

This map shows an overview of important farmlands. It was made by overlaying an interpretation from the published soil survey map to a base map showing roads, boundaries, and names. This procedure may result in slight misalignment of lines and features in certain areas because the scales and states of the two maps used were different. For specific locations of soil map units that may qualify as important farmland use the published soil survey for the county. If the publication does not specify which map units are important farmlands, the state or local office of the Soil Conservation Service for that area can furnish you a list of important farmland map units. A soil survey publication can be obtained from the state or local office of the Soil Conservation Service, the county agent, or the congressman for that district. Many libraries keep published soil surveys on file for reference.

Base Source: USGS 1:100,000 county base map dated 1978

Projection and 10,000 meter grid ticks, zone 18. Universal Transverse Mercator. 25,000 foot grid ticks based on New Jersey coordinate system, North zone 1987, North American datum.

Interpretations derived from soil map constructed 1984 by Geographic Division, Soil Conservation Service, USDA of Camden County, New Jersey.
