Attending: Beard, Bijur, Geng, Hoover, Jantz, Marker, Mills(recorder), Triggs, Yu

Agenda

1) Announcements - all
2) 8.2 Testing/Fixes - all
3) Kopp Data - Beard & Jantz - document attached
4) School Name Change - Marker, et. al.
   School of Health Related Professions has changed its name to School of Health Professions. How do we handle this changes at many levels; old dissertations, new dissertations, collection name in WMS and dlr/EDIT etc.
5) Isilon storage array software upgrade/maintenance - Ananthan, Bijur, Hoover
6) Jobs & Reports - Triggs

Announcements

1) OOI/DOI project has begun again.
2) VDC grant is starting up.
3) ROA project development sprint will begin shortly
4) Roman coins imaging is starting up again. With the assistance of another grant, which is being applied for, the collection may be completed by April 2017.
5) Jazz oral history project is starting up. Audio will be streaming only with restricted access to transcripts. PDF versions of the transcripts will be offered to registered and vetted individuals.

8.2 Testing/Fixes

LDAP attribute update is working as expected so far. Testing continues; with bug fixes starting again next week. After that a final round of testing before packaging for the staging environment.

Kopp Data

Jantz and Beard presented a possible solution of the large Kopp Data project. They proposed a further breakdown of the Kopp dataset into packages of roughly 1,300 files amounting to 250GB. This breakdown still follows the natural organization of the Kopp data. Beard and Jantz will perform a test on the test environment to see if this is feasible using 8.2 code.

School Name Change

Marker outlined they would like the public search display to only display the current/new school name, but still return submissions that have the old school name when the collection is selected from the option list. It was suggested only an edit of the collection label/name in dlr/EDIT is needed to accomplish this. Also, in WMS the collection name needs changing. To do that the current collection object needs to be edited. However, doing this will keep the WMS status flag for that collection object at "OK." Yu will provide a SQL script in 8.2 to change the status back to "Ingested."

Isilon Storage Array Software Upgrade/Maintenance

The Isilon storage array hasn't been rebooted in 4 years. EMC needs to perform multiple rolling reboots, coupled with firmware and OneFS upgrades. Total expected time to complete is 8.5-9 hours. The group decided it would be worth developing a plan for a read-only system during that downtime. Hoover will outline the possibilities in a document that will be reviewed at the next meeting.

Jobs & Reports

1) UnTARing legacy resources – Triggs has been working with Yu to generate technical metadata for untarred legacy archival files using a shared class in WMS. During that investigation it was uncovered that the shared class doesn't support an older technical metadata schema we had used. That schema was replaced several years ago, but the technical metadata was never migrated forward. The group discussed whether we should just abandon the old technical metadata schema and any useful information in it or migrate it and retain as much as possible for future use. It was decided we should migrate the old technical metadata schema to the new format. That migration will be a separate task. Any objects with TARed archival masters will be skipped for now; until the technical metadata s migrated. We will move forward with untaring archival masters that have technical metadata that follow the current schema.
