Attending: Ananthan, Beard, Geng, Hoover, Jantz, Marker, Mills(recorder), Morgan, Triggs, Yu

Agenda

1) Announcements - All

2) 8.2 release - All

3) Kopp data - Morgan

4) High-resolution image job - Jantz, et. al

5) EAD support in 8.2 - Mills

6) Jobs & Reports - Triggs

1) Announcements

- 4 million dollar grant to build a cyberinfrastructure with Penn State and others accepted.
- Jantz reported an ingest of 200 Roman Coins this summer; cost about $20 a coin for digitizing and metadata. Had good success using batch ingest in WMS. High res image display works well. etc. Working on funding for 500 more coins.
- Move/migrate any email lists under @rulmail to @libraries

2) 8.2 release

Yang Yu

- Down to four bugs or so. Marked a few won't fix, because they appear to be feature requests. Some issues are marked as incomplete.

  Example is distinguishing graduate students from undergraduate students using LDAP information. A meeting will be setup with Jane, Kalaivani, Yang, and Rhonda to discuss possible solutions for this.

- Still waiting on ABBYY dev instance. Can we use ABBYY production for testing? Ananthan will follow up with the account manager about a dev license. If we don't hear back by 9/21 we will have to use the production ABBYY server for testing. Mills will ask Nick for page use count on production ABBYY server; both dev and production.
- Marker will add a bug about using custom wording from the rights event in the coversheet generation

Jeffery Triggs

- Two larger issues are resolved for 8.2 updating of technical metadata and editing XML in dlr/EDIT.

Jie Geng

- Almost completed. Currently on track.

Chad Mills

- A couple left, almost complete.

3) Kopp Data – Morgan

- Mills will make a dummy ZIP file with 3,000 files that are 1-2kb each
- Continue to work to support this in 8.2

4) High-resolution image job - Ron et. al,

- Almost ready to go; a job was started and aborted. 202 high resolution images were examined and cleared. Hoover will run a complete dry run job on production between 9/8-9/9.

5) EAD support in 8.2

- Some questions about the process for resource digitization, ingest, and inclusion.
- Are RELS-EXT necessary? Not for the EAD viewer they are not, but it is suggested for discoverability of the finding aid when looking at the digitized resource.
- Agnew needs to review implementation specification
- SC/UA and IJS finding aid author should be contacted to see if the workflow and feature addition is agreeable.

6) Jobs & Reports – Triggs

- Triggs reported the day 15 and day 16 of the RARCH move back in as managed datastreams were completed
- Mills reported the THUMBJPEG job - ready to run on production
- Mills reported the high resolution image job - ready to run on production
- Triggs will work on the untaring of archival masters - report back by October 20th with a start date for that job
