reconciling the discrepancy between the total and partial heights), which eteron was surmounted by the pyramid; the sculptures were of course on the frieze of the order. The other apparent discrepancy between the lengths of the sides and fronts and the total circuit of the building can only be satisfactorily explained by supposing that it stood within an enclosure, or upon a platform of the larger dimensions, namely, 440 feet in perimeter. When we come to the details of the arrangement of the parts, we find most writers giving the simple explanation, which most readers of Pliny would probably adopt at first sight, that the 36 columns, of which Pliny speaks, formed a single peristyle all round the building. (See, for example, the restoration in Hirt's Gesch. d. Baukunst, Pl. x. fig. 14, Pl. xxx. fig. 14.) To this view there are very formidable objections; and another, which has not only the merit of being exceedingly ingenious, but the authority of a most accomplished architect, is proposed by Mr. Cockerell in Mr. Nash's Essay. Taking on the one hand Pliny's 63 feet as the length of the longer side of the peristyle, and on the other hand, calculating the dimensions of the order from the existing fragments of the frieze (which, in the case of a work of that period of Greek art, an architect can do with as much certainty as that with which Professor Owen can construct a dinornis from a single thigh-bone), Mr. Cockerell arrives at the conclusion that the 36 pillars were arranged, in a single row of six columns on each front, and in a double row of eight on each side, at intercolumniations of 6 feet 8 inches, around a long narrow cela, corresponding in length to six of the columns of the peristyle, and in width to two. (See the plan and elevation in the Classical Museum, l. c.)

The researches of the latest travellers furnish a strong hope that good elements for reconstructing the plan of the Mausoleum may be found among the fragments of columns which are scattered about the site of the Museum; and, with Halicarnassus itself, in the almost total destruction which fell upon the cities of Asia Minor. For its subsequent history, the question of its site, and the chain of evidence which proves that the marbles now in the British Museum are the very relics with which Scopas and his rivals adorned the sepulchre of Mausolus, the reader is referred to the very interesting account of these matters given in Mr. Newton's Essay. All that can here be stated is, that when the knights of Rhodes built the citadel of Halicarnassus (Budrum), in the fifteenth century, or more probably when they strengthened its fortifications in 1522, they used materials obtained from the ruins of the Mausoleum, and, among the rest, they worked into the inner wall of their fortress some of the sculptured slabs which had formed its frieze. Various travellers, from Thevenot to the present time, have described these marbles, of which there is a sketch in the Ionian Antiquities of the Dillettanti Society (vol. ii. Suppl. Pl. ii.). At length our ambassador at Constantinople, Sir Stratford Canning, obtained the permission of the Porte for their removal, and in February, 1846, they were taken down and conveyed to England, and are now deposited in the British Museum, under the name of the Budrum Marbles. They consist of thirteen slabs, of the uniform height of 3 feet including the mouldings, or 2 feet 5$rac{1}{2}$ inches without them, and varying in length from 2 feet 8 inches to 6 feet 11 inches. Their total length is 64 feet 11 inches, which is nearly the same as that of each longer side of the building; but they are evidently from different faces of it, as they cannot all be arranged in one continuous composition, though some of them are too continuous, and they show traces of the hands of various artists. Their subject is the battle of Greek warriors with Amazons, which was as favourable a myth in Ionia and Caria as it was in Attica. Their style is considered by competent judges to be inferior to what we might have expected from artists of the school of Scopas and Praxiteles; but their close resemblance to another bas-relief of the same school, that of the choragic monument of Lycurgus, is admitted; and the points in which they are deficient as he himself remarks, with Pliny's statement that the sculptures were regarded as of equal merit; but also, it is one of those gratuitous suppositions made to escape from a difficulty, which cannot be admitted without some positive proof.

In the Roman Mausolos the form chiefly employed was that of a succession of terraces in imitation of the roges. Of these the most celebrated were those of Augustus and of Hadrian; the latter of which, stripped of its ornaments, still forms the fortress of modern Rome (the Castle of S. Angelo); but of the other, which was on a still larger scale, and which was considered as one of the most magnificent buildings of Augustus, there are only some insignificant ruins. (Strabo, v. p. 236; Suet. Aug. 109; Nardini, Roma Antica, vol. iii. p. 75, ed. Nibby; Hirt, Lehrb. d. Gliederb., pp. 349—351, and restoration of the monuments in Pl. xxx. fig. 21, 23.)

MAZO’NOMUS (μαζονόμος, dim. μαζονόμοιος, Athen. v. 30, 34), from μαζί, a loaf, or a cake; properly a dish for distributing bread: but the term is applied also to any large dish used for bringing meat to table. (Varro, de Re Rust. iii. 4.) These dishes were made either of wood (Pollux, vii. 87), of bronze (Athen. lv. 31), or of gold (Athen. v. 27).

MEDIASI'TNI, the name given to slaves, used for any common purpose, and are said by the Scholast on Horace (Ep. i. 14. 14) to be those "qui in medio stant ad quaevis imperata parati." The name is chiefly given to certain slaves belonging to the familia rustica (Cic. Cat. ii. 3; Colum. i. 9, ii. 13), but it is also applied sometimes to slaves in the city. (Dig. 4. tit. 9. s. 1. § 5, t. 7. s. 6.)

MEDI'CINNA (λαρυγκός, the name of that science which, as Celsus says (de Medec. lib. i. Praefat.), "Sanitatem aegris promittit," and whose object Hippocrates defines (de Arte, vol. i. p. 7, ed. Kühn) to be "the delivering sick persons from their disease, and the diminishing the force of
sicknesses, and the not undertaking the treatment of those who are quite overcome by sickness, as we know that medicine is here of no avail." For other definitions of the art and science of Medicine given by the ancients, see Pseudo-Galen (Introduct. Seu Medicus, c. 6. vol. xiv. pp. 686—8, ed. Kühn). The invention of medicine was almost universally attributed by the ancients to the gods. (Hippocr. de Prisea Matricol. i. p. 39; Pseudo-Galen, Introduct. cap. i. p. 674; Cie. Tusc. Dis. iii. 1. Plin. H. N. xxix. 1.) Another source of information was the observing the means resorted to by animals when labouring under disease. Pliny (H. N. viii. 41) gives many instances in which these instinctive efforts taught mankind the properties of various plants, and the more simple surgical operations. The wild goats of Crete pointed out the use of the Dictamus and vulnerary herbs; dogs when indisposed sought the Friticum repens; and the same animal taught to the Egyptians the use of purgative, constituting the treatment called Syrasmia. The hippopotamus introduced the practice of bleeding, and it is affirmed that the employment of clysters was shown by the ibis. (Compare Pseudo-Galen, Introduct. c. 1, p. 675.) Sheep with worms in their liver were seen seeking saline substances, and cattle affected with dropsy anxiously looked for chalybeate waters. We are told (Herod. i. 197; Strab. xvi. c. 1, ed. Tauchn.; Pseudo-Galen, Introduct. l. c.) that the Babylonians and Chaldaeans had no physicians, and in cases of sickness the patient was carried out and exposed on the highway, that any persons passing by who had been affected in a similar manner, might give some information respecting the means that had afforded them relief. Shortly afterwards, these observations of cures were suspended in the temples of the gods, and we find that in Egypt the walls of their sanctuaries were covered with records of these signs of the omnipotence of the gods. The priests of Greece adopted the same practice, and some of the tablets preserved by the ancients, "one searches into the history of medicine and the ruins of ancient medical literature." The Asclepiadæ, to which family Hippocrates belonged, were the supposed descendants of Aesculapius (Aēsculapios), and were in a manner the hereditary physicians of Greece. They professed to have among them certain secrets of the medical art, which had been handed down to them from their great progenitor, and founded several medical schools in different parts of the world. Galen mentions (De Meth. Med. i. vol. x. pp. 5, 6) three, viz., Rhodes, Cnidos, and Cos. The first of these appears soon to have become extinct, and has left no traces of its existence behind. From the second proceeded a collection of observations called Κρίτιαν Διάκεισις; 4 Cudian Sentences;" a work of much reputation in early times, which is often mentioned by Hippocrates (De Rot. Vict. in Morb. Auct.), and which appears to have existed in the time of Galen. (Comment, in Hippocr. lib. cit. vol. x. p. 427.) The school of Cos, however, is by far the most celebrated, on account of the greater number of eminent physicians that sprang from it, and especially from having been the birth-place of the great Hippocrates. We learn from Herodotus (iii. 131) that there were also two celebrated medical schools at Crotona in Magna Graecia, and at Cyrene in Africa, of which he says that the former was in his time more esteemed than the latter, and in the next place came that of Cyrene. In subsequent times the medical profession was divided into different sects; but a detailed account of their opinions is foreign to the object of the present work. The oldest, and perhaps the most influential of these sects was that of the Dogmatici, founded about B.C. 400 by Theasalus, the son, and Polybus, the son-in-law of Hippocrates, and thence called the Hippocratici. These retained their influence till the rise of the Empirici, founded by Herophilus of Alexandria, and Scopas of Cos, in the third century B.C., and so called, because they professed to derive their knowledge from experience only; after which time every member of the medical profession during a long period ranged in one of these two sects. In the first century B.C. Themison founded the sect of the Methodici, who held doctrines nearly intermediate between those of the two sects already mentioned. About two centuries later the Methodici were divided into numerous sects, as the doctrines of particular physicians became more generally received. The chief of these were the Pneumatics and the Eclecticæ; the former founded by Athenaeus about the middle or end of the first century A.D.; the latter about the same time of the doctrine that one meets with is the collection of writings known under the name of the works or Hippocrates. The science mounts up directly to that origin and thence stops. Not that it had not been cultivated earlier, and had not given rise to even numerous productions; but every thing that had been made before the physician of Cos has perished. We have only remaining of them scattered and unconnected fragments; the works of Hippocrates have alone escaped destruction; and by a singular circumstance, there exists a great gap after them, as well as before them. The medical works from Hippocrates to the establishment of the school of Alexandria, and those of that school itself, are completely lost, except some quotations and passages preserved in the later writers; so that the writings of Hippocrates remain alone amongst the ruins of ancient medical literature. The Asclepiadæ, to which family Hippocrates belonged, were the supposed descendants of Aesculapius (Aēsculapios), and were in a manner the hereditary physicians of Greece. They professed to have among them certain secrets of the medical art, which had been handed down to them from their great progenitor, and founded several medical schools in different parts of the world. Galen mentions (De Meth. Med. i. vol. x. pp. 5, 6) three, viz., Rhodes, Cnidos, and Cos. The first of these appears soon to have become extinct, and has left no traces of its existence behind. From the second proceeded a collection of observations called Κρίτιαν Διάκεισις; 4 Cudian Sentences;" a work of much reputation in early times, which is often mentioned by Hippocrates (De Rot. Vict. in Morb. Auct.), and which appears to have existed in the time of Galen. (Comment, in Hippocr. lib. cit. vol. x. p. 427.) The school of Cos, however, is by far the most celebrated, on account of the greater number of eminent physicians that sprang from it, and especially from having been the birth-place of the great Hippocrates. We learn from Herodotus (iii. 131) that there were also two celebrated medical schools at Crotona in Magna Graecia, and at Cyrene in Africa, of which he says that the former was in his time more esteemed than the latter, and in the next place came that of Cyrene. In subsequent times the medical profession was divided into different sects; but a detailed account of their opinions is foreign to the object of the present work. The oldest, and perhaps the most influential of these sects was that of the Dogmatici, founded about B.C. 400 by Theasalus, the son, and Polybus, the son-in-law of Hippocrates, and thence called the Hippocratici. These retained their influence till the rise of the Empirici, founded by Herophilus of Alexandria, and Scopas of Cos, in the third century B.C., and so called, because they professed to derive their knowledge from experience only; after which time every member of the medical profession during a long period ranged in one of these two sects. In the first century B.C. Themison founded the sect of the Methodici, who held doctrines nearly intermediate between those of the two sects already mentioned. About two centuries later the Methodici were divided into numerous sects, as the doctrines of particular physicians became more generally received. The chief of these were the Pneumatics and the Eclecticæ; the former founded by Athenaeus about the middle or end of the first century A.D.; the latter about the time
either by Agathinus of Sparta, or his pupil Archigenes.

It only remains to mention the principal medical authors after Hippocrates whose works are still extant, referring for more particulars respecting their writings to the articles in the Dictionary of Biography. Celcus is supposed to have lived in the Augustan age, and deserves to be mentioned more for the elegance of his style, and the neatness and judiciousness of his compilation, than for any original contributions to the science of Medicine. Diocles of Anthennas, who lived in the first century after Christ, was for many centuries the greatest authority in Materia Medica, and was almost as much esteemed as Galen in Medicine.

Aristaeus, who probably lived in the time of Nero, is an interesting and striking writer, both from the beauty of his language, and from the originality of his opinions. The next in chronological order, and perhaps the most valuable, as he is certainly the most voluminous, of all the medical writers of antiquity, is Galen, who reigned supreme in all matters relating to his art till the commencement of modern times. He was born at Pergamus A.D. 131, came early in life to Rome, where he lived in great honour, and passed great part of his days, and died A.D. 201. After him the only writers deserving particular notice are Orbasius of Pergamus, physician to the emperor Julian in the fourth century after Christ; Aetius of Amida, who lived probably in the sixth century; Alexander Trallianus, who lived something later; and Paulus Aegineta, who belongs to the end of the seventh century.

[Medicus] (lit. teacher), the name given by the ancients to every professor of the healing art, whether physician or surgeon, and accordingly both divisions of the medical profession will here be included under that term. In Greece and Asia Minor physicians seem to have been held in high esteem; for, not to mention the apothecary of Aesculapius, who was considered as the father of it, there was a law at Athens that no female or slave should practise it (Hyginus, Fab. 274); Aelian mentions one of the laws of Zaleucus (in the Prytaneum at the state's expense) by which it was ordered that if any one during his illness should drink wine contrary to the orders of his physician, even if he should recover, he should be put to death for his disobedience (Var. Hist. ii. 37); and, according to Mead, there are extant several medals struck by the people of Smyrna in honour of different persons belonging to the medical profession. (Dissertatio de Nummis quibusdam a Smyrneis in Medicorum Honorem percussis, 4to. Lond. 1741.) In the 5th book of the Athenians (published among the letters of Hippocrates) be genuine, and if Soranus (in Vit. Hippocr.) can be depended on, the same honours were conferred upon that physician as had before been given to Herchus; he was voted a golden crown, publicly initiated into the Eleusinian mysteries, and maintained in the Prytaneeum at the state's expense. (Compare Plin. H. N. vii. 57.)

As there were no hospitals among the ancients, the chief places of study for medical pupils were the Aesculapias, or temples of Asclepius, where the votive tablets furnished them with a collection of cases. The Asclepiades [Medicina] were very strict in examining into and overlooking the character and conduct of their pupils, and the famous Hippocratic oath (which, if not drawn up by Hippocrates himself, is certainly almost as ancient) requires to be inserted here as being the most curious medical monument of antiquity. "I swear by Apollo the physician, by Aesculapius, by Hygeia, and Panaceae, and all the gods and goddesses, calling them to witness that I will fulfill religiously, according to the best of my power and judgment, the solemn promise and the written bond which I now do make. I will honour as my parents, the master who has taught me this art, and endeavour to minister to all his necessities. I will consider his children as my own brothers, and will teach them my profession, should they express a desire to follow it, without remuneration or written bond. I will admit to my lessons, my discourses, and all my other methods of teaching, my own sons, and those of my tutor, and those who have been inscribed as pupils and have taken the medical oath; but no one else. I will prescribe such a course of regimen as may be best suited to the condition of my patients, according to the best of my power and judgment, seeking to preserve them from anything that might prove injurious. No inducement shall ever lead me to administer poison, nor will I ever be the author of such advice; neither will I contribute to an abortion. I will maintain religiously the purity and integrity both of my conduct and of my art. I will not cut any one for the stone, but will leave that operation to those who cultivate it. Into whatever dwellings I may go, I will enter them with the sole view of succouring the sick, abstaining from all injurious views and corruption, especially from any immoderate action, towards women or men, free men or slaves. If during my attendance, or even unprofessionally in common life, I happen to see or hear of any circumstances which should not be revealed, I will consider them a profound secret, and observe on the subject a religious silence. May I, if I rigidly observe this my oath, and do not break it, enjoy good success in life, and in [the practice of] my art, and obtain general esteem for ever; should I transgress and become a perjurer, may the reverse be my lot."

Some idea of the income of a physician in those times may be formed from the fact mentioned by Herodotus (iii. 131) that the Aeginetans (about the year B.C. 532) paid Democedes from the public treasury one talent per annum for his services, i.e. (if we reckon, with Hussey, Ancient Weights and Money, &c., the Aeginetan drachma to be worth 1s. 3d.) not quite 344l.; he afterwards received from the Athenians one hundred minae, i.e. (reckoning, with Hussey, the Attic drachma to be worth 9d.) rather more than 406l., and he was finally attracted to Samos by being offered by Polycrates a salary of two talents, i.e. (if the Attic standard be meant) 487l. 10s. It should however be added, that Valekenaes doubts the accuracy of this statement of Herodotus with respect to the Aeginetans and Athenians (and apparently with reason) on the ground that the latter people, at the time of their greatest wealth, only allowed their ambassadors two drachmae (or 1s. 7½d.) per day, i.e. somewhat less than thirty pounds per annum. (Aristoph. Acharn. v. 66.) A physician, called by Pliny both Erasistratus (H. N. xxix. 3) and Cleomelus (H. N. vii. 37), is said...
by him to have received one hundred talents for curing king Antiochus, which (if we suppose the Attic talents of the standard of Alexander’s coinage to be meant, which, according to Hussey, was worth 243s. 15s.) would amount to 24,375s. *

It seems to have been not uncommon among the Greeks in those times (as afterwards in the later Roman empire; see below) to maintain physicians, who were paid at the public cost (Xen. Mem. iv. 2. § 5; Plato, Gorg. § 25; Strabo, iv. p. 125; Diod. Sic. xii. 13); and these again had attendants, for the most part slaves, who exercised their calling among people of low condition. (Plato, De Leg. iv. p. 720, ed. Steph.)

The Romans derived their knowledge of medicine at first from the Etruscans, and afterwards from the Greeks. One of the most ancient customs at Rome in order to ward off epidemic diseases, and to appease the anger of the gods, was the interrogating the books bought by Tarquin of the Sibyl. In the earlier times of the Roman republic physicians are said by Pliny to have been unknown (H. N. xxix. 9); and for some time afterwards the exercise of the profession was in a great measure confined to persons of servile rank; for the richer families having slaves who were skilled in all sorts of trades, &c., generally possessed one or more that understood medicine and surgery. (Middleton’s Essay, De Medicorum aput Romanos degentium Conditione, Cantab. 1736, 4to, and the various answers to it that appeared on its publication.) To this practice, however, there were many exceptions, e.g. the physician who was taken prisoner with Julius Caesar by the pirates at the island of Pharmaca (Sueton. J. Ces. 4), and who is called his friend by Plutarch (see Casaubon’s note on Sueton.) Archagathus, who being the first foreign surgeon that settled at Rome, had a shop bought for him at the public expense, and was presented with the Jus Quiritium a. c. 219 (Cassius Hemiapa, ap. Plin. H. N. xxix. 6); Artorius, who is known to have been a physician (Caec. Aurel. De Morb. Aeat. iii. 14, p. 224), and who is called the friend of Augustus (Plut. Brut. 41), where, however, it should be noticed that some editions read Αὐτῷονας instead of Αὐτῶος); Ascalpo, whom Cicero calls his friend (ad Fam. xiii. 20); Asclepiades, the friend of Crassus the orator (Cic. de Orat. i. 14); Eudemos, who is called by Tacitus (Annal. iv. 3) the friend and physician of Livia; and others. The hatred borne by Cato the Censor against the Greek physician as well as the Greek philosophers at Rome is well known; but it is not true that he caused them to be expelled from Rome. (See Sprengel, Hist. de la Méd.) With respect to the income made by eminent physicians in the early times of Rome, the writer is not aware of any data for ascertaining it; at the beginning of the empire, we learn from Pliny (H. N. xxix. 5) that Albutius, Arruntius, Calpetanus, Cassius, and Rubrius gained 250,000 sesterces per annum, i.e. (reckoning with Hussey the mille nummi (seserten- tia) to be worth, after the reign of Augustus, 7L. 16s. 3d.) 1935l. 2s. 6d.; that Q. Serturinius made it a favour that he was content to receive from the emperor 500,000 sesterces per annum (or 3906s. 5s.), as he might have made 600,000 sesterces (or 4687l. 10s.) by his private practice; and that he and his brother, who received the same annual income from the emperor Claudius, left between them at their death, notwithstanding large sums that they had spent in beautifying the city of Naples, a sum of thirty millions of sesterces (or 252,375l.).

Of the previous medical education necessary to qualify a physician at Rome for the legal practice of his profession in the early times, we know nothing; afterwards, however, this was under the superintendence of the archiater. [ARCHIATER.]

Two other medical titles that we meet with under the emperors were Iatrosoivysta (see the word) and Actuarius, Actuoy»tos. The latter was a title at the court of Constantine, given apparently only to physicians, and quite distinct from the use of the word found in the earlier Latin authors. (See Da Cuno, Gloss. Graec. vol. i. p. 46, and Possini, Gloss. ad Pechymyr. Hist. An- dronic., vol. i. p. 366, &c. and vol. ii. pp. 468, 469.) Besides Joannes the son of Zacharias, who is better known by his title of Actuarius than by his real name, several other physicians are recorded as having arrived at this dignity. [W. A. G.]

MEDIMNUS (μεδίμνος or μέδιμνος αἰτής), the principal dry measure of the Greeks. It was used especially for measuring corn. It contained 6 hektes, 12 hexaecteres, 96 aeginae (sex- taris), 192 cotylae, and 1152 cyathsi. The Attic medimnus was equal to six Roman modii, or two amphorae (Nepos, Att. 2; Cic. in Iuv. iii. 45, 46, 49; Suidas, s. v.; Rhemn. Fann. v. 64.)

Suidas makes the medimnus = 108 litrae, confounding it apparently with the metretes, the chief Greek fluid measure, which was three quarters of the medimnus. The medimnus contained nearly 13 imperial gallons, or 14 bushel. This was the Attic medimnus; the Aeginetan and Ptolemaic was half as much again, or in the ratio of 3:2 to the Attic. For the values of the subdivisions of the medimnus see the Tables. (Böckh, Metrol. Unters. pp. 202—204.) [P. S.]

MEDITRINA’LIA was one of the festivals connected with the cultivation of vineyards. It took place on the eleventh of October, on which day the people of Latium began to taste their new wine (μαιστόν), and to offer libations of it to the gods. In drinking the new wine it was customary to pronounce the words; "νέου νυμφόν νυμφόν μῆναι, νομίζεις μᾶλλον μῦσκον μέλιδον." (Varro, de Ling. Lat. vii. 21; Festus, s. v. Meditrinalis.) Varro derives the name of the festival from the healing power of the new wine, but Festus speaks of a goddess Meditrina. [L. S.]

MEDIX TUTICUS, the name of the supreme magistrate among the Oscan people. Medix appears to have signified a magistrate of any kind (medix aput Oscos nomen magistratus est, Festus, s. v. p. 123, ed. Müller), and tuticus to have been equivalent to magnus or sumnus. Livy, therefore, in calling the medix tuticus the sumnus magis- tratus, gives a literal translation of the word. In the time of the second Punic war, the Campanians were governed by the medix tuticus, who seems to have been elected annually (Liv. xiii. 35, xxiv. 19, xxvi. 6); and we may infer from a line of Ennius (apud Fest. s. v.), "Sumnus ibi capitur medix, occiditur alter," that there was another
magistrate of the same name under him, who perhaps took his place in case of death, or of his being incapacitated by illness or other causes from discharging his duties. In Orac inscription the name occurs in the form of meddίs τάτηκας; so that the orthography of Festus is more correct than that of Livy, which is placed at the head of this article. (Lepsius, Inscr. Unbr. et Osca.)

MEGALΕSΙA, MEGALΕNSΙA, or MEGALΕSΕS LUDI, a festival with games celebrated at Rome in the month of April and in honour of the great mother of the gods (Cybele, ριεχαγίς Σέρις, whence the festival derived its name). The statue of the goddess was brought to Rome from Pessinus in the year 203 B.C., and the day of its arrival was solemnised with a magnificent procession, lectionesterna, and games, and great numbers of people carried presents to the goddess on the Capitol. (Varro, de Ling. Lat. vi. 15; Liv. xxix. 14.) The regular celebration of the Megalesia, however, did not begin till twelve years later (191 B.C.), when the temple which had been vowed and ordered to be built in 203 B.C., was completed and dedicated by M. Junius Brutus. (Liv. xxxvi. 36.) But from another passage of Livy (xxxv. 54) it appears that the Megalesia had already been celebrated in 193 B.C. The festival lasted for six days, beginning on the 4th of April. The season of this festival, like that of the whole month in which it took place, was full of general rejoicings and feasting. It was customary for the wealthy Romans on this occasion to invite one another mutually to their repasts, and the extravagant habits and the good living during these festive days were probably carried to a very high degree, whence a certain extent of expenditure. (Gellius, ii. 24; compare xviii. 2.)

The games which were held at the Megalesia were purely scenic, and not circenses. They were at first held on the Palatine in front of the temple of the goddess, but afterwards also in the theatres. (Cic. de Harusp. Resp. ii. 1, &c.) The first ludi scenici at Rome were, according to Valerius Antias, introduced at the Megalesia, i.e. either in 193 or 191 B.C. The day which was especially set apart for the performance of scenic plays was the third of the festival. (Ovid. Fast. iv. 377; Ael. Spartan. Antonin. Carac. c. 6.) Slaves were not permitted to be present at the games, and the magistrates appeared dressed in a purple toga and praetexta, whence the proverb, purpurae Megalesinis. The games were under the superintendence of the curule aediles (Liv. xxxiv. 54), and we know that four of the extant plays of Terence were performed at the Megalesia. Cicero (de Harusp. Resp. 12), probably contrasting the games of the Megalesia with the more rude and barbarous games and exhibitions of the circus, calls them maxime casti, solemnes, religiosi. (See Ovid. Fast. iv. 179–372; P. Manutius, ad Cic. ad Fam. ii. 11.)

MENELAEIA. A festival celebrated at Therapnae in Laconia, in honour of Menelaus and Helena, who were believed to be buried there. (Paus. iii. 19. § 9.) Menelaus was to the Lacedaemonians what Nestor was to the Messenians, a model of a wise and just king, and hence they raised him to the rank of one of the great gods (Isocr. Panath. p. 247, n.), and honoured him and Helena with annual and solemn sacrifices at Therapnae, which continued to be offered in the days of Isocrates. (Helen. Encom. p. 218, n.) These solemnities are sometimes called Ελένα. (See Creuzer, Symbol. iii. p. 38.)

MENA (μενά), a table. The simplest kind of table was one with three legs, round, called κυλίβα (Festus, s. v.; Varro, de Ling. Lat. v. 25. p. 123, ed. Spengel; Hor. Sat. i. 3. 13; Ovid. Met. viii. 602), and in Greek τρέτες. (Xen. Anab. vii. 3. § 10; Athen. iv. 21, 35, v. 28.) It is shown in the drinking-scene painted on the wall of a wine-shop at Pompeii. (Gell's Pompeiana, 1832, vol. ii. p. 11.) (See woodcut.) The term τραύης, though commonly used in Greek for a table of any kind, must, according to its etymology, have denoted originally a four-legged table. Accordingly, in paintings on vases, the tables are usually represented with four legs, of which an example is given in the annexed cut. (Millin, Peintures de Vases Antiques, vol. i. pl. 59.) Horace used at Rome a dining-table of white marble, thus combining neatness with economy. (Sat. i. 6. 116.)

For the houses of the opulent, tables were made of the most valuable and beautiful kinds of wood, especially of maple (σφενδάμων), Athen. ii. 32; αεωρία, Hor. Sat. ii. 8. 10; Mart. xiv. 90), or of the citrus of Africa, which was a species of eypress or juniper. (Cicero, Cic. Tarr. iv. 17; Mart. ii. 43, xiv. 89; Plin. H. N. xiii. 29.) For this purpose the Romans made use of the roots and tubers of the tree, which, when cut, displayed the greatest variety of spots, beautiful waves, and curling veins. The finest specimens of tables so adorned were sold for many thousand pounds. (Plin. H. N. xiii. 29, xvi. 26, 84; Tertull. de Pallio, sub fin.; A. Aikin, On Ornamendal Woods, pp. 23, 24.) Besides the beauty of the boards (ἐπιθήματα) the legs of these tables were often very tasteful, being carved in imitation of lion's or tiger's feet, and made of ivory. (Athen. i. c. ; Mart. ii. 43, 9.)

One of the principal improvements was the inte-
vension of the monspodium, a round table (orbis) supported by a single foot; this, with other elegant kinds of furniture, was introduced into Rome from Asia Minor by Cn. Manlius. (Plin. H.N. xxxiv. 8.) Under the Roman emperors semicircular tables were introduced, called mensae lunatae from comparing them to the half-moon, and signata, because they had the form of that letter, C. (Lamprid. Hel. 25, 29.) This lunate table was surrounded by a sofa of the same form, called stabulum, which was adapted to hold seven or eight persons. (Mart. x. 49, xiv. 97.)

As the table was not very large, as we see from the preceding cut, it was usual to place the dishes and the various kinds of meat upon it, and then to bring it thus furnished to the place where the guests were reclining: hence such phrases as mensam opponere or opponere (Plaut. Asin. v. 1. 2; Most. i. 3. 150; Cic. de Ad. Att. xiv. 21; Ovid. Met. viii. 570); and mensam afferre or renovare. (Plaut. Amphit. ii. 2. 175; Virg. Aen. i. 216.) As the board of the table was called by a distinct name \\

Τετράπετρος, (Athen. iv. 22) the Romans used for the same purpose a thick cloth with a long woolly nap (gauze, Hor. l. c.; Heindorf in loc.)

Under the influence of the ideas of hospitality, which have prevailed universally in the primitive states of society, the table was considered sacred. (Juv. ii. 110.) Small statues of the gods were fixed. (Horn. Od. ii. 25, 29.) This lunate table supported by a single foot; this, with other elegant kinds of furniture, was introduced into Rome from Asia Minor by Cn. Manlius. (Plin. H.N. xxxiv. 8.) Under the Roman emperors semi-

circular tables were introduced, called mensae lunatae from comparing them to the half-moon, and signata, because they had the form of that letter, C. (Lamprid. Hel. 25, 29.) This lunate table was placed upon it. (Arnob. t. c.)

The two principal courses of a dinner were the tripe and the coena, or a Greek and Roman dinner, were called respectively τρίπτερα και θέατρα τράπεζας, δείπνων τράπεζας, and mensa prima, mensa secunda. [Corn.]

The name of τράπεζα or mensa was given to a square tomb-stone (Becker, Charidès, vol. ii. pp. 191, 193) [Fundus, p. 556, b.]; and the same name was also given to square altars. Every curia at Rome had an altar, called mensa, which was sacred to Juno Curitis. (Dionys. ii. 30; Festus, pp. 199, 196; Müller, Menon. Sot. iii. 11; Becker, Rom. Alterth. vol. ii. pt. i. p. 34.) [L. Y.]

MENSA'RI, MENSULA'RII, or NUMU'NARI, were a kind of public bankers at Rome who were appointed by the state; they were distinct from the argentarii, who were common bankers and did business on their own account. (Dig. 1. tit. 12. s. 1; Cod. Theod. 16. tit. 4. s. 5.)

Bankers appointed by the state also existed in other ancient towns, and Cicero (pro Plac. 19) mentions mensarii at Temnos in Asia Minor who were appointed by the people. [L. S.]

MENSIS. [CALENDARIUM.]

MENSO'RES, measurers or surveyors. This name was applied to various classes of persons whose occupation was the measurement of things.

1. It was applied to land-surveyors who measured and defined the extent of fields, and appear to have been the same as the agrimensores. (Colum. v. 1; compare Agrimensores.)

2. To persons who measured in the Roman camps the space to be occupied by the tents. They must be distinguished from the metallarii who selected the place for a camp. (Veg. de Re Milit. ii. 7.)

3. To a class of officers during the time of the empire who provided quarters for the soldiers in the towns through which they passed and where they made a temporary stay. They not only assigned to each soldier the house in which he was to be quartered, but also wrote the name of the occupant upon the door-post, and he who effaced or destroyed this name was punished as a falsi reus. (Cod. Theod. 7. tit. 8. s. 4.)

4. Mensors adficientes is sometimes applied to architects, or more especially to such architects as conducted the erection of public buildings, the plans of which had been drawn up by other architects. (Plin. Epist. x. 28 and 29.)

5. Mensores frumentarii was the name of officers who had to measure the corn which was conveyed up the Tiber for the public granaries. (Dig. 27. tit. 1. s. 26; Cod. Theod. 14. tit. 9. s. 9; and tit. 15. s. 1.) They were stationed in the port near Ostia, and were employed under the praefectus annonae. The name is mentioned in various ancient inscriptions. [L. S.]

MENSU'RA (μέτρον), measure, in its widest
sense, signifies the application of number to quantity; or, to speak more specifically, the comparison of different quantities by means of the standard of number. So long as we regard quantity apart from number, we can only compare two quantities by the test of coincidence, by which we ascertain whether they are equal or unequal, and, if the latter, which of the two is the greater; as, for instance, in the case of two lines. The next step is the comparison of one magnitude with certain definite parts, or multiples, of the other, its half or double, third or triple, and so forth. The last step, by which we attain to a complete method of expressing magnitude numerically, is the choice of some fixed magnitude, or unit, with which we may compare all other magnitudes of the same kind, so as to ascertain what multiple, part, or parts of the unit each of them is, if they are commensurable, and, if not, as nearly as we please. Thus the unit, in itself, or in its parts, forms a measure of all magnitudes of the same kind as itself. A set of fixed measures, one for each kind of quantity, with their subdivisions, forms a metrical system.

The notions which lie at the foundation of mathematical and mechanical science determine of themselves the foundation of every metrical system. Those notions are Extension and Force; the former in its various kinds, the line, the surface, the solid, and the angle; the latter in that manifestation of it which we call weight. Now, since extension, whether linear, superficial, or solid, can be estimated by means of one straight line; or by means of two straight lines which form a fixed angle with one another, and which, together with two other lines drawn parallel to them, enclose a surface; or by means of three straight lines, the planes passing through which form a fixed solid angle, and, together with three other planes drawn parallel to them, form a solid; — it follows that all these three kinds of magnitude may be estimated numerically by fixing upon units which are respectively a straight line, a parallelogram having two adjacent sides and an angle fixed, and a parallelepiped whose sides and an angle are fixed, and a parallelepiped having three adjacent edges and an angle fixed; or, simplifying the two latter cases by making the fixed sides equal and the fixed angles right angles, the units are (1) a straight line of fixed length, (2) the square of which that straight line is a side, (3) the cube of which that line is the edge. Thus we obtain a metrical system for length, surface, and volume.

For the measurement of angular magnitude, or, which is the same thing, of distance reckoned along the circumference of a circle, one unit is sufficient, namely, a fixed angle, which will exactly measure the sum of four right angles, or a fixed arc of a fixed circle, which will exactly measure the circumference of the circle. Thus we obtain a metrical system for all angular magnitudes, including time.

Again, with respect to Force, of which the test is weight, since all forces may be compared, either directly, or through the calculation of the velocities which they produce, with the force of gravity. There are two ways of estimating weight. Either its measure may be deduced from the measure of capacity; for, as the weight of a body depends on the quantity of matter in a given space, estimated by the effect which the force of gravity exerts upon it, we may take the quantity of a fixed kind of matter (water for example) which will exactly fill the unit of capacity, as the unit of weight. Or we may take a bulk of any substance, without measuring it, as the unit of weight. In the latter case it is evident that, by measuring the solid content either of the unit of weight, or of an equal weight of some other substance, we might derive from our system of weights a system of measures, first, of capacity, and thence of surface, and thence of linear distance; just as by the opposite process we pass from the line to the surface, thence to capacity, and thence to weight.

The statement of these elementary principles, in as brief a form as is consistent with clearness, has appeared necessary, in order to the complete understanding of the metrical systems of the Greeks and Romans, the explanation of which is the object of this article.

I. Origin of Measures.

1. Of Length.—The first step in the construction of a metrical system is obviously that of fixing upon the unit of length; and nature itself suggests the choice, for this purpose, of some familiar object, of nearly uniform length, and which is constantly at hand to be referred to. These conditions are fulfilled by various parts of the human body; from which accordingly we find that not only the unit of length, but all the measures of length, except those which are too small or too large to be measured by parts of the body, are derived in every metrical system, except the latest formed of all, the modern French system, which is founded on the measurement of the earth. In support of the general statement now made we have, besides the antecedent argument from the nature of the case, the testimony of all writers, the names of the measures, and the general agreement of their lengths with the parts of the body whose names they bear. (Hom. II. vi. 319, xx. 676, Od. xi 310; Vitruv. iii. 1, § 2—9, with Schneider's Notes; Hero, Geom. in Anal. Græc. Paris, 1688, vol. i. pp. 308—315, 388; Diog. Laërt. ix. 51; Ukert, Geogr. d. Griech. u. Rom. vol. i. pt. 2, p. 54.) The chief of such measures, with their Greek and Roman names, are the following: the breadth of a finger (δάκτυλος, digitus) or thumb (pollex); the breadth of the hand, or palm (παλάμη, palmus); the span, that is, the distance from the tip of the thumb to the tip of the little finger, when spread out as wide as possible (*επίθηκος); the length of the foot (πόδος, pes); the cubit, or distance from the elbow to the tip of the middle finger (πυξίς, cubitus); a step (δήμα, gradus); a double step, or pace (passus); and the distance from extremity to extremity of the outstretched arms (οργανδ). With reference to the last two measures, it will be observed that the Romans derived them from the legs, the Greeks from the arms, the passus being one foot shorter than the οργανδ of the other, and the former (5 feet) belonging to the decimal system, the latter (6 feet) to the duodecimal. The higher measures of length will be referred to presently. Comp. Pol. Lux. ii. 157, 158; who also mentions some less important measures; namely, the δόσυμ or δακτυλόδογχον or δάκτυλον, which was the same as the παλαμη; the οργανδορον, or the length of the*

* This measure was not in the Roman system. Where they wished to express the Greek span, the proper word was dodrans, that is, three quarters (of the foot).
whole hand from the wrist to the tips of the fingers; the ἀγώον or distance from the tip of the thumb to the tip of the forefinger, when extended, the lesser span; the τύχων and πυρήνη were modifications of the πύς, the τύχων being the distance from the elbow to the fingers when bent, that is, to the knuckle joints, the πυρήνη from the fingers when shut, that is, to the joints at their base. Other writers mention the κονδυλος, knuckle, as equal to two δακτύλοι.

In practical use, such a system as this is sufficient for many ordinary purposes, and every one is familiar with examples of the use of such measures in their plain physical sense. But, to make a system definite, two things are required; namely, to fix upon a precise invariable standard for the unit, or principal measure in the system, for which the foot was naturally chosen; and, secondly, to determine the precise relations which the several measures bear to the foot and to one another. The former of these points we reserve for the present, merely observing that the foot in each system was not very far from ours; the latter was accomplished according to the following plan, while, on the whole, it will be found to express, not only the relations actually existing between the parts in a well made man, especially according to the standard of the Roman foot. It is worth while also to observe the general accordance, which results from this method of invention, between the metrical systems of all nations.

The Greek and Roman systems are identical in their modes of connecting the measures which are common to the two; but, to avoid confusion, they are exhibited separately.

1. In the Greek system —

   4 digits = make a palm.
   3 palms = " a span.
   4 palms = " a foot.
   1½ spans = " a foot.
   2 spans = " a cubit.
   2½ feet = " a step.
   4 cubits = an ῥύπωδ or fathom.*
   6 feet = an ῥύπωδ or fathom.

2. In the Roman system —

   4 digits = make a palm.
   4 palms = " a foot.
   1½ feet = " a cubit.
   2½ feet = " a step.
   5 feet = " a pace.

It will be observed that in this account of the Greek and Roman systems nothing has been said of the inch. It was not a measure derived from the human body, but a subdivision which the Romans made of their foot, as they were accustomed to subdivide any unit whatever, according to the analogy of the uncial division of the As. A more complete view of the Greek and Roman measures of length, with their values, reduced to our system, will be found in the Tables appended to this work.

2. Itinerary Measures. — For the higher measures of length, although the continuity of the system was preserved by making them exact multiples of a foot, yet it is obvious that convenience would demand higher denominations, one of which would be regarded as a new unit. Nay, these higher measures may be viewed, with respect to their origin, as in some sense independent of those smaller measures, with which they were afterwards made to agree. For, just as we have seen that the smaller measures of length are taken from natural objects, so we shall find that, at an early period, the larger measures were not derived artificially from the smaller, but were taken from distances which occur in nature and in ordinary life. Thus, Homer expresses distances by the cast of a stone (II. ii. 12; and so even in later times, Thuc. v. 65, Polyb. v. 6), of a quoit (II. xxi. 431), and of a sperr (II. x. 357, xv. 358, xxiii. 529), and by the still more indefinite description, "as far as a man is heard clearly when he shouts" (Od. vi. 294, v. 400, et alibi.), and again by a standard derived from agriculture, which it is important to notice in comparison with the Roman actus (II. x. 352; see below.) Of still longer distances time was made the measure; the journey of a day, or of a day and a night, which was thus expressed, was that of a race-course, or of a day's journey, which was that of a ship; a system too frequently employed now, as well as in ancient times, to need the citation of examples for its illustration. (Comp. Ukert, Geog. d. Griech. u. Röm. vol. i. pt. 2, pp. 54, 55.)

The system of measurement by stations or posts should probably be referred to this head, as it is most likely that such distances would be fixed according to the strength of man or horse before the trouble was taken actually to measure them out. Another plan was that which Herodotus several times adopts, and which is also familiar to all ages, the description of one distance by comparing it with another, and which thus formed a universally familiar standard of reference for itinerary measurements. Whether the Olympic stadium was originally measured out precisely equal to 600 feet, or whether, having been accidentally (or at least loosely) assumed, it was found to be so nearly equal to 600 feet, that the measure derived from it was taken at exactly 600 feet, it is now impossible to determine. We think the latter more probable; but, whichever may be the truth, the point now insisted upon is not affected, namely, that when an early Greek writer expressed a distance in stadia, he did not mean to suggest to his readers the idea of so many times 600 feet, but of so many times the length of the actual objective Olympic stadium, with which they were all familiar. The corresponding feature in the Roman system furnishes an interesting illustration of the differences of national character. The military notions, which lie at the basis of so many of their institutions, are at once recognised in their mile, the thousand paces of a foot-march.

3. Land Measures. — Another distinct source of the greater measures of length is to be found in the necessity which arises at an early period in

* This word is used as being about the value of the measure, for want of an English word to express its meaning.
MENSURA.

every civilised community for determining the boundaries of land. Herodotus (ii. 169) mentions a tradition, which assigned the invention of geometry to such a necessity which arose in Egypt in the time of Scæsars. Of course this tradition is now referred to merely as an illustration, not as expressing an historical fact. As in the other cases, the origin of the system lies far back beyond the reach of history; and all that can be done is to trace, with some probability, its successive steps, as indicated by the nature of the case, by the names of the measures, and by the statements of ancient writers. Here too, as in the itinerary distances, the original unit of the system was probably not a specific number of feet, but some natural quantity, which was afterwards brought into accordance with the standard of the smaller measures. Also it is to be observed, that these measures are, from the nature of the case, measures of surface, although in practice they were often used merely as measures of length. The precise fact seems to be that the first natural measure of the sort was one of a considerable length and a very moderate breadth; that then, this measure came to be used as a measure of length alone; and then, for the measure of surface connected with it, they did not revert to the original narrow strip, but took the square of its length. This seems to follow from what the ancient writers tell us of the quadratus, which was the base of the Roman system of land measures. On this subject, or even the elaborate development of the duodecimal system with its double the jugurum, we also see the connection of the duodecimal system with the decimal.

In the corresponding part of the Greek system, the παλέθρον answers to the actus, but with just the difference between the decimal and duodecimal systems. As a measure of length, it is 100 feet (10 x 10 instead of 12 x 10); and as a measure of surface, it is the square of 100, or 10,000 square feet. The ἄρπος was the quarter of it, that is, 2500 square feet, or the square of 50 feet. A measuring rod of 10 feet, σταδίον, appears also in the Greek system, and of this the παλέθρον was the square. Also, 6 καλαμοί or 10 ὀργύων and 4 παλίσματα made one ψιθυρία or chain. This system was connected with the other by reckoning 6 plethra or 100 ὀργύων to the stadium. (Herod. ii. 149.) For a complete view of the Greek and Roman measures of length and surface, see the Tables; and, respecting the Roman land measures, compare Actus, AGRIMENSORES, DECEMPEDA, JUGERUM, and Niebuhr’s Essay On the Roman Mode of partitioning Landed Property, History of Rome, vol. ii. app. i.

4. Measures of Capacity. — The measures of capacity seem to have been arranged on a similar principle to those already noticed; that is, they were not derived by a definite process of calculation from the measures of length, but were originally nothing more than the names of different sized vessels of no very definite capacity, which, when the metrical system came to be definitively constituted, were brought into harmony, on the one hand with the measures of length, on the other with those of weight.

The question still remains, which of the three kinds of measures was the one first constructed, and the one from which the others were derived.

II. Whence were the Greek and Roman Measures derived?

In all that we have said about the origin of these measures, it has neither been stated nor implied that these measures, as definitely fixed by the precise determination of their unit, were obtained in the manner and order that has been described. All that has been said may be true, as we believe it is, and yet the question, WHAT was the foot, and WHENCE was it derived, still remains unanswered. To this question we now proceed.

Our limits quite forbid the full discussion of the various opinions which have been put forward on this subject, or even the elaborate development of that view which we believe to be the correct one; and which is, in the main, that which has been put forward by Böckh in his very careful and learned work entitled, Metrologische Untersuchung über die Einheiten und Maße des Alterthums in ihrem Zusammenhange, Berlin, 1838, 8vo, and to the principal points in which Mr. Grote assents, in his review of Böckh’s work in the Classical Museum for 1844, vol. i. p. 1. The two chief questions involved in the discussion are these: — 1. Whence were the Greek and Roman metrical systems derived? 2. In each of these
systems, which of the three kinds of measure formed the foundation, from which the other two were deduced, length, capacity, or weight?

On the first of these questions our space allows us to do little more than refer the reader to Böckh’s elaborate exposition of the opinion, in which few competent readers of his work will fail to coincide, that the basis of the Greek and Roman metrical systems was that which had prevailed from very early times among the Chaldaeans at Babylon, from which or from some common original the Egyptians derived their metrical system; and which was carried by the commerce of the Phenicians into Greece, whence it passed over into Italy. On the second question, his researches, as well as the arguments of other writers, may safely be said to have established the position that weights were determined before measures, and that measures were derived from weights.

It will be convenient here to give Böckh’s own compendium of the main results which he undertakes to establish, with Mr. Grote’s statement of the points in which he differs from Böckh. We adopt Mr. Grote’s translation of the passage, only substituting Aeginetan for Aquinician. “If” (Böckh says, iii. 4. p. 20) “we regard this relation of the weights and measures*, based upon a given weight of water which is the base of the Roman system — and if we carry the application of this water-weight backwards to the chief measures of the ancient world — we shall find a connection really and truly organic between the systems of the different people of antiquity, and we shall arrive at last at the fundamental unity (unit) of weight and measure in the Babylonian system; so that this supposition is found to be verified in all its consequences and details. To give some preliminary intimation of this — I shall show that the Grecian (or, more accurately, the Aeginetan) and the Roman pound are in the ratio of 10:9; the Aeginetan pound is half the Aeginetan mina; but the cubical measures stood normally in the ratio of the weights; and therefore the Grecian cubic foot was to the Roman as 10:9, and, as the Roman cubic foot weighs 80 pounds of rain-water, so also the Grecian cubic foot weighs 80 Grecian or Aeginetan pounds, equal to 40 Aeginetan minae. The unity (unit) of weight (in Greece) however is, not 40 minae, but 60 minae, or a talent. In the original institutions of the people of antiquity everything has its reason, and we find scarcely anything purely arbitrary; nevertheless, this unity (unit) of weight, the talent, does not coincide with the unity of measure — neither with the cubic foot, nor with any other specific cubical denomination. But the coincidence reveals itself at once, as soon as we discover that the Babylonian cubic foot, standing as it does in the ratio of 3:2 to the Grecian* cubic foot, weighs 60 Aeginetan minae (60 Babylonian minae = 1 Babylonian talent) of rain-water.” (Class. Mus. vol. i. p. 4.)

Upon this Mr. Grote remarks: “M. Böckh here promises more than his volume will be found to realise. He does, indeed, satisfactorily show that the Babylonian talent was identical with, and was the original prototype of, the Aeginetan talent, and that the standard and scale of weight was strikingly

* Namely, that between the Roman pound and the Roman amphora or quadrantal.
† By a curious misprint, Mr. Grote has German.
III. Determination of the Greek and Roman Measures.

1. Measures of length. — Before we can attempt to fix the Greek and Roman foot, we must examine the question, whether the former people (for no one pretends it of the latter) had different standards of length. We think that Ukert has satisfactorily shown that they had not different standards, but always used the Olympic stadium and the foot corresponding to it. (Ukert, Uber die Art der Griechen und Römer die Entfernungen zu bestimmen, und über das Stadium, Weimar, 1813, 8vo.; Geogr. d. Griech. u. Römer, vol. i. pt. 2, pp. 65, &c.) It is only here possible to give a brief statement of the argument.

It has been supposed by some authors that there were other stadia in use in Greece besides the Olympic. The most ancient writers never either say or hint at such a thing: but when we compare the distances between places, as stated by them almost invariably too great if estimated by the Olympic stadium, never too small. Hence the conclusion has been drawn, that the Greeks used for itinerary measurements a stade much smaller than the Olympic. Major Rennell, who analyses several of these statements, gives 505¾ feet for the value of the itinerary stade. (Geography of Herodotus, sec. 2.) It is, however, scarcely credible that these authors, some of whom expressly inform us that the stade contained 600 feet, should reckon distances by another stade, without giving any intimation of the fact; especially as they usually warn their readers when they speak of measures differing from the common standard. (Herod. ii. 3, 17, 89, 95; Plin. H. N. vi. 26, s. 30.) The real cause of the excess in the itinerary distances of the Greeks is explained by Ukert in a way which seems decisive of the question. The most ancient mode of reckoning distances among the Greeks, as among most other nations, was by the number of stadia to a day's journey. (Herod. iv. 85, 86.) It is evident that nearly all the distances given by the ancient Greek writers were computed, not measured. The uncertainties attending this mode of computation are obvious, and it is equally obvious that, as a general rule, the results would be above the truth. At sea the calculation was made according to the number of stadia which could be sailed over in a day by a good ship, in good order, and with a fair wind. Any failure in these conditions (and some such there must always have been) would increase the number of days' sail, and therefore the calculated distance when reduced to stadia. Similarly by land a day's journey was reckoned equal to the number of stadia which a good traveller (ἀρση εἰκονος) could perform in a day, which for obvious reasons would generally exceed the space passed over under ordinary circumstances. Even the Greeks themselves are not agreed as to the number of stadia in a day's journey. Herodotus (iv. 86) gives 700 stadia for the voyage of a sailing ship by day, 600 by night. Most commonly 1000 stadia were reckoned as a 24 hours' voyage, but under unfavourable circumstances scarcely 500 were performed. (Marin. Tyr. op. 

Plodem. Geogr. i. 17.) Allowance must also be made for the windings of the coast, the difficulties of the navigation, the currents of the sea, the varying skill of the seamen, and other circumstances.

A day's journey by land was reckoned at 200 or 180 stadia (Herod. iv. 101; Pausan. x. 53; Ptol. i. 9), or for an army 150 stadia. (Herod. v. 53, 54.) And here also delays would often occur. The ancients themselves differ widely in their accounts of distances, not only as compared with the true distances, but with one another, a fact which the theory of a separate itinerary stade cannot account for, but which is a natural result of their mode of reckoning, as explained above.

The following testimonies are advanced in support of the view of different stadia. Censorinus, who lived in the time of Alexander Severus, after speaking of the astronomical measurements of Eratosthenes and Pythagoras, says that by the stadium used in them we must understand "the stadium which is called Italic, of 625 feet, for there are others besides this, of different lengths, as the Olympic, which consists of 600 feet, and the Pythian, of 1000." (De Die Natali, c. 13.) This passage is evidently a complication of blunders. The "Italic stadium," unknown elsewhere, is manifestly the same as the Olympic, but reckoned in Roman feet, of which it contained 625. The "Olympic of 600 feet" is the same in Greek feet. The value given for the Pythian stadium is clearly wrong, for the Olympic race-course was the longest in Greece (as appears from the passage of Gellius quoted below), and besides Censorinus obviously confounds the extreme length of the race courses with the portion of them measured out for the race, the same name, stadium, being applied to both; for it is very possible that the former were of different lengths, though the latter never varied.

Aulus Gellius (i. 1) quotes from Plutarch to the effect that Hercules measured out the stadium at Olympia with his own feet, making it 600 feet long; and that when afterwards other stadia were established in Greece, containing the same number of feet, these were shorter than the Olympic in the proportion by which the foot of Hercules exceeded that of other men. But whatever there is of truth in this story is probably the obscure remnant of an ancient tradition respecting the existence of a standard of length greater than the common one, at some distant period: a matter which will be presently referred to.

Attempts have been made, especially by Romé de l'Ile and Gosselin, to prove the existence and to determine the lengths of different stadia from the different lengths assigned by ancient writers to a great circle of the earth. But surely it is far more just and reasonable to take these different values as a proof (among various others) that the ancients did not know the real length of a great circle, than, first assuming that they had such knowledge, to explain them as referring to different standards.

On the whole, therefore, there seems no reason to suppose that different stadia existed before the third century of the Christian era.

From this period, however, we do find varieties of the stade, the chief of which are those of 7 and 7½ to the Roman mile. (Wurm, de Pond. &c. § 56.)
The following table of supposed varieties of the stadium is from Hussey's *Ancient Weights, &c.*.

But, although the stadium and the foot connected with it were single definite measures throughout Greece, yet we find, in the Eastern countries, Babylon, Syria, and Egypt, and in some neighbouring Greek states, feet longer than the Olympic (not shorter, as Rennell's itinerary stadium would require), the origin of which is to be explained by the co-existence, in the Babylonian system, of a royal or sacred and a common foot and cubit, which were so related to one another that the royal cubit was three finger-breadths longer than the common.

(Herod. i. 178: see further under Pers.)

In proceeding to determine the Greek and Roman foot, the most convenient plan is first to fix the latter, and then to derive the former from it.

1. The Roman foot. There are five different ways of determining the length of the Roman foot. These are, 1. From ancient measures still in existence, including feet laid down on sepulchral monuments, and foot rules found in the ruins of various cities of the Roman empire; 2. From measurements of known distances along roads, both between mile stones and between places; 3. From measurements of buildings and obelisks; 4. From the contents of certain measures of capacity; and 5. From measurements of a degree on the earth's surface. (For a complete historical account of these systems, see the treatises of Wurm, Hussey, and Böckh.)

1. It might appear, at first thoughts, that ancient measures in actual existence would at once give the required information. But these measures are not found to differ among themselves. They are of two kinds, foot-measures cut upon grave-stones, and brass or iron measures intended for actual use. From the nature of the case the latter would probably be more exact than the former, and in fact the measures on the grave-stones are rudely cut, and their subdivisions are of unequal length, so that they have no pretensions to minute accuracy; but on the other hand, it would be absurd to suppose that they would have been made very far wrong. We may safely conclude that they would have about as much accuracy as a measure hastily cut on stone by a mason from the foot-rule used by him in working. Four such measures are preserved in the capitol at Rome. They are called the Statilian, Cossutian, Aebutian, and Capponian feet. They have been repeatedly measured, but unfortunately the different measurements gave different results. The brass and iron foot-rules, of which several exist, do not precisely agree in length. There was anciently a standard foot-measure kept in the capitol, called the *pes monetalis*, which was probably lost at the burning of the capitol under Vitellius or Titus.

2. The itinerary measurements are of two kinds, according as they are obtained by measuring the distance from one place to another, or the distance from one mile-stone to another on a Roman road. Both methods have the advantage of the diminution of error which always results from determining a lesser magnitude from a greater, but both are subject to uncertainty from turnings in the road, and from the improbability of the mile-stones having been laid down with minute accuracy; and two other serious objections apply to the former mode, namely, the difficulty of determining the points where the measurement began and ended, and the changes which may have taken place in the direction of the road. Both methods, however, have been tried; the former by Cassini, who measured the distance from Nimes to Narbonne, and by Riccioli and Grimaldi, who measured that between Modena and Bologna, and the latter by Cassini, between Aix and Arles.

3. The measurement of buildings is rather a verification of the value of the foot as obtained from other sources than an independent evidence. It very seldom happens that we know the number of ancient feet contained in the building measured. We have one such example in the Parthenon, which was called the *Hecatompedon* (hundred-footed, Phutarch, *Pericl. 13*, *Cata. 5*) from the width of its front; but even in this case we cannot tell exactly, till we know something of the length of the Greek foot, to what precise part of the front this measurement applies. Again, there is the obelisk in the Piazza del Popolo at Rome, and the Flaminian obelisk, the heights of which are given by Pliny (*H. N. xxxvi. 9. s. 14*). But the actual heights of these obelisks, as compared with Pliny, would give a value for the foot altogether different from that obtained from other sources. Indeed the numbers in Pliny are undoubtedly corrupt, and, as they stand, it is only the difference of height between the two that can be of any service, and even this gives a result by no means satisfactory. An ingenious emendation by Stuart would remove the difficulty; but it is obvious that a passage which requires a conjectural emendation cannot be taken as an independent authority. There is another mode of deducing the value of the foot from buildings, of the dimensions of which we have no information. The building is measured, and the length thus obtained is divided by the supposed value of the ancient foot (as derived from other evidence), and if a remainder be left, this value of the foot is corrected so that there may be no remainder. It is assumed in this process that no fractions of feet were allowed in the dimensions of the building, and also that the plans were worked out with the most minute exactness, both of which assumptions are not very probable. In fact these measurements have given different values for the foot. "Modern architects," says Mr. Hussey, "do not allow that such calculations could be depended on in modern buildings, for determining the true length of the measures by which they were planned. Nor are the dimensions of the parts of buildings of the middle ages in our own country, as Gothic churches and cathedrals, found to agree exactly, so as to give whole numbers of the standard measure." On the other hand, these measurements, like those on roads, have the advantage of involving, in all probability, very small errors, and of the diminution of the error by division.
4. Villalpando and Eisenschmidt have attempted to deduce the length of the Roman foot from the solid content of the congius of Vespasian. [CONGIUS.] Since the congius was the eighth of the amphora, and the content of the amphora was a cubic foot [QUADRANTAL], the process is to multiply the content of the congius by 8, and extract the cube root of the product. But this process is very uncertain. First, there is a doubt about the content of the congius itself [PONDERA], then it is hardly to be supposed that the content of the congius was actually adapted with perfect accuracy to the length of the foot, and lastly, there is a further risk of error in reversing this process.

5. Some French geographers, and especially M. Gosselin, have supposed that the ancient astronomers were acquainted with the dimensions of a great circle of the earth, and that they founded the results of M. Gosselin's calculations agree well with those derived from other sources. But we need better evidence than this agreement to convince us that both the Greeks and Romans, at a very early period, formed a system of such scientific principles; and it is incredible that, if such a system had really existed, there should be no allusion to it in any of the ancient sources.

VI. The Greek foot. We have no ancient measures by which to determine the length of the Greek foot; but we have the general testimony of ancient writers that it was to the Roman in the ratio of 25 : 24. The Greek stadium, which contained 600 Greek feet, is said by Roman writers to contain 625 Roman feet; and also a Roman mile, or 5000 feet, was reckoned equal to 8 Greek stadia, or 4800 feet; both of these calculations give the above ratio of 25 : 24. (Plin. H.N. ii. 23. s. 214; 108. s. 112; Colum. v. 1; Polyb. iii. 30; Strab. vii. p. 322.) If therefore the Roman foot was 9'068 of the English, the Greek foot was equal to 10'1126 English feet, or 12'135 inches.

This value is confirmed by the measurement of the Parthenon. "Stuart" (Antiq. Ath. ii. p. 8), says Mr. Hussey, "measured the upper step of the base of the Parthenon, which is the platform on which the pillars stand, and is exactly that part of the building where we should expect that the measure would have been taken, if the name Heptompedon was really given it on account of its dimensions. He found the width of the front to be 101 feet 1-7 inches, the length of the side 227 feet 7-65 inches; and since these two quantities are very nearly in the ratio of 100 to 225, he inferred that the two sides really contained these two numbers of feet. From this he calculated the value of the foot, from the front 12'137 inches, from the side 12'138 inches: of which the greatest exceeds the value given above by only 0'003 of an inch." Other measurements of the Parthenon and of other buildings at Athens tend to the same result.

Strabo, however (l.c.) quotes from Polybius a calculation which would make the Greek and Roman foot equal, but it is perfectly clear that there is a mistake in this statement. Plutarch again (C. Gracch. 7) says expressly that the mile is a little less than 8 stadia, which would give a rather smaller ratio than that of 24 : 25 for the ratio of the Roman to the Greek foot. It is on the authority of this passage that Böckh gives the value above mentioned for the Roman foot. If, according to the supposed explanation, a slight disturbance took place in the Roman foot, this would account for the difference. But perhaps we ought not to consider this solitary passage of sufficient weight to influence the calculation.

As the general result, we may take the Greek foot at 12'135 English inches, that is, rather more than 1-10th of an inch greater than the English foot. For the other measures see the Tables.

2. Measures of Surface. — These are easily derived from the measures of length. See the Tables.

3. Measures of Capacity. — The determination of the measures of capacity is so inseparably connected with the question of the settlement of the Greek and Roman weights, that it is better to speak of them under PONDERA, to which article also the reader is referred for the literature of the whole subject.

4. Angular and Circular Measures. — The chief, and almost the only importance of this part of the subject is its application to the measurement of circles and degrees on the earth's surface, and to the measures of time. The former class of measures will be treated of in the Dictionary of

MENSURA. 757
MERCENARII.

Greek and Roman Geography. Respecting the measures of time, see Annexis, Hora, &c. [P. S.]

MENSTRUUM. [Servus.]

MENUSIS (μένυσις). [Ecclesla, p. 443, a.]

MERCENARII (μεσενάριοι, μεσενάρφοι), more commonly Ξένοι, mercenary troops. At an early period there was no such thing as a standing army, or mercenary force, in the Greek republics. The former would have excited jealousy, lest it should oppress the people, as the chosen hand did at Argos (Pausan. II. 20, § 2; Thucyd. vi. 81); and for the latter there was rarely any occasion. The citizens of every state formed a national militia for the defence of their country, and were bound to serve for a certain period at their own expense, the heavy-armed infantry, the lower classes as light-armed troops. Foreigners were rarely employed; the Carians, Cretans, and Arcadians, who served commonly as mercenaries, at an early period. (Xenoph. Hellen. iii. 4, § 15, iv. 3, § 15, v. 2, § 21.) The Greeks who followed Cyrus in his expedition against Artaxerxes, were mercenaries. (Xenoph. Anab. i. 3, § 21.) So were the famous peltastae of Chabrias and Iphicrates. (Harpoc. s. v. Σεναρεν ός Κόπας; Aristoph., Plut. 173.) The Athenians won a victory over Onophrion, and Phyllus, carried on the sacred war by the aid of mercenaries, paid out of the treasuries of the Delphian temple. (Diod. xvi. 30, &c.) But higher pay and richer plunder were in general to be found in Asia, where the disturbed state of the empire created continued occasions for the services of Greek auxiliaries, whose superior discipline and courage were felt and acknowledged by the Barbarians. Even the Spartans sent their king Agesilaus into Egypt, for the sake of obtaining Persian gold. Afterwards we find a large body of Greeks serving under Darius against Alexander. It is proper here to notice the evil consequences that resulted from this employment of mercenaries, especially to Athens, which employed them more than any other Greek state. It might be expected that the facility of hiring trained soldiers, whose experience gave them great advantages, would lead to the desire of military service by the citizens, such was the case. The Athenian citizens stayed at home and became enervated and corrupted by the love of ease and pleasure; while the conduct of wars, carried on for their benefit, was entrusted to men over whom they had little control. Even the general, though commonly an Athenian, was compelled frequently to comply with the humours, or follow the example of his troops. To conciliate them, or to pay them their arrears, he might be driven to commit acts of plunder and outrage upon the friends and allies of Athens, which thus found enemies where she least expected. It was not unusual for the generals to engage in enterprises foreign to the purposes for which they were sent out, and unconnected with the interests of their country, whose resources they wasted, while they sought their own advantage. The expeditions of Chabrias and Iphikrates to Egypt are examples of this. But the most signal example is the conduct of the adventurer Charidemos. Upon all these matters we may refer the reader more particularly to Demosthenes, whose comments upon the disastrous policy pursued by his countrymen were no less just than they were wise and statesmanlike. (Demosth. Philop. i. p. 46, c. Aristoc. pp. 666, 671; πρις τους αστεφ. της τραπ. p. 1232, &c.; Athen. xii. 43; Thirwall, Hist. of Greece, vol. v. p. 210; Wachsmuth, vol. i. pt. ii. p. 509.) The Romans at a comparatively early time introduced pay was greatly promoted by the distribution of Persian money among the belligerents. (Thucyd. viii. 5, 29, 45; Xenoph. Hellen. i. 5, § 3.) At the close of the Peloponnesian war, large numbers of men who had been accustomed to live by war were thrown out of employment; many were in exile or discontented with the state of things at home; all such persons were eager to engage in a foreign service. Hence there arose in Greece a body of men who made arms their profession, and cared little on which side they fought, provided there were a suitable prospect of gaining distinction or emolument. Conon engaged mercenaries with Persian money. Agesilaus encouraged the practice, and the Spartans allowed the members of their confederacy to furnish money instead of men for the same purpose. (Xenoph. Hellen. iii. 4, § 15, iv. 3, § 15, v. 2, § 21.) The Persians who followed Cyrus in his expedition against Artaxerxes, were mercenaries. (Xenoph. Anab. i. 3, § 21.) So were the famous peltastae of Chabrias and Iphicrates. (Harpoc. s. v. Ψεναρεν ός Κόπας; Aristoph., Plut. 173.) The Athenians won a victory over Onophrion, and Phyllus, carried on the sacred war by the aid of mercenaries, paid out of the treasuries of the Delphian temple. (Diod. xvi. 30, &c.) But higher pay and richer plunder were in general to be found in Asia, where the disturbed state of the empire created continued occasions for the services of Greek auxiliaries, whose superior discipline and courage were felt and acknowledged by the Barbarians. Even the Spartans sent their king Agesilaus into Egypt, for the sake of obtaining Persian gold. Afterwards we find a large body of Greeks serving under Darius against Alexander. It is proper here to notice the evil consequences that resulted from this employment of mercenaries, especially to Athens, which employed them more than any other Greek state. It might be expected that the facility of hiring trained soldiers, whose experience gave them great advantages, would lead to the desire of military service by the citizens, such was the case. The Athenian citizens stayed at home and became enervated and corrupted by the love of ease and pleasure; while the conduct of wars, carried on for their benefit, was entrusted to men over whom they had little control. Even the general, though commonly an Athenian, was compelled frequently to comply with the humours, or follow the example of his troops. To conciliate them, or to pay them their arrears, he might be driven to commit acts of plunder and outrage upon the friends and allies of Athens, which thus found enemies where she least expected. It was not unusual for the generals to engage in enterprises foreign to the purposes for which they were sent out, and unconnected with the interests of their country, whose resources they wasted, while they sought their own advantage. The expeditions of Chabrias and Iphikrates to Egypt are examples of this. But the most signal example is the conduct of the adventurer Charidemos. Upon all these matters we may refer the reader more particularly to Demosthenes, whose comments upon the disastrous policy pursued by his countrymen were no less just than they were wise and statesmanlike. (Demosth. Philop. i. p. 46, c. Aristoc. pp. 666, 671; πρις τους αστεφ. της τραπ. p. 1232, &c.; Athen. xii. 43; Thirwall, Hist. of Greece, vol. v. p. 210; Wachsmuth, vol. i. pt. ii. p. 509.) The Romans at a comparatively early time introduced
the practice of paying their own citizens for their service in the army [STIPENDIUM], but mercenary troops, in the usual acceptation of the term, were unknown among them till at a very late period. [C. R. K.]

MERENDA. [CORNA, p. 306, b.]
MÉRIDIÀNI. [GLADIATORIÀ, p. 575, b.]

METALLUM. [TITEGES, p. 499, e.]
METAGEI'TNIA (μετάγειτνια), a festival celebrated by the Attic demos Melite, in honour of Apollo Metageitnios. The chief solemnities consisted in offering sacrifices, and the festival was believed to commemorate the emigration of Diomis. (Plut. de Esquil. p. 601, b.; comp. Suidas, and Harpocrat. s. v. Metagei'tniv.) [L. S.]

METALLUM. (μετάλλον). The Greek word originally signified a πέτρα or κατέβας, where anything is sought for by digging, hence a mine, and hence any mineral found in a mine, especially metal. In Latin, the word means both a mine and metal, the latter sense, however, preponderating in use. The object of this article is to give a brief general view of the acquaintance which the Greeks and Romans had with the metals, and the uses to which they applied them.

The metals which have been more or less known from the earliest period of which we have any information are those which were long distinguished as the seven principal metals, namely, gold, silver, copper, tin, iron, lead, and mercury. (Some very interesting information, which does not fall within the province of this work, may be read in Beckmann's History of Inventions, by Johnston, vol. ii, pp. 23, &c. 4th ed.) If to this list we add the compound of gold and silver called electrum, the compound of copper and tin called χαλκός and aes (bronze), and steel, we have, in all probability, a complete list of the metals known to the Greeks and Romans, with the exception of zinc, which they do not seem to have known as a metal, but only in its ores, and of brass, which they regarded as a sort of bronze. (See below.)

The early Greeks were no doubt chiefly indebted for a supply of the various metals to the commerce of the Phoenicians, who procured them principally from Arabia and Spain, and tin from our own island and the East. In the Homeric poems we find an allusion to this traffic as one in which the Greeks of the western coast were already engaged; where Athena personates Metes, the ruler of the Taphians, carrying shining iron to Temesa in Cyprus, to exchange it for copper. (Od. i. 164, comp. Nitzsch's note.) The Homeric poems furnish ample proofs of how much more plentiful copper and tin were then than now, and of the common material of arms, instruments, and vessels of various sorts (aes); the latter is mentioned much more rarely, and is distinguished by an epithet implying the difficulty of working it (πολυκύστος, II. vi. 48), and its adjective is frequently used metaphorically to express the greatest stubbornness (Od. v. 191, &c.; see Seiler and Jacobitz, s. v. σίδήρος and σίδηρες). Hesiod carried us back to a period when iron was unknown. (Op. et Di. 150, 151):

and though the period thus described is mythical, yet the idea of it was clearly connected with the belief that iron had been the last discovered of all the metals. (See Höckh, Creta, vol. i. p. 260; Millin, Mineralogie Homérique.) The importance of hardening the copper used for arms and armour, and so forth, is a presumption in favour of the knowledge and use of tin; but we have also definite mention of this metal (κασασίτερος) several times in the Iliad; and it seems not improbable than, as the Molossians had another metal. (See Liddell and Scott, and Seiler and Jacobitz, s. v.; Beckmann, vol. ii. p. 206, fol.) The art of hardening copper by the admixture of tin was known before the historical period. (Comp. AES.) With respect to steel, it is a much disputed point whether this metal is the proper sense of the word κέτμας in Homer (II. xii. 24, 35, Od. vii. 87) and Hesiod (Sent. 143), but at all events it is highly probable that this is the meaning of δάδεμας in Hesiod (Sent. 251, Theog. 161); see the lexicographers, s. v., the commentators on Homer and Hesiod, in ll., and Beckmann, vol. ii. p. 324). It would appear from the manner in which Asclepius refers to the Chalybes, taken in connection with the traditions respecting the early intercourse of the Greeks with the shores of the Baltic, that the iron and steel works of that people were known at a very early period, and that it was from them chiefly that the Greeks procured their iron and steel. (Aesch. Prom. 720; Apollon. Rhod. ii. 1000; Xen. Anab. v. 5 § 1; Ritter, Erdkunde, vol. ii. p. 719; Höckh, Creta, vol. i. p. 294.) Enough has already been said respecting the early knowledge of the precious metals, separately and in combination, under ARGENTUM, AURUM, and ELECTRUM.

In drawing inferences, however, from Homer's allusions to these and the other materials of the useful and fine arts, we must be on our guard not to make the poet's imagination our standard of their actual abundance. (See further, concerning the real or supposed knowledge of metals and metallurgy in the earliest times, Plin. H. N. vii. 56, s. 57.)

If we turn from the metals themselves to the art of working them, still taking the poems of Homer and Hesiod for our guide, we find the Greeks of that early period perfectly acquainted with the processes of smelting the metal from the ore and of forging heated masses into the required shapes, by the aid of the hammer and tongs. It may, indeed, be doubted whether the χάφειον, into which Hephaestus throws the materials of the shield of Achilles, and which are worked by the blast of twenty pairs of bellows (φωάς) are smelting-furnaces or mere smith's forges (II. xviii. 470), but the former sense seems to be required in the passage of Hesiod. (Theog. 383.) Both Homer and Hesiod refer to the smith's workshop (χάλκειον) as a place of shelter in which the poor resorted for its warmth. (Od. xviii. 328, Op. et Di. 491.)

The whole of Homer's description of the workshop of Hephaestus deserves careful study (II. xviii. 565, &c.). The smith's instruments were the anvil (δικων) with the block on which it rested (ακμοῖς), the tongs (πυραγράπ), and the hammer (μακρότρη, σφέρα, H. N. l. c., Od. iii. 433-435). [INCUS, FORCPS, MALLEUS.] The arts of casting metals into moulds, and of welding, or even of soldering pieces of metal together, were as yet unknown. In large works, hammered plates, iron or copper, were used, as mechanical fastenings, nails, pins, rivets, cramps, or dovetails (δεσμοί, χλω, περίφρα, κέτρα), and specimens of this sort of work in the bronze statues of...
of the earliest period were still to be seen in the time of Pausanias (I. xi. 634, xviii. 379; Paus. x. 16. § 1). The art of embossing, or fastening pieces of one metal on to the surface of another (ἐμβασμός, τύχων), is referred to several times in Homer (I. xxvi. 35; Lobeck, ad Nis. Phys. 440, &c.). Gilding was commonly practised: one interesting example is the gilding of the horns of an ox about to be sacrificed. (Od. iii. 425, &c.) This passage furnishes a striking instance of the use of words connected with χάλκωσις for working in any kind of metal: thus, the artificer is called by the generic term, χαλκεύς (432), as well as by the specific name, χρυσόχως (425), and his tools are the ὀξὺ χαλκεύαι, ύδωρ περι χρυσοῦ εἰργαζέτο (vv. 433, 435). Lastly, the image used to describe the hissing of the burning stake when plunged in the eye of Polyphemus, shows an acquaintance with the process of dipping red-hot iron in water to harden it. (Od. xi. 591, comp. Soph. Ai. 720.)

The advances made in the art of metallurgy in subsequent times are chiefly connected with the improvements in the art of statuary. The method of working, as described in Homer, seems to have long prevailed, namely, by beating out lumps of the material into the form proposed, and afterwards fitting the pieces together by means of pins or keys. It was called σφυρήλατον, from σφύρα, a hammer. Pausanias (iii. 17, § 6) describes this process in speaking of a very ancient statue of Jupiter at Sparta, the work of Learchus of Rhegium. With respect to its supposed antiquity, Pausanias can only mean that it was very ancient, and of the archaic style of art. The term σφυρήλατον is used by Diodorus (ii. 9) in describing a very ancient golden statue at Babylon. Pliny gives us the name of its inventor, Glaucus of Chios, according to whom the art of casting in bronze and in iron was invented by Rhoeacus and Theodorus of Samos, who probably lived in the sixth and fifth centuries before our era. (Paus. iii. 12. § 8, viii. 14 § 5; Plin. H. N. xxxv. 12. s. 43; Dict. of Biog. s. v. Rhoeacus, Theodorus.)

The ancients used something answering the purpose of a solder for fastening the different pieces of metal together; but it is difficult to determine whether the term κόλλασις means a solder or only a species of glue. Pausanias distinctly speaks of it as something different from nails or cramps, and gives us the name of its inventor, Glauceus of Chios, who appears to have lived earlier than the Samian artists just referred to (Herod. i. 25; Paus. x. 16. § 1; Plut. de Def. Or. 47, p. 436; Dict. of Biog. s. v.).

Casting was commonly practised: one interesting example is the gilding of the horns of an ox about to be sacrificed. (Od. iii. 425, &c.)

The modern practice of welding pieces of metal together seems to be a Roman invention, and is recorded by Pausanias (x. 16. § 1). The art of embossing, or fastening pieces of metal together; but it is difficult to determine the mode in which this was effected by the ancients, than the statements of Pausanias and Pliny, according to whom the art of casting in bronze and in iron was invented by Rhoeacus and Theodorus of Samos, who probably lived in the sixth and fifth centuries before our era. (Paus. iii. 12. § 8, viii. 14 § 5; Plin. H. N. xxxv. 12. s. 43; Dict. of Biog. s. v. Rhoeacus, Theodorus.)

The ancients used something answering the purpose of a solder for fastening the different pieces of metal together; but it is difficult to determine whether the term κόλλασις means a solder or only a species of glue. Pausanias distinctly speaks of it as something different from nails or cramps, and gives us the name of its inventor, Glauceus of Chios, who appears to have lived earlier than the Samian artists just referred to (Herod. i. 25; Paus. x. 16. § 1; Plut. de Def. Or. 47, p. 436; Dict. of Biog. s. v.).

Casting was commonly practised: one interesting example is the gilding of the horns of an ox about to be sacrificed. (Od. iii. 425, &c.)

The modern practice of welding pieces of metal together seems to have been altogether unknown to the ancients.

Respecting the supply and use of metals in the historical period, little remains to be added to what has been said under Αἰές, Αργετόν, Αἴρυμ, Καλέλατον, Ελέκτρον, Στατουραίον, &c. Iron was found chiefly in Laconia and on the shores of the Black Sea, and was brought especially from Sinope. Stephanus Byzantinus, who mentions this fact, states the purposes for which the two sorts of iron were considered respectively better fitted (s. v. Αἰές Ελέκτρον). The iron which constitutes the sword and metal-work is treated of by Pliny in the thirty-third and thirty-fourth books of his Historia Naturalis.

One point not yet noticed is the question, whether the ancients possessed a knowledge of zine. That they rarely if ever used it as an alloy of copper is proved by the analysis of existing specimens of their bronze [Αἰές]; but that they were absolutely ignorant of it can easily be disproved. One of the most important passages on the subject is in Strabo (xiii. p. 610), who states that "in the neighbourhood of Andeira (in the Troas) there is a certain stone which, on being burnt, becomes iron; then, on being smelted with a certain earth, it distils ψευδάργυρος, and with the addition of copper it becomes what is called κράμα (which may mean
either an alloy in general, or a particular kind of alloy), which some call δρέκαλος; and ψευδάργυρος is also found about Tmolus." In all probability the stone here mentioned is the common zinc ore called calamine, which Pliny and other writers call calamine, zinc ore, and δρέκαλος brass. For a further discussion of this subject, into which we have no space to enter, the reader is referred to Beckmann, vol. ii. pp. 52, &c.

Respecting the use of metals for money, see NUMMUS.

Only a few words are necessary on the word metallum in its other sense. Nearly all that is known on the subject of the Greek mines, the mode of working them, and the revenues derived from them is contained in Böckh's Essay on the Silver Mines of Laurion appended to his Public Economy of Athens. Respecting the Roman mines, see VETICULAE.

[CASTRA, p. 214, a.]

METEOCRÉS. [CASTRA,

METEOR (μέτωκος), is the name by which, at Athens and in other Greek states, the resident aliens were designated, and these must be distinguished from such strangers as made only a transitory stay in a place, for Harpocrates (s. v.) expressly mentions as a characteristic of a μέτωκος, that he resided permanently in the place. No city of Greece perhaps had such a number of resident aliens as Athens, as none afforded to strangers greater advantages and conveniences, or a more agreeable mode of living. In the census instituted by Demetrius Phalereus (309 B. C.), the number of resident aliens at Athens was 10,000, in which number women and children were probably not included. (Athens vi. p. 272.) These aliens were persons from all parts of Greece, as well as from barbarous countries, such as Lydia, Phrygians, and Syrians, or Attic freedmen [LIBERTUS (GREEK)], and these people had chosen Athens as their adoptive country, either on account of its resources for amusement and instruction, or on account of the facilities it afforded for carrying on mercantile business. The latter class of persons seems to have been by far the most numerous. The jealousy with which the citizens of the ancient Greek republics kept their body clear of intruders, is also manifest in their regulations concerning aliens. However long they might have resided in Athens, they were always regarded as strangers, whence they are sometimes called ξένοι, and to remind them of their position they had on some occasions to perform certain degrading services to the Athenian citizens. These services [HYDRAPIHORIA] were however in all probability not intended to hurt the feelings of the aliens, but were simply acts symbolical of their relation to the citizens. Aliens were not allowed to acquire landed property in the state they had chosen for their residence, and were consequently obliged to live in hired houses or apartments (Demosth. pro Phorm. p. 946; Xen. de Vectig. ii. 2; Aristot. Oecon. ii. 2, 3; compare Böckh's Publ. Econom. i. § 24), and hence the letting of houses was a subject of much speculation and profit at Athens. As the aliens did not constitute a part of the state, and were yet in constant intercourse and commerce with its members, every alien was obliged to select a citizen for his patron (προστάτης), who was not only the mediator between them and the state, through whom alone they could transact any legal business whether private or public, but was at the same time answerable (ἐγγυτής) to the state for the conduct of his client. (Etymol. M. s. v. Ἀρριστασίος.) On the other hand, however, the state allowed the aliens to carry on all kinds of industry and commerce under the protection of the law; in fact at Athens nearly all business was in the hands of aliens, who on this account lived for the most part in the Peiraeus. (Xen. de Vectig. c. 2, de Rep. Ath. i. 12.)

Each family of aliens, whether they availed themselves of the privilege of carrying on any mercantile business or not, had to pay an annual tax (μετωκίων or ξενίας) of twelve drachmae, or if the head of the family was a widow, of only six drachmae. (Böckh, Prim. Econom. iii. § 7; Isaeus ap. Harpocrates s. v. Μετωκίων.) If aliens did not pay this tax, or if they assumed the right of citizens, and probably also in case they refused to select a patron, they not only forfeited the protection of the state, but were sold as slaves. [ΑΡΡΙΣΤΟΣΙΟΥ ΔΙΚΗ.] In some cases, however, though they are of rare occurrence, aliens without having the isopoliety, might become exempt from the μετωκίων (Ἀστείεα μετωκίων) as well as from other obligations. (Demosth. c. Aristocrat. p. 691; Plut. Vit. dec. Orait. p. 842; Demosth. c. Aristog. p. 787; Suidas, s. v. Μετωκίων.) Extraordinary taxes and liturgies (εἰσφοράι and λειτουργίες) devolved upon aliens no less than upon citizens (Demosth. c. Androt. p. 612), though there must have been a difference between the liturgies performed by citizens and those performed by aliens. In what this difference consisted is nowhere expressly mentioned, but we have reason to believe that with the exception of the trierarchy and gymnasichy, all other liturgies might devolve upon aliens, though perhaps only on certain occasions, as the choregia at the festival of the Lenaia. (Schol. ad Aristoph. Plat. 584; compare Böckh, Publ. Econom. iv. § 10.) The extraordinary taxes (εἰσφοράι) which aliens had to pay, seem also in some degree to have differed from those paid by citizens; and it is clear from Demosthenes (c. Androt. p. 609 and 612), that they were taxed higher than citizens of the same census. The aliens were also obliged, like citizens, to serve in the regular armies and in the fleet, both abroad and at home, for the defence of the city. (Xen. de Vectig. i. c.; Thucyd. i. 143, i. 16.) Respecting these μετωκίων who had obtained the λιγοκείμενα, see CIVITAS (GREEK). The heirs of a μετωκίων who died in Attica, were under the jurisdiction of the polemarch. (Demosth. c. Steph. ii. p. 1135.)

The preceding account of the condition of the aliens at Athens applies with very few modifications to most other parts of Greece. (Compare Petius, Legg. Att. ii. 5. p. 246, &c.; F. A. Wolf, Proleg. ad Leptin. p. lxvi, &c.; Hermann, Polit. Ant. § 115.)

METEÓPA. [L. S.]

METEÔPA (μετόπη), the name applied to each of the spaces between the triglyphs in the frieze of the Doric order, and by metonymy to the sculptured ornament with which those spaces were filled up. To this word was also attached the original significance of the parts the triglyphs represent the ends of the cross-beams or joists which rested on the architrave; the beda of these beams were called ὀπά, and hence the spaces between them μετόπα. (Vitr. iv. 2. § 4.) Originally they
were left open; next they were filled up with plain slabs, as in the propylaeum at Eleusis, and many other buildings, and lastly, but still at an early period, they were adorned with sculptures either in low or high relief. The earliest existing examples of sculpture metopes are probably those of the middle temple on the acropolis of Selinus, which had metopes only on its east front, and in which the style of the sculptures is so rude as almost to remind one of some Mexican works of art. The date is probably between 620 and 580 b.c. The next in antiquity are those from the middle temple on the eastern side of the lower city of Selinus, in which there is a marked improvement, but which still belong to the archaic style. Their date is in the former half of the 6th century B.C. A still further progress may be observed in the metopes of the southern temple on the eastern hill, which belongs to the second half of the same century. In these the ground is tufa and the figures marble; the others are entirely of tufa. (See figures of the Selinuntine metopes in the Atlas zu Kugler's Kunstgeschichte, pt. ii. pl. 5, figs. 1—4; comp. Müllcr, Archäol. d. Kunst, § 90, n. 2.) Thus these Selinuntine metopes, with the works of the epoch of perfect art, namely the metopes of the temple of Theseus and of the Parthenon, form an interesting series of illustrations of the progress of Grecian sculpture. The metopes from the Parthenon, now in the British Museum, are too well known to need description; but it is important to notice the marked difference in their style; some show evident traces of the archaic school, while others are worthy of the hand of Phidias himself. In the later orders the metopes are not seen, the whole frieze being brought to one surface. This is the case even in some ancient specimens of the Doric order. (Comp. COLUMNA, and the plates of the order in Maucl, Architekton. Ord.-måsum.)

METRETES (μετρητής) or AMPHORA METERETES (ἀμφόρεις μετρητῆς, the standard amphora), was the principal Greek liquid measure. It contained 12 choes, 46 cheniicles, 72 sextarii (sercuri), and 144 cotyla. It was 3-4ths of the medium, the chief dry measure. The Attic metretes was half as large again as the Roman amphora quadrans, and contained a little less than 9 gallons. (See the Tables.) If we take, according to Böckh’s views, the Greek cubic foot as equal to 53⅓ Roman sextarii, then, since the Attic metretes contained 72 sextarii, we have the ratio of the metretes to the cubic foot as 72 : 53⅓ or as 27 : 100, or as 1 3/5 to 1, or nearly as 4 : 3.

The Aeginetan metretes was to the cubic foot (still following Böckh’s calculations) in the ratio of 9 : 4, and to the Attic metretes in the ratio of 5 : 3, so that the Aeginetan measure was 2-5ths greater than the Attic; and since the Attic contained 72 sextarii, the Aeginetan contained 120, which is precisely the content assigned by Cleopatra, Galen, and Didymus, to the Babylonian, Syrian, or Antiochen metretes, which belonged to the same system as the Eginetan. (Mensura, PondoRA.)

The Macedonian metretes is inferred to have been much smaller than the Attic, from the circumstance mentioned by Aristotle (Hist. Anim. viii. 9) of an elephant’s drinking 14 of them at once; but this is doubtful.

P. S.

MILLIARE.

METHRONOMI (μετρονομοί) were officers at Athens belonging to that class which we might term police-officers. They were, like all officers of this kind, appointed by lot. Their number is stated differently; some say that there were fifteen (ten for the Peiraeeus, and five for the city); some say twenty-four (fifteen for the Peiraeeus, and nine for the city); and others state that there were only ten, five for the Peiraeeus and five for the city. (Harpocret., Suidas, Phot. and Lex. Seg. s. v. Metronomoi.) Böckh (Publ. Econ. i. § 9, n. 193) would alter all these passages of the grammarians so as to make them say, that the whole number of metronomi was fifteen, and that ten were for the city and five for the Peiraeeus, because the sitophylaces were distributed in the same manner. But there does not appear sufficient ground for such a bold alteration, and it seems at any rate probable that the number of these officers, as the grammarians state, was necessarily greater in the port-town than in the city, for there must have been more business for them in the Peiraeeus than at Athens, which was not the case with the sitophylaces. The duties of the metronomi were to watch that the weights and measures used by tradesmen and merchants should have the size and weight prescribed by law, and either to punish offenders or to receive complaints against them, for the real nature of the jurisdiction of the metronomi is not known. (Meier and Schömann, Att. Proc. p. 95, &c.) (L. S.)

MILLIARES, MILLIAR'RIUM, or MILLE PASSUUM (μίλιον), the Roman mile, consisted of 1000 paces (passus) of 5 feet each, and was therefore = 5000 feet. Taking the Roman foot at 11·6946 English inches, the Roman mile would be 1618 English yards, or 142 yards less than the English statute mile. By another calculation, in which the foot is taken at 11·62 inches, the mile would be a little more than 1614 yards. (Mensor.) The number of Roman miles in a degree of a large circle of the earth is a very little more than 75. The Roman mile contained 8 Greek stadia. The most common term for the mile is milles passuum, or only the initials M. P.; sometimes the word passuum is omitted. (Cic. ad Att. iii. 4; Sallust, Jug. c. 114.)

The mile stones along the Roman roads were called millaria. They were also called lapides; thus we have ad tertium lapidem (or without the word lapidem) for 3 miles from Rome, for Rome is to be understood as the starting-point when no other place is mentioned. Sometimes we have in full ab Urbe, or a Roma. (Plio. H. N. xxxii. 12, s. 56; Varro, R. R. iii. 2.) The laying down of the mile-stones along the Roman roads is commonly ascribed to C. Gracchus, on the authority of a passage in Plutarch (Gracch. 6, 7), which only proves that Gracchus erected mile-stones on the roads which he made or repaired, without at all implying that the system had never been used before. There are passages in the historians, where mile-stones are spoken of as if they had existed much earlier; but such passages are not decisive; they may be exempli gratia, or auctory anticipations. (Mensor, PondorA.) A more important testimony is that of Polybius (iii. 39), who expressly states that, in his time, that part of the high road from Spain to Italy, which lay in Gaul, was provided with mile-stones.

The system was brought to perfection by Au-
Augustus, probably in connection with that measurement of the roads of the empire, which was set on foot by Julius Caesar, and the results of which are recorded in the so-called Antoinia Itinerarium. Augustus set up a gilt marble pillar in the forum at Rome, to mark the central point from which the great roads diverged to the several gates of Rome (Dion Cass. liv. 8 ; Plut. Gall. 24). It was called the Milliarium Aureum, and its position is defined as being in capite Romani Fusi (Plin. ii. N. 5. s. 9; sub aedem Saturni (Tac. Hist. i. 27). Some remains of it still exist, close to the Arch of Septimius Severus, consisting of a round base and a piece of fine marble 4½ feet in diameter, the whole being about 10 feet high. (Platner u. Bunsen, Beschreib. d. Stadt Rom, vol. iii. pt. 1. p. 73; pt. 2. p. 102; Platner u. Urichs, Beschreib. Rom., p. 20.) It seems that the marble pillar was covered, on each of its faces, with tablets of gilt bronze; but whether the information engraved upon them consisted simply of a list of the chief places on each road, with their distances, or whether there was a sort of map of each set of roads with the distances marked upon them, is now unknown. It is also uncertain whether the miles began to be reckoned from the pillar itself, or from the city gates. (See De la Nauze, in the Mémo. de l'Acad. des Insér. vol. xxvii. p. 388, &c.; Ideler, in the Abhandl. d. Berl. Acad. 1812, pp. 134, 164.)

The Milliarium Aureum at Byzantium, erected by Constantine in imitation of that of Augustus, was a large building in the forum Augusteum, near the church of S. Sophia. (See Buchholz, in the Zeitschrift für Alterthums- senzaichn. 1845, No. 100, &c.)

London also had its Milliarium Aureum, a fragment of which still remains, namely, the celebrated London Stone, which may be seen affixed to the wall of St. Swithin's Church in Cannon Street.

From this example it may be inferred that the chief city of each province of the empire had its Milliarium Aureum. The ordinary millia were along the roads were blocks or pillars of stone, inscribed with some or all of the following points of information: (1) the distance which was expressed by a number, with or without M.P. prefixed; (2) the places between which the road extended; (3) the name of the constructor of the road, and of the emperor to whose honour the work was dedicated. Several of these inscriptions remain, and are collected in the following works: Gruter, C. i. pp. cit. &c.; Muratori, Thes. vol. i. pp. 447, &c.; Orelli, Insér. Lat. Sel. Nos. 1067, 5330, 4877; and especially Bergler, Hist. des grands Chemins des Rom. vol. ii. pp. 757, &c., Bruxelles, 1789, 4to.

On some of these mile-stones, which have been found in Gaul, the distances are marked, not only in Roman miles, but also in Gallic Leagues, a measure somewhat greater than the Roman mile. (For some further details respecting these extant mile-stones, see the article Milliarium in the Real-Encyclop. d. Class. Alterth., to which the foregoing article is considerably indebted.)

MIMUS (μίμος) is the name by which, in Greece and at Rome, a species of the drama was designated, though the Roman mimus differed essentially from the Greek μίμος.

The Greek mimus seems to have originated among the Greeks of Sicily and southern Italy, and to have consisted originally of extemporary representations or imitations of ridiculous occurrences of common life at certain festivals, like the Spartan deiculaea. At a later period these rude representations acquired a more artistic form, which was brought to a high degree of perfection by Sophron of Syracuse (about 420 B.C.); he wrote his pieces in the popular dialect of S. Doriones and a kind of rhymical prose. (Quintil. i. 8.) The mimus of Sophron are designated as μίμος στοιχαί, which were probably of a more serious and ethical character, and μίμος γέλιον, in which ridiculous buffoonery preponderated. Such mimus remained after the time of Sophron a favourite amusement of the Greeks, and Philiscia of Magnesia, a contemporary of Augustus, was a celebrated actor in them. (See Müller, Dor. iv. 7. § 5.)

Among the Romans the word mimus was applied to a species of dramatic plays as well as to the persons who acted in them. It is certain that the Romans did not derive their mimus from the Greeks in southern Italy, but that it was of native growth. The Greek mimus were written in prose, and the name μίμος was never applied to an actor, but if used of a person it signified one who made grimaces. The Roman mimus were imitations of foolish and mostly indecent and obscene occurrences (Ovid, Trist. ii. 515; Valer. Max. ii. 6. § 7, x. 11), and scarcely differed from comedy except in consisting more of gestures and mimicry than of spoken dialogue, which was not the case in the Greek mimus. The dialogue was, indeed, not excluded from the Roman mimus, but was only interspersed in various parts of the representation, while the mimus acting continued along with it and uninterruptedly from the beginning to the end of a piece. At Rome such mimus seem originally to have been exhibited at funerals, where one or more persons (μιμι) represented in a burlesque manner the life of the deceased. If there were several mimii, one of them, or their leader, was called archimimus. (Suet. Vespas. 19; Gruter, Insér. 1089. 6.)

During the latter period of the republic such farces were also represented in theatres; but it appears that they did not attain any high degree of perfection before the time of Caesar, for it is not until then that writers of mimus are mentioned: Cn. Matius, Decius Laberius, and Publ. Syrus were the most distinguished among them. (Gellius, xv. 25; Suet. Calig. 39; Cic. ad Fam. xii. 18.) These coarse and indecent performances, of which Sulla was very fond, had greater charms for the Romans than the regular drama: hence they were not only performed on the stage, but even at receptions in the houses of private persons. On the stage they were performed as farces after tragedies, and during the play they generally supplanted the place of the Atellanae. The exact time, however, when the Atellanae yielded to the mimus is uncertain. It was peculiar to the actors in these mimus, neither to wear masks, nor the cithurnus, nor the soccus, whence they are sometimes called planipedes. (Dion. iii. 487; Gellius, i. 11; Macrobi. Sat. i. 1.) As the mimus contained scenes taken from common life, such as exhibited its most striking features, their authors are sometimes called biologi or ethologi (Cic. pro Rofir. 12. de Orat. ii. 59), and the works themselves were distinguished for their richness in moral sentiments. That distinguished and living persons were sometimes exposed to ridicule in these mimus, is clear.
MISTHOUS DIKE.

MINA. [Talentum.] MINOR. [Curator; Infans.] MINOR. [APOTITTO.] MIRIMILLO'NES. [Gladiatores, p. 575, b.] MJS'SIO. [Exercitus, p. 499, b.] MJS'SIO. [Gladiatores, p. 575, a.] MISTHO'PHOIRI (μισθόφοροι). [Mercurian.] MISTHOSES DIKE (μισθοσες δικη), also called μισθοσες ολοκ δικη, is the action brought against a guardian for either having neglected to make profitable use of the property of his ward, or for having made no use of it at all. Use might be made of such property either by letting it, if it consisted of lands or houses, or by putting it out to interest, if it consisted of capital. The δικη μισθοσες must have been of a twofold character, either public or private, that is, it might be brought against the guardian, during the minority of his ward, by any person who took an interest in the welfare of the orphan, or it was brought by the orphan himself after his coming of age. Complaints of this kind were brought before the first archon. In cases where the guardian would not or could not occupy himself with the administration of the property of his ward, he might request the archon to let the whole substance of his ward's property to the highest bidder, provided the testator had not expressly forbidden this mode of acting in his will. (Demosth. c. Aphob. p. 837; compare 853, 857; Lys. c. Dioqitt. p. 506.) The letting of such property took place by auction, and probably in the presence of a court of justice, for we read that the court decided in cases where objections were made against the terms of letting the property. (Isaeus, de Philocteta. hered. p. 141, &c.) The person who took the property had to pay an annual percentage for the right of using it, and this percentage was added to or deducted from the estate. If one man alone was unwilling to take the whole property on such conditions, it might be divided and let to several persons separately. (Isaeus, de Meaelc. hered. p. 13.) The tenant or tenants of the property of an orphan had to give security (αποστολαμα) for it, and to mortgage (αποστολαμαται) his own estate, and the archon mortgaged the property of the orphan, whether it was done by the guardian himself or by the archon, was μισθοπουλιον, and those who took it were said μισθοπολισιοντος δικη (ολοκ here signifies the whole substance of the property). The tenants of the estate of an orphan had the right and perhaps the obligation to protect it against any other person. (Isaeus, de Hagn. hered. p. 289.) It is not clear what resource was open to an orphan against a tenant who did not fulfil his obligations, but it is probable, that if any disputes arose, the guardian or the archon alone were answerable and had to procure justice to the orphan. (Meier and Schömann, Att. Proc. pp. 535, &c.; Bonn, 2d ed.) [L.S.] MISTHOUS DIKE (μισθος δικη or μισθοσες δικη) is the name of a private action which might be brought against persons who refused to pay for services which had been performed for them, provided it had been agreed that they should be paid for; and, secondly, against persons who either had not or had imperfectly performed the services for which they were paid. It made no difference whether the service was performed by physical or intellectual powers, as teachers, sophists, actors, authors, and similar persons with paid and unpaid literary work (Bückh, Pult. Econ. i. § 21), and it is natural to suppose that these persons, like others, made agreements, either written or by word of mouth, respecting the remuneration to be given to them. In case either party thought themselves wronged they might bring the μισθος δικη against the other. Protagoras had written a book called δικη οτρερ μισθος, and an instance is recorded of an action of this kind in which he demanded payment of one of his pupils. (Diogy. Laer. ix. 8. § 3.) It is not improbable that his work contained an account of this lawsuit. (Meier and Schömann, Att. Proc. p. 554, &c.) [L.S.]

MITRA (μιτρα), signified in general a band of any kind, and was used specifically to indicate, 1. A belt or girdle worn by warriors round the waist. [Zonas.] 2. A broad band of cloth worn round the head, to which the name of anomad was sometimes given. [Coma, p. 329, b.] 3. In later times, a band worn round the bosom by women, which the Greeks usually called αρχερειωσ, and the Romans faxeapectoralis or srophiwm. (Becker, Charicles, vol. ii. p. 320.) [Fascia; Strophium.] MIXTA ACTIO... [Actio.] MIA (μία). [Talentum.] MNE'MATA, MNE'MEIA (μηνιματα, μηνιμεια). [FUNUS, p. 556, a.] MNOIA (μονοια). [Cosmi.] MOCHLUS (μοχλος). [Janua.] MODIOLUS, the diminutive of MODIUS, is used for various kinds of small vessels; among others, for the buckets on the edge of the tympanum, by which water was raised (Vitruv. x. 10), and generally for any kind of bucket or small cistern in hydraulic machinery. (2d ed.) [Cat. P. R. 20.] for the box of a wheel (Pini. H. N. ix. 4. s. 3; Vitrrev. x. 14); and for other kinds of sockets (Vitrrev. x. 18). [P. S.]

MODIUS. The principal dry measure of the Romans, was equal to one-third of the amphora (Volusius Macaianus, Festus, Priscian, ap. Wurm, § 67), and was therefore equal to nearly two gallons English. It contained 16 sextarii, 32 heminae, 64 quartarii, 128 acetabula, and 192 syphii. Compared with the Greek dry measure, it was 1-6th of the Mydianus. Its contents weighed, according to Pliny, 20 pounds of Greek wheat, which was the lightest known at Rome. Farmers made use of vessels holding 3 and 10 modii (Column. xii. 18. § 5). The third part of the jugerum was sometimes called modius. [P. S.]

MODULUS (μοδολος), the standard measure used in determining the parts of an architectural order. It was originally the lower diameter of the column; but Vitruvius takes, in the Doric order, the lower semidiameter for the module, retaining the whole diameter in the other orders. Modern architects use the semidiameter in all the orders. The system of dividing the module into minutes was not used by the ancient architects, who merely used such fractional parts of it as were convenient. The absolute length of the module

MODULUS.
depends, of course, on the dimensions of the edifice: thus Vitruvius directs that, in a Doric tetra-
style portico, 1-20th, and in a hexastyle 1-44th of the whole width should be taken as the module,
if diastyle, or 1-23rd and 1-35th respectively, if styaste. (Vitruv. i. 2, iv. 3, v. 9). [P.S.]  
MOENIA. [MURUS.]  
MOICHIEIAS GRAPHE. [ADULTERIUM.]  
MOLA (μύλος), a mill. All mills were an-
ciently made of stone, the kind used being a vol-
canic trachyte or porous lava (γρίττες, Plin. H. N.  
xxxvi. 30 ; silices, Virg. & Mort. 23—27; pumiceas,
Ovid. Fast. vi. 310), such as that which is now  
obtained for the same purpose at Mayen and  
other parts of the Eifel in Rhenish Prussia.  
This species of stone is admirably adapted for the pur-
pose, because it is both hard and cavernous, so  
that, as it gradually wears away, it still presents  
an infinity of cutting surfaces.  

Every mill consisted of two essential parts, the  
upper mill-stone, which was moveable (στάττίλια,  
ὑπος, τὸ ἐπίμιλιον, Deut. xxiv. 6), and the lower,
which was fixed and by much the larger of the two.  
Hence a mill is sometimes called molæ in the  
plural. The mills mentioned by ancient authors  
are the following: —  

I. The hand-mill, or quern, called mola manu-
oria, verrassilia, or trautillia. (Plin. H. N. xxxvi.
29 ; Gell. iii. 3 ; Cato, de Re Rust. 10.)  

The islanders of the Archipelago use in the  
present day a mill, which consists of two flat round  
stones about two feet in diameter. The upper  
millstone, seen in its place on the right  
hand of the woodcut, approaches the form of an  

hour-glass, consisting of two hollow cones, jointed

together at the apex, and provided at this point  
with a socket, by which the upper stone was sus-
pended upon the iron pivot, at the same time  
touching on all sides the lower stone, and with  
which it was intended to revolve. The upper  
stone was surrounded at its narrowest part with  
a strong band of iron; and two bars of wood were  
suspended into square holes, one of which appears  
in the figure, and were used to turn the upper stone.

The uppermost of the two hollow cones served the  
purpose of a hopper. The corn with which it  
was filled, gradually fell through the neck of the upper  
stone upon the summit of the lower, and, as it pro-
ceded down the cone, was ground into flour by  
the friction of the two rough surfaces, and fell on  
all sides of the base of the cone into a channel  
formed for its reception. The mill here represented  
is five or six feet high.  

The hand-mills were worked among the Greeks  
and Romans by slaves. Their pistrinium was con-
sequently proverbial as a place of painful and de-
grading labour; and this toil was imposed prima-
cially on women. (Hom. Od. vii. 104 ; Exod. xi.
5 ; Matt. xxiv. 41.)  

In every large establishment the hand-mills were  
numerous in proportion to the extent of the family.  
Thus in the palace of Ulysses there were twelve,
each turned by a separate female, who was obliged  
to grind every day the fixed quantity of corn before  
she was permitted to cease from her labour. (Od.
xx. 105—119 ; compare Cato, de Re Rust. 56.)  

II. The cattle-mill, mola asinaria (Cato, de Re
Rust. 10 ; Matt. xviii. 6) in which human labour  
was supplied by the use of an ass or some other  
animal. (Ovid, Fast. vi. 316.) The animal devoted  
to this labour was blind-folded. (Apul. Met. ix.)  
The mill did not differ in its construction from the  
larger kinds of hand-mill.  

III. The water-mill (mola aquaria, διακατηρία).  
The first water-mill, of which any record is pre-
served, was connected with the palace of Mithri-
dates in Pontus. (Strabo, xii. 3. § 30.) That  
water-mills were used at Rome is manifest from  
the description of them by Vitruvius (x. 5. ed.
Schneider). A cogged wheel, attached to the axis  
of the water wheel, turned another which was  
attached to the axis of the upper mill-stone: the  
corn to be ground fell between the stones out of a  
hopper (συμβάλλεις), which was fixed above  
them. (See also Brunck, Anal. l. 119 ; Pallad.  
de Re Rust. i. 42.) Ausonius, as quoted below,
mentions their existence on the Ruwer near Treves;  
and Venantius Fortunatus, describing a castle  
built in the sixth century on the banks of the Mo-
selle, makes distinct mention of a tail-race, by  
which "the tortuous stream is conducted in a  
straight channel." (Poem. iii. 10.)  

IV. The floating-mill. When Rome was be-
sieged by the Goths, A. D. 536, and when the stop-
page of the aqueducts rendered it impossible to use  
the public corn-mills (οἱ τῇς πόλεως μύλωνες) in the  
Janiculum, so that the citizens were in danger  
of starvation, Belisarius supplied their place by  
ereciting floating-mills upon the Tiber. Two boats  
being moored at the distance of two feet from each  
other, a water-wheel, suspended on its axis between  
them, was turned by the force of the stream, and  
put in motion the stones for grinding the corn, by  
which the lives of the besieged were preserved.  
(Procop. de Bello Gothic. i. 15.)  

V. The saw-mill. Ausonius mentions mills
situated on some of the streams falling into the Moselle, and used for cutting marble into slabs. (Mosella, 362, 363.)

VI. The pepper-mill. A mill for grinding pepper, made of boxwood, is mentioned by Petronius (molae buxae pipier trivit, Sat. 74.) [J. Y.]

MONA’RCHIA (μοναρχία), a general name for any form of government in which the supreme functions of political administration are in the hands of a single person. The term μοναρχία is applied to such governments, whether they are hereditary or elective, legal or usurped. To its commonest application, it is equivalent to basileia, whether absolute or limited. But the rule of an aesynetes or a tyrant would equally be called a μοναρχία. (Arist. Pol. iii. 9, 10, iv. 8; Plato, Polit. p. 291, c. e. p. 302, d. c.) Hence Plutarch uses it to express the Latin dictatura. It is by a somewhat rhetorical use of the word that it is applied now and then to the διοικ. (Eurip. Suppl. 552; Arist. Pol. iv. 4.) For a more detailed examination of the subject the reader is referred to the article IARX, ARCHON, TYPANNUS, PVTANUS, ARGENTUM, AURUM, NUMMI, TAGIUM, TACUS, Pel. Polit.

MONETA, the mint or the place where money was coined. The mint of Rome was a building on the Capitoline, and attached to the temple of Juno Moneta, as the aerarium was to the temple of Saturn. (Liv. vi. 20.) This temple was vowed by Camillus, and dedicated in 344 B.C. on the spot where the house of M. Manlius Capitolinus had once been standing. (Liv. vii. 28; Ov. Fast. vi. 183.) Some writers describe the art of coining as having been known to the Italians from the earliest times, and assign its invention to Janus (Macrob. Sat. I. 7; Athen. xv. p. 692); but this and similar notions are nothing more than fables. The statement of Pliny (H. N. xxxiii. 3), who assigns the invention of coining to Servius Tullius, has somewhat more of an historical aspect; and he derives the name pecunia from the circumstance that the coins were originally marked with the image of some animal. The earliest Roman coins were of aes [AES], and not struck, but cast in a mould. (See the representation of such a mould on page 545.) The moulds, however, were sometimes without any figure and merely shaped the metal, and in this case, the image as well as the name of the gens, &c., were struck upon it by means of a hammer upon an anvil on which the form was fixed. As the strokes of the hammer were not always equal, one coin though equal in value with another might differ from it in thickness and shape. Greater equality was produced at the time when the Romans began to strike their money; but when this custom became general, is not known. Respecting the changes which were introduced at Rome at various times in the coining see AES, AS, ARGENTUM, AURUM, and NUMMUS.

In the early times of the republic we do not read of any officers who were charged with the superintendence of the mint; and respecting the introduction of such officers we have but a very vague statement of Pomponius. (Dig. 1. tit. 2, § 30.) Their name was triumviri monetales, and Niesbhr (Hist. of Rome, iii. p. 646) thinks that they were introduced at the time when the Romans first began to coin silver, i.e. 269 B.C. The triumviri monetales had the whole superintendence of the mint, and of the money that was coined in it. A great number of coins, both of gold and silver, is signed by these triumvirs in the following manner:—III. VIR. AAAFF, that is, triumvir aureo, argento, aere flando feriendio (Cic. de Leg. iii. 3; P. Manut. ad Cic. ad Fam. vii. 13) or III. VIR. A.F.P. that is, ad pecuniam feriendam. Other coins on the other hand do not bear the signature of a triumvir monetalis, but the inscription CUR. X. PL. S. C. i.e. curator denarium flandorum ex senatu consulto, or are signed by praetors, aediles, and quaestors. Caesar not only increased the number of the triumviri monetales to four; whence some coins of his time bear the signature IIII. VIR. A.F.P., but entrusted certain slaves of his own with the superintendence of the mint. (Suet. Cesar. 76; compare Cic. Philipp. vii. 1.) The whole regulation and management of the Roman mint and its officers during the time of the republic is involved in very great obscurity.

The coining of money at Rome was not a privilege belonging exclusively to the state, but from the coins still extant we must infer that every Roman citizen had the right to have his own gold and silver coined in the public mint, and under the superintendence of its officers. The individual or gens who had their metal coined, stated its name as well as the value of the coin. This was a kind of guarantee to the public, and nearly all the coins of the republican period coined by a gens or an individual bear a mark stating their value. As long as the republic itself used pure silver and gold, bad money does not seem to have been coined by any one; but when, in 90 B.C., the tribune Livius Drusus suggested the expediency of mixing the silver which was to be coined with one-eighth of copper, a temptation to forgery was given to the people, and it appears henceforth to have occurred frequently. As early as the year 86 B.C. forgery of moneta was carried to such an extent, that no one was sure whether the money he possessed was genuine or false, and the praetor M. Marius Gratidianus saw the necessity of interfering. (Cic. de Off. iii. 20.) He is said to have discovered a means of testing money and of distinguishing the good from the bad denarii. (Plin. H. N. xxxiii.) It has been stated above, that probably every
Roman citizen had the right to have his gold and silver coined, but none had the right to put his own image upon a coin, and not even Sulla ventured to act contrary to this custom. The coins apparently of the republican period with the portraits of individuals, were, according to Eckhel, coined at a later time, and by the descendants of those persons whose portraits are given. Caesar was the first to whom this privilege was granted, and his example was followed by many others, as we see from the coins of Sext. Pompeius. The emperors assumed the right to put either their own images or those of members of their families upon their coins. From the time of Augustus, the triumphviri, generally speaking, no longer put their names on any coin, and it became the exclusive privilege of the emperor to coin silver and gold. The senate entrusted with the administration of the aerarium retained only the right of coined copper, whereas almost all copper coins of this period are marked with S. C. or EX S. C. But this lasted only till the time of Galienus, when the right of coining all money became the exclusive privilege of the emperors. As, however, the vast extent of the empire rendered more than one mint necessary, we find that, in several provinces, such as Gaul and Spain, Roman money was coined under the superintendence of quaestors or proconsuls. Roman colonies and provinces now gradually ceased to coin their own money. In the western parts of the empire, this must have taken place during the first century of our era, but in the East the Roman money did not become universal till after the time of Galienus. From the time of the emperor Aurelian, a great number of cities of the empire possessed mints in which Roman money was coined, and during the latter period of the empire the superintendents of mints are called procurators or praepositi monetae. The persons who were employed as workmen in a mint were called monetarii. Their number at Rome appears to have been very great during the latter period of the empire, for in the reign of Aurelian they nearly produced a most dangerous rebellion. (Aurd. Vict. de Caeis. 35; Vopisc. Aurd. 38.) They seem generally to have been freedmen. (Murt. Inscript. 985. p. 5.)

In Greece every free and independent city had the right to coin its own money. Sparta and Byzantium are said to have only coined iron money (Pollux, vii. 106), but no ancient iron coin has ever been found. Respecting the time when money was first coined in Greece, see Argentum and Nummus. The Greek term for money was νόμισμα, from νόμος, because the determination of its value was fixed by law or contract. (Aristot. Ethic. v. 8.)

The mint at Athens was called ἄργυροκόπεων. [Argyrocopeon.] We do not hear of any officers connected with the management or the superintendence of the Athenian mint. How far the right of coining money was a privilege of the central government of Attica is unknown. But the extant coins show that at least some demes of Attica had the right of coining, and it is probable that the government of Athens only watched over the weight and the purity of the metal, and that the people in their assembly had the right of regulating everything concerning the coining of money. (Aristoph. Eccles. 810, &c.) The Attic gold and silver coins were always of very pure metal, and we have only one instance in which the state at a time of great distress used bad metal. This was in the archonship of Antigones and Callias, B.C. 407 and 406. (Aristoph. Ran. 673, with the Schol., and 678.) Individuals who coined bad money were punished with death. (Demosth. c. Lept. p. 508; Nomismatós Diaphorás Dirh.) The place where money was coined is always indicated on Greek coins; either the name of the place is stated, or some symbolical representation of the place, as the owl on Athenian and a peacock on Samian coins. These symbols are generally of a religious nature, or connected with the worship of the gods or heroes.

For further information on this subject see Eckhel, Doctrina Numorum Veterum, and especially the Prolegomena generalia in vol. i.; Dureau de la Malle, Économie Politique des Rouains.

MONETA, 767

MONILE (ὀψαος), a necklace. Necklaces were worn by both sexes among the most polished of those nations which the Greeks called barbarous, especially the Indians, the Egyptians, and the Persians. [Armilla.] Greek and Roman females adopted them more particularly as a bridal ornament. (Lucan, ii. 361; Claud. de vi. cons. Honor. 527.)

The simplest kind of necklace was the monila lacocatum, or head necklace (Virg. Aen. i. 637; Lamprid. Al. Ser. 41), which consisted of berries, small spheres of glass, amethyst, &c., strung together. This is very commonly shown in ancient paintings. (See woodcut, p. 136.) The head of Minerva at page 566, exhibits a frequent modification of the head necklace, a row of drops hanging below the beads. These drops, when worn, arrange themselves upon the neck like rays proceeding from a centre. To this class of necklaces belongs one in the Egyptian collection of the British Museum (see the annexed woodcut), in which small golden lizards alternate with the drops. The figure in the
woodcut immediately underneath this exhibits the central portion of a very ancient and exquisitely wrought necklace, which was found at S. Agatha, near Naples, in the castle called Greek Daily. It has 71 pendants. Above them is a band consisting of several rows of the close chain-work, which we now call Venetian. [CATENA.] We also give here the central portions, exhibiting the patterns of three splendid gold necklaces, purchased from the Prince of Canina for the British Museum. These were found in Etruscan tombs. The ornaments consist of circles, lozenges, rosettes, ivy-leaves, and hippocampi. A heart depends from the centre of one of the necklaces.

The necklace was sometimes made to resemble a serpent, coiled about the neck of the wearer, as was the case with that given as a nuptial present by Venus to Harmonia, which was ornamented in so elaborate a manner, that Nonnus devotes 50 lines of his Dionysiaca (v. 125, &c.) to its description. This same necklace afterwards appears in the mythology as the biret by which Eriphyle was tempted to betray her husband. (Apollodor. iii. 4. § 2, iii. 6. §§ 2—6 ; Diod. iv. 65, v. 49 ; Serv. in Aen. vi. 445.)

The beauty and splendour, as well as the value of necklaces, were enhanced by the insertion of pearls and precious stones, which were strung together by means of linen thread, silk, or wires and links of gold. For this purpose emeralds, or other stones of a greenish hue (smaragdi), were often employed (virides gemmae, Juv. vi. 363). Amber necklaces are mentioned in the Odyssey (xv. 459, xviii. 295). Some account of the various kinds of neck, there was sometimes a second or even a third vol. ii. p. 129.)

as dedicated offerings, upon the statues of Minerva, and this was in accordance with the description of Aen.

pearls and precious stones, which were strung to stones of a greenish hue employed or clasps for fastening the necklace behind the neck were also various, and sometimes neatly and ingeniously contrived. Besides a band encircling the neck, there was sometimes a second or even a third row of ornaments, which hung lower down, passing over the breast. (Hom. Hymn. ii. in Ven. 11 ; longa monilia, Ovid. Met. x. 264 ; Böttiger, Sabina, vol. ii. p. 129.)

Very valuable necklaces were sometimes placed, as dedicated offerings, upon the statues of Minerva, Venus, and other goddesses (Sueton. Galb. 18), and this was in accordance with the description of their attire given by the poets. (Hom. Hymn. i. in Ven. 68.) Horses and other favourite animals were adorned with splendid necklaces (taresse, Virg. Aen. vii. 278 ; gemmata monilia, Ovid. Met. x. 113 ; Claudian, Epig. xxxxi. 9 ; A. Gell. v. 5). [TORQUES.]

MONUMENTUM. [Furnus, p. 561, a.]

MORA. The fact of an obligatio not being discharged at the time when it is due, is followed by important consequences, which either may depend on the nature of the contract, or may depend on rules of positive law. After such delay the creditor is empowered to use all legal means to obtain satisfaction for his demand: he may bring his action against his debtor or against those who have become securities for him, and, in the case of pledge, he may sell the thing and pay himself out of the proceeds of the sale. For particular cases there are particular provisions: for instance, the purchaser of a thing after receiving it, must pay interest on the purchase-money, if there is delay in paying it after the time fixed for payment. (Dig. 18. tit. 1. s. 13. § 20.) The rule is the same as to debts due to the Fiscus, if they are not paid when they are due. If a colonus was behind in payment of his rent for two years, the owner (locator) might eject him (Dig. 19. tit. 2. s. 54. § 1) ; and a man lost the right to his emphyteusis, if he delayed the payment of what was due (canon) for three years.

These were cases of delay in which there was simply a non-fulfilment of the obligatio at the proper time; and the term Mora is sometimes applied to such cases. But that which is properly Mora is when there is delay on the part of him who owes a duty, and culpa can be imputed to him. Some modern writers are of opinion that all delay in a person discharging an obligatio is Mora, except there be some impediment which is created by causes beyond the debtor's control. But there are many reasons for the opinion that Mora in its proper sense always implied some culpa on the part of the debtor. This is proved by the general rule as to the necessity of interpellatio or demand of the creditor (si interpellatus opportuno loco non solverit, quod apud judicem examinabatur); by the rules about excusationes a mora, which only have a meaning on the supposition that real mora is not always to be imputed; besides, there may be delay in the discharge of an obligatio. That this is the true meaning of Mora is also shown by the terms used with reference to it (per eum stetit, per eum factum est quominus, &c.). This view is confirmed also by the rule that in every case of Mora the particular circumstances are to be considered, a rule which plainly implies that the bare fact of delay is not necessary to constitute Mora. In a passage of Papinian (Dig. 12. tit. 1. s. 5) the doctrine that bare delay does not constitute legal Mora is clearly expressed.

When Mora could be legally imputed to a man, he was liable to loss in many cases when he otherwise would not be liable: as if a man was bound to give a thing and it was lost or destroyed, he was to bear the loss, if the fault was his, that is, if real culpa mora could be imputed to him. (Dig. 12. tit. 1. s. 5.) In cases where a man did not pay money when he ought, he was liable to pay interest if legal mora could be imputed to him. In bona fide contractus interest (usurae) was due if there was legal mora. (Vangerow, Pandekt. d. p. 148 ; Wolff, System, i. § 96, &c. ; Dig. 32. tit. 1.)

MORA. [Exercitus, p. 483.]

MORTARIUM. [PLUM (Plin. H. N. xviii. 3 ; xxxiii. 26), (δαλιον : ὑδη, Schol. in Hes. Op. et Dies, 421 ; ὑδη, apparently from the root of ὑερ, to strike), a mortar.

Before the invention of mills [Mola] corn was pounded and rubbed in mortars (pistum), and hence the place for making bread, or the bakehouse, was called pistrinum. (Serv. in Virg. Aen. i. 179.) Also long after the introduction of mills this was an indispensable article of domestic furniture. (Plaut. Aul. i. 2. 17 ; Cato, de Re Rust. 74 —76 ; Colum. de Re Rust. xii. 55.) Hesiod (l. c.), enumerating the wooden utensils necessary to a farmer, directs him to cut a mortar three feet, and a pestle (δισερον, κοσάνων, pistillum) three cubits long. Both of these were evidently to be made from straight portions of the trunks or branches of trees, and the thicker and shorter of them was to be hollowed. They might then be used in the
manner represented in a painting on the tomb of Remeses III. at Thebes (see woodcut, left-hand figure taken from Wilkinson, vol. ii. p. 383); for there is no reason to doubt that the Egyptians and the Greeks fashioned and used their mortars in the same manner. (See also Wilkinson, vol. iii. p. 181, showing three stone mortars with metal pestles.) In these paintings we may observe the thickening of the pestle at both ends, and that two men pound in one mortar, raising their pestles alternately as is still the practice in Egypt. Pliny (H. N. xxxvi. 43) mentions the various kinds of stone selected for making mortars, according to the purposes to which they were intended to serve. Those used in pharmacy were sometimes made, as he says, "of Egyptian alabaster." The annexed woodcut shows the forms of two preserved in the Egyptian collection of the British Museum, which exactly answer to this description, being made of that material. They do not exceed three inches in height; the dotted lines mark the cavity within each. The woodcut also shows a mortar and pestle, made of baked white clay, which were discovered, a. d. 1831, among numerous specimens of Roman pottery in making the northern approaches to London-bridge (Archaeologia, vol. xxiv. p. 199, plate 44).

Besides the uses already mentioned, the mortar was employed in pounding charcoal, rubbing it with glue, in order to make black paint (atramentum, Vitruv. vii. 10. ed. Schneider); in making plaster for the walls of apartments (Plin. H. N. xxiv. 55); in mixing spices and fragrant herbs in triturating cinnabar to obtain mercury from it (H. N. xxxvii. 70); Brunck, med. iii. 51); and in metallurgy, as in triturating cinnabar to obtain mercury from it by sublimation. (Plin. H. N. xxxii. 41, xxxiv. 22.)

**MUNYCHIA.**

Besides the uses already mentioned, the mortar was employed in pounding charcoal, rubbing it with glue, in order to make black paint (atramentum, Vitruv. vii. 10. ed. Schneider); in making plaster for the walls of apartments (Plin. H. N. xxxvi. 55); in mixing spices and fragrant herbs in triturating cinnabar to obtain mercury from it by sublimation. (Plin. H. N. xxxii. 41, xxxiv. 22.)

MUNUS. [Gladiatores, p. 574, a.]

MUNYCIA (μούνυχια), a festival celebrated in honour of Artemis Munychia. Plutarch (de Glor. Ath. p. 549, b.) says that it was instituted to commemorate the victory over the Persians at Salamis, and that it was held every year on the sixteenth of Munychian. (Compare Suidas and Harpocrt. s. v. Μούνυχιά.) The sacrifices which were offered to the goddess on this day consisted of cakes called ἄμφωφατρες, either because at this season the full moon was seen in the west at the moment the sun rose in the east, or, as is more probable, and also confirmed by most authorities, because these cakes were adorned all round with burning candles. (Athen. xiv. p. 645; Suidas, s. v. Ἀνάστατος: Hezych. and Etymol. Mag. s. v. Αμφώφατρας.) Eustathius (ad Ilid, xviii.) says that these cakes were made of cheese. [L. S.]

MURALIS CORONA. [Corona.]

MUREX. [Triulbus.]

MURIES. [Yestales.]

MURRINIA VASA, or MURREA VASA, were first introduced into Rome by Pompey, who dedicated cups of this kind to Jupiter Capitolinus. (Plin. H. N. xxxvii. 7.) Their value was very great. (Sen. de Benef. vii. 9, Epist. 119; Martian, iii. 82. 25; Dig. 33. tit. 10. s. 3, § 4.) Pliny (l. c.) states that 70 talents were given for one holding three sextarii, and speaks of a murrhine trulla, which cost 300 talents. Nero gave even 300 talents for a cupis or drinking cup.

Pliny (xxxvii. 8) says that these murrhine vessels came from the East, principally from places within the Parthian empire, and chiefly from Carmania. He describes them as made of a substance formed by a moisture thickened in the earth by heat, and says that they were chiefly valued on account of their variety of colours. Modern writers differ much respecting the material of which they were composed. Some think that they were variegated glass, and others that they were made of onyx, since that stone presents a variety of colours; but the latter conjecture is overthrown by a passage of Lampridius (Helioth. 32), who speaks of onyx and murrhine vases. Most recent writers, however, are inclined to think that they were true Chinese porcelain, and quote in support of their opinion the words of Propertius (iv. 5. 26): —

"Murræaque in Parthis poca eca fist." (Sen. de Benef. vii. 9, Epist. 119; Martian, iii. 82. 25; Dig. 33. tit. 10. s. 3, § 4.) Pliny (l. c.) states that 70 talents were given for one holding three sextarii, and speaks of a murrhine trulla, which cost 300 talents. Nero gave even 300 talents for a cupis or drinking cup.

This opinion would be rendered still more probable if we could place dependence on the statement of Sir W. Gell (Pompeiana, vol. i. pp. 98, 99), "that the porcelain of the East was called Mirra di Smyrna to as late a date as 1555." (Becker, Galles, vol. i. p. 143.)

MURUS, MOENIA (Σεις), the wall of a city, in contradistinction to PARIES (Σεις), the wall of a house, and MAEONIA, a boundary wall. Both the Latin and Greek words appear to contain, as a part of their root meaning, the idea of a firm, strong wall; and they are nearly always used for walls of stone or some other massive construction. Murus and Σεις are also used for the outer wall of a large building.

We find cities surrounded by massive walls at the earliest periods of Greek and Roman history, of which we have any records. Homer speaks of the chief cities of the Argive kingdom as "the Parthenon," and "Mycenae the well-built city" (II. ii. 559, 569), not only thus, as in other passages, proving the common use of such structures in the Homeric period, but also attesting the great antiquity of those identical gigantic walls which still stand at Tiryns and Mycenae, and other cities of Greece and Italy. In Ephesus, in...
MURUS.

Etruria, and in Central Italy, especially in the valleys at the foot of the Apennines on their western side, we find numerous remains of walls, which are alike, inasmuch as they are composed of immense blocks of stones put together without cement of any kind, but which differ from one another in the mode of their construction. Three principal species can be clearly distinguished:—

1. That in which the masses of stone are of irregular shape and are put together without any attempt to fit them into one another, the interstices being loosely filled in with smaller stones; as in the walls of the citadel of Tiryns, a portion of which is shown in the following engraving: —

Another specimen of the buildings at Tiryns, of much more regular construction, may be seen at p. 125.

2. In other cases we find the blocks still of irregular polygonal shapes, but of a construction which shows a considerable advance upon the former. The stones are no longer unhewn (ἀφυγολ ἄθοιο), but their sides are sufficiently smoothed to make each fit accurately into the angles between the others, and their faces are cut so as to give the whole wall a tolerably smooth surface. Examples of this sort of work are very common in Etruria. The engraving is taken from the walls of Larissa in Argolis.

3. In the third species, the blocks are laid in horizontal courses, more or less regular (sometimes indeed so irregular, that none of the horizontal joints are continuous), and with vertical joints either perpendicular or oblique, and with all the joints more or less accurately fitted. The walls of Mycenae present one of the ruder examples of this sort of structure; and the following engraving of the "Lion Gate," of that fortress (so called from the rudely sculptured figures of lions) shows also the manner in which the gates in these three species of walls were built, by supporting an immense block of stone, for the lintel, upon two others, for jambs, the latter inclining inwards, so as to give more space than if they were upright. A very large number of interesting examples of these constructions will be found engraved in some of the works presently referred to. We have only space for these three characteristic specimens, one of each class. Neither is it here possible, or at all necessary, to discuss the opinions of ancient writers, most of whom were content with the popular legend which assigned these works to the Cyclopes, nor the theories of modern scholars and antiquarians, who (with some of the ancients) have generally referred them to the Pelasgians. The principal conclusions to which Mr. Bunbury has come, from a thorough examination of the whole subject, may be safely regarded as correct; namely, that while in such works as the walls of Tiryns we have undoubtedly the earliest examples of mural architecture, it is quite a fallacy to lay down the general principle, that the unhewn, the polygonal, the more irregular and the more regular rectangular constructions, always indicate successive steps in the progress of the art; and that it is also erroneous to assign these works to any one people or to any one period; that, while such massive structures would of course be built by people comparatively ignorant of the art of stone-cutting or of the tools proper for it, they might be and were also erected in later times simply on account of their adaptation to their purpose, and from the motive of saving unnecessary labour; and that the difference between the polygonal and rectangular structures is generally to be ascribed not to a difference in the skill of the workmen, but to the different physical characters of the materials they employed,—the one sort of structure being usually of a species of limestone, which easily splits into polygonal blocks, and the other a sandstone, the natural cleavage of which is horizontal. (Bunbury, Cyclopaean Remains in Central Italy, in the Classical Museum, 1845, vol. ii. pp. 147, &c.; Müller, Archäol. d. Kunst, §§ 45, 166, and the works there quoted; Stieglitz, Archäol. d. Baukunst, vol. i. pp. 95—98; Hirt, Gesch. d. Baukunst, vol. i. pp. 195, &c., and plate vii. from which the foregoing cuts are taken; Atlas zu Kugler's Kunstgeschichte, Pt. ii. Pl. 1; Gottling in the Rhein. Mus. 1843, vol. iv. pp. 321, 480, and in the Archäologische Zeitung, No. 26; Pompeii, vol. i. c. 4, with several woodcuts of walls; Abeken, Mittelausf. vor den Zeiten römischer Herrschaft, a most important work, with numerous engravings of walls).

The examples of the foregoing class lead us gradually to the regular mode of construction which prevailed in Greece after the time of the Persian Wars, and which had been adopted in the walls of temples much earlier. In the long walls of
the walls were to be faced with slabs of marble; (3) when they are laid entirely lengthwise; (4) entirely crosswise; and (5) when the courses are alternately higher and lower than each other, as in the round temple (of Vesta, so called) upon the Tiber. This temple also afforded us an example of what is called rustico-work, in which the stones are bevelled at their joints, the rest of their surfaces being generally left rough. This style of work originated, in the opinion of some, from the desire to save the trouble of smoothing the whole face of the stones; but it is more probable that it was adopted in order to give a bolder and firmer appearance to the structure. Examples of it are found in the remains of several Roman fortifications in Germany, and in the substructions of the bridge over the Moselle at Coblenz (Rhein. M. 1836, vol. iv. p. 510; Witzel, in the Real-Encyclop. d. class. Alterth. art. Mari). As by the Greeks, so by the Romans, walls of a commoner sort were built of smaller quarried stones (caementa) or of bricks. Vitruvius (ii. 8) and Pliny (H. N. xxxvi. 22. s. 51) describe the following kinds of masonry, according to the mode in which the small stones (caementa) were put together. (The woodcut is copied from the Abbildungen zu Winckelmann's Werke, Donaufusschingen, 1835, fig. 10.)

Besides the large square blocks of stone (O), they used smaller quadrangular stones arranged in regular courses of equal and of unequal heights; the former was called sodomum (M), the latter pseudosodomum (L); in another sort of work, called empilecton (G), the outer faces of the walls only were of wrought stones, the intermediate parts being filled up with rough stones, but these, in the Greek method of construction, were well bedded in mortar, and arranged with overlapping joints, and the wall was bonded together with stones laid across at intervals, which were called bedrows (F); but the workmen of the time of Vitruvius were in the habit, for the sake of despatch, of running up the outer walls separately, and then filling the middle space with loose rubbish, a sort of work which Pliny calls dianieton. The excellence of the cement which the Romans used enabled them to construct walls of very small rough stones, not laid in courses, but held together by the mortar; this structure was called opus incertum (N). An improvement upon it in appearance, but inferior in stability, was the opus reticulatum, of which there were two kinds, the laticum (K) and the unlike (1). This sort of work was composed of stones or bricks, from six to nine inches long, and about three inches square at the end, which formed the faces of the...
wall, the interior being filled in with mortar and small rough stones. Vitruvius complains of these walls as being apt to split, on account of their having neither horizontal courses nor covered joints. Another structure of which the Romans made great use, and which was one of the most durable of all, was that composed of courses of flat tiles (II.). Such courses were also introduced in the other kinds of stone and brick walls, in which they both served as bond-courses, and, in the lower part of the wall, kept the damp from rising from the ground. Brick walls covered with stupe were exceedingly common with the Romans; even columns were made of brick covered with stupe; we have an example in the columns of the basilica at Pompeii, the construction of which is explained in Pompeii, vol. i. p. 136. In hot countries, as in Africa and Spain, walls were built of earth rammed in between two faces or moulds (taludata, formae), which were removed when it hardened; they were called parietes formacei; and Pliny mentions watch-towers of this construction, built by Hannibal, on the mountains of Spain, which still stood firm. (H. N. xxxiv. 14. s. 48.) Walls of turf were chiefly used in the ramparts of camps (Ager, Vallum) and as embankments for rivers. With respect to the use of walls as fortifications, we have not space to say much. The Cyclopean walls of Tiryns, &c., had no towers; but Homer refers to towers on the walls of Troy; and in the historical period we find that it was the practice to have neither horizontal courses nor covered joints. Some writers on military affairs recommend them to be placed at salient angles of the walls, in order to command the intervening spaces, whilst others object to this position on account of the increased exposure of the tower itself to the battering ram. The account which Thucydides gives, in his second book, of the siege of Plataea, is an interesting exhibition of the state of the science of fortification and attack at the period of the Peloponnesian war. Much was done to advance it by the architects and engineers of the time of Alexander and his successors. The rules which have been established by the time of the Roman emperors may be seen exhibited in detail by Vitruvius (i. 5), and the writers on military affairs, and illustrated by the remains of the walls of Pompeii. (Pompeii, vol. i. pp. 66, &c.) The system may be described in a few words as a broad terrace of earth (ager) enclosed between two battlemented walls and furnished with towers, two, three, or more stories high, communicating by arched doorways with the ager, and also having a sally-port. These towers were at distances, on the average, of the cast of a javelin, but varying according to the greater or less exposure of each part of the wall. Respecting the gates, see PORTA. [P. S.]

MUSCUS CANUS was, according to the description of Vegetius (de Re Milit. iv. 16), one of the smaller military machines, by which soldiers in besieging a town were protected while engaged in filling up the ditches round the besieged place, so that the movable towers (touras, palataloriae) of the besiegers might not be able to approach the walls without obstacle. A minute description of a muscus is given by Caesar (de Bell. Civ. ii. 10, &c.). The one which he describes was nine feet long, and was constructed in the following manner:--Two beams of equal length were placed upon the ground at the distance of four feet from each other, and upon them were fixed little pillars five feet high. Their top-ends were joined by transverse beams, which formed a gentle slope on either side of the roof of which they formed the frame-work. The roof was then entirely covered with pieces of turf broad, which were fastened with metal plates and nails. Around the edge of this roof square pieces of wood, four cubits broad, were fixed for the purpose of keeping together the bricks and mortar with which the muscus was then covered. But that these materials, which were intended to protect the muscus against fire, might not suffer from water, the bricks and mortar were covered with skins; and that these skins again might not suffer from the fire or stones which the besieged might throw upon the muscus, the whole was covered with rags of cloth. The whole of this machine was constructed under the cover of a vinen, and close by the Roman tower. At a moment when the besieged were least expecting any attack, the muscus was moved on against the wall of the town. The men engaged under it immediately began to undermine the wall and thus to make a breach in it; and while this work was going on, the besiegers kept up a lively fight with the besieged in order to prevent them from directing their attacks against the muscus. (Compare Caes. de Bell. Civ. iii. 80, de Bell. Afer. 1.) The muscus described by Caesar was evidently designed for different purposes than the one mentioned by Vegetius, and the former appears to have been only a smaller but a more indestructible kind of vinen than that commonly used. (Lipius, Poliorc. i. 9; Guichard, Mémoires Milit. ii. p. 35, tab. 2.)

MUSEA (Museis), a festival with contests celebrated at Thespiae in Boeotia in honour of the Muses. (Paus. ix. 31. § 5.) It was held every fifth year and with great splendour. (Plut. Amator, p. 746, &r.) From Aeschines (c. Timarch.) it appears that there was also a festival called Musei, which was celebrated in schools.

MUSEUM (Musivum) signified in general a place dedicated to the Muses, but was specially the name given to an institution at Alexandria, founded by Ptolemy Philadelphus, about B.C. 280, for the promotion of learning and the support of learned men. (Athen. v. p. 203.) We learn from Strabo (xviii. p. 794) that the museum formed part of the palace, and that it contained cloisters or poricis (peripatos), a public theatre or lecture-room (exoöra), and a large hall (oikos megas), where the learned men dined together. The museum was supported by a common fund, supplied apparently from the public treasury; and the whole institution was under the superintendence of a priest, who was appointed by the king, and after Egypt became a province of the Roman empire, by the Caesar. (Strabo, l. c.) Botanical and zoological gardens appear to have been attached to the museum, (Philos. Apollon. vi. 24; Athen. xiv. p. 634.) The emperor Claudius added another museum to this institution. (Suet. Claud. 42, with the references.)

MUSICA (Musivis), signified in general any art over which the Muses presided, but is sometimes employed to indicate Music in the modern acceptation of the term. [Greek.] In compiling the following article little more has been attempted than to give an outline of facts which rest upon positive evidence, and at the same time to present them,
in such a form as to serve for an introduction to the original sources. Hence it necessarily consists in a great measure of technical details, which, however, can present no difficulty to persons acquainted with the first elements of the modern theory; and nothing has been said in the way of deduction, except in one or two cases where the interest of the subject and the apparent probability of the conclusions seemed to permit it.

The term ἀρμονία was used by the Greek writers to denote what is now called the Science of Music; μουσική having, as has been already remarked, a much wider signification. Ἀρμονία ἄστιν ἐπιστήμη θεωρητική καὶ πρακτικῆ τῆς τοῦ ἀρμονιούντος φύσεως. Ἀρμοσμένοι δὲ ἐστὶν τὸ ἐκ φθορῶν καὶ διαστημάτων, πολὺ τάξιν ἔχοντων, συνυγείμονα. (Euclid. Int. Harmon. p. 1.)

The following sevenfold division of the subject, which is adopted by the author just quoted, as well as by others, will be partly adhered to in the present article:—I. Of Sounds (περὶ φθορῶν). II. Of Intervals (περὶ διαστημάτων). III. Of Genera (περὶ γένων). IV. Of Systems (περὶ συστημάτων). V. Of Modes (περὶ τόνων).* VI. Of Transition (περὶ μεταβολῆς). VII. Of Composition (περὶ μελοστιάς).

A sound is said to be musical when it has a determinate pitch (tάσις). When two sounds differ in pitch, one is said to be more acute (δὲξιός), the other more grave (βαρύς); or, in common language, one is called higher and the other lower. The term ἡμιεύθυς applied to a sound either signifies simply, that it is capable of being used in a melody; or relatively, that it is capable of being used in the same melody with some other sound or system of sounds; the latter is its most common meaning.

An Interval is the difference or rather distance between two sounds of different pitch. When we compare the intervals between two pairs of sounds, we judge them in certain cases to be similar, or equal. If the more acute sound of one of them be then raised, that interval is said to become greater than the other. It is this property of intervals (their being comparable in respect of magnitude) which enables us to classify them, and enumerate their several kinds.

Intervals are either consonant (σύμφωνα) or dissonant (διάφωνα), according as the two sounds may or may not be heard at the same time without offending the ear. (Euclid. p. 8.) Strictly speaking it is impossible to define the limit between the two classes, and this seems to be acknowledged by the later writers, who distinguish various degrees of consonance and dissonance. Originally, the only intervals reckoned consonant were the Octave or eighth (διὰ πασῶν), the Fifth (διὰ πίντη ἢ οὔτε δέξιων), the Fourth (διὰ τεσσάρων οὐσίασ), and any interval produced by adding an octave to one of these. But all intervals less than the fourth, or intermediate between any two of those just enumerated (as the sixth, tenth, &c.), were considered as dissonant. The principal intervals, less than the fourth, employed in Greek music were the double tone (δίτόνος), nearly equal to the modern major third; the tone and half (τριγύμδιον), nearly the same as the minor third; the tone (τόνος), equal to the modern major tone; the half tone (ἡμιτόνος) and the quarter tone (δίησις). (Eucl. p. 8.) Other writers speak of ἀπομονικὰ or unison, ἀνατομονικὰ or the consonance of the octave, and παραφωνικά or the consonance of the fourth and fifth. See Arist. Prov. xix. 39., and Gundentius, p. 11. The latter author considers παραφωνικά to be intermediate between consonance and dissonance, and mentions the tritone or sharp fourth as an example of it.

If two strings, perfectly similar except in length, and stretched by equal tensions, be made to vibrate, the number of vibrations performed in a given time by each is inversely proportional to its length; and the interval between the sounds produced is found to depend only on the ratio of the lengths, i.e. of the numbers of vibrations. Thus if the ratio be \( \frac{3}{2} \) the interval is an octave, if \( \frac{2}{3} \) a fifth, if \( \frac{3}{4} \) a fourth, if \( \frac{4}{5} \) a major tone.

The discovery of these ratios is attributed, probably with truth, to Pythagoras. But the accounts of the experiments by which he established them (see Nicomachus, p. 10) are plainly false, since they contradict the known fact that when similar and equal strings are stretched by different tensions, the number of vibrations are as the square roots of the tensions. (See Whewell's Dynamics, part ii. p. 331, ed. 1834.)

The τόνος or tone was defined to be the difference between the fourth and fifth; so that the corresponding ratio would be determined either by experiment, or by simply dividing \( \frac{3}{2} \) by \( \frac{2}{3} \).

It is remarkable that each of the four ratios enumerated above is superparticular*; i.e. the two terms of each differ from one another by unity. And all the intervals employed in the modern theory are either such as correspond to superparticular ratios, or are produced from such by combining them with the octave. Thus the ratio corresponding to the

- major third is \( \frac{3}{2} \)
- minor third is \( \frac{2}{3} \)
- minor tone is \( \frac{2}{5} \)
- major semitone is \( \frac{1}{2} \)

It seems therefore extraordinary, that analogy should not have led at once to the discovery at least of the major and minor third, as soon as the connection between intervals and ratios had been observed. However no such discovery was then made, or if made it was neglected; and this affords at once an explanation of the fact that intervals less than the fourth were reckoned consonant: for the δίτονος, or double major tone, is greater than the true consonant major third (which consists of a major and minor tone) by an interval expressed by the ratio \( \frac{2}{3} \); a difference quite sufficient to desanctify.

* Euclid seems to consider no intervals consonant except such as correspond to superparticular (ἐπιμήροις) or multiple (πολλαπλασιών) ratios; the latter being such as \( \frac{2}{3}, \frac{3}{4}, \&c. \) On this theory the octave and fourth (\( \frac{2}{3} \)) would be dissonant, but the octave and fifth (\( \frac{2}{4} \)) consonant. (See Eucl. Sect. Can. p. 24.)
stro the consonance of the interval. In fact, when a keyed instrument is tuned according to the equal temperament, the major thirds are too great by an interval little more than half of this (++) nearly), and yet are only just tolerable. This subject is important, because it bears immediately upon the question whether harmony was used in the Greek music.

An aggregate of two or more intervals, or rather a series of sounds separated from one another by intervals, constituted a system. Systems were named from the number of sounds which they comprehended. Thus an octachord was a system of usually, though not necessarily, the number of prehended. Thus an octachord was a system of the four sounds were (ascending), semitone, tone, interval of an octave between the extremes. The important and peculiar property of the latter system, namely, the completeness of its scale, was fully understood, as the name of the interval δια παραγωγα sufficiently indicates (see also Aristides, pp. 16, 17), but it was not taken in theory for the foundation of the scale; or at any rate was considered as made up of two extreme sounds.

The fundamental system in ancient music was the tetrachord, or system of four sounds, of which the extremes were at an interval of a fourth. In modern music it is the octachord, and comprehends an octave between the extremes. The important and peculiar property of the latter system, namely, the completeness of its scale, was fully understood, as the name of the interval δια παραγωγα sufficiently indicates (see also Aristides, pp. 16, 17), but it was not taken in theory for the foundation of the scale; or at any rate was considered as made up of two extreme sounds.

The Genus of a system depended upon the distribution of the two intermediate sounds of the tetrachord. The Greek musicians used three Genera:

I. The Diatonic, in which the intervals between the four sounds were (ascending), semitone, tone, tone:

II. The Chromatic; semitone, semitone, tone, and half:

III. The Enharmonic; diesis, diesis, double tone:

(The second note is meant to represent a sound half way between E and F, for which the modern system supplies no notation.)

Of these genera the Diatonic was allowed to be the most ancient and natural, and the Enharmonic the most modern and difficult; the latter however seems soon to have become the favourite with theorists at least, for Aristoxenus complains that all writers before his time had devoted their treatises almost entirely to it, to the neglect of the two others. (Aristox. pp. 2 and 19.)

The only difference between the ancient and modern Diatonic is, that in the former all the tones are major tones, whereas in the latter, according to the theory generally admitted, major and minor tones occur alternately. (See Crotch’s Elements of Musical Composition, chap. ix.) The interval called a semitone in the above descriptions is therefore strictly neither equal to the modern major semitone, nor to half a major tone, but the ear would hardly appreciate the difference in melody.

Besides these genera, certain Colours (χρώα) or specific modifications of them are enumerated. (Eucl. p. 10.)

The Enharmonic had only one χρώα, namely, the genus itself as described above; it is commonly called simply ἡμιμορία.

The Chromatic had three: 1st. χρώα μανιά (τοινον), or simply χρώα, the same as the genus; 2nd. χρώα ήμιμορίον, in which intervals of three-eighths of a tone were substituted for the two semitones; 3rd. χρώα μαλακόν, in which intervals of one third of a tone were similarly employed.

The Diatonic had two χρώα: 1st. διάτονον σύντονον, or simply διάτονον, the same as the genus; 2nd. διάτονον μαλακόν, in which an interval of three-fourths of a tone was substituted for the second semitone (ascending).

The following table will exhibit at one view the intervals between the sounds of the tetrachord, taken in the ascending order, according to each of these χρώα, the tone being represented by unity, and two tones and a half being supposed to make up a fourth, a supposition which is not exactly true, but is commonly adopted by the ancient writers as sufficiently accurate for their purpose. (See Eucl. Sectio Canonis Theor. xv.)

I. Diatonic . . . . 1. διάτονον (σύντονον) \( \frac{6}{5} \), 1. 1. 1.<ref>Harmonics, sect. iv. art. 10. These intervals exist in the natural scales of the horn, trumpet, &c., and are in fact used, instead of the minor third and tone, in the harmony of the dominant seventh, both by stringed instruments and voices when unaccompanied by tempered instruments.  

* See Smith’s Harmonics, sect. iv. art. 10. These intervals exist in the natural scales of the horn, trumpet, &c., and are in fact used, instead of the minor third and tone, in the harmony of the dominant seventh, both by stringed instruments and voices when unaccompanied by tempered instruments.  

MUSICA.

MUSICA.
πάτη the lowest but one, and παραμή the highest but one. Παραμή was also frequently called λιχανός, probably because in some ancient instrument the corresponding string was struck by the forefinger; and παραμήπη was afterwards called τρίτη in certain cases. These names were used in all the genera; but the name of the genus was commonly added to λιχανός (thus λιχανός διάτωνος, χρωματικός or τραχύλιχανός), perhaps because in the position of the genus with respect to ἰπάτη and νάπατη what chiefly determines the character of the genus. When the two lowest intervals of the tetrachord taken together were less than the remaining one, those two were said to form a condensed interval (κοινὰ). Thus the interval between ἰπάτη and λιχανός is κοινὰ in the Enharmonic and Chromatic genera. The three sounds of the κοινὰ were sometimes called βαρηκοῦνσι, μεσοποτικοῦσι, and διατακτοῦσι, and sounds which did not belong to a κοινὰ were called ἰπαλλατὴν.

It is not to be supposed that the tetrachord could long continue to furnish the entire scale used in practice, though it was always considered as the element of the more comprehensive systems which gradually came into use. The theory of the genera, as has been seen, required only the tetrachord for its full development, though it certainly could not have been invented till after the enlargement of the scale.

Terpander is said to have invented the seven-stringed lyre (Eucl. p. 19), which seems not to have been obsolete in Pindar's time (Pyth. ii. 70); its scale consisted of an octave with one sound omitted. (Arist. Prob. xix. 7, 25, 32.) The addition of this omitted sound (attributed to Lycaon or Pythagoras), would give an octachordal lyre with a complete octave for its scale. And an instrument called μαγαδίς, which must have had a still greater compass, was very early known, and is said to have had twenty strings as used by Anacreon. (See Böckh, de Metr. Pind. lib. iii. cap. 7, 11.)

When two tetrachords were joined so that the highest sound of one served also for the lowest of the other, they were called διακονεῖον (διακονεῖον), but if the highest sound of one were a tone lower than the lowest of the other, they were called διακονεῖον (διακονεῖον), thus

\[
\begin{align*}
\text{BCDEFGA} & \quad \text{conjunct.} \\
\text{EFGABCDE} & \quad \text{disjunct.}
\end{align*}
\]

In the latter case the tone (between A and B) which separates them was called τὸνος διακονεῖον. (Eucl. p. 17.)

A hendecachordal system, consisting of three tetrachords, of which the middle one was conjunct with the lower but disjunct from the upper, thus

\[
\begin{align*}
\text{BCDEFGABCDE} & \quad \text{disjunct.}
\end{align*}
\]

is supposed to have been used about the time of Pericles. (Böckh.) In such a system the lowest tetrachord was called (τετράχορον) ὄπατων, the middle μέσων, and the highest διευγεμένων. Afterwards a single sound (called πρωτοσέπηθος) was added at an interval of a tone below the lowest of ὄπατων, and a conjunct tetrachord (called ὑπερβολαίον) was added above. And thus arose a system of two complete octaves,

\[
\begin{align*}
\text{A} & \quad \text{ὄπατων} \\
\text{B} & \quad \text{μέσων} \\
\text{C} & \quad \text{ὑπερβολαίον}
\end{align*}
\]

which was called the greater perfect system. Another system, called the smaller perfect system, was composed of three conjunct tetrachords, called

\[
\begin{align*}
\text{A} & \quad \text{ὄπατων} \\
\text{B} & \quad \text{μέσων} \\
\text{C} & \quad \text{ὑπερβολαίον}
\end{align*}
\]

and these two together constituted the immutable system (ἀναμνήματος) described by all the writers later than Aristoxenus, and probably known to him. (Eucl. p. 17.)

The sounds in these systems were named in the way before described, the names of the tetrachord only being added, and μέση and παραμήθη being substituted for ἰπάτη μέσων and ἰπάτη διευγεμένων respectively. Thus, taking the sounds in the ascending order,

\[
\begin{align*}
\text{A} & \quad \text{πρωτοσέπηθος} \\
\text{B} & \quad \text{ὄπατων} \\
\text{C} & \quad \text{ὑπερβολαίον} \\
\text{D} & \quad \text{λιχανός ὄπατων} \\
\text{E} & \quad \text{ὑπερβολαίον} \\
\text{F} & \quad \text{ὑπερβολαίον} \\
\text{G} & \quad \text{λιχανός μέσων} \\
\text{A} & \quad \text{μέση}
\end{align*}
\]

So far the sounds are common to the greater and smaller systems. Then follow, in the greater,

\[
\begin{align*}
\text{B} & \quad \text{τρίτη διευγεμένων} \\
\text{C} & \quad \text{τρίτη διευγεμένων} \\
\text{D} & \quad \text{τρίτη διευγεμένων} \\
\text{E} & \quad \text{τρίτη διευγεμένων} \\
\text{F} & \quad \text{τρίτη ὑπερβολαίον} \\
\text{G} & \quad \text{τρίτη ὑπερβολαίον} \\
\text{A} & \quad \text{τρίτη ὑπερβολαίον}
\end{align*}
\]

The interval between μέση and παραμήθη is a tone. But in the smaller system μέση serves also for the lowest sound of the tetrachord διευγεμένων, which terminates the scale, thus

\[
\begin{align*}
\text{B} & \quad \text{μέση} \\
\text{BB} & \quad \text{τρίτη διευγεμένων} \\
\text{C} & \quad \text{παραμήθη διευγεμένων} \\
\text{D} & \quad \text{νήση διευγεμένων}
\end{align*}
\]

3 d 4
Indeed Plutarch relates, on the authority of Aristoxenus, that Olympus was led to the invention of this genus by observing that a peculiar and beautiful character was given to melody when certain notes of the scale, and particularly λυσιός, were left out. (See Plutarch's Dialogue on Music; Mem. de l'Acad. des Inscriptions, vol. x. 126.) It is therefore most probable that this was the original form of the Enharmonic scale, and that it was more ancient than the highly artificial Chromatic. In this form it would be both natural and easy. But afterwards, when additional tones were interpolated between B and C, E and F, it would of course become, as it is always described, the most difficult of all the Genera, without however ceasing to be natural: for these additional sounds could certainly not be neither used by a composer nor executed by a singer as essential to the melody, but must rather have been introduced as passing or ornamental notes, so that the general effect of the genus would remain much the same as before. The assertion of Aristoxenus (see pp. 28, 33) that no voice could execute more than two quarter tones in succession, evidently supports this view.* Thus the Enharmonic would derive its distinctive character more from the largeness of the highest interval of the tetrachord than from the smallness of the two others. Aristoxenus (p. 23) expressly mentions the important influence which the magnitude of the interval between λυσιός and νύμφη had upon the character of the genus, and blames the musicians of his own time for their propensity to diminish this interval for the sake of sweetness (τοῦτον δ' αίτιον τὸ βοολεῦσθαι γλυκαίνων λεί). That a peculiar character really is given to a melody by the occurrence of a larger interval than usual between certain sounds of the scale, is a well known fact, exemplified in many national airs, and easily proved by the popular experiment of playing on the black keys only of a pianoforte.†

The Genus of a system was determined, as has been explained, by the magnitude of certain of its intervals. The species (εἴδος) depended upon the order of their succession. Hence, supposing no system to be used which was not similar to some part of the σύστημα ἀμετάβολον, every system would have as many species as it had intervals, and no more. (Eucl. p. 14.)

The tetrachord, for example, had three species in each genus thus (Diatonic),

1st. ½, 1, 1, 1, 1, 1, ½, 1
2nd. 1, ½, 1, ½, 1, ½, 1, ½
3rd. 1, ½, 1, 1, ½, 1, ½, 1

(where ½ stands for a tone).

The species of a system was often described by indicating two sounds of the σύστημα ἀμετάβολον between which a similar one might be found. Of the seven species of the Octachord, the first was exemplified by the octave comprehended between ὑπάτη ὑπατών and παρασκέψ: the second by that between παρασκέψ ὑπατών and τρίτη διεισειγμένων: and so on. The order of the intervals in these seven species would be as follows in the Diatonic genus (ascending):

1st. ½, 1, 1, 1, 1, 1, ½
2nd. 1, ½, 1, ½, 1, ½, 1, ½
3rd. ½, 1, 1, 1, ½, 1, ½, 1

* The modern minor scale, A, B, C, D E, F, G, A, can hardly be considered an exception to this assertion, for its essential character, as now used, depends so little upon the Chromatic interval between F and G, that this peculiarity is usually got rid of in melody by raising the F or lowering the G, according to circumstances. Hence the popular but incorrect way of representing the ascending and descending minor scales. (See Dehn, Theoretisch-praktische Harmonielehre, pp. 67, 68.)

† See Burney, vol. i. p. 27, on the Old Enharmonic.
This distinction of species is important, because it formed originally the chief difference between the modes (τόνοι). Unfortunately there are no means of determining what was the real difference between melodies written in these several scales; and the difficulty of forming any probable hypothesis on this subject is increased by what is said of μέση in the passage quoted above from the Aristotelic Problematia. Πάντα γὰρ τὰ χρηστὰ μέλη πολλάκις τῇ μέσῃ χρίσιται, καὶ πάντες οἱ όρανθοι ποιντικα πυκνὰ πρὸς τὴν μέσην ἀπαντῶσι, κἂν ἀπέλθωσι, τάχει ἐπιστρέφονται, πρὸς τὴν ἄλλην ὀὕτως ὀδοθείαν. For since the position of μέση was determined (Euclid, p. 18) by the intervals adjacent to it, any series of sounds beginning or ending with μέση would give a system always of the same species. Possibly the author of the Problematia does not use the term μέση in the same sense as Euclid.

However it is certain that the seven species of the Octachord above described were anciently (ὑπὸ τῶν ἀρχαίων, Euclid. p. 15) denoted by the names Mixolydian, Lydian, Phrygian, Dorian, Hypolydian, Hypophrygian, and Hypodorian; and it seems likely that they always differed in pitch as well as species, the Mixolydian being the highest, the Hypodorian the lowest. Hence it is conjectured that there were originally only three modes, corresponding to the three species of tetrachord, and that these were the Dorian, Phrygian, and Lydian; because the Octachord in each of these three modes is made up of two similar disjunct tetrachords, which are of the first species in the Dorian, the second in the Phrygian, and the third in the Lydian.

Aristides describes also six enharmonic modes of very ancient origin (αἱ ἐντὸς παλαιότατοι τοῦ ἄρχαιον χρῆσιν, p. 21) consisting of different species of octachords, and quotes the well-known passage in Plato (Rep. iii. c. 10) as referring to them. The order of the intervals is given as follows (see the notes of Meibomius upon the passage):

- **Lydian**: 1, 1, 1, 1, 2, 1, 1, 1
- **Dorian**: 1, 1, 1, 2, 1, 1, 1, 1
- **Phrygian**: 1, 1, 1, 1, 2, 1, 1, 1
- **Ionian**: 1, 1, 1, 1, 1, 1, 1, 1
- **Mixolydian**: 1, 1, 1, 1, 1, 1, 1, 1
- **Syntonydian**: 1, 1, 1, 1, 1, 1, 1, 1

It will be observed that these scales do not all comprehend exactly an octave; and none of them except the Lydian is coincident with any part of the σύντομα ἀμετέρατον. None of them is distinctly unnatural, except perhaps the Mixolydian. Of course it is impossible to recognize their characters as described by Plato, in the absence of examples of their application in actual melody. Their principal interest therefore consists in the evidence which they afford of the antiquity of enharmonic systems, i.e. of systems formed by omitting certain sounds of the diatonic scale. For unless we take this view of them, and consider the quarter tones as unessential additions, it seems quite impossible to understand how they could be used at all.

The difference of species, considered as the characteristic distinction of modes, is evidently spoken of as a thing antiquated and obsolete, not only by Aristides (who was certainly later than Cicero, see p. 70), but also by Euclid. As to Aristoxenus, the fragments which remain of his writings contain no allusion to such a distinction at all. In his time it appears that the number of modes was thirteen; and later writers reckon fifteen. (Euclid. p. 19; Aristid. pp. 23, 24.) The descriptions of these fifteen modern modes are very scanty, but they indicate pretty plainly that they were nothing more than transpositions of the greater perfect system; their names were Hypodorian, Hypoioastian, Hypophrygian, Hypoaeolian, Hypolydian, Dorian, Instian, Phrygian, Aeolian, Lydian, Mixolydian, Hyperiastian, Hyperphylygian, Hyperaeolian, Hyperlydian. The Hypodorian was the lowest in pitch, and the προσταθάνωνι of the others were successively higher by a semitone; and only that part of each scale was used which was within the compass of the voice. It seems likely that the ancient modes mentioned by Euclid, and described above, consisting of octachords taken, as regards their species, from different parts of the σύντομα ἀμετέρατον, would, as regards pitch, be each so placed as to lie between ὁπᾶτη μέσων and μέση διενεχόμενων of the modern mode of the same name. For they certainly did always differ in pitch, as the name τῶνος shows; and there is no reason to believe that their relative position was ever changed: the system of notation, moreover, confirms this supposition. But for details on this subject we must refer to the dissertation of Böckh (iii. 8), where it is treated at length. The only important results, however, are, first, that the modes did anciently differ in species; secondly, that in process of time this difference either disappeared entirely, or ceased to be their distinguishing mark; and, thirdly, that their general pitch was always different. The ideas conveyed by these general assertions of the real character and effect of the Greek music are excessively vague and unsatisfactory; but an examination into particulars does not tend to make them at all more definite or clear.

There can be little doubt that different rhythms and degrees of slowness or quickness, as well as different metres and styles of poetry, would soon be appropriated to the modes, so as to accord with their original musical character; and these differences would in time naturally supersede the old distinction of species, and come to be looked on as their characteristic marks; so that at length all the species might even be used in each mode, for the sake of additional variety. With regard to the poetry, indeed, it is certain that particular measures were considered appropriate to different modes (Plat. Leg. ii. p. 670), and it has even been attempted to divide Pindar's Odes into Dorian, Aeolian, and Lydian. (Böckh. iii. 15.) The rhythm of the music must have depended chiefly, if not entirely, upon that of the words, or else have been of a very simple and uniform character, since there is no mention of a notation for it as distinct from the metre of the poetry. Probably, therefore, nothing like the modern system of musical rhythm existed; and if so, this...
must have formed one of the most essential points of difference between the ancient and modern music. How the rhythm of mere instrumental music was regulated, or what variety it admitted, does not appear. There is no reason, however, to believe that music without words was practised to any extent, though it was certainly known; for Plato speaks with disapprobation of those who used μέλος καὶ ρομάδος ὄνων ῥήματων, φύλα καθορίστης τε καὶ ἀδέλφης προχώρουσας (Leg. ii. p. 669), and others mention it. (Böckh, iii. 11.)

On the two last of the heads enumerated in dividing the whole subject, very little real information can be obtained. In fact they could not be intelligibly discussed without examples, a method of illustration which unfortunately is never employed by the ancient writers. Μεταβολή was the transition from one genus to another, from one system to another (as from diatonic to conjunct or vice versa), from one mode to another, or from one style of melody to another (Euclid, 20), and the change was made in the same way as in modern music, viz. by passing through an intermediate stage, or using an element common to the two extremes between which the transition was to take place. (See Euclid, 21.)

Μέλοσον, or composition, was the application or use of all that has been described under the preceding heads. This subject, which ought to have been the most interesting of all, is treated of in such a very unsatisfactory way that one is almost forced to suspect that only an exordic doctrine is contained in the works which have come down to us. On one of which propositions μεταβολή is said, or rather supposed, viz. by passing through an intermediate stage, or using an element common to the two extremes between which the transition was to take place. (See Euclid, 21.)

There are several classifications of melodies, made on different grounds; these are the three principal, with the variety of notes in each. The first is divided into grave, acute, and intermediate (for the reasons already given). This last division seems merely to refer to the general pitch of the melody; yet each of the three classes is said to have a distinct turn (τρόπος), the grave being tragic, the acute comic (νομίκος), and the intermediate di-thyrambic. Again melody is distinguished by its character (όρος), of which three principal kinds are mentioned, Σαβανάδων, Καλλικράτους, and Ὀρθίανδρος, and these terms are respectively explained to mean aptitude for expressing a magnanimous and heroic, or low and effeminate, or calm and religious nature. Other subordinate classes are named, as the erotic, epithalmian, comic, and encomiastic. (Euclid. 21; Aristid. 29.) No account is given of the formal peculiarities of the melodies distinguished by these different characters, so that what is said of them merely excites our curiosity without tending in the least to satisfy it.

The most ancient system of notation appears to have consisted merely in the appropriation of letters of the alphabet to denote the different sounds of the scale; and the only alteration made in it was the introduction of new signs formed by accenting letters, or inverting, distorting, and mutilating them in various ways, as the compass of the scale was enlarged. A great, and seemingly unnecessary, complexity was caused by the use of two different signs for each sound; one for the voice, and the other for the instrument. These two signs were written one above the other immediately over the syllable to which they belonged. They are given by several of the Greek writers, but most fully by Alypius. The instrumental signs appear to have been chosen arbitrarily; at least no law is now discoverable in them: but the vocal (which were probably more ancient) follow an evident order. The sounds of the middle part of the scale are denoted by the letters of the Ionian alphabet (attributed to Simonides) taken in their natural order; and it is remarkable that these signs would be just sufficient for the sounds comprised in the six modes supposed to be the most ancient, if the compass of each were an octave and they were pitched at intervals of a semitone above one another. No other system of lettered sounds are given to the higher and lower sounds. To learn the system perfectly must have required considerable labour, though its difficulty has been much exaggerated by some modern writers. (See Böckh, iii. 9.) A few specimens of Greek melody expressed in the ancient notation have come down to us. An account of them may be found in Burney (vol. i. p. 83), where they are given in modern notes with a conjectural rhythm. The best of them may also be seen in Böckh (iii. 12) with a different rhythm. It is composed to the words of the first Pythian, and is supposed by Böckh to be certainly genuine, and to belong to a time earlier than the fifteen modes. Its merits have been very variously estimated; probably the best that can be said of it is that no certain notion can now be obtained of its real effect as anciently performed.

It has long been a matter of dispute whether the ancients practised harmony, or music in parts. We believe there are no sufficient grounds for supposing that they did. The following are the facts usually appealed to on each side of the question. The first Pythian, and is supposed by Böckh to be certainly genuine, and to belong to a time earlier than the fifteen modes. Its merits have been very variously estimated; probably the best that can be said of it is that no certain notion can now be obtained of its real effect as anciently performed.

It has long been a matter of dispute whether the ancients practised harmony, or music in parts.
In the next place, the constitution of the scale was, as has been seen, very unfit for harmony, the beauty of which depends so essentially upon the use of thirds. The true major third was either not discovered or not admitted to be consonant till a very late period; Ptolemy being the earliest extant author who speaks of the minor tone (Burney, vol. i. p. 441); a fact which is so extraordinary and so contrary to all that could have been anticipated, as to destroy all confidence in any prier reasonings on the subject, and to exclude all but actual evidence on either side. The positive evidence in favour of the existence of counterpoint consists chiefly in certain indications of two modes having been sometimes used at once. Thus the expression in Horace (Epod. ix. 5),

"Sonante miamum tibiis carmen lyra
Hac Dorium, illis barbarum,"

is interpreted to mean that the lyre was played in the Dorian mode, and the tibiae in the Lydian; so that if the ancient Dorian and Lydian octave were employed, the former being of the fourth species, while the latter was of the second, and pitched two tones higher, the series of intervals heard would consist of fourths and major thirds, or rather double tones.

Again, there are passages such as —

Αλοκάθες ἐπείρεις Δορίαν κέλευθον ὑμῶν
(quoted from Pindar by the Scholiast on Pyth. ii. 127), which are supposed to indicate that poetry written in one mode and sung accordingly, was accompanied by instruments in another. For a view of the most that can be made of such arguments, see Böckh, iii. 10. Our knowledge of the real use of the modes is so very imperfect, that not much reliance can be placed on them; and at any rate they would only prove the existence of a kind of magadizing, modified by taking scales of different (instead of the same) species for the two parts, so as to avoid the succession of intervals absolutely the same. This would certainly be the very lowest kind of counterpoint; but if any thing more had been practised, it would be absolutely impossible to account for the utter silence of the theoretical writers, which is all but fatal even to such a limited hypothesis. It is only necessary to add that the influence of instruments upon the development of the art ought to be kept in view in considering this question. The Greeks had only two kinds of instrumental music, ἀθάνατη and κυθάριστα. The ἀθάνατος was always a pipe pierced with holes, so as to have an artificial scale. The simple tube or trumpet does not appear to have been used as a musical instrument, so that the scale of natural harmonics was probably unknown; and this may partly account for the major third escaping observation. And anything like the modern system of harmony could probably no more have been invented without the assistance of keyed instruments than the Elements of Euclid could have been composed in the total absence of drawing materials. For a fuller account of ancient musical instruments see Böckh, iii. 11.

The chief authorities on the subject of this article are the "Antique Musica Auctorum Septem," viz.: Aristoxenus, Euclid, Nicomachus, Alcibiades, Gaudentius, Bacchius, Aristides, Quintilius, and Martianus Capella, edited by Meibomius, in one volume (Amsterdam, 1652), to the pages of which the preceding quotations refer; the Harmonics of Ptolemy (with an Appendix by Wallis, Op. Mathemat. vol. iii.); the Dialogue of Plutarch; and a section of the Aristotelic Problematum; Burney, History of Music; Böckh, de Metris Pindari; Driberg, Musikalische Wissenschaften der Griechen; and Aufschlüsse über die Musik der Griechen; Dode, Gesch. der. Lyr. Dichtkunst der Hellenen; Forlange, Das Musikalische System der Griechen, Leipzig, 1847.

[W. F. D.]

2. ROMAN. It may well be believed that in music as in the other arts, the genius of Greece had left little for Romans to do, but admire and imitate. Yet we must not forget that another element had been introduced into the arts of Rome, as well as into her language and government; one which was derived from Etruria, and partook of an Oriental character. Every species of musical instrument found on Greek works of art is found also on Etruscan. No doubt the early Roman music was rude and coarse, still from the most ancient times mention is made of hymns and flutes in their triumphal processions; so Servius Tulinius in his comitia made two whole centuries of cornices and tibiae; and the Twelve Tables allowed at funerals ten players on the flute, and enjoined that "the praises of great men should be sung in mournful songs (nenia) accompanied by the flute."

The year B.C. 365 marks an era in Roman music by its adaptation to theatrical amusements. It is in this year we find mention of a lectisternium, at which actors were first brought from Etruria, who, without Verses, danced in dumb show to the sound of the flute. Some time later Livy (ix. 30) mentions a curious tale of the desertion of certain Roman flute-players, who were only brought back by an amusing stratagem. We learn from Valerius Maximus (ii. 5) that the Roman flute-players were incorporated into a college, and Ovid (Fast. vi. 637), speaking of their ancient importance, says —

"Temporibus veterum tubicinis usus avorum
Magnus, et in magno semper honore fuit:
Cantabat fanis, cantabat tibia ludis,
Cantabat moestis tibia funeribus."

Nero, as Suetonius (Nero, 24) tells us, played on the flute, and came in a sort of triumphal procession through Italy, bearing the spoils he had won in 1800 musical contests. The same writer informs us that the emperor, to preserve his voice, used to lie on his back with a thin plate of lead on his stomach; that he took frequent emetics and cathartics, and at last transacted all business in writing.

There does not appear to be any trace of a
Roman musical system entirely distinct from the Greeks. A passage in Cicero would lead us to suppose that the laws of contrast, of light and shade, of loud and soft, of swelling and diminishing, were understood by the Romans (de Orat. iii. 44), and another passage from Apuleius decidedly proves that the Romans had instrumental music distinct from their vocal; on both of which points there is not the same clear evidence to decide the question with reference to the Greeks. Still the Roman musical writers, as St. Augustine, Macrobius, Martianus Capella, Cassiodorus, and Boethius (all of whom flourished between the fourth and sixth centuries of the Christian era), did nothing to improve the science of music, and were little more than copyists of their Greek predecessors. The great improvement which the Romans introduced (rather a practical than a theoretical one) was a simplification of the musical nomenclature, effected by rejecting the arbitrary signs in use among the Greeks, and substituting for them the first fifteen letters of the Roman alphabet. (Hawkins, vol. i. p. 275.) This simplification they were enabled to make by the metre of the song: the want of a notation of time would make us doubt whether any but a very simple style of merely instrumental music prevailed among them. (B. J.)

P. 279.) This simplification they were enabled to make by a reduction of the modes: indeed it seems very probable that this complicated system had in practice entirely fallen into disuse, as we know that the diatonic genus had usurped the place of the two other genera.

Of all Latin authors Boethius gives the most profound account of the subject. His work is a mere abstract speculation on the nature of music, carrying out of the old Pythagorean system, and is that the diatonic genus had usurped the place of the two other genera.

Before this time St. Ambrose had introduced the practice of antiphonal singing in the church at Milan. Of the nature of the Ambrosian chant we only know that it consisted in certain progressions, corresponding with different species of the diapason. It is described as a kind of recitation, more like reading than singing.

It was by St. Gregory the Great that the octave was substituted for the tetrachord as the fundamental division of the scale. The first octave he denoted by capital letters A, B, C, &c., the second by small letters a, b, c, &c., and when it became necessary to extend the system, marked the third by small letters doubled, a, b, c, &c. There is no proof that the Romans, any more than the Greeks, had any notation with reference to time. Where vocal music was united with instrumental, the time was marked by the metre of the song: the want of a notation of time would make us doubt whether any but a very simple style of merely instrumental music prevailed among them. (Hawkins's History of Music, vol. i.; Burney's History of Music, vol. i.)

For a general account of ancient music the reader is referred to the previous article. (B. J.)

P. 431; Picture, No. XV.]

MUSTAX (μουταρία), moustaches. The different parts of the beard (βαρμα) had different names, which also varied with its age and appearance. The young beard, first appearing on the upper lip, was called ἄλεος or ἀλεον προτήτος (Diod. v. 28; Philostr. Sen. Imag. i. 30, ii. 7, 9), and the youth just arrived at puberty, who was graced with it, was πρωτῶν ἀλεοντίς. (Hom. II. xiv. 318, v. ii. x. 279; Schol. in loc.; Brunck, Anal. i. 44 : Aelian, V. H. x. 18.) By its growth and development it produced the moustaches, which the Greeks generally cherished as a manly ornament. (Theoret. iv. 4; Antiphanes, op. Athen. iv. 21; Pollux. ii. 80, x. 120.) To this practice, however, there seems to have been one exception. The Spartan Ephors, when they were inducting, made a proclamation requiring the people “to shave their moustaches and obey the laws.” For what reason they gave the former command does not appear. (Plut. De Sera Num. Vind. p. 976, ed. Steh. : Proclus in Hes. Op. et Dies, 722; Miller, Dor. iii. 7, § 7, iv. 2, § 5; Becker, Charibdes, vol. ii. p. 391.) [J. Y.]

MUSTUM. [VINCUM.]

MUTATIO/NES. [MANSIO.]

MUTUUM. The Mutui datio is mentioned by Gaius as an instance of an obligation “quae rem contrahit.” It existed in several forms, the most universal being that which also varied with its age and appearance. The young beard, first appearing on the upper lip, was called ἄλεος or ἀλεον προτήτος (Diod. v. 28; Philostr. Sen. Imag. i. 30, ii. 7, 9), and the youth just arrived at puberty, who was graced with it, was πρωτῶν ἀλεοντίς. (Hom. II. xiv. 318, v. ii. x. 279; Schol. in loc.; Brunck, Anal. i. 44 : Aelian, V. H. x. 18.) By its growth and development it produced the moustaches, which the Greeks generally cherished as a manly ornament. (Theoret. iv. 4; Antiphanes, op. Athen. iv. 21; Pollux. ii. 80, x. 120.) To this practice, however, there seems to have been one exception. The Spartan Ephors, when they were inducting, made a proclamation requiring the people “to shave their moustaches and obey the laws.” For what reason they gave the former command does not appear. (Plut. De Sera Num. Vind. p. 976, ed. Steh. : Proclus in Hes. Op. et Dies, 722; Miller, Dor. iii. 7, § 7, iv. 2, § 5; Becker, Charibdes, vol. ii. p. 391.) [J. Y.]
The first two days men and women took part in the celebration together; on the third day the men left the sanctuary, and the women remaining in it performed during the night certain mysterious rites, during which not even male dogs were allowed to remain within the sacred precincts. On the fourth day the men returned to the temple, and men and women now received each other with shouts of laughter and assailed each other with various raillery. (Paus. vii. 27. § 4; Cornutus, de Nat. Deor. 28.) Other particulars are not known.

**Mystae, Mystagogus** (μυστας, ὠνταγγωγός). [Eleusinia.]

**Mystereia** (μυστήρια). As each mystery or mystic festival is described in a separate article, a few general observations only will be required under this head. The names by which they were designated in Greece, are μυστήρια, τελεσταί, and ἄργεα. The name ἄργεα (from ἄργος) originally signified only sacrifices accompanied by certain ceremonies, but it was afterwards applied especially to the ceremonies observed in the worship of Dionysus, and at a still later period to mysteries in general. (Lobeck, Agath. i. p. 305.) Τελεστή signifies in general a religious festival (Aristot. Rhet. II. 24; Pind. Nem. x. 63), but more particularly a festival performed in order to avert some calamity either public or private. (Plato, de Rep. ii. p. 264, a.) Μυστήρια signifies, properly speaking, the secret part of the worship, but it was also used generally in the same sense as τελεστή, and for mystic worship.

Mysteries in general may be defined as sacrifices and ceremonies which took place at night or in secret within some sanctuary, which the uninitiated were not allowed to enter. What was essential to them, were objects of worship, sacred utensils, and traditions with their interpretations, which were withheld from all persons not initiated. We must however distinguish between mysteries properly so called, that is, such in which no one was allowed to partake unless he had undergone a formal initiation, and the mystic ceremonies of certain festivals, the performance of which, though confined to particular classes of persons, or to a particular sex, yet did not require a regular initiation. Our attention in this article will be confined to the mysteries properly so called.

It appears to have been the desire of all nations of antiquity to withhold certain parts of their religious worship from the eyes of the multitude in order to render them the more venerable. (Strabo, p. 717.) But that the ancient mysteries were nothing but impostures, priests, who played upon the superstitious and ignorant, is an opinion, which, although entertained by Limburg Brouwer, the latest writer on the subject (Histoire de la Civilisation Morale et Rélig. des Grecs, vol. iv. p. 198), certainly cannot satisfy those who are accustomed to seek a more solid and vital principle in all religious institutions that have ever had any lasting influence upon mankind. The persons united and initiated to celebrate the mysteries in Greece were neither all priests, nor did they belong to the ignorant and superstitious classes of society, but they were on the contrary frequently the most distinguished statesmen and philosophers. It has been remarked under Eleusinia (p. 454, b) that it is far more probable that the mysteries in the various parts of Greece were remains of the ancient Pelasgian religion. The associations of persons for the purpose of celebrating them must therefore have been formed at the time when the overwhelming influence of the Hellenic religion began to gain the upper hand in Greece, and when persons who still entertained a reverence for the mysteries of former times, united together with the intention of preserving and upholding among themselves, as much as possible of the religion of their forefathers. It is natural enough that they formed themselves for this purpose into societies, analogous to the brotherhoods in the church of Rome (Porphy. de Abstin. iv. 5), and endeavoured to preserve against the profanation of the multitude that which was most dear to them. Hence the secrecy of all the Greek mysteries, and hence the fact that they were almost invariably connected with the worship of the ancient Pelasgian divinities. The time when mysteries were established as such, must have been after the great changes and disturbances produced by the Dorian migration, although tradition referred their institution to Orpheus, the Curetes, the Idacan Dactyles, Dionysus, &c., who belonged to a much earlier period. These traditions, however, may in so far be regarded as true, as the mysteries were only a continuation and propagation of the ancient religion. But it must be admitted that history has not enabled us to state what new elements were added to the mysteries, which were originally foreign to them. The development of philosophy, and more especially the intercourse with the East and with Egypt, appear to have exercised a considerable influence upon their character.

The most celebrated mysteries in Greece were those of Samothrace and Eleusis. [Cabeiria; Eleusinia.] But several other places and divinities had their peculiar mysteries, e.g. the island of Crete those of Zeus (Strabo, p. 710; Athen. ix. 16); Argolis those of Hera (Paus. ii. 34, § 2); Athens those of Athena and Dionysus (Plut. Alex. 34; Dionysl.) Arcadia those of Artemis (Paus. viii. 23, § 3), and Aegina those of Hecate. (Paus. ii. 30, § 2.) But not only the worship of the great gods, but also that of some ancient heroes was connected with mysteries. (Paus. iv. 34. §§ 6, ii. 1, ii. 30, § 5; Herod. v. 83.)

The benefits which the initiated hoped to obtain were security against the vicissitudes of fortune, and protection from dangers both in this life and in the life to come. The principal part of the initiation, and that which was thought to be most efficacious in producing the desired effects, were the lustrations and purifications, whence the mysteries themselves are sometimes called καθαρσία or καθαρωμόν. Offences against and violations of the mysteries were at Athens under the jurisdiction of the archon king, and the court in such cases only consisted of persons who were themselves initiated (μεμυστηκόν), and were selected from the heliastai for the purpose. (Pollux, viii. 141.) Even in cases which were brought before an ordinary court, the judges were only initiated persons, if the case had any connection with the mysteries. (Andocid. de Myst. p. 14.) That no one but the initiated might hear the transactions in such a case, the court was surrounded by public slaves to keep all profane persons at a distance. (Pollux, viii. 123.)

The Roman religion had no such mysteries as that of the Greeks, but only mystic rites and cerom
A very full account of the Greek mysteries is given by Limburg-Brouwer, *Hist. de la Civilisation. Mor. et Relig. des Grecs*, vol. iv. p. 160—415, and chapter xxxvi. of the same work contains a useful survey of the various opinions upon the subject which have been entertained by modern scholars and philosophers. [L. S.]

MYSTILE (μυστήλη). [Corixa, p. 305, a.]

MYSTRUM (μυστρόν), a Greek liquid measure, of which there were two sizes, called the large and small mystrium. The small, which was the more common of the two, was $\frac{1}{3}$ of the cotyla, and $\frac{1}{4}$ of the cyathus, and therefore contained about 1-50th of an English pint. (Galen, *Frag. c. 13.* Galen adds that the smaller mystrium contained $\frac{2}{3}$ drachms, that the larger was $\frac{1}{2}$ of the cotyla and contained $3\frac{1}{2}$ drachms; but that the most exact mystrium (τό δικαίωταντος μυστρῶν) held 8 scruples, that is, $\frac{2}{3}$ drachms. According to this, the small mystrium would be $\frac{1}{3}$ of the larger. But in the 13th chapter of the same fragment he makes the large mystrium $= \frac{1}{2}$ of the cotyla and the small mystrium $\frac{1}{4}$ of the large. In c. 4 he makes the large mystrium $= 3$ oxyzapha, and the small $= 1\frac{1}{2}$.

Cleopatra makes the large $= \frac{1}{2}$ of the cotyla, the small $= \frac{1}{2}$. (Wurn, *de Pond.* p. 130.) [P. S.]

NAVALES DUUMVIRI. [Duumvir.]

NAVALES SO'CELI. [Exercitus, p. 509, b.]

NAVAlA, were docks at Rome where ships were built, laid up, and refitted. They were attached to the emporium outiside of the Porta Trigemina, and were connected with the Tiber. (Liv. xxxv. 10, xl. 51, xlv. 2.) The emporium and navalia were first included within the walls of the city by Aurelian. (Vopisc. *Aurel.* 21.)

The docks (νεφεκοια or νεφελα) in the Peiraeus at Athens cost 1000 talents, and having been destroyed in the anarchy were again restored and finally completed by Lycurgus. (Isocr. *Arocopag. 25*; Böckh, *Publ. Econ.* p. 201, 2nd ed.) They were under the superintendence of regular officers called ἐπιμεληταὶ τῶν ναυαγών. [Epimeleteae, No. 5.]

NAVALIS CORONA. [Corona, p. 360.]

NAVARCHUS (ναύαρχος) is the name by which the Greeks designated both the captain of a single ship, and the admiral of a fleet. The office itself was called ναυαρχία. The admiral of the Athenian fleet was always one of the ten generals (στρατηγοὶ) elected every year, and he had either the whole or at least the principal command of the fleet. (Plut. *Themist. 18.*) The chief officers who served under him were the triarchia and the pentecotarchia, each of whom commanded one vessel; the inferior officers in the vessels were the κυβέρνηται or helmsmen, the κελευσταὶ or commanders of the rows, and the προφωταὶ who must have been employed at the prow of the vessels. (Xenoph. *de Republ. Atl.* 1, 2. § 20; compare Strato.)

Other Greek states who kept a navy had likewise their navarchs. A Spartan navarchus is mentioned by Xenophon (Hellen. ii. 1. § 7), and under him served an officer called ἐντομοκλές. (Pollux, i. 96; Sturt, *Lex. Xenoph.* ii. p. 521.) The navarchus of Sparta however was an innovation of later times, when the Spartans had acquired a fleet and possessions in foreign countries. The office was distinct from that of the kings, and Aristotle (Pol. ii. 6. p. 69, ed. Götting) calls it σχέδια ἑτέρα βασιλεία. (See Weber, *De Gythio et Lacademoniorum Reip. Navaib.* p. 73, &c.)

The navarchus in Rhodes seems to have been their chief military officer. We find him authorized to conclude treaties with foreign nations (Polyb. xvii. 1), and sent on embassies in the name of the republic. (Polyb. xxx. 8; Liv. xiv. 25.)

NAUCHARIA (ναυχαρία) is the name of a division of the inhabitants of Attica. The four Attic phyle were each divided into three phratries, and each of these twelve phratries into four naucraries, of which there were thus forty-eight. This division is ascribed to Solon (Photius, *v. n. Naukrapia*), but Herodotus (v. 71) in relating the insurrection of Cylon mentions magistrates at Athens called πρώταροι τῶν ναυχαρίων, so that the naucraries must have existed long before Solon. There is, however, some difficulty connected with this passage of Herodotus, inasmuch as Thucydides (i. 126) in relating the same event mentions the nine archons instead of the prytanes of the naucraries. Wachsmuth (*Hellen. Atl.* vol. i. p. 366, 2d ed.) endeavours very ingeniously to reconcile Herodotus and Thucydides, by supposing that the prytanes of the naucraries were the same as the trittarcha, the assessors of the first archon, and were thus identified by Thucydides with the archons themselves. What the naucraries were previous to the legislation of Solon is not stated anywhere, but it is not improbable that they were political divisions similar to the demes in the constitution of Cleisthenes, and were made perhaps at the time of the institution of the nine archons for the purpose of regulating the liturgies, taxes, or financial and military affairs in general. (Böckh, *Publ. Econ.* ii. § 21.) Tittmann (*Griech. Staaten.* p. 269) moreover supposes with some probability, that they were, like the demes of Attica, local divisions. Hence the grammarians inform us that ναυχαρίος, or the chief officer of every naucrary, was the same as the demarch. At any rate, however, the naucraries before the time of Solon can have had no connection with the navy, for the Athenians then had no navy, and the word ναυχαρίος cannot be derived from ναῦς, a ship, but from ναῖω, and ναυχαρίος is only another form for ναοκληρος in the sense of a householder, as ναῖων was used for the rent of a house. (Pollux, x. 29; Wachsmuth, *Hellen. Atl.* vol. i. p. 367; Thirwall, *Hist. of Gr. vol. ii. p. 52.*)

Solon in his legislation thus only retained the old institution of the naucraries. His innovation probably was that he charged each of them with the equipment of one trireme and with the mounting of two horsemen. (Pollux, viii. 108.) All military affairs, as far as regards the defraying of expenses, probably continued as before to be regu-
NAVIS.

The beginning of the art of ship-building and of navigation among the Greeks must be referred to a time much anterior to the ages of which we have any record. Even in the earliest mythical stories the attempt is mentioned, which are certainly not altogether poetical fabrications, and we have every reason to suppose that at that early age ships were used which were far superior to a simple canoe, and of a much more complicated structure. The time, therefore, when boats consisted of one hollow tree (Monoxyla), or when ships were merely rafts (Rutes, σχεδίαι) tied together with leathern thongs, ropes, and other substances (Plin. H. N. v. 57), belongs to a period of which not the slightest record has reached us, although such rude and simple boats continued occasionally to be used down to the latest times, and appear to have been very common among several of the barbarous nations with which the Romans came in contact. (Codex; compare Quintil. x. 2; Flor. iv. 2; Fest. s. v. Scholia: Liv. xxi. 26.) Passing over the story of the ship Argo and the expedition of the Argonauts, we shall proceed to consider the ships as described in the Homeric poem.

The numerous fleet, with which the Greeks are said to have sailed to the coast of Asia Minor, must on the whole be regarded as sufficient evidence of the extent to which navigation was carried on in those times, however much of the detail in the Homeric description may have arisen from the poet's own imagination. In the Homeric catalogue it is stated that each of the fifty Boeotian ships carried 120 warriors (II. ii. 510), and a ship which carried so many cannot have been of very small dimensions. What Homer states of the Boeotian vessels applies more or less to the ships of other Greeks. These boats were provided with a mast (τευδα) which was fastened by two ropes (σχέδες) to the two ends of the ship, so that when the rope connecting it with the prow broke, the mast would fall towards the stern, where it might kill the helmsman. (Od. xii. 409, &c.) The mast could be erected or taken down as necessary required. They also had sails (ισθία), but no dock; each vessel however appears to have had only one sail, which was used in favourable wind; and the principal means of propelling the vessel lay in the rowers, who sat upon benches (καλύβα). The oars were fastened to the side of the ship with leather thongs (ξύλωσος, Od. iv. 782), in which they were turned as a key in its hole. The ships in Homer are mostly called black (μῆλανα), probably because they were painted or covered with a black substance, such as pitch, to protect the wood against the influence of the water and the air; sometimes other colours, such as μίλτος, minimum (a red colour), were used to adorn the sides of the ships near the prow, whence Homer occasionally calls ships μῆλονταρρος, t. e. red-cheeked (II. ii. 637, Od. ix. 125); they were also painted occasionally with a purple colour (φωκοκύρρος, Od. xi. 124). Herodotus says (vi. 28) that all ships were painted with μίλτος. When the Greeks had landed on the coast of Troy, the ships were drawn on land, and fastened at the poop to large stones with a rope which served as anchors (II. i. 436, xiv. 77, Od. ix. 137, xv. 498; Moschopoul. ad II. i. 436). The Greeks then surrounded the fleet with a fortification to secure it against the attacks of the enemy. This custom of drawing the ships upon the shore, when they were not used, was followed in later times also, as every one will remember from the accounts in Caesar's Commentaries. There is a celebrated passage in the Odyssey (v. 243, &c.), in which the building of a boat is described, although not with the minuteness which an actual ship-builder might wish for. Odysseus first cuts down with his axe twenty trees, and prepares the wood for his purpose by cutting it smooth and giving it the proper shape. He then bores the holes for nails and hooks, and fits the planks together and fastens them with nails. He rounds the bottom of the ship like that of a broad transport vessel, and raises the bulwark (ιβρα), fitting it upon the numerous ribs of the ship. He afterwards covers the whole of the outside with planks, which are laid across the ribs from the keel upwards to the bulwark; next the mast is made, and the sail-yard attached to it, and lastly the rudder. When the ship is thus far completed, he raises the bulwark still higher by wickerwork which goes all around the vessel, as a protection against the waves. This raised bulwark of wickerwork and the like was used in later times also. (Enesth. ad Od. v. 256.) For ballast Odysseus throws into the ship δαν, which according to the Scholiast consisted of wood, stones, and sand. Calypso then brings him materials to make a sail of, and he fastens the ιμμές or ropes which run from the mast to the two ends of the yard, and also the κάλαμ with which the sail is drawn up or let down. The νόδες mentioned in this passage were undoubtedly, as in the later times, the ropes attached to the two lower corners of the square sail. (Comp. Nitzsch. Anmerk. z. Odys. vol. ii. p. 35, &c.; Ukert, Benem. über Hom. Geogr. p. 20.) The ship of which the building is thus described was a small boat, a σχεδία as Homer calls it; but it had like all the Homeric ships a round or flat bottom. Greater ships must have been of a more complicated structure, as ship-builders are praised as artists. (II. i. 60, &c.) Below, under Κορυά, a representation of two boats is given which appear to bear great resemblance to the one of which the building is described in the Odyssey. (Comp. Thirlwall, Hist. of Greece, vol. i. p. 219.)
It is a general opinion that in the Homeric age sailors did not venture out into the open sea, but that such was really done is clear from the fact, that Homer makes Odysseus say that he had lost sight of land, and saw nothing but the sky and water (Od. xii. 403; comp. xiv. 302; Virg. Aen. iii. 192, &c.), although on the whole it may be admitted, that even down to the historical times the navigation of the ancients was confined to coasting along the shore. Homer never mentions engagements at sea. The Greeks most renowned in the heroic ages as sailors were the Cretans, whose king Minos is said to have possessed a large fleet, and also the Phaeacians. (Thucyd. i. 4; Hom. Od. viii. 110, &c.)

After the times of the Trojan war, navigation, and with it the art of ship-building, must have become greatly improved, on account of the establishment of the numerous colonies on foreign coasts, and the increased commercial intercourse with these colonies and other foreign countries. The practice of piracy, which was during this period carried on to a great extent not only between Greeks and foreigners, but also among the Greeks themselves, must likewise have contributed to the improvement of ships and of navigation, although no particulars are mentioned. In Greece itself the Corinthians were the first who brought the art of ship-building nearest to the point at which we find it in the time of Thucydides, and they were the first who introduced ships with three ranks of rowers (τριήρεις, Triremes). About the year 700 B.C. Ameinocles the Corinthian, to whom this invention is ascribed, made the Samians acquainted with it (Thucyd. i. 13; Plin. H. N. vii. 57); but it must have been preceded by that of the Biremes, that is, ships with two ranks of rowers, which Pliny attributes to the Erythraeans.* These innovations however do not seem to have been generally adopted for a long time; for we read that about the time of Cyrus the Phocaeans introduced long sharp-keeled ships called τευτυγάλικοι (He-rod. i. 163.) These belonged to the class of long war-ships (νῆσε Μακραί), and had fifty rowers, twenty-five on each side of the ship, who sat in one row. It is further stated that before this time vessels called στρογγύλαι, with large round or rather flat bottoms, had been used exclusively by all the Ionians in Asia. At this period most Greeks seem to have adopted the long ships with only one rank of rowers on each side; their name varied accordingly as they had fifty (πεντήκόντα), or thirty (τριακόντα), or even a smaller number of rowers. A ship of war of this class is represented in the previous woodcut, which is taken from Montfaucon, l'Antig. Expiq. vol. iv. part 2. pl. 142.

The following woodcut contains a beautiful fragment of a Bireme with a complete deck. (Winckelmann, Monum. Antich. inedit. pl. 207.) Another specimen of a small Bireme is given further on.

The first Greek people whom we know to have acquired a navy of importance were the Corinthians, Samians, and Phocaeans. About the time of Cyrus and Cambyses the Corinthian Triremes were generally adopted by the Sicilian tyrants and by the Corcyraeans, who soon acquired the most powerful navies among the Greeks. In other parts of Greece and even at Athens and in Aegina the most common vessels about this time were long ships with only one rank of rowers on each side. Athens, although the foundation of its maritime power had been laid by Solon [NAUCURIA], did not obtain a fleet of any importance until the time of Themistocles, who persuaded them to build 200 Triremes for the purpose of carrying on the war against Aegina. But even then ships were not provided with complete decks (καταστρόφωμα) covering the whole of the vessel. (Thucyd. i. 14; Herod. vii. 144.) Ships with only a partial deck or with no deck at all, were called ἄφρακτοι νῆς, and in Latin naves opertae. A fine representation of such a one is figured above from a coin of Coreya. The ships described in Homer had no decks, and were all ἄφρακτοι (Thucyd. i. 10), and the only protection for the men consisted of the ιερᾶ or bulwark. (Hom. Od. xii. 229.) Even at the time of the Persian war, the Athenian ships were without a complete deck. (Thucyd. i. 14.) Ships which had a complete deck were called κατάφρακτοι, and the deck itself κατάστροφα. Their invention is ascribed by Pliny to the Thasians. At the time when Themistocles induced the Athenians to build

---

* Biremes are sometimes called by the Greeks δικερτα (Cic. ad Att. xvi. 4; Hirt. Bell. Alex. 47.) The name biremis is also applied to a little boat managed by only two oars. (Horat. iii. 29. 62; Lucan, viii. 562, x. 56.)
a fleet of 200 sails, he also carried a decree, that every year twenty new Triremes should be built from the produce of the mines of Laurium. (Poly- 

then. i. 30; Plut. Thes. 4; comp. Bickh, 

Pudl. Econ. p. 249, 2d edit.) After the time of 

Themistocles as many as twenty Triremes must have been built every year both in times of war and of peace, as the average number of Triremes which was always ready amounted to between three and four hundred. Such an annual addition was the more necessary, as the vessels were of a light structure and did not last long. The whole superintendence of the building of new Triremes was in the hands of the senate of the Five Hun-

dred (Demosth. c. Andr. p. 589), but the actual business was entrusted to a committee called the τριτηραρχοι, one of whom acted as their treasurer, and had in his keeping the money set apart for the purpose. In the time of Demosthenes a treasurer of the τριτηραρχοι ran away with the money, which amounted to two talents and a half. During the period after Alexander the Great the Attic navy appears to have become considerably diminished, as, in 307 B. C. Demetrius Poliorcetes promised the Athenians timber for 100 new Triremes. (Diod. 

xx. 46; Plut. Demetr. 14.) For this time the Rhodians became the greatest maritime power in Greece. The navy of Sparta was never of great importance.

Navigation remained for the most part what it had been before: the Greeks seldom ventured out into the open sea, and it was generally considered necessary to remain in sight of the coast or of some island, which also served as guides in daytime: in the night the position, rising and setting of the different stars answered the same purpose. In winter navigation generally ceased altogether. In cases where it would have been necessary to coast around a considerable extent of country, which was connected with the main land by a narrow neck, the ships were sometimes drawn across the neck of land from one sea to the other, by machines called ὀλκολ. This was done most frequently across the isthmus of Corinth. (Herod. vii. 24; Thucyd. vii. 1, iii. 15, with the Schol.; Strab. viii. p. 330; Polyb. iv. 19, v. 101.)

Now as regards the various kinds of ships used by the Greeks, we might divide them with Pliny, according to the number of ranks of rowers em-

ployed in them, into Moneres, Biremes, Triremes, Quadriremes, Quinquemeres, &c., up to the enormous ship with forty ranks of rowers, built by Ptolemaeus Philopator (Plin. l. c.; Athen. v. p. 203, &c.) But all these appear to have been constructed on the same principle, and it is more convenient to divide them into ships of war and ships of burden (φωρτικά, φωρτυγιο, Δικάδες, πλοία, φωρτυγιαλα, ναυκες ουρανιας, ναυκες ακταρια). Ships of the latter kind were not calculated for quick movement or rapid sailing, but to carry the greatest possible quantity of goods. Hence their structure was bulky, their bottom round, and although they were not without rowers, yet the chief means by which they were propelled were their sails.

The most common ships of war in the earlier times were the pentecontori (πεντεκόντοροι), but afterwards they were chiefly Triremes, and the latter are frequently designated only by the name τρις, while all the others are called by the name indicating their peculiar character. Triremes however were again divided into two classes: the one con-

sisting of real men-of-war, which were quick-sail-

ving vessels (ταχεῖα), and the other of transports either for soldiers (πραγματῶτες ου θαλατταγωγοι) or for horses (ιππουργοι, ιππαγωγοι). Ships of this class were more heavy and awkward, and were therefore not used in battle except in cases of necessity. (Thucyd. i. 116.) It seems to have been a common practice to use as transports for soldiers and horses such Triremes as had become useless as men-of-war. The ordinary size of a war galley may be inferred from the fact that the average number of men engaged in it, including the crew and marines, was two hundred, to whom on some occasions as much as thirty ephetae were added. (Herod. viii. 17, vii. 194; comp. ΕΡΙΒΑΤΕΣ and Bickh, Pudl. Econ. p. 278, &c.) The rapidity with which these war galleys sailed may be gathered from various statements in ancient writers, and appears to have been so great, that even we cannot help looking upon it without astonishment, when we find that the quickness of an ancient trireme nearly equalled that of a modern steamboat. Among the war-ships of the Athenians their sacred state-vessels were always included (ΠΑ-

ΧΑΥΛΟΙ; comp. Bickh, Urkunden, p. 76, &c.; but smaller vessels, such as the πεντηγώνοροι or τριθυκτοροι, are never included when the sum of men-of-war is mentioned, and their use for military purposes appears gradually to have ceased.

Vessels with more than three ranks of rowers on each side were not constructed in Greece till about the year 400 B. C., when Dionysius I., tyrant of Syracuse, who bestowed great care upon his navy, built the first Quadriremes (πεντεκέφαλοι), with which he had probably become acquainted through the Carthaginians, since the invention of these vessels is ascribed to them. (Plin. H. N. vii. 57; Diodor. xiv. 41, 42.) Up to this time no Quinquemeres (πέντεκεφαλοι) had been built, and the invention of them is likewise ascribed to the reign of Dionysius. Mnesigetion (ap. Plin. l. c.) ascribes the invention of Quinquemeres to the Salaminians, and if this statement is correct, Dionysius had his Quinquemeres probably built by a Salaminian ship-builder.

In the reign of Dionysius 11. Hekareis (ΕΚΑΡΕΙΟΙ) are also mentioned, the invention of which was ascribed to the Syracusans. (Ath. H. 1. p. 76, with the note of Perizonius; Plin. l. c.) After the time of Alexander the Great the use of vessels with four, five, and more ranks of rowers became very general, and it is well known from Polybius (i. 63, &c.) that the first Punic war was chiefly carried on with Quinquemeres. Ships with twelve, thirty, or even forty ranks of rowers (Plin. l. c.; Athen. v. p. 204, &c.), such as they were built by Alexander and the Ptolemies, appear to have been more curiosities, and did not come into common use. The Athenians at first did not adopt vessels larger than Triremes, probably because they thought that with rapidity and skill they could do more than with large and unwieldy ships. In the year b. c. 326 they continued to use nothing but Tri-

remes; but in 330 b. c. the republic had already a number of Quadriremes, which was afterwards increased. The first Quinquemeres at Athens are mentioned in a document (in Bickh's Urkunden, N. xiv. lit. K.) belonging to the year b. c. 325. Herodotus (vi. 87), according to the common reading, calls the theoria, which in O. 72 the Aegaeotians took from the Athenians, a πεντεκέφαλοι.
but the reading in this passage is corrupt, and παρέπεινος should be written instead of παρέπεινομένος. (Böckh, Urkunden, p. 76.) After the year 330 the Athenians appear to have gradually ceased building Triremes, and to have constructed Quadriremes instead.

Among the smaller vessels we may mention the δικταύος or δικλάτος, which seems to have been sometimes used as a ship of burden. (Herod, vii. 186; comp. Pind. Pyth. xi. 62, Nem. v. 5.) The acactus must generally have been very small, and the same as a scapha, for Suetonius (Caes. 64) in describing Caesar's escape from Alexandria, says that he jumped into a scapha, which Plutarch, in narrating the same event, calls an acatic. From Thucydidis (iv. 67) with the remark of the Scholiast, we must infer that it was a small boat in which every person sailing in it managed two oars, one with each hand. The name Scapha (ἐκατόρθος) denotes a small skiff or life-boat, which was commonly attached to merchantmen for the purpose of saving the crew in danger. (Act. Apost. xxvii. 30.)

Liburna, or Liburnica, in Greek λιβορίς or λιβόρις, is a name given apparently to every warship, from a bireme up to those with six lines of rowers on each side (Lucian, vol. v. p. 262, ed. Bip.; Flor. iv. 2; Sueton. Aug. 17); but in the time of Augustus, liburnae even with six lines of rowers were considered small and swift in comparison with the unwieldy ships of Antony at Actium. (Horat. Epod. i. 1.) Pliny (x. 32) informs us that they were constructed sharp in the bows to offer the least possible resistance to the water. They were usually provided with a beak, whence a navis rotata is generally the same as a Liburna. They were first constructed by the Liburnians (whence they derived their name), and first used by the Romans in the battle of Actium. (Comp. Gall. xiv. 3; Plin. H. N. ix. 5, xiv. 3; Appian, de Bell. Bibr. 3; Juven. iii. 214.) Ever vessel at Athens, as in modern times, had a name given to it, which was generally of the feminine gender, whence Aristophanes (Εἰό. 1313) calls the Triremes παρέπεινος, and one vessel, the name of which was Nauphante, he calls the daughter of Nauso. (Böckh, Urk. p. 91, &c.; and a list of names in p. 94, &c.) The Romans sometimes gave to their ships masculine names. The Greek names were either taken from ancient heroines such as Nausicaa, or they were abstract words such as Εὐερίνα, Θερεπία, Πρόναια, Ζώφονα, Ηγεμόνη, &c. In many cases the name of the builder also was added.

We now proceed to describe the principal parts of ancient vessels.

1. The prow (πρόφυς or μετάτον, prona) was generally ornamented on both sides with figures, which were either painted upon the sides or laid in. It seems to have been very common to represent an eye on each side of the prow. (Böckh, Urk. p. 102; Becker, Charidës, vol. ii. p. 60.) Upon the prow or fore-deck there was always some emblem (παράστημα, insigne, figura) by which the ship was distinguished from others. At the head of the prow there projected the ορος, which was frequently made in the shape of a ram and the like. This ορος was used for the purpose of attacking another vessel and of breaking its sides. It is said to have been invented by the Tyrrhenian Pisaeus. (Plin. l. c.) These beaks were at first always above the water and visible; afterwards they were attached lower, so that they were invisible, and thus became still more dangerous to other ships. (Diodor. xii. 27, xiv. 60, 75; Polyb. i. 26, xvi. 5, viii. 6.) The annexed woodcuts, taken from Montfaucon (L'Antiqu. Égypt., iv. 2, tab. 133), represent three different beaks of ships.

The prow and projecting a little above the keel was the Rostrum (ἐμπειρός, ἐμμαχός) or beak, which consisted of a beam, to which were attached sharp and pointed irons, or the head of a ram and the like. This ἐμπειρός was used for the purpose of attacking another vessel and of breaking its sides. It is said to have been invented by the Tyrrhenian Pisaeus. (Plin. l. c.) These beaks were at first always above the water and visible; afterwards they were attached lower, so that they were invisible, and thus became still more dangerous to other ships. (Diodor. xii. 27, xiv. 60, 75; Polyb. i. 26, xvi. 5, viii. 6.) The annexed woodcuts, taken from Montfaucon (L'Antiqu. Égypt., iv. 2, tab. 133), represent three different beaks of ships.
NAVIS.

Connected with the έμβολος was the προμηλας, which according to Pollux (i. 85) must have been a wooden part of the vessel in the prow above the beak, and was probably the same as the πράσινος, and intended to ward off the attack of the εὔβολος of a hostile ship. The command in the prow of a vessel was exercised by an officer called προπηλας, who seems to have been next in rank to the steersman, and to have had the care of the gear, and the command over the rowers. (Xenoph. Oecon. vii. 14.)

2. The stern (πρόμυρα, ἀντικρόνιον) was generally above the other parts of the deck, and in it the helmsman had his elevated seat. It is seen in the representations of ancient vessels to be rounder than the prow, though its extremity is likewise sharp. The stern was, like the prow, adorned in various ways, but especially with the image of the tutelary deity of the vessel (πράσινος). In some representations a kind of roof is formed over the head of the steersman, and the upper part of the stern frequently has an elegant ornament called ἀπλυστρα, and in Greek ἀψτρατος, which constituted the highest part of the poop. It formed a corresponding ornament to the ὀξούσατος at the prow. At the junction of the aplustre with the stern on which it was based, we commonly observe an ornament resembling a circular shield: this was called ὁμίδεις or ὁμίδες. It is seen on the two aplustria here represented. (Comp. Apollon. Rhod. i. 1089, ii. 601; Apollod. i. 9. § 22; Hom. Il. xv. 716; Herod. vi. 114.) The aplustre rose immediately behind the gubernator, and served in some degree to protect him from wind and rain. Sometimes there appears, beside the aplustre, a pole, to which a fillet or pennon (ταῦτια) was attached, which served both to distinguish and adorn the vessel, and also to show the direction of the wind. In the column of Trajan, a lantern is suspended from the aplustre so as to hang over the deck before the helmsman. The aplustre commonly consisted of thin planks, and presented a broad surface to the sky. In consequence of its conspicuous place and beautiful form, the aplustre was often taken as the emblem of maritime affairs: it was carried off in triumph by the victor in a naval engagement (Juven. x. 135), and Neptune is sometimes represented on medals holding the splaustre in his right hand, as in the annexed woodcut; and in the celebrated Apotheosis of Homer, now in the British Museum, the female personating the Odyssey exhibits the same emblem in reference to the voyages of Odysseus.

3. The τράφνη is the bulwark of the vessel, or rather the uppermost edge of it. (Heavch. s. v.) In small boats the pegs (σκαλμοί, σκελμαί) between which the oars move, and to which they are fastened by a thong (προσωταρίον), were upon the τράφνη. (Bückh. Urkund. p. 103.) In all other vessels the oars passed through holes in the side of the vessel (σφαλαιοί, τρήματα, or γναθήματα). (Schol. Aristoph. Acharn. 97, &c.)

4. The middle part of the deck in most ships of war appears to have been raised above the bulwark or at least to a level with its upper edge, and thus enabled the soldiers to occupy a position from which they could see far around and hurl their darts against the enemy. Such an elevated deck appears in the annexed woodcut representing a Μονερίς. In this instance the flag is standing upon the hind-deck. (Mazois, Pomp. Part i. tab. xxii. fig. 2.)

5. One of the most interesting, as well as important parts in the arrangements of the Biremes, Triremes, &c., is the position of the ranks of rowers, from which the ships themselves derive their names. Various opinions have been entertained by those who have written upon this subject, as the information which ancient writers give upon it is extremely scanty. Thus much, however, is certain, that the different ranks of rowers, who sat along the sides of a vessel, were placed one above the other. This seems at first sight
very improbable, as the common ships in later times must have had five ordines of rowers on each side, and since even the lowest of them must have been somewhat raised above the surface of the water, the highest ordo must have been at a considerable height above it, and consequently required very long oars: the apparent improbability is still more increased, when we hear of vessels with thirty or forty ordines of rowers above one another. But that such must have been the arrangement is proved by the following facts: First, In works of art, in which more than one ordo of rowers is represented, they appear one above another, as in the biremes given on pp. 784, a, 791, a, and in several others figured by Montfaucon. Secondly, The Scholiast on Aristophanes (Acharn. 1106; compare Aristoph. Ran. 1105) states that the lowest rank of rowers having the shortest oars and consequently the easiest work, received the smallest pay, while the highest ordo had the longest oars, and consequently had the heaviest work and received the highest pay. Thirdly, In the monstrous πετροκράτισα of Ptolemaeus Philopator, the description of which by Callimachus (ap. Athen. v. p. 203, &c.) is as authentic as it well can be, the height of the ship from the surface of the water to the top of the prow (ἀφροτόλαι) was 48 cubits, and from the water to the top of the stern (ἀφλαστα) 53 cubits. This height afforded sufficient room for forty ranks of rowers, especially as they did not sit perpendicularly above one another, but one rower, as may be seen in the above representation of a Bireme, sat behind the other, only somewhat elevated above him. The oars of the uppermost ordo of rowers in this huge vessel were 36 cubits long.

In ordinary vessels from the Monereis up to the Quinqueremia each ear was managed by one man, which cannot have been the case where each ear was 38 cubits long. The rowers sat upon little benches attached to the ribs of the vessel, and called ἑδάλων, and in Latin fori and transstra. The lowest row of rowers was called θαλάμος, the rowers themselves, θαλαμίται or θαλάμαι. (Schol. ad Aristoph. Acharn. 1106.) The uppermost ordo of rowers was called ἄπρος, and the rowers themselves ἀπρίται. (Thucyd. vol. ii. p. 461, &c.) The middle ordo or or- dines of rowers were called γυγλα, γυγνοι or γυγαν. (Pollux, i. 9.) Each of this last class of rowers had likewise his own seat, and did not, as some have supposed, sit upon benches running across the vessel. (Böckh, Urkund. p. 103, &c.)

We shall pass over the various things, which were necessary in a vessel for the use and maintenance of the crew and soldiers, as well as the machines of war which were conveyed in it, and confine ourselves to a brief description of things belonging to a ship as such. All such utensils are divided into wooden and hanging gear (σκεύη ξύλων, and σκεύη κρεμαστά, Pollux, x. 13; Athen. i. p. 27). Xenophon (Oecon. viii. 12) adds to these the σκεύη πλεκτά, or the various kinds of wickerwork, but these are more properly comprehended among the κρεμαστά.

I. Σκεύη ξύλων.

1. Oars (κώπα, remi). The collective term for oars is τρῆβος, which properly signified nothing but the blade or flat part of the oar (Herod. viii. 12; Pollux, i. 90), but was afterwards used as a collective expression for all the oars with the exception of the rudder. (Eurip. Iph. Taur. 1346, Hel. 1554; Polyb. xvi. 5.) The oars varied in size accordingly as they were used by a lower or higher ordo of rowers, and from the name of the ordo by which they were used, they also received their special names, viz. κώπα, δαλάμαι, γυγνοι, and δραμα- τεῖς. Böckh (Urk. p. 119) has calculated, that each Trireme on an average had 170 rowers. In a Quinquereme during the first Punic war, the great vessel of Ptolemaeus Philopator had 4000 rowers (Athen. v. p. 204), and the handle of each ear (εὐχερείδος) was partly made of lead, that the shorter part in the vessel might balance in weight the outer part, and thus render the long oars manageable. The lower part of the holes through which the oars passed, appear to have been covered with leather (ἀσκώμα), which also extended a little way outside the hole. (Aristoph. Acharn. 97, with the Schol.; Schol. ad Ran. 367; Suidas, s. v. ἀσκώματα and δορθέα; compare Böckh, Urk. 106, &c.) The τρῆβος also contained the περίτακτον, which must consequently be a particular kind of oars. They must have derived their name, like other oars, from the class of rowers by whom they were used.

2. The rudder (πτεράλον, gubernaculum). Before the invention of the rudder, which Pliny (H. N. vii. 57) ascribes to Tiphys, the pilot of the ship Argo, vessels must have been propelled and guided by the oars alone. This circumstance may account for the form of the ancient rudder, as well as for the mode of using it. It was like an ear with a very broad blade, and was commonly placed on each side of the stern, not at its extremity. The annexed woodcut presents examples of its appearance as it is frequently exhibited on gems, coins, and other works of art. The figure in the centre is from one of Bartoli’s lamps (Luc. Ant. i. 5), and shows a Triton blowing the bucina, and holding a rudder over his shoulder. The left-hand figure in the same woodcut is from a cameo in the Stosch collection. It represents a rudder with its helm or tiller crossed by the cornucopia. In the third figure taken from another cameo in
the same collection, Venus leans with her left arm upon a rudder to indicate her origin from the sea. The rudder was managed, says Herodotus, by the governor-naut (κυβιστήρ), who is also called the rudder-bearer as distinguished from the magister. A ship had sometimes one, but more commonly two rudders (Aelian, V. H. ii. 40; Heliod. Aethiop. v. p. 241, ed. Comm.; Acts xxvii. 40), and they were distinguished as the right and left rudder (Hygin. Fab. 14); but they were managed by the same steersman to prevent confusion. (Bartoli, l. c. iii. 31.) In larger ships the two rudders were joined by a pole which was moved by the governor-naut and kept the rudders parallel. The contrivances for attaching the two rudders to one another and to the sides of the ship, are called (σεισματα (Eurip. Helen. 1526) or διαστηματα (Acts. xxvii. 40). The famous ship of Ptolemaus Philopator had four rudders, each 30 cubits in length. (Athen. v. p. 204; comp. Tac. Ann. ii. 6.)

3. Ladders (Κλειμακίδες, scolae). Each Trireme had two wooden ladders, and the same seems to have been the case in τριακόντος. (Böckh, p. 125.)

4. Poles or punt poles (κορνολ, conti). Three of these belonged to every Trireme, which were of different lengths, and were accordingly distinguished as κορνολ μέγας, κορνολ μικρός, and κορνολ μέδιας. Triacontores had probably always four punt poles. (Bartolo; Böckh, p. 125, &c.)

5. Παρασάται or supports for the masts. They seem to have been a kind of props placed at the foot of the masts. (Isidor. Orig. x. 2. 11.) The mast of a Trireme, as long as such props were used, was supported by two. In later times they do not occur any longer in Triremes, and must have been supplanted by something else. The Triacontores on the other hand retained their παρασάται. (Böckh, p. 126, &c.)

6. The mast (ιστός, maus). The ancients had vessels with one, two or three masts. From Böckh's Urkunden we learn that two masts were issued at Athens from the νέαρον for every trireme. The foremost was called δεξιός, while the mainmast was called ιστός μέγας. A trimcenter, or a vessel with 30 rowers, had likewise two masts, and the smaller mast here as well as in a trireme was near the prow. In three-masted vessels the largest mast was nearest the stern. The masts as well as the yards were usually of fir. (Plin. H. N. xvi. 76.) The invention of masts in navigation is attributed to Daedalus (Plin. H. N. vii. 56.) The part of the mast immediately above the yard (antenna), formed a structure similar to a drinking cup, and bore the name of κερακέυμα (κεράκευμα). Into it the mariners ascended in order to manage the sail, to obtain a distinct view, or to discharge missiles. (Eurip. Hecub. 1237, with the Schol.; Lucil. Sat. 3.) The ceruchis or other tackle may have been fastened to its lateral projections which corresponded to the hands of a cup. (Comp. Pind. Nem. v. 94.) The carchesium of the three-masted ship built for Hiero II. by Archimedes were of bronze. Three men were placed in the largest, two in the next, and one in the smallest. The Breackstrokes (Διοδακεια) were fixed to these structures, so as to supply the place of defensive armour; and pulleys (τρεχυλαι, trochlaeae) for hoisting up stones and weapons from below. (Athen. v. 43.) The continuation of the mast above the carchesium was called the "distaff" (διακάτη), corresponding to our top-mast or top-gallant mast. (Apollon. Rhod. i. 565; Athen. xi. 49.) The carchesium was sometimes made to turn upon its axis, so that by means of its apparatus of pulleys, it served the purpose of a crane. (Vitruv. x. 2, 10, with Schneider's note.)

7. The yards (κέρας, κεράς, antenna). The mainyard was fastened to the top of the mast by ropes termed ceruchis, as seen in the annexed woodcut.

To the mainyard was attached the mainsail, which was hoisted or let down as the occasion might require. For this purpose a wooden hoop was made to slide up and down the mast, as we see it represented in an antique lamp, made in the form of a ship. (Bartoli, l. c. iii. 31; comp. Isid. Orig. xx. 15.) In the two extremities of the yard (κερας, κερας, κερας), ropes (ceruchis, κερας, κερας) were attached, which passed to the top of the mast; and by means of these ropes and the pulleys connected with them, the yard and sail, guided by the hoop, were hoisted to the height required. (Caes. de Bell. Gall. iii. 14; Lucenn, viii. 177; Val. Flacc. i. 469.) There are numerous representations of ancient ships in which the antenna is seen, as in the two woodcuts here appended. In the second of them, there are ropes hanging down from the antenna, the object of which was to enable the sailors to turn the antenna and the sail according to the wind.

II. Σκειόμενος κρεμαστό

1. Τρομαζόμενο. This part of an ancient vessel was formerly quite misunderstood, as it was believed to be the boards or planks covering the outside of a ship and running along it in the direction from poop to prow. But Schneider (ad Vitruv. x. 15. 6) has proved that the word means cordage or tackling, and this opinion, which is supported by many ancient authors, is confirmed by the documents published by Böckh, where it is reckoned among the σκειόμενος κραμαστή. The τρομαζόμενο were thick and broad ropes which ran in a horizontal direction around the ship from the stern to the prow, and were intended to keep the whole fabric together.
790 NAVIS.

together. They ran round the vessel in several circles, and at certain distances from one another. The Latin name for ἵππωτα is tormentum. (Isidor. Orig. xix. 4. 4; Plato, de Rep. x. p. 616.) The length of these tormenta varied accordingly as they ran around the higher or lower part of the ship, the latter being naturally shorter than the former. Their number varied according to the size of the ship. The Tessarakontores of Ptolemaeus Philopator had twelve ἵππωται, each 600 cubits long. (Athen. v. p. 204.) Such ἵππωται were always ready in the Attic arsenals, and were only put on a vessel when it was taken into use. Sometimes they were taken on board when a vessel sailed, and not put on till it was thought necessary. (Act. Apost. xxvi. 17.) The act of putting them on was called ἰππωτονεῖν or διαδικουώνειν, or ἵππωσα. (Polyb. xxvii. 3; Appian, B. C. v. 91; Appol. Ibhid. Argos. i. 368.) A Trireme required four ἵππωται, and sometimes this number was even increased, especially when the vessel had to sail to a stormy part of the sea. (Böckh, pp. 133—138.)

2. Ιτιτίαν (velum), sail. Most ancient ships had only one sail, which was attached with the yard to the greatest mast in the vessel. In a Trireme too one sail might be sufficient, but the trierarch might nevertheless add a second. As each of the two masts of a Trireme had two sail-yards, it further follows that each mast might have two sails, one of which was placed lower than the other. The two belonging to the main-mast were called ιτιτια μεγάλα, and those of the fore-mast ιτιτια ιάκτηνια. (Xenoph. Hellen. vi. 2. § 27; Bäcker, Anecdol. pp. 19, 10.) The former were used on ordinary occasions, but the latter probably only in cases when it was necessary to sail with extraordinary speed. The sails of the Attic war-galleys, and of most ancient ships in general, were of a square form, as is seen in numerous representations on works of art. Whether triangular sails were ever used by the Greeks, as has been frequently supposed, is very doubtful. The Romans, however, used triangular sails, which they called suipera, and which had the shape of an inverted Greek Δ (v), the upper side of which was attached to the yard. Such a sail had of course only one πούς (pes) at its lower extremity. (Schol. ad Lucan. I. 447. 41; Isidor. Orig. xix. 3, 4; Böckh, p. 133—138.)

3. Τώρια, cordage. This word is generally explained by the grammarians as identical with σχοινία or καλάκι: but from the documents in Böck it is clear that they must have been two distinct classes of ropes, as the τώρια are always mentioned after the sails, and the σχοινία before the anchors. The σχοινία (fanes) are the strong ropes to which the anchors were attached, and by which a ship was fastened to the land; while the τώρια were a lighter kind of ropes and made with greater care, which were attached to the mast, yards, and sails. Each rope of this kind was made for a distinct purpose and place (τίπος, whence the name τώρια). The following kinds are most worthy of notice: — a. καλάκια or καλάκι. What they were is not quite clear, though Böck thinks it probable that they belonged to the standing tackle, i. e. that they were the ropes by which the mast was fastened to both sides of the ship, so that the πρόπτειναι in the Homeric ships were only an especial kind of καλάκια, or the καλάκια themselves differently placed. In later times the πρόπτεινα was the rope which went from the top of the mainmast (καρκήπθαι) to the prow of the ship, and thus was what is now called the main-stay. b. ἵππαρακτα and κερεύγματα are probably names for the same ropes which ran from the two ends of the sail-yard to the top of the mast. In more ancient vessels the ἵππας consisted of only one rope; in later times it consisted of two, and sometimes four, which uniting at the top of the mast, and there passing through a ring, descended on the other side, where it formed the επίτονα, by means of which the sail was drawn up or let down. (Böckh, pp. 148—152.) Compare the lower woodcut at p. 789, which shows a vessel with two ceruchi, and the upper woodcut p. 789, which shows one with four ceruchi. c. Ἕγκυονα, Latin enoicium (Isidor. Orig. xix. 4. 7), was the rope which went from the middle of a yard to the top of the mast, and was intended to facilitate the drawing up and letting down of the sail. The Ἕγκυονα διπλή of Quadriremes undoubtedly consisted of two ropes. Whether Triremes also had them double, is uncertain. (Pollux, l. c.; Böckh, p. 132.) d. Πίδαις (pedes) were in later times as in the poems of Homer the ropes attached to the two lower corners of a square sail. Most ancient ships had only one sail, which was attached with the yard to the greatest mast in the vessel. In a Trireme too one sail might be sufficient, but the trierarch might nevertheless add a second. As each of the two masts of a Trireme had two sail-yards, it further follows that each mast might have two sails, one of which was placed lower than the other. The two belonging to the main-mast were called ιτιτια μεγάλα, and those of the fore-mast ιτιτια ιάκτηνια. (Xenoph. Hellen. vi. 2. § 27; Bäcker, Anecdol. pp. 19, 10.) The former were used on ordinary occasions, but the latter probably only in cases when it was necessary to sail with extraordinary speed. The sails of the Attic war-galleys, and of most ancient ships in general, were of a square form, as is seen in numerous representations on works of art. Whether triangular sails were ever used by the Greeks, as has been frequently supposed, is very doubtful. The Romans, however, used triangular sails, which they called suipera, and which had the shape of an inverted Greek Δ (v), the upper side of which was attached to the yard. Such a sail had of course only one πούς (pes) at its lower extremity. (Schol. ad Lucan. I. 447. 41; Isidor. Orig. xix. 3, 4; Böckh, p. 133—138.)

4. Παραβαθύματα. The ancient vessels were not fitted with a bulwark as they are nowadays; but to protect the ship from the high waves and from the darts of the enemy, they had a kind of breast-work behind which the men might find protection against high waves, and also to serve as a kind of breast-work behind which the men might be safe against the darts of the enemy. These elevations of the bulwark are called parabathyma, and in the documents in Böck they are either called τρίχυνα, made of hair, or λευκά, white. They were probably fixed upon the edge on both sides of the vessel, and were taken off when not wanted. Each galley appears to have had several parabathyma, two made of hair and two white ones, these four being regularly mentioned as belonging to one ship. (Xenoph. Hellen. i. 6. § 19; Böckh, p. 139, &c.)

5. Κατάλθυμα and ἱππαρκία. The former of these occurs in Quadriremes as well as in Triremes, the latter only in Triremes. Their object and nature are very obscure, but they appear to have been a lighter kind of parabathyma. (Polyaen. Strat. iv. 11, 13; Böckh, p. 160, &c.)

6. Σχοινία are the stronger and heavier kinds of ropes. There were two kinds of these, viz. the σχοινία ἐγκύονα, to which the anchor was attached, and σχοινία επίτονα or επίτεινα (retinacula), by which the ship was fastened to the shore or drawn upon the shore. Four ropes of each of these two kinds is the highest number that is mentioned as belonging to one ship. The thick ropes were made
of several thinner ones. (Aristoph. Paæ, 36 ; Varro, de Re Rust. i. 135; Büchh., pp. 161—166.)

7. The anchor (ἀγκύρα, ancora.) We have already remarked that in the Homeric age, anchors were not known, and large stones (eisel, sleeper) used in their stead. (Hom. H. ii. 436, xvi. 77, Od. ix. 137, xv. 498.) According to Pliny (H. N. 57), the anchor was first invented by Eupalamus and afterwards improved by Anacharsis. Afterwards, when anchors were used, they were generally made of iron, and their form, as may be seen from the annexed figure, taken from a coin, resembled that of a modern anchor. (Comp. Virg. Aen. i. 169, vi. 3.) Such an anchor was often termed bidentis, δίπλη, ἄμφιβολος or ἄμφιστατος, because it had two teeth or flukes; but sometimes it had only one, and was then called ἀρείνος. The technical expressions in the use of the anchor are: ancora solvere, ἀγκύραν χαλάν, to loose the anchor; ancora jamare, ἀγκύραν βάλλειν or βίβλειν, to cast anchor; and ancora tollere, ἀγκύραν αφέναι or ἀναφέστα, to weigh anchor, whence αφέναι by itself means "to set sail," ἄγκυραν being understood. The following figure, taken from a marble at Rome, shows the cable (funis), passing through a hole in the prow (oeulus). Each

The Romans in the earlier period of their history never conceived the idea of increasing their power by the formation of a fleet. The time when
war (naves turritae), and fought upon them in the same manner as if they were standing upon the walls of a fortress. Some of such naves turritae occur in the woodcuts given above. (Flor. l.c.; Plut. Anton. 33; Dion Cass. xxxii. 33; Plin. H. N. xxxii. 1; comp. Caes. de Bell. Gall. iii. 14; Dion Cass. xxxix. 43; Veget. de Re Milit. v. 14, &c.)

For a more detailed account of the ships and navigation of the ancients, see Scheffer, De Militia Navali, Upsala, 1654; Berghaus, Geschichte der Schiffsfahrtskunde der vornehmsten Völker des Alterthums; Benedict, Gesch. der Schiffsfahrt und des Handels der Alten; Howell, On the War-galleys of the Ancients; A. Jal, Archéologie Navale, Paris, 1840; and for the Attic navy especially, Böckh’s Urkunden über das Seewesen des Attischen Staates, Berlin, 1840; K. Hultäus, Geschichte Roms im Zeitalter der Punischen Kriege, Leipzig, 1846, p. 607, &c.)
The combatants in these sea-fights, called Naumachia (Suet. Claud. 21), were usually captives (Dion Cass. xlviii. 19) or criminals condemned to death (Dion Cass. lx. 33), who fought as in gladiatorial combats, until one party was killed, unless preserved by the clemency of the emperor. The ships engaged in the sea-fights were divided into two parties, called respectively by the names of different maritime nations, as Tyrians and Egyptians (Suet. Jul. 31), Rhodians and Sicilians (Suet. Claud. 21; Dion Cass. lx. 33), Persians and Athenians (Dion Cass. lxi. 9), Corcyreans and Corinthians, Athenians and Syracusans, &c. (I. d. lxvi. 25.) These sea-fights were exhibited with the same magnificence and lavish expenditure of human life as characterized the gladiatorial combats and other public games of the Romans. In Nero's naumachia there were sea-monsters swimming about in the artificial lake (Suet. Nero. 12; Dion Cass. lxi. 9), and Claudius had a silver Triton placed in the middle of the lake Fucinus, who was made by machinery to give the signal for attack with a trumpet. (Suet. Claud. 21.) Troops of Nereids were also represented swimming about. (Martial, de Spect. 26.) In the sea-fight exhibited by Titus there were 3000 men engaged (Dion Cass. lxvi. 25), and in that exhibited by Domitian the ships were almost equal in number to two real fleets (Paus. p. 525, b.) The combatants in these sea-fights, called Naumachia (Suet. Claud. 21), were subsequently called the vetus naumachia. (Suet. Dom. 4, 5.) Representations of naumachiae are sometimes given on the coins of the emperors. (Scheffer, de Militia Navali, iii. 2, pp. 189, 191.)

The concurrent authority of most of them, the nautodicae, renders it more than probable that the nautodicae were not eisagogeis in the cases above mentioned, but δικασταί. But this mode of settling the question does not appear to us to be as satisfactory as that adopted by Meier and Schömann. (Att. Proc. p. 83, &c.) In all the speeches of Demosthenes no trace occurs of the nautodicae, and in the oration against Lacritus (p. 940), where all the authorities are mentioned before whom such a case as that of Lacritus might be brought, the orator could scarcely have failed to mention the nautodicae, if they had still existed at the time. It is therefore natural to suppose that the δικας ἠμπρων at the time of Philip of Macedon, when they became δικας ἐμφυόν (Emmeni Dikai), were taken from the nautodicae and transferred to the thesmothetae. And as the republic could not now think it any longer necessary to continue the office of nautodicae, merely on account of the δικας ἔργα, these latter were likewise transferred to the thesmothetae, and the office of the nautodicae was abolished. The whole period during which nautodicae existed, together with the time from the legislation of Cleisthenes or soon after, to Philip of Macedonia. One difficulty however yet remains, for nautodicae are mentioned by Lucian (ii. p. 203, ed. Bip.) in a dialogue in which the author represents as having taken place after the death of Alexander. Those who are unwilling to believe that Lucian here, as in other places, has been guilty of an anachronism, must suppose that the nautodicae were after their abolition restored for a time, of which however there is no other evidence. (Compare Böckh, P. A., i. § 9; Baumstark, De Curatoribus Emporii et Nautodicis apud Atheniacens, pp. 65—78.)

NEBRIS, a fawn's skin (from νεάρδης, a fawn; see AEGIS), worn originally by hunters and others as an appropriate part of their dress, and afterwards attributed to Dionysus (Eurip. Bacch. 99, 125, 157, 790, ed. Matt.; Aristoph. Ranae, 1209; Dionys. Periog. 702, 346; Rufus Festus Avien. 1129), and consequently assumed by his votaries in the processions and ceremonies which they observed in honour of him. (Dionysia.) The annexed woodcut, taken from Sir Wm. Hamilton's Vases (t. 37), shows a priestess of Bacchus in the attitude of offering a nebris to him or to one of his ministers. The works of ancient art often show it as worn not only by male and female bacchinals, but also by Pan and Satyrs. It was
commonly put on in the same manner as the aegis, or goat-skin, by tying the two fore legs over the right shoulder so as to allow the body of the skin to cover the left side of the wearer. (Ovid. Met. vi. 593.)

NECRODEIPNON (νεκροδείπνων). [FUNUS, p. 557, b.]

NECY'SIA (νεκόστα). [FUNUS, p. 558, a.]

NEFASTI DIES. [DIES.]

NEGATIVA, NEGATORIA ACTIO. [Contraria, by analogy to similar actions in other cases.]

NEGLIGENCENTIA. [CULPA.]

NEGO'TI'O'RI M GES'TO'RUM A'CTIO. This was an action which a man might have against another who had managed his affairs for him in his absence, without being commissioned to do so (sine mandato). The action was not founded either on contract or delict, but was allowed for convenience sake (utilitas causa). The person whose business was transacted by another, and the person who transacted the business, might severally have an action against one another in respect of that which "ex bona fide alterum alteri praestare oportet." The dominus negotii had a negotiorum gestio directa. The action of the self-constituted agent (gestor) was sometimes called Contraria, by analogy to similar actions in other cases. He was bound to make good any loss that was incurred during his administration by dolus or culpa, and in some instances even loss that had been incurred by cases. On the other hand, he had his action for all expenses properly incurred, and in some cases, even if the result was unfortunate to the absent person; as if he paid for medical attendance on a sick slave, and the slave died notwithstanding all his care; but various difficulties might easily be suggested as to such cases as these (Dig. 3. tit. 3. a. 10), and the rule must be qualified by the condition of the thing undertaken being a thing necessary (to the owner) to be undertaken, though the result might be unprofitable. It was also necessary that the gestor should have undertaken the business not with the view of doing it for nothing, but with the intention of establishing a right against the negotii dominus, though that might not be the immediate motive to undertaking the thing (Savigny, System, &c. iii. p. 6, note 9). There was, however, no negotiorum gestorum actio contraria, if the gestor had done the acts that he did, with the clear intention of doing an act of Liberalitas or Pietas. The edict allowed a man to recover the expenses that he had been put to about another man's interment, though he had no direct authority for looking after it. The reason of the rule was, that persons might not be prevented from attending to so necessary a matter as the interment of a corpse, if there was no person present to whom the duty belonged. (Dig. 11. tit. 7. De Relig. et Sumpribus funerum.)

It was a much disputed question what was the effect of Ratihabitio on the negotiorum gestio, whether it was thereby turned into a Mandatum. (See Vangerow, Pandekten, &c., iii. p. 483.) The dominus was not bound by the negotiorum gestio, except when the acts done were such as were necessary to prevent some imminent loss or damage to his property, as already observed. But he might, if he pleased, confirm the negotium, though it was male gestum.

(Inst. 3. tit. 27. s. 3, &c.; Dig. 44. tit. 7. s. 5; Dig. 3. tit. 5. De Negotios Gestis; Cod. 2. tit. 19; Vangerow, Pandekten, &c., iii. p. 479.)

NEGOTIATORIRES, signified specially during the later times of the republic Roman citizens settled in the provinces, who lent money upon interest or bought up corn on speculation, which they sent to Rome as well as to other places. Their chief business however was lending money upon interest, and hence we find the words negotiatio, negociatio, and negociari used in this sense. The negotiatores are distinguished from the publicani (Cic. ad Att. ii. 16, "malo negotiatores satisfacere quam publicani;" comp. Cic. Verr. ii. 3, pro Flacco. 16, pro Leg. Manil. 7), and from the mercatores (Cic. pro Planc. 26, "negotiatores comis, mercatores justus"). That the word negotiatores was, during the later times of the republic, always used in the signification above given is amply proved by Ernesti in the treatise quoted below, and is also sufficiently clear from the following passages (Cic. pro Flacco. 29, Verr. iii. 60, ad Q. Fr. v. 1, pro Flacco. 36; Hirt. D. Afr. 36). Hence the negotiatores in the provinces corresponded to the argentarii and feneratores at Rome; and accordingly we find Cicero giving the name of feneratores to certain persons at Rome, and afterwards calling the very same persons negotiatores when they are in the provinces (Cic. ad Att. v. 21, vi. 1—3), compare Ernesti, De Negotiatoibus in his Opuscula Philologica.

NEMEA. (νεμέα, νεμεία or νεμάια), one of the four great national festivals of the Greeks. It was held at Nemea, a place near Cleoneae in Argolis. The various legends respecting its origin are related in the argumenta of the Scholiasts to the Nemea of Pindar, with which may be compared Pausanias (ii. 15. § 2, &c.), and Apollodorus (iii. 6. § 4). All these legends, however, agree in stating that the Nemea were originally instituted by the Seven against Thebes in commemoration of the death of Opheltes, afterwards called Archemorus. When the Seven arrived at Nemea, and were very thirsty, they met Hypsipile, who was carrying Opheltes, the child of the priest of Zeus
and of Eurydice. While she showed to the hero the way to the nearest well, she left the child behind lying in a meadow, which during her absence was killed by a dragon. When the Seven on their return saw the accident, they slew the dragon and instituted funeral games (ἀγών ἐμπάθως) to be held every third year (τριτερπόσ). Other legends attribute the institution of the Nemean games to Hercules, after he had slain the Nemean lion; but the more genuine tradition was that he had either revived the ancient games, or at least introduced the alteration by which they were from this time celebrated in honour of Zeus. That Zeus was the god in honour of whom the games were afterwards celebrated is stated by Pindar (Nem. ii. 114, &c.). The games were at first of a war-like character, and only warriors and their sons were allowed to take part in them; subsequently, however, they were thrown open to all the Greeks (δημοτικών πάθως συνήθως). The games took place in a grove between Cleonae and Philus. (Strabo, vili. p. 377.) The various games, according to the enumeration of Apollodorus (i. c.), were horse-racing, running in armour in the stadium (Paus. ii. 15. § 2), wrestling, chariot-racing and discus, boxing, throwing the spear and shooting with the bow, to which we may add a musical contest. (Paus. i. 50. § 3; Plut. Philep. 11.) The Scholiasts on Pindar describe the agon very imperfectly as ἵπποις and γυμνοῖς. The prize given to the victors was at first a chaplet of olive-branches, but afterwards a chaplet of green parsley. When this alteration was introduced is not certain, though it may be inferred from an expression of Pindar (Nem. vi. 71), who calls the parsley (στέλεον) the Βοτάνα λέωντος, that the new prize was believed to have been introduced by Hercules. The presidency at these games and the management of them belonged at different times to Cleone, Corinth, and Argos, and from the first of these places they are sometimes called ἄγων Κλαδίων. The judges who awarded the prizes were dressed in black robes, and an instance of their justice, when the Argives presided, is recorded by Pausanias (vili. 40. § 9).

Respecting the season of the year at which the Nemean games were celebrated, the Scholiast on Pindar (Argum. ad Nem.) merely states that they were held on the 12th of the month of Panemus, though in another passage he makes a statement which upsets this assertion. Pausanias (vili. 15. § 2) speaks of winter Nemea, and manifestly distinguishes them from others which were held in summer. It seems that for a time the celebration of the Nemea was neglected, and that they were revived in Ol. 53. 2, from which time Eusebius dates the first Nemead. Henceforth it is certain that they were for a long time celebrated regularly twice in every Olympic year, viz. at the commencement of every second Olympic year in the winter, and soon after the commencement of every fourth Olympic year in the summer. This has been shown by Böckh in an essay über die Zeitverhältnisse der Demoseth. Rote gegen Miliar, in the transactions of the Berlin Acad. 1818, 1819. Histor. Philar. Klauser, p. 92, &c.;compare also, Hunds. der Chronol. ii. p. 606, &c. About the time of the battle of Marathon it became customary in Argolis to reckon according to Nemeads.

In 208 B.C. Philip of Macedonia was honoured by the Argives with the presidency at the Nemean games (Livy. xxvii. 30, &c.; Polyb. x. 26), and Quintius Flamininus proclaimed at the Nemea the freedom of the Argives. (Livy. xxxiv. 41; Polyb. x. 26.) The emperor Hadrian restored the horseracing of boys at the Nemea, which had fallen into disuse. But after his time they do not seem to have been much longer celebrated, as they are no longer mentioned by any of the writers of the subsequent period. (See Villiason, Histoire de l'Acad. des Inscrip. et Bel. Lett. vol. xxxviii. p. 29, &c.; Schultmann, Plutarchi Agis et Cleomenes, &c. § 8.) [L. S.]

NEMEA. [Funus, p. 559, a.]

NECOCORI (νεκοκόρο), signified originally temple-sweepers (Hesyech, and Suid. s. v.), but was applied even in early times to priestly officers of high rank, who had the supreme superintendence of temples and their treasures. (Plat. vi. p. 759; Xen. Anab. v. 3. § 6.) Under the Roman emperors the word was especially applied to those cities in Asia, which erected temples to the Roman emperors, since the whole city in every such case was regarded as the guardian of the worship of the emperor. Accordingly we frequently find on the coins of Ephesus, Smyrna, and other cities, the epithet Neocoro, which also occurs on the inscriptions of these cities. None of these cities, however, was allowed to assume this honour without obtaining the permission of the Roman senate, as we learn from inscriptions. (Comp. also Tac. Ann. iv. 55, 56.) For further information on this subject, see Knaue, NEKROPOI, Civicitates Neronarum aetatis Augustae, Lips. 1844. [A. E. J.]

NEODAMOIDES (νεοδαμώδες). [I. L. p. 592.]

NEPTUNALIA, a festival of Neptune, celebrated at Rome, of which very little is known. (Varro, de Ling. Lat. vi. 19.) The day on which it was held, was probably the 23d of July. In the ancient calendaria this day is marked as Nept. ludi et feriae, or Nept. ludi, from which we see that the festival was celebrated with games. Respecting the ceremonies of this festival nothing is known, except that the people used to build huts of branches and foliage (umbrice, Fest. s. v. Umbire), in which they probably feasted, drank, and amused themselves. (Horat. Carm. iii. 28. 1, &c.; Tertull. De Spect. 6.)

NERONIA. [QUINQUENNALLIA.]

NEXI. [NEXUM.]

NEXUM is defined by Manlius to be "omne quod per libram et aes geritur, in quo sint Man- cipia." Mucius Scaevola has a different definition: "Liber qui suas operas in servitutem pro pecunia quadam debebat, dum quae mancipio dentur." Varro (de Ling. Lat. vii. 505, ed. Müller) who has preserved both these definitions, prefers the litter, as being consistent with the etymology of the word: "quod obligatur per Nexum.

The difference in these definitions arises solely from the different aspect under which the Nexum is viewed. Every body was in the form of a sale, and consequently, viewed as to its formal part, Nexum comprehended Mancipium. The Testamentari facio was also included under Nexum. Viewed as to its object and legal effect, Nexum was either the transfer of a thing to a creditor as a secu-
The person who became Nexus by the effect of a Nexum or Nexus (for this form of the word also is used) was said Nexus iniuria. (Liv. vii. 15.)

The phrases Nexi datio, Nexi liberatio respectively express the contracting and the release from the obligation.

The Roman law as to the payment of borrowed money (pecunia certa credita; see Lex Gall. Cisalp. 21, 22) was very strict. A curious passage of Gellius (xx. 1) gives us the ancient mode of legal procedure in the case of debt, as fixed by the Twelve Tables. If the debtor admitted the debt, or had been condemned in the amount of the debt by a judex, he had thirty days allowed him for payment. At the expiration of this time, he was liable to the Manus Injectio [MANUS INJECTIO], and ultimately to be assigned over to the creditor (addictus) by the sentence of the praetor.

The creditor was required to keep him for sixty days in chains, during which time he publicly exposed the debtor on three nundinae, and proclaimed the debtor on six nundinae, and proclaimed the amount of his debt. If no person released the debtor, the praetor would adjudicate him to be Nexus, and the treatment was in the same way in which Sale and Mortgage or Pledge are opposed. The formal part of both transactions consisted in a transfer per aes et libram, and this object of the obligatio per aes et libram always made a man Nexus; but there is no difficulty in assuming that a man only became Nexus with reference to an obligatio per aes et libram, so that a man could contract an obligatio per aes et libram, and at the same time could make himself Nexus. A free man could not properly be the object of a sale, but it requires only a slight acquaintance with Roman law to perceive that this difficulty could be got over by a fiction. As in the case of Manumission Per Vindictam there was a fiction that the slave was free; so there might here be a fiction that the freeman was a slave. And if this is not admitted as a probable solution, it cannot be denied that there is as much difficulty in understanding the co-emtio of a female, who was sui juris, which as a legal fact is quite certain, as the formal sale of a freeman with his consent. The notion of a freeman giving himself into the power of another, so far from being foreign to the notions of Roman law, as some writers have asserted, is perfectly consistent with them, as we see in the instance of adrogation. The Nexum then being in the form of a sale, the Nexus was in a servile condition as a necessary consequence of the Nexum, and the opinion that there must be an addictio to give effect to the Nexum, is inconsistent with the notion of the Nexum. According to this view, a Nexus, as soon as the contract of a Nexum was made, was in the condition of an Addictus, and both were treated as slaves. But it has been urged, that “one cannot discover any reason for this self-pledging (nexum), since every insolvent, even when there was no nexum, must become his creditor’s slave (addictus), and how can we understand that the abolition of the nexum was such an advantage gained by the Plebeians (Liv. viii. 28), if the addictio still remained, which might be obtained when there was no nexum; and it cannot be denied that it did remain?” The advantage consists precisely in the difference between a contract which cannot be enforced against a person without the forms of legal proceeding, and a contract which at once gives a man a power over his debtor without any application to a court of justice. The effect of the abolition of the Nexum, in this its special sense, while the Addictio still existed, may be illustrated by the supposed case of a landlord’s remedy for the recovery of his rent by distress being abolished, while his other remedies under the contract for letting and hiring remained.

It is remarked by Goetting (Geschichte der Röm. Staatsverfassung) that “the comparison of the Adrogatio and the Adoptio gives the clearest proof of the correctness of Savigny’s view, who rejects the notion of a freeman pledging himself. In the case of the Adrogatio of a Roman, who is sui juris, there was no mancipatio which such person could effect as to himself; but in the case of adoption, a mancipatio occurs, and it is effected by the living father and the son together. In the case of coemtio it certainly appears, as if the woman of herself effect a self-mancipatio; she, however,
is not herself auctor, but her guardian is auctor." There may be some weight in this observation, the point of which appears to be this: there was mancipatio in the case of adoption, where the adopted person was in the power of another, but no mancipatio in the case of Adrogation, where the adopted person was not in the power of another. The tacit conclusion then seems to be, that if in one case there was no mancipatio and yet a person was brought into the power of another with his own consent, there could be no mancipatio when a person consented to put himself into a servile relation to another; for it is here assumed that a nexus was voluntary. But this is not a legitimate conclusion. It is easy to see that mancipatio in the case of adoption, where the adopted person was only a filius familiaris; and that Adrogation, which was of a person who was sui juris, was a very different matter, and required other forms to be observed, because the person adrogated was not a filius familiaris. [ADOPTION.] A nexus effected no change of familia like an adoption or adrogation, and while its object was different from that of both of these ceremonies, it is quite consistent for its form to have been the same as the form of the one, and different from the form of the other.

The mode in which Goettling (p. 123) explains this matter of the nexus is as follows: "A free citizen can come into a mancipi causa when he cannot pay a loan (aes confessum) out of his own means. What in such case he has to give security for, that to which he has bound himself, is called nexus (namely aes); hence the phrases nexi datio, nexi liberatio. The person who does such an act is called nexus (from nexus nexus) tuens, nexus faciens, but after he has received the loan in the above solemn manner, he is nexus obligatus, nexus vincet; as soon as he has failed to fulfil his obligation, and in consequence of such failure has been addicted (addictus), and given in mancipium by the magistrate, he is called nexus (adjective), qui se nexus dedit"—a more confused account of the thing, or one more remote from legal precision, cannot be imagined. The passage of Livy (vi. 27) is not easy to explain. (Compare Liv. ii. 23.)

The Lex Poetelia (n. c. 326) alleviated the condition of the nexi, provided they did not act in fraud of the other. If the contract was for a slave, the nexi did not bind themselves. It is said (Liv. vi. 28, nexi soluti), and it enacted that for the future there should be no nexus (causumque in postera non nectarunt), and that no debtor should for the future be put in chains. Addictio however still continued in force after the Lex Poetelia, as we see in several instances. (Liv. xxiii. 14; Sall. Cat. 33; Cic. pro Flacco, 20.)

It appears from the Lex Galliae Cisalpinae (c. 21, 22), that in the case of other actions there was only a Possessio Honorum, but in the case of pecunia certa credita there was personal execution. The enactment of the Lex Julia which introduced the Honorum Cessio, and gradual changes in society, must have diminished the frequency of the Addictio. [HONORUM CESSIO.] In the system of Justinian, Nexus did not exist, for the use of aes et libra in legal transactions had ceased.

Neither the Addictus nor the Nexus was a slave, and his ingenuitas was only in suspense. As to the Nexus, it must have been necessary that the effect of the legal act by which the ingenius was made a nexus should be done away with by another legal act; and this seems to be the Nexus liberatio which was done per aes et librum. It also appears from a passage in Livy (vi. 14), that a certain person, who was judicatus pecuniae, and is not described as nexus, was released from his obligation per aes et libram. In the time of Gaius an imaginary form of payment per aes et libram was retained in cases where the obligation was contracted either per aes et librum or was due ex judicati causa. (Gaius, iii. 175—175.) There seems indeed no reason why this ceremony should have been used in the case of an addictus who wished to be restored to his former state, for the Addictio was by implication only to have an effect till the debt was paid. It might be contended that such was the effect of the Nexus also, but we must distinguish between the effect of a sentence of the Praetor and a solemn act like that of the Nexus, which was in form a transfer of ownership. The addictus was protected against injuria from his master (Gaius, i. 141), and it is said that he retained his name and tribe; but it is somewhat difficult to understand how he retained his tribe, since he had sustained Infamia. Upon the discharge of his obligations the addictus, it seems, returned to his former status.

It was Niebuhr's opinion that the Nexus, when it became a form of giving security, had not its complete effect until the debtor was unable to pay and was brought into the condition of a debtor-slave by the addictio. An answer to this has been already given. If it required an addictio to make a person nexus, what was the use of a Nexus when a man might become addictus, even when there was no Nexus? The only intelligible solution of all these difficulties is that a Nexus, in which there was a mancipi causa, had an immediate effect.

It seems to be a legal consequence of a Nexus and an Addictio that the children, if they were in the power of the parent, must follow his condition, as in the case of adrogation.

In the case mentioned in Livy (viii. 20), where the son is said to have been nexus for his father's debt (cum se nexus dedisset), it may be that the father bound his son only, which he could certainly do just in the same way as he could mancipate him. If the son was not in his father's power, he could still bind himself on behalf of his father. The expression in Livy does not enable us to determine which of the two possible cases was the real case, but it seems probable that the son was in the power of the father. Unterholzer observes (Lehre des Röm. Rechts von den Schuldenverhältnissen, i. p. 31. note g): "The legal condition of the nexi is one of the most obscure points in the old Roman law. It is here assumed that a man by the personae mancipi causa came into this condition. Persons who were in the Patria Potestas could for the noxae causa, which was long maintained in practice, and also on account of the debts of him who had the Potestas, consequently in a sense after the nature of a pawn, and by virtue of the so-called paternal power of sale, be mancipated. Further, we must assume that persons who were sui juris could also mancipate themselves by way of pawn, though no evidence of that has been preserved. This is made the less incredible, since we cannot doubt, that women who were sui juris could make a coentio,
and consequently could mancipate themselves either matrimonii causa or fiduciae causa, whereby however they did not, like the nexi, come into a condition similar to that of slaves, but only into a state of dependence similar to that of a child. The nexi were, as a matter of course, in mancipio, and consequently alieni juris, but for that very reason greatly different from the addicti. However, they could, like them, be put in chains, until the power of putting debtors in chains was altogether abolished.

The meaning of the provision in the Twelve Tables, cited by Galliuss, as to cutting the debtor in pieces has been a subject of much discussion. Taylor in his essay (Comment. ad L. Decemvirallem de Inope Debitore in partis dissecando) attempts to prove that Galliuss misunderstood the old law, and that the words of the Twelve Tables "partis secanto; si plus minusve se fraudeste esto," mean that the several creditors are intitled to have the "partis," that is, the "opercum" of the addictus divided or distributed among them; and he goes on to explain the rest of the law in these terms: "Communis sit servus eorum, qui quidem adfuerint, et sine fraude esto, si plus minusve se fuerint; et sine fraude esto, si plus minusve se fuerint, quam eorum, qui quidem adfuerint; et sine fraude esto, si plus minusve se fuerint; et sine fraude esto, qui quidem adfuerint, secanto: si plus minusve se fuerint, quam eorum, qui quidem adfuerint, si plus minusve se fuerint, quam eorum, qui quidem adfuerint, si plus minusve se fuerint, quam eorum, qui quidem adfuerint, si plus minusve se fuerint, quam eorum, qui quidem adfuerint, si plus minusve se fuerint, quam eorum, qui quidem adfuerint, si plus minusve se fuerint, quam eorum, qui quidem adfuerint, si plus minusve se fuerint, quam eorum, qui quidem adfuerint, si plus minusve se fuerint, quam eorum, qui quidem adfuerint, si plus minusve se fuerint, quam eorum, who claimed the body of a debtor, he might be kept by any one for the benefit of himself and the rest till the sixty days were over; but after that time, if the creditors could not agree among themselves, there was no possible mode of settling their conflicting claims than that which the law of the Decemviri gave them, and which they might adopt if they chose. Such a law could never be carried into effect in any country, as the legislators must have well known, and thus while its terms fully satisfied the claims of the creditors, in practice it may have turned out really favourable to the debtor. (See the remarks of Galliuss on this part of the law, xx. 1.) But the solution of the difficulty is quite a different matter from the fact of its existence, which is in no way to be questioned because we cannot explain it.

The various authorities on the subject of the Nexum and Addictio are referred to by Rehm, Das Röm. Privatrecht, p. 313, &c. The writer of this article has not had the advantage of seeing the essay of Savigny, Über das altromische Schulldrecht, Berlin, 1834. The whole subject is still enwrapped with difficulty, as will appear from a reference to the various writers on this subject. The note of Walter (Geschichte des Röm. Rechts, p. 642, n. 6) appears to contain the true statement as to the difference between the effect of a Nexum and a Res Judicata; but he rejects the notion of a man selling or pledging himself.

[O. L.]
period of Roman history before the consulsip was opened to the Plebeians; and it is possible that the Patricians may have had the use of Imagines, which those Plebeians afterwards adopted, when the curule magistracies were opened to them. The Patricians carried back their pedigrees (stem-mata) to the remotest historical period and even beyond it. (Tact. An. iv. 9.) It seems probable that the Roman Nobilitas, in the strict sense of that term, and the Jus Imaginum, originated with the admission of the Plebeians to the consulsip (p. 356). The practice of having Imagines, as already observed, may have existed and probably did exist before the notion of the Jus Imaginum was established. Indeed, as the object of the Patricians, who were all of equal rank so far as respected their class, would be to attach to themselves such Plebeians as were elected to Curule magistracies, it seems conformable to the nature of the thing that the family of such plebeians should be allowed or invited to adopt some existing distinction which should separate them from the body to which they properly belonged. Usage would soon give to such a practice the notion of legality; and thus the Jus Imaginum would be established, as many Roman institutions were, by some general and it would be perpetuated by custom.

was the founder of his family's Nobilitas (princeps nobilitatis; auctor generis). Such a person could have none of his own, for such imagines of a man He was called by the Romans a "novus homo" or a new man; and his status or condition was is put in the mouth of C. Marius.) The term Plebeian Consul, L. Sextius; and the two most formed would easily unite with the old aristocracy and to prevent more novi homines from polluting this exclusive class. (Sail. Jug. 85; the speech which is put in the mouth of C. Marius.) The term novus homo was never applied to a Patrician. The first novus homo of Rome was the first distinguished "novi homines" were C. Marius and

A plebeian who first attained a Curule office was the founder of his family's Nobilitas (princeps nobilitatis; auctor generis). Such a person could have no imagines of his ancestors; and he could have none of his own, for such imagines of a man who first attained a Curule office would be comprehended, ascendants of a man up to the ancestor who first attained a curule office would be comprehended, and if Affines were occasionally included, as they appear to have been, the stemma would become an enormous pedigree.

The term Populares is vague. It could be used to signify the opponents of the Nobilitas, whether the motives of these opponents were pure and honest, or whether the motives were self-aggrandizement through popular favour. Of Caesar, who sought to gain the popular favour, it was truly said, that it was not so much what he gave to the people which made him formidable, as what he expected to get from them in return. A Popularis might be of the class of the Nobilitas, and very often was. He might even be a Patrician like Caesar: his object might be either to humble the nobles, or to promote the interest of the people, or to promote his own; or he might have all the objects, as Caesar had.

The Nobilitas is discussed by Becker, Hand-buch der Römischen Alterthümer, ii. 1ste Abth.; and there is probably little to add to what he has said, and little to correct in it. There are also some remarks on the Roman Nobles in Zacharines, Sulla (i. 5). He observes of Sulla that though his family was Patrician, he could hardly be considered as belonging to the Nobiles in the strict sense, as the term Nobilitas implied that some one of a man's ancestors had filled curule magistracies; and though his family was poor, it was still Nobilis. A Nobilis, though poor, as Sulla was, was still Nobilis. Want of wealth might deprive a man of influence, but not of the Jus Imaginum. If there was any Patrician whose ancestors had never filled a curule magistracy, he would not be Nobilis in the strict sense. But when the Nobilitas had been formed into a powerful body, which was long before the reforms of the Gracchi, the distinction of

nor yet was he ignobilis. The first novus homo of Rome was the first
does include all the nobles, or to promote the interest of the people, or to promote his own; or he might have all the objects, as Caesar had.

The term Optimates is explained by Cicero (pro Sest. 45) is opposed to Populares: he describes the Optimates to be all those "qui nunc occultes sunt nec natura improbi nec furiosi nec malis domesticis impediti." This is no political definition; it is nothing more than such a name as Conservative or any other like name. The use of it in Livius (iii. 39) shows how he understood it; but Livius is blameable for using the term with reference to those early times. Velleius (ii. 3) describes the Optimates, as the Senatus, the better and larger part of the equestris ordo, and such part of the Plebs as were unaffected by pernicious counsels; all these joined in the attack on Gracchus. This opens our eyes to the real meaning of Optimates: they were the Nobilitas and the chief part of the Equites, a rich middle class, and also all others whose support the Nobilitas and Equites could command, in fact all who were opposed to change that might affect the power of the Nobilitas and the interests of those whom the Nobilitas allied with themselves. Optimates in this sense are opposed to Plebs, to the mass of the people; and Optimates is a wider term than Nobilitas, inasmuch as it would comprehend the Nobilitas and all who adhered to them.

The term Populares is vague. It could be used to signify the opponents of the Nobilitas, whether the motives of these opponents were pure and honest, or whether the motives were self-aggrandizement through popular favour. Of Caesar, who sought to gain the popular favour, it was truly said, that it was not so much what he gave to the people which made him formidable, as what he would expect to get from them in return. A Popularis might be of the class of the Nobilitas, and very often was. He might even be a Patrician like Caesar: his object might be either to humble the nobles, or to promote the interest of the people, or to promote his own; or he might have all the objects, as Caesar had.

The Nobilitas is discussed by Becker, Hand-buch der Römischen Alterthümer, ii. 1ste Abth.; and there is probably little to add to what he has said, and little to correct in it. There are also some remarks on the Roman Nobiles in Zacharines, Sulla (i. 5). He observes of Sulla that though his family was Patrician, he could hardly be considered as belonging to the Nobiles in the strict sense, as the term Nobilitas implied that some one of a man's ancestors had filled curule magistracies; and though his family was poor, it was still Nobilis. A Nobilis, though poor, as Sulla was, was still Nobilis. Want of wealth might deprive a man of influence, but not of the Jus Imaginum. If there was any Patrician whose ancestors had never filled a curule magistracy, he would not be Nobilis in the strict sense. But when the Nobilitas had been formed into a powerful body, which was long before the reforms of the Gracchi, the distinction of

NOMEN.

Patrician was of secondary importance. It would seem unlikely that there was any patrician gens existing in the year B.C. 133, or, indeed, long before that time, the families of which had not enjoyed the highest honours of the state many times. The exceptions, if any, would be few.

In reading the Greek writers on Roman history, it is useful to attend to the meaning of the political terms which they use. The +amphidromia (Tit. Gracch. 13, 20), and the παλαιστρά, are the Nobilitas and their partisans; or as Cicero, after he was made consul, would call them the Optimates. In such passages as Dion Cassius (xxviii. 2), the meaning of διαταγή may be collected from the context.

NOMEN (νόμος), name. 1. GREEK. The Greeks, as is well known, bore only one name (Paus. vii. 7 § 4), and it was one of the special rights of a father to choose the names for his children, and to alter them if he pleased. (Demosth. c. Boeot. i. p. 1002, 1006, c. Mucrat. p. 1075, &c.) It was customary to give to the eldest son the name of the grandfather on his father's side. The history of Greece contains many instances of this custom, and Sosithes (ap. Demosth. c. Mucrat. i. c.) says, "I gave to my eldest son, as is just (ἀνεπακόλουθώς ἡ ἐγένεσις), the name of my father." (Compare Enuath. ad I. v. 546.) While custom was generally followed in regard to the other children, they may be inferred from the same passage, for Sosithes goes on to say, that he called his second son after the name of his wife's father, the third after a relation of his wife, and the fourth son after his own grandfather on his mother's side. Mothers seem also sometimes to have assumed the right of giving the names to their children (Eurip. Phoen. 58), and it may be that, as in the case described by Aristophanes (Nub. 60, &c.), sometimes a quarrel arose between the parents, if they could not agree upon the name to be given to a child. A boy also sometimes received the name of his father, as in the cases of Demosthenes and Demades, or one similar to that of his father. Nausinicus thus called his son Nausiphoil, and Callicrates called his son Callistratus. (Böckh, ad Pind. Pyth. iv. p. 265.) A similar method was sometimes adopted in the names of several brothers; thus two brothers in the speech of Lysias against Diagiton are called Diodotus and Diogiton. In some cases lastly, the name of a son was a patronymicon, formed from the name of the father, as Phocion, the son of Phoeces.

The day on which children received their names was the tenth after their birth. (Aristoph. Ατιόδωρος 922, &c.) According to some accounts a child received its name as early as the seventh or even fifth day after its birth. [Ἀμφιδρόμεια.] The tenth day, called διαταγή, however, was a festive day, and friends and relations were invited to take part in a sacrifice and a repast, whence the expressions διαταγή δίων and διαταγὴ διοίχει. If in a court of justice proofs could be adduced that a father had held the διαταγή, it was sufficient evidence that he had recognised the child as his own. (Demosth. c. Boeot. i. p. 1001, c. Boeot. ii. p. 1017; Ioseus, de Pyth. hered. p. 60.)

The fact that every Greek had only one name rendered it necessary to have an innumerable variety of names, and never has a nation shown more taste, ingenuity, and invention in devising them than the ancient Greeks. But however great the number of names might be, ambiguity and confusion could not be avoided; and in reading the works of the Greeks we are not always certain whether the same name in different passages or writers belongs to one or to several persons. The Greeks themselves were aware of this, and where accuracy was of importance they used various means to prevent mistakes. Sometimes they added the name of the father in the genitive case, as Ἀλκείαδης ὁ Κλέανδος, Πλεύστοπος ὁ Παντανόος: sometimes they added the name of the place or country in which a person was born, in the form of an adjective, as Θησεύδης ὁ Ἀθηναῖος, ὁ Ἰδωρότου Ἀλκαραστής, Χαρακτίππης Παμφρός, Διακάρχος ὁ Μεσαρίχος, &c.; sometimes they added an epithet to the name, expressing either the occupation or profession which a person followed, or indicating the school to which he belonged. Instances of such frequent occurrence that it is superfluous to quote any. The custom of adding the father's name was called πατρολέω σωματενασον, (Paus. vii. 7 § 4; Xenoph. Oeconom. 7 § 3.)

In common life the Greeks had yet another means of avoiding ambiguity, and this was the frequent use of nicknames, expressive of mental or bodily peculiarities and defects. Thus Demosthenes was from his childhood called Ἀτρακός. (Aeschyl. c. Timarch. pp. 134, 142; Demosth. de Coron. p. 288.) Aristophanes (Ατρακός, 1291, &c.) mentions several names of birds which were used as nicknames; other nicknames are preserved in Athenaeus (vi. p. 242).

(Compare Becker, Charicles, vol. i. p. 23, &c.)

2. ROMAN. In the earliest history of Rome there occur persons who are designated by only one name, such as Romulus, Remus, and others, while there are many also who bear two names. The Romans of a later age were themselves uncertain as to the legitimate number of names borne by the earliest Romans; and while Varro (ap. Val. Max., Epitome de Numinis Ratione), Appian (Rom. Hist. Praef. 13), and others, stated that the earliest Romans used only to have one name, their opponents adduced a great many instances in which persons had two. This question will perhaps be placed in a more proper light, and become more satisfactorily settled, if we consider separately the three distinct elements of which the Roman nation was composed in its origin, and it will then be found that both Varro and his opponents are right or wrong according as their assertions are applied to one or to all of the three tribes.
NOMEN.

The Sabines, from the earliest times down to the end of their existence, had two names (Val. Max. de Nominum Itinere), one indicating the individual as such (prænomen), e.g. Albus, Valesus, Pompus (Val. Max. l.c.), Talus (Fest. s.v.), Caius, Titus, Quintus, Appius, &c., and the second the gens to which the individual belonged, which terminated like the Roman nomen gentilicium in ius or ius, e.g. Tatius, Pomplinius, Claudius, &c. It is moreover a feature peculiar to the Sabines that a person sometimes, instead of a praenomen and a nomen gentilicium, had two nomina gentilia, one indicating the gens of his father and the other that of his mother. The latter sometimes preceded and sometimes followed the former. This custom is clear from Livy (xxxix. 13, 17), who mentions a Campanian (Sabine) woman, Paculla Minia, who was married to a man who bore the name of Cerrinius from his gens, and one of the sons of these parents was called Minius Cerrinius. Another instance is the name of the Sabine augur Attius Navius, where, according to Dionysius (iii. p. 70), Attius is the ονομα συγγενειας. Dionysius, however, must be mistaken in making Navius an ονομα παραγενειας, if he meant this to be the same as the Roman praenomen, which the name Navius never was. In all probability therefore both Attius and Navius are nomina gentilicia. A third instance seems to be Minatius Magnus (Vell. Pat. ii. 16), the son of Decius Magnus. This practice must have been very common among the Sabines, for in most cases in which the two names of a person have come down to us, both have the termination ius, as Marius Egnatius, Hierius Asinius (Appian. B. C. ii. 41), Statius Gellius (Liv. ix. 44), Olilius Calavius. A more complete list of such Sabine names is given by Götting (Gesch. d. Röm. Staatsr. p. 6, note 3), who supposes that a son bore the two nomina gentilicia of his father and mother only as long as he was unmarried, and that at his marriage he only retained the nomen gentilicum of his father, and, instead of that of his mother, took that of his wife. Of this, however, there is not sufficient evidence. Thus much is certain, that the Sabines at all times had two names, one a real praenomen, or a nomen gentilicium serving as a praenomen, and the other a real nomen gentilicium, derived from the gens of the father. The Sabine women bore, as we have seen in the case of Paculla Minia, likewise two names, e.g. Vestia Oppia, Faecula Cluvia (Liv. xxxvi. 33), but whether in case they both terminate in ius they are nomina gentilicia, and whether the one, as Götting thinks, is derived from the gens of the woman’s father, and the other from that of her husband, cannot be determined. Many Sabines also appear to have had a cognomen, besides their praenomen and nomen gentilicium; but wherever this occurs, the praenomen is generally omitted, e.g. Herennius Bassus (Liv. xxiii. 43), Calavius Perolla (Liv. xxxiii. 8), Vetzierus Cato (Appian. B. C. i. 40), Insteius Cato, Popaedius Silo, Papius Mutilius (Vell. Pat. ii. 16). Such a cognomen must, as among the Romans, have distinguished the several families contained in one gens. The Latins in the earliest times had generally only one name, as is seen in the instances adduced by Varro (ap. Val. Max. l.c.), Romulus, Remus, Faustulus, to which we may add the names of the kings of the Aborigines (Latins), Latinus, Ascanius, Capetus, Cepys, Procas, Numitor, Amulius, and others. When, therefore, Varro and Appian say that the earliest Romans had only one name, they were probably thinking of the Latins. There occur, indeed, even at an early period, Latins with two names, such as Geminius Metius, Metius Suffixius, Vitruvius Vaceus, Turnus Herdonius, &c.; but these names seem to be either two nomina gentilicia, or one a nomen gentilicium and the other a cognomen, and the Latina do not appear to have had genuine praenomina such as occur among the Sabines and afterwards among the Romans.

The Etruscans in the Roman historians generally bear only one name, as Porcenna, Spirinna, which apparently confirms the opinion of Varro; but on many urns in the tombs of Etruria such names terminating in na are frequently preceded by a praenomen. Müller (Etrusk. i. p. 413, &c.), and Götting (l. c. p. 31), who follows him, are of opinion that no Etruscan ever bore a nomen gentilicium, and that the names terminating in na are mere cognomina or agnomina. Niebuhr (Hist. of Rome, i. p. 381, note 922, and p. 500, note 1107), on the other hand, thinks, and with more probability, that the Etruscan name corresponds to the Sabine and Roman ius, and that accordingly such names as Porcenna, Spirinna, Caecina, Perperna, Vibenna, Ergenna, Mastarna, &c. are real nomina gentilicia.

From this comparison of the three original tribes, it is clear that when the Romans became united into one nation, they chiefly followed the custom of the Sabines, and perhaps that of the Latins. (Val. Max. l. c.) Originally every Roman citizen belonged to a gens, and derived his name (nomen or nomen gentilicium) from the gens of his father or from his gens. This nomen gentilicium generally terminated in ius, or with a preceding e, in eius, which in later times was often changed into aevus, as Annius, Annius, and Annaeus; Appuleius and Appulaeus. Nomina gentilicia terminating in eius or elius, sometimes change their termination into the diminutives illus and elius, as Opillus, Hostilius, Quintilius, and Ofellus, instead of Opilii, Hostilius, Quintilius, and Ofellus. (Horat. Sat. ii. 2. 8, et passim.) Besides this nomen gentilicium every Roman had a name, called praenomen, which preceded the nomen gentilicium, and which was peculiar to him as an individual, e.g. Caius, Lucius, Marcus, Cneius, Sextus, &c. In early times this name was given to boys when they attained the age of pubertas, that is, at the age of fourteen, or, according to others, at the age of seventeen (Gellius, x. 28), when they received the toga virilis. (Fest. s. v. Pultes; Scaevola ap. Val. Max. l. c.) At a later time it was customary to give to boys a praenomen on the ninth day after their birth, and to girls on the eighth day. This solemnity was preceded by an lustratio of the child, whence the day was called dies iusticius, dies nominum, or nominalia. (Macrobi. Sat. i. 16; Tertull. de Idolol. 6.) The praenomen given to a boy was in most cases that of the father, but sometimes that of the grandfather or great-grandfather. Hence we frequently meet with instances like M. Tullius, M. F., that is, Marcus Tullius, Marcus filius, or C. Octavius, C. F., C. N., that is, Caius Octavius, Caet filius, Caet nepos, Caet pronepos. Sometimes, however, the praenomen was given without any reference to father or grand- father, &c. There existed, according to Varro, about thirty praenomina, while nomina gentilicia
were very numerous. These two names, a praenomen and a nomen gentilicium or simply nomen, were indispensable to a Roman, and they were at the same time sufficient to designate him; hence the numerous instances of Romans being designated only by these two names, even in cases where a third or fourth name was possessed by the person. Plebeians, however, in some cases possessed a cognomen as well. Among the praenomina given at such an early age we may reckon Prima, Secunda, Tertia, Quarta, Postuma, &c. These names were in most cases hereditary, and descended to the latest members of a familia; such as Caia, Lucia, Publia. (Stecchini, op. cit. Val. Max. I. c.)

Every Roman citizen, besides belonging to a gens, was also a member of a familia, contained in a gens, and, as a member of such a familia, he had or might have a third name or cognomen. Such cognomina were derived by the Romans from a variety of mental or bodily peculiarities, or from some remarkable event in the life of the person who was considered as the founder of the familia. Such cognomina are, Asper, Imperiosus, Magnus, Maximus, Publicola, Brutus, Capito, Cato, Naso, Labeo, Caeceus, Cicero, Scipio, Sulla, Torquatus, &c. These names were in most cases hereditary, and descended to the latest members of a familia; in some cases they ceased with the death of the person to whom they were given for special reasons. Many Romans had a second cognomen (cognomen secundum or agnomem), which was given to them by an honorary distinction, and in commemoration of some memorable deed or event of their life, e.g. Africanus, Asiaticus, Hispalius, Cretensis, Macedonicus, Numantianus, &c. Such cognomina were sometimes given by one general to another, sometimes by the army and confirmed by the emperor himself. After the time of Caracalla (A.D. 212), when all the free inhabitants of the empire had obtained the Roman franchise, and when the gentilician relations which had already gradually fallen into oblivion were totally forgotten, any person might adopt what name he pleased, either ancient or newly invented, and even change his name, if he did not like
If a person by adoption passed from one gens into another, he assumed the praenomen, nomen, and cognomen of his adoptive father, and added to these the name of his former gens, with the termination *anus*. Thus C. Octavius, after being adopted by his great-uncle C. Julius Caesar, was called C. Iulius Caesar Octavianus, and the son of L. Aemilius Paulus, when adopted by P. Cornelius Scipio, was called P. Cornelius Scipio Aemilius. [Adoptio (Roman).] There were, however, two gentes, viz., the gens Antonio and the gens Flavinius, which, in case of any of their gentiles being adopted into another gens, took the termination *ius* instead of *anus*, as Antoninus and Flamininus, instead of Antonianus and Flaminianus. Sometimes also the cognomen of the former family was retained and added without any alteration to the name of the adoptive father, as in the case of Q. Servilius Caepio Brutus. (Eckhel, *Doctr. Num.* vol. v. p. 59 and p. 187.) If one man adopted two brothers, the adoptive father might choose any praenomen at his discretion in order to distinguish his adoptive sons from each other. Thus when Augustus adopted the two sons of Agrippa, he gave to the one the praenomen Caius, and to the other the praenomen Lucius. (Vell. Pat. ii. 96.) During the early period of the empire it appears to have sometimes occurred that a person, when adopted into another gens, added his own nomen gentilicium without any alteration to that of his adoptive father, as in the cases of C. Plinius Caecilius Secundus, and L. Aelius Aurelius Commodus. (Dion Cass. *Excerpt.* lib. lxxii. c. 15.) Besides this, many other irregularities occurred in cases of adoption during the period of the empire, but it is not necessary for our purpose to enumerate them all.

Slaves had only one name, and usually retained that which they had borne before they came into slavery. If a slave was restored to freedom, he received the praenomen and nomen gentilicium of his former master, and to these was added the name which he had had as a slave. He became thus in some measure the gentilicus of his former master, in as far as he had the same nomen gentilicium, but he had none of the other claims which a freeborn gentilicus had. (Cic. *Top.* 6.) Instances of such freedom are, Titus Ansatus Messander, a freedman of T. Angius Balbus (Cic. *ad Fam.* viii. 70); L. Cornelius Crysogonus, a freedman of L. Cornelius Sulla (Cic. *pro Rose. Am.* 2, &c.); M. Tullius Lauren, and M. Tullius Tiro, freedmen of M. Tullius Cicero. If the state emancipated a slave, he received the praenomen and nomen gentilicium of his former master, and gave him the franchise at the same time, any praenomen and nomen were given to him, or he took these names from the magistrate who performed the act of emancipation in the name of the state, and then received a cognomen derived from the name of the city, as Romanus or Romanensis. (Varro, *de Ling.* Lat. viii. 83; Liv. iv. 21.) [L. S.]

**NOMEN.** [Fenus, p. 527, a; *Obligationes*.]

**NOMENCLATOR.** [Ambitus, p. 77, a.]

**NOMISMATOS DIAPHRAGMATA.** (Ῥουμέστως διαφοράς γραφή) is the name of the public action which might, at Athens, be brought against any one who coined money either too light or not consisting of the pure metal prescribed by the law. The lawful punishment inflicted upon a person in case he was convicted was death. (Demosth. *c. Lept.* 508, *c. Timoert.* p. 785, &c.) What action might be brought against those who coined money without the sanction of the republic, and how such persons were punished, is not known. (See Petitius, *Legg.* Att. vii. 510.)

**NOMOPHYLACES.** (νομοφύλακες), were certain magistrates or official persons of high authority, who exercised a control over other magistrates, and indeed over the whole body of the people, it being their duty to see that the laws were duly administered and obeyed. Mention is made of such officers at Sparta and elsewhere, and some of the Greek philosophers who wrote on legislation appear to have had such a view. In such a case such a body was essential to the well-being of a community. (Schömann, *Ant. Jur. Pub.* Gr. p. 130; *Plat.* Leg. vi. p. 252; Xen. *Oecon.* ix. 14.) No such body existed at Athens, for they must have had a power too great for the existence of a democracy. The Senate of 500, or the Areopagitic council, performed in some measure the office of law-guardians (Arist. *Pol.* vi. 3, *sub fin.; Andoc.* *De Myst.* 11); but the only persons designated by this name appear to have been inferior functionaries (a sort of police), whose business it was to prevent irregularities and disturbances in the public assemblies. Even their existence has been doubted by modern writers; some think they have been confounded with the *seismobates*. Another hypothesis is, that the office was never introduced until the time of Demetrius Phalereus, who, when he was invested with the authority of lawgiver by Cassander, gave to the Eleven the additional duty of watching the conduct of all the other magistrates, with a view to introduce a more aristocratical government. In favour of this opinion it has been observed, that the office of *nomophylakes* is only mentioned by grammarians, and they refer to Deinarchus, who was the friend and contemporary of Demetrius. (See Schneider's note to Arist. *Pol.* vi. 5, § 10; Wachsm. vol. i. pt. i. p. 209; Meier, *Att. Proc.* pp. 68–73.)

**NOMOS (νόμος).** This word comprehends the notion not only of established or statute law, but likewise of all customs and opinions to which long prescription or natural feeling gives the force of law; as Euripides (*Bacch.* 935) expresses it, το ἐν κράτοις μακροχρόνοις ἐκκεντρικάν. In the heroic ages, before the period of authentic history begins, we find in the Homeric and other poems traces of a general belief among the Greeks that government ought to be controlled by law. As even the supreme God was supposed to be subject to a higher power, Fate or Εὐσωφή καταλλελεύτως, he was bound to govern according to the rules of justice, δικαίος, νόμος, ἐυσωφή. (Hom. *Od.* xvii. 487; *Pind.* Pyth. 2. 151; *Herod.* iii. 36; *Hes.* *Op. et Dies*, 274.) Government, though monarchic and slave, was never less limited, ἡ δὲ ἐκ τῶν ἡμέρων ἡμέρας ἐπ' ὅσον οἷον τόπον ἐν τοῖς ἐν ἑαυτῷ, or men was, was not to consult for the good of their people, and to listen to
The influence exercised by these they were divinely inspired; a power which was all. From this body indeed were excluded all slaves of every kind. It began to feel the necessity of having permanent laws to define and secure their civil rights. The notion soon sprang up that society was formed for the good of all classes. The expression τὸ κοινὸ, formerly applied to national leagues and confederacies (Herod. v. 109), came to denote a united body of citizens; and equal laws were claimed for all. From this body indeed were excluded all such persons as came under the definition of ἐπι-ποιω, provincials (Herod. vi. 58, ix. 11), or serfs, like the Helots; and all slaves of every kind. It was only the townsman (τοῖς τής) and the freeman who could enjoy the privileges of a citizen. The emigrant (ἀπόμειται) he was upon certain conditions admitted to the protection of the law, was never placed on the same footing as the native.

Before any written codes appeared, law was promulgated by the poets or wise men, who sang the great deeds of their ancestors, and delivered their moral and political lessons in verse. Such was the ἀρχή of Athens. (Aelian, ii. 39; Arist. Pol. v. 9; Plato, Leg. v. p. 738.) The first written laws we hear of are those of Zaleucus. (Wachsm. vol. i. pt. i. p. 206.) The first at Athens were those of Draco, called ἰσομήται, and by that name distinguished from the νόμοι of Solon. (Andoc. de Mys. p. 11, ed. Steph.) From the origin of this word one would suppose that it signified ordained or statute law, τέθεις νόμοι: but it is frequently used like ἱσομέι, in the sense of natural right or social usage. (Hom. ii. 134, xi. 770, Od. xxiii. 296.) The six inferior archons were called ἵσομοι, because a great variety of causes fell under their cognizance, and, in the absence of a written code, those who declare and interpret the laws may be properly said to make them, (Thirlwall, Gr. Hist. vol. ii. p. 17.)

The laws of Lycurgus were not written. He enjoined that they should never be inscribed on any other tablet than the hearts of his countrymen. (Thirlwall, vol. i. p. 326.) Those of Solon were inscribed on wooden tablets, arranged in pyramidal blocks turning on an axis, called δίκαια and κυρίαι. (Harpoc. s. v. Οἱ καταθέν νόμοι: Pausan. i. 18. § 3.) Archives were established for the custody of Athenian laws in the temple of the mother of the gods (τῷ νυμφαίῳ) with a public servant (δασιόσας) to take care of them. (Demosth. de Vota Leg. 381, c. Aristog. 799.) Others were hung up in various public places, so that any citizen might have access to them, to read or take extracts. For instance, laws which concerned the jurisdiction of the archon were hung up in his office; those which concerned the senate (βουλευτικολ νόμοι) in their council-room, and so on. (Demosth. c. Aristoc. 627, 643, c. Timoc. 706; Wachsm. vol. i. pt. p. 266; Meier and Schom. Att. Proc. pp. 170, 660.) After the expulsion of the thirty tyrants, in the archonship of Euclides, a decree was passed by the assembly to restore the ancient laws, and appoint a committee to revise them, and propose any alterations or additions that might seem necessary. The new and old laws were all to be written out in the enlarged Ionian alphabet, which had not come into use in Solon's time; and the whole code thus revised was transcribed on the walls of the portico (ἐις τὴν στοάν ἀνέγραφων). At the same it was enacted that no magistrate should be allowed to use an unwritten law (ἀγράφων δὲ νόμων τὰς ἀρχαίς μη χειράθησας μη περι ενός), Andoc. de Mys. 11—13, ed. Steph.)

According to these statutes of Solon, and those which were subsequently enacted at various times, the magistrates and the judges at Athens were bound to administer the law, executive and judicial. The Helastic body, acting in their capacity as such, was considered the custodian of such laws as were material to the questions to be tried, and brought them before the ἱσομοὶ dikai-τηριοι at the ánákρισις, by whom they were con- signed to the ἄγχος, and produced at the trial, to be read to the dikastai by the γραμματεῖς. If
any man produced before the judges a fictitious law (υώς διστανών), he was punishable with death. (Demosth. c. Arist. 607.)

As the δικαιαπατ (chosen as explained under Demosth.) performed the functions both of judge and jury, it is evident that the important question, how the laws of Athens worked, depends on the discretion which in practice they exercised in the interpretation of the written law. This is only to be discovered by a careful perusal of the Attic orators, and is too wide a question to be discussed here. Much light is thrown on the subject by law interpretation of the written law. This is only to be discovered by a careful perusal of the Attic courts. He reckons the νόμος among the ἐσχήν πέθαιναι, and advises the orator, when the law of the country is against him (ἐν καὶ ἔγνωμαν τῷ πράγματι) to appeal to the universal law of justice or equity (τῷ κοινῷ νόμῳ καὶ τοῖς ἐπικείμενοι, ὑπὸ δικαιώμας). For (says he) if the written law is contrary to justice, it is not a law, οὐ γὰρ ποιεῖ τὸ ἐργαν τοῦ νόμου. From this it may be seen, that the notions entertained by the Athenians of the discretion to be exercised by a judge were somewhat different from our own. There existed at Athens no class of persons corresponding to our counsel or attorneys, whose business or profession it was to explain the laws. The office of the ἄγιγρατα related only to religious observances. [ΕΚΣΕΓΕΤΕ] According to the principle of the constitution, every citizen was bound to watch over the preservation of the laws, and to inform against and prosecute any persons who transgressed them. The people, either on the bench or in the assembly, were the ultimate judges. (Lycurg. c. Leoc. 146, ed. Steph.)

As to the difference between νόμος and φύσεις, and as to the manner in which laws were enacted or repealed, see NOMOTHESES. [C. R. K.]

NOMOTHESES (νομοθετής), legislator, is a word which may be applied to any person who causes laws to be enacted. Thus, Poricles and Themistocles are called νομοθεταί, movers or proposers of laws. (Lyss. c. Nicom. 186, ed. Steph.) It is, however, more commonly given to those eminent men whose laws have been celebrated for their intrinsic merit, or for the important influence which they exercised over the destinies of their country. Such were Minos of Crete, Draco at Athens, Zakus at Sicyon, and Chonon at Chios, whose laws were distinguished for their δικαίωμα, and were received at Rhegium, Catana, and other Chalcidian states. (Aristot. Pol. ii. 9. § 8; Hermann, Pol. Ant. § 83, 89.) Many other men have been honoured with this title, either for having improved the laws of their countrymen, or as having by their writings, their counsel, and good example, led to the introduction of a sound moral discipline among them. These were the sages or wise men, called by Diogenes Laërtius (i. 40) σωτηρίων, νομοθετων. Pittacus of Lesbos, Phidon of Argos, Thales of Miletus, Bias of Priene, Chilon, who improved the laws of Lycuges, and Pythagoras, may be reckoned in this class. (Wachsm. vol. i. pt. i. p. 212.) But the name of νομοθετής is given κατ’ ἐξωχώιν to Solon and Lycuges; for they not only introduced codes of laws, but were the founders of constitutions (τολίταια), which, though from time to time modified and altered, and sometimes even suspended, remained more or less in force, so long as Athens and Sparta existed as republics. (Aristot. Pol. ii. 9. § 1.) So high was the esteem in which Solon was held by the Athenians, as the founder of their social polity, that although he was an important reformer, he was not regarded at various periods, he still continued to be regarded as the νομοθετής, and the whole body of laws passed under his name. Wachsmuth (vol. i. pt. i. p. 268) remarks that on this account, whenever a law of Solon is cited, we may suspect that it contains interpolation. On the other hand, we should bear in mind that in all the changes which took place in the Athenian constitution, the reformers aimed at preserving the main principles of Solon's policy. Clisthenes, who established the νόμος, remodelled the φύσις, and made other changes, is described by Aristotle (Pol. ii. 6. § 11) as having for his object ἀδικήματα τῆς δικαιορατίας.

There is this remarkable difference between the legislation of Solon and that of other Greek lawgivers, that he did not (as they did) endeavour to secure fixity and finality for his institutions. Zaleucus and Chondas are said to have made it a capital crime to propose new laws. Lycurgus forbade young men to censure the laws; and when he went on his last journey, from which he never returned (the story says), he bound his countrymen by an oath to observe all his laws till his return. Solon exacted a similar oath of the Athenians for only ten years. (Herod. i. 29; Wachsm. vol. i. pt. i. p. 211; Thirlwall, Gr. Hist. vol. i. p. 295.)

But Solon also devised regulations by which the laws might undergo periodical revision, and he amended as occasion required. At the first κυρία ἐκάλεσα in every year, any person was at liberty to point out defects in the existing code or propose alterations. If his motion was deemed worthy of attention, the third assembly might refer the matter to a legislative committee, called νομοθεταί. This committee was selected by lot from the Helianistic body; it being the intention of Solon to limit the power of the popular assembly by means of a superior board emanating from itself, composed of citizens of mature age, bound by a stricter oath, and accustomed to weigh legal principles by the exercise of their judicial functions. The number of the committee, so appointed, varied according to the exigency of the occasion. The people appointed five advocates (ὑποκατασκευασταί) to attend before the board and maintain the policy of the existing institution. If the proposed measure met the approval of the committee, it passed into law forthwith. Besides this, the Themomathetan were officially authorized to review the whole code, and refer all statutes which they considered unworthy of being retained to the νομοθεταί. (Hermann, Pol. Ant. § 131; Wachsm. vol. i. pt. i. p. 269; Thirlwall, vol. ii. p. 46; Demosth. c. Tinnocr. 706.)

Hence appears the difference between φύσεις and νόμος. The mere resolution of the people in assembly was a φύσιμα, and only remained in force a year, like a decree of the senate. Nothing was a law that did not pass the ordeal of the νομοθεταί. The democracy of Solon was therefore one of that kind, in which (as Aristotle says), κύριος ήν νόμος, ἄλλ' οὐ τὸ πάλιθος. (Pol. iv. 4. § 3; Hermann, Pol. Ant. § 67, n. 8; Demosth. c. Aristoc. 649, 651.) Privilegia required to be passed by six thousand of the people in assembly, giving their votes secretly. The naturalization of a foreigner is an example of a privilegium; for
which two votes of different assemblies were necessary. (Demosth. c. Noeir. 1375.)

Propositions to be submitted to the people were first approved by the senate of 500, and then called προθυελήματα. The mover of a law was said διήγεσi or γράφειν νόμον, the people who passed it δέθαι. To indict a man for proposing illegal measures was called γράφειν τίνα παράνομον. As to the proceedings in such a case, see PARA-

NONOM GRAPHIE. [C. R. K.]

NONAE. [CALENDARIUM.]

NORMA (γράφειν), a square, used by carpenters, masons, and other artificers, to make their work rectangular. (Philo de 7 Orb. Spec. 2; Vit

ruv. vii. 3; Plin. H. N. xxxvi. 22. s. 51; Prud

ten. Psychom. 828.) It was made by taking three flat wooden rulers [REGULA] of equal thickness, one of them being two feet ten inches long, the others each two feet long, and joining them together by their extremities so as to assume the form of a right-angled triangle. (Isid. Orig. xix. 19.) This method, though only a close approximation, must have been quite sufficient for all common purposes. For the sake of convenience, the longest side, i.e. the hypotenuse of the triangle, was discarded, and the instrument then assumed the form, in which it is exhibited among other tools in woodcut at p. 235. A square of a still more simple fashion, made by merely cutting a rectangular piece out of a board, is shown on another sepulchral monument, found at Rome and published by Gruter (l. c. p. 229), and copied in the woodcut which is here introduced. The square was used in making the semicircular striae of Ionic columns [COLUMNNA], a method founded on the proposition in Euclid, that the angle contained in a semicircle is a right angle (Vitruv. iii. 5. § 14).

From the use of this instrument a right angle was also called a normal angle. (Quintil. xi. 3. p. 416, ed. Spalding.) Any thing mis-shapen was called obvormos. (Hor. Sat. ii. 2. 3. [J. Y.]

NOTA, which signified a mark or sign of any kind, was also employed for an abbreviation. Hence notasignified the marks or signs used in taking down the words of a speaker, and was equivalent to our short-hand writing, or steno-

graphy; and notarii signified short-hand writers. It must be borne in mind, however, that notae also signified writing in cipher; and many passages in the ancient reciters which are supposed to refer to short-hand, refer in reality to writing in cipher. Thus both Julius Caesar and Augustus wrote many of their letters in cipher (per notae, Suet. Jul. Cons. 56, Aug. 88; comp. Gell. xvii. 9). Still short-hand was well known and extensively em-
ployed. Among the Greeks it is said to have been invented by Xenophon (Diog. Laërt. ii. 48), and their short-hand writers were called ταχύγραφοι, δευτερόγραφοι and σημειωγράφοι. The first introduc-
tion of the art among the Romans is ascribed to Cicero. Plutarch, in speaking of the speech of Cato in the senate, on the punishment of Catiline conspirators, relates, "They say that this is the only speech of Cato which is preserved, and that it was owing to Cicero the consul who had previously instructed those clerks, who surpassed the rest in quick writing, in the use of certain signs which comprehended in their small and brief marks the force of many characters, and had placed them in different parts of the senate-house. For the Romans at this time were not used to employ nor did they possess what are called note-

writers (σημειωγράφοι), but it was on this occa-

sion, as they say, that they were first established in a certain form." (Cat. min. c. 23, Long's transl.) Cicero himself sometimes wrote in short-hand for the sake of brevity or secrecy (διά σημειωμα τιβρο

seram. Cic. ad Att. xiii. 32). Dion Cassius (iv. 7) attributes the invention of stenography to Maced

cena. Eusebius, in his Chronicon, ascribes it to Tiro, the freedman of Cicero, and hence the system of abbreviated writing, in which some manuscripts are written, has received the name of Notiae Tiro

nianae; but there is no evidence to show whether this species of short-hand was really the invention of Tiro. It would appear, moreover, from several passages in ancient writers, that the system of short-hand employed in the time of the Roman empire must have been of a much simpler and more expeditious kind than the Notiae Tironianae; but there is no evidence to show whether this species of short-hand was really the invention of Tiro. It would appear, moreover, from several passages in ancient writers, that the system of short-hand employed in the time of the Roman empire must have been of a much simpler and more expeditious kind than the Notiae Tironianae; thus Seneca says (Ep. 90): "Quid verborum notae, quibus quanvis citata excipitur oratio, et celeritate linguae manus sequitur." Manilius speaks to the same effect (iv. 197): —

"Hie et scriptor erit velox, cui litera verbum est, Quisque notis linguam supereet, cursusque loquentis Excipiet longas nova per compendia voces." And likewise Martial (xiv. 208): —

"Cursum verba licet; manus est velocior illis: Nondum lingua suum, dextra peregit opus." Many of the wealthy Romans kept slaves, who were trained in the art. (Senec. Ep. i. c.) Thus the elder Pliny, when travelling, used to carry a notarius with him, that the slave might be ready to take down any thing that he wished. (Plin. Ep. iii. 5.) The art was also learnt even by the Roman nobles, and the emperor Titus was a great proficient in it. (Suet. Tit. 3.) At a later time, it seems to have been generally taught in the schools, and hence Fulgentius (Mythol. iii. 10) divides the writing taught in schools into two kinds, the Abecedaria and Notaria; the former being the regular letters of the alphabet, A, B, C, D, &c, and the latter, stenography. There were, moreover, short-hand writers (notarii) by profession, who were chiefly employed in taking down (natur, excipere) the proceedings in the courts of justice. At a later
period, they were called exceptores (Dig. 19. tit. 2. s. 19. § 9). These short-hand writers were also employed on some occasions to take down a person's will (Dig. 29. tit. 1. s. 40). This is the chief information we have respecting the use of stenography by contemporary writers. But Isidorus, who lived in the seventh century of the Christian era, gives a more detailed account of the history of the art (Orig. i. 29. p. 836, ed. Gothofred). He ascribes the invention of the art to Eminus (?), who, as he says invented 1100 marks (notae); but the first person who practised it at Rome he states to have been Tiro, the freedman of Cicero, who, however, according to Isidore's account, used only notae for prepositions. Isidore then goes on to say that additional notae were invented by Tertius Persannius, Philargius, and Aquila, a freedman of Maecenas, till they were ascribed in the manuscripts to Tiro and Seneca, but contains many words, which were only used at a much later age. It appears from this work, that the Notae Tironianae were very different only to a smaller extent, in ordinary writing. We likewise have some manuscripts written in Notae Tironianae, of which an account is given in his Thesaurus Inscriptionum. This work is ascribed in the manuscripts to Tiro and Seneca, but contains many words, which were only used at a much later age. It appears from this work, that the Notae Tironianae were very different from our system of stenography, and were simple abbreviations of the words, such as were used, in the work of Kopp quoted below (Carpentier, vol.i. pp. 197, 198).

We likewise have some manuscripts written in Notae Tironianae, of which an account is given in the work of Kopp quoted below (Carpentier, vol.i. pp. 197, 198). In his Thesaurus Inscriptionum. This work is ascribed in the manuscripts to Tiro and Seneca, but contains many words, which were only used at a much later age. It appears from this work, that the Notae Tironianae were very different from our system of stenography, and were simple abbreviations of the words, such as were used, in the work of Kopp quoted below (Carpentier, vol.i. pp. 197, 198). A large part of these Novellae relate to the administration of the state and to ecclesiastical affairs, but a considerable number relate to Privatam Jus, and they modified or altered many rules of law.

There is a Latin Epitome of these Novellae by Julian, a teacher of law at Constantinople, which contains 123 Novellae. The Epitome was probably made in the time of Justinian, and the author was probably Antecessor at Constantinople. There is also another collection of 134 Novellae, in a Latin version made from the Greek text. This collection is generally called Authenticum or Liber Authenticorum: the compiler and the time of the compilation are unknown. This collection has been made independently of the Greek compilation. It is divided into nine Collationes, and the Collationes are divided into tituli. This was the collection which the Glossatores considered as having the authority of law.

The most complete work on the history of the Novellae is by Biener, Geschichte der Novellen. See also Beiträge zur Litterar-Geschichte des Novellen-Ausus von Julian, Von Haubold, Zeitschrift, &c. vol.iv. The history of the collections of the Novellae is very confused, and it is impossible to state it correctly in a short space. (Puchta, Just. i. § 147.) After the publication of his Codex, Theodosius made various new enactments under the name of Novellae Constitutiones, or Novellae Leges, as to which see CODEX THEODOSIANUS. [G.L.] NOVENIDAE (sc. sursum) was the name given to two different festivals. 1. Of a festival lasting nine days, which was celebrated, as often as stones rained from heaven. It was originally made various new enactments under the name of Novellae Constitutiones, or Novellae Leges, as to which see CODEX THEODOSIANUS. [G.L.] NOXALIS ACTIO. Some of them were published in Latin and some in both languages. The first of these Novellae of Justinian belongs to the year A.D. 535 (Nov. 1), and the latest to the year A.D. 565 (Nov. 137); but most of them were published between the years 535 and 539. These Constitutions were published after the completion of the second edition of the Code, for the purpose of supplanting what was deficient in that work. Indeed it appears that on the completion of his second edition of the Code the Emperor designed to form any new constitutions, which he might publish, into a body by themselves so as to render a third revision of the Code unnecessary, and that he contemplated giving to this body of law the name of Novellae Constitutiones. (Const. Cordi. s. 4.) It does not however appear that any official compilation of these new constitutions appeared in the lifetime of Justinian. The Greek text of the Novellae, as we now have them, consists of 165 Novellae at the least, or 168 as some make it, of which 159 belong to Justinian, and the rest to Justin the Second and to Tiberius: they are generally divided into chapters.
had a Noxalis Actio, or a legal remedy for the Noxa or wrong done to him, against the father (paterfamilias) or the owner of the slave, as the case might be; but he had no action against the son or the slave. The word Noxa (from noceo) properly signified injury done; in its legal sense it comprehended every delictum. (Dig. 56. tit. 16. s. 293.) The father or the master might either pay damages to the injured person, or surrender the offender to him. The surrender of the offender was expressed by the phrase "noxae dare or dedere;" and the acceptance of the offender in satisfaction of the injury was expressed by the phrase "noxae accepere." In these expressions "noxa" does not mean "punishment," as is sometimes supposed, but the meaning of the expression is that the person was surrendered in respect of or as a compensation for his Noxa. In the Institutes (4. tit. 8) Noxa is defined to be the person that does the mischief, that is, the slave, and Noxia the mischief that is done.

Noxales Actiones were given both by Leges and by the Edict. In the case of Furtum they were given by the Twelve Tables; and in the case of Damnii Injuria by the Lex Aquilia. In the case of Injuriae and of Vi Bonoram Raptorum, they were given by the Edict. This action was said "capet sequi," which is thus explained by instances: if a son or slave committed Noxa, the action was against the father or owner, so long as the offender was in his power; if the offender became sui juris, the injured party had a directa actio against him; and if he came into the power of another person, that other person was liable to the action. If a paterfamilias committed a Noxa, and was adopted (adrogated), the actio which was originally against him (directa), became an action against the adopting person. A paterfamilias or master could have no action against a son or slave in respect of a Noxa done to himself, the ground of which was that no obligatio could be contracted between such parties; and as the foundation of all obligatio was wanting in such case, it followed that there could be no action against such son or slave, if he became sui juris, nor against another person into whose power he might come. If another person's slave or son committed Noxa, and then came into the power of the injured person, it was a question between the two schools whether the right of action was extinguished, or only suspended so as to revive in case the offending party was released from the power of the injured person. The opinion of the Proculiani, which was in favour of the suspension only, appears more consistent with the principles on which this right of action was founded.

The mode of the "noxae deditio" was by mancipation. The Proculiani contended that three mancipations were required by the Law of the Twelve Tables [EMANCIPATIO]; but the Sabini contended that the Law only applied to the case of voluntary mancipations, and that one mancipatio was sufficient. If the father or owner made no defence to a noxalis actio, the offender was given up by a decree of the praeator to the injured person, and thus became his praetorian property (in bonis). If several slaves committed theft, the Edict required the master to pay only the amount of damage which would be payable, in case a single freeman had committed the theft.

Justinian abolished the noxae datio in the case of children; observing that it appeared from the ancient jurisprudence, there might be no action against a filiusfamilias in respect of his own delicts. As to damage done by an animal, see PAUERIES.

(Gaius, iv. 75—79; Instit. 4. tit. 8; Dig. 9. tit. 4.)

[NUMMUS.]

NUMMUS. [CALCULUS, p. 221, a.]

NUMUS (γυμνός). These words, besides denoting absolute nakedness, which was to be ἀνακολοθομένον καὶ ἐχθρίτως (compare Moschus, iv. 96), were applied to any one who, being without an AMICTUS, wore only his tunic or indutus. (Aristoph. Eccles. 409; John xxxi. 7.) Thus Cincinnatus was found naked at the plough when he was called to be dictator, and sent for his toga, that he might appear before the senate. (Plin. H. N. xviii. 4; Aure. Vict. de Vir. Illust. 17; Liv. iii. 26.) The accompanying woodcut is taken from an antique gem in the Florentine Collection, and shows a man ploughing in his tunic only. The light and thin clothing of Hetaerae, was denoted by the use of the same epithets. (Athen. xiii. 24, 25.)

This term applied to the warrior expressed the absence of some part of his armour. (Hom. II. xxii. 30; Jos. Ant. Jud. vi. 2 § 2; Geil. ix. 13; Xen. de Rep. Lac. xi. 9.) Hence the light-armed were called γυμνὲς. (J. Y.)

NUMERUS, the name of a body of troops in the imperial period. (Exercitus, p. 500, b.)

NUMMULARII or NUMULA'RII. [MENTHAKI.]

NUMMUS or NUMUS, coined money.—I. The chief terms used in Greek and Latin for money are ἄργυρος, χρήματα, νόμισμα, aes, pecunia, moneta, nummus (or numis), and numisma. It was called ἄργυρον from ἄργυρος, because the prevailing coins in Greece were of silver [ARGENTUM], (so at a later period we have χρήμαν and χάλκιον, which, however, are seldom used, except in their specific senses,) and aes, because that of Rome and Italy was of copper [AERS]; χρήματα, simply as the representative of value; pecunia, from the same cause, in connection with pecus, which either meant originally cattle, and thence, in an early age, valuable property in general, or, perhaps, vice versa*; and νόμισμα (sc. ἄργυρον).
From νόμος, because it was a medium of exchange established by custom and law, current coin (Demosth. adv. Timoc. p. 805 ; Aristoph. Nub. 246 ; Aristot. Eth. v. 8). These last terms, nummus and numisma, were transferred into the Latin language through the Greeks of Sicily and southern Italy, who applied the word νόμος (or, as it is also written, νομίσμα) not only to money in general, but specifically to the chief silver coin of their system; and thus, in Latin, the word is used both in the specific sense, as equivalent to sestertius (Sestertius), and in the general meaning of any sort of money. (Varro, L. L. v. 37, § 173; ed. Müller; Pollux, i. 79; Müller, Etrusk. vol. i. p. 315; Böckh, Metrol. Untersuch. p. 310; Eckhel, Proleg. Comment. General. c. 1; and the Greek and Latin Lexicons.) Some writers give the ridiculous derivation of nummus from Numa, who, they say, first coined money: here the process has been, first, to fancy the connection of the words, and then to invent the fact to account for it. (Suid. s. v. Αὐστράρα; Isid. Orig. xvi. 17.) The word money, from which, through the French, we get our word monnaie, was a surname of Juno, in whose temple the standards of weight, measure, and money were preserved: the epithet itself seems to correspond in meaning and derivation (from monoe) to the name of the Greek deity Μνημοσύνη. (Moneta.)

II. Origin of Money. — Aristotle (Politi. i. 3) defines νόμισμα as στοιχείων καὶ πέρας τῆς διάλασσης, and traces its invention to the early felt necessity of a common medium of exchange, to obviate the inconveniences of barter. At first, he tells us, it consisted of masses of metal and other convenient substances, determined by size and weight, and, lastly, with marks stamped upon them, to save the trouble of always weighing them. It is unnecessary to quote other authorities in confirmation of this statement. (Eckhel, Proleg. c. 2.) The things which are essential to money are the material and the stamp — the former giving it the reality of value, the latter its assurance. In the early state of commerce, described in the Homeric poems and other ancient works, when the transfer of commodities was effected by means of quantities of unstamped gold, silver, or copper, which were determined by weight, money, properly speaking, did not exist. On the other hand, a mere stamp, on a material of little intrinsic value, does not make it money, but a mere token of credit, which is sometimes loosely and inaccurately called money. This sort of so-called money was sometimes, though rarely, employed by the ancients, and that chiefly by the barbarous nations; the civilised states preferred the subterfuge of debasing their coinage to any attempt to introduce the element of credit avowedly into their monetary system. They had nothing like our paper money or bills of exchange.

III. Materials of ancient Money. — The conditions which any material used for money must of necessity answer are obviously the following: — it must exist in sufficient abundance; it must be of intrinsic, that is, universally acknowledged value, and, as nearly as possible, of uniform value; it must be capable of resisting wear and corrosion; it must be portable, easily divisible, and not difficult to work into those sizes and to mark with those stamps, which determine and certify its quantity and quality. These conditions are best fulfilled by the metals gold, silver, and copper, which therefore have formed, either separately or in combination with each other, the materials of nearly every system of money which has ever existed. The history of their use by the Greeks and Romans will be noticed presently; but it is necessary first to say a few words respecting some other substances, which were anciently employed for money.

IV. Distinction between ancient Money and Medals. — It is no longer necessary to examine the paradoxical assertion of Sebastian Erizzo, that all the ancient coins which have come down to us are mere medals, and were never current money. (See Eckhel, l. c.) Leather, wood, and shells are also referred to as materials of money; but such monies could only have been tokens, not true coin. Leather money is said to have been used by the Carthaginians, Spartans, and Romans. (Eckhel, l. c.)

We find a continuous series of coins, having the same, or nearly the same weight, stamp, and style of workmanship (allowing for the decline or improvement of the art); or when we find a multitude of specimens of the same coins, and that too in different places; when the stamp upon a coin expresses its weight or its denomination; in these cases there can be no doubt that the coins, if genuine, were real money. These tests are answered by the general series of Roman copper, silver, and gold coins; by most of those of the Greek states; by the gold and silver coins of Philip, Alexander, and his successors; and by the cistophori of proconsular Asia. On the other hand, those appear to be medals, and not coins, which very much exceed in size the ordinary coins, such as the celebrated and beautiful gold medals of Lykomachus, many gold medals of the Roman Empire, and some silver medals which occur only under the later emperors. The question of the copper or bronze medals is more difficult to decide by this test, on account of the large size of the
ancient copper money of Rome. (See Eckhel, l.c. p. xv.) Another test of a medal is its being of an unusual or very elaborate device or workman-ship. Respecting the occasions on which medals appear to have been struck, see Eckhel, l.c. pp. xvi—xviii.

V. Tests of the genuineness of ancient Coins. — As this work is intended for the general classical student, and makes no pretension to be a perfectly adequate guide for the special study of each branch of antiquity, and as this branch of numismatic science, although of primary importance for one who wishes to examine the ancient coins themselves, is yet one of the most intricate, and is comparatively unimportant for the mere explanation of the Greek and Roman writers, it must suffice to refer to the chief writers, quoted at the end of this article, with only the observation that the abundance of ancient false money and modern forged coins is one chief cause of the great difficulties of the subject.

VI. History of Greek and Roman Coins. — It has already been observed that the general definition of money is a certain weight of metal of a certain value, that is, of a certain fineness; the weight and the fineness being attested by a stamp upon the coin. The latter condition was not introduced until the first had long been acted upon; and, on the other hand, there are many occasions on which the stamp upon a coin is altogether neglected, and it passes current merely according to its real weight and fineness: one interesting example of this has been noticed under As, p. 140. The primitive stage in the invention of money is illustrated by various passages in the historical books of the Old Testament, and in Homer. Coined money is never once mentioned in the Homeric poems; but the instrument of all the traffic referred to in them is either simple barter, or quantities of gold, silver, and copper. Gold alone is referred to as measured by a definite weight, the τόλασσα, which in Homer appears to be quite a different quantity from the common talent of the historical period. This word was originally a generic term for weight, and signified a pair of scales, and any weight. The same is true of the Latin word libra: the original meaning of the equivalent word as was merely unity, or a unit, whether of weight or of anything else. The other principal Greek word, μωνετα, which is later than the Homeric poems, is, undoubtedly, of Oriental origin, and probably means anything divided, apportioned, or determined, akin to the Hebrew manech, and to μωνες, monere, monetâ, &c. These words concur with all the other information we have upon the subject, and with the very necessity of the case, to prove that every system of money is founded upon a previously existing system of weight. It is, however, of the utmost importance to observe, that a word denoting a certain weight does not, of necessity, when applied to money, indicate a quantity of metal of the same weight. For, first, the word talent or pound may be applied to an equivalent value of gold, silver, or copper, although, in weight, its meaning must be restricted to one of these metals; secondly, there may be, in the formation of a monetary system, an intentional deviation from the existing standard of weight, while the names of that standard are preserved; and, lastly, the progressive deterioration, to which history informs us that most coinages have been subjected, destroys the meaning of the terms of weight, which are still applied to the coins. Examples of the first cause of disagreement occur of necessity in every monetary system which contains more than one metal; of the second, an interesting illustration will be found in the progressive diminution of the Roman as.[As.] Still, however, where we have no historical evidence of such discrepancies between the weights and monies of a people, especially in early periods, we assume their correspondence. If we did not, the attempt to reconstruct any ancient system of weight and money, and to express it in terms of our own, would be hopeless, as there would be no basis whatever for the investigation. Unless then we know anything to the contrary, we assume a talent of money to mean a talent’s weight of the metal, which was chiefly used for money, namely, among the Greeks, silver; and, conversely, that the weight of the silver coins, which make up the value of a talent, gives us the amount of talent-weight.

In order that what follows may be better understood, we give here the chief denominations of weight and money among the Greeks and Romans. Among all the Greeks, the unit was the talent, which was thus divided (comp. Pondera and the tables): —

<table>
<thead>
<tr>
<th>Talent</th>
<th>Mina</th>
<th>Drachma</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>60</td>
<td>100</td>
</tr>
</tbody>
</table>

In this system we have a combination of the decimal and duodecimal systems.

Among the Romans, the unit of weight and money was the As or Libra, which was divided on the duodecimal system, its twelfth part being called uncia, and the intermediate parts being named according to the number of unciæ they contained, or according to the fractional part of the As which each was. In some parts of Italy, however, (namely, Central Italy, north of the Apennines,) the decimal division of the As was used, the uncia being its tenth part. (Comp. As, Pondera, Uncia, Tables.)

i. History of Greek Money. — The invention of coined money among the Greeks is ascribed by tradition to two sources, not to mention the merely mythical stories of its origin (Pollux, ix. 83). According to one account, the Lydians were the first of mankind who coined and used gold and silver money (Herod. i. 94; Xenoph. ap. Poll. l. c.). The other and prevailing tradition is, that Peidion, king of Argos, first coined both copper and silver money at Aegina, and first established a system of weights and measures. (Herod. vi. 127; Ephor. ap. Strab. viii. p. 376; Ael. V. H. xii. 10; Poll. l. c.; Marm. Par. 45, 46; Grote, History of Greece, vol. ii. p. 424: the date of Peidion, according to the Parian Marble, is B.C. 885; but Grote, Clinton, Böckh, and Müller all agree in placing him about the middle of the eighth century, between 783 or 770 and 744 or 730, B.C.; see Grote, l. c. p. 419.) These traditions are not altogether inconsistent; only we must understand the former as implying nothing more than that a system of money existed in Asia Minor in very early times;

* These were not coined, but were monies of account.
which was adopted by the Ionian colonists, from whom it passed over into the Ionian States of Greece Proper, especially Athens, under the name of the Euboic system; a name which it probably obtained from an early coinage in the island of Euboea, which was rich in copper and silver ores.*

The other tradition, in all probability, expresses an historical fact, except as to the circumstance of Pheidon’s executing his coinage in Aegina, which is almost certainly an invention of the later writers, made for the purpose of explaining the name Aeginetan, applied to the system which was established by Pheidon and adopted by most of the Doric states. This system, as well as the former, was derived from the East, and was identical with the Babylonian; and, moreover, both systems existed together in Asia Minor, where the larger (Babylonian) talent was used for silver, and the smaller (Euboic) for gold. Thus it appears that these two systems of weight and money, both derived originally from the Chaldaean, may be distinguished as the larger Babylonian or Argive or (generally, but less properly) Aeginetan, and the smaller Babylonian or Lydian or Ionian or Euboic or larger Attic. The last term is used to distinguish the old Attic scale, which was identical with the Euboic, from the scale which Solon introduced, and which was considerably less; the latter alone was used for money, although the former continued in use as a scale of weight under the name of the commercial standard. The talents of the three systems of money, which have been mentioned, are known respectively as the Aeginetan, the Euboic, and the Attic or Solonian. Their numerical ratios to one another were as follows: —

<table>

(Respecting the details of these matters comp. PONDERA.)

(1.) Money of the Aeginetan Standard. — Although, according to the tradition, Pheidon coined copper as well as silver, and although we have indications of copper currency among the Greek states of Sicily and Magna Graecia, which followed the Aeginetan standard, yet in Greece Proper copper money was altogether exceptional. [CHALCUS.] The ordinary currency in all the states was silver, the principal coins being the drachma, and its double (διδραχμων), and quadruple (τετραδραχμων), the didrachm prevailing in the older coinages, and the tetradrachm in the later. Didrachms are the prevailing coin among the extant specimens of Aeginetan money; tetradrachms among the Attic. The didrachm, from its prevalence in the early coinages, obtained the name of stater (στατέρα, i.e. standard), which was afterwards used specifically as the name of the chief gold coins, because they were of the same weight as the silver didrachm [STATER]. There still exist numerous Aeginetan drachms, didrachms, and tetradrachms of undoubtedly genuineness; many of the highest antiquity. The earliest of these coins are very thick, and of rude workmanship: they are stamped with the figure of a tortoise, the reverse having no device, but only an indented mark, as if the coin, at the time of striking, had been laid upon a puncheon, the impress of which has been transferred to it by the weight of the blow. In the later coins of Aegina, the turtle is changed into a tortoise, and the other side bears a device. (See the woodcut on p. 439.)

In calculating the weight of the Aeginetan coins, we are at once met with one of the great sources of uncertainty in numismatics, namely, the doubt whether the existing coins of any system are of full weight, which doubt, in the great majority of cases, experience converts into the certainty that they are not. The chief exception to the general debasement of ancient money was the silver money of Athens, which, at least until some time after the Peloponnesian War, was proverbial for its full weight and purity. One method, therefore, is to take the best Attic coins as the standard of computation, not only for the Attic system, but also for any other system which bore a known determined ratio to the Attic. Now, taking Hussey’s value for the Attic drachma, 65.5 grains (which, if there be any error, is a little below the mark), the Aeginetan drachma ought to weigh between 110 and 111 grains.† Its actual average weight, however, as obtained by Mr. Hussey from the coins of Aegina and Boeotia, is only 96 grains.

There is, of course, the alternative of using this discrepancy as an argument against the ratio of 5 : 3 for the systems of Aegina and Athens; and this course Mr. Hussey has adopted. But Böckh has shown most conclusively that this explanation is totally inadmissible. We have not space to discuss the question at length. It must suffice to observe that, if any one fact in ancient metrology is to be accepted as established by testimony, it is the fact of this ratio of 5 : 3; — that the fact of the prevailing debasement of ancient coinages, by which the discrepancy above noticed may be explained, is also one of the most certain facts in the whole subject — that coins are actually found of the Aeginetan system, which come very nearly up to the full theoretical weight, those, namely, of Melos and Byzantium, both Doric settlements, and those of the Macedonian kings before Alexander the Great. § To these positive arguments it may be added, that Mr. Hussey’s attempt to explain away the statement of Pollux, that the Aeginetan didrachm was 224.59 grains, the drachm 112.295 grains, the obolus 18.716 grains (p. 77).

* Mr. Grote’s derivation of the names Euboic and Aeginetan, “from the people whose commercial activity tended to make the scales most generally known — in the one case, the Aeginetans; in the other case, the inhabitants of Chalcis and Eretria” (vol. ii. p. 432) — is at least as probable as that suggested in the text.

† Böckh, from a rather higher value of the Attic drachma, gives the following theoretical weights for the Aeginetan coins: the didrachm 224.59 grains, the drachm 112.295 grains, the obolus 18.716 grains (p. 77).

§ These Mr. Hussey is compelled by his theory to erect into a distinct standard.
et at 93 4 (or 93-5792. Böckh, p. 109). There exist several coins of Chalcis itself, of Rhegium in Italy, Naxos in Sicily, and other Chalcedian cities, which come quite as near to this standard as could be expected. (See Böckh, l. c. and foll.) The Euboic gold money is singularly scarce, and the few pieces that exist only give rise to new difficulties. (Böckh, l. c. § 5.)

(3.) Money of the Attic (Solonian) Standard.— Before the time of Solon, the standard of weight used at Athens was the Euboic; and there still exist coins, evidently from their form and workmanship among the most ancient and most likely to appear to be didrachms of the Euboic scale. These coins are stamped with the figure of an ox, which we know from several ancient writers to have been the regular impress upon the oldest Attic coins. (Schol. A. B. L. ad Hom. ll. vi. 236; Elém. Mag. s. v. ἐκάρμνη; Pollux, ix. 69; Dio- genian. iii. 48; Hesych. s. v. βοῖος ἐκ πλασμάτων γενειάσων; Zenob. ii. 70; Suid. s. v. βοῖος ἐκ γάλακττι.) This coin was called βοῖος, and its origin was carried back mythologically to the time of Theseus, who was said to have first coined it, and Böckh supposed that it was to have stamped it with the figure of an ox, in allusion either to the Marathonian bull, or to the Minotaur; reasons which are mere guess-work.* (Plut. Thes. 25.) This didrachm or βοῖος was the chief coin of the old Attic system: in the Solonian system the chief coin was the tetradrachm stamped with the head of Athena and the owl, and this also received a name from its impress, and was called γαλακττι. (Philol. ap. Schol. ad Aristoph. A. 1106.) The latter device continued to be the prevailing one throughout the whole history of the Athenian coinage. (See the wood-cut on p. 438.) Böckh supposes that the didrachms of the old Attic system passed for tetradrachms in the later (or Solonian) currency.

The politico-economical history of Solon's alteration of the Athenian currency does not belong to the present subject. (See Grote's History of Greece, vol. iii. pp. 131, foll.) That legislator is known to have lowered the standard of money in order to relieve debtors, and Plutarch (Solon, 15) informs us, on the testimony of Androtion, that "Solon made the mina of 100 drachmae which formerly contained 73." It is incredible that a large prime number, such as 73, should have been used as a multiplier in any system of weights; but what Plutarch meant to say was, that Solon made a mina or 100 drachmae out of the same quantity of silver which was formerly used for 73 drachmae. The value, therefore, of the Solonian money to that of the old standard was as 73 : 100. Now this was very nearly the proportion of the old or commercial weight to the new silver weight, namely, 100 : 136, =722 9/10: 100, or, more exactly, as Böckh has shown, as 100 : 135.9 =72 : 100 =18 : 25. [Pondera.] But why should Solon have adopted so singular a proportion? Böckh suggested in his Public Economy of Athens that it was probably an accident; that Solon intended to reduce the mina one-fourth, that is, to make 100 drachmae of the new coinage equal to 75 of the old, but that by some inaccuracy

* The ox on the coins of Euboec is supposed to be in allusion to the name of the island, and possibly the Attic coins may have borrowed the type from the coins of Euboec.
of manufacture the new coins were found to be a little too light; and as Solon’s coinage furnished the standard for all subsequent ones, the error was retained; and that, in fixing upon one-fourth as the amount of the reduction, Solon was guided by the wish of assimilating the Attic system to the Euboic, which, according to this view, would be different from the old Attic. A more complete investigation of the subject has, however, convinced that distinguished scholar that he was mistaken in supposing the Euboic standard to be distinct from the old Attic, and that the true reason of the precise amount of decrease adopted by Solon was in order to bring his new system into a simple definite ratio, namely 3:5 to the Aeginetan, which the Pheidonian institutions had established throughout the greater part of Greece. (For the full development of the argument, see Böckh, *Metropo. Untersuchungen*, c. ix., and for the denominations and values of the Attic silver money, see *Drachma*.)

It was the boast of the Athenians that their coinage was finer than all other money in Greece, and Xenophon says that they exchanged it with profit in any market (Aristoph. *Ran.* 732; Xen. *Fed.* iii. 2) there is, however, a distinction to be made in this respect between the Attic coins of different ages, which are easily distinguished by their form and workmanship. The most ancient are very thick and extremely rude. The second kind, which appear to belong to the age of Pericles, are broad and thin. Most of the third kind, which belong to a later period, are broad and thin. The third, which belong to a later period, are broad and thin. Most of the writers have supposed that they are quite free from baser metal, but the experiments which have been made show that the finest possess a small quantity of alloy. Mr. Hussey found upon trial (*Ancient Weights and Money*, p. 45), that the most ancient Athenian coins contained about 3/4 of the weight alloy, the second kind about 2/3, and the more modern about 1/2, the last of which is nearly the same alloy as in our own silver coin.

The purity and full standard of the Attic silver money, and the commercial character of the people, will account easily for its wide diffusion throughout the Grecian states. It was adopted at an early period by Corinth and her colonies; and thus was introduced into Sicily and Italy, where we find it, not only in the coins of Rhegium and Tarentum, but also of a thick form, but not so clumsy in appearance. The third, which belong to a later period, are broad and thin. Most of the extant specimens are of very fine silver. Some writers have supposed that they are quite free from baser metal; but the experiments which have been made show that the finest possess a small quantity of alloy. Mr. Hussey found upon trial (*Ancient Weights and Money*, p. 45), that the most ancient Athenian coins contained about 3/4 of the weight alloy, the second kind about 2/3, and the more modern about 1/2, the last of which is nearly the same alloy as in our own silver coin.

The purity and full standard of the Attic silver money, and the commercial character of the people, will account easily for its wide diffusion throughout the Grecian states. It was adopted at an early period by Corinth and her colonies; and thus was introduced into Sicily and Italy, where we find it, not only in the coins of Rhegium and Tarentum, but even in those of Populonia; but in most of these cases, it existed side by side with the Aeginetan standard. It is also found in the later coins of Euboea and of Crete, and in those of Thasos and Aegina. It is probable that it prevailed extensively in the Ionian islands and cities of the Aegaean Sea, but there are great difficulties connected with the coins of many of these states, and some of them (Chios, for example) seem to have had standards altogether distinct and peculiar. The Attic standard prevailed in Western Greece. The Thessalian confederacy had, at a late period, coins on the Attic scale; and the money of some of the barbarian nations of Eastern Europe appears to belong to the same standard. It also formed the basis of the later Macedonian coinage, having been adopted by Philip for gold (*Aurum, Stater*), and by Alexander for silver. It was followed likewise by the Seleucidae in Syria, and by Philetaerus in Pergamus.

There are many other points connected with Greek money in general, and with the systems of particular states, which cannot be comprised within the limits of this article, but which are fully treated of in the works referred to at the end of it. The details of the minting of the money and the laws affecting it will be found under *Moneta*.

**ii. History of Roman and Italian Money.** — The earliest coinage at Rome was of copper. Its history has been already given under *As.*

Silver was not coined at Rome till a. c. 269, five years before the first Punic war (Plin. *H.N.* xxxix. 3. 13); but the Roman coinage of silver never appears to have been so free from baser metal as the best Athenian coinage. Under the Emperor Gallienus, the coinage was so much debased that in the time of the republic the impression on silver coins was usually, on the one hand, the head of Rome with a helmet, the Dioscuri, or the head of Jupiter; and on the reverse, carriages drawn by two or four animals (*bigae, quadrigae*), whence they were called respectively *bogati* and *quadrigati*, sc. *nummi*. The principal silver coins among the Romans were the *denarius* and *sestertius*. (*Denarius, Sesterius.* Respecting the Roman gold money, see *Aurum*.)

Among the interesting matters which are here passed over for want of space, and as not of great importance for the ordinary classical student, are the fuller discussion of the early systems of the other states of Italy besides Rome, and the description of the coins of the later empire. On the former subject, the reader is referred to Müller’s *Etrusk*er, and Abeken’s *Mittelitalien*, on the latter to Eckhel.

**iii. Connection of the Greek and Roman Systems in Sicily and Lower Italy.** — For the reasons just assigned, some very brief remarks must suffice for this part of the subject, though it is one of the most interesting in the whole range of numismatics. It is also, however, one of the most difficult, and its full discussion would require a separate work of no small dimensions. We find in Sicily and Lower Italy all the three chief systems which prevailed in Greece, and also the Italian system, not kept distinct, but brought into connection; besides a system which may be called specifically Sikelian, as it is not found elsewhere, and besides also the Carthaginian system. Of the three systems imported from Greece, the Aeginetan was naturally brought by the colonists from Corinth and Rhodes, who were the chief Doric settlers in Sicily; the Euboic was similarly introduced by the Chalcidian colonists, and also from Corinth; and the Attic was imported through commerce, both directly and by way of Corinth. The Italian is supposed by Böckh to have been introduced by the commercial activity of the Etruscans at a very early period. Undoubted evidence of the existence of the last system is furnished by the very words *Aurum* and *siliqua*, which it is impossible to explain otherwise than as being the Italian *oro* and *moneta*. It is important to observe that we have here a mixture, not only of different standards of weight and money, but also of different systems of arithmetical computation, the mixed decimal and duodecimal system of the Greeks coming into collision with the purely duodecimal system of the Italians.

In adapting these systems to one another, it would seem that the *pound* of the Italian system
NUMMUS.

Denominations.

Values.

| 12 obols or | 1 didrachm | 1 libra |
| 10 assae, decussis | = | Euboe. |
| 10 obols | = | Sicil. |

Just as in the Latin system, so in the Graeco-Sicilian, there seem to have been no coins between the half and whole λίτρα. Thus, in the second passage quoted by Pollux from Epicharmus, a sum of money is expressed as consisting of λίτρα καὶ δεκάλειτρον στατήρ, εζάτων τε καὶ πεντάγκυκων. Even as denominations of weight we have (so far as we know) no terms corresponding to the Latin septa, dextra, decima, and denarius. Bückh supposes that this system was introduced in Sicily about the 40th, or 50th, or even 500th century.
The worth of the chief coin in this system, the silver λίτρα, or Aeginetan silver obol, must evidently be assumed to have been, like the Italian libra, the value of a pound-weight of copper.
The gold money of this scale has already been spoken of under DAMARETION.

For further details on the whole subject, see Bückh, Metrol. Untersuch. c. xix.

Besides the λίτρα, we find the word nummus (nuummos) itself in the Sicilian system as the name of a particular coin. The Greek origin of the word is attested by several of the grammarians.

(Varro. L. L. v. 36. s. 67, ed. Müller ; Pollux. ix. 79 ; Festus, s. v. ; Suid. s. v. νόμος.) Pollux (i. c.) quotes two passages from Epicharmus, in which the word is used in the specific sense, for a particular coin; and he adds the statement, from Aristotle's Polity of the Tarentines, that νόμος is the name applied by them to a coin, on which Taras was represented carried on a dolphin. The grammarians give the value of the Sicilian nummus as 1/2 Attic obol, in connection with a small talent, peculiar to Sicily, or rather two such talents, the older containing 24 nummi and the later 12. From a careful criticism of these statements, and from an examination of the extant coins, Bückh comes to the conclusion, that the nummus was originally the same as the λίτρα, but that, when the Attic standard came into common use, this nummus or λίτρα was diminished by 1-10th, in order to bring it into conformity with that scale; and by this change it became 2/3 of the Aeginetan obol, which is equal to 1/2 of Attic obol, or the fourth part of an Attic drachma. Thus we get the simple law by which the Sicilian money was

 scholars, and that, in fact, the parts of the system were named, as the general rule, not from the number of ounces they contained (except in the case of the πεντάγκυκον, like the Latin quincaux, an exception easily accounted for by the difficulty of expressing the fraction 5-12ths by a single word), but from the fractional part of the λίτρα which each of them was equal to, just as in the Latin system. The following table shows the whole series, with the corresponding Latin names, and with the values of the coins in silver obols of the Aeginetan standard and in the copper coins called chalce:—

NUMMUS.

(libra, λίτρα) was identified, not, as some have supposed, with the mina, but with the half mina of the Aeginetan scale; and, consequently, that 120 pounds went to the talent, as we are expressly informed by the Taenarian inscription, and that copper money was coined in conformity with this standard.

Pollux (ix. 80—82) refers to Aristotle's Polity of the Hierocharson, for an account of several denominations of Sicilian coins, and of these he mentions the ουγκία, as equal in value to one chalce; the διένα, equal to two chalce; the τρεῖς to three; the ημιλειτρον to six; and the λίτρα, which is an obol; the δεκάλειτρον, he adds, still quoting Aristotle, is worth ten obols, and is the Corinthian stater.

He then proceeds to state that there were many passages of the Attic, as well as the Dorian, coin, which the Sicilian money was derived, namely, in the Corinthian didrachm or stater of ten Aeginetan obols, which may be regarded as forming the στατήρ, or chief coin, of the Sicilian system; that then, the obol, being identified with the λίτρα, was subdivided, just like the Italian pound, from which its name was derived, into twelve parts or ounces (διάκονια, ουγκία, i.e. unciae), each of which was a chalce (χαλκοῦς: what this chalce really was, we shall presently endeavour to show).

As to the intermediate parts of the pound or λίτρα, it is evident, from the explanation which Pollux gives of διόξα and τρεῖς, that he supposed them to be named from the number of ounces they contained, as was clearly the case with the πεντάγκυκον, according to the analogy of which, if the idea of Pollux had been right, διόξα and τρεῖς would have been respectively διάκονια and τρεῖς. Aris totipotent the half and whole Atrpa. Thus, in the second (vario, l. v. 36. s. 67, ed. Müller ; Pollux. ix. 79 ; Festus, s. v. ; Suid. s. v. νόμος.) Pollux (i. c.) quotes two passages from Epicharmus, in which the word is used in the specific sense, for a particular coin; and he adds the statement, from Aristotle's Polity of the Tarentines, that νόμος is the name applied by them to a coin, on which Taras was represented carried on a dolphin. The grammarians give the value of the Sicilian nummus as 1/2 Attic obol, in connection with a small talent, peculiar to Sicily, or rather two such talents, the older containing 24 nummi and the later 12. From a careful criticism of these statements, and from an examination of the extant coins, Bückh comes to the conclusion, that the nummus was originally the same as the λίτρα, but that, when the Attic standard came into common use, this nummus or λίτρα was diminished by 1-10th, in order to bring it into conformity with that scale; and by this change it became 2/3 of the Aeginetan obol, which is equal to 1/2 Attic obol, or the fourth part of an Attic drachma. Thus we get the simple law by which the Sicilian money was
NUMMUS.

The Sicilian system came to be identified by the Greek writers with the chalcos, in its specific sense. The Attic chalcos was ¼ of the obole [Chalcus]; hence 12 chaetae would make up ¼ Attic oboles, that is (restoring the 1-10th of depreciation), an Aeginetan obole, or a Sicilian litra. The nummas of the Tarentines, mentioned in the above passage from Pollux, and which was also used at Heraclea, was a much larger coin, and is probably the same as the full-weighted Aeginetan drachma (δρακχμή παχνία), which came near enough to the Attic didrachm to be identified by itself when the currencies came to be mixed. In fact the word nummus was evidently applied (like στατήρ in Greece) to the chief current coin in any system, and it may therefore have had very different values: Plautus actually uses it for the didrachm.

For a further account of the Sicilian nummus and a small talent, and the Attico-Sicilian system, see Büch, cc. xxi., xxii.

iv. On the Value of Ancient Money in terms of our own.—When we endeavour to express the value of ancient coins in terms of our own, we meet with certain difficulties which require particular consideration. If we take for example, a drachma, and a shilling, and make a comparison of their multiples and parts, wherever they are mentioned in any sense, we might substitute that value for the drachma, its value in terms of our own. Of course we might, and that thus we might express all ancient money in terms of our own.—

Hence, also, we see how the method of reckoning of the one to the other; and it might appear that we at once obtain a determinate ratio for the value of the one to the other; and it might appear that we should at all obtain what we are seeking, but it does not follow that, after doing so, we should have obtained the true value.

Real value. Another source of disagreement, in comparing the gold and the silver coins with ours, is the different ratios of the value of gold to that of silver in ancient and in modern times. (See Argentum, Aureum.) The only course left is to express the value of the ancient coins in terms of the current value of our coins, choosing the sovereign or shilling as the standard just as we may prefer, but in making use of the values so obtained, to remember that they are comparatively worthless, until by other investigations we have ascertained the value of money as compared with commodities at different periods of ancient history. Such investigations form no part of our present subject. The reader is referred for them to Böckh's Publie Economy of Athens, and to Jacob's History of the Precious Metals. The Tables appended to this work are constructed on the principle we have described.

It is unnecessary to make any attempt to give a complete list even of the chief books on numismatics. All the earlier works are referred to in one or other of the few books which we now proceed to mention as those which are most important for the student who wishes to pursue the subject further:—Eckhel, Doctrina Numorum Veterum, 8 vols. 4to, Vindobon, 1792—1839, some of the volumes being second editions; Rasche, Lexicon Universale Rei Numinarum, 7 vols. 8vo, Lips. 1835—1855; Wurm, de Ponderum, Numorum, Men- surarum, de Annis et Rationibus Oppidorum Romanos et Graecos. Stutt. 1831, 8vo; Hussey, Essay on the Ancient Weights and Money, Ox., 1836, 8vo; Böckh, Metrologische Untersuchungen über Gewichte, Minzfusse, und Masses des Alterthums in ihrem Zusammenhange, Berlin, 1838, 8vo; Grote's Review of Böckh's work, in the Classical Museum, vol. i. [P. S.]

NUNCUPATIO. [Testamentum.]

NUNDINAE. is invariably and justly derived by all the ancient writers from nones and dies, so that it literally signifies the ninth day. (For nones, ant. Rom. ii, 26, vii, 53; Macrob. Sat. l. 16; Festus, s. v. Nundinum, Cotec.) In ancient Calendaria all the days of the year, beginning with the first of January, are divided into what we may call weeks, each containing eight days which are marked by the letters A, B, C, D, E, F, G, H. Now it is admitted on all hands that this division is made to mark the nundinae, for every eighth day according to our mode of speaking, was a nundinae. There were thus always seven ordinary days between two nundinae, and consequently that the nundinae recurred every ninth day, and called them nundinae, as it were noveminae. A similar mode of stating the number of days in a week is still customary in Germany, where, in common life, the expression eight days is used for a week, and the French and Italians in the same manner call a fortnight quinze jours and quinque dies. The number of nundinae in the ancient year of ten months was 38; and care was always taken that they should not fall on the calendar of January nor upon the nones of any month (Macrob. Sat. 13; Dion Cass. xl. 47, xlviii. 33), and in order to effect this, the 355th day of the lunar year (dies intercalaria) was inserted in such a manner as to avoid the coincidence of the nundinae with the praeceps calenda, the entire week would be signalised by misfortunes; the nones were avoided because the birthday of king Servius Tullius was celebrated on the nones of every month, as it was known that he was born on the nones of some month, though the month itself was not known. Now, as on the nones, the country-folk assembled in the city, the patricians feared lest the plebeians gathered at Rome on the nones might become excited and endanger the peace of the republic. These reasons are indeed very unsatisfactory, as Ovid (Gest. der Röm. Staatstv. p. 183) has shown, and it is more probable that the calends of January were ill suited to be nundinae, because this day was generally spent by every father in the bosom of his own family, and that the nones were avoided, because, as Ovid (Fast. i. 58) says, Nonarum tutela
NUNDINAE.

de a deor. But at the time when the Julian calendar was introduced, these scribula, whatever they may have been, were neglected, and in several ancient calendars the nundiniae fall on the first of January as well as on the nones. (See Graecius, Thesaur, vol. vii. p. 7, and the various ancient Calendars. Both before and after the time of Caesar it was sometimes thought necessary, for religious reasons, to transfer the nundiniae from the day on which they should have fallen to another.

The nundiniae themselves were, according to Plutarch (Quaest. Rom. p. 275, n), sacred to Saturn, and, according to Granius Licinianus (ap. Macrob. Sat. i. 16) the Flaminica offered at all nundiniae a sacrifice of a ram to Jupiter.

It is uncertain to whom the institution of the nundiniae is to be ascribed, for some say it was Romulus (Dionysii. ii. 28; Tucidianus, ap. Macrob. Sat. i. c.), and others that it was Servius Tullius (Caussi Hemina, ap. Macrob. l. c.,) who instituted them, while the manner of their observing which for which they were originally set apart seems to show that their institution was as old as the Romulian year of ten months, or at least that they were instituted at the time when the Roman population extended beyond the precincts of the city itself. For the nundiniae were originally market-days for the produce of their labour, and on which the king therefore, we read that the nundiniae were feriae, to be held, we have to understand this of the pulus, and not of the plebs; and while for the plebeians, who on these occasions pleaded their causes with members of their own order, and held their public meetings (the ancient comitia) and debates on such matters as concerned their own order, or to discuss which they must have been, were neglected, and in several

OBELISCUS.

Obeliscus (obelios) is a diminutive of Obedus (obelos), which properly signifies a skewer, a skewer or spit, and is the name given to certain works of Egyptian art.* A detailed description of such works would be inconsistent with the plan of this work, but some notice of them is required by the fact that several of them were transported to Rome under the emperors. Ammianus Marcellinus (xvii. 4) says "that an obelisk is a very rough stone in the shape of a kind of land-mark or boundary stone, rising with a small inclination on all sides to a great height; and in order that it may imitate a solar ray by a gradual diminution of its bulk, it terminates in a prolongation of four faces united in a sharp point. It is very carefully smoothed." Most ancient writers consider obelisks as emblematic of the sun's rays. (Comp. Plin. H. N. xxxvi. 14.)

An obelisk is properly a single block of stone, cut into a quadrilateral form, the sides of which diminish gradually, but almost imperceptibly from the base to the top of the shaft, but do not terminate in an apex upon the top, which is crowned by a small pyramid, consisting of four sides terminating in a point. The Egyptian obelisks were mostly made of the red granite of Syene, from which place they were carried to the different parts of Egypt. They were generally placed in pairs at the entrance to a temple, and occasionally in the interior, and were usually covered with hieroglyphical inscriptions.

Obelisks were first transported to Rome under Augustus, who caused one to be erected in the Campus Martius and another in the Circus Maximus. (Plin. xxxvi. 14.) The former was restored in 1589, and is called at present the Flaminian obelisk. Its whole height is about 116 feet, and without the base about 78 feet. The obelisk in the Campus Martius was set up by Augustus as a sun-dial. It stands at present on the Monte Citorio, where it was placed in 1792. Its whole height is about 110 feet, and without the base about 77 feet. Another obelisk was brought to Rome by Caligula, and placed on the Vatican in the Circus of Caligula. (Plin. xxxvi. 15, xvi. 76. § 2.) It stands at present in front of St. Peter's, where it was

Herodotus (ii. 111) uses obelos in the sense of an obelisk.
The Roman Law recognised a limited number, as bonae fidei actiones. Viewed with reference to mandati, negotiorum gestorum, tutelae actiones; the foundation of bonae fidei actiones, of which commodati actio, and some others. The term dered as bonae fidei; and such Obligationes were and Naturales are opposed among one another. Turales Obligationes: Civiles Obligationes have long to Jus Civile in its wider sense. [Jus.]

This is the sense of Civiles when opposed to Naturales: was conformable to the principles of the Jus Gentium, and added the term Naturalis, by which it was opposed to Civilis and Praetoria or Honoraria. The preceding brief account is chiefly taken from Long's Egyptian Antiquities, vol. i. cc. 14, 15. London, 12mo. 1832.

OBLIGATIO'NES. Obligatio is defined (Inst. 3. tit. 13) to be "a bond of law by which we are under a necessity of releasing (solvendae) something according to the laws of our state." According to Paulus (Dig. 44. tit. 7. s. 3) the substance of an obligatio does not consist in this, that its object is to make any corporeal thing (corpus) or servitus ours, but that it shall bind another person to give us something, or to do something, or to secure or make good something (ad dandum olibauid, vel faciendum, vel praesumendum). This "binding" is a "legal binding," that is, the party who fails to perform what he has engaged to do, is liable to legal compulsion; in other words, the duty which he owes may be enforced by suit or action. The duty must consist in something that has a pecuniary value, or may be estimated in money (Dig. 40. tit. 7. s. 9. § 2): if the duty is not capable of such estimation, it is not a duty which can be enforced by legal process. An agreement which does not conform to the principles of the Roman Law, is not properly an obligatio, but still the Romans gave such a name the name of Obligatio, when it was conformable to the principles of the Jus Gentium, and added the term Naturales, by which it is opposed to Civilia and Praetoria or Honoraria. Obligationes Civiles were those which produced a right of action according to the Jus Civile; Praetoriae or Honoriae were those which owed their force to the jurisdiction of the Praetor. In the wider sense Civiles Obligationes comprehend Honoraria, inasmuch as the acta magistratuum are long to Jus Civile in its wider sense. [Jus.]

This is the sense of Civiles when opposed to Naturales Obligationes: Civiles Obligationes have the narrower sense when Civiles, Honorariae, and Naturales are opposed among one another. Those obligationes, which were viewed as based on the Naturales Ratio, were peculiarly considered as bona fidei; and such obligationes were founded on the bonae fidei actions, of which the Roman Law recognised a limited number, as commodati actio; manceti et venditati actiones; locati et conducti actio; manceti et venditati actiones; manceti et venditati actiones; commodati actio, and some others. The term strictum jus (Cod. 5. tit. 13) is opposed to bona fidei; and stricti juris actiones are opposed to bona fidei actions. Viewed with reference to the facts on which the law operated to give Obligationes a binding force, Obligationes arose from Contract and Quasi Contract, and Delict (maleficium, delictum), and Quasi delict. (Inst. 3. tit. 13.)

This division of Obligationes with respect to their origin was apparently viewed as exhaustive; though it is doubtful whether the Roman jurists really viewed every obligatio as included with one of these four divisions. For instance, it is doubtful whether the actio ad exhibendum was considered as an obligatio quasi ex contractu, or an obligatio quasi ex delicto. Gaius divides Obligationes into these: ex contractu and ex delicto; but he intends to comprehend the obligationes quasi ex contractu under those ex contractu, and obligationes quasi ex delicto under those ex delicto. In his Aurea (Dig. 44. tit. 7. s. 1) he distributes obligationes as to their origin into obligationes ex contractu, ex delicto, and ex variis causarum figuris; and the ex variis causarum figuris comprehends the obligationes quasi ex contractu and quasi ex delicto; indeed the term is comprehensive enough to comprehend all others, whatever they may be.

Contract (contractus) was made in four ways—Re, Verbis, Litteris, and Consensu.

As an example of an obligatio Re, Gaius mentions Mutuum [MUTUUM]. Also, if a man received what was not due from a person who paid by mistake, the payer had his remedy for the recovery (condicio indebiti) just as if it were a case of Mutuum. But "this kind of obligation," observes Gaius (iii. 91), "does not appear to arise from contract, because he who gives with the intention of payment, rather intends to dissolve or put an end to (distrahere) a transaction (negotium), than to commence or to constitute (contrahere) a transaction."

To the contracts made Re, there also belong Commodatum, Depositum, and Pignus.

The Obligatio Verbis was contracted by oral question and answer between the parties. The form of words might be:—Dare Spondeo? Spondeo. The word "spondeo" properly refers to him who asks the question: si quis ita dari stipuletur; Post morie non saepe iterum solvendae (solvendae) something according to the laws of our state. According to Paulus (Dig. 44. tit. 7. s. 3) the substance of an obligatio does not consist in this, that its object is to make any corporeal thing (corpus) or servitus ours, but that it shall bind another person to give us something, or to do something, or to secure or make good something (ad dandum olibauid, vel faciendum, vel praesumendum). This "binding" is a "legal binding," that is, the party who fails to perform what he has engaged to do, is liable to legal compulsion; in other words, the duty which he owes may be enforced by suit or action. The duty must consist in something that has a pecuniary value, or may be estimated in money (Dig. 40. tit. 7. s. 9. § 2): if the duty is not capable of such estimation, it is not a duty which can be enforced by legal process. An agreement which does not conform to the principles of the Roman Law, is not properly an obligatio, but still the Romans gave such a name the name of Obligatio, when it was conformable to the principles of the Jus Gentium, and added the term Naturales, by which it is opposed to Civilia and Praetoria or Honoraria. Obligationes Civiles were those which produced a right of action according to the Jus Civile; Praetoriae or Honoriae were those which owed their force to the jurisdiction of the Praetor. In the wider sense Civiles Obligationes comprehend Honoraria, inasmuch as the acta magistratuum are long to Jus Civile in its wider sense. [Jus.]

This is the sense of Civiles when opposed to Naturales Obligationes: Civiles Obligationes have the narrower sense when Civiles, Honorariae, and Naturales are opposed among one another. Those obligationes, which were viewed as based on the Naturals Ratio, were peculiarly considered as bona fidei; and such obligationes were founded on the bonae fidei actions, of which the Roman Law recognised a limited number, as commodati actio; manceti et venditati actiones; locati et conducti actio; manceti et venditati actiones; manceti et venditati actiones; commodati actio, and some others. The term strictum jus (Cod. 5. tit. 13) is opposed to bona fidei; and stricti juris actiones are opposed to bona fidei actions. Viewed with reference to the facts on which the law operated to give Obligationes a binding force, Obligationes arose from Contract and Quasi Contract, and Delict (maleficium, delictum), and Quasi delict. (Inst. 3. tit. 13.)

This division of Obligationes with respect to their origin was apparently viewed as exhaustive; though it is doubtful whether the Roman jurists really viewed every obligatio as included with one of these four divisions. For instance, it is doubtful whether the actio ad exhibendum was considered as an obligatio quasi ex contractu, or an obligatio quasi ex delicto. Gaius divides Obligationes into these: ex contractu and ex delicto; but he intends to comprehend the obligationes quasi ex contractu under those ex contractu, and obligationes quasi ex delicto under those ex delicto. In his Aurea (Dig. 44. tit. 7. s. 1) he distributes obligationes as to their origin into obligationes ex contractu, ex delicto, and ex variis causarum figuris; and the ex variis causarum figuris comprehends the obligationes quasi ex contractu and quasi ex delicto; indeed the term is comprehensive enough to comprehend all others, whatever they may be.

Contract (contractus) was made in four ways—Re, Verbis, Litteris, and Consensu.

As an example of an obligatio Re, Gaius mentions Mutuum [MUTUUM]. Also, if a man received what was not due from a person who paid by mistake, the payer had his remedy for the recovery (condicio indebiti) just as if it were a case of Mutuum. But "this kind of obligation," observes Gaius (iii. 91), "does not appear to arise from contract, because he who gives with the intention of payment, rather intends to dissolve or put an end to (distrahere) a transaction (negotium), than to commence or to constitute (contrahere) a transaction."

To the contracts made Re, there also belong Commodatum, Depositum, and Pignus.

The Obligatio Verbis was contracted by oral question and answer between the parties. The form of words might be:—Dare Spondeo? Spondeo. The word "spondeo" properly refers to him who asks the question: si quis ita dari stipuletur; Post morie non saepe iterum
OBLIGATIONES.

effected by words, it was a necessary consequence that the parties should have power to speak and hear, and on this ground was founded the rule of law that a mutus and a surdus could not be parties to a stipulatio. As to the ability of Pupilli and Infantes with respect to Obligationes, see IMPUBES and INFANTES. The Stipulator might have another party to the contract on his behalf, who was called Adstipulator. The Adstipulator had the same right of action as the Stipulator, and therefore a payment in respect of the stipulatio could be made to him as well as to the stipulator; and the stipulator had an actio Mandati against the adstipulator for the recovery of any thing that he had received.

There were some peculiarities in the adstipulatio. The right of action did not pass to the heirs of the adstipulator, and the adstipulatio of a slave for his master had no effect, though in all cases he could acquire for his master by stipulatio. The same rule of law applied to apply to him who was in Mancipio, for he was servi loco. If a son who was in the power of his father, became his adstipulator, he did not acquire any thing for his father, though he acquired for him by stipulatio. Still his adstipulatio gave the son a right of action, provided he was released from the father's power without a capitis diminutio, as for instance by the father's death or by being inaugurated Flamen Dialis. The same rule of law applied to a filia-familias and to a wife in manu.

Those who were bound for the promissor were called Sponsores, Fidepromissores, Fidejussores [INTERCESSIO].

The Obligatio Literis is illustrated by Gaius (iii. 128) by the instance of Nomina transcripticin, as when a creditor who has a debt due from a person in respect of a sale, or a letting, or a partnership, enters it in his book (codices, or tabulae expensis et acceptis) as a debt (expensum illi fert: compare Cic. pro Rosc. Com. 4, 5; expensum tali non dicti, cum tabulas non recteq). This was called Nomen transcripticum a re in personam. It was called transcriptio a persona in personam, when, for instance, 'I have entered as due from you the debt which Titius owes to me, that is, if Titius has transferred or assigned (delegavit) you to me.'

Cicero clearly alludes to this literarium obligated in his Oration pro Roscio Comodo. He says (c. 5), speaking of the plaintiff's demand: 'his claim is for a certain sum of money (pecunia certa), and this must be either data ('a case of obligation re), or 'expensa lata' (the literarium obligated), or stipulatio (an obligation Verbis).'

Some difficulty arises on the mode of converting an obligation of one kind into an obligation of another kind. The subject is discussed by Unterholzer (Ueber die Rede des Cicero für den Schauspieler Q. Roscius, Zeitschrift, vol. i. p. 246) in an ingenious essay, which, however, was written before the publication of the MS. of Gaius; and it has since been discussed by himself and by other writers. Unterholzer conjectured that a third party, with the consent of the debtor and creditor, made the entry in his own book; but there is no evidence in support of this assumption. Theophilus (Ad. tit. 1. De Lit. Oblig.) represents the literarium obligated as a Novatio or a change of an obligation of one kind into an obligation of another kind, and this he says was effected both by words and writing (θέματι καὶ γράφματι). It was effected, according to him, by the creditor writing to the debtor (γράφων ρήματα πρὸς αὐτὸν) to ask his consent to the old obligation being made into a new one of a different kind, and by the debtor consenting. As stated by him the obligatio literis might be an obligation contracted by a letter of the creditor to the debtor and the debtor's reply. In principle there would be no objection to its being contracted by the debtor's consent expressed by a subscription in the creditor's books. The literarium obligated of Theophilus, however, rather seems to correspond to the other kinds of literarium obligated referred to by Gaius (iii. 134), where he says 'this obligation can be contracted by chirographa and syngrapha, that is, if a man writes that he owes a sum of money or will pay it; provided, however, there be no stipulatio on the same account.' It is not impossible that Gaius means that the creditor might convert an obligation of another kind into that of pecunia expensa by the bare entry of it in his book; for it is no objection to this, as Unterholzer has it, 'that a unilateral writing on the part of the creditor should have the effect of putting another person under an obligation,' for an obligation was already contracted, which the creditor would have to prove, but if he could prove it, the law gave him all the advantage of a creditor for pecunia certa, if he had compiled with certain forms. Gaius (iii. 137) certainly may be understood as asserting that this obligation was contracted simply 'expensum ferendo,' but it seems to be the general opinion that this literarium obligated required the consent of the debtor either orally in the presence of witnesses or by letter (Cic. pro Rose. Com. 5; Val. Max. viii. 2. § 2); and this is not inconsistent with Gaius, for though he says that the debtor is bound by the 'expensum ferendo,' that does not exclude his consent, but merely shows what is necessary in order to make the consent an obligatio literis.

The obligation consensu were Emitto and Venditio, Locatio Conducetio, Societas, Mandatum. All obligationes by contract of course required consent and the evidence of consent; but these obligationes, says Gaius (iii. 135), 'are said to be contracted consensum, because no peculiar form of words or writing was required, but the consent of the parties to the transaction was sufficient.' Accordingly such transactions could take place between persons at a distance from one another, but a verborum obligation required the presence of the parties. The actions founded on these obligationes consensu were Borne sibi.

An obligatio Civilia implies a right of action against the person who owes the duty (qui obligatur). This right of action (ex contractu) might be acquired by any person who was sui juris. It might also be acquired for him by those who were in his Potestas, Manus, and Mancipium; and by free men and slaves whom a man possessed bona fide, with certain exceptions. This right of action might also be acquired by a man through the acts of a free man who was his agent, so far that he could require the cession of the obligatio so acquired.

An obligation was terminated (tolitur) in various ways. The most common way was by payment (solutio) of what was due. A man with the consent of the creditor might pay another's debt, but the two schools differed as to the legal consequence of such payment. The Proculei and usual adhering strictly to fundamental principles main-

OBLIGATIONES.
tained that the debtor was still under his obligatio, but if the money was demanded of him by the creditor he had a good plea of dolus malus (exceptio doli mali).

An obligatio might be terminated by Acceptatio. An obligatio contracted per aequum et librum might be determined in the same way, and also obligatio in a manumission or release (Dipl. 1. tit. 10.) An obligatio might also be determined by Novatio, which is the change of an existing duty (debitum) into another obligation, and the determination of the former obligation. (Dig. 46. tit. 2. De Nova-
tionibus et Delegationibus.) This is explained by the following instance (Gaius, iii. 176): — If I stipulate that Titius shall give me what is due from you, a new obligatio arises by the intervention of a new person, and the former obligatio is determined by being replaced by the latter; and sometimes a former obligatio may be determined by a subsequent stipulation, though the subsequent stipulatio may be invalid. — If the stipulation was from the same person, it required the addition of something to effect a Novatio, as the addition of a condition, or a sponsor, or the circumstance of adding to or subtracting from the time contained in the terms of the covenant. As to the case of a condition, it was the law in the time of Gaius that there was no Novatio until the condition was fulfilled, and till that time the former obligatio continued. The opinion of the great jurist Servius Sulpicius as to the addition of a condition immediately effecting a Novatio, was not law in the time of Gaius (alto jure utinam).

An obligatio was also determined by the Litis contestatio, if the proceedings had taken place in a Legitimum judicium. It is stated generally under the articles Litis contestatio and Legitimum judici-
cium, what is the import of these terms respecti-
vately. The original obligation (principalis obligatio) was determined by the Litis contestatio, and the defendant (creditor) was bound by the judgment (res judicata) as well as the duty or obligation owing by one a thing has been bequeathed and given to several persons; and some other instances.

These quasi contracts are arranged in the Insti-
tutes of Justinian after Obligationes ex contractu; and the Obligationes quasi ex delicto are placed immediately after the Obligationes ex delicto. Instances of these Obligationes quasi ex delicto, enumerated in the Institutes (4. tit. 5), are, “si judex item sum fecerit,” and the case of “de]
exjunctum effusumve,” and others. (Keller, &c.)

Obligationes arising from Contracts, Gaius (iii. 182) passes to the con-
sideration of Obligationes “quae ex delicto ori-
untur;” and these delicts which are the found-
ation of these obligationes, are Fortunum, Bona
Rapta, &c. Damnum and Injuria. All these obligationes he considers to be comprised in one genus, with which all the obligationes ex contractu are distributed into four gener-

The arrangement by the Roman jurists of Obliga-
tiones ex delicto with Obligationes ex contractu, was founded on the circumstance that both classes of obligationes were the foundation of rights against a determinate individual or determinate indivi-
duals; but there is an important difference in the origin of the two rights. The rights ex contractu are rights founded on lawful acts; and rights ex delicto are rights founded on infringements of other rights.

The Obligationes quasi ex contractu are not enumerated by Gaius, but they are discussed in the Institutes of Justinian (3. tit. 27). These Obligationes do not properly arise either from contract or delict, but inasmuch as they are founded on acts, which are not delicts, they were considered as belonging to contract rather than to delict. In-
stances of these quasi contracts, enumerated in the Institutes, are “absentia negotiorum gestatio” [Ne-
gotiorum Gestorum Actio], the “nudilae jut-
dicum,” a “commune res sine sequela,” as when a person has been bequeathed and given to several persons; and some other instances.

These quasi contracts are arranged in the Insti-
tutes of Justinian after Obligationes ex contractu; and the Obligationes quasi ex delicto are placed immediately after the Obligationes ex delicto. Instances of these Obligationes quasi ex delicto, enumerated in the Institutes (4. tit. 5), are, “si judex item sum fecerit,” and the case of “de-
exjunctum effusumve,” and others. (Keller, &c.)

The nature of an Obligatio may now be more clearly understood. An Obligatio implies two subjects or persons at least, creditor, or he who has the right, and debitor, or he who owes the duty; these two terms, which strictly apply to creditor and debitor in the common sense, are also used to express generally the relation of the parties to an Obligatio. Obligatio (literally a binding) primarily denotes the facts by which the legal relation between the parties is established. It also denotes the duty or obligation owing by one of the parties to the contract (debitor) to the other party (creditor), if the obligatio is unilateral; and the duties mutually owing from the one to the other, if the obligatio is bilateral. The word, which, as opposed to obligatio or “binding,” ex-
presses the determination of such binding, is “soluto;” and generally some form of the word “solvo” is the appropriate term to express the legal termination of the obligatio. But inasmuch as duties owing by one party to the contract, or duties mutually owing by the parties to the con-
tract, imply a right in the other party to the con-
tract, or imply mutual rights in the parties to the contract, the word obligation is often used to express also the right which is established by the obligatio: and it is also used to express the whole relation between debitor and creditor. Thus, the right of the Creditor is spoken of as his Obligatio, and the duty of the Debitor as his Obligatio. There is no special name in the Roman law for a right against a determinate person or determinate persons. The
name for ownership is Dominium, to which is opposed the name Obligationes as descriptive of rights against determinate persons.

It is correctly remarked (Austin, An Outline of a course of Lectures on General Jurisprudence) "that in the writings of the Roman lawyers, the term obligatio is never applied to a duty which contains a right in another that is good against all the world. But as the duty answering to a right in rem is only the duty of reimbursement, that is, of not doing anything to interfere with the right, there is no inconvenience in the want of a name: the right to the exclusive enjoyment of any thing (corpus) is ownership; all other people are not owners: as soon as an act is done which is an infringement of an owner's right, or in other words a delictum (in one sense in which the Romans use this word) an obligation arises by force of such act (obligatio ex delicto) and gives the injured person a right of action against the wrong-doer.

A contract required the consent of all the parties to it. Those Obligationes which were said to be founded on "consent" (consensum) were said to be so founded only because consent was sufficient (Gaius, iii. 136), and no peculiar form of words or expression was required; whereas in the Obligationes contractae "re," "verbis," and "litis," certain acts, words, or writing were required. In those contracts where particular forms were not required in order to convert them into Obligationes, any words or acts were sufficient, which were evidence of consent. Constraint by force or threats (vis, metus), and fraud (dolus), and in many cases error (error, ignorantia), either render an agreement absolutely null, or give the party who has been constrained, deceived, or in error, various modes of defence against the claims of the other party.

An Obligatio, as already observed, supposes two persons at least. But there may be more than two parties to an Obligatio, either as creditors or debtors, or both of whom are comprehended under the general name of Rei. (Cic. de Or. ii. 43.) With reference to a person who is under the same obligatio, a person may be called Correus. But when there are several parties to an obligatio, there are properly several Obligationes, and this is the case whether the creditor is one and the debitor is several, or the creditors are several and the debitor is one, or both of the creditors and debitors are several. In the obligatio pro rata, the claims of the several creditors, or the duties of the several debitors, are determinate parts of a whole, which is made up by the parts being united in one formal obligatio. There are cases when several creditors may claim the whole (solidum), or several debitors may owe the whole (solidum); where a creditor claims the whole against several debitors, there are in fact several obligationes binding on the several debitors. But if one creditor has recovered the whole, or one debtor has paid the whole, the entire obligatio is at an end. (Inst. 3. tit. 16 (17).)

If an obligatio is unilateral, it only gives a right of action to one of the parties to it, as in the case of Mutuum, Stipulatio, and others; if it is bilateral, it gives a right to each party against the other, as emtio venditio, and locatio conductio.

The most general name for any agreement, the object of which was to establish legal relations between the parties, is Convenio, Pactio, Pactum Conventionum, and its essence is consent: "conventionis verbum generale est, ad omnia pertinentes, de quibus negotii contrahendi transigendi causa consentient, qui inter se agunt." (Dig. 2. tit. 14.) Conventiones were juris gentium, and as a genus were divisible into species. Those Conventiones which answer to certain classes were called Contractus, of which the Jus Civile acknowledged the four kinds already mentioned, Re, Verbis, Litteria and Consensum. Of those Obligationes which were established Re, the four which have been already mentioned, had special names, Mutuum, Commodatum, Depositum and Pignus; and accordingly they have been called by modern writers Contractus Nominati. But there were other Obligationes which were established Re, for which the Romans had no particular name, and accordingly they have been called by modern writers Contractus Imominati.

These obligations are founded upon something that has been given or done by one party, which gives him a claim against the other for something to be given or done in return. If the matter of the conventio was a civil negotium or had a civilis causa, it formed an obligatio, and was a foundation of an action "praescriptis verbis" or "in factum," or as it is clearly expressed by Julian (Dig. 19. tit. 5. De praescriptis verbis, &c.), this is the actio "ad quum necesse est confugere, quoutes contractus existunt, quorum appellatio nulla jure civilii probitae sunt." All the events upon which these actions could arise were reduced to the four following heads: "aut do tibi ut des, aut do ut facias, aut facio ut des, aut facio ut facias." (Paulus, Dig. 19. tit. 5. s. 5, § 1—4.) The bare agreement (pactum) both in nominate and innominate contracts is not sufficient to establish an obligatio: in both cases some act must be done to make the agreement become a contract, and to establish an obligatio. The nominate contracts have their particular names. The innominate contracts take the name of contracts from their resemblance to nominate contracts; but as they are not referable to any one of such contracts, they are formed into a separate class: still some of them have special names. These contracts, as it will appear from the description just given of them, have their foundation in an act (a giving or doing) by one of the parties, and so far resemble contracts Re.

The transaction is not completed so long as a thing remains to be given or done by the debitor; and the creditor may have his action (condictio) for the recovery of a thing which he has given, and for which the debitor has not made the return (a giving or an act) agreed upon. The creditor has also this action generally (praescriptis verbis) for the performance of the contract, if he prefers that, or for compensation to the amount of the injury sustained by its non-performance.

All other conventiones were simply Facta, the characteristic of which is that they were not originally the foundation of actions, but only of pleas or answers (exceptiones); that is, if a contract (convenio, pactio) could not be referred to some class of contracts, it did not give a right of action.

When there was no civilis causa, there was no civilis obligatio created by such conventio, and it is added (Dig. 2. tit. 14. s. 7, § 4), "therefore a nuda pactio does not produce an obligatio but an exception;" whence it follows that a nuda pactio
is a pactio sine causa. Sometimes Nuda conventio is used as equivalent to Nuda pactio. (Dig. 15. tit. 5. s. 15.) It is a mistake to say that Pactum by itself means a one-sided contract. Pactum is a term as general as conventio as included in the law of Obligationes, obtained a limited signification; and it was used to signify establishment of a servitus in provincial lands obligedio. Some of these pacta were in course of time made the foundation of an actio civilis, and were protected by the Praetor: ait Praetor: "Pacta conventa quae neque dolo malo neque iniuria detrahatur. " (Dig. 2. tit. 14. s. 1), and is a part of all contracts as conventio is. There might be a Pactum or Pactio relating to marriage, the establishment of a servitus in provincial lands (Gaius, ii. 31), and other matters. But Pactum as included in the law of Obligationes, obtained a limited signification; and it was used to signify establishment of a servitus in provincial lands made, it was still illegal, though it had been confirmed by a stipulatio or any other form. The matter relating to Pacta is not arranged in the Digest under the head of Obligationes et Actiones (Dig. 44. tit. 7), but in the same book with the titles De Jurisdictione, &c.

Savigny shows that the notion of Agreement, (vertrag), is too narrowly conceived by jurists in general. He defines agreement to be the "union of several persons in one concordant declaration of will whereby their legal relations are determined." Consequently the notion of agreement must be extended to other things than to contracts which produce obligatio: for instance Traditio or delivery is characterized by all the marks of an agreement; and the fact that the declaration of their will by the parties to the traditio, is insufficient to effect the essence of the agreement. The imperfect conception of an agreement has arisen from not separating in some cases the obligatory agreement from those acts which do not involve an illegality. If an illegal pactum was made, it was still illegal, though it had been confirmed by a stipulatio or any other form. The matter relating to Pacta is not arranged in the Digest under the head of Obligationes et Actiones (Dig. 44. tit. 7), but in the same book with the titles De Jurisdictione, &c.

The imperfect conception of an agreement has arisen from not separating in some cases the obligatory agreement from those acts which do not involve an illegality. If an illegal pactum was made, it was still illegal, though it had been confirmed by a stipulatio or any other form. The matter relating to Pacta is not arranged in the Digest under the head of Obligationes et Actiones (Dig. 44. tit. 7), but in the same book with the titles De Jurisdictione, &c.

Savigny shows that the notion of Agreement, (vertrag), is too narrowly conceived by jurists in general. He defines agreement to be the "union of several persons in one concordant declaration of will whereby their legal relations are determined." Consequently the notion of agreement must be extended to other things than to contracts which produce obligatio: for instance Traditio or delivery is characterized by all the marks of an agreement; and the fact that the declaration of their will by the parties to the traditio, is insufficient to effect the essence of the agreement. citizens, who were thus tempted to adopt as one of their ordinary avocations, that which they would otherwise have left in more suitable hands. (Polyb. vi. 4; Plut. de Monarch. &c., c. 3; Thirlwall, Hist. of Greece, c. x, vol. i. p. 410.) [C. P. M.]

O'CREEA (ερυθραίς), a greave, a leggin. A pair of greaves (ερυθραίς) was one of the six articles of armour which formed the complete equipment of a Greek or Etruscan warrior [ARMA], and likewise of a Roman soldier as fixed by Servius Tullius. (Liv. i. 48.) They were made of bronze (Alcmeus, Frag. 1. ed. Matthiae), of brass (Hes. Scat. 125), of tin (Hom. II. xviii. 612, xxi. 592), or of silver and gold (Virg. Aen. vii. 634, viii. 624, xi. 409), with a lining probably of leather, felt, or cloth. Another method of fitting them to the leg so as not to hurt it, was by the interposition of that kind of sponge which was also used for the lining of helmets [GALRA], and which Aristotle describes as being remarkable for thickness, density, and firmness. The greaves, lined with these materials, as they were fitted with great exactness to the leg, probably required, in many cases, no other fastening than their own elasticity. Often, nevertheless, they were further secured by two straps, as may be seen in the woodcut at p. 135. Their form and appearance will be best understood from the accompanying woodcut. The upper figure is that of a bronze shield and a pair of bronze greaves, which were found by Signor Campanari in the museum, now at Munich, belonging to the temple in Aegina. In consequence of the bending of the knees, the greaves are seen to project a little above them. That the Greeks took great delight in handsome appearing, which was first erected during the flourishing epoch of Greek art in the fifth century b.c., for contests in vocal and instrumental music (τόπος εν δ' οί βαφθοί καὶ οἱ καθαριότατοι ἡμώνωτα, Heagyth. s. v., comp. Suid. s. v.). In its general form and arrangements it was very similar to the theatre; and it is sometimes called Στίατος. (Paus. i. 8, ii. 3; Philostr. Vit. Soph. ii. 1. p. 549.) There were, however, some characteristic differences: the Odeum was much smaller than the theatre; and it was roofed over, in order to retain the sound. (Vitruv. v. 9.) The comparatively small size of the Odeum is easily accounted for, not only because the space required in the theatre for the evolutions of the Chorus was not wanted here; but also because it appears to have been originally designed chiefly for musical rehearsals, in subordination to the great choral performances in the theatre, and consequently a much smaller space was required for the audience.

Unfortunately we have no detailed description of this class of buildings. Vitruvius (L. c.) makes a passing mention of the Odeum of Pericles, but states no particulars respecting its construction, except that it was adorned with stone pillars, and roofed over with the masts and yards of the captured Persian ships, a statement which has led some writers into the mistake of referring the building to the time of Themistocles. From the statement of Pausanias (i. 20. § 4) that, when the Odeum was rebuilt, after its burning in the capture of Athens by Sulla, it was made of a form which was said to be in imitation of the tent of Xenexes, it may perhaps be inferred that the original building was actually covered with that tent. At all events, this statement proves that the roof must have been conical. Accordingly Plutarch, who states that the original building was an imitation of the king's tent, describes its roof as

his minuteness in describing some of their parts, especially the ankle-rings, which were sometimes of silver. (Hom. H. ii. 361, xii. 18.) The modern Greeks and Albanians wear greaves, in form resembling those of their ancestors, but made of softer materials, such as velvet, ornamented with gold, and fastened with hooks and eyes. Among the Romans, greaves made of bronze, and richly embossed, were worn by the gladiators. Some such have been found at Pompeii. (See woodcut, p. 576.) It appears that in the time of the emperors, greaves were not entirely laid aside as part of the armour of the soldiers. (Lamprid. Al. Secr. 40.) At an earlier period, the heavily-armed wore a single greave on the right leg. (Veget. de Re Mil. i. 20.) Leggins of ox-hide or strong leather, probably of the form already described and designated by the same names both in Greek and Latin, were worn by agricultural labourers (Liv. Od. xxiv. 228; Plin. H. N. xix. 7; Pallad. de Re Rust. i. 43) and by huntsmen. (Hor. Sat. ii. 3. 234.)

ODEUM. [TEMPIUM.] OCTA/VAE. [VESTIGALIA.] OCTOBER EQUUS. [PALLIJA.] OCTOPHORON. [LECTICA.] ODEUM (οδήγος), a species of public building, which was first erected during the flourishing epoch of Greek art in the fifth century B.C., for contests in vocal and instrumental music (τόπος εν δ' οί βαφθοί καὶ οἱ καθαριότατοι ἡμώνωτα, Heagyth. s. v., comp. Suid. s. v.). In its general form and arrangements it was very similar to the theatre; and it is sometimes called Στίατος. (Paus. i. 8, ii. 3; Philostr. Vit. Soph. ii. 1. p. 549.) There were, however, some characteristic differences: the Odeum was much smaller than the theatre; and it was roofed over, in order to retain the sound. (Vitruv. v. 9.) The comparatively small size of the Odeum is easily accounted for, not only because the space required in the theatre for the evolutions of the Chorus was not wanted here; but also because it appears to have been originally designed chiefly for musical rehearsals, in subordination to the great choral performances in the theatre, and consequently a much smaller space was required for the audience.

† Perhaps he confounded it with the one which was standing in his time.

tomb of an Etruscan warrior, and which are now preserved in the British Museum. These greaves are made right and left.
The other principal Odeum were that of Corinth, also built by Herodes (Paus. ii. 3. § 6; Philost. L.c.); that of Patrae, which was next in magnificence to that of Herodes at Athens, and contained, among other works of art, a celebrated statue of Apollo (Paus. vii. 20. § 6); those of Smyrna and Tralles already mentioned; that of Messene, 112 feet long, and 93 feet in its inner diameter; that of Nicopolis, with an inner diameter equal to the last, but with an outer diameter of 193 feet: there are also ruins of Odeum at Laodicea, Ephesus, Anemurium, and other places in Asia Minor. (See Chandler, Pococke, Beaufort's Oramanta, Leake, and other topographers.)

The first Odeum, properly so called, at Rome, was built by Domitian (Suet. Dom. 5; Eutrop. viii. 13), and the second by Trajan. (Amm. Marc. xvi. 10.) There are ruins of such buildings in the villa of Hadrian at Tivoli, at Pompeii, and at Catana.

As a general fact, the Odeum were less strictly reserved for their special use than the theatres. Some of the extra uses, to which the Odeum of Pericles was applied, have been already mentioned. It was also used sometimes as a court of justice (Aristoph. Ievq. 1104, c. Schol., comp. Pollux, viii. 6); and philosophical disputations were held in the Odea. (Plut. de Eras. p. 604.) Further details will be found in the following works. (Martini, Uber die Odeum; Stieglitz, Archäol. d. Baukunst, vol. ii. sect. 3; Hirt, Lepk d. Gebäude, pp. 111—113; Rose, über die Odeum in Athen, Rom, u. Karthago, Scest, 1831, 4to; Müller, Arch. d. Kunst, § 269; Klausen, in Ersch and Gruber's Encyclopädie; Baumnark, in the Real Encyclop. d. klass. Alterthum.)

The Odeum of Pericles was in ruins. It is remarkable that Pausanias nowhere mentions the Pnyx, which he supposes to have been fitted up as an Odeum, while that of Antioch was a real Odeum, as erected by Pericles at Athens, for the purpose, according to Plutarch (/. c.) of recovering the house itself; the by-gone rents, or Loseivas, which are now lost, to recover the house itself; the by-gone rents, or monæ profits, were recoverable in an action called Oikias Deie (oolias dieun), an action to recover a house, in which (as in any other action where property was the subject of litigation) the dicasts decided (dieukiasēs) to which of the parties the house belonged, and adjudged it to him (epetekiasēs). Nothing further being requisite, the suit was an artemos agwv. Certain speeches of Lyssias, Isaeus, and Hyperides, which are now lost, were upon this subject. The oolias dieun was only to recover the house itself; the by-gone rents, or monæ profits, were recoverable in an action called Oikies dieun. [See Enokhous Dikaios.] (Meier, Att. Proc. p. 492.)

emblem of industry and peace. While it yields a large supply of palatable and highly nutritious food, it requires less outlay and less attention than almost any other fruit tree, is subject to few casualties, and, even if altogether neglected, does not suffer serious injury, but may be quickly restored to fertility by moderate care. Hence, the honour paid to it at Athens, and hence the title of "prima omnium arborum" bestowed upon it by Columella.

**VARIETIES.** The *Olea Europaea* is the only species of the natural family of *Oleaceae*, which yields the highly valued olive oil, but many varieties are produced by different modes of culture, and by peculiarities of soil and climate. Columella enumerates ten, and this number may be considerably increased from the works of other ancient writers. The following seem to have been the most important:

Of these the *Pausia*, according to Columella, was the most pleasant in flavour (*juicandissimum*), although upon this point he is apparently contradicted by Virgil.

**SOIL AND CLIMATE.** The soil considered most congenial was a rich tenacious clay, or a mixture of clay and sand, a gravelly subsoil being essential. Columella enumerates the various ways.

**PROPAGATION AND CULTURE.** Previous to the formation of an olive yard (*oleum, olivetum*) it was necessary to lay out a nursery (*seminarium*) for the reception of the young plants. A piece of ground was selected for this purpose, freely exposed to the sun and air, and in which the soil was a rich black mould. It was the practice to trench (*postinare*) this to the depth of three feet, and then to leave it to crumble down under the influence of the atmosphere.

The propagation of the olive was effected in various ways:

1. The method generally adopted was to fix upon the most productive trees, and to select from these long, young, healthy branches (*ramos ovalos*) of such a thickness as to be easily embraced by the hand. The branches immediately after being detached from the parent stem, were sawed into lengths of a foot and a half each, great care being taken not to injure the bark; these segments, which were called *talaec or clavolae or trunci*, were then tapered to a point at each end with a knife, the two extremities were smeared with dung and ashes, they were buried upright in the ground, so that the tops were a few inches breadth below the surface, and each *talea* was placed as nearly as possible in the same position, both vertically and laterally, as the branch had occupied upon the tree. During the first year, the ground was frequently loosened by the sarculum; when the young roots (*radiculae seminum*) had taken a firm hold, heavy hand-rakes (*rostra*) were employed for the same purpose, and in the heat of summer water was regularly supplied. For two years no pruning was resorted to, but in the third year the whole of the shoots (*ramuli*), with the exception of two, were lopped off; in the fourth year, the weaker of the remaining two was detached, and in the fifth year the young trees (*arbusculae*) were fit for being transplanted (*labiles translationis*). This latter operation was best performed in autumn where the ground to which they were conveyed was dry, but if it was moist and rich, in spring, a short time before the buds were formed. In the field which they were to occupy permanently, pits (*scrubes*) four feet every way were prepared, if practicable, a year beforehand, so that the earth might be thoroughly pulverised; small stones and gravel mixed with mould were placed at the bottom to the depth of a few inches, and some grains of barley were scattered over all. The young tree was lifted with as large a ball of earth as possible attached to the roots, placed in the pit surrounded with a little manure, and planted so as to occupy precisely the same position, in relation to the cardinal points, as in the nursery. In rich corn land, the space left between each row was at least sixty feet, and between each tree in the row forty feet, in order that the branches and roots might have full space to spread, but in poorer soil, twenty-five feet, each way, were considered sufficient. The rows were arranged so as to run from east to west, in order that the cool breezes might sweep freely down the open spaces in summer. After the trees had become firmly fixed, and had been pruned up into a proper shape, that is, into a single stem kept without branches to the height of the tallest ox, the labour attending upon an olive yard was comparatively trifling. Every year, the soil around the roots was loosened with hoes (*bidens*), or with the plough, the roots themselves laid bare (*ablaquere, ablaquatio*), the young suckers cut away, and the lichens scraped from the bark; every third year, in autumn, manure was thrown in; every eighth year the trees were
pruned. The system of culture here indicated was followed so generally that it had become embodied in a proverb "Veteris proverbii meminisse con-
venit, eum qui aret olivetum, rogare fructum; qui stercoret, exorare; qui caedat, cogere." (Columell. v. 9. §15.) Besides this, the whole surface of the ground was regularly ploughed at the usual seasons, and cropped in alternate years, the manure applied for these crops being altogether inde-
pendent of that supplied to the trees specially. Moreover, since olives bore fruit, in abundance at least, only once in two years, matters were so ar-
ranged that the land should yield a crop in those years when the trees were unproductive.

2. A second method of propagation was to cut the roots of wild olives into small pieces in such a manner that each should contain an eye or rudiment of a lateral fibre (radicum oculis silvestrium olea
rnum hortales excudere), and these pieces were treated precisely in the same manner as the talaee described above.

3. A third method is indicated by Virgil in the lines

Quin et caudibus sectis, mirabile dictu,
Truditur e sicco radix oleagina ligno,
and is still pursued in some parts of Italy, where, as we are told, "an old tree is hewn down and the
stock cut into pieces of nearly the size and shape of a mushroom, and which from that circumstance are
called novoli; care at the same time is taken that a small portion of bark shall belong to each
novolo. These, after having been dipped in manure, are put into the earth, soon throw up shoots, are
transplanted at the end of one year, and in three
years are fit to form an olive yard." Grafting or budding (inserere, insertio, oculos inserere) were also
resorted to for the purpose of introducing fine varieties or of rendering barren trees
fruitful. (Cat. R. R. 40, 42, 43, 45; Varr. R. R. i. 40; Columell. v. 9, De Arbor, 17; Plin. H. N. xviii. 19. a. 30; Pallad. iii. 8, x. 1, xi. 8; Geopon. ix. 5, 6, &c.; Blunt's Vestiges of Ancient Manners, &c., in Italy, p. 215.)

OLIVE GATHERING (Oleitas, Oileitas). The olive usually comes to maturity, in Italy, about the
middle or latter end of December, but, according to the views of the proprietors, it was gathered in
various stages of its progress, either while yet green (alba), or when changing colour (maria), or when
fully ripe (nigra), but it was considered highly desirable that it should never be allowed to
remain so long as to fall of its own accord. The
fruit was picked as far as possible with the bare
hand, but which could not be reached from the
ground or by the aid of ladders was beaten down with long reeds, which were preferred to sticks as
less likely to injure the bark of the branches and the
young bearers, a want of attention to this pre-
caution on the part of the gatherers (legali) being
in the opinion of Varro the cause why olive trees
so seldom yielded a full crop for two years con-
successively. (Varr. R. R. i. 55; Plin. H. N. xv. 3.
as. 6; Geopon. ix. 17.)

DIFFERENT USES. The fruit (bacca) of the olive
was for the most part employed for one of two
purposes. 1. It was eaten as a fruit, either fresh, pickled, or
preserved in various ways. 2. It was pressed so as to yield the oil and
other juices which it contained. And again, the

oil was employed for a variety of purposes, but
chiefly

a. As an article of food.  

b. For anointing the body, and in this case it was frequently made a vehicle for perfumes
(unguenta).

g. For burning in lamps.  
PRESERVING OLIVES. (Condere oleas, ol-
itarum conditio.) Olives might be preserved in various ways, either when unripe (alaeae, acerbae), or ripe (mariae), or half-ripe (variae, fuscace).

Green olives, the Pausia being used principally for this purpose, were preserved in strong brine (maria), according to the modern practice, or they were beaten together into a mass, steeped in water which was frequently changed, then pressed and
thrown with salt into a jar of vinegar, to which various spices or flavouring condiments were added, especially the seeds of the Pistachia Lentiscus, or Gum Mastich tree, and fennel. Sometimes, instead of vinegar, inspissated must (passum, defrutum) or sweet wine (passum) or honey were employed, in
which case the olives were preserved sweet, and
sometimes salt pickle, vinegar, must and oil, seem
have been all mixed together.

Half-ripe olives (and here again the Pausia was the favourite) were picked with their stalks and
covered over in a jar with the best oil. In this
manner they retained the flavour of the fresh fruit
for more than a year.

Ripe olives, especially the orchiites, were sprinkled
with salt, and left untouched for five days, the salt
was then shaken off, and they were dried in the
sun. Or they were preserved sweet in defrutum
without salt.

The peculiar preparation called Epityrum was
made by taking olives in any of the three stages, extracting the stones, chopping up the pulp and
throwing the fragments into a jar with oil, vinegar,
coriander seeds, cumin, fennel, rue and mint, the
quantity of oil being sufficient to cover up the
compound and exclude the air. In fact, it was an olive
salad, and, as the name import, eaten with cheese.

OLIVE MAKING (Oleum confecere). The fruit of the olive tree consists of two parts, the pulpy
pericarp (caro), and the stone (nucleus).

The caro or pulp yielded two fluids: one of these of a watery consistence, dark in colour, bitter
to the taste, flowed from the olive upon very slight
pressure; it was called ξυμμάρ της by the Greeks, 
Amurca by the Latins, and was extensively used as
a manure and for a great number of purposes con-
ected with domestic economy. The other fluid which flowed from the pulp, when subjected to more forcible pressure, was the oil (oleum, oleum), mingled however to a certain extent with amurca
and other impurities (frees, fisces), and this was of
different qualities, according to the state of the
fruit, and the amount of pressure. The finest oil
was made from the fruit before it was fully ripe,
and from this circumstance, or from its greenish
colour, was termed Oleum viride, and by the Greeks οἰλωκρίνες: the quantity given out was how-
ever small, and hence the remark of Cato, quaer
acerbissima olea olea facies tunc oleum optimum erit: domino de materia olea oleum fici maxima
expedit.

A distinction is made by Columella, between the
After a moderate force had been applied to the press, and a considerable quantity of oil had flowed forth, the bruised cake (sampa) was taken out of the bags, mixed with a little salt, replaced and subjected to the action of the press a second, and again a third time. The oil first obtained (oleum primae pressurae) was the finest, and in proportion as additional force was applied by the press-man (factores, torcularii), the quality became gradually worse (longe meliore saporis quod minus et prius factum defluuerit). Hence, the product of each pressing was kept distinct, the marketable value of each being very different. (plurimum reperit non miscere iterationes multoque minus ferentiationem cum prima pressura). The lowest quality of all (oleum cibarium) was made from olives which had been partially damaged by vermin, or which had fallen from the trees in bad weather into the mud, so that it became necessary to wash them in warm water before they could be used.

The quantity of fruit thrown at one time into the press varied from 120 to 160 modii, according to the capacity of the vessels: this quantity was termed (fisca) of oil obtained from one factus was called (Hustus), but these words are not frequently confounded. (Cat. R. R. 7, 64, 65, 66; Varr. R. R. i. 24, 55; Columell. xii. 52; Plin. H. N. xv. 3, 6, 7; Geopon. ix. 17.) [W. R.]

Oligarchia (δολαρχία), the government of a few, is a term, the application of which by writers on political science is less wide than its etymological signification might have warranted. (See Polyb. iv. 4; Arist. Pol. iv. 3, from whom we learn that some writers used Oligarchia as a generic name, including Aristocracia as one of its species.) It is shown elsewhere (ARISTOCRATIA) under what conditions the limitation of political power to a portion of the community was regarded as a proper and regular constitution (δικαία) polis (Arist. Pol. iii. 4, iv. 2). The term Oligarchia was applied to that perversion (παράδοσεις) of an Aristocracy into which the latter passed, when, owing to the rise of the domus (DEMOCRATIA), and the vanishing of those substantial grounds of pre-eminence which rendered an Aristocracy not unjust, the rule of the dominant portion of the community ceased to be the exponent of the general interests of the state, and became the ascendency of a faction, whose efforts were directed chiefly towards their own aggrandisement and the maintenance of their own power and privileges (Arist. L. C. Eth. Nicom. viii. 12; Polyb. vi. 8. § 4). The preservation of power under such circumstances of course depended chiefly upon the possession of superior wealth and the other appliances of wealth which were its concomitants. Thus it came to be regarded as essentially characteristic of an oligarchy, that the main distinction between the dominant faction and the subject portion of the community was the possession of greater wealth on the part of the former. Hence the term Oligarchia would not have been applied, if a small section of the community, consisting of poor persons, by any means got the reins of government into their hands. (Arist. Pol. iv. 3, δήμος μέν ἐστιν ὅταν οἱ ἄλλοι κράτους ἡ δικαιοσύνη ἤ λαβεν, Oligarchia δε ὅταν ὁ πλούσιοι. A little further on he says: ὁλαρχίαι δε ὅταν ὁ πλούσιοι καὶ εὐγενεστέροι, ὁλορχίαι δέοις, κράτου της ἀρχῆς δειν. Comp. iv. 6; Plat. de Rep. viii. pp. 550, c. 553, a.) The case of the wealthy portion being also the more numerous would be a νε-
not be an oligarchy; but neither would it be a democracy (Arist. Pol. iv. 3). When an aristocracy passed in the natural development of society into an oligarchy, the oligarchs would, of course, be high born as well as rich. But high birth was not an essential condition. It very commonly happened that the oligarchs were themselves only a section of the old nobility, having excluded the poorer members of their order from the possession of power.

Aristotle (Pol. iv. 5) distinguishes various species of oligarchy: — 1. Where a certain large amount of property is the only requisite for being a member of the ruling class: 2. Where the property qualification is not large, but the members of the government themselves supply any vacancies that may occur in their ranks by electing others to fill them: 3. Where the son succeeds to the power of his father: 4. Where, besides this being the case, the rulers govern according to no fixed laws, but arbitrarily. (Comp. Plat. Polit. pp. 301, 302.) The first kind, especially when the τιμήμα was not extravagantly high, so that a considerable number shared political power, though only a few of them might be eligible to the highest offices, was sometimes called τυμωναρτία (Arist. Eth. Nic. viii. 12; Xenophon, Mem. iv. 6. § 12, uses the term τλευτωναρτία; Plato, de Rep. viii. p. 547, d., uses the term τυμωναρτία in a different sense. It approximates closely to the πολιτεία, and hence Aristotle (Pol. iv. 11) calls it διαγραφαλ πολοτεία. Elsewhere (Eth. Nic. i. c.) he identifies it with the πολιτεία.

These general divisions of course admitted of various modifications; and the distribution of the functions of government might be such as to create an oligarchy within an oligarchy. To this species of oligarchy, the name διονωστεία was sometimes applied. (Arist. Pol. v. 2. 5; Thuc. iii. 62, iv. 78; Xen. Hellen. v. 4. § 46.) The term Aristocracia is not unfrequently applied to what the more careful distinctions of the writers on political science would term Oligarchia. (Comp. Thuc. iii. 82; Xen. Hellen. v. 2. § 7; Aristoph. Av. 125.)

Besides the authorities quoted above, the reader may consult Wachsmuth, Hellenische Alterthums-kunde, §§ 36, 44, 47, 63, 64; Hermann, Lehrbuch der Griech. Staatsalterthümer, §§ 58—61; Thirlwall, Hist. of Greece, vol. i. ch. 10. [C. P. M.]

OLL'A, ant. AUL'A (Plinut. Aulul passim), dim. OLLLUL'A (ληνίς; χύτρος, χύτρα, dim. χύτραs), a vessel of any material, round and plain, and having a wide mouth; a pot; a jar.

Besides being made of earthenware (Antiphanes ap. Athen. x. 70; διραχίαν, τετσειαν) and bronze (χαλκίες, αεές, Aesop, Fab. 329; Cato, de Re Rust. 81; αεόν, Ovid. Met. vii. 318—321; λεβίς χάλκεος, Herod. i. 48), the ancients also made these vessels of different kinds of stone, which were turned upon the lathe. At Pleurs, a village near Chiavenna to the north of the Lake of Como, the manufacture of vessels from the potstone found in a neighbouring mountain is still carried on, and has probably existed there from the time of Pliny, who makes express mention of it (H.N. xxxvi. 92, s. 44). Some of these vessels are nearly two feet in diameter; and, being adapted to bear the fire, are used for cooking. (Ovctis observare ollam vulcin, se adaturum, Varro, ap. Non. Marcell. p. 543, ed. Merceri; Festus, s. v. Aul'as.)

The preceding woodcut is taken from a vase in the British Museum, which was found at Canino in Etruria. The painting upon it represents the story of Medea boiling an old ram with a view to persuade the daughters of Pelias to put him to death. (Ovid, Met. vii. 318—321; Hygin. Fab. 24.) The pot has a round bottom, and is supported by a tripod under which is a large fire. The ram, restored to youth, is just in the act of leaping out of the pot. Instead of being supported by a separate tripod, the vessel was sometimes made with the feet all in one piece, and it was then called in Greek τρίπους [Tripos], χυτρόνεσ (Hes. Op. et Dies, 748; Schol. in Soph. Aj. 1400), and πυρότατος.

Besides being placed upon the fire in order to boil water or cook victuals, the ancients used pots to carry fire, just as is now done by the modern inhabitants of Greece, Italy, and Sicily. (Xen. Hellen. iv. 5. § 4.) They also used small pots containing fire and pitch to annoy the enemy in sieges by throwing them from slings and military engines. Ollae were also used to hold solids and keep them in store, while amphorae rendered the same service in regard to liquids. [AMPHORA.] Thus grapes were kept in jars as at present. (Columell. R.R. xii. 43.) Although pots were commonly made solely with a view to utility, and were therefore destitute of ornament and without handles, yet they were sometimes made with two handles (βιατοί) like amphorae; and, when they were well turned upon the wheel, well baked, smooth and neat, so large as to hold six congi ( =4½ gallons nearly), they were, as we learn from Plato (Hipp. Maj. pp. 153, 154, ed. Heindorf), considered very beautiful.

Pots were used, as with us, in gardening. (Cato, de Re Rost. 51.) The custom of placing flower-pots in windows is mentioned by Martial (xi. 19, 1, 2). A flower-pot, about six inches high and suited to this application, was found among the ruins of Aldborough, the ancient Isurium, and is
OLYMPIA.

preserved by A. Lawson Esq., the owner of that place.

Another very remarkable use of these vessels of earthenware among the Greeks was to put infants into them to be exposed to (Apithoph. Run, 1188; Schol. ad loc.; Moeris, s. v. Εὐκρυπταμος), or to be carried anywhere. (Aristoph. Thesm. 512—516; Schol. ad loc.) Hence the exposure of children was called ἐκυριπτίζεσθαι (Hesych. s. v.), and the miserable women who practised it ἐκυριπτομάτα. (Suidas, s. v.)

In monumental inscriptions the term olla is frequently applied to the pots which were used to receive the ashes of the slaves or inferior members of a family, and which were either exposed to view in the niches of a columbarium, or immured in such a manner as to show the lid only. Some good specimens of cinerary ollae are preserved in the British Museum in a small apartment so constructed as to exhibit accurately the manner of arranging them. (See above, p. 561; and numerous plates in Bartoli's Anticld Sepolcri.)

The lid of the olla was called ἐπεφίλημα and ἐπεφέρα, it generally corresponded in the material and the style of ornament with the olla itself. (Herod. i. 40; Col. l. c.)

OLYMPIA (ολυμπία), usually called the Olympic games, the greatest of the national festivals of the Greeks. It was celebrated at Olympia in Elis, the name given to a small plain to the west of Pisa, which was bounded on the north and north-east by the mountains Cronius and Olympus, on the south by the river Alpheus, and on the west by the Cladeus, which flows into the Alpheus. Olympia does not appear to have been a town, but rather a collection of temples and public buildings, the description of which does not come within the plan of this work.

The origin of the Olympic Games is buried in obscurity. The legends of the Elean priests attributed the institution of the festival to the Idaean Heracles, and referred it to the time of Cronos. According to their account, Rhea committed her newborn Zeus to the Idaean Dactyls, also called Curetes, of whom five brothers, Heracles, Paeonaeus, Epimenides, Iasius, and Idas, came from Ida in Crete, to Olympia, where a temple had been erected to Cronos by the men of the golden age; and Heracles the eldest conquered his brothers in a foot-race, and was crowned with the wild olive-tree. Heracles hereupon established a contest, which was to be celebrated every five years, because he and his brothers were five in number. (Paus. v. 7. § 4.) Fifty years after Deucalion's flood they said that Clymenus, the son of Cardis, a descendant of the Idaean Heracles, came from Crete, and celebrated the festival; but that Endymion, the son of Athelus, deprived Clymenus of the sovereignty, and offered the kingdom as a prize to his sons in the foot-race; that a generation after the taking of Elis, afterwards Oxythea in Elis, the name given to a small plain to the south by the river Alpheus, and on the west of Pisa, which was bounded on the north and south by the Cladeus, which flows into the Alpheus. Olympia does not appear to have been a town, but rather a collection of temples and public buildings, the description of which does not come within the plan of this work.

The territory of Elis itself was considered especially sacred during its continuance, and no armed force could enter it without incurring the guilt of sacrilege. When the Spartans on one occasion sent forces against the fortress Phyracus, the Spartan lawgiver, and Cleosthenes of Pisa; and the names of Iphitus and Lycurgus, and the events on a disc in commemoration of the event; which disc Pausanias saw in the temple of Hera at Olympia. (Paus. v. 4. § 4, v. 20. § 1; Plut. Lyce. 1. 23.) It would appear from this tradition, as Thirlwall (Hist. of Greece, ii. p. 386) has remarked, that Sparta concurred with the two states most interested in the establishment of the festival, and mainly contributed to procure the consent of the other Peloponnesians. The celebration of the festival may have been discontinued in consequence of the troubles consequent upon the Dorian invasion, and we are told that Iphitus was commanded by the Delphic oracle to revive it as a remedy for intestine commotions and for pestilence, with which Greece was then afflicted. Iphitus thereupon induced the Eleans to sacrifice to Heracles, whom they had formerly regarded as an enemy, and from this time the games were regularly celebrated. (Paus. l. c.) Different dates are assigned to Iphitus by ancient writers, some placing his revival of the Olympic games to the time of Cronus, 776, others, as Callimachus, at B. C. 694, and others, as Plutarch, at B. C. 828. (Clinton, Fast. Hell. p. 409. 6.) The interval of four years between each celebration of the festival was called an Olympiad; but the Olympiads were not employed as a chronological era till the victory of Coroebus in the foot-race B. C. 776. (Olympias.)

The most important point in the renewal of the festival by Iphitus was the establishment of the ἐκεχευρία, or sacred armistice, the formula for proclaiming which was inscribed in a circle on the disc mentioned above. The proclamation was made by peace-heralds (σπουδοθοροί), first in Elis and afterwards in the other parts of Greece; it put a stop to all warfare for the month in which the games were celebrated, and which was called ἐποιμνία. The territory of Elis itself was considered especially sacred during its continuance, and no armed force could enter it without incurring the guilt of sacrilege. When the Spartans on one occasion sent forces against the fortress Phyracus and Lepreum during the existence of the Olympic truce (ἐν ταῖς Ὁλυμπιακαῖς στοιχεῖοι), they were fined by the Eleans, according to the Olympic law, 2000 minae, being two for each hoplite. (Thucyd. v. 49.) The Eleans, however, pretended not only that their lands were inviolable ancient writers, however, attribute the institution of the games to Hercules, the son of Amphitrion (Apollod. ii. 7. § 2; Diod. iv. 14; compare Strabo. viii. p. 355), while others represent Arethus as their founder. (Vell. Pat. i. 8; Hermann, Ἴνδ. Ant. c. 23. n. 10.)

Strabo (viii. pp. 354, 355) rejects all these legends, and says that the festival was first instituted after the return of the Heraclidæ to the Peloponnesus by the Aetolians, who united themselves with the Eleans. It is impossible to say what credit is to be given to the ancient traditions respecting the institution of the festival; but they appear to show that religious festivals had been celebrated at Olympia from the earliest times, and it is difficult to conceive that the Peloponnesians and the other Greeks would have attached such importance to this festival, unless Olympia had long been regarded as a hallowed site. The first historical fact connected with the Olympic Games is their revival by Iphitus, king of Elis, who is said to have accomplished it with the assistance of Lycurgus, the Spartan lawgiver, and Cleosthenes of Pisa; and the names of Iphitus and Lycurgus were inscribed on a disc in commemoration of the event; which disc Pausanias saw in the temple of Hera at Olympia. (Paus. v. 4. § 4, v. 20. § 1; Plut. Lyce. 1. 23.) It would appear from this tradition, as Thirlwall (Hist. of Greece, ii. p. 386) has remarked, that Sparta concurred with the two states most interested in the establishment of the festival, and mainly contributed to procure the consent of the other Peloponnesians. The celebration of the festival may have been discontinued in consequence of the troubles consequent upon the Dorian invasion, and we are told that Iphitus was commanded by the Delphic oracle to revive it as a remedy for intestine commotions and for pestilence, with which Greece was then afflicted. Iphitus thereupon induced the Eleans to sacrifice to Heracles, whom they had formerly regarded as an enemy, and from this time the games were regularly celebrated. (Paus. l. c.) Different dates are assigned to Iphitus by ancient writers, some placing his revival of the Olympic games to the time of Cronus, 776, others, as Callimachus, at B. C. 694, and others, as Plutarch, at B. C. 828. (Clinton, Fast. Hell. p. 409. 6.) The interval of four years between each celebration of the festival was called an Olympiad; but the Olympiads were not employed as a chronological era till the victory of Coroebus in the foot-race B. C. 776. (Olympias.)

The most important point in the renewal of the festival by Iphitus was the establishment of the ἐκεχευρία, or sacred armistice, the formula for proclaiming which was inscribed in a circle on the disc mentioned above. The proclamation was made by peace-heralds (σπουδοθοροί), first in Elis and afterwards in the other parts of Greece; it put a stop to all warfare for the month in which the games were celebrated, and which was called ἐποιμνία. The territory of Elis itself was considered especially sacred during its continuance, and no armed force could enter it without incurring the guilt of sacrilege. When the Spartans on one occasion sent forces against the fortress Phyracus and Lepreum during the existence of the Olympic truce (ἐν ταῖς Ὁλυμπιακαῖς στοιχεῖοι), they were fined by the Eleans, according to the Olympic law, 2000 minae, being two for each hoplite. (Thucyd. v. 49.) The Eleans, however, pretended not only that their lands were inviolable
during the existence of the truce, but that by the original agreement with the other states of Peloponnesus their lands were made sacred for ever, and were never to be attacked by any hostile force (Strabo, viii. p. 359); and they further stated that the first violation of their territory was made by Pheidon of Argos. But the Eleans themselves did not abstain from arms, and it is not probable that such a privilege would have existed without imposing on them the corresponding duty of refraining from attacking the territory of their neighbours. The later Greeks do not appear to have admitted this claim of the Eleans, as we find many cases in which their country was made the scene of war. (Xen. Hell. iii. 2. § 28, &c., vii. 4, &c.)

The Olympic festival was probably confined at first to the Peloponnesians; but as its celebrity extended, the other Greeks took part in it, till at length it became a festival for the whole nation. No one was allowed to contend in the games but persons of pure Hellenic blood: barbarians might be spectators, but slaves were entirely excluded. All persons who had been branded by their own number of conquerors came from the colonies than from the mother country. After the conquest of Greece by the Romans, the latter were allowed to take part in the games. The emperors Tiberius and Nero were both conquerors, and Pausanias (v. 20. § 4) speaks of a Roman senator who gained the victory. During the freedom of Greece, even Greeks were sometimes excluded, when they had been guilty of a crime which appeared to the Eleans to deserve this punishment. The horses of Hieron of Syracuse were excluded from the chariot-race through the influence of Themistocles, because he had not taken part with the other Greeks against the Persians. (Plut. Them. 25; Aelian, V. H. ix. 5.)

All the Lacedaemonians were excluded in the 90th Olympiad, because they had not paid the fine for violating the Elean territory, as mentioned above (Thuc. v. 49, 50; Paus. iii. 8. § 2); and similar cases of exclusion are mentioned by the ancient writers.

No women were allowed to be present or even to cross the Alpheus during the celebration of the games under penalty of being hurled down from the Typhon rock. Only one instance is recorded of a woman having ventured to be present, and she, although detected, was pardoned in consideration of her father, brothers, and son having been victors in the games. (Paus. vi. 6. § 5*; Ael. V. H. x. 1.) An exception was made to this law in favour of the priestess of Demeter Chamyne, who sat on an altar of white marble opposite to the Hellanodicae. (Paus. vi. 20. § 6; compare Suét. Ner. c. 12.)

* It would appear from another passage of Pausanias that virgins were allowed to be present, though married women were not (παρθένους δὲ αὐτὸν εὐργυς διέσωσα, vi. 20. § 6); but this statement is opposed to all others on the subject, and the reading of the passage seems to be doubtful. (See Valkenaer, ad Theoc. Adon. pp. 196, 197.)
offered by the Eleans and the Theori at the commencement or at the termination of the contests; our limits do not allow us to enter into the controversy, but it appears most probable that certain sacrifices were offered by the Eleans as introductory to the games, but that the majority were not offered till the conclusion, when the flesh of the victims was required for the public banquets given to the victors.

The contests consisted of various trials of strength and skill, which were increased in number from time to time. There were in all twenty-four contests, eighteen in which men took part, and six in which boys took part; but the contests of the chorus were never all exhibited at one festival, since some were abolished almost immediately after their institution, and others after they had been in use only a short time. We subjoin a list of these from Pausanias (v. 8. § 2, 3, 9. § 1, 2; compare Plut. Symp. v. 2), with the date of the introduction of each, commencing from the Olympic of Korobeus:—1. The foot-race (διαλός), which was the only contest during the first 13 Olympiads. 2. The δίαυλος, or foot-race, in which the stadium was traversed twice, first introduced in Ol. 14. 3. The δόλιχος, a still longer foot-race than the δίαυλος, introduced in Ol. 15. * For a more particular account of the διαλός and δόλιχος see STADIUM. 4. Wrestling (πάλης) [LUTA], and 5. The Pentathlon (πεντάθλον), which consisted of five exercises [PENTATHLUM], both introduced in Ol. 18. 6. Boxing (πυγμή), introduced in Ol. 23. [PUGILATUS.] 7. The chariot-race, with four full-grown horses (τετάρταδικαί ὄρμοι), introduced in Ol. 25. 8. The Pancratium (πανγκράτιον) [PANCRAZIUM], and 9. The horse-race (τετάρταδικα κέλης), both introduced in Ol. 33. 10 and 11. The foot-race and wrestling for boys, both introduced in Ol. 37. 12. The Pentathlon for boys, introduced in Ol. 38, but immediately afterwards abolished. 13. Boxing for boys, introduced in Ol. 41. 14. The foot-race, in which men ran with the equipments of heavy-armed soldiers (τῶν ὀπλιτῶν ὄρμων), introduced in Ol. 65, on account of its training men for actual service in war. 15. The chariot-race with mules (ἀμάλγα), introduced in Ol. 70; and 16. The horse-race with mares (κάλπης), described by Pausanias (v. 9. § 1), introduced in Ol. 71, both of which were abolished in Ol. 84. 17. The chariot-race with two full-grown horses (τετάρταδικαί συνωρίους), introduced in Ol. 93. 10, 19. The contest of heralds (κήρυκες) and trumpeters (καλτικεῖα), introduced in Ol. 96. [African, ap. Euseb. Chron. 1. Ἑλλ. ἤλ. p. 41; Paus. v. 22. § 1; compare Cic. ad Fam. v. 12.] 20. The chariot-race with four foals (παλανὸς ἀμφαιμοι), introduced in Ol. 99. 21. The chariot-race with two foals (παλανὸς συνωρίοις), introduced in Ol. 128. 22. The horse-race with foals (παλανὸς κέλης), introduced in Ol. 131. 23. The Pancratium for boys, introduced in Ol. 145. 24. There was also a horse-race (τετάρταδικα) in which boys rode (Paus. vi. 2. § 4, 12. § 1, 13. § 6), but we do not know the time of its introduction. Of these contests, the greater number were in existence in the heroic age, but the following were introduced for the first time by the Eleans:—all the contests in which boys took part, the foot-race of Hoplites, the races in which foals were employed, the chariot-race in which mules were used, and the horse-race with mares (κέλης). The contests of heralds and trumpeters were also probably introduced after the heroic age.

Pausanias (v. 9. § 3) says that up to the 77th Olympiad, all the contests took place in one day; but as it was found impossible in that Olympiad to finish them all in so short a time, a new arrangement was made. The number of days in the whole festival, which were henceforth devoted to the games, and the order in which they were celebrated, has been a subject of much dispute among modern writers, and in many particulars can be only matter of conjecture. The following arrangement is proposed by Krause (Olympia, p. 106):—On the first day, the initiatory sacrifices were offered, and all the contests classed and arranged by the judges. On the same day, the contest between the trumpeters took place; and to this succeeded on the same day and the next the contests of the boys, somewhat in the following order:—the Foot-Race, Wrestling, Boxing, the Pentathlon, the Pancratium, and lastly, the Horse-Race. On the third day, which appears to have been the principal one, the contests of the men took place, somewhat in the following order:—the simple Foot-Race, the Diadus, the Dolichos, Wrestling, Boxing, the Pancratium, and the Race of Hoplites. On the fourth day the Pentathlon, either before or after the Chariot and Horse-Races, which were celebrated on this day. On the same day or on the fifth, the contests of the Heralds may have taken place. The fifth day appears to have been devoted to processions and sacrifices, and to the banquets given by the Eleans to the conquerors in the Games.

The judges in the Olympic Games, called Helanodiae (Ἑλανοδίαι), were appointed by the Eleans, who had the regulation of the whole festival. It appears to have been originally under the superintendence of Pisa, in the neighbourhood of which Olympia was situated, and accordingly we find in the ancient legends the names of Oenomae, Pelops, and Augeas as presidents of the Games. But after the conquest of Peloponnessus by the Dorians on the return of the Heraclidae, the Aetolians, who had been of great assistance to the Heraclidae, settled in Elis, and from this time the Aetolian Eleans obtained the regulation of the festival, and appointed the presiding officers. (Strabo, viii. pp. 357, 358.) Pisa, however, did not quietly relinquish its claim to the superintendence of the festival, and it is not improbable that at first it had an equal share with the Eleans in its administration. The Eleans themselves only reckoned three festivals in which they had not had the presidency, namely, the 8th, in which Phaeon and the Pisaeans obtained it; the 34th, which was celebrated under the superintendence of Panteleon, king of Pisa; and the 104th, celebrated under the superintendence of the Pisaeans and Arcadians. These Olympiads the Eleans called ἀναχρυσάδες, as cele-
brated contrary to law. (Paus. vi. 22. § 2, 4. § 2.)

The Hellanodicae were chosen by lot from the whole body of the Eleans. Pausanias (v. 9. § 4, 5) has given an account of their numbers at different periods; but the commencement of the passage is unfortunately corrupt. At first, he says, there were only two judges chosen from all the Eleans, but that in the 25th OI. (75th OI. ?) nine Hellanodicae were appointed, three of whom had the superintendence of the horse-races, three of the Pentathlum, and three of the other contests. Two Olympiads after, a tenth judge was added. In the 103rd OI. the number was increased to 12, as at first, he says, there were 12 in each tribe, and a judge was chosen from each tribe; but as the Eleans afterwards lost part of their lands in war with the Arcadiana, the number of Phylae was reduced to eight in the 104th OI., and accordingly there were then only eight Hellanodicae. But in the 108th OI. the number of Hellanodicae was increased to 10, and remained the same to the time of Pausanias. (Paus. i. c.)

The Hellanodicae were instructed for ten months before the festival by certain of the Elean magistrates, called Νομοφύλακες, in a building devoted to the purpose near the market-place, which was called Ἐκλανδιώται. (Paus. vi. 24. § 3.) Their office probably only lasted for one festival. They had to see that all the laws relating to the games were observed by the competitors and others, to determine the prizes, and to give them to the conquerors. An appeal lay from their decision to the Elean senate. (Paus. vi. 3. § 3.) Their office was most honourable. They wore a purple robe (πορφυρός), and had in the Stadium special seats appropriated to them. (Paus. vi. 26. § 5, 6, 7; Bekker, Anm. p. 249. 4.) Under the direction of the Hellanodicae was a certain number of ἀλώται with an ἀλώτραχος at their head, who formed a kind of police, and carried into execution the commands of the Hellanodicae. (Lucian, Herm. c. 40. vol. i. p. 738, Reitz; Etym. Mag. p. 72. 13.) There were also various other minor officers under the control of the Hellanodicae.

All free Greeks were allowed to contend in the games, who had complied with the rules prescribed to candidates. The equestrian contests were necessarily confined to the wealthy; but the poorest citizens could contend in the athletic contests, of which Pausanias (vi. 10. § 1) mentions an example. This, however, was far from degrading the games in public opinion; and some of the noblest as well as meanest citizens of the state took part in these contests. The owners of the chariots and horses were not obliged to contend in person; and the wealthy vied with one another in the number and magnificence of the chariots and horses which they sent to the games. Aleciades sent seven chariots to one festival, a greater number than had ever been entered by a private person (Thuc. vi. 16), and the Greek kings in Sicily, Macedon, and other parts of the Hellenic world contended with one another for the prize in the equestrian contests.

All persons, who were about to contend, had to prove to the Hellanodicae that they were freemen, of pure Hellenic blood, had not been branded with Atimia, nor guilty of any sacrilegious act. They further had to prove that they had undergone the preparatory training (προγυμνάσματα) for ten months previously, and the truth of this they were obliged to swear to in the Βουλευτήριον at Olympia before the statue of Zeus "Ορμων."

The fathers, brothers, and gymnastic teachers of the competitors, as well as the competitors themselves, had also to swear that they would be guilty of no crime (κακοφρύγμα) in reference to the contests. (Paus. v. 24. § 2.) All competitors were obliged, thirty days previous to the festival, to undergo certain exercises in the Gymnasiwm at Elia, under the superintendence of the Hellanodicae. (Paus. vi. 26. § 1—3, 24. § 1.) The different contests, and the order in which they would follow one another, were written by the Hellanodicae upon a tablet (Λέεωμος) exposed to public view. (Compare Dion Cass. Ixxxix. 10.)

The competitors took their places by lot, and were of course differently arranged according to the different contests in which they were to be engaged. The herald then proclaimed the name and country of each competitor. (Compare Plato, Leg. viii. p. 833.) When they were all ready to begin the contest, the judges exhorted them to acquit themselves nobly, and then gave the signal to commence. Any one detected in bribing a competitor to give the victory to his antagonist was heavily fined; the practice appears to have been not uncommon from the many instances recorded by Pausanias (v. 21).

The only prize given to the conqueror was a garland of wild olive (κάστινος), which according to the Elean legends was the prize originally instituted by the Idaean Hercules. (Paus. v. 7. § 4.) But according to Phlegon's account (Περὶ τῶν Ὀλυμπιάδων, p. 140), the olive crown was not given as a prize upon the revival of the games by Iphitus, and was first bestowed in the seventh Olympiad with the approbation of the oracle at Delphi. This garland was cut from a sacred olive tree, called Αἰαίς καλλιεργημένος, which grew in the sacred grove of Altis in Olympia, near the altars of Apha- rode and the Hours. (Paus. v. 15. § 3.) Heroes is said to have brought it from the country of the Hyperboreans, and to have planted it himself in the Altis. (Pind. Ol. iii. 14; Müller, Dor. i. 12. § 3.) A boy, both of whose parents were still alive (ἐμφθηλίξ παῖς) cut it with a golden sickle (χρυσῷ ἱεραπόνῳ), the victor was originally crowned upon a tripod covered over with bronze (τρίπος ἐνίκαλος), but afterwards, and in the time of Pausanias, upon a table made of ivory and gold. (Paus. v. 12. § 5, 20. § 1, 2.) Palm branches, the common tokens of victory on other occasions, were placed in their hands. The name of the victor, and that of his father and of his country, were then proclaimed by a herald before the representatives of assembled Greece. The festival ended with processions and sacrifices, and with a public banquet given by the Eleans to the conquerors in the Prytanœum. (Paus. v. 15. § 8.)

The most powerful states considered an Olympic victory, gained by one of their citizens, to confer honour upon the state to which he belonged; and a conqueror usually had immunities and privileges conferred upon him by the gratitude of his fellow-citizens. The Eleans allowed his statue to be placed in the Altis, or sacred grove of Zeus, which was adorned with numerous such statues erected by the conquerors or their families, or at the expense of the states of which they were citizens. On his return home, the victor entered the city in a triumphal procession, in which his praises were
celebrated frequently in the loftiest strains of poetry. (Compare Athletae, p. 167.)

Sometimes the victory was obtained without a contest, as it was said to be åkevori. This happened either when the antagonist, who was assigned, neglected to come or came too late, or when an Athlete had obtained such celebrity by former conquests or possessed such strength and skill that no one dared to oppose him. (Paus. vi. 7. § 2.) When one state conferred a crown upon another state, a proclamation to this effect was frequently made at the great national festivals of the Greeks. (Demosth. de Cor. p. 265.)

As persons from all parts of the Hellenic world were assembled together at the Olympic Games, it was the best opportunity which the artist and the writer possessed of making their works known. In fact, it answered to some extent the same purpose as the press does in modern times. Before the invention of printing, the reading of an author's works to as large an assembly as could be obtained, was one of the easiest and surest modes of publishing them; and this was a favourite practice of the Greeks and Romans. Accordingly, we find many instances of literary works thus published at the Olympic festival. Herodotus is said to have read his history at this festival; but though there are some reasons for doubting the correctness of this statement, there is no doubt that several writers who thus published their works, as the sophist Hippis, Prodicus of Ceea, Anaximenes, the orator Lyisas, Dion Chrysostom, &c. (Compare Lucian, Herod. c. 3, 4. vol. i. p. 834, Reitz.) It must be borne in mind that these recitations were not contests, and that they formed properly no part of the festival. In the same way painters and other artists exhibited their works at Olympia. (Lucian, l. c.)

The Olympic Games continued to be celebrated with much splendour under the Roman emperors, by many of whom great privileges were awarded to the conquerors. [Athletae, p. 167.] In the sixteenth year of the reign of Theodosius, A. D. 394, to the conquerors. [ATHLETAE, p. 167.] In the same way painters and other artists exhibited their works at Olympia. (Lucian, l. c.)

The Olympic Games continued to be celebrated with much splendour under the Roman emperors, by many of whom great privileges were awarded to the conquerors. [ATHLETAE, p. 167.] In the sixteenth year of the reign of Theodosius, A. D. 394, (Ol. 293), the Olympic festival was for ever abolished; but we have no account of the names of the victors from Ol. 249.

Our limits do not allow us to enter into the question of the influence of the Olympic Games upon the national character; but the reader will find some useful remarks on this subject in Thirlwall's Hist. of Greece, vol. i. p. 390, &c.

There were many ancient works on the subject of the Olympic Games and the conquerors therein. One of the chief sources from which the writers obtained their materials, must have been the diligenty preserved by the Eleans. (\'Haleiws \'es tods \'Olympionivkwn \'ygmwstwv, Paus. iii. 21. § 1, v. 21. § 5, vi. 2. § 1; \'tov \'\'Helevs \'ygmwstos \'Arxwia, v. 4. § 4.) One of the most ancient works on this subject was by the Elean Hippis, a contemporary of Plato, and was entitled \'Anagraphe \'Olympionivouw. (Plut. Numa, 1.) Aristotle also appears to have written a work on the same subject. (Diog. Laerct. v. 56.) There was a work by Timaeus of Sicily, entitled in which case it was \'Arxwia \'Papwia, and another by Eratosthenes (born b. c. 275) also called \'Olympionivka. (Diog. Laerct. viii. 51.) The Athenian Stesicleides is mentioned as the author of an \'Anagraphe \'tov \'\'Arxwntov KAI \'Olympionivouw (Diog. Laerct. ii. 56), and Pliny (H. N. vii. 34) speaks of Agrippas as a writer of Olympionivke.

There were also many ancient works on the Greek festivals in general, in which the Olympic Games were of course treated of. Thus the work of Diocarchus Peri \'\'Agwvou (Diog. Laerct. v. 47), contained a division entitled \'Olympivouw. (Athen. xiv. p. 620, d.)

One of the most important works on the Olympic Games was by Phelegon of Tralles, who lived in the reign of Hadrian; it was entitled Peri tov \'\'Olympivwv KAI \'Olympivwv KAI Khrwvivn \'Sunagwghw, was comprised in 16 books, and extended from the first Olympiad to Ol. 229. We still possess two considerable fragments of it. The important work of Julius Africanus, \'Eleuvhivn \'Olympivwv KAI \' troop, &c., is preserved to us by Eusebius; it comes down to Ol. 248. Dezippus of Athens, in his \'Arxwiv \'Ayepop, carried down the Olympic conquerors to Ol. 262.

In modern works much useful information on the Olympic games is given in Corssin's Dissert. Agonisticoe, and in Böckh's and Dissen's editions of Pindar. See also Meier's article on the Olympic Games, and Rathgeber's articles on Olympia, Olimpiac, and Olympischer Jupiter in Ersch and Grüber's Encyclopädie; Dissen, Ueber die Anordnung der Olympischen Spiele, in his Kleine Schriften, p. 185; and Krause, Olympia oder Darstellung der grossen Olympischen Spiele, Wien, 1838.

In course of time festivals were established in several Greek states in imitation of the one at Olympia, to which the same name was given. Some of these are only known to us by inscriptions and coins; but others, as the Olympic festival at Antioch, obtained great celebrity. After these Olympic festivals had been established in several places, the great Olympic festival is sometimes designated in inscriptions by the addition of "in Pisae," \'in Pisa. (Compare Böckh, Inschr. n. 247. pp. 361, 362. n. 1068. p. 564.) We subjoin from Krause an alphabetical list of these smaller Olympic festivals. They were celebrated at:—

\'Aegae in Macedonia. This festival was in existence in the time of Alexander the Great. (Arrian, Anab. i. 11.)

\'Alexandria. (Gruter, Inschr. n. cccxiv. n. 240.) In later times, the number of Alexandrian conquerors in the great Olympic Games was greater than from any other state.

\'Anazarbo in Cilicia. This festival was not introduced till a late period. (Eckhel, Docr. Num. iii. p. 44.)

\'Antioch in Syria. This festival was celebrated at Daphne, a small place, 40 stadia from Antioch, where there was a large sacred grove watered by many fountains. The festival was originally called Daphnea, and was sacred to Apollo and Artemis (Strabo, xvi. p. 750; Athen. v. p. 194), but was called Olympia, after the inhabitants of Antioch had purchased from the Eleans, in \'A. D. 44, the privilege of celebrating Olympic games. It was not, however, regularly celebrated as an Olympic festival till the time of the emperor Commodus. It commenced on the first day of the month Hyperberetae (October), with which the year of Antioch began. It was under the presidency of an Alytarch. The celebration of it was abolished by Justin, \'A. D. 521. The writings of Libanius, and of Chrysostom, the Christian Father, who lived many years at Antioch, gave various particulars respecting this festival.

\'Athens. - There were two festivals of the name
OLYMPIAS.

of Olympia celebrated at Athens, one of which was in existence in the time of Pindar (Pind. Nem. ii. 23, &c.; Schol. ad loc.), who celebrates the ancestors of the Athenian Timomades as conquerors in it, and perhaps much earlier (Schol. ad Thuc. i. 126). It was celebrated to the honour of Zeus, in the spring between the great Dionysia and the Bendidia. (Böckh, Inschr. pp. 53, 250—252.) The other Olympic festival at Athens was instituted by Hadrian A. D. 131; from which time a new Olympic aera commenced. (Corsini, Fust. Att. vol. ii. pp. 195, 110, &c.; Spartan. Hadr. 13.)

OLYMPIAS.

Attalia in Pamphylia. This festival is only known to us by coins. (Rathgeber, l. c. p. 526.)

Cypucus. (Böckh, Inschr. n. 2810.)

Cyprene. (Böckh, Explicat. Pind. p. 328.)

Dium in Macedonia. These games were instituted by Archelaus, and lasted nine days, corresponding to the number of the nine Muses. They were celebrated with great splendour by Philip II. and Alexander the Great. (Diodor. xvii. 16; Dion Chrysost. vol. i. p. 73; Reiske; Suidas, s. v. 'Αρεταξαμώμενα.)

Epeiros. This festival appears by inscriptions, in which it is sometimes called 'Αρδασα 'Ολυμπία ή Τρίφων, to have been instituted by Attalus I. (Böckh, Inschr. n. 2810; compare n. 2987, 3000.)

Elis. Besides the great Olympic Games, there appear to have been smaller ones celebrated yearly. (Anecd. Gr. ed. Siebenk. p. 95.)

Magnesia in Lydia. (Rathgeber, l. c. pp. 326, 327.)

Neopolis. (Corsini, Diss. Aaton. iv. 14. p. 103.)

Neapolis in Epeirus. Augustus, after the conquest of Antony, off Actium, founded Neapolis, and instituted games to be celebrated every five years (δεκα πενταετεπιδος) in commemoration of his victory. These games are sometimes called Olympic, but more frequently bear the name of Actia. They were sacred to Apollo, and were under the care of the Lacedaemonians. (Strabo, vii. p. 325.) [ACTIA.]

Olympus in Thessaly, on the mountain of that name. (Schol. ad Ait. Rhod. Argonaut. i. 599.)

Pergamus in Mysia. (Böckh, Inschr. n. 2810; Momont, ii. 610, 626.)

Side in Pamphylia. (Rathgeber, p. 129.)

Symena. Pausanias (vi. 14. § 1) mentions an Aon of the Smyrneans, which Corsini (Diss. Aaton. i. 12. p. 20) supposes to be an Olympic festival. The Marmar O xeniiense expressly mentions Olympia at Smyrna, and they also occur in inscriptions. (Gruter, Inschr. p. 314. 1; Böckh, Inschr. ad n. 1720.)

Tarsus in Cilicia. This festival is only known to us by coins. (Krause, p. 228.)

Tegae in Arcadia. (Böckh, Inschr. n. 1513. p. 700.)

Theseleia in Macedonia. (Krause, p. 230.)

Tityra in Lydia. (Rathgeber, p. 520.)

Trieria in Lydia. (Krause, p. 235.)

Tyros in Phoenicia. (Rathgeber, p. 328.)

OLYMPIAS ("Ολυμπίας), the most celebrated chronological aera among the Greeks, was the period of four years, which elapsed between each celebration of the Olympic Games. The Olympiads began to be reckoned from the victory of Coroebus in the foot-race, which happened in the year B. C. 776. (Paus. v. 8. § 3, viii. 26. § 5; Strab. viii. p. 355.) Timaeus of Sicily, however, who flourished B. C. 524, was the first writer who regularly arranged events according to the conquerors in each Olympiad, with which aera he compared the years of the Attic Archons, the Spartan Ephors, and that of the Argive priests. (Polyb. xii. 12. § 1.) His practice of recording events by Olympiads was followed by Polybios, Diodorus Siculus, Dionysius of Halicarnassus, and sometimes by Pausanias, Aelian, Diogenes Laërtius, Arrian, &c. It is twice adopted by Thucydid (ii. 3, v. 49) and Xenophon (Hell. i. 2. § 1, iii. § 1). The names of the conquerors in the foot-race were only used to designate the Olympiad, not the conquerors in the other contests. Thucydid (ii. 3), however, designates two Olympiads by the name of the conquerors in the Pancratium; but this appears only to have been done on account of the celebrity of these victors, both of whom conquered twice in the Pancratium. Other writers, however, adhere so strictly to the practice of designating the Olympiad only by the conqueror in the foot-race, that even when the same person had obtained the prize in other contests as well as in the foot-race, they only mention the latter. Thus Diodorus (xi. 70) and Pausanias (iv. 24. § 2) only record the conquest of Xenophon of Corinth in the foot-race, although he had also conquered at the same festival in the Pentathlon.

The writers, who make use of the aeras of the Olympiads, usually give the name of the Olympiad (the first corresponding to B. C. 776), and then the name of the conqueror in the foot-race. Some writers also speak of events as happening in the first, second, third, or fourth year, as the case may be, of a certain Olympiad; but others do not give the separate years of each Olympiad. The rules for converting Olympiads into the year B. C., and vice versa, are given under CHRONOLOGIA, p. 281; but as this is troublesome, we subjoin for the use of the student a list of the Olympiads with the years of the Christian aera corresponding to them from the beginning of the Olympiad to A. D. 301. To save space the separate years of each Olympiad, with the corresponding years B. C., are only given from the 47th to the 126th Olympiad, as this is the most important period of Grecian history; in the other Olympiads the first year only is given. In consulting the following table it must be borne in mind that the Olympic Games were celebrated about Midsummer [OLYMPIA], and that the Attic year commenced at about the same time. If, therefore, an event happened in the second half of the Attic year, the year B. C. must be reduced by 1. Thus Socrates was put to death in the 1st year of his Olympiad, and then an event happened in Thargelion, the 11th month of the Attic year, the year B. C. must be reduced by 1, which gives us B. C. 399, the true date of his death.

Many of the ancient writers did not consider history to begin till the Olympiad of Corosbus, and regarded as fabulous the events said to have occurred in preceding times. (Censorinus, De Die Notabilibus, n. 342, 446, 1345.) A new Olympiad aera appears only to have been used by writers, and especially by historians. It does not seem to have been ever adopted by any state in public documents. It is never found on any coins, and scarcely ever on inscriptions. There are only two inscriptions published by Böckh in which it appears to be used. (Corp. Ins. n. 2683, 2999.) A new Olympiad aera, however, came into use under the Roman emperors, which is found in inscriptions and was used in public documents. This aera begins in Ol. 227. 3. (a. d. 131), in which year Hadrian dedicated the Olimpion at Athens; and accordingly we find Ol. 227. 3. spoken of as the first Olympiad, Ol. 229. 3. (a. d. 135) as the second Olympiad, &c. (Böckh, Corp. Ins. n. 342, 446, 1345.) (Krause, Olympia, p. 60, &c.; Wurm de Pond., &c. § 94, &c.)

OPONYX. [SCULPTURA.]

OPA. [METOPA.]

OPA’LIA, a Roman festival in honour of Opis, which was celebrated on the 14th day before the Calends of January (Dec. 19th), being the third day of the Saturnalia, which was also originally celebrated on the same day, when only one day was devoted to the latter festival. It was believed that Opis was the wife of Saturnus, and for this reason the festivals were celebrated at the same time. (Macrobi. Sat. i. 12; Varr. de Ling. Lat. vi. 22, ed. Müller; Festus, s. v. Opalia.) The worshipers of Opis paid their vows sitting, and touched the earth on purpose, of which she was the goddess. (Macrobi. l. c.)

OPERIS NOVI NUNTIATIO was a summary remedy provided by the Edict against a person who was making an Opus Novum. An Opus Novum consisted in either adding something in the way of building (aedificando) or taking away something so as to alter the appearance of a thing (facies operis). The object of the nuntiatio was the maintenance of a right (jus), or to prevent damage (damnun), or to protect the public interest (publicum ius). The owner of the property which was threatened with damage by the Opus Novum, or he who had an easement (servitus) in such property, had the Jus nuntiandi (Dig. 43. tit. 25). Nuntiatio consisted in protesting against and forbidding the progress of the Opus Novum, on the spot where the work was proceeding and in the presence of the owner or of some person who was there present on his account. The Nuntiatio did not require any application to or interference on the part of the Praetor. It was a rule of law that the Nuntiatio must take place before the work was completed: after it was completed, the Opem Novi Nuntiatio had no effect, and redress could only be obtained by the Interdict Quod vi aut clain.

If the Opus Novum consisted in building on the complainant’s ground, or inserting or causing anything to project into his premises, it was better to apply at once to the praetor, or to prevent it per manum, that is, as it is explained “jucau lapilli,” which was a symbol of the use of force for self-protection.

The Edict declared that after a Nuntiatio nothing should be done, until the Nuntiatio was declared illegal (nuntiatio missa, jurata) or a security (satisdatio de operis restitutum) was given. If the person to whom the notice was given persevered, if he had a right to do what he was doing; yet as he was acting against the praetor’s edict, he might be compelled to undo what he had done. By the Nuntiatio, the parties were brought within the jurisdiction of the praetor. In cases where there was danger from the interruption of the work, or the person who was making the Opus Novum denied the right of the nuntians, he was allowed to go upon giving a cautio or security for demolition or restoration, in case the law was against him. When the cautio was given or the nuntians waived it, the party was intitled to an interdictum prohibitorium for his protection in prosecuting the work.

The effect of the nuntiatio ceased, when the cautio was given; when the nuntians died; when he alienated the property in respect of which he claimed the Jus nuntiandi; or when the praetor permitted the work to go on (operis novi nuntiationem . . . remississet, Lex Gall. Civ. x. 39; Dig. tit. 1. s. 22, ante remissam nuntiationem; Dig. 39; tit. 1; Mackeldy, Lehrbuch, &c., 12th ed. § 237, &c. [G. L.]

OP’MA SPO’LIA. [SPOLIA.]

OPINATORES were officers under the Roman emperors, who were sent into the provinces to obtain provisions for the army. The provisions had to be supplied to them within a year. The etymology of the name is uncertain. (Cod. 12. tit. 35. s. 11; Cod. Theod. 7. tit. 4. s. 26; 11. tit. 7. s. 16.)

OPISTHODOMUS. [TEMPLUM.]

OPISTHOPHOROS. [LIBRAR.]

OPSONIUM, or OBSONIUM (φοσ, dim. φοσαριον; φοσαριον, Plut. Sympos. Prob. iv. 1), denoted every thing which was eaten with bread. Among the ancients leaves, at least preparations of corn in some form or other, constituted the principal substance of every meal. But together with this, which was the staff of their life, they partook of numerous articles of diet called opsonia or pulimentaria (Cat. de Re Rust. 58; Hor. Sat. ii. 2. 29), designed also to give nutriment, but still more to add a relish to their food. Some of these
articles were taken from the vegetable kingdom, but were much more pungent and savoury than bread, such as olives, either fresh or pickled, radishes, and sesamum. (Plato, de Repub. ii. p. 85, ed. Bekker; Xen. Oecön. viii. 9.) Of animal food much by much the most common kind was fish, whence the terms under explanation were in the course of time used in a confused and special sense to denote fish only, but fish variously prepared, and especially salt fish, which was most extensively employed to give a relish to the vegetable diet either at breakfast (Menander, p. 70, ed. Meineke), or at the principal meal. (Plaut. Autal. ii. 6, 3.) For the same reason ὑφοφορεῖα meant a garnish or epicuria, and ὑφοφορεῖον, a garnished dish. ( Athen. ix. 24—27.) In maritime cities the time of opening the fish-market was signified by ringing a bell, so that all might have an equal opportunity for the purchase of delicacies. (Strab. xiv. 1. § 21; Plut. Sympos. Prob. p. 1187, ed. Steph.)

Of the different parts of fishes the roe was the most esteemed for this purpose. It is still prepared from the fish in the very same waters adjoining Myus in Ionia, which were given to Themistocles by the King of Persia. (Thuc. i. 130; Corn. Nepos. Them. x. 3; Diod. xi. 57.) A jar was found at Pompeii, containing caviare made from the roe of the tunny. (Gell, Pompeianus, 1832, vol. i. p. 178.)

Some of the principal ἀρχιερεῖα, or establishments for curing fish, were on the southern coast of Spain (Strab. iii. 4): but the Greeks obtained their chief supply from the Hellespont (Hermippus ap. Athen. i. 49, p. 27, e); and more especially Byzantium first rose into importance after its establishment by the Milesians in consequence of the active prosecution of this branch of industry. Of all seas the Euxine was accounted by the ancients the most abundant in fish, and the catching of them was aided by their migratory habits, as in the autumn they passed through the Bosporus towards the South, and in spring returned to the Euxine, in order to deposit their spawn in its tributary rivers. At these two seasons they were caught in the greatest quantity, and, having been cured, were shipped in Milesian bottoms, and sent to all parts of Greece and the Levant. The principal ports on the Euxine engaged in this traffic were Sinope and Panticapaeum. (Hegesich, Colonlen der Griechen, p. 80.)

Among the fish used for curing were different kinds of sturgeon (ὕπακας, Herod. iv. 55; Schneider, Ex. Phys. i. p. 65, ii. p. 49); tunny (σκεύηπός, Hermippus, l. c.); scophus; πυλαμία, a name still in use with some modification among the descendants of the ancient Phœceans at Marseilles, Paasow, Handwörterbuch, s. e.), and mullet. A minute discussion of their qualities, illustrated by quotations, may be seen in Athenaeus. (iii. 84—93.)

Plato mentions the practice of salting eggs, which was no doubt intended to convert them into a kind of opsonium (Symp. p. 401, ed. Bekker). The treatise of Apicus, de Opsonium, is still extant in ten books.

The Athenians were in the habit of going to markets (εἰς τοῖνος) themselves in order to purchase their opsonia (ὑφοφορίς, Theophrast. Char. 28; opsonaroi). [Macellum.] But the opulent Romans had a slave, called opsonator (ὑφοφόρος), whose office it was to purchase for his master. It was his duty, by learning what flavours were most acceptable to him, by observing what most delighted his eyes, stimulated his appetite, and even overcame his nausea, to satisfy as much as possible all the cravings of a luxurious palate. (Sen. Epist. 47; compare Hor. Sat. i. 2, 9, ii. 7, 106; Plaut. Menex. ii. 2, 1, Mil. iii. 2, 73.) We may also infer, from an epigram of Martial (xiv. 217), that there were opsonarotores, or purveyors, who furnished dainties and other entertainments at so much per head, according to the means and wishes of their employers. Spon (Misc. Erud. Ant. p. 214) has published two inscriptions from monuments raised to the memory of Romans who held the office of purveyors to the Imperial family. At Athens both the sale and the use of all kinds of opsonia were superintended by two or three special officers, appointed by the senate, and called ὑφοφόροι. (Ath. vii. 12.)

O'PTIO. [Exercit. p. 506, a.]

OPTIMATES. [Nobles.]

ORACULUM (μαντεῖον, χρηστίριον) was used by the ancients to designate the revelations made by the deity to man, as well as the place in which such revelations were made. The deity was in none of these places believed to appear in person to man, and to communicate to him his will or knowledge of the future; but all oracular revelations were made through some kind of medium, which, as we shall see hereafter, was different in the different places where oracles existed. It may, on first sight, seem strange that there were, comparatively speaking, so few oracles of Zeus, the father and ruler of gods and men. But although, according to the belief of the ancients, Zeus himself was the first source of all oracular revelations, yet he was far too above men to enter with them into any close relation; other gods therefore, especially Apollo, and even heroes, acted as mediators between Zeus and men, and formed as it were the organs through which he communicated his will. (Soph. Oed. Col. 629; Aesch. Eum. 19, 611, &c.) The fact that the ancients consulted the will of the gods on all important occasions of public and private life, arose partly from the universal desire of men to know the issue of what they are going to undertake, and partly from the great reverence for the gods, so peculiar to the ancients, by which they were led not to undertake anything of importance without their sanction; for it should be borne in mind that an oracle was not merely a revelation to satisfy the curiosity of man, but at the same time a sanction or authorisation by the deity of what man was intending to do or not to do. We subjoin a list of the Greek oracles, classed according to the deities to whom they belonged.

I. ORACLES OF APOLLO.

1. The oracle of Delphi was the most celebrated of all the oracles of Apollo. Its ancient name was Pythio, which is either of the same root as πυθέ- δαι, to consult, or, according to the Homeric hymn on Apollo (185, &c.) derived from πυθός, to putrefy, with reference to the nature of the locality. Respecting the topography of the temple of Apollo see Pausanias (x. 14. § 7) and Müller (in Dissen's Pindar, ii. p. 628). In the innermost sanctuary (the μύχος δύουν or μύχαρον), there was the statue of Apollo, which was, at least, in later times, of gold; and before it there burned upon
an altar an eternal fire, which was fed only with
The inner roof of the temple was covered all over with laurel garlands (Aesch. Eum. 39), and
upon the altar laurel was burnt as incense. In the
centre of this temple there was a small opening (χώρα)
in the ground from which, from time to
time, an intoxicating smoke arose, which was be-
lieved to come from the well of Cassotis, which
vanished into the ground close by the sanctuary.

(Paus. x. 24. § 5.) Over this chasm there stood a
high tripod, on which the Pythia, led into the
temple by the prophetes (προφητες), took her seat
whenever the oracle was to be consulted. The
smoke rising from under the tripod affected her
brain in such a manner that she fell into a state of
delirious intoxication, and the sounds which she
uttered in this state were believed to contain the
revelations of Apollo. These sounds were care-
fully written down by the prophetes, and afterwards
communicated to the persons who had come to con-
sult the oracle. (Diod. xvi. 26 ; Strabo, ix. p.
419, &c.; Plut. de Orac. Def.)

The Pythia (the προφητής) was always a native
of Delphi (Europ. Ion, 92), and when she had once
centered the service of the god she never left it, and
was never allowed to marry. In early times she
was always a young girl; but after one had been
seduced by Echecrates the Thessalian, the Del-
phians made a law that in future no one should
be elected as prophetess who had not attained the
age of fifty years; but in remembrance of former
days the old woman was always dressed as a
maiden. (Diod. l.c.) The Pythia was generally
taken from some family of poor country-people. At
first there was only one Pythia at a time; but when
Greece was in its most flourishing state, and when
the number of those who came to consult the oracle
was very great, there were always two Pythias
who took their seat on the tripod alternately, and
a third was kept in readiness in case some accident
should happen to either of the two others. (Plut.
Quaest. Græc. c. 9.) The effect of the smoke on
the whole mental and physical constitution is said
to have sometimes been so great, that in her deli-
rion she leaped from the tripod, was thrown into
convulsions, and after a few days died. (Plut. de
Orac. Def. c. 51.)

At first oracles were given only once every
year, on the seventh of the month of Bysius (pro-
bably the same as Πόδεος, or the month for con-
sulting), which was believed to be the birthday of
Apollo (Plut. Quaest. Gr. c. 90), but as this one
day in the course of time was not found sufficient,
certain days in every month were set apart for the
purpose. (Plut. Alex. 14.) The order, in which the
persons who came to consult were admitted, was
determined by lot (Aesch. Eum. 32; Europ. Ion,
422) ; but the Delphian magistrates had the
power of granting the right of Ποιαυαρελα, i. e. the
right of consulting first, and without the order
being determined by lot, to such individuals or
states as had acquired claims on the gratitude of
the Delphians, or whose political ascendancy seemed
to give them higher claim. Such were the cases with Croesus and the Lydians (Herod.
l. 54), with the Lacedaemonians (Plut. Per. 21),
and Philip of Macedonia. (Demosth. c. Phil. iii.
p. 119.) It appears that those who consulted the
oracle had to pay a certain fee, for Herodotus
states that the Lydians were honoured with
When the oracle of Delphi lost its importance in the eyes of the ancients, the number of persons who consulted it naturally decreased, and in the days of Plutarch one Pythia was, as of old, sufficient to do all the work, and oracles were only given on one day in every month.

The divine agency in Pytho is said to have first been discovered by shepherds who tended their flocks in the neighbourhood of the chasm, and whose sheep, when approaching the place, were seized with convulsions. (Diod. xvi. 26; Plut. de Defect. Or. c. 42.) Persons who came near the place showed the same symptoms, and received the power of prophecy. This at last induced the people to build a temple over the sacred spot. According to the Homeric hymn on Apollo, this god was himself the founder of the Delphic oracle, but the local legends of Delphi stated that originally it was in the possession of other deities, such as Gaea, Themis, Phoebe, Poseidon, Night, Cronos, and that it was given to Apollo as a present. (Aeschyl. Eum. 3, &c.; compare Paus. x. 5; Ovid. Metam. i. 321; Argum. ad Pind. Pyth.; Tzetz. ad Lyogphr. 202.) Other traditions again, and these perhaps the most ancient and genuine, represented Apollo as having gained possession of the oracle by a struggle, which is generally described as a fight, with Python, a dragon, who guarded the oracle of Gaea or Themis.

The oracle of Delphi, during its best period, was believed to give its answers and advice to every one who came with a pure heart, and had no evil designs; if he had committed a crime, the answer was refused until he had atoned for it (Herod. i. 19, 22), and he who consulted the god for bad purposes was sure to accelerate his own ruin. (Herod. iv. 86; Paus. ii. 18. § 2.) No religious institution in all antiquity obtained such a paramount influence, not only in Greece, but in all countries around the Mediterranean, in all matters of importance, whether relating to religion or to politics, to private or to public life, as the oracle of Delphi. When consulted on a subject of a religious nature, the answer was invariably of a kind calculated not only to protect and preserve religious institutions, but to command new ones to be established (Demosth. c. Mid. 15; Herod. v. 82, i. 165, &c.), so that it was the preserver and promoter of religion throughout the ancient world. Colonies were seldom or never founded without having obtained the advice and the directions of the Delphic god. (Cic. de Div. i. 1.) Hence the oracle was consulted in all disputes between a colony and its metropolis, as well as in cases where several states claimed to be the metropolis of a colony. (Thucyd. i. 25, 28; Dion. xiv. 18.)

The Delphic oracle had at all times a leaning in favour of the Greeks of the Doric race; but the time when it began to lose its influence must be dated from the period when Athens and Sparta entered upon their struggle for the supremacy in Greece; for at this time the partiality of Sparta became so manifest, that the Athenians and their partisans endeavoured to lose all reverence and esteem for it (Plut. Demoth. 20), and the oracle became a mere instrument in the hands of a political party. In the times of Cicero and Plutarch many believed that the oracle had lost the powers which it had possessed in former days; but it still continued to be consulted down to the times of the emperor Julian, until at last it was entirely done away with by Theodosius.

Notwithstanding the general obscurity and ambiguity of most of the oracles given at Delphi, there are many also which convey so clear and distinct a meaning, that they could not possibly be misunderstood, so that a wise agency at the bottom of the oracles cannot be denied. The manner in which this agency has been explained at different times, varies greatly according to the spirit of the age. During the best period of their history the Greeks, generally speaking, had undoubtedly a sincere faith in the oracle, its counsels and directions. When the sphere in which it had most benefited Greece became narrowed and confined to matters of a private nature, the oracle could no longer command the veneration with which it had been looked upon before. The pious and believing heathens, however, thought that the god no longer bestowed his former care upon the oracle, and that he was beginning to withdraw from it; while free-thinkers and unbelievers looked upon the oracle as a skilful contrivance of priestcraft which had then outgrown itself. This latter opinion has also been adopted by many modern writers. The early Christians, seeing that some extraordinary power must in several cases have been at work, represented it as an institution of the evil spirit. In modern times several opinions are advanced. Hüllmann, for example, has endeavoured to show that the oracle of Delphi was entirely managed and conducted by the aristocratic families of Delphi, which are thus described as forming a sort ofarchical senate for all Greece. If so, the Delphic senate surely was the wisest of all in the history of the ancient world. Klausen, on the other hand, seems to be inclined to allow some truly divine influence, and at all events thinks that even in so far as it was merely managed by men, it acted in most cases according to lofty and pure moral principles.

The modern literature on the Delphic oracle is very rich; the most important works are:—C. F. Wilster, De Religione et Oraculo Apollinis Delphicici, Hafniae, 1827; H. Piotrowski, De Graevitute Oraculi Delphici, Lipsiae, 1829; R. H. Klausen, in Ersch und Gruber's Encyclopädie, s. v. Orakel; K. D. Hüllmann, Würdigung des Delphischen Orakels, Bonn, 1837; W. Götze, Das Delphische Orakel, in seinem politischen, religiösen und sittlichen Einfluss auf die alte Welt, Leipzig, 1839.

2. Oracle at Aabe in Phoecia. An oracle was believed to have existed there from very early times (Paus. x. 55, § 2), and was held in high esteem by the Phocians. (Sophr. Oed. Tyr. 899; Herod. viii. 33.) Some years before the Persian invasion, the Phocians gained a victory over the Thessalians, in which they obtained, among other spoils, four thousand shields, half of which they dedicated in the temple of Apollo at Abae, and half in that of Delphi. (Herod. viii. 27.) The oracle was like many others consulted by Croesus; but he does not seem to have found it agreeing with his wishes. (Herod. i. 46.) In the Persian invasion of Xerxes, the temple of Abae was burnt down, and, like all other temples destroyed in this invasion, it was never rebuilt. The oracle itself, however, remained, and before the battle of Leuctra it promised victory to the Thebans; but in the Phocian or sacred war, when some Phocian fugitives had taken refuge in the ruins, they were entirely destroyed by the Thebans. (Paus. l. c.) But even after this calamity the
oracle seems to have been consulted, for the Romans, from reverence for it, allowed the inhabitants of Abdera to govern themselves. HADRIAN built a small temple by the side of the old one, some walls of which were still standing as ruins in the time of Pausanias (x. 32. § 2, 3).

3. Oracle on the hill of Ptoon, in the territory of Thebes. The oracle was here given through the medium of a man called προμαντις, and the first pronamis was said to have been Teneros, a son of Apollo. (Strab. ix. p. 413; Paus. ix. 33. § 3.) The oracles were usually given in the Aeolian dialect, but when Mys, the Carian, consulted the god, the answer was given in the Carian language (Paus. i. c.), so that instead of the Tholus, who generally wrote down the oracles, the Carian was obliged to do it himself. (Herod. vii. 135.) When Alexander the Great destroyed Thebes, this oracle also perished. (Paus. ix. 33. § 3.) In the time of Plutarch the whole district was completely desolate. (De Orac. Def. c. 8.)

4. Oracle of Apollo at Ismenion, in Boeotia, south of Thebes. The temple of Apollo Ismenios was the national sanctuary of the Thesians. The oracle was here not given by inspiration, as in other places, but from the inspection of the victims. (Herod. vii. 134.) On one occasion it gave its prophecy from a huge cobweb in the temple of Demeter. (Diod. xvii. 10; compare Paus. ix. 10. § 2, &c.)

5. Oracle of Apollo at Hyssia, on the frontiers of Attica. This place contained an oracle of Apollo which was sacred to them, from which those who wished to become inspired. In the time of Pausanias the oracle had become extinct. (Paus. ix. 2. § 1.)

6. Oracle of Apollo at Tegea, was an ancient and much frequented oracle in Boeotia, which was conducted by prophets. The Pythia herself on one occasion declared this to be the birth-place of Apollo. In the time of Plutarch the whole district was a wilderness. (Plut. de Orac. Def. c. 8, Polop. 16; Steph. Byz. s. v. Τεγέα.)

7. Oracle of Apollo in the village of Eutresis, in the neighbourhood of Leuctra. (Steph. Byz. s. v. Εὐτρεσια; Eustath. ad Ilid. ii. 502.) This oracle became extinct during the Macedonian period. (Plut. de Orac. Def. c. 5.)

8. Oracle of Apollo at Oropia, in Euboea. Apollo here bore the surname of the Selintianus. (Strab. x. p. 443.)

9. Oracle of Apollo in the Lyceum at Argos. The oracle was here given by a prophetess. (Plut. Pyrrell. 31.)

10. Oracle of Apollo Deiradates, on the acropolis of Argos. The oracle was given by a prophetess, who was obliged to abstain from matrimonial connections once in every month. She was believed to become inspired by tasting of the blood of a lamb which was sacrificed during the night. This oracle continued to be consulted in the days of Pausanias (i. 24. § 1).

11. Oracle of Apollo at Didyma, usually called the oracle of the Branchidae, in the territory of Miletus. This was the oracle most generally consulted by the Ionians and Aeolians. (Herod. i. 158.) The temple, however, was said to have been founded previously to the arrival of the Ionians on the coast of Asia (Paus. vii. 2. § 4), and the altar was said to have been built by Hercules, and the temple by Branchus, a son of Apollo, who had come from Delphi as a purifying priest. (Paus. v. 13. § 6; Strab. xiv. p. 634.) Hence this oracle, like that of Delphi, combined purifying or atoning rites with the practice of prophecy. (Müller, Dor. ii. 2. § 6.) The real antiquity of the oracle, however, cannot be traced further back than the latter half of the 7th century before our era. (Soldan, p. 553, &c.) The priests called Branchidae, who had the whole administration of the oracle, were said to be the descendants of Branchus. The high priest bore the name Stephanephorus. Among them was one family which possessed the hereditary gift of prophecy, and was called the family of the Euganeides. (Conon, 44.) The oracle was under the especial management of a priest, who ordered metrics for the Delphian festivals. The oracles were probably inspired in a manner similar to that at Delphi. (Paus. v. 7. § 3.) Crossus made to this oracle as munificent presents as to that of Delphi. (Herod. i. 46, &c.) The principles which it followed in its counsels and directions were also the same as those followed by the Delphians. The Persians burnt and plundered the temple as had been predicted by the Pythia of Delphi (Herod. vi. 19); but it was soon restored and adorned with a fine brazen statue of Apollo (Paus. ii. 10. § 4, ix. 10. § 2; compare Müller, Ancient Apollo and its Remains, § 80), which Xerxes on his retreat carried with him to Ecbatana. A part of the Branchidae had surrendered to Xerxes the treasures of the temple, and were at their own request transplanted to Bactriana (Strabo, ii. 54.) This oracle was in connection with Delphi, from which the oracles had saluted him as king. (Paus. i. 16. § 3; Diod. ix. 90.) The oracle continued to be consulted after the faithlessness of its ministers. Some ruins of the temple at Didyma are still extant. (Compare the Commentators on Herod. i. 92; Suid. s. v. Εὐγανείδας; Droysen, Gesch. Alex. des Grossen, p. 307; and an excellent essay by W. G. Soldan, Das Orakel der Branchiden, in Zimmermann's Zeitschrift für die Alterthumswissenschaft, 1841. No. 66, &c.)

12. Oracle of Apollo at Claros, in the territory of Colophon. It was said to have been founded by Cretans under Rhacius, previous to the settlement of the Ionians in Asia Minor. The early legends put this oracle in connection with Delphi, from whence Manto, the daughter of Teiresias, came to Claros, married Rhacius and gave birth to Mopsus, from whom the prophets of Clarus were probably believed to be descended. (Paus. vii. 3. §§ 1, 2.) This oracle was of great celebrity, and continued to be consulted even at the time of the Roman emperors. (Paus. vii. 5. § 1, &c.; Strab. xiv. p. 612; Tacit. Annal. xii. 22.) The oracles were given through an inspired prophet, who was taken from certain Miletian families. He was generally a man without any refined education, had only the names and the number of the persons who consulted the oracle stated to him, and then descended into a cavern, drank of the water from a secret well, and afterwards pronounced the oracle in verse. (Tacit. Annal. i. 54.)

13. Oracle of Apollo at Gryneum, in the territory of the Myrincians. (Heuct. Frogn. 211.)

16. Oracle of Apollo in Delos, which was only consulted in summer. (Callim. Hymn. in Del. i.; Serv. ad Virg. Aen. iv. 143.)

17. Oracle of Apollo at Patara, in Lycia, was only consulted in winter. The prophetess (προφήτισ) spent a night in the temple to wait for the communications which the god might make to her. (Herod. i. 182; Serv. ad Virg. Aen. iv. 143.)

18. Oracle of Apollo at Tæmessus. The priests of this institution did not give their answers by inspiration, but occupied themselves chiefly with the interpretation of dreams, whence Herodotus (i. 78; compare Cic. de Deo. i. 41; Arrian, ii. 3) calls them ἄγγελοι. But they also interpreted other marvellous occurrences. Near Tæmessus there was another oracle of Apollo, where those who consulted it had to look into a well, which showed them in an image the answer to their questions. (Paus. vii. 21. § 6.)

19. Oracle of Apollo at Mytillus, in Cilicia. (Strab. xiv. p. 675, &c.; Arrian, ii. 5.)

20. Oracle of the Sorpolidian Apollo, in Cilicia. (Diod. Exc. xxxviii. 12.)

21. Oracle of Apollo at Ephlya, in Caria. (Athén. xv. p. 672.)

22. Oracle of Apollo at Herae Konon, on the Macedon, a celebrated oracle which spoke in good verses. (Liv. xxxviii. 18; Steph. Byz. s. v.)

II. ORACULUM.

1. Oracle of Zeus at Olympia. In this as in the other oracles of Zeus the god did not reveal himself by inspiration, as Apollo did in almost all of his oracles, but he merely sent signs which men had to interpret. Those who came to consult the oracle of Olympia offered a victim, and the priests gave his answers from the nature of the several parts of the victim, or from accidental circumstances accompanying the sacrifice. (Herod. viii. 134; Strab. viii. p. 353.) The prophets or interpreters here belonged to the family of the Ianids. In early times the oracle was much resorted to, and Sophocles (Oed. Tyr. 900) mentions it along with the most celebrated oracles; but in later times it was almost entirely neglected, probably because oracles from the inspection of victims might be obtained anywhere. The spot, where the oracles were given at Olympia, was before the altar of Zeus. (Pind. Ol. vi. 70.) It was especially those who intended to take part in the Olympic games that consulted the oracle about their success (Pind. Ol. viii. 2); but other subjects also were brought before it.

2. Oracle of Zeus at Dodona. Here the oracle was given from sounds produced by the wind. The sanctuary was situated on an eminence. (Aeschyl. Prom. 830.) Although in a barbarous country, the oracle was in close connection with Greece, and in the earliest times apparently much more so than afterwards. (Hom. H. xvi. 233.) Zeus himself, as well as the Dodonaeans, were reckoned among the Pelasgians, which is a proof of the ante-hellenic existence of the worship of Zeus in these parts, and perhaps of the oracle also. (Hesiod. and Ephor. ap. Strab. vii. p. 927, &c.)

The oracle was given from lofty oaks covered with foliage (Hom. Od. xiv. 328, xix. 297), whence Aeschylus (Prom. 832; compare Soph. Trach. 1170) mentions the speaking oaks of Dodona as great wonders. Beech-trees, however, are also mentioned in connection with the Dodonaean oracle, which, as Hesiod (Frageg. 39; Soph. Trach. 169; Herod. ii. 55) said, dwelt in the stem of a beech-tree. Hence we may infer that the oracle was not thought to dwell in any particular or single tree, but in a grove of oaks and beeches. The will of the god was made manifest by the rustling of the wind through the leaves of the trees, which are therefore represented as eloquent tongues. In order to render the sounds produced by the winds more distinct, brazen vessels were suspended on the branches of the trees, which being moved by the wind came in contact with one another, and thus sounded till they were stopped. (Suid. s. v. Δοδώνη; Philostr. Imag. 1. Another mode of producing the sounds was this:— There were two columns at Dodona, one of which bore a metal basin, and the other a boy with a scourge in his hand; the ends of the scourge consisted of little bones, and as they were moved by the wind they knocked against the metal basin on the other column. (Steph. Byz. s. v. Δοδώνης; Suid. s. v. Δωυναίων χαλκίων; Strabo, Exc. s. e. lib. vii. vol. ii. p. 73, ed. Kramer.) According to other accounts oracles were also obtained at Dodona through pigeons, which sitting upon oak-trees pronounced the will of Zeus. (Dionys. Hal. 1. 15.) The sounds were in early times interpreted by men, but afterwards, when the worship of Dion became connected with that of Zeus, by two or three old women who were called τέλειας or τέλειας, because pigeons were said to have brought the commands of the god. (Plut. Mor. 219.) In the time of Herodotus (l. c.) the names of the three prophetesses were Promeneia, Timarete and Nicandra. They were taken from certain Dodonaean families, who traced their pedigree back to the mythical ages. There were, however, at all times priests called τεμναία (Strab. l. c.) connected with the oracle, who on certain occasions interpreted the sounds; but how the functions were divided between them and the Pelasgi is not clear. In the historical times the oracle of Dodona had less influence than it appears to have had at an earlier period, but it was at all times inaccessible to bribe and refused to lend its assistance to the Doric interest. (Corn. Nep. Lysoz. 3.) It was chiefly consulted by the neighbouring tribes, the Aetolians, Acarnanians, and Epirens (Paus. vii. 21. § 1; Herod. ix. 93), and by those who would not go to Delphi on account of its partiality for the Dorians. There appears to have been a very ancient connection between Dodona and the Bore- tian Ismenion. (Strab. ix. p. 402; compare Müller, Orchiom. p. 378, 2d edit.)

The usual form in which the oracles were given at Dodona was in hexameters; but some of the oracles yet remaining are in prose. In 219 B.C. the temple was destroyed by the Aetolians, and the sacred oaks were cut down (Polyb. iv. 67), but the oracle continued to exist and to be consulted, and does not seem to have become totally extinct until the third century of our era. In the time of Strabo the Dodonaean prophetesses are expressly mentioned, though the oracle was already decaying like all the others. (Strab. vii. p. 329.)

3. *Oracle of Zeus Ammon*, in an oasis in Libya, in the north-west of Egypt. According to the traditions current at Dodona and Thebes in Egypt, it was founded by the latter city (Herod. ii. 42, 54, &c.), and the form in which the god was represented at Thebes and in the Ammonium was the same; he had in both places the head of a ram and the body of a man. (Herod. ii. 50.) There are three accounts of how this oracle came into existence. The Greek writers, who became familiar with it, mention several oracles of this divinity in foreign countries. (Herod. ii. 29; Diod. iii. 6.)

**ORACULUM.**

**III. ORACLES OF OTHER GODS.**

The other gods who possessed oracles were consulted only concerning those particular departments of the world and human life over which they presided. *Demeter* thus gave oracles at Patrae in Achaia, but only concerning sick persons, whether their sufferings would end in death or recovery. Before the sanctuary of the goddess there was a well surrounded by a wall. Into this well a mirror was set, and persons were allowed to fall into it on condition of fasting one day. By fasting one day, and by

**ORACULUM.**

**IV. ORACLES OF HEROES.**

1. *Oracle of Amphiaraus*, between Potnae and Thbes, was consulted only concerning those particular departments of the world and human life over which they presided. *Demeter* thus gave oracles at Patrae in Achaia, but only concerning sick persons, whether their sufferings would end in death or recovery. Before the sanctuary of the goddess there was a well surrounded by a wall. Into this well a mirror was set, and persons were allowed to fall into it on condition of fasting one day, and by

2. *Oracle of Amphileochus*, He was the son of Amphiaraus, and had an oracle at Mallos in Cilicia, which Pausanias calls the most trustworthy of his

3. *Oracle of Trophonius at Lebadeia in Boeotia. (Paus. ix. 37, § 3.) Those who wished to consult this oracle had first to purify themselves by spending some days in the sanctuary of the good spirit and good luck (ἀγάθου Δαιμόνος καὶ ἀγάθης Τεχνη), to live sober and pure, to abstain from warm baths, but to bathe in the river Hercyna, to offer sacrifices to Trophonius and his children, to Apollo, Cronos, king Zeus, Hera Heniocha, and to Demeter Europe, who was said to have nursed Trophonius; and during these sacrifices a soothsayer explained from the intestines of the victims whether Trophonius would be pleased to admit the consultor. In the night in which the consultor was to be allowed to descend into the cave of Trophonius, he had to sacrifice a ram to Agamedes, and, only in case the signs of the sacrifice were favourable, the hero was thought to be pleased to admit the person into his cave. What took place
after this was as follows:—Two boys, 13 years old, led him again to the river Hercyna, and bathed and anointed him. The priests then made him drink from the well of oblivion (Ἄβδον) that he might forget all his former thoughts, and from the well of recollection (Μνήμωνων) that he might remember the visions which he was going to have. They then showed him a mysterious representation of Trophonius, made him worship it, and led him into the sanctuary, dressed in linen garments with girdles around his body, and wearing a peculiar kind of shoes (κρυστάδες) which were customary at Lebadeia. Within the sanctuary which stood on an eminence, there was a cave, into which the person was now allowed to descend by means of a ladder. Close to the bottom, in the side of the cave, there was an opening into which he put his feet, whereupon the other parts of the body were likewise drawn into the opening by some invisible power. What the persons here said was different at different times. They returned through the same opening by which they had entered, and the priests now placed them on the throne of Mnemosyne, asked them what they had seen, and led them back to the sanctuary of the good spirit and good luck. As soon as they had recovered from their fear, they were obliged to write down their vision on a little tablet which was dedicated in the temple. This is the account given by Pausanias, who had himself descended into the cave, and wrote as an eye-witness. (Paus. ix. 39. § 3, &c.; compare Philostr. Vit. Apoll. viii. 19.) The answers were probably given by the priests according to the report of what persons had seen in the cave. This oracle was held in very great esteem, and did not become extinct until a very late period: and though the army of Sulla had plundered the temple, the oracle was much consulted by the Romans (Orig. Cæs. vii. p. 553), and in the time of Plutarch it was the only one among the numerous Boeotian oracles, that had not become silent. (Plut. de Orac. Deip. c. 5.)

4. Oracle of Calchas, in Damia in southern Italy. Here answers were given in dreams, for those who consulted the oracle had to sacrifice a black ram, and slept a night in the temple, lying on the skin of the victim. (Strab. vi. p. 234.)

5. Oracles of Asclepius (Aesculapius). The oracles of Asclepius were very numerous. But the most important and most celebrated was that of Epidaurum. His temple there was literally covered with votive tablets, on which persons had recorded their recovery by sleeping a night in the temple. In the temples of Aesculapius and Serapis at Rome, recovery was likewise sought by incubatio in his temple. (Suet. Claud. 25.) F. A. Wolf has written an essay, Beitrag zur Gesch. des Somnambulismus aus dem Alterthum (Vermischte Schriften, p. 392, &c.), in which he endeavour to show that what is now called Mesmerism, or animal magnetism, was known to the priests of those temples where sick persons spent one or more nights for the purpose of recovering their health. Other oracles of the same kind are mentioned in that essay, together with some of the votive tablets still extant.

6. Oracle of Hercules at Bura in Achaia. Those who consulted it, prayed and put their questions to the god, and then cast four dice painted with figures, and the answer was given according to the position of these figures. (Paus. vii. 25. § 6.)

7. Oracle of Posidippus at Thalamia in Laconia, where answers were given in dreams while persons spent the night in the temple. (Plut. Cleom. 7, Agis, 9; Cic. de Div. i. 43.)

8. Oracle of Phrixus, in Iberia near Mount Caucasus, where no rams were allowed to be sacrificed. (Strab. xi. p. 430; Tacit. Annal. vi. 34.)

V. ORACLES OF THE DEAD.

Another class of oracles are the oracles of the dead (νεκρομαντείαν ή ψευδομαντείαν), in which those who consulted called up the spirits of the dead, and offered sacrifices to the gods of the lower world. One of the most ancient and most celebrated places of this kind was in the country of the Thesprians near lake Aornos. (Diod. iv. 22; Herod. v. 92. § 7; Paus. ix. 30. § 3.) Another oracle of this kind was at Heraclea on the Propontis. (Plut. Cim. 6.)

VI. ITALIAN ORACLES.

Oracles, in which a god revealed his will through the mouth of an inspired individual, did not exist in Italy. The oracles of Calchas and Aesculapius mentioned above were of Greek origin, and the former was in a Greek heroum on mount Garganus. The Romans, in the ordinary course of things, did not feel the want of such oracles as those of Greece, for they had numerous other means to discover the will of the gods, such as the Sibylline books, augury, haruspices, signs in the heavens, and the like, which are partly described in separate articles and partly in Divinatio. The only Italian oracles known to us are the following:—

1. Oracle of Pausanias. His oracles are said to have been given in the Saturnian verse, and collections of his vaticinia seem to have existed at an early period. (Aurel. Vict. De Orig. gent. Rom. c. 4.) The places where his oracles were given were two groves, the one in the neighbourhood of Titour, round the well of Albunea, and the other on the Aventine. (Virg. Aen. vii. 81, &c.; Ovid, Fast. iv. 650, &c.) Those who consulted the god in the grove of Albunea, which is said to have been restored to by all the Italians, had to observe the following points:—The priest first offered a sheep and other sacrifices to the god. The skin of the victim was spread on the ground, and the consul-tor was obliged to sleep upon it during the night, after his head had been thrice sprinkled with pure water from the well, and touched with the branch of a sacred beech tree. He was, moreover, obliged several days before this night to abstain from animal food and from matrimonial connections, to be clothed in simple garments, and not to wear a ring on his fingers. After he fell asleep on the sheep-skin he was believed to receive his answer in wonderful visions and in converse with the god himself. (Virg. l. c.; Isidor. viii. 11. 87.) Ovid (l. c.) transfers some of the points to be observed in order to obtain the oracle on the Albanum, to the oracle on the Aventine. Both may have had much in common, but from the story which he relates of Numa it seems to be clear that on the Aventine certain different ceremonies also were observed.

2. Oracles of Fortuna existed in several Italian towns, especially in Latium, as at Antium and Praeneste. In the former of these towns two
sisters Fortunae were worshipped, and their statues used to bend forward when oracles were given. (Macrobi. Sat. i. 29; compare Horat. Carm. i. 35. 1; Suet. Calig. 57 with Ernesti's note; Domit. 15.) At Praeneste the oracles were derived from lots (sortes), consisting of sticks of oak with ancient characters graven upon them. The lots were said to have been found by a noble Praenestine of the name of Numerius Suffucius, inside of a rock which he had cleft open at the command of a dream by which he had been haunted. The lots, when an oracle was to be given, were shaken up together by a boy, after which one was drawn for the person who consulted the goddess. (Cic. 41.) The lots of Praeneste were, at least with the oracle at Dodona, for a woodpecker of Rome, At Praeneste the oracles were derived from lots characters graven upon them. These lots were the name of Numerius Suffucius, inside of a rock which he had cleft open at the command of a dream by which he had been haunted. The lots, when by a boy, after which one was drawn for the per oracle. wiping the face, and appears to have been employed for much the same purposes as our pocket-handkerchief. It was made of silk or linen. In the Oraria, *M. Aug.* (p. 804. 27, ed. Syllb.) it is explained by *proσwπνων θακαμεγιων*. Aurelian introduced the practice of giving *Oraria* to the Roman people to use *ad favorem*, which appears to mean for the purpose of waving in the public games in token of applause, as we use our hats and handkerchiefs for the same purpose. (Vopisc. *Aerel. 48; Casabon ad loc.; Augustin, de Civ. Dei, xxii. 8; Prudent. *Pei Συλλεκτικου* ; Hieron. ad Nuptian. Ep. 2.)

O R A T I O N E S P R I N C I P U M. The Orationes Principum are frequently mentioned by the Roman writers under the Empire, but those which are discussed under this head have reference to legislation only, and were addressed to the Senate. Under the Christian Emperors particularly, these Orationes were only a mode of promulgating Law as constituted by the Emperor; and we have an instance of this even in the reign of Probus ("Leges, quas Probus ederet, Sententias consultis propriis consequentes," Prob. Imp. ap. Plin. Vopisc. 13.) and in a passage of the Institutes of Justinian (2. tit. 17. s. 7), the expression "Divi Pertinacis oratione cunctum est." Under the earlier Emperors, the Orationes were in the form of propositions for laws addressed to the Senate, who had still in appearance, though not in reality, the legislative power. This second kind of Orationes is often cited by the Classical Jurists, as in the following instance from Gaius (ii. 285)—"ex oratione Divi Hadriani Sententias consultum factum est."—"Orationes Divi Marci, quanquam S. C. secundum est." (Paulus, Dig. 23. tit. 2. s. 16.)

Many of the Orationes of the Roman emperors, such as are quoted by the Augustae Historiae Scriptorum, are merely communications to the Senate; such for instance as the announcement of a victory. (Maxim. Duq. ap. J. Capit. 12, 13.) These Orationes are sometimes called *Litterae* or *Epistolae* by the non-juridical writers; but the juridical writers appear to have generally avoided the use of Epistolae in this sense, in order not to confound the Imperial Orationes with the Rescripta which were often called Epistolae. It appears that the Roman jurists used the term *Orationes Principis* as equivalent, for the passages which have been referred to in support of the opinion that these two words had a different sense (Dig. 6. tit. 3. s. 20, 22), show that Libellus and Oratio Principis are the same, for the Oratio is here spoken of by both names. These Orationes were sometimes pronounced by the Emperor himself, but apparently they were commonly in the form of a written message, which was read by the Quaestors (Dig. 1. tit. 15); in the passage last referred to, these Imperial messages are called indirectly *Libellus* or *Epistolae*. *Suetonius* (Titus, 6) says, that Titus sometimes read his father's orationes in the senate, "quae pertinebant ad Reipublicam." We frequently read of *Litterae* and Orationes being sent by the Emperor to the Senate. (Tacit. Ann. iii. 52, xvi. 7.) The mode of proceeding upon the receipt of one of these Orationes may be collected from the preamble of the Senatusconsultum contained in the Digest (5. tit. 3). These Orationes were the foundation of the Senatusconsulta which were framed upon them, and when the Orationes were drawn up with much regard to detail, they contained in fact the provisions of the subsequent Senatusconsultum. This appears from the fact that the Oratio and the Senatusconsultum are often cited indifferently by the classical jurists, as appears from numerous passages. (Dig. 2. tit. 15. s. 5; 5. tit. 3. s. 20, 22, 40; 11. tit. 4. s. 3, &c.) The Oratio is cited as containing the reasons or grounds of the law, and the Senatusconsultum for the particular provisions and words of the law. To the time of Septimius Severus and his son Caracalla, numerous Senatusconsulta, founded on Orationes, are mentioned; and numerous Orationes of these two Emperors are cited. But after this time they seem to have fallen into disuse, and the form of making and promulgating Laws by Imperial constitutions was the ordinary mode of legislation. There has been much discussion on the amount of the influence exercised by the Orationes Principum on the legislation of the Senate. But it seems to be tolerably clear, from the evidence that we have, and from the nature of the case, that the Oratio might either recommend generally some legislative measure, and leave the details to the Senate; or it might contain and detail the provisions of the proposed measure, and so be in substance, though not in form, a Senatusconsultum; and it would become a Senatusconsultum on being adopted by the Senate, which, in the case supposed, would be merely a matter of form. In the case of an Oratio, expressed in more general terms, there is no reason to suppose that the recommendation of the Emperor was less of a command; it was merely a command in more general terms. (Zimmern, Geschichte des Röm. Privatrechts, i. p. 79; and Dirksen, Ueber die Beden des Röm. Kaiser und deren Einfluss auf die Gesetzgebung, in Rhein. Mus. für Jurisprudenz, vol. ii.)

O R A T O R. Cicero remarks (Or. Part. c. 28) that "a certain kind of causes belong to Jus Civile, and that Jus Civile is conversant about Laws (Lex) and Custom (mos) appertaining to things
public and private, the knowledge of which, though neglected by most orators, seems to me to be necessary for the purposes of oratory." In his treatise on the Orator, and particularly in the first book, Cicero has given his opinion of the duties of an orator and his requisite qualifications, in the form of a dialogue, in which Lucius Licinius Crassus and M. Antonius are the chief speakers. Crassus was himself a model of the highest excellence in oratory: and the opinions attributed to him as to the qualifications of an orator were those of Cicero himself, who in the introductory part of the first book (c. 6) declares that "in his opinion no man can deserve the title of a perfect orator, unless he has acquired a knowledge of all things and of all arts; for it is out of knowledge that oratory must blossom and expand, and if it is not founded on matter which the orator has fully mastered and understood, it is idle talk, and may almost be called puerile." According to Crassus the province of the Orator embraces everything: he must be enabled to speak well on all subjects. Consequently he must have a knowledge of the Jus Civile (i. 44, &c.), the necessity for which Crassus illustrates by instances; and he should not only know the Jus Civile, as being necessary when he has to speak in causes relating to private matters and to private suits, but he should also have a knowledge of the Jus Publicum which is conversant about a State as such, and he should be familiar with the events of history and instances derived from the experience of the past. Antonius (i. 49) limits the qualifications of the orator to the command of language pleasant to the ear and of arguments adapted to convince in causes in the forum and on ordinary occasions. He further requires the orator to have competent voice and action and sufficient grace and ease. Antonius (i. 58) contends that an orator does not require a knowledge of the Jus Civile, and he instances the case of himself; for Crassus allowed that Antonius could satisfactorily conduct a cause, though Antonius admits (i. 59) that as there were many essentials to an orator, which were of difficult attainment, he says that it would be unwise to distract him with other things. Some requisites of oratory, such as voice and gesture, could only be acquired by discipline; whereas a competent knowledge of the law of a cause (jus utilitas) could be got at any time from the jurisconsulti (periti) or from books. Antonius thinks that the Roman orators in this matter acted more wisely than the Greek orators, who being ignorant of law had the assistance of law fellows, who worked for hire, and were called Pragmatists (i. 45): the Roman orators entrusted the maintenance of the law to the high character of their professed Jurists.

So far as the profession of an advocate consists in the skilful conduct of a cause, and in the sup-
porting of his own side of the question by proper argument, it must be admitted with Antonius that a very moderate knowledge of law is sufficient; and indeed even a purely legal argument requires not so much the accumulation of a vast store of legal knowledge as the power of handling the matter when it has been collected. The method in which this consummate master of his art managed a cause is stated by himself (de Or. ii. 72); and Cicero in another passage (Brutus, 37) has recorded his merits as an orator. Servius Sulpicius, who was the greatest lawyer of his age, had a good practical knowledge of the law, but others had this also, and it was something else which distinguished Sulpicius from all his contemporaries—"Many others as well as Sulpicius had a great knowledge of the law; he alone possessed it as an art. But the knowledge of law by itself would never have helped him to this without the possession of that art which teaches us to divide the whole of a thing into its parts, by exact definition to develop what is imperfectly seen, by explanation to clear up what is obscure; first of all to see ambiguities, then to disentangle them, lastly to have a rule by which truth and falsehood are distinguished, and by which it shall appear what consequences follow from premises and what do not." (Brut. 41.) With such a power Sulpicius combined a knowledge of letters and a pleasant style of speaking. As a forensic orator then he must have been one of the first that ever lived; but still among the Romans his reputation was that of a jurist, while Antonius, who had no knowledge of the law, is put on a level as an orator (patronus) with L. Crassus, who of all the eloquent men of Rome had the best acquaintance with the law.

Oratory was a serious study among the Romans. Cicero tells us by what painful labour he attained to excellence. (Brut. 91, &c.) Roman oratory reached its perfection in the century which preceded the Christian era. Its decline dates from the establishment of the Imperial power under Augustus and his successors; for though there were many good speakers, and more skilful rhetoricians under the empire, the oratory of the republic was rendered by circumstances unsuitable for the senate, for the popular assemblies, or for cases of crimes and high misdemeanours.

In the Dialogue De Oratoribus, which is attributed to Taullus, Messala, one of the speakers, attempts (c. 28, &c.) to assign the reasons for the low state of oratory in the time of Vespasian, when the Dialogue was written, compared with its condition in the age of Cicero and of Cicero's predecessors. He attributes its decline to the neglect of the discipline under which children were formerly brought up, and to the practice of resorting to rhetoricians ( rhetores) who professed to teach the oratorical art. This gives occasion to speak more at length of the early discipline of the old orators and of Cicero's course of study as described in the Brutus. The old orators (c. 34) learned their art by constant attendance on some eminent orator and by actual experience of business; the orators of Messala's time were formed in the schools of Rhetoric, and their powers were developed in exercises on fictitious matters. These, however, it is obvious, were only secondary causes. The immediate causes of the decline of eloquence appear to be indicated by Maternus, another speaker in the Dialogue, who attributes the former flourishing
condition of eloquence to the political power which oratory conferred on the orator under the Republic, and to the party struggles and even the violence that are incident to such a state of society. The allusion to this fact is produced by the establishment of the Imperial power is clear enough in the following words, which refer both to the Imperial and the Republican periods: "cum mixtis omnibus et modere uno carentibus, tantum quique orator separat, quantum erranti populo persuaderi poterat."

The memorials of Roman oratory are the orations of Cicero; but they are only a small portion of the great mass of oratorical literature. The fragments of the Roman orators from Appius Caecus and M. Porcius Cato to Q. Aurelius Symmachi, have been collected by H. Meyer, Zürich, 1 vol. 8vo. 2d ed. 1842. [G. L.]

ORBUS. [Leges Juliae, p. 692, b.]
ORCA. [Stellae.
ORCHE'SIS (δέρσις). [Saltatio.
ORCHESTRA. [Theatrum.
ORCINUS LIBERTUS. [Manumissio.
ORCINUS SENATOR. [Senatus.
ORDINARIUS JUDEX. [Judex Pedaneus.
ORDINARIUS SERVUS. [Servus.
ORDO is applied to any body of men, who form a corporation in the community, either by possessing distinct privileges, pursuing certain trades or professions, or in any other way. Thus Cicero (Verr. ii. 6) speaks of the "Ordo aratorum, sive pecuariorum, sive mercatorum." In the same way the whole body of sacerdotes at Rome is spoken of as an ordo (Festus, s. v. Ordo Sacerdotum), and separate ecclesiastical corporations are called by the same title. (Ordo collegii nostri, Orelli, Inser. n. 2417; Ordo Securitatis, Id. n. 2229.) The libertini and sciribae also formed separate ordinia. (Suet. de Grammat. 18; Cic. Verr. i. 47, iii. 79.) The Senate and the Equites are also spoken of respectively as the Ordo Senatorius and Ordo Eques-tris [Senatus; Equites]; but this name is never applied to the Plebes. Accordingly, we find the expression "Uterque Ordo" used without any further explanation to designate the Senatorial and Equestrian ordinia. (Suet. Aug. 15; Vell. Pat. ii. 100.) The Senatorial Ordo, as the highest, is sometimes distinguished as "amplissimus Ordo." (Plin. Ep. x. 3; Suet. Otho, 3, Vesp. 2.)

The Senate in colonies and municipia was called Ordo Decurionum (Dig. 59. tit. 2. § 3; Orelli, n. 1167; Colonia, p. 818, a), and sometimes simply Ordo (Tact. Hist. ii. 52; Dig. 50. tit. 2. s. § 3; Orelli, n. 3854), Ordo amplusissimus (Cic. pro Cael. 2), or Ordo splendidissimus (Orelli, n. 1180, 1181).

The term Ordo is also applied to a company or troop of soldiers, and is used as equivalent to Centuria: thus centuriones are sometimes called "qui ordines duxerunt" (Cic. Phil. i. 8; Caes. Bell. Civ. i. 15), and the first centuries in a legion "primi ordinis." (Caes. Bell. Gall. v. 20, 44.) Even the centuriones of the first centuries are occasionally called "Primi Ordines." (Caes. Bell. Gall. v. 30, vi. 7; Liv. xxx. 4; Gronov. ad loc.) [Comp. Exercitus, p. 501, b.]

ORGANON. [Hydoraula; Machina.
ORGIA. [Mysteria.
ORGULA (δρυγά), a Greek measure of length, derived from the human body, was the distance from extremity to extremity of the outer stretched arms, whence the name, from δέρα. (Xen. Mem. ii. 3. § 19; Pollux, ii. 158.) It was equal to 6 feet or to 4 cubits, and was 1-100th of the stadium. (Herod. ii. 149.) It may be expressed nearly in English by the word fathom. (Comp. Mensus; Tabulae.) [P. S.]

ORYCHALCUM (ορυχάλκες), a metallic compound, akin to copper and bronze, which was highly prized by the ancients. (See the passages in Forcellini, and the other Latin Lexicons.) The word has given rise to much doubt; but the truth seems to be that it denotes brass, with which the ancients became acquainted by fusing zinc ore (cadmium, calamine) with copper, although they appear to have had scarcely any knowledge of zinc as a metal. They appear to have regarded orichalcum as a sort of bronze. How little acquainted they were with its true formation is shown by the fact that, deceived by its colour, they supposed gold to be one of its constituents, and then perpetuated their error by a false orthography, aurichalcum. The true derivation is no doubt from ὄρος and χαλκός, that is, mountain-bronze, so called probably because it was obtained by fusing copper with an ore (metal as found in the mountain), and not with an already reduced metal. (See especially Strabo, with Groskurd's note, and Beckman, as quoted in the article MTA- LUM.)

ORIGINA'RI. [Colonatiss, p. 811, b.]

ORTHODO'RON. [Mensusa.
OSCHOPHORIA (οσχοφόρια or όσχοφόρια), an Attic festival, which according to some writers was celebrated in honour of Athena and Dionysus (Phot. p. 322, Beek.), and according to others in honour of Dionysus and Ariadne. (Plut. Thes. 23.) The time of its celebration is not mentioned by any ancient writer, but Corsini (Fast. Att. ii. p. 354) supposes with great probability that it was held at the commencement of the Attic month Pnympnsion. It is said to have been instituted by Theseus. Its name is derived from ὅσχος, ὅσχος, or ὅσχη, a branch of vines with grapes, for it was a vintage festival, and on the day of its celebration two youths, called ὅσχοφοροι, whose parents were alive, and who were elected from among the noblest and wealthiest citizens (Schoi. ad Nicand. Alexiph. 100), carried, in the disguise of women, branches of vines with fresh grapes from the temple of Dionysus in Athens, to the ancient temple of Athena Scira in Phalerus. These youths were followed by a procession of persons who likewise carried vine-branches, and a chorus sang hymns called ὅσχοφωρικα μελή, which were accompanied by dances. (Athos, xiv. p. 681.) In the sacrifice which was offered on this occasion, women also took part; they were called δωπισται, for they represented the mothers of the youths, carried the provisions (ὀφαλος και στίγμα) for them, and related stories to them. During the sacrifice the stuff of the herd was adorned with garlands, and when the libation was performed the spectators cried out ἄλειφα, ἄλον, ἄλον. (Plut. Thes. 22.) The ephebi taken from all the tribes had on this day a contest in racing from the city to the temple of Athena Scira, during which they also carried the ὅσχη, and the victor received a cup filled with five different things (πεντάπλασιος, πενταπλάδιος, or πενταπλάυ),
viz. wine, honey, cheese, flour, and a little oil. (Athen. xi. p. 435.) According to other accounts the victor only drank from this cup. The story which was symbolically represented in the rites and ceremonies of this festival, and which was said to have given rise to it, is related by Plutarch (Thes. 22, 23) and by Proclus (p. 383, ed. Gaisford). (Compare Bekker's Anecdota, p. 318; Etymol. Magn. and Hesych. s. v. Πάεις; Suidas, s. v. Παίας): [L.S.]

OSCILLUM, a diminutive through osculum from os, meaning "a little face," was the term applied to faces or heads of Bacchus, which were suspended in the vineyards to be turned in every direction by the wind. Whichever way they looked, they were supposed to make the vines in that quarter fruitful. (Virg. Georg. ii. 368—369.)

The left-hand figure in the annexed woodcut is taken from an oscillum of white marble in the British Museum. The back of the head is wanting, and it is concave within. The mouth and pupils of the eyes are perforated. It represents the countenance of Bacchus with a beautiful, mild, and propitious expression that it is corrupted from the Bacchanalian eios. Dionysius makes another mistake in assigning a laurel chaplet to the conqueror on these occasions, since all the Roman writers agree with Plutarch in representing that the myrtle crown, hence called Oeulis Corona, was a characteristic of the ovation. (Festus, s. v. Oeulis Corona; Plin. H. N. xx. 19; Plut. Gell. ll. cc.) Compare CORONA, p. 359, a.)

In later times, the victor entered upon horseback (Serv. in Virg. Aen. iv. 549), and the ovations celebrated by Octavius, Drusus, Tiberius, &c., are usually recorded by Dion Cassius by a reference to this circumstance. (Dion Cass. xlviii. 31, xlx. 15, liv. 8, 33, lv. 2.)

An ovation was granted when the advantage gained, although considerable, was not sufficient to constitute a legitimate claim to the higher distinction of a triumph, or when the victory had been achieved with little bloodshed, as in the case of Postumius Tubertus, who first received this honour (Plin. H. N. xx. 29) or when the war had not been completely terminated, which was one of the ostensible reasons for refusing a triumph to Marcellus on his return from Sicily (Plut. l. c.; Liv. xxvii. 21) or when the contest had been carried on against base and unworthy foes, and hence when the servile bands of Athenien and Spartacus were destroyed by Perperna and Cassius, these leaders celebrated ovations only (Florus, iii. 19; Plin. Gell. l. c.) although the latter by a special resolution of the senate was permitted to wear a laurel crown. [W.R.]

OVILE. [COMITIA, p. 336, b.]

OU'SIAS DIKE. [ENOIKIOU DIKE.]

OXYPHABIUM. [ACETABULUM.]

PAEAN.

PAEAN (παίας, παίδας, παιδόν), a hymn or song which was originally sung in honour of Apollo, and seems to be as old as the worship of this deity. The etymology of the word is doubtful. Some suppose that it obtained its name from Paon, the god of healing; but in the Homeric poems Paon is always spoken of as a separate divinity, distinct from Apollo. Other writers, with still less probability, connect it with παιδόν to strike.
The paean was always of a joyous nature, and its tune and sounds expressed hope and confidence. The sound of i̇ appeared to have been invariably connected with it. (Athen. xvi. pp. 696, e. f. 701, b. e.) It was sung by several persons, one of whom probably led the others, and the singers either marched onwards or sat at a table. Thus Achilles after the death of Hector calls upon his companions to return to the ships, singing a paean on account of the glory they had gained (I. xxii. 391); and the Achaean, after restoring Chryses to her father, are represented as singing a paean to Apollo at the end of the sacrificial feast, in order to appease his wrath. (H. 1. 478.) From these passages it is clear that the paean was a song of thanksgiving, when danger was passed, and also a hymn to propitiate the god. It was sung at the solemn festivals of Apollo, especially at the Hyma tantia (eis τα 'Ραυναν εἰς ταῦναν, Xen. Hell. iv. 5. § 11, Ages. ii. 17), and was also sung from very early times in the temples of the god. (Hom. Hymn. ad Apoll. 514; Eurip. Ion, 125, &c.)

The paean was also sung as a battle song, both before an attack on the enemy and after the battle was finished. (Thucyd. i. 50, iv. 43, ii. 91, vii. 44; Xen. Anab. i. 3, § 17, &c.) This practice seems to have chiefly prevailed among the Dorians, but it was also common among the other Greek states. The origin of it is said to have arisen from the fact, that Apollo sang it after his victory over the Pythonian dragon. The paean sung previous to an engagement was called by the Spartans παυάρ ἐστίν, (Plut. Lyce. 22.) The Scholiast on Thucydidès (i. 50) says, that the paean which was sung before the battle was sacred to Ares, and the one sung after to Apollo; but there are strong reasons for believing that the paean as a battle-song was in later times not particularly connected with this worship of Apollo. (Bode, Gesch. der lyrisch. Dichtkunst der Hellenen, vol. i. pp. 9, 10, &c.) It is certain that the paean was in later times sung to the honour of other gods besides Apollo. Thus Xenophon relates that the Lacedaemonians on one occasion sang a paean to Poseidon, to propitiate him after an earthquake (Hell. iv. 7. § 4), and also that the Greek army in Asia sang a paean to Zeus. (Anab. iii. 2, § 9.)

In still later times, paeanas were sung in honour of mortals. Thus Aratus sang paeanas to the honour of the Macedonian Antigonus (Plut. Cleom. 16) ; a paean, composed by Alexium was sung at Delphi in honour of the Macedonian Craterus; and the Rhodians celebrated Ptolemeus I., king of Egypt, in the same manner. (Athen. xv. p. 696, e. i.) The Chalcidians, in Plutarch's time, still continued to celebrate in a paean the praises of their benefactor, Titus Flamininus. (Plut. Flam. 16.) The practice of singing the paean at banquets, and especially at the end of the feast, when libations were poured out to the gods, was very ancient. It is mentioned by Alcman, who lived in the seventh century a. c. (Strab. x. p. 492.) The paean continued to be sung on such occasions till a late period. (Xen. Symp. ii. 1; Plut. Symp. vii. 8. § 4.)

(Müller, Hist. of Greek Literature, pp. 19, 20, Dori ans, ii. 6. § 4; Bode, Gesch. der lyrisch., &c. vol. i. pp. 7—77.)

PAE DAGOUS. [PAE DAGOUS.]

PAE DAGOUS (παεδαγούς), a tutor. The office of tutor in a Grecian family of rank and opulence (Plato, de Repub. i. p. 87, ed. Bekker, de Leg. vii. pp. 41, 42) was assigned to one of the most trustworthy of the slaves. The sons of his master were committed to his care on attaining their sixth or seventh year, their previous education having been conducted by females. Thus it was recognized that the tutor (μαγιστήρ) until they attained the age of puberty. (Ter. Andr. i. 1. 24.) His duty was to guard them from evil, both physical and moral, than to communicate instruction, to cultivate their minds, or to impart accomplishments. He went with them to and from the school or the Gymnasion (Plato, Lysis, p. 118); he accompanied them out of doors on all occasions; he was responsible for their personal safety, and for their avoidance of bad company. (I.ato, op. Athen. vii. p. 279.) The formation of their morals by direct superintendence belonged to the παεδαγός as public officers, and their instruction in the various branches of learning, i. e. in grammar, music, and gymnastics, to the διδάκτωρ or πρασευτήριον, whom Plato (ib. αξ., Xenophon (de Luc. Rep. i. 1, i. 2), Plutarch (de Lib. Ed.), and Quintilian (Inst. Or. i. 1. 8, 9) expressly distinguish from the παεδαγός. These latter even carried the books and instruments which were requisite for their young masters in studying under the sophists and professors. This account of the office is sufficient to explain why the παεδαγός so often appears on the Greek stage, both in tragedy, as in the Medea, Phoenissae, and Iom of Euripides, and in comedy, as in the Bacchides of Plautus. The condition of slavery accounts for the circumstance, that the tutor was often a Thracian (Plato, Alcib. i. p. 541, ed. Bekker), an Asiatic, as is indicated by such names as Lydus (Plaut. l. c.), and sometimes an eunuch. (Herod. viii. 75; Corn. Nep. Thesm. iv. 3; Polygen. i. 80, § 2.) Hence also we see why these persons spoke Greek with a foreign accent (πρωσιαφανίς, Plato, Lysis, p. 145, ed. Bekker). On rare occasions, the tutor was admitted to the presence of the daughters, as when the slave, sustaining this office in the royal palace at Thebes, accompanies Antigone while she surveys the besieging army from the tower. (Eurip. Phoen. 87—210.) Among the Romans the attendance of the tutor on girls as well as boys was much more frequent, as they were not confined at home according to the Grecian custom. (Val. Max. vi. 1, § 3.) As luxury advanced under the emperors, it was strikingly manifested in the dress and training of the beautiful young slaves who were destined to become paedagogi, or, as they were also termed, paedagogia and pueri paedagogiani. (Plin. H. N. xxxiii. 12. a. 54; Sen. Epist. 124, De Vita beata, 17; Tertull. Apol. 13.) Augustus assigned them to a separate place, near his own, at the public spectacles. (Sueton. Aug. 44.) Nero gave offence by causing free boys to be brought up in the delicate habits of paedagogi. (Sueton. Ner. 26.) After this period numbers of them were attached to the imperial family for the sake of state and ornament, and not only is the modern word page a corruption of the ancient appellation, but it aptly expresses the nature of the service which the paedagogia at this later era afforded.

In palaces and other great houses the pages slept and lived in a separate apartment, which was also called paedagogium. (Plin. Epist. vii. 27.) [J. Y.]
PAEDO'NOMUS (παιδόνομος), was a magistrate at Sparta, who had the general superintendence of the education of the boys. His office was considered very honourable, and he was always chosen from the noblest citizens. He had to make a general inspection of the boys, and to punish severely all those who had neglected or idled; for which purpose μαστιγοφόροι were assigned to him by Lycurgus. Those who were refractory he might bring before the Ephors. The more immediate inspection of the gymnastic exercises of the boys belonged to magistrates called Ἰδιαῖοι. [BIBL.]

PAEDOTRIBAE (παιδοτριβαί), [GYNMNSIUM, p. 581, b.]

PAE'NULA was a thick cloak, chiefly used by the Romans in travelling instead of the toga, as a protection against the cold and rain. (Cic. pro Mil. 20; Quintil. vi. 3. § 66.) Hence we find the expression of scindere paenulum (Cic. ad Att. xii. 33) used in the sense of greatly pressing a traveller to stay at one's house. The paenula was worn by women as well as by men in travelling. (Dig. 34. tit. 2. s. 23.) It appears to have been a long cloak without sleeves, and with only an opening for the head, as is shown in the following figure taken from Bartholinii. If this is a real example of a paenula, it would seem that the dress was sewed in front about half way down, and was divided into two parts, which might be thrown back by the wearer so as to leave the arms comparatively free; it must have been put on over the head. This figure explains the expression of Cicero (pro Mil. l. c.), "paenula irrctitus;" and of the author of the Dialogus de Oratoribus (c. 39), "paenula adstricti et velut inclusi."

The paenula was usually made of wool (Plin. H. N. viii. 48. a. 78), and particularly of that kind which was called Gausapa (Gausapa, Mart. xiv. 145). It was also sometimes made of leather (paenula scorteae, Mart. xiv. 130). Seneca (Quaest. Nat. iv. 6) speaks of "paenulae aut scorteae," but he appears only to use this expression because paenulae were usually made of wool. (Bartholini, de Paenula; Becker, Gallus, vol. ii. p. 93.)

PAGANA'NIA. [PAGI.]

PAGA'NI. [PAGI.]

PAGA'NIC. [PILA.]

PAGI, were fortified places, to which the country-people might retreat in case of an hostile inroad, and are said to have been instituted by Servius Tullius (Dionys. iv. 15); though the division of the country-people into pagi is as old as the time of Numa (Dionys. ii. 76.) Each of the country-tribes was divided into a certain number of pagi; which name was given to the country adjoining the fortified village, as well as to the village itself. There was a magistrate at the head of each pagus, who kept a register of the names and of the property of all persons in the pagus, raised the taxes, and summoned the people, when necessary, to war. Each pagus had its own sacred sites, and an annual festival called Paganalia. (Dionys. iv. 15; Varro, de Ling. Lat. vi. 24, 26, ed. Müller; Macrobi. Saturn. i. 16; Ovid, Fast. i. 569.) The Paganii, or inhabitants of the pagi, had their regular meetings, at which they passed resolutions, many of which have come down to us. (Orelli, Inscr. n. 3793, 4056, 106, 202, 2177.) The division of the country-people into pagi continued to the latest times of the Roman empire, and we find frequent mention of the magistrates of the pagi under the names of Magistri, Praefecti or Praepositi pagorum. (Orelli, Inscr. n. 121, 3795, 3796; Cod. Theod. 2. tit. 30. s. 1; B. tit. 15. s. 1; Waller, Geschichte des Röm. Rechts, §§ 26, 164, 247, 306, 2a ed.)

The term Pagni is often used in opposition to milites, and is applied to all who were not soldiers, even though they did not live in the country. (Milites et pagani, Plin. Ep. x. 18; Juv. xvi. 32; Suet. Aug. 27, Galb. 19; Dig. 11. tit. 4. e. 1; 48. tit. 19. s. 14, &c.) Hence we find Pagni or citizens applied as a term of reproach to soldiers who did not perform their duty (Tacit. Hist. iii. 24) in the same way as Julius Caesar addressed his rebellious soldiers on one occasion as Quirites. The Christian writers gave the name of Pagni to those persons who adhered to the old Roman religion, because the latter continued to be generally believed by the country-people, after Christianity became the prevailing religion of the inhabitants of the towns. (Isidorus, viii. 10; Cod. Theod. 16. tit. 10; Cod. Just. i. tit. 11.)

PAL'A (παλά), a spade. (Cato de Re Rust. 10; Plin. H. N. xvii. 17. s. 27, xvii. 32. s. 55.) The spade was but little used in ancient husbandry, the ground having been broken and turned over by the plough, and also by the use of large hoes and rakes. (Ligo; Rast. Trum.) But in some cases a broad cutting edge was necessary for this purpose, as, for example, when the ground was full of the roots of rushes or other plants. (Plin. H. N. xviii. 8.) Also in gardening it was an indispensable instrument, and it was then made on the same principle as the
plough-share, viz. by casing its extremity with iron. (Colum. x. 43.) The annexed woodcut, taken from a funeral monument at Rome (Fabretti, Inscrip. Ant. p. 574), exhibits a deceased countryman with his falk and bidens, and also with a pala, modified by the addition of a strong cross-bar, by the use of which he was enabled to drive it nearly twice as deep into the ground as he could have done without it. In this form the instrument was called biplatum, being employed in trenching (passinatio), or, when the ground was full of roots to a considerable depth, in loosenning them, turning them over, and extirpating them, so as to prepare the soil for planting vines and other trees. By means of this instrument, which is still used in Italy and called everga, the ground was dug to the depth of two spades or nearly two feet. (Plin. H. N. x. viii. 26, s. 62; Cat. de Re Rust. 6, 45, 151; Varr. de Re Rust. i. 37; Col. de Re Rust. v. 6. p. 214, xi. 3. p. 450, ed. Bip.)

Cato (Ibid. 11) mentions wooden spades (palas lignea) among the implements necessary to the husbandman. One principal application of them was in winnowing. The winnowing-shovel, also called in Latin ventilabrum, is still generally used in Greece, and the mode of employing it is exhibited by Stuart in his "Antiquities of Athens." The corn which has been threshed lies in a heap upon the floor, and the labourer throws it to a distance, and the wind, blowing strongly across the direction in which it is thrown, drives the chaff and refuse to one side. (Theocrit. vii. 150; Matt. iii. 12; Luke, iii. 17.) The fruit of leguminous plants was purified and adapted to be used for food in the same manner. (Hom. I. v. 499—502, xiii. 598—592.)

The term pala was applied anciently, as it is in modern Italian, to the blade or broad part of an ear. [Remus.] In a ring the broad part, which held the gem, was called by the name of pala [Annulus].

PALAEOSTE. [PALMUS; MENSURA,b. 751, b.]

PALAESTRA (σαλαστρα) properly means a place for wrestling (παλαιστην, παλα), and appears to have originally formed a part of the gymnasion. The word was, however, used in different senses at various periods, and its exact meaning, especially in relation to the gymnasion, has occasioned much controversy among modern writers. It first occurs in Herodotus (vi. 126, 128), who says that Cleisthenes of Sicyon built a dromos and a palaestra, both of which he calls by the general name of palaestra. At Athens, however, there was a considerable number of palaestrae, quite distinct from the gymnasion, which were called by the names either of their founders, or of the teachers who gave instruction there; thus, for example, we read of the palaestra of Taurom. (Plut., Charmid. init.) Krause (Gymnastik und Agonistik der Hellenen, p. 117, &c.) contends that the palaestrae at Athens were appropriated to the gymnastic exercises of boys and youths (παιδες and μεταξα), and the gymnasion to those of men; but Becker (Charikles, vol. i. pp. 311, 335, &c.) has shown that this cannot be the true distinction, although it appears that certain places were, for obvious reasons, appropriated to the exclusive use of boys. (Aesch. c. Timarch. p. 35, Reiske.) But that the boys exercised in the gymnasion as well, is plain from many passages (Antiph. de Grec. Histor. vol. p. 661, Reiske; παις ἐφοσίαν ἀπο γυμνασιον, Aristoph. Av. 138, 140); while, on the other hand, we read of men visiting the palaestrae. (Lucian, Nav. 4. vol. iii. p. 251, Reitz.)

It appears most probable that the Palaestrae were, during the flourishing times of the Greek republics, chiefly appropriated to the exercises of wrestling and of the panentrium, and were principally intended for the athletes, who, it must be recollected, were persons that contended in the public games, and therefore needed special training. This is expressly stated by Plutarch (Symp. iv. 4), who says, "that the place in which all the athletes exercise is called a palaestra;" and we also learn from Pausanias (v. 15. § 5, vi. 21. § 2), that there were at Olympia palaestrae especially devoted to the athletes. In Athenaeus (x. p. 417, f) we read of the great athletes Damippus coming out of the palaestra; and Galen (τρητι ς του δια μειραν σφαλας γυμνασιον, c 5) places the athletes in the palaestra. (Krause, Ibid. p. 115.)

The Romans had originally no places corresponding to the Greek gymnasia and palaestrae; and when towards the close of the republic, wealthy Romans, in imitation of the Greeks, began to build houses for exercise, in their villas, they called them indifferently gymnasia and palaestrae. (Cic. ad Att. i. 4, 8, 9, 10, ad Qu. Fr. iii. i. § 2, Vorr. v. 73.) The words were thus used by the Romans as synonymous; and accordingly we find that Vitruvius (v. 11) gives a description of a Greek gymnasion under the name of palaestra.

PALA'TIA. [PALUS.]

PALATI'NI LUDI. [LUDI PALATINII.]

PALEE (παλα). [LUCTA.]

PALILTA. [LUCITED.]
PALILIA.

s. v. Parilia; Cic. de Divin. ii. 47; Varro, de Rer. Rust. ii. 1; Plin. H. N. xviii. 66; and some of the rites customary in later times were said to have been first performed by Romulus when he fixed the pomerium. (Dionys. l. c.) Ovid (Fast. iv. 731, &c.) gives a description of the rites of the Palilia, which clearly shows that he regarded it as a shepherd-festival, such as it must originally have been when the Romans were real shepherds and husbandmen, and as it must have continued to be among country-people in his own time, as is expressly stated by Dionysius; for in the city itself it must have lost its original character, and have been regarded only as the dies natalitius of Rome. The connection, however, between these two characters of the festival is manifest, as the founders of the city were, as it were, the kings of shepherds, and the founders of a religion suited to shepherds.

The first part of the solemnities, as described by Ovid, was a public purification by fire and smoke. The things burnt in order to produce this purifying smoke were the blood of the October-horse, the ashes of the calves sacrificed at the festival of Ceres, and the shells of beans. The people were also sprinkled with water; they washed their hands in spring-water, and drank milk mixed with must. (Ovid. Fast. l. c.; compare Propert. iv. 1. 20.) As regards the October-horse (equus October) it must be observed that in early times no bloody sacrifice was allowed to be offered at the Palilia, and the blood of the October-horse, mentioned above, was the blood which had dropped from the tail of the horse sacrificed in the month of October to Mars in the Campus Martius. This blood was preserved by the Vestal virgin in the temple of Vesta for the purpose of being used at the Palilia. (Solin. p. 2; &c.; Fest. s. v. October equus; Plut. Romul. 12.) When towards the evening the shepherds had fed their flocks, laurel-branches were used as brooms for cleaning the stables, and for sprinkling water through them, and lastly the stables were adorned with laurel-boughs. Hereupon the shepherds burnt sulphur, rosemary, fir-wood, and incense, and made the smoke pass through the stables to purify them; the flocks themselves were likewise purified by this smoke. The sacrifices which were offered on this day consisted of cakes, milk, milk, and other kinds of eatables. The shepherds then offered a prayer to Pales. After these solemn rites were over, the cheerful part of the festival began: bonfires were made of heaps of hay and straw, and under the sounds of cymbals and flutes the sheep were again purified by being compelled to run three times through the fire, and the shepherds themselves did the same. The festival was concluded by a feast in the open air, at which the people sat or lay upon benches of turf, and drank plentifully. (Tibull. ii. 5. 87, &c.; compare Propert. iv. 4. 75.)

In the city of Rome the festival must, at least in later times, have been celebrated in a different manner; its character of a shepherd-festival was forgotten, and it was merely looked upon as the day on which Rome had been built, and was celebrated as such with great rejoicings. (Athen. viii. p. 361.) In the reign of Caligula it was decreed that the day, on which this emperor had come to the throne, should be celebrated under the name of Palilia, as if the empire had been revived by him, and had commenced its second existence. (Suet. Calig. 16.) Athenaeus (l. c.) says, that before his time the name Palilia had been changed into Romana (Ῥωμαία). Whether this change of name was occasioned by the decree in the reign of Caligula just mentioned, is unknown. (Comp. Hartung, Die Relig. der Römer, vol. ii. p. 150, &c.)

PALIMPSESTUS. [Liber.]

PALLA. [PALLIUM.]

PALLACE (παλάκης). [Concubina.]

PALLIATA FA'BULA. [Comedia, p. 346.]

PALLIUM, dim. PALLIOLUM, poct. PALLA (Plaut. Men. ii. 3. 41—47; Ovid. Amor. iii. 1. 12, ii. 2. 25) (ιμάχτων, dim. ἰματίσιον; Ion. and post. φαύς). The English cloak, though commonly adopted as the proper translation of these terms, conveys no accurate conception of the form, material, or use of which they denoted. The article designated by them was always a rectangular piece of cloth, exactly, or at least nearly, square (περιεράδια, Pallium ap. Athen. v. p. 213; quadrangularis, Tertull. de Pall., 1). Hence it could easily be divided without loss or waste into four parts. (John, xix. 23.) It was indeed used in the very form in which it was taken from the loom [Tela], being made entirely by the weaver (τοὶ ιμάχτων ὅφθαλμος, Plat. Charm. pp. 86, 98, ed. Heindorf; Hipp. Min. p. 210, ed. Bekker), without any aid from the tailor except to repair (αἱρείει, δικείει) the injuries which it sustained by time. Although it was often ornamented, more especially among the northern nations of Europe, with a fringe [FIMBRIAE], yet this was commonly of the same piece with the pallium itself. Also whatever additional richness and beauty it received from the art of the dyer, was bestowed upon it before its materials were woven into cloth or even spun into thread. Most commonly it was used without having undergone any process of this kind. The raw material, such as wool, flax, or cotton, was manufactured in its natural state, and hence blankets and sheets were commonly white (Αεαία ιμάτσια, Artemidor. ii. 3), although from the same cause brown, drab, and grey were also prevailing colours. The more splendid and elegant tints were produced by the application of the murex (μυρίτα, conchylia, purpurea, vestis; πορφυρόνθι, δραγυρή ιμάτσια, Heerlides Pont. ap. Athen. xii. p. 512), the kermes (coccineus, κόκκινος), the angol (fuscus), and the saffron (crocus, κροκότης). [Crocota.] Pale green was also worn (σφιδρικὸς, Pollux, Onom. vii. 56). Black and grey pallia were either made from the wool of black sheep (Theocrit. v. 96) or were the result of the art of the dyer. They were worn in mourning (μαύρον ιμάτσια, Xen. Hell. Gr. i. 7. § 8; Artemidor. l. c.; σκιά λόφιτα, Inscript. in Fellows’s Journal, 1835, p. 31.), and by sorceresses. (Hor. Sat. i. 8. 23.) The pallium of one colour (ιμάχτων, literally “the self-coloured,” Artem. l. c.) was distinguished from the variegated (τουκλίον) and of this latter class the simplest kinds were the striped (βαλβώτων, Xen. Cyrop. vii. 8. § 8), in which the effect was produced by inserting alternately a woof of different colours, and the check or plaid (εκατολυταμ, tesselatum), in which the same colours were made to alternate in the warp also. Zeusis, the painter, exhibited at the Olympic games a plaid having
PALLIUM.

An endless variety was produced by interweaving sprigs or flowers in the wool (ἐκδει αὔτων, Plat. Repul., viii. p. 401, ed. Bekker). By the same process carried to a higher degree of complexity and refinement, whole figures and even historical or mythological subjects were introduced, and in this state of advancement the weaving of palla was the elegant and worthy employment of females of the first distinction (Hom. H. iii. 125—128, xxii. 440, 441), and of Athena, the inventor of the art, herself. (Apollo. Rhod. ii. 73—78.) The greatest splendour was imparted by the use of gold thread. (Plin. iv. 3), and in size, some of these differences were expressed by the diminutives of ἑσπερινός, Soph. Trach. 916, compare 537; ἐλαῖα, Theocr. xviii. 19, xxiv. 25; Hom. Od. xiv. 500—521, xvii. 186, 179, xx. 4, 95, 143; ἱλαία, Virg. in Van. 159—184; ἀλαία, Alciphron, l. c.; pallium, Juv. vii. 202; Spartan, Hadr. 22). In many of these cases it is to be observed, that the same pallium which was worn as a garment by day served to sleep in at night, in exact agreement with the practice which to the present day prevails among the Bedouin Arabs, who constantly use their large hyked for both purposes. [Lūcctus; Lourix; Tapes.]

I. They were spread over beds and couches, and to cover the body during sleep (ἰμάτιον, Aelian, V. H. viii. 7, xii. 1; Deut. xxiv. 13; ἰματισμὸς, Theophr. Char. 23; φάφος, Soph. Trach. 916, compare 537; ἰματιοῦς, Theocr. xviii. 19, xxiv. 25; Hom. Od. xiv. 500—521, xvii. 186, 179, xx. 4, 95, 143; ἱλαία, Virg. in Van. 159—184; ἀλαία, Alciphron, l. c.; pallium, Juv. vii. 202; Spartan, Hadr. 22). In many of these cases it is to be observed, that the same pallium which was worn as a garment by day served to sleep in at night, in exact agreement with the practice which to the present day prevails among the Bedouin Arabs, who constantly use their large hyked for both purposes. [Lūcctus; Lourix; Tapes.]

II. They were spread on the ground and used for carpets. Cidius, the friend of Alexander, when he held a levee, appeared walking εἰς πορφυρόν ἱμάτιον. (Athen. xii. p. 539, c.) This was an affectation of Eastern luxury. When the people at Jerusalem spread their hykes upon the ground (as recorded in St. Matt. xxii. 8; St. Mark, xi. 8; St. Luke, xix. 36) they intended thereby to recog

...
PALLIUM.

been to the fuller (ἀδυνατα, Plut. Symp. Probd. vi. 6), were wrapped round ice and snow to keep them from melting.

IX. A fine white blanket was sometimes used as a shroud (φάρος ταφην, Hom. I. xviii. 355; Od. ii. 94—100; ἑμύδατον, Xen. Cyrop. vii. 3. § 13).

X. In Asia, horses and other animals used to ride upon, were covered with beautiful pallina, especially upon occasions of ceremony or of rejoicing. Cyrus had 200 horses covered with striped cloths. (Xen. Cyrop. viii. 3. § 16.) When the Persian ambassador, a few years ago, went to the levee in London, his horses were in like manner covered, παθεωται ιματιον. Compare St. Matt. xxi. 7; St. Mark. xi. 7; St. Luke, xix. 35. [TAPES.]

XI. The newly-born infant was wrapped in a blanket (φάρος, Hom. Hymn. in Apoll. 121). [INCUNABULA.]

XII. Lastly, the pallium was the most common article of the AMICTUS. [CHLAMYS.] Hence we find it continually mentioned in conjunction with the TUNICA, which constituted the indutus. Such phrases as "coat and waistcoat," or "shoes and stockings," are not more common with us than such as those which follow, in ancient authors: tunica palliumque (Cic. in Verr. v. 52; Plaut. Epid. v. 2. 61); ιμάταν καλ χιτάνον in the will of a certain philosopher (Diog. Laer. v. 72); το ιμάτιον καὶ τὸν χιτωνίσκον; φάρος ἡπ χιτάνον (Hom. Ili. xxiv. 588, Od. viii. 425); καλαίνεν τ’ ἡπ χιτάνα (Hom. II. ii. 262, Od. iv. 50, v. 229, vii. 455, x. 365, 451, xiv. 132, 154, 320, 341, xv. 330, xvii. 89); χιλαίνε καὶ χιτωνίσκος. (Antiphanes, ap. Athen. xii. p. 545, a.) The following passages also exemplify the practice of naming these two articles of dress together: A. Gell. vi. 10; Plaut. Trin. v. 2. 30; Athen. v. p. 198, c, d, f; Theophrast. Char. 21; St. Matt. v. 40; St. John, xix. 23—25.

But although the pallium and tunica were always regarded as essential parts of an entire dress, yet each of them might be worn without the other. Cases in which the tunica was retained and the blanket laid aside, are explained under the article NUDUS. It is also evident that the pallium would not be the most convenient kind of dress when the wearer of it had occasion to run; and we find that in such circumstances it put away entirely (Hom. II. ii. 183, Od. xiv. 500) or folded it up as a Scottish Highlander folds his plaid, and threw it round his neck or over his shoulder. (Plaut. Capt. iv. 1. 12; iv. 2. 9; Ter. Phor. v. 6. 4.) On the other hand, to wear the pallium without the under-clothing indicated poverty or severity of manners, as in the case of Socrates (Xen. Mem. i. 6. § 29), Agesilaurus (Aelian, V.H. vii. 13), and Gelon, king of Syracuse. (Diod. Sic. xi. 26.)

The pallium was no doubt often folded about the body simply with a view to defend it from cold, and without any regard to gracefulfulness of appearance. It is thus seen on the persons of Poly- nices and Parthenopaeus in the celebrated intaglio, now preserved at Berlin, representing five of the heroes who fought against Thebes, and copied on an enlarged scale in the annexed woodcut. The names of the several heroes are placed beside them in Etruscan letters. This precious relic was found at Perugia. (Winckelmann, Descr. des Pierres gravées de Stosch, p. 344—347.) By a slight adaptation, the mode of wearing it was rendered both more graceful and more convenient. It was first passed over the left shoulder, then drawn behind the back and under the right arm, leaving it bare, and then thrown again over the left shoulder. Of this we see an example in a bas-relief engraved by Dodwell. (Tour through Greece, vol. i. p. 243.) Another very common method was to fasten the pallium with a brooch [FIBULA] over the right shoulder (ἀμφιπεραυδα, Hom. II. x. 131—136; Stat. Theb. vii. 658, 659; April. Flor. ii. 1), leaving the right arm at liberty, and to pass the middle of it either under the left arm so as to leave that arm at liberty also, or over the left shoulder so as to cover the left arm. We see Phocion attired in the last-mentioned fashion in the admired statue of him preserved in the Vatican at Rome. (Mus. Pio-Clement. vol. i. tav. 43.) (See woodcut.) The attachment of the pallium by means of the brooch caused it to depend in a graceful manner (demissa e humeris, Virg. Aen. iv. 263), and contributed mainly to the production of those dignified and elegant forms which we so much admire in ancient sculptures. When a person sat, he often allowed his pallium to fall from his shoulder, so as to envelop the lower part of his body only.

The sagum of the northern nations of Europe (see woodcut, p. 213) was a woolen pallium, fa-
PALLIUM.

PALUDAMENTUM.

583
tened, like that of the Greeks, by means of a brooch, or with a large thorn as a substitute for a brooch. (Tact. Germ. 17; Strabo, iv. 4. 3.) The Gauls wore in summer one which was striped and chequered, and to altogether wear with the plaid which distinguished their Scottish descendants in winter it was thick and much more simple in colour and pattern. (Diod. Sic. v. 30.) The Greeks and Romans also wore different pallia in summer and in winter. The thin pallium made for summer wear was called ἄρμος, δίμ, ἄρμιν (Aristoph. Ave, 173—177) and στεριῶν δίμ, στεριῶν (Hom. Od. ii. 103, vi. 179; Xen. Hist. Gr. iv. 5. § 4) in contradistinction from the warm pallium with a long nap, which was worn in winter (laena, Mart. xiv. 130; ἀλαίην, Moeris, s. v.; Hom. H. vii. 224, Od. xiv. 525; Plut. de Aud. p. 75, ed. Steph.; ἄρμαιον, Callim. Hymn. in Dian. 113.) This distinction in dress was, however, practised only by those who could afford it. Socrates wore the same pallium both in summer and winter. (Xen. Mem. i. 6. § 2.)

One kind of blanket was worn by boys, another by men (τὸ παιδικὸ, τὸ ἀνδρικὸν ἦτορμ, Plut. de Aud. init.) Women wore this garment as well as men. "Phocion's wife," says Aelian (V. H. vii. 9), "wore Phocion's pallium; " but Xanthippe, as related by the same author (vii. 10), would not wear that of her husband Socrates. (See also Hom. Od. v. 229, 230, x. 542, 543; Plut. Mor. iv. 236; Herod. v. 87.) When the means were not wanting, women wore pallia, which were in general smaller, finer, and of more splendid and beautiful colours than those of men (σομαίτια ἀνδρία, Aristoph. Eccles. 26, 75, 333), although men also sometimes displayed their fondness for dress by adopting in these respects the female costume. Thus Alcibiades was distinguished by his purple pallium which trailed upon the ground (Plut. V. H. 115). This dis
tinction in dress was, however, practised only by those who could afford it. Socrates wore the same pallium both in summer and winter. (Xen. Mem. i. 6. § 2.)

PALLIUM.

One kind of blanket was worn by boys, another by men (τὸ παιδικὸ, τὸ ἀνδρικὸν ἦτορμ, Plut. de Aud. init.) Women wore this garment as well as men. "Phocion's wife," says Aelian (V. H. vii. 9), "wore Phocion's pallium; " but Xanthippe, as related by the same author (vii. 10), would not wear that of her husband Socrates. (See also Hom. Od. v. 229, 230, x. 542, 543; Plut. Mor. iv. 236; Herod. v. 87.) When the means were not wanting, women wore pallia, which were in general smaller, finer, and of more splendid and beautiful colours than those of men (σομαίτια ἀνδρία, Aristoph. Eccles. 26, 75, 333), although men also sometimes displayed their fondness for dress by adopting in these respects the female costume. Thus Alcibiades was distinguished by his purple pallium which trailed upon the ground (Plut. V. H. 115). This distinction in dress was, however, practised only by those who could afford it. Socrates wore the same pallium both in summer and winter. (Xen. Mem. i. 6. § 2.)

Philosophers wore a coarse and cheap pallium, which from being exposed to much wear was called τρέβων and τρέβανων. (Aristoph. Plut. 397; Athen. v. p. 211, e; Thesm. Orcl. x. p. 153, ed. Dindorf; palaistra, Apul. Florid. i.) The same was worn also by poor persons (Isaeus, De De, p. 94, ed. Reiske; Polyb. Strat. vii. 35); by the Spartans (Athen. xii. p. 555, e; Aelian, V. H. vii. 13), and in a later age by monks and hermits (φανὸν τρέβανων, Synes. Epist. 147; sagum rustici, Hieron. Vita Hilar. i.) These blankets (τρεβωφορον, Palladii, Hist. Laus, in vita Sep, often went without a tunic, and they sometimes supplied its place by the greater size of their pallium. It is recorded of the philosopher Antisthenes, that "he first doubled his pallium" (Diog. Laërt. vi. 6, 12), in which contrivance he was followed by his brother Cyrus (Bruneau, Ancal. ii. 22; Hor. Epist. i. 7, 25), and especially by Diogenes, who also slept and died in it, and who according to some was the first inventor of this fashion. (Diog. Laërt. vi. 22, 77.) The large pallium, thus used, was called διπλοῖς (diplois, Isid. Hisp. Orig. xix. 24), and also Exomis, because, being worn with-out the fibula, it left the right shoulder bare, as seen in the preceding figure of Polynices, and in the bas-relief in Dodwell's Tour already referred to (Plaut. Mil. iv. 4. 43; Aelian, V. H. ix. 54); and, when a girdle was added round the waist, it approached still more to the appearance of the single-sleeved tunic, the use of which still remains.

Under the Roman republic and the early Em-pirs, the toga was worn by men instead of the pallium. They were proud of this distinction, and therefore considered that to be palliatus or sagatus instead of being togatus indicated an affectation of Grecian or even barbarian manners. (Graeco pallio amicus, Plin. Epist. iv. 11; Graeci palliati, Plaut. Curc. ii. 3, 9; Cic. Phil. v. 5, xiv. 1; Sueton. Jul. 48; Val. Max. ii. 6. § 10.) Cæcina, on his return from the north of Europe, offended the Romans (togatus) by addressing them in a phæ (varisellare sagula) and trowsers. (Dhaxieu, (Tact. Hist. ii. 20.) [J. Y.]

PALMIPES, i. e. pes et palmus, a Roman measure of length, equal to a foot and a palm; or a foot and a quarter, or 15 inches, or 20 digits. (Plin. H. N. xvi. 20. s. 32; Vitruv. v. 6.) [P. S.]

PALMUS, properly the word of the open hand, or, more exactly, of the four fingers, was used by the Romans for two different measures of length, namely, as the translation of the Greek παλμος, or βαρον in old Greek, and στεφάμι respectively. In the former sense it is equal to 4 digits, or 3 inches, or 1-4th of a foot, or 1-6th of the cubit. (Mensula, p. 751, b.) Jerome (in Ezech. 40) expressly states that this was its proper meaning, but that the Greek στεφάμι was also called by some palmus; or, for the sake of distinction, palmus; in which sense it would be 3-4ths of a foot. Hence some writers distinguish, in the old Roman metrical system, a palmus major of 9 inches, and a palmus minor of 3 inches, and they suppose that the former is referred to by Varro (R. R. iii. 7). Ideler has, however, shown that this supposition is groundless, that Varro refers to the common palm of 4 digits (3 inches), and the larger palm only occurs in later Roman writers. (Über die Längen und Flachenmaasse der Alten, p. 129.) From this large palmus of 9 inches the modern Roman palmo is derived. [P. S.]

PALUDAMENTUM, according to Varro (L. L. vii. 37) and Festus (s. v.), originally signified any military decoration; but the word is always used to denote the cloak worn by a Roman general commanding an army, his principal officers and personal attendants, in contradistinction to the sagum (SAGUM) of the common soldiers and the toga or garb of peace. It was the practice for a Roman magistrate after he had received the imperium from the Comitia Curtiata and offered up his vows in the Capitol, to march out of the city arrayed in the paludamentum (exive paludatus, Cic. ad Fam. viii. 10) attended by his lieutenants in similar attire (paludatus hiericus, Liv. xii. 10, xiv. 39), nor could he again enter the gates until he had formally divested himself of this emblem of military power, a ceremony considered so solemn and so indispens-able that even the emperors observed it. (Tacit. Hist. ii. 89; compare Sueton. Vitell. c. 11.) Hence Cicero declared that Verres had sinned "contra auspicia, contra omnes divinas et humanas reli-giones," because, after leaving the city in his palu-
damentum (exoe paludatus excipit), he stole back in a litter to visit his mistress. (In Verr. v. 13.)

The paludamentum was open in front, reached

3 1 3
PALUDAMENTUM.
down to the knees or a little lower, and hung loosely over the shoulders, being fastened across the chest by a clasp. A foolish controversy has arisen among antiquaries with regard to the position of this clasp, some asserting that it rested on the right shoulder, others on the left, both parties appealing to ancient statues and sculptures in support of their several opinions. It is evident from the nature of the garment, as represented in the annexed illustrations, that the buckle must have shifted from place to place according to the movements of the wearer; accordingly, in the following cut, which contains two figures from Trajan's column,

one representing an officer, the other the emperor with a tunic and fringed paludamentum, we observe the clasp on the right shoulder, and this would manifestly be its usual position when the cloak was not used for warmth, for thus the right hand and arm would be free and unembarrassed; but in the preceding cut, copied from the Raccolta Maffei, representing also a Roman emperor, we perceive that the clasp is on the left shoulder; while in the cut below, the noble head of a warrior from the great Mosaic of Pompeii, we see the paludamentum flying back in the charge, and the clasp nearly in front. It may be said that the last is a Grecian figure; but this, if true, is of no importance, since the chlamys and the paludamentum were essentially, if not absolutely, the same. Nonius Marcellus considers the two terms synonymous, and Tacitus (Ann. xii. 56) tells how the splendid naumachia exhibited by Claudius was viewed by Agrrippina dressed chlamyde aurota, while Pliny (H. N. xxxii. 3) and Dion Cassius (ix. 38) in narrating the same story use respectively the expressions paludamento aurotextili, and χλαμύδα διαχρόσφ.

PAMBOEOTIA.
The colour of the paludamentum was commonly white or purple, and hence it was marked and remembered that Crassus on the morning of the fatal battle of Carrhae went forth in a dark-coloured mantle. (Val. Max. i. 6, § 11; compare Plin. H. N. xxii. 1; Hirtius, de bello Africano, c. 57.)

PALUS, a pole or stake, was used in the military exercises of the Romans. It was stuck into the ground, and the tirones had to attack it as if it had been a real enemy; hence this kind of exercise is sometimes called Palaria. (Veget. i. 11). Juvenal (vi. 247) alludes to it when he says, "Quis non vidit vulnera pali?" and Martial (vii. 32. 8) speaks of it under the name of stipes, "Ast nudi stipitis iecus hebes." (Becker, Gallus, i. p. 278.)

PAMBOEOTIA (παμβοιεία), a festive panegyris of all the Boeotians, which the grammarians compare with the Panathenaea of the Atticans, and the Panonia of the Ionians. The principal object of the meeting was the common worship of Athena Itonia, who had a temple in the neighbourhood of Coronea, near which the panegyris was held. (Strabo, ix. p. 411; Paus. ix. 34. § 1.) From Polybius (iv. 3, ix. 34) it appears that during this national festival no war was allowed to be carried on, and that in case of a war a truce was always concluded. This panegyris is also mentioned by Plutarch. (Amat. Narrat. p. 774, f.) It is a disputed point whether the Pamboeotia had anything to do with the political constitution of Boeotia, or with the relation of its several towns to Thebes; but if so, it can have been only previous to the time when Thebes had obtained the undisputed supremacy in Boeotia. The question is discussed in Sainte Croix, Des Gouvernements fédérat. p. 211, &c.; Raoul-Rochette, Sur la Forme...
merely transfer a name common in their own days

and were held in the third year of every Olympiad.
attics into one body, this
festival, which then became the common festival of
attics, was called Panathenaea. (Paus. viii. 32 ; 3. ii. 18 ; Plut. Thes. 24: Apollo.)
According to this account it would seem as if
the name of the festival were derived from that of
the city; but the original name Athenaea was un-
doubted derived from that of the goddess, and
the subsequent appellation Panathenaea merely sig-
nifies the festival of Athens, common to or cele-
brated by all the Attic tribes conjointly. Pan-
thenaea are indeed mentioned as having been cele-
brated before the 20th of this month, and we may add
that the ancient themselves call the Panathenaea the
longest of all festivals (Schol. ad Aristoph. Nub.
385), and if we bear in mind the great variety of
games and ceremonies that took place during the
season. When the distinction between the greater
and lesser Panathenaea was introduced, is not cer-
tain, but the former are not mentioned before Ol.
66. 3 (Thucyd. vi. 58, i. 20; Herod. v. 56), and
it may therefore be supposed that they were in-
stituted a short time before Ol. 66, perhaps by
Peisistratus, for about this time certain innovations
were made in the celebration of the Panathenaea, as
is mentioned below. The principal difference
between the two festivals was, that the greater
one was more solemn, and that on this occasion
the peplus of Athena was carried to her temple in
a most magnificent procession which was not held
at the lesser Panathenaea.

The solemnities, games, and amusements of the
Panathenaea were: rich sacrifices of bulls, feet,
horse, and chariot races, gymnastic and musical
contests, and the lampadephoria; rhapsodists re-
cited the poems of Homer and other epic poets,
philosophers disputed, cock-fights were exhibited,
and the people indulged in a variety of other
amusements and entertainments. It is, however,
not to be supposed that all these solemnities
and games took place at the Panathenaea from
the earliest times. Gymnastic contests, horse
and chariot races, gymnastic and musical
contests, and the lampadephoria; rhapsodists re-
cited the poems of Homer and other epic poets,
philosophers disputed, cock-fights were exhibited,
and the people indulged in a variety of other
amusements and entertainments. It is, however,
not to be supposed that all these solemnities
and games took place at the Panathenaea from
the earliest times. Gymnastic contests, horse
and chariot races, gymnastic and musical
contests, and the lampadephoria; rhapsodists re-
cited the poems of Homer and other epic poets,
philosophers disputed, cock-fights were exhibited,
and the people indulged in a variety of other
amusements and entertainments. It is, however,
not to be supposed that all these solemnities
and games took place at the Panathenaea from
the earliest times. Gymnastic contests, horse
and chariot races, gymnastic and musical
contests, and the lampadephoria; rhapsodists re-
cited the poems of Homer and other epic poets,

PANATHENAEA.

vi. 2.) Songs in praise of Harmodius and Aristogiton appear to have been among the standing customs at the Panathenaea. Musical contests in singing and in playing the flute and the cithara were not introduced until the time of Pericles; they were held in the Odeum. (Plut. Peric. 13.) The first who gained the victory in these contests was Phrynis, in Ol. 81. 1. (Schoel. ad Aristoph. Nub. 971 ; Mumm. Par. Ep. 64.) The prize for the victors in the musical contests was, as in the gymnastic contests, a vase, but with an additional chaplet of olive branches. (Suid. s. v. Παναθηναία, in which a very complete list of dates was also performed at the Panathenaea (Lys. de Maurer. accept. p. 161), and the pyrrhic dance in armour is expressly mentioned. (Aristoph. Nub. 988, with the Schoel.) Of the discussions of philosophers and orators at the Panathenaea we still possess two specimens, the ἄγος Παραθείρας of Isocrates, and that of Aristides. Herodotus is said to have recited his history to the Athenians at the Panathenaea. The management of the games and contests was entrusted to persons called ὀικόθεντες, whose number was ten, one being taken from every tribe. Their office lasted from one great Panathenaeic festival to the other. (Pol. vii. 8. 6.) It was formerly believed, on the statement of Diogenes Laërtius (iii. 56 ; compare Suidas, s. v. Πεζαλογία), that dramatic representations also took place at the Panathenaea, but this mistake has been clearly refuted by Bückh. (Graec. Trag. Princip. p. 207.)

The lampadephoria or torch-march of the Panathenaea has been confounded by many writers, and even by Wachsmuth (Hist. Att. ii. 2, p. 246 ; ii. p. 578, 2d ed.), with that of the Beidediae. On what day it was held, and in what relation it stood to the other contests, is unknown, though it is clear that it must have taken place in the evening. It has been supposed by some writers that the lampadephoria took place only at the great Panathenaea, but this rests upon the feeble testimony of Libanius (Argum. ad Demost. Mid. p. 510), while all other writers who mention this lampadephoria, speak of it as a part of the Panathenaea in general, without the epithet ταχυνής, which is itself a sufficient proof that it was common to both festivals. The same is implied in a statement of the author of the Etymologicon Magnum (s. v. Κεραμεῖκος). The prize of the victor in the lampadephoria was probably the lampas itself, which he dedicated to Hermes. (Bückh, Corp. Inscrip. i. n. 243, 250.)

It is impossible to determine the exact order in which the solemnities took place. We may, however, believe that those parts which were the most ancient preceded those which were of later introduction. Another assistance in this respect is the sculptures of the Parthenon (now in the British Museum), in which a series of the solemnities of the Panathenaea is represented in the great procession. But they neither represent all the solemnities—for the lampadephoria and the gymnastic contests are not represented—not can it be supposed that the artists should have sacrificed beauty and symmetry merely to give the solemnities in precisely the same order as they succeeded one another at the festival. In fact we see in these sculptures the flute and cithara players represented as proceeding the chariots and men on horseback, though the contests in chariot and horse racing probably preceded the musical contests. But we may infer from the analogy of other great festivals that the solemnities commenced with sacrifices. The sacrifices at the Panathenaea were very magnificent; for each town of Attica, as well as every colony of Athens, and, during the time of her greatness, every subject town, had to contribute to this sacrifice by sending one bull each. (Schol. Aristoph. Nub. 385.) The meat of the victims appears to have been distributed among the people; but before the feasting commenced, the public herald prayed for the welfare and prosperity of the republic. After the battle of Marathon the Plataeans were included in this prayer. (Herod. vi. 111.)

The chief solemnity of the great Panathenaea was the magnificent procession to the temple of Athena Polias, which, as stated above, probably took place on the last day of the festive season. The opinion of Creuzer (Symbol. ii. p. 810) that this procession also took place at the lesser Panathenaea is opposed to all ancient authorities with the exception of the Scholiasts on Plato (Rep. 461.) and on Aristophanes (Equit. 509), and these scholiasts are evidently in utter confusion about the whole matter. The whole of this procession is represented in the frieze of the Parthenon, the work of Phidias and his disciples. The description and explanation of this magnificent work of art, and of the procession it represents, would lead us too far. (See Stuart, Antiq. of Athens, vol. ii.; Leake, Topogr. of Athens, p. 213, &c.; C. O. Müller, Ancient Art and its Rem. §118; H. A. Müller, Panath. p. 93, &c.) The chief object of this procession was to carry the peplos of the goddess to her temple. It was a crimson-coloured garment for the goddess, and made by maidens, called ἑφαρτιστία. (Hesych. s. v.; compare Arist.-Pherephoria.) In it were woven Eucleidas and the giants, as they were conquered by the goddess. (Eurip. Hecub. 466; Schol. ad Aristoph. Equit. 566; Suid. s. v. Πέλατος; Virg. Cir. 29, &c.; compare Plat. Enl. III. 1.) Procclus (ad Plut. Tim.) says that the figures on the peplos represented the Olympic gods conquering the giants, and this indeed is the subject represented on a peplos worn by an Athenian preserved in the Museum of Dresden. On one occasion in later times, when the Athenians overwhelmed Demetrius and Antigonus with their flatteries, they also decreed that their images, along with those of the gods, should be woven into the peplos. (Plut. Demet. 10.) The peplos was not carried to the temple by men but was suspended from the mast of a ship (Schol. Hom. II. v. 734 ; Philostr. Vit. Soph. i. 5. p. 559; compare Bückh, Graec. Trag. Princ. p. 193; Schol. ad Aristoph. Par. 410) ; and this ship, which was put at other times kept near the Areopagus (Paus. i. 29, § 1), was moved along on land, it is said, by subterraneous machines. What these machines may have been is involved in utter obscurity. The procession proceeded from the Ceramicus, near a monument called Leocorium (Theocyd. i. 20), to the temple of Demeter at Eleusis, and thence along the Pelagic wall and the temple of Apollo Pythius to the Pyx, and thence to the Acropolis, where the statue of Minerva Polias was adored with the peplos.

In this procession nearly the whole population of Attica appears to have taken part, either on foot, on horseback, or in chariots, as may be seen in the frieze of the Parthenon. Aged men carried olive
branches, and were called ἀθλοφόροι (Etym. M. and Heaych. s. e.); young men attended, at least in earlier times, in armour (Thucyd. vi. 56), and maidens who belonged to the noblest families of Athens carried baskets, containing offerings for the goddess, whence they were called καυσθέρους. (Hephaist. c. c.) Respecting the part which aliens took in this procession, and the duties they had to perform, see HYDRIAPHORIA.

Men who had deserved well of the republic were rewarded with a gold crown at the great Panathenaea, and the herald had to announce the event during the gymnastic contests. (Demosth. de Coron. p. 265; compare Meurs. Panath. p. 43.) Prisoners also were allowed to enjoy freedom during the great Panathenaea. (Ulpian, ad Demosth. c. Timocr. p. 749; compare Demosth. de Fals. Leg. p. 894.)

PANCRATIASTAE. [Pancratium.]

PANCRA'TIUM (πανκρατίων) is composed of πᾶν and κράτος, and accordingly signifies an athletic game, in which all the powers of the fighter were called into action. The pancratium was one of the games or gymnastic contests which were exhibited at all the great festivals of Greece; it consisted of boxing and wrestling (πολυμιχία and πάλη), and was reckoned to be one of the heavy or celerata (ραβία or βαριότερα), on account of the violent exertions it required, and for this reason it was not much practised in the gymnasia; and where it was practised, it was probably not without modifications to render it easier for the boys. According to the ancient physicians it had very rarely a beneficial influence upon health, (H. Mercurial.)

At Sparta the regular pancratium was forbidden, but the name was there applied to a fierce and unbridled contest, in which, in short, everything was allowed by rules, it might, as at Sparta, sometimes happen, that the fighters made use of their teeth and nails (Philost. l. c.; Aristoph. Pax, 348.) In cases where the contests of the pancratiae were not regulated by strict rules, it might, as at Sparta, sometimes happen, that the fighters made use of their teeth and nails (Philost. l. c.; Lucian, Demonax, c. 49; Plut. Lec. Apophth. p. 234, d.) but such irregularities probably did not occur at any of the great public games.

When two pancratists began their contest, the first object which each of them endeavoured to accomplish, was to gain a favourable position, each trying to make the sun shine in his face, or that other inconveniences might prevent his fighting with success. This struggle (ἀγών της στάσεως, Aeschin. c. Cleopat. p. 83, ed. Steph.) was only the introduction to the real contest, though in certain cases this preparatory struggle might terminate the whole game, as one of the parties might wear out the other by a series of stratagems, and compel him to give up further resistance. Sostratus of Sicyon had gained many a victory by such tricks. (Paus. vi. 4, § 1.) When the real contest began, each of the fighters might commence by boxing or by wrestling; accordingly as he thought he should be more successful in the one than in the other. The victory was not decided until one of the parties was killed, or lifted up a finger, thereby declaring that he was unable to continue the contest either from pain or fatigue. (Faber, Agonist. i. 8.) It usually happened that one of the combatants, by some trick or other, made his antagonist fall to the ground, and the wrestling, which then commenced, was called ἀκρασία, and continued until one of the parties declared himself victor. (Paus. viii. 40, § 1, &c.; Euseb. Chron. p. 150, Scalig.) A lively description of a struggle of this kind is given by Philostorus (l. c.) Sometimes one of the other by a series of stratagems, and compel him to give up further resistance. Sostratus of Sicyon had gained many a victory by such tricks. (Paus. vi. 4, § 1.) When the real contest began, each of the fighters might commence by boxing or by wrestling; accordingly as he thought he should be more successful in the one than in the other. The victory was not decided until one of the parties was killed, or lifted up a finger, thereby declaring that he was unable to continue the contest either from pain or fatigue. (Faber, Agonist. i. 8.) It usually happened that one of the combatants, by some trick or other, made his antagonist fall to the ground, and the wrestling, which then commenced, was called ἀκρασία, and continued until one of the parties declared himself victor. (Paus. viii. 40, § 1, &c.; Euseb. Chron. p. 150, Scalig.) A lively description of a struggle of this kind is given by Philostorus (l. c.) Sometimes one of

also into the other great games of Greece, and in the times of the Roman emperors we also find it practised in Italy. In Ol. 145 the pancratium for boys was introduced at the Olympic games, and the first boy who gained the victory was Panæhumus, native of a town in Trosa. (Paus. v. 8, in fin.) This innovation had been adopted before in other contests of the national games, and in the 61st Pythiad (Ol. 108), we find a Theban boy of the name of Olaiades as victor in the pancratium in the Pythian games. (Paus. x. 7. § 3.) At the Isthmian games the pancratium for boys is not mentioned till the reign of Domitian (Corinii, Dissert. Agon. p. 101) but this may be merely accidental, and the game may have been practised long before that time. Philostratus (Imag. ii. 6) says that the pancratium of men was the most beautiful of all athletic contests; and the combatants must certainly have shown to the spectators a variety of beautiful and exciting spectacles, as all the arts of boxing and wrestling appeared here united. (Aristot. Rhet. i. 5; Plut. Sympos. ii. p. 638, c.) The combatants in the pancratium did not use the cestus, or if they did, it was the ἰαντές μαλακώτεροι (Cestus), so that the hands remained free, and wounds were not easily inflicted.

The name of these combatants was pancratia (πανκρατιασταί) or πάμπυμαχοι. (Pollux iii. 30. 5.) They fought naked, and had their bodies anointed and covered with sand, by which they were enabled to take hold of one another. (Philost. l. c.; Aristoph. Pax, 348.) In cases where the contests of the pancratiae were not regulated by strict rules, it might, as at Sparta, sometimes happen, that the fighters made use of their teeth and nails (Philost. l. c.; Lucian, Demonax, c. 49; Plut. Lec. Apophth. p. 234, d.) but such irregularities probably did not occur at any of the great public games.
the fighters fell down on his back on purpose that he might thus ward off the attacks of his antagonist more easily, and this is perhaps the trick called στανταμός. The usual mode of making a person fall was to put one foot behind his, and then to push him backward, or to seize him round his body in such a manner that the upper part being the heavier the person lost his balance and fell. Hence the expressions μέσον λαμβάνεις, μεσολαθείς, μέσον αἰρεῖς, τὰ μέσα ἔχεις, διὰ μυρῶν στᾶνταμον, &c. (Sealig. ad Euseb. Chron. p. 48.) The annexed woodcut represents two pairs of Pandectae; the one on the right hand is an example of the ἀνακλώματα, and that on the left of the μεσολαθείς. They are taken from Krause's Gymnastik und Agonistik d. Hellen. Taf. xxii. b, Fig. 35, b, 31, b., where they are copied respectively from Grivaud, Rec. d. Mon. Ant. vol. i. pl. 20, 21, and Krause, Signorum ext. icones, tab. 10.

At Rome the pancratium is first mentioned in the games which Caligula gave to the people. (Dion Cass. lix. 13.) After this time it seems to have become extremely popular, and Justinian, in 353, provided a law for the amusement of the people. (Const. Deo Auctore, s. 12.) It was also declared that abbreviations (σύνθεσις) should not be used in forming the text of the Digest. The work was completed in three years (17 Cal. Jan. 353) as appears by a Constitution both in Greek and Latin which confirmed the work and gave it legal authority. (Cont. Tanta, &c. s. 16.) Besides Tribonian, who had the general conduct of the undertaking, sixteen other persons are mentioned as having been employed on the work, among whom were the Professors Dorotheus and Anatolius, who for that purpose had been invited from the law-school of Berytus, and Theophilus and Cratinus who resided at Constantinople. The compilers made use of about two thousand different treatises, which contained above 3,000,000 lines (versus, στρώματα), but the amount retained in the compilation was only 150,000 lines. Tribonian procured this large collection of treatises, many of which had entirely fallen into oblivion, and a list of them was prefixed to the work, pursuant to the instructions of Justinian. (Cont. Tanta, &c. s. 16.) Such a list is at present only found in the Florentine MS. of the Digest, but it is far from being accurate. Still it is probably the Index mentioned in the Constitution, Tanta, &c. (Puchta, Demarkungen ueber den Index Florentinus, in Rhein. Mus. vol. iii. pp. 365—370.)

The work is thus distributed into Fifty Books, which, with the exception of three books, are subdivided into Titles, of which there are said to be 922. The books 30, 31, 32, are not divided into Titles, but have one common Title, De Legatis et Legibus, &c. a adoptis, &c. s. 7) has caueto legez, and though not "laws" in the strict sense of the term, they were in fact "law;" and in the same sense the Emperor calls the jurisprudentia "legislatores." (Cont. Tanta, &c. s. 16.) The Fifty
books under materially both in bulk, number of titles, and number of extracts. The Glossatores and their followers, in referring to the Digest, sometimes indicate the work by P, p, or II, and sometimes by D or ff, which according to some writers represents D, and according to others represents II. The oldest printed English work in which the Digest is cited is Bracton's *England,* and his mode of citation is that of the Glossatores. (Two Discourses by G. Long, London, 1847, p. 107.)

There was also a division of the whole Fifty Books into Seven larger masses, called Parts, which corresponded to the seven main divisions of the works on the Edict, and had also a special reference to the course of instruction then established. Thus the first Pars comprises Four Books, the second Pars comprises seven Books, and so on. (*Const. Tanta,* &c. § 2. "Igitur prima quidem"

The number of writers from whose works extracts were made is thirty-nine, comprehending those Jurists from whom extracts were made at second hand, as Q. Mucius Scaevola, the Pontifex, from whom four fragments, and Aelius Gallus from whom one fragment is taken; but omitting Servius Sulpicius Rufus, who is represented by Alfenus, distinguishing Aelius Gallus from Julius Aquila, Venuleius from Claudius Saturninus; assuming that there is only one Pomponius, and omitting Sabinus whose name is erroneously inserted in the Florentine Index. (Zimmern, *Geschichte des Rom. Privatrechts,* p. 224.)

The following is the list of Jurists from whose writings the Digest was constructed, as it is given in the *Palingenesia* of Hommelius, who has arranged the matter taken from each writer under his name, and placed the names in alphabetical order. The dates of the Jurists are chiefly founded on the authority of Zimmern. The figures in the third column indicate the proportions contributed to the Digest by each Jurist, estimated in the nacres of Hommelius: (a) denotes that the contribution is under one page of the Palingenesia. This list includes Sabinus. The extracts from many of the writers are few and short: those from Ulpian are more than a third of the whole; and next to these the extracts from Paulus, Papinian, Julianus, Pomponius, Q. Cervidius Scaevola, and Gaius, are the largest.

Domitius *Veneratus.* The Antonini . 10
Ulpianus *S. Severus.* and Alex. Severus 610

It follows from the instructions of the Emperor and the plan of the work that the extracts from the Jurists are not always given in their exact words. It is probable that many short passages were interpolated, or altered, as a matter of necessity, though there seems to be no reason for supposing that these changes were carried farther than the nature of the case required. Still there is no doubt that the changes are such that the extracts from the old Jurists cannot be used for many purposes without some caution and judgment.

The distribution of the matter of the Digest into Books and Titles has evidently been made according to a plan, as will be obvious on inspecting the list of Tituli prefixed to the editions. Thus the 28th book treats of testaments, of the institution of a heres, &c., and the 29th of military testaments, and of codicils, &c.; in fact of matters appertaining to universal succession by testament: the 30th, 31st, and 32d books treat of legacies and fiduciary

* He must not be confounded with C. Aquilius Gallus, one of the masters of Servius Sulpicius, from whom there is no extract in the Digest.
bequests. There is a method of arrangement therefore so far as generally to bring things of the same kind together, but the compilation has no claims to being considered as a scientific arrangement of the matter of law. And indeed the compilers were evidently fettered in this respect by the Emperor's instructions, which required them to compare theDigest with the whole body of the law comprised in the Digest, according to the Code and the Edict Perpetuum.

It has long been a matter of dispute whether the compilers of the Digest were guided by any, and if any, by what principle in the arrangement of the several extracts under the respective Titles. This subject is examined in a very learned essay by Bluhme, entitled "Die Ordnung der Fragmente in den Pandektentexten." (Zeitschrift, vol. iv.) The investigation is of course founded on the titles of the several works of the Jurists, which as already observed are given at the head of each extract: thus, for instance, in the beginning of the 3d book, the first seven extracts are headed as follows: "Ulpianus Libro sexagesimo quarto ad Edictum;" "Idem Libro primo Fideicommissorum;" "Idem Libro quarto ad Sabinium;" "Idem Libro quinto ad Sabinium;" "Paulus Libro primo ad Sabinium;" "Julianus Libro trigesimo tertio Digestorum;" "Paulus Libro secundo ad Sabinium." These will serve as samples of the whole and will explain the following remarks from Bluhme, whose conclusions are these: "The compilers separated all the writings from which extracts were to be made, into three parts, and formed themselves into three committees. Each committee read through in order the books that had fallen to its lot, yet so that books which were closely related as to their contents, were extracted at the same time. The books were compared with the Code of Justinian, and what was selected for the new compilation, was placed under a Title taken either from the Code, the Edict, or in case of necessity from the work itself which was extracted. What came under the same title was compared; repetitions were erased, contradictions were got rid of, and alterations were made, when the contents of the extracts seemed to require it. When the three committees had finished their labours, the present Digest was formed out of the three collections of extracts. In order to accomplish this, they made that collection the foundation of the law, and if any, by what principle in the arrangement of the matter of law. And indeed the compilers were evidently fettered in this respect by the Emperor's instructions, which required them to compare theDigest with the whole body of the law comprised in the Digest, according to the Code and the Edict Perpetuum.

It has long been a matter of dispute whether the compilers of the Digest were guided by any, and if any, by what principle in the arrangement of the several extracts under the respective Titles. And indeed the compilers were evidently fettered in this respect by the Emperor's instructions, which required them to compare theDigest with the whole body of the law comprised in the Digest, according to the Code and the Edict Perpetuum.

Justinian's plan embraced two principal works, one of which was to be a selection from the Jurists and the other from the Constitutions. The first, the Pandect, was very appropriately intended to contain the foundation of the law: it was the first work since the date of the Twelve Tables, which in itself and without supposing the existence of any other, might serve as a central point of the whole body of the law. It may be properly called a Code, and the first complete Code since the time of the Twelve Tables, though a large part of its contents is not Law, but consists of Dogmatic and the investigation of particular cases. Instead of the insufficient rules of Valentinian III., the excerpts in the Pandect are taken immediately from the writings of the Jurists in great numbers, and arranged according to their matter. The Code also has a more comprehensive plan than the earlier codes, since it comprises both Rescripts and Edicts. These two works, the Pandect and the Code, ought properly to be considered as the completion of Justinian's design. The Institutions cannot be viewed as a third work independent of both; it serves as an introduction to them or as a manual. Lastly, the Novellae are single and subsequent additions and alterations, and it is merely an accidental circumstance that a third edition of the Code was not made at the end of Justinian's reign, which would have comprised the Novellae which had a permanent
PANDIA. 861

application." (Savigny, Geschichtel des Röm. Rechts im Mittelalter, i. p. 14.)

There are numerous manuscripts of the Digest, both in libraries of the Continent and of Great Britain. A list of the MSS. of the Corpus Juris in the libraries of this country, which are principally in the Colleges of Oxford and Cambridge, is given by Dr. Hach in the Zeitschrift (vol. v.). But the MSS. of the Digest generally contain only parts of the work, and are not older than the twelfth century. The MS. called the Florentine is complete and probably as old as the seventh century. It is generally said that it had been kept at Amalfi time out of mind, and was given to the Pisans by Luigi Orsini, bishop of Amalfi, after the capture of Amalfi A. D. 1137, as a memorial of his gratitude to them for their aid against Roger the Norman. The Pisans kept it till their city was taken by the Florentines under Gino Caponi A. D. 1406, who carried this precious MS. to Florence where it is still preserved. There is however pretty good evidence that the MS. was not found at Amalfi. Odofredus says, that it was transmitted to Pisa by Justianian, and Bartolus adds, that it always had been, and then was at Pisa. At any rate it is the oldest MS. of the Pandectae. An exact copy of this MS. was published at Florence in 1553, in 4to, with the title "Digestorum seu Pandectarum Libri Quinquaginta Ex Florentinis Pandectis repraesentati ; Florentiae In Officina Cum Summi Pontif. Car. V. Imp. Henrici II Gallores Regis, Eduardi VI Angliae regis, Cosmi Medicis Ducis Florent. II Privilegio." The facts relating to the history of the MS. appear from the dedication of Franciscus Taurellius to Cosmo I., Duke of Florence. Laelio Torelli and his son Francesco superintended the printing of the edition of this splendid work, which is invaluable to a scholar. The orthography of the MS. has been scrupulously observed. Those who cannot consult this work may be satisfied with the edition of the Corpus Juris by Charondas, which the distinguished printer of that edition, Christopher Plantinus, affirms to be as exact a copy of the Florentine as it could be made. (Antwerp, 1575.)

As to the other editions of the Digest, see Corpus Juris. [G. L.]

PANDIA (πάνδια), an Attic festival, the real character of which seems to have been a subject of dispute among the ancients themselves; for according to the Etymologicum M. (c. ν. Λάνθανα; comp. Phot. s.v.), some derived it from Pandia, who is said to have been a goddess of the moon (this is also Wachsmuth's opinion, ii. p. 465); others from the Attic king Pandion; others again from the Attic tribe Dias, so that the Pandia would have been in the same relation to this tribe as the Panathenaea to Athens; and others from Δίας, and call it a festival of Zeus. Welcker (Aeschy. Trilog. p. 303) considers it to have been originally a festival of Zeus celebrated by all the Attic tribes, analogous to the Panathenaea, and thinks that when the confederacy, of which this festival was as it were the central point, became dissolved, the old festival remained, though its character was changed. It was celebrated on the 14th of Elaphebolion (c. Mid. p. 517). Taylor in his note on this passage strangely confounds it with the Diasia, though it is well known that this festival was held on the 19th of Munychion, while the Pandia took place on the 14th of Elaphebolion. (Compare Suidas and Hezych. s. v. Νάποδια; Böckh, Abhandl. der Berlin. Akademie, 1818, p. 56, &c.)

[ L. S.]

PANE'GYRIS (πάνεγγυρος) signifies a meeting or assembly of a whole people for the purpose of worshipping at a common sanctuary. But the word is used in three ways: — 1. For a meeting of the inhabitants of one particular town and its vicinity [Εἴσεσισ]; 2. For a meeting of the inhabitants of a whole district, a province, or of the whole body of people belonging to a particular tribe [Δῆλα, Παμμοβοτία, Πάνοινία]; and 3. For great national meetings, as at the Olympic, Pythian, Isthmian, and Nemean games. Although in all panegyrics which we know, the religious character forms the most prominent feature, other subjects, political discussions and resolutions, as well as a variety of amusements, were not excluded, though they were perhaps more a consequence of the presence of many persons than objects of the meeting. As regards their religious character, the panegyrics were real festivals in which prayers were performed, sacrifices offered, processions held, &c. The amusements comprehended the whole variety of games, gymnastic and musical contests, and entertainments. Every panegyris, moreover, was made by the proprietor a source of gain, and it may be presumed that such a meeting was never held without a fair, at which all sorts of things were exhibited for sale. (Paus. x. 32. § 9; Strab. x. p. 486; Dio Chrysost. Orat. xxvii. p. 528.) In later times, when the love of gain had become stronger than religious feeling, the fairs appear to have become a more prominent characteristic of a panegyris than before; hence the Olympic games are called mercatus Olympiacus or ludi et mercatus Olympiorum. (Justin. xiii. 5; Vell. Pat. i. 8.) Festive orations were also frequently addressed to a panegyris, whence they are called λόγοι πανεγγυρικοί. The Panegyrics of Isocrates, though it was never delivered, is an imaginary discourse of this kind. In later times any oration in praise of a person was called panegyricus, as that of Pliny on the emperor Trajan.

Each panegyris is treated of in a separate article.

For a general account see Wachsmuth, Hell. Alt. i. p. 149, &c.; Böckh, ad Pind. Od. vii. p. 175, &c.; Hermann, Polit. Ant. § 10. [L. S.]

PANELLE'NIA (πανελλήνια), a festival, or perhaps rather a panegyris of all the Greeks, which seems to have been instituted by the emperor Hadrian, with the well-meant but impracticable view of reviving a national spirit among the Greeks. (Philosorr. Vitr. Soph. ii. i. 5; Böckh, Corp. Inscrip. i. p. 789, ii. p. 500.)

[ L. S.]

PANIΩ'NIA (πανιώνια), the great national panegyris of the Ionians on mount Mycale, where their national god Poseidon Heliconius had his sanctuary, called the Panionium. (Herod. i. 148; Strab. viii. p. 384; Paus. vii. 24. § 4.) One of the principal objects of this national meeting was the common worship of Poseidon, to whom splendid sacrifices were offered on the occasion. (Diodor. xv. 49.) As chief-priest for the conduct of the sacrifices, they always appointed a young man of priestly birth, and among the Greeks as one of the peculiar superstitions of the Ionians on this occasion, that they thought the bull which they sacrificed to be pleasing to the god if it roared at the moment it was killed. (Strab. i. c.) But
religious worship was not the only object for which they assembled at the Panionium; on certain emergencies, especially in case of any danger threatening their country, the Ionians discussed at these meetings political questions, and passed resolutions which were binding upon all. (Herod. i. 141, 170.)

But the political union among the Ionians appears nevertheless to have been very loose, and their confederacy to have been without any regular internal organization, for the Lydians conquered one Ionian town after another, without there appearing anything like the spirit of a political confederacy; and we also find that single cities concluded separate treaties for themselves, and abandoned their confederates to their fate. (Herod. i. 169.)

Diodorus (xx. 49) says that in later times the Ionians used to hold their meeting in the neighbourhood of Ephesus instead of at Mycale. Strabo, on the other hand, who speaks of the Panionic panegyris as still held in his own time, does not only not mention any such change, but appears to imply that the panegyris was at all times held on the same spot, viz. on mount Mycale. Diodorus therefore seems to consider the Ephesian panegyris [Ephesia] as having been instituted instead of the Panonia. But both panegyris existed simultaneously; and were connected with the worship of two distinct divinities, as is clear from a comparison of two passages of Strabo, viii. p. 304, xiv. p. 639.

PANOPLIA. [ARMA.]

PANTOMIMUS is the name of a kind of actors peculiar to the Romans, who very nearly resembled in their mode of acting the modern dancers in the ballet. They did not speak on the stage, but merely acted by gestures, movements, and attitudes. All movements, however, were rhythmical like those in the ballet, whence the general term for them is saltatio, saltare; the whole art was called musica muta (Cassidius. Var. i. 20) and to represent Niobe or Leda was expressed by saltare Nioben and saltare Ledam.

Mimic dancers of this kind are common to all nations, and hence we find them in Greece and Italy; in the former country they acquired a degree of perfection of which we can scarcely form an idea. But pantomimes in a narrower sense were peculiar to the Romans, to whom we shall therefore confine ourselves. During the time of the republic the pantomimes acquired at Rome in the time of Augustus through these distinguished actors, was the cause of their spreading not only in Italy but also in the provinces, and Tiberius found it necessary to put a check upon the great partiality for them; he forbade all senators to frequent the houses of such pantomimes, and the equites were not allowed to be seen walking with them in the streets of Rome, or to attend their performances in any other place than the public theatres, for wealthy Romans frequently engaged male and female pantomimes to amuse their guests at their repasts. (Tacit. Annal. i. 77.) But Caligula was so fond of pantomimes that one of them, M. Lepidus Mnester, became his favourite; and through his influence the whole class of pantomimes again recovered their ascendancy. (Suet. Calig. 36, 55, 57; Tacit. Annal. xiv. 21.) Nero not only patronized them, but acted himself as pantomime (Suet. Nero, 16, 26), and from this time they retained the highest degree of popularity at Rome down to the latest period of the empire.

As regards their mode of acting, we must first state that all pantomimes wore masks, so that the features of the countenance were lost in their acting. All the other parts of their body, however, were called into action, and especially the arms and hands, whence the expressions manus luporum, manus colere, manus simulacrum, &c. Notwithstanding their acting with masks, the ancients agree that the pantomimes expressed actions, feelings, passions, &c., more beautifully, correctly, and intelligibly than it would be possible to do by speaking or writing. They were, however, assisted in their acting by the circumstance that they only represented mythological characters, which were known to every spectator. (Juv. vi. 63, v. 121; Horat. Epist. ii. 2, 125; Sueton. Nero, 54; Vell. Pat. ii. 83.) There were, moreover, certain conventional gestures and movements which every body understood. Their costume appears to have been like that of the dancers in a ballet, so as to show the beauty of the human form to the greatest advantage; though the costume of course varied according to the various characters which were represented. See the manner in which Plautus is described by Velleius (ii. 83) to have danced the character of Glauce. In the time of Augustus there was never more than one dancer at a time on the stage, and he represented all the characters of the story, both male and female, in succession. (Lucian, De Salt. c. 67; Jacobus, ad Anthol. i. 1, p. 268.) This remained the custom till towards the end of the second century of our era, when the several parts of a story began to be acted by several pantomimes dancing together. Women, during the earlier period of the empire, never appeared as pantomimes on the stage, though they did not scruple to act as such at the private parties of the great. During the latter time of the empire women acted as pantomimes in public, and in some cases they threw aside all regard to decency, and appeared naked before the public. The Oriental writers therefore represent the pantomimic exhibitions as the school of every vice and licentiousness. (Tertull. de Spect. p. 260, ed. Paris; see also Senec. Quaest. Nat. vii. 92; Plin. Epist. v. 24; Ammian. Marc. xiv. 6; Plin. Nat. Histor. 9.)

Mythological love stories were from the first the favourite subjects of the pantomimes (Ovid. Rem. Am. 753), and the evil effects of such sensual representations upon women are described in strong colours by Juvenal (vi. 63, &c.). Every represent-
and ballet. (Compare Lessing, written in the Greek language. Some of them that whole tragedies of Sophocles and Euripides standing in the background of the stage, and the flute. In Sicily pantomimic dances were called Alterthums; number of astragali or other things, and his op
ponent had to guess whether the number was odd
or even. (Pollux, viii. 32; Meier, Aft. Proc. pp. 767, 772.) [C.R.K.]
PARACATA'THESE (παρακαταθήσει), generally signifies a deposit of something valuable with a friend or other person, for the benefit of the owner. Thus, if I deliver my goods to a friend, to be taken care of for me; or if I deposit money with a banker; such delivery or baixment, or the goods bailed or delivered, or the money deposited, may be called παρακαταθήσθη (Herod. vi. 86; Demosth. pro Phorm. 946); and the word is often applied metaphorically to any important trust committed by one person to another. (Demosth. c. Aphob. 840; Aesch. c. Timarch. 26, ed. Steph., de Fals. Leg. 47.) As every bailee is bound to restore to the bailor the thing deposited; either on demand (in case of a simple bailment) or on the performance of the conditions on which it was received; the Athenians gave a παρακαταθήσθη δίκη against a bailee who unjustly withheld his property from the owner. [πρακτευτικός λόγος of Isocrates. A pledge given to a creditor could not be recovered, except on payment of the money owed to him; but, after selling the article, and satisfying his debt out of the proceeds, he would of course be bound to restore the surplus (if any) to the pledger. It follows from the nature of the παρακαταθήσθη that it was λίτμος, but it is not improbable that the additional penalty of διάμιξις might be inflicted on a defendant who fraudulently denied that he had ever received the deposit.

The difficulty of procuring safe custody for money, and the general insecurity of movable property in Greece, induced many rich persons to make valuable deposits in the principal temples, such as that of Apollo at Delphi, Jupiter at Olympia, and others. (Meier, Att. Proc. pp. 512—513.) It may be observed that τίτθα, παρακαταθήσθη, in the middle voice, are always used of a person making a deposit, for his own benefit, with the intention of taking it up again. Hence the expression δέσθα χάρμω, to confer an obligation, which gives the right (as it were) of drawing upon the obliged party for a return of the favour at some future time. Κομίζεσθα is to recover your property or right. (Isocrat. c. Euthyn. 400, ed. Steph.) [C.R.K.]
PARADRISUS (παραδρίσσον), was the name given by the Greeks to the parks or pleasure-grounds, which surrounded the country residences of the Persian kings and satraps. They were generally stocked with animals for the chase, were full of all kinds of trees, watered by numerous streams, and enclosed with walls. (Xen. Anab. i. 4. § 10, Cyr. i. 3. § 14, 4. § 5, Hell. iv. 1. § 33, Oec. iv. 13; Dioec. vi. 41; Curt. viii. i. § 11, 12; Goll. ii. 20.) These paradises were frequently of great extent; thus Cyrus on one occasion reviewed the Greek army in his paradise at Celaenae (Xen. Anab. i. 2. § 9), and on another occasion the Greeks were alarmed by a report that there was a great army in a neighbouring paradise. (Id. ii. 4. § 16.)

Pollux (ix. 13) says that παραδρίσσον was a Persian word, and there can be no doubt that the Greeks obtained it from the Persians. The word, however, seems to have been used by other Eastern nations, and not to have been peculiar to the Persians. Gesenius (Lexicon Hebraicum, p. 888, Lips. 1833) and other writers suppose it to be the same as the Sanskrit parādasaṛas, but this word does
not mean a land elevated and cultivated, as Genesis and others state, but merely a foreign country, whence is derived paradiæin, a foreigner. The word occurs in Hebrew (דיוד, paredas) as early as the time of Solomon (Eccles. ii. 5; Cant. iv. 13), and is also found in Arabic (فريداس), and Armenian ( vardes, Schroeder, Dissert. Theosur. Ling. Armen. praemiss. p. 56).

PARAGAUDA (παραγαύδα), the border of a tunic [λιμένος], enriched with gold thread, worn by ladies, but not allowed to men except as one of the insignia of office. These borders were among the rich presents given by Furius Placidus a.d. 343, when he was made consul (lineae paragaudae, Vopisc. Armen. 110). Under the later emperors the manufacture of them was forbidden except in their own gymnasia. (Cod. 11. tit. 8. s. 1, 2.)

The term paragauda, which is probably of Oriental origin, seems also to have been converted into an adjective, and thus to have become the denomination of the tunic, which was decorated with such borders. (Lydus does not exactly correspond with any term in our language, but may without much impropriety be considered the tunic, which was decorated with such borders. (Lydia de Mag. i. 17, ii. 4. 13.) [J. Y.]

PARAGRAFHE (παραγραφή). This word does not exactly correspond with any term in our language, but may without much impropriety be called a plea. It is an object raised by the defendant to the admissibility of the plaintiff's action: "exceptio rei adversus actorem, actionemve, term adjective, and thus to have become the denomination of the tunic, which was decorated with such borders. (Lydus does not exactly correspond with any term in our language, but may without much impropriety be considered as the tunic, which was decorated with such borders. (Lydia de Mag. i. 17, ii. 4. 13.) [J. Y.]

The course of proceeding on a paragraphe was obviously calculated to delay the progress of the cause, and was therefore not looked on with favours by the defendants. Πρόσεκτη, ἐπικωνια, παραγραφή, τα ἐκ τῶν νόμων, exceptiones, delays, pleas, legal objections, are classed together by the orator as being the manœuvres of defendants to defeat justice. Hence we find in the extant paragrapheικόν λόγον, that the defendant, in order to remove the prejudice of the dicasts against himself, not only supports the ground of the paragraphe, but discusses the general merits of the cause, and endeavours to show that there is no foundation for the plaintiff's complaint. And there is no doubt that the dicasts were materially influenced by such discussion, however in strictness irrelevant. (Demosth. c. Mid. 541, c. Leoch. 924, c. Steph. 1117, pro Phorm. 914, Argum. Or. c. Zenoth.) The same observation applies to the διαμαρτυρία. [See HERES.] (Isaeus, de Philoct. her. 60, de Apoll. her. 63, ed. Steph.; Demosth. c. Leoch. 1097.)

There was no such thing as this proceeding by paragraphe, until after the expulsion of the thirty tyrants, when a law was passed on the proposal of Archinas, ἐν τισ διακίνηται πάρα τῶν ἄρκην, ἑκείναι τῷ φερετῷ παραγράφοσθαι, τοῦ δὲ ἄρκην ἔχοντας πέρι τουτοῦ πρῶτον εὐλογεῖ, λέγων δὲ πρῶτον τοῖς παραγράφομαι, ἀπέτερος δὲ ἐκ διακίνησις φεύλαιν. The object of this law appears to have been, to enable any person against whom an information or prosecution might be brought, or action commenced, for any matter arising out of the late political troubles, to obtain the benefit of the general amnesty, by specially pleading the same, and so bringing his defence in a more solemn manner before the court. The same privilege was afterwards extended to other grounds.
of defence. (See the opening of the speech of Isocrates against Callimachus.) Before this time all special objections to the adversary's course of proceeding seem to have been called ἀντιγράφα, and sometimes ἐξωμολογία, because an oath was taken by the parties who tendered them. (Lysias, c. Poee. 166; Steph. Aristoph. Aris.rium, 1026; Schol. ad loc.; Suidas, s. v. ἐξωμολογία; Meier, Att. Proc. pp. 644–650.)

[C. R. K.]

ΠΑΡΑΛΥΣ (πάραλος), and ΣΑΛΑΜΙΝΙΑ (σαλαμίνια). The Athenians from very early times kept for public purposes two sacred or state vessels, the one of which was called Παράλυς and the other Σαλαμίνια: the crew of the one bore the name of παράλοι or πάραλοι, and that of the other σαλαμίνιοι. (Phot. s. v. Πάραλος and πάραλοι.) In the former of these two articles Photius erroneously regards the two names as belonging to the same and the same ship. (Pollux, vii. 116; Phot. s. v. Παράλυτης.) The Salamínia was also called Δηλαί or Θεωρίς, because it was used to convey the Θεωρίς to Delos, on which occasion the ship was adorned with garlands by the priest of Apollo. (Plat. Phaed. p. 58, c.) Both these vessels were quick-sailing triremes, and were used for a variety of state purposes: they conveyed treaties, despatches, &c. from Athens, carried treasures from subject countries to Athens, fetched state criminals from foreign parts to Athens, and the like. (Thucyd. vii. 53, 61.) In battles they were frequently used as the ships in which the admirals sailed. These vessels and their crew were always kept in readiness to act, in case of any need arising; and the crew, although they could not for the greater part of the year be in actual service, received their regular pay of four oboli per day all the year round. This is expressly stated only of the Paralus (Harpocont. and Phot. s. v. Πάραλος), but may be safely said of the Salamínia also. The statement of the scholiast on Aristophanes (Ar. 147; comp. Suidas, s. v. Σαλαμινιά ναῦς), that the Salamínia was only used to convey criminals to Athens, and the Paralus for theories, is incorrect, at least if applied to the earlier times. When Athens had become a great maritime power, and when other ships were employed for purposes for which before either the Salamínia or the Paralus had been used, it is natural to suppose that these two vessels were chiefly employed in matters connected with religion, as theories, and in extraordinary cases, such as when a state criminal like Alcibiades was to be solemnly conveyed to Athens. The names of the two ships seem to point to a very early period of the history of Attica, when there was no navigation except between Attica and Salamis, for which the Salamínia was used, and around the coast of Attica, for which purpose the Paralus was destined. In later times the names were retained, although the destination of the ships was principally to serve the purposes of religion, whence they are frequently called the sacred ships. (Böckh, Publ. Econ. of Athens, p. 240, 2d ed.; Göffler, ad Thucyd. iii. 33; Schömann, ad Isaeum, p. 296.)

PARANOIAS GRAPHE (παρανοιας γραφή). This proceeding may be compared to our commission of lunacy, or writ de lunatico incapacito. It was a suit at Athens that having proceeded by the son or other relation against one who, by reason of madness or mental imbecility, had become incapable of managing his own affairs. If the complaint was well grounded, the court decreed that the next heir should take possession of the lunatic's property, and probably also made some provision for his being put in confinement, or under proper care and guardianship. (Suidas, s. v. Παρανοια: Xen. Mem. i. 2. § 49; Aristoph. Nub. 844; Aesch. c. Cho. 89, ed. Steph.) It is related of Sophocles, that having procured a patent at the discretion of an advanced age, and by reason thereof neglected his family affairs, he was brought before the court by his sons, and accused of lunacy; that he then read to the judges his Oedipus Colonus, which he had just composed, and asked them if a man out of his mind could write such a poem as that; whereupon they acquitted him. (Cic. de Senect. 7.) The story is told differently by the anonymous author of the life of Sophocles; who speaks of the suit as taking place between Iophon and his father, and seems to intimate that it was preferred before the φράτωρ. In this last point he is supported by the Scholiast on Aristophanes, but it can hardly be correct; as we have no other authority for supposing that the φράτωρ had such a jurisdiction, and Pollux (viii. 89) expressly says that the παρανοιας γραφή came before the archon; to whom indeed it peculiarly belonged, as being a matter connected with family rights; and, if so, we are to understand that it came before the archon in the regular way, as ἡγεμόν δικαστήριον. (Meier, Att. Proc. pp. 296—298.) It is highly probable that there was some foundation for this anecdote of Sophocles. He might perhaps have given offence to his sons by that penuriousness which is said to have crept upon him in his old age; and Iophon being a poet, and lying under the suspicion of being assisted by his father, might possibly be induced by a mean jealousy to bring this charge against him. (See Aristoph. Ran. 78, Paz. 697.) The play of Oed. Col. appears to exhibit the wounded feelings of the writer. (See more especially 337, 441.)

[C. R. K.]

PARANOIMON GRAPHE (παρανοίμων γραφή). An indictment for proposing an illegal, or rather unconstitutional measure or law. We have seen [ΝΟΜΟΘΕΤΗΣ] that any Athenian citizen was at liberty to make a motion in the popular assembly, to pass a new law, or amend an old one. In order to check rash and hasty legislation, the mover of any law or decree, though he succeeded in causing it to be passed, was still amenable to criminal justice, if his enactment was found to be contrary to the public interest. (Demosth. c. Timoc. 710, 711.) Any person might institute against him the γραφή παρανοίμων within a year from the passing of the law. If he was convicted, not only did the law become void, but any punishment which was said to have crept upon him in his old age; and Iophon being a poet, and lying under the suspicion of being assisted by his father, might possibly be induced by a mean jealousy to bring this charge against him. (See Aristoph. Ran. 78, Paz. 697.) In this last point he is supported by the Scholiast on Iophon's Oedipus Colonus, which he had written for the court of the archon; who, in order to check rash and hasty legislation, the mover of any law or decree, though he succeeded in causing it to be passed, was still amenable to criminal justice, if his enactment was found to be contrary to the public interest. (Demosth. c. Timoc. 710, 711.) Any person might institute against him the γραφή παρανοίμων within a year from the passing of the law. If he was convicted, not only did the law become void, but any punishment which was said to have crept upon him in his old age; and Iophon being a poet, and lying under the suspicion of being assisted by his father, might possibly be induced by a mean jealousy to bring this charge against him. (See Aristoph. Ran. 78, Paz. 697.) The play of Oed. Col. appears to exhibit the wounded feelings of the writer. (See more especially 337, 441.)
the importance of the prosecution, as tending to preserve the existing laws, and maintain constitutional liberty. (Demosth. c. Tim. 749, 749; Aeschin. c. Ctes. 56, ed. Steph.) Notwithstanding this check, the mania for legislation appears to have increased so greatly at Athens in later times, that Demosthenes (c. Lepid. 485) declares that ψυφοµένων ονής στοισι διαφέροντος εις νόμων. This arose from the relaxation of that precautionary law of Solon, which required every measure to be approved by the νομοθεταὶ, before it could pass into law. (Nomothetes, and Schömann, Id. p. 229.)

It is obvious that, while the people in assembly had the power of making decrees which could remain in force for a year, if they wished to evade the law of Solon, all they had to do was to renew their decree from year to year, and thus in practice the ψυφάρμα became νόμων.

If the year had elapsed, the proponent of the law could not be punished, though the law itself might be repealed in the ordinary way by the institution of proceedings before the νομοθεταὶ, before whom it was defended by the five σύνεσιν. The speech against Leptines was made in a proceeding against the law itself, and not against the mover. 

Fals. Leg. by the people in assembly; they either had in their instructions (παρὰ τῷ ψυφίσματι προοειδών) a high misdemeanor. (Demosth. de Fals. Leg. 346.) On their return home they were required immediately to make a report of their proceedings (ἄργυγγελλέων τῶν προειδών) first to the Senate of Five Hundred, and afterwards to the people in assembly. (Aesch. de Fals. Leg. 50, ed. Steph.; Aristoph. Achar. 61; Schömants, Ant. jur. pob. Gr. p. 234.) This done, they were functi officio; but still, like all other persons who held an office of trust, they were liable to render an account (εἴδοσιν) of the manner in which they had discharged their duty. (Demosth. de Fals. Leg. 367, 406.) The persons to whom such account was to be rendered were the λογισταὶ, and the officers associated with them, called εἴδοσιν. A pecuniary account was only rendered in cases where money had passed through the hands of the party; in other cases, after stating that he had neither spent nor received any of the public money, the accounting party was discharged, unless there was reason for thinking that he deserved to be proceeded against for misconduct.

The λογισταὶ themselves had power to summon the party at once to appear as a criminal, and undergo the ἀκάρδια in their office (λογιστηρίων), upon which they would direct the προσώποι to prosecute; and this probably was the ordinary course in case of any pecuniary malversation. Accusations, however, of a more general nature were commonly preferred by individuals, giving information to the λογισταὶ, who, for the purpose of giving any citizen an opportunity of so doing, caused their κρίσις to make proclamation in public assembly, that such a person was about to render his account, and to ask if any one intended to accuse him. If an accuser appeared, his charge would be reduced to the form of a γραφή, and the prosecution would be conducted in the usual way, the λογισταὶ being the superintending magistrates. (Pollux, viii. 40, 45; Schömann, Id. p. 240; Meier, Att. Proc. pp. 214—224.) Magistrates, who were annually elected, rendered their accounts at the end of the official year; but ambassadors, who were extraordinary functionaries, had no time limited for this purpose. Aeschines delayed giving an account of his embassy to Philip for three years. (Demosth. de Fals. Leg. 374; Thirlwall, Gr. Hist. vol. vi. p. 26.) We can hardly suppose, however (as Thirlwall states), that the time of rendering the account was optional with the ambassador himself; since, not to mention the power of the λογισταὶ, it was open to any man to move for a special decree of the people, that the party should be called to account immediately. The γραφή παραπρεσβεία was a ἁγιασμός (Meier, Att. Proc. p. 152); and as it might be of a private charge, of the same kind, such as treachery and treason against the state, the defendant might have to apprehend the heaviest punishment. Aeschines (de Fals. Leg. 28, 52) reminds the díkasts of the great peril to which he is exposed, and makes a merit of submitting to his trial without fear. Besides the γραφή, an ἐσαγγελία might be brought against an ambassador; upon which the accused would be committed to prison, or compelled to give bail for his appearance. This course was taken by Hyperides against Philocrates, who avoided his trial by voluntary exile. (Aeschin. c. Oes. 65, ed. Steph.) [C. R. K.]

PARASANGA.

According to Herodotus (ii. 6, 53, vi. 42) the parasang was the half of the Egyptian schoenus, and was equal to 30 Greek stadia. Suidas (s. v.) and Hesychius (s. v.) assign the same length; and Xenophon must also have calculated it at the same, as he says (Anab. ii. 2. § 6) that 10,050 stadia are equal to 533 parasangs (10,050 + 535 = 30). Agathias (ii. 21), however, who quotes the testimony of Herodotus and Xenophon, reckons the Persian measure of length, frequently mentioned by the Greek writers. It is still used by the Persians, who call it fauxagh, and which has been changed in Arabic into farsakh.

The view is confirmed by the opinion of the best Oriental scholars respecting the etymology of the word. (Comp. Ukert, Geogr. d. Griech. u. Röm., vol. i. pt. 2, p. 77, and über die Art d. Gr. u. R. die Entfomungen zu bestimmen.) Its true etymology is doubtful. Rödiger (in Ersch und Gruber's Encyclopädie, s. v. Paras.) supposes the latter part of the word to be the same as the Persian sena, "a stone," and the former part to be connected with the Sanskrit páda, "end," and thinks that it may have derived its name from the stones placed at the end of certain distances on the public roads of Persia.

**PARASE'MON (παρασήμον).** [Insigne.]

**PARASITI (παράσιτοι) properly denotes persons who dine with others. In the early history of Greece the word had a very different meaning from that in which it was used in later times. To δε τοι παρασείτον υφομα παλαι μην η' σεμου καλ εροι, says Athenaeus (vi. p. 234), and he proves from various decrees (ψηφιάστατα) and other authorities that anciently the name παράσιτος was given to the people who were allowed to dine with certain persons and to be connected with certain temples and to the highest magistrates. As regards the priestly and civil parasites, the accounts of their office are so obscure that we are scarcely able to form any definite notion of it. An ancient law (Athen. l. c.) ordained that each of the priestly parasites should select from the βουκολία the sixth part of a medimnus of barley, and supply with it the Athenians who were present in the temple, according to the custom of their fathers; and this sixth of a medimnus was to be given by the parasites of Acharnæ. The meaning of this very obscure law is discussed by Preller. (Polymictes Fragm. p. 115, &c.) Thus much, however, is clear, that the parasites were elected in the demes of Attica from among the most distinguished and most ancient families. We find their number to have been twelve, so that it did not coincide with that of the demes. This may be accounted for by supposing that in one demos two or more gods were worshipped, whose service required a parasite; while in another there was no such divinity. The gods in whose service parasites are mentioned, are Heracles, Apollo, the Anakes, and Athena of Pallene. Their services appear to have been rewarded with a third of the victima sacrificed to their respective gods. Such officers existed down to a late period of Greek history, for Clearchus, a disciple of Aristotle, says that parasites in his own days continued to be appointed in most Grecian states to the most distinguished magistrates. (Athen. vi. p. 235.) These, however, must have been different from the priestly parasites. Solon in his legislation called the act of giving public meals to certain magistrates and foreign ambassadors in the ptytanæum, παραστασιν (Plut. Sol. 24), and it may be that the parasites were connected with this institution. (Compare Pollux, vi. c. 7.)

The class of persons whom we call parasites was very numerous in ancient Greece, and appears to have existed from early times, though they were not designated by this name. The comedies of Aristophanes contain various allusions to them, and Philippos, who is introduced in the Symposium of Xenophon, as well as a person described in some verses of Epicharmus preserved in Athenaeus, are perfect specimens of parasites. But the first writer who designated these persons by the name of παρασίτος was Alexis in one of his comedies. (Athen. vi. p. 235.) In the so called middle and new Attic comedy, and in their Roman imitations, the parasites are standing characters, and although they are described in very strong colours in these comedies, yet the description does not seem to be much exaggerated, if we may judge from other accounts of real parasites. We shall not therefore be much mistaken in borrowing our description of parasites chiefly from these comedies.

The characteristic features common to all parasites are importunity, love of sentimental pleasures, and above all the desire of getting a good dinner without paying for it. According to the various means they employed to obtain this object, they may be divided into three classes. The first are the γελαστοποιοι or jesters; who, in order to get some invitation, not only tried to amuse persons with their jokes, but even exposed their own person to ridicule, and would bear all kinds of insult and abuse if they could only hope to gain the desired object. Among these we may class Philippus in the Symposium of Xenophon, Ergastilus in the Captivi, and Gelasimus in the Stichus of Plautus; and the second class are the κολάκτες or flatterers (assensatores), who, by praising and admiring vain persons, endeavoured to obtain an invitation to their house. Gnatho in the Eunuchus of Terence, and the Arato-gus in the Miles Gloriosus of Plautus, are admirable delineations of such characters. The third class are the ἐρασοτικοί or the officious, who by a variety of services even of the lowest and most degrading description endeavoured to acquire claims to invitations. (Plut. de Adul. 23, de Édouca. 17.) Characters of this class are the parasites in the Asinaria and Menaechmi of Plautus, and more especially the Cureius and Saturio in the Persæ of Plautus, and the Phormio of Terence. From the various statements in comedies and the treatise of Plutarch, De Adulatoris et Amicis Discrimine, we see that parasites always tried to discover where a good dinner was to be had, and for this purpose they lounged about in the market, the palaestrae, the baths, and other public places of resort. After they had fixed upon a person, who was in most cases probably an inexperienced young man, they used every possible means to induce him to invite them. No humiliation and no abuse could deter them from pursuing their plans. Some examples of the most disgusting humiliations which parasites endured, and even rejoiced in, are mentioned by Athenaeus (vi. p. 249) and Plutarch. (De Occult. viv. 1, Sympos. vii. 6; compare Diog. Laërt. ii. 67.) During the time of the Roman emperors a parasite seems to have been a constant guest at the tables of the wealthy. (Lucian, de Parasit. 53.)

**PARASTADES.** [Anfæ.]

**PARASTASIS (παραστασις), a fee of one drachm paid to an arbitrator by the plaintiff, on bringing his cause before him; and by the defendant, on putting in his answer. The same name was given to the fee (perhaps a drachm) paid by the prosecutor in most public causes. (Harpocr. s. v. Παραστάσις; Meier, Att. Proc. pp. 614, 615.) [Compare Diætætæ, p. 397, b.] [C. R. K.]

**PARASTATAE.** [Hendecæ.]

**PARAZO'NIUM.** [Zona.]

**PAREDRI (παραδρῳς).** Each of the three 3 κ. 2
superior archon was at liberty to have two assessors (παρεψων) chosen by himself, to assist him by advice and otherwise in the performance of his various duties. The assessor, like the magistrate himself, had to undergo a διωκμασία in the Senate of Five Hundred and before a judicial tribunal, before he could be permitted to enter upon his labours. He was also to render an account (εὑνύμνω) at the end of the year. The office is called an ἄρχη by Demosthenes (c. Neer. 1369).

The duties of the archon, magisterial and judicial, were so numerous, that one of the principal objects of having assessors must have been to enable them to get through their business. We find the παρεψων assisting the archon at the λῆξις δικης. (Demosth. c. Theoc. 1332.) He had authority to keep order at public festivals and theatres, and to impose a fine on the disorderly. (Demosth. c. Mid. 572.) As the archons were chosen by lot (ἀλαρτοτελ), and might be persons of inferior capacity, and not very well fitted for their station, it might often be useful, or even necessary for them, to procure the assistance of clever men of business. (Demosth. c. Neer. 1372.) And perhaps it was intended that the παρεψων should not only assist, but in some measure check and control the power of their principals. They are spoken of as being βοηθο, σύμβουλοι καὶ φιλακτες. Demosthenes accuses Stephanus of buying his place of the archon, and of having counsellors who answered the same purpose. (Demosth. c. Theoc. 1332.) The Thesmothetae, though they had no regular power of their principals, were spoken of as being ἀρχηγοι, σύμβουλοι, who answered the same purpose. (Demosth. c. Theoc. 1330; Schömann, Ant. Jur. Pub. Gr. p. 245; Meier, Att. Proc. pp. 57—59.) The office of παρεψων was called παρεψαρδία, and to exercise it παρεπεμευνείν.

From the παρεψων of the archons, we must distinguish those who assisted the ἐθυνοι in examining and auditing magistrates' accounts. The ἐθυνοι or tax collectors, and assessors (Schömann, Ant. Jur. Pub. Gr. p. 240; Meier, Att. Proc. p. 102.) [ETHYNE.] [C.R.K.]

PAREISGRIFFER (παρεισγραφος), signifies a fraudulent enrolment in the register of citizens. For this an indictment lay at Athens called κοιναί γραφης: and, besides, the δημοταί might by their διαφώσεις eject any person who was illegally enrolled among them. From their decision there might be an appeal to a court of dicasts, of which the speech of Demosthenes against Eubulides furnishes an example. If the dicasts confirmed the decision of the δημοταί, the appellant party was sold for a slave. Spurious citizens are sometimes called παρεγγραπτοι, παρεγγεγραμμον. (Aesch. de Fals. Leg. 38, 51, ed. Steph.) The expression παρεισγραφος γραφη is not Attic. (Schömann, Ant. Jur. Pub. Gr. p. 206; Meier, Att. Proc. pp. 347—349.) [C. R. K.]

PARENTALIA. [Fines, p. 562, b.]

PAYS (πεύς), the wall of a house, in contradistinction to ΜΙΧΟΣ (πεύς), the wall of a city, and μακερία (πεύς), a small enclosure, such as a court-yard; sometimes πεύς is used for the wall of an insula (Curt. 2. 5. 93). Among the numerous methods employed by the ancients in constructing walls we find mention of the following:

### I.

The παρειάνδει, i.e. the wattle or the lathe-and-plaster wall, made of canes or hurdles [Crates], covered with clay. (Plin. H. N. xxxvi. 14. s. 40; Festus, s. v. Sola.) These were used in the original city of Rome to form entire houses (Ovid. Fast. iii. 103, vi. 261; Vitruv. ii. 1); afterwards they were coated with mortar instead of clay, and introduced as outer lath-and-plaster walls in the interior of houses.

II. Vitruvius (L. c.) mentions as the next step, the practice, common in his time among the Gauls, and continued to our own in Devonshire, of drying square lumps of clay and building them into walls, which were strengthened by means of horizontal bond-timbers (jugamenta) laid at intervals, and which were then covered with thatch.

III. The παρειανδεια, i.e. the πιστοι wall, made of rammed earth. [FORMA.]

IV. In districts abounding with wood, log-houses were common, constructed, like those of the Siberians and of the modern Americans in the back settlements, of the trunks of trees, which, having been more or less squared, were then laid upon one another in an horizontal position, and had their interstices filled with chips (σχιδία), moss, and clay. After this manner the Celchisians erected houses several stories high. (Vitruv. L. c.: compare Herod. iv. 108; Vitruv. ii. 9.)

V. The παρειανδεια lateritius, i.e. the brick wall. [LATER.] Among the Romans the ordinary thickness of an outside wall was 18 inches (oesquipes), being the length of the common or Lydian brick; but, if the building was more than one story high, the walls at the bottom were either two or three bricks thick (diplinthii aut triplinthii) according to circumstances. The Egyptians sometimes exhibited a chequered pattern, and perhaps other devices, upon the walls of their houses by the alternation of white and black bricks. (Ath. v. p. 208, c.) The Romans, probably in imitation of the Etrurians, often cases the highest part of a brick wall with a range of terra cottas (structura et lorica testaceae, Vitruv. ii. 8; Pallad. de Re Rust. i. 11), eighteen inches high, with projecting cornices, and spouts for discharging the water from the roof. [ANTEFIXA.]

VI. The reticulata structura (Plin. H. N. xxxvi. 22. s. 51), i.e. the reticulated, or resembling network. This structure consists in placing square or lozenge-shaped stones side by side upon their edges, the stones being of small dimensions and cemented by mortar (materia ex calce et arena). In many cases the mortar has proved more durable than the stone, especially where volcanic tufa is the material employed, as at Baiae in the Bay of Naples, and in the villa of Hadrian near Tivoli. This kind of building is very common in the ancient edifices of Italy. Vitruvius says (ii. 8), that it was universally adopted in his time. Walls thus constructed were considered more pleasing to the eye, but less secure than those in which the stones lay upon their flat surfaces. The front of the wall was the only part in which the structure was regular, or the stones cut into a certain form, the interior being rubble-work or concrete (farta), i.e. fragments and chippings of stone (aemumenta, χαλαξ) imbedded in mortar. Only part of the wall was built of brick, the other part giving it firmness and durability the sides and base were built of brick or of squared stones, and horizontal courses of bricks were laid at intervals, extending through the length and thickness of the wall. These circu-
stances are well exemplified in the annexed woodcut, which is copied from the drawing of a wall at Pompeii, executed on the spot by Mr. Mocatta.

VII. The *structura antiqua* or *incerta*, i.e. the wall of irregular masonry, built of stones, which were not squared or cut into any exact form. The necessary consequence of this method of construction was, that a great part of the wall consisted of mortar and rubble-work. (Vitrav. *l. c.)*

VIII. The *emplecton*, i.e. the complicated wall, consisting in fact of three walls joined together. Each side presented regular masonry or brickwork; but the interior was filled with rubble (fartura). To bind together the two outside walls, and thus render the whole firm and durable, large stones or courses of brickwork (coagmenta) were placed at intervals, extending through the whole thickness of the wall, as was done also in the *structura reticulata*. Walls of this description are not uncommon, especially in buildings of considerable size.

IX. The *paries e lapide quadrato*, i.e. the ashlar wall, consisting entirely of stones cut and squared by the chisel. This was the most perfect kind of wall, especially when built of marble. The construction of such walls was carried to the highest perfection by the architects of Greece; the temples of Athens, Corinth, and many cities of Asia Minor still attest in their ruins the extreme skill bestowed upon the erection of walls. Considerable excellence in this art must have been attained by the Greeks even as early as the age of Homer, who derives one of his similes from the "nicely fitted stones" of the wall of a house. (H. xvi. 212.) But probably in this the Greeks only copied the Asiatics; for Xenophon came to a deserted city in Mesopotamia, the brick walls of which were capped by a parapet of "polished shell marble." (Arabh. iii. 4. § 10.) Besides conferring the highest degree of beauty and solidity, another important recommendation of ashlar walls was, that they were the most secure against fire, an advantage, to which St. Paul alludes, when he contrasts the stones, valuable both for material and for workmanship (λίθως τιμίως), and the gold and silver, which were exhibited in the walls of such a temple as that just mentioned, with the logs of wood, the thatch, the straw and cane, employed in building walls of the four first kinds. (1 Cor. iii. 10—15.) Vitruvius also strongly objects to the *paries craticus* on account of its great combustibility (ii. 8. ad fin.). Respecting walls of this kind see further under *murus*.

Cicero, in a single passage of his *Topica* (§ 4), uses four epithets which were applied to walls. He opposes the *paries solidus* to the *fornicatus*, and the *communis* to the *directus*. The passage at the same time shows that the Romans inserted arches [*fornix*] into their "common" or party walls. The annexed woodcut, representing a portion of the supposed Thermae at Trèves (Wyttenbach's *Guide*, p. 60), exemplifies the frequent occurrence of arches in all Roman buildings, not only when they were intended for windows or doorways, but also when they could serve no other use than to strengthen the wall. In this "paries fornicatus," each arch is a combination of two or more concentric arches, all built of brick. This specimen also shows the alternation of courses of brick and stone, which is a common characteristic of Roman masonry. The "paries solidus," i.e. the wall without openings for windows or doorways, was also called "a blind wall" (Ving. *Aem.* v. 589); and the *paries communis* (Ovid. *Met*. iv. 66; κουνός τοίχος, Thucyd. ii. 3), which was the boundary between two tenements and common to them both, was called *interpericus*, *interpericus* (Festus, s. v.; Plin. *H. N.* xxxv. 14. s. 49), and in Greek *μεσοτοίχος* (Athen. vii. p. 281, d), *ομεσοτοίχον*. (Eph. ii. 14.) The walls, built at right angles to the party-wall for the convenience of the respective families, were the *parietes directi*.

Walls were adorned, especially in the interior of buildings, in a great variety of ways. Their plane surface was broken by panels. [ABACUS.] However coarse and rough their construction might be, every unevenness was removed by a coating, two or three inches thick, of mortar or of plaster with rough-cast, consisting of sand together with stone, brick, and marble, broken and ground to various degrees of fineness. (Vitrav. vii. 3; *Acts* xxiii. 3.) Gypsum also, in the state which we call plaster of Paris, was much used in the more
splendid edifices, and was decorated with an endless variety of tasteful devices in bas-relief. Of these ornaments, wrought in stucco (opus tectorium), specimens remain in the "Baths of Titus" at Rome. When the plasterer (sector, κοσμητός) had finished his work (trullisatio, i.e. trowelling; opus tectorium), in all of which he was directed by the use of the square (norma), the rule, and the line and plummet (perpendicularum), and in which he aimed at producing a surface not only smooth and shining, but as little as possible liable to crack or decay (Vitr. vii. 3), he was often succeeded by the painter in fresco (ado tectorium, Vitr. l.c.). In many cases the plasterer or stucco was left without any additional ornament; and its whiteness and freshness were occasionally restored by washing it with certain fine calcareous or aluminous earths dissolved in milk (paratum, Plin. II. N. xxxv. 6. s. 18; terra Selinusia, 16. s. 56). A painted wall was commonly divided by the artist into rectangular compartments, which he filled according to his taste and fancy with an endless variety of landscapes, buildings, gardens, animals, &c. (Vitr. vii. 5.)

Another method of decorating walls was by en-crusting them with slabs of marble (crustae). The blocks, designed for this purpose, were cut into thin slabs by the aid of saw-mills. (Mola.) Various kinds of sand were used in the operation, according to the hardness of the stone; emery (naxia, Plin. II. N. xxxvi. 6. s. 9) being used for the hardest. This art was of high antiquity, and probably Oriental in its origin. The brick walls of the Mausoleum at Halicarnassus, built as early as 335 n. c., were covered with slabs of Proconnesian marble (Plin. II. N. xxxvi. 6); and this is the most ancient example upon record. In the time of Pliny (Plin. II. N. xxxv. 1) slabs of a uniform colour were sometimes inlaid with variously coloured materials in such a way as to represent animals and other objects. In short the beautiful invention now called Florentine Mosaic was then in use for the decoration of the walls of apartments. [Emblem.] The common kind of Mosaic was also sometimes used in walls as well as in floors and ceilings. The greatest refinement was the attempt to produce the effect of mirrors, which was done by inserting into the wall pieces of black glass manufactured in imitation of obsidian. (Plin. II. N. xxxvi. 26. s. 67.) [Domus p. 43; Pictura, § XV.]

PARMA. [Pam.]
PARMA. dim. PARMULA (Hor. Carm. ii. 7. 10), a round shield, three feet in diameter, carried by the velites in the Roman army. Though small, compared with the clipeus, it was so strongly made as to be a very effectual protection. (Polyb. vi. 20.) This was probably owing to the use of iron in its frame-work. In the Pyrrhic dance it was raised above the head and struck with a sword so as to emit a loud ringing noise. (Claud. ad Cons. Honor. 628.) The parma was also worn by the equites (Sallust, Frag. Hist. iv.); and for the sake of state and fashion it was sometimes adorned with precious stones. (Propert. iv. 2. 21.)

We find the term parma often applied to the target (cétra), which was also a small round shield, and therefore very similar to the parma. (Propert. iv. 2. 49; Mela, i. 5. § 1; Virg. Aen. x. 817.) Virgil, in like manner, applies the term embossed (σφυρικάρων) [Malleus] and gilt, representing on its border, as is supposed, the taking of Rome by the Gauls under Brennus and its recovery by Camillus. It belonged formerly to the Woodwardian Museum, and is supposed to have been made in the time of Claudius or Nero. The boss (umbo) is a grotesque face, surrounded with ram's horns, foliage, and a twisted beard. (Dodwell, de Parma Woodwardiana, Oxon. 1713.) Compare Bernd, Das Wappenessen der Griechen und Römer, Bonn, 1841. [J.Y.]

PA'ROCHI, were certain people who were paid by the state to supply the Roman magistrates, ambassadors, and other official persons, when they were travelling, with those necessaries which they could not conveniently carry with them. They existed on all the principal stations on the Roman roads in Italy and the provinces, where persons were accustomed to pass the night. But as many magistrates frequently made extortionate demands from the parochi, the lex Julia de Repudundis of Julius Caesar, b. c. 59, defined the things which the parochi were bound to supply, of which hay, fire-wood, salt, and a certain number of beds appeared to have been the most important (Hor. Sat. i. 5. 46; Cic. ad Att. v. 16, xiii. 2; Heindorf, ad Hor. l. c.)

PAROPSIS (παρόπις). Two different meanings are given to this word by the Greek grammarians; some interpret it as meaning any food eaten in mcnsa comeduntur. The word is also written [Malleus] and gilt, representing on its border, as is supposed, the taking of Rome by the Gauls under Brennus and its recovery by Camillus. It belonged formerly to the Woodwardian Museum, and is supposed to have been made in the time of Claudius or Nero. The boss (umbo) is a grotesque face, surrounded with ram's horns, foliage, and a twisted beard. (Dodwell, de Parma Woodwardiana, Oxon. 1713.) Compare Bernd, Das Wappenessen der Griechen und Römer, Bonn, 1841. [J.Y.]

PASTOPHORUS.

PARRICIDA, PARRICIDIOUM. [Lex Cornellia, p. 607.]

PARTHÈNIAE (παρθενίαι or παρθενίαι), are, according to the literal meaning of the word, children born by unmarried women (παρθένως, Hom. II. xvi. 180). Some writers also designated by this name those legitimate children at Sparta who were born before the mother was introduced into the house of her husband. (Hesych. s. v.; Müller, Dor. iv. 4. § 2.) The partheniae, however, as a distinct class of citizens, appear at Sparta after the first Messenian war and in connection with the foundation of Tarentum, but the legends as to who they were, are different. Hesychius says that they were the children of Spartan citizens and female slaves; Autiochus (ap. Strab. vi. p. 278, &c.) states, that they were the sons of those who emigrated and became the founders of Tarentum. (Compare Theopomp. p. 271; ETHEUNACTAE.) These stories seem to be true, for want of an increase in the number of citizens the Spartans who took no part in the war against the Messenians, sent an embassy to the camp of their husbands, complained of their long absence, and declared that the republic would suffer for want of an increase in the number of citizens if the war should continue much longer. Their husbands, who were bound by an oath not to leave the field until the Messenians were conquered, sent home all the young men in the camp, who were not bound by oath, and requested them to cohabit with the maidens at Sparta. The children thus produced were called partheniae. On the return of the Spartans from Messenia, these partheniae were not treated as citizens, and according ly united with the Helots to wage war against the Spartans. But when this plan was found impracticable, they emigrated and founded the colony of Tarentum. (Compare Theopomp. ap. Athen. vi. p. 271; EPEUNACTAE.) These stories seem to be nothing but distortions of some historical fact. The Spartans at a time of great distress had perhaps allowed marriages between Spartans and slaves or Laconians, or had admitted a number of persons to the franchise, but afterwards endeavored to curtail the privileges of these new citizens, which led to insurrection and emigration. (See Thirlwall, Hist. of Greece, vol. i. p. 352, &c.)

PASSUS (from pando), a measure of length, which consisted of five Roman feet. (Colum. v. 1; Vitruv. x. 14.) [Mensa.] The passus was not the single step (gradus), but the double step; or, more exactly, it was not the distance from heel to heel, when the feet were at their utmost ordinary extension, but the distance from the point which the heel leaves to that in which it is set down. The mille passuum, or thousand passes, was the common name of the Roman mile. [Miliare.]

In connecting the Greek and Roman measures, the word passus was sometimes applied to the extension of the arms, that is, the Greek ἐπφυά, which, however, differed from the true passus by half-a-foot; and, conversely, the gradus was called by Greek writers βίμα, or τὸ βίμα τὸ ἀπλαῖον, and the passus τὸ βίμα τὸ διπλαῖον. [P.S.]

PASTOΦHORUS (παστοφόρος). The shawl, richly interwoven with gold (χρυσόστατος), and displaying various symbolical or mythological figures, was much used in religious ceremonies to convey to their splendour, to explain their signification, and also to veil their solemnity. The maidens, who carried the figured peplus in the Panathenae at Athens, were called ἄρηφοροι. In Egypt, the priests of Isis and Osiris, who probably fulfilled a similar office, were denominated παστοφόροι, and were incorporated. (Bidd. i. 29; Porphyry. de Abstin. iv. 6; Apul. Met. xi. pp. 124, 128, ed. Aldi.) They appear to have extended themselves together with the extension of the Egyptian worship to various parts of Greece and Italy, so that "the College of the Pastophori of Indivia," a city of Liguria, is mentioned in an inscription found near Turin. (Maffei, Mus. Veron. p. 230.) The Egyptian college was divided into minor companies, each containing ten pastophori, and each having at its head a leader who was called decario quinquennalis, because he was appointed for five years. (Apul. Met. xi. ad fin.)

Besides carrying the παστός, or sacred ornamental shawl, they performed other duties in connection with the worship of the temple. It was the office of this class of priest to raise the shawl with the performance of an appropriate chant, so as to discover the god seated or standing in the adytum (Clem. Alex. Paedag. iii. 2), and generally to show the temple with its sacred utensils, of which, like modern sacrificants, they had the custody. (Horn, Hier. i. 41.) In consequence of the supposed influence of Isis and her priesthood in healing diseases, the pastophori obtained a high rank as physicians. (Clem. Alex. Strom. vi. 4. p. 758, ed. Potter.)

It must be observed, that according to another interpretation of παστός, the pastophori were so denominated from carrying, not a shawl, but a shrine or small chapel, containing the image of the god. Supposing this etymology to be correct, it is no less true that the pastophori sustained the various offices which have here been assigned to them.

It was indispensably requisite, that so numerous and important a body of men should have a residence appropriated to them in the temple to which they belonged. This residence was called παστοφόροι. The common use of the term, as applied by the Greeks to Egyptian temples, led to its application to the pastophori, a class of the temple at Jerusalem by Josephus (Ant. Jud. iv. 12), and by the authors of the Alexandrine version of the Old Testament. (1 Chron. ix. 26, 33, xxiii. 23 ; Jer. xxxv. 4 ; 1 Macc. iv. 38, 57.)

PATER FAMI/LIAE. [Familia; Matrimonium; Patria Potestas.]

PATER PATRATUS. [Filia.]

PATERA. [Lex Cornellia, p. 607.]

PATERA, diim. PATELLA (φαλάν), a round dish ; a plate ; a saucer. Macrobius (Sat. v. 21), explaining the difference between the patera and the Carchesium, says that the former received its name from its flat expanded form (planum ac patens). The paterae of the most common kind are thus described by Festus (s. v. Patellae), " Vasa picata carpa, sacrificii fociendi apta." (Nigra patella, Mart. v. 120 ; Rubicunda testa, xiv. 114.) They were small plates of the common red earthen ware, on which an ornamental pattern was drawn in the manner described under the article of Figgles, and which were sometimes entirely black. Numerous specimens of them may be seen in the
PATERA.

British Museum, and in other collections of ancient fictile vases. The more valuable paterae were metallic, being chiefly of bronze; but every family, raised above poverty, possessed one of silver (ἀγρυπίς), together with a silver salt-cellar. [SALIUM.] (Plin. H. N. xxxiii. 12. s. 54.) In opulent houses there was a plate of gold (χρυσίς, Athen. xi. pp. 497, 503; Pind. Ol. vii. 1–3; Virg. Georg. ii. 192). These metallic plates were often adorned with figures, engraved or embossed upon them. (Cic. Ver. iv. 21; Xen. Anab. iv. 7. § 27, vii. 3. § 27.) A beautiful specimen is presented in the woodcut to the article LIBRA; and the accompanying woodcut exhibits a highly ornamented dish, also of bronze, designed to be used in the worship of Mars, and found at Pompeii. (Donaldson's Pomp. vol. ii. pl. 78.) The view of the upper surface is accompanied by a side-view, showing the form and depth of the vessel. The ornamental paterae sometimes represented leaves of fern, which probably diverged from the centre (φιλικταῖς, Cic. Parad. i. § 2). Gems were set in others. (Cic. Ver. iv. 24; Virg. Aen. i. 728, 739.) We read also of an amber dish (electronium), having in the centre the countenance of Alexander the Great, and his history represented on the border. (Treb. Poll. Trip. Tyr. 13.) The annexed woodcut contains a view and section of a plate of white marble in the British Museum, which was found in the ruins of Hadrian's Villa, and purchased by Mr. Towneley. It is 14 inches in diameter, and ½ thick. In the centre is sculptured a female bacchante in a long tunic and with a scarf [CHLAMYS] floating over her head. This centre-piece is encircled by a wreath of ivy. The decorations indicate the appropriation of the plate to the worship of Bacchus.

Plates were sometimes made so as to be used with either side downward, and were then distinguished by the epithet ἀμφίδετον. (Hom. H. xxiii. 270, 616.) In these the under surface was ornamented as well as the upper. The Massilians and other Ionic Greeks commonly placed the under surface uppermost. Plates were further distinguished from one another by being either with or without a base (στυγμα), a boss in the middle (ὑμφαλαυθή, μετοθυμαλαυθή, φθοῖ), fest (Βαλαγωρί), and handles. (Athm. xi. pp. 501, 502.) In the preceding woodcuts the bronze patera has one handle: both the paterae are made to stand upon a low base.

Small plates were sometimes used in cooking (Plin. H. N. xxx. 8. a. 21), an operation more commonly performed in pots (olla) and basins or bowls. [PATINA.] They were used at meals to eat upon as we use them (Varro, Eumen. ap. Non. Marc. xx. 6; Hor. Epist. i. 5. 2), although it appears that very religious persons abstained from this practice on account of the customary employment of them in sacrificing to the gods. (Cic. de Fin. ii. 7.) A larger plate, in fact, a round dish, was used to bring to table such an article of food as a flat fish. (Mart. xiii. 81.) Mustard (Plin. H. N. xix. 8. s. 54) and ointments (Xenophanes, p. 68, ed. Karsten) were brought in saucers. The Greeks also drank wine out of plates or saucers (Xen. Con. ii. 23), as we see in the woodcut under SYMPOSIUM, which represents a symposium, and in which the second and third figures from the right hand have each a saucer.

The use of paterae at meals no doubt gave origin to the employment of them in sacrifices. On these occasions they held either solid food (μύγχα κρέας, Varro, Man. ap. Non. Marc. l. c.; cibōs, Ovid, Fast. vi. 310), or any liquid intended to be poured out as a libation. (Virg. Aen. iii. 67, iv. 60, v. 98, vi. 249, viii. 133, xii. 174; Ovid. Met. ix. 160, Fast. ii. 634, iv. 934; Val. Flacc. v. 192; Juv. iii. 26; Heliodor. Aethip. ii. p. 98; Athen. xi. p. 482.) We find them continually represented in conjunction with the other instruments of sacrifice upon coins, gems, altars, bas-reliefs, and the friezes of temples. In the ancient Doric temple at Rome, now dedicated to St. Adrian, the tasteful patera and the cranium of the bull are alternately sculptured on the metopes. (Labacco, Ant. di Roma, 16, 17.)

Plates of the most precious materials and of the finest workmanship were sometimes given as prizes at the public games. (Hom. H. xxiii. 270; Pind. Isth. i. 20; Schol. in Pind. Nem. ix. 121, 123.)

[PA'TINA.]

PATINA. [FURCA.]

PATINA (καφώ, dim. κεφέων al. κεφαίου, λεκάκινη, Athen. vi. p. 268, λεκάκι, second dim. λεκάκιων, Bekker, Anc. 794), a basin or bowl of earthenware, rarely of bronze (Pallad. de Re Rust.
Patria Potestas.

873

i. 40; Plin. H. N. xxxiv. 11. s. 25) or silver. (Treb. Poll. Claud. p. 208, c.)

A patina, covered with a lid (speculum), was sometimes used instead of a jar (Col. de Re Rust. xii. 43), a proof that this vessel was of a form intermediate between the Patera and the Olla, not so flat as the former, nor so deep as the latter. Hence it is compared to the crater. (Schol. in Aristoph. Aekarn. 1109.)

This account of its shape accords with a variety of uses to which it was applied, viz., to hold water and a sponge for washing (Aristoph. Vesp. 596), and clay for making bricks (Aesch. 1114, 1146), in vomiting (Nub. 904), and in smelting the ore of quicksilver. (Plin. H. N. xiii. 8. s. 46.) But its most frequent use was in cookery and pharmacy. (Plin. H. N. xxiii. 2. s. 33.)

Although the patera and the olla were also used, the articles of diet were commonly prepared, sometimes over a fire (Plaut. Pseud. iii. 2. 51; Plin. H. N. xviii. 11. s. 26, xxii. 25. s. 80), and sometimes without fire, in a patina, and more especially when they were accompanied with sauce or fluid. (Hor. Sat. i. 3, 80.) Hence the word occurs in almost every page of Apician De Opositis (Opso- rocr.) ; and hence came its synonym, stipleum. (Phys. Lex. s. n.) In the same bowl the food was commonly brought to table ( Xen. Cyr. p. 3. § 4; Athen. iv. p. 149, f.; Plaut. Mil. iii. 1. 164; Ter. Enn. iv. 7, 46; Hor. Sat. ii. 8. 43), an example of which is λεκάνου τῶν λαγηφὸς κρείω, i.e. "a basin of stewed hare." (Aristoph. Aekarn. 1109.) But it is to be observed, that dishes [LANX, PA- TERA] were used to bring to table those articles of food, the form and solidity of which were adapted to such vessels.

The silver bowl was sometimes ornamented, as with ivy-leaves (hederata, Treb. Poll. l. c.), or by the insertion of mirrors (specillata, FL Vopisc. Prob. p. 234, ed. Salmasii). These bowls weighed from 10 to 20 lbs. each. Vitellius, wishing to obtain an earthenware bowl of immense size, had a furnace constructed on purpose to bake it. (Plin. H. N. xxxiv. 12. s. 46; Juv. iv. 130—134.)

A method of divination by the use of a basin (λεκάνωμεναρτέα) is mentioned by Tzetzes on Lyco- phon, v. 613.

Patres. (Patricii; Senatus.)

Patria Potestas. Potestas signifies generally a power or faculty of any kind by which we do any thing. "Potestas," says Paulus (Dig. 50. tit. 16. s. 215), "has several significations: when applied to Magistratus, it is Imperium; in the case of Children, it is the Patria Potestas; in the case of Slaves, it is Dominium." According to Paulus then, Potestas, as applied to Magis- tratus, is equivalent to Imperium. Thus we find Potestas associated with the adjectives Praetoria, Consularia. But Potestas is applied to Magis- tratus who had not the Imperium, as for instance to Quaestors and Tribuni Plebis (Cic. pro Cluent. c. 27); and Potestas and Imperium are often op- posed in Cicero. Both the expressions Tribuni- cium Jus and Tribunicia Potestas are used (Tact. Ann. i. 2, 3). Thus it seems that this word Potestas, like many other Roman terms, had both a wider signification and a narrower one. In its wider signification it might mean all the power that was delegated to any person by the State, whatever might be the extent of that power. In its narrower significations, it was on the one hand equivalent to Imperium; and on the other, it expressed the power of those functionaries who had not the Imperium. Sometimes it was used to express a Magistratus, as a person (Sueton. Claud. 13; Juv. Sat. x. 100); and hence in the Italian language the word Potestas signifies a Magistrate.

Potestas is also one of the words by which is expressed the power that one private person has over another, the other two being Manus and Mancipium. The Potestas is either Dominica, that is, ownership as exhibited in the relation of Master and Slave [SERVUS]; or Patria as ex- hibited in the relation of Father and Child. The Mancipium was framed after the analogy of the Potestas Domini [MANCIPIUM].

Patria Potestas then signifies the power which a Roman father had over the persons of his children, grandchildren, and other descendants (filii familiae, filiae familiae), and generally all the rights which he had by virtue of his paternity. The founda- tion of the Patria Potestas was a Roman mar- riage, and the birth of a child gave it full effect. [MATRIMONIUM.]

It does not seem that the Patria Potestas was ever viewed as an inalienable right of the Roman, as absolutely equivalent to the Dominica Potestas, or as involv- ing ownership of the child; and yet the original notion of the Patria came very near to that of the Dominica Potestas. Originally the father had the power of life and death over his son as a member of his familia: he could sell him and so bring him into the mancipii causa; and he had the jus noxae dandi as a necessary consequence of his being liable for the delicts of his child. He could even give his child in adoption, and emancipate a child at his pleasure.

The father could exheredate his son, he could substitute another person as heir to him [HERBS], and he could by his will appoint him a tutor.

The general rights and disabilities of a filius- familiae may be thus briefly expressed — "The child is incapable, in his private rights, of any power or dominion; in every other respect he is capable of legal rights." (Savigny, System, &c. ii. 52.) The incapacity of the child is not really an incapacity of acquiring legal rights, for the child could acquire by contract, for instance; but every thing that he acquired, was acquired for his father.

As to matters that belonged to the Jus Publicum, the son laboured under no incapacities: he could vote at the Comitia Tributa, he could fill a magistratus; and he could be a tutor: for the Tutela was considered a part of Jus Publicum. (Dig. 1. tit. 6. s. 9; Liv. xxiv. 44; Gell. ii. 2.)

The child had Communion and Commercium, like any Roman citizen who was sui juris, but these legal capacities brought to him no present power or ownership. His marriage with his father's consent was legal (futsum), but if it was accom- panied with the In Manum conventio, his wife came into the power of his father, and not into the power of the son. The son's children were in all cases in the power of their grandfather, when the son was. The son could also divorce his wife with his father's consent.

Inasmuch as he had Commercium, he could be a witness to Mancipationes and Testaments; but he could not have property nor servitudes. He had the testamenti facies, as already stated, so far
as to be a witness to a testament; but he could not make a testament, for he had nothing to dispose of; and he could not have executors. Further privileges of this kind were also given by Constantine and extended under subsequent emperors (bona quae patri non adquireret).

The Patria Potestas began with the birth of a child in a Roman marriage. If a Roman had by mistake married a woman with whom he had no connubium, thinking that connubium existed, he was allowed to prove his case (causa erroris pro bieto), upon doing which the child that had been born and the wife also became Roman citizens, and from that time the son was in the power of the father. This cause probatio was allowed by a Senatus-consultum (Gaius, i. 67), which, as it appears from the context, and a comparison with Ulpian's Fragments (vii. 4), was an amendment of the Lex Aelia Sentia. Other instances of the causa probatio are mentioned by Gaius.

It was a condition of the Patria Potestas that the child should be begotten in matrimonium legitimum. (Gaius, i. 55—107 ; Inst. i. 9—11.) By the old law, the subsequent marriage of the parents did not legitimate a child born before the marriage. But it seems to have early become the fashion for the Emperor, as the interest of the public, to place such child on the same footing as legitimate children. The legitimation per subsequens matrimonium only became an established rule of law under Constantine, and was introduced for the advantage of children who were born in concubinage. [CONCUBINA.] In the time of Theodosius II., the rule was established by which a child was legitimated per oblacionem curiae. To these two modes of legitimation, Justinian added that per rescriptum principis. The child thus legitimated came into the familia and the potestas of his father, as if he had been born in lawful marriage.

The Patria Potestas could also be acquired by either of the modes of Adoption. [ADOPTIO, p. 15, b.]

The Patria Potestas was dissolved in various ways. It was dissolved by the death of the father, upon which event, the grandchild, if there were any, who had hitherto been in the power of their grandfather, came into the power of their father who was now sui juris. It could also be dissolved in various ways during the lifetime of the father. A maxima or media capitis diminutio either of the parent or child dissolved the Patria Potestas; though in the case of either party sustaining a capitis diminutio by falling into the hands of an enemy, the relation might be revived by Postliminium. A father who was adrogated, and consequently sustained a minima capitis diminutio, came together with his children, who had hitherto been in his power, into the power of his adoptive father. The emancipation of the child by the father was a common mode of dissolving the Patria Potestas, and was accompanied by the Minima Capitis diminutio. If a son was elected Flamen Dialis or a daughter was chosen a Vestal, the Patria Potestas ceased; and in the later period, it was also dissolved by the son's attaining certain civil or ecclesiastical honours. The Potestas of the father might cease without the son becoming sui juris, as in the case of the son being given in adoption.

The term Patria Potestas strictly expresses the power of the father, as such, which arises from the paternal relation; but the term also imports the
rights of the child as a filiusfamilias or filiafamilias. Of these rights, the most important was the capacity of being the suns heres of the father. Generally, the parent could emancipate his child at his pleasure, and thus deprive him of the rights of agnation; but the law in this respect was altered by Justinian (Nov. 89. c. 11), who made the consent of the child necessary. (Savigny, System, &c., ii. 49, &c.; Fuchta, Inst. iii. 142; Böcking, Inst. i. 224.)

PATRICII. This word is a derivative from pater, which in the early times invariably denoted a parent, and in the later times of the republic frequently occurs in the Roman writers as equivalent to senator. Patricii therefore signifies those who belonged to the pateres rex patres eoo (senatores) voluit nominari, patriciosque eorum liberos." (Cic. de Re Publ. ii. 12; Liv. i. 8; Dionyss. ii. 8.) It is a mistake in these writers to suppose that the patricii were only the offspring of the patres in the sense of senators, and necessarily connected with them by blood. Patres and patricii were originally convertible terms. (Plut. Romul. 18; Lydus, de Mens. i. 20, de Magy. i. 16; Niebuhr, Hist. of Rome, i. p. 336.) The words patres and patricii have radically and essentially the same meaning, and some of the ancients believed that the name patres was given to that particular class of the Roman population from the fact that they were fathers of families (Plut. Dionyss. l. c.); others, that they were called so from their age (Sallust, Catil. 6); or because they distributed land among the poorer citizens, as fathers did among their children. (Fest. s. v. Patres Senatores; Lyd. de Mens. iv. 50.) But most writers justly refer the name to the patrocinium which the patricians exercised over the whole state, and over all classes of persons of whom it was composed, (Plut. and Sallust, l. c.; Zonaras, vii. 8; Suidas, s. v. Patricii.)

In considering who the patricians were, we have to distinguish three periods in the history of Rome. The first extends from the foundation of the city down to the establishment of the plebeians as a second order; the second, from this event down to the time of Constantine, during which time the patricians were a real aristocracy of birth, and as such formed a distinct class of Roman citizens opposed to the two other classes which were afterwards added to the plebeian aristocracy of the nobles: the third period extends from Constantine down to the middle ages, during which the patricians were no longer an aristocracy of birth, but were persons who merely enjoyed a title, first granted by the emperors and afterwards by the popes also.

First Period: from the foundation of the city, to the establishment of the plebeian order. Niebuhr’s researches into the early history of Rome have established it as a fact beyond all doubt, that during this period the patricians comprised the whole body of Romans who enjoyed the full franchise, that they were the populus Romanus, and that there were no other real citizens besides them. (Niebuhr, Hist. of Rome, ii. pp. 224, 225, note 507; Cic. pro Caecein. 35.) The patricians must be regarded as conquerors who reduced the earlier inhabitants of the places they occupied to a state of servitude, which in our authorities is designated by the terms cliens and pleso. The other parts of the Roman population, namely clients and slaves, did not belong to the populus Romanus, or sovereign people, and were not burghers or patricians. The senators were a select body of the populus or patricians, which acted as their representative. The burghers or patricians consisted originally of three distinct tribes, which gradually became united into the sovereign populus. These tribes had founded settlements upon several of the hills which were subsequently included within the precincts of the city of Rome. Their names were Ramnes, Tituli, and Luceres, or Ramnenses, Titenses, and Lucerenses. Each of these tribes consisted of ten curiae, and each curia of ten deurices, which were established for representative and military purposes. [Senatus.] The first tribe, or the Ramnes, were a Latin colony on the Palatine hill, said to have been founded by Romulus. As long as it stood alone, it contained only one hundred gentes, and had a senate of one hundred members. When the Titus, or Sabine settlers on the Quirinal and Viminal Hills, under king Tatius, became united with the Ramnes, the number of gentes as well as that of senators was increased to 200. These two tribes after their union continued, until a considerable time to be the patricians of Rome, until the third, the Luceres, which chiefly consisted of Etruscan, who had settled on the Caelian hill, also united with the other two as a third tribe. When this settlement was made was not certain: some say that it was in the time of Romulus (Fest. s. v. Caecus Mons and Luceres; Varro, de Ling. Lat. v. 55) others that it took place at a later time. (Tacit. Annal. iv. 65; Fest. s. v. Tuscan vicum.) But the Etruscan settlement was in all probability older than that of the Sabines (see Götting, Gesch. der Röm. Staatsrwe. p. 84, &c.), though it seems occasionally to have received new bands of Etruscan settlers even as late as the time of the republic.

The amalgamation of these three tribes did not take place at once: the union between Latins and Sabines is ascribed to the reign of Romulus, though it does not appear to have been quite perfect, since the Latins on some occasions claimed a superiority over the Sabines. (Dionys. ii. 62.) The Luceres existed for a long time as a separate tribe without enjoying the same rights as the two others until Tarquinius Priscus, himself an Etruscan, caused them to be placed on a footing of equality with the others. For this reason he is said to have increased the number of senators to 300 (Dionys. iii. 67; Liv. i. 35; Cic. de Re Publ. ii. 20; compare Senatus), and to have added two Vestal virgins to the existing number of four. (Dionys. l. c.; Fest. s. v. Sex Vestae sacrorum; Niebuhr, Hist. of Rome, i. p. 302, &c.) The Luceres, however, are, notwithstanding this equalisation, sometimes distinguished from the other tribes by the name patres minorum gentium; though this name is also applied to other members of the patricians, e. g. to those plebeian families who were admitted by Tarquiniius Priscus into the three tribes, and in comparison with these, the Luceres are again called patres majorum gentium. (Compare Niebuhr, i. p. 304, and Göttling, p. 226, &c.) That this distinction between patres majorum and minorum gentium was kept up in private life, at a time when it had no value whatever in a political point of view, is clear from Cicero (ad Fam. ix. 21). Tullus Hostilius admitted several of the noble gentes of Alba among the patricians (in
plebeian order to the time of Constantine. A plebeian, on the other hand, or even a stranger, might, as we stated above, be made a patrician by a lex curiata. But this appears to have been done very seldom;

and the consequence was, that in the course of a few centuries the number of patrician families became so rapidly diminished, that towards the close of the republic there were not more than fifty such families. (Dionys. i. 85) Julius Caesar by the lex Cassia raised several plebeian families to the rank of patricians, in order that they might be able to continue to hold the ancient patrician offices which still belonged to their order. (Suet. Cæs. 41; Tacit. Annal. xii. 25; Dion Cass. xliii. 47, xlv. 2) Augustus soon after found it necessary to do the same by a lex Saenia. (Tacit. l.c.; Dion Cass. xliii. 47, lxx. 42) Other emperors followed these examples: Claudius raised a number of senators and such persons as were born of illustrious parents to the rank of patricians (Tacit. l.c.; Suet. Oth. 1); Vespasian, Titus, and other emperors did the same. (Tacit. Agric. 9; Capitol. M. Antonin. 1; Lamprid. Comm. 6) The expression for this act of raising persons to the rank of patricians was in patricias or in familia patriciam adligere.

Although the patricians throughout this whole period had the character of an aristocracy of birth, yet their political rights were not the same at all times. The first centuries of this period are an almost uninterrupted struggle between patricians and plebeians, in which the former exerted every means to retain their exclusive rights, but which ended in the establishment of the political equality of the two orders. (Plebes.) Only a few insignificant priestly offices, and the performance of certain ancient religious rites and ceremonies, remained in the exclusive possession of the patricians; of which they were the prouder, as in former days their religious power and significance were the basis of their political superiority. (See Ambrosch, Studien und Anmerkungen, &c. p. 58, &c.) At the time when the struggle between patricians and plebeians ceased, a new kind of aristocracy began to arise at Rome, which was partly based upon wealth and partly upon the great offices of the republic, and the term Nobles was given to all persons whose ancestors had held any of the curule offices. (Compare Nobles.) This aristocracy of nobles threw the old patricians as a body still more into the shade, though both classes of aristocrats united as far as was possible to monopolise all the great offices of the state (Liv. xxii. 34, xxxix. 41); but although the old patricians were obliged in many cases to make common cause with the nobles, yet they could never suppress the feeling of their own superiority; and the veneration which historical antiquity alone can bestow, always distinguished them as individuals from the nobles. How much wealth gradually gained the upper hand, is seen from the measure adopted about the time of the
Patrici.

First Punic war, by which the expenses for the public games were no longer given from the neronium, but were defrayed by the aediles; and as their office was the first step to the great offices of the republic, that measure was a tacit exclusion of the poorer citizens from those offices. Under the emperors the position of the patricians as a body was transferred on the reign, in whose vacancy, in their order by the emperors began more and more to assume the character of an especial honour, conferred upon a person for his good services or merely as a personal favour, so that the transition from this period to the third had been gradually preparing.

Respecting the great political and religious privileges which the patricians at first possessed alone, but afterwards were compelled to share with the plebeians, see Plebs and the articles treating of the several Roman magistracies and priestly offices.

Compare also Gens; Curia; Senator.

In their dress and appearance the patricians were scarcely distinguished from the rest of the citizens, unless they were senators, curule magistrates, or equites, in which case they wore like others the ensigns peculiar to these dignities. The only thing by which they appear to have been distinguished in their appearance from other citizens, was a peculiar kind of shoes, which covered the whole foot and part of the leg, though they were not as high as the shoes of senators and curule magistrates. Those shoes were fastened with four strings (corrigtcae or lora patricis) and adorned with a lunula on the top. (Senec. De Tranq. Anim. 11; Plut. Quaest. Rom. 75; Stat. Silv. v. 2. 27; Martial. i. 50, ii. 29.) Festus (s. v. Mulleus) states that malleus was the name of the shoes worn by the patricians; but the passage of Varro which he adds only shows that the mallei (shoes of a purple colour) were worn by the curule magistrates. (Compare Dion Cass. xlili. 43.)

Third period: from the time of Constantine to the middle ages. From the time of Constantine the dignity of patricius was a personal title, which was conferred on the person in whose family it was granted, a very high rank and certain privileges. Hitherto patricians had been only genuine Roman citizens, and the dignity had descended from the father to his children; but the new dignity was created at Constantinople, and was bestowed on old Roman families; it was given, without any regard to persons, to such men as had for a long time distinguished themselves by good and faithful services to the empire or the emperor. This new dignity was not hereditary, but became extinct with the parents were both alive, (Festus, s. v. Flaminia; Patricius; Matrimes; called by Dionysius, ii. 23, ἀρσεναλεύς) in the same way as pater patrines signifies a father, whilst an other father is still alive. (Compare Dion Cass. viii. 9; Savaron Patro'nomi.)

This new dignity was not confined to Romans or subjects of the empire, but was sometimes granted to foreign princes, such as Odoacer, the chief of the Heruli, and others. When the popes of Rome had established their authority, they also assumed the right of bestowing the title of patricius on eminent persons and princes, and many of the German emperors was thus distinguished by the popes. In several of the Germanic kingdoms the sovereigns imitated the Roman emperors and popes by giving to their most distinguished subjects the title of patricius, but these patricii were at all times much lower in rank than the Roman patricii, a title of which kings and emperors themselves were proud.

In their dress and appearance the patricians were not as high as the shoes of senators and curule magistrates. Those shoes were fastened with four strings (corrigtcae or lora patricis) and adorned with a lunula on the top. (Senec. De Tranq. Anim. 11; Plut. Quaest. Rom. 75; Stat. Silv. v. 2. 27; Martial. i. 50, ii. 29.) Festus (s. v. Mulleus) states that malleus was the name of the shoes worn by the patricians; but the passage of Varro which he adds only shows that the mallei (shoes of a purple colour) were worn by the curule magistrates.

Compare also Gens; Curia; Senator.

In their dress and appearance the patricians were scarcely distinguished from the rest of the citizens, unless they were senators, curule magistrates, or equites, in which case they wore like others the ensigns peculiar to these dignities. The only thing by which they appear to have been distinguished in their appearance from other citizens, was a peculiar kind of shoes, which covered the whole foot and part of the leg, though they were not as high as the shoes of senators and curule magistrates. Those shoes were fastened with four strings (corrigtcae or lora patricis) and adorned with a lunula on the top. (Senec. De Tranq. Anim. 11; Plut. Quaest. Rom. 75; Stat. Silv. v. 2. 27; Martial. i. 50, ii. 29.) Festus (s. v. Mulleus) states that malleus was the name of the shoes worn by the patricians; but the passage of Varro which he adds only shows that the mallei (shoes of a purple colour) were worn by the curule magistrates. (Compare Dion Cass. xliii. 43.)

Patrici et Matrimes, also called Patrimes and Matrimes, were those children whose parents were both alive (Festus, s. v. Flaminia; Matrimes; called by Dionysius, ii. 23, ἀρσεναλεύς) in the same way as pater patrines signifies a father, whilst an other father is still alive. (Compare Dion Cass. viii. 9; Savaron Patro'nomi.)

This new dignity was not confined to Romans or subjects of the empire, but was sometimes granted to foreign princes, such as Odoacer, the chief of the Heruli, and others. When the popes of Rome had established their authority, they also assumed the right of bestowing the title of patricius on eminent persons and princes, and many of the German emperors was thus distinguished by the popes. In several of the Germanic kingdoms the sovereigns imitated the Roman emperors and popes by giving to their most distinguished subjects the title of patricius, but these patricii were at all times much lower in rank than the Roman patricii, a title of which kings and emperors themselves were proud.

(P. S.)

Patroni et Matrimes, also called Patrimes and Matrimes, were those children whose parents were both alive (Festus, s. v. Flaminia; Matrimes; called by Dionysius, ii. 23, ἀρσεναλεύς) in the same way as pater patrines signifies a father, whilst an other father is still alive. (Compare Dion Cass. viii. 9; Savaron Patro'nomi.)

This new dignity was not confined to Romans or subjects of the empire, but was sometimes granted to foreign princes, such as Odoacer, the chief of the Heruli, and others. When the popes of Rome had established their authority, they also assumed the right of bestowing the title of patricius on eminent persons and princes, and many of the German emperors was thus distinguished by the popes. In several of the Germanic kingdoms the sovereigns imitated the Roman emperors and popes by giving to their most distinguished subjects the title of patricius, but these patricii were at all times much lower in rank than the Roman patricii, a title of which kings and emperors themselves were proud.

(P. S.)
The manumissor could secure to himself further rights over his libertus by a stipulatio or by taking an oath from him. The subjects of such agreements were gifts from the libertus to the manumissor (dona et munera) and services (operae). The oath was not valid unless the person was a libertus when he took it. If then he freed the oath as a slave, he had to repeat it as a freedman, which seems to be the meaning of the passage of Cicero in which he speaks of his freedman Chrysogonus. (Ad Att. vii. 2; compare Dig. 38. tit. 1. s. 7.) These Operae were of two kinds, Officiales which consisted in respect and affection; and Fabriles which are explained by the term itself. The officiales determined by the death of the Patronus, unless there was an agreement to the contrary; but the fabriles being of the nature of money or money's worth passed to the hcredes of the Patronus, like any other property. The Patronus, when he commanded the opera of his libertus, was said "ei operas indecere or impone." (Gaius, iv. 162; Dig. 38. tit. 2. s. 29.)

The Patronus could not command any services which were disgraceful (turpes) or dangerous to life, such as prostitution or fighting in the amphitheatre; but if the libertus exercised any art or calling (artificium), even if he learned it after his manumission, the opera in respect of it were due to the patron.

The Lex Julia et Papia Popaeae released freedmen (except those who followed the art ludica or hired themselves to fight with beasts) from all obligation as to gifts or opera, who had begotten two children and had them in their power, or one child five years old. (Dig. 38. tit. 1. De Operis Liberorum, s. 37.)

If liberty was given directly by a testament, the testator was the manumissor, and his patronal rights would consequently belong to his children; if it was given indirectly, that is, per fideicommisum, the person who performed the act of manumission was the patronus. In those cases where a slave obtained his freedom under the Senatusconsultum Silianum, the Praetor could assign him a Patronus; and if this was not done, that person was the Patron of whom the libertus had last been the slave. (Dig. 38. tit. 16. s. 3.)

The patronal rights were somewhat restricted, when the act of manumission was not altogether the free act of the manumissor. For instance, the Manumissor per fideicommisum had all the patronal rights, except the power to prosecute for ingratitude, the right to be supported by the libertus, and to stipulate for munera and operae; his rights against the property of the libertus were however the same as those of any other manumissor. (Frag. Vat. § 225; Dig. 38. tit. 2. s. 29.) If a slave had given money to another person in order that this other person might purchase and manumit him, the manumissor had no patronal rights, and he lost even the name of patron, if he refused to perform the act for which he had received the money and allowed the slave to compel him to perform his agreement, which the law could do by a constitution of M. Aurelius and L. Verus. (Dig. 40. tit. 1. s. 4, 5.) If a master manumitted his slave in consideration of a sum of money, he retained all patronal rights, but he could not stipulate for operae. A person who purchased a slave, and on the occasion of the purchase agreed to manumit him, had all patronal rights, except the right of prosecuting
for ingratitude, in case the slave compelled him to manumit pursuant to the constitution of M. Aurelius and L. Verus. (Dig. 40. tit. 9. a. 30.)

It was the duty of the patron to support his freedman in case of necessity, and if he did not, he lost his paternal rights: the consequence was the same if he brought a capital charge against him. The Lex Aelia Sentia, among its various provisions, contained several that related to the rights and duties of the patron.

A capitis diminutio, either of the Patron or the Libertus, dissolved the relation between them. (See Tacti. Hist. ii. 92, where "jura libertorum" means "jura patronorum," or "jura in libertos.") The relation was dissolved when the Libertus obtained Ingenuitas by the Natalium Restitutio, but not when he merely obtained the jus aureorum annulorum. [INGENUUS.]

The most important of the Paternal rights related to the property of Liberti who died intestate. The Lex Papia Poppaea. (Ulp. ii. 92, where "jura patronorum" meant "jura liberti.") The relation was dissolved when the Libertus obtained Ingenuitas by the Natalium Restitutio, but not when he merely obtained the jus aureorum annulorum. [INGENUUS.]

The most important of the Paternal rights related to the property of Liberti who died intestate or having made a testament.

The subject, so far as concerns the Ante-Justinian period, may be distributed under the two following heads: — 1. the ordinary rules of law, and 2. the extraordinary: the former comprehend the rules of the old civil law, and the Edict on the Bonorum Possessio contra tabulas; and the latter, the Bonorum Possessio contra tabulas libertae, and the right to a virilis pars which was given by the Lex Papia Poppaea.

By the law of the Twelve Tables, if a freedman died intestate, without sui heredes, the patron was his heir. This right was viewed as a right of Agnation. The Legitima patronorum tutela was not expressly mentioned in the Twelve Tables, but it was a legal consequence of the rule as to inheritance. (Ulp. Frag. xi. 3.) In the case of an intestate liberta, who could not have a suus heres, the patron was heres. The Senatusconsultum Orfitianum, which was passed after Galus wrote (iii. 51), and in the last year but one of the reign of M. Aurelius, made an alteration in this respect. The passage of Ulpian (Frag. xxix. 2), which was written when this Senatusconsultum was in force, says, that if a liberta died intestate, the patron succeeded to her property, because a mother could not have sui heredes; yet Ulpian himself (lib. 12, ad Solon.; Dig. 38. tit. 17. a. 1) says, that whether the mother of the Libertus or Libertina, the children could succeed to her inheritance by the Senatusconsultum Orfitianum. This apparent contradiction is removed by the supposition that the Senatusconsultum gave the children in such cases an equal right with the patron.

These paterno rights belonged both to a Patronus and a Patrona, and to the liberti of a Patronus, (Ulp. Frag. xxvii.) The male children of the patron had the same rights as the patronus himself; but the females had only the rights which the Twelve Tables gave to the males, and they had not the Bonorum Possessio contra tabulas testamenti liberti aut ab intestato contra suos heredes non naturales, until these rights were given them by the Lex Papia Poppaea. (Ulp. Frag. xxix. 4, 5.) A difficulty which is raised by a passage in Justinian's legislation on the paternal rights is discussed by Unterholzer. (Zeitschrift, v. p. 87.) It seems that the children of a Patrona had not by the Twelve Tables the same rights as the children of a Patronus, but the Lex Papia Poppaea probably made some change in this respect. (Zeitschrift, v. p. 43, &c.)

In order that these paternal rights should exist, it was necessary that the libertus must have been made free by a Roman citizen, and have become a Roman citizen by the act of manumission. Accordingly, if a person obtained the citizenship, it was necessary that he should have a special grant of the jus patronatus, in order that he might have paternal rights against his then freedmen, who must also at the same time become Roman citizens. (Plin. Ep. x. 6.) A capitis diminutio, as already observed, of either of the patron or the libertus, destroyed the paternal rights to the inheritance. (Gaius, iii. 51.)

If there were several patroni or patronae, they divided the inheritance equally, though their shares in the libertus when a slave might have been unequal. These paternal rights resembled a jointtenancy in English Law, for the survivor or survivors of the patroni had all the paternal rights to the exclusion of any children of a deceased patronus. A son of a patron also claimed the inheritance to the exclusion of the grandson of a patron. If the patroni were all dead, leaving several children, the hereditas was divided among all the children equally (in capita), pursuant to the law of succession in the case of Agnation. (Gaius, iii. 16, 59, &c.)

A Senatusconsultum, which was passed in the time of Claudius, allowed a patron to assign his paternal rights to the inheritance of a libertus, to any of his children whom he had in his power, to the exclusive of the rest. (Dig. 33. tit. 4.)

The Edict extended the Bonorum Possessio to Patroi. The Paternal rights of the Civil Law were founded on an assumed Cognatio: those of the Edict were founded on an assumed Cognatio. The Edict called to the Bonorum Possessio of Liberti, 1. their children; 2. their heredes legitimi; 3. their cognati, who must of course be descendants; 4. the familia of the Patronus; 5. the patronus and patrona, and their children and parents, by which provision was made in case the Patronus or Patrona had sustained a capitis diminutio, and so could not be called in the fourth order; 6. the husband or wife of the freedwoman or freedman; 7. the cognati of the manumissor.

Originally, if the freedman made a will, he could pass over (Georgia) the possession. But by the Edict, unless he left him as much as one half of his property, the patron or his male children could obtain the Bonorum possessio contra tabulas of one half of the property. If the libertus died intestate, leaving no suus heres, except an adopted child, or a wife in manu, or a nurus in the manus of his son, the patron had a bonorum possessio of one half against these sui heredes. But if the libertus had children of his own blood (naturales) either in his power at the time of his death or emancipated or given in adoption, and if these children were made heredes by his testament or being praeteriti claimed the Bonorum possessio contra tabulas, the patron had no claim on the freedman's property. The patron was not excluded, if the children of the freedman were exheredated. (Gaius, iii. 40; Dion Cass. li. 15, and the note of Reimarus.)

By the Lex Papia Poppaea, if a freedman had a property amounting to a hundred thousand sesterii and fewer than three children, the patronus had an
equal share (\textit{virilis pars}) with the children, whether the freedman died testate or intestate; and a patrona ingenua, who had three children, enjoyed the same rights with respect to the Bonorum possessio contra tabulas and with respect to an adopted son, a wife in manu, or a nurus in manu filii, as the Edict had placed Patrona. The Lex also gave to a Patrona who had a single child, the same rights that it gave to a Patronus.

According to the old law, as the liberta was in the legitima tutela of her patron, she could make no disposition of her property without his consent (\textit{patrono aucitore}). The Lex Papia freed a liberta from this tutela, if she had four children, and she could subsequently then make a will without the consent of her patronus, but the law provided that the patronus should have an equal share with her surviving children.

In the case of a liberta dying intestate, the Lex Papia gave no further rights to a Patronus, who had two children (\textit{libertas bimanae}) than she had before; and therefore if there had been no capitis diminutio of the Patrona or the Libertina, the Patrona inherited the property, even if she had no children, to the exclusion of the children of the liberta. If the liberta made a will, the Lex Papia gave to the Patrona, who had the number of children required by that law, the same rights which the Edict gave to the Patrona contra tabulas liberta. The same Lex gave to the daughter of a patronus, who had a single child, the same rights that the patronus had contra tabulas liberta. (Gaius, iii. 53; a passage which Unterholzner proposes to give to a Patronus ingenua, but not to a Libertina, who had three children, the same rights that it gave to a Patronus.

According to the old law, as the liberta was in the legitimata tutela of her patron, she could make no disposition of her property without his consent (\textit{patrono aucitore}). The Lex Papia freed a liberta from this tutela, if she had four children, and she could subsequently then make a will without the consent of her patronus, but the law provided that the patronus should have an equal share with her surviving children.

In the case of a liberta dying intestate, the Lex Papia gave no further rights to a Patrona, who had two children (\textit{libertas bimanae}) than she had before; and therefore if there had been no capitis diminutio of the Patrona or the Libertina, the Patrona inherited the property, even if she had no children, to the exclusion of the children of the liberta. If the liberta made a will, the Lex Papia gave to the Patrona, who had the number of children required by that law, the same rights which the Edict gave to the Patrona contra tabulas liberta. The same Lex gave to the daughter of a patronus, who had a single child, the same rights that the patronus had contra tabulas liberta. (Gaius, iii. 53; a passage which Unterholzner proposes to give to a Patronus ingenua, but not to a Libertina, who had three children, the same rights that it gave to a Patronus.

The same Lex gave to the daughter of a patronus, who had a single child, the same rights that the patronus had contra tabulas liberta. (Gaius, iii. 53; a passage which Unterholzner proposes to give to a Patronus ingenua, but not to a Libertina, who had three children, the same rights that it gave to a Patronus.
PECULATUS.

PECULATUS (κταίς), a comb. The Greeks and Romans used combs made of box-wood (Brunck, Annt. i. 221; Ovid. Fast. vi. 23; Mart. xiv. 25), which they obtained, as we do, from the shores of the Euxine sea. The mountain ridge of Cytorus in Galatia was particularly celebrated for this product. (Ovid. Met. iv. 311.) The Egyptians had ivory combs (Apul. Met. xi. p. 121, ed. Aldi), which also came into use by degrees among the Romans. (Claudian, de Nupt. Honor. 102.) The golden comb, ascended to the goddesses, is of course imaginary. (Callim. in Lou. Pal. 31.) The wooden combs, found in Egyptian tombs, are toothed on one side only; but the Greeks used them with teeth on both sides, as appears from the remains of combs found, at Pompeii (Donaldson's Pompeii, vol. ii. pl. 78), and from the representation of three combs, exactly like our small-tooth combs, on the Amarysean marbles. (Memoirs relating to Turkey, edited by Walpole, p. 452.)

The principal use of the comb was for dressing the hair (Ovid. Amor. i. 14. 15. Met. xii. 409), in doing which the Greeks of both sexes were remarkably careful and diligent. (Herod. vii. 203.)

To go with uncombed hair was a sign of affliction. (Ovid. Rem. Amor. 102.)

A comb with iron teeth was used in corn-fields to separate the grain from the straw, whilst it was yet standing. (Col. de Re Rust. ii. 21.) This method of reaping was called pecuniae segetem. (Sophr. Oed. Col. 1257.)

A comb with ivory teeth was used in corn-fields to separate the grain from the straw, whilst it was yet standing. (Col. de Re Rust. ii. 21.) This method of reaping was called pecuniae segetem. (Sophr. Oed. Col. 1257.)

A painting in the sepulchral grotto of El Kab in Egypt represents a man combing flax for the purpose of separating the linseed from the stem. (Rein, Das Criminalrecht der Römer, p. 672.)

There was a similar class of female slaves, called pedisecui; a class of slaves, whose duty was to follow their master when he went out of his house. This name does not appear to have been given to any slave, who accompanied his master; but the pedisecui seem to have formed a special class, which was almost the lowest of all. (Nep. Attic. 13; Plaut. Mil. Glor. iv. 2. 18.)

There was a similar class of female slaves, called pedisecui. (Plaut. Asin. i. 3. 31.) Compare Becker, Gallus, vol. i. p. 101.

PEDUM (κεφαλής, Δηρεόδος, Theocrit. vii. 43, 128), a crook. The accompanying woodcut is taken from a painting found at Civita Vecchia. (Ant. d'Ercolano, vol. iii. tav. 53.)

It shows the tiones perpetuae, which imply some Lex de Peculatu, and such a Lex is by some writers enumerated among the Leges Sullanae, but without stating the authority for this assertion. Two Leges relating to Peculatus are cited in the Digest, Lex Julia Peculatus and Lex Julia de Residuis (Dig. 46. tit. 13); but these may be the same Lex, though quoted as two Leges, just as the Lex Julia de Adulteris comprised a provision De Fundo Dotali, which chapter is often quoted as if it were a separate Lex. Matters relating to sacrilege were also comprised in the Lex Julia Peculatus (ne quis ex pecunia sacra, religiosa publica usuraret, &c.) matters relating to the debasement of the coinage; the erasing or cancelling of tabulae publicae, &c. The Lex de Residuis applied to those who had received public money for public purposes and had retained it (apud quem pecunia publica resolvit). The penalty under this Lex, on conviction, was a third part of the sum retained. The punishment which was originally aque et ignis interdictio, was changed into Deportatio under the Empire: the offender lost all his rights, and his property was forfeited. (Inst. 4. tit. 18. § 5.) Under the Empire sacrilege was punished with death. A "Sacrilegus" is one who plunders public sacred places. (Rein, Das Criminalrecht der Römer, p. 672.) [G. L.]

PECU'NIAE REPETUNDAE. [REPE]

PECU'RII, the name given to persons who pastured their cattle on the public lands (pascua), for which they were bound to pay a tax to the state, called SCRIPTURA. But in the earlier times of the republic many persons supported their cattle on the public pastures without paying this tax at all, or paying less than was legally due; and hence the word pecuarii was frequently employed to signify those persons who thus illegally made use of the public pastures. They were often prosecuted by the aediles and fined (Ov. Fast. v. 18. 294; Liv. x. 23, 47, xxxvii. 42, xxxv. 10; Festus, p. 238, ed. Müller.)

PECULATUS is properly the misappropriation or theft of public property (pecunia publica), whether it was done by a functionary or by a private person. Labeo defines it thus, "pecuniae publicae aut sacrae fur turum, non ab eo factum, cujus pecunia est;" the person guilty of this offence was Peculator. Cicero (de Off. iii. 18) enumerates Peculatores with sicarii, venefici, testamentarii and fures. The origin of the word appears to be Pecus, a term which originally denoted that kind of movable property which was the chief sign of wealth. Originally trials for Peculatus were before the Populus, or before the Senate. (Liv. v. 32, xxxvii. 57, xxxviii. 54.) In the time of Cicero matters of peculati were one of the Quaes-
PELLIS.

means of balance-weights the Roman amphitheatres (Juv. iv. 121; Mart. i. 2. 2; Sueton. upon them being called the crook is continually seen in works of ancient art in the hands of Pan (Sil. Ital. Pun. xiii. 334), and of satyrs, fauns, and shepherds. It was also the usual attribute of Thalia, as the Muse of Pastoral poetry. (Combe, Anc. Marbles of Br. Museum, Part iii. pl. 5.)

PELLIS. (πηνία), a small shield. Iphicles, observing that the ancient CLIPUS was cumbersome and inconvenient, introduced among the Greeks a much smaller and lighter shield, from which those who bore it took the name of peltastae. [EXERCITUS, p. 487, b.] It consisted principally of a frame of wood or wickerwork (Xen. Anab. ii. 1. § 6), covered with skin or leather, without the metallic rim. [ANTYX.] (Timaecus, Lex. Plat. s. e.) Light and small shields of a great variety of shapes were used by numerous nations before the adoption of them by the Greeks. The round target or cetro was a species of the Pelta, and was used especially by the people of Spain and Mauritania. [Cutra.] The Pelta is also said to have been quadrangular. (Schol. in Thucyd. ii. 29.) A light shield of similar construction was part of the national armour of Thrace (Thucyd. ii. 29; Eurip. Alces. 516, Iphes. 407; Max. Tyr. Dist. vii.) and of various parts of Asia, and was on this account attributed to the Amazonas, in whose hands it appears on the works of ancient art sometimes elliptic, as in the bronzes of Siris (woodcut, p. 712), and at other times variously sinuated on the margin, but most commonly with a semicircular indentation on one side (Iunatis peltis, Virg. Aen. i. 490, xi. 663). An elegant form of the pelta is exhibited in the annexed woodcut, taken from a sepulchral urn in the Capitoline Museum at Rome, and representing Penthesilea, Queen of the Amazonas, in the act of offering aid to Priam.

PELMAS.

PELLIS. (δέρμα, δοράς), the hide or skin of a quadrapred. Before weaving was introduced into Europe there is reason to believe that its inhabitants were universally clothed in skins. The practice continued among the less civilised nations (Virg. Georg. iii. 393; Tacit. Germ. 17, 46; Ovid, Fast. iii. 10. 19), and is often ascribed by the poets to heroes and imaginary beings. [Comp. Aeschy.; Hom.] The term σιθίρα or σιθηρα, denoted an article of domestic furniture, which was made by sewing together several goat-skins with the hair on. (Schol. in Aristoph. Ave, 122.) The sheep-skin (δελε, νάκος, διθήρα) was worn not only by the Lacedaemonian helots, but frequently by the laborious poor, as is still the case in many parts of Europe. The lamb-skin was called δη-
The Aeolian Boeotians who did not called Archemaclius, in his Euboica. (Athen. vi. to particular houses, whence also they were called Adrpfis. They were very numerous, for, in the families of the Alcænae and Scopadæ. (Theor. xvi. 35 ; Müller, Dor. iii. 4. § 6) We may add that amongst the Thessalian Penestae Theopompeus includes the descendants of the conquered Magnesians and Perrhaebians (Ath. p. 262), a statement which can only apply to a part of those nations, as, though reduced to dependence, they were not made entirely sub ject. (Herod. viii. 132 ; Müll. l. c.) From a passage in Demosthenes (c. Arist. 667, 1) it appears that the Penestae sometimes accom panied their masters to battle, and fought on horse back, as their knights or vassals: a circumstance which need not excite surprise, as Thessaly was so famous for cavalry. The Penestae of Thessaly also resembled the Laconian Helots in another re spect; for they often rose up in arms against their lords. (Arist. Pol. ii. 6) There were Penestae amongst the Macedonians also. (Müller, l. c.; Wachsmuth, Alterthumsk. Hellen. vol. i. pp. 177, 492, 403, 612, 2d ed.; Thirlwall, Hist. of Greece, vol. i. p. 437; Clinton, Fast. Hell. Appendix, c. 22.)

PENTACOSIOMIDINI. [CENSUS, p. 266, a.]
PENTALITHUS (pentáλιθος). [GYMN subsequent; for an athlete might be conquered in one or two games and be victorious in the others, whereas it can have occurred but seldom that one and the same man gained the victory in all the five. Who of the pentathl then was the victor? Modern writers have said that the prize was either awarded
to him who had been victorious in all the five games, or to the person who had conquered his antagonist in at least three of the games; but nothing can be determined on this point with any certainty. That the decision as to who was to be rewarded was considered difficult by the Greeks themselves, seems to be implied by the fact that at Olympia there were three hellanodicae for the pentathlon alone. (Paus. v. 9, § 5.)

As regards the πραγμός mentioned above, several statements of ancient writers suggest, that the whole of the pentathlon was not always performed regularly and from beginning to end; and the words by which they designate the abridged game, πραγμός, ἄποργάσεως, and τριάν περίκεφαλαί, lead us to suppose that the abridged contest only consisted of three games, and most probably of those three which gave to the pentathlon its peculiar character, viz., leaping and throwing the discus and the spear. (Dion Chrysost. Διογ. i. p. 279, ed. Reiske; Schol. ad Aristid. ap. Phot. Cod. p. 409, Bekker; Müller, Ancient Art and its Rem., § 423, 3.) The reason for abridging the pentathlon in this manner may have been the wish to save time, or the circumstance that athletes who had been conquered in the first three games were frequently discouraged, and declined continuing the contest. When the triagmos was introduced at Olympia is not mentioned anywhere, but Krause infers with great probability from Pausanias (v. 9, § 3) that it was in ol. 77.

The pentathlon required and developed very great elasticity of all parts of the body, whence it is said by the Greeks that it was principally performed by young men (Schol. ad Plut. Amat. p. 135, d, &c.); and it is probably owing to the fact, that this game gave to all parts of the body their harmonious development, that Aristotle (Rhet. i. 5) calls the pentathlon the most handsome of all the athletic contests. The pentathlon was for the same reason also regarded as very beneficial in a medical point of view, and the Εἰληνος, who had from his childhood suffered from rheumatism, was cured by practising the pentathlon, and became one of the most distinguished athletes. (Paus. vi. 3, § 4.) (Compare O. Fr. Philipp, De Pentathlo sive Quinquertio Commentatio, Berlin, 1827; Krause, Gymnastik und Agonistik der Hel lenen, 6th ed.) [L.S.H.]

ΠΕΝΤΕΚΟΝΤΕΡΟΣ (πεντήκοντος), a duty of two per cent. levied upon all exports and imports at Athens. (Harpoer. s. v. Πεντήκοντα.) Thus, it was levied on corn (Demosth. c. Newer. 1353); which, however, could only be imported, exportation being prohibited by law (Demosth. c. Lacr. 941); and also on woollen cloth, and other manufactured goods. (Demosth. c. Mid. 558.) On imports the duty was payable on the unloading (Demosth. c. Lacr. 932); on exports, probably, when they were put on board. The money was collected by persons called πεντήκοντολογοί, who kept a book in which they entered all customs received. Demosthenes refers to their entry (ἀπογραφή), to prove that a ship was not laden with more than a certain quantity of goods. (c. Phorn. 909.) The merchant who paid the duty was said πεντηκοντόπωτρος. All the customs appear to have been let to farm, and probably from year to year. They were let to the highest bidders by the ten παλαιτραί, acting under the authority of the senate. The farmers were called τελώναι, and were said ἀνευσθα τὴν πεντήκοντα. They might either collect the duty themselves, or employ others for that purpose. Several persons often joined together in the speculation, in which case the principal, in whose name the bidding took place, and who was responsible to the state, was called δραχμός or τελωνάρχης. Sureties were usually required. (Demosth. c. Timoc. 713; Andoc. de Myst. 17, ed. Steph.) Whether the customs on different articles of merchandise were farmed altogether, or separately, does not appear. The corn-duty at least was kept distinct (Demosth. c. Newer. 1353); and this was the case with another tax. (Aesch. c. Timarch. 16.) With respect to the amount of the revenue derived from this source, the reader may consult Böckh (Publ. Econ. of Athens, p. 315, &c., 2d ed.). The πεντήκοντα has been thought by some to be the same with the ἐλαμάννον, mentioned by Pollux (viii. 132, ix. 30), but this was more probably a duty paid for the use of the harbour, whether goods were unhanced or not; and was perhaps the same as the ἐκατόν, mentioned by Xenophon (de Rep. Ath. 1. 17) as being paid by foreign ships entering the Peiræus, and alluded to by Aristophanes. (Vesp. 658.) Böckh’s conjecture, that, besides a personal harbour due, a duty was levied of one per cent. on all the goods on board, appears less probable; for it would be unreasonable to exact a customs duty on goods not landed; and, if they were to be landed, why should the πεντήκοντα be required in addition to the ἐκατόν? [C. R. K.]

ΠΕΝΤΕΚΟΣΤΥΣ (πεντήκοντος). [Exekicus, p. 408, a.]

ΠΕΠΛΟΣ (πεπλοῦς), a shawl, differing from the CHLAMYS in being much larger, and from the PALLIUM in being finer and thinner and also considerably larger. It was sometimes used as a cover to protect valuable articles of furniture (Hom. Il. v. 194) or to adorn a throne (Od. vii. 96), but most commonly as a part of the dress of females (Hom. Il. v. 315, 734, 735, viii. 384, Od. xx. 128, ἐκόνις, Hom. xiv. 178; Eurip. Hec. 1013, Med. 791; Theocrit. i. 53); although instances occur, even among the Greeks, in which it is worn by the other sex, unless we suppose the term to be in these instances improperly used. (Thuc. ii. 59, Paus. iii. 206.) In Persia and other Eastern countries the shawl was no doubt worn anciently, as it is at the present day, by both sexes. (Aeschyl. Pers. 204, 474, 1030, 1061.) Also in Bacchanalian processions it was worn by men both in allusion to Oriental habits, and because they then avowedly assumed the dress of females. (Od. v. 474, 1030.) Like all other pieces of cloth used for the AMICTUS, it was often displayed upon the head. (Eurip. Bacch. 763—791.) Women of high rank wore their shawls so long as to trail upon the ground. (Strabo i. 422; ἔλατο παντικέλους, Od. iv. 305.) Like all other pieces of cloth used for the AMICTUS, it was often fastened by means of a brooch [FIBULA] (Soph. Trach. 920; Callim. Lob. Poll. 70; Apollon. Rhod. iii. 833), and was thus displayed upon the statues of female divinities, such as Diana (Brunck, Carm. 920, v. 18.) It was, however, frequently worn without a brooch in the manner represented in the annexed woodcut, which is copied from one of Sir Wm. Hamilton’s vases (vol. iii. pl. 58). Each of the females in this group wears a shift falling down to her feet [ΤΥΝΗΚΑ].
and over it an ample shawl, which she passes entirely round her body and then throws the loose extremity of it over her left shoulder and behind her back, as is distinctly seen in the sitting figure. The shawl was also often worn so as to cover the head while it enveloped the body, and more especially on occasion of a funeral (see woodcuts, p. 557), or of a marriage, when a very splendid shawl (περικρατήριον, 1. 27) was worn by the bride. The following woodcut (from Bartoli, Admim. Rom. Ant. pi. 57) may be supposed to represent the moment when the bride, so veiled, is delivered to her husband at the door of the nuptial chamber. He wears the pallium only; she has a long shift underneath her shawl, and is supported by the pronuba. Thus veiled the poets represented Aurora and Night, but with this difference, that the one arose expanding a shawl dyed with saffron (κρουστέρας ἄνδρας Ἰων, 1. 1150), whereas a black one enveloped the other (μελάμπηρος Νύξ, Ioum. 1150).

Of all the productions of the loom shawls were those on which the greatest skill and labour were bestowed. So various and tasteful were the subjects which they represented, that pottz delighted to describe them. The art of weaving them was entirely Oriental (Βαρδάνσις ἑδύσματα, Ioum. 1159); those of the most splendid dyes and curious workmanship were imported from Tyre and Sidon (Hom. H. vi. 329—294); a whole book was written by Polyesco "Concerning the Shawls of Carthage." (Athem. xii. p. 541.) Hence "shawl" (περικρατήριον, Clem. Alex. Strom. vi. 1. p. 736, ed. Potter) was one of the titles of works of an imaginative or descriptive character, and was adopted to intimate the variety of their subjects and the beautiful mode of displaying them. A book, intended to depict some of the characters in the Iliad, and denominated "The Shawl," was ascribed to Aristotle. (Eustath. in H. ii. 557.) Varro also wrote a Peplography (πεπλογραφία, Cic. ad Att. xvi. 11.) As a specimen of the subjects delineated a shawl may be mentioned, which exhibited the frame of the world. (Mart. Capella, L. vi. i. Mattaire's Corpus Poetarum, vol. ii. p. 1446.) Euripides describes one which represented the sun, moon, and stars, and which, with various others containing hunting-pieces and a great variety of subjects, belonged to the temple of Apollo at Delphi, and was used to form a magnificent tent for the purpose of an entertainment (Ioum, 1141—1162); for it is to be observed, that stores of shawls were not only kept by wealthy individuals (Hom. Od. xv. 104—105), but often constituted a very important part of the treasures of a temple (Eurip. Ioum. 329, 330), having long been presented to the divinity on numerous occasions by suppliants and devotees. (Hom. H. vi. 271—304; Virg. Aen. i. 480, Cix. 21—25.) [Compare Donaria; Panathenaia; Pastophorus.]

PER CONdictio'NEM. This Legis Actio, says Gaius, was so called because the plaintiff gave notice to the defendant to be present on the thirtieth day after the notice in order that a judex might be appointed. (Comp. Gell. x. 24.) It was an actio in personam and applicable to those cases in which the plaintiff required the defendant to give something {qua intendit dart oportere}. This Legis Actio was introduced by a Lex Silia in the case of a fixed sum of money (certa pecunia), and by a Lex Calpurnia in the case of any definite thing. Gaius observes that it does not appear why this form of action was needed, for in a case of "dari oportere" there was the Sacramentum, and the Per Judicis postulationem. The name Condictio was applied to actiones in personam, after the legis actiones fell into disuse, though improperly, for the notice (denuntiatio) whence the legis actio took its name was discontinued. (Gaius, iv. 18, &c.)

PER JUDICIS POSTulatIo'NEM. This was one of the Legis Actiones. The passage in Gaius is wanting in which this form of action is described. There are some remarks on this Actio by Puchta, Inst. ii. § 154, 162. [G. L.]

PER MANUs INJECTIOnEM. [MANUS INJECTIO.]

PER PIGNORIs CAPIO'NEM or CAP'TIOnEM. This was one of the Legis Actiones or old Forms of procedure, which in some cases was founded on custom (mos), in others on enactments (lex). It was founded on military usage in the following cases. A soldier might seize as a pledge (pignus capere) anything belonging to the person who had to furnish the aes militare, in case he did not make the proper payments; he might also make a seizure in respect of the money due
to him for the purchase of a horse (aes eques trium), and also in respect of the allowance for the food of his horse (aes hordarium), upon what belonged to the person whose duty it was to make the payment. Originally, such payments were fixed upon particular persons, and not made out of the Aeraarium (Liv. i. 43 ; Gaius, iv. 27). The Law of the Twelve Tables allowed a pignoris capio in respect of pay due for the hire of a beast, when the hire money was intended for a sacrifice. By a special law (the name is not legible in the MS. of Gaius) the publicani had the right pignoris capionis in respect of vectigalia publica which were due by any person whose property was seized. It does not appear whether this legis actio was the origin of the law of pledge, as subsequently developed; but it seems not improbable. (Gaius, iv. 26, &c. ; Cic. Epiy. i. 22, ii. 22, 28 ; Auson. Epig. 53.)

The preceding wordcut is the representation of a goat- herd with his staff and wallet from the column of Theodosius, formerly at Constantinople. (Menes- trier, Déscription de la Col. Hist. Par. 1762, pl. 16.)

[PERGUL].

[PERGULIO'NIS DUU'MVIRI were two officers or judges appointed for the purpose of trying persons who were accused of the crime of perduellio. Niebuhr believes that they were the same as the quaestores parricidii, and Walter (Gesch. des Röm. Rechts, p. 24, note 19) agrees with him, though in a later part of his work (p. 655, note 20) he admits that they were distinct. It appears from a passage of the Ten规章, that the thing seized was only taken as a security and was redeemed by payment of the sum of money in respect of which it was seized. It did not allow it to be a legis actio, because the proceeding was extra jus, that is, not before the Praetor, and generally also in the absence of the person whose property was seized. The pignus could also be seized on a dies nefastus, or one on which a legis actio was not permitted.

It appears from a passage of Gaius, in which he speaks of the legal fiction that was afterwards introduced into the Formula by which the publicani recovered the vectigalia, that the thing seized was taken as a security and was redeemed by payment of the sum of money in respect of which it was seized. In case of non-payment, there must however have been a power of sale, and accordingly this pignoris capio resembled in all respects a pignus proper, except as to the want of consent on the part of the person whose property was seized. It does not appear whether this legis actio was the origin of the law of pledge, as subsequently developed ; but it seems not improbable. (Gaius, iv. 26, &c. ; Cic. Verr. iii. 11 ; Pignoris capio, Gell. vii. 10.)

PERA, dim. PE'RULA (wife), a wallet, made of leather, worn suspended at the side by rustics and by travellers to carry their provisions (Mart. xiv. 81) and adopted in imitation of them by the Cynic philosophers. (Diog. Laert. vi. 13 ; Brunck, Ausal. i. 223, ii. 22, 28 ; Auson. Epig. 53.)
find, for instance, that painters exhibited their works in a pergula that they might be seen by those who passed by (Lactant. i. 22), and Apelles is said to have concealed himself in his pergula behind his pictures that he might over-hear the remarks of those who looked at them. (Plin. H. N. xxxv. 36. §12.) Such places were occupied by persons, who, either by working or sitting in them, wished to attract the attention of the public. (Salmas. ad Script. Hist. Aug. pp. 458, 459.) Hence we find them inhabited by poor philosophers and grammarians who gave instruction and wished to attract notice in order to obtain pupils. (Suet. Aug. 94, Stobaeus, ad Script. Hist. Aug. 10; Flav. Varr. Saturn. 10; Juven. xi. 137.)

It should be observed that scholars do not agree as to the real meaning of pergula: Scaliger (ad Plant. Pseud. i. 2. 79) describes it as a part of a house built out into the street, as in some old houses of modern times; Ernesti (ad Suet. Aug. 94) thinks that a pergula is a little room in the upper part of a house which was occasionally used by poor philosophers as an observatory. But neither of these two definitions is so applicable to all the passages in which the word occurs as that which we have proposed.

PERIACTOS (περιάκτος), a theatrical machine, consisting of three scenes, placed in the form of a triangle (or rather, triangular prism) on a revolving platform, so that, by simply turning the machine, the scene could be changed. It was chiefly used when a god was to be introduced with the accompaniment of thunder. The name was also applied to the space which was provided for the machine in the erection of the theatre. (Vitruv. v. 7; Pollux, iv. 126.)

PERIDEIPNON (περιδείπνον). [F. S.]

PERIDRO'MIDES. [Xvstus.]

PERIOECI (περιοεκ). This word properly denotes the inhabitants of a district lying around some particular locality, but is generally used to describe a dependent population, living without the walls or in the country provinces of a dominant city, and although personally free, deprived of the enjoyment of citizenship, and the political rights conferred by it. The words σύνοικος and μέτοικος have an analogous meaning.

A political distinction such as that of the Perioeci of ancient Greece, and like the vassalage of the Germanic nations, could hardly have originated in anything else than foreign conquest, and the Perioeci of Laconia furnish a striking illustration of this. Their origin dates from the Dorian conquest of the Peloponnesus, when the old inhabitants of the country, the Achaians, submitted to their conquerors on certain conditions, by which, according to Ephorus (Strab. viii. p. 364), they were left in possession of their private rights of citizenship (ιστιμία), such as the right of intermarriage with the Dorians, and also of their political franchise. They suffered indeed a partial deprivation of their rights and were obliged to submit to a king of foreign race, but still they remained equal in law to their conquerors, and were eligible to all offices of state except the sovereignty. (Iστιμίαι μετέχοντει καλοι πολιτείας καὶ ἄρχειαν. (Arnold. Thucyd. vol. i. p. 641.) But this state of things did not last long: in the next generation after the conquest, either from the lust of increased dominion on the part of the Dorians, or from an unsuccessful attempt by the Achaians to regain their independence, the relation between the two parties was changed. The Achaians were reduced from citizens to vassals; they were made tributary to Sparta (συντελεσία), and their lands were subjected to a tax, perhaps not so much for the sake of revenue as in token of their dependence (Ephor. l. c.); they lost their rights of citizenship (ιστιμία), such as that of intermarriage with the Dorians, the right of voting in the general assembly, and their eligibility to important offices in the state, such as that of a senator, &c. It does not, however, appear that the Perioeci (especially in the Historic times) were esteemed a people, though kept in a state of political inferiority to their conquerors. On the contrary, the most distinguished amongst them were admitted to offices of trust (Thucyd. viii. 61), and sometimes invested with naval command (1d. viii. 22), but probably only because they were better suited for it than the Spartans themselves, who did not set a high value on good sailmanship. Moreover, the Perioeci sometimes served as heavy-armed soldiers or troops of the line: at the battle of Plataea, for instance, they supplied 10,000 men, 5000 hoplites and 5000 light-armed (Herod. ix. 61), a circumstance which seems to imply a difference of rank connected with a difference of occupation amongst the Perioeci themselves. Again, at Sphacteria 292 prisoners were taken, of whom 120 were Spartans and the rest περιοεκ. (Müller, iii. 2. §3.) We also read of καλὸν κάγαθον, "or accomplished and well-born" gentlemen, amongst the Perioeci serving as volunteers in the Spartan service. (Xen. Hell. v. 3. §9.) But still it is not to be expected, it is not natural, that men competent to the discharge of high functions in a state, and bearing its burdens, should patiently submit to an exclusion from all political rights. Accordingly we find, that on the rising of the Holots in B. C. 464, some of the Perioeci joined them. (Thucyd. i. 101.) When the Thebans invaded Laconia (B. C. 369), the Perioeci were ready to help them. (Xen. Hell. vi. 5. §25.) In connection with the insurrection of Cinadon we are told that the Perioeci were most bitter against the ruling Spartans. (Id. iii. 3. §6.) From these and other facts (Clin. F. H. Append. xxiii.) it appears that the Perioeci of Laconia, if not an oppressed, were sometimes a disaffected and discontented class; though in times of strong excitement, or of general danger to the whole of Greece, they identified themselves with their conquerors. The very relation indeed which subsisted between them was sufficient to produce in Sparta a jealousy of her subjects, with corresponding feelings on their part. Nor can we suppose that the Dorians would willingly permit the Perioeci to acquire strength and opulence, or even to settle in large towns. (Thirlwall, Hist. of Greece, vol. i. p. 307.) In fact it is stated by Isocrates (Panath. p. 307), that the Dorians intentionally weakened the Achaians by dispersing them over a great number of hamlets, which they called τόλμες, though they were less powerful than the country parishes of Attica, and were situated in the most unproductive parts of Laconia, the best land of which was reserved for the Spartans. It is not, however, necessary to understand the orator as speaking of a uniform practice; and another of his statements, to the effect that the Ephori could put any of the Perioeci to death (p. 271) without trial, is either a perversion of the
truth, or arose from his confounding the Perioeci with the Helots.

Still the grievances of the Perioeci were not after all intolerable, nor do they seem to have been treated with wantonness or insolence. The distance at which many of them lived from Sparta, must have rendered it impossible for them to share in the administration of the state, or to attend the public assemblies; a circumstance which must in some measure have blunted their sense of their political inferiority. Nor were they subjected to the restraints and severe discipline which the necessity of maintaining their political supremacy imposed upon the Spartans, making them more like an "army of occupation in a conquered country," or a "beleaguered garrison," than a society of men united for civil government and mutual advantage.

By way of compensation, too, the Perioeci enjoyed many advantages (though not considered as privileges) which the Spartans did not. The trade and manufactures of the country were exclusively in their hands, and carried on by them with the more facility and profit as they occupied maritime towns. The cultivation of the arts also, as well in the higher as in the lower departments, was confined to the Perioeci, the Spartans considering it beneath themselves; and many distinguished artists, such as embossers and brass-founders, were found in the Laconian schools, all of whom were probably Perioeci. (Mueller, Dor. iii. 2. § 3.) Nor is there wanting other evidence, though not altogether free from doubts, to show that the Spartan provincials were not in the least checked or shackled in the development of their intellectual powers. (Thirlwall and Mueller, &c.) Moreover, it seems natural to suppose that the towns which occupied seaports in the communities to which they belonged, and which otherwise would scarcely have been called παπασεις; but whether or no these cities had the power of electing their own chief magistrate is a matter of conjecture. Ephorus, indeed (l. c.), informs us that on the conquest of the Peloponnesus by the Dorians, they divided the country of Laconia into six districts, four of which were left in the possession of the Achaia, and governed by magistrates sent from Sparta; but we do not know how long this practice lasted, nor can we draw any conclusions with respect to the government of Laconia in general from the example of Cythera, to which a Spartan officer was annually sent under the peculiar title of κυβηροδικης, or the "Justice of Cythera."

The number of Laconian (as they are called) or subject cities, is said to have formerly amounted to 100. (Strab. viii. p. 362.) Several of them lay on the coast, as Gythium, the port of Sparta; whence the whole coast of Laconia is called περυμος. (Thucyd. iii. 16.) Many, however, lay more inland, as Thuria (Thucyd. i. 101) and Cardamyile, which seems to have belonged to the old Messenia. The inhabitants of the district of Sciros (Σκηνεωτης), on the confines of Arcadia, seem to have been distinct from the other Perioeci (Xen. Hell. v. 2. § 24), and in battle were posted by themselves on the left wing. (Thucyd. v. 67.) An enumeration of the principal of these cities is given in Clinton. (Past. Hell. App. c. 32.) The Perioeci also occupied the island of Cythera, at the port of which the Lacedaemonian merchants usually put in, on their voyages home from Egypt and Libya. (Thucyd. iv. 53. vii. 57.) We have said that the Perioeci living in these towns were the descendants of the old inhabitants of the country, but we must not suppose they were exclusively so. Some of them on the contrary were foreigners, who had either accompanied the Dorians on their invasion of Laconia, or been afterwards invited by them to supply the place of the dispossessed Achaains. One of these cities, Boïa, is even said to have been founded by a Hermóleus chief (Strab. p. 364); and another, Geronthrae, was peopled by colonists sent from Sparta, after it was evacuated by the old inhabitants. (Pass. iii. 22. § 5.)

The number of Perioeci in the Persian war is thus determined by Clinton (l. c.): — "At the battle of Platea in B. C. 479, the Perioeci supplied 10,000 men. If we assume this proportion to be the same as that which the Spartan force bore to the whole number on the same occasion, or five-eighths of the whole number of citizens, this would give 16,000 for the males of full age, and the total population of this class of the inhabitants of Laconia would amount to about 66,000 persons."

In the later times of Spartan history, the Perioecian towns of the coast (Laconiae orae castella et vici) were detached from Sparta by T. Quintius Flamininus, and placed under the protection of the Achaian league. (Mueller, iii. 2. § 1; Liv. xxxiv. 29, 30, xxxviii. 31.) Subsequently to this the emperor Augustus released 24 towns from their subjection to Sparta, and formed them into separate communities, under laws of their own. They were consequently called Eleuthero-Lacones. (Pass. iii. 21. § 6.) But even in the time of Pausanias some of the Laconian towns were not αυτοκρατορες, but dependent upon Sparta (συντελεωται et Συμβολαστης).

A class of Perioeci, and also of Helots, has been said by Muller to be the basis of the Dorian form of government: we may therefore expect to find Perioeci amongst other Dorian communities, as well as at Sparta, as, for instance, Elis and Argos, and the Boeotian Thebes: the dependent towns of which states formed separate communities, as Thebans under Thebes, the Tryphilian cities in Elis, and Oscan under Argos, though they could not be called αυτοκρατορες. (Wachsmuth, i. 1. p. 161.) From the last mentioned town, which was long independent, but reduced about B. C. 530, all the Argive Perioeci derived their name of Ornean. About the time of the Persian war, however, the inhabitants of the towns surrounding Argos were received into the city as συναντοι, and admitted to the rights of citizenship; a change which was attended with a revolution in the constitution of Argos, and gave additional force to its democracy. (Mueller, iii. 4. § 2.) The Doric cities of Crete also had their Perioeci (Arist. Pol. ii. 7), as well as the colonies of Cyrene and Thera. (Herod. iv. 101.)

The Perioeci of antiquity have been compared to other bodies, such as the plebs of Rome, and the communities of the Athenian deme or parishes. But the only resemblance they bore to the latter was in the similarity of their position relative to the chief city of their country, nor did the former body stand in the same relation to the Patricians as the Laconian provincials did to the Spartan citizens. Modern history furnishes sifter objects of comparison in the Norman conquest of England and the city of Augsburg. (Arnold, Thucyd. vol. i. App. 1 and 2.) The burghers or free citizens of Augsburg lived in the city, while there grew up
about them a distinct and large community living without the city, chiefly formed of the emancipated vassals of the dominant class, and called “Plañhïhrîr, or citizens of the “pale,” the suburbs in which they lived being surrounded by palisades. The Norman conquest of England presents a striking parallel to the Dorian conquest of Laconia, both in its achievement and consequences. The Saxons, like the old Achaïans, were deprived of their lands, excluded from all offices of trust and dignity, and reduced, though personally free, to a state of political slavery. The Normans on the contrary, of whatever rank in their own country, were all nobles and warriors, compared with the conquered Saxons, and for a long time enjoyed exclusively the civil and ecclesiastical administration of the land.

For further details see Arnold, Thucyd. lib. i. c. 101, and Appendix ii.; Thierry, Histoire de la Conquête de l’Angleterre par les Normands, Livres iv.—vi. [R. W.]

PERIPOLI (περιπόλοι). [Ερευνσ].
PERIPTEROS. [Σεβαλουμ].
PERISCHELIS (περισκῆλις, Long. Past. i. 2; Menander, ap. Pollac. ii. 194, v. 100, Hor. Ep. i. 17. 56; Petron. 67). Much controversy has arisen with regard to the true meaning of this word. The etymology points out merely that it was something worn round the leg (περι σκῆλος), but from the context of the passage in Horace where it is found we must at once infer that it was a trinket. The Scholast. explains it as “ornamentum pedis circum crum,” and hence we can scarcely doubt that it denotes an anklet or bangle, especially since by the Orientals, the Egyptians, and the Greeks, but by the Roman ladies also. (Plin. H. N. xxxiiii. 3. s. 12; compare Wilkinson’s Ancient Egyptians, vol. iii. p. 374.) This explanation perfectly accords with the expressions of Tertullian, (de Cultu Feminarum, ii. sub fin.), where the periscelism is spoken of as decorating the leg in the same manner as the bracelet adorns the wrist and the necklace the throat. The anklet is frequently represented in the paintings of Greek figures on the walls of Pompeii, as in the following representation of a Nereid. (Museo Borbonico, vol. vi. tav. xxxiv.)

It must be observed, however, that the Greek lexicographers Hesychius, Photius, and Suidas, interpret περισκέλης and περισκῆλις by branckia, φημίδλα, and St. Jerome (Epist. ad Fabiol.) expressly states that the Greek περισκέλης were the same with the Latin feminalia, that is, drawers reaching from the navel to the knees. In the Septuagint we find περισκέλαι (σε ἐνδυμα) in Exod. xxvii. 42, xxxix. 26, Levit. vi. 10, and περισκέλαι in Levit. xvi. 4, which our translators uniformly render, and apparently with accuracy, linen breeches. [W. R.]

PERISTIARCHUS (περιστάρχος). [Εκκλησία, p. 441, b.]

PERISTROMA. [Σεβαλουμ; VELUM.]
PERISTILYUM (περιστύλιον), as its name implies, was a continued row or series of rows of columns all a court or building, in contradistinction to Porticus (στοά), in which the pillars did not surround a space, but were arranged in one or more parallel lines. The enclosed court was also called peristylum. The chief specific use of the word was to denote the relation to the ancients of town-houses. (Domus, p. 423, a.) [P. S.]

PERJURIAM. [Ισερανδρουμ].
PERIZOMA. (περιζώμα). [Σεβαλουμ; SUBLIGACULUM.
PERMO (ἀρόθλης, dim. ἀρόθλις; καρβατίνη, Xen. Anab. iv. § 14), a low boot of untanned hide (crudus, Virg. Aen. vii. 609; Brunck, Anat. i. 250), worn by ploughmen (peronatus arator, Pers. v. 102) and shepherds, as exemplified in the woodcut, at p. 808, and by others employed in rural occupations. (Juv. xiv. 186.) It had a strong sole (Theocrit. vii. 229), and was adapted to the foot with great exactness. (Galen, in Hippocr. Lib. iv.) It was also called περικάτας on account of its adaptation for walking through clay and mire. In the Greek mythology Perseus was represented wearing boots of this description with wings attached to them. (Lycochron, 839.) Diana wore them, when accoutred for the chase. (Brunck, Anat. iii. 206.)

PERSONA. 889

PERJURIAM. [Ισερανδρουμ].
PERSONA. [Σεβαλουμ].
PERSONA. (face, πρόσωπον or προσωπον), a mask. Masks were worn by Greek and Roman actors in nearly all dramatic representations. This custom arose undoubtedly from the practice of smearing the face with certain juices and colours, and of appearing in disguise, at the festivals of Dionysus. (Dionysia.) Now as the Greek drama arose out of these festivals, it is highly probable that some mode of disguising the face was as old as the drama itself. Choricius of Samos, however, is said to have been the first who introduced regular masks. (Suid. s. v. Φυρίνχος.) Other writers attribute the invention of masks to Thespis or Aeschylus (Horat. ad Pis. 278), though the latter had probably only the merit of perfecting and completing the whole theatrical apparatus and costume. Phrynichus is said to have first introduced female masks. (Suid. s. v. Φυρίνχος.) Aristotle (Poët. ii. 22) was unable to discover who had first introduced the use of masks in comedy. Some masks
covered, like the masks of modern times, only the face, but they appear more generally to have covered the whole head down to the shoulders, for we find always the hair belonging to a mask described as being a part of it; and this must have been the case in tragedy more especially, as it was necessary to make the head correspond to the stature of an actor which was heightened by the cothurnus.

I. Tragic Masks. It may at first seem strange to us, that the ancients, with their refined taste in the perception of the beautiful in form and expression, should by the use of masks have deprived the spectators in their theatres of the possibility of observing the various expressions, of which the human face is capable, and which with us contribute so much to theatrical illusion. But it must be remembered, that in the large theatres of the ancients it would have been impossible for the greater part of the audience to distinguish the natural features of an actor. The features of the masks were for this same reason very strong and marked. Again, the dramatis personae of most of the ancient tragedies were heroes or gods, and their characters were so well known to the spectators, that they were perfectly typical. Every one therefore knew immediately on the appearance of such a character on the stage, what it was, and it would have been difficult for a Greek audience to imagine that a god or hero should have had a face like that of an ordinary actor. The use of the cothurnus also rendered a proportionate enlargement of the countenance absolutely necessary, or else the figure of an actor would have been ridiculously disproportionate. Lastly, the solemn character of ancient tragedy did not admit of such a variety of expressions of the countenance as modern tragedies; the object of which seems to be to exhibit the whole range of human passions in all their wild and self-devouring play. How widely different are the characters of ancient tragedy! It is, as Müller (Hist. of the Lit. of Anc. Greece, i. p. 298) justly remarks, perfectly possible to imagine, for example, the Orestes of Aeschylus, the Ajax of Sophocles, or the Medea of Euripides, throughout the whole tragedy with the same countenance, though it would not have been possible for them to be represented in a suffering condition.

The masks used in ancient tragedies were thus, for the most part, typical of certain characters, and consequently differed according to the age, sex, rank, and other peculiarities of the beings who were represented. Pollux, from whom we derive most of our information on this subject, enumerates (iv. 133, &c.) 25 typical or standing masks of tragedy, six for old men, seven for young men, nine for females, and three for slaves. The number of masks which were not typical, but represented certain individuals with their personal peculiarities, such as the blind Thamyris, the hundred-eyed Argus, &c., must have been much more numerous, for Pollux by way of example mentions thirty of such peculiar masks. The standing masks of tragedy are divided by Pollux into five classes.

1. Tragic masks for old men. The mask for the oldest man on the stage was called ἔκυκλος ἄνθρωπος, from the circumstance of the beard being smoothly shaved. The hair, which was in most cases attached to the mask, was white, and hung down with the exception of a part above the forehead, which rose in an acute angle, or in a round shape, and left the temples uncovered. This rising part of the hair was called ὄρακος. The checks of this mask were flat and hanging downwards. A second mask for old men, called λευκός ἄνθρωπος, had grey hair, floating around the head in locks, a full beard and a prominent forehead, above which the hair formed a small ὄρακος. The countenance was probably pale, as the adjective λευκός seems to indicate. A third mask, called σπαραστάσις, had black hair interspersed with grey, and was somewhat pale. It probably represented a hero of from 40 to 50 years of age, and in a suffering condition. The fourth mask, μέλας ἄνθρωπος, represented a hero in his full vigour, with black and curly hair and beard, strong features and a high ὄρακος. This was probably the mask for most of the tragic heroes who were not very much advanced in years. For a secondary class of heroes there were two other masks, the ἔκυκλος and the ἐγνώμονας ἄνθρωπος: the former represented a fair man with floating locks, a low ὄρακος, and a good colour in his countenance; the second or fairer man, was pale and of a sickly appearance.

2. Tragic masks for young men. Among these are mentioned, 1. The νεανίσκος πάχυχρυσός, a mask intended to represent a man who had just entered the age of manhood, and was yet unbearded, but of a blooming and brownish complexion, and with a rich head of hair. The name πάχυχρυσός probably indicates that the mask might be used in a great variety of parts. 2. The νεανίσκος οἶλος, or ξένος or ὑπαρχός, a fair youth of a haggard or impudent character; his hair was curly and formed a high ὄρακος; his character was indicated by his raised eye-brows. 3. Νεανίσκος πάρουλος, resembled the preceding mask, but was somewhat younger. The counterpart of these two was, 4. The ἀνάκλασις, a young man of a delicate and white complexion, with fair locks and a cheerful countenance like that of a youthful god. 5. Πιαρός. There were two masks of this name, both representing young men of an age which, of all other classes, was the most difficult for a Greek audience to imagine that a god or hero should have had a face like that of an ordinary actor, as being a part of it; and this must have been the case in tragedy more especially, as it was necessary to make the head correspond to the stature of an actor which was heightened by the cothurnus.

3. Tragic masks for male slaves. Pollux mentions three, viz. the θεραπέας, which had no ὄρακος and wore a band round the smooth white hair. The countenance was pale, the beard gray, the nose sharp, and the expression of the eyes melancholy. The σφεντοσάχιος, or the pointed beard, represented a man in his best years, with a high and broad forehead, a high ὄρακος, hardened features, and a red face. The ἀνάκτισμα, or the pug-nose, was an impudent face with fair rising hair, of a red colour and without beard.

4. Tragic masks for female slaves. Of these five specimens are mentioned, viz. the τολιά κατάκατορας,
5. Tragic masks for free women. The first of these, called ἀπόδρασμα, represented a pale lady, with long black hair and a sad expression in her countenance. One generally shared the sufferings of the principal hero in a play. The second, called μεσόδρασμα ἄφρα, resembled the former, with the exception that her hair was half shorn. She was a woman of middle age, and was probably intended to represent the wife of the chief hero, if he was not too advanced in age. The third is the μεσόδρασμα πρεσβυστέρος, representing a newly married woman in full bloom with long and floating hair. The fourth is the κομψός παρθένος, a maiden of mature age, with short hair divided on the middle of the forehead, and smiling smoothly around the head. The colour of her countenance was rather pale. There was another mask of the same name, but it seemed from the former by the following circumstances:—the hair was not divided on the forehead or curled, but wildly floating, to indicate that she had had much suffering to go through. The latter is the κόρη, or young girl. This mask represented the beauty of a maiden's face in their full bloom, such as the face of Danaë, or any other great beauty was conceived to have been.

The account which Pollux gives of the tragic masks comprehends a great number, but it is small in comparison with the variety of masks which the Greeks must have used in their various tragedies, for every hero and every god who was known to the Greeks as being of a particular character, must have been represented by a particular mask, so that the spectators were enabled to recognize him immediately on his appearance. For this very reason the countenances of the gods, heroes, and heroines, must, in point of beauty, have been the same as were used in their various tragic masks comprehends a great number, but it is small in comparison with the variety of masks which the Greeks must have used in their various tragedies, for every hero and every god who was known to the Greeks as being of a particular character, must have been represented by a particular mask, so that the spectators were enabled to recognize him immediately on his appearance. The latter is the κόρη, or young girl. This mask represented the beauty of a maiden's face in their full bloom, such as the face of Danaë, or any other great beauty was conceived to have been.
4. Comic masks for old women. Pollux mentions three, viz.—1. The γυνὴ λεκτική, or the talkative woman; her hair was smoothly combed down, the eyebrows rather raised, and the complexion white. 2. The γυνὴ οὐλή was only distinguished for her fine head of hair. 3. The κύων had her hair combed smoothly, had high and black eyebrows, and a white complexion. 4. The ψευδόκηρη had a whiter complexion than the former, her hair was bound up above the forehead, and she was intended to represent a young woman who had not been married more than once. 5. Another mask or the same name was only distinguished from the former by the irregular manner in which the hair was represented. 6. The συντροπόλος λεκτική, an elderly woman who had once been a prostitute, and whose hair was partly grey. 7. The παλλακός resembled the former, but had a better head of hair. 8. The τέλειον ἑταίριον was more red in the face than the ψευδόκηρη, and had locks about her ears. 9. The ἑταίριον was of a less good appearance, and wore a band round the head. 10. The διψυχός ἑταίριον was of a different name from the gold with which her hair was adorned. 11. The βιωτρος ἑταίριον, from the variegated band wound around her head. 12. The λουτράβιον, from the circumstance of her hair being dressed in such a manner that it stood upright upon the head in the form of a lampas. 13. The μορφή πεςκωρός represented a female slave newly bought and wearing only a white chiton. 14. The παραψυριστόν was a slave distinguished by a pug-nose and her hair; she attended upon hetearae, and wore a crocus-coloured chiton.

Numerous as these masks are, the list cannot by any means be considered as complete, for we know that there were other standing masks for persons following particular kinds of trade, which are not mentioned in Pollux. Museon of Megara, for example, is said to have invented a peculiar mask called after his own name μαῖσων, another for a slave, and a third to represent a cook. (Athen. xiv. p. 659.) From this passage of Athenaeus we also learn that Stephanus of Byzantium wrote a work περὶ προτάσσων.

III. MasKs used in the Satyric Drama.

The masks used in this species of the Greek drama were intended to represent Satyrs, Silenus, and similar companions of Dionysus, whence the expressions of the countenances and the form of their heads may easily be imagined. Pollux only mentions the grey-headed Satyr, the unbearded Satyr, Silenus, and the πάπας, and adds that the characters of all the other Satyric masks either resemble these, or were sufficiently expressed in their names. e. g. the Παππόσιλεν was an old man with a very predominant animal character. (Compare Eichstadt. de Dramate Comico-Satyrico, p. 81.) A grotesque mask of a Satyr, together with one of the finest specimens of a tragic mask, is contained in the Townly Gallery in the British Museum, and is represented on the following page.

As regards the earliest representations of the regular drama among the Romans, it is expressly stated by Dionides (iii. p. 486, ed. Putsch.), that masks were not used, but merely the galerus or
and this supposition is confirmed by all works of art, and in that of Dacier. The cut annexed contains a wig, and that Roscius Gallus, about the year 100 B.C., was the first who introduced the use of masks. It should, however, be remembered that masks had been used long before that time in the Attelaneae (cf. Fest. s.v. Personata), so that the innovation of Roman masks must have been confined to the regular drama, that is, to tragedy and comedy. As for the forms of Roman masks, it may be presumed that, being introduced from Greece at so late a period, at the time when the arts were in their decline, and the paintings of Herculaneum and Pompeii, in which masks are represented; for the masks appear unnaturally distorted and the mouth always wide open. The expressions of Roman writers also support this supposition. (Gellius, v. 7; Juv. Ars Sat. iii. 7.) We may mention here that some of the oldest MSS. of Terence contain representations of Roman masks, and from these MSS. they have been used long before that time in the Atellanae, and are used especially by architects and land-surveyors, and is found on all the foot-measures that have come down to us. Pollex (the thumb), which is used in modern Latin for on inch, is not found in the ancient writers, but Pliny (H.N. xxvii. 9, xxiv. 32) uses the adjective pollicaris (of a thumb's breadth or thickness).

From the analogy of the as, we have also denomination for 2 feet (Column. iii. 15, &c.), and pes sesterius for 24 feet. (Leg. XII. Tab., Tab. viii.) The chief subdivisions and multiples of the foot will be found mentioned under Mensura, and more fully described in their proper places. (See also the Tables.) One itinerary measure, which has been omitted in its proper place, is the Leuca, or Leuce, which was a Gallic measure = 1300 passus or 14 mile. (Ammian. Marc. xvi. 12; Itin. Antonii.)

The square foot (pes quadratus) is called by Frontinus constatus, and by Boethius contractus. Frontinus applies the term quadratus to the cubic foot, and the same, as a measure of capacity, was called quadrantal.

Certain peculiar foot-measures, differing from the ordinary ones, are mentioned by ancient writers. The Samian, which was the same as the Egyptian foot, is known from the length of the Egyptian cubit as derived from the Nilmeter (namely, 17.7427857 inches) to have contained 11.82552384 inches, or more than 11⅛ inches. A larger foot than the common standard seems to have been used in Asia Minor. Heron (de Mens. p. 368) names the Royal or Philaeterian foot as being 16 finger-breadths, and the Italian as 13⅓, and he also mentions a mile (milio) of 5400 Italian or 4500 royal feet. Ideler supposes that the Italian foot means the common Roman, and the royal a Greek foot larger than the common standard, corresponding to the stadium of 7 to the mile, which had been introduced before Heron's time, namely, the tenth century. The Pes Drusianus or foot of Drusus, contained 13½ Roman inches = 13.1056 English inches. It was used beyond the boundaries of Italy for measuring land, and was the standard among the Tungri in Lower Germany.

(Hussey, on Ancient Weights, &c., Appendix; Wurm, de Pond. chap. 6 and 7; Bockh's Metrolog. Untersuch. pp. 196, &c.; Ideler, Längen und Flächenmaße; Fréret, Observations sur le Rapport des Mésures Grecques et des Mésures Romaines, Mémo. de l'Acad. d'Inscr. t. xxiv. pp. 551, &c. [P.S.]

PESSI (πεσσί). [LATRUNCULI.]

PE'SSULUS. [JANUA, p. 626, b.]

PETALISMUS (πεταλισμός). [EXSILIAUM, p. 515, a.]

PETASUS. [PILEUS.]

PETARUSTAE. [PETARUM.]

PETARUM (πεταρχός, πέτερος) is said by the Greek grammarians to have been a pole or board, on which fowls roosted. (Hezsch. s.v.; Pollex, x.)
PETITOR. [Actor.]

PETORRITUM, a four-wheeled carriage, which, like the Esserum, was adopted by the Romans in the time of the Gauls. (Hor. Sat. i. 6. 104.) It differed from the HARMAMAXA in being uncovered. Its name is obviously compounded of petor, four, and rit, a wheel. Festus (s. v.) in explaining this etymology observes that petor meant four in Oscan and in Aeolic Greek. There is no reason to question the truth of this remark; but, since Petor meant four in many other European languages, it is more probable that the Romans derived the name, together with the fashion of this vehicle, from the Gauls. Gellius (xx. 30) expressly says that it is a Gallic word. [J.Y.]

PEZETAERI (πεζηταιρι). [Exercitus, p. 436, b.]

PHALANGAE or PALANGAE (φαλάγγες), any long cylindrical pieces of wood, such as trunks or branches of trees (Herod. iii. 97; Plin. H. N. xii. 4. s. 8), truncheons (Plin. H. N. viii. 56. s. 57), and poles used to carry barrels. The carriers who used these poles were called phalangetii (Gloss. Aut. s. v.), and also hexapophorii, tetrapophorii, &c., according as they worked in parties of six, four, or two persons.

The word was especially used to signify rollers placed under ships to move them on dry land, so as to draw them upon shore or into the water (δουλετοὶ κυλιόντων, Bruneck, Ausl. iii. 89; Apoll. Rhod. i. 375—389). This was effected either by making use of the oars as levers, and at the same time fastening to the stern of the ship cables with a noose (μαρίφος), against which the sailors pressed with their breasts, as we see in our canal navigation (Orph. Argon. 219—219, 270—275), or by the use of machines. (Hor. Carm. i. 4. 2.) Rollers were employed in the same manner to move military engines (Caesar, Bell. Cis. ii. 10).

PHALANX (φάλανξ). [Exercitus, pp. 482, b, 483.]

PHALERA. [Hasta, p. 589, a.]

PHALERA (φάλαρα), a boss, disc, or crescent of metal, in many cases of gold (Herod. i. 215; Athen. xii. p. 530; Claudian, Epig. 34) and beautifully wrought so as to be highly prized. (Cic. Verr. iv. 12.) Ornaments of this description, being used in pairs, are scarcely ever mentioned except in the plural number. The names for them are evidently formed from the term φαλαρα, which is explained under Galea. (Compare Hom. H. xvi. 106.) Besides the metallic ornaments of the helmet similar decorations were sometimes, though very rarely, worn by warriors on other parts of their dress or armour, probably upon the breast. (Virg. Aen. ix. 539, 458.) The negro slaves who were kept by opulent Romans were sometimes suspended round their necks. (Sueton. Nero. 30.) Also the tian of the king of Persia was thus adorned. (Aeschyl. Pers. 668.) But we most commonly read of phalerae as ornaments attached to the harness of horses (Xen. Hellen. iv. 1. § 39: Virg. Aen. x. 310; Gell. v. 5; Claudian, Epig. 36), especially about the head (αρχανηιτοι φάλαρα, Soph. Oed. Col. 1069; Eurip. Suppl. 536: Grec. Cor. de Dialect. p. 508, ed. Schäfer), and often worn as pendants (pensillia, Plin. H. N. xxvii. 12. s. 74), so as to produce a terrific effect when shaken by the rapid motions of the horse (turbantur phalerae, Claudian, in iv. Cons. Honor. 548). These ornaments were often bestowed upon horsemen by the Roman generals in the same manner as the Armilla, the Torques, the hasta pura (Hasta), or the crown of gold (Corona, in order to make a public and permanent acknowledgment of bravery and merit. (Juv. xvi. 60; Gell. ii. 11.) [J.Y.]

PHALLUS. [Dionysia, p. 411, a.]

PHALOS (φαλός). [Galea.]

PHARETRA (φαρέτρα, od. Herod. φασσέταυς), a quiver. A quiver, full of arrows, was the usual accompaniment of the bow. [Arcus.] It was consequently part of the attire of every nation aequitas aequitas to archery. Virgil applies to it the epithets Cressa, Ligea, Tharsis (Georg. iii. 345, Aen. vii. 616, xi. 858); Ovid mentions the pharetutis Geta (De Ponto, i. 8. 6); Herodotus represents it as part of the ordinary armour of the Persians (vii. iii. 894). The quiver, like the bow-case (corus), was principally made of hide or leather (Herod. ii. 141), and was adorned with gold (Anacr. xiv. 6; aurata, Virg. Aen. iv. 138, xi. 858), painting (Ovid. Epist. Her. xxi. 173), and braiding (παλαιφακτον, Theocrit. xxv. 269). It had a lid (φασα, Hom. H. iv. 116, Od. ix. 314), and was suspended from the right shoulder by a belt (Baileus, passing over the breast and behind the back. (Hes. l.c.) Its most common position was on the top
PHAROS.

PHASELUS (φάσηλος), was a vessel rather long and narrow, apparently so called from its resemblance to the shape of a phaselus or kidney-bean. It was chiefly used by the Egyptians, and was of various sizes, from a mere boat to a vessel adapted for long voyages. (Virg. Georg. iv. 289; Catull. 4; Martial, x. 30. 13; Cic. ad Att. i. 13.) Octavia sent ten triremes of this kind, which she had obtained from Antony, to assist her brother Octavianus; and Appian (Bell. Civ. v. 35) describes them as a kind of medium between the ships of war and the common transport or merchant vessels. The phaselus was built for speed (Catull. l.c. phaselus ille—navium celerrimus*), to which more attention seems to have been paid than to its strength; whence the epithet fragilis is given to it by Horace. (Carm. iii. 2. 27, 28.) These vessels were sometimes made of clay (fictilia phaselis, Juv. xv. 127), to which the epithet of Horace may perhaps also refer.

PHASELIS (φασέλις), was one of the various methods by which public offenders at Athens might be prosecuted; but the word is often used to denote any kind of information; as Polux (viii. 47) says, κινδυνόμενοι φάσέλις εκαλοῦτο πᾶσα αἱ μνημεῖα τῶν λαθραίωτατων ἀδίκηματων. (See Aristoph. Ec. 300, and Acharn. 823, 826, where the word φασέλις is used in the same sense as φαίνω.) The word συκοφάντης is derived from the practice of laying information against those who exported fgs. [SYCOPHANTES.]

Though it is certain that the φασέλις was distinguished from other methods of prosecution (Demosth. c. Aristog. 793; leoc. c. Callim. 379, ed. Sueton. Claud. 20; Bruneck, Anst. ii. 186.) The Pharos of Brandusium, for example, was, like that of Alexandria, an island with a light-house upon it. (Mela, ii. 7. § 13; Steph. Byz. l. c.) Suetonius (Tiber. 74) mentions another pharos at Carpeana.

The annexed woodcut shows two pharos remaining in Britain. The first is within the precincts of Dover Castle. It is about 40 feet high, octagonal externally, tapering from below upwards, and built with narrow courses of brick and much wider courses of stone in alternate portions. The space within the tower is square, the sides of the octagon without and of the square within being equal, viz., each 15 Roman feet. The door is seen at the bottom. (Stukely, Itin. Curios. p. 129.) A similar pharos formerly existed at Boulogne, and is supposed to have been built by Caligula. (Sueton. Calig. 46; Montfacon, Supplicum, vol. iv. L. vi. 3. 4.) The round tower here introduced is on the summit of a hill on the coast of Flintshire. (Pennant, Par. of Whiteford and Holnefield, p. 112.)

PHAROS (φαραος). [PALLIUM.]

PHAROS or PHARIUS (φόραος), a light-house. The most celebrated light-house of antiquity was that situated at the entrance to the port of Alexandria. It was built by Sostratus of Cuidas on an island, which bore the same name, by command of one of the Ptolemies, and at an expense of 600 talents. (Plin. ii. N. xxxvi. 12; Steph. Byz. s. v. Phoiras; Archil. Tat. v. 6.) It was square, constructed of white stone, and with admirable art; exceedingly lofty, and in all respects of great dimensions. (Caesar, Bell. Civ. iii. 112.) It contained many stories (πολυφόραος, Strabo, xvii. 1. § 6), which diminished in width from below upwards. (Herodian, iv. 3.) The upper stories had windows looking seawards, and torches or fires were kept burning in them by night in order to guide vessels into the harbour. (Val. Flacc. vii. 34; see Bartoli, Luc. Ant. iii. 12.)

Pliny (l. c.) mentions the light-houses of Ostia and Hvaranna, and says that there were similar towers at many other places. They are represented on the medals of Apamea and other maritime cities. The name of Pharos was given to them in allusion to that at Alexandria, which was the model for their construction. (Herodian, l. c.;
Steph.), we are not informed in what its peculiarities consisted. According to Pollux (i. 1.), it might be brought against those who committed offences against the mine laws, or the customs, or any other part of the revenue; against any persons who brought false accusations against others for such offences; and against guardians who injured their wards. The charge, as in the γραφή, was made in writing (ἐν γραμματείᾳ), with the name of the prosecutor, and the proposed penalty (Τίμημα) affixed, and also the names of the ἐνδότες. The same author says, ἔφημαν δὲ πρὸς τὸν ἀγγέλον. Here we must either understand the word ἔγγελον to be used in a more general sense, as denoting any magistrate to whom a jurisdiction belonged, or read with Schömann (de Comit. 178) τῶν ἀγγέλων. For it is clear that the archon was not the only person before whom a φάσις might be preferred. In cases where corn had been carried to a foreign port, or money lent on a ship which did not bring back a return cargo to Athens, and probably in all cases of offence against the export and import laws, the information was laid before ἡφαίστειαν τοῦ ἐγγέλου (Demosth. c. Theocr. 1323). Where public money had been embezzled, or illegally appropriated, for which a φάσις was maintainable, the σύνδεσμος were the presiding magistrates. (Isocr. c. Callin. 372; Lys. de Publ. Pecun. 149, de Aristoph. bon. 154, ed. Steph.) Offences relating to the mines came before the thesmothetae. (Meier, c. Nausim. 991.) All ἀγγέλων were οἰκονόμοι, according to Pollux (viii. 48), and he says τὸ τιμηθὲν ἑγγεύτων τῶν ἀδελφοῦν, ὅποσ τοῖς ἀδελφῶν φίλειν. By this we are to understand that the τίμημα went to the state, if the prosecution was one of a purely public nature, that is, where the offence immediately affected the state; but where it was of a mixed nature, as where a private person was injured, and the state only indirectly, in such case compensation was awarded to the private person. The third person in these prosecutions against fraudulent guardians. On the same ground, (Demosth. c. Theocr. 1323.) Where the φάσις was of a purely public nature, the prosecutor would be subject only to the payment of the παράδοσις, and to the thousand drachms, if he failed to obtain a fifth part of the votes, according to the common practice in criminal cases. (Demosth. c. Theocr. 1523.) Whether in those of a mixed nature he was liable to these payments, as well as to the πρωτανία and ἐπωθεία, is a question which has been much discussed, but cannot be settled. We have no speech left us by the orators on the subject of a φάσις, but only mention of a lost speech of Lysias πρὸς τὴν φάσιν τοῦ ὁφαντικοῦ οἰκον. (See Bückh, Publ. Econ. of Athens, p. 368, &c. 2d ed.; Meier, Att. Proc. pp. 247—252, 792; Platter, Proc. und Kl. vol. ii. pp. 9—17.)

PHEIDITIA (φειδίτια). [SYSSITIA.]

PHENACE (φηνάκε). [COMA, p. 330, a.]

PHERNE (φερνή). [Dos.]

PHILALE. [PATERA.]

PHONOS (φῶνος). Homicide, was either ἐκοινός or ἀκοινός, a distinction which corresponds in some measure, but not exactly, with our murder and manslaughter; for the φῶνος ἐκοινός might fall within the description of justifiable homicide, while φῶνος ἀκοινός might be excusable homicide. According to the different circumstances under which the homicide was committed, the tribunal to which the case was referred, and the modes of proceeding at Athens, varied. All cases of murder (with one exception, to be hereafter noticed) were tried by the court of Areiopagus; other cases of homicide were (by the statutes of Draco) to be tried by the ἐφέται. All φωνικά δίκαι belonged to the jurisdiction of the ἄρχων βασιλείας as ἄγιον δικαστή. He was the sole judge in cases of unintentional homicide; for such an action was considered in a religious point of view, as being a pollution of the city; and it became his duty, as guardian of religion, to take care that the pollution (ἄγιον) was duly expiated. Draco, however, established the ἐφέται, first as a court of appeal from the ἄρχων βασιλείας; and soon after they began to perform the office of δικασταῖς, he being the presiding magistrate. (Suidas, s. v. Ἡγεμονια δικαστηρίων; Pollux, viii. 90, 125.) In discussing this subject we have to consider the various courts established at Athens for the trial of homicide, the different species of crime therein respectively prosecuted, the manner of proceeding against the criminal, and the nature of the punishment to which he was liable. All these points are fully discussed by Matthine in his treatise de Judiciis Athen. in the Miscellanea Philologica, vol. i., to which more particular references are given in this article.

Solon, who seems to have remodelled the court of Areiopagus, enacted that this court should try cases of murder and malicious wounding, besides arson and poisoning. (Demosth. c. Arieoer. 627.) One would be deemed a murderer, who instigated another to commit the deed, provided the purpose were accomplished. (Demosth. c. Conon. 1294, 1265; Matth. p. 148.) Besides the court of Areiopagus, there were four other courts, of which the ἐφέται were judges; τὸ ἔπι Παλλαδίως, τὸ ἔπι Δελφίως, τὸ ἔπι Πρωτανίου, and τὸ ἐν Φρεστοί. (Harpoc. et Suid. s. v. Ἐφέται.) To the court ἔπι Παλλαδίως belonged cases of accidental homicide, manslaughter, and attempts to commit murder (Βουλευσέται). Such a case as that mentioned by Demosthenes (c. Neer. 1348) of an unlawful blow followed by death, would be manslaughter. It seems also that this court had a concurrent jurisdiction with the Areiopagus in charges of murderous conspiracy, which was carried into effect. The law perhaps allowed the prosecutor to waive the heavier charge, and proceed against the offender for the conspiracy only. (Harpoc. s. v. Βουλευσέται; Antiph. τετάρτα, 126, ed. Steph.; Matth. p. 150.) As to the supposed origin of this court, see Harpoc. s. v. Ἐπί Παλλαδίου; Pollux, viii. 118. To the court ἔπι Δελφίως were referred cases where the party con-
fessed the deed, but justified it; διὰ τὴν διάλογον μὴν κτίναιν, ἔννομος δὲ δὲ δηρικαίναι. Demo-

theologicus calls it ἀγάπατος καὶ φιλικόδειτασσος (c. Aristocr. 644; Harpocr. s. v. Ἑτέλεξτοι; Pol-

lux, viii. 119). As to the origin of this court see Matth. p. 152. In the τὸ ἔκταμνιον the objects of prosecution were inmates things, as wood, stone, or iron, which had caused the death of a man by falling on him. (Harpocr. s. v. Ἑτέλεξτοι; Pol-

lux, viii. 120; Demosth. c. Aristocr. 645.) Draco enacted that the cause of death should be cast in which ceremony the θέμων/Bailey was assisted by the Φιλόσαλις. (Meier, Ἀπετ. Πράξ. p. 117; Suidas, s. v. Νικόν; Aesch. c. Τυπίος. 88, ed. Steph.) This was a relic of very rude times, and may be not inaptly compared with our custom of giving deodands. Matth. p. 152. In the μῆνα τῆς Αριστοκρατίας was reserved for a peculiar case; where a man, after going into exile for an unintentional homicide, and before he had appeased the relations of the deceased, was charged with having committed murder. He was brought in a ship to a place in the harbour called έν ψεφαττῳ, and there pleaded his cause on board ship, while the judges remained on land. If he was convicted, he suffered the punishment of murder; if acquitted, he remained the sovereign of his former punishment. The object of this contrivance was to avoid pollution (for the crime of the first act had not yet been expiated), and at the same time to bring the second offence to trial. (Demosth. c. Aristocr. 646; Har-

porc. s. v. Ἑτέλεξτοι; Pollux, viii. 120; Matth. p. 155.)

To one or other of these courts all φυλικὰ δίκαια were sent for trial; and it was the business of the βασιλείας/Βασιλείας to decide which. The task of prosecution devolved upon the nearest relatives of the deceased, and in case of a slave, upon the master. To neglect to prosecute, without good cause, was deemed an omission against religion, that is, in any κομία διάφορα further removed than a first cousin's son (ἀνεκλανθοῦν). Within that degree the law enjoined the relations to prosecute, under penalty of an ανέκλανθος γράφη, if they failed to do so. (Demosth. c. Αἰμιλίου μακάριος, c. Macart. 1069; c. Εὐστου και Ἑραμνοῦ, 1109, 1101; Antiph. de Her. caed. 135, ed. Steph.) A key might, however (without incurring any censure), forbear to prosecute, where the murderer had forgotten the murderer before he died (Demosth. c. Παντείου 983); or, in cases of involuntary homicide, where the offender gave the satisfaction which the law required; unless the deceased had given a special injunction to avenge him. (Lysias, c. Αγορῆς 133, 138, ed. Steph.;

The first step taken by the prosecutor was, to give notice to the accused to keep away from all public places and sacrifices. This was called προφή-

τητος καὶ οἰὼν καὶ τρισφορήν φύος. (Demosth. c. Macart. 1068, c. Neiter. 1348.) The next thing was, to prefer the charge before the king-archon. To such charge the term ἑπικτεστεία or ἑπι-

κτεστεία was peculiarly applied. (Pollux, viii. 23, 118; Harpocr. s. v. Επισκέψαι; Antiph. κατηγ. φαρμ. 111, ed. Steph.) The charge was delivered in writing; the prosecutor was said ἀναγράφεσθαι δίκην φύος. (Antiph. de Chor. 145, ed. Steph.) The king-archon having received it, after first warning the defendant ἐπικτεστεία τῶν μουστηρίων καὶ τῶν ἐλλὸν νομίμων (Pollux, viii. 60, 90), pro-

ceeded in due form to the ἔκταμνος. The main thing to be inquired into was the nature of the offence, and the court to which the cognizance ap-

pertained. The evidence and other matters were to be prepared in the usual way. Three months were allowed for this preliminary inquiry, and there were three special hearings, one in each month, called διαδίκαιαι, or (according to Bekker's reading) προδικαιαί (Antiph. de Chor. 146, ed. Steph.) after which, in the fourth month, the king-archon εἰσηγήσεται. (Matth. p. 160.) The defendant was allowed to put in a ἀποκατάργησις, if he contended that the charge ought to be tried in one of the minor courts. (Pollex, viii. 57.)

All the φυλικὰ δικαστήρια were held in the open air, in order that the judges might not be under the same roof with one suspected of impurity; nor the prosecutor with his adversary. (Antiph. de Her. caed. 130, ed. Steph.) The king-archon presided, with his crown taken off. (Pollux, viii. 90.) The parties were bound by the most solemn oaths; the one swearing that the charge was true, that he bore such a relationship to the deceased, and that he would in conducting his case confine himself to the question at issue; the other declaring the charge to be false. (Antiph. de Her. caed. 130, 140, de Chor. 143, ed. Steph.; Demosth. c. Ἑνικαῖς. 1161; Matth. p. 163.) The witnesses on both sides were sworn in like manner (Antiph. de Her. caed. 130, 131, ed. Steph.; Meier, Ἀπετ. Πράξ. p. 673); and slaves were allowed to appear as witnes-

ses. (Meier, Ἀπετ. Πράξ. p. 673.) The judge could not be prevented by the adversary, but the property of the exile was confiscated. (Pollux, viii. 117; Demosth. c. Aristocr. 634, 643; Matth. p. 167.) On the third day the judges proceeded to give their votes; for which two boxes or urns were provided (ὀθόνα καὶ ἄφωρες), one of brass, the other of wood; the former for the condemning ballots, the latter for those of acquittal. An equal number of votes was an acquittal; a point first established (according to the old tradition) upon the trial of Orestes. (Aeschy. Ευν. 753; Matth. p. 165.) As the defence might consist either in a simple denial of the killing, or of the intention to kill, or in a justification of the act, it is necessary to in-

quire what circumstances amounted to a legal justification or excuse. We learn from Demo-

thones (c. Aristocr. 637) that it was excusable to kill another unintentionally in a gymnastic combat, or
to kill a friend in battle or ambuscade, mistaking him for an enemy; that it was justifiable to slay an adulterer if caught in ipso delicto, or a paramour caught in the same way with a sister or daughter, or even with a concubine, if her children would be free. (As to an adulterer, see Lys. de Erotasth. caed. 94, ed. Steph.) It was lawful to kill a robber at the time when he made his attack (εἰδες διναστέως) but not after. (Demosth. c. Aristocr. 629.) By a special decree of the people, made after the expulsion of the thirty tyrants, it was lawful to kill any man who attempted to establish a tyranny, or put down the democracy, or committed treason against the state. (Lycurg. c. Leocr. 163; Andoc. de Myst. 13, ed. Steph.) A physician was excused who caused the death of a patient by mistake or professional ignorance. (Antiph. τερατ. 127, ed. Steph.) This distinction, however, must be observed. Justifiable homicide left the perpetrator entirely free from pollution (σέβασμα). That which, though unintentional, was not perfectly free from blame, required to be expiated. See the remarks of Antiphon in the Τερατολογία, n. 123.

It remains to speak of the punishment.

The courts were not invested with a discretionary power in awarding punishment; the law determined this according to the nature of the crime. (Demosth. c. Neas. 1572.) Willful murder was punished with death. (Antiph. de Her. caed. 130, ed. Steph.; Demosth. c. Med. 532.) It was the duty of the Thesmothetæ in such cases to see that the sentence was executed, and of the Eleven to execute it. (Demosth. c. Aristocr. 630; Meier, Att. Proc. p. 74; Schömann, Ant. Jur. Publ. Gr. p. 246.) We have seen that the criminal might avoid it by flying before the sentence was passed. Malicious wounding was punished with banishment and confiscation of goods. (Lys. c. Simon. 109; Math. p. 140.) So were attempts to murder (Βοιοθανεία). But where the design was followed by the death of him whose life was plotted against, and the crime was treated as a murder, it might be punished with death, at least if it was tried in the Areiopagus; for it is doubtful whether the minor courts (except that εἰς φρεατον) had the power of inflicting capital punishment. (Math. p. 150; Schömann, Ant. Jur. Publ. Gr. p. 294; Meier, Att. Proc. p. 313.) If the criminal who was banished, or who avoided his sentence by voluntary exile, returned to the country, an εὔσεξ might forthwith be laid against him, or he might be arrested and taken before the Thesmothetæ, or even slain on the spot. (Suidas χ. c. Εὔσεξ; Math. p. 160.) The proceeding by ἀπαγωγὴ (arrest) might perhaps be taken against a murderer in the first instance, if the murder was attended with robbery, in which case the prosecutor was liable to the penalty of a thousand drachmas if he failed to get a fifth of the votes. (Demosth. c. Aristocr. 647; Meier, Att. Proc. p. 231.) But no murder, even after conviction, could lawfully be killed, or even arrested, in a foreign country. (Demosth. c. Aristocr. 581, 632.) The humanity of the Greeks forbade such a proceeding. It was against the principle of international law, that the exile had a safe asylum in a foreign land. If an Athenian was killed by a foreigner abroad, the only method by which his relations could obtain redress, was to seize natives of the murderer’s country (not more than three), and keep them until the murderer was given up for judgment. (Demosth. c. Aristocr. 647; Pollux, viii. 50; Harpocr. and Suidas, s. v. Ἀνδρο-λύφων.)

Those who were convicted of unintentional homicide, not perfectly excusable, were condemned to leave the country for a year. They were obliged to go out (ἀπεξούσαι) by a certain time, and by a certain route (ταπτή ὁδόν), and to expiate their offence by certain rites. Their term of absence was called αὐσταρπάμιος. It was their duty also to appease (αιδεῖα) the relations of the deceased, or if he had none within a certain degree, the members of his clan, either by presents or by humble entreaty and submission. If the convict could prevail on them, he might even return before the year had expired. The word αἰδεῖα was used not only of the criminal humbling himself to the relations, but also of their forgiving him. (Harpocr. s. v. Τροφαδία; Demosth. c. Pantocr. 983, c. Macart. 1069; c. Aristocr. 645; Math. p. 170.) The property of such a criminal was not forfeited, and it was unlawful to do any injury to him either on his leaving the country or during his absence. (Demosth. c. Aristocr. 634.)

Such was the constitution of the courts, and the state of the law, as established by Solon, and mostly indeed by Draco; for Solon retained most of Draco’s φαναλ τόμας. (Demosth. c. Euryb. 116, c. Aristocr. 636.) But it appears that the jurisdiction of the ἥπετα in later times, if not soon after the legislation of Solon, was greatly abridged; and that most of the φαναλικῆ ἀθήνα was tried by a common jury. It is probable that the people preferred the ordinary method of trial, to which they were accustomed in other causes, criminal as well as civil, to the more aristocratical constitution of the court of ἥπετα. Their jurisdiction in the courts εἰς φρεατον and ἐν Πυραμοκαιρίᾳ, was, no doubt, still retained; and there seem to have been other peculiar cases reserved for their cognizance. (Pollux, viii. 123; Math. p. 158; Schömann, Ant. Jur. Pub. p. 296.) Whether the powers of the Areiopagus, as a criminal court, were curtailed by the proceedings of Pericles and Ephialtes, or only their administrative and censorial authority as a council, is a question which has been much discussed. The strong language of Demosthenes (c. Aristocr. 641) inclines one to the latter opinion. See also Dinarchus (c. Aristog. init., from which it appears there was no appeal from the decision of that court. (Math. 166; Pluter, Proc. un. Klog. vol. i. p. 27; Schömann, Ant. Jur. Pub. p. 201; Thirlwall, Gr. Hist. vol. iii. c. 17. p. 24.)

No extraordinary punishment was imposed by the Athenian legislator on parricide. Suicide was not considered a crime in point of law, though it seems to have been deemed an offence against religion; for by the custom of the country the act of the suicide was buried apart from his body. (Aesch. c. Ætes. 88, ed. Steph.) [C. R. K.]

PHORBIA (φορβία). [CAPISTRUM.]

PHORMNX (φορμεν). [LYRA.]

PHOROS (φορος), literally that which is brought in, was specially used to signify the tribute paid by the Attic states to Athens, which is spoken of under TELOS.

PHRA'TRIA. [CIVITAS, pp. 269, 250; TRIBUS (Greeks.).]

PHRYGIO. [PALLIUM, p. 851, a.]

PHTHORA TON ELEUTHERON (φθορὰ τῶν ἐλευθέρων), was one of the offences that might be criminally prosecuted at Athens. The word
the cavalry of his own tribe, and they were subject to the two Hipparchs, just as the Taxiarchs were subject to the Archons collectively; but his authority can hardly be considered as conclusive on this point. The origin and duties of the Athenian magistrates, so-called, are involved in much obscurity, and the ancient authors relating to the arts; but the Catalogue is the more valuable portion of the work; Sillig, Catalogus Artificum, Dresden 1827, 8vo., an indispensable supplement to the Catalogue of Juni on this subject; this excellent work, written equally for the scholar and the artist, has been translated into English under the title of a Dictionary of the Artists of Antiquity, 1837*; a further supplement to Sillig, of great importance, is the work of M. Raoul-Rochette, Lettres à M. Schorn, Supplément au Catalogue des Artistes de l'Antiquité Grecque et Romaine, Paris 1845; Müller, Handbuch der Archäologie der Kunst, Breslau 1848, 8vo., 3rd ed. by Welcker, a most useful work, but written more for the antiquary than the artist; the 2nd edition has recently been translated by Mr. Leitch; Böttiger, Ideen zur Archäologie der Malerei, Dresden 1811, 8vo., first part, from the earliest times until Polygnotus and his contemporaries, inclusive; Durand, Histoire de la Peinture Ancienne, London 1725, folio, a translation of book xxxv. of Pliny, with copious notes; Carlo Malerei der Alien, Berlin 1836, 4to.; Nagler, Newer everything that is found in the place of encaustic.

* An important error, however, among many others, in this translation, demands notice; the term enamel is throughout erroneously used in the place of encaustic.
III. Painting in its earliest state. The legends relating to the origin of painting in Greece, though not being free from a no real historical value, are at least interesting to the lovers of art. One legend, which is recorded by Pliny (H. N. xxxv. 12. s. 43) and is adverted to by Athenagoras (Legat. pro Chr. 14. p. 59, ed. Dechair), relates the origin of the delineation of a shadow (σκία, σκιαγραφία). Athenagoras (l. c.) mentions Saurias of Samos, who traced his horse's shadow in the sun with the point of his spear, and Crato of Sicyon, whom he struck with the shadow of her daughter, a potter of Corinth, struck with the shadow of her daughter, a potter of Corinth, at Corinth, struck with the shadow of her daughter, a potter of Corinth, at Corinth, with such force and fidelity, that her father cut away the plaster within the outline, and took an impression from the wall in clay, which he baked with the rest of his pottery. (Dict. of Biog. s. v.) There seem to be, however, other claimants to the honour of having invented skiaigraphy (σκιαγραφία). Athenagoras (l. c.) mentions Saurias of Samos, who traced his horse’s shadow in the sun with the point of his spear, and Crato of Sicyon, whom he styles the inventor of drawing or outline (γραφεῖν), for he was the first to practise the art upon tablets with prepared grounds (ἐν πίναις λειχερουκόμεναι). Pliny (H. N. vii. 57) mentions upon the testimony of Aristotle, that Eucheir (Εὐχείρ), a relation of Daddalus, invented painting in Greece. (Dict. of Biog. s. v.) Although Pliny’s account (H. N. xxxv. 5) of the origin and progress of painting in Greece is somewhat circumstantial, his information can still not be considered as authentic matter of history; and the existence of several of the most ancient artists, mentioned by Pliny and many Greek writers, is very questionable. Besides those already spoken of, we find mention made of Philocles of Egypt; Caneathes, Aricles, and Cleophantus, of Corinth; Telephanes of Sicyon, Eugrammus, and others. (Upon the meanings of some of these names see Böttiger, Ideen zur Archäologie, p. 138, and Thiersch, Epoch. &c., note 22, and Dict. of Biog. art. Chrisipus.)

Painture is generally supposed to be a more ancient art than painting; but this arises from an imperfect comprehension of the nature of the two arts, which are one in origin, end, and principle, and differ only in their development. Design is the basis of both, colour is essential to neither, nor can it be said to belong more particularly to the latter (γραφεῖν) than to the former (παλαιστιχά).

Coloured works in plastic, in imitation of nature, were in ancient times as common, and probably more so, than coloured designs: the majority of the illustrations upon the vases are colourless. The staining of the human body, or the colouring of images, is the common notion of the origin of painting; but simple colouring, and painting, strictly speaking, are quite distinct; the distinction between "to colour," χρῶν, colorum indicare, and "to paint," γραφεῖν, pingere, delineare. (Pollux, vii. 126.) The colouring of the early wooden images, the ancient ἱδώνα, or the ἔμαυς, the παλαιάδια, and the δαιδάλια, must certainly have preceded any important essays in painting, or the representation of forms upon an even surface by means of colour and light and shade combined. But this is no stage in the art of painting, and these figures were most probably coloured by the artists who made them, by the old παρατάσια or ἐμφαλάφῳ themselves; the existence, however, of the art of painting is established by the existence of the plastic art.

We will now as briefly as possible consider the gradual development of painting, and the information relating to its progressive steps, preserved in ancient writers. The simplest form of design or drawing (γραφεῖν) is the outline of a shadow, without any intermediate markings, or the shape of a shadow itself (a silhouette), in black, white, or in colour (σκιαγραφία). This kind of drawing was termed σκιαγραφία. But this simple figure or shade, σκία (σκιαγραφήμα), when in colour was also essentially a monochrom (μοιχρώματα). The next step was the outline, the "pictura lineāris," the monogram (μοιχράγματα); this is said to have been invented by Philocles of Egypt or Caneathes of Corinth, but first developed in practice by Aricles of Corinth and Telephanes of Sicyon: it was the complete outline with the inner markings, still without colour; such as we find upon the ancient vases, or such as the celebrated designs of Plaxman, which are perfect monograms. These outlines were most probably originally practised upon a white ground (ἐν πίναις λειχερουκόμεναι), for Pliny remarks that they were first coloured by Cleophantus of Corinth, who used "testa trita," by which we should perhaps understand that he was the first to draw them upon a coloured or red ground, such as that of the vases. (Plin. H. N. xxxv. 5.)

The next step is the more perfect form of the monochrom, alluded to above; in this, light and shade were introduced, and in its most perfect state it was, in everything that is essential, a perfect picture. These "monochromata" were practised in all times, and by the greatest masters. Pliny, speaking of Zeuxis (H. N. xxxv. 36), says, "pinxit et monochromata ex albo;" ex albo, that is, in gray and gray, similar to the chiarisceri of the Italians. They are described by Quintilian (xl. 3. § 46), "qui singulā pinxerunt coloribus, alia tamen eminentiora, alia redintegrā fecerunt." They were painted also red in red. Pliny (H. N. xxxii. 39) tells us that the old masters painted them in vermilion, "Cinnabar velutem, quo etiam nunc monochromata, pingebant," and also in red lead, but that afterwards the rubrica or red ochre was substituted for these colours, being of a more delicate and more agreeable tint.

Hygiena, Dinias, and Charmadas, are mentioned by Pliny (H. N. xxxv. 34) as having been famous ancient monochromists; their age is not known, but they most probably practised the simpler form, such as we find upon the most ancient vases. Four monochroms in the latter style, red in red, were discovered in Herculanenum. (Le
Antiquitāt d'Ercolano, vol. i. plates 1, 2, 3, 4.) They are paintings of a late date and are of considerable merit in every respect, but the colours have been nearly destroyed by the heat, and the pictures are in some places defaced; they are painted upon marble. They were probably all executed by the same artist, Alexander of Athens. ALEXANDROS AΘΗΝΑΙΟΣ ΕΡΑΘΕΝ, is an inscription upon one of them (pl. 1), which represents five females, with their names attached, two of whom are playing at the ancient game of the tali (harpagoria). These tablets are in the collection of ancient paintings of the Museo-Borbonico at Naples, Nos. 408, 409, 410, 411.

The next and last essential step towards the full development or establishment of the art of painting (γεφυαία) was the proper application of local colours in accordance with nature. This is, however, quite a distinct process from the simple application of a variety of colours before light and shade were properly understood, although each object may have had its own absolute colour. The local colour remained the same throughout; meaning that it assumes in a particular light or position, which colour depends upon, and changes with, the light and the surrounding objects; this was not thoroughly understood until a very late period, but there will be occasion to speak of this hereafter. Probably Eumarus of Athens, and certainly Cimon* of Cleonae, belonged to the class of ancient tetrachromists or polychromists, for painting in a variety of colours, without a due or at least a partial observance of the laws of light and shade, is simply polychromy; and a picture of this latter description is a much more simple effort than the rudest imitation of the laws of light and shade, is simply imitative art, nor is there mention of any artist, similar to Hephaestus, who might represent the class of painters. This is the more remarkable, since Homer speaks of rich and elaborate embroidery as a thing not uncommon; it is sufficient to mention the splendid Diplax of Helen (H. iii. 126), in which were worked many battles of the Greeks and Trojans fought on her account. This embroidery is actual painting in principle, and is a species of painting in practice, and it was considered such by the Romans, who termed it "pictura textilis" (Cic. Ver. ii. 4. 1), "textilium strigilis magnifica operibus picto" (Id. Tusc. v. 21); that is, painted with the needle, embroidered, aev picto. (Ovid. Met. vi. 23; Virg. Aen. ix. 582.) The various allusions also to other arts, similar in nature to painting, are sufficient to prove that painting must have existed in some degree in Homer's time, although the only kind of painting he notices is the "red-cheeked" and "purple-cheeked ships" (θηρει μελακόρουφος, II. ii. 697; πέτος φοινικαρήφος, Od. xi. 129), and an ivory ornament for the faces of heroes. (H. N. xxxvi. 10.) It is sufficient to mention the fact that the plastic art must have attained a considerable degree of development in the time of Homer, and therefore determines also the existence of the art of design. (Ars delineandi; γραφική.)

Painting seems to have made considerable progress in Asia Minor, while it was still in its infancy in Greece, for Candaules, king of Lydia (B.C. 716), is said to have purchased at a high price a painting of Bularchus, which represented a battle of the Magnetes. (Plin. H. N. xxxv. 34.) It would appear from the expression of Pliny (H. N. vii. 39) that Candaules paid the painter as much gold coin as would cover the picture. It must be confessed that the tradition is very doubtful (see Dict. of Biog. art. Bularchus); but this painting of Bularchus is not an isolated fact in evidence of the early cultivation of painting in Asia; there is a remarkable passage in Ezekiel, who prophesied about 600 B.C., relating to pictures of the Assyrians (xxiii. 14, 15): "Men portrayed upon the wall, the images of the Chaldeans portrayed with vermilion, girded with girdles upon their loins, exceeding in dyed attire upon their heads, all of them princes to look to, after the manner of the Babylonians of Chalida, the land of their nativity."

The old Ionic or Asiatic painting, the "genus picturae Asiaticum," as Pliny (H. N. xxx. 10. s. 36) terms it, most probably flourished at the same time with the Ionian architecture, and continued as an independent school until the sixth century B.C., when the Ionians lost their liberty, and with their liberty their art. Herodotus (i. 164) mentions that when Harpagus besieged the town of Phocaea (b. c. 544), the inhabitants collected all their valuables, their statues and votive offerings from the temples, leaving only their paintings, and such works in metal or of stone as could not easily be removed, and fled with them to the island of Chios; from which we may conclude that paintings were not only valued by the Phocaeans, but also common among them. He- rodotus (ii. 87) also informs us that Mandrocles of Samos, who constructed the Ionian Hystapis the bridge of boats across the Bosporus (b. c. 590),
had a picture painted, representing the passage of Dareius's army, and the king seated on a throne reviewing the troops as they passed, which he dedicated in the temple of Hera at Samos.

After the conquest of Ionia, Samos became the seat of the arts. (Herod. iii. 60.) The Heraeum at Samos, in which the picture of Mandrocles was placed, was a general depository for works of art, and in the time of Strabo appears to have been particularly rich in paintings, for he terms it a "picture-gallery" (πινακοθήκη, xiv. p. 627). Consecrated or votive pictures on panels or tablets (πίνακες ἀνακεφαλέων, or γραφαὶ ἀνακεφαλέων) constituted a considerable portion of the ἀναθήματα or votive offerings in the temples of Greece, most of which in a later period had a distinct building or gallery (σχημα) attached to them disposed for the reception of pictures and works of this class. (Paus. i. 22 § 4, x. 25; § 1, 2; Ath. xiii. p. 606, b; Strab. ix. p. 486.)

After the decline of the Ionian art, painting flourished amongst the Greeks in Italy and Sicily, and especially in Cretona, Sybaris, and Tarentum. Aristotle (de Miraβ. Anim. c. 99) speaks of a magnificent cloth or pallium (μακροθυμίον) of Alec-thenes of Sybaris, which measured 15 cubits, was of the richest purple, and in it were worked the representations of cities, of gods, and of men. It came afterwards into the possession of the tyrant Dionysius the elder, who sold it to the Carthaginians for 120 talents. This is sufficient evidence of the existence of painting among the Italiots, and even of painting of a high degree.

Pliny would induce us to believe that painting was established throughout Italy as early as the time of Tarquinius Priscus (H. N. xxx. 6). He mentions some most ancient paintings at Caere; and a naked group of Helen and Atalanta, of beautiful forms, painted upon the wall of a temple at Lanuvium, and some paintings by the same artist in the temple of Juno at Ardea, accompanied with an inscription in ancient Latin characters, recording the name of the artist and the gratitude of the patron. (H. N. xxx. 6, 57.)

V. Painters.—The son of Cleone of Cleone is the first important personage we meet with in the history of painting in Greece. His exact period is very uncertain, but he was probably a contemporary of Solon, and lived at least a century before the time of Simonides of Thasos. (//. AT. xxxv. 6.) He is very uncertain, but he was probably a contemporary of Solon, and lived at least a century before the time of Simonides of Thasos. After the conquest of Ionia, Samos became the seat of the arts. (Herod. iii. 60.) The Heraeum at Samos, in which the picture of Mandrocles was placed, was a general depository for works of art, and in the time of Strabo appears to have been particularly rich in paintings, for he terms it a "picture-gallery" (πινακοθήκη, xiv. p. 627). Consecrated or votive pictures on panels or tablets (πίνακες ἀνακεφαλέων, or γραφαὶ ἀνακεφαλέων) constituted a considerable portion of the ἀναθήματα or votive offerings in the temples of Greece, most of which in a later period had a distinct building or gallery (σχημα) attached to them disposed for the reception of pictures and works of this class. (Paus. i. 22 § 4, x. 25; § 1, 2; Ath. xiii. p. 606, b; Strab. ix. p. 486.)

After the decline of the Ionian art, painting flourished amongst the Greeks in Italy and Sicily, and especially in Cretona, Sybaris, and Tarentum. Aristotle (de Miraβ. Anim. c. 99) speaks of a magnificent cloth or pallium (μακροθυμίον) of Alec-thenes of Sybaris, which measured 15 cubits, was of the richest purple, and in it were worked the representations of cities, of gods, and of men. It came afterwards into the possession of the tyrant Dionysius the elder, who sold it to the Carthaginians for 120 talents. This is sufficient evidence of the existence of painting among the Italiots, and even of painting of a high degree.

Pliny would induce us to believe that painting was established throughout Italy as early as the time of Tarquinius Priscus (H. N. xxx. 6). He mentions some most ancient paintings at Caere; and a naked group of Helen and Atalanta, of beautiful forms, painted upon the wall of a temple at Lanuvium, and some paintings by the same artist in the temple of Juno at Ardea, accompanied with an inscription in ancient Latin characters, recording the name of the artist and the gratitude of the patron. (H. N. xxx. 6, 57.)
nias: eorum qui tabulas pixerent " (H. N. xxxv. 57); that is, those who painted history or fable upon panels, in what is termed the historic or great style, the megalographia of Vitruvius (vii. 4, 5), and the χρυσογραφία of Plutarch. (Arat. 15.) These panels, when finished, were fixed into frames of various descriptions and materials (Plin. H. N. xxxv. 45), and encased in walls. (Plin. H. N. xxxv. 10; Cic. in Verr. ir. 55; Dig 19. tit. 1. s. 17. § 3; Müller, Arch. § 319. 5; see Raoul-Rochette, Sur l’Emploi de la Peinture, &c., and Letronne, Lettres d’un Antiquaire, &c., works devoted to the discussion of this subject.) The ornamental panel-painting in the houses of Pompeii is evidently an imitation of this more ancient and more costly system of decorating walls. The wood of which these panels or tablets were generally made was Larch (Abies Larix, Larix Fontana, Λάρξις, Theophr. H. Pl. iii. 9, 7; Plin. H. N. xvi. 73), and they were grounded or prepared for painting with chalk or white plaster; this prepared ground was termed λεύκωμα, which term was applied to the tablet itself when thus prepared. (Suida, s. v.; έν πίνακι λευκωμονά, Athenag. l. c.)

The style or cestrum used in drawing, and for spreading the wax colours, pointed at one end and broad and flat at the other, was termed γραφίς by the Greeks and cestrum by the Romans; it was generally made of metal. There is a representation of an instrument of this description in one of the paintings of Herculaneum. (Antichita d’Ercolano, vol. iii. pl. 45.) The hair pencil (peneicillas, peneicilum) was termed χρυσαφίς, and apparently also βαθίον (χράξιν δι τοῦ βαθίου, Timmeus, Lex. Plat. s. v. Χρυσαφίν, see Letronne, Encyclop. Journ. des Sav. Sept. 1835, on the meaning of βαθίον.)

The ancients used also a palette very similar to that used by the moderns, although it appears that there is no absolute mention of the palette in any ancient author. The fact, however, is sufficiently attested by the figure of Painting discovered in the so-called Pantheon at Pompeii, which holds the palette and brushes in her left hand. (Zahn, Die schönsten ornamentale und merkwürdigsten gem’dlde von den besten Meistern in der Welt, Berlin 1828.) In the same work (plate 98) a female who is painting is represented holding something in her left hand which appears to be a palette, but it is not well defined even in the original. (Museum of Naples, No. 383. “La femme Peintre,” Pompei. In the Antichità d’Ercolano, it is given as a female copying a Herme[us, vol. vii. 1.) In the grotesque drawing of a portrait-painter at work, copied by Mauzan (Les Ruines de Pompei, part ii. p 68) from a picture in the Casa Carolina at Pompeii, a small table serves as a palette and stands close to his right hand; it appears to have suffered fourteen different tints upon it. It is most probable that the “tabella” of Pliny and the πινάκων of Pollux (or even the πυθίων, x. 59) signified also palette as well as tablet.

The ancient authors have left us less information concerning the media or vehicles (φίδωμα) used by the painters of antiquity, or any other matter connected with ancient painting. Gum and glue, commix, gummi, glutinum, glutinum taurinum, were evidently in common use. (Plin. H. N. xxxv. 25; Vitruv. vii. 10.) Pliny (H. N. xiii. 20) speaks of sarcocolla (Penaeus Sarcocolla, Linneus) as a gum most useful to painters. The Greeks received it from Persia. (Dioce. iii. 99.) Its substance has been analyzed by M. Pelletier. (See Merat, Diet. Méd. Scien.)

Mastic, a resin of the Pistacia Lenticularis, now much used by painters, is also mentioned by Greek and Roman writers (Plin. H. N. xii. 38; xxv. 20; Dioce. l. 96; Theophr. H. Pl. vi. 4); the best was produced in the island of Chios. It was termed βυρίνι and μαρτυς, also ἀκαθαιρήτης, resina lenticiscia, mastic. There were various kinds; Pliny mentions a kind from Pontus which resembled bitumen. This resin was not improbably mixed with the Punic wax prepared for painting in encaustic, for the Abate Requeno, who made many experiments in encaustic (Stulig sul ristabilimento dell’ antica arte dei Greci e Romani pittori, Parma 1787), asserts that it amalgamates well with wax; the same writer is also of opinion that the ancient encaustic painters used also amber (saccinum) and frankincense or oleum (Thus musculanum) in the preparation of their colours. Pliny (H. N. xxxiv. 26), speaking of verdigris, remarks that it was sometimes mixed with frankincense. He also mentions (xiv. 25) other resins and substances which are useful to painters, and (xxiv. 22) particularly turpentine (Terebithia), of which, as now, there were formerly various kinds. (See Geoffroy, Mater. Méd.; and Excurs. vi. ad Plin. H. N. xxiv. 22, ed. Lenorme.)

The method of preparing wax, or Punic wax (cera Punica), as it was termed, is preserved in Pliny (H. N. xxi. 49) and Dioscorides (i. 105). It was the ordinary yellow wax, purified and bleached, by being boiled three distinct times in sea-water, with a small quantity of nitre, applying fresh water each time. When taken out of the water the third time, it was covered with a thin cloth and placed in the sun to dry. Wax thus purified was mixed with all species of colours and prepared for painting; but it was applied also to many other uses, as polishing statues, walls, &c.

Pliny speaks of two kinds of bitumen or asphaltum (δασμαλτος), the ordinary, and a white Babylonian bitumen (H. N. xxxv. 51). It was used as a varnish for bronze statues. For an account of the colours used by the ancient painters, see the article COLORES, and John, Malerei der Alten, &c.

VII. Methods of Painting. There were two distinct classes of painting practised by the ancients; in water colours, and in wax; both of which were practised in various ways. Of the former the principal were fresco, al fresco; and the various kinds of distemper (a tempera), with glue, with the white of egg, or with gums (a guazzo) and with wax or resins when these were rendered by any means vehicles that could be worked with water. * Of the latter the principal was through fire (δια πυρος) termed encaustic (εγκαυστικα), encaustica). The painting in wax, κηρογραφία, or ship painting, inoreaumenta nautum (Liv. xxviii. 43), was distinct from encaustic. Compare Athenæus,

* Wax becomes a water colour medium, when boiled with sarcoolla or mastic, according to the Abate Requeno, who mixed five ounces of mastic with two of wax, which, when boiled he cooled in a basin of cold water; turpentine becomes such when well mixed with the white of egg and water. The yolk of egg, when mixed with vinegar, also makes a good working vehicle for this species of painting, but it does not require water.
PICTURA.

v. p. 204, b.; ἑκάσταυρος καταστεπτοικότο, which is distinct from ἐκονές...ἐν ἐγκαταγμένοι γραφόμεναι διὰ πόρου, Plin. Mor. Anim. 16.)

Fresco was probably little employed by the ancients for works of imaginative art, but it appears to have been the ordinary method of simply colouring walls, especially amongst the Romans. The walls were divided into compartments or panels, which were termed abaci, ἄβακαι; the composition of the stucco and the method of preparing the walls for painting is described by Vitruvius (vi. 3). They first covered the wall with a layer of ordinary plaster, over which, when dry, were successively added three other layers of a finer quality, mixed with sand; above these were placed still three layers of a composition of chalk and marble dust, the upper one being laid on before the under one was quite dry, and each succeeding coat being of a finer quality than the preceding. By this process the different layers were so bound together, that the whole mass formed one solid and beautiful slab, resembling marble, and was capable of being detached from the wall and transported in a wooden frame to any distance. (Vitr. ii. 8; Plin. H. N. xxxv. 49.) Vitruvius remarks that the composition of the ancient Greek walls was so excellent, that persons were in the habit of cutting away slabs from them and converting them into tables, which had a great vogue amongst the Romans. Fresco was probably the most ancient species of painting; but the impasto is of very inferior quality in comparison with other methods. The grounds of pictures, are in fresco. All the frescoes in Pompeii are in common distemper; but those of the better houses, not only in Pompeii but in Rome and elsewhere, especially those which constitute the principal ingredient of the colouring; and the wet brush or pencil was rubbed upon them when colour was required, or they were moistened and the artist previous to commencing work. From the term ἀκαστήρ, it would appear that wax constituted the principal ingredient of the colouring vehicle used, but this does not necessarily follow, and it is very improbable that it did; there must have been a great portion of gum or resin in the colours, or they could not have hardened. Wax was undoubtedly a most essential ingredient, since it apparently prevents the colours from cracking: ceres therefore might originally simply mean colours which contained wax, in contradistinction to those which did not, but was afterwards applied generally by the Romans to the colours of painters, as was just necessary to melt the wax: it was then rubbed with a candle (wax?) and a clean linen cloth, in the way that naked marble statues were done. (Compare Plin. H. N. xxxiv. 40.) The Ptolemaic Requesens says that the candles were used as a species of delicate cauterium, simply to keep the wax soft, that it might receive a polish from the friction of the linen; but it is a subject that presents considerable difficulty.

This kind of varnish was applied apparently to plain walls only, for Sir Humphry Davy discovered no remains whatever in the Baths of Titus, of an encaustic varnish upon paintings, although the plain walls had generally traces of a red varnish of this description. Neither Pliny nor Vitruvius mention anything about colour, but this is evidently a most simple addition, and does not interfere at all either with the principle or the application of the varnish. Paintings may have possibly been executed upon the walls after they were thus varnished.

A method apparently very generally practised by the Roman and later Greek painters was Encaustic, which, according to Plutarch (i. c.), was the most durable of all methods; it was in very little use by the earlier painters, and was not generally adopted until after the time of Alexander. Pliny (H. N. xxxv. 99) defines the term thus: "ceris pingere ac picturam inurere," to paint with wax or wax colours, and to burn in the picture afterwards with the cauterium; it appears therefore to have been the simple addition of the process of burning in to the ordinary method of painting with wax colours. * Cerae (waxes) was the ordinary term for painters' colours amongst the Romans, but more especially encaustic colours and they kept them in partitioned boxes, as painters do at present. (* Pictures beculatas magnas habent arculas, ubi discolores sint cerae, Varro, de Re Rust. iii. 17.) They were most probably kept dry in these boxes, and the wet brush or pencil was rubbed upon them when colour was required, or they were moistened by the artist previous to commencing work. From the term ceras, it would appear that wax constituted the principal ingredient of the colouring vehicle used, but this does not necessarily follow, and it is very improbable that it did; there must have been a great portion of gum or resin in the colours, or they could not have hardened. Wax was undoubtedly a most essential ingredient, since it apparently prevents the colours from cracking: ceres therefore might originally simply mean colours which contained wax, in contradistinction to those which did not, but was afterwards applied generally by the Romans to the colours of painters, as

* There were various kinds of encaustic, with the pencil and with the cestrum; but the difference between them and the common process in which the cauterium or heater was not applied cannot have been very great, for Pausias, whose style was in encaustic with the cestrum, nevertheless undertook to repair the paintings of Polygnotus at Thespiae, which were painted in the ordinary manner in water colours with the pencil. Pliny (H. N. xxxv.) in enumerating the most celebrated painters of antiquity speaks separately of those who excelled in either class; chap. 36 is devoted to those who painted in the ordinary method with the pencil, and chap. 40 principally to those who painted in encaustic.
modes of ship painting add others to the number. The sponge (σπόγγια, σπογγία), spoken of by Pliny and other writers in connection with painting, alludes to some proof that painting in water colours was the method generally practised by the ancient painters; which is also corroborated by the small vessel placed close to the palette or table of the portrait-painter of the Casa Carolina of Pompeii, evidently for the purpose of washing his single brush in. Seneca (Ep. 121. 5) notices the facility and rapidity with which a painter takes and lays on his colours. That wax or resins may be used as vehicles in water-colours has been already mentioned.

The origin of encaustic painting is unknown. It was practised by the ancients with the cestrum, namely, in wax and on ivory; and in a third manner with the pencil. The last method, according to Pliny, was applied chiefly to ship-painting; the colours were laid on hot. His words are,—”Encausto pingendi duo fuisse antiquitas genera: cera, et in ebole, cestro id est viriculo, donec classes pingi coepise. Hoc tertiun accessit, resolutis igni ceris penicillo utendi, quae pictura in navibus nee sole nee sale venticasse corruptur.” (H. N. xxxv. 41.) This passage, from its conciseness, presents many difficulties. “Cera, cestro,” that is, in wax with the oestrum, was, as is distinctly said, without wax, “cera, et in ebole.” The third method, “resolutis igni ceris penicillo utendi,” though first employed on ships, was not necessarily confined to ship-painting; and if the assertion of Pliny is correct, it must have been a very different style of painting from the ship-colouring of Homer, since he says it was of a later date than the preceding methods. The “inceramenta navium” of Livy, and the cesteria Thucydides (iv. 19), seem to have been a species of drawing with a hot point, upon ivory, for it was, as is distinctly said, without wax, “cera, et in ebole.” The second method, “resolutis igni ceris penicillo utendi,” which is stated to have been employed on ships, was not necessarily confined to ship-painting; and if the assertion of Pliny is correct, it must have been a very different style of painting from the ship-colouring of Homer, since he says it was of a later date than the preceding methods. The “inceramenta navium” of Livy, and the cesteria Thucydides (iv. 19), seem to have been a species of drawing with a hot point, upon ivory, for it was, as is distinctly said, without wax, “cera, et in ebole.” The third method, “resolutis igni ceris penicillo utendi,” which was first employed on ships, was not necessarily confined to ship-painting; and if the assertion of Pliny is correct, it must have been a very different style of painting from the ship-colouring of Homer, since he says it was of a later date than the preceding methods. The “inceramenta navium” of Livy, and the cesteria Thucydides (iv. 19), seem to have been a species of drawing with a hot point, upon ivory, for it was, as is distinctly said, without wax, “cera, et in ebole.”

The practice of varnishing and polishing marble statues has been already incidentally noticed. The custom was very general; ancient statues were also often painted, and what is now termed polychrome sculpture was very common in Greece, for the acrolithic and the chrysobyx were made with a view to ornament, and was not practice. Many works of the latter class, which were of extraordinary magnificence and costliness, are described by Pausanias. The term polychromy, thus applied, was apparently unknown to the ancients; this species of painting is called by Plutarch (De Gla. Athén. 6) ἀγαλμάτων ἐγκαυσις, and appears to have been executed by a distinct class of artists (ἀγαλμάτων ἐγκαυσις). They are mentioned also by Plato (De Republic. iv. 420. c). ὁ ἄθροιστας γράφονται: et if it is certain that Plato here alludes to painting statues, it is clear that they were occasionally entirely painted, in exact imitation of nature; for he expressly remarks, that it is not by applying a rich or beautiful colour to any particular part, but by giving its local colour to each part, that the whole is made beautiful (Ἀλλ’ ἄθροις ἐτ’ ἀκρόσις καὶ ἐκάστος ἄθροιστος τὰ δίδον καὶ πονομένος). That this was, however, not a general practice, is evident from the dialogue between Lucius and Polystratos, in Lucian (Imag. 5—6), where it is clearly, though indirectly, stated, that the Venus of Camillus Praxiteles, and other celebrated statues, were not coloured, although they may have been ornamented in parts and covered with an encaustic varnish.

The practice of colouring statues is undoubtedly as ancient as the art of statuary itself; although we were perhaps originally coloured more from a love of colour than from any design of improving the resemblance of the representation. The Jupiter of the Capitol, placed by Tarquinius Priscus, was coloured with minium. (Plin. H. N. xxxv. 45.) In later times the custom seems to have been reduced to a system, and was practised with more reserve. Considerable attention also seems to have been paid to the effect of the object as a work of art. Praxiteles being asked which of his marble works he most admired, answered, those which Nicias had had a hand in, “quibus Nicias manum adduxisset,” so much, says Pliny (H. N. xxxv. 40), did he attribute to his colilmultio. Nicias, therefore, who painted in encaustic, seems in his youth.
to have been a ἀγαλμάτων ἐγκαταστάσεις, or painter of statues, and from the approval of Praxiteles, excluded apparently in this description of painting or colouring.

This view differs very materially from those which have been hitherto advanced upon this subject, but it has not been adopted without mature consideration.

In the "circumlitio" of Nicias, the naked form was most probably merely varnished, the colouring being applied only to the eyes, eyebrows, lips, and hair, to the draperies, and the various ornaments of dress; and there can be little doubt that fine statues, especially of females, whose carefully and tastefully coloured in this way, must have been extremely beautiful; the encaustic varnish upon the white marble must have had very much the effect of a pale transparent flesh. Gold was also abundantly employed upon this description of painting ancient monuments of Italy and Sicily; but with the progress of the times, and in some degree upon the modern traveller; for traces of colour have been found upon most of the architectural ruins of Greece, and upon the ancient statues; the hair of the Venus de Medicis was gilded, and in some, glass eyes and eyelashes of copper were inserted, examples of which are still extant.

The practice also of colouring architecture seems to have been universal amongst the Greeks, and very general amongst the Romans. It is difficult to define exactly that the system was, for there is scarcely any notice of it in ancient writers; a few casual remarks in Vitruvius and Pausanias are all we possess of any value. Our information is drawn chiefly from the observations of modern travellers; for traces of colour have been found upon most of the architectural ruins of Greece, and upon the ancient statues; but with the exception of the Doric ruins at Corinth and the temple of Aegina, which are not of marble, the colouring was confined to the mouldings and other ornaments, the friezes, the metopes, and the tympana of the pediments. The exterior of the walls of the Aegina temple, and the columns of the Corinthian ruins, were covered with stucco and coloured red. It does not appear that the exterior walls when of marble were ever coloured, for no traces of colour have been found upon them. At an early age, before the use of marble, when the temples and public edifices were constructed mostly of wood, the use of colour must have been much more considerable and less systematic; but during the most refined ages, the colouring, otherwise quite arbitrary, appears to have been strictly confined to the ornamental parts. From the traces found upon ancient monuments we are enabled to form a very tolerable idea of the ancient system of decorating mouldings. They were painted in various ways and in a great variety of colours, and a tasteful combination of colours must have added greatly to the effect of even the richest mouldings. The ordinary decorations were foliage, ova, and beads; but upon the larger mouldings on which foliage was painted, the outlines of the leaves were first engraved in the stone. Gilding and metal work were also introduced, particularly in the Doric order; the architrave of the Parthenon at Athens was decorated with gilded shields. Friezes that were adorned with sculpture appear to have been invariably coloured, as also the tympana of the pediments; in the Parthenon these parts were of a pale blue, in some of the Sicilian monuments red has been found. Some interior polychrome cornices of Pompeii are given in the work of Zahn (Die schönsten Ornamente, &c., pl. 91). In later times, amongst the Romans, the practice of colouring buildings seems to have degenerated into a mere taste for gaudy colours. Pliny and Vitruvius both repeatedly deplore the corrupt taste of their own times. Vitruvius (vii. 5) observes that the decorations of the ancients were tastefully laid aside, and that strong and gaudy colouring and prodigal expense were substituted for the beautiful effects produced by the skill of the ancient artists. Pompeii, with much that is chaste and beautiful, has many traces also of what Vitruvius and Pliny complain of. Plate 99 of Zahn affords a beautiful specimen of the ancient wall-painting of Pompeii, in courts and interiors. For a further account of this subject, see Kugler, "Uber die Polykromie der Griechischen Architektur und Sculptur und ihre Grenzen," Berlin, 1835.

IX. Vase Painting. The fictile-vase painting of the Greeks was an art of itself, and was practised by a distinct class of artists (Aristoph. Eccl. 995, 996, Bekker), who must have required a peculiar instruction, and probably exercised their art according to a prescribed system. It is, however, impossible to say anything positive regarding the history of this branch of ancient painting, as scarcely anything is known. The designs upon these vases (which the Greeks termed Ἀκρωτήρια) have been variously interpreted, but they have been generally considered to be in some way connected with the initiation into the Eleusinian and other mysteries. (Lanzi, De Vasi Antichi dipinti; Christie, Disquisitions upon the painted Greek Vases; Bottiger, Ideen, &c.) They were given as prizes to the victors at the Panathenaea and other games, and seem to have been always buried with their owners at their death, for they have been discovered only in tombs.

Vase painting cannot be adduced to determine the general nature or character of ancient painting as a liberal or imitative art; though the rude designs upon the vases throw considerable light upon the progressive development of the art, as relates to style of design, and in some degree upon the principles of Grecian composition of the early times; but their chief interest and value consist in the faithful pictures they afford of the traditions, customs, and habits of the ancients.

The ancient vase-painters were probably attached to the potteries, or the establishments in which the vases were made; or themselves constituted distinct bodies, which fixed the general principles of design upon the vases, is not improbable. They do not seem to have been held in any esteem, for their names have not been preserved by any ancient writer; and we only know the names of very few, from their being inscribed upon the vases themselves, as Taleides, Assteas, Lasimos, Calliphon, and a few others. (Millin, Peintures de Vases Antiques, vol. i. pl. 3. 44. vol. ii. pl. 37. pl. 61; Millingen, Anc. Uned. Mon. pl. 27.)

The words καλὸς and καλὴ, found frequently upon the ancient vases, are explained to be simple acclamations of praise or approval, supposed to be addressed to the person to whom the vase was presented; the words are frequently preceded or followed by a name, evidently that of the person for whom the vase was designed. The inscription also ἡ παίς καλὴ has been found on some vases, which have probably been designed as presents for young females. D'Hancarville (Collection of Vases, &c. Intro.) supposes that vase painting had en-
tirdy ceased about the time of the destruction of
Corinth, and that the art of manufacturing vases
began to decline towards the reign of Trajan, and
arrived at its last period about the time of the An-
tonines and Septimius Severus. Vase painting had
evidently ceased during the time of Pliny, for in
his time the painted vases were of immense val-
ue and were much sought after; but the manu-
facture of the vases themselves appears to have been
still extensive, for he himself mentions sixteen
celebrated potteries of his own time, eight in Italy
and six elsewhere. The vases, however, appear to
have been merely remarkable for the fineness or
durability of the clay and the elegance of their
shapes. (H. N. xxxv. 46.) For the composition of
the clay, with which these fictilia were made,
see FICTILE.

Even in the time of the empire painted vases
were termed "opera antiqui," and were then
sought for in the ancient tombs of Campania and
other parts of Magna Graecia. Suctonius (Jul.
Caes. 81) mentions the discovery of some vases of
this description in the time of Julius Caesar, in
clearing away some very ancient tombs at Capua.
It is also remarkable that not a single painted
vase has been yet discovered in either Pompeii,
Herculaneum, or Stabiae, which is of itself almost
sufficient to prove that vase painting was not
practised, and also that painted vases were ex-
tremely scarce. We may form some idea of their
immense value from the statement of Pliny (H. N.
xxxv. 46), that they were more valuable than the
Murghine vases. [MURRHINA VASA.] The paint-
ings on the vases, considered as works of art, vary
exceedingly in the detail of the execution, although
in style of design they may be arranged in two
principal classes, the black and the yellow; for
those which do not come strictly under either of
these heads, are either too few or vary too slightly
to require a distinct classification. The majority
of the vases that have been as yet discovered have
been found, in ancient tombs, about Capua and
Nola.

The black vases, or those with the black figures
upon the stained reddish-yellow terra cotta, the
best of which were found at Nola, are the most
ancient, and their illustrations consist principally
of representations from the early mythological tra-
ditions; but the style of these vases was some-
times imitated by later artists. (Plate 56, vol. iv.
of D'Hancarville is an example.) The inferior ex-
amples of this class have some of them traces of the
graphis or cestrum upon them, which appear to
to be traced sort of the graphis upon them, which appear to
have been drawn upon the soft clay; the only
colour upon these, independent of that of the clay,
is the dark back-ground, generally black, which
renders the figures very prominent. The designs
upon the better vases are also merely monograms,
with the usual dark back-grounds, but there is a
very great difference between the execution of
these and that of those just alluded to; there are
no traces whatever of the graphis upon them, their
outlines are drawn with the hair pencil, in colour,
similar to that of the back-ground, which is a
species of black varnish, probably asphaltum; or
perhaps rather prepared with the gagates lapis
(jet) (?) (γαγατές λίπις) of Pliny, for he remarks that it
is indelible when used on this kind of earthenware.
(H. N. xxxv. 44.)

The best of these vases, which probably belong
to about the time of Alexander, are conspicuous
for a very correct style of design, although they
are invariably carelessly executed, especially in the
extremities, but exhibit at the same time a surpris-
ing facility of hand. The celebrated vase of Sir
W. Hamilton's collection, now in the British Mu-
seum, the paintings of which represent Hercules
and his companions in the gardens of the Hes-
perides, and the race of Atalanta and Hippomenes,
exhibits, for design, composition, and execution,
perhaps the finest specimen of ancient vase paint-
ing that has been yet discovered: the style of de-
sign is perfect, but the execution, though on the
whole laborious, is in many parts very careless.
(D'Hancarville, plates 127, 128, 129, 130.)

There appears to be no example of the more
perfect monochrom (see No. III.) upon ancient
vases, and examples of the polychrom are very
rare. In Sir W. Hamilton's collection there are a
few examples in which various colours have been
added after the ordinary monogram has been com-
pleted, for they are not incorporated with the vase,
as the black and ground tints are, but are subject
to scale and are easily rubbed off. They consist of
white, red, yellow, and blue colours. These vases
are apparently of a later date than the above; for
the style of design is very inferior.

The Museums of Naples, Paris, London, and
other cities afford abundant examples of these an-
cient vases; the Museo Borbonico at Naples
contains alone upwards of 2500 specimens. The
subjects of the illustrations are almost always con-
ected with ancient mythology, and the execution
is generally inferior to the composition.

No opinion of the style of the designs upon
ancient vases can be formed from the generality of
the great works imprinted to illustrate them; they
have been published of late years. Very few are
at all accurate in the lines and proportions, es-
specially of the extremities; and in some, even the
composition is not faithfully imitated. This is
particularly the case with the splendid works pub-
duted by Dubois-Maisonneuve, Laborde, and some
PICTURA.

others, in which the illustrations are drawn with a care, precision, and uniformity of character quite foreign to the paintings on the vases. They all appear to be drawn rather according to common and perfect standards of the different styles, than to be the faithful imitations of distinct original designs. Plates 25 and 26 of the first volume of Maisonnoue, purporting to be faithful imitations of the design upon the celebrated Nola vase, (in the Museum at Naples, No. 1846,) representing a scene from the destruction of Troy, bear but little resemblance to the original. This remark is applicable also to the work of D'Hancarville and other earlier productions, but in a less degree. Perhaps the work which illustrates most faithfully the style of the designs upon ancient vases, as far as it goes, is that in course of publication by Gerhard (Amorilecno Greichische Vasmubilder, Berlin 1839). The specimen also of ancient paintings, published by Raoul-Rochette (Peintures Antiques), have every appearance of being faithful imitations of the originals.

X. Remains of Ancient Painting. There is a general prejudice against the opinion that the painting of the Greeks equalled their sculpture; and the earlier discoveries of the remains of ancient paintings at Pompeii and Herculaneum tended rather to increase this prejudice than to correct it. The style of the paintings discovered in these cities was condemned both by Pliny and Vitruvius, and yet almost every species of merit may be discovered in them. What therefore must have been the productions which the ancients themselves esteemed their immortal works, and which singly were estimated equal to the wealth of cities? (Plin. H.N. xxxv. 32.)

These remains of Pompeii and Herculaneum induced Sir Joshua Reynolds to form a decided opinion upon ancient painting. He remarks (Notes to Fossor. 37). "From the various ancient paintings which have come down to us we may form a judgment with tolerable accuracy of the excellencies and the defects of the arts amongst the ancients. There can be no doubt but that the same correctness of design was required from the painter as from the sculptor; and if what has happened in the case of sculpture, had likewise happened in regard to their paintings, and we had the good fortune to possess what the ancients themselves esteemed their masterpieces, I have no doubt but we should find their figures as correctly drawn as the Laocoon, and probably coloured like Titian." This opinion has been confirmed by later discoveries at Pompeii; especially by the great mosaic of the Casa del Fauno discovered in 1831, supposed to represent the battle of Issus. (Mosaic, No. XV.) But the beauty of ancient sculpture alone is itself a powerful advocate in favour of this opinion; for when art has once attained such a degree of excellence as the Greek sculpture evinces, it is evident that nothing mediocre or even inferior could be tolerated. The principles, which guide the practice of both arts, are in design and proportion the same; and the style of design in painting cannot have a more interesting influence on sculpture. Several of the most celebrated ancient artists were both sculptors and painters; Phidias and Euphranor were both; Zeuxis and Protogenes were both modellers; Polygnotus devoted some attention to statuary; and Lysippus consulted Eupompus upon style in sculpture. The design of Phedias and Euphranor in painting cannot have been inferior in style to that of their sculpture; nor can Eupompus have been an inferior critic in his own art than in that of Lysippus. We have besides the testimony of nearly all the Greek and Roman writers of every period, to speak more frequently and in higher terms of painting than of sculpture. "Si quid generis istius modi delectat, pictura delectat," says Cicero (ad Fam. vii. 23).

The occasional errors in perspective, detected in some of the architectural decorations in Pompeii, have been assumed as evidence that the Greek painters generally were deficient in perspective. This conclusion by no means follows, and is entirely confuted by the mosaic of the battle of Issus, in which the perspective is admirable; in many other works also of minor importance the perspective has been carefully attended to. We know, moreover, that the Greeks were acquainted with perspective at a very early period; for Vitruvius (vii. praef.) says, that when Aeschylus was exhibiting tragedies at Athens, Agatharchus made a scene, and left a treatise upon it. By the assistance of this, Democritus and Anaxagoras wrote upon the same subject. (See Dict. of Bioz. art. Agatharchus.) This class of painting was termed scenography (σκηνογραφία) by the Greeks, and appears to have been sometimes practised by architects. Cleisthenes of Eretria is mentioned as architect and scenographer (σκηνογράφος). (Diog. li. 125.) Scenopis, Eudorus, and others, were esteemed as scene-painters. (Plin. H.N. xxxv. 37. 40.) Scene-painting was not perhaps generally practised until after the time of Aeschylus, for Aristotle (Poet. 4) attributes its introduction to Sophocles.

The most valuable and the most considerable of the ancient paintings, that have been yet discovered, are:—The so-called Aldobrandini Marriage, Nozze Aldobrandine, originally the property of the Aldobrandini family, which was found on the Esquiline Mount during the pontificate of Clement VIII., Ippolito Aldobrandini, and was placed by Pius VII. in the Vatican; this painting, which is on stucco and contains ten rather small figures in three groups, is a work of considerable merit in composition, drawing, and colour, and is executed with great freedom (Böttiger and Meyer, Die Aldobrandinische Hochzeit, Dresden 1810); and the following paintings of the Musco Borbonico at Naples, which are conspicuous for freedom of execution and general technical excellence: the two Nereids found in Stabiae, Nos. 361 and 362, Cat.; Telephus nourished by the roe, &c., from Herculanum, No. 495; Chiron and Achilles, also from Herculanum, No. 730; Briseis delivered to the heralds of Agamemnon, from Pompeii (Sir W. Gell, Pompeiana, pl. 39 and 40), No. 684; and the nine Funambuli or Rope-dancers, which are executed with remarkable skill and facility. (Mus. Borb., Ant. d’Ercol., and Zalm contain engravings from these works; for facsimiles of ancient paintings, see Recueil de Peintures antiques, imitees d’apres les desseins coloris faits par P. S. Bartoli, &c. Paris 1757, folio.)

XI. Period of Development.—Essential Style. With Polygnotus of Thasos (b. c. 462) painting was fully developed in all the essential principles of imitation, and was established as an independent art in practice. The works of Polygnotus were
conspicuous for expression, character, and design; the more minute discriminations of tone and local colour, united with dramatic composition and effect, were not accomplished until a later period. The minute space of this article necessarily precludes anything like a general notice of all the various productions of Greek painters incidentally mentioned in ancient writers. With the exception, therefore, of occasionally mentioning works of extraordinary celebrity, the notices of the various Greek painters of whom we have any satisfactory knowledge will be restricted to those who, by the quality or peculiarity of their works, have contributed towards the establishment of any of the various styles of painting practised by the ancients. A fuller account of each artist will be found under the respective names in the Dictionary of the arts and Roman Biography.

Polygnotus is frequently mentioned by ancient writers, but the passages of most importance relating to his style are in the Poetics of Aristotle (c. 2 and 6) and the Imagines of Lucian (c. 7). The notice in Pliny (H. N. xxxv. 35) is very cursory; he mentions him among many before Olymp, from which time he dates the commencement of his art, and simply states that he added much to the art of painting, such as opening the mouth, showing the teeth, improving the folds of draperies, painting transparent vests for women, or giving them various coloured head-dresses. Aristotle speaks of the general character of the design and expression of Polygnotus, Lucian of the colour; in which respects both writers award him the highest praise. Aristotle (c. 2), speaking of imitation, remarks that it must be either superior, inferior, or equal to its model, which he illustrates by the cases of three painters: "Polygnotus," he says, "paints men better than they are, Pauson worse, and Dionysus as they are." This passage alludes evidently to the general quality of the design of Polygnotus, which appears to have been of an exalted and ideal character. In another passage (c. 6) he speaks of him as an ἀγάθος ἱθυγράφος, or an excellent delineator of moral character and expression, and assigns him in this respect a complete superiority over Zeuxis. From the passage in Lucan, we may infer that Polygnotus, Ephesius, and Scopas were the greatest colourists among the ancients according to the general opinion of the ancient writers. He notices also in the same passage the truth, the elegance, and the flowing lightness of the draperies of Polygnotus.

Pausanias mentions several of the works of Polygnotus, but the most important were his two great paintings, or series of paintings, in the Leache of the temple of Apollo at Delphi, to a description of which Pausanias devotes seven chapters. (x. 25—31, Dict. of Biog. s. v.)

The painting of the destruction of Troy (and the other was similar in style) seems to have contained three rows of figures, with the names of each written near them, in distinct groups, covering the whole wall, each telling its own story, but all contributing to relate the tale of the destruction of Troy. It is evident from this description that we cannot decide upon either the merits or the demerits of the composition, from the principles of art which guide the rules of composition of modern times. Neither perspective nor composition, as a whole, are to be expected in such works as these, for they did not constitute single compositions, nor was any unity of time or action aimed at; they were painted histories, and each group was no further connected with its contiguous groups, than that they all tended to illustrate different facts of the same story.

Polygnotus has been termed the Michel Angelo of antiquity. His style was strictly ethic, for his whole art seems to have been employed in illustrating the human character; and that he did it well, the surname of Ethographer (Ἑθογράφος) given to him by Aristotle and others sufficiently testifies. His principles of imitation may be defined to be those of individual representation independently of any accidental combination of accessory; neither the picturesque, nor a general and indiscriminate picture of nature, formed any part of the art of Polygnotus or of the period. Whatever, therefore, was not absolutely necessary to illustrate the principal object, was indicated merely by symbol: two or three warriors represented an army; a single hut, an encampment; a ship, a fleet; and a single house, a city: and, generally, the laws of baso-rilievo appear to have been the laws of painting, and things were still to a great extent subservient to architecture.

The principal contemporaries of Polygnotus were Dionysius of Colophon, Pleistaenetus and Panaenus, of Athens, brothers (or the latter, perhaps, a nephew) of Pheidias, and Micon, also of Athens.

Dionysius was apparently an excellent portrait painter, the Holbein of antiquity; for besides the testimony of Aristotle, quoted above, Pintarch (Tirol. 36) remarks that the works of Dionysius wanted neither force nor spirit, but that they had the appearance of being too much laboured. Polygnotus also painted portraits. (Plut. Cimon, 4.)

Panaenus assisted Pheidias in decorating the statue and throne of the Olympian Jupiter. Micon was particularly distinguished for the skill with which he painted horses. (Dict. of Biog. s. v.)

Prize contests also were already established, in this early period, at Corinth and at Delphi. Pliny (H. N. xxxv. 35) mentions that Panaenus was defeated in one of these at the Pythian games, by Timagoras of Chalcis, who himself celebrated his own victory in verse.

The remarks of Quintilian (Inst. Orator, xii. 10) respecting the productions of this period are very curious and interesting, although they do not accord entirely with the testimonies from Greek writers quoted above. He says, that notwithstanding the simple colouring of Polygnotus, which was little more than a rude foundation of what was afterwards accomplished, there were those who even preferred his style to the styles of the greatest painters who succeeded him; not, as Quintilian thinks, without a certain degree of affection.
Seyon were the principal seats of the art at this period.

Apollodorus, says Plutarch, invented tone (φθοράν καὶ ἀπάρων σκίας), which is well defined by Fuseli (Lec. 1) as "the element of the ancient "Ἀρμογή, that imperceptible transition, which, without opacity, confusion, or hardness, united local colour, demitint, shade, and reflexes." This must, however, not be altogether denied to the earlier painters; for Plutarch himself (Timol. 36) attributes the same property to the works of Dionysius (ἰεχύν ἄχρωμα καὶ τόνον), though in a less degree.

The distinction is, that what in the works of Dionysius was really merely a gradation of light and shade, or gradual diminution of light, was in those of Apollodorus a gradation also of tints, the tint gradually changing according to the degree of light.

The former was termed τόνος, the latter ἀρμογή; but the English term tone, when applied to a coloured picture, comprehends both; it is equivalent to the "splendor" of Pliny. (II. N. xxxv. 11.)

Apollodorus first painted men and things as they really appeared; this is what Pliny (II. N. xxxv. 36) means by "His primus species exprimere insti-

tuit." The rich effect of the combination of light and shade with colour is also clearly expressed in the words which follow: "primumque gloriarn penicillo jure contulit;" also, "neque ante eum tabula ullius estendit, quae teneat oculos." We may almost imagine the works of a Rembrandt to have been spoken of; his pictures rivetted the eye.

Through this striking quality of his works, he was surnamed the shadower, ἀφροτας. (Heusyphus, s. v. Comp. further Diet. of Blog, s. v.)

Zeuxis combined a certain degree of ideal form with the rich effect of Apollodorus. Quintilian (L.c.) says that he followed Homer, and was pleased with powerful forms even in women.

Cicero (Brut. 18) also praises his design. Zeuxis painted many celebrated works, but the Helen of Croton, which was painted from five of the most beautiful virgins in the city, was the most renowned, and under which he inscribed three verses (156–158) in the third book of the Iliad. (Valer. Max. iii. 7. § 3; Cic. de Invent. ii. 5; Aelian, V. H. iv. 12, &c.)

Stobaeus (Serm. 61) relates an anecdote of the painter Neomachus and this Helen, where the painter is reported to have observed that the picture was so much admired, "Take my eyes and you will see a goddess." We learn from another anecdote, recorded by Plutarch (Perièr. 13), that Zeuxis painted very slowly.

Parrhasius is spoken of by ancient writers in terms of the very highest praise. He appears to have combined the magic tone of Apollodorus, and the exquisite design of Zeuxis, with the classic invention and expression of Polygnotus; and he so defined all the powers and ends of art, says Quintilian (L.c.), that he was called the "Legislator." He was himself not less aware of his ability, for he termed himself the prince of painters. (Ἐλλη-

νον πρῶτα φθοράν τέχνης, Athen. xii. p. 543, c.) He was, says Pliny (II. N. xxxv. 36), the most insolent and most arrogant of artists. (Compare Athen. xv. p. 687, b; and Aelian, V. H. ix. 11.)

Timanthes of Cythus or Seyon, was distinguished for invention and expression; the particular charm of his invention was, that he left much to be supplied by the spectator's own fancy; and although his productions were always admir-

able works of art, still the execution was surpassed by the invention. As an instance of the ingenuity of his invention, Pliny (II. N. xxxv. 36, § 6) mentions a sleeping Cyclops that he painted upon a small panel, yet conveyed an idea of his gigantic form by means of some small satyrs who were painted measuring his thumb with a thyrsus. He was celebrated also for a picture of the sacrifice of Iphigenia. (See the admirable remarks of Fuseli upon this picture, Lecture I.) Timanthes defeated Parrhasius in a professional competition, in which the subject was the contest of Ulysses and Ajax for the arms of Achilles. (Aelian, l. c.; Plin. l. c.)

Eupompos of Seyon was the founder of the celebrated Seyonian school of painting which was afterwards established by Pamphilus. Such was the influence of Eupompos's style, that he added a third, the Seyonic, to the only two distinct styles of painting then recognized, the Helladic or Grecian and the Asiatic, but subsequently to Eupompos distinguished as the Attic and the Ionic; which with his own style, the Seyionic, henceforth constituted the three characteristic styles of Grecian painting. (Plin. II. N. xxxv. 36. § 7.) We may judge from the advice which Eupompos gave Lyssipus that the predominant characteristic of this style was individuality; for upon being consulted by Lyssip-

hus whom of his predecessors he should imitate, he is reported to have said, pointing to the surrounding crowd, "Let nature be your model, not an artist." (Plin. II. N. xxxiv. 19. s. 6.) This celebrated maxim, which eventually had so much influence upon the arts of Greece, was the first professed deviation from the principles of the generic style of Polygnotus and Phidias.

XII. Period of Reformation. The art of this period, which has been termed the Alexandrian, because the most celebrated artists of this period lived about the time of Alexander the Great, was the last of progression or acquisition; but it only added variety of effect to the tones it could not improve, and was principally characterised by the diversity of the styles of so many contemporary artists. The decadence of the art immediately succeeded; the necessary consequence, when, instead of excellence, variety and originality became the end of the artist. "Floruit circa Philippum, et usque ad successores Alexandrī," says Quintilian (L.c.), "the most celebrated artists of this period were not inferior in art and skill to those of Eupompos and Pamphilus;" and he then enumerates some of the principal painters of this time, with the excellencies for which each was distinguished. Protegenes was distinguished for high finish; Pamphilus and Melanthius for composition; Antiphus for facility; Theon of Samos for his prolific fancy; and for grace Apelles was unrivalled; Euphranor was in all things excellent; Pausias and Nicias were remarkable for chiaroscuro of various kinds; Nicomachus was celebrated for a bold and rapid pencil; and his brother Aristides surpassed all in the depth of expression. There were also other painters of great celebrity during this period; Philoxenus or Everitia, Asclepiodorus of Athens, Athenion of Maronea, Echion, Cydias, Philochares, Themessus, Pyreicus, &c.

This general revolution in the theories and practice of painting appears to have been greatly owing to the principles taught by Eupompos at Seyon. Pamphilus of Amphipolis succeeded Eupompos in the school of Seyon, which from that time became the most celebrated school of art in Greece. Pam-
philus had the reputation of being the most scientific artist of his time; and such was his authority, says Pliny (H. N. xxxv. 36), that chiefly through his influence, first in Sicyon, then throughout all Greece, noble youths were taught the art of drawing before all others: the first exercise was probably to draw a simple line. (Γραμμὴ ἔλεγον, Pollux, vii. 128; see further, respecting the school of Pamphilus, Dict. of Biog. s. v.)

Nicomachus of Thebes was, according to Pliny (l. c.), the most rapid painter of his time; but he was as conspicuous for the force and power of his pencil as for its rapidity; Plutarch (Timol. 38) says, "Nicomachus was a native of Ephesus or of Cos; Pliny also informs us that the complexion was browner than Alexander's, thus making a finer contrast with the fire in his hand, which apparently constituted the light of the picture. Pliny (l. c.) tells us that Apelles glazed his pictures in a manner peculiar to himself, and in which no one could imitate him. When his works were finished he covered them with a dark transparent varnish (most probably containing asphaltum), which had a remarkable effect in harmonizing and toning the colours, and in giving brilliancy to the shadows. Sir J. Reynolds discovered in this account of Pliny "an artist-like description of the effect of glazing or scumbling, such as was practised by Titian and the rest of the Venetian painters." (Notes to Pers. 37.) There is a valuable though incidental remark in Cicero (de Nat. deor. i. 57), relating to the colouring of Apelles, where he says, that the tints of the Venus Anadyomene were not blood, but a resemblance of blood. The females, and the pictures generally, of Apelles, were most probably simple and unadorned; their absolute merits, and not their effect, constituting their chief attraction. See further Dict. of Biog. art.

Protagenes of Caunus, a contemporary of Apelles, was both statuary and painter; he was remarkable for the high finish of his works, for a detailed account of which, as well as of his life and its relations with Apelles, see Dict. of Art. Protagenes.

Euphranor, the Isthmian, was celebrated equally as painter and statuary; he was, says Pliny (H. N. xxxv. 40), in all things excellent, and at all times equal to himself. He was distinguished for a peculiarity of style of design; he was fond of a muscular limb, and adopted a more decided anatomical display generally, but he kept the body light, in proportion to the head and limbs. Pliny says that Euphranor first represented heroes with dignity. Parrhasius was said to have established the canon of art for heroes; but the heroes of Parrhasius were apparently more divine, those of Euphranor more human. We have examples of both these styles, in the kindred art of sculpture, in the Apollo and the Laocoön, and in the Meleager and the Gladiator, or the Antinous and the Discobolus. It was to this distinction of style which Euphranor apparently alluded, when he said that the Theseus of Parrhasius had been fed upon roses, but his own upon beef. (Plut. de Glor. Athen. 2; Plin. l. c.) Euphranor painted in encaustic, and executed many famous works; the most famous, however, was the picture of Democritus and Timoclea, and a picture of the twelve gods. (Plin. l. c.; Plut. l. c.; Paus. i. 3; Lucian, Imag. 7; Valer. Max. viii. 11 § 5; Eustath. ad H. i. 529, &c.)

Nicias of Athens was celebrated for the delicacy with which he painted females, and for the rich tone of chiaroscuro which distinguished his paintings. He also painted in encaustic. His most celebrated work was the νέκταρ, or the region of the shades, of Homer (νεκτομανια Homeri), which he declined to sell to Pusely I. of Egypt, who had offered 60 talents for it, and preferred presenting to his native city, Athens, as he was then sufficiently wealthy. Nicias also painted some of the marble statues of Praxiteles. (Plin. H. N. xxxv. 40; Plut. Mor. Epicur. 11; see No. VII.)

Athienion of Maronea, who painted also in encaustic, was, according to Pliny (l. c.), compared with, and even preferred by some to Nicias; he was more austere in colouring, but in his austerity more pleasing, and if he had not died young, says Pliny, he would have surpassed all men in painting. He appears to have looked upon colours as a
mere means, to have neglected pictorial effect, and, retaining individuality and much of the refinement of design of his contemporaries, to have endeavoured to combine them with the generic style of Poly- 

moton and Phedias (ut in ipsa pictura eruditio elucet). His picture of a groom with a horse is mentioned by Pliny as a remarkable painting.

Philocharis, the brother of the orator Aeschines, was also a painter of the greatest merit, according to Pliny (H. N. xxxv. 10), although he is contemptuously termed by Demosthenes (Pala. Legat. p. 415, Reiske) "a painter of perfume-pots and tambours" (διάπαθροσια καλ τιμωρω). Echion also, of uncertain country, is mentioned by Cicero (Brut. 18) and Pliny (H. N. xxxv. 36) as a famous painter. Pliny speaks of a picture of a bride by him as a noble painting, distinguished for its expression of modesty. A great compliment is also incidentally paid to the works of Echion by Cicero (Paral. v. 2), where he is apparently ranked with Polycletus.

XIV. Decline. The causes of the decline of painting in Greece are very evident. The political revolutions with which it was convulsed, and the various dynastic changes which took place after the death of Alexander, were perhaps the principal obstacles to any important efforts of art; the in- 

telligent and higher classes of the population, upon whom painters chiefly depend, being to a great ex- 

tent engrossed by politics or engaged in war. Another influential cause was, that the public buildings were already rich in works of art, almost even to the exhaustion of the national mythology and history; and the new rulers found the transfer of works already renowned a more sure and a more expeditious method of adorning their public halls and palaces, than the more tardy and hazardous alternative of requiring original productions from contemporary artists.

It was already the fashion in this age to talk of the inimitable works of the great masters; and the artists generally, instead of exerting themselves to imitate the masterpieces of past ages, seem to have been content to admire them. All works bearing great names were of the very highest value, and were sold at enormous prices. Plutarch mentions that Aratus bought up some old pictures, but particularly those of Melanthus and Pamphilus, and sent them as presents to Ptolemy III. of Egypt, to conciliate his favour, and to induce him to join the Achaean league. Ptolemy, who was a great admirer of the arts, was gratified with these presents, and presented Aratus with 150 talents in consider- 

ation of them. (Plut. Arat. 12.) These were, however, by no means the first works of the great painters of Greece, which had found their way into Egypt. Mydon of Soli; Neaces, Leontiscus, and Timanthes, of Sicyon; Arcesilas, Erimonus, and Pasias, of uncertain country; and Metrodorus of Athens, equally eminent as a painter and as a philosopher. The school of Sicyon, to which the majority of the distinguished painters of this period belonged, is expressly mentioned by Plutarch (Arat. 12) as the only one which still retained any traces of the purity and the greatness of style of the art of the renowned ages. It appears to have been still active in the time of Aratus, about 250 B.C., who seems to have instilled some of his own enterprising spirit into the artists of his time. Aratus was a great lover of the arts, but this did not hinder him from destroying the portraits of the Tyrants of Sicyon; one only, and that but partially, was saved. (Plut. Arat. 13.)

It was already the fashion in this age to talk of the inimitable works of the great masters; and the artists generally, instead of exerting themselves to imitate the masterpieces of past ages, seem to have been content to admire them. All works bearing great names were of the very highest value, and were sold at enormous prices. Plutarch mentions that Aratus bought up some old pictures, but particularly those of Melanthus and Pamphilus, and sent them as presents to Ptolemy III. of Egypt, to conciliate his favour, and to induce him to join the Achaean league. Ptolemy, who was a great admirer of the arts, was gratified with these presents, and presented Aratus with 150 talents in consider- 

ation of them. (Plut. Arat. 12.) These were, however, by no means the first works of the great painters of Greece, which had found their way into Egypt. Mydon of Soli; Neaces, Leontiscus, and Timanthes, of Sicyon; Arcesilas, Erimonus, and Pasias, of uncertain country; and Metrodorus of Athens, equally eminent as a painter and as a philosopher. The school of Sicyon, to which the majority of the distinguished painters of this period belonged, is expressly mentioned by Plutarch (Arat. 12) as the only one which still retained any traces of the purity and the greatness of style of the art of the renowned ages. It appears to have been still active in the time of Aratus, about 250 B.C., who seems to have instilled some of his own enterprising spirit into the artists of his time. Aratus was a great lover of the arts, but this did not hinder him from destroying the portraits of the Tyrants of Sicyon; one only, and that but partially, was saved. (Plut. Arat. 13.)

From the time of Alexander the spirit of the Greeks animated Egyptian artists, who adopted the standard of Grecian beauty in proportion and character. Antiphilus, one of the most celebrated painters of antiquity, was a native of Egypt, perhaps of Naucratis. (Dict. of Biog. s. v.) Many other Greek painters also were established in Egypt, and both the population and arts of Alexandria were more Greek than Egyptian. (Quint. xii. 10; Plin. H. N. xxxv. 37 and 40; Athen. v. p. 196.)

Amongst the most remarkable productions of this period were, the celebrated ship of Hiero II. of Syracuse, which had Mosaic floors, in which the whole history of the fall of Troy was worked with admirable skill (Athen. v. p. 297, e), and the immense ship of Ptolemy Philopator, on the prow and stern of which were carved colossal figures, eighteen feet in height; and the whole vessel,赦
both interior and exterior, was decorated with painting of various descriptions. (Athen. v. p. 204, a.) Nearly a century later than Aratus we have still mention of two painters at Athens of more than ordinary distinction, Heracleides a Macedonian, and Metrodorus an Athenian. The names of several painters, however, of these times are preserved in Pliny, but he notices them only in a cursory manner. When Aemilius Paulus had conquered Perseus, b. c. 168, he commanded the Athenians to send him their most distinguished painter to perpetuate his triumph, and their most approved philosopher to educate his sons. The Athenians selected Metrodorus the painter, professing that he was pre-eminent in both respects. Heracleides was a Macedonian, and originally a ship-painter; he repaired to Athens after the defeat of Perseus. (Plin. H. N. xxxv. 40.) Plutarch in his description of the triumph of Aemilius Paulus (in Vit. 32) says, that the paintings and statues brought by him from Greece were so numerous that they required 250 waggons to carry them in procession, and that the spectacle lasted the entire day. Aemilius appears at all times to have been a great admirer of the arts. For Plutarch (Aemil. Paul. 6) mentions that after his first consulate he took especial care to have his sons educated in the arts of Greece, and amongst others in painting and sculpture; and that he accordingly entertained masters of those arts (παρατηρήσας καὶ καταφέρον) in his family. From which it is evident that the migration of Greek artists to Rome had already commenced before the general spoliations of Greece. Indeed Livy (xxxix. 23) expressly mentions, that many artists came from Greece to Rome upon the occasion of the ten days games appointed by Pius when they became acquainted with the great masters of former times: Timomachus of Athens, Heracleides a Macedonian, and Metrodorus an Athenian. The names of several painters, however, to have been the privilege of the arts as the lawful prize of conquest. (Diodor. xiii. 90; Polyb. ix. 6. § 1; Liv. xxxi. 26; Plin. H. N. xxxv. 19, xxxv. 36.) The Roman conquerors, however, at first plundered with a certain degree of moderation (Cic. in Verr. v. 4); as Marcellus at Syracuse, and Fabius Maximus at Tarentum, who carried away no more works of art than were necessary to adorn their triumphs, or decorate some of the public buildings. (Cic. in Verr. v. 52, &c.; Plut. Fab. Max. 25, Marcellus 50.) The works of Greek art brought from Sicily by Marcellus, were the first to inspire the Romans with the desire of adorning their public edifices with statues and paintings; which taste was converted into a passion when they became acquainted with the great treasures and almost inexhaustible resources of Greece; and their rapacity knew no bounds. Plutarch says that Marcellus (in Vit. 21) was accused of having corrupted the public morals through the introduction of works of art into Rome; since from that period the people wasted much of their time in disputing about arts and artists. But Marcellus gloried in the fact, and boasted even before Greeks, that he was the first to teach the Romans to esteem and to admire the exquisite productions of Greek art. We learn from Livy (xxvi. 21) that one of the ornaments of the triumph of Marcellus, 214 b.c., was a picture of the capture of Syracuse.

These spoliations of Greece, of the Grecian kingdoms of Asia, and of Sicily, continued uninterrupted for about two centuries; yet, according to Mucianus, says Pliny (H. N. xxxiv. 17), such was the inconceivable wealth of Greece in works of art, that Rhodes alone still contained upwards of 3000 statues, and that there could not have been less at Athens, or at Olympia, or at Delphi. The men who contributed principally to fill the public edifices and temples of Rome with the works of Grecian art, were Cn. Manlius, Fulvius Nobilius, who plundered the temples of Ambraucia (Liv. xxxvii. 44), Mummianus, Sulla, Lucullus, Scaurus, and Verres. (Liv. xxxix. 5, 6, 7; Plin. H. N. xxxiv. 55, xxxiv. 17, xxxvii. 6.) Mummianus, after the destruction of Corinth, b. c. 146, carried off or destroyed more works of art than all his predecessors put together. Some of his soldiers were found by Polybius playing at dice upon the celebrated picture of Dionysus by Aristides. (Strab. viii. p. 381.) Many valuable works also were purchased upon this occasion by Attalus III., and sent to Pergamus; but they all found their way to Rome on his death, b. c. 133, as he bequeathed all his property to the Roman people. (Plin. H. N. xxxiii. 53.) Scaurus, in his aedileship, b. c. 59, had all the public pictures still remaining in Sicyon transported to Rome on account of the debts of the former city, and he adorned the temple of Minerva on the Aventine, B. c. 213, with 3000 bronze statues. (Plin. H. N. xxxv. 40, xxxvi. 24.) Verres ransacked Asia and Achaia, and plundered almost every temple and public edifice in Sicily of whatever was valuable in it. Amongst the numerous robberies of Verres, Cicero (in Verr. iv. 55) mentions particularly twenty-seven beautiful pictures taken from the temple of Minerva at Syracuse, consisting of portraits of the kings and tyrants of Sicily.

From the destruction of Corinth by Mummianus, and the spoliations of Sicily by Sulla, the higher branches of art, especially in painting experienced so sensible a decay in Greece, that only two painters are mentioned who can be classed with the great masters of former times: Timomachus of Byzantium, contemporary with Caesar (Plin. H. N. xxxv. 40, &c.), and Aetion, mentioned by Lucian (Imag. 7; Herod. 5), who lived apparently about the time of Hadrian. (Müller, Archäol. § 211. 1.) Yet Rome was, about the end of the republic, full of painters, who appear, however, to have been chiefly occupied in portraits, or decorative and arabesque painting; painters must also have been very numerous in Egypt and in Asia. Paintings of various descriptions still continued to perform a conspicuous part in the triumphs of the Roman conquerors. In the triumph of Pompey over Mithridates the portraits of the children and family of that monarch were carried in the procession (Appian, de Bell. Mithr. 117); and in one of Caesar's triumphs the portraits of his principal enemies in the civil war were displayed, with the exception of that of Pompey. (Id. de Bell. Civ. ii. 101.)

The school of art at Rhodes appears to have been
the only one that had experienced no great change; for works of the highest class in sculpture were still produced there. The course of painting seems to have been much more capricious than that of sculpture; in which masterpieces, exhibiting various beauties, appear to have been produced in nearly every age, from that of Phidias to that of Hadrian. A decided decay in painting, on the other hand, is repeatedly acknowledged in the later Greek and in the best Roman writers. One of the causes of this decay may be, that the highest excellence in painting requires the combination of a much greater variety of qualities; whereas invention and design, identical in both arts, are the sole elements of sculpture. Painters also are addicted to the permiscuous, though lucrative, practice of dashing off or despatching their works, from which sculptors, from the very nature of their materials, are exempt: to paint quickly was all that was required for works in sculpture also, through the durability of their material, are more easily preserved than paintings, and they set higher models and incentives to the artists of after ages. Artists, therefore, who may have had ability to excel in sculpture, would naturally choose that art in preference to painting. It is only thus that we can account for the production of such works as the Antinous, the Laocoon, the Torso of Apollonius, and many others of surpassing excellence, at a period when the art of painting was comparatively extinct, or at least principally practised as mere decorative colouring, such as the majority of the paintings of Rome, Herculanum, and Pompeii, now extant; though it must be remembered that these were the inferior works of an inferior age.

XV. Roman Painting. The early painting of Italy and Magna Graecia has been already noticed, and we know nothing of a Roman painting independent of that of Greece, though Pliny (H. N. xxxv. 7) tells us that it was cultivated at an early period by the Romans. The head of the noble house of the Fabii received the surname of Pictor, which remained in his family, through some paintings which he executed in the temple of Salus at Rome, n. c. 304, which last had the time of the emperor Claudius, when they were destroyed by the fire that consumed that temple. Paeonius also, the tragic poet, and nephew of Ennius, distinguished himself by some paintings in the temple of Heracles in the Forum Boarium, about 180 n. c. Afterwards, says Pliny (l. c.), painting was not practised by polite hands (honestis manibus) amongst the Romans, except perhaps in the case of Turpilius, a Roman knight of his own times, who executed some beautiful works with his left hand at Verona. Yet Q. Pedius, nephew of Q. Pedius, cohort of Caesar with Augustus, was instructed in painting, and became a great proficient in the art, though he died young. Antistius Labeo also amused himself with painting small pictures. Julius Caesar, Agrippa, and Augustus were among the earliest great patrons of artists. Suetonius (Jul. Cceas. 47) informs us that Caesar expended great sums in the purchase of pictures by the old masters; and Pliny (H. N. xxxv. 40) mentions that he gave as much as 80 talents for two pictures by his contemporary Timamachus of Byzantium, one an Ajax, and the other a Medea meditating the murder of her children. These pictures, which were painted in encaustic, were very celebrated works; they are alluded to by Ovid (Trist. ii. 525), and are mentioned by many other ancient writers.

There are two circumstances connected with the earlier history of painting in Rome which deserve mention. One is recorded by Livy (xli. 28), who informs us that the Consul Tib. Sempronius Gracchus, dedicated in the temple of Mater Matuta, upon his return from Sardinia, n. c. 174, a picture of apparently a singular description; it consisted of a plan of the island of Sardinia, with representations of various battles he had fought there, painted upon it. The other is mentioned by Pliny (H. N. xxxv. 7), who says that L. Hostilius Manlius, n. c. 147, exposed to view in the forum a picture of the taking of Carthage, in which he had performed a conspicuous part, and explained its various incidents to the people. Whether these pictures were the productions of Greek or of Roman artists is doubtful; nor have we any guide as to their rank as works of art.

The Romans generally have not the slightest claims to the merit of having promoted the fine arts. We have seen that before the spoliations of Greece and Sicily, the arts were held in no consideration in Rome; and even afterwards, until the time of the emperors, painting and sculpture seem to have been practised very rarely by Romans; and the works which were then produced were chiefly characterised by their bad taste, being mere military records and gaudy displays of colour, although the city was crowded with the finest productions of ancient Greece.

There are three distinct periods observable in the history of painting in Rome. The first, or great period of Greco-Roman art, may be dated from the conquest of Greece until the time of Augustus, when the artists were chiefly Greeks. The second, from the time of Augustus to the so-called Thirty Tyrants and Diocletian, or from the beginning of the Christian era until about the latter end of the third century; during which time the great majority of Roman works of art were produced. The third comprehends the state of the arts during the exarchate; when Rome, in consequence of the foundation of Constantinople, lost the character it had previously inflicted upon Greece. This was the period of the total decay of the imitative arts amongst the ancients.

The establishment of Christianity, the division of the empire, and the incursions of barbarians, were the first great causes of the important revolution experienced by the imitative arts, and the serious check they received; but it was reserved for the fanatic fury of the iconoclasts effectually to destroy all traces of their former splendour.

Of the first of these three periods sufficient has been already said; of the second there remain still a few observations to be made. About the beginning of the second period is the earliest age in which we have any notice of portrait painters (imaginarum pictores), as a distinct class. Pliny mentions particularly Dionysius and Sopolis, as the most celebrated at about the time of Augustus, or perhaps earlier, who filled picture galleries with their works. About the same age also Lala of Cyzicus was very celebrated; she painted, however, chiefly female portraits, but received greater prices than the other two. (Plin. H. N. xxxv. 37, 40.)

Portraits must have been exceedingly numerous.
PICTURA.

amongst the Romans; Varro made a collection of the portraits of 700 eminent men. (Plin. N. N. xxxv. 2.) The portraits or statues of men who had performed any public service were placed in the temples and other public places; and several edicts were passed by the emperors of Rome respecting the placing of them. (Sueton. Tiber. 26, Calig. 34.) The portraits of authors also were placed in the public libraries; they were apparently fixed above the cases which contained their writings, below which chairs were placed for the convenience of readers. (Cic. xxxvi. 2.) Respecting the imagines or wax portraits, which were preserved in "armaria" in the atria of private houses (Plin. N. N. xxxv. 2; Senec.&Culig. iii. 29), there is an interesting account in Polybius (vi. 53). With the exception of Aetion, as already mentioned, not a single painter of this period rose to eminence: although some were of course more distinguished than others; as the profligate Arelius; Fabullus, who painted Nero's golden house; Dorotheus, who copied for Nero the Venus Anadyomene of Apelles; Cornelius Pinus, Vettius Priscus, Marcus Ludius, Maullus, and others. (Plin. N. N. xxxv. 34, &c.) Portrait, decorative, and scenic painting seem to have engrossed the art. Pliny and Vitruvius regret in strong terms the deplorable state of painting in their times, which was but the commencement of the decay; Vitruvius has devoted an entire chapter (vii. 5) to a lamentation over its fallen state; and Pliny speaks of it as a dying art. (Plin. N. N. xxxv. 11.) The latter writer instances (H. N. xxxv. 30) as a sign of the decay, ("cadere subutiae insanae"), the colossal portrait of Nero, 120 feet high, which was painted upon canvas, a thing unknown till that time.

Marcus Ludius, in the time of Augustus, became very celebrated for his landscape decorations, which were illustrated with figures actively employed in occupations suited to the scenes; the artist's name, however, is doubtful. (See Dict. of Biog. s. v.) This kind of painting became universal after his time, and apparently with every species of licence. Pliny and Tacitus mention various kinds of landscape painting, as the scenery, the variegated frames and cornices of panels, to which were afterwards added architectural decorations; and finally in the exedrae were painted angular, comic, or satyrical scenes, and in the long galleries and corridors, various kinds of landscapes, or even subjects from the poets and the higher walk of life. But these things were in the time of Vitruvius tastelessly laid aside, and had given place to mere gaudy display, or the most hallucinative and wild conceptions, such as many of the paintings which have been discovered in...
thing by bare agreement (nuda conventio) is properly Hypothec. (Inst. 4. tit. 6. § 7.) The law relating to Pignus and Hypotheca was in all essentials the same. The object of the pledging is that the pledger shall in case of necessity sell the pledge and pay himself his demand out of the proceeds. The original nature of pledge perhaps was simply the power of holding a debtor's property as a means of compelling him to pay; but a power of sale would be a matter of agreement; but the later Roman jurists viewed a power of sale as a part of the contract of pledge.

A pledge may be given (res hypothecae dari potest) for any obligation, whether money borrowed (multa pecunia), dowry in a case of marriage and sale ing, letting and hiring, or mandatum; whether the obligatio is conditional or unconditional; for part of a sum of money, as well as for the whole. (Dig. 20. tit. 1. s. 5.) Any thing could be the object of pledge which could be an object of sale (Dig. 20. tit. 1. s. 9; Dig. 20. tit. 3. Quae res pignori vel hypothecae daturae obligari non possunt), and it might be a thing corporeal or incorporeal; a single thing or a university of things. If a single thing was pledged, the thing with all its incidents were pledge; the hypothec was a pledge of a piece of land which was increased by alluvio. If a shop (taverna) was pledged, all the goods in it were pledged, and if some of them were sold and others brought in, and the pledger died, the pledgee's security was the shop and all that it contained at the time of the pledger's death. (Dig. 20. tit. 1. s. 34.) If all a man's property was pledged, the pledge comprehended also his future property, unless such property was clearly excepted. A man might also pledge his share of a thing and that he had against another, whether it was a debt (nomen) or a thing (corpus). (Dig. 13. tit. 7. s. 18.)

The act of pledging required no particular form, in which respect it resembled contracts made by consensus. Nothing more was requisite to establish the validity of a pledge than proof of the agreement of the parties to it. It was called Contractus pignorcius, when it was a case of Pignus; and Pactum hypothecae, when it was a case of Hypotheca; the latter in tradition was necessary. A man might also by his testament make a Pignus (Dig. 13. tit. 7. s. 26); for the Romans applied the notion of pignus to an annual payment left by way of legacy, and charged or secured on land. (Dig. 34. tit. 1. s. 12.) The intention of a man to pledge could in any case be deduced either from his words or from any acts which admitted of no other interpretation than an intention to pledge.

A man could only pledge a thing when he was the owner and had full power of disposing of it; but a man who was owner of a thing could not pledge his share. A man could pledge another man's property, if the owner had full power of disposing of it, his possession. The pledger could a suit the thing pledged, unless there were some agreement.
to the contrary, but such sale did not affect the right of the pledgee. (Dig. 13. tit. 7. s. 18. § 2.) If the pledgor sold a movable thing that was pignorated, or that was specially hypothecated, without the knowledge and consent of the creditor, he was guilty of furturn. (Dig. 47. tit. 2. s. 19. § 6, and s. 68. pr.) If the pledgor at the time of a pignus being given was not the owner of the thing, but had possession of it, he could still acquire the property of the thing by usucapion, for the pledging was not an interruption of the usucapio. [Possessio.]

The creditor could keep possession of a pignorated thing till his demand was fully satisfied, and he could maintain his right to the possession against any other person who obtained possession of the thing. He could also pledge the thing that was pledged to him; that is, he could transfer the pledge. (Dig. 20. tit. 1. s. 13. § 2.) He had also the right, in case his demand was not satisfied at the time agreed on, to sell the thing and satisfy his demands out of the proceeds (ius distrabendi sive vendendi pignus). (Cod. 8. tit. 27 (20.).) This power of sale might be qualified by the terms of the agreement; but a creditor could not be deprived of all power of sale; nor could he be compelled to exercise his power of sale. Gaius (ii. 64) illustrates the maxim that he who was not the owner of a thing, could in some cases sell it, by the example of the pledgee selling a thing pledged; but he properly refers the act of sale to the will of the debtor, as expressed in the agreement of pledging; and thus in legal effect, it is the debtor who sells by means of his agent, the creditor. An agreement that a pledge should be forfeited in case the demand was not paid at the time agreed on, was originally very common; but it was declared by Constantine, A. D. 326, to be illegal. [Comm. Sor. L. E.]

In case of a sale the creditor, according to the later law, must give the debtor notice of his intention to sell, and after such notice he must wait two years before he could legally make a sale. If any thing remained over after satisfying the creditor, it was his duty to give it to the debtor; and if the price was insufficient to satisfy the creditor's demand, his debtor was still his debtor for the remainder. If no purchaser at a reasonable price could be found, the creditor might become the purchaser, but still the debtor had a right to redeem the thing within two years on condition of fully satisfying the creditor. (Cod. 8. tit. 34. s. 3.)

If there were several creditors to whom a thing was pledged which was insufficient to satisfy them all, he whose pledge was prior in time had a preference over the rest (potior est in pignore qui prius creditid pecuniam et accepit hypothecam, Dig. 20. tit. 4. s. 11). There were some exceptions to this rule; for instance, when a subsequent pledgor had lent his money to save the pledged thing from destruction, he had a preference over a prior pledgor. (Dig. 20. tit. 4. s. 5, 6.) This rule has been adopted in the English Law as to money lent on ships and secured by bottomry bonds.

Certain hypothecae, both tacitae and founded on contract, had a preference or priority (privilegium) over all other claims. The Fiscus had a preference in respect of its claims; the wife in respect of her dow; the lender of money for the repair or restoration of a building; a pupillus with whose money a thing had been bought. Of those hypothecae which were founded on contract, the following were privileged: the hypothecae of those who had lent money for the purchase of an immovable thing, or of a shop, or for the building, maintaining, or improving of a house, &c., and had contracted for an hypotheca on the thing; there was also the hypotheca which the seller of an immovable thing reserved by contract until he was paid the purchase-money. Of these claimants, the Fiscus came first; then the wife in respect of her dow; and then the other privileged creditors, according to their priority in point of time.

In the case of unprivileged creditors, the general rule as already observed was, that priority in time gave priority of right. But an hypotheca which could be proved by a writing executed in a certain public form (instrumentum publice confectum), or which was proved by the signatures of three reputable persons (instrumentum quasi publice confectum), had a priority over all those which could not be so proved. If several hypothecae of the same kind were of the same date, he who was in possession of the thing had a priority. The creditor who had for any reason the priority over the rest, was intitled to be satisfied to the full amount of his claim out of the proceeds of the thing pledged. A subsequent creditor could obtain the rights of a prior creditor in several ways. If he furnished the debtor with money to pay off the debt, on the condition of standing in his place, and the money was actually paid to the prior creditor, the subsequent creditor stepped into the place of the prior creditor. (Dig. 20. tit. 3. s. 3.) Also, if he purchased the thing on the condition that the purchase-money should go to satisfy a prior creditor, he thereby stepped into his place. A subsequent creditor could also, without the consent either of a prior creditor or of the debtor, pay off a prior creditor, and stand in his place to the amount of the sum so paid. This arrangement, however, did not affect the rights of an intermediate pledgor. (Dig. 20. tit. 4. s. 16.)

The pledgor had an actio hypothecaria or pignoraticia in respect of the pledge against every person who was in possession of it and had not a better right than himself. This right of action existed indifferently in the case of Pignus and Hypotheon. The hypothecaria actio was designed to give effect to the right of the pledgee, and consequently for the delivery of the hypothecated thing or the payment of the debt. A creditor who had a Pignus, had also a right to the Interdictum retinendae et recuperandae possessionis, if he was disturbed in his possession.

The pledgee was bound to restore a pignus on payment of the debt for which it had been given; and up to that time he was bound to take proper care of it. On payment of the debt, he might be sued in an actio pignoraticia by the pledgor, for the restoration of the thing, and for any damage that it had sustained through his neglect. The remedy of the pledgee against the pledgor for his proper costs and charges in respect of the pledge, and for any dolus or culpa on the part of the pledgor relating thereto, was by an actio pignoraticia contraria.

The pledge was extinguished if the thing perished, for the loss was the owner's; it was also extinguished if the thing was changed so as no longer to be the same, as if a man should have all the timber in a merchant's yard as a security, and
the timber should be used in building a ship (Dig. 13, tit. 7, § 8); if there was confusion, as when the pledgee became the owner of the thing that was pledged. It was also extinguished by the payment of the debt; and in some other ways.

The law of pledge at Rome was principally founded on the Edict. Originally the only mode of giving security was by a transfer of the Quiritarian ownership of the thing by Mancipatio or in jure cessio, if it was a Res Mancipi, on the condition of its being re-conveyed, when the debt was paid (sub leges remanecipations or sub fiducia). [Fiducia.] Afterwards a thing was given to the creditor with the condition that he might sell it in case the thing was not paid for; there was no transfer of the ownership. But so long as the creditor could not protect his possession by legal means, this was a very insufficient security. Ultimately the Praetor gave a creditor a right of action (actio in rem) under the name Serviana actio for the recovery of the property of a colonus which was his security for his rent (pro mercedibus familiaribus); and this right of action was extended under the name of quasi Serviana or hypothecaria generally to creditors who had things pignerated or hypothecated to them. (Inst. 4. tit. 6. s. 7.) As to the Interdictum Salvianum, see INTERDICTUM.

The progress of pledge in the Roman system was from the clumsy contrivance of a conveyance and reconveyance of the ownership, to the delivery (traditio) of a thing without a conveyance and upon an agreement that it should be a security (pignus), and finally to the simple Pactum hypothecae, in which case there was no delivery, and all that the creditor got was a right to have some particular thing of the debtor subject to be sold if he did not pay his debt. The hypothec was the last stage in the development of the Roman law of Pledge. It gave facilities for pledging beyond what existed when the Pignus was only in use, because things could be hypothecated without a transfer of ownership or a giving of possession, such as mere rights of action, deeds, and the like. In fact, Pawn or Pledge under the form of Hypotheca was perfected by the Romans, and there is nothing to add to it.

The Roman Law of Pledge has many points of resemblance to the English Law, but more is comprehended under the Roman Law of Pledge than the English Law of Pledge, including in that term Mortgage. Many of the things comprehended in the Roman Law of Pledge belong to the English Law of Lien and to other divisions of English Law which are not included under Pledge or Mortgage.

(Dig. 20. tit. 1, 2, 3, &c.; Cod. 8. tit. 14—35; Gaius, ii. 59—61; Dig. 13. tit. 7, and Cod. 4. tit. 24. De Pignoratricia Actione vel contr.; Puchta, Inst. i. § 246, &c.; there is an English treatise intitled "The Law of Pledges or Pawns as it was in use among the Romans, &c., by John Ayliffe, London, 1736," which appears to contain all that can be said, but the author's method of treating the subject is not perspicuous.) [G. L.]

PILA (φιλάρα), a ball. The game at ball (σφαιροστάτικα) was one of the most favourite gymnastic exercises of the Greeks and Romans from the earliest times to the fall of the Roman empire. As the ancients were fond of attributing the invention of all games to particular persons or occasions, we find the same to be the case with respect to the origin of this game (Herod. i. 94; Athen. i. p. 14, d. e.; Plin. vii. 56), but such statements do not deserve attention. What is more to the purpose in reference to its antiquity is, that we find it mentioned in the Odyssey (vi. 100, &c. viii. 370, &c.), where it is played by the Phaeacian damsels to the sound of music, and also by two celebrated performers at the court of Alcinous in a most artistic manner accompanied with dancing.

The various movements of the body required in the game of ball gave elasticity and grace to the figure; whence it was highly esteemed by the Greeks. The Athenians set so high a value on it, that they conferred upon Aristonicus of Ceryus the right of playing there without the payment of the debt; and in some other ways.

The game at ball was played at in various ways: the later Greek writers mention five different modes, θρασια, ἐπίσκοψος, φαυλίδα, ἀραστόν, ἀντόβαξις, and there were probably many other various ones. 1. Θρασία was a game in which the ball was thrown up into the air, and each of the persons who played strove to catch it, before it fell to the ground. (Pollux, ix. 106; Hesych. and Phot. s. v.; Eustath. ad Od. viii. 572, p. 1601.) 2. Επίσκοπος, also called ἐφησικός, was the game at foot-ball, played in much the same way as with us, by a great number of persons divided into two parties opposed to one another. (Pollux, ix. 104.) This was a favourite game at Sparta, where it was played with great emulation. (Siebelis, ad Paus. iii. 14. § 6.) 3. Φαυλίδα, called ἐφησικός by Hesychius (s. v.), was played by a number of persons, who threw the ball from one to another, but its peculiarity consisted in the person who had the ball pretending to throw it to a certain individual, and while the latter was expecting it, suddenly turning, and throwing it to another. Various etymologies of this word are given by the grammarians. (Pollux, ix. 105; Etym. Mag. s. v. Φαυλίς; Athen. i. p. 15, a.) 4. Ἀραστόν, which was also played at by the Romans, is spoken of under ΗΡΑΡΣΤΗΜ. 5. Ἀντόβαξις, was a game in which the player threw the ball to the ground with such force as to cause it to rebound, when he struck it down again with the palm of his hand and so went on doing many times: the number of times was counted.
(Pollux, ix. 105.) We learn from Plato (Theaeet., p. 146) that in one game of ball, played at by boys, though we do not know what kind it was, the boy who was conquered was called ass (αστ). and the one who conquered was named king (βασιλεύς).

Among the Romans the game at ball was also played at in various ways. Pila was used in a general sense for any kind of ball: but the balls among the Romans seem to have been of three kinds; the pila in its narrower sense, a small ball; the follis, a great ball filled with air (follis); and the pagania, of which we know scarcely anything, as it is only mentioned in two passages by Martial (vii. 32. 7, xiv. 43), but from the latter of which we may conclude that it was smaller than the follis and larger than the pila. Most of the games at ball among the Romans seem to have been played at with the pila or small ball. One of the simplest modes of playing the ball, where two persons standing opposite to one another threw the ball from one to the other, was called datalim ludere. (Plaut. Crci. ii. 3. 17.) But the most favourite game at ball seems to have been the trigon or pila trigramalis, which was played at by three persons, who stood in the form of a triangle, ευ τριγωνον. We have no particulars respecting it, but we are told that skilful players prided themselves upon catching and throwing the ball with their left hand. (Mart. xiv. 46, vii. 72. 9.)

The ancient physicians prescribed the game at ball, as well as other kinds of exercise, to their patients; Antyllus (op. Ortob. vi. 32) gives some interesting information on this subject.

The persons playing with the pila or small ball in the annexed woodcut are taken from a painting in the baths of Titus (Descr. des Bains de Titus, pl. 17); but it is difficult to say what particular kind of game they are playing at. Three of the players have two balls each.

PILA. [Descr. des Bains de Titus, pl. 17.]
PILLA. [Mortariunm.]
PILANT. [Exercit. p. 501, b.]
PILENTUM. [Exercit. p. 501, b.]

Pilentum, a splendid four-wheeled carriage, furnished with soft cushions, which conveyed the Roman matrons in sacred processions, and in going to the Circensian and other games. (Virg. Aen. vii. 666; Hor. Epist. ii. 1. 192; Claudian, De Nupt. Honor. 235; Isid. Orig. xx. 12.) This distinction was granted to them by the Senate on account of their generosity in giving their gold and jewels on a particular occasion for the service of the state.

(Liv. v. 25.) The Vestal virgins were conveyed in the same manner. (Prudentius contra Sym. ii. sub fin.) The pilentum was probably very like the Harmarama and Carpentum, but open at the sides, so that those who sat in it might both see and be seen. (J. Y.)

Pileus or Pileum (Nom. Marc. iii. ; pilea virorum sunt, Serv. in Virg. Aen. ix. 616). Dim. Pileolus or Pileolum (Colum. de Arbor. 25). (πιλος, dim.  πιλον, second dim.  πιλιδιον;  πιλημα, πιλωτον), any piece of felt; more especially, a skull-cap of felt, a hat.

There seems no reason to doubt that feltimg (πιλητικας, Plut. Polit. ii. 2. p. 296, ed. Bekker) is a more ancient invention than weaving (τελα), nor that both of these arts came into Europe from Asia. From the Greeks, who were acquainted with this article as early as the age of Homer (II. x. 265) and Hesiod (Op. et Dies, 542, 546), the use of felt passed together with its name to the Romans. Among them the employment of it was always far less extended than among the Greeks. Nevertheless Pliny in one sentence, "Lanae et per se coactae vestem faciunt," gives a very exact account of the process of felting. (H. N. viii. 48. s. 73.) A Latin sepulchral inscription (Gruter, p. 648. n. 4) mentions "a manufacturer of woolen felt" (tessarius coatingarius), at the same time indicating that he was not a native of Italy (Lari senes).

The principal use of felt among the Greeks and Romans was to make coverings of the head for the male sex, and the most common kind was a simple skull-cap. It was often more elevated, though still round at the top. In this shape it appears on coins, especially on those of Sparta, or such as exhibit the symbols of the Dioscuri; and it is thus represented, with that addition on its summit, which distinguished the Roman flamines and salii, in three figures of the woodcut to the article Apex. But the apex, according to Dicynus of Halicarnassus, was sometimes conical; and conical or pointed caps were certainly very common.

In the Greek and Roman mythology different kinds of caps were symbolically assigned to indicate the occupations of the weavers. The painter Nicomachus first represented Ulysses in a cap, no doubt to indicate his sea-faring life. (Plin. H. N. xxxvi. § 22.) The woodcut on the following page shows him clothed in the Exomis, and in the act of offering wine to the Cyclops. (W. Wickelmann, Mem. Incid. ii. 154 ; Homer, Od. i. 345—347.) He here wears the round cap; but more commonly both he and the boatman Charon (see woodcut, p. 512) have it pointed. VULAN (see woodcut, p. 726) and Daedalus wear the caps of common artificers.

A cap of very frequent occurrence in the works of ancient art is that now generally known by the name of "the Phrygian bonnet." The Mysian pilaus, mentioned by Aristophanes (Acharn. 429), must have been one of this kind. For we find it continually introduced as the characteristic symbol of Asiatic life in paintings and sculptures of Pism (see woodcut, p. 882) and Mithras (woodcut on title-page), and in short in all the representations, not only of Trojans and Phrygians, but of Amazons (woodcut, p. 894), and of all the inhabitants of Asia Minor, and even of nations dwelling still further east. The representations of this Phrygian, or Mysean, cap in sculptured marble show that it was made of a strong and stiff material and of a
conical form, though bent forwards and downwards. By some Asiatic nations it was worn erect, as by the Saceae, whose stiff peaked caps Herodotus describes under the name of κυβέρνια.

The form of those worn by the Armenians (παλάφρον Ἀρμενίων, Brunck, *Anal*. ii. 146) is shown on various coins, which were struck in the reign of Verus on occasion of the successes of the Roman army in Armenia, A.D. 161. It is sometimes erect, but sometimes bent downwards or truncated. The truncated conical hat is most distinctly seen on two of the Sarmatians in the group at page 213.

Among the Romans the cap of felt was the emblem of liberty. When a slave obtained his freedom he had his head shaved, and wore instead of his hair an undyed pileus (πλαύσων λαμπρός, Diod. Sic. 22. p. 625, ed. Wess.; Plaut. *Amphit.* i. 1. 306; Persius, v. 82). Hence the phrase *servos ad pileum vocare* is a summons to liberty, by which slaves were frequently called upon to take up arms with a promise of liberty. (Liv. xxiv. 32.) The figure of Liberty on some of the coins of Antoninus Pius, struck A.D. 145, holds this cap in the right hand.

In contradistinction to the various forms of the felt cap now described, we have to consider others more nearly corresponding with the hats worn by Europeans in modern times. The Greek word πετασός, dim. πετασύνος, derived from πετάνωμαι, "to expand," and adopted by the Latins in the form *petasus*, dim. *petasuniculus*, well expressed the distinctive shape of these hats. What was taken from their height was added to their width. Those already described had no brim: the petasus of every variety had a brim, which was either exactly or nearly circular, and which varied greatly in its width. In some cases it is a circular disk without any crown at all, and often there is only a depression or slight concavity in this disk fitted to the top of the head. Of this a beautiful example is presented in a recumbent statue of Endymion, habited as a hunter, and sleeping on his scarf: this statue belongs to the Townley Collection in the British Museum, and shows the mode of wearing the petasus tied under the chin. In other instances, it is tied behind the neck instead of being tied before it. (See the next woodcut.) Very frequently we observe a boss on the top of the petasus, in the situation in which it appears in the woodcuts, pages 259, 379. In these woodcuts and in that here introduced the brim of the petasus is surmounted by a crown. Frequently the crown is in the form of a skull-cap; we also find it surrounded with a very narrow brim. The Greek petasus in its most common form agreed with the cheapest hats of undyed felt, now made in England.

On the heads of rustics and artificers in our streets and lanes we often see forms the exact counterpart of those which we most admire in the works of ancient art. The petasus is also still commonly worn by agricultural labourers in Greece and Asia Minor. In ancient times it was preferred to the skull-cap as a protection from the sun (Sueton. *Aug.* 82), and on this account Caligula permitted the Roman senators to wear it at the theatres. (Dion Cass. lix. 7.) It was used by shepherds (Callim. *Frag.* 125), hunters, and travellers. (Plaut. *Amphit.* Pro. 143, i. 1. 287; *Pseud.* ii. 4. 45, iv. 7. 90; Brunck, *Anal*. ii. 170.)

The annexed woodcut is from a fictile vase belonging to Mr. Hope (*Costume*, i. 71), and it represents a Greek soldier in his hat and pallium. The ordinary dress of the Athenian ephebi, well exhibited in the Panathenaic Frieze of the Parthenon, now preserved in the British Museum, was the hat and scarf. [CHLAMYS. (Brunck, *Anal*. i. 5, ii. 41; Philemon, p. 367, ed. Meineke; Pollux, x. 164.) Among imaginary beings the same costume was commonly attributed to Mercury (Arnob. *adv. Gent.* vi.; Martianus Capella, ii. 176; Ephip- pus *ap. Athen*. xii. p. 587. f), and sometimes to the Dioscuri. Ancient authors mention three varieties of the petasus, the Thessalian (Dion Cass. *l.c.*; Callim. *Frag.* 124; Schol. *in Soph.* Oed. Col. 316), the Arcadian (Brunck, *Anal*. ii. 384; *Diog. Laërt.* vi. 102), and the Laconian (Arrian. *Tact.* p. 12, ed. Blancardi); but they do not say in what the dif-
Bread was not generally made at home at Athens, but was sold in the market-place chiefly by women, called ἀρτοπώλεις. (Compare Aristoph. Vesp. 1388, &c.) These women seem to have been what the fish-women of London are at present; they excelled in abuse, whence Aristophanes (Ran. 356) says, λαυροδιάβα δὲστυε ἀρτοπώλεις. (Becker, Charid. vol. i. p. 284.)

PILC/CREPUS. [PILA.]
PILUM. [HASTA.]
PINACOTHE'CA (πίνακις, δημην), a picture-gallery. Marcellus, after the capture of Syracuse, first displayed the works of Greek painters and sculptors to his countrymen, whose taste for the fine arts was gradually matured by the conquests of L. Scipio, Flamininus, and L. Paullus, and grew into a passion after the spoils of Achaia had been transported by Mummius to Rome. Objects of this description were at first employed exclusively for the decoration of temples and places of public resort, but private collections were soon formed; and towards the close of the republic we find that in the houses of the more opulent a room was devoted to the reception of paintings and statues. (Varro, R. R. i. 2. 59; Cic. in Verr. i. 21.) In the time of Augustus, Vitruvius includes the pinacotheca among the ordinary apartments of a complete mansion, and gives directions that it should be of ample size and facing the north, in order that the light might be equable and not too strong. (Vitruv. i. 2, vi. 5. 7; compare Plin. H. N. xxv. 2. 7. 11; Maxois, Le Palais de Scouras, cap. ix.; Becker, Gallia, vol. i. p. 92.)

PISCA'TO'RII LUDI. [LUM PISCATORII.]
PISCI'NA, properly a fish-pond, either of salt-water or of fresh (see the passages in Forcellini and Freund) denotes also any kind of reservoir, especially those connected with the aqueducts and the baths. (Aquaeductus, p. 114, a; Balnea, pp. 189, b, 19, a.)

PIS'TIUM. [MORTARIUM.]
PIS'TOR (ἀρτοπωλεῖος), a baker, from pinserc to pound, since corn was pounded in mortars before the invention of mills. (MOLA.) At Rome bread was originally made at home by the women of the house; and there were no persons at Rome who made baking a trade, or any slaves specially kept for this purpose in private houses, till b. c. 173. (Plin. H. N. xviii. 11. s. 28.) In Varro’s time, however, good bakers were highly prizèd, and great sums were paid for slaves who excelled in this art. (Gell. xv. 19.) The name was not confined to those who made bread only, but was also given to pastry-cooks and confectioners, in which case however they were usually called pictores dulcicarius or candidarius. (Mart. iv. 222; Orellii, Inscrip. n. 4263.) The bakers at Rome, like most other tradespeople, formed a collegium. (Dig. 3. tit. 4. s. 1; 27. tit. 1. s. 46.)

Bread was often baked in moulds called artopotere, and the loaves thus baked were termed artop ticci. (Plin. H. N. xviii. 11. s. 27, 28; Plaut. Aul. iii. 9. 4.) In one of the bakehouses discovered at Pompeii, several loaves have been found apparently baked in moulds, which may therefore be regarded as artop ticci; they are represented below. They are flat and about eight inches in diameter.
while both the Morning Star ("Eφιρφος"), and the Evening Star ("Εσσερος") are named in the Homeric poems (Il. xxxii. 317, xxxii. 226, comp. Od. xxxii. 53), where they are evidently regarded as distinct from one another. According to Apollodorus, in the second book of his work Ilepiτος (II. 26), among which he reckoned the Morning Star ("Εφιρφος") and the Evening Star ("Εσσερος") were one and the same, but by Phavorinus the honour of this discovery is ascribed to Parmenides. The latter certainly looked upon this body, which he called both "Εως and "Εσσερος, as altogether different in its nature from the fixed stars, for he placed it in his highest region or aether; as altogether different in its nature from the fixed stars, as of a hot and fiery nature, beyond these was Mars, beyond Mars was Jupiter, of the Universe, the Moon was believed to be the earth, and, below the earth, the Anticthon and the lexicographers.

The Earth being generally regarded as the centre of the Universe, the Moon was believed to be nearest to it, then the Sun, Venus, and Mercury; beyond these was Mars, beyond Mars was Jupiter, beyond Jupiter was Saturnus, the fixed stars being the most remote of all. But while astronomers for the most part agreed in placing the Sun, Venus, and Mercury between the Moon and Mars, the greatest diversity of opinion obtained with regard to their relative position. According to some, the Sun was the nearest of the three to the Earth, according to others the most distant, while a third set of philosophers assigned to it the middle place between Venus and Mercury. In like manner, some supposed that Mercury was nearer to the Earth than Venus, others the reverse, and every possible combination of the three bodies was exhausted.

Saturnus was believed to perform a complete revolution in about three hundred years, Jupiter in twelve, calculations approaching very near to the truth. The period of Mars was fixed at two years, a determination less accurate than the two former, but not very wide of the truth. As to Venus and Mercury, not even an approximation was made, for they were both believed to perform their revolution in exactly, or very nearly the same time as the Sun: Pliny, who affects great precision in this matter, fixes 348 days for Venus, and 339 days for Mercury.

Saturnus being thus removed to a great distance from the source of heat was naturally viewed as possessing a cold and icy character (gelidus ac rigentis naturae — frigida stella Saturni), Mars, on the other hand, as of a hot and fiery nature, while Jupiter which lay between them enjoyed a temperature made up by the combination of the extremes. The astrologers caught up these notions, and uniting them with the legends of mythology, adapted them to their own purpose, uniformly representing the influence of Saturnus as malign, and that of Jupiter as propitious.

Hae tamen ignorat, quid sidus triste minetur Saturni. Juv. vi. 569.
In many cases, though not universally, the wheels were fastened to the axle, which moved, as in our children's carts, within wooden rings adapted for its reception and fastened to the body. These rings were called in Greek ἄμαξιδόδεικτα, in Latin arcus clericis. The parts of the axle, which revolved within them, were sometimes cased with iron. (Vitr. x. 20. § 14.) The commonest kind of cart-wheel was that called τύμπανον, "the drum," from its resemblance to the musical instrument of the same name. (Varro, de Re Rust. iii. 5; Virg. Georg. ii. 444.) It was nearly a foot in thickness, and was made either by sawing the trunk of a tree across in an horizontal direction, or by nailing together boards of the requisite shape and size. It is exemplified in the preceding woodcut, and in the sculptures on the arch of Septimius Severus at Rome. Although these wheels were excellent for keeping the roads in repair and did not cut up the fields, yet they rendered it necessary to take a long circuit in turning. They advanced slowly. (Virg. Georg. i. 138.) They also made a loud creaking, which was heard at a great distance (stridentia plusstrum), and is therefore etymologically connected with πλαστος, a term which was applied to the plebeians by the more correct Greek writers on Roman history, while others wrongly called them δήμος or δημοτικόν.

The plebeians were the body of commons or the commonalty of Rome, and thus constituted one of the two great elements of which the Roman nation consisted, and which has given to the earlier periods of Roman history its peculiar character and interest. Before the time of Niebuhr the most inconsistent notions were entertained by scholars with regard to the plebeians and their relations to the patricians; and it is one of his peculiar merits to have pointed out the real position which they occupied in the history of Rome. The ancients themselves do not agree respecting the time when the plebeians began to form a part of the Roman population. Dionysius and Livy represent them as having formed a part of the Romans as early as the time of Romulus, and seem to consider them as the clients of the patricians, or as the low multitude of outcasts who flocked to Rome at the time when Romulus opened the asylum. (Dionys. i. 8; Liv. i. 8.) If there is any truth at all in these accounts of the early existence of the plebeians, we can only conceive them to have been the original inhabitants of the districts occupied by the new settlers (Ramnes or Romans), who, after their territory was conquered, were kept in that state of submission in which conquered nations were so frequently held in early times. There are also some other statements referring to such an early existence of the plebeians; for the clients, in the time of Romulus, are said to have been formed out of the plebeians. (Dionys. ii. 9; Plut. Romul. 13; Cic. de Re Publ. ii. 9; Fest. s. v. Patrocinium.) In the early times of Rome the position of a client was in many respects undoubtedly far more favourable than that of a plebeian, and it is not improbable that some of the plebeians may for this reason have entered into the relation of clientela to some patricians, and have given up the rights which they had as free plebeians; and occurrences of this kind may have given rise to the
plebeians, they were perfectly distinct the plebeians; and those, who confirm the election this error he labours throughout his history, for he distributed among the patrician curies, and under this question, the 'patrician curiae (Dionys. ii. 60, vi. 90, x. 4 ; Liv. i. 33, 37.) Many, however, remained in their original homes, and their lands were given back to them by the Romans, so that they re assigned to them as their habitation. (Liv. i. 33, 37.) Many, however, remained in their original homes, and their lands were given back to them by the Romans, so that they remained free land-owners as much as the conquerors themselves, and thus were distinct from the clients.

The order of plebeians or the commonalty, which had thus gradually been formed by the side of the patricians, and which far exceeded the populus in number, lived partly in Rome itself in the districts above mentioned, and partly on their former estates in the country subject to Rome, in towns, villages, and scattered farms. The plebeians were citizens, but not optimo jure; they were perfectly distinct from the patricians, and were neither contained in the three tribes, nor in the curie nor in the patrician gentes. They were consequently excluded from the comitia, the senate, and all civil and priestly offices of the state. Dionysius is greatly mistaken in stating that all the new citizens were distributed among the patrician curies, and under this error he labours throughout his history, for he conceives the patricians and plebeians as having been united in the comitia curiata (iv. 12, ix. 4.) That the plebeians were not contained in the curies, is evident from the following facts: — Dionysius himself (iv. 76, 78) calls the curiae a patrician assembly; Livy (v. 46) speaks of a lex curiata, which was made without any co-operation on the part of the plebeians; and those, who confirm the election of kings or magistrates and confer the imperium, are in some passages called patricians, and in others curiae (Dionys. ii. 60, vii. 50, x. 4 ; Liv. vi. 42; compare Niebuhr, Hist. of Rome, ii. p. 120; Becker, Handbuch der Röm. Alterth. ii. 1. p. 135, &c.), which shows that both were synonymous. That the plebeians did not belong to the patrician gentes, is expressly stated by Livy (v. 48). The only point of contact between the two estates was the army, for after the conquest of Alba, Tullius Hostilius doubled the number of legions of the Roman army.

(Livy i. 30.) Livy also states that Tullius Hostilius formed ten new turmae of equites, but whether these new turmae consisted of Albans, as Livy says, or whether they were taken from the three old tribes, as Götting (Gesch. d. Röm. Staatsw. p. 225) thinks, is only matter of speculation. The plebeians were thus obliged to fight and shed their blood in the defence and support of their new fellow-citizens without being allowed to share any of their rights or privileges, and without even the right of intermarriage (connubium). In all judicial matters they were entirely at the mercy of the patricians, and had no right of appeal against any unjust sentence, though they were not, like the clients, bound to have a patronus. They continued to have their own sacra which they had had before the conquest, but they were regulated by the patrician pontiffs. (Fest. s. v. Municipalia sacra.) Lastly, they were free land-owners, and had their own gentes. That a plebeian woman, had the patri potestas over her children, and that if he belonged to a plebeian gens, he shared in the jura and sacra gentilicia of that gens, are points which appear to be self-evident.

The population of the Roman state thus consisted of two opposite elements; a ruling class or aristocracy, and the commonalty, which, though of the same stock as the noblest among the rulers, and exceeding them in numbers, yet enjoyed none of the rights which might enable them to take a part in the management of public affairs, religious or civil. Their citizenship resembled the relation of aliens to a state, in which they are merely tolerated on condition of performing certain services, and they are, in fact, sometimes called peregrini. While the order of the patricians was perfectly organized by its division into curiae, decuriae, and gentes, the commonality had no such organization, except its division into gentes; its relations to the patricians also were in no way defined, and it could adopt no means of protecting itself against any arbitrary proceedings of the rulers. That such a state of things could not last, is a truth which must have been felt by every one who was not blinded by his own selfishness and love of dominion. Tarquinius Priscus was the first who conceived the idea of placing the plebeians on a footing of equality with the old burghers, by dividing them into three tribes, which he intended to call after his own name and those of his friends. (Verrius Flaccus, ap. Fest. s. v. Navius; Liv. i. 36, &c.; Dionys. iii. 71; Cels. de Re Publ. ii. 20.) But this noble plan was frustrated, by the opposition of the augur Attus Navius, who probably acted the part of a representative of the patricians. All that Tarquinius could do was to effect the admission of the noblest plebeian families into the three old tribes, who, however, were distinguished from the old patrician families by the names of Rames, Tities, and Luceres secundi, and their gentes are sometimes distinguished by the epithet minores, as they entered into the same relation in which the
Lucerius had been to the first two tribes, before the time of Tarquinius. (Fest. a. n. Sex Vesta Sacerdotes; Cic. de Re Publ. ii. 20; Liv. i. 35, 47.) This measure, although an advantage to the most distinguished plebeian families, did not benefit the plebeians as an order, for the new patricians must have become alienated from the commonality, while the patricians as a body were considerably strengthened by the accession of the new families.

It was reserved to his successor, Servius Tullius, to give to the commonalty a regular internal organization and to determine their relations to the patricians. The intention of this king was not to upset the old constitution, but only to enlarge it so as to render it capable of receiving within itself the new elements of the state. He first divided the city into four, and then the subject country around, which was inhabited by plebeians, into twenty-six regions or local tribes (Liv. i. 43; Dionys. iv. 14, &c.), and in these regions he assigned lots of land to those plebeians who were yet without landed property. Niebuhr (ii. p. 162) thinks that these allotments consisted of seventy jugera each, an opinion which is controverted by Götting (p. 239, &c.). As regards the four city-tribes, it should be observed that the Aventine and the Capitol were not contained in them: the former forming a part of the country tribes, and the latter being, as it were, the city of the gods. (Varro, de Ling. Lat. v. 56, ed. Müller.) The twenty-six country tribes are not mentioned by Livy in his account of the Servian constitution, and where he first speaks of the whole number of tribes (ii. 21; compare Dionys. vii. 64), he only mentions twenty-one instead of thirty. Niebuhr (i. p. 418) is undoubtedly right in reconciling this number with the thirty tribes of Servius by the supposition, that in the war with Porsenna Rome lost one third of her territory, i.e. ten tribes, so that there were only twenty left. As, therefore, after the immigration of the Claudii and their clients, a new tribe was formed (Liv. ii. 16), Livy is right in mentioning only twenty-one tribes. These thirty Servian tribes did not, at least originally, contain any patricians, and even after the Claudii were inserted in the tribes, it is not supposed that the gens Claudia, which was raised to the rank of patrician, was contained in the new tribe, but the new tribe probably consisted of their clients to whom lands were assigned beyond the Anio. (Liv. i. c.; compare Tribus.) Some of the clients of the patricians, however, were probably contained in the Servian tribes. (Dionys. iv. 22, &c.) Each tribe had its praetor called tribunos. (Dionys. iv. 14; Appian, B. C. iii. 29; Tribunos.) The tribes had also their own sacra, festivals, and meetings (comitia tributa), which were convoked by their tribunes.

This division into tribes with tribunes at their heads was no more than an internal organization of the plebeians, analogous to the division of the patricians into thirty curiae, without conferring upon them the right to interfere in any way in the management of public affairs, or in the elections, which were left entirely to the senate and the curiae. These rights, however, they obtained by another regulation of Servius Tullius, which was made wholly independent of the thirty tribes. For this purpose he instituted a census, and divided the whole body of Roman citizens, plebeians as well as patricians, into five classes, according to the amount of their property. Taxation and the military duties were arranged according to these classes in such a manner, that the heavier burdens fell upon the wealthier classes. The whole body of citizens thus divided was formed into a great national assembly called comitia maxima or comitia centuriata. (Comitia, p. 333, &c.) In this assembly the plebeians now met the patricians apparently on a footing of equality, but the votes were distributed in such a way that it was always in the power of the wealthiest classes, to which the patricians naturally belonged, to decide a question before it was put to the vote of the poorer classes. A great number of such noble plebeian families, as were now constituted by Servius into a number of equites, with twelve suffragia in the comitia centuriata. (Equites, p. 471.) Lastly, Servius Tullius is said to have regulated the commercial between the two orders by about fifty laws. (Dionys. iv. 15; Νόμοι τῶν μὲν εὐνακτημένων καὶ τῶν μὴ θεών, &c.; comitia, p. 22; Götting, p. 240; Becker, l.c. p. 136.)

In this constitution the plebeians, as such, did not obtain admission to the senate, nor to the highest magistracy, nor to any of the priestly offices. To all these offices the patricians alone thought themselves entitled by divine right. The plebeians also continued to be excluded from occupying any portion of the public land, which as yet was only possessed by the patricians, and were only allowed to keep their cattle upon the common pasture, for which they had to pay to the state a certain sum. It is true that by the acquisition of wealth plebeians might become members of the first property class, and that thus their votes in the comitia might become of the same weight as those of the wealthy patricians, but the possibility of acquiring such wealth was diminished by their being excluded from the use of the ager publicus. Niebuhr (i. p. 430, &c.) infers from the nature of the Servian constitution that it must have granted to the plebeians greater advantages than those mentioned by our historians: he conceives that it gave to them the right of ascertaining by appeal to their own assembly, and to pass sentence upon such as grossly infringed their liberties, in short that the Servian constitution placed them on the same footing in regard to the patricians, as was afterwards permanently effected by the laws of C. Licinius and L. Sextius. There is no doubt that such might and should have been the case, but the arguments which he brings forward in support of his hypothesis do not appear to be convincing, as has been pointed out by Götting (p. 265, &c.). All that we know for certain is, that Servius gave to the body of the plebeians an internal organization by the establishment of the thirty plebeian tribes, and that in the comitia centuriata he placed them, at least apparently, on a footing of equality with the populus. Whether he intended to do more, or would have done more if it had been in his power, is a different question. But facts, like those stated above, were sufficient at a later period, when the benefits actually conferred upon the plebeians were taken away from them, to make the grateful commonalty look upon that king as its great patron, and even regard him as having granted all those rights which subsequently they acquired after many years of hard struggle. Thus what he actually had done, was
exaggerated to what he possibly might have done, or would have wished to do. In this light we have to regard the story that he intended to lay down his royal dignity and to establish the government of two consuls, one of whom was to have been a plebeian.

During the reign of the last king the plebeians not only lost all they had gained by the legislation of his predecessor (Dionys. iv. 43, 44); but the tyrant also compelled them to work like slaves in his great architectural works, such as the cloaca maxima and the circus.

On the establishment of the republic, the comitia centuriata, and perhaps the whole constitution, such as it had been before the reign of the last Tarquinius, were restored, so that the patricians alone continued to be eligible to all the public offices. (Liv. iv. 6, vi. 40, &c., x. 8.) That the comitia centuriata were restored immediately after the banishment of the Tarquins, may be inferred from the words of Livy (i. 60), who says, that the first consuls were elected ex commentariis Servii Tudri, for these words probably refer to the comitia centuriata, in which, according to the regulations of king Servius, the elections were to be held. There was still no connubium between the two orders, and the popularus was still in every respect distinct from the plebs. Considering the fact that the patricians reserved for themselves all the powers which had formerly been concentrated in the king, and that these powers were now given to a number of patrician officers, we must admit that the plebeians at the commencement of the republic were worse off than if the kingly rule had continued under the institutions introduced by Servius. They, however, soon gained some advantages.

The vacancies which had occurred in the senate during the reign of the last king were filled up with the most distinguished among the plebeian equites (patres conscripti, Liv. ii. 1; Dionys. v. 13; Fest. s. v. Qui patres; Plut. Public. ii. 1; Senatus), and Valerius Publicola carried a number of laws by which the relations between patricians and plebeians were more accurately defined than they had hitherto been, and which also afforded some protection to the plebeians. (Leyes Valerianae.) Both orders acted in common only in the army and the comitia centuriata, in which, however, the patricians exercised an overwhelming influence through the number of their clients who voted in them; and in addition to this all decrees of the centuries still required the sanction of the curiae. Notwithstanding these disadvantages, the plebeians occupied a position which might soon have enabled them to rise to a perfect equality with the patricians, had not a great calamity thrown them back, and which also afforded some protection to the plebeians. (Plebiscitum.) A few years after this (445, B.C.), the tribune Canuleius established, by his rogations, the comitiun between patricians and plebeians. (Liv. iv. 44, v. 11, 12; Dionys. x. 60, xi. 28; Cic. de Re Public. ii. 37.) He also attempted to divide the consulsip between the two orders, but the patricians frustrated the realisation of this plan by the appointment of six military tribunes, who were to be elected from both orders. (Tribunus.) But that the plebeians might have no share in the senatorial power, with which the consuls had been invested, the military tribunes did not obtain that power, and a new curule dignity, the censorship, was established, with which patricians alone were to be invested. (Censor.) Shortly after the taking of Rome by the Gauls, we find the plebeians again in a state little better than that in which they had been before their first secession to the mons saevior. In B.C. 421, however, they were admitted to the quaestorship, which opened to them the way into the senate, where henceforth they were to stand on an equal footing with the patricians. (Quaestor; Senatus.) In B.C. 367, the tribunes L. Licinius Stolo and L. Sextius placed themselves at the head of the comity, and resumed the contest against the patricians. After a fierce struggle, which lasted for several years, they at length carried a rogation, according to which decemvirs were to be appointed for keeping the Sibylline books instead of duumvirs, of whom half were to be plebeians. (Liv. vi. 37, 42.) The next great step was the restoration of the censorship, on condition that one consul should always be a plebeian. A third rogation of Licinius, which was only intended to afford monetary relief to the poor plebeians, regulated the rate of interest. From this time forward the plebeians also
In the possession of the right to occupy parts of the ager publicus. (Livy, vii. 16; Niebuhr, iii. p. 1, &c.) In B. c. 356, L. Sextius Lateranus was the first plebeian consul. The patricians, however, who always contrived to yield no more than what it was absolutely impossible for them to retain, stripped the consulship of a considerable part of its power and transferred it to two new curule offices, viz., that of praetor and of curule aedile. [ARIDILES; PRÆTOR.] But after such great advantages had been once gained by the plebeians, it was impossible to stop them in their progress towards a perfect equality of political right with the patricians. In B. c. 356 C. Marcus Rutulus was the first plebeian dictator; in B. c. 351, the censorship was thrown open to the plebeians, and in B. c. 336 the praetorship. The Ogulnian law, in B. c. 300, also opened to them the offices of pontifex and augur. These advantages were, as might be supposed, not gained without the fiercest opposition of the patricians and even after they were gained and sanctioned by law, the patricians exerted every means to obstruct the operation of the law. Such fraudulent attempts led, in B. c. 392, to the accession of two plebeians, after which, however, the dictator Q. Hortensius successfully and permanently reconciled the two orders, secured to the plebeians all the rights they had acquired until then, and procured for their plebiscita the full power of leges binding upon the whole nation.

In a political point of view the distinction between patricians and plebeians now ceased, and Rome, internally strengthened and united, entered upon the happiest period of her history. How completely the old distinction was now forgotten, is evident from the fact that henceforth both consuls were frequently plebeians. The government of Rome had thus gradually changed from an oligarchy to a moderate democracy, in which each party had its proper influence and the power of checking the other, if it should venture to assume more than it could legally claim. It was this constitution, the work of many generations, that excited the admiration of the great statesman Polybius.

We stated above that the plebeians during their struggle with the patricians did not seek power for the mere gratification of their ambition, but as a necessary means to protect themselves from oppression. The abuse which they, or rather their tribunes, made of their power, belongs to a much later time, and no traces of it appear until more than half a century after the Hortensian law; and even then, this power was only abused by individuals, and not on behalf of the real plebeians, but of a degenerating democratical party, which is unfortunately designated by later writers by the name of plebeians, and thus has become identified with them. Those who know the immense influence which religion and its public ministers had upon the whole management of the state, will not wonder that the plebeians in their contest with the aristocracy exerted themselves as much to gain access to the priestly offices as to those of a purely political character; as the latter in reality would have been of little avail without the former. The office of curio maximus, which the plebeians sought and obtained nearly a century after the Ogulnian law (Livy. xxvii. 6, 8), seems indeed to afford ground for supposing that in this instance the plebeians sought a distinction merely for the purpose of extending their privileges; but Ambrose (Studien u. Anmerkungen, p. 95) has rendered it more than probable that the office of curio maximus was at that time of greater political importance than is generally believed. It is also well known that such priestly offices as had little or no connection with the management of public affairs, such as that of the rex sacrorum, the flamines, salii, and others, were never coveted by the plebeians, and continued to be held by the patricians down to the latest times. (Dionys. v. 1; Cic. pro Dom. 14; Fest. s. v. Major, flam.)

After the passing of the Hortensian law, the political distinction between patricians and plebeians ceased, and with a few unimportant exceptions, both orders were placed on a footing of perfect equality. Henceforth the name popularis is sometimes applied to the plebeians alone, and sometimes to the whole body of Roman citizens, as assembled in the comitia centuriata or tributa. (Liv. xxviii. 5; Cic. ad Att. iv. 2; Gell. x. 20.) The term plebs or plebeacula, on the other hand, was applied in a loose manner of speaking to the multitude or populace in opposition to the nobiles or the senatorial party. (Sallust, Jug. 63; Cic. ad Att. i. 16; Hor. Epist. ii. 1. 158;Hist. Bell. Alex. 5, &c.)

A person who was born a plebeian, could only be raised to the rank of a patrician by a lex curiata, as was sometimes done during the kingly period, and in the early times of the republic. Caesar was the first who ventured in his own name to raise plebeians to the rank of patricians, and his example was followed by the emperors. [PATRJCII.] It frequently happened in the history of Rome that one and the same gens contain plebeian as well as patrician families. In the gens Cornelia, for instance, we find the plebeian families of the Balbi, Mammalae, Meruline, &c., along with the patrician Seipiones, Sullae, Lentuli, &c. The occurrence of this phenomenon may be accounted for in different ways. It may have been, that one branch of a plebeian family was made patrician, while the others remained plebeians. (Cic. Brut. 16, de Leg. ii. 3; Sueton, Ner. 1.) It may also have happened that some families had the same nomen gentilicium without being actual members of the same gens. (Cic. Brut. 16; Tacit. Annal. iii. 48.) Again, a patrician family might go over to the plebeians, and as such a family continued to bear the name of its patrician gens, this gens apparently contained a plebeian family. (Liv. iv. 16; Plin. H. N. xviii. 4.) At the time when no connubium existed between the two orders, a marriage between a patrician and a plebeian had the consequence, that the same nomen gentilicium belonged to persons of the two orders. (Niebuhr, ii. p. 397, n. 756; Suet. Aug. 2.) When a peregrinus obtained the civitas through the influence of a patrician, or when a slave was emancipated by his patrician master, they generally adopted the nomen gentilicium of their benefactor (Cic. ad Fam. xiii. 35, 36, c. Verr. iv. 17; Appian, Civit. 100), and thus appear to belong to the same gens with him. (Comp. Becker, l. c. p. 135, &c.; Ithae, l. c.)

PLEBISCITUM. A name properly applied to a law passed at the Comitia Tributa on the occasion of a Tribune. According to Iaelius Felix (Gellius, xvi. 27) and the note in the edition of Gronovius, he who had authority to convene not the universus populus, but only a part, could hold
The principal Plebiscia are mentioned under Lex.

[LEX.]

PLECTRUM. [LYRA.]

PLEMOCHOAE (πλημοχόαι). [ELUKSINIA, p. 454, a.]

PLINTHUS (πλίνθος) was originally a measure of surface, which is the only sense of the word πλέθρον in Homer. (II. xxii. 407, Od. xii. 577.) It seems to have been the fundamental land measure in the Greek system, being the square of 100 feet, that is, 10,000 square feet. The later Greek writers use it as the translation of the Roman jugurum, probably because the latter was the standard land measure in the Roman system; but, in size, the plethron answered more nearly to the Roman actus, or half-jugurum, which was the older unit of land measure. The plethron would answer exactly to the actus, but for the difference caused by the former being decimal (100 x 100), and the other partly duodecimal (120 x 120). The plethron contained 4 aruras of 2500 square feet each.

2. As frequently happened with the ancient land measures, the side of the plethron was taken as a measure of length, with the same name. This plethron was equal to 100 feet (or about 101 English feet) = 66 2/3 yards or 66.666... yards. It was also introduced into the system of imperial Roman measures, being 1/6 of the stadium. (Herod. ii. 124; comp. Mensura, p. 753, b., and the Tables).

PLINTHUS (πλίνθος), any rectangular parallelopiped. 1. A brick or tile. [LATER.] 2. The quadrangular piece of stone which should properly form the lowest member of the base of a column, and which may be supposed to have originated in the use of a tile or a flat piece of wood to prevent the shaft from sinking into the ground; although very frequently the plinth is wanting, the highest step or other basement forming a sort of continuous plinth or podium. [P. S.]

PLUMARI, a class of persons, mentioned by Vitruvius (vi. 7, pp. 177, ed. Bip.), Varro (ap. Nonius, ii. p. 710), and in inscriptions. It cannot be decided with certainty what their exact occupation was: their name would lead us to suppose that they were persons who wove in garments golden or purple figures made like feathers. The word, however, probably signifies all those who work in feathers, as lanarii those who work in wool, and argentarii those who work in silver. Seneca (Ep. 90) speaks of dresses made of the feathers of birds. (Becker, Gallus, vol. i. pp. 44-48.)

PLETEUS, appears to have signified in general any kind of protection or shelter, and was hence used in the following special significations:—1. A kind of shed made of hurdles and covered with raw hides, which could be moved forward by small wheels attached to it, and under which the besiegers of a town made their approaches. (Festus, s. v.; Veget. iv. 15; Liv. xxxiv. 17.) 2. A parapet or breastwork made of boards and similar materials, placed on the valum of a camp, on moveable towers or other military engines, on rafts, the decks of ships, &c. (Plut. Caec. 25, 41, 72, Bell. Circ. i. 25.) 3. The board at the side of a bed. The side at which a person entered the bed was open and called sponda: the other side, which was protected by a board, was called pluteus. (Suet. Cal. 26; Martial. iii. 91.)

PLYNETERIA (πλυντηρία), from πλύνω, to wash, was a festival celebrated at Athens every year, on the 22nd of Thargelion, in honour of Athena, surnamed Aglauros (Phot. Lev. s. v.; Plut. Aesch. 34; Haplograt. Suid. s. v.), whose temple stood on the Acropolis. (Herod. viii. 53; Hesych. s. v. Πλυντηρία.) Plutarch states that the festival took place on the 25th, but probably only because it lasted for several days. (Dodwell, de Cyclop, p. 349; comp. Photol. Mus. ii. p. 234.) The day of this festival was at Athens among the ἀναπόθεσις or δις νεφθῆ; for the temple of the goddess was surrounded by a rope to preclude all communication with it (Pollux, viii. 141); her statue was stripped of its garments and ornaments for the purpose of cleaning them, and was in the meanwhile covered over to conceal it from the sight of man. (Plut. Lec.; Xen. Hellen. i. 4. § 12.) The persons who performed this service were called παραπόθηκες. (Plut. l. c.; Hesych. s. v.) The city was therefore, so to speak, on this day without its protecting divinity, and any undertaking commenced on it was believed to be necessarily unsuccessful. A procession was also held on the day of the Plyneteria, in which a quantity of dried figs, called γλυκύρια, was carried about. (Etymol. Magn.; Hesych. s. v. ἡγκυρία; Phot. Lex. s. v.)

PNYX. [ECCLESIA, p. 440, a.]

POCULUM was any kind of drinking-cup. It must be distinguished from the Crater or vessel in which the wine was mixed [Crater], and from the Cyathus, a kind of ladle or small cup, which was used to convey the wine from the Crater to the Poculum or drinking-cup. [Cyathus.] Thuc. Horace (Carm. iii. 19. 11)—

“tribus aut novem
Miscentur cyathus pocula commodis.”
PODIUM, in architecture, is a continued pedestal, for supporting a row of columns, or for a parapet, or for forming a sort of terrace, as the podium in the theatre and amphitheatre. (Vitruv. iii. 3, v. 7, vii. 4; AMPHITHEATRUM.) [P. S.]

POENA (Greek, ποινή). The Roman sense of this word is explained by Ulpian (Dig. 50. tit. 16. s. 13) at the same time that he explains Fraus and Malta. Fraus is generally an offence, Noxa; and Poena is the punishment of an offence, Noxae vindicta. Poena is a general name for any punishment of any offence: Multa is the penalty of a pecuniary. Ulpian says in his time because by the Law of the Twelve Tables, the Multa was pecunia or a certain number of oxen and sheep. (Plin. xviii. 3; Festus, s. ev. Multam, Peculatia.) [LEX AETERNA TARPEIA.] Ulpian proceeds to say that Poena may affect a person's caput and existimatio, that is, Poena may be loss of citizen ing to circumstances, and its amount was determined by the pleasure of him who imposed it. A Poena was only inflicted when it was imposed by some lex or some other legal authority or penalty might be inflicted. Every person who had jurisdictio (this seems to be the right reading of Ulpian) could impose a multa; and these were magistratus and praesides provinciarum. They also formed part of the functions of the Athenian magistrate of this rank next to the king, when on actual service commanded single morae (Xen. Hell. vii. 173.) They composed part of the king's council in war, and of the royal escort called δωστεία (Xen. Hell. vi. 4. § 14), and were assisted by the managers of the public lands and mines, and also to let the revenues arising from the customs, taxes, confiscations, and forfeitures. Of such letting the word πολεν (not μυστου) was generally used, and also the corrective words άνώτεια and πρίσθα. Their official place of business was called πολεντήριον. One was chosen from each tribe. A chairman presided at their meetings (ἐπιρτάνευε). In the letting of the revenue they were assisted by the managers of the theoric fund (το δεμοσίο), and they acted under the authority of the Senate of Five Hundred, who exercised a general control over the financial department of the administration. Resident aliens, who did not pay their residence-tax (μετοίκιον), were summoned before them, and if found to have committed default, were sold in a room called πολεντήριον το μετοίκιον. (Demost. c. Arisob. 787.) Other persons who had forfeited their freedom to the state were also sold by the πολεντήται, as foreigners who had been convicted of usurping the rights of citizenship. (Harpoc. and Suid. s. ev. Εσωγνικός και μετοίκιος; Pollux, viii. 79; Böhck, Publ. Econ. of Athens, p. 153, 3d ed. Néha, de bon. taxn. p. 41.)

POLITEIA, POLITES (πολιτεία, πολίτης). [CIVITAS (GREEK).]

POLITY (GREEK). [ΠΟΛΙΤΟΦΥΛΑΚΕΣ (πολιτοφύλακες).

TAGUS.

POLITACIES. [POLITACIES, p. 821.]

POLLOCTORES. [FUNUS, p. 528, a.]

POLLUS (πόλος), in astronomy, is a very difficult word to explain in a perfectly satisfactory manner, on account of the various senses in which it is used. In such a case, the only safe guide to the original meaning of a word is to determine, if possible, its sense in the earliest passage in which it occurs, and to compare that sense with what is known of the etymology of the word. Now it is evident that πόλος contains the root ΠΚΛ, which we find in πόλομαι and other words, and the fundamental idea attached to which appears to be that of movement. Then, turning to the Greek authors, we find the word first occurring in the well-known passage in which Aeschylus (Prom. 427) speaks of Athens as supporting on his shoulders the pole of heaven, that is, the vault of the sky, which was called πόλος in accordance with the notion, which prevailed from the time of Thales, that the sky was a hollow sphere, which moved continually round the earth, carrying the heavenly bodies with it. (Comp. Eurip. Or. 1855; Pseudo-Plat. Astron.)
POMERIUM.

The middle of the ir6\os, —

post muros). The original pomerium of Romulus ran, according to Gellius (l. c.), around the foot of the Palatine, but the one which Tacitus (Annal. xii. 24) describes as the pomerium of Romulus comprised a much wider space, and was, as Niebuhr thinks (Hist. of Rom. i. p. 268; compare Bunsen, Beschreibung. d. Stadt Rom, i. p. 138; Sachse, Beschreibung von Rom. i. p. 50), an enlargement of the original compass, taking in a suburb or borough. Niebuhr also believes that pomerium properly denotes a suburb taken into the city. The Romanian pomerium, according to Tacitus, ran from the Forum Boarium (the arch of Septimius Severus) through the valley of the Circus so as to include the ara maxima Herculis; then along the foot of the Palatine to the ara Consi, and thence from the Septizonium to the curiae veteres (a little below the baths of Trajan), along the top of the Velia to the Sacellum Larium, and lastly by the via sacra to the Forum. From the eastern side of the Forum to the Velabrum the pomerium was extended, so that Tacitus does not mention the line of the pomerium here. Servius Tullius again extended the pomerium (Liv. i. 44; Dionys. iv. 13), but the Aventine was not included, either because the auspices here taken by Remus had been unfavourable, or, which is more probable, because there stood on this hill the temple of Diana, the common sanctuary of the Latins and Romans. (Gell. l. c.; Varro, de Ling. Lat. v. 43.) The Aventine did not become included within the pomerium until the
time of the Emperor Claudius. (Gell. l.c.; Tacit. Annal. xii. 23.) Dionysius (l.c.) states that down to his time nobody had extended the pomeronium since the time of King Servius, although we know from authentic sources that at least Augustus enlarged the pomeronium (Bunsen, l.c. p. 139), and the same is said of Sulla and J. Caesar. (Tacit. Annal. l.c.; Gell. l.c.; Fest. s.v. Prosiumium; Cic. ad Att. xiii. 20; Don Cass. xiii. 56, xlv. 48.) The last who extended the pomeronium of Rome was the Emperor Aurelian, after he had enlarged the walls of the city. (Fl. Vopisc. Div. Aurel. 21; comp. Becker, Handbuch der Röm. Alterth. i. p. 92, &c.)

POMPS (πόμπα), a solemn procession, as on the occasion of a funeral, triumph, &c. (Cic. pro Mil. 13; Suet. Jul. Casa. 37, &c.) It is, however, more particularly applied to the grand procession with which the games of the Circus commenced (Pompa Circensia). [CIRCUS.]

PONDERA (σταφυλι). The considerations, which lie at the basis of the subject of weights and measures, both generally, and with special reference to the ancient Greek and Roman systems, have already been mentioned in the introductory part of the article MENSURA. In the present article it is proposed to give a brief general account of the Greek and Roman systems of weights.

1. Early Greek Weights. — It has been already stated, in the article MENSURA, that all the knowledge we have upon the subject goes to prove that, in the Greek and Roman metrical systems, weights preceded measures; that the latter were derived from the former; and both from a system which had prevailed, from a period of unknown antiquity, among the Chaldaeans at Babylon. This system was introduced into Greece, after the epoch of the Homeric poems; for, of the two chief denominations which lie at the basis of the whole subject of weights and measures, which, if not strictly demonstrated, are by the light of the etymological signification of the principal denominations, which, though different at different times and places, and even at the same place for different substances, always bore the same relation to each other. These were the Talent (τάλαντον), which was the largest, then the Mina (μίνα), the Drachma (δραχμή), and the Obol (δόλος).

The two latter terms are, in all probability, genuine Greek words, introduced for the purpose of making convenient subdivisions of the standard, δραχμή signifying a handful, and δόλος being perhaps the same as δόλας, and signifying a small wedge of silver; so that these words again fall under the description of generic terms specifically applied.

These weights were related to one another as follows:—

<table>
<thead>
<tr>
<th>Weight</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Talent</td>
<td>60 Mina</td>
</tr>
<tr>
<td>Mina</td>
<td>100 Obol</td>
</tr>
<tr>
<td>Obol</td>
<td>6 Drachma</td>
</tr>
<tr>
<td>Drachma</td>
<td>6 Talent</td>
</tr>
</tbody>
</table>

2. The Greek System in the Historical Period. — Of course, by the Greek system here meant the system which prevailed throughout Greece in the historical times, and which contained four principal denominations, which, though different at different times and places, and even at the same place for different substances, always bore the same relation to each other. These were the Talent (τάλαντον), which was the largest, then the Mina (μίνα), the Drachma (δραχμή), and the Obol (δόλος). The two latter terms are, in all probability, genuine Greek words, introduced for the purpose of making convenient subdivisions of the standard, δραχμή signifying a handful, and δόλος being perhaps the same as δόλας, and signifying a small wedge of silver; so that these words again fall under the description of generic terms specifically applied.

These weights were related to one another as follows:—

<table>
<thead>
<tr>
<th>Weight</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Talent</td>
<td>60 Mina</td>
</tr>
<tr>
<td>Mina</td>
<td>100 Obol</td>
</tr>
<tr>
<td>Obol</td>
<td>6 Drachma</td>
</tr>
<tr>
<td>Drachma</td>
<td>6 Talent</td>
</tr>
</tbody>
</table>

Their relative values are exhibited more fully in the following table:—

<td>Mina</td>
<td>600</td>
</tr>
<tr>
<td>Talent</td>
<td>36,000</td>
</tr>
</tbody>
</table>

3. Derivation of this System from Babylon. — Now, in this system, the unabbreviated word μινα indicates, as already observed, the source from which the standard was derived. This word is undoubtedly of Semitic origin; and it seems to belong more especially to the Chaldean dialect, in which it signifies number or measure in its widest sense, the proper word for weight being תָּלָנָה or תָּלָנָו. (See Dan. v. 25, 26, where both words occur). In Hebrew it is used as a specific weight, equal to 50 or 60 shekels (1 Kings. x. 17; Ezra, ii. 69; Nehem. vii. 71, 72; Esth. v. 12). The word was also used in Egypt, in the sense of a fluid measure and also of a weight of water. (See Böckh, Metrol. Untersuch. c. i v.) From an examination of several passages of the Greek writers, by the light of the etymological signification of the word μινα, Böckh arrives at the following conclusions, which, if not strictly demonstrated, are established on as strong grounds as we can probably ever hope to obtain in so difficult a subject:—

(1) that in the astronomical observations of the Chaldees and Egyptians, time was measured by the running out of the water through an orifice:—

(2) that the quantity of the water which so ran out was estimated both by measure and by weight:—

(3) that this mode of measuring time led naturally to the determination of a connected system both of weights and measures, the unit of which was the maneh (μινα), which originally signified a definite quantity of water, determined either by weight or measure, and was afterwards used especially in the sense of a definite weight:—

(4) that this system passed from Assyria to Phoenicia, and thence to

* The τ and ι are merely dialect variations.
† Which is the true value is doubtful. Perhaps the two values were used at different places, according to the duodecimal or decimal system prevailed.
the Greeks, who are expressly stated to have derived from Babylon their method of dividing the day and measuring time, and other important usages, and whose most ancient talent (the Aeginetan) was still, in the historical times, identical with the Babylonian.

4. The Babylonian Talent. — The Babylonian talent itself was current in the Persian Empire as the standard weight for silver. Under Dareius the son of Hystaspes, the silver tribute of the provinces was estimated by the Babylonian talent, their coin by the Euboic; and coined silver was also paid from the royal treasury according to the Babylonian talent. (Herod. iii. 89, foll.; Aelian. V. H. i. 22.) Now the two standards here mentioned are connected by Herodotus by the statement that the Babylonian talent is equal to 70 Euboic minae, which, since every talent contained 60 minae, gives 70:60 for the ratio of the Babylonian talent to the Euboic. There are, however, very sufficient reasons for concluding that 70 is here a round number, not an exact one. (See Büchh, c. v.) Pollux gives the same ratio (70:60) for that of the Babylonian to the Attic talent; for he says that the Babylonian talent contained 70 Attic minae and 7000 Attic drachmas (ix. 86); and it is probable that this statement is founded on the testimony of Herodotus, but that Pollux substituted the familiar Attic standard for the less known Euboic, which two standards he knew to have some close connection with each other, and so he fell into the error of making them precisely equal. The same correction must be applied to the testimony of Aelian (l. c.), who makes the Babylonian talent equal to 72 Attic minae; and in this statement, so corrected, we have probably the true ratio of the Babylonian talent to the Euboic, namely 72:60 or 6:5. In such arguments as these, it is extremely important to remember that the evidence is not that of Pollux and Aelian, who are expressly stated to have derived their usages, and whose most ancient talent (the Aeginetan) was still, in the historical times, identical with the Babylonian, and whose nature, or old talent, was equal to 72 Euboic minae. What is meant precisely by the Aeginetan talent was equal to 70 Euboic or 72 Attic minae; and therefore that the ratio of the Euboic talent to the Attic was 72:70. It will presently be shown that this ratio was not 72:70, but 100:72, i.e. 72:51.84.

weights, namely 7, but in 72 (=6 x 12) as well as in 60 (5 x 12) we have the duodecimal computation which we know to have prevailed most extensively in the early metrical systems. The division of the day into 12 hours, which Herodotus expressly ascribes to the Babylonians, is not only a striking example of this, but a fact peculiarly important in connection with the idea that the measurement of time by water led to the invention of the Babylonian system of weights. It is also important to observe that these two ancient systems, the Babylonian and the Euboic, differ from one another in a proportion which is expressed by multiplying 12 by the numbers which form the bases of the decimal and duodecimal systems respectively, namely, 6 and 5. In connection with this fact, it is interesting to observe that the Hebrew talent, which was no doubt essentially the same as the Babylonian, is made, by different computations, to consist of 60 or 50 maneh.

Indeed, the whole of the Hebrew system throws important light on that of the Babylonian, and on its connection with the Greek. The outline of this system is as follows:

<table>
<thead>
<tr>
<th>Gera</th>
<th>Bekah</th>
<th>Shekel</th>
<th>Maneh</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>2</td>
<td>50</td>
<td>60</td>
</tr>
</tbody>
</table>

where the principal unit is the Shekel, which can be identified with the principal unit of the old Greek system (in its chief application to coined money), namely, the didrachm or old stater. Hence we have the

Kikkar equivalent to the talent
Manch " mina
Shekel " didrachm or stater
Bekah " drachma.

To this part of the subject, which we have not space to pursue further, Büchh devotes a long and elaborate chapter (c. vi. Ἱστορίας, Πλούσιος, und Syrisches Gewiind und Geld).

5. The Aeginetan Talent. — Returning to the connection between the Babylonian and the Greek talent, we have seen that the Babylonian talent contained 72 Euboic minae. It will presently appear that the Euboic talent and mina were the same as the great Attic talent and mina, which were in use before the reduction effected in them by Solon; and further that the nature of that reduction was such that the Old Attic (Euboic) talent was equivalent to 8333/4 New Attic (Solonian) drachmae, and the Euboic mina to 1384/5 Solonian drachmae. Now the Babylonian talent contained 72 Euboic minae, that is (1384/5 x 72) 10,000 Solonian drachmae. But 10,000 Solonian drachmae were equivalent to an Aeginetan talent. (Pollux, ix. 76, 86; comp. Nummus, p. 810, a.) Therefore, the Aeginetan Talent was equivalent to the Babylonian. What is meant precisely by the Aeginetan talent, and how this talent was established in Greece by the legislation of Pheidon, has already been explained under Nummus. The only step remaining is to complete the exposition of the outline of the sub-
ject is the obvious remark that Pheidon must have arranged his standard of weights by that which had already been introduced into Greece by the commerce of the Phoenicians, namely, the Babylonian.

The Euboic Talent.—In the foregoing remarks, the Euboic talent has been continually referred to as a standard with which to compare the Babylonian. We have now to investigate independently its origin and value. The name Euboic, like the name Aeginetan, is calculated to mislead, as we see in the absurd explanations by which some of the grammarians attempt to account for its origin. (See Nummus, p. 819.) That the name comes from the island of Euboea, and that the Euboic standard was not only used there, but was widely diffused thence by the Chal- cidian colonies, admits of no reasonable doubt; but it is not very probable that the standard originated there. The most important testimony respecting it is the statement already quoted, that Dareius reckoned the gold tribute of his satrapies in Euboic talents. (Herod. iii. 89, 95.) Böckh (c. viii.) thinks it incredible that the Persian king should have made use of a Greek standard; and, before him, the best of all the writers on metrology, Raper, had acknowledged the Oriental origin of the standard. (Philos. Trans. vol. lxi. p. 486.) The curious numerical relation already noticed between the Babylonian and Euboic scales; which suggests the idea that the minae of the two scales may have been derived from the subdivision of the same primary unit, in the one, into parts both decimal and duodecimal, that is, sexagesimal (60), in the other, into parts purely duodecimal (72); and then, for the sake of uniformity, a talent of the latter scale was introduced, containing, like the other, minae. In this case it may, it can be affirmed with tolerable safety that the Euboic talent is derived from a standard of weight used for gold, which existed in the East, in the earliest historical period, by the side of the Babylonian standard, which was used chiefly for silver: that, at an early period, it was introduced by commerce into Euboea, from which island it derived the name by which it was known to the Greeks, on account of its diffusion by the commercial activity of the Euboceans, just as the Babylonian standard obtained its Greek name from the commercial activity of the Aeginetans. (Comp. Nummus, i.e.)

The examination of the testimonies respecting the value of this standard involves a discussion too intricate to be entered upon here, although it is one of the most interesting points of the whole subject. We must be content to refer the reader to the masterly argument of Böckh (c. viii.), who comes to the following conclusions: — that the Euboic standard was not, as some have thought, the same as the Aeginetan; nor the same, or but slightly different from, the Solonian Attic; but the same as the old (ante-Solonian) Attic: that its true ratio to the Babylonian, or Aeginetan, was that given in round numbers by Herodotus, as 60 : 70, and in exact numbers by Aelian (who by Attic means old Attic) as 60 : 72; that is, 5 : 6; and that its ratio to the Solonian was, as will presently be shown, 25 : 18. These views are confirmed, not only by the consistency of the results to which they lead, but by the decisive evidence of the existing coins of the Euboic standard. [Nummus.]

These two standards form the foundation of the whole system of Greek weights. But the second received an important modification by the legislation of Solon; and this modification became, under the name of the Attic silver talent, the chief standard of weight throughout the East of Europe, and the West of Asia. We proceed to notice both of the Attic standards.

7. The Old Attic Talent, and the Solonian Talent.—We have already noticed, under Nummus (p. 812, b.), Plutarch's account of the reduction effected by Solon in the Attic system of weights and money, according to which the old weights were to the new in the proportion of 100 : 73. An important additional light is thrown on this matter by an extant Athenian inscription, from which we obtain an exact statement of the ratio than in Plutarch's account, and from which we also learn that the old system continued in use, long after the Solonian reduction, for all commodities, except such as were required by law to be weighed according to the other standard, which was also the one always used for money, and is therefore called the silver standard, the old system being called the commercial standard, and its mina the commercial mina (μακεν ἢ εἰσίφων). The inscription, which is a decree of uncertain date (about Ol. 155, c. 160, according to Böckh, C. I. No. 125, § 4, vol. i. p. 164), mentions the Attic talent weighing "138 drachmae ἀργυρον, according to the standard weights in the mint" [Ἀργυροκρόσιον], that is, of course, 138 drachmae of the silver, or Solonian, standard. This would give the ratio of the old to the new Attic weights as 138 : 100, or 100 : 72%°, certainly a very curious proportion. It appears, however, on closer research, that this ratio is still not quite exact. It often happens that, in some obscure passage of a grammarian, we find a statement involving minute details, so curious and so inexplicable, till the clue is found, that the few scholars who notice the passage reject it as unintelligible, without considering that those strange minutiae are the best evidence that the statement is no invention; and that the grammarian, who copied the statement, without troubling himself to understand it, has preserved a fact, which more systematic writers have lost or perverted. Such passages are grains of pure gold amidst the mud which forms the bulk of the deposit brought down to us by those writers. A striking instance is now before us, in a passage of Priscian (De Re Numm.,) in which, following a certain Dardanus, he says: "Talentum Atheniense partem minae sexaginta, magnum minae octingenta tres et unciae quattuor." Taking the last words to be the Roman mode of expressing 83½, and assuming, what is obvious, that the minae meant in the two clauses are of the same standard, namely, the common Attic or Solonian (for, as a general rule, this standard is to be understood, where no other is specified), and understanding by the great Attic talent that of the commercial standard, and by the small, the silver, or Solonian, we obtain this result, — that the ratio of the old Attic or commercial talent to the new Attic or Solonian, was as 83½ : 60, or as 138% : 100, or as 100 : 72. For the masterly argument by which Böckh sustains the truth of this statement, we must refer to his own work (c. viii.). It is easy to understand how, in process of time, the fraction came to be neglected, so that, in the decree quoted, the commercial mina of 100
commercial drachmae was spoken of as containing 138 silver drachmae instead of 138½, and how, further, when Plutarch came to calculate how many drachmae of the old scale were contained in the Solonian mina, he gave an integral number 73, instead of 72½, and thus, by these two rejections of fractions, the true ratio of 100 : 72 was altered to 100 : 73.*

8. *Ratios of the three Greek Systems to each other.*

The importance of this calculation is made manifest, and its truth is confirmed, by comparing the result with the statements which we have of the ratio of the Aeginetan standard to the Solonian. That ratio was 5 : 3, according to the statement of Pollux, that the Aeginetan talent contained 10,000 drachmae, and the drachma 10 Attic obols. (Poll. ix. 76, 86.) Mr. Hussey (who was the first, and, after the reply of Böckh, ought to be the last, to call this statement in question) observes that this value would give an Aeginetan drachma of 110 grains, whereas the existing coins give an average of only 96; and he explains the statement of Pollux as referring not to the Attic silver drachmae of the full weight, but to the lighter drachma which was current in and after the reign of Augustus, and which was about equal to the Roman denarius. [Drachma.]

On the other hand, Böckh adheres to the proportion of 5 : 3, as given by Pollux, who could not (he contends) have meant by drachmae those equal to the denarius, because he is not making a calculation of his own, suited to the value of the drachma in his time, but repeating the statement of some ancient writer who lived when the Attic and Aeginetan currencies were in their best condition. Mr. Hussey himself states (p. 84), and for a similar reason to that urged by Böckh, that when Pollux speaks of the value of the Babylonian money was actually lighter than the proper standard, while the Attic at the same period was very little below the full weight.

From comparing statements made respecting the pay of soldiers, Hussey (p. 61) obtains 4 : 3 as the result of the whole investigation, we get the following definite ratios between the three chief systems of Greek weights:

<table>

9. Other Greek Systems.—Our information respecting the other standards used in Greece and the neighbouring countries is very scanty and confused. Respecting the Egyptian, Alexandrian, or Ptolemaic Talent, the reader is referred to Böckh, c. x. The Tyrian Talent appears to have been exactly equal to the Attic. A Rhodian Talent is mentioned by Festus in a passage which is manifestly corrupt (s. v. Talentum). The most probable emendation of the passage gives 4000 cistophori or 7500 denarii as the value of this talent. A Syrian Talent is mentioned, the value of which is very uncertain. There were two sizes of it. The larger, which was six times that used for money, was used at Antioch for weighing wood. A Cilician Talent of 3000 drachmae, or half the Attic, is mentioned by Pollux (ix. 6).

A much smaller talent was in use for gold. It was equal to 6 Attic drachmae, or about ½ oz. It
PONDERA.

was called the gold talent, or the Sicilian talent from its being much used by the Greeks of Italy and Sicily. This talent is perhaps connected with the small talent which is the only one that occurs in Homer. The Italian Greeks divided it into 24 nummi, and afterwards into 12 (Pollux, ix. 6 ; Festus, s. v. Talentum). [Compare NUMMUS, p. 814.]

This small talent explains the use of the term great talent (magnum talentum), which we find in Latin authors, for the silver Attic talent was great in comparison with this. But the use of the term by the Romans is altogether very inexact; and in some cases, where they follow old Greek writers, they use it to signify the old Attic or Euboic Talent.

There are other talents barely mentioned by ancient writers. Hesychius (s. v.) mentions one of 100 pounds (Λίτρον), Vitruvius (x. 21) one of 120 ; Suidas (s. v.), Hesychius, and Epiphanius (de Mon. et Pond.) of 125 ; Dionysius of Halicarnassus (ix. 27) one of 125 asses, and Hesychius three of 165, 400, and 1125 pounds respectively.

Where talent appears without any specification of the standard, we must generally understand the Attic. Hesychius (s. v. Talentum) says of the weight of the small talent which is the only one that occurs in Homer, that its weight, though originally a pound, was relied on than any other by most modern writers.

The outline of the Roman weights here is the same as the ancient system of copper money, has been recently examined. In 1630, Auzout found it to contain 5203'76 grains. Hence the pound will be 288 x 17^2 = 5040 grains, as before. The next aurei coined were, according to Pliny, 40 to the pound, and therefore, if the above calculation be right, = 126 grains; and we do find many of this weight. But, as well as these results hang together, there is great doubt of their truth.

For, besides the uncertainty which always attends the process of calculating a larger quantity from a smaller on account of the multiplication of a small error, we have every reason to believe that the existing coins do not come up to their nominal weight, for there was an early tendency in the Roman mint to make money below weight (Plin. H. N. xxxiii. 13. 846; compare As, AURUM, DENARIUS), and we have no proof that any extant coins belonged to the very earliest coinage, and therefore no security that they may not have been depreciated. In fact, there are many specimens of the denarius extant, which weigh more than the above average of 60 grains. It is therefore probable that the weight of 5040 grains, obtained from this source, is too little. Hence, Wurm and Böckh, who also follow the coins, give it a somewhat higher than the former making it 5053'633 grains, and the latter 5053'28. (Hussey, c. 9 ; Wurm, c. 2 ; Böckh, c. 11. (2) Another mode of determining the pound is from the relation between the Roman weights and measures. The chief measures which aid us in this inquiry are the amphora or quadrantal, and the congus. The solid content of the amphora was equal to that of a cube, of which the side was one Roman foot, and the weight of water it contained was 80 pounds. [QUADRANTAL.] Hence, if we can ascertain the length of the Roman foot independently, it will give us the solid content of the amphora, from which we can deduce the weight of the Roman pound. Taking the Roman foot at 11'65 inches, its cube is 1581'167 cubic inches = 57025 imperial gallons = 57'023 pounds avoirdupois, the 80th part of which is =7128 of a pound, or 4989 grains. But there are many disturbing elements in this calculation, of which the chief is our ignorance of the precise density of the fluid, 80 pounds of which filled the amphora.

It might, at first thought, appear that the result might be obtained by taking the cubic content of the amphora, from the conus of Vespasian, which professes to hold 10 Roman pounds [CONGIUS], and the content of which has been twice examined. In 1630, Auzout found it to contain 51463'2 grains of distilled water, which would give 51'463'2 grains for the Roman pound. In 1721, Dr. Hase found it to contain 52037'69 grains, giving 52037'77 grains for the Roman pound. Both these results are probably too high, on account of the enlargement which the vessel has undergone by the corrosion of its inner surface ; and this view is confirmed by the fact, that the earlier of the two experiments gave it the smaller content. (See Wurm, p. 78 ; Böckh, pp. 166, 167.) Again, the nature of the fluid employed in the experiment, its temperature, and the height of the barometer, would all influence the result, and the error from these sources must occur twice, namely, at the original making of the conus and at the recent weighing of its contents. We can, therefore, by no means agree with Mr. Hussey in taking the weight of 5204 grains, as obtained from this experiment, to be the nearest approximation to the weight of the Roman pound. On the contrary, if this method were followed at all, we
should be compelled to prefer the theoretical calculation from the quadrantal already given, and to say that the value of 5053:28 (or 5053:635) grains, obtained from the coins is too high, rather than too low.  

(3) Another method is from existing Roman weights, of which we possess many, but differing so greatly among themselves, that they can give no safe independent result, and their examination is little more than a matter of curiosity. A full account of them will be found in Böckh, pp. 108—196. 

(4) The determination of the Roman pound from its ratio to the Attic talent, namely, as 1 : 80 (see Böckh, c. 9) is not to be much relied on; since we do not know whether that ratio was exact, or only approximate. 

On the whole, the result obtained from the coins is probably nearest to the truth.

12. Connection between Weights and Measures. — Upon the interesting, but very difficult, subjects of the connection of the Greek and Roman weights with one another, and of both with the Greek measures, our space does not permit us to add anything to the passages quoted from Böckh and Grote under the number 754; and to what is said under Quadrantal.

13. Authorities. — The following are the chief authorities on the subject of ancient weights, money, and measures.

i. Ancient Authorities. — In addition to the classic writers in general, especially the historians and geographers, (1) the Ancient Grammarians and lexicographers contain many scattered notices, some of which are preserved from the last metrological treatises of Dardanus, Diodorus, Polyenmus, and others. (2) We possess a number of small metrological treatises, which are printed in the fifth volume of Stephanus's Thesaurus Linguae Graecae, and with the works of Gellen, vol. xix. ed. Kühn. The most important of them are, that ascribed to Dioscorides, the piece entitled peri μέτρων δόγμων, and the extract from the Κοσμηματικά of Cleopatra. Besides these, we have a good treatise on the subject, printed in the Benedicinæ Analecta Graeca, pp. 393, foll., and in Montfaucon's Palæographie Graeca, pp. 369, foll.; (two works, of but little value, ascribed to Epiphanius, entitled peri μέτρων καὶ πάντων and peri πάντων μέτρων, printed in the Varia Sacra of Steph. Le Moyne, vol. i. pp. 470, foll.; — various writings of Heron (see Dict. of Bieg. s. v.; — and a treatise by Didymus of Alexandria, μέτρα μαρμάρων καὶ παντολειών ἔξω, published by Angelo Mai from a MS. in the Ambrosian Library at Milan, 1817, 8vo. Certain difficulties respecting the authorship of some of these works are discussed by Böckh, c. 2. In Latin, we have two works by Priscian; the one in prose, entitled, De Figuris et Numeris Numeralibus et De Numeris de Ponderibus ad Syammaconum Liber; the other is the poem De Ponderibus et Mensuris, in 208 hexameter verses, which is commonly ascribed to Rhennius Fannius, and which is printed in Weinersdorff's Poetae Latinii Minores, vol. v. pt. 1. pp. 212, foll., and in Weber's Corpus Poetarum Latinorum, pp. 1369, 1370. The statements of all these metrological writers must be used with great caution on account of their late age. (3) The chief Existing Monuments such as buildings, measures, vessels, weights, and coins, have been mentioned in the articles MENSURA, and NUMMUS. Further information respecting them will be found in Böckh. 

ii. Modern Works: see the list given at the end of the article NUMMUS. The present position of our knowledge is marked by the work of Böckh, so often referred to, with Mr. Grote's review of it. There is no satisfactory English work on the subject. The best, so far as it goes, is the treatise of Raper, in the Philosophical Transactions, vol. xi. Mr. Hussey's work is very useful, but its value is much impaired by the want of more of that criticism, at once ingenious and sound, which has guided Böckh to so many new and firm results amidst intricacies which were before deemed hopeless.

For a general view of the value of the several weights, measures, and money in terms of our own, see the Tables at the end of this work. [P. S.] PONDO. [LIBRA.] PONS (γέφυρα), a bridge. The most ancient bridge upon record, of which the construction has been described, is the one erected by Nitosidis over the Euphrates at Babylon. (Herod. i. 186.) It was in the nature of a drawbridge; and consisted merely of stone piers without arches, but connected with one another by a framework of planking, which was removed at night to prevent the inhabitants from passing over from the different sides of the river to commit mutual depredations. 

The stones were fastened together by iron cramps soldered with lead; and the piers were built whilst the bed of the river was free from water, its course having been diverted into a large lake, which was again restored to the usual channel when the work had been completed. (Herod. i. c.) Compare the description given by Diodorus Siculus (ii. 8, vol. i. p. 121, ed. Wesseling), who ascribes the work to Semiramus.

Temporary bridges constructed upon boats, called σχέδαι (Heavch. s. c.; Herod. vii. 36; Aesch. Pers. 69, ed. Blond., ed. Gloss.), were also of very early invention. Dareius is mentioned as having thrown a bridge of this kind over the Thracian Bosorus (Herod. iv. 83, 85); but we have no details respecting it, beyond the name of its architect, Mandrocles of Samos. (Herod. iv. 87, 88.) The one constructed by order of Xerxes across the Hellespont is more celebrated, and has been minutely described by Herodotus (vii. 36). It was built at the place where the Chersonese forms almost a right angle, between the towns of Sestos and Madytus on the one side, and Abydos on the other. The first bridge, which was constructed at this spot, was washed away by a storm almost immediately after it was completed (Herod. vii. 34), and of this no details are given. The subsequent one was executed under the directions of a different set of architects. (Ed. 36.) Both of them appear to have pertaken of the nature of suspension bridges, the platform which formed the passage-way being secured upon enormous cables formed by ropes of flax (λευκόλων) and papyrus (βυθιλων) twisted together, and then stretched tight by means of windlasses (ήνωτο) on each side.

The bridges hitherto mentioned cannot be strictly denominated Greek, although the architects by whom the two last were constructed were natives of the Greek islands. But the frequent mention of the word in Homer proves that bridges were not uncommon in the Greek states, or at least in the western part of Asia Minor, during his time.
for by this means the openings between the piers by which they were enabled to erect structures known from the well-known feat of Horatius vi. 5. § 22).

sponded with the road because it was built of wood;

most ancient, was the PONS SUBLICIUS, so called in the lan

Grut.

p. 160. n.l.)

III. IV. PONS FABRICIUS and PONS CESTIUS were the two which connected the Insula Tiberina with the opposite sides of the river; the first with the city, and the latter with the Janiculum. Both are still remaining. The pons Fabricius was originally of wood, but was rebuilt by L. Fabricius, the curator viarum, as the inscription testifies, a short time previous to the consipriy of Catiline (Dion Cass. xxxvii. p. 50); which passage of Dion Cassius, as well as the words of the Scholiast on Horace (Sat. ii. 3. 36), warrant the assumption that it was then first built of stone. It is now called “Ponte quattro capi.” The pons Cestius is, by some authors, supposed to have been built during the reign of Tiberius by Cestius Gallus, the person mentioned by Pliny (x. 60; Tacit. Ann. vi. 31), though it is more reasonable to conclude that it was constructed before the termination of the republic, as no private individual would have been permitted to give his own name to a public work under the empire. (Nardini, l. c.) The inscriptions now remaining are in commemoration of Valentinianus, Valens, and Gratianus, the emperors by whom it was restored. Both these bridges are represented in the following woodcut: that on the right is the pons Fabricius, and is curious as being one of the very few remaining works which bear a date during the republic; the pons Cestius on the left represents the efforts of a much later age; and, instead of the buildings now seen upon the island, the temples which originally stood there, as well as the island itself, have been restored.

The Greek term for a permanent bridge is γέφυρα, which the ancient etymologists connected with the Gephyrai (Γεφυραῖοι), a people whom Herodotus (v. 57) states to have been Phoenicians, though they pretended to have come from Eretria; and the etymologists accordingly tell us that the first bridge in Greece was built by this people across the Cephissus; but such an explanation is opposed to sound etymology and common sense. As the rivers of Greece were small, and the use of the arch known to them only to a limited extent [Arcus], it is probable that their bridges were built entirely of wood, or, at best, were nothing more than a wooden platform supported upon stone piers at each extremity, like that of Nitocris described above. Pliny (H. N. iv. 1) mentions a bridge over the Acheron 1000 feet in length; and also says (iv. 21) that the island Euboea was joined to Boeotia by a bridge; but it is probable that both these works were executed after the Roman conquest.

In Greece also, as well as in Italy, the term bridge was used to signify a roadway raised upon piers or arches to connect the opposite sides of a ravine, even where no water flowed through it (τὴν γέφυραν, ἐν τῷ τῇ γέφυρῃ ἦν, Xen. Anab. vi. 5. § 22).

The Romans were undoubtedly the first people who applied the arch to the construction of bridges, by which they were enabled to erect structures of great beauty and solidity, as well as utility; for by this means the openings between the piers for the convenience of navigation, which in the bridges of Babylon and Greece must have been very narrow, could be extended to any necessary span.

The width of the passage-way in a Roman bridge was commonly narrow, as compared with modern structures of the same kind, and corresponded with the road (via) leading to and from it. It was divided into three parts. The centre one, for horses and carriages, was denominated upper or iter; and the raised footpaths on each side (decuria), which were enclosed by papyrus walls similar in use and appearance to the pilae in the basilica. [BASILICA, p. 199, b.]

Eight bridges on the Tiber are enumerated by P. Victor as belonging to the city of Rome. I. Of these the most celebrated, as well as the most ancient, was the PONS SUBLICIUS, so called because it was built of wood; subiciae, in the language of the Formiani, meaning wooden beams. (Festus, s. v. Subicium.) It was built by Ancus Martius, when he united the Janiculum to the city (Liv. i. 33; Dionys. iii. p. 183), and became renowned from the well-known feat of Horatius (Sat. vi. 5. § 22).

If we learn from P. Victor, in his description of the Regio xi., that these two bridges were one and the same—“Aemilius qui ante sublicius.” It is called Aemilian by Juvenal (Sat. vi. 32) and Lampadius (Heliog. c. 17), but it is mentioned by Capitolinus (Ant. iv. 8) as the pons Subliciun; which passage is alone sufficient to refute the assertion of some writers that it was built of stone at the period when the name of Aemilius was given to it. (Nardini, Rom. Ant. viii. 2.)

This bridge was a favourite resort for beggars, who used to sit upon it and demand alms. (Senec. De Vit. Infect. 25.) Hence the expression of Juvenal (xiv. 134), alias ponte deo, for a beggar. (Compare also Juv. iv. 116.)

It was situated at the foot of the Aventine, and was the bridge over which C. Gracchus directed his flight when he was overtaken by his opponents. (Plut. Gracch. p. 842, c.; compare Val. Max. iv. 7. § 2; Ovid. Fast. vi. 477.)

II. PONS PALATINUS formed the communication between the Palatine and its vicinities and the Janiculum, and stood at the spot now occupied by the “ponte Rotto.” It is thought that the words of Livy (xl. 51) have reference to this bridge.

It was repaired by Augustus. (Inscr. ap. Grut. p. 160. n. 1.)

III. IV. PONS FABRICIUS and PONS CESTIUS were the two which connected the Insula Tiberina with the opposite sides of the river; the first with the city, and the latter with the Janiculum. Both are still remaining. The pons Fabricius was originally of wood, but was rebuilt by L. Fabricius, the curator viarum, as the inscription testifies, a short time previous to the conspiracy of Catiline (Dion Cass. xxxvii. p. 50); which passage of Dion Cassius, as well as the words of the Scholiast on Horace (Sat. ii. 3. 36), warrant the assumption that it was then first built of stone. It is now called “Ponte quattro capi.” The pons Cestius is, by some authors, supposed to have been built during the reign of Tiberius by Cestius Gallus, the person mentioned by Pliny (x. 60; Tacit. Ann. vi. 31), though it is more reasonable to conclude that it was constructed before the termination of the republic, as no private individual would have been permitted to give his own name to a public work under the empire. (Nardini, l. c.) The inscriptions now remaining are in commemoration of Valentinianus, Valens, and Gratianus, the emperors by whom it was restored. Both these bridges are represented in the following woodcut: that on the right hand is the pons Fabricius, and is curious as being one of the very few remaining works which bear a date during the republic; the pons Cestius on the left represents the efforts of a much later age; and, instead of the buildings now seen upon the island, the temples which originally stood there, as well as the island itself, have been restored.
V. Pons Janiculensis, which led direct to the Janiculum. The name of its founder and the period of its construction are unknown; but it occupied the site of the present "ponte Sisto," which was built by Sixtus IV. upon the ruins of the old bridge.

VI. Pons Vaticanus, so called because it formed the communication between the Campus Martius and Campus Vaticanus. When the waters of the Tiber are very low, vestiges of the piers are still discernible at the back of the Hospital of San Spirito. By modern topographists this bridge is often called "Pons Triumphalis," but without any classical authority; the inference, however, is not improbable, because it led directly from the Campus to the Clivus Cinnae (now Monte Mario), from which the triumphal processions descended.

VII. Pons Aelius, built by Hadrian, which led from the city to the Mausoleum of that emperor, now the bridge and castle of St. Angelo. (Spart. Hadr. c. 19; Dion Cass. Ixix. p. 797, e.) A representation of this bridge is given in the following woodcut, taken from a medal still extant. It affords a specimen of the style employed at the period when the fine arts are considered to have been at their greatest perfection at Rome.

VIII. Pons Milvius, on the Via Flaminia, now ponte Molle, was built by Aemilius Scaurus the censor (Aur. Vict. De Viris Illustr. c. 27. § 8), and is mentioned by Cicero about forty-five years after its formation. Upon this bridge the ambassadors of the Allobroges were arrested by Cicero's retainers during the conspiracy of Catiline. (Cic. in Cat. iii. 2.) Catulus and Pompey encamped here against Lepidus when he attempted to annul the acts of Sulla. (Florus, iii. 23.) Its vicinity was a favourite place of resort for pleasure and debauchery in the licentious reign of Nero. (Tacit. Ann. xii. 47.) And finally, it was at this spot that the battle between Maxentius and Constantine, which decided the fate of the Roman empire, took place. (A. D. 312.)

The Roman bridges without the city were far too many to be enumerated here. They formed one of the chief embellishments in all the public roads; and their numerous and stupendous remains, still existing in Italy, Portugal, and Spain, attest, even to the present day, the scale of grandeur with which their works of national utility were always carried on. Subjoined is a representation of the bridge at Ariminum (Rimini), which remains entire; it was commenced by Augustus and terminated by Tiberius, as we learn from the inscription, which is still extant. It is introduced in order to give the reader an idea of the style of art during the age of Vitruvius, that peculiar period of transition between the austere simplicity of the republic and the profuse magnificence of the empire.

The bridge thrown across the bay of Baiae by Caligula (Dion Cass. lix. p. 652, e; Suet. Cal. 19), the useless undertaking of a profligate prince, does not require any further notice; but the bridge
which Trajan built across the Danube, which is one of the greatest efforts of human ingenuity, must not pass unmentioned. A full account of its construction is given by Dion Cassius (Ixviii. p. 776, u.); and it is also mentioned by the younger Pliny (Ep. viii. 4; compare Procopius, De Aedificiis). The form of it is given in the annexed woodcut, from a representation of it on the column of Trajan at Rome; which has given rise to much controversy, as it does not agree in many respects with the description of Dion Cassius. The inscription, supposed to have belonged to this bridge, is quoted by Leunclav. p. 1041. 6, and by Gruter, 448. 3.

It will be observed that the piers only are of stone, and the superstructure of wood. The Conte Marsigli, in a letter to Montfaucon (Giornale de' Letterati d'Italia, vol. xxii. p. 116), gives the probable measurements of this structure, from observations made upon the spot, which will serve as a faithful commentary upon the text of Dion. He considers that the whole line consisted of 23 piers and 22 arches (making the whole bridge about 3010 feet long, and 48 in height), which are much more than the number displayed upon the column. But this is easily accounted for without impairing the authority of the artist's work. A few arches were sufficient to show the general features of the bridge, without continuing the monotonous uniformity of the whole line, which would have produced an effect ill adapted to the purposes of sculpture. It was destroyed by Hadrian (Dion Cass. /. c.), under the pretence that it would facilitate the incursions of the barbarians into the Roman territories, but in reality, it is said, from jealousy and despair of being able himself to accomplish any equally great undertaking; which is supposed to be confirmed by the fact that he afterwards put to death the architect, Artemidorus, under whose directions it was constructed.

When the Comitia were held, the voters, in order to reach the enclosure called septum and ovile, passed over a wooden platform, elevated above the ground, which was called pons suffragiornum, in order that they might be able to give their votes without confusion or collusion.

Pons is also used to signify the platform (ἔστασις, ἀνάστασις) used for embarking in or disembarking from, a ship.

The method of using these pontes is represented in the annexed woodcut, taken from a very curious intaglio representing the history of the Trojan war, discovered at Bovillae towards the latter end of the 17th century; which is given by Fabretti, Syntagma de Column. Trajani, p. 315. (See further, Hirt, Lehre der Gebäude, § x.) [A. R.]
possible to perform sacrifices on each side of the Tiber. (Varro, de Ling. Lat. v. 83, ed. Müller; Dionysius. ii. 73.) This statement is, however, contradicted by the tradition which ascribes the building of the pons sublicius to Ancus Martius (Livy. i. 33), at a time when the pontiffs had long existed and borne this name. Götting (Gesch. d. Röm. Staatsv. p. 173) thinks that pontifex is only another form for pompifex, which would characterise the pontiffs only as the managers and conductors of public processions and solemnities. But it seems far more probable that the word is formed from ponts and ἀρχεῖα (the original of the Greek ἄρχειν, to perform a sacrifice), and that consequently it signifies the priests who offered sacrifices upon the bridge. The ancient sacrifice to which the name thus alludes, is that of the Argeans on the sacred or sublician bridge, which is described by Dionysius (i. 38; compare Argei). Greek writers, moreover, sometimes translate the word pontiffs by γεροφόροι.

The Roman pontiffs formed the most illustrious among the great colleges of priests. Their institution, like that of all important matters of religion, was ascribed to Numa. (Livy. i. 20; Dionysius. ii. 73.) The number of pontiffs appointed by this king was four (Livy. x. 6), and at their head was the pontifex maximus, who generally not included when the number of pontiffs is mentioned. Cicero (de Re Publ. ii. 14), however, includes the pontifex maximus when he says that Numa appointed five pontiffs. Niebuhr (Hist. of Rome, i. p. 392, &c.; compare iii. p. 410; Liv. x. 6; Cic. de Re Publ. ii. 9) supposes with great probability, that the original number of 5 pontiffs (not including the pontifex maximus) had reference to the two earliest tribes of the Romans, the Ramnes and Tities, so that each tribe was represented by two pontiffs. In the year a.c. 300, the Ogulnian law raised the number of pontiffs to eight, or, including the pontifex maximus, to nine, and four of them were to be plebeians. (Livy. x. 6.) The pontifex maximus, however, continued to be a patrician down to the year a.c. 254, when Tib. Coruncaninus was the first plebeian who was invested with this dignity. (Livy. Epit. 18.) This number of pontiffs remained for a long time unaltered, until in 81 a.c. the dictator Sulla increased it to fifteen (Livy. Epit. 89), and J. Caesar to sixteen. (Dion Cass. xiii. 51.) In both these changes the pontifex maximus is included in the number. During the empire the number varied, though on the whole fifteen appears to have been the regular number.

The mode of appointing the pontiffs was also different at different times. It appears that after their institution by Numa, the college had the right of co-optation, that is, the members of the college died (for all the pontiffs held their office for life), the members met and elected a successor, who after his election was inaugurated by the augurs. (Dionysius. ii. 22, 73.) This election was sometimes called captio. (Gellius, i. 12.) In the year 212 a.c. Livy (xxv. 5) speaks of the election of a pontifex maximus in the comitia (probably the comitia tributa) as the ordinary mode of appointing this high-priest. But in relating the events of the year 181 a.c. he again states that the appointment of the chief pontiff took place by the co-optation of the college. (Hist. xii. 42.) How these anomalies arose (unless Livy expresses himself carelessly) is uncertain (see Götting, l. c. p. 375); for, as far as we know, the first attempt to deprive the college of its right of co-optation, and to transfer the power of election to the people, was not made until the year b. c. 145, by the tribune C. Licinius Crassus; but it was frustrated by the praetor C. Lælius. (Cic. de Am. 25, Brut. 21, de Nat. Deor. iii. 2.) In 104 b.c. the attempt was successfully repeated by the tribune Cn. Domitian Ahenobarbus: and a law (Lex Domitia) was then passed, which transferred the right of electing the members of the great colleges of priests to the people (probably in the comitia tributa); that is, the people elected the candidate, who was then elected a member of the college by the co-optatio of the priests themselves, so that the co-optatio, although still necessary, became a mere matter of form. (Cic. de Leg. Agr. ii. 7, Epist. ad Brut. i. 5; Vell. Pat. ii. 12; Sueton. Nero, 2.) The lex Domitia was repealed by Sulla in a lex Cornelia de Sacerdotis (81 b. c.), which restored to the great priestly colleges their full right of co-optatio. (Livy. Epit. 89; Pseudo-Ascon. in De civ. lib. 102, ed. Orelli; Dion Cass. xxxvii. 37.) In the year 83 b. c. the law of Sulla was found defective, and an attempt was restored, but not in its full extent; for it was now determined, that in case of a vacancy the college itself should nominate two candidates, and the people elect one of them. This mode of proceeding is expressly mentioned in regard to the appointment of augurs, and was, no doubt, the same in that of the pontiffs. (Cic. Phil. ii. 2.) Julius Caesar did not alter this modified lex Domitia, but M. Antonius again restored the right of co-optatio to the college. (Dion Cass. xlv. 53.)

The college of pontiffs had the supreme superintendence of all matters of religion, and of things and persons connected with public as well as private worship. A general outline of their rights and functions is given by Livy (i. 20) and Dionysius (ii. 73). This power is said to have been given to them by Numa; and he also entrusted to their keeping the books containing the ritual ordinances, together with the obligation to give information to any one who might consult them on matters of religion. They had to guard against any irregularity in the observance of religious rites that might spring from a neglect of ancient customs, or from the introduction of foreign rites. They had not only to determine in what manner the heavenly gods should be worshipped, but also the proper form of burials, and how the souls of the departed (manes) were to be appeased; in like manner what signs either in lightning or other phenomena were to be received and attended to. They had the judicial decision in all matters of religion, whether private persons, magistrates, or priests were concerned, and in cases where the existing laws or customs were found defective or insufficient, they made new laws and regulations (decreta pontificum) in which they always followed their own judgment as to what was consistent with the existing customs and usages. (Gell. ii. 28, x. 15.) They watched over the conduct of all persons who had anything to do with the sacrifice or the worship of the gods, that is, over all the priests and their servants. The forms of worship and of sacrificial duties were determined by the pontiffs, and whoever refused to obey their injunctions was punished by them, for they were a forum quae ad sacrum et religiousem pertinent; judicium et vindiciae.” (Fest. s. v. Maximus pontifex; compare
ment, and were not responsible either to the senate
were not subject to any court of law or punish
R.ir., Pontificalium (Fest. ii. 8.) One part of these libri pontificiales, commentarii sacrorum or pontificialium (Fest. s. v. C. and
Cic. Comm. 1. 21.) Another part must have contained the
fornulæ of the jus pontificium. (Cic. ii. 31.) The original laws and regulations con
cluded in these books were in the course of time
increased and more accurately defined by the de
crees of the pontiffs, whence perhaps their name commentarii. (Plin. H. N. xiii. 3; Liv. iv. 3; 
Cic. Brut. 14.) Another tradition states that Numa communicated to the
pontiffs their duties and rights merely by word of
mouth, and that he had buried the books in a
stone chest on the Janiculum. (Plut. Num. 22; 
Plin. H. N. xiii. 27; Val. Max. i. 1. 12; August. de Civit. Dei, vi. 34.) These books were found
in 181 B.C., and one half of them contained ritual
regulations and the jus pontificium, and the other
half philosophical inquiries on the same subjects,
and were written in the Greek language. The
books were brought to the praetor urbanus Q.
Petilius, and the senate ordered the latter half to
be burnt, while the former was carefully preserved.
Respecting the nature and authenticity of this
story, see Hartung, Die Relig. d. Rom. i. p. 214. The annales maximi were records of the events of
each year kept by the pontifex maximus, from the
commencement of the state to the time of the
pontifex maximus, P. Mucius Scaevola, B. c. 133.
As to the rights and duties of the pontiffs, it must
first of all be borne in mind that the pontiffs were
not priests of any particular divinity, but a college
which stood above all other priests, and superin
tended the whole external worship of the gods.
(Cic. de Leg. ii. 8.) One of their principal duties
was the regulation of the sacra both publica and
privata, and to watch that they were observed at
the proper times (for which purpose the pontiffs
originally had the whole regulation of the calendar, see Calendarium, p. 236, &c.), and in their proper
form. And the management of the sacra publica they
were in later times assisted in certain per
formances by the triumviri epulones [Epulones],
and had in their keeping the funds from which the
expenses of the sacra publica were defrayed.
[SACRA.] The pontiffs convoked the assembly of the curies
(comitia calata or curiata) in cases where priests were to be appointed, and flamines or a rex sacro
rum were to be inaugurated; also when wills were to
be received, and when a detestatio sacrorum and adoption by adrogatio took place. (Gell. v. 19, 
xy. 27; Adoptio.) Whether the presence of the pontiffs together with that of the augurs and two
flamines was necessary in the comitia curiata also
in cases when other matters were transacted, as Niebuhr thinks (i. p. 342, ii. p. 223), does not
appear to be quite certain. The curious circum
stance that Cicero states the senate was
commanded by the senate to preside at the
election of tribunes of the people, is explained by
Niebuhr (ii. p. 359, &c.).
As regards the jurisdiction of the pontiffs, magistrates and priests as well as private individu
were bound to submit to their sentence, pro
vided it had the sanction of three members of the
college. (Cic. de Harusp. Resp. 6.) In most cases the sentence of the pontiffs only inflicted a fine
upon the offenders (Cic. Philipp. xi. 8; Liv. xxii. 51, xl. 42), but the person fined had a right to
appeal to the people, who might release him from
the fine. In regard to the Vestal virgins and the
people who committed incest with them, the
pontiffs had criminal jurisdiction and might pro
ounce the sentence of death. (Dionys. iv. 49; 
Liv. xxii. 57; Fest. s. v. Probrum.) A man who
had violated a Vestal virgin was according to an
ancient law scourged to death by the pontifex
maximus in the comitia, and it appears that
originally the decemvirs and the Vestal virgins to the
major offenders in such a case had any right of
appeal. Götting (p. 185) considers that they had the
right of appeal, but the passage of Cicero (de Re Publ. ii. 31) to which he refers, does not support
his opinion. Incest in general belonged to the
jurisdiction of the pontiffs, and might be punished
with death. (Cic. de Leg. ii. 19.) In later times
we find that even in the case of the pontiffs having
passed sentence upon Vestal virgins, a tribune in
ferred and indeed the people, to appoint a
quaeator for the purpose of making a fresh inquiry
into the case; and it sometimes happened that
after this new trial the sentence of the pontiffs
was modified or annulled. (Ascon. ad Milton. p. 46, ed. Orelli.) Such cases, however, seem to
have been mere irregularities founded upon an abuse
of the tribunitian power. In the early times the
pontiffs were in the exclusive possession of the
civil as well as religious law, until the former was
made public by C. Flavius. (Ascon. ad Milton. 46, ed. Orelli.) Such cases, however, seem to
have been mere irregularities founded upon an abuse
of the tribunitian power. In the early times the
pontiffs were in the exclusive possession of the
civil as well as religious law, until the former was
made public by C. Flavius. (Ascon. ad Milton. 46, ed. Orelli.) Such cases, however, seem to
have been mere irregularities founded upon an abuse
of the tribunitian power. In the early times the
pontiffs were in the exclusive possession of the
civil as well as religious law, until the former was
made public by C. Flavius. (Ascon. ad Milton. 46, ed. Orelli.) Such cases, however, seem to
have been mere irregularities founded upon an abuse
of the tribunitian power. In the early times the
PONTIFEX.

called tutulus or galerus, with an apex upon it, and the toga praetexta.

The pontifex maximus was the president of the college and acted in its name, whence he alone is frequently mentioned in cases in which he must be considered only as the president of the college. He was generally chosen from among the most distinguished persons, and such as had held a curule magistracy, or were already members of the college. (Liv. xxxv. 5, xli. 42.) Two of his especial duties were to appoint (capere) the Vestal virgins and the flames [VESTALES; FLAMEN], and to be present at every marriage by confarreatio. When festive games were vowed or a dedication made, the chief pontiff had to repeat over before the persons who made the vow or the dedication, the formula with which it was to be performed (praeterea verba, Liv. v. 40, ix. 46, iv. 27). During the period of the republic, when the people exercised sovereign power in every respect, we find that if the pontiff on constitutional or religious grounds refused to perform this solemnity, he might be compelled by the people.

A pontifex might, like all the members of the great priestly colleges, hold any other military, civil or priestly office, provided the different offices did not interfere with one another. Thus we find one and the same person being pontifex, augur, and decemvir sacrorum (Liv. xli. 42); instances of a pontifex maximus being at the same time consul, are very numerous. (Liv. xxvii. 38; Cic. de Harusp. Resp. 6; compare Ambrosch, Studien und Andeutungen, p. 229, note 105.) But whatever might be the civil or military office which a pontifex maximus held beside his pontificate, he was not allowed to leave Italy. The first who violated this law was P. Licinius Crassus, in B. C. 131 (Liv. Epit. 59; Val. Max. viii. 7. 6; Oros. v. 10); but after this precedent, pontiffs seem to have frequently transgressed the law, and Caesar, though pontifex maximus, went to his province of Gaul.

The college of pontiffs continued to exist until the overthrow of paganism (Aromb. iv. 35; Symmach. Epit. ix. 128, 129); but its power and influence were considerably weakened as the emperors, according to the example of Caesar, had the right to appoint as many members of the great colleges of priests as they pleased. (Dion Cass. xxi. 40, 61; Stueck Curt. iii. 17. 63.) In this case also, as in the case of P. Licinius Crassus and Julius Caesar, the number of these secretaries is uncertain; Ciceron (de Harusp. Resp. 6) mentions the name of three minor pontiffs. The name cannot have been used long before the end of the republic, when even chief pontiffs began to show a disregard for their sacred duties, as in the case of P. Licinius Crassus and Julius Caesar. Another proof of their falling off in comparison with former days, is that about the same time the good and luxurious living of the pontiffs became proverbial at Rome. (Horat. Carm. ii. 14, 26; Cæc. Mart. xii. 48, 12; Macrobi. Sat. ii. 5.)

PONTIFICALES LUDI. [Ludi Pontificales]

PONTIFICIUM JUS. [Jus, pp. 656, 657.]

POPA. [CAUPONA; SACRIFICIUM.]

POPI'NA [CAUPONA.]

POPULA'RES. [NOBILES, p. 799, b.]

POPUL'ARIA. [AMPHITHEATRUM, p. 88, b.]

POPULIFU'GIA or POPLIFU'GIA, the day of the people's flight, was celebrated on the Nones of July, according to an ancient tradition preserved by Varro (De Ling. Lat. vi. 18, ed. Müller), in commemoration of the flight of the people, when the inhabitants of Ficulea, Fidenae, and other places round about, appeared in arms against Rome shortly after the departure of the Gauls, and produced such a panic that the Romans suddenly fled before them. Macrobius (Saturn. ii. 2), however, says that the Populifugia was celebrated in commemoration of the flight of the people before the Tuscanas, while Dionysius (ii. 76) refers its origin to the flight of the people of the death of Romulus. Niebuhr (Hist. of Rome, vol. ii. p. 573) seems disposed to accept the tradition preserved by Varro; but the different accounts of its origin given by Macrobius and Dionysius render the story uncertain.

PO'PULUS. [Patrik].

PORISTAE (poristai), were magistrates at Athens, who probably levied the extraordinary supplies. (Poristai einai arxh tis Athenton, ἦν ἶτον ἡγεῖτο Μέκκερ, Becher, Aene. p. 294. 19.)

Antiphon (De Chor. p. 791, Reiske) classes them
with the Poletae and Praetores; and Demosthenes (Philip. i. p. 49. 15) joins τῶν χρημάτων ταύτι
kal τορισταί, from which it would appear that they were public officers in his time, although the
words do not necessarily prove this. (Bockh, Puld. Econ. of Athens, p. 166, 2d ed.)
PORNAE (πόρναι). \[HETAERAE.\]
PORPE (πόρπη). \[FIBULAE.\]
PORTA (πόρνη, dim. πορείς), the gate of a city, citadel, or other open space inclosed by a wall, in
contradistinction to JANUA, which was the door of a house or any covered edifice. The terms porta
and πόρνη are often found in the plural, even when applied to a single gate, because it consisted of
two leaves. (Thucyd. ii. 4; Virg. Aen. ii. 396.)
The gates of a city were of course various in their number and position. The ancient walls of
Paestum, Sepianum, and Aosta, still remain and inclose a square: in the centre of each of the four
walls was a gate. If, instead of being situated on a plain, a city was built on the summit of a pre-
cipitous hill, there was a gate on the sloping de-
civity which afforded the easiest access. If, in
consequence of the unevenness of the ground, the
form of the walls was irregular, the number and sit-
uation of the gates varied according to the cir-
stances. Thus Megara had 6 gates (Rein-
gamum, Megarim, pp. 125, 129); Thebes, in Bac-
tria, had 7; Athens had 8 (Ersch u. Gruber,
s.v. Attica, i. p. 49. 15) joins
PORNAE (πόρναι).
PORTA (πόρνη, dim. πορείς), the gate of a city,

tria, had 7; Athens had 8 (Ersch u. Gruber,
s.v. Attica, pp. 240, 241); and Rome 20, or per-
ehaps even more.
The jambs of the gate were surmounted, 1. by a
lintel, which was large and strong in proportion to
the width of the gate; examples of extremely
massive jambs and lintels are presented by the
 gates in the so-called Cyclopean Walls; see, for
instance, the engraving of the celebrated Lion-
Gate at Mycenae, under MURUS, p. 770, b. The
lintel of the centre gate leading into the Athenian
Acropolis, is 17 feet long. 2. by an arch, as we
see exemplified at Pompeii, Paestum, Sepianum,
Volterra, Susa, Autun, Bezançon, and Treves. 3.
At Arpinum, one of the gates now remaining is
arched, whilst another is constructed with the
stones projecting one beyond another, after the
manner represented in the wood-cut, at p. 125.
(Keppel Craven, Excursions in the Abruzzi, vol. i.
p. 108.)
At Como, Verona, and other ancient cities of
Lombardy, the gate contains two passages close
together, the one designed for carriages entering,
and the other for carriages leaving the city. The
same provision is observed in the magnificent ruin
of a gate at Treves. (See the following woodcut,
showing a view of it, together with its plan.)
In other instances we find only one gate for carriages,
but a smaller one on each side of it (παραπώλος,
Heliodor. viii. p. 394) for foot-passengers. (See
the plan of the gate of Pompeii, p. 256.) Each of
the fine gates which remain at Autun has not
only two carriage-ways, but exterior to them two
sideways for pedestrians. (Müllin, Voyage dans
les Départemens, &c. vol. i. ch. 22. Atlas, Pl. 18.
Fig. 3, 4.) When there were no sideways, one of
the valves of the large gate sometimes contained
a wicket (πορτνλαι, πορείς: πορείς), large enough
to admit a single person. The porter opened it
when any one wished to go in or out by night.
(Polyb. viii. 20, 24; Liv. xxv. 9.)
The contrivances for fastening gates were in
general the same as those used for doors (Janua),
but larger in proportion. The wooden bar placed
across them in the inside (μωσαίδας) was kept in
its position by the following method. A hole,
passing through it perpendicularly (βαλανόδοκη,
Aen. Tact. 18), admitted a cylindrical piece of iron,
called βαλανοδόκη, which also entered a hole in
the gate, so that, until it was taken out, the bar could
not be removed either to the one side or the other.
(Thucyd. ii. 4; Aristoph. Vesp. 200; Bebalántαται,
Aves, 1159.) Another piece of iron, fitted to the
βαλανοδόκη and called βαλανάβραχον, was used to
extract it. (Aen. Tact. i. c.) When the besiegers,
for want of this key, the βαλανάβραχον, were unable
to remove the bar, they cut it through with a hatchet
(Thucyd. iv. 11); Polyb. viii. 23, 24), or set it
on fire. (Aen. Tact. 19.)
The gateway had commonly a chamber, either
on one side or on both, which served as the resi-
dence of the porter or guard. It was called πορείς
(Polyb. viii. 20, 23, 24). Its situation is shown
in the following plan. (See wood-cut.) But the
gate-way was also, in many cases, surmounted
by a tower, adapted either for defence (portis turres
imposuit, Caes. B. G. viii. 9; Virg. Aen. vi. 532—
534) or for conducting the general business of go-
government. In the gates of Como and Verona this
edifice is 3 stories high. At Treves it was 4
stories high in the flanks, although the 4 stories
remain standing in one of them only, as may be
observed in the annexed wood-cut. The length
of this building is 115 feet; its depth 47 in the
middle, 67 in the flanks; its greatest height, 92.
All the 4 stories are ornamented in every direc-
tion with rows of Tuscan columns. The gateways
are each 14 feet wide. The entrance of each ap-
appears to have been guarded, as at Pompeii (see
p. 256), first by a porticullis, and then by gates of
wood and iron. The barbaric, between the double
porticullis and the pair of gates, was no doubt
open to the sky, as in the gates of Pompeii.
This edifice was probably erected by Constantine.
PORTICUS (στόα), a walk covered with a roof, which is supported by columns, at least on one side. A porticus was either attached to temples and other public buildings, or it was built independent of any other edifice. Such shaded walks and places of resort are almost indispensable in the southern countries of Europe, where people live much in the open air, as a protection from the heat of the sun and from rain. This was the case in ancient times to a much greater extent than at present. The porticoes attached to the temples were either constructed only in front of them, or went round the whole building, and temples received different names according to these different porticoes, and according to the arrangement of the columns of the porticoes. [TEMPLUM.] They were originally intended as places for those persons to assemble and converse in who visited the temple for various purposes. As such temple-porticoes, however, were found too small or not suited for the various purposes of private and public life, most of the Greek towns had independent porticoes, some of which were very extensive, especially in their places of public assembly [AGORA]; and as the Greeks, in all their public works, soon went beyond the limits of mere utility, these public walks were not only built in the most magnificent style, but were adorned with pictures and statues by the best masters. Of this kind were the Poecile (στόα ποικίλα) and στόα Βασίλειος at Athens (Athen. xiii. p. 577; Paus. i. 3. § 1, &c.), and the στόα Ηπείρου at Sparta. (Paus. iii. 11. § 3.) The Skias at Sparta, where the popular assemblies were held, seems to have been a building of the same kind. (Paus. iii. 12. § 8.) In most of these stoa, seats [ΕΞΙΔΡΑΙ] were placed, that those who were tired might sit down. They were frequented not only by idle loungers, but also by philosophers, rhetoricians, and other persons fond of intellectual conversation. The Stoic school of philosophy derived its name from the circumstance, that the founder of it used to converse with his disciples in a stoa. The Romans derived their great fondness for such covered walks from the Greeks; and as luxuries among them were carried in everything to a greater extent than in Greece, wealthy Romans had their private porticoes, sometimes in the city itself, and sometimes in their country-seats. In the public porticoes of Rome, which were exceedingly numerous and very extensive (as that around the Forum and the Campus Martius), a variety of business was occasionally transacted: we find that law-suits were conducted here, meetings of the senate held, goods exhibited for sale, &c. (See Pitusius, Lexicon. s. v. Porticus. who has given a complete list of all the porticoes of Rome.)

[L.S.] PORTICUSCULUS (κελευτήριον), an officer in a ship, who gave the signal to the rowers that they might keep time in rowing. The same name was also given to the pole or hammer, by the striking of which he regulated the motion of the oars (Festus, s. v.). The duties of this officer are thus described by Silius Italicus (vi. 360, &c.):

"Medine stat margine puppis,
Qui voce alternos nautarum temperet ictus,
Et remis dictet somitum, pariterque relatis
Ad somitum plaudat resonantia caeca tonia,"

This officer is sometimes called Hortator (Ovid. Met. iii. 618; Plaut. Plaut. iv. 25; Virg. Aen. i. 138) or PAVARIUS. (Compare Bimmeldlt., ad Aesch. Pers. 403.)

PORTITORES. [PORTORIUM; PUBLICAN.] PORTORIUM was one branch of the regular revenues of the Roman state, consisting of the duties paid on imported and exported goods: sometimes, however, the name portorium is also applied to the duties raised upon goods for being carried through a country or over bridges. (Plin. H. N. xii. 31; Sueton. Iul. 14.) A portorium, or duty upon imported goods, appears to have been paid at a very early period, for it is said that Valerius Publicola exempted the plebes from the portoria at the time when the republic was threatened with an invasion by Persia. (Liv. ii. 9; compare Dionys. v. 22.) The time of its introduction is uncertain; but the abolition of it ascribed to Publicola can only have been a temporary measure; and as the expenditure of the republic increased, new portoria must have been introduced. Thus the censor M. Acilius Lepidus and M. Fulvius Nobilior instigated portoria et recigalitua multa (Liv. xl. 51), and C. Gracchus again increased the number of articles which had to pay portoria. (Vell. Pat. ii. 6.) In conquered places and in the provinces the import and export duties, which had been paid there before, were generally not only retained, but increased, and appropriated to the aeurarium. Thus we read of portoria being paid at Capua and Puteoli on goods which were imported by merchants. (Liv. xxxii. 7.) Sicily, and above all, Asia furnished to the Roman treasury large sums which were raised as portoria. (Cic. c. Verr. ii. 75, pro Leg. Manil. 6.) In some cases, however, the Romans allowed a subject nation, as a particular favour, to raise for themselves whatever portoria they pleased in their ports, and only stipulated that Roman citizens and socii Latini should be exempted from them. (Liv. xxxviii. 44; Gruter, Inscription, p. 500.) In the year 60 B.C. all the portoria in the ports of Italy were done away with, by a lex Caecilia carried by the praetor Q. Metellus Nepos. (Dion
PORTORIUM.

Cass. xxxvii. 51 ; Cie. ad Att. ii. 16. It appears, however, that the cause of this abolition was not any complaint by the people of the tax itself, but of the portoriores, i.e. the persons who collected it, and who greatly annoyed the merchants by their unfair conduct and vexatious proceedings. [PUBLICAN.] Thus during the time only levied on import and export duties in the provinces, until Julius Caesar restored the duties on commodities imported from foreign countries. (Suet. Caes. 43.) During the triumvirate new portoriores were introduced (Dion Cass. xlviii. 34), and Augustus partly increased the old import duties and partly instituted new ones. The subsequent emperors increased or diminished this branch of the revenue as necessary required, or as their own discretion dictated.

As regards the articles subject to an import duty, it may be stated in general terms, that all commodities, including slaves, which were imported by merchants for the purpose of selling them again, were subject to the portorium; whereas things which a person brought with him for his own use, were exempted from it. A long list of such taxable articles is given in the Digest (39. tit. 4. s. 16 ; compare Cic. c. Ferr. ii. 72, 74). Many things, however, which belonged more to the luxuries than to the necessaries of life, such as entertainments, amusements, and so forth, were levied a portorium, even though they were imported by persons for their own use. (Suet. De clar. Rhet. i. ; Cod. 4. tit. 42. s. 2.) Things which were imported for the use of the state were also exempt from the portorium. But the governors of provinces (prasesides), when they sent persons to purchase things for the use of the public, had to write a list of such things for the publicani (portoriores) to enable the latter to see whether more things were imported than what were ordered (Dig. 39. tit. 4. s. 4) ; for the practice of smuggling appears to have been as common among the Romans as in modern times. Respecting the right of the portoriores to search travellers and merchants, see Publicani. Such goods as were duly stated to the portoriores were called scripta, and those which were not, inscripta. If goods subject to a duty were concealed, they were, on their discovery, confiscated. (Dig. 39. tit. 4. s. 16.) Respecting the amount of the import or export duties we have but very few statements in the ancient writers. In the time of Cicero the portorium in the ports of Sicily was one-twentieth (vicesimas) of the value of taxable articles (Cic. c. Ferr. ii. 75) ; and as this was the customary rate in Greece (Böckh, Pubb. Econ. p. 225, 2d edit.), it is probable that this was the average sum raised in all the other provinces. In the times of the emperors the ordinary rate of the portorium appears to have been the fortieth part (quadragesimas) of the value of imported goods. (Suet. Vespas. 1 ; Quintil. Dedicam. 559 ; Symmach. Epist. i. 62, 63.) In a late period the exorbitant sum of one-eighth (octava, Cod. 4. tit. 61. s. 7) is mentioned as the ordinary import duty ; but it is uncertain whether this is the duty for all articles of commerce, or merely for certain things.

The portorium was, like all other vectigalibus, farmed out by the censors to the publicani, who collected it through the portoriores. [VETIGALIA ; PUBLICANI.] (Burmann, De Vectigalibus Populi Rom. pp. 50—77 ; R. Boss, Grundzüge des Finanz.

P. 945

PORTUMNA'LLIA, or PORTUNA'LLIA, a festival celebrated in honour of Portunus, or Portunus, the god of harbours. (Varro, De Ling. lat. vii. 19, 20.) A festival celebrated on the 17th day before the Kalendas of September. (Calendarium Maff.)

POSCA, vinegar mixed with water, was the common drink of the lower orders among the Romans, as of soldiers when on service (Spart. Hadr. 10), slaves (Plaut. Mil. iii. 2. 23), &c.

POSEIDONIA (posideiswz), a festival held every year in Aegina in honour of Poseidon. (Athen. xiii. p. 508 ; Plut. Quaest. Gr. 44.) It seems to have been celebrated by all the inhabitants of the island, as Athenaeus (xiii. p. 508) calls it a panegyris, and mentions that during one celebration Phryne, the celebrated hetaera, walked naked into the sea in the presence of the assembled Greeks. The festival is also mentioned by Theodoretus (Therap. 7), but no particulars are recorded respecting the way in which it was celebrated. (Comp. Müller, Aegypt. p. 148.) [L. S.]

POSSESSIO. Paulus (Dig. 41. tit. 2. s. 1) observes, "Possesio appellata est, ut et Lobeo dit, a pedibus, quasi positio : quia naturaliter tenetur ab eo, qui insistit." The etymology and the reason are equal. The elements of Possidere are either pot (pot-is), and sedere ; or the first part of the word is related to apned, and the cognate Greek form of nori (npds).

Possesio, in its primary sense, is the power of virtue of which a man has such a mastery over a corporeal thing as to deal with it at his pleasure and to exclude other persons from meddling with it. This condition or power is called Detention, and it lies at the bottom of all legal senses of the word Possession. This Possession is no legal state or condition, but it may be the source of rights, and it then becomes Possessio in a juristical sense. Still even in this sense, it is not in any way to be confounded with Property (proprietus). A man may have the juristical possession of a thing without being the proprietor ; and a man may be the proprietor of a thing without having the Detention of it, or even the juristical possession. (Dig. 41. tit. 2. s. 12.) Ownership is the legal capacity to operate on a thing according to a man's pleasure and to exclude everybody else from doing so. Possession, in the sense of Detention, is the actual exercise of such a power as the owner has a right to exercise.

Detention becomes juristical possession and the foundation of certain rights, when the Detainer has the intention (animus) to deal with the thing as his own. If he deal with it as the property of another, as exercising over it the rights of another, he is not said "possidere" in a juristical sense ; but he is said "alieno nomine possidere." This is the case with the Commodatarus and with him who holds a deposit. (Dig. 41. tit. 2. s. 18, 30.)

When the Detention is made a juristical Possessio by virtue of the animus, it lays the foundation of a right to the Interdicts, and by virtue of Usuaption it may become ownership. The right to the Interdicts is simply founded on a juristical possession, in whatever way it may have originated.

3 p
except that it must not have originated illegally with respect to the person against whom the Interdict is claimed. [INTERDICTUM.] Simply by virtue of being possessor, the possessor has a better right than any person who is not possessor. (Dig. 43. tit. 17. s. 1, 2.) Usucapion requires not only a jurisdidential possession, but in its origin it must have been bona fide and founded on a justa causa, that is, on some legal transaction. He who buys a thing from a man who is not the owner, but whom he believes to be the owner, and obtains possession of the thing, is a bona fide possessor with a justa causa. [USUCAPION.]

The right which is founded on a jurisdidential possession is a Jus possessionis, or right of possession, that is, a right arising from a jurisdidential possession. The expresion Jus possessionis is used by the Roman Jurists. The right to possess, called by modern Jurists, Jus possidendi, belongs to the theory of Ownership.

All Jurisdictional Possession then, that is, Possessio in the Roman Law, as a source of rights, has reference only to Usucapion and Interdicts; and all the rules of law which treat Possessio as a thing of a jurisdidential nature have no other object than to determine the possibility of Usucapion and of the Interdicts. (Savigny, *Das Recht des Besitzes*, p. 24, &c.)

In answer to the question to which class of Rights Possession belongs, Savigny observes (§ 6),—So far as concerns Usucapion, one cannot suppose the thing to be the subject of a question. No one thinks of asking, to what class of rights a justa causa belongs, without which tradition cannot give ownership. It is no right, but it is a part of the whole transaction by which ownership is acquired. So is it with Possession in respect to Usucapion.

The right to Possessorial Interdicts belongs to the Law of Obligations ex maleficiis. "The right to possessorial Interdicts then belongs to the Law of Obligations, and therein possession is only so far considered, as containing the condition without which the Interdicts cannot be supposed possible. The Jus Possessio is consequently, that is the right, which mere possession gives, consists simply in the claim which the Possessor has to the Interdicts, as soon as his possession is disturbed in a definite form. Independent of this disturbance, mere possession gives no rights, neither the Jus Obli- gationis, nor the right to the Interdicts; but the converse is not true. Possessio Naturalis, as above observed, has two significations, but they are both negative, and merely express in each case a logical opposition, that is, they are respectively not Possessio Civilis, or Possessio (ad Interdicta). The various expresions used to denote bare Detention are "tenere," "corporical possidere," "esse in possessione." (Savigny, p. 109.)

In the case of a thing being pignorated, the person who pignors it still has the possessio ad usucapionem, but the pignorer alone has the possessio ad interdicta. It is not a Possessio Civilis which is the foundation of the pignorer's title by usucapion; but by a special fiction he is considered to have such Possessio, and so the case is a special exception to the general rule, "sine possessione usucapio contingero non potest."

Possessio Justa is every Possessio that is not illegal in its origin, whether such Possessio be mere Detention or Jurisdictional Possessio. The word Justa is here used, not in that acceptation in which it has reference to Jus Civile and is equivalent to Civilis or Legitima; but in another sense, which is more indefinite and means "rightful" generally, that is, not wrongful. The creditor who is in possession of a pledge, has a Justa Possessio, but not a Civilis Possessio: he has, however, a Jurisdictional Possessio, that is, Possessio, and consequently a right to the Interdicts. The Missio in Possessionen is the foundation of a Justa Possessio, but, as a general rule, not of a Jurisdictional Possessio. Possessio Injusta is the logical opposite of Justa, and in the case of Possessio Injusta there are three special species posseos that is when the Possession has originated Vi, Clam, or Precario. (Terentius, *Eunuch*, ii. 3. *Hanc tu mihi vel vi, vel clam, vel precario fac tradas*: Dig. 43. tit. 17. s. 1, 2.)

With respect to the causa Possessionis, there was a legal maxim: *Nemo sibi ipse causam possessionis mutare potest*, which applies both to Civilis and Naturalis Possessio. This rule is explained by Savigny by means of Gaius (i. 52, &c.) as having reference to the old usucapio pro herede, and the meaning of it was that if a person had once begun to possess with any particular causa, he could not at his pleasure change such Possessio into a Possessio pro herede. (Savigny, p. 56.)

A Possessor bona fide is he who believes that no person has a better right to possess than himself. A Possessor malae fidei is he who knows that he has no right to possess the thing. (Savigny, p. 84.)

Besides these various meanings of Possessio, Possessor, Possidere, at the bottom of all which lies simply; and this is the meaning of Possessio, when it is used alone, and yet in a technical sense. As opposed to this sense of Possessio all other kinds of Detention are also called Naturalis Possessio, the opposition between the Natural and the Jurisdictional Possessio (posseos) being here exprest just in the same way as this opposition is denoted in the case of the Civilis Possessio. There is therefore a twofold Jurisdictional Possessio: Possessio Civilis or Possessio for the purpose of Usucapion; and Possessio or Possessio for the purpose of the Interdicts. It follows that Possessio is included in Possessio Civilis, which only requires more conditions than Possessio. If then a man has Possessio Civilis, he has also Possessio, that is the right to the Interdicts that Jurisdictional possessor is not true. Possessio Naturalis, as above observed, has two significations, but they are both negative, and merely express in each case a logical opposition, that is, they are respectively not Possessio Civilis, or Possessio (ad Interdicta). The various expressions used to denote bare Detention are "tenere," "corporical possidere," "esse in possessione." (Savigny, p. 109.)

In the case of a thing being pignorated, the person who pignors it still has the possessio ad usucapionem, but the pignorer alone has the possessio ad interdicta. It is not a Possessio Civilis which is the foundation of the pignorer's title by usucapion; but by a special fiction he is considered to have such Possessio, and so the case is a special exception to the general rule, "sine possessione usucapio contingero non potest."

Possessio Justa is every Possessio that is not illegal in its origin, whether such Possessio be mere Detention or Jurisdictional Possessio. The word Justa is here used, not in that acceptation in which it has reference to Jus Civile and is equivalent to Civilis or Legitima; but in another sense, which is more indefinite and means "rightful" generally, that is, not wrongful. The creditor who is in possession of a pledge, has a Justa Possessio, but not a Civilis Possessio: he has, however, a Jurisdictional Possessio, that is, Possessio, and consequently a right to the Interdicts. The Missio in Possessionen is the foundation of a Justa Possessio, but, as a general rule, not of a Jurisdictional Possessio. Possessio Injusta is the logical opposite of Justa, and in the case of Possessio Injusta there are three special species posseos that is when the Possession has originated Vi, Clam, or Precario. (Terentius, *Eunuch*, ii. 3. *Hanc tu mihi vel vi, vel clam, vel precario fac tradas*: Dig. 43. tit. 17. s. 1, 2.)

With respect to the causa Possessionis, there was a legal maxim: *Nemo sibi ipse causam possessionis mutare potest*, which applies both to Civilis and Naturalis Possessio. This rule is explained by Savigny by means of Gaius (i. 52, &c.) as having reference to the old usucapio pro herede, and the meaning of it was that if a person had once begun to possess with any particular causa, he could not at his pleasure change such Possessio into a Possessio pro herede. (Savigny, p. 56.)

A Possessor bona fide is he who believes that no person has a better right to possess than himself. A Possessor malae fidei is he who knows that he has no right to possess the thing. (Savigny, p. 84.)

Besides these various meanings of Possessio, Possessor, Possidere, at the bottom of all which lies
there are some other meanings. "To have ownership" is sometimes expressed by Possidere, the notion of Possession in the sense of Detention, and other writers. But it is remarked by Savigny that these meanings of Possidere, Possessio, &c., always refer to land as their object. The phrase "Possessio populi Romani," is applied by Cicero to public land, and it is translated by Plutarch (Plut. 39), κτήμα τοῦ δήμου Ρωμαίων.

Possessio also denotes the relation of a defendant with respect to a plaintiff. For instance, when ownership is claimed, the demand must be against a person in possession; but this does not mean that such person must have a juridical possession. In a Vindicatio accordingly the plaintiff is called Petitor, and the defendant is named Possessor, because in fact he has the possession of that which the plaintiff claims. The procedure by the Vindicatio was also adapted to the case of an hereditas; and here also the term possessor was applied to the defendant. In many cases the possessor was really such, and one object of the hereditatis peticio was to recover single things which the defendant possessed pro herede or pro possessore. But the term possessor was not limited to such cases, for the defendant is called possessor when the petitio is not about a matter of possession. He is called Juris possessor, because he refuses to do something which the heres claims of him to do, or because he asserts his right to a portion of the hereditas. (Savigny, p. 87.)

The juristical notion of Possession implies a thing which can be the object of ownership; it also implies that the Possessor can be no other than a person who has a capacity for ownership.

The possession of a thing is such that only one person at a time can possess the whole of a thing (pfarco tandem rem in solidum possidere non possunt). When several persons possess a thing in common, so that their possession is mutually limited, each in fact possesses only a fractional part of the thing, but does not possess the other parts, and though the division into parts is only ideal, this does not affect the legal consideration of the matter. Possession is the same as in the case of acquiring a jus in re (apud horrea). The delivery of the key is not a symbolic delivery, as some have supposed, but it is the delivery of the means of getting at the thing. (Compare Lord Hardwicke's remarks on this matter, Ward v. Turner, 2 Vez.)

The animus consists in the will to treat as one's own the thing that is the object of our apprehension. All persons therefore who are legally incompetent to will, are incompetent to acquire a juridical possession. Infantes and furiosi are examples of such persons. If a man has the detention of a thing, he can acquire the Possessio by the animus alone; for the other condition has been already complied with.

In order that juridical possession may be acquired, there must always be the animus on the part of him who intends to acquire the possession; but the act of apprehension (corpus) may be effected by another as his representative, if that other does the necessary acts, and with the intention of acquiring the possession for the other, and not for himself. (Paulus, S. R. v. tit. 2. s. 1.) There must be a certain relation between the person for whom possession is thus acquired and the person who acquires it for him, either of legal power (potestas), or of agency: the former is the case of a slave or filius familiae who obeys a command, and the latter is the case of an agent who follows instructions (mandatum). A person, who is already the representative of another, and has the Possessio of a thing, may by the animus alone cease to have the Possessio for himself and have it for that other, retaining only the bare detention.

Possessio, that is the Right of Possession, can be transferred, without the transfer of ownership. In this case of derivative Possessio the apprehension is the same as in the case of acquiring a juridical possessio; but the animus with which the thing is apprehended, cannot be the "animus domini," but merely the "animus possidenti," that is, the will to acquire the Jus Possessionis, which the Possessor transfers, and nothing more. The Detention of a thing may be transferred without the ownership, but the transfer of the detention is not always accompanied by a transfer of the Jus Possessionis. There are three classes into which all acts may be distributed which are accompanied with a transfer of Detention: 1, those which are never the foundation of a derivative Possessio, 2, those which always are, and 3, those
which are sometimes. The First class comprehends such cases as those when the detenion of a thing is transferred to an agent (procurator), and the case of a Commodatum. [COMMODATUM.] The Second class comprehends the case of the Empyætenta, which is a Possessio, but only a derivative one, as the Empyætenta has not the animus domini; it also comprehends the case of the creditor who receives the detenion of a pignus by a contractus pignoria, and with the detenion, the Jus Possessionis; but it does not comprehend the case of a Pignus praetorium, Pignus in causa judicati captum, nor a Pactum hypothecæ. In the case of a contractus pignoria, when the thing was delivered to the creditor, he had Possessio, that is, a right to the Interdicts, but not Possessio Civilest, that is, the Right of Usucapion. The debtor had no Possessio at all, but by virtue of an exception to a general rule, the usurcation that had been commenced, still continued. The Third class comprehends Depositum and Precarium.

The Right of Possession consists in the right to the protection of the Interdict [INTERDICTUM], and this protection is also extended to Jura in re. The relation of the Juris quasi possessio to Possessio has been already explained. The objects of this Juris quasi possessio are: Personal servitutes, Real servitutes, and Jura in re which do not belong to the class of Servitutes, but which Superficies is the only proper instance. (Savigny, p. 525.) In all the cases of Juris quasi possessio, the acquisition and the continuance of the right of possession depend on the corpus and animus; and the animus is to be viewed exactly in the same way as in the case of possession of a corporeal thing. The exercise of Personal servitutes (particularly usus and ususfructus) is inseparable from the natural possession of the thing; and the possession of them is consequent acquired in the same way as the possession of a corporeal thing. As to the Juris quasi possessio of Real Servitutes, there are two cases: either he who has a right to the Servitus, must do some act, which if he had not the right, he might be forbidden to do (servitus quæs in patiendo consistit); or the owner of property has no right to do some particular thing, which, if the right did not exist, he might do (servitus quæs in non faciendo consistit). As to the first class, which may be called Positive Servitutes, the acquisition of the Juris quasi possessio consists merely in doing some act, which is the object of the right, and the doing of this act must be for the purpose of exercising the right. (Dig. 8. tit. 6. § 25.) This rule applies to the Jus Itineris, Actus, Vinc, and others, which are independent of the possession of any other property by the person who claims the Jus. Such an act as the Jus digni immittendi, or the driving a beam into the wall of one's neighbour's house, is a right connected with the possession of another piece of property, and the possession of this right consists in the exercise of it. As to the second class which may be called Negative Servitutes, the Juris quasi possessio is acquired at the instance of the person whose right is thereby limited, attempting to do some act contrary to the right of the person who claims the servitus, and meeting with opposition to such act and acquiescing in the opposition. (Dig. 8. tit. 5. § 6.) This Juris quasi possessio may also be founded on a legal title, that is, on any juridical transaction which can give such right.

Every possession continues so long as the corpus and the animus continue. (Savigny, p. 339.) If both cease or either of them ceases, the possession is gone. (Dig. 41. tit. 2. § 3. 46.) As to the corpus, the possession is lost, when in consequence of any event the possessor cannot operate on the thing at his pleasure, as before. In the case of moveable things, the possession is lost, when another person has got hold of them, either by force or secretly: in the case of immoveable things, it is lost when a man has turned another out of the possession; but if in the absence of the possessor, another occupies his land without his knowledge, he does not lose the possession till he attempts to exercise ownership over the land and is prevented by the person then in possession of it, or through fear does not attempt to recover his possession. The possession thus acquired by the new possessor is a violenta possessio. If the former possessor knows the fact and acquiesces by doing nothing, he loses the possession by the animus alone. In the case of possession being lost by animus alone, it may be effected either expressly or tacitly; the only thing necessary is that there must be an intention to give up the possession. The possession is lost corpore et animo, when the possessor gives up a thing to another to possess as his own. In the case of a Juris quasi possessio, as well as in that of Possessio proper, the continuance of the possessio depends on the corpus and animus together. There can be no Juris quasi possessio without the animus possidenti; and if there be merely the animus possidenti, the Juris quasi possessio must cease.

Possessio can be lost by means of a person who represents the Possessor. Such person may himself acquire the possession by exercising the animus possidenti, when it is accompanied with a sufficient corporeal act: in the case of moveable things, this is factum; in the case of immoveable things, it is violent dispossession. The possession can be lost through the representative, in all cases in which it would have been lost by the possessor, if there had been no representation.

In many of the systematic expositions of Roman Law, the theory of Possessio is treated as introductory to the theory of Ownership (Dominium). The view which has been here given of it, is also not universally acquiesced in, but it is the correct view. For instance, Gans in his chapter on Possession (System des Röm. Civilrechts im Grundrisse, etc.) begins with the two following sections:—

§ 103. Darstellung der verschiedenen herrschenden Meinungen über den Besitz. — Der Besitz ist kein blosses Factum, und erstehet nicht als Recht, durch den unweg des Unrechts.

§ 104. Der Besitz als das Eigenthum nach der Seite des bloss besonderen willens. — Anfangendes, präsumtives Eigenthum.

Savigny's view on the contrary is briefly this: "Possession is a Fact (Factum), so far as a mere factitious (majuriatelic) relation (detention) is the foundation of it. But Possession is also a Right, so far as rights are connected with the bare existence of the relation of Fact. Consequently Possessio is both Fact and Right."

Also—"The only Right arising from bare Possession is a Right to the Interdicts"—and "the Right to the Interdicts is founded on the fact of the Exercise of Ownership being obstructed wrongfully, as for instance, by force."
On what ground is bare Possession to be maintained, if it is not a Right? The answer is, that Possession cannot be disturbed except by force, and force is not allowed. The fundamental notion then is this; a violent disturbance of Possession is an attack on a man's personality, on his freedom. It is shown in the article Agrariae Leges that the origin of the Roman doctrine of Possession may probably be traced to the Possesio of the Ager Publicus. Possessio, Possessor, and Possidere are the proper technical terms employed by the Roman writers to express the possession and the enjoyment of the Public Lands. These terms did not express ownership (ex jure Quiritium); they had in fact no more relation to ownership than the Possessio of which this article treats. Still the notion of this kind of use and enjoyment was such, that one may easily conceive how the term Possessio became applicable to various cases in which there was no Quiritarian ownership, but something that had an analogy to it. Thus in the case of vacantium infectum, or possession to the second missio in possessionem (ex secundo decreto), the Prator says "possidere jubebo," which is equivalent to giving bonitarian ownership with the power of usucapion. A usufructus which could only be maintained by the Jus Praetorium, was a Possessio usufructus as opposed to Dominium usufructus. The expressions Hereditatis or bonorum possessio do not mean the actual possession of the things, but the peculiar character of the Pratoria hereditas; for this Bonorum possessio has the same relation to the Hereditas that Bonorum possessio was to its Object; and Ager and Possessio were thus opposed: Ager was a piece of land which was either accidentally an object only of Quiritarian ownership, as a fundus Italicus of which there had been merely tradition; or it was land that could not be the object of Quiritarian ownership, such as Provincial land (Jauv., Dig. 50. tit. 16. s. 115), and the old Ager Publicus.

Concerning matters relating to Possessio appear to be explained by this view of its historical origin. The Interdictum recuperandae possessionis relates only to land, a circumstance which is consistent with the hypothesis of the origin of Possessio. The nature of the Precarium also is explained, when we know that it expressed originally the relation between the Patrons and the Clients who occupied the Possessio of the Patrons as a tenant at will and could be ejected by the Interdictum de precario, if he did not quit on notice. Further, we may thus explain the apparent inconsistency in the case of a lessee of Ager Vestigalis, who though he had only a jus in re, had yet juristic Possessio: the Ager Vestigalis was in fact fashioned according to the analogy of the old Ager Publicus, and it was a simple process to transfer it to that notion of Possessio which had existed in the case of the Ager Publicus. [Empyresus.]

This article read in connection with the article on the Agrariae Leges, and the Licinian Rogations [LXX, pp. 693, 694], will give the reader an outline of the law of Possession both in relation to the Ager Publicus and Privatus.

The preceding view of possession is from Savigny, Des Recht des Besitzes, fifth ed. 1927. There is an analysis of this excellent work by Warnkönig, "Analyse du traité de la possession par M. de Savigny, Liège 1824 ;" and a summary view of Savigny's Theory is given by Mackeldy, Lehrbuch, &c. ii. p. 7. See also Puchta, Inst. ii. § 224; Gaius, iv. 138—170; Inst. 4. tit. 15; Dig. 41. tit. 2, 3; 43. tit. 16—23, 26, 31; Cod. 7. tit. 32; 8. tit. 4, 5, 6, 9; Cod. Theod. 4. tit. 22, 23. [G. L.]

Possessio Bonorum. [Bonorum Possessio.]

Possessor clandesfina. [Interdictum.]

Postliminium. [Janua.]

Postliminium, jus postliminii. "There are," says Pomponius (Dig. 49. tit. 15. s. 14), "two kinds of Postliminium, for a man may either return himself or recover something." Postliminium is further defined by Paulus (Dig. 49. tit. 15. s. 19) to be the "right of recovering a lost thing from an extraneus and of its being restored to its former status, which right has been established between us (the Romans) and free people and kings by usage and laws (ius privatum ac legis);" for what we have lost in war or even out of war, if we recover it, we are said to recover postliminium; and this usage has been introduced by natural equity, in order that he who was wrongfully detained by strangers, should recover his former rights on returning into his own territories (in fines suos). Again Paulus says, "a man seems to have returned Postliminium, when he has entered our territory (in fines nostris intraerit);" it is a foundation is laid for a Postliminium (sicuti adimittur) when he has gone beyond our territories (in fines nostris excessit). But if a man has come into a state in alliance (sociis) or friendship with Rome, or has come to a King in alliance or friendship with Rome, he appears to have forthwith with returned by Postliminium, because he then first begins to be safe under the name of the Roman state." These extracts are made for the purpose of clearing up the Etymology of this word, as to which there was a difference of opinion. (Cic. Top. 6.) The explanation of Scaevola, as given by Cicero, has reference to the etymology of the word, post and limen: "what has been lost by us and has come to an enemy and as it were has gone from its own limen, and then has afterwards (post) returned to the same limen, seems to have returned by Postliminium." According to this explanation, the limen was the boundary or limit within which the thing was under the authority of Rome and an object of Roman law. A recent writer (Goetting, Geschichte der Röm. Staatsverfassung, p. 117) suggests that Postliminium must be viewed in a sense analogous to Pomerium. There is a fanciful explanation of the matter by Pintarchus (Quaest. Rom. 5) in his answer to the question, Why are

those who have been falsely reported to have died in a foreign land, not received into the house through the door, in case of their return, but let down through an opening in the roof?

If a Roman citizen during war came into the power of an enemy, he sustained a diminutio capitis maxima, and all his civil rights were in abeyance. Being captured by the enemy, he became a slave; but his rights over his children, if he had any, were not destroyed, but were said to be in abeyance (pendere) by virtue of the Jus Postliminii: when he returned, his children were again in his power; and if he died in captivity, they became sui juris. Whether their condition as sui juris dated from the time of the captivity or of the death, was a disputed matter (Gauius, i. 129); but Ulpian, who wrote after Gauius, declares that in such case he must be considered to have died, when he was made captive; and this is certainly the true deduction from the premises. In the case of a filius or nepos being made a captive, the paternal power was suspended (De suspens.). If the son returned, he obtained his civic rights and the father resumed his parental power; which is the case mentioned in the Digest (49. tit. 15. s. 14). As to a wife, the matter was different: the husband did not recover his wife jure postliminii, but the marriage was renewed by consent. This rule of law involves the doctrine, that if a husband was captured by the enemy, his marriage, if any then existed, was dissolved. If a Roman was ransomed by another person, he became free, but he was in the nature of a pledge to the ransomer, and the Jus Postliminii had no effect till he had paid the ransom money.

Sometimes by an act of the state a man was given up bound to an enemy; and if the enemy would not receive him, it was a question whether he had the Jus Postliminii. This was the case with Sp. Postumius who was given up to the Samnites, and with C. Hostilius Machinorna who was given up to the Numantines; but the better opinion was that they had no Jus Postliminii (Cic. De Or. i. 40, De Off. ii. 30, Top. 8, De Coena, c. 94; Dig. 49. tit. 15. s. 4; 50. tit. 7. s. 17): and Machinorna was restored to his civic rights by a Lex. (Dig. 50. tit. 7. s. 17).

Cicero (Pro Balbo, c. 12) uses the word Postliminium in a different sense; for he applies it to the case of a man who had, by his own voluntary act, ceased to be a citizen of a state, and subsequently resumed his original civic rights by Postliminium.

It appears that the Jus Postliminii was founded on the fiction of the captive having never been absent from home; a fiction which was of easy application to the case of a slave, who had passed his entire life in the service of another, and who had no legal act, the interval of captivity was a period of legal non-activity, which was terminated by his showing himself again.

The Romans acknowledged capture in war as the source of ownership in other nations, as they claimed it in their own case. Accordingly things taken by the enemy lost their Roman owners; but when they were recovered, they reverted to their original owners. This was the case with land that had been occupied by the enemy, and with the following moveables, which are enumerated by Cicero as Postliminia (Top. 8): "item (that is slaves), navis, mulus clitellarius, equus, equa quae fraudata recipere solet." (Compare Festus, s. v. Postliminium.)

Arms were not Res Postlimini, for it was a maxim that they could not be honourably lost.

The recovery above referred to seems to mean the recovery by the Roman state or by the original owner. If an individual recaptured from an enemy what had belonged to a Roman citizen, it would be consistent that we should suppose that the thing recaptured was made his own by the act of capture; but if it was a Res postliminii, this might not be the case. If a thing, as a slave, was ransomed by a person not the owner, the owner could not have it till he had paid the ransom: but it does not appear to be stated how the matter was settled, if a Roman citizen recaptured property (of the class res postlimini) that had belonged to another Roman citizen. This apparent difficulty may perhaps be solved thus: in time of war no Roman citizen could individually be considered as acting on his own behalf under any circumstances, and therefore whatever he did was the act of the State. It is a remark of Labeo (Dig. 49. tit. 15. s. 28)."Si quid pro pecunia posuit, non postliminio redit;" and Pomponius (Dig. 49. tit. 15. s. 29) states, that if the enemy is expelled from Roman lands, the lands return to their former owners, being neither considered public land nor praeda; in making which remark he evidently assumes the general doctrine laid down by Labeo. Paulus also, in his remark on Labeo's rule of law, merely mentions an exception to the rule, which is of a peculiar kind. If then anything taken in war was booty (praeda), to what did the Jus Postliminii apply? It applied at least to all that was restored by treaty or was included in the terms of surrender, and slaves no doubt were a very important part of all such things as were captured or lost in time of war; and they were things that could be easily identified, and restored to their owners. It also applied to a slave who escaped from the enemy and returned to his master. The maxim "quae res hostiles apud nos sunt, occupatum fiunt" (Dig. 40. tit. 1. s. 51) has no reference to capture from the enemy, as it sometimes seems to be supposed. (Mühlenbruch, Doct. Pand. p. 243.)

It may be objected that the explanation of one difficulty, that has been already suggested, raises another. According to this explanation, if a man in time of war recaptured his own slave, it would be praeda, and he would not at once recover the ownership, as above supposed. The answer is, that it may be so, and that this matter of Postliminium, particularly as regards things, waits for a careful investigation. As a general rule all moveables belonging to an enemy, which were captured by a Roman army, were Praeda, apparently not the property of the individual soldier, but his absence opened to lay his hands on them, but the property of the state or at least of the army. Now the difficulty is to ascertain whether all moveables so taken were Praeda, except Res Postlimini; or whether all things so taken were Praeda, Res Postlimini included. In the former case, the Res Postlimini would be the property of the owner when he could prove them to have been his, as in the case mentioned by Livy (v. 16): in the latter, when a thing had become Praeda, it had lost its character as a thing that belonged to the individual soldier, who had lost its capacity (if we may so speak) of being a Res Postlimini. The distinction is a fundamental one. The difficulty partly arises from the expression of Labeo above quoted, Si...
PRAECINCTIO

The difference between Praeda and Manubiae is explained by Galliis (xiii. 24) to be this:—

Praeda is the things themselves that are taken in

war, and Manubiae is "pecunia per quaestorem

populi Romani ex praeda vendita contracta;" nor can any objection to this explanation be derived from the words of Cicero (de Leg. Agr. ii. 22).

When prisoners were sold, they were said to be sold "sub corona," the true explanation of which expression is probably that given by Galliis (est autem alia, dec. vii. 4). The mode of sale of other things than slaves was at first probably in detail, but afterwards in the lump, that is, the whole praeda might be sold to the highest bidder, or it might be sold in large masses which contained a great number of separate things, in which cases the whole or the mass would pass to the purchaser as a universitas, and he might retail it if he chose.

This mode of sale in the lump was called "sectionem venire," and the purchaser was called sector.
was the practice to set up a spear at such sales, which was afterwards used at all sales of things by a magistratus in the name of the people. [Sectio.]

Corresponding to the acquisition of moveable things in warfare, and their being made private property, is the transfer of Ager publicus, which was acquired in war, to individuals by a Lex Agraria or de colonis deducendis or by sale as a praetor's (ager quaestorius). [Postliminium.] [G. L.]

PRAEDIA TOR. [Praes.]

PRAEDIATORIUM JUS. [Praes.]

PRAEDIUM. This word originally signified according to Varro (L. iv. 40, ed. Muller) any property which was made a security to the State by a Praetor: “Prædia dicta, item ut praedæ, a praestando, quod ea pignori data publice mancipius fidem præstet.” Subsequently the word was limited to signify land generally. In this sense Praedia were divided into Rustica and Urbana, 'of which the following definition has been given: Rustica are those on which there are no aedes or which are in the country (in agris) and Urbana are those which are in the city and comprise buildings. Those incorporeal things which consisted not in the ownership of Praedia, but in certain rights with respect to them, were called Jura praediorum. Provincialia Praedia were either stipendiaria or tributaria: the former were in those provinces which were considered to belong to the Populus Romanus and the latter in those provinces which were considered to belong to the Caesar. (Gaius, ii. 21.) [G. L.]

PRAEFECTURA. [Colonia, pp. 318, b, 319, a.]

PRAEFECTUS AERARI. [Aerarium.]

PRAEFECTUS ANNONÆ, the prefect of the corn-market, was not a regular magistratus under the republic, but was only appointed in cases of extraordinary scarcity, when he had the entire charge of supplying the capital with provisions, especially with corn, and fixed the price at which the latter was to be sold. This magistrate was appointed for the first time in B.C. 439. (Liv. iv. 12; Niebuhr, Hist. of Rome, ii. p. 418.) The superintendence of the corn-market throughout the whole republic was at a later period entrusted to Pompey for a period of five years (Dion Cass. xxxiv. 9; Cic. ad Att. iv. 1; Liv. Epit. 104) and, in accordance with this example Augustus took the same superintendence upon himself, and commanded that two persons, who had been praetors five years before, should be appointed every year for the distribution of the corn. (Dion Cass. liv. 1; curam frumenti populo dividendi, Suet. Aug. 37.) Subsequently Augustus assigned this duty to two persons of consular rank (Dion Cass. iv. 26, 31); but he also created an officer under the title of Praefectus Annonæ, who must be distinguished from the above-mentioned officers. This office was a permanent one, and appears to have been only held by one person at a time: he had jurisdiction over all matters appertaining to the corn-market, and, like the Praefectus Vigilum, was chosen from the Equites, and was not reckoned among the ordinary magistrates. (Dion Cass. lii. 24; Dig. 1. tit. 2. s. 2. § 33; 14. tit. 1. s. 1. § 18. tit. 5. s. 8; 48. tit. 2. s. 13.) The Praefectus Annonæ continued to exist till the latest times of the empire: respecting his duties in later times see Q. Suetonii, Gesch. des Kén. Reichs, § 300, 2d ed. Comp. FRUMENTIAE.

PRAEFECTUS AQUARUM. [Aqua ductus, p. 115, b.]

PRAEFECTUS CASTRORUM, praefect of the camp, is first mentioned in the reign of Augustus. There was one to each legion. (Vell, Pat. ii. 119; Tac. Ann. i. 20, xiv. 37.) We learn from Vegetius (ii. 10) that it was his duty to attend to all matters connected with the making of a camp, such as the vallum, fossa, &c., and also to the internal economy of it.

PRAEFECTUS CLASSIS, the commander of a fleet. This title was frequently given in the times of the republic to the commander of a fleet (Liv. xxvi. 48, xxxvi. 42); but Augustus appointed two permanent officers with this title, one of whom was stationed at Ravenna on the Adriatic and the other at Misenum on the Tuscan sea, each having the command of a fleet. (Suet. Aug. 49; Veget. iv. 32; Tac. Hist. iii. 12.)

PRAEFECTUS FABRUM. [Fabrili.]

PRAEFECTUS JURI DICUNDO. [Colonia, p. 318, b.]

PRAEFECTUS PRAETORIO, was the commander of the troops who guarded the emperor's person. [Praetorians.] This office was instituted by Augustus, and was at first only military, and had comparatively small power attached to it (Dion Cass. lii. 24, lv. 10; Suet. Aug. 49); but under Tiberius, who made Sejanus commander of the praetorian troops, it became of much greater importance, till at length the power of these praefects became second only to that of the emperors. (Tac. Ann. iv. 1, 2; Aurel, Vict. de Casar. 9.) The relation of the praefectus praetorio to the emperor is compared to that of the magister equitum to the dictator under the republic (Dion Cass. i. 101, tit. 11.). From the reign of Severus to that of Diocletian, the praefects, like the vizirs of the East, had the superintendence of all departments of the state, the palace, the army, the finances, and the law: they also had a court in which they decided cases. (Dig. 12. tit. 1. s. 40.) The office of praefect of the praetorium was not confined to military officers; it was filled by Ulpius and Papinius, and other distinguished jurists.

Originally there were two praefects; afterwards sometimes one and sometimes two; from the time of Commodus sometimes three (Lamprid. Commod. 6), and even four. They were as a regular rule chosen only from the equestes (Dion Cass. lii. 24; Suet. Tit. 6; Lamprid. Commod. 4); but from the time of Alexander Severus the dignity of senator was always joined with their office. (Lamprid. Alex. Ser. 21.)

Under Constantine the praefects were deprived of all military command, and changed into governors of provinces. He appointed four such praefects: the one, who commonly attended on the imperial court, had the command of Thrace, the whole of the East, and Egypt; the second had the command of Illyricum, Macedonia, and Greece, and usually resided first at Sirmium, afterwards at Thessalonica; the third of Italy and Africa; the fourth, who resided at Trèves, of Gaul, Spain, and
from the facts, that it was always given to young men of illustrious families (Tacit. Annal. iv. 36), and that Julius Caesar even appointed to it several youths of equestrian rank under age. (Dion Cass. xlii. 49, xlii. 48. During the empire such praefects of the city continued to be appointed so long as the Feriae Latinae were celebrated, and were even invested with some kind of jurisdiction. (Tacit. Annal. vi. 11; Suet. Nero, 7; Claud. 4; Dion Cass. liv. 17; J. Capitol. Antonin. Phil. 4.) On some occasions, however, no praefectus urbi was appointed at all; and then his duties were performed by the praetor urbanus. (Dion Cass. xli. 14, xlix. 16; comp. Becker, Handb. der Röm. Alterth. vol. ii. pt. ii. p. 146.)

An office very different from this, though bearing the same name, was instituted by Augustus on the suggestion of Maccenas. (Dion Cass. lii. 21; Tacit. Annal. xiv. 4; Suet. Aug. 38.) This new praefectus urbi was a regular and permanent magistrate, whom Augustus invested with all the powers necessary to maintain peace and order in the city. He had the superintendence of butchers, bankers, guardians, theatres, &c.; and to enable him to exercise his power, he had distributed throughout the city a number of milites stationarii, whom we may compare to a modern police. He also had jurisdiction in cases between slaves and their masters, between patricians and freed men, and over sons who had violated the pietas towards their parents. (Dig. 1. tit. 12. s. 1. § 5—14; 37. tit. 15. s. 1. § 2.) His jurisdiction, however, became gradually extended; and as the powers of the ancient republican praefectus urbi had been swallowed up by the office of the praetor urbanus, so now the power of the praetor urbanus was gradually absorbed by that of the praefectus urbi; and at last there was no appeal from his sentence, except to the person of the princeps himself, while anybody might appeal from a sentence of any other city magistrate, and, at a later period, even from that of a governor of a province, to the tribunal of the praefectus urbi. (Vopisc. Florian. 5, 6; Suet. Aug. 38; Dion Cass. lii. 21, 33; Dig. 4. tit. 4. s. 38.) His jurisdiction in criminal matters was at first connected with the quaestiones (Tacit. Annal. xiv. 41, with the note of Lipaius); but from the third century he exercised it alone, and not only in the city of Rome, but at a distance of one hundred miles from it, and he might sentence a person to deportatio in insulam. (Dig. 1. tit. 12. s. 1. § 3 and 4.) During the last part of the empire and under good emperors, the office was generally held for a number of years, and in many cases for life (Dion Cass. lii. 21, 24, lxxviii. 14; J. Capitol. Antonin. Pius, 8; Lamprid. Commod. 14; Vopisc. Carin. 16); but from the time of Valerian a new praefect of the city occurs almost every year.

At the time when Constantinople was made the second capital of the empire, this city also received its praefectus urbi. The praefects at this time were the direct representatives of the emperors, and all the other officers of the administration of the city, all corporations, and all public institutions, were under their control. (Cod. 1. tit. 28. s. 4; Symmach. Epist. x. 37, 43; Cassiod. Var. vi. 4.) They also exercised a superintendence over the importation and the prices of provisions, though these subjects were under the more immediate regulation of other officers. (Cod. 1,
 Sometimes Praejudicium means inconvenience, damage, injury, which sense appears to arise from the notion of a thing being prejudged, or decided without being fairly heard; and this sense of the word seems to be very nearly the same in which it occurs in our law in the phrase "without prejudice to other matters in the cause."

(Gaius, iii. 123, iv. 44; Dig. 25, tit. 3; Dig. 22, tit. 3. s. 8; Dig. 43, tit. 30. De libbris exhibendis; Inst. 4. tit. 6. s. 13; and Theophilius, Paraphr. ad Inst. 4. tit. 6. s. 13.)

PRAEJUDICIA. [Complia, pp. 338, b., 339, b.]

This word, as appears from its etymology, has a certain relation to Judicium, to which it is opposed by Cicero (Divinat. 4): "de quo non praedixerit, sed plane jam judicium factum." The commentator, who goes under the name of Asconius, observes on this passage, that a praedixus is something, which when established becomes an exemplum for the judicis (judicature) to follow; but this leaves us in doubt whether he means something established in the same cause, by way of preliminary inquiry, or something established in a different but a like cause, which would be what we call a precedent. Quintilian (Inst. Ort. v. 1. 2) states that it is used both in the sense of a precedent, in which case it is rather exemplum than praedixus (res ex paribus causae judicatae); and also in the sense of a preliminary inquiry and determination about something which belongs to the matter in dispute (judicatis ad ipsam causam pertinentibus), from whence also comes the name Praejudicium. This latter sense is in conformity with the meaning of Praejudiciale Actiones or Praejudicia in which there is an Intentio only and nothing else. (Gaius, iv. 44.) These accordingly were called Praejudiciale Actiones which had for their object the determination of some matter, which was not accompanied by a condemnation."

"A praedixus is an actio, which has not any condemnation as a consequence, but only a judicial declaration as to the existence of a legal relation. The name of this kind of actions comes from the circumstance that they serve as preliminary to other and future actions. All these actions are in rem, that is, they avail not exclusively against a determinate person who owes a duty, like actions which are founded on Obligationes." (Savigny, System, &c. vol. i. p. 356.) For instance, the question might be, Whether a man is a father or not, or Whether he has a Potestas over his child: these were the subject of Praejudicium. If a father denied that the child which was born of his wife, or with which she was then pregnant, was his child, this was the subject of a "Praejudicium cum patre de partu agnoscendo." If a Judex should have declared that the child must be maintained by the reputed father, there must still be the Praejudicium to ascertain whether the reputed father is the true father. If it was doubtful whether the mother was his wife, there must be a praedixus on this matter before the praedixus de partu agnoscendo. These praedixus actions then, were, as it appears, actions respecting Status; and they were either Civiles or Praetoriae. It was a Civil Actio when the question was as to libertas; the rest seem to have been Praetoriae Actiones. Quintilian makes a third class of Praejudicia, "cum de eadem causa pronuntiatum est," &c.

PRAEUROGATIA. [Complia, pp. 338, b., 339, b.]

PRAES. If we might trust a definition by Ausonius (Julg. xii. 9), he was called Vas who gave security for another in a causa Caesari, and who gave security for another in a civil action was Praes. But this authority cannot be trusted, and the usage of the words Vas and Præs was certainly not always conformable to this definition. According to Varro (Ling. Lat. vi. 74, ed. Muller), any person was Væs, who promised Vadimonium for another, that is, gave security for another in any legal proceeding. Festus (s. v. Vodom) says that Vas is a Sponsor in a res capitale. If Vas is genus, of which Væs in its special sense, and Praes are species, these definitions will be consistent. (Comp. Sallust. Jug. 35, 61; Horat. Sat. i. 1. 11, and Heindorfer's note.) Under Mancps Festus remarks, that Mancps signifies he who buys or hires any public property (qui a populo emitt conductue), and that he is also called Praes because he is bound to make good his contract (praestare quod promisit), as well as he who is his Praes. (See also Varro, L. c.) According to this, Praes is a surety for one who buys of the state, and so called because of his liability (praestare). But the etymology at least is doubtful, and we are inclined to think, false. The passage of Festus explains a passage in the Life of Atticus (C. N. 11), in which it is said that he never bought anything at public auction (ad hastam publicam) and never was either Mancps or Præs. A case is mentioned by Cel- lius (vii. 19) in which a person was committed to prison who could not obtain Prædes. The goods of a Præs were called Prædia (Pseudo-Ascon. in Verr. ii. 1. 54), and in Cicero (L. c.) and Livy (xxii. 60) "praedibus et praedibus" come together. The phrase "praedibus cutere," to give security, occurs in the Digest (10. tit. 3. s. 6), where some editions have "pro aedibus cavere." (See the various readings ed. Gebauer and Spangenberg.) The phrase "praedibus venderit" means to sell, not the praedes properly so called, but the things which are given as a security.
PRAESCRIP'TIO, or rather TEMPORIS PRAESCRIP'TIO, signifies the Exceptio or answer which a defendant has to the demand of a plaintiff, founded on the circumstance of the lapse of time. The word has properly no reference to the plaintiff's loss of right, but to the defendant's acquisition of a right by which he excludes the plaintiff from prosecuting his suit. This right of a defendant did not exist in the old Roman law.

When the Praetors gave new actions by their Edict, they attached to them the condition that those actions must be brought within a year (intra annum judicium dobo), that is a year from the time when the right of action accrued. These actions then were exceptions from the old rule, that all actions were perpetuae. This rule became extended by the Longi temporis praescriptio, which established that in actions about ownership, or jura in re, ten, or in some cases twenty years, would give a praescriptio, when the Possessor could show that he had complied with the main conditions of Usucapion, without having acquired ownership by Usucapion, for if he had, he had no need of any Exceptio. This rule was further extended by Constantine, and a period of 30 or 40 years, for it seems that the time was not quite settled, was to be considered as sufficient for a praescriptio, though the defendant had not complied with the conditions of Usucapion. A general constitution was made by Theodosius, A. D. 424, which with some variations appears in both the Codes (Cod. Theod. 4. tit. 14.; Cod. 7. tit. 39. s. 3.); and it enacted that, as in the case of Usucapion, the praescriptio was, 1. Actio Nata, for there must be a defendant to the populus as a security by a Praescriptio, or rather TEMPOKIS PRAESCRIPTIO. 2. There must be a continuous neglect on the part of the person entitled to bring the action, in order that the time of the Praescriptio may be reckoned uninterruptedly. 3. Bona fides was not a necessary condition in a Praescriptio, as such, because it was the neglect of the plaintiff which laid the foundation of the Praescriptio. But the longi temporis praescriptio was made like to Usucapion as to its conditions, of which bona fides was one. Justinian (Cod. 7. tit. 39. s. 8.) required a bona fides in the case of a thirty year Praescriptio, but this was no new rule except so far as the Possessor claimed the benefit of Usucapio; and as the longi temporis praescriptio, as an independent rule of law, disappeared from the legislation of Justinian, the bona fides as a condition of praescriptio went with it. 4. The lapse of time, which was 30 years; but to this there were many exceptions.

The sources on the subject of Praescriptio are referred to in Brinkmann's Institutiones Juris Romani, and Mühlenbruch's Doctrina Pandectorum, § 261, and § 481, on the distinction being ultimately abolished between Praescriptio and Usucapio; Savigny, System des heutigen Röm. Rechts, vol. v., from whom this outline is taken. See also USUCAPIO.

Praescriptio had a special sense in Roman pleadings, which Gaius has explained as existing in his time (iv. 150). These Praescriptiones were pro actor, and not pro reo; and an example will explain the term. It often happens that an obligatio is such that the party owed nothing, yet was bound to do certain acts at certain times, for instance, yearly, half yearly, or monthly. The payment of interest on money would be an example. At the close of any of these certain periods, the party to whom the obligatio was due, might sue for what was due, but not for what was not due, though an obligatio was contracted as to future time. When a debt had become due in consequence of an obligatio, there was said to be a Prostatio, or it was said, "aliquid jam praestari oportet:" when the obligatio existed, but the Prostatio was not due, it was "futura praestatio of it was said, "prostatio ad hanc summa fusa." If then the plaintiff wished to limit his demand to what was due, it was necessary to use the following Praescriptio: "Ea res agatur cujus rei dies fuit." (Compare Cae de Or. i. 37.) The Name of Praescriptiones, observes Gaius, is manifestly derived from the circumstance of their being prefixed (praescribuntur) to the formulæ, that is, they came before the Intentio. In the time of Gaius the Praescriptiones were only used by the actor; but formerly they were used also in favour of a defendant (resus), as in the following instance: "Ea res agatur quod praescripuit hereditatia non fiat," which in the time of Gaius was always intercalated in any exceptio or answer, when the petitio hereditatia, by using a different kind of actio, was prejudging the ques-
tion of the hereditas (cum petitor, &c. ... praedictum hereditati faciatur). Compare Gaius Dig. 10. tit. 2. s. 1; and see Praedictum.)

Savigny shows that in the legislation of Justinian, Praescriptio and Exceptio are identical and that both terms can be used indifferently. He observes that the Praescriptiones which in the old form of procedure were introduced into the formula for the benefit of the defendant, were properly Exceptions, and it was merely an accident that certain Exceptions were placed before the intention instead of being placed at the end of the formula, as was the usual practice. Subsequently, as appears from Gaius, only the Praescriptiones pro actore were prefixed to the formula; and those pro reo were placed at the end, and they retained, though improperly, the name of Praescriptiones. Thus Exceptio and Praescriptio came to be used as equivalent terms, a circumstance to which the disuse of the Ordo judiciorum contributed. Yet in the case of particular exceptions, one or other of the names was most in use, and the indiscriminate employment of them was an exception to the general rule. The prevalence of one or the other name in particular cases is easily explained: thus, the Doli and Rei Judicatae Exceptions were always at the end of the Formula, and the Temporis and Fori Praescriptiones in earlier times were placed in the beginning. Savigny adds that in modern times Praescriptio has acquired the sense of Umscapion, but this is never the sense of the word Praescriptio in the Roman law. Though Exceptio and Praescriptio came to be used as equivalent, yet neither Exceptio nor Praescriptio is used in the sense of Temporis praescriptio without the addition of the words Temporis, Temporalis, triginta annorum, &c. (Savigny, System, &c. iv. 309, v. 163.) [G.L.]

PRAESEES. [Provincia.] Praesul. [Aulus.] Praetexta. [Togata.]
Praetor. According to Ciceron (de Legg. iii. 3) Praetor was a title which designated the consuls as the leaders of the armies of the state; and he considers the word to contain the same elemental parts as the verb praetere. The period and office of the command of the consuls might appropriately be called Praetorium. (Livy. viii. 11.) Praetor was also a title of office among the Latins: and it is considered the word to contain the same elemental parts as the verb praetere. The Praetor was the leader of the army, and the other four went abroad. (Livy. xlv. 44.) The Senate determined their provinces, which were distributed among them by lot. (Livy. xxii. 27, 28.) After the discharge of his judicial functions in the city, a Praetor often had the administration of a province with the title of Propraetor, and sometimes with the title of Proconsul. Sulla increased the number of Praetors to eight, which Julius Caesar raised successively to ten, twelve, fourteen, and sixteen. (Dion Cassius, xiii. 51, xlii. 51, and the notes of Reimarus.) Augustus after several changes fixed the number at twelve. Under Tiberius there were sixteen. Praetors were appointed by Claudius for matters relating to Fideicommissa, when the business in this department of the law had become considerable, but Titus reduced the number to one; and Nero added a Praetor for the decision of matters between the Fiscus and individuals, "Thus," says Pomponius, speaking of his own time, "eighteen praetors administer justice (jus dicent) in the State." (Dig. i. tit. 2. s. 34.) M. Aurelius, according to Capitolinus (M. Aurel. c. 10), appointed a Praetor for matters relating to tutela, which must have taken place after Pomponius wrote. (Pandectae.) The main duties of the Praetors were judicial, and it appears that it was found necessary from time to time to increase their number, and to assign to them special departments of the administration of justice.

Sometimes extraordinary duties were imposed on them, as in the case of the Praetor Peregrinus (B. C. 144) who was commissioned by a Senatus-consultum to look after the repair of certain aqueducts and to prevent the improper use of the water. (Frontinus, De Aquaeduct., lib. 1.)

The Praetor Urbanus was specially named the armies, he exercised their functions within the city. He was a Magistratus Curulis and he had the Imperium, and consequently was one of the Maiiores: but he owed respect and obedience to the consuls. (Polyb. xiii. 1.) His precedence over six lictors, whence he is called Polybios Ἰεραύκον or Σεπτηλέως, and sometimes simply Ἡσπηλέως. Plutarch (Sulla, 5) uses the expression ἡστρατηγία πολεμική. At a later period the Praetor had only two lictors in Rome. (Censorinus, c. 24.) The praetorship was at first given to a consul of the preceding year as appears from Livy. L. Papirius was praetor after being consul. (Livy. x. 47.)

In the year B. C. 246 another Praetor was appointed, whose business was to administer justice in matters in dispute between peregrini, or peregrini and Roman citizens; and accordingly he was called Praetor Peregrinus. (Dig. 1. tit. 2. s. 28.) The other Praetor was then called Praetor Urbanus "qui jus inter cives dicit," and sometimes simply Praetor Urbanus et Praetor Urbis. The two Praetors determined by lot which functions they should respectively exercise. If either of them was at the head of the army, the other performed all the duties of both within the city. Sometimes the military imperium of a Praetor was prolonged for a second year. When the territories of the state were extended beyond the limits of Italy, new praetors were made. Thus two praetors were created B. C. 227, for the administration of Sicily and Sardinia, and two more were added when the two Spanish provinces were formed B. C. 197. When there were six praetors, two stayed in the city, and the other four went abroad. (Livy. xlv. 44.) The Senate determined their provinces, which were distributed among them by lot. (Livy. xxiii. 27, 28.) After the discharge of his judicial functions in the city, a Praetor often had the administration of a province with the title of Propraetor, and sometimes with the title of Proconsul. Sulla increased the number of Praetors to eight, which Julius Caesar raised successively to ten, twelve, fourteen, and sixteen. (Dion Cassius, xiii. 51, xlii. 51, and the notes of Reimarus.) Augustus after several changes fixed the number at twelve. Under Tiberius there were sixteen. Two praetors were appointed by Claudius for matters relating to Fideicommissa, when the business in this department of the law had become considerable, but Titus reduced the number to one; and Nero added a Praetor for the decision of matters between the Fiscus and individuals, "Thus," says Pomponius, speaking of his own time, "eighteen praetors administer justice (jus dicent) in the State." (Dig. 1. tit. 2. s. 34.) M. Aurelius, according to Capitolinus (M. Aurel. c. 10), appointed a Praetor for matters relating to tutela, which must have taken place after Pomponius wrote. (Pandectae.) The main duties of the Praetors were judicial, and it appears that it was found necessary from time to time to increase their number, and to assign to them special departments of the administration of justice.

Sometimes extraordinary duties were imposed on them, as in the case of the Praetor Peregrinus (B. C. 144) who was commissioned by a Senatus-consultum to look after the repair of certain aqueducts and to prevent the improper use of the water. (Frontinus, De Aquaeduct., lib. 1.)

The Praetor Urbanus was specially named...
Prætor, and he was the first in rank. His duties confined him to Rome, as is implied by the name, and he could only leave the city for ten days at a time. It was part of his duty to superintend the public law. He was also the chief magistrate for the administration of justice, and to the Edicta of the successive praetors the Roman Law owes a great degree its development and improvement. Both the Praetor Urbanus and the Praetor Peregrinus had the Jus Edicendi (Gaius, i. 2), and their functions in this respect do not appear to have been limited on the establishment of the imperial power, though it must have been gradually restricted as the practice of Imperial Constitutions and Rescripts became common. [Edictum.] The limits of these two praetors' administration were expressed by the term Urbanæ Provinciae.

The chief judicial functions of the Praetor in civil matters consisted in giving a judex. [Judex.] It was only in the case of Interdicts, that he decided in a summary way. [Interdictum.] Proceedings before the praetor were technically said to be in iure.

The Praetors also presided at trials of criminal matters. These were the Quaestiones perpetuae (Cic. Brut. c. 27), or the trials for Repetundae, Ambitus, Majestas, and Peculatus, which, when there were six praetors, were assigned to four out of the number. Sulla added to these Quaestiones those of Falsum, De Sicariis et Veneficis, and De Parricidis, and for this purpose he added two or according to some accounts four praetors, for the accounts of Pompeius and of other writers do not agree on this point. (Sueton. Caesar, 41; Dion Cass. xii. 51.) On these occasions the praetor presided, but a body of judges determined by a majority of votes the condemnation or acquittal of the accused. [Judicium.] The Praetor when he administered justice sat on a sella Curulis in a Tribunal, which was that part of the Court which was appropriated to the Praetor and his assessors and friends, and is opposed to the Subsellia, or part occupied by the Praetor and his friends. (Cic. Brut. 94.) But the Praetor could do many ministerial acts out of court, or as it was expressed e plano, or ex acuo loco, which terms are opposed to e tribunal et ex superior loco: for instance, he could in certain cases give validity to the act of manumission when he was out of doors, as on his road to the bath or to the theatre. (Gaius, i. 20.)

A person who had been ejected from the senate could recover his rank by being made Praetor (Dion Cassii, xxvii. 39; Plutarch, Cicero, 17). Sallustus was made praetor e tūr tēn tēn sēculīm ēvalēdiēm. (Dion Cassius, xiii. 52.)

The Praetors existed with varying numbers to a late period in the Empire, and they had still jurisdiction. (Cod. 7. tit. 62. s. 17; 5. tit. 71. s. 18.)

The functions of the Praetors, as above observed, were chiefly judicial, and this article should be connected with a reference to Edictum, Imperium, Judex, Jurisdiction, Magistratus, Provincia. To the authorities referred to under Edictum may be added, "Die Prätorischen Edictes der Römer, &c., von D. Eduard Schröder, Weimar, 1815." [G. L.]
bers and abolished their privileges (Aurel. Vict. de Caes. 39); they were still allowed to remain at Rome, but had no longer the guard of the emperor’s person, as he never resided in the capital. Their numbers were again increased by Maxentius, but after his defeat by Constantine, A.D. 312, they were entirely suppressed by the latter, their fortified camp destroyed, and those who had not perished in the battle between Constantine and Maxentius were dispersed among the legions. (Zosimus, ii. 17; Aurel. Vict. de Caes. 40.) The new form of government established by Constantine did not require such a body of troops, and accordingly they were never revived. The emperor’s body guards now only consisted of the Domesticos and Vexillaires and foot under two comites, and of the Protectores. (Cod. 12. tit. 17; Cod. Theod. 6. tit. 24.)

The commanders of the Praetorians were called Praefecti Praetorio, whose duties, powers, &c. are mentioned in a separate article.

Praetorium was the name of the general’s tent in the camp, and was so called because the name of the chief Roman magistrate was originally praetor, and not consul. [CASTRA, p. 249.] The officers who attended on the general in the Praetorium, and formed his council of war, were called by the same name. (Liv. xxx. 5.) The word was also used in several other significations, which were derived from the original one. Thus the residence of a governor of a province was called the Praetorium (Cic. a. Verr. iv. 28, v. 35; St. John, xviii. 28, 33); and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33); and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Suet. St. John, xviii. 28, 33) ; and the same name was also given to any large house or palace. (Sue...
ment of the assembly, the parties proceeded to trial in the usual manner. The court before whom they appeared, however influenced they might be by the praejudicium of the people, were under no legal compulsion to abide by their decision; and on the other hand it is not improbable that if the people refused to give judgment in favour of the complainant, he might still proceed against his adversary by a γραφή, or a private action, according to the nature of the case. (Platner, Proc. und Kl. vol. i. p. 382.)

The cases to which the ξροβολή was applied were complaints against magistrates for official misconduct or oppression; against those public informers and mischief-makers who were called συνοφρύται; against those who outraged public decency at the religious festivals; and against all such as by evil practices exhibited disaffection to the state. (Harpoc. and Suidas, s. v. Καταχειρωτονία; Pollux, viii. 46; Aesch. de Fals. Leg. 47; Isocr. peri ἀριτίδ. 344, ed. Steph.)

With respect to magistrates, Schömann (de Comit. p. 231) thinks that the ξροβολαί could only be brought against them at those εἰπερχειρωταί which were held at the first κυρία ἐκκλησία in every Πρυτανεία, when the people inquired into the conduct of magistrates, with a view to continue them in office. (Platner, p. 385.) The cases to which the ξροβολαί were applied except those of a trifling character, for which they were empowered (according to the interpretation) the not bringing the case before the magistrates before whom the charge was made, were to bring the case before the people those complaints, for which satisfaction would be a profanation of its sanctity, and to subject the offender to the penalties of these statutes. For any such offence complaint was to be made to the Prytanes (i. e. the Proedri), who were to bring forward the charge at an assembly to be held soon after the festival in the theatre of Dionysus. The defendant was to be produced before the assembly. Both parties were heard, and then the people proceeded to vote by show of hands. Those who voted in favour of the prosecution were said καταχειρωτονίοι, those who were against it ἀποχειρωτονίοι. The complainant was said προβάλλεσθαι πῶς ἀδικοίως, and the people, if they condemned him, προκαταγωγώναι. (Demosth. c. Mid. 578, 583, 586.)

Some difficulty has arisen in explaining the following words in the law above referred to: — τὰς προβολὰς παραδίδοσθαι ὅσοι ὄχι ἑκτέσιμα ἄδικως. Platner (Proc. und Kl. vol. i. p. 384) and Schömann (de Com. p. 230) suppose that by these words the Prytanes are commanded to bring before the people those complaints, for which satisfaction has not been made by the offender to the prosecutor; and, to show that a compromise would be impracticable, the cases to which the ξροβολαί were not applied except those of a trifling character, for which they were themselves empowered to impose a fine. (As to the power of fining see Att. Proc. p. 275.) If we suppose the complaint to take the name of ξροβολή upon its being presented to the Proedri, the expression ἑκτεσιμῷ ἄδικος will cause no difficulty; for as δίκαις τίνως signifies to pay the damages awarded in an action, so προβολᾶς τίνες signifies, to pay the fine imposed by the magistrates before whom the charge was brought; and προβολήν is not used improperly for ἑκτεσεθήν, any more than δίκην is for τίμημα in the other case. Perhaps there is more force in another objection urged by Platner, viz., that (according to this interpretation) the not bringing the case before the people was to depend on the non-payment, and not (as might have been expected) on the imposition of the fine.

The people having given their sentence for the prosecution, the case was to be brought into the court of Heliaea. In certain cases of a serious nature the defendant might be required to give bail for his appearance, or (in default thereof) go to prison. (Meier, Att. Proc. p. 276.) The persons on whom devoted the γυμναία διακατηρίων were, according to Pollux (viii. 87), the Thesmothetae. Meier (i. e.) thinks this would depend on the nature of the case, and that upon a charge for the profanation of a festival, the cognizance would be long to such of the three superior archons as had the superintendence thereof. This would (no doubt) follow from the ordinary principles of Athenian jurisprudence; but it may be conceived that the extraordinary nature of the complaint by προβολή might take it out of the common course of practice. (Platner, p. 385.) The dicasts had to pro-
nounce their verdict on the guilt of the party, and to assess the penalty, which might be death, or only a pecuniary fine, according to their discretion. The trial (proboleuma) was conducted with no risk to the prosecutor, who was considered to proceed under the authority of the popular decree. (Meier, Att. Proc. p. 277.) [C. R. K.]

PROBOULEUMA (proboleuma). [Boule, p. 210, b.]

PROBOULI (proboloi), a name applicable to any persons who are appointed to consult or take measures for the benefit of the people. Thus, the delegates who were sent by the twelve Ionian cities to attend the PanIonian council, and deliberate on the affairs of the confederacy, were called proboloi. (Herod. vi. 7.) So were the deputies sent by the several Greek states to attend the congress at the Isthmus, on the occasion of the second Persian invasion (Herod. vii. 172); and also the envoys whom the Greeks agreed to send annually to Plataea. (Plutarch, Arist. 21.) The word is also used like γονοφύλακες, to denote an oligarchical body, in whom the government of a state was vested, or who at least exercised a controlling power over the senate and popular assemblies. Such were the sixty senators of Clidus; and a similar body appears to have existed at Megara, where, although democracy prevailed at an earlier period, the government became oligarchical before the beginning of the Peloponnesian war. (Arist. Pol. iv. 12, § 8, vi. 5, § 18; Müller, Dor. iii. 9, § 10; Wachsmuth, Ath. vol. i. pt. 2, p. 91; Schömann, Antiq. jur. publ. p. 82.) A body of men called proboloi were appointed at Athens, after the end of the Sicilian war, to act as a committee of public safety. Thucydides (viii. 1) calls them ἀρχην των προφύλακων αὐτῶν, οἵτως περὶ τῶν παρόντων ὡς ἀν καροῦ ἢ προβολείσθωσιν. They were ten in number. (Suidas, s. v. proboleumai.) Whether their appointment arose out of any concerted plan for overthrowing the constitution, is doubtful. The ostensible object at least was different; and the measures which they took for defending their country, and prosecuting the war, appear to have been prudent and vigorous. Their authority did not last much longer than a year; for a year and a half afterwards Pisander and his colleagues established the council of Four Hundred, by which the democracy was overthrown. (Thucyd. viii. 67; Wachsmuth, vol. i. pt. 2, p. 197.) The first step which had been taken by Pisander and his party, was to procure the election of a body of men, called ἑγγράφας αὐτοκράτορες, who were to draw up a plan, to be submitted to the people, for remodelling the constitution. Thucydides says they were ten in number. Harpocratie (s. v. ἅγγραφαις) cites Androtion and Philochorus as having stated that thirty were chosen, and adds, ὦ δὲ θεουκιδίδης τῶν δεκα ἐμφανίσθη τῶν προβολῶν. This and the language of Suidas (s. v. προβολωιοὶ) have led Schömann to conjecture that the proboloi were elected as συγγραφεῖς, and twenty more persons associated with them, making in all the thirty mentioned by Androtion and Philochorus. (Antiq. jur. publ. 181.) Others have thought that the συγγραφεῖς of Thucydides have been comprehended by grammarians with the thirty tyrants, who were first chosen αἱ τῶν πατρίων νόμων συγγράφασι καθ' ὅσ' πολιτεύουσιν. (Xen. Hell. ii. 3, § 2; Goeller, Ad Thuc. vii. 67.) These Athenian proboloi are alluded to by Aristophanes in the Lysistrata (467), which was acted the year after the Sicilian defeat, and by Lysias, c. Erotesoth. 126, ed. Steph. [C. R. K.]

PROCHEIROTÔNIA (προχειροτονία). [Boule, p. 251, a.]

PROCLEISIS (προκλησίς). [Diatetae, p. 398, b.]

PROCONSUL is an officer who acts in the place of a consul without holding the office of consul itself; though the proconsul was generally one who had held the office of consul, so that the proconsulship was a continuation, though a modified one, of the consulship. The first time that we meet with a consul, whose imperium was prolonged after the year of his consulship, is at the commencement of the second Samnite war, at the end of the consulship year 227 B.C., when it was thought advisable to prolong the imperium (imperium pro rōgare) of Q. Publilius Philo, whose return to Rome would have been followed by the loss of most of the advantages that had been gained in his campaign. (Liv. viii. 23, 26.) The power of proconsul was conferred by a senatusconsultum and plebisconsultum, and was nearly equal to that of a regular consul, for he had the imperium and juridictio, but it differed inasmuch as it did not extend over the city and its immediate vicinity (see Niebuhr, Hist. of Rome, iii. p. 180, who infers from Gaius, iv. 184, 105, and Cic. de Nat. Deor. ii. 3, that in this earlier instance the proconsular power is not an imperium prorogatum, but a fresh appointment as commander of the reserve, and Niebuhr (Hist. of Rome, ii. p. 123) justly remarks that Livy here probably applies the phraseology of a much later time to the commander of the reserve; and this is the more probable as Dionysius (ix. 12) speaks of this āντιστρατηγίδης as having been appointed by the consuls. Nineteen years after the proconsulship of Publius Philo, 308 B.C., Livy (ix. 42) relates that the senate alone, and without a plebeian censure, prolonged the imperium of the consul Q. Fabius Maximus Rullianus; but it is manifest that here again Livy transfers a later institution to a time when it did not yet exist; for it was only by the lex Maenia (236 B.C.) that the Senate obtained the right to prolong the imperium.

When the number of Roman provinces had become great, it was customary for the consuls, who during the latter period of the republic spent the year of their consulship at Rome, to undertake at its close the conduct of a war in a province, or its peaceful administration. (Cic. de Nat. Deor. ii. 3; Liv. xxxii. 25; Cæs. ad Fam. viii. 5. 13.) There are some extraordinary cases on record in which a man obtained a province with the title of proconsul without having held the consulship before. The first case of this kind occurred in B.C. 211, when young P. Cornelius Scipio was created proconsul of Spain in the comitia centuriata. (Liv. xxvi. 18.) During the last period of the republic such cases occurred more frequently. (Plut. Aemil. Paul. 4;
Cic. de Leg. i. 20.) Respecting the powers and jurisdiction of the proconsuls in the provinces, see PROVINCIA.

After the administration of the empire was newly regulated by Constantine, parts of certain dioceses were under the administration of proconsuls. Thus a part of the diocese of Asia, called Asia in a narrower sense, Achaea in the diocese of Macedonia, and the consular province in the diocese of Africa, were governed by proconsuls. (Walter, Geschichte des Römischen Rechts, § 306, 2d edit.) [L. S.]

PROCURITORES. [EXERCITUS, p. 508, a.]

PROCURATOR is the person who has the management of any business committed to him by another. Thus it is applied to a person who maintains or defends an action on behalf of another, or, as we should say, an attorney [ACTIO]: to a steward in a family [CALCULATOR]: to an officer in the provinces belonging to the Caesars, who attended to the duties discharged by the questor in the other provinces [PROVINCIA]: to an officer engaged in the administration of the Fiscus [FICUS]: and to various other officers under the empire.

PRODIGIUM in its widest acceptation denotes any sign by which the gods indicated to men a future event, whether good or evil, and thus includes omens and auguries of every description. (Verg. Aen. v. 639; Servius, ad loc. ; Plin. H. N. xi. 37; Cic. in Verr. iv. 49.) It is, however, generally employed in a more restricted sense to signify some strange incident or wonderful appearance which was supposed to herald the approach of misfortune, and happened under such circumstances as to announce that the calamity was impending over a whole community or nation rather than private individuals. The word may be considered synonymous with ostentum, monstrum, portentum. "Quia enim ostentandum, portentum, monstrant, praedictum ostenta, portenta, monstra, prodigia dicuntur." (Cic. de Div. i. 42.) It should be observed, however, that prodigia must be derived from ago, and not from di/o, as Cicero would have it.

Since prodigies were viewed as direct manifestations of the wrath of heaven, and warnings of coming vengeance, it was believed that this wrath might be appeased, and consequently this vengeance averted, by prayers and sacrifices duly offered to the offended powers. This being a matter which deeply concerned the public welfare, the necessary rites were in ancient times regularly performed, under the direction of the pontifices, by the consuls before they left the city, the solemnities being performed those active duties which the Greeks in battle would be an instance of this kind; so would any breach of the oath taken by the ἕφθοι at Athens; or any line of conduct for which a charge of disfavour to the people (μοισυνία) might be successfully maintained. (Xen. Cyrop. vi. 4. § 14, vi. 3. § 27; Eurip. Phoeniss. 1003; Andoc. c. Mheh. 50, ed. Steph.; Lycurg. c. Leocr. 155, ed. Steph.) It would be a betrayal of the state, to delude the people by false intelligence or promises; or to disobey any special decree, such as that (for instance) which prohibited the exportation of arms or naval stores to Philip, and that which (after Philip had taken possession of Phocis) forbade Athenian citizens to pass the night out of the city. (Demosth. c. Lept. 497, 498, pro Cor. 230, de Ægis. Leg. 435.) But not only would advent acts of disobedience or treachery amount to the crime of ἐξοδοσία, but also the neglect to perform those active duties which the Gr.eks in general expected of every good citizen. cowardice in battle (ἐκλεία) would be an instance of this kind; so would any breach of the oath taken by the ἑρακριτικαί at Athens; or any line of conduct for which a charge of disfavour to the people (μοισυνία) might be successfully maintained. (Xen. Cyrop. vi. 4. § 14, vi. 3. § 27; Eurip. Phoeniss. 1003; Andoc. c. Mheh. 50, ed. Steph.; Lycurg. c. Leocr. 155, ed. Steph.)

Thus, we find persons, whose offence was the pronouncing unconstitutional laws, or advising bad measures, or the like, charged by their political opponents with an attempt to overthrow the constitution. (Demosth. πεταλὸς κυνηγετής, 170; Aesch. c. Timarch. 1, c. Ctes. 82, ed. Steph.; Lys. pro Polyst. 159, ed. Steph.) Of the facility with which such charges might be made at Athens, especially in times of political excitement, when the most eminent citizens were liable to be suspected of plots against the state, history affords abundant proof; and Greek history, no less than modern, shows the danger of leaving the crime of treason undefined by the law, and to be interpreted by judges. (Aristoph. Ἑκ. 236, 475, 862, Vesp. 483, 953; Wachsmuth, Holl. Alt. vol. i. pt. ii. p. 154, vol. ii. pt. i. p. 178.) One of the most remarkable cases...
PRODOSIA.

trials for constructive treason at Athens was that of Leocrates, who left the city after the defeat at Chaeroneia, and was prosecuted by Lycurgus for desertion of his country. The speech of Lycurgus is preserved to us, and is a good specimen of his eloquence. The facts of the case are stated in p. 150, ed. Steph. The nature of the charge may be seen from various expressions of the orator, such as προδοσία τοῦς γεώς καὶ τὰ ἔθνη καὶ τὰς ἐν τοῖς ἱπόμενοι διανεία (147), μη βοήθησας τῶν πατρίων ἤρωις, ἀγκαλιασάς τὴν πόλιν (148), οὐ συμβεβλήμενον οὖν εἰς τὴν πόλεως σωτηρίαν (153), φεύγων τὸν ὑπὲρ τῆς πατρίδος κύδωνα (154), and the like. The defence of the accused was that, he did not leave Athens with a traitorous intention (ἐν προδοσία), but for the purposes of trade (ἐν ἐμπόρῳ). (See Argument, and p. 153.)

The ordinary method of proceeding against those who were accused of treason or treasonable practices was by εἰσαγγελία, as in the case of Leocrates. (Pollux, viii. 52.) In some cases a γραφή might be laid before the Thesmotheate. (Demosth. c. Steph. 1137.) We read of an old law, by which the jurisdiction in trials for high treason was given to the archon βασιλεύς. (Meier, Att. Proc. p. 50.) But it could hardly be expected that in a Greek city state offences would always be prosecuted according to the forms of law; and we find various instances in which magistrates, generally and others, took a summary method for bringing traitors and conspirators to justice. Thus a certain person, named Antiphon, who had promised Philip to burn the Athenian arsenal, was seized by the council of Areopagus, and afterwards put to the torture, and condemned to death by the people. (Demosth. pro Cor. 271; Aesch. c. Ctes. 69, ed. St-ph.) As to the power of the Areopagus, see further Lycurg. c. Leoc. 154. The people in assembly might of course direct any extraordinary measures to be taken against suspected persons, as they did in the affair of the Hermes busts (Thucyd. vi. 50, 61), and by their ψήφσεις might supersede even the form of a trial. So fearful were the Athenians of any attempt to establish a tyranny or an oligarchy, that any person who conspired for such purpose, or any person who held an office under a government which had overthrown the constitution, might be slain with impunity. Every citizen indeed was under an obligation to kill such a person, and for so doing was entitled by law to honours and rewards. (Andoc. de Mysd. 12, 13, ed. Steph.; Lys. Δμε. καταλ. ἄπολ. 172, ed. Steph.)

The regular punishment appointed by the law for most kinds of treason appears to have been death (Xen. Hellen. i. 7. § 22; Demosth. pro Cor. 238; Lycurg. c. Leoc. 148, 152, ed. Steph.), which, no doubt, might be mitigated by decree of the people, as in the case of Mitilades (Herod. vi. 186) and many others. The less heinous kinds of προδοσία were probably punished at the discretion of the court which tried them. (Demosth. c. Timoc. 740, c. Timoc. 1344.) The goods of traitors, who suffered death, were confiscated, and their houses razed to the ground; nor were they permitted to be buried in the country, but had their bodies cast out in some place on the confines of Attica and Megara. Therefore it was that the bones of the Mistomices, who had been condemned for treason, were brought over and buried secretly by his friends. (Thucyd. i. 138.) The posterity of a traitor became ἄγιους, and those of a tyrant were liable to share the fate of their ancestor. (Meursius, Them. Att. ii. 2, 15; Plutner, Proc. und Klag. vol. ii. p. 82; Meier, Att. Proc. p. 341, De bon. damn. pp. 11—13, 15.) Traitors might be proceeded against even after their death, as we have seen done in modern times. Thus, the Athenians resolved to prosecute Phrynichus, who had been most active in setting up the oligarchy of the Four Hundred (πολεμικοὶ κρινεῖν προδοσίας), and also to subject his defenders to the punishment of traitors, in case of a conviction. This was done. Judgment of treason was passed against Phrynichus. His bones were dug up, and cast out of Attica; his defenders put to death; and his murderers honoured with the freedom of the city. (Thuc. vii. 92; Lyiaeas, c. Agor. 136; Lycurg. c. Leoc. 164, ed. Steph.)

PROEDRI (προέδροι). [BOULE, pp. 210, 212.]
PROEISPHORA [ΡΘΗΩΗΡΑ.] PROEISPHORAS DIKE (προείσφορας δίκη), an action brought by a member of a Symmoria, to recover a rate paid on account of another. The Symmoriae being so arranged, that three hundred of the richest men were selected to form a superior board, responsible to the state in the first instance for the collection of a property tax; the people passed a decree, in case of need, commanding them to pay the tax; and also to subject his defenders to the punishment of traitors, in case of a conviction. This was done. Traitors might be proceeded against for the purpose of recovering money so advanced was called προεισφοράν κοιμίζεται. (Demosth. c. Pantesn. 977, c. Phaenipp. 1046, c. Polyg. 1206.) This cause, like others relating to the property tax and the trierarchy, belonged to the jurisdiction of the Strategi. (Büchel, Publ. Econ. of Athens, pp. 450, 526, 553, 2d ed.; Meier, Att. Proc. pp. 107, 550.)

PROELIA [PROELIALES DIES. [DIES.]
PROEROSIA or PROERO'SIAE (προεροσία or προεροσίαι) were sacrifices (or, according to other writers, a festival) offered to Demeter at the time when the seeds were sown, for the purpose of obtaining a plentiful harvest. (Suidas, Hesych., Etymol. Mag. s. v.; Arrian in Epictet. iii. 21.) According to Suidas the Athenians performed this sacrifice in Ol. 5, on behalf of all the Greeks; but from all the other accounts it would appear that the Athenians did so at all times, and that the instance mentioned by Suidas is only the first time that proerosia were offered by the Athenians for all the Greeks. They are said to have been instituted by the command of some oracle at a time when all the world was suffering from scarcity or from a plague. (Suid. s. v. Επεροσία; compare Lycurg. Fragm. c. Menenarch.)

PROIX (προῖχ). [DOS, p. 436.]
PROLETA'THII. [CAPUT.]
PROMETHEIA (προμηθεία), a festival celebrated at Athens in honour of Prometheus. (Xen. de Re Publ. Ath. 3, § 4; Harpocr. s. r. Αὔμαται.) The time at which it was solemnised is not known, but it was one of the five Attic festi
vals, which were held with a torch-race in the Ceramicus (Har pocrat. l. e. ; Schol. ad Aristoph. Ran. 131 ; comp. Lampadephoria), for which the gymnasiarchs had to supply the youths from the gymnasia. Prometheus himself was believed to have instituted this torch-race, whence he was called the torch bearer. (Hygin. Poet. Astr. ii. 15; Euph. Phoen. 1133; Philostr. Vit. Sophist. ii. 20.) The torch-race of the Prometheus commenced at the so-called altar of Prometheus in the academia (Paus. i. 30. § 2; Schol. ad Soph. Oed. Col. 53), or in the Ceramicus, and thence the youths with their torches raced to the city. (Weller, Die Aeschy. Trilog. p. 120, &c.)

PRONPRAETOR. [Provincia.]
PRONPRIETAS. [Domi num.]

PROPYLEAE (propilaia), the entrance to a temple, or sacred enclosure, consisted of a gateway flanked by buildings, whence the plural form of the word. The Egyptian temples generally had magnificent propylae, consisting of a pair of oblong truncated pyramids of solid masonry, the faces of which were sculptured with hieroglyphics. (See Herod. ii. 68, 101, 121, and other passages; the modern works on Egyptian antiquities; the Atlas to Kugler's Kunstgeschichte, sect. 1. pl. 5. fig. 1.)

In Greek, except when the Egyptian temples are spoken of, the word is generally used to signify the entrance to the Acropolis of Athens, which was the last completed of the great works of architecture executed under the administration of Pericles. The building of the Propylaia occupied five years, B.C. 437—432, and cost 2012 talents. The name of the architect was Mnesicles. (Plut. Per. 13; Thuc. ii. 13, with Poppo's Notes; Aristoph. Equit. 1326; Demosth. de Rep. Or. 23. p. 174. 23, ed. Bekker; Harpocrat. Suid. s. v.; Cie. de Off. ii. 17.) The edifice was of the Doric order, and presented in front the appearance of a hexastyle portico of white marble, with the central intercolumniation widest in the rear, and with two advanced wings, containing chambers, with the northern one of which (that on the left hand) was adorned with pictures, which are fully described by Pausanias (i. 22. §§ 4—7), and among which were works by Pygnotus, and, probably, by Protogenes. (See Dict. of Bieg. s. v.) On the right hand, and in front of the Propylae, stood the temple of Nike Apteros, and close to the entrance the statue of Hermes Propylaeus; and the Propylae themselves were adorned with numerous statues. (Paus. l.c.) A broad road led straight from the Agora to the Propylaia, which formed the only entrance to the Acropolis, and the immediate approach to which was by a flight of steps, in the middle of which there was left an inclined plane of the same material as a carriage-way for the processions. Both ancient and modern writers have agreed in considering the Propylaia as one of the most perfect works of Greek art.

PROSCRIPTIO. The verb proscribe properly signifies to exhibit a thing for sale by means of a bill or advertisement; in this sense it occurs in a great many passages. But in the time of Sulla it assumed a very different meaning, for he applied it to a measure of his own invention (Vell. Pat. ii. 28), namely, to the sale of the property of those who were put to death at his command, and who were themselves called proscripti. Towards the end of the year 82 n. c. Sulla, after his return from Praeneste, declared before the assembly of the people that he would improve their condition, and punish severely all those who had supported the party of Marius. (Appian. B. C. i. 95.) The people appear tacitly to have consented to this measure of his power which he wanted for the execution of the design, for the lex Cornelia de proscriptione et proscriptis was sanctioned afterwards when he was made dictator. (Cic. de Leg. i. 15, de Leg. Agr. iii. 2, &c.; Appian. B. C. i. 98.) This law, which was proposed by the interrex Lucius Valerius Flaccus at the command of Sulla, is sometimes called lex Cornelina (Cic. c. Ferr. i. 47), and sometimes lex Valeria. Cicero (pro Ros. Am. 43) pretends not to know whether he should call it a lex Cornelina or Valeria. (Comp. Schol. Gronor. p. 433, ed. Orelli.)

Sulla drew up a list of the persons whom he wished to be killed; and this list was exhibited in the forum to public inspection. Every person contained in it was an outlaw, who might be killed by any one who met him with impunity, even by his slaves and his nearest relatives. All his property was taken and publicly sold. It may naturally be supposed that such property was sold at a very low price, and was in most cases purchased by the friends and favourites of Sulla; in some instances only a part of the price was paid when it was sold, and the remainder was paid by the proscribed person himself. (Sallust, Frug. p. 238, ed. Gerlach.) The property of those who had fallen in the ranks of his enemies was sold in the same manner. (Cic. pro Ros. Am. 43.) Those who killed a proscribed person, or gave notice of his place of concealment, received two talents as a reward; and whoever concealed or gave shelter to a proscribed, was punished with death. (Cic. c. Ferr. i. 47, Phut. Sull. 31; Suet. CAes. 11.) But this was not all; the proscription was regarded as a corruption of blood, and consequently the sons and grandsons of proscribed persons were for ever excluded from all public offices. (Plut. L. C.; Vell. Pat. ii. 28; Quinctil. x. 1. 85.) After this example of a proscription had once been set, it was readily adopted by those in power.
PROTHRYN. [Athousa; Domus, p. 424, b.; Janua, p. 627, a.]

PROTRYGAEA (προτρύγαεα), a festival celebrated in honour of Dionysus, surnamed Protyrges, and of Poseidon. (Herch. s. v.; Aelian, V. H. iii. 41.) The origin and mode of celebration of this festival at Tyre are described by Achilles Tatius (ii. init.).

[LS.]

PROVINCIA. The original meaning of this word seems to be a "duty" or "matter entrusted to a person," as we see in various passages. The word is an abbreviated form of Providentia, as Hugo has suggested. All other proposed derivations ought to be rejected. In the Medecin MS. of Livy (xxi. 17), the word is written Provintia, and also in the Provin. Prop. xi. 20, ed. Becker. That the word originally had not the signification of a territory merely appears from such expressions as Urbana Provincia (Liv. xxxi. 6); and the expression Urbana Provincia was still used, after the term Provincia was used to express a territory beyond Italy which had a regular organization and was under Roman administration. This is the ordinary sense of the word, that of a foreign territory in a certain relation of subordination to Rome. But the word was also used, before the establishment of any provincial governments, to denote a district or enemy's country which was assigned to a general as the field of his operations.

The Roman State in its complete development consisted of two parts with a distinct organization, Italia and the Provinciae. There were no Provinciae in this sense of the word till the Romans had extended their conquests beyond Italy; and Sicily (Cic. Ferr. ii. 2) was the first country that was made a Roman Province, B. C. 241; Sardinia was made a Province B. C. 235. The Roman province of Gallia Ulterior in the time of Caesar was sometimes designated simply by the term Provincia (Caesar, Bell. Gall. i. 17, &c.)

A conquered country received its provincial organization either from the Roman commander, whose acts required the approval of the Senate; or the government was organized by the commander and a body of commissioners appointed by the Senate out of their own number. (Plutarch, Lucull. 35, 36.)

The mode of dealing with a conquered country was not uniform. When constituted a Province, it did not become to all purposes an integral part of the Roman State; it retained its national existence, though it lost its sovereignty. The organization of Sicily was completed by P. Rupilius with the aid of ten legates, and his constitution is sometimes referred to under the name of Leges Rupiliae. The island was formed into two districts, with Syracuse as the chief town of the eastern and Lilybaeum of the western district: the whole island was administered by a governor...
annually sent from Rome. He was assisted by two Quaestors and was accompanied by a train of praecores, scribæ, haruspices, and other persons, who formed his Cohors. The Quaestors received from the Roman aerarium the necessary sums for the administration of the island, and they also collected the taxes, except those which were let by the Censors at Rome. One quaeator resided at Lilybaeum, and the other with the governor or Praetor at Syracuse. The governor could dismiss the quaestors from the province, if they did not conform to his orders, and could appoint Legati to do their duties. The whole island was not treated exactly in the same way. Seventeen conquered towns forfeited their land, which was restored on condition of the payment of the decimae and the scriptum. But this restoration must not be understood as meaning that the ownership of the land was restored, for the Roman State became the owner of the land, and the occupiers had at most a Possessio. These taxes or dues were let to farm by the censors at Rome. Three cities, Messana, Tauromenium, and Netum, were made Foederatae Civitates and retained their land. [FOEDERATAE CIVITATES.] Five other cities, among which were Panormus and Segesta, were Liberæ et Immunes, that is, they paid no decimæ; but it does not appear whether they were free from the burdens to which the Foederatae Civitates as such were subject by virtue of their Foedus with Rome. Before the Roman conquest of Sicily, the island had been subject to a payment of the tenth of wine, oil, and other products, the collecting of which had been determined with great precision by a law or regulation of King Hiero (Les Hieronici). The regulations of Hiero were preserved and these tenths were let to farm by the Quaestors in Sicily to Sicilians and Romans settled in Sicily; the tenths of the first-mentioned towns were let to farm to Romans in Rome. The towns which paid the tenths were called by the general name of Stipendiariae.

For the administration of justice the island was divided into Foedera or Conventus, which were territorial divisions. Sicilians who belonged to the same town had their disputes settled according to its laws; citizens of different towns had their disputes decided by judges appointed by the governor; in case of disputes between an individual and a community, the Senate of any Sicilian town might act as judices, if the parties did not choose to have as judges the Senate of their own town; if a Roman citizen sued a Sicilian, a Sicilian was judex; if a Sicilian sued a Roman citizen, a Roman was judex; but no person belonging to the Cohors of a Praetor could be judex. These were the provisions of the Rupiliae Leges. Disputes between the lessees of the tenths and the Aratorcs were decided according to the provisions of Hiero. (Cic. Verr. ii. 13.) The settlement of the Municipal constitution of the towns was generally left to the citizens; but in some instances, as in the case of C. Claudius Marcellus and the town of Alesa, a constitution was given by some Roman at the request, as it appears, of the town. The Senate and the People still continued as the component parts of the old Greek cities. Cicero mentions a body of 140 men called censors who were appointed to take the census of Sicily every fifth year, after the fashion of the Roman census (in Verr. ii. 55, &c.). The island was also bound to furnish and maintain soldiers and sailors for the service of Rome, and to pay tributum for the carrying on of wars. The governor could take provisions for the use of himself and his cohors on condition of paying for them. The Roman State had also the Civitas foro Romanus, which were let to farm to Romans at Rome.

The governor had complete Jurisdiction in the island with the Imperium and Potestas. He could delegate these powers to his quaestors, but there was always an appeal to him, and for this and other purposes he made circuits through the different Conventus.

Such was the organization of Sicilia as a province, which may be taken as a sample of the general character of Roman provincial government. Sicily obtained the Latinitas from C. Julius Caesar, and the Civitas was given after his death (Cic. of Att. xiv. 12); but notwithstanding this there remained some important distinctions between Sicily and Italy. The chief authority for this account of the Provincial organization of Sicily is the Verrine orations of Cicero.

Hispania was formed into two Provinces, Citerior or Tarraconica between the Iberus and the Pyrenees, and Ulterior or Baetica south of the Iberus. Hispania Citerior was divided into seven Conventus,—Carthaginensiensis, Tarraconicae, Cæsarugustanae, Clunienae, Asturum, Lucensis, and Bracarum. The diversity of the condition of the several parts of the Province appears from the enumeration of Colonie, Oppida Civium Romanorum, Latini veteres, Fœderati, Oppida stipendiariae. Hispania Baetica was divided into four Juridici conventus,—Gaditanus, Cordubensis, Astigianus, Hispalensis. The oppida consisted of Colonie, Municipia, Latio antiqui qui donata, which appear to be equivalent to Latini veteres, Liberæ, Fœderatae, Stipendiariae. (Plin. H. N. iii. 1, 3.) The Provincia of Lusitania was divided into three Conventus,—Emeritensis, Pascentis, and Scibolitanis. The classes of Oppida enumerated are Colonie, Municipia Civium Romanorum, Oppida Latii antiqui qui donata, Oppida, Stipendiariae. (Plin. H. N. iv. 22.) This example will give some idea of the Roman mode of administering a province for judicial purposes. All Hispania received the Latinitas from Vespasian. (Plin. H. N. ii. 3.) The province paid a fixed vestigal or land-tax in addition to the tributum which was collected by Praefecti, and in addition to being required to deliver a certain quantity of corn. And the Praetor had originally the right to purchase a twentieth part at what price he pleased. (Liv. xiii. 2; compare Tacit. Agric. 19; and in Verr. iii. 81, de aestimatione frumento.)

This organization was not confined to the Western Provinces of Asia. For instance, there was a Smyrnaicus Conventus which was frequented by a great part of Aelia; the term conventus was applied both to the territorial division made for the administration of justice and also to the chief city or place “in quem conveniunt.” Ephesus gave name to another Conventus. As the Conventus were mainly formed for judicial purposes, the term Jurisdiction is sometimes used as an equivalent. Thus Pliny (H. N. v. 29) speaks of the Sardiana Jurisdiction, which is the same as Sardiana conventus. The object of this division is further shown by such phrases as “eodem discretant foro,” “Tarraconense discretant populi xili.”

Strabo remarks (xiii. p. 629) that the boundaries
of Phrygia, Lydia, Caria, and Mysia were confounded, and that the Romans had added to the confusion, by not attending to the subsisting national divisions, but making the administrative divisions different (τὰς διοικήσεις), in which are the Form (ἀγώρας MS.) and the administration of justice. The word ἀγώρα probably represents Conventus (as to the reading, see Casaubon's note). The Conventus, it appears, were sometimes held (conventus acti) in the winter (Caesar, Bell. Gall. i. 54, vi. 44); but in Caesar's case this might be a matter of convenience. Cicero proposed to do the same in his province (ad Att. v. 14). The expression "forum agere" is equivalent to "conventus agere." (Prætor Romanus conwentus agit, Liv. xxxi. 29.)

The Conventus were attended by the Romans who were resident in the province, among whom were the publicani, and generally by all persons who had any business to settle there. The judges for the decision of suits were chosen from the persons who attended the conventus. Other acts were also done there, which were not matters of litigation but which required certain forms in order to be legal. In the case of manumission by persons under thirty years of age certain forms were required by the Lex Aelia Sentia, and in the provinces it was enacted on the last day of the Conventus (Gaius, i. 20); from which it appears that Conventus means also the time during which business was transacted at the place "in quem conveniebat."

The governor upon entering on his duties published an edict, which was often framed upon the Edictum Urbanum. Cicero when Proconsul of Cilicia says that as to some matters he framed an edict of his own, and as to others he referred to the Edicta Urbana. (Ad Att. vi. 1.) Though the Romans did not formally introduce their law into the provinces, and so much of it as applied to land and the status of persons was inapplicable to Provincial land and Provincial persons, great changes were gradually introduced by the edictal power both as to the forms of procedure and all other matters to which the Roman Law was applicable; and also by special enactments. (Gaius, i. 183, 185, iii. 122.)

There was one great distinction between Italy and the Provinces as to the nature and property in land. Provincial land could not be an object of proprietary ownership, and it was accordingly appropriately called Possessio. The ownership of Provincial land was either in the Populus or the Caesar: at least this was the doctrine in the time of Gaius (ii. 7). Provincial land could be transferred without the forms required in the case of Italian land, but it was subject to the payment of a land-tax (vectigal). Sometimes the Ius Italicum was given to certain provincial towns, by which their lands were assimilated to Italian land, for all legal purposes. With the Ius Italicum such towns received a free constitution like that of the towns of Italy, with magistrates, as decemviri, quinquennales (censors) and aediles; and also a jurisdiction. It was a ground of complaint against Piso that he exercised jurisdiction in a Libera Civitas. (Cic. de Prov. Cons. 3.)

Towns possessing the Jus Italicum in Hispania, Gallia and other countries are enumerated. The Latinitas or Jus Latii also, which was conferred on many provincial towns, appears to have carried with it a certain jurisdiction; and those who filled certain magistrii in these towns thereby obtained the Roman Civitas. (Strabo, p. 168, Casaub.) It is not easy to state what constituted the essence of the Coloniae Romanae and Latinae which were established in the Provinces: if the name is a certain indication of their political condition, that is pretty well ascertained.

It has been stated that the terms Italia and Provinciae are opposed to one another as the component parts of the Roman State, after it had received its complete development. Under the Emperors we find Gallia Cisalpina or Citerior an integral part of Italy and without a governor, the Provincial organization having entirely disappeared there. In the year B.C. 49 when Caesar crossed the Rubicon on his march towards Rome, it was a Province of which he was Proconsul, a circumstance which gives a distinct meaning to this event. Cicero still calls it Provincia Gallia at the epoch of the battle of Mutina. In the autumn of B.C. 43 D. Brutus the Proconsul of the Province Gallia was murdered, and from that time we hear of no more Proconsuls of this Province, and it is a reasonable conjecture that those who then had all the political power were unwilling to allow any person to have the command of an army in a district so near to Rome. The name Italia was however applied to this part of Italy before it became an integral portion of the Peninsula by ceasing to be a Provincia. (Caesar, Bell. Gall. i. 54, v. 1, vi. 44, &c.; Cic. Phil. v. 12.)

On the determination of the Provincial form of government in Gallia Cisalpina, it was necessary to give to this part of Italy a new organization suited to the change of circumstances, particularly as regarded the administration of justice, which was effected by the Lex Rubria de Gallia Cisalpina. The Proconsul of Gallia Cisalpina had the Imperium, but on his functions ceasing, the Jurisdiction was placed in the hands of local magistrates who had not the Imperium. These magistrates could give a judex; in some cases their jurisdiction was unlimited; in others it did not extend to cases above a certain amount of money; they could remit a novi operis sanction, require a Caution in case of Damnwm Inspecwm, and if it was not given, they could grant an action for damages.

The Roman provinces up to the battle of Actium as enumerated by Signonius are: Sicilia; Sardinia et Corsica; Hispania Citerior et Ulterior; Gallia Citerior; Gallia Narbonensis et Conata; Illyricum; Macedonia; Achaia; Asia; Cilicia; Syria; Bithynia et Pontus; Cyprus; Africa; Cyprus; Creta; Numidia; Mauritania. Those of a subsequent date which were either new, or arose from division are according to Signonius: Rhaetia; Noricum; Pannonia; Moesia; Dacia; Britainia; Mauritania Caesariensis and Tingitan; Aegyptus; Cappadocia; Galatia; Rhodus; Lycia; Commagene; Judaea; Arabia; Mesopotamia; Armenia; Assyria. The accuracy of this enumeration is not warranted. It will appear that it does not conform to the Roman map of the world, which is one of the two divisions of Hispania Ulterior, the other being Baetica: Lusitania may however not have had a separate governor. Originally the whole of Spain, so far as it was organized, was divided into the two provinces Citerior and Ulterior; the division of Ulterior into Baetica and Lusitania belonged to a later period. Under Augustus Gallia was divided
into four provinces: Narbonensis, Celtica or Lugdunensis, Belgica, and Aquitania. The Provincia of Caesar's Commentaries, from which term the modern name Province is derived, appears to have corresponded to the subsequent province Narbonensis. He had also the Province of Gallia Cisalpina, or Citerior (Caesar, Bell. Gall. i. 54) which, and if it was a distinct eparchy, it must have belonged to the Caesar. Lusitania is not enumerated among the eparchies of the Populus, but after the passing of a Lex Julia B.C. 51, he was bound to deposit two copies of his accounts (ratioes) in the two chief cities of his province and to forward one (totidem verbis) to the Aerarium. (Cic. ad Fam. ii. 17, v. 20, ad Attic. vi. 7.) If the governor misconducted himself in the administration of the province, the provincials applied to the Roman Senate, and to the powerful Romans who were their Patrons. The offences of Repandumae and Peculius were the usual grounds of complaint by the provincials; and if a governor had betrayed the interests of the State, he was also liable to the penalties attached to Majestas. Quaestiones were established for inquiries into these offences; yet it was not always an easy matter to bring a guilty governor to the punishment that he deserved.

With the establishment of the Imperial power under Augustus, a considerable change was made in the administration of the provinces. Augustus took the charge of the provinces where a large redelin of business was not necessary, and left them under the care of the Senate and the Roman people. (Strabo, xvii. p. 840.) Accordingly we find in the older jurists (Gaius, ii. 21) the division of provinciae into those which were "propriae Populi Romani," and those which were "propriae Caesaris," and this division with some modifications continued to the third century. TheSenatorian provinces were distributed among consules and those who had filled the office of Praetor, two provinces being given to the consules and the rest to the Praetores; these governors were called Proconsules, or Praeses, which latter is the usual term employed by the old jurists for a provincial governor. The Praesides had the jurisdictio of the Praetor Urbanus and the Praetor Peregrinus; and their quaestores had the same jurisdiction that they had in their provinces. They held their office and their power at the pleasure of the Emperor, but after the expiration of their year of office, received the government of a province with the title of Proconsules: such provinces were called Consulares. Cicero was Proconsul of Cilicia n. c. 55, and his colleague in the consulship, C. Antonius, obtained the proconsulship of Macedonia immediately on the expiration of his consulship office. The provinces were generally distributed by lot, but the distribution was sometimes arranged by agreement among the persons entitled to them, by a Sempronia Lex the proconsular provinces were annually determined before the election of the consuls, the object of which was to prevent all disputes. A Senatusconsultum of the year 55 n. c., provided that no consul or praetor should have a province till after the expiration of five years from the time of his consulship or praetorship. A province was generally held for a year, but the term was often prolonged. When a new governor arrived in his province, his predecessor was required to leave it within thirty days. A Lex Julia passed in the time of C. Julius Caesar limited the holding of a Praetoria Provincia to one year, and a Consularia Provincia to two years. (Dion Cassius, xiii. 25; Cic. Phil. i. 8, v. 3.) The governors of provinces had no pay as such, but certain expenses were provided for out of the Aerarium. Augustus first attached pay to the office of provincial governor. (Dion Cassius, liii. 13; Sueton. August. 36.)

The governor of a province had originally to account to Rome (ad urbem) for his administration from his own books and those of his quaestors; but after the passing of a Lex Julia B.C. 51, he was bound to deposit two copies of his accounts (ratioes) in the two chief cities of his province and to forward one (totidem verbis) to the Aerarium. (Cic. ad Fam. ii. 17, v. 20, ad Attic. vi. 7.) If the governor misconducted himself in the administration of the province, the provincials applied to the Roman Senate, and to the powerful Romans who were their Patrons. The offences of Repandumae and Peculius were the usual grounds of complaint by the provincials; and if a governor had betrayed the interests of the State, he was also liable to the penalties attached to Majestas. Quaestiones were established for inquiries into these offences; yet it was not always an easy matter to bring a guilty governor to the punishment that he deserved.

With the establishment of the Imperial power under Augustus, a considerable change was made in the administration of the provinces. Augustus took the charge of the provinces where a large redelin of business was not necessary, and left them under the care of the Senate and the Roman people. (Strabo, xvii. p. 840.) Accordingly we find in the older jurists (Gaius, ii. 21) the division of provinciae into those which were "propriae Populi Romani," and those which were "propriae Caesaris," and this division with some modifications continued to the third century. The Senatorian provinces were distributed among consules and those who had filled the office of Praetor, two provinces being given to the consules and the rest to the Praetores; these governors were called Proconsules, or Praeses, which latter is the usual term employed by the old jurists for a provincial governor. The Praesides had the jurisdictio of the Praetor Urbanus and the Praetor Peregrinus; and their quaestores had the same jurisdiction that they had in their provinces. They held their office and their power at the pleasure of the Emperor; and he delegated to them both military command and jurisdictio, just as a Proconsul in the Republican period delegated these powers to his Legati. These Legati had also Legati under them. No quaestores were sent to the provinces of the Caesar, and for this reason observes Gaius, this edict (hoc edictum) is not published in those provinces, by which he appears, from the context, to mean the edict of the Curule Aediles. In place of the quaestores, there were Procurores Caesaris, who were either Equites or freedmen of the Caesar. Egypt was governed by an Eques with the title of Praefectus. The Procurores looked after the taxes, paid the troops, and generally were intrusted with the interests of the Fiscus. Judaea, which was a part of the province of Syria, was governed by a Procurator who had the powers of a Legatus. It appears that there were also Procurores Cas-
in the senatorial provinces and such Roman laws as were specially enacted for them, and according to imperial constitutions, senatusconsulta and the edict of the governors. In some instances the provisions of roman laws were extended to the provinces. (Gaius, i. 47; Ulp. tit. 55. de defenderibus.) They were elected by the decuriones and all the city; but, unlike the magistrates, they could not be elected out of the body of decuriones. The office was originally for five years, but after the time of Justinian only for two years. The principal business of the defender was to protect his town against the oppression of the governor. (Cod. 1. tit. 55. s. 4.) He had a limited jurisdictio in civil matters, which Justinian extended from matters to the amount of 60 solidi to matters to the amount of 300 solidi. There was an appeal from him to the governor. (Nov. 15. c. 5.) He could not impose a multa; but he could appoint a tutor. In criminal matters, he had only jurisdictio in some of the less important cases.

The number of senators both in the italic and provincial towns seems to have been generally one hundred; and this was the number in capua. (Cic. in Rutil. ii. 53.) But the number was not in all places the same. Besides the actual members, the album decurionum comprised others who were merely honorary members. The album of the town of camasium, of the year A. D. 228, which has been preserved, consists of 148 members, of whom 30 were patroni, roman senators, and 2 were patroni, roman equites; the remainder were 7 quinquennales, a term which is easily explained by referring to the meaning of the term quinquennales [colonia], 4 alfecti inter quinquennales, 22 duumviri, 19 aedilicii, 21 pedani, 34 praetextati. The distinction between pedani and praetextati savigny professes himself unable to explain. In many towns the first persons in the list of actual senators were distinguished from the rest, and generally the first ten, as decemviri; of which there is an example in livy (xxix. 15. magistrate deseneque principes); and in the case of America, and of centuriae in Sicily (Cic. pros. Ros. Amer. c. 9, in Verrem, ii. 67).

It has been previously shown that at the time when the roman republic had attained its complete development, italy and the provinciae were
the two great component parts of the Empire; and one great distinction between them was this, that in Italia the towns had magistratus with Jurisdictio, in the province, and in important places which had received the Jus Italicum, the governor alone had Jurisdictio. But with the growth and development of the Imperial power, a greater uniformity was introduced into the administration of all parts of the Empire; and ultimately Italy itself was under a Provincial form of government. [Colonia.] As above shown, the relation of the Governor to the province was not the same, when a city had magistratus, and when it had not; and consequently it was in this respect not the same in Italy as in the Provinces.

The constitution of Constantine was based on a complete separation of the Civil and Military power, which were essentially united in the old system of provincial government: Justinian however ultimately re-united the civil and military power in the same person. The governor who had Civil power was called Rector, Judex, Judex Ordinarius; and of these governors there were three classes, Consulares, Correctores, Praesides, among whom the only distinction was in the extent and rank of their government. In the writings of the older jurists, which are excerpted in the Pandect, the Praeses is a general name for a Provincial governor. (Dig. 8. tit. 18.) The military power was given to Duces who were under the general superintendence of the Magistri Militum. Some of these Duces were called Comites, which was originally a title of rank given to various functionaries and among them to the Duces; and when the title of Comes was regularly given to certain Duces, who had important commands, the name Dux was dropped, and Comes became a title. This was more particularly the case with important commands on the frontier. (Cod. Theod. 7. tit. 1. s. 9.) The Comes is mentioned in Imperial Constitutions before the Dux, whence we infer his higher rank. (Cod. Theod. 8. tit. 7. s. 11. Ad magistros militum, et comites, et duces omnes.)

It remains to add a few remarks on the exercise of the Jurisdictio, so far as they have not been anticipated in speaking of the functionaries themselves. In Italy, and in the towns which had the privileges of Italian towns, all matters as a general rule came before the magistratus in the first instance; but in certain excepted matters, and in cases where the amount in question was above a certain sum (the precise amount of which is not known), the matter came before the governor of the province in the first instance, or in Italy before the Roman Praetor. Until the middle of the fourth century A.D. all matters in the Provincial towns, which had not magistratus, came before the governor in the first instance; but about this time the Defender acquired a power, like that of the magistratus of the privileged towns, though more limited. The old form of proceeding in civil matters has been explained elsewhere [Judex]; the magistratus empowered the Judex to make a condemnation; and this institution was the Ordo Judiciorum Privatorum. That which the magistratus did without the aid of a Judex was Extra Ordinem. [Interdictum.] The same institution prevailed in those towns which had a magistratus, for it was of the essence of a Magistratus or of Jurisdictio to name a Judex. (Lex Gall. Cisalp. c. 29.) Under the emperors, it gradually became common for the magistratus to decide various cases without the aid of a Judex, and these are the Extraordinariae Contractorum Privatorum, (Cod. 3. tit. 3. a. 2.); and in the time of Justinian the institution had entirely disappeared (Inst. 4. tit. 15. s. 6), and, as it is conjectured, both in Rome and the Provinces.

Under the emperors, it gradually became common for the magistratus to decide various cases without the aid of a Judex, and these are the Extraordinariae Contractorum Privatorum, (Cod. 3. tit. 3. a. 2.); and in the time of Justinian the institution had entirely disappeared (Inst. 4. tit. 15. s. 6), and, as it is conjectured, both in Rome and the Provinces.

By the aid of the Judices, two Praetors were able to conduct all the judicial business between citizens and Peregrini at Rome; and by the aid of the same institution, the judicial business was conducted in the Jurisdictiones out of Rome. In no other way is it conceivable how the work could have been got through. But when the Ordo Judiciorum was abolished, the difficulty of transacting the business must have been apparent. How this was managed, is explained by Savigny, by referring to the growth of another institution. Even in the time of the Republic, the Praetors had their legal advisers, especially if they were not jurists themselves; and when all the power became concentrated in the Caesars, they were soon obliged to form a kind of college, for the dispatch of business of various kinds and particularly judicial matters which were referred to the Caesar. This college was the Caesar's Consistorium or Auditorium. The Provincial governors had their body of assessors, which were like the Caesar's Auditorium (Dig. 1. tit. 22); and it is a conjecture of Savigny, which has the highest probability in its favour, that the new institution was established in the municipal towns and in the provincial towns, so that here also the magistratus and the Defender had their assessors.

Besides the Jurisdictio, which had reference to Litigation, the so-called Contentiosa Jurisdictio, there was the Voluntaria. Matters belonging to this Jurisdiction, as Manumission, Adoption, Emancipation, could only be transacted before the Magistratus Populi Romani, and, unless these powers were specially given to them, the Municipal Magistrates had no authority to give the legal sanction to such proceedings; though in the old Municipia it is probable that the power of the magistratus was as little limited in the Voluntaria as in the Contentiosa Jurisdictio. In the Imperial period it was usual to perform many acts before the public authorities, and in the three cases of large Gifts, the making of a Will, and the Opening of a Will, it was necessary for these acts to be done before a public authority. Such acts could be done before a provincial governor; and also before the Curia of a city in the presence of a Magistratus and other persons. (Compare the Constitution of Honorius, Cod. Theod. 12. tit. 1. s. 151, and a Novel of Valentinian, Nov. Theod. tit. 23, with Savigny's remarks on them.)

Though the general administration of the Roman provinces is adequately understood, there are differences of opinion as to some matters of detail; one cause of which lies in the differences which actually existed in the administration of the provinces and which had their origin in the different circumstances of their conquest and acquisition, and in the diversity of the native customary law in
the different provinces, with a large part of which the Romans originally did not interfere. A general view of the provinces should therefore be completed and corrected by a view of the several provinces.

The authorities for this view of the Provincial government have been generally referred to. They are, more particularly, Siganus, De Antiquo Jure Provinciarum, Lib. i. — iii. ; Goetsling, Geschichte der Römischen Staatsverfassung; Walter, Geschichte des Römischen Rechts, where the authorities are very conveniently collected and arranged, and chap. xxxi. Notes 76, 79, wherein he differs from Savigny as to the Jus Italicum; in chapter xxxvii. Walter has described the provincial divisions of the Empire, which existed about the middle of the fifth century A.D. ; he states, Savigny, Geschichte des Römischen Rechts, R. im Mittelalter, vol. i. ; Fuchta, Uber den Inhalt der Lex Rubria, Zeitschrift, &c., vol. x. PRYTANEIO.UM (πρυτανεῖον). The πρυτανεία of the ancient Greek states and cities were to the communities living around them, the common houses of which they in some measure represented, and what private houses were to the families which occupied them. Just as the house of each family was its home, so was the πρυτανεῖον of every state or city the common home of its members or inhabitants, and was consequently called the ἐστία πόλεως, the “focus” or “penetral urbis.” (Cic. de Leg. ii. 12 ; Liv. xii. 20 ; Dionysii. ii. 23, 63.) This correspondence between the πρυτανεῖον, or home of the city, and the private home of a man’s family, was at Athens very remarkable. A perpetual fire or πῦρ καθέστων was kept continually burning on the public altar of the city in the Prytaneion, just as in private houses a fire was kept up on the domestic altar in the inner court of the house. (Pollux, i. 7 ; Arnold, ad Thucyd. ii. 15.)

The same custom was observed at the Prytaneion of the Eleians, where a fire was kept burning night and day. (Paus. v. 15, § 5.) Moreover the city of Athens exercised in its Prytaneion the duties of hospitality, both to its own citizens and strangers. Thus foreign ambassadors were entertained here, as well as Athenian envoy on their return home from a successful or well conducted mission. (Aristoph. Acharn. 125 ; Pollex, ix. 40.) Here, too, were entertained from day to day the successful Prytanes or Presidents of the Senate, together with those citizens who, whether from personal or ancestral services to the states, were honoured with what was called the στύχησις ἐν Πρυτανείῳ, the “victus quotidinus in Prytaneo” (Cic. de Orat. i. 54), or the privilege of taking their meals there at the public cost. This was granted sometimes for a limited period, sometimes for life, in which latter case the parties enjoying it were called ἀδελτοῖοι. The custom of conferring this honour on those who had been of signal service to the state and their descendents, was of so great antiquity that one instance of it was referred to the times of Codrus; and in the case to which we allude the individual thus honoured was a foreigner, a native of Delphi. (Lycurg. c. Leo. p. 158.) Another illustration of the uses to which the Prytaneion was dedicated, is found in the case of the daughters of Aristides, who on the death of their father were considered as the adopted children of the state, and married from (ἐκδοθεῖσαν) that common home of the city, just as they would have been from their father’s home had he been alive. (Plut. Arist. c. 27.)

Moreover, from the ever-burning fire of the Prytaneion, or home of a mother state, was carried the sacred fire which was to be kept burning in the Prytaneia of her colonies; and if it happened that this was ever extinguished, the flame was rekindled from the Prytaneion of the parent city. (Duker, ad Thucyd. i. 24.) Lastly, a Prytaneion was also a distinguishing mark of an independent state, and is mentioned as such by Thucydides (ii. 15), who informs us that before the time of Theseus, every city or state (πόλις) of Attica possessed a prytaheinion. The Achaeans, we are told (Herod. vii. 197), called their prytaheinion αἱτίην (from ἄεις, popular), or the “town-hall,” and exclusion from it seems to have been a sort of civil excommunication.

The Prytaneion of Athens lay under the Acropolis on its northern side (near the ἄγορα), and was, as its name denotes, originally the place of assembly of the several provinces. In the earliest times it probably stood on the Acropolis. Officers called Prytanes were appointed as such by Thurikides (ii. 15), who informs us that before the time of Theseus, every city or state (πόλις) of Attica possessed a prytaheinion. At Athens they were in early times probably a magistracy of the second rank in the state (next to the Archon), acting as judges in various cases (perhaps in conjunction with him), and sitting in the Prytaneion. That this was the case is rendered probable by the fact, that even in aftertimes the fees paid into court by plaintiff and defendant, before they could proceed to trial, and received by the diacetae, were called prythaenices. (Pollux, viii. 38.) This court of the Prytaneion, or τὸ ἑτών πρυτανείων, is said (Pollux, viii. 120) to have been presided over by the φιλοδασεῖοι, or princes, having apparently the same root as πρῶτος or πρωτάτος. At Athens they were in early times probably a magistracy of the second rank in the state (next to the Archon), acting as judges in various cases (perhaps in conjunction with him), and sitting in the Prytaneion. That this was the case is rendered probable by the fact, that even in aftertimes the fees paid into court by plaintiff and defendant, before they could proceed to trial, and received by the diacetae, were called prytaheinices. (Pollux, viii. 38.)

This court of the Prytaneion, or τὸ ἑτών πρυτανείων, is said (Pollux, viii. 120) to have been presided over by the φιλοδασεῖοι, or princes, having apparently the same root as πρῶτος or πρωτάτος. At Athens they were in early times probably a magistracy of the second rank in the state (next to the Archon), acting as judges in various cases (perhaps in conjunction with him), and sitting in the Prytaneion. That this was the case is rendered probable by the fact, that even in aftertimes the fees paid into court by plaintiff and defendant, before they could proceed to trial, and received by the diacetae, were called prytaheinices. (Pollux, viii. 38.)

In later ages, however, and after the establishment of the courts of the Heliaea, the court of the Prytaneum had lost what is supposed to have been its original importance, and was made one of the courts of the Ephebes, who held there a species of mock trial over the instruments by which any individual had lost his life, as well as over persons who had committed murder, and were not forthcoming or detected. The tablets or ἀκρωτεῖα otherwise κόρβεια, on whichSolon’s laws were written (Plut. Sol. 25), were also deposited in the Prytaneum (Paus. i. 18, § 3); they were at first kept on the Acropolis, probably in the old Prytaneum, but afterwards removed to the Prytaneum in the ἄγορα, that they might be open to public inspection. (Pollux, viii. 128.) Epichaeus is said to have been the author of this measure (Harpocrat. s. v. Ω ἀκροτεῖαν νόμον), but their removal may have been merely the consequence of the erection of a new Prytaneum on the lower site in the time of Pericles. (Thirlwall, Hist. of Greece, vol. ii. p. 54.)

PRYTANES (πρυτανεῖον). [Boule, pp. 210, 212; Prytaneum.]

PSEPHISMA (ψῆφισμα). [Boule, pp. 210, 211; Νομοθετεῖες.]
PSEPHUS (ψήφος). The Athenian dicasts, in giving their verdict, voted by ballot. For this purpose they used either sea-shells, χορήγαι (Arist. Vesp. 333, 349, Eq. 1532), or beans (hence the δημοσία is called κοινωνία or crackling beans by Aristophanes, Eq. 41), or balls of metal (στάντυλοι) or stone (ψήφος). These last were the most common: hence ψηφίσεως, and its various derivatives, are used so often to signify voting, determining, &c. The balls were either pierced (πετροτυμέναι) and whole (πλήρεις), the former for condemnation, the latter for acquittal (Aesch. c. 434). In giving their verdict, voted by ballot. For this reason, the ψήφων (ψήφος), and its various derivatives, are used so often to signify voting, determining, &c. The balls were either pierced (πετροτυμέναι) and whole (πλήρεις), the former for condemnation, the latter for acquittal (Aesch. c. Timarch. 11, ed. Steph.; Harpoc. s. v. \(\pi_{\text{επί}}\)τρονυμένη) or they were black and white, for the same purposes, respectively, as the following lines show (Ovid. Met. xv. 41): —

"Mostrat antiquus niveis atriisque lapillis,\[CHEIKOTONIA.\]

There might be three methods of voting. First, the secret method, called κρειδίων ψηφίσεως, when each dicast had two balls given him (say a black and a white); two boxes (καδοί, καδικοί, or ἀμφορεῖς), were prepared, one of brass, called the judgment-box (καθος), into which the dicast put the ball by which he gave his vote, and the other of wood, called άκρων, into which he put the other ball, and the only object of which was to enable him to conceal his vote. Each box had a neck or funnel (καπνίς), into which a man could put his hand, but only one ball could pass through the lower part into the box. (Aristoph. Vesp. 99, 751.) Secondly, there might be only one box, in which the dicast put which of the two balls he pleased, and returned the other to the officer of the court. Thirdly, there might be two boxes, one for condemnation, the other for acquittal, and only one ball. (Harpoc. s. v. \(\kappa\alpha\dot{i}δικος\).) The first method was most commonly practised at Athens. Where, however, there were several parties before the court, as in inheritance causes, to one of whom an estate or other thing was to be adjudged, it was customary to have as many ballot-boxes as there were parties, or at least parties in distinct interests; and the dicast put the white or whole ball into the box of that person in whose favour he decided. [HRES (GREEK.)] The same system of balloting was employed when the dicasts voted on the question of damages. Hence the verdict on the question, guilty or not guilty, or for the plaintiff or defendant (to distinguish it from the other), is called \(\piε\rhoων ψ\varepsilon\piων\). (Aesch. c. Oes. 82, ed. Steph.; Demosth. de Fals. Leg. 434, c. Aristoc. 676, c. Aristoc. 795, c. Neaer. 1347.) A curious custom was in vogue in the time of Aristophanes. Each dicast had a waxen tablet, on which, if the heavier penalty was awarded, he drew a long line (lengthway on the tablet); if the lighter penalty, he drew a short line (breathway on the tablet). We must suppose, not that the voting took place in this way, but that, on the votes being counted, the jurors took a note of the result for their own satisfaction; unless we resort to this hypothesis, viz. that the drawing lines on the tablets was an act preliminary to the division, whereby the jury intimated to the parties how the matter was likely to go, unless they came to a compromise. Such intimation might be necessary in those cases, where, the estimates of the parties being widely different, the one proposing too high a penalty, the other too low, a one, the jury wished to inform the more reasonable party, that, unless he offered them some better alternative, they should adopt the estimates of his adversary. (As to this point, see Meier, Att. Proc. p. 101.) The tablet is called \(\pi\varepsilon\rho\varepsilon\nu\)

In the popular assemblies the common method of voting was by show of hands. [CHEIKOTONIA.] There were some occasions, however, when the ballot was employed; as where it was deemed important that the voting should be secret, or that the numbers should be accurately counted. Thus, to pass a law for the naturalization of a foreigner, or for the release of a state debtor, or for the restoration of a disfranchised citizen, and indeed in every case of a privilege, it was necessary that six thousand persons should vote in the majority, and in secret. (Andoc. de Myst. 12, ed. Steph.; Demosth. c. Timoc. 715, 719, c. Neaer. 1375.) On the condemnation of the ten generals who gained the battle of Arginusae, the people voted by ballot, but openly, according to the second of the plans above mentioned. The voting was then by tribes, \(\pi\varepsilon\rho\varepsilon\nu\), \(\pi\varepsilon\rho\varepsilon\nu\), and \(\pi\varepsilon\rho\varepsilon\nu\). (Xen. Hell. i. 7, § 9.) On the secret voting by the Senate of Five Hundred, it is mentioned in Aeschines (c. Timarch. 5, ed. Steph.); and in ostracism the voting was conducted in secret. (Schömann, De Comit. pp. 121—128, 245.) The people or jury were said \(\psi\varepsilon\rho\varepsilon\nu\), \(\psi\varepsilon\rho\varepsilon\nu\, \phi\varepsilon\nu\varepsilon\nu\) or \(\delta\varepsilon\varepsilon\nu\), to vote, or give their vote or judgment. \(\psi\varepsilon\rho\varepsilon\nu\, \tau\varepsilon\varepsilon\nu\), to cast accounts, is used with a different allusion. (Demosth. pro Cor. 304.) The presiding magistrate or officer, who called on the people to give their votes, was said \(\epsilon\nu\varphi\varepsilon\rho\varepsilon\nu\), \(\psi\varepsilon\rho\varepsilon\nu\, \epsilon\nu\varepsilon\varepsilon\nu\) or \(\delta\varepsilon\varepsilon\nu\), though the last expression is also used in the sense of voting in favour of a person. \(\psi\varepsilon\rho\varepsilon\nu\), to vote, to resolve, \(\pi\varepsilon\rho\varepsilon\nu\), to acquit, and other derivations from \(\psi\varepsilon\rho\varepsilon\nu\), are often used metaphorically, where the method of voting was \(\chi\varepsilon\rho\varepsilon\varepsilon\nu\), and conversely. \(\chi\varepsilon\rho\varepsilon\varepsilon\nu\), however, is not used, like \(\psi\varepsilon\rho\varepsilon\nu\), with the accusative of the thing voted. As to this see Schömann, de Comit. p. 123. [C. R. K.]

PSEUDENGRAPHES GRAPHE (ψευδογράφης γράφη). It is shown under PRAXE'IKA that the name of every state debtor at Athens was entered in a register by the practores, whose duty it was to collect the debts, and erase the name of the party when he had paid it. The entry was usually made upon a return by some magistrate, to whom the incurring of the debt became officially known; as, for instance, on a return by the \(\pi\varepsilon\lambda\varepsilon\varepsilon\nu\), that such a person had become a lessee of public lands, or farmer of taxes, at such a rent or on such terms. In case, however, the authorities neglected to make the proper return, any individual might, on his own responsibility, give information to the registering officers of the existence of the debt; and thereupon the officers, if they thought proper, might make an entry accordingly, though it would probably be their duty to make some inquiry before so doing. If they made a false entry, either willfully, or upon the suggestion of another person, the aggrieved party might institute a prosecution against them, or against the person upon whose suggestion it was made. Such prosecution was called \(\gamma\varphi\varepsilon\nu\) ψευ-
registered as debtor for more than was really due
from him. And the reader must understand the like
remedy to be open to one, who was falsely recorded
this form of proceeding could be adopted against
the remedy against them could only be at the
7pa}—)
ypatp^j tytvSeyypatpijs
Thesmothetae. If the defendant was convicted,
in those cases where a man, who had been a state
malice might (as matter of course) be presumed by
debtor, had paid all that was due, but his name
malicious motives were necessary to be proved on
such a charge ; but it is reasonable also to suppose
that in any case of gross negligence, fraud or
the dicasts. (Pollux, viii. 40, 43 ; Harpoc. and
prove that a defendant had been duly summoned,
by default. To prevent fraud, the Athenian law
directly that the names of the witnesses who at
appeared as a witness
tended the summons should be subscribed to the
bill of plaint or indictment (ryKA/rjjua), so that the
whereby the defendant neglected to appear,
that he had been duly summoned, had no discre-
tion but to pronounce judgment against him ;
whereas the dicasts, to whom the witness gave
a prosecution against one, who
had appeared as a witness (κατήργον οκάντιοι)
to prove that a defendant had been duly summoned,
and thereby enabled the plaintiff to get a judgment
by default. To prevent fraud, the Athenian law
directed that the names of the witnesses who at
attended the summons should be subscribed to the
bill of plaint or indictment (Ψυχλήμα), so that the
defendant, if he never had been summoned, and
judgment had nevertheless been given against him
by default, might know against whom to proceed.
The false witness (κατήργον) was liable to be crimini-
nally prosecuted, and punished at the discretion
of the court. Even death might be inflicted in a
case of gross conspiracy. (Demosth. c. Nicost.
1252.) A person thrice convicted of this offence
was, as in the case of other false testimony, οριο
jure disfrianchised ; and even for the first offence the
jury might, if they pleased, by a προστηθήσεις inflict
the penalty of disfranchisement upon him. (Andoc.
de Mysyt. 10, ed. Steph.; Meier, de Bon. Damn.
p. 125.) Here we may observe this distinction,
that the proceeding against the false witness to a
summons was of a criminal nature, while the wit-
ness in the cause (μάρτυρ) was liable only to a civil
action. The cause might be that the former offence
was more likely to do mischief. The magistrate,
before whom the defendant neglected to appear,
when by the evidence of the witness it was shown
that he had been duly summoned, had no disci-

section but to pronounce judgment against him ;
whereas the dicasts, to whom the witness gave
false evidence at the trial, might disbelieve him
and find their verdict according to the truth. If
the fraud was owing to a conspiracy between the
plaintiff and the witness, it is probable that an
action at the suit of the defendant would lie against
the former, to recover compensation ; for, though
the conviction of the witness would lead to a re-
verson of the judgment, still he (the defendant)
might have suffered damage in the meantime,
which the setting aside of the judgment would not
repair. Such action (it has been conjectured)
might be a δίκη συνοφορίας, or perhaps κακετη-

tics. If the fraud of the witness had been fraudu-

ently used by the plaintiff, and the witness
and thereby been brought into trouble, we may
conclude, by analogy to the case of other witnesses,
that he had a δίκη βλάστεις against the plaintiff.
(Demosth. c. Ariph. 849.) The γαρφή ψυχη-
κατῆργον came before the Thesmothenae, and
the question at the trial simply was, whether the
defendant in the former cause had been summoned or
not. (Platur, Proc. und Klag. vol. i. p. 417;

PSEUDODIPTEROS. [Templum.]
PSEUDOMARTYRION GRAPHE (ψευδο-
κατηργον γραφη).

PSILI (ψιλα). [Arma.]

PSYSTER (ψυκτρη, διμ. ψυκτριδιον), a wine-
s. v.; Menander, p. 177, ed. Meinecke; Athen. xi.
pp. 469, 502, 503.) The vessel especially adapted
for this operation, was sometimes made of bronze
(Athen. iv. p. 142) or silver (v. p. 199). One of
earthware is preserved in the Museum of Anti-
quities at Copenhagen. It consists of one deep
vessel for holding ice, which is fixed within another
for holding wine. The wine was poured in at the
top. It thus surrounded the vessel of ice and was
cooled by the contact. It was drawn off so as to
fill the drinking-cups by means of a cock at the
bottom. Thus the ψυκτρη was a kind of CRATER ;
and accordingly, Phylarchus (ap. Athen. iv.
p. 142) in describing the mode of life of Cleomenes,
King of Sparta, uses the former term, Plutarch
uses the latter term, Plutarch (Cleom. p. 1486, ed. Steph.) adopts the latter.
The size of the ψυκτρη was very various. It
contained from 2 quarts (Plat. l. c.) to a great
number of gallons. (Athen. v. p. 199, d. f.) It was
sometimes given as a prize to the winners in the
game of the COTTAMOS. [J. Y.]

PUBES, PUBLERTAS. [Curator; Im-
phyes; Infans.]

PUBLICA’NI, farmers of the public revenues
of the Roman state (vexigatiae). Their name is
formed from publicum, which signifies all that
belongs to the state, and is sometimes used as syn-

onymous with vexigal. (Dig. 39. tit. 4. s. 1;
§ I; 50. tit. 16. a. 16; Suet. Nero, l; Cic. pro
Rabir. Post. 2; Val. Max. vi. 9. § 7.) The re-
venues which Rome derived from conquered coun-
tries, consisting chiefly of tolls, tithes, harbour
duties, the scripura or the tax which was paid
for the use of the public pasture lands, and the
duties paid for the use of mines and salt-works
(salinae), were let out, or, as the Romans ex-
pressed it, were sold by the censors in Rome itself
to the highest bidder. (Cic. de Leg. Agr. ii. 21,
c. Verr. iii. 7.) This sale generally took place in
the month of Quintilis and was made for a lus-
trum. (Macrob. Sat. i. 12.) The terms on which
the revenues were let, were fixed by the censors
in the so-called ileges censoriae. (Cic. ad Quint.
Frat. i. 1; Varro, de Rer. Rust. ii. 1; Fest. s. v.
Prod.) This sale, how ever, was soon to
modified the terms fixed by the censors in order to
raise the credit of the publicani (Plut. Flamin. 19;
Polyb. vi. 17; Liv. xxi. 44), and in some cases
even the tribunes of the people interfered in this
branch of the administration. (Liv. xliii. 16.) The
thieves raised in the province of Sicily alone, with
the exception of those of wine, oil, and garden
produce, were not sold at Rome, but in the districts of Sicily itself, according to a practice established by Hiero. (Cic. c. Verr. ii. 3, 64, &c.) The persons who undertook the farming of the public revenue of course belonged to the wealthiest Romans. Their wealth and consequent influence may be seen from the fact, that as early as the second Punic war, after the battle of Cannae, when the surrender was entirely exhausted, the publicani advanced large sums of money to the state, on condition of repayment after the end of the war. (Val. Max. v. 6, § 8; Liv. xxiv. 18; compare xxii. 48, &c.) But what class of Romans the publicani were at this time is not stated; scarcely half a century later however we find that they were principally men of the equestrian order (Liv. xxiii. 16); and down to the end of the republic, as well as during the early part of the empire, the farming of the public revenues was almost exclusively in the hands of the equites; whence the word equites and publicani are sometimes used as synonymous. (Cic. c. Verr. i. 51, ii. 71, ad Att. ii. 1; Suet. Aug. 24; Tacit. Annal. iv. 6.)

The publicani had to give security to the state for the sum at which they bought one or more branches of the revenue in a province; but as for this reason the property of even the wealthiest individuals was not the object, a number of equites generally united together and formed a company (socii, societas or corpus), which was recognized by the state (Dig. 3. tit. 4. s. 1), and by which they were enabled to carry on their undertakings upon a large scale. Such companies appear as early as the second Punic war. (Liv. xxiii. 48, 49.) The shares which each partner of such a company took in the business, were called partes, and if they were small, particulae. (Cic. c. Verr. ii. 77, de Prov. Cons. 5.) This body of men is called familia publicanorum, and comprehended, according to the praetor's edict (Dig. 39. tit. 4. s. 1), all persons who assisted the publicani in collecting the vectigal. Various laws were enacted in the course of time, which were partly intended to support the servants of the publicani in the performance of their duty, and partly to prevent them from acts of oppression. (See Digest. 39. tit. 4: De Publicanis et vectigalibus et commissis; Gaius, iv. 28.)

The separate branches of the public revenue in the provinces (decumae, portoria, scriptura, and the revenues from the mines and saltworks) were mostly leased to separate companies of publicani; whence they were distinguished by names derived from that particular branch which they had taken in farm; e.g. decumani, pecunia or scripturnarum, salinarum or mancipios salinarum, &c. (Pseudo-Ascon. I. c.; compare Decumae, Portorium, Salinarum, Scriptura.) On some occasions, however, one company of publicani farmed two or more branches at once; thus we have an instance of a societas farming the portorium and the scriptura at the same time. (Cic. c. Verr. ii. 70.)

The commentator, who goes by the name of Asconius, asserts that the portorites were publicani who farmed the portorium; but from all the passages where they are mentioned in ancient writers, it is beyond all doubt that the portorites were not publicani properly so called, but only their servants engaged in examining the goods imported or exported, and levying the custom-duties upon them. They belonged to the same class as the publicani of the New Testament. (St. Luke, v. 27, 29.)

Respecting the impudent
way in which these inferior officers sometimes behaved towards travellers and merchants, see Plut. 
Mesouscli. i. 2. 5, &c.; Cic. ad Quint. Fr. i. 1; 
Plut. de Curiosis. p. 518, c. (Compare Burmann, 
de Testor. i. 1.) [L. S.] 
PUBLICA'NA IN REM ACTIO, was given 
to him who had obtained possession of a thing ex 
justa causa, and had lost the Possession before he 
had acquired the ownership by Usucapion. This 
was a Praetorian action, so called from a Praetor 
Publicius; and the fiction by which the Possessor 
was enabled to sue, was that he had obtained the 
ownership by Usucapion. This 
was a Praetorian action, so called from a Praetor 
Publicius; and the fiction by which the Possessor 
was enabled to sue, was that he had obtained the 
ownership by Usucapion. (Gams^ iv. 36, where 
the intention is given.) This actio was an incident 
to every kind of possessio which was susceptible 
hauded towards travellers and merchants, see Plant. 
Accordingly Possessio for the purposes of Usucapion 
can be viewed in two ways: viewed with 
respect to the ownership of which it is the founda 
tion, it is an object of jurisprudence as bare Pos 
session; viewed with reference to the Publiciana 
actio, an action which a man could only 
have, when he had the Quiritarian ownership of a 
things. According to the definition a man could 
possess, without having it in bonis. When he 
had the thing in bonis his action was good against 
the owner, who had the right of ownership, in fact, 
while the plaintiff had it only in fiction; nor was 
it valid against another who had a Civilis possessio 
in the case where ownership and Possession were ac 
quired at the same time by Occupatio or Traditio. 
Possessio for the purposes of Usucapion (the thirty years' excepted). In 
the legislation of Justinian, the distinction be 
tween Res Mancipi and Nec Mancipi was abolished, 
and ownership could in all cases be transferred by 
tradition. The Publiciana actio therefore became 
useless for any other purpose than a case of bonae 
fiatis possessio, and this seems to explain why the 
words "non a domino" appear in the Edict as 
cited in the Digest (6. tit. 2. s. 1), while they do 
not appear in Gaius (iv. 36). 
The Publiciana actio applied also to Servitutes, 
the right to which had not been transferred by 
Mancipatio or In jure cession, but which had been 
enjoyed with the consent of the owner of the 
land. As the legislation of Justinian rendered 
the old forms of transfer of servitutes unnecessary, 
the Publiciana actio could then only apply to a 
case of Possessio. (Dig. 6. tit. 2.; Inst. 4. tit. 6; Saviugy, Das 
ii. § 233; Mackeldy, Lehrbuch, 12th ed. § 270, 
and the notes).

PUER. [Servus.] 
PUGILATUS (πογν, πυγμ, πυγμαχια, πυγμο-
σιον), boxing. The fist (πυγμ, πογν) being the 
simplest and most natural weapon, it may be 
taken for granted that boxing was one of the 
earliest athletic games among the Greeks. Hence 
even gods and several of the earliest heroes are 
described either as victors in the πυγμ, or as dis-
tinguished boxers, such as Apollo, Hercules, Ty-
deus, Polydeuces, &c. (Paus. v. 7. § 4; Theocr. 
xxiv. 113; Apollod. iii. 6. § 4; Paus. v. 8. § 2.) 
The Scholast on Pindar (Nem. v. 89) says that 
Theseus was believed to have invented the art of 
boxing. The Homerica heroes are well acquainted 
with it. (Hom. II. xxiii. 691, &c.; compare Od. 
viii. 105, &c.) The contest in boxing was one of 
the hardest and most dangerous, whence Homer 
gives it the attribute ἄγχυρρων. (I. xxiii. 653.) 
Boxing for men was introduced at the Olympic 
games in Ol. 23, and for boys in Ol. 37. (Paus. 
v. 8. § 3.) Contests in boxing for boys are also 
mentioned in the Nemea and Isthmus. (Paus. vi. 
4. § 6.) 
In the earliest times boxers (pugiles, ποικαι) 
fought naked, with the exception of a ζώα round 
their loins (Hom. II. xxiii. 683; Virg. Aen. v. 
421); but this was not used when boxing was 
introduced at Olympia, as the contests in wrestling 
and racing had been carried on here by persons 
entirely naked ever since Ol. 15. Respecting the 
leathern thongs with which pugilists surrounded 
their fists, see CESTUS, where its various forms are 
illustrated by wood-cuts. 
The boxing of the ancients appears to have 
resembled the practice of modern times. Some par-
ticulars, however, deserve to be mentioned. A peculiar method, which required great skill, 
was not to attack the antagonist, but to remain on the 
defensive, and thus to wear out the opponent, 
until he was obliged to acknowledge himself to be 
conquered. (Dio Chrysost. Melanc. ii. orat. 29; 
Eustath. ad II. p. 1322, 29.) It was considered 
a sign of the greatest skill in a boxer to conquer 
without receiving any wounds, so that the two 
great points in this game were to inflict blows, 
and at the same time not to expose oneself to 
any danger (πνυ/α ii και φωλακ, J. Chrysost. 
Serm. vii. 1; Plut. Sympnos. ii. 5; compare Paus. 
vii. 12. § 3). A pugilist used his right arm chiefly 
for fighting, and the left as a protection for his 
head, for all regular blows were directed against 
the upper parts of the body, and the wounds 
inflicted upon the head were often very severe and 
fatal. In some ancient representations of boxers 
the blood is seen streaming from their noses, and 
their teeth were frequently knocked out. (Apoll. 
Rhod. ii. 785; Theocr. ii. 126; Virg. 
Aen. v. 469; Aelian. V. H. x. 19.) The ears 
especially were exposed to great danger, and
with regular pugilists they were generally much mutilated and broken. (Plat. Gorg. p. 516; Protag. p. 342; Martial, vii. 32. 5.) Hence in works of art the ears of the pancratiasts always appear beaten flat, and although swollen in some parts, are yet smaller than ears usually are. In order to protect the ears from severe blows, little covers, called ἄσφαρτιδες, were invented. (Pollux, ii. 82; Etymol. Mag. s. v.) But these ear-covers which, according to the Etymologist, were made of brass, were undoubtedly never used in the great public games, but only in the gymnasia and palaestrae, or at most in the public contests of boxing for boys; they are never seen in any ancient work of art.

The game of boxing, like all the other gymnastic and athletic games, was regulated by certain rules. Thus pugilists were not allowed to take hold of one another, or to use their feet for the purpose of making one another fall, as was the case in the pancentum. (Plut. Symp. ii. 4; Lucian, Anach. 3.) Cases of death either during the fight itself or soon after, appear to have occurred rather frequently (Schol. ad Pind. Ol. v. 34), but if a fighter willfully killed his antagonist, he was severely punished. (Paus. viii. 40. § 3, vi. 9. § 3.) If both the combatants were tired without wishing to give up the fight, they might pause a while to recover their strength; and in some cases they are described as resting on their knees. (Apollon. Rhod. ii. 86; Stat. Theb. vi. 796.) If the fight lasted too long, recours was had to a plan called κακίσα, that is, both parties agreed not to move, but to stand still and receive the blows without using any means of defence, except a certain position of the hands. (Eustath. ad H. xxii. p. 1324; Paus. viii. 40. § 3.) The contest did not end until one of the combatants was compelled by fatigue, wounds or despair, to declare himself conquered (ἀκρατεία) or was resting on his knees. (Polyai. Rhod. ii. 86; Stat. Theb. vi. 796.)

If a fighter wilfully killed his antagonist, he was fined by the laws of Lycurgus. (Paus. vi. 10. § 1.) Cases of death either during the fight or soon after, appear to have occurred rather frequently (Schol. ad Pind. Ol. v. 34), but if a fighter willfully killed his antagonist, he was consequently drawn it with the thumb at the upper part of the body, the position most effective for stabbing. (Lucian, Anach. 3; Plut. Cat. Maj. 20.) Even in a medical point of view, boxing was recommended as a remedy against giddiness and chronic headaches. (Arcaeta, De Morb. diut. cur. i. 2.)

In Italy boxing appears likewise to have been practised from early times, especially among the Etruscans. (Liv. i. 32; Dionys. viii. 72.) It continued as a popular game during the whole period of the republic as well as of the empire. (Suet. Aug. 45; Cic. De Leg. ii. 15, 18; Tacit. Annal. xvi. 21; Suet. Calig. 18.) See Krause, Die Gymnastik und Agon. d. Hellenen, pp. 407—534. [L. S.]

PUGILLA/RES. [Tabular.] PUGIUO (μύγιον, 
διαμ. μύγιον) ἄσφαρτιδες, a dagger; a two-edged knife, commonly of bronze, with the handle in many cases variously ornamented or enriched, sometimes made of the hard black wood of the Syrian terebinth. (Theophr. H. P. v. 3, § 2.) The accompanying woodcut shows three ancient daggers. The two upper figures are copied from Beger (Theas. Brand. vol. iii. pp. 398, 419): the third represents a dagger about a foot long, which was found in an Egyptian tomb, and is preserved in the Museum at Leyden. The handles of the two others were fitted to receive a plate of wood on each side. The lowermost has also two bosses of ivory or horn, and shows the remains of a thin plate of gilt metal, with which the wood was covered.

In the heroic ages the Greeks sometimes wore a dagger suspended by the sword on the left side of the body [GLADIUS], and used it on all occasions instead of a knife. (Hom. II. iii. 271; Athen. vi. p. 232, c.) The custom is continued to the present day among the Arnauts, who are descended from the anciant Greeks. (Dodd, Tour, vol. i. p. 133.) The Romans (see woodcuts, pp. 2, 554), wore the dagger as the Persians did [ACINACES] on the right side, and consequently drew it with the thumb at the upper part of the hilt, the position most effective for stabbing. The terms pugio and ἄσφαρτιδες denote both its smallness and the manner of grasping it in the hand (ῥήγα, pugnum). In the same way we must understand "the two swords" (duos gladios, Gell. ix. 13) worn by the Gallic chief, slain by Manlius Torquatus; and the monuments of the middle ages prove that the custom long continued in our own and in adjoining countries. (See Stuart, Mon. Antiqu. of Gt. Britain.) Among some of the northern nations of Europe, a dirk was constantly worn on the side, and was in readiness to be drawn on every occasion. (Ovid. Trist. v. 8, 19, 20.) The Chalybes employed the same weapon, stabbing their enemies in the neck. (Xen. Achill. iv. 7, § 16.) For the Greek horsemen the dagger was considered preferable to the long sword as a weapon of offence. (Xen. de Re Equest. xii. 11.) [J. Y.]

PULLA/RIUS. [Aegur, p. 176, a.] PULLIT/UM [Theatrum.] PULVINAR. A representation of the mode of using cushions or pillows (pulvinari), to recline upon at entertainments, is given in the wood-cut under SYMPOSIUM. The most luxurious of such cushions were stuffed with swan's-down. (Mart. xiv. 161.) An ancient Egyptian cushion is preserved in the British Museum. In reference to this practice, the Romans were in the habit of placing the statues of the gods upon pillows at the lectisterna. [EPULONES; LECTISTERNIUM.] The couches provided for this purpose in the temples were called pulvinaria. (Hor. Carm. i. 37, 3; Ovid. Met. xiv. 827; Cic. in Cat. iii. 10, Harus. 5, Dom. 53, Tusc. iv. 2; Val. Max. iii. 7. § 1;
Servius, in Virg. Georg. iii. 533.) There was also a pulvinar, on which the images of the gods were laid, in the Circus. (Sueton. August. 45, Claud. 4.)

PULVINAR. [PULVINAR.] PULPILLA, PUPILLUS. [IMPURES; INFANS; TUTELA.]
PULPILLARIS SUBSTITUTIO. [HRES, p. 599.]

PUPPIUS. [NAVIS, p. 787, a.]

PUTEAL, properly means the enclosure surrounding the opening of a well, to protect persons from falling into it. It was either round or square, of three or four feet from the ground. There is a puteal which was found among the ruins of one of Tiberius's villas in Capreae; it exhibits five groups of fauna and bacchanalian nymphs; and around the edge at the top may be seen the marks of the ropes used in drawing up water from the well. Such putealia seem to have been common in the Roman villas: the puteulis signata, which Cicero (ad Att. i. 10) wanted for his Tuscanian villa, must have been of the same kind as the one in the British Museum; the signata refers to its being adorned with figures. It was the practice in some cases to surround a sacred place with an enclosure open at the top, and such enclosures from the great similarity they bore to Putealia were called by this name. There was a Puteal of this kind at Rome, called Puteal Scribonianum or Puteal Libonis, which is often exhibited on coins of the Scribonia gens, and of which a specimen is given below. The puteal is on the reverse of the coin adorned with garlands and two lyres. It is generally stated that there were two putealia in the Roman forum; but C. F. Hermann, who has carefully examined all the passages in the ancient writers relating to this matter (Ind. Lect. Murburg. 1840), comes to the conclusion that there was only one such puteal at Rome. It was in the forum, near the Arcus Fabianus, and was dedicated in very ancient times either on account of the whetstone of the Augur Navius (comp. Liv. i. 36), or because the spot had been struck by lightning. It was subsequently repaired and re-dedicated by Scribonius Libo, who had been commanded to examine the state of the sacred places (Pestus, s. v. Scribonianum). Libo erected in its neighbourhood a tribunal for the praetor, in consequence of which the place was, of course, frequented by persons who had law-suits, such as money-lenders and the like. (Comp. Hor. Sat. ii. 6. 35, Epist. i. 19, 98; Ov. Remol. Amor. 561; Cic. pro Sex. 8; C. F. Hermann, i.e.)

PYCNUMSTYLOS. [TEMPLUM.]

PYELYUS (πυσλος). [FUNUS, p. 555, b.]

PYGME. [MENSURA, p. 752, a.]

PYGON. [MENSURA, p. 752, a.]

PYLARGANAE (πυλαγραναι). [AMPHICTYNES, p. 80, b.]

PYRA. [FUNUS, p. 559, b.]

PYRUS (πυρος), a tower. 1. The towers used in fortification and in war are spoken of under TURIS. 2. An army drawn up in a deep oblong column. [TURIS, No. VI.] 3. A dice-box, so called from its resemblance to a tower [FRILLUS]. 4. The territory of the town of Teos was distributed among a certain number of towers (πυρος), to each of which corresponded a symmory or section of the citizens (Bück, Corp. Inscri. No. 3064; and the elucidations of Grote, Hist. of Greece, vol. iii. pp. 247, 248).

PYRRHICA. [SALTATIO.]

PYTHIA (πυθια), one of the four great national festivals of the Greeks. It was celebrated in the neighbourhood of Delphi, and was carried by a boy whose parents were still living, and those who followed him sang certain verses, which are preserved in Plutarch. (i.e. compare Clem. Alex. Strom. iv. p. 474; Eustath. ad ll. xii.; Suid. s. v. Epeiroi; and Etymol. Mag. where a different account is given.) The procession went to a temple of Apollo, and the olive-branch was planted at its entrance. According to others, every Athenian planted, on the day of the Pyanepsia, such an olive branch before his own house, where it was left standing till the next celebration of the festival, when it was exchanged for a fresh one. (Schol. ad Aristoph. Plut. 1050.)

PYTHIA.

PYTHIA (πυθια), a festival celebrated at Athens every year on the seventh of Pyanepion, in honour of Apollo. (Harpocrat. Haecych. Suidas. s. v. Πυθια.) It was said to have been

PYTHIA, instituted by Theseus after his return from Crete. (Plut. These. 22.) The festival as well as the month in which it took place, are said to have derived their names from πυθια, another form for κιαωοιο, i.e. pulse or beans, which were cooked at this season and carried about. (Harp. and Suid. l.c.; Athen. ix. p. 406.) A procession appears to have taken place at the Pyanepsia, in which the epeirod was carried about. This epeirod was an olive-branch surrounded with wool and laden with the fruits of the year; for the festival was in reality a harvest feast. It was carried by a boy whose parents were still living, and those who followed him sang certain verses, which are preserved in Plutarch. (i.e.; compare Clem. Alex. Strom. iv. p. 474; Eustath. ad il. xii.; Suid. s. v. Epeirod; and Etymol. Mag. where a different account is given.) The procession went to a temple of Apollo, and the olive-branch was planted at its entrance. According to others, every Athenian planted, on the day of the Pyanepsia, such an olive branch before his own house, where it was left standing till the next celebration of the festival, when it was exchanged for a fresh one. (Schol. ad Aristoph. Plut. 1050.)
Pythian god with the accompaniment of the cithara. (Paus. x. 7. § 2; Strab. ix. p. 421.) Some of the poets, however, and mythographers represent even the gods and the early heroes as engaged in gymnastic and equestrian contests at the Pythian games. But such statements, numerous as they are, can prove nothing; they are anachronisms in which late writers were fond of indulging. The description of the Pythian games in which Sophocles, in the Electra, makes Orestes take part, belongs to this class. The Pythian games must, on account of the celebrity of the Delphic oracle, have become a national festival for all the Greeks at a very early period; and when Solon fixed pecuniary rewards for those Athenians who were victors in the great national festivals, the Pythian agon was undoubtedly included in the number, though it is not expressly mentioned. (Diog. Laërt. i. 55.)

Whether gymnastic contests had been performed at the Pythian games previous to Ol. 47, is uncertain. Böckh supposes that these two kinds of games had been connected at the Pythia from early times, and that afterwards the gymnastic games were neglected; but however this may be, it is certain that about Ol. 47 they did not exist at Delphi. Down to Ol. 48 the Delphians themselves had been the agonothetae at the Pythian games, but in the third year of this Olympiad, when after the Crissaean war the Amphictyons took the management under their care, they naturally became the agonothetae. (Strab. ix. p. 421; Paus. x. 7. § 3.) Some of the ancients date the institution of the Pythian games from this time (Phot. Cod. p. 535, ed. Bekker and others say that henceforth they were called Pythagian games. Owing to being under the management of the Amphictyons they are sometimes called 'Amphictyonika Aplia. (Heliod. Aeth. iv. 1.) From Ol. 48, 3, the Pythiads were occasionally used as an aera, and the first celebration under the Amphictyons was the first Pythiad. Pausanias (l. c.) expressly states that in this year the original musical contest in αὐξαρχία was extended by the addition of αὐξαρχία, i.e. singing with the accompaniment of the flute, and that of flute-players alone. (Diog. Laërt. i. c.) In speaking of these innovations does not mention the αὐξαρχία, but states that the contest of cithara-players (κιθαρισταί) was added, while Pausanias assigns the introduction of this contest to the eighth Pythiad. One of the musical contests at the Pythian games in which only flute and cithara-players took part, was the so-called νόμος Πεύκης, which, at least in subsequent times, consisted of five parts, viz. ἀναρχικός, ἀνάμειρα, κατακλεισμός, ἱμάδου καὶ δακτυλος, and σέργγης. This was a musical description of the fight of Apollo with the dragon and of his victory over the monster. (Strabo, l. c.) A somewhat different account of the parts of this νόμος is given by the Scholiast on Pindar (Argum. ad Pyth.) and by Pollux (iv. 79, 81, 84).

Besides these innovations in the musical contests which were made in the first Pythiad, such gymnastic and equestrian games as were then customary at Olympia, were either revived at Delphi or introduced for the first time. The chariot-race with four horses was not introduced till the second Pythiad. (Paus. x. 7. § 3.) Some games on the other hand were adopted, which had not yet been practised at Olympia, viz. the διάλισμα and the διάλωος for boys. In the first Pythiad the victors received χρήματα as their prize, but in the second a chaplet was established as the reward for the victors. (Paus. and Schol. ad Pind. l. c.) The Scholiast on Pindar lists the first Pythiad from this introduction of the chaplet, and their system has been followed by most modern chronologers, though Pausanias expressly assigns this institution to the second Pythiad. (See Clinton, F. H. p. 195; Krause, Die Pyth. Nem., &c. p. 21, &c.) The αὐξαρχία, which was introduced in the first Pythiad, was omitted at the second and ever after, as only elegies and ἄρρητοι had been sung to the flute, which were thought too melancholy for this solemnity. The τετράπόδα or chariot-race with four horses however was added in the same Pythiad. In the eighth Pythiad (Ol. 55, 3) the contest in playing the cithara without singing was introduced; in Pythiad 23 the foot-race in arms was added; in Pythiad 48 the chariot-race with two full-grown horses (πολίκη δρόμος) was performed for the first time; in Pythiad 53 the chariot-race with four foals was introduced. In Pythiad 61 the pancratium for boys, in Pythiad 63 the horse-race with foals, and in Pythiad 69 the chariot-race with two foals were introduced. (Paus. l. c.) Various musical contests were also added in the course of time, and contests in tragedy as well as in other kinds of poetry and in recitations of historical compositions are expressly mentioned. (Philogr. Vit. Soph. ii. 27. 2; Plut. Sympnos. ii. 4.) Works of art, as paintings and sculptures, which were exhibited in the assembled Greeks, and prizes were awarded to those who had produced the finest works. (Plin. xxx. 35.) The musical and artistic contests were at all times the most prominent feature of the Pythian games, and in this respect they even excelled the Olympic games.

Previous to Ol. 48 the Pythian games had been an ἐνευμενής, that is, they had been celebrated at the end of every eighth year; but in Ol. 46, 3, they became like the Olympia a revera-race, i.e. they were held at the end of every fourth year, and a Pythiad therefore ever since the time that it was used as an aera, comprehended a space of four years, commencing with the third year of every Olympiad. (Paus. l. c.; Diod. xv. 60; compare Clinton, F. H. p. 195.) Others have, in opposition to direct statements, inferred from Thucydides (iv. 117, v. 1) that the Pythian games were held towards the end of the second year of every Olympiad. Respecting this controversy, see Krause, l. c. p. 29, &c. As for the season of the Pythian games, they were in all probability held in the spring, and most writers believe that it was in the month of Bysius, which is supposed to be the same as the Attic Munychion. Böckh (ad Corp. Inscript. n. 1688) however has shown that the games took place in the month of Bucatius, which followed after the month of Bysius, and that this month must be considered as the same as the Attic Munychion. The games lasted for several days, as is expressly mentioned by Sophocles (Elect. 650, &c.), but we do not know how many. When ancient writers speak of the day of the Pythiad agon, they are probably thinking of the musical agon alone, which was the most important part of the games, and probably took place on the 7th of Bucatius.
It is quite impossible to conceive that all the numerous games should have taken place on one day.

The concourse of strangers at the season of this panegyria, must have been very great, as unmerous games should have taken place on one day. The states belonging to the amphictyony of Delphi had to send their theoria in the month of Bysius, however some time before the commencement of the festival itself. (Böckh, Corp. Inscr. i. c.) All the theoria sent by the Greeks to Delphi on this occasion, were called Panathenai (Strab. loc. cit. p. 494), and the theoria sent by the Athenians were always particularly brilliant. (Schol. ad Aristoph. Av. 1565.) As regards sacrifices, processions, and other solemnities, it may be presumed that they resembled in a great measure those of Olympia. A splendid, though probably in some degree fictitious, description of a theoria of Thessalians may be read in Heliodorus (Ath. ii. 34).

As to the order in which the various games were performed, scarcely anything is known, with the exception of some allusions in Pindar and a few mentions of Plutarch. The latter (Symm. ii. 4; comp. Philostr. Apoll. Tyian. vi. 10) says that the musical contests preceded the gymnastic contests, and from Sophocles it is clear that the gymnastic contests preceded the horse and chariot races. Every game, moreover, which was performed by men and by boys, was always first performed by the latter. (Plut. Symm. ii. 5.)

We have stated above that, down to Ol. 48, the Delphians had the management of the Pythian games; but of the manner in which they were conducted previous to that time nothing is known. When they came under the care of the Amphictyons, special persons were appointed for the purpose of conducting the games and of acting as judges. They were called Εµεληται (Plut. Symm. ii. 4, vii. 5) and answered to the Olympian Hellanodicae. Their number is unknown. (Krause, l. c. p. 44.) In later times it was decreed by the Amphictyons that king Philip with the Thessalians and Boeotians should undertake the management of the games (Diod. xvi. 60), but afterwards was even under the Roman emperors the Amphictyon again appear in the possession of this privilege. (Philostr. Vit. Soph. ii. 27.) The Εµεληται had to maintain peace and order, and were assisted by µασττιγοφοι, who executed any punishment at their command, and thus answered to the Olympian Διστατος. (Luc. adv. indoct. 9, &c.)

The prize given to the victors in the Pythian games was from the time of the second Pythiad a laurel chaplet; so that they then became an αγνω στεφανους, while before they had been an αγνω χαμαρινας (Paus. x. 7; § 3; Schol. in Argum. ad Pind. Pyth. vii. 47.) In addition to this chaplet, the prize given to the victors in the Pythian games was from the time of the second Pythiad a palm-branch, and was allowed to have his own laurel chaplet; so that they then became an αγνω στεφανους, while before they had been an αγνω χαμαρινας (Paus. x. 7; § 3; Schol. in Argum. ad Pind. Pyth. vii. 47.) In addition to this chaplet, the victor here, as at Olympia, received the symbolic palm-branch, and was allowed to have his own laurel chaplet, when he properly denoted that which was made of box (πυξες), but was applied to things of similar form and use made of any other material. In fact, the caskets in which the ladies of ancient times kept their jewels and other ornaments, were made of gold, silver, ivory, mother-of-pearl, tortoise-shell, &c. They were also much enriched with sculpture. A silver casket, 2 feet long, 1 ½ wide, and 1 deep, most elaborately adorned with figures in bas-relief, is described by Büttiger. (Subina, vol. i. pp. 64—80, plate iii.)

The annexed woodcut (from Ant. d'Ercolano, vol. ii. tab. 7) represents a very plain jewel-box, out of which a dove is extracting a riband or fillet. Nero deposited his beard in a valuable pyxis, when he shaved for the first time. (Barba.)

The same term is applied to boxes used to contain drugs or poison (Cic. pro Caelio, 25—29; Quintil. vi. 3; § 25); and to metallic rings employed in machinery. (Plin. H. N. xviii. 11, s. 29.)

Quadragesima, the fortieth part of the year A. D. 394. In A. D. 191 a celebration of the Pythia is mentioned by Philostratus (Vit. Soph. ii. 27) to the Olympian Pythia and Pythian Hellanodicae. Their number is unknown. (Krause, De Pyth. Neme. i., pp. 1—106.)

Quadragesima, the fortieth part of the year A. D. 394. In A. D. 191 a celebration of the Pythia is mentioned by Philostratus (Vit. Soph. ii. 27) to the Olympian Pythia and Pythian Hellanodicae. Their number is unknown. (Krause, De Pyth. Neme. i., pp. 1—106.)

QUADRANTAL.

The Romans were aware that there is a difference in the specific gravity of water and of wine, and in the different sorts of each, but, for the sake of simplicity, they reckoned that of the same specific gravity: when, however, they wished a very exact determination, they used rain water. (Böckh, c. 3.)

(Cato, R. R. 57; Gell. i. 20; Priscian, Carm. de Mens. et Pond. vv. 59—63; —

"Peso longo in spatio latique altoque notetur: Angulus ut par sit, quem claudit linea triplex, Quatuor et medium quadris cingatur inane: Amphora fit cubus, quam ne violare licet, Sacravere Jovi Tarpeio in monte Quirites."

A standard model of the Amphora was kept with great care in the temple of Jupiter in the Capitol, and was called amphora Capitolina (Priscian. l.c.; Capitolin. Maximin. 4). There still exists a congius which professes to have been made according to this standard. [CONGIUS.] For a full account of this congius, see H. Haec, Abhandl. d. Berl. Akad. 1824.

There are two questions of very great interest connected with the Roman quadratic; namely, (1), whether the equality to the cubic foot was originally exact, or only approximate, and (2), whether there was any exact ratio between the Roman and the Greek measures. The full discussion of these questions would be inconsistent both with the limits and with the chief object of this work. A general statement of the matters in dispute will be found under MENSURA, p. 754. It may here be added, that, whether there was or was not originally any precise ratio between the Greek and Roman measures of capacity, they were at least so nearly related to one another, that, when the two systems came to exist side by side, it was found easy to establish the following definite ratios. Of the liquid measures; the Roman amphora, or quadrantal, was 2-5ths of the Aeginetan, and 2-3rds of the Attic amphora or metretes; and the congius of the Roman system was equal to the ñoxis of the Attic. Again, comparing the Roman liquid with the Greek dry measures, the quadrantal was 1-3rd of the Aeginetan, and one half of the Attic, mediunnus. Consequently, of the dry measures, the modius (which was 1-3rd of the quadrantal) was 1-9th of the Aeginetan, and 1-6th of the Attic, mediunnus. The connecting subordinate unit in all these sets of measures is the Roman sextarius, or sixth part of the congius, which was introduced into the Greek system under the name of ñerras, and which stands to the several measures now mentioned in the following relations: —

1. Liquid Measures.

The Roman quadrantal = 48 sextarii
" Attic metretes = 72 "
" Aeginetan " = 120 "

2. Dry Measures.

The Roman modius = 16 sextarii
" Attic mediunnus = 96 "
" Aeginetan " = 144 "

The ñerras, or Roman sextarius, is not to be confounded with the genuine Attic ñerras or sixth of the mediunnus, which was equal to the Roman modius. (On the whole of this part of the subject, see Böckh, cc. iii. xi. xv.—xxvii.)

From the preceding remarks it will be seen that the only safe mode of computing the content of the amphora in terms of our own measures of capacity is by deducting it from the value already assigned the Roman pound, on the authority chiefly of the coins. That value may be taken, in round numbers, at 5050 grains. Now the imperial gallon contains 70,000 grains. Therefore

* The Romans were aware that there is a difference in the specific gravity of wine and of water, and in the different sorts of each, but, for the sake of simplicity, they reckoned that of the same specific gravity: when, however, they wished a very exact determination, they used rain water. (Böckh, c. 3.)
the Roman amphora $\left( \frac{5050 \times 80}{70000} \right) = 3.77$ imperial gallons, or a little more than 5½ gallons, or than 5 gallons and 6 pints. If we were to make the computation directly from the consigio of Vespasian, we should have a somewhat higher value; which, as has already been shown under PONDERA, arises probably from a source of error. On the other hand, the computation from the Roman cubic foot gives a somewhat lower value [PONDERA]; but, as already intimated, it is very doubtful whether the true content of the amphora was exactly a cubic foot, and in fact, if Böckh be right, it was a little more. At all events, the value of 5 gallons 6 pints is quite near enough to the truth for all the purposes of the classical student. (See the Tables.) On the other hand, if we were to reckon the quadrantal at exactly 6 gallons, and consequently the seostarius, which is the small unit of the system, at exactly 1 pint (instead of 96) we should obtain a system so extremely simple, and with so small a limit of error (namely less than $\frac{1}{56}$ in a pint), that it would probably be allowable to adopt it in the ordinary reading of the classic authors; indicating, however, the small error, by prefixing in each case the words a little less than; and correcting it, when the numbers are large, by taking from the result 1-25th of itself. [P.S.]

QUADRIGAE. [CURRIS, p. 379.]
QUADRIGATUS. [DENARIUS.]
QUADRIREMES. [NAVIS, p. 785, b.]
QUADRUPES. [PAUPERIES.]
QUADRUPLETORIÆS, public informers or accusers, were so called, either because they received a fourth part of the criminal's property, or because those who were convicted were condemned to pay fourfold (quadrupli damnari), as in cases of violation of the laws respecting gambling, usury, &c. (Pseudo-Ascon, in Cív. Divin. p. 110, in Verr. ii. p. 208, ed. Orelli; Festus, s. v.) We know that on some occasions the accuser received a fourth part of the property of the accused (Tacit. Ann. iv. 21); but the other explanation of the word may also be correct, because usurers, who violated the law, were subjected to a penalty of four times the amount of the loan. (Cato, de Re Rust. init.) When the general right of accusation was given, the abuse of which led to the springing up of the Quadrupletoriæ, was uncertain; but originally all fines went into the common treasury, and while no instance in which it could be said with any certainty, that the quaestores parricidii took a part. As thus everything is so uncertain, and as late writers are guilty of such manifest confusions, we can say no more than that such public accusers existed, and infer from the analogy of later times that they were appointed by the populus on the presentation of the king. In the early period of the republic the quaestores parricidii appear to have become a standing office, which, like others, was held only for one year. (Liv. iii. 24, 25.) They were appointed by the populus on the curia, after the presentation of the consuls. (Dig. 1. tit. 2. s. 2. § 23; Tacit. i. c.) When these quaestores discovered that a capital offence had been committed, they had to bring the charge before the comitia for trial. (Liv. iii. 24; Dionys. viii. 75.) They convoked the comitia through the person of a trumpet, who proclaimed the day of meeting from the capitol, at the gates of the city, and at the house of the accused. (Varro, de Ling. Lat. vi. 90, ed. Müller.) When the sentence had been pronounced by the people, the quaestores parricidii executed it; thus they threw Spurius Cassius from the Tarpeian rock. (Dionys. viii. 77; Liv. iii. 41, Cív. de Re Publ. ii. 25.) They were mentioned in the laws of the Twelve Tables, and after the time of the decaevirate they still continued to be appointed, though probably no longer by the curies, but either in the comitia centuriata or tributa, which they therefore must also have had the right to assemble in cases of emergency. (Varro, de Ling. Lat. vi. 9.) This appears to be implied in the statement of Tacitus, that in the year 447 B.C. they were created by the people without any presentation of the consuls. From the year 391 B.C. onwards, they were no longer mentioned in Roman history, as their functions were gradually transferred to the trimviri capitales. (Val. Max. v. 4. § 7, viii. 4. § 2; Sallust, functions of both classes of officers: “Quaestores a quaerendo, qui conquerunt publicas pecunias et maleficia.” The one class therefore had to do with the collecting and keeping of the public revenues, and the other were a kind of public accusers. The former bore the name of quaestores classicæ, the latter of quaestores parricidii. (Dig. 1. tit. 2. s. 2. § 22, 23.) The quaestores parricidii were, as we have said, public accusers, two in number, who conducted the accusation of persons guilty of murder or any other capital offence, and carried the sentence into execution. (Festus, s. v. Pàrìcì and Quaestores; Liv. ii. 41; Dionys. viii. 77.) There are many points which might make us inclined to believe that the quaestores parricidii and the duumviri perduellionis were the same officers; but a closer examination shows that the former were a permanent magistracy, while the latter were appointed only on special emergencies. [See Perduelliosis DUVMVRIL.] All testimonies agree that these public accusers existed at Rome during the period of the kings, though it is impossible to ascertain by which king they were instituted (Festus, i. c.; Tacit. Annal. xi. 22; Dig. 1. tit. 13), as some mention them in the reign of Romulus and others in that of Numa. When Ulpian takes it for certain that they occurred in the time of Tullius Hostilius, he appears to confound them, like other writers, with the duumviri perduellionis, who in this reign acted as judges in the case of Horatius, who had slain his sister. During the kingly period there occurs no instance in which it could be said with any certainty, that the quaestores parricidii took a part. As thus everything is so uncertain, and as late writers are guilty of such manifest confusions, we can say no more than that such public accusers existed, and infer from the analogy of later times that they were appointed by the populus on the presentation of the king. In the early period of the republic the quaestores parricidii appear to have become a standing office, which, like others, was held only for one year. (Liv. iii. 24, 25.) They were appointed by the populus on the curia, after the presentation of the consuls. (Dig. 1. tit. 2. s. 2. § 23; Tacit. i. c.) When these quaestores discovered that a capital offence had been committed, they had to bring the charge before the comitia for trial. (Liv. iii. 24; Dionys. viii. 75.) They convoked the comitia through the person of a trumpet, who proclaimed the day of meeting from the capitol, at the gates of the city, and at the house of the accused. (Varro, de Ling. Lat. vi. 90, ed. Müller.) When the sentence had been pronounced by the people, the quaestores parricidii executed it; thus they threw Spurius Cassius from the Tarpeian rock. (Dionys. viii. 77; Liv. iii. 41, Cív. de Re Publ. ii. 25.) They were mentioned in the laws of the Twelve Tables, and after the time of the decaevirate they still continued to be appointed, though probably no longer by the curies, but either in the comitia centuriata or tributa, which they therefore must also have had the right to assemble in cases of emergency. (Varro, de Ling. Lat. vi. 9.) This appears to be implied in the statement of Tacitus, that in the year 447 B.C. they were created by the people without any presentation of the consuls. From the year 391 B.C. onwards, they were no longer mentioned in Roman history, as their functions were gradually transferred to the trimviri capitales. (Val. Max. v. 4. § 7, viii. 4. § 2; Sallust,
Cat. 55 ; TRIVUMI CAPITALES), and partly to the aediles and tribunes. (AEDILES, TRIBUNI ; Niebuhr, Hist. of Rome, vol. iii. p. 44; Zachariae, Sulla, als Ordner, &c. vol. ii. p. 147, &c.)

The quaestores parricidi have not only been confounded with the duumviri perduellionis, but also with the quaestores classici (Tacit. i. c. ; Zonar. vii. 13, &c.), and this probably owing to the fact, that they ceased to be appointed at such an early period, and that the two kinds of quaestors are seldom distinguished in ancient writings by their characteristic epithets. (Becker, Handb. der Röm. Alterth. vol. ii. pt. ii. p. 228, &c.)

The quaestores classicl were officers entrusted with the care of the public money. It is established by the clearest possible evidence, that during the kingly period this magistracy did not exist (Liv. iv. 4 ; Plut. Popul. 12), and it would seem that a considerable time elapsed after the expulsion of the kings, before this magistracy was instituted. Their distinguishing epithet classic is not mentioned by any ancient writer, except Lydus (De Mag. i. 27), who however gives an absurd interpretation of it. Niebuhr (vol. ii. p. 430) refers it to their having been elected by the centuries ever since the time of Valerius Publicola, who is said to have first instituted the office. (Plut. Publ. 12.) They were at first only two in number, and of course taken only from the patricians. As the senate had the supreme administration of the finances, the quaestors were in some measure only its agents or paymasters, for they could not dispose of any part of the public money without being directed by the senate. Their duties consequently consisted in making the necessary payments from the aerarium, and receiving the public revenues. Of both they had to keep correct accounts in their tabulae publicae. (Polyb. vi. 13.) Demands which any one might have on the aerarium, and outstanding debts were likewise registered by them. (Pseudo-Ascon. in Verrin. p. 158, Orelli ; Plut. Cat. Min. 27.)

Fines to be paid to the public treasury were registered and annotated by the quaestors. (Polyb. vii. 13, &c.) Another branch of their duties, which however was likewise connected with the treasury, was to provide the publican, and to control the latter. The quaestors were probably, like the praetors, elected by the people, at their own expense, whereby the princeps had to make to this assembly some present, and they were probably, like the praetors, allowed to fix the number of quaestors to twenty, that he might have a large body of clerks to attend on the public business. (Dion Cass. xliii. 47, 51.)

In the year B. c. 450, after the Romans had made themselves masters of Italy, and when, in consequence, they were admitted to carry on the public business in Italy and in the provinces, the number of quaestors was doubled to eight (Liv. iv. 53 ; Epit. lib. 15; Niebuhr, vol. iii. p. 645); and it is probable that henceforth their number continued to be increased in proportion as the empire became extended. One of the eight quaestors was appointed by lot to the quaestura ostiensis, a most laborious and important post, as he had to provide Rome with corn. (Cic. pro Murex, 8, pro Sest. 17.)

Besides the quaestura ostiensis, which resided at Ostia, three other quaestors were distributed in Italy to raise those parts of the revenue which were not farmed by the publincani, and to control the latter. Of one of them resided at Cales, and the other two probably in towns on the Upper Sea. (Cic. in Pat. 5.) The two remaining quaestors, who were sent to Sicyon, are spoken of below.

Sulla in his dictatorship raised the number of quaestors to twelve (Livy. iv. 54), and he might have had just as many number of candidates for the senate (seuuti ex plebulo, Tacit. Annal. xi. 22), and Julius Caesar even to forty. (Dion Cass. xiii. 47, 51.) In the year B. c. 49 no quaestors were elected, and Caesar transferred the keeping of the aerarium to the aediles. From this time forward the treasury was sometimes entrusted to the praetors, sometimes to the praetorii, and sometimes again to quaestors. (AERARIUM.) Quaestors however, both in the city and in the provinces, occur down to the latest periods of the empire. Some of them bore the title of candidati principis, and their only duty was to read in the senate the communications which the princes had to make to this assembly (liberi principales, epistolae principis, Dig. 1. tit. 13. § 2 and 4; Lyd. de Mag. i. 28; L umpried. Alex. Sco. 43; Plin. Epist. vii. 16.). From the time of the emperor Claudius all quaestors, on entering their office, were obliged to give gladiatorial games to the people, at their own expense, whereby the office became inaccessible to any one except the wealthiest individuals. (Suet. Claud. 24; Tacit. Annal. l. c. xiii. 5.; Suet. Domit. 4; -L umbried. Alex. Sco. 43.)

When Constantine had become the second capital of the empire, it received like Rome its quaestors, who had to give games to the people on entering their office; but they were probably, like the praetors, elected by

3 8 3

of quaestor had undoubtedly, as in later times, the right to take his seat in the senate, unless he was excluded as unworthy by the next consuls. And this was probably the reason why the patricians so determinately opposed the admission of plebeians to this office. [SENIATUS.] Henceforth the consuls, whenever they took the field against an enemy, were accompanied by one quaestor each, who at first had only to superintend the sale of the booty, the produce of which was either divided among the legion, or was transferred to the aerarium. (Liv. iv. 53.) Subsequently however we find that these quaestors also kept the funds of the army, which they had received from the treasury at Rome, and gave the soldiers their pay; they were in fact the pay-masters in the army. (Polyb. vi. 39.) The two other quaestors, who remained at Rome, continued to discharge the same duties as before, and were distinguished from those who accompanied the consuls by the epithet urbani. In the year B. c. 265, after the Romans had made themselves masters of Italy, and when, in consequence, the administration of the treasury and the raising of the revenues became more laborious and important, the number of quaestors was again doubled to eight (Lyd. de Mag. i. 27; Liv. Epit. lib. 15; Niebuhr, vol. iii. p. 645); and it is probable that henceforth their number continued to be increased in proportion as the empire became extended. One of the eight quaestors was appointed by lot to the quaestura ostiensis, a most laborious and important post, as he had to provide Rome with corn. (Cic. pro Murex, 8, pro Sest. 17.) Besides the quaestura ostiensis, which resided at Ostia, three other quaestors were distributed in Italy to raise those parts of the revenue which were not farmed by the publicani, and to control the latter. Of one of them resided at Cales, and the other two probably in towns on the Upper Sea. (Cic. in Pat. 5.) The two remaining quaestors, who were sent to Sicyon, are spoken of below.

Sulla in his dictatorship raised the number of quaestors to twelve (Livy. iv. 54), and he might have had as many number of candidates for the senate (seuuti ex plebulo, Tacit. Annal. xi. 22), and Julius Caesar even to forty. (Dion Cass. xiii. 47, 51.) In the year B. c. 49 no quaestors were elected, and Caesar transferred the keeping of the aerarium to the aediles. From this time forward the treasury was sometimes entrusted to the praetors, sometimes to the praetorii, and sometimes again to quaestors. (AERARIUM.) Quaestors however, both in the city and in the provinces, occur down to the latest periods of the empire. Some of them bore the title of candidati principis, and their only duty was to read in the senate the communications which the princes had to make to this assembly (liberi principales, epistolae principis, Dig. 1. tit. 13. § 2 and 4; Lyd. de Mag. i. 28; L umpried. Alex. Sco. 43; Plin. Epist. vii. 16.). From the time of the emperor Claudius all quaestors, on entering their office, were obliged to give gladiatorial games to the people, at their own expense, whereby the office became inaccessible to any one except the wealthiest individuals. (Suet. Claud. 24; Tacit. Annal. l. c. xiii. 5.; Suet. Domit. 4; -L umbried. Alex. Sco. 43.)

When Constantine had become the second capital of the empire, it received like Rome its quaestors, who had to give games to the people on entering their office; but they were probably, like the praetors, elected by

3 8 3
the senate and only announced to the emperor.

The proconsul or praetor, who had the administration of a province, was attended by a quaestor. This quaestor had undoubtedly to perform the same functions as those who accompanied the armies into the field; they were in fact the two officers, with the exception that the former were stationary in their province during the time of their office, and had consequently rights and duties which those who accompanied the armies could not have.

In Sicily, the earliest Roman province, there were two quaestors answering to the two former divisions of the island into the Carthaginian and Greek territory. The one resided at Lilybaenum, the other at Syracuse. Besides the duties which they had in common with the pay-masters of the armies, they had to levy those parts of the public revenue in the province which were not farmed by the publicani, to control the publicani, and to forward the sums raised, together with the accounts of them, to the aerarium. (Pseudo-Ascon. in Verr. p. 167, Orelli.) In the provinces the quaestors had the same jurisdiction as the curule aediles at Rome. (Gaius, i. 6.) The relation existing between a praetor or proconsul of a province and his quaestor was according to ancient custom regarded as resembling that between a father and his son. (Cic. De nat. 19, c. Verr. ii. 1. 15, pro Planc. 11, ad Fam. iii. 10.) When a quaestor died in his province, the praetors had the right to appoint a proquaestor in his stead (Cic. c. Verr. i. c.), and when the praetor was absent, the quaestor supplied his place, and was then attended by lie-tors. (Cic. ad Fam. ii. 15, pro Planc. 41.) In what manner the provinces were assigned to the quaestors after their election at Rome, is not mentioned, though it was probably by lot, as in the case of the quaestor ostiensiis. But in the consulship of Decimus Drusus and Porcina it was decreed that the provinces should be distributed among the quaestors by lot ex senatus consulto. (Dig. 1. tit. 13, § 2; Cic. c. Verr. ii. 1. 13.) During the time of the empire this practice continued, and if the number of quaestors elected was not sufficient for the number of provinces, those quaestors of the preceding year, who had had no province, might be sent out. This was, however, the case only in the provinces of the Roman people, for in those of the preceding year, who had had no province, might be the number of provinces, those quaestors of the empire this practice continued, and if the time of Constantine the title of quaestor sacripalatii was given to a minister of great importance, whose office probably originated in that of the candidati principis. Respecting his power and influence see Walter, Gesch. d. Röm. R., p. 365. [L.S.]

QUAESTORIUM. [CASTRA, pp. 249, n. 255, b.]

QUALES-QUALES. [SERVUS.]

QUALUS. [CALATHUS.]

QUANTI MINORIS is an actio which a buyer had against the seller of a thing, in respect of any non-apparent faults or imperfections, at the time of the sale, even if the seller was not aware of them, or for any defects in the qualities of the thing which the seller had warranted: the object of the actio was to obtain an abatement in the purchase-money. This action was to be brought within a year or within six months, according as there was a Cautio or not. The actio quanti minoris might be brought as often as a new defect was discovered; but the purchaser could not recover the value of the same thing twice. [EXTIO ET VENDITIO.] (Dig. 21. tit. 1 ; 44. tit. 2. s. 25. § 1.)

G.L.

QUARTARIUS, a Roman measure of capacity, one fourth of the sextario, and consequently a little less than a quarter of a pint imperial. It is also found in the Greek system of liquid measures under the name of ϊαμνος. [P.S.]

Quinquagesima, the fiftieth or a tax of two per cent. upon the value of all slaves that were sold, was instituted by Augustus according to Dion Cassius (iv. 31). Tacitus (xiii. 31), however, mentions the twenty-fifth or a tax of four per cent. upon the sale of slaves in the time of Nero: if both passages are correct, this tax must have been increased after the time of Augustus, probably by Caligula, who, we are told by Suetonius (in vita, c. 40), introduced many new taxes. (Burmann, de Vectig. p. 69, &c.)

We are also told by Tacitus (Ann. xiii. 51) that Nero abolished the Quinquagesima; this must have been a different tax from the above-mentioned one, and may have been similar to the Quinquagesima mentioned by Cicero (c. Verr. iii. 49) in connection with the Araeota of Sicily.

A duty of two per cent. was levied at Athens upon exports and imports. [Pentecoste.]

Quinquatrus or Quinquatria, a festival sacred to Minerva, which was celebrated on the 19th of March (a. d. xiv. kal. Apr.), and was so called according to Varro (de Ling. Lat. vi. 14, ed. Müller), because it was the fifth day after the Ides, in the same way as the Tusculans called it the festival on the tenth day after the Ides. (Comp. Müller, Etrusk., vol. ii. p. 49.) Both Varro and Festus state that the Quinquatrus was celebrated for only one day, but Ovid (Fast. iii. 899, &c.) says that it was celebrated for five days, and was for this reason called by this name; that on the first day no blood was shed, but that on the last four there were contests of gladiators. It would appear however from the above-mentioned authorities that the first day was only the festival properly so called, and that the last four were merely an addition made perhaps in the time of Caesar to gratify the people, who became so passionately fond of gladiatorial combats. The ancient Calendars too assign only one day to the festival. Ovid (L.c.) says that this festival was celebrated in commemoration of the birth-day of Minerva; but according to Festus it was sacred to Minerva because her temple on the Aventine was consecrated on that day. On the fifth day of the festival, according to Ovid (iii. 849), the trumpets
used in sacred rites were purified; but this seems to have been originally a separate festival called *Tubilustrium* (Plaut. *Trin.* 276; *Varro, L. c.*), which was celebrated as we know from the ancient Calendars on the 23d of March (a. d. x. Cal. Apr.), and would of course, when the Quinquatrus was extended to five days, fall on the last day of that festival.

As this festival was sacred to Minerva, it seems that women were accustomed to consult fortune-tellers and diviners upon this day. (Plant. *Mil.* iii. 1. 96.) Domitian caused it to be celebrated every year in his Alban Villa, situated at the foot of the hills of Alba, and instituted a collegium to superintend the celebration, which consisted of the hunting of wild beasts, of the exhibition of plays, and of contests of orators and poets. (Suet. *Dom.* 4.)

There was also another festival of this name called Quinquatrus Menenacae or Quinquatrus Minores, celebrated on the Ides of June, on which the tibicines went through the city in procession to the temple of Minerva. (Varro, *de Ling. Lat.* vi. 17; Ovid. *Fast.* vi. 631, &c.; Festus, p. 143, ed. Müller.)

**QUINQUENNA'LLIA.** were games instituted by Nero a. d. 60, in imitation of the Greek festivals, and celebrated like the Greek *παραστάσεις* at the end of every four years: they consisted of musical, gymnastic, and equestrian contests, and were called Neronia. (Suet. *Ner.* 12; Tac. *Ann.* xiv. 20; *Dion Cass.* i. 21.) Suetonius and Tacitus (l. c.) say that such games were first introduced at Rome by Nero. The *Quinquenalia*, which had previously been instituted both in honour of Julius Caesar (*Dion Cass.* xlv. 6) and of Augustus (*Id.* li. 19; Suet. *Aug.* 59, 98), were confined to the towns of Italy and the provinces.

The *Quinquenalia* of Nero appear not to have been celebrated after his time, till they were revived again by Domitian in honour of the Capitoline Jupiter. (Suet. *Dom.* 4.)

**QUINQUCENT'A'LLIS.** [Colonia, p. 318, b.]

**QUINQUERE'MIS.** [Nayis, p. 765, b.]

**QUINQUERTIUM.** [Pentathlon.]

**QUINQUEVIRI**, or five commissioners, were frequently appointed under the republic as extraordinary magistrates to carry any measure into effect. Thus *Quinquevirii Mensatrii*, or public bankers, were occasionally appointed in times of great distress [*Mensarii*]; the same number of commissioners was sometimes appointed to superintend the formation of a colony, though three (triumviri) was a more common number. [*Colonia, p. 313, b.*] We find too that Quinqueviri were created to superintend the repairs of the walls and of the towers of the city (*Liv.* xxv. 7), as well as for various other purposes.

Besides the extraordinary commissioners of this name, there were also permanent officers, called Quinqueviri, who were responsible for the safety of the city after sunset, as it was inconvenient for the regular magistrates to attend to this duty at that time: they were first appointed soon after the war with Pyrrhus. (Dig. 1. tit. 2. s. 12; *Ulp.* *Digest.* 7. 5. 10.)

**QUIRITES, QUIRITIUM JUS.** [Jus, p. 658, a.]

**QUOD JUSSU, ACTIO.** [Jussu, *Quod*, *Actio.*]

**QUORUM BONORUM, INTERDICTUM.**

The object of this interdict is to give to the Praetorian heres the possession of anything belonging to the hereditas which another possesses pro herede or pro possessor. The name of this Interdict is derived from the introductory words, and it runs as follows: *ibi Praetor: Quorum bonorum ex edicto meo, quidem dolo malo fecisti, uti desineres possidere: id illi restitutionum.* The plaintiff is entitled to this Interdict when he has obtained the *Bonorum Possessio*, and when any one of the four following conditions apply to the defendant.

1. *Quod de his bonis pro herede.*
2. *Aut pro possessore possides.*
3. *Possidere si nihil usucaptum esset,* uti desineres possidere: id illi restitutionum.*
4. *Quod quidem dolo malo fecisti, uti desineres possidere.*

The first two conditions are well understood, and apply also to the case of the hereditatis petio. The fourth condition also applies to the case of the hereditatis petio and the rei vindicatio; but instead of "*quod quidem" the reading "*quodque" has been proposed, which seems to be required, for No. 4 has no reference to No. 3, but is itself a new condition. The words of No. 3 have caused some difficulty, which may be explained as follows: In establishing the *Bonorum Possessio*, the Praetor intended to give to many persons, such as emancipated children and Cognati, the same rights that the heres had; and his object was to accomplish this effectually. The Roman heres was the representative of the person who had died and left an hereditas, and by virtue of this representative or jurisdictional fiction of the person of the dead having a continued existence in the person of the heres, the heres succeeded to his property and to all his rights and obligations. In the matter of rights and obligations the Praetor put the *Bonorum Possessio* in the same situation as the heres by allowing him to sue in respect of the claims that the deceased had, and allowing any person to sue him in respect of claims against the deceased, in an *actio utilis* or *fictitia*. (Ulp. *Frag.* tit. 28. s. 12; Gais, *iv.* 34.) In respect to the property, according to the old law any person might take possession of a thing belonging to the hereditas, and acquire the ownership of it in a certain time by usucapion. (Gais, li. 52—58.) The persons in whose favour the Praetor's edict was made could do this as well as any other person; but if they found any other person in possession of anything belonging to the hereditas, they could not claim it by the vindicatio, for they were not owners, nor by the hereditatis petio, for they were not heredes. To meet this difficulty the *Interdictum Quorum Bono- rum* was introduced, the object of which was to aid the *Bonorum Possessor* in getting the possession (whence the title of the *Interdictum adipsicendae possessionis*) and so commencing the usucapion.
If he lost the possession before the usucaption was complete, he could in most cases recover it by the Possessorial Interdicts, properly so called, or by other legal means. This, according to Savigny, is the origin of the Bonorum Possessor.

In course of time when Bonitariam ownership (in bonis) was fully established and co-existed with Quiritarian ownership, this new kind of ownership was attributed to the Bonorum Possessor, after he had acquired the Bonorum Possessio, and thus all that belonged to the deceased ex jure Quiritium became his in bonis and finally by Usucaption, ex jure Quiritium; though in the mean time he had most of the practical advantages of Quiritarian ownership. Ultimately the Bonorum Possessio came to be considered as a species of hereditas, and the like forms of procedure to those in the case of the real hereditas were applied to the case of the Bonorum Possessio; thus arose the possessoria hereditatis petitio, which is mentioned by Gaius, and cannot therefore be of later origin than the time of Marcus Aurelius. Thus the new form of procedure, which would have rendered the Interdict Quorum Bonorum unnecessary, if it had been introduced sooner, co-existed with the Interdict, and a person might avail himself of either mode of proceeding, as he found best. (Gaius, iii. 34.) In the Legislation of Justinian, we find both forms of procedure mentioned, though that of the Interdict had altogether fallen into disuse. (Inst. 4. tit. 15.)

According to the old law, any possessor, without respect to his title, could by usucaption pro herede obtain the ownership of a thing belonging to the hereditas; and of course the Bonorum Possessor was exposed to this danger as much as the Heres. If the time of Usucaption of the possessor was not interrupted by the first claim, the heres had no possess pro possessore, but once so possessed, and in consequence of a lucrativa usucapio. According to the title to the Interdict, as appears from its terms, for interrupted by the first claim, the heres had no possess pro possessore, but once so possessed, and in consequence of a lucrativa usucapio. According to this formula of the Interdict, and thus the obscure passage No. 3 applies only to the new rule of law established by the Senatusconsultum of Hadrian, which allowed the old usucaption of the improbus possessor to have its legal effect, but rendered it useless to him by compelling restitution. In the legislation of Justinian consequently these words have no meaning, since that old usucaption forms no part of it; yet the words have been retained in the compilation of Justinian, like many others belonging to an earlier age, though in their new place they are entirely devoid of meaning.

(Savigny, Uber das Interdict Quorun Bonorum, Zeitschrift, &c. vol. v.; Dig. 43. tit. 2; Gaius, iv. 144.)

RECEPTA.

R.

RAMNES, RAMNENSES. [PATRICI.] RAP'NA. [BONA RAPTA; FURTUM.]

RASTER or RASTRUM, dim. RASTELLUS, RALLUS, RALLUM (ɛ̃sɔʁɛ), a spud (ɛ̃d̻ɛ̃vus); a rake, a hoe. Agreeably to its derivation from rado, to scrape, “Raster” denoted a hoe which in its operation and in its simplest form resembled the scrapers used by our scavengers in cleansing the streets. By the division of its blade into times or prongs, it assumed more of the form of our garden-rakes, and it was distinguished by the epithets bidens and quadridentes (Caudo de Re Rust. 10) according to the number of the divisions.

The raster bidens was by far the most common species, and hence we frequently find it mentioned under the simple name bidens. (Juv. iii. 228.)

This term corresponds to the Greek δικέλλα, for which μανίν was substituted in the Attic dialect. (Xen. Cyrop. vi. 2. § 34, 36; Aristoph. Nub. 1488, 1562, Aves, 601; Phryn. Edog. p. 302, ed. Lobecck; Plato, Repub. p. 426, f.; Tim. Leg. Plat. s. e.) The bidens was used to turn up the soil, and thus to performing, as he found best. (Plin. H. N. xvii. 9. s. 6.) But it was much more commonly used in the work called acceatio, i.e., the breaking down of the clods after ploughing. (Verg. Georg. ii. 94, 155.)

AGRICULTURA, p. 52, a.) Hence it was heavy. (Ovid. Met. xi. 101.) The prongs of the bidens held by the rustic in the woodcut at p. 849 are curved, which agrees with the description of the same implement in Catullus (iv. 39). Vine-dressers continually used the bidens in hacking and breaking the limbs of earth, stirring it, and collecting it about the roots of the vines. (Verg. Georg. ii. 355, 400; Col. de Re Rust. iii. 13, iv. 14, Geopon. v. 25.) In stony land it was adapted for digging trenches, whilst the spade was better suited to the purpose when the soil was full of the roots of rushes and other plants. (Plin. H. N. viii. 6. s. 8; Suet. Nero, 19.) [PALA.] Wooden rakes were sometimes used. (Col. de Re Rust. ii. 13.) [J. Y.]

RATES. [NAVIS, p. 783, a.]

RATIO'NIUS DISTRAHENDIS ACTIO. [TUTELA.]

RECEPTA; DE RECEPTO, ACTIO. The Praetor declared that he would allow an action against Nautae, Caupones, and Stabularii, in respect of any property for the security of which they had undertaken (recooperint, whence the name of the action) if they did not restore it. The meaning of the term Nauta has been explained [Exercitoria Actio]; the meaning of Caupo follows from the description of the business of a Caupo. (Dig. 4. tit. 9. s. 5.) “A Nauta, Caupo, and Stabularius are paid not for the care which they take of a thing, but the Nauta is paid for carrying passengers; the Caupo for permitting travellers to stay in his Caupona; the Stabularius for allowing beasts of burden to stay in his stables, and yet they are bound for the security of the thing also (custodiae nomine tenetur).” The two latter actions are similar to such actions as arise among us against innkeepers, and livery stable keepers, on whose premises loss or injury has been sustained with respect to the property of persons which they have by legal implication undertaken the care of. At first sight there seems no reason
for these praetorian actions, as the person who
had sustained a loss would either have an actio
locati and conducti, in cases where payment had
been agreed on, or an actio depositi, where no pay-
ment had been agreed on; but Pomponius suggests
that the reason was this: in a matter of Locatum
and Conductum, the receiver was only answerable
for loss in case he was guilty of Culpa ; and in a
matter of Depositiurn, only in case he was guilty of
Dolus Malus; but the receiver was liable to these
praetorian actions, if the thing was lost or injured
even without any Culpa on his part, and he was
only excused in case of Damnum fatale, such as
a fire in the caupona, but not if caused by a mere tra-
veller. The actio for damages could not be main-
tained against the heres. (Dig. 4. tit. 9 ; Peckill
in Titt. Dig. et Cod. Ad rem nauticam pertinentes
Commentarii, &c. Amstel. 1668.)

RECURSIO RIA ACTIO. [INTERCESSIO.

RECEPTEAM. [JUDEX.

REDIMUM CULUM (kaβēτρ)/), a fillet attached
to the Calanctic, Diadema, Mitra, or other head-
dress at the occiput, and passed over the shoulders,
so as to hang on each side over the breast. (Verg.
Aen. iv. 616; Ovid. Met. x. 205.) Redimicula
were properly female ornaments (Festus, s. v.
Ovid. Epist. xi. 71; Juv. ii. 70; Prudent. Pseudo-
M. 448); and in the statues of Venus they were imi-
tated in gold. (Ovid. Fast. iv. 135-137.) [J. Y.]

REGIA LEX. [LEX REGIA.

REGIFUGIUM or FUGA LIA, the king's
flight, a festival which was celebrated by the Romans
every year on the 24th of February, and according
to Verrius (ap. Fest. s. v. Regifigium) and Ovid
(Fast. ii. 685, &c.) in commemoration of the flight
of king Tarquiniius Superbus from Rome. The
day is marked in the Fasti as nefastus. In some
ancient calendars the 24th of May is likewise
marked with equal divisions, like our carpenter's
straight lines or making plane surfaces. (Aristoph.
Aen. iii. 69, 87) ; also the rule used by carpenters,
masons, and other artificers, either for drawing
straight lines or making plane surfaces. (Aristoph.
Ran. 798; Vitruv. vii. 3. § 5.) That it was
marked with equal divisions, like our carpenter's
rules, is manifest from the representations of it
among the "Instrumenta fabrorum tignariorum," in
the woodcuts at pp. 287, 806. The substance,
with which the lines were made, was raddle or
red ochre (μαλακός, Brum. Anal. i. 221; φοινικί
καβδι, Europ. Herc. Par. 925.) [L. S.]

REGULA (καβδί), the ruler used by scribes
for drawing right lines with pen and ink (Brum.,
Anal. iii. 89, 87) ; also the rule used by carpenters,
masons, and other artificers, either for drawing
straight lines or making plane surfaces. (Aristoph.
Ran. 798; Vitruv. vii. 3. § 5.) That it was
marked with equal divisions, like our carpenter's
rules, is manifest from the representations of it
among the "Instrumenta fabrorum tignariorum," in
the woodcuts at pp. 287, 806. The substance,
with which the lines were made, was raddle or
red ochre (μαλακός, Brum., Anal. i. 221; φοινικί
καβδί, Europ. Herc. Par. 925.) [L. S.]
scale-beam is sometimes called karun instead of γορόν. [Jugum].

REMUS. [Naves, pp. 787, b., 788, a.]

REPAGULA. [JANUA, p. 626, b.]

REPUTANDEA, or PECUNIAE REPUTANDEA. Repetundae Pecuniae in its widest sense was the term used to designate such sums of money as the Socii of the Roman State or individuals claimed to recover from Magistratus, Judices, or Publici Curatores, which they had improperly taken or received in the Provinciae, or in the Urbs Roma, either in the discharge of their Jurisdiction, or in their capacity of Judices, or in respect of any other public function. Sometimes the word Repetundae was used to express the illegal act for which compensation was sought, as in the phrase "Repetundarum insimulari, dammari," and Pecuniae meant not only money, but anything that had value. The expression which the Greek writers sometimes use for Repetundae is δικαι δακρων. (Plut. Sulla, 5.)

It is stated by Livy (xiiii. 1) that before the year B. C. 173, no complaints were made by the Socii of being put to any cost or charge by the Roman magistrates. When complaints of exactions were made, an inquiry was instituted into this offence extra ordinem ex Senatusconsulto as appears from the case of P. Furius Philus and M. Mtiienus, who were accused of this offence by the Hispani. (Liv. xiiii. 2.) The first Lex on the subject was the Calpurnia, which was proposed and carried by C. Julius Caesar. It extended the penalties of Repetundae to other illegal acts committed in the provinces, and to judges who received bribes, to those whose hands the money came, and to those who did not give into the Acurarium their Proconsular accounts (proconsularis rationes). The Lex also allowed the prosecution, the defence, and the evidence to be heard once, and the matter was decided. (Cic. de Off. ii. 21, Brut. 27.) This Lex only applied to Provinicial Magistrates, except in the year B. C. 141 according to Cicero (de Fin. ii. 16) the like offence in a Magistratus Urbanus was the subject of a Quaestio extra ordinem. It seems that the penalties of the Lex Calpurnia were merely pecuniary, and at least did not comprise exsilium, for C. Cornelius Lentulus who was Censor B. C. 147, had been convicted on a charge of Repetundae in the previous year. The pecuniary penalty was ascertainment by the litis aestimatio, or taking an account of all the sums of money which the convicted party had illegally received. Various legis de repetundis were passed after the Lex Calpurnia, and the penalties were continually made heavier. The Lex Junia was passed probably about B. c. 126 on the proposal of M. Junius Pennis, Tribunus Plebis. It is probable that this was the Lex under which C. Cato, Proconsul of Macedonia, was living in exile at Terraco (Cic. pro Balbo, 11; Vell. Pat. ii. 8); for at least exsilium was not a penalty imposed by the Calpurnia Lex, but was added by some later Lex. The Lex Junia and the Lex Calpurnia are mentioned in the Lex Servilia.

The Lex Servilia Glancia was proposed and carried by C. Servilius Glancia Praetor B. C. 100. This Lex applied to any magistrate who had improperly taken or received money from any private person; but a magistrate could not be accused during the term of office. The Lex enacted that the Praetor Peregrinus should annually appoint 450 judges for the trial of this offence: the judges were not to be senators. The penalties of the Lex were pecuniary and exsilium; the law allowed a compensatio. (Cic. in Verr. i. 9.) Before the Lex Servilia, the pecuniary penalty was simple restitution of what had been wrongfully taken: this Lex seems to have raised the penalty to double the amount of what had been wrongfully taken: and subsequently it was made quadruple. Exsilium was only the punishment in case a man and not abide his trial, but withdrew from Rome. (Savigny, Von dem Schutz der Mind., Zeitschrift.) Under this Lex were tried M. Aquillius, P. Rutilius, M. Scaurus, and Q. Metellus Numidicus. The Lex gave the Civitas to any person on whose complaint a person was convicted of Repetundae. (Cic. pro Balbo, 23, 24.)

The Lex Acilia, which seems to be of uncertain date (probably B. C. 101), was proposed and carried by M. Acilius Glabrio, a Tribunus Plebis, which enacted that there should be neither ampliatio nor compensatio. It is conjectured that this is the Lex Caecilia mentioned by Valerius Maximus (vi. 9, 10), in which passage if the conjecture is correct, we should read Acilia for Caecilia. (Cic. in Verr. Act. i. 17, in Verr. i. 9.) It has sometimes been doubted whether the Acilia or Servilia was first enacted, but it appears that the Acilia took awav the compensatio which the Servilia allowed.

The Lex Acilia was passed in the dictatorship of Sulla B. C. 81, and continued in force to the time of C. Julius Caesar. It extended the penalties of Repetundae to other illegal acts committed in the provinces, and to judges who received bribes, to those to whose hands the money came, and to those who did not give into the Acurarium their Proconsular accounts (proconsularis rationes). The Praetor who presided over this quaestio chose the judges by lot from the Senators, whence it appears that the Servilia Lex was repealed by this Lex, at least so far as related to the constitution of the court. The Lex also allowed ampliatio and compensatio. The penalties were pecuniary (litis aestimatio) and the aquae et ignis interdictio. Under this Lex were tried L. Dolabella, Cn. Piso, C. Verres, C. Macer, M. Fonteius, and L. Ficeus, the two last of whom were defended by Cicero. In the Verrine Orations Cicero complains of the compensatio or double hearing of the cause, which the Lex Cornelia allowed, and refers to the practice under the Lex Acilia, according to which the case for the prosecution, the defence, and the evidence were only heard once, and so the matter was decided. (In Verr. i. 9.)

The last Lex de Repetundis was the Lex Julia passed in the first consulship of C. Julius Caesar B. C. 59. (Cic. in Pat. 12.) This Lex consisted of numerous heads (capita) which have been collected by Sigonius. (Cic. ad Fam. viii. 8.) This Lex repealed the penalty of exsilium, but in addition to the litis aestimatio, it enacted that persons convicted under this Lex should lose their
rank, and be disqualified from being witnesses, judges, or senators. This is the Lex which was commented on by the Jurists, whose expressions are preserved in the Digest (48. tit. 11), and in the Code (9. tit. 27). This Lex adopted some provisions that existed in previous Leges, as for instance that by which the money that had been improperly retained could be recovered from those into whose hands it could be traced. (Cic. pro C. Rabir. Post. 4.) The Lex had been passed when Cicero made his oration against Piso, b. c. 55. (In Pis. 21.) A. Gabinius was convicted under this Lex. Many of its provisions may be collected from the oration of Cicero against Piso. Cicero boasts that in his proconsulship of Cilicia there was no cost caused to the people by himself, his legate, quaestor, nor any one else; he did not even demand from the people what the Lex (Julia) allowed him. (Ad Att. v. 16.)

Under the Empire the offence was punishable with exile. (Tact. Annum. xiv. 28, and the note of Lipsius.)

In Clinton's Fasti Holleci, the Lex Calpurnia is incorrectly stated to be the first law at Rome against Bribery at Elections. Bribery is AMBITUS. (Sigonius de Judic. ii. c. 27 ; Rein, Das Criminalrecht der Romer, p. 604, &c.; Rudorff, Uber das Octoeuvische Formel, Zeit schrift für Geschielt. Reclint. Sc. xi. p. 136.)

REPUDIUM. [Divortium.]
RES. [Dominium.]
RES JUDICATA. [Judicata Actio.]
RES MANCIPI. [Dominium.]
RESCRIPTUM. (Constitutiones.)
RESPONSIA. [Jurisconsulti.]

RESTITUTIO IN INTEGRUM, in the sense in which the term will here be used, signifies the rescinding of a contract or legal transaction so as to place the parties to it in the same position with respect to one another which they occupied before the contract was made or the transaction took place. The Restitutio here spoken of is founded on the Edict. If the contract or transaction is such as not to be valid according to the Jus Civilis, this Restitutio is not needed; and it only applies to cases of contracts and transaction, which are not in their nature or form invalid. In order to entitle a person to the Restitutio, he must have sustained some injury capable of being estimated, in consequence of the contract or transaction, and not through any fault of his own; except in the case of one who is minor xxv annorum, who was protected by the Restitutio against the consequences of his own carelessness. The injury also must be one for which the injured person has no other remedy.

The Restitutio may either be effected on the complaint of the injured party, which would generally be made after the completion of the transaction, or when he is sued by the other party in respect of the transaction and defends himself by an Exceptio. The complaint as a general rule must be made within four years of the time of the injury being discovered, and of the party being capable of bringing his action; in the case of Minores the four years were reckoned from the time of their attaining their majority. In the case of an Exceptio there was no limitation of time. (Cod. 2. tit. 55. s. 7.) According to the old law the complaint must be made within one year.

The application for a Restitutio could only be made to one who had Jurisdiction, either original or delegated, which flowed from the possession of the Imperial power. It might, according to the circumstances, be decreed by the Magistratus extra ordinem, or the matter might be referred to a Judex. When a Restitutio was decreed, each party restored to the other what he had received from him with all its accessions and fruits, except so far as the fruits on one side might be set off against the interest of money to be returned on the other side. All proper costs and expenses incurred in respect of the thing to be restored were allowed. If the object of the Restitutio was a right, the injured party was restored to his right; or if he had incurred a duty, he was released from the duty.

The action for Restitutio might be maintained by the person injured, by his heredes, cessionarii, and sureties; but as a general rule it could only be maintained against the person with whom the contract had been made, and not against a third person who was in possession of the thing which was sought to be recovered, except when the actio for restitution was an actio in rem scripta, or the injured party had an actio in rem, or when the right which he had lost was a right in rem.

The grounds of Restitutio were either those expressed in the Edict, or any good and sufficient cause: "item si qua alia mihi justa causa esse videbitur in integrum restituam, quod ejus per Leges, Plebiscita, Senatus consulta, Edicta, Decretum Principium liebhit." (Dig. 4. tit. 6. s. 1.)

The following are the chief cases in which a Restitutio might be decreed.

The case of Vis et Metus. If a man did an act that was injurious to himself, through vis or metus, the act was not for that reason invalid, nor was it considered that his consent was wanting (Dig. 4. tit. 2. s. 21. § 5): but it was contra bonos mores to allow such an act to have legal effect. When a man had acted under the influence of force, or reasonable fear caused by the acts of another party, he had an actio quod metus causa for restitution against the party who was the wrongdoer, and also against an innocent person who was in possession of any thing which had thus been got from him, and also against the heredes of the wrongdoer if they were enriched by being his heredes (quantum ad eos pervenit). He was sued in respect of the transaction, he could defend himself by an exceptio quod metus causa. The actio Quod Metus was given by the Praetor Octavius, a contemporary of Cicero. (Compare C. in Verr. iii. 65, and Dig. 4. tit. 2. s. 1.)

The case of Dolus. When a man was fraudulently induced to become a party to a transaction, which was legal in all respects, saving the fraud, he had his actio de dolo malo against the guilty person and his heredes, so far as they were made richer by the fraud, for the restoration of the thing of which he had been defrauded, and if that was not possible, for compensation. Against a third party who was in bona fide possession of the thing, he had no action. If he was sued in respect of the transaction, he could defend himself by the exceptio doli mali. (Compare Dig. 4. tit. 3.)

The case of Minores xxv annorum. A Minor could by himself do no legal act for which the
RESTITUTIO IN INTEGRUM.

assent of a Tutor or Curator was required, and therefore if he did such act by himself, no Restitutio was necessary. If the Tutor had given his Auctoritas, or the Curator his assent, the transaction was legally binding, but yet the Minor could not be held liable if he had sustained injury by the transaction. Gaius (iv. 57) gives an example, when he says that if too large an amount was inserted in the Condemnatio of the Formula, the matter is set right by the Praetor, or in other words “reus in integrum restituitur,” but if too little was inserted in the formula, the Praetor would not make any alteration; “for,” he adds, “the Praetor more readily relieves a defendant than a plaintiff; but we except the case of Minores xxv annorum, for the Praetor relieves persons of this class in all cases wherein they have committed error (in omnibus rebus lapsis).”

There were however cases in which Minores could obtain no Restitutio for instance, when a Minor with fraudulent design gave himself out to be Major; when he confirmed the transaction after coming of age; and in other cases. The benefit of this Restitutio belonged to the heredes of the Minor, and generally also to sureties. The demand could only be made, as a general rule, against the person with whom the Minor had the transaction and his heredes. The Minor had four years after attaining his age in which he could sue. The older law allowed only one year. If the time had not elapsed when he died, his heres had the benefit of the time adeundi hereditatem; and if the heres was intitled to Restitutio, if the absentia was unavoidable: if it was not unavoidable, he was generally intitled to restitutio, if the absentia was unavoidable: if it was not unavoidable, he was intitled to Restitutio, either if he could have made another was inserted in the Condemnatio of the Formula, the Praetor relieved persons of this class in all cases wherein they have committed error (in omnibus rebus lapsis)."

The case of Absentia: which comprehends not merely absence in the ordinary sense of the word, but absence owing to madness or imprisonment, and the like causes. (Dig. 4. tit. 6. s. 28.) If a man assigned a claim or right with the view of injuring his adversary by giving him a harder

claimant to deal with, the adversary could meet the assignee, when he sued, with an exception judici mutandi causa.

The case of alienatio in fraudem creditorum facts. (Dig. 42. tit. 8.) When a man was insolvent (non solvendo), if he alienated his property for the purpose of injuring his creditors, the Praetor's Edict gave the creditors a remedy. If for instance a debt was paid post bona possessa, it was absolutely void, for the effect of the Bonorum Possessio in the case of insolvency was to put all the creditors on the same footing. If any alienation was made before the Bonorum Possessio, it was valid in some cases. A debtor might reject any thing which was for his advantage, for the Praetor's edict related only to the diminution of his property, and not to its increase. If the act was such as to diminish his property (fraudationis causa), the creditors, as a general rule, were intitled to have the act undone. A creditor who exacted his just debt, was intitled to retain it. The actio by which the creditors destroyed the effect of an illegal alienation was called Paululiana, which was brought by the Curator bonorum in the name of the creditors, for the restoration of the thing which had been improperly alienated, and all its fruits. The creditors were also intitled to an Interdictum fraudatorum in order to get possession of the thing that had been improperly alienated. (Dig. 36. tit. 1. s. 67.)

In the Imperial times, Restitutio was also applied to the remission of a punishment (Tac. Ann. xiv. 12; Plin. Ep. x. 64, 65; Dig. 48. tit. 19. s. 27) which could only be done by the Imperial grace.

(Dig. 4. tit. 1—7; 44. tit. 4; Paulus, S. R. i. tit. 7—9; Cod. 2. tit. 20—55; Cod. Theod. 2. tit. 13, 16; Mühlenbruch, Doct. Pandect.; MacKeldy, Lehrbuch, &c. 12th ed.; Rein, Das Römische Privatrecht; Rudorff, Zeitschrift für Geschicht. Rechtes. xii. 131; Uber die Octoberanische Formel; Puchta, Inst. ii. § 209.)

RESTITUTORIA ACTIO. [INTERCESSIO.]

RETIA. [GLADIATORIS, p. 575, b.]

RETI CULUM, a head-dress. [COMA, p. 329, a.]

RETIIS and RETE; dim. RETICULUM (Bικτρων), a net. Nets were made most commonly of flax from Egypt, Coelebs, the vicinity of the Cinyps in North Africa, and some other places. Occasionally they were of hemp. (Varro, de Re Rust. iii. 5.) They are sometimes called lina (Linum) on account of the material of which they consisted. (Hom. II. v. 487; Brunck, Aniil. ii. 494, 495.) The meshes (maculae, Ovid. Epist. v. 19; Varro, de Re Rust. iii. 11; Nemesiani, Cyneg. 302; Βρόχος, dim. Βροχίδες, Heliolod. vi. p. 231, ed. Commelin,) were great or small according to the purposes intended; and these purposes were very various. But by far the most important application of net-work was to the three kinds arts of fishing, hunting, and fishing; and besides the general terms used alike in reference to all these employments, there are special terms to be explained under each of these heads.

I. In fishing the use of nets was comparatively limited (Aristoph. Av. 528); nevertheless thrushes were caught in them (Hor. Epod. ii. 33, 34); and doves or pigeons with their limbs tied up or fastened to the ground, or with their eyes covered or put out, were confined in a net, in order that their cries might allure others into the snare. (Aristoph. Av. 1083.) The ancient Egyptians, as
we learn from the paintings in their tombs, caught birds in clap-nets. (Wilkinson, Man. and Cud. vol. iii. pp. 35–38, 45.)

II. In hunting it was usual to extend nets in a curved line of considerable length, so as in part to surround a space into which the beasts of chase, such as the hare, the boar, the deer, the lion, and the bear, were driven through the opening left on one side. (Aelian, H. A. xii. 46; Tibullus, iv. 3. 12; Plin. H. N. xix. 2. § 2.) This range of nets was flanked by cords, to which feathers dyed scarlet and of other bright colours were tied, so as to flame and flutter in the wind. The hunters then satified forth with their dogs, dislodged the animals from their coverts, and by shouts and barking drove them first within the formido, as the apparatus of string and feathers was called, and then, as they were scared with this appearance, within the circuit of the nets. Splendid descriptions of this scene are given in some of the following passages, all of which allude to the spacious enclosure of net-work. (Virg. Georg. iii. 411–415, Aen. iv. 121, 151–159, x. 707–715; Ovid. Epist. iv. 41, 42, v. 19, 20; Oppian, cyn. iv. 120–123; Eurip. Bacchae, 821–832.) The accompanying woodcuts are taken from two bas-reliefs in the collection of ancient marbles at Ince-Blundell in Lancashire. In the uppermost figure three servants with staves carry on their shoulders a large net, which is intended to be set up as already described. (Tibullus, i. 4. 49, 50; Sen. Hippol. i. 1. 44; Propert. iv. 2. 32.) The foremost servant holds by a leash a dog, which is eager to pursue the game. In the middle figure the net is set up. At each end of it stands a watchman holding a staff. (Oppian, Cyneg. iv. 124.) Being intended to take such large quadrupeds as boars and deer (which are seen within it), the meshes are very wide (retia rara, Virg. Aen. iv. 131; Hor. Epod. ii. 33). The net is supported by three stakes (σταθινες, Oppian, Cyneg. iv. 67, &c.; Poliux, v. 31; ancones, Gratius, Cyneg. 67; eari, Lucan, iv. 439). To dispose the nets in this manner was called retia poncre (Virg. Georg. i. 307), or retia tendere (Ovid. Art. Amat. i. 45). Comparing it with the stature of the attendants, we perceive the net to be between five and six feet high. The upper border of the net consists of a strong rope, which was called σπαδόν. (Xen. de Venat. vi. 9.) The figures in the following woodcut represent two men carrying the net home after the chase; the stakes for supporting it, two of which they hold in their hands, are forked at the top, as is expressed by the terms for them already quoted, ancones and eari.

Besides the nets used to inclose woods and coverts or other large tracts of country two additional kinds are mentioned by those authors who treat on hunting. All the three are mentioned together by Xenophon (Diktya, ένδια, πράξεις, ii. 4), and by Nemesianus (Cyneg. 299, 300).

The two additional kinds were placed at intervals in the same circuit with the large hunting-net or haye. The road-net (πλέγα, ἐνδίος) was much less than the others, and was placed across roads and narrow openings between bushes. The pursue- or tunnel-net (ανεία, ένδια) was made with a bag (σκερφαλος, Xen. de Venat. vi. 7), intended to receive the animal when chased towards the extremity of the inclosure. Within this bag, if we may so call it, were placed branches of trees, to keep it expanded and to decoy the animals by making it invisible. The words δέντος or cassis are used metaphorically to denote some certain method of destruction, and are more particularly applied, as well as αμφιβλαστρον, which will be explained immediately, to the large shawl in which Clytemnestra enveloped her husband in order to murder him. (Aeschyl. Agam. 1085, 1349, 1353, Coph. 405, Eumen. 112.)

III. Fishing-nets (αλευτικά δίκτυα, Diod. Sic. xvii. 48, p. 193, Wess.) were of six different kinds, which are enumerated by Oppian (Hal. iii. 80–82) as follows: —

Τὸν τὰ μὲν αμφιβλαστρον, τὰ δὲ γρίφοι καλοῦνται, ᾿Οψαχα τ', ᾿Η' ἐποχαί περίγνεις, ἢ ημερίναι, ᾿Αλλὰ δὲ κυκλίζουσιν καλύμματα.

Of these by far the most common were the αμφιβλαστρον or casting-net (σκότα, juculum, retinaculum) and the σαγήνα (i.e. the drag-net, or sean (tragum, Isid. Hisp. Orig. xix. 5; trapula, verniculum). Consequently these two are the only kinds mentioned by Virgil in Georg. i. 141, 142, and by Ovid. in Ar. Amat. i. 763, 764. Of the καλύμμα we find nowhere any further mention. We are also ignorant of the exact form and use of the γρίφος, although its comparative utility may be inferred from the mention of it in conjunction with the sean and casting-net by Artemidorus (i. 14) and Pintarch (πέρι εὐθύμ. vol. v. p. 936, ed. Steph.). We know no more of the γαγγαρίου. (Hesych. s.v.; Aeschyl. Agam. 352.) The καταχαί was a landing-net, made with a hoop (κύκλος) fastened to a pole, and perhaps provided also with the means of closing the circular aperture at the top. (Oppian, Hal. iv. 251.) The metaphorical use of the term αμφιβλαστρον has been already mentioned. That it denoted a casting-net may be concluded both from its etymology and from the circumstances in which it is mentioned by various authors. (Hesiod, Scut. Herc. 213–215; Herod. i. 141; Ps. xii. 10; Is. xix. 8; Hab. i. 15–17 LXX. and Vulgate versions); (Xen. iv. 19; St. Mark, i. 16.) More especially the casting-net, being always pear-shaped or conical, was suited to the use mentioned under the article Conopeum.
Its Latin names are found in the passages of Virgil's Georgics, and of the Vulgate Bible above referred to, in Plautus, Asinur. i. 87, Truc. i. 14; and in Isid. Hist. Orig. xix. 5. The English term sean (which is also in the south of England pronounced and spelt seain, as in French), has been brought into our language by a corruption of the Greek (σαΐνειν, 'a σαΐνειν, 'a σαΐνειν, 'a σαΐνειν, 'a σαΐνειν, 'a σαΐνειν, 'a σαΐνειν, 'a σαΐ
 functions, preserved in the fine collection of Egyptian antiquities at Berlin. (See Yates, Tractatus Antiqu. Appendix C.)

The use of corks (φελλακ, cortices suberinum, Sidon. Apollin. Epist. ii. 2; Plin. H. N. xvi. 8. s. 13) to keep the top, and of leads (μολέσσιδες) to support the bottom, is frequently mentioned by ancient writers (Ovid. Trist. iv. 4. 11; 12; Aelian, H. A. xii. 43; Pausan. viii. 12. § 1), and is clearly exhibited in some of the paintings in Egyptian tombs. Leads, and pieces of wood serving as floats and their preservative nature, is frequently mentioned by the Arabians and by our own fishermen in Cornwall, is sometimes half a mile long, was probably of equal dimensions among the ancients, for they speak of it as nearly taking in the compass of a whole bay. (Hom. Od. xxi. 304—367; Alci- phon, l. 17, 18.) This circumstance well illustrates the importance of the term to designate the besieging of a city; to encircle a city by an uninterrupted line of soldiers was called ἂρετικαὶ. (Herod. iii. 145, vi. 31; Plato, de Leg. iii. sub fìn.; Heliodorus, vii. p. 304, ed. Commelin.)

Whether in early times absolute monarchies existed in Greece, of which we have any authentic records, we find the kingly form of government everywhere prevalent. On this point we may safely trust the pictures of society found in the Homeric poems; for whatever amount of historical truth there may be in the legends which form their material, the traditions of the ancient historians (Ovid. Trist. iii. 4. 11, 12; Aelian, H. A. xii. 43; Pausan. viii. 12. § 1), and is clearly exhibited in some of the paintings in Egyptian tombs. Leads, and pieces of wood serving as floats instead of corks, still remain on a sean which is preserved in the fine collection of Egyptian antiquities at Berlin. (See Yates, Tractatus Antiquum, Appendix C.)

Aristotle (c. c.) mentions, as the functions of the kings in the heroic age, the leadership in war, the offering of such sacrifices as were not appropriated to particular priests, and the duty of deciding judicial causes. But both in the field and in the agora the king always appears in connection with the boule, or council of chiefs and elders, of which he acts as president. Even before Troy Agamemnon submits his plans to the assembled chieftains and soldiers (H. ii. 53, &c. x. 195, &c.), The restrictive influence of these assemblies was, however, rather indirect than ostensible. The chieftains or princes merely offer their advice (H. ix. 95, &c.), and the multitude assembled outside the circle in which they sit take no part in the deliberations. They only listen, and sometimes applaud (H. ii. 100; Aristot. ap. Schol. ad H. ii. 17). Still less is the matter in hand put in any formal way to the vote of either the boule, or the assembly of freemen. The assemblies described in the second book of the Iliad and the second book of the Odyssey will give a good idea of their nature. In judicial trials the council of elders seems always to have held a prominent place. (H. xvii. 504; Hisiod. Theog. 85, Op. et D. 37.) Theoretically the government of the heroic age was in the strictest sense monarchical (see especially the remarkable passage H. ii. 204). Here and there the poet represents kings as using language which would imply a power on the part of the king to deal with his dominions and subjects in a very summary manner (see the offer of Agamemnon to make over to Achilles seven cities, H. ix. 153; and of Menelaus, to depropel one of his towns to make room for Ulysses, Od. iv. 176). No doubt the power of different kings varied, and in the absence of definite constitutional restrictions the actual amount of power in the hands of each depended mainly on his individual qualifications and address. The cases, however, must have been extremely rare in
which it approached to absolute power (σουμαρί-
λεία). Even the voice of the commonly carried a
moral weight with it that ensured some degree of
respect for it (χαλεπώς δήμου φόβου, Od. xiv. 239,
241.)

Besides such private property as the king might
possess, he had the use of a domain attached to
the regal office. (Od. xl. 165.) The τεμένη here
spoken of are different from the κηνατα, or pri-
vate property of the family, which Telemachus
would retain, even if excluded from the throne,
and so deprived of the use of the royal domain.
(Od. i. 402.) There were also stated duos (σύ-
μετέρτ), which formed an important item in the
king's emoluments (hence termed άπραξια, Il. ix.
156, 298). But besides these a large part of his
revenues was derived from presents (τετερινα ου
σωρα), which appear to have been given on most
occasions on which his aid or protection was in-
voked (Il. x. 155, xvii. 225). The characteristic
emblem of the kingly office was the
πέτρινω (Od. xi. 101, 206). [Σχέδημ.] It will be
noted here that the rule of here-
ditary succession was infringed upon, though
the case of Telemachus (Od. i. 386, &c.) indicates
that under peculiar circumstances the idea of departing
from it might be entertained. But even here the
presumptive right of Telemachus is admitted. Such
a departure from the ordinary rule, however,
marks a considerable decline in the kingly power,
and advance on the part of the nobles. At a later
period we find kings deprived of their throne for
misconduct, as in the case of Thymoetes in Attica.
At a later period than the Homeric age the fact of
immediacy (Arist. Pol. iv. 5). Hence at Argos Pheidon is called a
tyrant, though he was a legitimate successor to the throne,
because he acquired for himself despotic authority.

Our information respecting the Grecian kings in
the more historical age is not ample or minute
enough to enable us to draw out a detailed scheme
of their functions. The rising influence of the
nobles gradually reduced these to narrower and
narrower limits till at last the establishment of
aristocratical or oligarchical governments became
almost universal. Respecting the kings of Sparta
the reader is referred to the article ΕΦΟΗΛ. As
an illustration of the gradual limitation of the preroga-
tives of the king or chief magistrate, the reader
may consult the article ΑΡΧΟΝ. The title ΡΕΞ.
was sometimes applied to an officer who dis-

charged the priestly functions of the more ancient
kings, as in Athens [ΑΡΧΟΝ], Delphi (Plut.
Quaest. Gr. 7. p. 177), Siphnos (Ioscr. ad Collin.
p. 683), Megara (Chandler, Μεγαρ. Οικον. 2, 62),
Chalcis (Chalc. Ecol. ii. 11, 12), Lampsakus (Liv.
6. 71, 72), and Samosarche (Liv. xiv. 5).
(K. F. Hermann, Lehrbuch der griech. Staatsmit-
glieder, §§ 53—55; Wachsmuth, Hellenische Al-
territorialkunde, §§ 38, 43; Thirlwall, Hist. of
Greece, cc. vii. x.; Grote, Hist. of Greece, c. xx.
vol. ii. p. 79, &c.) [C. P. M.]

2. ΡΩΜΑΝ. Rome was originally governed by
kings. All the ancient writers agree in repre-
senting the king as elected by the people for life,
and as voluntarily entrusted by them with the
supreme power in the state. No reference is made
to the hereditary principle in the election of the
first four kings; and it is not until the fifth king
Tarquinus Priscus obtained the sovereignty, that

anything is said about the children of the deceased
king. Consequently the ancient writers state that
the king was chosen on account of his virtues and
not his descent (Cic. de Rep. ii. 12; Appian, B. C.
i. 98). It is true that in the case of Romulus the
genuine legend makes no mention of his election to
the royalty; and one of the acutest modern writers
on the history of the Roman constitution has
availed himself of this circumstance to support his
theory, that the Roman king was not elected by the
people, but derived his power immediately from
the gods, and that this power devoted upon the
senate at his death, and was transmitted in all its
integrity to the next king by means of the inter-
reges (Rubino, Untersuchungen über Römische Ver-
fassung, p. 107, &c.). Our limits will not permit
us to enter into an examination of this theory. It
rests to a great extent upon the assumption that the
Patres in the early Roman constitution were
the senate; and it falls if it can be proved that the
Patres in the earliest times were the same as the
whole body of the patricians. We think that W. A.
ii. 71, 72), and Samothrace (Liv. xlv. 5).

The Interrex presided over the comitia curiata,
which was assembled for the election of the king.
He had previously agreed with the senate upon
who was to be proposed to the comitia
as king; for it is inconceivable that he had the
absolute power of selecting whatever person he
chose, as Dionysius states in some passages. The
person whom the senate had selected was proposed
by the Interrex to the people in a regular regale,
which the people could only accept or reject, for they had not the initiative and could not themselves propose any name. If the people voted in favour of the rotation, they were said creare regem, and their acceptance of him was called iussus populi. (Dionys. iv. 40, 80; Liv. i. 22, 32; Cic. de Rep. ii. 17, 21.) But the king did not immediately enter upon his office. Two other acts had still to take place before he was invested with the full regal authority and power. First, his inauguratio had to be performed, as it was necessary to obtain the divine will respecting his appointment by means of the auspices, since he was to be the high priest of the people. This ceremony was performed by an augur, who conducted the newly-elected king to the ara, or citadel, and there placed him on a stone seat with his face turned to the south, while the people waited below in anxious suspense until the augur announced that the gods had sent the favourable tokens confirming the king in his priestly character. (Liv. i. 18; Plut. Num. 7.) The inauguratio did not confer upon him the auspices; for the vote of the comitia to confer the auspices, as the comitia were held auspicio. It simply had reference to his priestly character, as already remarked, and consequently did not take place in the case of the republican magistrates, though the rex sacrorum and other priests were inaugurated. The passage of Dionysius (ii. 6), which is quoted in the article inauguratio to prove that the republican magistrates were inaugurated, refers only to their taking the auspices on the morning of the day on which they entered upon their office. (Comp. Becker, Lib. ii. p. 514.) The second act, which had to be performed was the conferring of the imperium upon the king. The curiae had only determined by their previous vote who was to be king, and had not by that act bestowed the necessary power upon him; they had, therefore, to grant him the imperium by a distinct vote. Accordingly the king himself proposed to the curiae a lex curiata de imperio, and the curiae by voting in favour of it gave him the imperium. (Cic. de Rep. ii. 13, 17, 18, 20, 21.) The reason of the double vote of the curiae is clear enough. The imperium could only be conferred upon a determinate person. It was necessary, therefore, first to determine who was to be the person who was capable of receiving the imperium; and when this was determined, the imperium was granted to him by a special vote. Livy in his first book makes no mention of the lex curiata de imperio, but he uses the expressions patres auctores fient, patres auctores facti. (Liv. i. 17, 22, 32.) That these expressions, however, are equivalent to the lex curiata de imperio in the kingly period is shown by Becker, an abstract of whose explanation is given under auctor. It is very difficult to determine the extent of the king's powers, as the ancient writers naturally judged of the kingly period by their own republican constitution, and frequently assigned to the king, the senate, and the comitia of the curiae, the respective powers and functions which were only true in reference to the consuls, the senate, and the comitia of their own time. Most modern writers have represented the supreme power as residing in the people, and have regarded the king, to a great extent, as the executive of the senate and the curiae; but this view of the limited nature of the king's powers is strongly attacked, and we may say dis-
oster justice alone, but was fettered by a consilium, since it is brought forward as a reproach against Tarquiniius Superbus, cognitones capitandum rerum sine consiliis per se solus exercerat (Livy, i. 47); but it is not easy to believe in the existence of such a consilium in the times of the early kings, or if it did exist, it must have been a body simply to advise the king, and could not have had the power of controlling him, as he administered justice in virtue of his possessing the imperium. There is moreover no case recorded in which the consilium had any share in the administration of justice. From the decision of the king there seems to have been no appeal (provocatio). This is indeed denied by Niebuhr, who maintains that in all cases affecting the caput of a Roman citizen, an appeal lay from the king to the people in the comitia of the curiae, and who further argues that this was an ancient right of the patricians, and was extended to the plebs by the Lex Valeria, enacted at the establishment of the republic. It is true that the ancient writers refer the institution of the provocatio to the kingly period (Livy, i. 26 ; Cic. pro Mil. 3 ; Val. Max. vi. 3, § 6, viii. 1 § 1 ; Festus, s. r. sororium tigillum ; Cic. de Rep. ii. 31), but it by no means follows that the provocatio of that early time was the same as the right secured by the Lex Valeria, which was regarded as the great bulwark of the liberty of a Roman citizen. We have indeed the record of only one case of provocatio under the kings, namely, when the surviving Horatius, who murdered his sister, appealed from the duumvirii to the people; and in this case it must be borne in mind that the appeal was not from the sentence of the king, but from the sentence of the duumvirii. It appears, even from the narrative of Livy, that the king voluntarily surrendered his right of trying the criminal and passing sentence upon him, in order to avoid the odium of putting to death the hero who had rendered such signal services to the state, and that he appointed duumvirii, from whose decision an appeal lay to the people, in order that the people might have the responsibility of pronouncing his acquittal or condemnation. (Livy, i. 26; comp. Cic. de Rep. ii. 32.) In addition to which it is expressly stated that the dictatorship was a restoration of the kingly power (Zonar. vii. 13; comp. Cic. de Rep. ii. 32); and it is certain that the great distinction between the power of the dictator and that of the consilium consisted in there being no provocatio from the decisions of the former, as there was from the decisions of the latter. Our authors do not allow us to enter further into an examination of this question; but the reader will find the arguments against Niebuhr's views stated at great length in Rubino, ibid, p. 429, &c.

Again, all the magistrates in the kingly period appear to have been appointed by the king and not elected by the curiae. This is expressly stated of the two most important, the Tribunus Celerum, who occupied the second place in the state, and who stood in the same relation to the king as the magister equitum did in later times to the dictator (Lydius, de Mag. i. 14), and the Custos or Proconsul urbi, who was nominated by the king to supply his place when he was absent from the city (Tac. Ann. vii. 11). We may consequently infer that the quaestores were in like manner nominated by the king, although the ancient authorities differ on the point, Tactius ascribing their appointment to the king (Tac. Ann. xi. 22) and Junius Gracchus to the people. (Dig. i. tit. 13.) Livy expressly says (i. 26) that the Duumviri Perduelliones were appointed by the king; and if these were the same officers as the Quaestores during the kingly period, as many writers maintain, there can be no doubt that the latter were nominated by the king.

Further, the king was not dependent upon the people for his support; but a large portion of the aeger publicus belonged to him, which was cultivated at the expense of the state on his behalf. (Cic. de Rep. v. 2.) He had also the absolute disposal of the booty taken in war and of the conquered lands. (Dionys. ii. 28, 6 ; Cic. de Rep. ii. 9, 14, 18.)

It must not, however, be supposed that the authority of the king was absolute. The senate and the assembly of the people must have formed some check upon his power; though, if the views we have been stating are correct, they were far from possessing the extensive privileges which Dionysius (ii. 14) assigns to them. The senate and the comitia of the curiae were independent bodies possessing the right of meeting at certain times and discussing questions of state. They could only be called together when the king chose, and further could only determine upon matters which the king submitted to them. The senate was simply the consilium of the king, the members of which were all appointed by him (Livy, i. 8 ; Dionys. ii. 12 ; Festus, p. 246, ed. Müller; Cic. de Rep. ii. 3), and which only offered their advice to him, which he could follow or reject according to his pleasure. The comitia of the curiae seem to have been rarely assembled, and then probably more to hear the decisions of the king than to ratify his acts; and it is certain that they had no power of discussing any matter that was brought before them. The only public matter in which the king could not dispense with the co-operation of the senate and the curiae was in declarations of war against foreign nations, as appears clearly from the declaration of war against the Latins in the time of Ancus Marcius, as related by Livy (i. 32), who preserves the ancient formula. There is no trace of the people having had anything to do with the conclusion of treaties of peace; and Dionysius in this case as in many others has evidently transferred a later custom to the earlier times. The relation in which the senate and the curiae stood to the kings is spoken of more at length under Comitia, p. 331, and Senatus.

The insignia of the king were the fasces with the axes (scares), which twelve lictors carried before him as often as he appeared in public, the trabea, the sella curulis, and the toga praetexta and pila. The trabea appears to have been the most ancient official dress, and is assigned especially to Romulus: it was of Latin origin, and is therefore represented by the antiquarian Virgil as worn by the Latin kings. (Plin. ii. viii. 48, ix. 39 ; Ov. Fast. ii. 501 ; Ving. Aen. vii. 187, xi. 334.) The toga praetexta and pila were borrowed, together with the sella curulis, from the Etruscans, and their introduction is variously ascribed to Tullius Hostilius or Tarquinii Frises. (Cic. de Rep. i. 17; Macrobi. Sat. i. 6; Plin. ii. ix. 39; Dionys. iii. 62.) Dionysius (i. 21) also mentions a diadem and a sceptre as insignia of the kings.

REX SACRIFICULUS, REX SACRIFICUS, or REX SACRORUM. When the civil and military powers of the king were transferred to two praetors or consuls, upon the establishment of the republican government at Rome, these magistrates were not invested with that part of the royal dignity by virtue of which he had been the high priest of his nation and had conducted several of the sacred publica, but this priestly part of his office was transferred to a priest called Rex Sacrificulus or Rex Sacrorum. (Liv. ii. 2; Dionys. iv. 74, v. 1.) The first rex sacrorum was designated, at the command of the consuls, by the college of pontiffs, and inaugurated by the augurs. He was always elected and inaugurated in the comitia calata under the presidency of the pontiffs (Gell. xv. 27), and as long as a rex sacrificulus was appointed at Rome, he was always a patrician, for as he had no influence upon the management of political affairs, the plebeians never coveted this dignity. (Liv. vi. 41; Cic. pro Mil. 10, 20; Juven. iii. 10; Mart. iii. 47.) The word *Ephorium*, which was formed by the Romans from the Greek prepositions *eiri* and the Gallic *rheda* (Quint. l. c.), is explained by the Scholiast on Juvenal (viii. 66) as: “Omnymum reddarum aut planumstrum.”

RHETOR. [RHETORIC GRAPHE.] RHETO’RICE GRAPHE (rı̌ptörık’ grap’hĕ). The best interpretation of this expression is perhaps that given by Harperson and Suidas, s. v. ἡ κατὰ βητόρος γενειακή, γραφήσατος τι ἢ εἰσντός τι πράξασαν παράνομον. There was not any particular class of persons called ἔβητορες, invested with a legal character, or intrusted with political duties, at Athens. For every citizen, who did not labour under some special disability, was entitled to address the people in assembly, make motions, propose laws, &c. The name of ἔβητορες, however, was given in common parlance to those orators and statesmen, who more especially devoted themselves to the business of public speaking; while those who kept aloof from, or took no part in, the business of popular assemblies, were called ἰδιάται. Hence ἔβητος is explained by Suidas, s. v. ὁ δήμος συμβολεων καὶ ὁ ἐν δήμῳ ἀρχηγος. The ἔβητορική γραφὴ might be either the same as the παράνομων γραφῆς, or a more special prosecution, attended with heavier penalties, against practised demagogues, who exerted their talents and influence to deceive the people and recommend bad measures. Others have conjectured this to be a proceeding similar to the ἐπαργυρεία δημοκρατία, directed against those persons who ventured to speak in public, after having been guilty of some misdemeanour which would render them liable to ἀτιμία. Of this nature was the charge brought against Timarchus by Aesches, whose object was to prevent the latter from appearing as prosecutor against him on the subject of the embassy to Philip. (Schömann, *De Comit. p. 108; Meiér, *Att. Proc.* p. 209.) [C. R. K.]

RHETRAE (rı̌ptrā’), specially the name of the ordinances of Lycurgus. (Plut. Lyco. 6, 13.) The word is defined by the grammarians to signify a compact or treaty (εὐθρα, εὐθράκατον, ἤν κατα). Apollon. *Lex. Hom.* p. 138, 30, ed. Beckler: ὅποτρὰ, συνθήκη διὰ λόγων, ἡσυχή;) and most modern writers adopt this interpretation, supposing the word to signify originally words (ὁτι ῥητρι), or a declaration, which bound parties. It is true that the etymology points simply to that which is spoken or declared; but Plutarch gives another meaning to the word in relation to the laws of Lycurgus, and says that they were divine ordinances (ῥητρα καὶ δελθαδα, ἤν παρὰ τοῦ Θεοῦ ὄνου, καὶ ἡμεροθήκην ἤτοι, Plut. Lyco. 13.) The opinion of Mr. Grote, which reconciles these two accounts, seems the most probable. “The word ῥητρα means a solemn compact, either originally emanating from, or subsequently sanctioned by the gods, who are always parties to such agreements:
see the old treaty between the Eleians and He-
maens—A Fodris, between the two, commemorated in the valuable inscription still preserved,—as an-
cient, according to Böckh, as Olym., 40—60 (Böckh, 
Borch. Inscrit., No. ii. p. 26, part i.). The words of 
Tyrtaeus imply such a contract between the 
contracting parties : first the kings, then the sena-
tors, lastly the people,—eidelas pbyrais anaxamie-
\textgreek{tovon,—where the participle last occurring applies 
not to the people alone, but to all the three. The 
Rhetra of Lycurgus emanated from the Delphian 
god ; but the kings, senators, and people all bound 
themselves, both to each other and to the gods to 
obeit." (Grote, Hist. of Greece, vol. ii. p. 462 ; 
for a different explanation of the word, see Thirl-
wall, Hist. of Greece, vol. i. p. 335, 2d ed.)

RHYTON (\textgreek{pdrpov}), a drinking-horn (\textgreek{keps}), by 
which name it was originally called, is said by Ath-
eneus (xi. p. 497, b) to have been first made under 
Posemy Philadelphus; but it is even mentioned in 
Demosthenes (c. Mid. p. 565, 29), as Athenaeus 
himself also remarks. The oldest and original 
form of this drinking-horn was probably the horn 
of the ox, but one end of it was afterwards orna-
mented with the heads of various animals and 
birds. We frequently find representations of the 
\textgreek{pdrpov} a piece of cloth. It occurs in a fragment of the 
purplum. (Thirlwall, Hist. of Greece, vol. i. p. 505.)

The \textgreek{pdrpov} had a small opening at the bottom, 
which the person who drank put into his mouth, 
and allowed the wine to run in : hence it derived 
this way in ancient paintings. (Pitt. d'Ercol. v. t. 
46 ; Zahn, Ornam. und Wandgem.)

Several specimens of these drinking-horns have also 
been discovered at Pompeii (Museo Borbonico, 
v. viii. 14. v. 20) ; representations of two of these are 
given in the annexed cut.

The \textgreek{pdrpov} was originally called \textgreek{athama} (\textgreek{\varphi\tau\omicron\omicron\omicron\alpha\iota\mu\alpha \omicron\mu\nu\alpha}, or \textgreek{\rho\omicron\omicron\sigma\omicron\nu}, or \textgreek{\rho\omicron\omicron\sigma\omicron\nu} 
which was a covering of the head used 
by females. (Varro, l. c. ; Fest. s. v. \textgreek{Rica}.) The 
grammarians appear themselves to have had no 
clear idea of the ricinium ; but after careful exami-
nation of the passages above referred to, it appears 
to have been a kind of mantle, with a sort of cowl 
attached to it, in order to cover the head. It was 
also worn by mimes upon the stage (Fest. l. c. 
and s. v. Orchestra), and the mayorium, mavorte, or 
mavors of later times was thought to be only an-
other name for what had formerly been called ricin-
ium. (L. S. 9.)

ROBICA/JIJA, a public festival in honour of the 
god Robigus to preserve the fields from mil-
dew, is said to have been instituted by Numa, and 

(Plin. H. N. xviii. 29. s. 69 ; Varro, \textgreek{He Rust.} l. 
Festus, s. v.) The sacrifices offered on this occa-
sion consisted of the entrails of a dog and a sheep, 
accompanied with frankincense and wine : a prayer 
was presented by a flamen in the grove of the an-
cient deity, whom Ovid and Columella make a 
goddess. (Ovid. Fast. iv. 897—942 ; Colum. x. 
312.) A god Robigus or a goddess Robiga is a 
mere invention from the name of this festival, for 
the Romans paid no divine honours to evil deities.

ROBUR. (Carver, p. 241, a.)

ROGATIO. (Lex, p. 682.)

ROGATO/RES. (Diribitores.)

ROGUS. (Funus, p. 533, b.)

ROMPHEA. (Hasta, p. 569, a.)

RO/RARI. (Exercitus, pp. 495, 502, b.)

ROSTRA, or The Beaks, was the name applied 
to the stage (\textgreek{belleum}) in the Forum, from which 
the orators addressed the people. This stage 
was originally called \textgreek{teymb} (Liv. ii. 56), because it 
was consecrated by the augurs, but it obtained its 
name of Rostra at the conclusion of the great Latin 
war, when it was adorned with the beaks (\textgreek{rostra}) 
of the ships of the Antiques. 
(Liv. viii. 14 ; Flor. i. 11 ; Plin. H. N. xxxiv. 5. s. 11.) The Greeks 
also mutilated galley's in the same way for the 
purpose of trophies: this was called by them 
\textgreek{\varphi\omicron\omicron\rho\omicron\omicron\nu}. (Acrotetrium.)

The Rostra lay between the Comitium or place 
of meeting for the curies, and the Forum or place 
of meeting for the tribes, so that the speaker might 
turn either to the one or the other ; but down to 
the time of C. Gracchus, even the tribunes in 
speaking used to front the Comitium; he first 
turned his back to it and spoke with his face tow-
ards the forum. (Niebuhr, \textit{Hist. of Rome}, vol. i. 
p. 426, note 990.) The form of the Rostra has 
been well described by Niebuhr (vol. iii. p. 144, 
note 269) and Bunsen (quoted by Arnold, \textit{Hist. of 
Rome}, vol. ii. p. 164) ; the latter supposes "that 
it was a circular building, raised on arches, with 
a stand or platform on the top bordered by a parapet ; 
the access to it being by two flights of steps, 
one on each side. It fronted towards the comitium, 
and the rostra were affixed to the front of it, just 
under the arches. Its form has been in all the 
main points preserved in the ambones, or circular 
pulpits, of the most ancient churches, which also 
had two flights of steps leading up to them, one 
on the east side, by which the preacher ascended, 
and another on the west side, for his descent. 
Specimens of these old churches are still to be 
seen at Rome in the churches of St. Clement and 
S. Lorenzo fuori le mure." The speaker was thus
enabled to walk to and fro, while addressing his audience.

The suggestus or Rostra was transferred by Julius Caesar to a corner of the Forum, but the spot, where the ancient Rostra had stood, still continued to be called Rostra Vetera, while the other was called Rostra Nova or Rostra Julia. (Ascon. in Cic. Mil. § 12. p. 43, ed. Orelli; Dion Cass. xliii. 49, lv. 34; Suet. Aug. 100.) Both the Rostra contained statues of illustrious men (Cic. Phil. ii. 61); the new Rostra contained equesrian statues of Sulla, Pompey, Julius Caesar, and Augustus. (Vell. Pat. ii. 61.) Niebuhr (l. c.) discovered the new Rostra in the long wall, that runs in an angle towards the three columns, which have for a very long time borne the name of Jupiter Stator, but which belong to the Curia Julia. The substance of the new Rostra consists of bricks and casting-work, but it was of course cased with marble: the old Rostra Niebuhr supposes were constructed entirely of peperino.

The following coin of M. Lollius Palicanus contains a representation of the Rostra.

ROSTRATA COLUMNA. [Columna, p. 327, b.]
ROSTRATA CORONA. [Corona, p. 360.]
ROSTRUM. [Navis, p. 786, b.]
ROTA. [Currus, p. 378.]
RUDENS (łat), any rope used to move or fix the mast or sail of a vessel (Juv. vi. 102; Ovid. Met. iii. 616; Achilles Tatius, ii. 32.) The different ropes of an ancient ship are spoken of under different terms. They were made of various materials. We have only to notice here its meaning as — 1. A hand-creel. (Coma, p. 329.) 2. A sieve for straining wine (Vinum). 3. A purse for holding money. Hence the phrase in Plautus irre ad secum, "to go a begging." (Plaut. Capt. i. 1. 22.)

S. SACELLUM is a diminutive of saecus, and signifies a small place consecrated to a god, containing an altar, and sometimes also a statue of the god to whom it was dedicated. (Cicelius, vi. 12.) Festus (s. v.) completes the definition by stating that a sacellum never had a roof. It was therefore a sacred enclosure surrounded by a fence or wall to separate it from the profane ground around it, and answers to the Greek περιθόκος. The form of a sacellum was sometimes square and sometimes round. The ancient sacellum of Janus which was said to have been built by Romulus, was of a square form, contained a statue of the god, and had two gates. (Ovid. Fast. i. 275; Sen. Maur. in Wernsdorf's Poet. Min. ii. p. 279.) Many Romans had private sacella on their own estates; but the city of Rome contained a great number of public sacella such as that of Caca (Serv. ad Aen. viii. 190), of Hercules in the Forum Boarium (Solin. i.; Plin. H. N. x. 29), of the Lares (Solin. 2), of Naenia (Fest. s. v. Naeniae deae), of Publification (Liv. x. 29), and others.

SACERDOS, SACERDOTEUM. Cicero (de Leg. ii. 8) distinguishes two kinds of sacerdotes; those who had the superintendence of the forms of worship (sacrae) and of the sacra, and those who interpreted signs and what was uttered by seers and prophets. Another division is that into priests who were not devoted to the service of any particular deity, such as the pontiffs, augurs, seers and prophets. Another division is that into the worship of particular divinities, such as the flaminins. The priests of the ancient world did not consist of men alone, for in Greece as well as at Rome certain deities were attended only by priestesses. At Rome the wives of particular priests were regarded as priestesses, and had to perform certain sacred functions, as the regina sacrorum and the flamina. (Flamen; Rex Sacrorum.) In other cases maidens were appointed priestesses,
as the Vestal virgins, or boys, with regard to whom it was always requisite that their fathers and mothers should be alive (patrini et matrini).

As all the different kinds of priests are treated of separately in this work, it is only necessary here to make some general remarks.

In comparison with the civil magistrates all priests at Rome were regarded as homines privati (Cic. v. Catil. i. 1; de Offic. ii. 22; ad Att. iv. 2, Philipp. v. 17), though all of them as priests were sacerdotes publici, in as far as their office (sacerdotium) was connected with any worship recognised by the state. The appellation of sacerdos publicus was however given principally to the chief-pontiff and the flamen dialis (Cic. de Leg. ii. 9; Serv. ad Aen. viii. 534), who were at the same time the only priests who were members of the senate by virtue of their office. All priestly offices or sacerdotes were held for life without responsibility to any civil magistrate. A priest was generally allowed to hold any other civil or military office besides his priestly dignity (Liv. xxxviii. 47, xxxix. 45; Epit. 19, xl. 45, Epit. 59, &c.); some priests however formed an exception, for the duumviri, the rex sacrorum and the flamen dialis were not allowed to hold any state office, and were also exempt from service in the armies. (Dionys. iv. 9.) Their priestly character was, generally speaking, inseparable from their person, as long as they lived (Plin. Epist. iv. 8); hence the augurs and friates arvalis retained their character even when sent into exile, or when they were taken prisoners. (Plin. H. N. xviii. 2; Plut. Quaest. Rom. 99.) It also occurs that one and the same person held two or three priestly offices at a time. Thus we find the three dignities of pontifex maximus, augur, and decemvir sacrorum united in one individual. (Liv. xl. 42.) But two persons belonging to the same gens were allowed to be members of the same college of priests. This regulation however was in later times often violated or evaded by adoptions. (Serv. ad Aen. vii. 303; Dion Cass. xxxix. 17.) Bodily defects rendered, at Rome as among all ancient nations, a person unfit for holding any priestly office. (Dionys. ii. 21; Senec. Controv. iv. 2; Plut. Quaest. Rom. 73; Plin. H. N. vii. 29.)

All priests were originally patricians, but from the year B. c. 367 the plebeians also began to take part in the sacerdotia (Plebees, p. 927), and those priestly offices which down the years remained in the hands of the patricians alone, such as that of the rex sacrorum, the flamines, salii and other, had no influence upon the affairs of the state.

As regards the appointment of priests, the ancients unanimously state that at first they were appointed by the kings (Dionys. ii. 21, &c. 73; Liv. i. 29), but after the sacerdotia were once in the hands of the patricians alone, such as the Vestal virgins and the flamines, were appointed (copieabantur) by the pontifex maximus, a rule which appears to have been observed down to the latest times; others again, such as the duumviri sacrorum, were elected by the people (Dionys. iv. 62), or by the curiae, as the curiones. But in whatever manner they were appointed, all priests after their appointment required to be inaugurated by the pontiffs and the augurs, or by the latter alone. (Dionys. ii. 22.) Those priests who formed colleges had originally, as we have already observed, the right of cooptatio; but in the course of time they were deprived of this right, or at least the cooptatio was reduced to a mere form, by several laws, called leges de sacerdotiis, such as the lex Domitia, Cornelia, and Julia; their nature is described in the article Pontifex, p. 940, &c., and what is there said in regard to the appointment of pontiffs applies equally to all the other colleges. The leges annales, which fixed the age at which persons became eligible to the different magistracies, had no reference to priestly offices; and on the whole it seems that the pubertas was regarded as the time after which a person might be appointed to a saecrdocium. (Livy. xiii. 28; Plut. Tib. Grocc. 4.)

All priests had some external distinction, as the apex, tutulus, or galerus, the toga praetexta, as well as honorary seats in the theatres, circuses and amphitheatres. They appear however to have been obliged to pay taxes like all other citizens, but seem occasionally to have tried to obtain exemption. See the case related in Livy, xxxiii. 42.

Two interesting questions yet remain to be answered: first whether the priests at Rome were paid for their services, and secondly whether they instructed the young, or the people in general, in the principles of their religion. As regards the first question, we read that in the time of Romulus lands were assigned to each temple and college of priests (Dionys. ii. 7), and when Festus (s. v. Osemm.) states that the Roman augurs had the enjoyment (frui solebant) of a district in the territory of Veii, we may infer that all priests had the usu of the sacred lands belonging to their respective colleges or divinities. This supposition is strengthened by the fact that such was actually the case in the Roman colonies, where, besides the lots assigned to the colonists, pieces of land are mentioned which belonged to the colleges of priests, who made use of them by letting them out to farmers. (Siculus Flaccus, de condit. agror. p. 23, ed. Goec. ; Hyginus, de Limit. Const. p. 205, ed. Goec.) It appears however that we must distinguish between such lands as were sacred to the gods themselves and could not be taken from them except by exaction, and such as were merely given to the priests as possession and formed part of the ager publicus. Often times in the case of necessity. (Dion Cass. xliii. 47 ; Oros. v. 18; Appian, de Bell. Mithr. 22.) Besides the use of such sacred or public lands some priests also had a regular annual salary (stipendium), which was paid to them from the public treasury. This is expressly stated in regard to the Vestal virgins (Liv. i. 20), the augurs (Dionys. ii. 6), and the curiones (Feat. s. v. Curionium), and may therefore be supposed to have been the case with other priests also. The pontifex maximus, the rex sacrorum, and all other public offices were the property of the state, and might be taken from the priests in any case of necessity. (Dion Cass. xliii. 47; Oros. v. 18; Appian, de Bell. Mithr. 22.)

As regards the second question, we do not hear either in Greece or at Rome of any class of priests on whom it was incumbent to instruct the people respecting the nature and principles of religion. Of preaching there is not the slightest trace. Relig.
gion with the ancients was a thing which was handed down by tradition from father to son, and consisted in the proper performance of certain rites and ceremonies. It was respecting these external forms of worship alone that the pontiffs were obliged to give instructions to those who consulted them. [PONTIFEX.-] [L.S.]

SACRA. This word in its widest sense expresses what we call divine worship. In ancient times the state as well as all its subdivisions had their own peculiar forms of worship, whence at Rome we find sacra of the whole Roman people, of the curies, gentes, families, and even of private individuals. All these sacra, however, were divided into two great classes, the public and private sacra (sacra publica et privata). That is, they were performed either on behalf of the whole nation and at the expense of the state, or on behalf of individuals, families, or gentes, which also to defray their expenses. (Fest. s. v. Publica sacra ; Liv. i. 20, x. 7 ; Plut. Num. 9 ; Cic. de Harusp. Resp. 7.) This division is ascribed to Numa. All sacra, publica as well as privata, were superintended and regulated by the pontiffs. We shall first speak of the sacra publica.

Sacra Publica. Among the sacra publica the Romans reckoned not only those which were performed on behalf of the whole Roman people, but also those performed on behalf of the great subdivisions of the people, viz. the tribes and the curiae, which Festus (l. c.) expresses: pro montanis, pagis, curitis, succelitis. (See Dionys. ii. 21, 23 ; Appian, Hist. Rom. viii. 138, de Bell. Civ. ii. 106 ; Plut. Quaest. Rom. 89.) The sacra pro montibus et pagis are undoubtedly the sacra montanalia and paganalia, which although not sacra of the whole Roman people, were yet publica. (Varro, de Ling. Lat. vi. 24, &c. ; comp. Fest. s. v. Septimontium.) The succella in the expression of Festus, sacra pro succelitibus, appear only to indicate the places where some sacra publica were performed. (Göttling, Gesch. d. Röm. Staatsw. p. 176.) What was common to all sacra publica, is that they were performed at the expense of certain public funds, which had to provide money for victims, libations, and for the building and maintenance of those places, where they were performed. (Fest. l. c. ; Dionys. ii. 23 ; Liv. x. 23, xlii. 3.) The funds set apart for the sacra publica were in the keeping of the pontiffs, and the sacramentum formed a part of them. They were kept in the domus publica of the pontifex maximus, and were called aerarium pontificum. (Varro, de Ling. Lat. v. 180 ; Gruter, Jusrhet. 413. 8, 496. 6, 452. 6.) When these funds did not suffice, the state treasury supplied the deficiency. (Fest. s. v. Sacramentum.) In the solemnization of the sacra publica the senate and the whole people took part. (Plut. Num. 2.) This circumstance however is not what constitutes their character as sacra publica, for the sacra popularia (Fest. s. v. Popul. sacr.) in which the whole people took part, might nevertheless be sacra private, if the expenses were not defrayed out of the public funds, but by one or more individuals, or by magistrates. The pontiffs in conducting the sacra publica were assisted by the epulones. [EPULONES.]

Sacra privata embraced, as we have stated, those which were performed on behalf of a gens, a family, or an individual. The characteristic by which they were distinguished from the sacra publica, is that they were made at the expense of those persons or on whose behalf they were performed. Respecting the sacra of a gens, called sacra gentilicia, see GENS, p. 568, b. The sacra connected with certain families were, like those of a gens, performed regularly at fixed times, and descended as an inheritance from father to son. As they were always connected with expenses, and were also troublesome in other respects, such an inheritance was regarded as a burden rather than anything else. (Macrobi. Sat. 1. 16.) They may generally have consisted in sacrifices to the Penates, but also to other divinities. They had usually been vowed by some member of a family on some particular occasion, and then continued for ever in that family for the welfare of which was thought to depend upon their regular and proper performance. Besides these periodical sacra of a family there were others, the performance of which must have depended upon the discretion of the heads of families, such as those on the birthday, or on the death of a member of a family. Saviugny (Zeitschrift., vol. ii. p. 3) denies the existence of sacra familiares.

An individual might perform sacra at any time, and whenever he thought it necessary; but if he vowed such sacra before the pontiffs and wished that they should not be ceased after his death, his heirs inherited with his property the obligation to perform them, and the pontiffs had to watch that they were performed duly and at their proper time. (Fest. s. v. Sacer mons ; Cic. pro Dom. 51 ; comp. ad Att. xii. 19, &c.) Such an obligation was in later times evaded in various ways.

Among the sacra privata were reckoned also the sacra municipalia, that is, such sacra as a community or town had been accustomed to perform before it had received the Roman franchise. After this event, the Roman pontiffs took care that they were continued in the same manner as before. (Fest. s. v. Municipalia sacra ; comp. Ambrosch, Stud. u. Andeut. p. 215.) (See Göttling, p. 175, &c. ; Walter, Gesch. d. Röm. Rechts, p. 178 ; Hartung, Die Relig. d. Röm. vol. i. p. 226, &c. ; comp. SACRIFICIUM.) [L.S.]

SACRAMENTUM. [JURISURANDUM ; VIN-DICARE.]

SACRARIUM was, according to the definition of Ulpian (Dig. 1. tit. 8. s. 9. § 2), any place in which sacred things were deposited and kept, whether this place was a part of a temple or of a private house. (Comp. Cic. s. v. Ferr. iv. 2, pro Milon. 31 ; Suet. Tib. 51.) A sacrarium therefore was that part of every house in which the images of the penates were kept. Respecting the sacrarium of the lares see LARARIUM. Public sacrarium at Rome were: one attached to the temple of the Capitoline Jupiter, in which the scutae or chariots for public processions were kept (Suet. Vespu. 5 ; Grat. Falsic. 534) ; the place of the Sulii in which the ancilia and the litus of Romulus were kept (Val. Max. i. 8. 11 ; Serv. ad Aen. vii. 606), and others. In the time of the emperors, the name sacrarium was sometimes applied to a place in which a statue of an emperor was erected. (Tacit. Annal. ii. 41 ; Stat. Silv. v. 1. 210.) Livy (i. 21) uses it as a name for a sacred retired place in general. [L.S.]

SACRIFICIUM (lepew). Sacrifices or offerings formed the chief part of the worship of the ancients. They were partly signs of gratitude, partly a means of propitiating the gods, and partly
also intended to induce the deity to bestow some favour upon the sacrificer, or upon those on whose behalf the sacrifice was offered. Sacrifices in a narrower sense were things offered to the gods, which merely afforded momentary gratification, which were burnt upon their altars, or were believed to be consumed by the gods. We shall divide all sacrifices into two great divisions, bloody sacrifices and unbloody sacrifices, and, where it is necessary, consider Greek and Roman sacrifices separately.

Bloody sacrifices. As regards sacrifices in the earliest times, the ancients themselves sometimes imagined that unbloody sacrifices, chiefly offerings of fruit, had been customary long before bloody sacrifices were introduced among them. (Plat. de Leg. vi. p. 782; Paus. viii. 2. § 1, i. 26. § 6; Macrobr. Sat. i. 10, &c.) It cannot indeed be denied, that sacrifices of fruit, cakes, libations, and the like existed in very early times; but bloody sacrifices, and more than this, human sacrifices, are very frequently mentioned in early story; in fact the mythology of Greece is full of instances of human sacrifices being offered and of their pleasing the gods. Wachsmuth (Hell. Alt. ii. p. 549, &c. 2d edit.) has given a list of the most celebrated instances. It may be said that none of them has come down to us with any degree of historical evidence; but surely the spirit which gave origin to such human sacrifices had nothing repulsive to the ancients, and those legends is sufficient to prove that human sacrifices had nothing repulsive to the ancients, and that the nobler and more pleasing it would be to the gods. Hence the sacrifices of animals were the most common among the Greeks and Romans. The victim was called ιπειξων, and in Latin hostia or victima. In the early times it appears to have been the general custom to burn only the legs (μυελαντια) enclosed in fat, and certain parts of the intestines, while the remaining parts of the victim were consumed by men at a festive meal. The gods delighted chiefly in the smoke arising from the burning victims, and the greater the number of victims, the more pleasing was the sacrifice. Hence it was not uncommon to offer a sacrifice of one hundred bulls (εκατονβοτα) at once, though it must not be supposed that a hecatomb always signifies a sacrifice of a hundred bulls, for the name was used in a general way to designate any great sacrifice. Such great sacrifices were not less pleasing to men than to the gods, for in regard to the former they were in reality a donation of meat. Hence at Athens the partiality for such sacrifices rose to the highest degree. (Athen. i. p. 3; comp. Böckh, pubbl. Econ. p. 211, &c.) Sparta, on the other hand, was less extravagant in sacrifices, and while in other Greek states it was necessary that a victim should be healthy, beautiful, and uninjured, the Spartans were not very scrupulous in this respect. (Plat. Alcib. ii. p. 149.) The animals which were sacrificed were mostly of the domestic kind, as bulls, cows, sheep, rams, lambs, goats, pigs, dogs, and horses; but fishes are also mentioned as pleasing to certain gods. (Athen. vii. p. 297.) Each god had his favourite animals which he liked best as sacrifices; but it may be considered as a general rule, that those animals which were sacred to a god were not sacrificed to him, though horses were sacrificed to Poseidon notwithstanding this usage. (Paus. viii. 7. § 2.) The head of the victim before it was killed was in most cases strewn with roasted barley meal (ολοθρυιτα or ολονθυριτα) mixed with salt (mola salsa). The Athenians used for this purpose only barley grown in the Rhamian plain. (Paus. i. 28. § 6.) The persons who offered the sacrifice were generally garlands round their heads and sometimes also carried them in their hands, and before they touched anything belonging to the

THARGELIA. With these few exceptions however human sacrifices had ceased in the historical ages of Greece. Owing to the influences of civilisation, in many cases animals were substituted for human beings, in others a few drops of human blood were thought sufficient to propitiate the gods. (Paus. viii. 23. § 1, i. 8. § 1.) The custom of sacrificing human life to the gods arose undoubtedly from the belief, which under different forms has manifested itself at all times and in all nations, that the nobler the sacrifice and the dearer to its possessor, the more pleasing it would be to the gods. Hence the frequent instances in Greek story of persons sacrificing their own children, or of persons devoting themselves to the gods of the lower world. In later times, however, persons sacrificed to the gods were generally criminals who had been condemned to death, or such as had been taken prisoners in war.
sacrifice they washed their hands in water. The victim itself was likewise adorned with garlands, and its hoofs were sometimes girt. Before the animal was killed, a bunch of hair was cut from its forehead, and thrown into the fire as primitiae; this preparatory rite was called κατάφρεσθαι. (Hom. Il. xix. 254, Od. xiv. 422; Herod. ii. 45, iv. 60; Eurip. Iphig. Taur. 40.) In the heroic ages the princes, as the high priests of their people, killed the victim; in later times this was done by the priests themselves. When the sacrifice was to be offered to the Olympic gods, the head of the animal was drawn heavenward (see the woodcut on the title page of this work: comp. Eustath., ad Ilid. i. 459); when to the gods of the lower world, to heroes, or to the dead, it was drawn downwards. While the flesh was burning upon the altar, wine and incense were thrown, upon it it was a city, a people, or a piece of land. [Lus.] The customs observed before and during the sacrifice of an animal were on the whole the same as those observed in Greece. (Virg. Aen. vi. 245; Serv. ad Aen. iv. 57; Fest. s. v. Immolare; Cato, de Re Rust. 134, 132.) But the victim was in most cases not killed by the priests who conducted the sacrifice, but by a person called popa, who struck the animal with a hammer before the knife was used. (Serv. ad Aen. xii. 120; Suet. Calig. 32.) The better parts of the intestines (extra) were stewed with barley meal, wine, and incense, and were burnt upon the altar. Those parts of the animal which were burnt were called prosecta, prosicius, or ablogmina. When a sacrifice was offered to gods of rivers or the sea, these parts were not burnt, but thrown into the water. (Cato, de Re Rust. 194; Macrobi. Sat. ii. 2; Liv. xxii. 27.) The sacrifice was then offered as symbolical sacrifices in various festivals. Cakes (πέδανα, πέδωβα, πένναυ, λίμων) were peculiar to the worship of certain deities, as to that of Apollo. They were either simple cakes of flour, sometimes also of wax, or they were made in the shape of some animal, and were then offered as symbolical sacrifices in the place of another animal, because they could not easily be procured or were too expensive for the sacrifice. (Suid. s. v. Βοῦς ὄβομος; Serv. ad Aen. ii. 116.) This appearance instead of reality in sacrifices was also manifest on other occasions, for we find that sheep were sacrificed instead of stags, and were then called stags; and in the temple of Isis at Rome the priests used water of the river Tiber instead of Nile water, and called the former water of the Nile. (Fest. s. v. Cervaria oris; Serv. i. c.)

Unbloody sacrifices. Among these we may first mention the libations (libationes, λοσαῖα or στομφαι). We have seen above that bloody sacrifices were usually accompanied by libations, as wine was poured upon them. Libations always accompanied a sacrifice which was offered in concluding a treaty with a foreign nation, and that here they formed a prominent part of the solemnity, is clear from the fact that the treaty itself was called συμφαια. But libations were also made independent of any other sacrifice, as in solemn prayers (Ilid. xvi. 233), and on many other occasions of public and private life, as before drinking at meals, and the like. Libations usually consisted of unmixed wine (ἐνυσανδος, merum), but sometimes also of milk, honey, and other fluids, either pure or diluted with water. (Schr. Oed. Col. 159, 481; Plin. H. N. xiv. 19; Aeschyl. Eum. 107.) Incense was likewise an offering which usually accompanied bloody sacrifices, but it was also burned as an offering by itself. Real incense appears to have been used only in later times (Plin. H. N. xiii. 1), but in the early times, and afterwards also, various kinds of fragrant wood, such as cedar, fig, vine, and myrtlewood, were burnt upon the altars of the gods. (Suid. s. v. Νηράφια ξύλα.) A third class of unbloody sacrifices consisted of fruit and cakes. The former were mostly offered to the gods as primitive or tithes of the harvest, and as a sign of gratitude. They were sometimes offered in their natural state, sometimes also adorned or prepared in various ways. Of this kind were the epseum, an olive branch wound around with wool and hung with various kinds of fruits; the χειράς or pots filled with cooked beans (Πρασιεφεία); the κέρνω or κέρω, or dishes with fruit; the διχαύα or διχαύα [Οσκροφορία]. Other instances may be found in the accounts of the various festivals. Cakes (πέδανα, πέδωβα, πένναυ, λίμων) were peculiar to the worship of certain deities, as to that of Apollo. They were either simple cakes of flour, sometimes also of wax, or they were made in the shape of some animal, and were then offered as symbolical sacrifices in the place of another animal, because they could not easily be procured or were too expensive for the sacrifice. (Suid. s. v. Βοῦς ὄβομος; Serv. ad Aen. ii. 116.) This appearance instead of reality in sacrifices was also manifest on other occasions, for we find that sheep were sacrificed instead of stags, and were then called stags; and in the temple of Isis at Rome the priests used water of the river Tiber instead of Nile water, and called the former water of the Nile. (Fest. s. v. Cervaria oris; Serv. i. c.)

SACRILEGIO is the crime of stealing things consecrated to the gods, or things deposited in a consecrated place. (Quinctil. vii. 3. § 21, &c.; Cic. de Leg. ii. 16; Liv. xii. 3.) A lex Julia referred to in the Digest (48. tit. 13. s. 4) appears to have placed the crime of sacrilegium on an equality with necrogamia. [PECULATUS.] Several of the imperial constitutions made death the punishment for a sacrilegus, which consisted according to circum- stances either in being given up to wild beasts, in being burned alive, or hanged. (Dig. 48. tit. 13. s. 6.) Paulus says in general that a sacrilegus was punished with death, but he distinguishes between such persons who robbed the sacra publica, and such as robbed the sacra privata, and he is of opinion that the latter, though more than a common thief, yet deserves less punishment than the former. In a wider sense, sacrilegium was used by the Romans to designate any violation of religion (Corn. Nep. Alcoh. 6), or of anything which should be treated with religious reverence. (Ovid. Met. xiv. 520, Rem. Am. 367, Fest. iii. 700.) Hence a law in the Codex (9. tit. 29. s. 1) states that any person who is guilty of sacrilegium who neglects or violates the sanctity of the divine law. Another law (Cod. 9. tit. 29. s. 2) decreed that even a doubt as to whether a person appointed by an emperor to some office was worthy of this office, was to be regarded as a crime equal to sacrilegium. [L.S.]

SACRO RUM DETESTATIO. [GRN, p. 568, b.]

SAECULABRESLUDI. [LUNASACCOLES.] 

SAECULUM. A saeculum was of a twofuld
nature, that is, either civil or natural. The civil saeculum, according to the calculation of the Etruscans, which was adopted by the Romans, was a space of time containing 110 lunar years. The natural saeculum, upon the calculation of which the former was founded, expressed the longest term of human life, and its duration or length was ascertained according to the ritual books of the Etruscans, in the following manner: the life of a person, which lasted the longest of all those who were born on the day of the foundation of a town, constituted the first saeculum of that town; and the longest liver of all who were born at the time when the second saeculum began, again determined the duration of the second saeculum, and so on. (Censorin. de Die Nat. 17.) In the same manner that the Etruscans thus calculated the longest life of a man a saeculum, so they called the longest existence of a state, or the space of 1100 years, a saecular day; the longest existence of one human race, or the space of 3300 years, a saecular week, &c. (Plut. Sulla, 7; Niebuhr, Hist. of Rome, i. p. 137.) It was believed that the return of a new saeculum was marked by various wonders and signs, which were recorded in the history of the Etruscans. The return of each saeculum at Rome was announced by the pontiffs, who also made the necessary determinations in such a manner, that at the commencement of a new saeculum the beginning of the ten months' year, of the twelve months' year, and of the solar year coincided. But in 215, iv. 81), whence the instrument, used to express this numeral, was derived. The account of the arrows of Hercules and of the signs, which were recorded in the history of the Etruscans, was annexed woodcut. That which lies horizontally was found at Persepolis, and is drawn from the size of the original. The two smallest, one of which shows a rivet-hole at the side for fastening it to the shaft, are from the plain of Marathon. (Skelton, Illust. of Armour at Goodrich Court, i. pl. 4.) The fourth specimen was also found in Attica. (Dodwell, l. c.) Some of the northern nations, who could not obtain iron, barbed their arrow-heads with bone. (Tacit. Germ. 46.)

The use of barbed arrows (adunca, hamatae), and poisoned arrows (venenatae sagittae) is always represented by the Greek and Roman authors as the characteristic of barbarous nations. It is attributed to the Sauromatæ and Getæ (Ovid. Trist. iii. 10. 63, 64, de Pontiv, iv. 7. 11, 12), to the Servili (Arnoldi, Chron. Siat. 4. § 8) and Stythians (Plin. H. N. x. 53. s. 115), and to the Arabs (Pollux, l. 10) and Moors. (Hor. Carm. i. 22. 3.) When Ulysses wishes to have recourse to this insidious practice, he is obliged to travel north of the country of the Thesprotians (Hom. Od. 1. 261—265); and the classical authors who mention it do so in terms of condemnation. (Hom. Plin. ii. c. 16.) Adnus, H. A. v. 16.) The poison applied to the tips of arrows having been called toxon (τοξόν), on account of its connection with the use of the bow (Plin. H. N. xvi. 10. s. 20; Festus, s. v.), Dioscor. vi. 20), the significance of this term was afterwards extended to poisons in general. (Plut. Merv. ii. 4. 4; Hor. Epod. xvii. 61; Preperit. i. 5. 6.)

II. The excellence of the shaft consisted in being long and at the same time straight, and, if it was of light wood, in being well polished. (Hes. C襦r., 263) ; and the classical authors who mention it do so in terms of condemnation. (Hom. Plin. ii. c. 16.) Adnus, H. A. v. 16.) The poison applied to the tips of arrows having been called toxon (τοξόν), on account of its connection with the use of the bow (Plin. H. N. xvi. 10. s. 20; Festus, s. v.), Dioscor. vi. 20), the significance of this term was afterwards extended to poisons in general. (Plut. Merv. ii. 4. 4; Hor. Epod. xvii. 61; Preperit. i. 5. 6.)

11. The excellence of the shaft consisted in being long and at the same time straight, and, if it was of light wood, in being well polished. (Hes. C襦r., 263) ; and the classical authors who mention it do so in terms of condemnation. (Hom. Plin. ii. c. 16.) Adnus, H. A. v. 16.) The poison applied to the tips of arrows having been called toxon (τοξόν), on account of its connection with the use of the bow (Plin. H. N. xvi. 10. s. 20; Festus, s. v.), Dioscor. vi. 20), the significance of this term was afterwards extended to poisons in general. (Plut. Merv. ii. 4. 4; Hor. Epod. xvii. 61; Preperit. i. 5. 6.)
SAGUM.

III. The feathers are shown on ancient monuments of all kinds, and are indicated by the terms alae (Virg. Aen. ix. 578, xii. 319), penaeae sagittae (Prudentius, Hamart. 498), and πτεροειδες ἔπτεροι. (Hom. II. v. 171.) The arrows of Hercules are said to have been feathered from the wings of a black eagle. (Hea. l. c.)

Besides the use of arrows in the ordinary way, they were sometimes employed to carry fire. Julius Caesar attempted to set Antony's ships on fire by sending βέλων πυρφόρα from the bows of his archers. (Dion Cass. l. 34.) A head-dress of small arrows is said to have been worn by the Indians (Prudentius, L. c.), the Sarmatians and the Huns, and other Oriental nations. (Claudian, de Nupt. Honor. 222, de 3 Cons. Honor. 21, de Laud. Stil. i. 254.)

In the Greek and Roman armies the sagittarii, more anciently called arqumi, i. e. archers, or bowmen (Festus, s. v.), formed an important part of the light-armed infantry. (Caesar, Bell. Civ. i. 81, iii. 44; Cic. ad Fam. xiv. 4.) They belonged, for the most part, to the allies, and were principally Cretans. (Aurus; Coryrus; Pharetra; Tormentum.)

SAGMINA were the same as the Verbenae, namely, herds turn up by their roots from within the inclosure of the Capitol, which were always carried by the Fetiadas or ambassadors, when they went to a foreign people to demand restitution for wrongs committed against the Romans, or to make a treaty. (Fetiadas.) They served to mark the sacred character of the ambassadors, and answered the same purpose as the Greek κτηρίες. (Plin. H. N. xxi. 3: 3; Liv. i. 24, xxx. 43; Dig. 1. tit. 8. s. 6.) Pliny (l. c.) also says that sagmina were used in remedii publicis, by which we must understand expiations and lustrations. The word Verbenæ seems to have been applied to any kind of herb, or to the boughs and leaves of any kind of tree, gathered from a pure or sacred place. (Serv. ad Virg. Aen. xii. 120.)

According to Festus (s. v.), the verbenæ were called sagmina, that is, pure herbs, because they were taken by the consul or the praetor from a sacred (sancto) place, to give to legati when setting out to make a treaty or declare war. He connects it with the words sanctus and sancire, and it is not at all impossible that it may contain the same root, which appears in a simpler form in sacramentum, sacramentum: hence in the Social or Marsic war the sagum was worn in the city, with the exception of those of consular rank (saga sumere, ad saga ire, in sagis esse, Cic. Phil. viii. 11, v. 12, xiv. 1): hence in the Social or Marsic war the sagum was worn for two years. (Liv. Epit. 72, 73; Vell. Pat. ii. 16.)

The sagum was open in the front, and usually fastened across the shoulders by a clasp, though not always (Trebell. Poll. Trig. Tyrann. 10): it resembled in form the Paludamentum (see woodcut, p. 584), as we see from the specimens of it on the column of Trajan and other ancient monuments. It was thick and made of wool (Mart. xiv. 159), whence the name is sometimes given to the wool itself. (Varro, L. L. v. 167, ed. Müller.)

The cloak worn by the general and superior officers is sometimes called sagum (Punicum sagum, Hor. Ep. ix. 28), but the diminutive Sogulum is more commonly used in such cases. (Compare Sil. Ital. iv. 519, xvii. 528; Liv. xxx. 17, xxvii. 19.)

The cloak worn by the northern nations of Europe is also called sagum; see woodcut, p. 213, where three nations are represented with sagum, and compare Pallium, p. 852. The German sagum is mentioned by Tacitus ( Germ. 17): that worn by the Gauls seems to have been a species of plaid (versicolor sagulum, Tac. Hist. ii. 20).

The outer garment worn by slaves and poor persons is also sometimes called sagum. (Columell. l. 8; compare Dig. 34. tit. 2. s. 23. § 2.)

SALAMINIA. [Paralus.]

SALARIUM, a salary. The ancients derive the word from sal, i. e. salt (Plin. H. N. xxxi. 41); the most necessary thing to support human life being thus mentioned as a representative for all others. Salarium therefore comprised all the provisions with which the Roman officers were supplied, as well as their pay in money. In the time of the republic the name salarium does not appear to have been used; it was Augustus who in order to place the governors of provinces and other military officers in a greater state of dependence, gave salaries to them or certain sums of money, to which afterwards various supplies in kind were added. (Suet. Aug. 36; Tacit. Agric. 42; Treb. Poll. Claud. 14 and 15; Plav. Vopisc. Prob. 4.) Before the time of Augustus, the provincial magistrates had been provided in their provinces with everything they wanted, through the medium of redempores (ωποχοι), who undertook, for a certain sum paid by the state, to provide the governors with all that was necessary to them. During the empire we find instances of the salarium being paid to a person who had obtained a province, but was nevertheless not allowed to govern it. In this case the salarium was a compensation for the honour and advantages which he might have derived from the actual government of a province, whence we can scarcely infer that the sum of 10,000 sesterces, which was offered on such an occasion (Dion Cass. lxxxvi. 22), was the regular salarium for a proconsul.

Salaria were also given under the empire to other officers, as to military tribunes (PLin. H. N. xxiv. 6; Juv. iii. 182), to assessors [Assessor], to senators (Suet. Nero, 10), to the comites of the princeps on his expeditions (Suet. Tib. 46), and others. Antoninus Pius fixed the salaries of all the rhetoricians and philosophers throughout the empire (Capitol, Ant. Pius, 11), and when persons did not fulfil their duties, he punished them by deducting from their salaries. (Capitol, ibid. 7.) Alexander Severus instituted fixed salaries for rhetoricians, grammarians, physicians, haruspices, mathematicians, mechanicians and architects (Lapid. Alex. Sec. 44); but to how much these salaries amounted we are not informed. Respecting the pay which certain classes of priests received, see SACERDOS.

SALIENTES. [Fons, p. 541, b.]
SALII.

SA'LLI were priests of Mars Gradivus, and are said to have been instituted by Numa. They were twelve in number, chosen from the patricians even in the latest times, and formed an ecclesiastical corporation. (Liv. i. 20; Dionys. i. 70; Cic. Rep. ii. 14; lucta juventus patria, Lcuon, ixa. 47.) They had the care of the twelve Ancilia, which were kept in the temple of Mars on the Palatine hill, whence those priests were sometimes called Salii Palatini to distinguish them from the other Salii mentioned below. The distinguishing dress of the Salii was an embroidered tunic bound with a brazen belt, the trabea, and the Apex, also worn by the Flamines. (Ap. N.) Each had a sword by his side, and in his right hand a spear or staff. (Dionys. l.c.)

The festival of Mars was celebrated by the Salii on the Ist of March and for several successive days; on which occasion they were accustomed to go through the city in their official dress carrying the ancilia in their left hands or suspended from their shoulders, and at the same time singing and dancing. In the dance they struck the shields with rods so as to keep time with their voices and with the movements of the dance. (Liv. i.c.; Dionys. l.c.; Hor. Carm. i. 30, l. iv. 1. 28.) From their dancing Ovid, apparently with correctness, derives their name (Fast. iii. 387). The songs or hymns, which they sang on this occasion (Saliaria carmina, Hor. Ep. i. 1. 56; Tac. Ann. ii. 83), were called Assamenta, Assamenta, or Assenenta, of which the etymology is uncertain. Göttling (Gesch. der Röm. Staatsv. p. 192) thinks they were so called because they were sung without any musical accompaniment, asse voce; but this etymology is opposed to the express statement of Dionysius (iii. 32). Some idea of the subject of these songs may be obtained from a passage in Virgil (Aen. vii. 286), and a small fragment of them is preserved by Varro (L. L. vii. 26, ed. Müller). In later times they were scarcely understood even by the priests themselves. (Varro, L. L. vii. 2; Hor. Ep. i. 1. 86; Quintil. i. 6. p. 54, Bipont.) The praises of Manmarius Veturius formed the principal subject of these songs, though who Manmarius Veturius was, the ancients themselves were not agreed upon. (Varro, L. L. vi. 43.) He is generally said to be the armourer, who made eleven ancilia like the one that was sent from heaven in the reign of Numa. (Festus, s. e. Mam. Vet.; Dionys. ii. 71; Ovid. Fast. iii. 384), but some modern writers suppose it to be merely another name of Mars. Besides, however, the praises of Manmarius, the verses, which the Salii sang, appear to have contained a kind of theogony, in which the praises of all the celestial deities were celebrated, with the exception of Venus. (Macrobi. Sat. i. 12.) The verses in honour of each god were called by the respective names of each, as Januli, Junonii, Minervii. (Festus, s. e. Assamenta.) Divine honour was paid to some of the emperors by inserting their names in the songs of the Salii. This honour was first bestowed upon Augustus (Monum. Ancy.), and afterwards upon Germanicus (Tac. Ann. ii. 83); and when Verus died, his name was inserted in the song of the Salii by command of M. Antoninus. (Capitol. M. Ant. Phil. 21.)

At the conclusion of the festival the Salii were accustomed to partake of a splendid entertainment in the temple of Mars, which was proverbial for its excellence. (Suet. Claud. 33; Cic. ad Att. v. 9; Hor. Carm. i. 37.) The members of the college were elected by co-optation. We read of the dignities of praesul, vates, and magister in the collegium. (Capitol. Ibid. 4.)

The shape of the ancile is exhibited in the annexed cut, taken from an ancient gem in the Florentine cabinet, which illustrates the accounts of the ancient writers that its form was oval, but with the two sides receding inwards with an even curvature, and so as to make it broader at the ends than in the middle. The persons engaged in carrying these ancilia on their shoulders, suspended from a pole, are probably servants of the Salii; and the representation agrees exactly with the statement of Dionysius (ii. 70) πέλεκας ὑπ'ερται ἵρημενα ἀπὸ κανώνων καμίουσιν. At the top of the cut is represented one of the rods with which the Salii were accustomed to beat the shield in their dance, as already described. (Gruter, Inscr. p. ccclxiv. note 3.)

Tullus Hostilius established another collegium of Salii in fulfilment of a vow which he made in a war with the Sabines. These Salii were also twelve in number, chosen from the patricians, and appeared to have been dedicated to the service of Quirinus. They were called the Salii Collini, Agonales or Agonenses. (Liv. i. 27; Dionys. ii. 70, iii. 32; Varro, L. L. vi. 14.) Niebuhr (Hist. of Rome, vol. iii. p. 351) supposes, that the oldest and most illustrious college, the Palatine Salii, were chosen originally from the oldest tribe, the Ramnes, and the one instituted by Tullus Hostilius or the Quirinalian from the Turings alone: a third college for the Luceres was never established. (Compare Hartung, Die Religion der Römer, vol. ii. p. 163.)

SALI'NAE. 1003

SALINAE. (Αλαλ, ἄλσοφυγας), a salt-work. (Varro, de L. Lat. viii. 25, ed. Spengel.) Although the ancients were well acquainted with rock-salt (Herod. iv. 181—185; ἄλσος ὅρθωτος, i.e. "fossil salt," Arrian, Exped. Atar. iii. 4, pp. 161, 162, ed. Blan., and although they obtained salt likewise from certain inland lakes (Herod. vii. 30) and from natural springs or brine-pits (Cic Nat. Doer. ii. 53; Plin. H. N. xxxi. 7. s. 39—42), and found no small quantity on certain shores where it was concealed by the heat of the sun without human labour (ἄλσος αὐτόματος, Herod. iv. 53; Plin. l. c.), yet they obtained by far the greatest quantity by the management of works constructed on the sea-shore, where it was naturally adapted for the purpose by being so low and
SALINUM.

 flat as to be easily overflowed by the sea (maritimae aequae salinarum, Col. de Re Rust. ii. 2), or even to be a brackish marsh (Δάλβωκαττα, Strabo, iv. 1 § 6, vii. 4 § 7; Caesar, Bell. Civ. ii. 37). In order to aid the natural evaporation, shallow rectangular ponds (multifidi lacus) were dug, divided from one another by earthen walls. The sea-water was admitted through canals, which were opened for the purpose, and closed again by sluices. [CATARACTA.]

The water was more and more strongly impregnated with salt as it flowed from one pond to another. (Rutilii, Itin. i. 475—476. When reduced to brine (coacto humore), it was called by the Greeks Δάλβη, by the Latins salsago or salisago, and by the Spaniards mariná. (Plin. l.c.) In this state it was used by the Egyptians to pickle fish (Herod. ii. 77), and by the Romans to preserve olives, vinous must, and other victuals. (Rutilii, Itin. i. 475—476.) In this state it was also used by the Spaniards to pickle fish. (Cato, De Re Rust. 7, 98, 103; Hor. Sat. ii. 8. 53.) From mariá, which seems to be a corruption of Δάλβη, "brine," the victuals cured in it were called salsae maritales. (Plant. Poem. i. 2. 32, 39.) As the brine which was left in the ponds crystallized, a mass was formed with the sand of them, and therefore called salinator (Δαλβητρης), raked out the salt so that it lay in heaps (tumuli) upon the ground to drain. (Manilius, v. propa. fin.; Nicander, Alex. 518, 519.) In Attica (Steph. Byz.), in Britain (Ptol.), and elsewhere, several places, in consequence of the works established in them, obtained the name of Σαλίνα or Salinium.

Throughout the Roman empire the salt-works were commonly public property, and were let by the government to the highest bidder. The first salt-works are said to have been established by Ancus Marcus at Ostia. (Liv. i. 33; Plin. H. N. xxxi. 41.) The publicani who farmed these works, as they were accustomed to sell the salt to the people. At Rome the modius was according to this regulation sold for a sextans, while in other provinces the salt was sold at a very high price, whence the censors M. Livius and C. Claudius (c. c. 204) fixed the price at which those who took the lease of them were obliged to sell the salt to the people. (Liv. xxix. 37.) The salt-works in Italy and in the provinces were very numerous. (Plin. H. N. xxxi. 41.) The publicani who farmed these works appear to have sold the salt, one of the most necessary of all commodities, at a very high price, whence the censors M. Livius and C. Claudius (c. c. 204) fixed the price at which those who took the lease of them were obliged to sell the salt to the people. At Rome the modius was according to this regulation sold for a sextans, while in other parts of Italy the price was higher and varied. (Liv. xxix. 37.) The salt-works in Italy and in the provinces were very numerous: when in conquered countries however they were sometimes left in the possession of their former owners (persons or towns) who had to pay to Rome only a fixed rent, but most of them were farmed by the publicani. (Burmann, Vindicat. Pop. Rom. p. 90, &c.)

SALI\'NUM, dim. SALI\'LLUM, a salt-cellar. Among the poor a shell served for a salt-cellar (Hor. Sat. i. 3. 14; Schol. ad loc.). But all who were raised above poverty had one of silver, which descended from father to son (Hor. Carm. ii. 16. 12, 14), and was accompanied by a silver plate, which was used together with the salt-cellar in domestic sacrifices. (Pers. iii. 24, 25.)

These two articles of silver were alone compatible with the simplicity of Roman manners in the early times of the republic. (Plin. H. N. xxxiii. 12. s. 54; Val. Max. iv. 4. § 3; Catull. xxiii. 19.) The salt-cellar was no doubt placed in the middle of the table, to which it communicated a sacred character, the meal partaking of the nature of a sacrifice. [FOCUS; MENSAL.]

These circumstances, together with the religious reverence paid to salt and the habitual comparison of it to wit and vice, explain the metaphor by which the soul of a man is called his salilium. (Plaut. Trin. ii. 4. 90, 91.)

SALTATIO. [J. Y.]

SALTATIO (δραχής, δραχήστως), dancing

The dancing of the Greeks as well as of the Romans had very little in common with the exercise which goes by that name in modern times. It may be divided into two kinds, gymnastic and mimetic; that is, it was intended either to represent bodily activity, or to express by gestures, movements and attitudes certain ideas or feelings, and also single events or a series of events, as in the modern ballet. All these movements however were accompanied by music; but the terms δραχή and saltatio were used in so much wider a sense than our word dancing, that they were applied to designate gestures, even when the body did not move at all. (Ovid. Art. Am. i. 555, ii. 305; saltare solis oculis, Apul. Met. x. p. 251, ed. Bip.; comp. Grote, Hist. of Greece, vol. iv. p. 114.)

We find dancing prevalent among the Greeks from the earliest times. It is frequently mentioned in the Homeric poems; the suitors of Penelope delighted themselves with music and dancing (Od. i. 152, 421, xvii. 100). In Attica (Steph. Byz.), in Britain (Ptol.), and elsewhere, several places, in consequence of the works established in them, obtained the name of 'Αλαλ or Salinium.

Throughout the Roman empire the salt-works were commonly public property, and were let by the government to the highest bidder. The first salt-works are said to have been established by Ancus Marcus at Ostia. (Liv. i. 33; Plin. H. N. xxxi. 41.) The publicani who farmed these works were obliged to sell the salt to the people. (Liv. xxix. 37.) The salt-works in Italy and in the provinces were very numerous: when in conquered countries however they were sometimes left in the possession of their former owners (persons or towns) who had to pay to Rome only a fixed rent, but most of them were farmed by the publicani. (Burmann, Vindicat. Pop. Rom. p. 90, &c.)

The lively imagination and mimetic powers of the Greeks found abundant subjects for various kinds of dances, and accordingly the names of no less than 200 different dances have come down to us. (Meursius, Orchestr.; Athen. xiv. pp. 627—630; Pollux, iv. 95—111; Liban. Ἱππ. τῶν δρακ.) It would be inconsistent with the nature of this work to give a description of all that are known; only the most important can be mentioned, and such as will give some idea of the dancing of the ancients.

Dancing was originally closely connected with religion: Plato (Leg. vii. pp. 706, 709) thought that all dancing should be based on religion, as it was, he says, among the Egyptians. The dances of the Chorus at Sparta and in other Greek states were intimately connected with the worship of Apollo, as has been shown at length elsewhere [CHORUS; HYPERCHHEMA]; and in all the public festivals, which were so numerous among the Greeks, dancing formed a very prominent part. All the religious dances, with the exception of the Bacchic and the Corybantian, were very simple, and consisted of gentle movements of the body with various turnings and windings around the altar: such a dance was the γεραυος, which Theseus is said to have performed at Delos on his return from Crete. (Plut. Thea. 21.) The Dionysiac or Bacchic and the Corybantian were of a very different nature. In the former the life and adventures of the god were represented by mimetic dancing [DIONYSIA]: the dance called Βασκιά, by Lucian (de Salt. 79), was a Satyric dance and chiefly prevailed in Ionia and Pontus; the most illustrious men in the state danced in it, representing Titans, Corybantians, Satyrs, and husbandmen; and the spectators were so delighted with the exhibition, that they remained sitting the
SALTATIO.

whole day to witness it, forgetful of everything else. The Corybantian was of a very wild character: it was chiefly danced in Phrygia and in Crete; the dancers were armed, struck their swords against their shields, and displayed the most extravagant fury; it was accompanied chiefly by the flute. (Lucian, I. 8; Strab. x. p. 472; Plat. Crit. p. 54.) The preceding woodcut from the Museo Pio Clementino (vol. iv. pl. 2) is supposed to represent a Corybantian dance. Respecting the dances in the theatre, see CHORUS.

Dancing was applied to gymnastic purposes and to training for war, especially in the Doric states, and was believed to have contributed very much to the success of the Dorian in war, as it enabled them to perform their evolutions simultaneously and in order. Hence the poet Socrates (Athen. xiv. p. 629, l) says,

οἱ δὲ χοροὶ κάλλιστα θεῶν τιμῶσιν, ἢρετοι ἐν πολέμῳ.

There were various dances in early times, which served as a preparation for war: hence Homer (Il. xi. 49, xii. 77) calls the Hoplites πρύκλετα, a war-dance having been called πρύκλες by the Cretans. (Müller, Dor. iii. 12. § 10.) Of such dances the most celebrated was the Pyrrhic (Πυρρήχις), of which the πρύκλες was probably only another name: this Plato (Leg. vii. p. 815) takes as the representative of all war dances. The invention of this dance is placed in the mythical age, and is usually assigned to one Pyrrhicos, but most of the accounts agree in assigning it a Cretan or Spartan origin; though others refer it to Pyrrhus or Neo-promeus, the son of Achilles, apparently misled by the name, for it was undoubtedly of Doric origin. (Athen. xiv. p. 630, e; Strab. x. p. 466; Plat. Leg. p. 796; Lucian, I6, 9.) It was danced to the sound of the flute, and its time was very quick and light, as is shown by the name of the Pyrrhic foot (πυρρήχις), which must be connected with this dance: and from the same source came also the Proceleusmaticus (προκελευσματικός) or challenging foot. (Müll., Hist. of the Literat. of Greece, p. 161.) The Pyrrhic dance was performed in different ways at various times and in various countries, for it was by no means confined to the Doric states. Plato (Leg. vii. p. 815) describes it as representing by rapid movements of the body the way in which missiles and blows from weapons were avoided, and also the mode in which the enemy were attacked. In the non-Doric states it was probably not practised as a training for war, but only as a mimetic dance: thus we read of its being danced by women to entertain a company. (Xen. Anab. vi. 1. § 12.) It was also performed at Athens at the greater and lesser Panathenaea by Epehô, who were called Pyrrhichists (Πυρρηχίσται) and were trained at the expense of the Choragus. (Schol. ad Aristoph. Nub. 988; Lysias, &σολ.

SALTATIO. 1005

δωροδόκος, p. 698, Reiske.) In the mountainous parts of Thessaly and Macedon dances are performed at the present day by men armed with muskets and swords. (Dodwell, Tour through Greece, vol. ii. pp. 21, 22.)

The following woodcut, taken from Sir W. Hamilton’s vases (ed. Tischbein, vol. i. pl. 60), represents three Pyrrhichists, two of whom with shield and sword are engaged in the dance, while the third is standing with a sword. Above them is a female balancing herself on the head of one, and apparently in the act of performing a somerset; she no doubt is taking part in the dance, and performing a very artistic kind of περσίμπσις or tumbling, for the Greek performances of this kind surpass any thing we can imagine in modern times. Her danger is increased by the person below, who holds a sword pointing towards her. A female spectator sitting looks on astonished at the exhibition.

The Pyrrhic dance was introduced in the public games at Rome by Julius Caesar, when it was danced by the children of the leading men in Asia and Bithynia. (Suet. Jul. Cæs. 39.) It seems to have been much liked by the Romans; it was exhibited both by Caligula and Nero (Dion Cass. lv. 7; Suet. Ner. 13), and also frequently by Hadrian. (Spartian. Hadr. 19.) Athenaeus (xiv. p. 631, a) says that the Pyrrhic dance was still practised in his time (the third century a. d.) at Sparta, where it was danced by boys from the age of fifteen, but that in other places it had become a species of Dionysiac dance, in which the history of Dionysus was represented, and where the dancers instead of arms carried the thyrsus and torches.

Another important gymnastic dance was performed at the festival of γυναικομασία at Sparta in commemoration of the battle at Thyrea, where the chief object according to Müller (Dor. iv. 6. § 8) was to represent gymnastic exercises and dancing in intimate union: respecting the dance at this festival, see ΓΥΜΝΟΠΑΕΔΙΑ.

There were other dances, besides the Pyrrhic, in which the performers had arms, but these seem to have been entirely mimetic, and not practised with any view to training for war. Such was the Καρπαία peculiar to the Aenianians and Magnetes, which was performed by two armed men in the following manner: one lays down his arms, sews the ground, and ploughs with a yoke of oxen, frequently looking around as if afraid; then comes a robber, whom as soon as the other sees, he snatches up his arms and fights with him for the oxen. All
these movements are rhythmical, accompanied by the flute. At last the robber binds the man and drives away the oxen, but sometimes the husbandman conquers. (Xen. Anab. vi. 1 §§ 7, 9; Athen. i. pp. 15, 16, 16, 27; Maxim. Tyg. Diss. xxviii. 4.) Similar dances by persons with arms are mentioned by Xenophon on the same occasion. These dances were frequently performed at banquets for the entertainment of the guests (Athen. iv. p. 155, b.). At banquets likewise the κυβιττητάρες or tumblers were frequently introduced. These tumblers, in the course of their dance, flung themselves on their heads and alighted again on their feet (δέπνει οἱ κυβιττητάρες καὶ εἰσὶ ὅρθροι τὰ σκέλη περιφερεμένου κυβισταύς κύκλως, Plato, Symp. c. 16, p. 190). We read of κυβιττητήρας as early as the time of Homer. (II. xxviii. 695, Od. iv. 18.) They were also accustomed to make their somerset over knives or swords, which was called κυβιστάν εἰς μαχαίρες. (Plato, Euthyd. c. 55, p. 294; Xen. Mem. i. 3, § 9, Symp. ii. 14; Athen. iv. p. 129, 4; Pollux, iii. 134.) The way in which this feat was performed is described by Xenophon, who says (Symp. ii. 11) that a circle was made quite full of upright swords, and that the dancer εἰς ταῦτα ἴσοντας τε καὶ ἴσοντας ἕπειρα ἀκόντων; and it is well illustrated by the following cut taken from the Museo Borbonico, vol. vii. tav. 59. (Becker, Charikles, vol. i. p. 492, vol. ii. p. 287.) We learn from Tacitus ( Germ. 24) that the German youths also used to dance among swords and spears pointed at them.

Other kinds of dances were frequently performed at entertainments, in Rome as well as in Greece, by courtesans, many of which were of a very indecent and lascivious nature. (Macrobi. Sat. i. 10; Plaut. Stich. v. 2. 11.) The dancers seem to have frequently represented Bacchanales: many such dancers occur in the paintings found at Herculanenum and Pompeii in a variety of graceful attitudes. (See Museo Borbonico, vol. vii. tav. 34—40, vol. ix. tav. 17, vol. x. tav. 5, 6, 54.) Among the dances performed without arms one of the most important was the ὅμηρος, which was danced at Sparta by youths and maidens together; the youth danced first some movements suited to his age, and of a military nature; the maiden followed in measured steps and with feminine gestures. Lucian (de Salt. 12) says that it was similar to the dance performed at the Gymnopaedia. (Compare Müller, Dor. iv. 6. § 4.) Another common dance at Sparta was the Βιβασία (βιβασία), which was much practised by both men and women. The dance consisted in springing rapidly from the ground, and striking the feet behind: a feat of which a Spartan woman in Aristophanes (Lysistr. 28) prides herself (γυναικείαν μαχαιράς καὶ τοις γυναικαῖς δίστήγων). The number of successful strokes was counted, and the most skilful received prizes. We are told by a verse which has been preserved by Pollux (iv. 192), that a Laconian girl had danced the bibasis a thousand times, which was more than had ever been done before. (Müller, Dorians, iv. 6. § 8.)

In many of the Greek states the art of dancing was carried to great perfection by females, who were frequently engaged to add to the pleasures and enjoyment of men at their symposia. These dancers always belonged to the hetaeræ. Xenophon (Sympos. ix. 2—7) describes a mimetic dance which was represented at a symposium, where Socrates was present. It was performed by a maiden and a youth, belonging to a Syracusian, who is called the δραυτοδιδασκαλος, and represented the loves of Dionysus and Ariadne.

Respecting the dancers on the tight-rope see Funambulus.

Dancing was common among the Romans in ancient times in connection with religious festivals and rites, and was practiced according to Servius (ad Virg. Eel. v. 78), because the ancients thought that no part of the body should be free from the influence of religion. The dancers at the Salii, which were performed by men of patrician families, are spoken of elsewhere. [Salii.] Dionysius (vii. 72) mentions a dance with arms at the Ludi Magni, which, according to his usual plan of referring all old Roman usages to a Greek origin, he calls the Pyrrhic. There was another old Roman dance of a military nature, called Bellicrepae Salatia, which is said to be instituted by Romulus, after he had carried off the Sabine virgins, in order that a like misfortune might not befall his state. (Festus, s. c.) Dancing, however, was not performed by any Roman citizen except in connection with religion; and it is only in reference to such dancing that we are to understand the statements, that the ancient Romans did not consider dancing disgraceful, and that not only free-men, but the sons of senators and noble matrons practised it. (Quintil. Inst. Orat. i. 11. § 18; Macrobr. Sat. ii. 10.) In the later times of the republic we know that it was considered highly disgraceful for a Freeman to dance; Cicero reproaches Cato for calling Murena a dancer (saluator), and adds "nemo tene saltat salutaris, nisi forte insanus." (Pro Muren. 6; compare in Pison. 10.)

The mimetic dances of the Romans, which were carried to such perfection under the empire, are described under Pantomimus. (Meurinus, Orchestra; Bürette, de la Danse des Anciens; Krause, Gymnastik und Aegy. d. Held. p. 807, &c.)

SALVIA'NUM INTERDICTUM. [INTERDICTUM.]

SALUTATORES, the name given in the later times of the republic and under the empire to a class of men who obtained their living by visiting the houses of the wealthy early in the morning to pay their respects to them (salutare), and to accompany them when they went abroad. This arose from the visits which the clients were accustomed to pay to their patrons, and degenerated in later times into the above-mentioned practice. Such persons seem to have obtained a good living among the great number of wealthy and vain persons at
SAMBUCA.

Rome, who were gratified by this attention. (Merr- cennarius Sallutaris, Colum. Proef. 1.; Martial, x. 74; Becker, Gallus, vol. I. p. 146.) [SPORTULA.]

SAMBUCA (σαμβύκα, or σάμβυκα, Arcadius de Accent. p. 107), a harp. The preceding Latin and Greek names are with good reason represented by Bochart, Vossius, and other critics, to be the same with the Hebrew נֶטֶז (nates), which occurs in Daniel (iii. 5, 7, 10). The performances of sam- bucistriae (σαμβύκιστρια) were only known to the early Romans as luxuries brought over from Asia. (Plaut. Stidh. ii. 3. 57; Liv. xxxix. 6.) The Athenians considered them as an exotic refinement (Philémon, p. 370, ed. Meineke); and the Rhodian women who played on the harp at the marriage-fest of Caranus in Macedonia, clothed in very thin tunics, were introduced with a view to give to the entertainment the highest degree of splendour. Some Greek authors expressly attributed the inven- tion of this instrument to the Syrians or Pho- cicians. (Athen. iv. p. 175, d.) The opinion of those who ascribed it to the Lyric poet, Ibycus, can only authorize the conclusion, that he had the merit of inventing some modification of it, the instrument as improved by him being called ἵδείκων. (Athen. l.c.; Suidas, s. v. ἵδεικων: ἰδείκων; Σαμβύκα.) Strabo, moreover, represents σαμβύκα as a "bar- barous" name (x. 3 § 17).

The sambuca is several times mentioned in con- junction with the small triangular harp (πριγυμον), which it resembled in the principles of its con- struction, though it was much larger and more complicated. The trigonum, a representation of which from the Museum at Naples is given in the annexed woodcut, was held like the lyre in the hands of the performer (Spon, Misc. Erud. Ant. p. 21), whereas the harp was sometimes consid- erably higher than the stature of the performer, and was placed upon the ground. The harp of the Parthians and Trogodytae had only four strings. (Athen. xiv. p. 633, f.) Those which are painted on the walls of Egyptian tombs (see Denon, Wilkin- son, &c.) have from 4 to 38. One of them, taken from Bruce's travels, is here introduced. From the allusions to this instrument in Vitruvius (vi. 1) we find that the longest string was called the "prosambamomenum," the next " hypate," the shortest but one " paranete," and the shortest, which had consequently the highest tone, was called "nete." [See Musica, p. 775.] Under the Roman Emperors the harp appears to have come into more general use (Pers. v. 95; Spartan. Hadr. 26), and was played by men (σαμβύκιστρα) as well as women. (Athen. iv. p. 182, e.)

Sambuca was also the name of a military engine, used to scale the walls and towers of besieged cities. It was called by this name on account of its general resemblance to the form of the harp. Accordingly, we may conceive an idea of its con- struction by turning to the woodcut and supposing a mast or upright pole to be elevated in the place of the longest strings, and to have at its summit an apparatus of pulleys, from which ropes proceed in the direction of the top of the harp. We must suppose a strong ladder, 4 feet wide, and guarded at the sides with palisades, to occupy the place of the sounding-board, and to be capable of being lowered or raised at pleasure by means of the ropes and pulleys. At the siege of Syracuse Marcellus had engines of this description fixed upon vessels, which the rowers moved up to the walls so that the soldiers might enter the city by ascending the ladders. (Polyb. viii. 5; Plut. Mor. p. 558, ed. Steph.; Athen. xiv. p. 634, b; Onesandr. Strat. 42; Vitruv. x. 16 § 9; Festus, s. v. Sambuca; Athen. de Mach. ap. Math. Vet. p. 7.) When an inland city was beleaguered, the Sambuca was mounted upon wheels. (Bito, ap. Math. Vet. pp. 110, 111; Veget. iv. 21.)

SARCOPHAGUS. [GLADIATORS, p. 576, a.]

SANDALIUM (σανδάλιον or σανδάλας), a kind of shoe worn only by women. In the Homeric age however it was not confined to either sex, and consisted of a wooden sole fastened to the foot with thongs. (Hom. Hymn. in Merc. 79, 83, 139.) In later times the sandali um must be distinguished from the ςόδομα, which was a simple sole bound under the foot (Pollux, vii. 84, with Kühn's emendation), whereas the sandalium, also called βαιστία or βαινή, was a sole with a piece of leather covering the toes, so that it formed the transition from the ςόδομα to real shoes. The piece of leather under the toes was called γούς or γούν. (Aristoph. Lysistr. 390, with the Schol.; Hesych. s. v. Γοῦς; Pollux, vii. 81; Phot. Lex. p. 54, ed. Doeb.) The σανδάλια γούγα in Strabo (vi. p. 259) are however not sandalium without the γούν, but, as Becker (Charikles, ii. p. 367, &c.) justly remarks, sandalium which did not belong to one another, or did not form a pair, and one of which was larger or higher than the other. The γούν was frequently adorned with costly embroi- dery and gold (Cephasidor. ap. Poll. vii. 87; Clem. Alex. Paedag. ii. 11), and appears to have been one of the most luxurious articles of female dress. (Aelian, V. H. i. 18.) The small cover of the toes however was not sufficient to fasten the sandalium to the foot, wherefore thongs likewise beautifully adorned were attached to it. (Pollux, vii. 92.) Although sandalium, as we have stated, were in Greece and subsequently at Rome also worn by women only, yet there are traces that at least in the East they were also worn by men. (Herod. ii. 91; St. Mark, vi. 9.)

The Roman ladies, to whom this ornament of the foot was introduced from Greece, wore sandalium which appear to have been no less beautiful and costly than those worn by the Greeks and the Oriental nations. (Tarpilius, ap. Nov. v. 24; Terent. Eunuch. v. 7. 4.)

SANDAPILLA. [FUNUS, p. 559, a.]

SARCOPHAGUS. [FUNUS, p. 559, b.]
SATURA.

SATURACUM (a sorriendo, Varro, de L. Lat. v. 31, sarracis, scaelastis), a hoe, chiefly used in weeding gardens, cornfields, and vineyards. (Hor. Carm. i. 1. 11; Ovid. Met. xi. 36, Fast. i. 699, iv. 930; Plaut. Truc. ii. 21; Cato, de Re Rust. 10, Columella, x. 21; Pallad, I. 43.) It was also sometimes used to convey goods when sown (Columella, ii. 11), and in mountainous countries it served instead of a plough. (Plin. H. N. xviii. 19. a. 49.) Directions for using it to clear the surface of the ground (σκάλειον, Herod, ii. 14; scæalew, Schol. in Theorit. x. 14) are given by Palladius (de Re Rust. ii. 9).

SARISSA. [Exercitus, p. 488, a.]

SARRACUM, a kind of common cart or waggon, which was used by the country-people of Italy for conveying the produce of their fields, trees, and the like from one place to another. (Virg. x. 1; Juv, iii. 24.) Its name as well as the fact that it was used by several barbarous nations, shows that it was introduced from them into Italy. (Sidon. Epist. iv. 18; Amm. Marc. xxxi. 2.) That persons also sometimes rode in a sarracum, is clear from a passage of Cicero quoted by Quintilian (viii. 3. § 21), who even regards the word sarracum as low and vulgar. Capitolinus (Anton, Philos. 13) states, that during a plague the mortality at Rome was so great, that it was found necessary to carry the dead bodies out of the city upon the common sarracum. Several of the barbarous nations with which the Romans came in contact used these wagons also in war, and placed them around their camps as a fortification (Sisenna, op. Nom. iii. 33), and the Scythians used them in their wanderings, and spent almost their whole lives upon them with their wives and children, whence Ammianus compares such a caravan of sarracum with all that was conveyed upon them to a wandering city. The Romans appear to have used the sarracum in war, and Juvenal (v. 22) goes even so far as to apply it to the constellation of stars which was generally called plaustrum. (Scheffer, de Re Vitisal. ii. 31.)

SARTAGO (τήγαυον), was a sort of pan which was used in the Roman kitchens for a variety of purposes, such as roasting, melting fat or butter, cooking, &c. (Plin, H. N. xvi. 22; Juv. x. 63.) Frequently also dishes consisting of a variety of ingredients seem to have been prepared in such a sartago, as Persius (i. 70) speaks of a sartago loguendi, that is, of a mixture of proper and improper expressions. Some commentators on this passage, and perhaps with more justice, understand the sartago loguendi as a mode of speaking in which hissing sounds are employed, similar to the noise produced when meat is fried in a pan. [L. S.]

SATISDA'TIO. [Actio.]

SATURA, or in the softened form SATIRA, is the name of a species of poetry, which we call satire. In the history of Roman literature we have to distinguish two different kinds of satires, viz. the early saturn, and the later saturn which received its perfect development from the poet C. Lucilius (148—103 B.C.). Both species of poetry, however, are altogether peculiar to the Romans. The literal meaning of saturn, the root of which is sal, comes nearest to what the French call poeuvre, or to the Latin furvo, a mixture of all sorts of things. The name was accordingly applied by the Romans in many ways, but always to things consisting of various parts or ingredients, e. g. lance satura, an offering consisting of various fruits, such as were offered at harvest festivals and to Ceres (Acròn, ad Horat. Sat. i. 1; Diomedi. iii. p. 483, ed. Putsch); lex per saturam lata, a law which contained several distinct regulations at once. (Fest. s. v. Satur.) It would appear from the etymology of the word, that the ancient Roman saturn, of which we otherwise scarcely know anything, must have treated in one work on a variety of subjects just as they occurred to the writer, and perhaps, as was the case with the satires of Varro, half in prose and half in verse, or in verses of different metre. Another feature of the earliest saturn, as we learn from the celebrated passage in Livy (vii. 2), is that it was scenic, that is, an improvisatory and irregular kind of dramatic performance, of the same class as the Versus Fescennini. When Livius Andronicus introduced the regular drama at Rome, the people, on account of their fondness for such extempore jokes and railleries, still continued to keep up their former amusements, and it is not improbable that the exodia of later times were the old saturne merely under another name. [Exodia.]

Ennius and Pacuvius are mentioned as the first writers of satires, but we are entirely unable to judge whether their works were dramatic like the saturn of old, or whether they resembled the satires of Lucilius and Horace. At any rate, however, neither Ennius nor Pacuvius can have made any great improvement in this species of poetry, as Quintilian (x. 1. § 93) does not mention either of them, and describes C. Lucilius as the first great writer of satires. It is Lucilius who is universally regarded by the ancients as the inventor of the new kind of saturn, which resembled on the whole that species of poetry which is in modern times designated by the same name, and which was no longer scenic or dramatic. The character of this new satira was afterwards emphatically called character Lucilianus. (Varro, de Re Rust. iii. 2.) These new satires were written in hexameters, which metre was subsequently adopted by all the other satirists, as Horace, Persius, and Juvenal, who followed the path opened by Lucilius. Their character was essentially ethical or practical, and as the stage at Rome was not so free as at Athens, the satires of the former had a similar object to that of the ancient comedy at the latter place. The poets in their satires attacked not only the follies and vices of mankind in general, but also of such living and distinguished individuals as had any influence upon their contemporaries. Such a species of poetry must necessarily be subject to great modifications, arising partly from the character of the time in which the poet lives, and partly from the personal character and temperament of the poet himself, and it is from these circumstances that we have to explain the differences between the satires of Lucilius, Horace, Persius, and Juvenal.

After Lucilius had already by his own example established the artistic principles of satire, Terentius Varro in his youth wrote a kind of satires, which were neither like the old saturn nor like the satira of Lucilius. They consisted of a mixture of verse and prose, and of verses of different metres, but were not scenic like the old saturne. They were altogether of a peculiar character, and were therefore called satirae Varronianae, or Me-
SATURNALIA.

AS RELATED BY VARRO, IT WAS ATTRIBUTED TO THE WANDERING PELASGI, UPON THEIR FIRST SETTLEMENT IN ITALY, OF MEN, REARED AN ALTAR TO HIM, AS A DEITY, IN THE LOOSE GOWN, CALLED "ANCE OF HIS GUEST AND BENEFACTOR FROM THE ABODES OF MEN, WERE OCCUPIED WITH THE jobs of agriculture and the arts of civilized life. FALLING TOWARDS THE END OF DECEMBER, AT THE SEASON WHEN THE AGRICULTURAL LABOURS OF THE YEAR WERE FULLY COMPLETED, IT WAS CELEBRATED IN ANCIENT TIMES BY THE RUSTIC POPULATION AS A SORT OF JOYOUS HARVEST-HOME, AND IN EVERY AGE WAS VIEWED BY ALL CLASSES OF THE COMMUNITY AS A PERIOD OF ABSOLUTE RELAXATION AND UNRESTRAINED MERRIMENT. DURING ITS CONTINUANCE NO PUBLIC BUSINESS COULD BE TRANSACTED, THE LAW COURTS WERE CLOSED, THE SCHOOLS KEPT HOLIDAY, TO COMMENCE A WAR WOULD HAVE BEEN IMPIÓUS, TO PUNISH A MALFACTOR INVOLVED IN POLLUTION. (MACROB. SAT. I. 10, 16; MARTIAL, I. 86; Suet. AUG. 32; PLIN. EP. VIII. 7.) SPECIAL INDULGENCES WERE GRANTED TO THE SLAVES OF EACH DOMESTIC ESTABLISHMENT; THEY WERE RELIEVED FROM ALL ORDINARY TOILS, WERE PERMITTED TO WEAR THE "PILEUS THE BADGE OF FREEDOM, WERE GRANTED FULL FREEDOM OF SPEECH, PARTook OF A BANQUET ATTENDED IN THE CLOTHES OF THEIR MAJESTIC RUG, AND WERE WAITED UPON BY THEM AT TABLE. (MACROB. SAT. I. 7; DION CASS. LX. 19; HOR. SAT. II. 7, 5; MARTIAL, XI. 6, XIV. 1; ATHEN. XIV. 44.)

ALL RANKS DEVOTED THEMSELVES TO FEASTING AND MIRTH, PRESENTS WERE INTERCHANGED AMONG FRIENDS, CEREI OR WAX TAPERS BEING THE COMMON OFFERING OF THE MORE HUMBLE TO THEIR SUPERIORS, AND CROWDS THOROUGHS THE STREETS, SHOUTING "LO SATURNALIA" (THIS WAS TERMED "ELONARE SATURNALIA"), WHILE SACRIFICES WERE OFFERED WITH UNCOVERED HEAD, FROM A CONVINCING SIGHT THAT NO ILL-CONSCIOUS SOUL WOULD INTERRUPT THE RITES OF SUCH A HAPPY DAY. (CATULL. 14; SENECA, EP. 18; Suet. AUG. 75; MARTIAL, V. 18, 19, VI. 53, XIV. 1; PLIN. EP. IV. 9; MACROB. SAT. I. 8, 10; SERV. AD VIRG. AEN. III. 407.)

SATURNUS BEING AN ANCIENT NATIONAL GOD OF LATIUM, THE INSTITUTION OF THE SATURNALIA IS LOST IN THE MOST REMOTE ANTIQUITY. IN ONE LEGEND IT WAS AScribed TO JANUS, WHO, AFTER THE SUDDEN DISAPPEARANCE OF HIS GUEST AND BENEFICTOR FROM THE ABODES OF MEN, REARED AN ALTAR TO HIM, AS A DEITY, IN THE FORUM, AND ORDERED ANNUAL SACRIFICES IN ANOTHER, AS RELATED BY VARRO, IT WAS ATTRADED TO THE WANDERING PELASGIS, UPON THEIR FIRST SETTLEMENT IN ITALY, AND HERCULES, ON HIS RETURN FROM SPAIN, WAS SAI D TO HAVE REFORMED THE WORSHIP, AND ABOLISHED THE PRACTICE OF IMOLLATING HUMAN VICTIMS; WHILE A THIRD TRADITION REPRESENTED CERTAIN FOLLOWERS OF THE LATER NAMEd HERO, WHO HAD LEFT BEHIND ON HIS RETURN TO GREECE, AS THE AUTHORS OF THE SATURNALIA. (MACROB. SAT. I. 7) RECORDS APPROACHING MORE NEARLY TO HISTORY REFERRED THE ERECTION OF TEMPLES AND ALTARS, AND THE FIRST CELEBRATION OF THE FESTIVAL, TO EPOCHS COMPARETIVELY RECENT, TO THE KINGDOM OF TATIUS (DIONYS. II. 50), OF TULLUS HOSTILIUS (DIONYS. III. 32; MACROB. SAT. I. 8), OF TARQUINIUS SUPERBUS (DIONYS. I. 1; MACROB. I. 23), TO THE CONSULSHIP OF A. SEMPRONIUS AND M. MINUCIUS, B.C. 497, OR TO THAT OF T. LARCIUS IN THE PRECEDING YEAR. (DIONYS. I. 1; LIV. II. 21.) THE CONFUSING STATEMENTS MAY BE EASILY RECONCILED, BY SUPPOSING THAT THE APPOINTED CEREMONIES WERE IN THESE RUBE AGES NEGLECTED FROM TIME TO TIME, OR CORRUPTED, AND AGAIN AT DIFFERENT PERIODS REVIVED, PURIFIED, EXTENDED, AND PERFORMED WITH FRESH SPLENDOUR AND GREATER REGULARITY. (COMPARE LIV. XXIII. 1. SUB FIN.)

SCALAE (ȘILMĂ), A LADDER. THE GENERAL CON-
SCALPTURA.

struction and use of ladders was the same among the ancients as in modern times, and therefore requires no explanation, with the exception of those used in besieging a fortified place and in making an assault upon it. The ladders were erected against the walls (admovever, ponerer, apponerer, or erigere scalas), and the besiegers ascended them under showers of darts and stones thrown upon them by the besieged. (Sallust. Jug. 6, 64; Caes. de Bell. Civ. i. 28, 63; Tacit. Hist. iv. 29, &c.; Veget. de Re Milit. iv. 21; Polyb. ix. 18.) Some of these ladders were formed like our common ones; others consisted of several parts (αλκάωρες πτέρυγες) which when put together so as to form one large ladder, and were taken to pieces when they were not used. Sometimes also they were made of ropes or leather with large iron hooks at the top, by which they were fastened to the walls to be ascended. The ladders made wholly of leather consisted of tubes sowed up air-tight, and when they were wanted, these tubes were filled with air. (Heron, c. 2.) Heron also mentions a ladder which was constructed in such a manner, that it might be erected with a man standing upon the top, whose object was to observe what was going on in the besieged town. (Heron, c. 12.) Others again were provided at the top with a small bridge, which might be let down upon the wall. (Heron, 19.) In ships small ladders or steps were likewise used for the purpose of ascending into or descending from them. (Virg. Aen. x. 654; Heron, c. 11.)

In the houses of the Romans the name Scalae was applied to the stairs or staircases, leading from the lower to the upper parts of a house. The steps were either of wood or stone, and, as in modern times, fixed on one side in the wall. (Vitruv. ix. 1. § 7, &c.) It appears that the staircases in Roman houses were as dark as those of old houses in modern times, for it is very often mentioned, that a person concealed himself in scalis or in scalarum tenensis (Cic. pro Mil. 15, Philip. ii. 9; Horat. Epist. ii. 2. 15), and passages like these need not be interpreted, as some commentators have done, by the supposition that in scalis is the same as sub scalaris. The Roman houses had two kinds of staircases: the one were the common scalae, which were open on one side; the others were called scalae Graece or αλκάωρες, which were closed on both sides. Massaurius Sabinus (ap. Gell. x. 15. § 29) states, that the Flaminica was not allowed to ascend higher than three steps on a common scalaib. The Flaminica was not allowed to ascend higher than three steps on a common scalaib. The Flaminica was not allowed to ascend higher than three steps on a common scala, but that she might make use of a climax like every other person, as here she was concealed when going up. (Serr. ad Aen. iv. 664.)

SCALPTURA or SCULPTURA. There are two different forms of this word, viz. sculpor, sculptra, and sculpfo, sculptura, (in Greek γλάφω and γλαφη), and there is much doubt respecting their precise meaning. The original meaning, common to them, is undoubtedly the cutting figures out of a solid material. The general opinion is, that both sculpfo and sculpfo, with their derivatives, signify the same thing, only different in degree of perfection, so that sculptura would signify a coarse or rude, sculptura an elaborate and perfect engraving. This opinion is chiefly based upon the following passages: Horat. Sat. ii. 3. 22; Ovid, Met. x. 248; Vitruv. iv. 6. (Compare the commentators on Suet. Galb. 10.) Others again believe that sculpfo (γλαφη) signifies to cut figures into the material (intagllos), and sculpfo (γλαφη) to produce raised figures, as in cameo. But it is very doubtful whether the ancients themselves made or observed such a distinction. From the passages in which the words occur, both in Greek and Latin writers, it seems that, in their widest sense, they were used, almost indifferently, for what we call sculpture, in its various forms, in wood, marble, ivory, or other materials, more particularly for reliefs, for carving, that is, the execution of small works by cutting, and for engraving precious stones; but, of these senses, the last was the most specific and usual; the first, in which modern writers use the word sculpture, was the most unusual. [STATUARIA.] (See the Greek and Latin Lexicons.)

It may be expedient, however, in accordance with the above distinction to divide the art into two departments: 1. the art of cutting figures into the material (intagllos), which was chiefly applied to producing seals and matrices for the mints; and 2. the art of producing raised figures (cameos), which served for the most part as ornaments.

The former of these two branches was much more extensively practised among the ancients than in modern times, which arose chiefly from the general custom of every free man wearing a seal-ring. [ANNUles.] The first engravings in metal or stone, which served as seals, were simple and rude signs without any meaning, sometimes merely consisting of a round or square hole. (Meyer, Kunstgeschichte, i. 10.) In the second stage of the art, certain symbolic or conventional forms, as in the worship of the gods, were introduced, until at last, about the age of Pheidias and Praxiteles, this, like the other branches of the fine arts, had completed its free and unrestrained career of development, and was carried to such a degree of perfection that, in the beauty of design as well as of execution, the works of the ancients remain unrivalled down to the present day. But few of the names of the artists, who excelled in this art, have come down to us. Some intagllos, as well as cameos, have a name engraved upon them, but it is in many cases more probable that such are the names of the owners than of the artists. The first artist who is mentioned as an engraver of stones is Theodorus, the son of Telecleus, the Samian, who engraved the stone in the ring of Polycrates. (Herod. iii. 41.) The most celebrated among them was Pyrgoteles, who engraved the seal-rings for Alexander the Great. (Winckelmann, vi. p. 107, &c.; see the articles in the Dict. of Biog.)

The art continued for a long time after Pyrgoteles in a very high state of perfection, and it appears to have been applied about this period to ornamental works. Both several of the successors of Alexander and other wealthy persons adopted the custom, which was and is still very prevalent in the East, of adorning their gold and silver vessels, cups, candelabras, and the like, with precious stones on which raised figures (cameos) were worked. (Ath. xi. p. 781; Cic. c. Verr. ii. 4. 27, &c.) Among the same class of ornamental works we may reckon such vessels and paterae as consisted of one stone, upon which there was in many cases a whole series of raised figures of the most exquisite workmanship. (Appian, Mithridat. 115; Cic. l.c.; Plin. H. N. xxxvii. 3.) The art was in a particularly flourishing state at Rome under Augustus and his successors, in the hands of Dioscu-
rises and other artists, many of whose works are still preserved. Respecting the various precious and other stones which the ancient artists used in these works, see Müller, *Archäol.* § 313.

As regards the technical part of the art of working in precious stones, we only know the following particulars. The stone was first polished by the *politor*, and received either a plane or convex surface; the latter was especially preferred, when the stone was intended to serve as a seal. The *scalptor* himself used iron or steel instruments moistened with oil, and sometimes also a diamond framed in iron. These metal instruments were either sharp and pointed, or round. The ancients understood the use of diamond dust in this work. (Plin. *H. N.* xxvii. 76; Müller, *Arch.* § 314. 2.)

The stones which were destined to be framed in rings, as well as those which were to be inlaid in gold or silver vessels, then passed from the hands of the *scalptor* into those of the goldsmith (*annularius, compositor*).

Numerous specimens of intaglios and cameos are still preserved in the various museums of Europe, and are described in numerous works. For the literature of the subject, and an account of these gems and their engravers, see Winckelmann, *Arch’dol.* § 315, &c.; and Raoul-Rochette, *Lettre à M. Sobrm*, 2d ed. [L. S.]

**SCALPTURATUM.** [Domus, p. 431, a.]

**SCAMNUM, dim. SCABELLUM,** a step which was placed before the beds of the ancients in order to assist persons in getting into them, as some were very high: others which were lower required also lower steps, which were called *scabella*. (Varro, *de Ling. Lat.* v. 168; Isidor. *xx.* 11; Ovid, *Ars Am.* ii. 211.) A *scannum* was sometimes also used as a foot-stool. (Ovid, *Ars Am.* i. 162.) A *scannum* extended in length becomes a bench, and in this sense the word is frequently used. The early Romans, before couches were introduced among them, used to sit upon benches (*scanna*) before the hearth when they took their meals. (Ovid, *Fast.* vi. 305.) The benches in ships were also sometimes called *scanna*. In the technical language of the agrimensores a *scannum* was a field which was broader than it was long, and one that was longer than broad was called *striga*. (Var. *Arch.* i. 67; Rea Agr, pp. 46, 128, 199, ed. Goes.)

In the language of the Roman pleasantry a *scannum* was a large clod of earth which had not been broken by the plough. (Colum. *ii.* 2.) [L. S.]

**SCAPHA.** [Narvis, p. 786, a.]

**SCAPHEPHORIA.** [HYDRIAPHORIA.]

**SCENA.** [THEATRUM.]

**SCEPTRUM.** A latinsised form of the Greek *σκηπτρος*, which originally denoted a simple staff or walking-stick. (Horn. *i.* 246, ii. 46.) It was enriched with gems (Ovid. *Met.* iii. 264), and made of precious metals or of ivory (i. 174, *Petr.* vi. 38.). The annexed woodcut, taken from one of Sir Win. Hamilton’s fictile vases, and representing Aeneas and carrying off his father Anchises, who holds the sceptre in his right hand, shows its form as worn by kings. The ivory sceptre (*eburneus scipio*, Val. *Max.* iv. 4, § 5) of the kings of Rome, which descended to the consuls, was surmounted by an eagle. (Virg. *Aen.* xi. 239; Serv. *ad loc.*; *Juv.* x. 43; Isid. *Orig.* xvii. 2.) [Insigne:] Jupiter and Juno, as sovereigns of the gods, were represented with a sceptre. (Ovid, *i.* 2.) [J. Y.]

**SCHOENUS** (* strcpyos, stylos*), literally, a rope of rushes, an Egyptian and Persian itinerary and land measure (Herod. i. 66). Its length is stated by Herodotus (ii. 6, 9) at 60 stadia, or 2 parasangs; by Eratosthenes at 40 stadium, and by others at 32 or 30. (Plin. *H. N.* v. 9. s. 10, xii. 14. s. 30.)

**SCHOLA.** [Balnrae, p. 189, b.]

The original wooden staff, in consequence of its application to the uses now described, received a variety of ornaments or emblems. It early became a truncheon, pierced with golden or silver studs. (II. i. 246, ii. 46.) It was enriched with gems (Ovid. *Met.* iii. 264), and made of precious metals or of ivory (i. 174, *Petr.* vi. 38.). The annexed woodcut, taken from one of Sir Win. Hamilton’s fictile vases, and representing Aeneas following Ascanius and carrying off his father Anchises, who holds the sceptre in his right hand, shows its form as worn by kings. The ivory sceptre (*eburneus scipio*, Val. *Max.* iv. 4, § 5) of the kings of Rome, which descended to the consuls, was surmounted by an eagle. (Virg. *Aen.* xi. 239; Serv. *ad loc.*; *Juv.* x. 43; Isid. *Orig.* xvii. 2.) [Insigne:] Jupiter and Juno, as sovereigns of the gods, were represented with a sceptre. (Ovid, *i.* 2.) [J. Y.]

**SCHOENUS** (*strcpyos, stylos*), literally, a rope of rushes, an Egyptian and Persian itinerary and land measure (Herod. i. 66). Its length is stated by Herodotus (ii. 6, 9) at 60 stadia, or 2 parasangs; by Eratosthenes at 40 stadium, and by others at 32 or 30. (Plin. *H. N.* v. 9. s. 10, xii. 14. s. 30.)

Strabo and Pliny both state that the schoenus varied in different parts of Egypt and Persia (Strabo, p. 603; Plin. *H. N.* vi. 26. a. 30; comp Athen. iii. p. 122, a.) [P. S.]

**SCHOLA.** [Balnrae, p. 189, b.]

3 T 2
the persons who sent their cattle to graze on such public pastures had to pay a certain tax or duty to the number and quality of the cattle which they kept upon them. To how much this duty amounted is nowhere stated, but the revenue which the state derived from it appears to have been very considerable. The publicani had to keep the lists of the persons who sent their cattle upon the public pastures, together with the number and quality of the cattle. From this registering (scribere) the duty itself was called scriptura, the public pasture land ager scripturarius (Fest. s. v. Scripturarius ager), and the publicani or their agents who raised the tax, scripturarit. Cattle, not registered by the publicani, were called pecudes inscriptae, and those who sent such cattle upon the public pasture were punished according to the lex censoria (Varro, de Re Rust. ii. 1), and the cattle was taken by the publicani and forfeited. (Plaut. Trinul. l. 2., &c.) The lex Thoria (Appian, de Bell. Civ. i. 27; Cic. Brut. 36) did away with the scriptura in Italy, where the public pastures were very numerous and extensive, especially in Apulia (Varro, de Re Rust. l. c.; Liv. xxxix. 29), and the lands themselves were now sold or distributed. In the provinces, where the public pastures were also let out in the same manner (Cic. c. Verr. ii. 2, 3, pro Leg. Man. 6, ad Fam. xii. 65; Plin. H. N. xix. 15), the practice continued until the time of the empire; but afterwards the scriptura is no longer mentioned. (Compare Niebuhr, Hist. of Rome, vol. iii. p. 15, &c.; Burmann, Vett. Pop. Rom. c. 4.)

SCRIIPULUM, or more properly SCRIPTUM or SCRIPTUM (sicutas), the smallest denomination of weight among the Romans. It was the 24th part of the uncia, or the 288th of the libra, and therefore about 18 grains English, which is the average weight of the scrupular aureus still in existence. (Avrum.) As a square measure, it was the smallest division of the jugerum, which contained 288 scrupula. (Jugurrum.) Pliny (H. N. ii. 7) uses the word to denote small divisions of a degree. It was in fact to be applicable, according to the use of the as and its parts, to the 288th part of any unit.

Though the scrupulum was the smallest weight in common use, we find divisions of it sometimes mentioned, as the obolus = the 18th part of a scruple, the semibolus = the 9th part of an obolus, and the siliqua = the 18th part of an obolus, which is thus shown to have been originally the weight of a certain number of seeds. (Priscian, de Pont. v. 6—13:—

"Semioboli duplum est obolus, quem pondere duplo"

Grammar vacant, scripulum nostri dixere priores. Semina sex aliis siliquis lattiantia curvis Attribuunt scripula, lentives grana bis octo, Aut totidem spelas numerant, triaevae lupinos Bis duo.")

[SCULPTURA. [SCULPTURA.]

SCULTICA. [FLAGRUM.]

SCUTUM (Supes), the Roman shield, worn by the heavy-armed infantry, instead of being round like the Greek CLEPUS, was adapted to the form of the human body, by being made either oval or of the shape of a door (Σφα) which it also resembled in being made of wood or wicker-work, and from which consequently its Greek name was derived. Two of its forms are shown in the woodcut at p. 711. That which is here exhibited is also of frequent occurrence, and is given on the same authority; in this case the shield is curved...
SCYTALE.

so as in part to encircle the body. The terms eclipes and scutum are often confounded; but that they properly denoted different kinds of shields is manifest from the passages of several ancient writers. (Liv. viii. 8; Plut. Rom. 21; Dio. Eclog. xxiii. 3.) In like manner Plutarch distinguishes the Roman scutum from the Greek hopla in his life of T. Flavius.

SCYTALE (σκυταλή) is the name applied to a secret mode of writing by which the Spartan ephors communicated with their kings and generals when abroad. (Plut. Lycurg. 19; Schol. ad Thucyd. l. 131; Suidas, s. v.) When a king or general

minius (p. 688, ed. Steph.) In Eph. vi. 16 St. Paul uses the term scutum rather than hopla or askos, because he is describing the equipment of a Roman soldier. These Roman shields are called scutum longa. (Virg. Aen. viii. 662; Ovid. Fast. vi. 335; scutum exopistes, Joseph. Ant. Jud. vii. § 2.) Polybius (vi. 21) says their dimensions were 4 feet by 2 1/2. The shield was held on the left arm by a handle, and covered the left shoulder. [Comp. EXERCITUS, p. 496, b.] [J. Y.]

SECRETARIUM. [AUDITORIUM.]

SECTIO. 1013

left Sparta, the ephors gave to him a staff of a definite length and thickness, and retained for themselves another of precisely the same size. When they had any communication to make to him, they cut the material upon which they intended to write into the shape of a narrow ribbon, wound it round their staff, and then wrote upon it the message which they had to send to him. When the strip of writing material was taken from the staff, nothing but single or broken letters appeared, and in this state the strip was sent to the general, who after having wound it around his staff, was able to read the communication. This rude and imperfect mode of sending a secret message must have come down from early times, although no instance of it is recorded previous to the time of Pausanias. (Corn. Nep. Pass. 3.) In later times, the Spartans used the scytale sometimes also as a medium through which they sent their commands to subject and allied towns. (Xenoph. Hell. v. 2 § 37.) [L. S.]

SCYTHAE (Σκύθαι). [DEMONIL.]

SECE/SPITA, an instrument used by the Roman priests in killing the victims at sacrifices. (Suet. Tib. 25.) According to the definition of Antistius Labeo, preserved by Festus (p. 348, ed. Müller) and Servius (ad Virg. Aen. iv. 262), it was a long iron knife (cultor) with an ivory handle, used by the Flamines, Flaminiæ Virgines, and Pontifices. Paulus, however, in his epitome of Festus (p. 336) says that some think it to be an axe (secutor), others a dolabra, and others again a knife (cultor). On Roman coins representing sacrificial emblems we see an axe, which modern writers call a secespita, though we do not know on what authority, except the doubtful statement of Paulus. See the annexed coin of the Sulpicia Gens, the obverse of which is supposed to represent a cultor, a simpulum, and a secespita.

The shield was held on the left arm by a handle, and covered the left shoulder. (Plut. Phoc. vii. 2.) The shield was a long iron knife (cater) with an ivory handle, and was used for purposes of self-defense, and also as a weapon to be used in attack. (Paus. xi. 13. 4; Plut. Phoc. vii. 2.) In later times, the Spartans used the scytale sometimes also as a medium through which they sent their commands to subject and allied towns. (Xenoph. Hell. v. 2 § 37.) [L. S.]

When a king or general
was sold in this way, and the Sector acquired the hereditatis petitio. [PRAEDA.] [G. L.]

SECTOR. [Sectio.]
SeCTORIUM INTERDICTUM. [INTERDICTO; S. S.]

SECURITAS, SECURICULA (ξίφος, πε-πελεκνεας), an axe or hatchet. The axe was either made with a single edge, or with a blade or head on each side of the haft, the latter kind being denominated bipennis (πελεκνεας διπωτός, or ἰμφωτό-μας, Agathias, Hist. ii. 5. pp. 73, 74). As the axe was not only an instrument of constant use in the hands of the carpenter and the husbandman, but was moreover one of the earliest weapons of attack (Hom. H. xv. 711 ; Suet. Gallia, 18), a constituent portion of the Roman fasces, and a part of the apparatus when animals were slain in sacrifice, we find it continually recurring under a great variety of forms upon coins, gems, and bas-reliefs. In the woodcut to the article SCEPTRUM, the young Ascanius holds a battle-ax in his hand. Also real axe-heads, both of stone and metal, are to be seen in many collections of antiquities. Besides being made of bronze and iron, and more rarely of silver (Virg. Aen. v. 307 ; Wilkinson, Man. and Cust. of Egypt, vol. i. p. 324), axe-heads have from the earliest times and among all nations been made of stone. They are often found in sepulchral tumuli, and are arranged in our museums together with chisels, both of stone and of bronze, under the name of celtes [DOLABRA].

The prevalent use of the axe on the field of battle was generally characteristic of the Asiatic nations (Curt. iii. 4), whose troops are therefore called securigenus catervae. (Val. Place. Argon. v. 138.) As usual, we find the Asiatic custom propagating itself over the north of Europe. The bipennis and the spear were the chief weapons of the Franks. (Agathias, l. c.) [J. Y.]

SEQUITORES. [GLADIATORES, p. 576, a.]
SEISACHTELIA (σεισακτηλία), a disburdening ordinance, was the first and preliminary step in the legislation of Solon. (Plut. Sol. 15 ; Diog. Laërt. i. 45.) The real nature of this measure was a subject of doubt even among the ancients themselves, for while some state that Solon thereby cancelled all debts, others describe it as a mere re-assignment of the rate of interest, and if this was, as it appears, retrospective, it would naturally in many cases wipe off a considerable part of the debt. The second part of the measure consisted in lowering the standard of the silver coinage, that is, Solon made 73 old drachmas to be worth 100 new ones; so that the debtor, in paying off his debt, gained rather more than one fourth. Böckh (Publ. Econ. p. 16) supposes that it was Solon's intention to lower the standard of the coinage only by one fourth, that is, to make 75 old drachmas equal to 100 new ones, but that the new coin proved to be lighter than he had expected. The third part consisted in the release of mortgaged lands from their incumbrances and the restoration of them to their owners as full property. How this was effected is not clear. Lastly, Solon abolished the law which gave to the creditor a right to the person of his insolvent debtor, and he restored to their full liberty those who had been enslaved for debt. For further information on this measure, see Dict. of Biogr. art. Solon.

This great measure, when carried into effect, gave general satisfaction, for it conferred the greatest benefits upon the poor, without depriving the rich of too much, and the Athenians poured down their thankfulness by a public sacrifice, which they called σεισακτηλία, and by appointing Solon to legislate for them with unlimited power. (Plut. Sol. 16 ; compare Suidas, Heav. Etym. Mag. s. v. ; Cic. de Re Publ. ii. 34 ; Wachsmuth, Hellen. Alt. vol. i. p. 472.) [L. S.]

SELIQUASTRUM. [SELLA, No. IV.]
SELLA. The general term for a seat or chair of any description. The varieties most deserving of notice are:—

I. Sella Curulis, the chair of state. Curulis is derived by the ancient writers from currus (Aul. Gell. iii. 18 ; Festus, s. v. Curules; Servius, ad Virg. Aen. xii. 334 ; Isidor. xx. 11. § 11); but it is more probably connected with curvus. The sella curulis is said to have been used at Rome from a very remote period as an emblem of kingly power (hence curuli regia sella adorna, Virg. i. 20), having been imported, along with various other insignia of royalty, from Etruria (Liv. i. 8), according to one account by Tullus Hostilius (Macrob. Silv. i. 6); according to another account by Tausonius (Flor. i. 5); while Silius names Verulambia, a city from which it was immediately derived (viii. 487). Under the republic the right of sitting upon this chair belonged to the consuls, praetors, curule aediles, and censors (Liv. ii. 54, vii. 1, ix. 46, x. 7, x. 45 ; Aul. Gell. vi. 9, &c.); to the Flamen Dialis (Liv. ii. 20, xxvii. 8) [FLAMEN]; to the dictator, and to those whom he deputed to act under himself, as the magister equum, since he might be said to comprehend all magistracies within himself. (Dion Cass. xiii. 40 ; Liv. iii. 31 ; Festus, s. v. Sellae curulis.) After the downfall of the constitution it was assigned to the emperors also, or to their statues in their absence (Tactit. Ann. xx. 29, Hist. ii. 59 ; Servius, l. c.) to the Augustales (Tactit. Ann. ii. 63), and, perhaps, to the praefectus urbi. (Spanheim, de Preest. et Usu Numism. x. 3. § 1.) It was displayed upon all great public occasions, especially in the circus and theatre (Liv. ii. 31; Suet. Octav. 43 ; Dion Cass. lviii. 4), sometimes, even after the death of the person to whom it belonged, a mark of special honour, bestowed on Marcellus, Germanicus, and Pertinax (Dion Cass. liii. 30, lxxiv. 4 ; Tactit. Ann. ii. 83, and Comm. of Lips.; Spanheim, x. 2 § 1); and it was the seat of the praetor when he administered justice. (Cic. Verr. ii. 38; Val. Max. iii. 5 § 1; Tactit. Ann. i. 75; Martial, xi. 98. 18.)

In the provinces it was assumed by inferior magistrates, when they exercised proconsular or propraetorian authority, as we infer from its appearing along with fasces on a coin of the Gems Papia, struck at Nemi in Bithynia, and bearing the name AVAOC nOVMiOC TAMIAC. We find it occasionally exhibited on the medals of foreign monarchs likewise, on those of Ariobarzanes II. of Cappadocia, for it was the practice of the Romans to present a curule chair, an ivory sceptre, a toga praetexta, and such like ornaments, as tokens of respect and confidence to those rulers whose friendship they desired to cultivate. (Liv. xxx. 11, xliii. 14; Polyb. v. Econ. Leg. cxxi.; Cic. ad Fam. xv. 2; Spanheim, l. c. x. 4.)
The sella curulis appears from the first to have been ornamented with ivory, and this is commonly represented upon the denarii of the Roman families, is given in p. 520. In the following cut are represented two pair of bronze legs, belonging to sellae curules, preserved in the museum at Naples (Museo Borbonico, vol. vi. tav. 29); and a sella curulis, copied from the Vatican collection.

**SELLA.**

The form of the sella curulis, as it is commonly represented upon the denarii of the Roman families, is given in p. 520. In the following cut are represented two pair of bronze legs, belonging to sellae curules, preserved in the museum at Naples (Museo Borbonico, vol. vi. tav. 29); and a sella curulis, copied from the Vatican collection.

**II. BISELLIUM.** The word is found in no classical author except Varro (L. L. v. 128, ed. Müller), according to whom it means a seat large enough to contain two persons. We learn from various inscriptions that the right of using a seat of this kind, upon public occasions, was granted as a mark of honour to distinguished persons by the magistrates and people in provincial towns. There are examples of this in an inscription found at Pisa, which called forth the long learned, rambling dissertation of Chimentelli (Graev. Thea. Antiq. Rom. vol. vii. p. 2030), and in two others found at Pompeii. (Orell. Inscr. n. 4048, 4044.) In another inscription we have BISSELLIUS HONOR (Orell. 4043); in another (Orell. 4055), containing the roll of an incorporation of carpenters, one of the office-bearers is styled COLLEGI BISELLARIUS. (Compare Orell. 4046, 4047.) Two bronze bisellia were discovered at Pompeii, and thus all uncertainty with regard to the form of the seat has been removed. One of these is engraved above. (Mus. Borbon. vol. ii. tav. 31.)

**III. SELLA GESTATORIA** (Suet. Ner. 26, Vitell. 16; Ann. Marc. xxix. 2) or FERTORIA (Caecilius Aurelian. i. 5, ii. 1), a sedan used both in town and country (Tacit. Ann. xiv. 4; Suet. Claud. 25), by men (Tacit. Hist. i. 35, iii. 85; Juven. vii. 141; Martial. ix. 23), as well as by women. (Tacit. Ann. xiv. 4; Juv. i. 124, vi. 532; hence nauicetris sella, Suet. Otho. 6.) It is expressly distinguished from the lectica (Suet. Claud. 25; Martial. x. 10, xi. 98; Senec. Brev. vit. 12), a portable bed or sofa, in which the person carried what the difference consisted it is not easy to determine. [CATHEDRA.] The sella was sometimes entirely open, as we infer from the account given by Tacitus of the death of Galba (Hist. i. 83, &c.), but more frequently shut in. (Juven. i. 120; Suet. Ner. 26, Vitell. 16, Otho. 6.) Dion Cassius (ix. 2) pretends that Claudius first employed the covered sella, but in this he is contradicted by Suetonius (Octav. 53), and by himself (xlvi. 25, lv. 43). It appears, however, not to have been introduced until long after the lectica was common, since we scarcely, if ever, find any allusion to it until the period of the empire. The sellae were made sometimes of plain leather, and sometimes ornamented with bone, ivory, silver (Lamprid. Elagab. 4), or gold (Claud. Honor. Cons. iv. 583), according to the rank or fortune of the proprietor. They were furnished with a pillow to support the head and neck (cervical, Juv. vi. 532, and Schol.), when made roomy the epithet laxa was applied (Senec. de Const. 14), when smaller than usual they were termed sellulae (Tacit. Hist. iii. 85); the motion was so easy that one might study without inconvenience (Plin. Ep. iii. 5), while at the same time it afforded healthful exercise. (Senec. Brev. vit. 12; Galen. de Tuend. Vol. vi. 4; Caecilius Aurelian. l. c.)

IV. SELLA of different kinds are mentioned incidentally in ancient writers, accompanied by epithets which serve to point out generally the purposes for which they were intended. Thus we read of sellae balneares, sellae tonsoriae, sellae obstetriciae, sellae familiariae v. pertusae, and many others. Both Varro (L. L. v. 128) and Festus (s. v.) have preserved the word sediquastrum. The former classes it along with sedes, sedilo, soletum, sellae, the latter calls them" sedilia antiqui genus," and Arnobius includes them among common articles of furniture. No hint, however, is given by any of these authorities which could lead us to
Of chairs in ordinary use for domestic purposes, a great variety, many displaying great taste, have been discovered in excavations or are seen represented in ancient frescoes. The first cut annexed represents a bronze one from the Museum at Naples (Mus. Borb. vol. vi. tav. 29): the second, two chairs, of which the one on the right hand is in the Vatican and the other is taken from a painting at Pompeii. (Mus. Borb. vol. xii. tav. 3.) A chair of a very beautiful form is given in the Mus. Borb. vol. viii. tav. 20.

Senatus. In all the republics of antiquity the government was divided between a senate and an assembly of elders, which is in fact the meaning in the early times was always regarded as a half of the nation, and thus incorrectly considered their senators likewise as the second or new half of that body. The new senators added by Tarquinus Priscus were distinguished from those belonging to the two older tribes by the appellation patres minorum gentium, as previously those who represented the Titiles had been distinguished, by the same name, from those who represented the Ramnae. (Dionys. ii. 57.) Servius Tullius did not make any change in the composition of the senate; but under Tarquinius Superbus their number is said to have become very much diminished, as this tyrant put many to death and sent others into exile. This account however appears to be greatly exaggerated, and it is a probable suggestion of Niebuhr (Hist. of Rome, i. p. 526), that several vacancies in the senate arose from many of the senators accompanying the tyrant into his exile. The vacancies which had thus arisen were filled up immediately after the establishment of the republic, by L. Junius Brutus, as some writers state (Liv. ii. 1), or, according to Dionysius (v. 13), by Brutus and Valerius Publicola, and according to Plutarch (Publ. 11) and Festus (s. v. Qui patres) by Valerius Publicola alone. All however agree that the persons who were on this occasion made senators were noble plebeians of equestrian rank. Dionysius states, that the noblest of the plebeians were first raised to the rank of patricians, and that then the new senators were taken from among them. But this appears to be incompatible with the name by which they were designated. Had they been made patricians, they would have been patres like the others, whereas now the new senators are said to have been distinguished from the old ones by the name of conscripti. (Liv. ii. 1; Fest. s. v. Conscriphi and adlociti.) Hence the customary mode of addressing the whole senate henceforth always was: patres conscripti, that is, patres et conscripti. There is a statement that the number of these new senators was 164 (Plut. Publ. 11; Fest. s. v. Qui patres); but the same writer has justly remarked, is a fabrication, perhaps of Valerius of Antium, which is contradicted by all subsequent history.

Henceforth the number of 300 senators appears to have remained unaltered for several centuries. (Liv. Epit. 60.) C. Sempronius Gracchus was the first who attempted to make a change, but in what this consisted is not certain. In the epitome of Livy it is expressly stated, that he intended to add 600 equites to the number of 300 senators, which would have made a senate of 900 members, and would have given a great preponderance to the equites. This appears to be an absurdity. (Götting, Gesch. d. Röm. Staatsw. p 437.) Pintarch (C.
Gracch. 5, &c.) states, that Gracchus added to the senate 300 equites, whom he allowed to select from the whole body of equites, and that he transferred the judicia to this new senate of 600. This account seems to be founded upon a confusion of the lex judiciaria of C. Gracchus with the latter one of Livius Drusus (Walter, Gesch. d. Röm. Rechts, p. 244), and all the other writers who mention the lex judiciaria of C. Gracchus do not allude to any change or increase in the number of senators, but merely state that he transferred the judicia from the senate to the equites, who remained in their possession till the tribuneship of Livius Drusus. The latter proposed, that as the senate consisted of 300, an equal number of equites should be elected (auranti のive) into the senate, and that in future the judges should be taken from this senate of 600. (Appian. B. C. i. 35; Aurel. Vict. de Vit. Illust. 66; Liv. Epit. 71.) After the death of Livius Drusus, however, this law was abolished by the senate itself, on whose behalf it had been proposed, and the senate now again consisted of 300 members. During the civil war between Marius and Sulla many vacancies must have occurred in the senate. Sulla in his dictatorship not only filled up these vacancies, but increased the number of senators. All we know of this increase with certainty is, that he caused about 300 of the most distinguished equites to be elected into the senate (Appian. B. C. i. 100), but the real increase which he made to the number of senators is not mentioned anywhere. It appears, however, henceforth to have consisted of between five and six hundred. (Cic. ad Att. i. 14.) Julius Caesar augmented the number to 900, and raised to this dignity even common soldiers, freedmen, and peregrini. (Dion Cass. xliii. 47; Suet. Caeas. 80.) This arbitrariness in electing unworthy persons into the senate, and of extending its number at random, was imitated after the death of Caesar, for on one occasion there were more than one thousand senators. (Suet. Aug. 35.) Augustus cleared the senate of the unworthy members, who were contemptuously called by the people Orcini senatores, reduced its number to 600 (Dion Cass. liv. 14), and ordained that a list of the senators should always be exhibited to public inspection. (Dion Cass. lv. 3.) During the first centuries of the empire, this number appears, on the whole, to have remained the same; but as every increase of the number raised a new objection, the government was obliged to adopt for several reasons, and without any intention to appoint representatives of the plebs. (Niebuhr, i. p. 526, &c.) The numbers of such plebeian senators at any rate must have been much smaller than they are stated by our authorities, for there is no instance of any plebeian senator on record before the year 439 B.C., when Spurius Maelius is mentioned as senator. The senate itself appears to have had some influence upon the election of new members, inasmuch as it might raise objections against a person elected. (Dionys. vii. 55.) The whole senate was divided into decuries, each of which corresponded to a curia. When the number of senate comprised only one hundred persons, there were accordingly only ten decuries of senators; and ten senators, one being taken from each decury, formed the decem primi who represented the ten curies. When subsequently the representatives of the two other tribes were admitted into the senate, the还有一些谁被选为参议员。
kings into those of the magistrates, the consuls, consular tribunes, and subsequently the censors. (Liv. ii. 1; Fest. s. v. Praetorii senatores.) But the power of electing senators possessed by the republican magistrates was by no means an arbitrary power, for the senators had at no time any right to elect senators, and they were always taken from among those who were equites, or whom the people had previously invested with a magistracy, so that in reality the people themselves always nominated the candidates for the senate. From the year 487 B.C. the princeps senatus was no longer appointed for life, but became a magistrate appointed by the censors, and the patres minorum gentium were likewise eligible to this dignity. (Niebuhr, ii. p. 119.) It moreover appears, that all the curule magistrates from the quaestors upwards had by virtue of their office a seat in the senate, which they retained after the year of their office was over, and it was from these ex-magistrates that the vacancies occurring in the senate were generally filled up.

After the institution of the censorship, the censors alone had the right to elect new members into the senate from among the ex-magistrates, and to exclude such as they deemed unworthy. (Zonar. vii. 19; compare Cic. de Leg. ii. 12.) [Censor.] The exclusion was effected by simply passing over the names and not entering them into the lists of senators, whence such men were called praestorii senatores. (Fest. s. v.) On one extraordinary occasion the eldest among the ex-censors was invested with dictatorial power to elect new members into the senate. (Liv. xxiii. 22.) The censors were thus, on the one hand, competent to the whole of the state offices, and on the other, they were expressly directed by the senate to turn the candidates for the senate. From the year 431 B.C. the princeps senatus was no longer excluded lex Ovinia is referred by Niebuhr (i. p. 527) on the other, they were expressly directed by the passage of Cicero (ad Font. xiii. 5), that Caesar was the first who instituted a senatorial census, but the passage of Cicero is still more inconclusive than that of Livy, and it seems to have become customary to remove from the whole of the nobiles, who were as aristocratic as the patricians. [No-Biles.] The office of princeps senatus, which had become independent of that of praetor urbanus, was now given by the censors, and at first always to the eldest among the ex-censors (Liv. ii. 11), but afterwards to any other senator whom they thought most worthy, and unless there was any charge to be made against him, he was re-elected at the next lustrum. This distinction, however, great as it was, afforded neither power nor advantages (Zonar. vii. 19), and did not even confer the privilege of presiding at the meetings of the senate, which only belonged to those magistrates who had the right to convocate the senate. (Gell. xiv. 7; Cic. de Leg. iii. 1018.)

It has been supposed by Niebuhr (iii. p. 406), that a senatorial census existed at Rome at the commencement of the second Punic war, but the words of Livy (xxiv. 11) on which this supposition is founded seem to be too vague to admit of such an inference. Götting (p. 340) infers from Cicero (ad Fam. xiii. 5), that Caesar was the first who instituted a senatorial census, but the passage of Cicero is still more inconclusive than that of Livy, and we may safely take it for granted that during the whole of the republican period no such census existed (Plin. H. N. xiv. 1), although senators naturally always belonged to the wealthiest classes. The institution of a census for senators belongs altogether to the time of the empire. Augustus first fixed it at 400,000 sesterces, afterwards increased it to double this sum, and at last even to 1,200,000 sesterces. Those senators whose property did not amount to this sum, received grants from the emperor to make it up. (Suet. Aug. 41; Dion Cass. liv. 17, 26, 30, liv. 18.) Subsequently it seems to have become customary to remove from the senate those who had lost their property through their own prodigality and vices, if they did not quit it of their own accord. (Tacit. Annal. ii. 48, xii. 52; Suet. Tib. 47.) Augustus also, after having cleared the senate of unworthy members, introduced a new and reanimating element into it by admitting men from the municipia, the colonies, and even from the provinces. (Tacit. Annal. iii. 55, xi. 25; Suet. Vesp. 9.) When an inhabitant of a province was honoured in this manner, the province was said to receive the jus

senatus. Provincials who were made senators of course went to reside at Rome, and with the exception of such as belonged to Sicily or to Gallia Narbonensis, they were not allowed to visit their native countries without a special permission of the emperor. (Tertull. de Persecut. c. 33 ; Dion Cass. lii. 46, lx. 25.) In order to make Rome or Italy their new home, the provincial candidates for the senate were subsequently always expected to acquire landed property in Italy. (Plin. Epist. vi. 19.) On the whole, however, the equites remained during the first centuries of the empire the seminarium senatus, which they had also been in the latter period of the republic.

As regards the age at which a person might become a senator, we have no express statement for the time of the republic, although it appears to have been fixed by some custom or law, as the acta senatoria is frequently mentioned, especially during the latter period of the republic. But we may by induction discover the probable age. We know that according to the lex annalis of the tribune Villius, the age fixed for the quaestorship was 31. (Orelli, Onom. Tull. vol. iii. p. 133.) Now as it might happen that a quaestor was made a senator immediately after the expiration of his office, we may presume that the earliest age at which a man could become a senator was 32. Augustus at last fixed the senatorial age at 25 (Dion Cass. lii. 20), which appears to have remained unaltered throughout the time of the empire.

No senator was allowed to carry on any mercantile business. About the commencement of the second Punic war, some senators appear to have violated this law or custom, and in order to prevent its recurrence a law was passed with the vehement opposition of the senate, that none of its members should be permitted to possess a ship of more than 300 amphorae in tonnage, as this was thought sufficiently large to convey to Rome the produce of their estates abroad. (Liv. xxi. 63.) It is clear however from Cicero (c. Verr. v. 18), that this law was frequently violated.

Regular meetings of the senate (senatus legitimus) took place during the republic, and probably during the kingly period also, on the calends, nones, and Ides of every month (Cic. ad Q. Frat. ii. 13) ; extraordinary meetings (senatus indicet) might be convoked on any other day, with the exception of the decemvirs, and those on which comitia were held. (Cic. ad Q. Frat. ii. 2.) The right of convoking the senate during the kingly period belonged to the king, or to his vicegerent, the custos urbis. (Dionys. i. 8 ; Praefectus Urbis.) This right was during the republic transferred to the curule magistrates, and at last to the tribunes also. Under the empire the consuls, praetors, and tribunes continued to enjoy the same privilege (Dion Cass. lvi. 47, lx. 24 ; Tacit. Hist. iv. 38), although the emperors also had them (Livy. Cass. lii. 1, iv. 5). If a senator did not appear on a day of meeting, he was liable to a fine for which a pledge was taken (pignoris captio) until it was paid. (Gellius, xiv. 7 ; Liv. iii. 28 ; Cic. de Leg. iii. 4, Philip. i. 5 ; Plut. Cic. 43.) Under the empire the penalty for not appearing without sufficient reason was increased. (Dion Cass. lvi. 18, iv. 3, lx. 11.) Towards the end of the republic it was decreed, that during the whole month of February the senate should give audience to foreign ambassadors on all days on which the senate could lawfully meet, and that no other matters should be discussed until these affairs were settled. (Cic. ad Q. Frat. ii. 13, ad Fam. i. 4.)

The places where the meetings of the senate were held (curiae, senacula) were always inaugurated by the augurs. (Tremplin.) The most ancient place was the Curia Hostilia, in which alone originally a senatusconsultum could be made. Afterwards however several temples were used for this purpose, such as the temple of Concordia, a place near the temple of Bellona [Legatus], and one near the porta Capena. (Fest. s. v. Senacula ; Varro, de Ling. Lat. v. 153, 156.) Under the emperors the senate also met in other places: under Caesar the curia Julia, a building of immense splendour, was commenced ; but subsequently meetings of the senate were not unfrequently held in the house of a consul.

When in the earliest times the king or the custos urbis, after consulting the pleasure of the gods by auspices, had convoked the senate (senatum edicere, convocare), he opened the session with the words: “Quod bonum, faustum, felix fortunatum sit populo Romano Quiritibus,” and then laid before the assembly (referre, relatio) what he had to propose. The president then called upon the members to discuss the matter, and when the discussion was over, every member gave his vote. The majority of votes always decided a question.

The majority was ascertained either by numeratio or by dispositio, that is, the president either counted the votes (Fest. s. v. Numera), or the members who voted on the same side joined together, and thus separated from those who voted otherwise. This latter method of voting appears in later times to have been the usual one, and, according to Capito (ap. Gell. xiv. 7), the only legitimate method.

The subjects laid before the senate partly belonged to the internal affairs of the state, partly to legislation, and partly to finance ; and no measure could be brought before the populus without having previously been discussed and prepared by the senate. The senate was thus the medium through which all affairs of the whole government had to pass: it considered and discussed whatever measures the king thought proper to introduce, and had, on the other hand, a perfect control over the assembly of the populus, which could not pass a bill except in a meeting called by the senate. When a king died, the royal dignity, until a successor was elected, was transferred to the decem primi (Liv. i. 17), each of whom in rotation held this dignity for five days. The candidate for the royal power was first decided upon by the interreges, who then proposed him to the whole senate, and if the senate agreed with the election, the interrex of the day, at the command of the senate, proposed the candidate to the comitia and took their votes respecting him. (Dionys. ii. 58, iii. 36, iv. 40, 80 ; comp. Walter, p. 23, n. 28.) The will of the gods was then consulted by the augurs, and when the gods too sanctioned the election (Liv. i. 18), a second meeting of the populus was held, in which the augurs announced the sanction of the gods. Hereupon the king was invested with the powers belonging to his office.

Under the republic the right of convoking the senate was at first only possessed by the dictators, praetors or consuls, interreges, and the praefectus urbi, who also, like the kings of former times, laid
before the senate the subjects for deliberation. The power of the senate was at first the same as under the kings, if not greater: it had the general care of the public welfare, the superintendence of all matters of religion, the management of all affairs with foreign nations; it commanded the levies of troops, regulated the taxes and duties, and had in short the supreme control of all the revenue and expenditure. The order in which the senators spoke and voted was determined by their rank as belonging to the maior or minora. (Cic. de Re Publ. ii. 20; Dionys. vi. 69, vii. 47.) This distinction of rank however appears to have ceased after the decemvirate, and even under the decemvirate we have instances of the senators speaking without any regular order. (Dionys. vi. 14, 12, 21; Liv. iii. 39, 41.) It is also probable that after the decemvirate vacancies in the senate were generally filled with ex-magistrates, which had now become more practicable as the number of magistrates had been increased. The tribunes of the people likewise obtained access to the deliberations of the senate (Liv. iii. 69, vi. 1); but they had no seats in it yet, but sat before the opened doors of the curia. (Val. Max. ii. 2, § 7.) The senate had at first had the right to propose to the comitia the candidatures for magistrates, but now (under the lex Hortensia) this right was lost: the comitia centuriata had become quite free in regard to elections and were no longer dependent upon the proposal of the senate. The curies only still possessed the right to sanction the election; but in the year B.C. 299 they were compelled to sanction any election of magistrates which the comitia might make, before it took place (Cic. Brut. 14; Aurel. Vict. de Vir. Illust. 35), and this soon after became law by the lex Maenia. (Orelli, Onom. Tutt. vol. iii. p. 215.) When at last the curies no longer assembled for this empty show of power, the senate took their place, and henceforth in elections, and soon after also in matters of legislation the senate had previously to sanction whatever the comitia might decide. (Liv. i. 17.) After the lex Hortensia a decree of the comitia tributa became law even without the sanction of the senate. The original state of things had thus gradually become reversed, and the senate had lost very important branches of its power, which had all been gained by the comitia tributa. (Cic. Brut. viii. 2; Strabo, xiii. 6, 2, 13, 29.) In its relation to the comitia centuriata however, the ancient rules were still in force as laws, declarations of war, conclusions of peace, treaties, &c. were brought before them and decided by them upon the proposal of the senate. (Walter, p. 132.)

The powers of the senate after both orders were placed upon a perfect equality may be thus briefly summed up. The senate continued to have the supreme superintendence in all matters of religion (Gellius, xiv. 7); it determined upon the manner in which a war was to be conducted, what legions were to be placed at the disposal of a commander, and whether new ones were to be levied; it decreed what provinces the consuls and praetors were to be sent to (Provincia), and whose imperium was to be prolonged. The commissioners who were generally sent out to settle the administration of a newly conquered country, were always appointed by the senate. (Liv. xlv. 17; Appian. de Reb. Hisp. 99, de Reb. Pan. 135; Sallust. Jug. 16.) All embassies for the conclusion of peace or treaties with foreign states were sent out by the senate, and such ambassadors were generally senators themselves and ten in number. (Polyb. vi. 13; Liv. passim.) The senate alone carried on the negotiations with foreign ambassadors (Polyb. l. c.; Cic. c. Vatin. 13) and received the complaints of subject or allied nations, who always regarded the senate as their common protector. (Liv. xxix. 16, xxxix. 3, xlii. 14, xliii. 2; Polyb. l. c.) By virtue of this office of protector it also settled all disputes which might arise among the municipia and colonies of Italy (Dionys. ii. 1; Liv. ix. 20; Varro, de Re Rust. iii. 2; Cic. ad Att. iv. 15, de Off. i. 19), and punished all heavy crimes committed in Italy, which might endanger the public peace and security. (Polyb. l. c.) Even in Rome itself the judicii of the senate were referred in important cases, both public and private, were taken from among the senators (Polyb. vi. 17), and in extraordinary cases the senate appointed especial commissions to investigate them (Liv. xxxvii. 54, xxxix. 14, xl. 37, 44, &c.) but such a commission, if the case in question was a capital offence committed by a citizen, required the sanction of the people. (Polyb. vi. 16; Liv. xxvi. 33, &c.) When the republic was in danger the senate might confer unlimited power upon the magistrates by the formulæ, "providetur quod regardum in bello quam per lege comprobatur" (Sallust. Cat. 29; Caes. B. C. i. 5, 7), which was equivalent to a declaration of martial law within the city. This general care for the internal and external welfare of the republic included, as before, the right to dispose over the finances requisite for these purposes. Hence all the revenue and expenditure of the republic were under the direct administration of the senate, and the censors and quaestors were only its ministers or agents. [Censor; Qaesta.] All the expenses necessary for the maintenance of the armies required the sanction of the senate, before anything could be done, and it might even prevent the triumph of a returning general, by refusing to assign the money necessary for it. (Polyb. vi. 15.) There are, however, instances of a general triumphing without the consent of the senate. (Liv. iii. 63, vii. 17, ix. 57.)

How many members were required to be present in order to constitute a legal meeting is uncertain, though it appears that there existed some regulations on this point (Liv. xxxviii. 44, xxxix. 4; Cic. ad Pan. i. 15, 3; Fest. s. v. Numera'), but there is one instance on record, in which at least one hundred senators were required to be present. (Liv. xxxix. 18.) The presiding magistrate opened the business, and as the senators sat in the following order,—princeps senatus, consules, consori, praetorii, aedilicii, tribunicii, quaestorii,—it is natural to suppose, that they were asked their opinion and voted in the same order. (Suo bore sentimentium diceere, Cic. Philp. v. 17, xiii. 13, &c., ad Att. xii. 21.) Towards the end of the republic the order in which the question was put to the senators, appears to have depended upon the discretion of the presiding consul (Varro, ap. Gelv. xiv. 7), who called upon each member by pronouncing his name (nominantim, Cic. o. Verr. iv. 64), but he usually began with the princeps senatus (Cic. pro Saxat. 32), or if consules designati were present, with them. (Sallust, Cat. 50; Appian, B. C. ii. 5.) The consul generally observed all the year round the same order in which he had commenced on the first of January. (Suet. Caes. 21.)
senator when called upon to speak might do so at full length, and even introduce subjects not directly connected with the point at issue. (Cic. de Leg. iii. 19; Gellius, i. 10; Tacit. Annal. iii. 99, xii. 29; compare Cic. Philo, vili.) It depended upon the president which of the opinions expressed he would put to the vote, and which he would pass over. (Polyb. xxxii. 1; Cic. ad Fam. i. 2, x. 12; Caes. B. C. i. 2.) Those men who were not yet real senators, but had only a seat in the senate on account of the office they held, or had held, had no right to vote (Gellius, xiii. 8.) When a Senatusconsultum was passed, the consuls ordered it to be written down by a clerk in the presence of some senators, especially of those who had been members of the comitia in previous years in bringing it about. (Polyb. vi. 12; Cic. de Orat. iii. 2, ad Fam. viii. 8.) [SENATUSCONSULTUM.] A meeting of the senate was not allowed to be held before sunrise or to be prolonged after sunset (Varro, ap. Gell. l. c.) on extraordinary emergencies, however, this regulation was set aside. (Dionys. iii. 17; Macroh. Sat. l. 4.) During the latter part of the republic the senate was degraded in various ways by Sulla, Caesar, and others, and on many occasions it was only an instrument in the hands of the men in power. In this way it became prepared for the despotic government of the emperors, when it was altogether the creature and obedient instrument of the princes. The emperor himself was generally also princeps senatus (Dion Cass. lii. 1, liii. 8, lixiii. 5), and had the power of convoking both ordinary and extraordinary meetings (Dion Cass. liv. 3; Lex de imperio Vespas.), although the consuls, praetors, and tribunes, continued to have the same right. (Tactit. Hist. iv. 39; Dion Cass. lxi. 47, lxii. 24, lx. 16, &c.) The ordinary meetings according to a regulation of Augustus were held twice in every month. (Suet. Aug. 35; Dion Cass. lv. 3.) A full assembly required the presence of at least 400 members, but Augustus himself afterwards modified this rule according to the difference and importance of the subjects which might be brought under discussion. (Dion Cass. lvi. 35, lv. 3.) At a later period we find that seventy or even fewer senators constituted an assembly. (Lamprid. Al. Sever. 16.) The regular president in the former was a consul, or the emperor himself, if he was invested with the consulship. (Plin. Epist. ii. 11, Panegyr. 76.) At extraordinary meetings, the person who convoked the senate was at the same time its president. The emperor, however, even when he did not preside, had by virtue of his office of tribune, the right to introduce any subject for discussion, and to make the senate decide upon it. (Dion Cass. liii. 32; Lex de imperio Vespas.) At a later period this right was expressly and in proper form confirmed to the princeps senatus, a name of juridictional relationis, and accordingly as he obtained the right to introduce three or more subjects, the jus was called jus tertiae, quartae, quintae, &c. relationis. (Vopisc. Prob. 12; J. Capitol. Persin. 5, M. Antonin. 6; Lamprid. Al. Sever. 1.) The emperor introduced his proposals to the senate in writing (oratio, libellus, epistola principis), which was read in the senate by one of his quaestors. (Dion Cass. liv. 25, lx. 2; Suet. Aug. 65, Tit. 6; Tacit. Annal. xvi. 27; Dig. l. tit. 13. s. 1. §§ 2 and 4.) [Orationes Princivm.] The praetors, that they might not be inferior to the tribunes, likewise received the jus relationis. (Dion Cass. iv. 3.) The mode of conducting the business, and the order in which the senators were called upon to vote, remained on the whole the same as under the republic (Plin. Epist. vi. 14, xii. 13); but when magistrates were to be elected, the senate, as in former times the comitia, gave their votes in secret with little tablets. (Plin. Epist. iii. 29, xi. 5.) The transactions of the senate were from the time of Caesar registered by clerks appointed for the purpose, under the superintendence of a senator. (Suet. Caesar, Aug. 36; Tacit. Annal. vi. 4, &c.; Spart. Hadrian. 3; Dion Cass. lixvii. 22.) In cases which required secrecy (senatusconsultum taceitum), the senate themselves officiated as clerks. (Cic. de Orat. iii. 2.)

As the Roman emperor concentrated in his own person all the powers which had formerly been possessed by the several magistrates, and without limitation or responsibility, it is clear that the senate in its administrative powers was dependent upon the emperor, who might avail himself of its counsels or not, just as he pleased. In the reign of Tiberius the election of magistrates was transferred from the people to the senate (Vell. Pat. ii. 124; Tacit. Annal. i. 15; Plin. Epist. iii. 29, vi. 19), which, however, was enjoined to take special notice of those candidates who were recommended to it by the emperor. This regulation remained, with a short interruption in the reign of Caligula, down to the third century, when we find that the princeps alone exercised the right of appointing magistrates. (Dig. 48, tit. 14. s. 1.) At the demise of an emperor the senate had the right to appoint his successor, in case no one had been nominated by the emperor himself; but the senate had in very rare cases an opportunity to exercise this right, as it was usurped by the soldiers. The aerarium at first still continued nominally to be under the control of the senate (Dion Cass. liii. 16, 22), but the emperors gradually took it under their own exclusive management (Dion Cass. lixvi. 33; Vopisc. Aurel. 9, 12, 20), and the senate retained nothing but the administration of the funds of the city (area publica), which were distinct both from the aerarium and from the fiscus (Vopisc. Aurel. 20, 45), and the right of giving its opinion upon cases connected with the fiscus law. (Dig. 49, tit. 14. s. 15 and 42.) Its right of examining money was limited by Augustus to copper coins, and ceased altogether in the reign of Gallicanus. (Eckhel, D. N. Proleg. c. 13.) Augustus ordained that no accusations should any longer be brought before the comitia (Dion Cass. lvi. 40), and instead of them he raised the senate to a high court of justice, upon which he conferred the right of taking cognizance of capital offences committed by senators (Dion Cass. lii. 31, &c.; Suet. Calig. 2; Tacit. Annal. xii. 44, &c.; compare M. Antonin. 10, &c.), of crimes against the state and the person of the emperors (Dion Cass. lii. 15, 17, 22, lx. 16, lxvi. 8; Suet. Aug. 66; Tacit. Annal. iii. 49, &c.), and of crimes committed by the provincial magistrates in the administration of their provinces. The senate might also receive appeals from other courts (Suet. Nero, 17; Tacit. Annal. xiv. 28; Capitol. M. Antonin. 10; Vopisc. Prob. 13), whereas, at least from the time of Hadrian, there was no appeal from a sentence of the senate. (Dion Cass. lix. 18; Dig. 48. tit. 2. s. 1. § 2.) The princeps sometimes referred cases which were not contained
in the above categories, or which he might have decided himself, to the senate, or requested its co-operation. (Suet. Claud. 14, 15; Nero, 15; Domit. 8, &c.) Respectively the provinces of the senate see Provincia.

When Constantine made was the second capital of the empire, Constantine instituted also a second senate in this city (Sozomen, ii. 2; Escr ipt. de gest. Const. 30), upon which Julian conferred all the privileges of the senate of Rome. (Zosim. iii. 11; Liban. Orat. ad Theod. ii. p. 383, ed. Morell.) Both these senates were still sometimes consulted by the emperor who had oratio upon matters of legislation (Cod. Theod. 6. tit. 2. s. 14; Symmach. Epist. x. 2. 28; Cod. 1. tit. 14. s. 3); the senate of Constantine retained its share in legislation down to the ninth century. (Nov. Leon. 78.) Each senate also continued to be a high court of justice to which the emperor referred important criminal cases. (Amm. Marc. xxviii. 1. 23; Symmach. Epist. iv. 5; Zosim. v. 11, 38.) Capital offences committed by senators, however, no longer came under their jurisdiction, but either under that of the governors of provinces, or of the prefects of the two cities. (Walter, p. 367, &c.) Civil cases of senators likewise belonged to the forum of the praefectus urb. (Cod. 3. tit. 24. s. 3; Symmach. Epist. x. 69.) The senatorial dignity was now obtained by descent (Cod. Theod. 6. tit. 2. s. 12; 12. tit. 1. s. 58; Cassiodor. Varitar. iii. 6), and by having held certain offices at the court, or it was granted as an especial favour by the emperor on the proposal of the senate. (Cod. Theod. l.c.; Symmach. Epist. x. 25, 118.) To be made a senator was indeed one of the greatest honours that could be conferred, and was more valued than in the times of the republic; but its burdens were very heavy, for not only had the senators to give public games (Symmach. Epist. x. 25, 26), to make magnificent presents to the emperors (Cod. Theod. 6. tit. 2. s. 5), and in times of need extraordinary donations to the people (Zosim. v. 41; Symmach. Ep. vi. 14, 26, vii. 69), but in addition they had to pay a peculiar tax upon their landed property, which was called folia or globa. (Zosim. ii. 32; Cod. Theod. 6. tit. 2; Symmach. Epist. x. 87; Cod. Theod. 6. tit. 2. s. 2; 6. tit. 4. s. 21.) It was therefore only the wealthiest persons of the empire, no matter to what part of it they belonged, that could aspire to the dignity of senator. A list of them, together with an account of their property, was laid before the emperor every three months by the prefect of the city. (Symmach. x. 66, &c.) Down to the time of Justinian the consuls were the presidents of the senate, but from that time the praefectus urbi presided. (Cod. Theod. 6. tit. 6. s. 1; Nov. Instit. 62.) It now remains to mention some of the distinctions and privileges enjoyed by Roman senators: 1. The tunica with a broad purple stripe (latus clausus) in front, which was woven in it, and not as is commonly believed sewed upon it. (Acr. ad Horat. Sat. i. 5. 35; compare i. 6. 29; Quintil. xi. 3.) 2. A kind of short boot with the letter C on the front of the foot. (Juv. vii. 192; Cic. Philid. xiii. 15.) This C is generally supposed to mean centum, and to refer to the original number of 100 (centum) senators. 3. The right of sitting in the orchestra in the theatres and amphitheatres. This distinction was first procured for the senators by Seiio Africanus Major, 154 B.C. (Liv. xxxiv. 54; Cic. pro Cluent. 47.) The same honour was granted to the senators in the reign of Claudius at the games in the circus. (Suet. Claud. 21; Dion Cass. i. 7.) 4. On a certain day in the year a sacrifice was offered to Jupiter in the capitol, and on this occasion the senators alone had a feast in the capitol; the right was called the jus publice expulandi. (Gellius, xii. 8; Suet. Aug. 35.) 5. The jus liberae legis lationis. [Legatus, sub finem. [L. S.] SENATUSCONSULTUM. In his enumeration of the punishments which were inflicted on freedmen, Martial, Cicero includes Senatusconsultum. (Top. 5.) Numerous senatusconsults properly so called were enacted in the reign of Augustus, and Leges, properly so called, were made even after his time. [LEX.] It was under Augustus however that the Senatusconsultula began to be taken the place of Leges properly so called, a change which is also indicated by the fact that until his time the Senatusconsultu were not designated either by the names of the Consuls or by any other personal name, so far as we have evidence that we can find the Senatusconsultula designated either by the name of the Consul, as Apronianum, Silanianum, or from the name of the Caesar, as Claudianum, Neroenianum; or they are designated as made "auctore" or "ex auctoritate Hadriani," &c., or "ad orationem Hadriani," &c. The name of the Senatusconsultum Macedonianum is an exception, as will afterwards appear. Many Senatusconsultula were enacted in the Republican period, and some of them were laws in the proper sense of the term, though some modern writers have denied the name of the Senatusconsultula to them, because they concern the maintenance of Religion, the suspension or repeal of laws in the case of urgent public necessity, the rights of the Aerarium and the Publicani, the senators alone had a feast in the capitol; the right was called the jus publice expulandi. (Gellius, xii. 8; Suet. Aug. 35.) 5. The jus liberae legis lationis. [Legatus, sub finem. [L. S.]}
pose of the Circenses was made legal (Plin. H. N. viii. 17); an old Senatusconsultum by which "quaestio (serrorum) in caput domini prohibebatur" (Tacit. Ann. ii. 30), a rule of law which Cicero (pro Milon. 22) refers to Moes as its foundation. From these instances of Senatusconsultum made in the Republican period we may finally arrive at the point to which this form of legislation applied. The constitution of the Senate was such as to gradually bring within the sphere of its legislation all matters that pertaining to religion, police, administration, provincial matters, and all foreign relations. And it seems that the power of the Senate had so far increased at the time of the accession of Augustus that it was no great change to make it the only legislating body. Pomponius (Dig. 1. tit. 2. s. 2), though his historical evidence must be received with caution, states the matter in a way which is generally consistent with what we otherwise know of the progress of Senatorial legislation:

"As the plebs found it difficult to assemble, &c., the Senate began to act, and whatever the Senate had determined (constitutisset) was observed (observabatur), and a law so made is called Senatusconsultum.

A Senatusconsultum was so named because the Consul (qui retailit) was said "Senatum consulere:"

"Marciva L. F. S. Postmius L. F. Cos Senatum Consolaverunt." (Senatusconsultum de Bacchanalibus.) In the Senatusconsultum De Philosophis et De Rhetoribus (Gell. xv. 11), the Praetor "consultavit." In the enacting part of a Lex the Populus was said "jubere," and in a Plebiscutum "scire:"

"in a Senatusconsultum the Senate was said "censere;"

"De Bacchanalibus, &c., in excedendvm censerevse." (S. c. de Bacch.) In the Senatusconsultum of the time of Augustus cited by Frontinus (de Aquaeductibus Romae, i.), the phrase which follows "censere" is sometimes "placeae huic ordinii." In Tacitus the verb "censere" is also applied to the person who made the motion for a Senatusconsultum. (Ann. iv. 20.) Sometimes the term "arbitari" is used (Dig. 16. tit. 1. s. 2), and Gaits (i. 4), writing under the Antonines applies to the Senatusconsultum the term "censere," originally denoted the legislative power of the Populus:

"Senatus jubet atque constituit; idque legis vicem sustenta.

The Senatusconsulta were originally intrusted to the care of the tribunes and the aediles, but in the time of Augustus the quaestors had the care of them. (Dion Cass. lv. 36, and the note of Reimarus.) Under the later emperors the Senatusconsulta "qua ad principes pertinentem," were preserved in "libri elephantini." (Vopiscus, Tacit. c. 8.)

A measure which was proposed as a Senatusconsultum might be stopped by the Intercessio of the Tribunes, and provision was sometimes made for a Senatusconsultum intercessarii. A Senatusconsultum proboelegit (praescribit) et de ea re ad senatum populumque referri." (Cic. ad Fam. viii. 8.) This explains one meaning of Senatus auctoritas, which is a Senatusconsultum which has been proposed and not carried, and of which a record was kept with the "auctoritates eorum qui scribendo adfuerant." In one passage Cicero calls a S. C. which had failed owing to an Intercessio, an Auctoritas (ad Fam. i. 7). One meaning of Auctoritas in fact is a S. C. proposed, but not yet carried; and this agrees with Livy (iv. 57): "Si quis intercedat Sto, auctoritate se foro contentum." If Senatus auctoritas occasionally appears to be used as equivalent to Senatusconsultum, it is an improper use of the word, but one which presents no difficulty if we consider that the names which denote a thing in its two stages are apt to be confused in popular language, as with us the words Bill and Act. In its general and original sense Senatus Auctoritas is any measure to which a majority of the Senate has assented. (See the note of P. Manutius on Cic. ad Fam. vi. 2.)"
The proper enacting word in the Senatus consultum is "censeo," but the word "decerno" was also used in ordinary language to express the enacting of a Senatus consultum. (Cic. ad Fam. VII. 8; Senata decrevit et dc. ad Atti. I. 15.) But a Senatus consultum in the literal sense of the term, is not called a Decretum, which was a rule made by the Senate as to some matter which was strictly within its competence. The words Decretum and Senatus consultum are often used indiscriminately and with little precision. (Gell. ii. 24.) (See Aelius Gallus, apud Festum, s. v. Senatus Decretum, and Decretum.

The forms of the Senatus consulta are the best evidence of their character. The following are some of the principal Senatus consulta which are preserved: the Senatus consultum de Tiburtibus, printed by Gruter and others, which is "undoubtedly the oldest of all Roman documents" (Niebuhr, Rom. Hist. vol. III, p. 264, note 66); the Senatus consultum de Bacchanalibus; the Senatus consultum in the letter of Cicero already referred to; Cic. Philipp. v. 13; Gellius, xvi. 11; the six Senatus consulta about the Roman Aqueducts in the second book of Frontinus de Aqueductibus; the Senatus consultum about the Aphrodite of the Emperor Antoninus in this Digest, ii. 353; the creation of Claudius (Tacit. Ann. xi. 24; Tacit. Oberlin. ii. 806); the various Senatus consulta preserved in the Digest, which are mentioned in a subsequent part of this article. See also the Senatus consultum printed in Sigerinus, "De Antiquo Jure Provinciarum," i. 288; and the Scutum by which the name Augustus was given to the month Sextils. (Macrobi. Saturnol. i. 12.)

The following list of Senatus consulta contains perhaps all of them which are distinguished by the name of a consul or other distinctive name. Numerous Senatus consulta under the Empire are referred to in the Latin writers, for which we find no distinctive name, though it is probable that all of them had a title like the Leges, but many of them being of little importance were not much referred to or cited, and thus their names were forgotten. Tacitus, for instance, often speaks of S. C. in that by J. Clericus, Amsterdam, 1710. There is a dissertation on this Senatus consultum by Byrkerhoek (De Cultu Religionum Peregrinarum apud Votores Romanos, Op. i. 412), who has printed the Senatus consultum and commented upon it at some length. The provisions of this Senatus consultum are stated generally under Dionysia, p. 414, b. There is no ancient authority, as it appears, for the name Marcianum, which has been given to it from the name of one of the Consuls who proposed it, and in accordance with the usual titles of S. C. in the Imperial period. This Scutum was found in the year A.D. 1640, in a village in Calabria, and is said to be now at Vico. (Senatus consulti De Bacchanalibus, &c. Explicatio, autore Matthaeo Aegyptio, Neapol. 1729.)

Calvitianum. (Ulpian, Frag. tit. xvi.; Julia et Papia Poppara Lex, p. 692, b.)

Claudianum passed in the time of the Emperor Claudius, reduced a free woman to the condition of a slave (ancilla) if she cohabited with the slave of another person, after the master had given her notice that he would not permit it. But if a woman, who was a Roman citizen, cohabited with a slave with the consent of the slave's master, she might agree with the master that remain free and yet any child born from this cohabitation would be a slave; for the Senatus consultum made valid any agreement between the free woman and the slave's master, and by such agreement the woman was relieved from the penalty of the Senatus consultum. But Hadrian, being moved thereto by a consideration of the hardship of the case and the incongruity of this rule of law (medaquinum juris), restored the old rule of the Jus Gentium, according to which the woman continuing free was the mother of a free child.
A difficulty arose on the interpretation of this Senatusconsultum for which the words of the law had not provided. If a woman, who was a Roman citizen, was with child, and became an anulla pursuant to the Senatusconsultum in consequence of cohabiting with a slave, contrary to the master's will, the condition of the child was a disputed matter: some contended that if the woman had become pregnant in a legal marriage, the child was a Roman citizen, but if she had become pregnant by illicit cohabitation, the child was the property of the person who had become the master of the mother. [Servus (Roman).]

There is an apparent ambiguity in a passage of Gaius (i. 86) in which he says, "but that rule of the same Lex is still in force, by which the issue of a free woman and another man's slave is a slave, if the mother knew that the man with whom she cohabited, was a slave." The Lex of which he speaks, is the Lex Aelia Sentia. The exception in the Senatusconsultum of Claudius applied to the case of a compact between a free woman and the master of the slave, which compact implies that the woman must know the condition of the slave, and therefore according to the terms of the Lex the issue would be slaves. But Gaius says (i. 84) that under this Senatusconsultum the woman might by agreement continue free and yet give birth to a slave; for the Senatusconsultum gave validity to the compact between the woman and the master of the slave. At first sight it appears as if the Senatusconsultum produced exactly the same effect as the Lex with respect to the condition of the child. But this is explained by referring to the chief provision of the Senatusconsultum, which was that cohabitation with a slave "invito et demuntiante domino" reduced the woman to a servile condition, and it was a legal consequence of this change of condition that the issue of her cohabitation must be a slave. The Lex Aelia Sentia had already declared the condition of children born of the union of a free woman and a slave to be servile. The Senatusconsultum added to the penalty of the Lex by making the mother also a slave, unless she cohabited with the consent of the master, and thus resulted that "inelegantia juris" by which a free mother could escape the penalty of the Senatusconsultum by her agreement and yet her child must be a slave pursuant to the Lex. Hadrian removed this inelegantia by declaring that if the mother notwithstanding the cohabitation escaped from the penalties of the Senatusconsultum by virtue of her compact, the child also should have the benefit of the agreement. The Senatusconsultum only reduced the cohabiting woman to a servile state when she cohabited with a man's slave "invito et demuntiante domino;" if she cohabited with him, knowing him to be a slave, without the knowledge of the master, there could be no demuntiatio, and in this case, it appears, was not affected by the Senatusconsultum, for Gaius observes, as above stated (i. 86), that the Lex had still effect and the offspring of such cohabitation was a slave. The fact of this clause of the Lex remaining in force after the enacting of the Senatusconsultum, appears to be an instance of the strict interpretation which the Roman Jurists applied to positive enactments; for the Senatusconsultum of Hadrian as stated by Gaius only applied to the case of a contract between the master's slave and the woman, and therefore its terms did not comprehend a case of cohabitation when there was no compact. Besides this if a free woman cohabited with a man's slave either without the knowledge of the master or with his knowledge, but without the "denuntiatio," it seems that this was considered as if she was simply indulged in promiscuous intercourse (rumpu consensu), and she being a slave, her mother being free, the child also was free by the law of Gentilium till the Lex attempted to restrain such intercourse by working on the parental affections of the mother, and the Senatusconsultum by a direct penalty on herself. There was a "juris inelegantia" in a free woman giving birth to a slave, but this was not regarded by Hadrian, who was struck by the inelegantia of a woman by compact being able to evade the penalty of the Senatusconsultum while her child was still subject to the penalty of the Lex.

This Senatusconsultum was passed A. D. 52, and is mentioned by Tacitus, but the terms in which he expresses himself do not contain the true meaning of the Senatusconsultum, and in one respect, "sin consensisset domini, pro libertis haberentur," they differ materially from the text of Gaius, unless the reading "libertis" should be "liberis." (See the notes of Tacitus, Ann. xii. 53, ed. Oehlcr.) It appears however from a passage in Paulus (S. R. ii. tit. 10), that a woman, in some cases which are not mentioned by him, was reduced to the condition of a liberta by the Senatusconsultum: a circumstance which confirms the accuracy of the text of Tacitus, but also shows how very imperfectly he has stated the Senatusconsultum. Suetonius (Vesp. 11) attributes the Senatusconsultum to the reign of Vespasian, and expresses its effect in terms still more general and incorrect than those of Tacitus. Such instances show how little we can rely on the Roman historians for exact information as to legislation.

It appears from Paulus that the provisions of this Senatusconsultum are stated very imperfectly even by Gaius, and that they applied to a great number of cases of cohabitation between free women, whether Ingenae or Libertinae, and slaves. This Senatusconsultum was entirely repealed by a Constitution of Justinian. Some writers refer the words "ea lege" (Gaius, i. 85) to the Senatusconsultum Claudianum, and they must consequently refer the words "ejusdem legis" (Gaius, i. 86) also to this Senatusconsultum; but the word "lex" in neither case appears to refer to the Senatusconsultum, but to the Lex Aelia Sentia.

(Gaius, i. 84, 86, 91, 160; Ulp. Frag. tit. xi.; Cod. 7. tit. 24; Paulus, S. R. ii. tit. 21.)

There were several other Senatusconsulta Claudianae, of which there is a short notice in Jo. Augusti Bachii Historia Jurisprudentiae Romanae.

Dasumianum, passed in the reign of Trajan, related to Fideicommissa libertas. (Dig. 40. tit. 21.) See Rudorff, Ztschrift, &c. vol. xii. p. 507, Das Testament des Dasumim.

Hadriani Senatusconsulta. Numerous Senatusconsulta were passed in the reign of Hadrian, but there does not appear to be any which is called Hadriane. Many Senatusconsulta of this reign are referred to by Gaius as "Senatusconsulta auctore Hadriano facta," i. 47, &c., of which there is a list in the Index to Gaius. The Senatusconsulta made in the reign of Hadrian are enumerated by Bachius, and some of them are noticed here under their proper designations.
JUNCIANUM, passed in the reign of Commodus, related to Fideicommissa Libertas. (Dig. 40. tit. 5. s. 28, 31.) This Senatusconsultum is preserved in one of the passages of the Digest referred to. It is a very ambiguous provision, that any loan of money to a filiusfamilias could not be recovered even after the death of the father. (Dig. 34. tit. 9. s. 16.) The origin of this Senatusconsultum is traced back to the Lex Cornelia. It appears to have been an extension of the Lex Cornelia to the Senatusconsultum. (Paraphr. Inst.)

JUVENTIANUM is the name given by modern jurists to the Senatusconsultum, which is preserved in the Digest (5. tit. 3. s. 29, § 8). The Senatusconsultum is placed under the title "De Hereditatis Petitione."

LARGIANUM, passed in the first year of the Emperor Claudius, A. D. 42, gave to the children of a Manumissor, if they were not exheredated by name, a right to the bona of Latin in preference to Extranei heredes. (Patronus; Gaius, iii. 63—71; Inst. 3. tit. 7. s. 4; Cod. 7. tit. 6.)

LIBONIANUM, passed in the reign of Tiberius, in the consulsip of T. Statilius Taurus and L. Scribonius Libo, A. D. 16, contained various provisions, one of which was to the effect that if a man wrote a will for another, every thing which he wrote in his own favour was void: accordingly he could not make himself a tutor (Dig. 26. tit. 2. s. 29), nor heres or legatarius (Dig. 34. tit. 8). This Senatusconsultum contained other provisions, and it appears to have been an extension of the Lex Cornelia de Falsis. [Falsum.]

MACEDONIANUM, enacted A. D. 46, provided that any loan of money to a filiusfamilias could not be recovered even after the death of the father. The Senatusconsultum took its name from Macedo, a notorious usurer, as appears from the terms of the Senatusconsultum which is preserved (Dig. 14. tit. 6). Theophilus (Parapr. Inst.) states incorrectly that the Senatusconsultum took its name from a filiusfamilias. The provision of the Senatusconsultum is cited by Tacitus (Ann. xi. 13), but in such terms as might lead to ambiguity in the interpretation of the law. Suetonius (Vesp. 11) attributes this Senatusconsultum to the time of Vespasian; but he states its provisions in less ambiguous terms than Tacitus.

MEMMIANUM. This name is sometimes given to the Senatusconsultum, passed in the time of Nero, the terms of which are preserved by Tacitus (Ann. xv. 19): "ne simulata adoptio in uilla parte munus publici jurevac, ac ne usurpanis queram hereditatibus procedat." The object of this Senatusconsultum was to prevent the evasion of the Lex Julia et Papia Poppaea. It is sometimes referred to the consulsip of C. Memmius Regulus and V. Annius Rufus, but it appears to belong to the preceding year. See Dig. 31. s. 51, and 53. tit. 1. s. 76.

NERONIANUM DE LEGATIS, the provisions of which are stated in the article LEGATUM. (Gaius, ii. 157, 198, 212, 218, 220; Ulp. Freg. tit. xxiv.)

NERONIANUM, also called PISONIANUM, from being enacted in the consulsip of Nero and L. Calpurnius Piso, A. D. 57. It contained various provisions: "Ut si quis a suis servis interfectus easset, il quoque, qui testamento manumissi sub eodem tecto mansisset, inter servos suppliencia pen-}

SENATUSCONSULTUM.

Orphitianum enacted in the time of M. Aurelius (Capitol. in vita, 11) that the legitima hereditas of a mother who had not been in manu, might come to her sons to the exclusion of the consanguinei and other agnati. The name Orphitianum is supplied by Paulus (S. R. iv. tit. 10), and the Digest (39. tit. 17); the enactment was made in the consulship of V. Rufus and C. Orphitus. (Inst. 3. tit. 4.)

Paulus (iv. tit. 14) speaks of rules relating to manumission being included in a Senatusconsultum Orphitianum. [Herest] This Senatusconsultum was made in the joint reign of M. Aurelius and Commodus. (Imp. Anton. et Commodi oratione in senatu recitata, Ulp. Freg. tit. xxvi.) See Ordenes Principum.

PISONIANUM was enacted in the reign of Vespasian, Pegasus and Pusio being Consules (Suffecti?) in the year of the enactment. (Inst. ii. tit. 23; Gaius, ii. 253, &c.) The provisions of this Senatusconsultum are stated under Fideicommissa and Legatum. This Senatusconsultum, or another of the same name, modified a provision of the Lex Julia et Papia Poppaea. (Compare Lex Julia et Pap. Pop.; Ulp. Freg. tit. xvi.; Sueton. Claud. 23.)

Pisonianum. [NERONIANUM.] Planclianum, of uncertain date, is by some writers assigned to the time of Vespasian. The Lex Julia Papia et Poppaea apparently contained a provision by which a fideicommissum was forfeited to the Piscus, if a heres or legatarius engaged himself by a written instrument or any other secret mode to pay or give the fideicommissum to a person who was legally incapable of taking it. (Dig. 30. s. 103; 34. tit. 9. s. 10, 18; 49. tit. 14. s. 3.) Such a Fideicommissum was called Taciturn, and when made in the way described was said to be "in fraudem legis," designed to evade the law. If it was made openly (palam), this was no fraud, and though the fideicommissum might be invalid on account of the incapacity of the fideicommissarius to take, the penalty of the lex did not apply. It does not appear certain whether this provision as to the confiscation was contained in the original Lex or added by some subsequent Senatusconsultum. However this may be, the fiduciarius still retained his Quarta. But a Senatusconsultum mentioned by Ulpian (Freg. tit. xxv. s. 17) enacted that if a man undertook to perform a taciturn fideicommissum, he lost the Quadrans or Quarta [Fideicommissum], nor could he claim what was Caducum under the Testamenta, which as a general rule he could claim if he had children. [Legatum; Bona Caducia.] This Senatusconsultum, it appears from an extract in the Digest (35. tit. 2,
was the Planclianum, or Plautianum, for the reading is doubtful; and in this passage it is stated that the Fourth, which the Fiduciarius was not allowed to retain, was claimed for the Fiscus by a Rescript of Antoninus Pius. The penalty for the fraud only applied to that part of the property to which the fraud extended; and if the heirs were in a larger share of the hereditas than the share to which the fraud extended, he had the benefit of the Falcidiurn for that part to which the fraud did not extend, which is thus expressed by Papinian (Dig. 34. tit. 9. s. 11), "sed si major modus institutionis quam fraudis fuerit quod ad Falcidiurn attinet, de superfluo quarta retinebitur." The history of legislation on the subject of Tactia fideicommis is not altogether free from some doubt.

Plautianum. [Planclianum.]

Rubrianum, enacted in the time of Trajan, in the consilium of Rubrius Gallus and Q. Coelius Hapio (probably consules suffecti). A. d. 101, related to fideicommisa libertas. Its terms are given in the Digest (40. tit. 5. s. 26): "Si hi a quilibet libertatem praestari oportet evocati a Praetore adesse, sed si major modus institutionis quam fraudis fuerit quod ad Falcidiurn attinet, de superfluo quarta retinebitur." Compare Plin. Ep. iv. 9, ad Ursum with the passage in the Digest.

Sabiniurn, of uncertain date, but apparently related to the time of Antoninus Pius. It related to the rights of one of three brothers who had been adopted, to a portion of the hereditas contra tabulas testamenti. (Cod. 8. tit. 48. s. 10; Inst. 3. tit. 1.)

Silaniurn, probably passed in the time of Augustus in the consilium of P. Cornelius Dolabella and C. Junius Silanus A. d. 10, contained various enactments. It gave freedom to a slave who discovered the murderer of his master. If a master was murdered, all the slaves who were under the roof at the time, if the murder was committed under a roof, or who were with him in any place at the time of the murder, were put to the torture, and, if they had not done their best to defend him, were put to death. Tacitus (Ann. xiv. 42) refers to this provision of the Senatusconsultum, and he uses the phrase "vetere ex more.

Lipsius (note on this passage) refers to Cicero (ad Fam. iv. 12). Servi Impuberes were excepted from this provision of the Senatusconsultum. (Dig. 29. tit. 5. s. 14.) The heres who took possession of the hereditas of a murdered person before the proper inquiry was made, forfeited the hereditas, which fell to the Fiscus: the rule was the same whether being heres ex testamento he opened the will (tabulae testamenti) before the inquiry was made, or whether being heres ab intestato, he took possession of the hereditas (adid hereditaten) or obtained the Bonorum Possesio: he was also subjected to a heavy pecuniary penalty. To which the Senatusconsultum passed in the consilium of Taurus and Lepidius A. d. 11, enacted that the penalty for opening the will of a murdered person could not be inflicted after five years, except it was a case of parricide to which this temporis prescriptio did not apply. (Paulus, S. R. iii. tit. 5; Dig. 29. tit. 5; Cod. 6. tit. 35.)

Tertullianum is stated in the Institutes of Justinian (3. tit. 3) to have been enacted in the time of Hadrian, in the consilium of Tertullius and concius; but some critics, notwithstanding this, would refer it to the time of Antoninus Pius. This Senatusconsultum empowered a mother, whether Ingentus or Libertina, to take the Legitima hereditas of an intestate son; the Ingentum, if she was or had been the mother of three children; the Libertina, if she was or had been the mother of four children. They could also take, though they neither were nor had been mothers, if they had obtained the Jus Libenorum by Imperial favour. Several persons however took precedence of the mother; the sui heredes of the son, those who were called to the Bonorum Possesio as sui heredes, the father, and the frater consanguineus. If there was a soror consanguinea, she shared with her mother. The Senatusconsultum Orphitianum gave the children a claim to the hereditas of the mother.

(Ulp. Prov. tit. xxvi; Paulus, S. R. iv. tit. 9; Dig. 38. tit. 17.)

Trebellianum, enacted in the time of Nero in the consilium of L. Annius Seneca and Trebellius Maximus. A. d. 62, related to Fideicommissae hereditates.

(Fideicommissum; Gaius, ii. 251, 253; Dig. 36. tit. 1; Paulus, S. R. iv. tit. 2.)

Turpilianum, enacted in the time of Nero in the consilium of Caesconius Pactus and Petronius Turpilius A. d. 61, was against praevaricatio or the collusive desisting from prosecuting a criminal charge. The occasion of this Senatusconsultum and the terms of it are stated by Tacitus (Ann. xiv. 14): "qui talen operam emptitasset, vendidisse, perinde poena teneeretur ac publico judicio calamine condemnaretur." The definition of a praevaricator is given in the Digest (48. tit. 16. s. 1. Ad Senatusconsultum Turpilianum.)

Veileium, rendered void all intercessiones by women, whether they were on behalf of males or females. This Senatusconsultum was enacted in the consilium of Marcus Silanus and Velleius Tutor, as appears from the preamble of the Senatusconsultum (Dig. 16. tit. 1), and it appears most probably to have been passed in the reign of Claudius from the words of Ulpian in his comment upon it. The name of Velleius Tutor does not occur in the Fasti Consulares, and he may be a consul suffectus. The name of M. Silanus occurs as consul in the reign of Claudius, and the colleague of Valerius Asinianus, A. d. 46. (Dion Cass. ix. 27.) [Intercessio.] In the year A. d. 19, according to the Fasti a M. Silanus was also consul; his colleague according to the Fasti was L. Norbanus Balbus, and this agrees with Tacitus (Ann. ii. 59.)

Vitrasianum is assigned to the reign of Vespasian, but the time is very uncertain. It related to Fideicommissae Libertas. (Dig. 40. tit. 5. s. 30.)

Volusianum, enacted in the reign of Nero in the consilium of Q. Volusia Saturninus and P. Cornelius Scipio, A. d. 56. It contained a provision against pulling down a domus or villa for the sake of profit; but the object of this law seems rather obscure: it is referred to, without the name being given, in the Digest (18. tit. 1. s. 52. Senatus consult, &c.) Tacitus (Ann. xiii. 28) mentions a Senatusconsultum in this consilium which limited the power of the Aediles: "quantum curules, quantum plebei pignoris caperent, vel poena irrogarent." A Senatusconsultum Volusianum (if the name is right) enacted that persons should be liable to the penalties of the Lex Julia de vi privata.
who joined in the suit of another person with the bargain that they should share whatever was acquired by the condemnation. (Dig. 48. tit. 7. s. 7.)

SENIORRES. [Comitia, p. 333.]

SEPTA. [Comitia, p. 336, b.]

SEPTEMVIRI EPULONES. [EPULONES.]

SEPTIMATRUS. [Quinquatrus.]

SEPTIMO'NTIUM, a Roman festival which was held in the month of December. It lasted only for one day (die Septimontium, die Septimontalis). According to Festus (s. v. Septimontium), the festival was the same as the Agonalia; but Scaliger in his note on this passage has shown from Varro and Tertullian (de Idolol. 10), that the Septimontium must have been held on one of the last days of December, whereas the Agonalia took place on the tenth of this month. The day of the Septimontium was a dies feriatus for the montani, or the inhabitants of the seven ancient hills or rather districts of Rome, who offered on this day sacrifices to the gods in their respective districts. These sacra (sacra pro montibus, Fest. s. v. Publica sacra) were, like the paganalia, not sacra publica, but privata. (Varro, l. c. compare Sacra.) They were believed to have been instituted to commemorate the enclosure of the seven hills of Rome within the walls of the city, but must certainly be referred to a time when the Capitoline, Quirinal, and Viminal were not yet incorporated with Rome. (Compare Columella, ii. 10; Suet. Domit. 4; Plut. Quest. Rom. 68; Niebuhr, Hist. of Rome, vol. i. p. 389, &c.)

SEPTUNX. [As, p. 140, b.]

SEPULCRUM. [Funus, p. 560, b.]

SERENITAS. [Quinquatrus.]

SERA. [Janua, p. 626, b.]

SERICUM (ςερικος), silk, also called bombycium. The first ancient author who affords any evidence respecting the use of silk, is Aristotle (H. A. v. 19). After a description, partially correct, of the metamorphoses of the silkworm (bombyx, Martian, viii. 35), he intimates that the produce of the cocoons was wound upon bobbins by women for the purpose of being woven, and that Pamphile, the daughter of Plates, was said to have first woven this at the beginning of the metamorphoses of the silkworm. (Tac. Ann. ii. 23; Dom. Cass. Via. 15; Suidas, s. v. Telephos.)

In the succeeding reigns, we find the most vigorous measures adopted by those emperors who were characterized by severity of manners, to restrict the use of silk, whilst Caligula and others, notorious for luxury and excess, not only encouraged it in the female sex, but delighted to display it in public on their own persons. (Suet. Calig. 52; Dion Cass. lix. 12; see also Joseph. B. J. vii. § 4.) Shawls and scarves, interwoven with gold and brought from the remotest East, were accumulated in the wardrobe of the Empress during successive reigns (Martial, xi. 9), until in the year 176 Antoninus, the philosopher, in consequence of the exhausted state of his treasury, sold them by public auction in the Forum of Trajan with the rest of the imperial ornaments. (Capitol. in vita, 17.) At this period we find that the silken texture, besides being mixed with gold (xρωδ'ωνωσος, χρωσωρθος), was adorned with embroidery, this part of the work being executed either in Egypt or Asia Minor. (Nilotti, Mascetti, acou. Luc. x. 141; Seneca, Her. Ost. 604.) The Christian authors from Clemens Alexandrinus (Paedog. ii. 10) and Tertullian (de Pallio, 4)往下 discourage or condemn the use of silk. Plutarch also dissuades the virtuous and prudent wife from wearing it (Conj. Pracc. p. 530, vol. vi. ed. Reiske), although it is probable that ribbands for dressing the hair (Mart. xiv. 24) were not uncommon, since these goods (Serici) were procurable in the remotest East. (Xiph. 1. 27.) Silk thread was also imported and used for various purposes. (Galen, Πεπλα βίδευ. vol. vi. p. 593, ed. Chartier.)

Although Commodus in some degree replenished the palace with valuable and curious effects, including those of silk (Capitol. Partin. 8), this article soon afterwards again became very rare, so that few writers of the third century make mention of it. When finely manufactured, it sold for its weight in gold, on which account Aurelian would not allow his empress to have even a single shawl of purple silk (pallio blatto serico, Vopisc. Arel. 45). The use of silk with a warp of linen or wool, called transoserica and subserica, as distinguished from lososerica, was permitted under many restrictions. About the end, however, of the third century, silk, especially when woven with a warp of inferior value, began to be much more generally worn both by men and women; and the consequence was that, in order to confine the enjoyment of this luxury more entirely to the imperial family and court, private persons were forbidden to engage in the manufacture, and gold and silken bor-
The production of raw silk (μέτρας) in Europe was first attempted under Justinian, A.D. 530. The eggs of the silkworm were conveyed to Byzantium in the hollow stem of a plant from "Serinda," which was probably Khotan in Little Bucanias, by some monks, who had learnt the method of gathering and rearing them. The worms were fed with the leaf of the Black or Common Mulberry (σαράντα), except in the church service. (Otto Frisingen, Hist. Imp. Freder. i. 33; Man. Commens, ii. 8.) The progress of this important branch of industry was however greatly impeded even in Greece both by sumptuary laws restricting the use of silk except in the church service or in the dress and ornaments of the court, and also by fines and prohibitions against private silk-mills, and by other attempts to regulate the price both of the raw and manufactured article.

It was at one time determined that the business should be carried on solely by the imperial treasurer. Peter Barsanes, probably a Phoenician, held the office, and conducted himself in the most oppressive manner, so that the silk trade was ruined both in Byzantium and at Tyre and Berytus, whilst Justinian, the empress Theodora, and their treasurer amassed great wealth by the monopoly. (Procop. Hist. Arcan. 25.)

The silks woven in Europe previously to the thirteenth century were highly elaborate, and appear to have been very similar in their patterns and style of ornament to the Persian shawls of modern times. (J. Y.)

SERRA, dim. SERRULA (σπίλων), a saw. It was made of iron (ferrea, Non. Marc. p. 223, ed. Merceri; de ferra lamina, Isid. Orig. xix. 19; Virg. Georg. i. 143). The form of the larger saw used for cutting timber was seen in the annexed woodcut, which is taken from a miniature in the celebrated Dioscorides written at the beginning of the sixth century. (Montfaucon, Pal. Graec. p. 203.) It is of the kind which we call the framesaw, because it is fixed in a rectangular frame. It was held by a workman (serrarius, Sen. Epist. 57) at each end. The line was used to mark the wood, which is taken from a miniature in the celebrated Dioscorides written at the beginning of the sixth century. (Montfaucon, Pal. Graec. p. 203.) It is of the kind which we call the framesaw, because it is fixed in a rectangular frame. It was held by a workman (serrarius, Sen. Epist. 57) at each end. The line was used to mark the wood, which is taken from a miniature in the celebrated Dioscorides written at the beginning of the sixth century. (Montfaucon, Pal. Graec. p. 203.)

SERTA. 1029

The saw is an instrument of high antiquity, its invention being attributed either to Daedalus (Plin. H. N. viii. 56; Sen. Epist. 90), or to his nephew Perdix (Hygin. Fab. 274; Ovid. Met. viii. 246) (Circinus), also called Talos, who, having found the jaw of a serpent and divided a piece of wood with it, was led to imitate the teeth in iron. (Diod. Sic. iv. 76; Apollod. iii. 15.) In a bas-relief published by Winckelmann (Mon. Ined. ii. fig. 94), Daedalus is represented holding a saw approaching very closely in form to the Egyptian saw above delineated. (J. Y.)

SERRATI NUMMI. (Denarius, p. 394, a.)

SERTA, used only in the plural (σερτα, σερτανωμα), a festoon or garland. The art of weaving wreaths (Corona), garlands, and festoons, employed a distinct class of persons (coronarii and coronarici; στεφανηγιανδροι), Theophrast. H. P. vi. 8. § 1; Plin. H. N. xxi. 2. s. 3, or στεφανηγιανδροι), who endeavoured to combine all the most beautiful varieties of leaves, of flowers, 3 v 3
and of fruits, so as to blend their forms, colours, and scents (Virg. *Copa*, 14, 35) in the most agreeable manner. The annexed woodcut taken from a sarcophagus at Rome (Millin, *Gal. Myth.* ii. 100), shows a festoon adapted to be suspended by means of the fillets at both ends. Its extremities are skilfully encased in acanthus-leaves: its body consists apparently of laurel or bay, together with a profusion of fruits, such as apples, pears, pomegranates, bunches of grapes, and fir-cones. At Athens there was a market, called οστεφανοπλάκιον for the manufacture and sale of this class of productions, the work being principally performed by women and girls. (Aristoph. *Thesm. 455.*

When a priest was preparing a sacrifice, he often appeared with a festoon intended to be placed on the door of the temple (festo fronde, Virg. *Aen.* ii. 249; variis sertis, iv. 202; Juv. xii. 84; Lucan, ii. 354), on the front of the altar (Virg. *Aen.* i. 417) or upon the head of the victim. Thus in the Iliad (i. 14, 28), Chryses besides the gilded sceptre, which denoted his office and authority carries a garland in honour of Apollo, which was probably wound about the sceptre. (See also Aristoph. *Av.* 894, *Pax*, 948; Callim. *Hygn. in Cer.* 45.) The act here described is seen in the annexed woodcut, which is taken from a bas-relief in the collection of antiques at Ince-Blundell, and represents a priestess carrying in her two hands a festoon to descend upon the circular temple which is seen in the distance. As the festoons remained on the temples long after their freshness had departed, they became very combustible. The temple of Juno at Argos was destroyed in consequence of their being set on fire. (Thuc. iv. 133. § 2; Paus. ii. 17. § 7.) The garlands on funereal monuments hung there for a year, and were then renewed. (Tibull. ii. 4. 48, 7. 32; Propert. iii. 16. 23.) The funeral pile was also decorated in a similar manner, but with an appropriate choice of plants and flowers. (Virg. *Aen.* iv. 506.)

Festoons were placed upon the door-posts of private houses in token of joy and affection (Tibull. i. 2. 14) more especially on occasion of a wedding. (Lucan, ii. 354.) They were hung about a palace in compliment to the wealthy possessor (basertuboro coronis atria, Prudent. in *Symm.* ii. 720); and on occasions of general rejoicing, the streets of a city were sometimes enlivened with these splendid and tasteful decorations. (Martial, vi. 79. 8.)

The smaller garlands or crowns, which were worn by persons on the head or round the neck, are sometimes called sertis. (Tibull. i. 7. 53.) The fashion of wearing such garlands suspended from the neck, was adopted by the early Christians. (Min. Felix, 38.)

The smaller garlands or crowns, which were worn by persons on the head or round the neck, are sometimes called sertis. (Tibull. i. 7. 53.) The fashion of wearing such garlands suspended from the neck, was adopted by the early Christians. (Min. Felix, 38.)

The owner of a thing can use it in all ways consistent with his ownership, and he can prevent others from using it in any way that is inconsistent with his full enjoyment of it as owner. If the owner's power over the thing is limited either way, that is, if his enjoyment of it is subject to the condition of not doing certain acts in order that some other person may have the benefit of such forbearance, or to the condition of allowing others to do certain acts, which limit his complete enjoyment of a thing, the thing is said "servire" to be subject to a "servitus." Hence when a thing was sold as "optima maxima," this was legally understood to mean that it was warranted free from Servitutes. (Dig. 50. tit. 16. s. 90. 169; compare Cic. *de Leg. Agr.* iii. 2.) The existence of a Servitus must be proved: the presumption is that the ground is free (liber) till it is shown to be servient. Servitutes are also included in the terms "Jura," and "Jura in Re," and these terms are opposed to Dominium or complete ownership. He who exercises a Servitus therefore has not the animus domini, not even in the case of ususfructus, for the Ususfructuarius is never recognized as owner in the Roman Law. The technical word for ownership, when the ususfructus is deducted from it, is Proprietas.

A man can only have a right to a servitus in another person's property; and a servitus can only be in a corporeal thing. Viewed with respect to the owner of the thing, a Servitus either consists in his being restrained from doing certain acts to his property, which otherwise he might do (servitus quae in faciendo consistit; Servitus negative); or it consists in his being bound to allow some other person to do something to the property, which such person might otherwise be prevented from doing (servitus quae in patiendo consistit; Servitus affirmative). A Servitus never consists in the owner of the servient property being obliged to do any act to his property, though he may be under an obligatio to do acts which are necessary towards the enjoyment of the Servitus. (Dig. 8. tit. 1. s. 15; Puchta, *Inst.* i. § 252, note e.)

There were two classes of Servitutes. Either they had for their subject a definite person, who could exercise the right, in which case they were
called Personal, Personarum; and they ceased with the death of the person: the expression "personalis servitus" was used. (Dig. 34. tit. 3. s. 8 § 3.) Or they had for their subject another piece of property, as a house or land, and the person who exercised the Servitus exercised it in respect of his right to the house or land, which was its subject. Servitutes of the latter kind were called Praedial, Servitutes Praediorum or Reorum, or Jura Praediorum (Gaius, ii. 17. 29; Dig. 8. tit. 1. s. 1); and with reference to their special kinds, Jura aquarum, &c. (Cic. pro Caecin. 26.)

The exercise of Personal Servitutes, of which Usus and Ususfructus were the principal, was always connected with the natural possession of the thing; and consequently the Quasi Possesso of such Servitutes had a close resemblance to Possessio. [Possessio]. Servitutes of this class consisted solely "in patiendo."

Praedial servitutes consisted both "in patiendo, and "in non faciendo." Those which consisted "in patiendo," comprised either such acts as a person might do, by virtue of the Servitus, which acts had only mediately a reference to another piece of land, as in the case of a Jus Itineris; or such acts as a man might do, with immediate reference to another piece of land, as Jus tigni immittendi, and the like. Those which consisted "in non faciendo" on the part of the owner were acts which another possessor of a piece of land could require the owner of the servient property not to do, but which except for the servitus, the owner might do.

Personal servitutes were Usus, Ususfructus, Habitatio, and Operae servorum et Animalium. Habitatio or the right of living in another person's house resembled the ususfructus or usus aedium. But it was not lost as ususfructus and usus were, by capitis diminutio or neglect to exercise the right. Also, it consisted in the right to inhabit some definite part of a house only, and not the whole; the habitatio could be sold or let. If it was a donatio inter vivos, it could be set aside by the heredes of the giver. (Dig. 7. tit. 8. De Usus et Habitatione; Dig. 39. tit. 5. s. 27, 93; Inst. 2. tit. 5.)

Operae servorum et animalium consisted in a man having a right to the use and services of another person's slave or beast, so long as the slave or beast lived. The servitus continued after the death of the person entitled to it, and was not lost by a capitis diminutio nor by neglect to exercise it. This is called by Gaius (i. 32) "the Ususfructus hominum et ceterorum animalium."

Praedial Servitutes imply the existence of two contiguous pieces of land (praedia), one of which owes a servitus to the other (servitutum debet, praedium, factum servitos); and the servitus is said to be due (dolери) from the one to the other. The name of praedium dominans which is now often used to designate the praedium to which the servitus is due, is a modern invention. It is of the nature of a Servitus to be an advantage to the dominant praedium in such a sense that it cannot be alienated without the praedium nor pledged nor let.

Praedial Servitutes were either Praediorum Urbaniorum or Rusticorum. But the word Servitus has a double meaning, according as we view it as a right or a duty. The Servitus of a Praedium Rusticum or Urbanum is, in the former sense, the servitus which belongs to a particular Praedium, as a right; in the latter sense it is the servitus which some particular Praedium owes, as a duty. When the two Praedia are contemplated together in their mutual relations of right and duty, the word Servitus expresses the whole relation. Servitutos Urbane are those which are for the advantage of an edifice as such, whether the advantage is derived from another building or simply a piece of land; Rusticæ are those which are for the advantage of a piece of ground, as such, and mainly for the benefit of agriculture. "Urbanum praedium non locus facti, sed materia." (Ulp. Dig. 60. tit. 16. s. 118.)

The following are the principal Servitutes Urbanæ: 1. Oneris ferendi, or the right which a man has to use the edifice or wall of his neighbour to support his own edifice. The owner of the servient property was consequently bound to keep it in repair so that it should be adequate to discharge its duty. (Dig. 8. tit. 5. s. 6.) 2. Tigni immittendi, or the right of planting a beam in or upon a neighbour's wall. 3. Projectiendi, or the right of adding something to a man's edifice, though it shall project to the open space which is above his neighbour's grounds. 4. Stillicidii, or fluminis recipiendi or immittendi. This servitus was either a right which a man had for the rain water to run from his house upon and through his neighbour's premises, or a right to draw such water from his neighbour's premises to his own. The technical meaning of Stillicidium is rain in drops; when collected in a flowing body it is Flumen. (Varro, de Ling. Lat. v. 27, ed. Müller; Cic. de Or. i. 38.) 5. Altius non tollendi, or the duty which a man owed not to build his house higher than its present elevation; or the duty of not raising his own piece of land not to raise the servitus above a certain height, in order that the owner of some other house might have the advantage of such forbearance. If a man was released from this duty by his neighbour, he obtained a new right, which was the Jus altius tollendi. In like manner, a man whose ground was released from the Servitus Stillicidii, was said to have the servitus stillicidii non recipiendi. This was not strictly accurate language, for if a servitus is defined to be some limitation of the usual rights of ownership, a recovery of these rights or a release from the duties which is implied by the possession of these rights by another, merely gives the complete exercise of ownership and so destroys all notion of a Servitus. Still such was the language of the Roman Jurists, and accordingly we find enumerated among the Urbanane Servitutes (Dig. 8. tit. 2. s. 2.), "Stillicidium avertendi in tectum vel aream vicini aut non avertendi." 6. Servitus ne Luminibus, and ne Prospectu officiarius, or the duty which a man owes to his neighbour's land not to obstruct his light or his prospect (see Gaius, ii. 31; Cic. de Or. i. 38.); and Servitus Luminum or Prospe.tus, or the duty of a man to allow his neighbour to make openings into his premises, as in a common wall for instance,
to get light or a prospect. It was a Servitus the object of which was to procure light, whereas the light officiatur was to prevent the destroying of light. (Dig. 8. tit. 2. s. 4. 40.) But there are different opinions as to the meaning of Servitus Lunarium. 7. Servitus Sterculinii, or the right of placing dung against a neighbour's wall, &c. 8. Servitus fumi immittendi, or the right of sending one's smoke through a neighbour's chimney. 9. Servitus claucae, or the right to a drain or sewer from a man's land or house through a neighbour's land or house.

The following are the principal Servitutes Rusticae:—1. Servitus Itineris, or the right to a foot-path through another man's ground or to ride through on horseback or in a sella or lectica, for a man in such cases was said iure et non agere. Viewed with reference to the person who exercised the right, this Servitus was properly called Jus eundi. (Gaius, iv. 3.) 2. Actus or Agendi, or the right of driving a beast or carriage through another man's land. 3. Vide or the right eundi et agendi et ambulandi. Via of course included the other Servitutes. 4. Servitus pascendi or the right of a man in respect of the ground to pasture his cattle on another's ground. 5. Servitus aquaeductus or the right of a man in respect of the ground to take water from another's aqueductus or ducendi aquam per fundum alienum. There were also other Servitutes as Aquae haustus, Pecoris ad aquam appulsus, Calcis coquendae, and Arenae sododierae. If a Publicius locus or a Via publica intervened, no servitus aquaeductus could be imposed, but it was necessary to apply to the Principles for permission to form an aqueductus across a public road. The intervention of a Sacer et religiosus locus was an obstacle to imposing an Itineris servitus, for no Servitus could be due to a personal Servitude with the death of the person who possessed it. 6. Servitus Stercolinii, or the right of placing dung or manure against a neighbour's wall, &c. 8. Servitus fumi immittendi, or the right of sending one's smoke through a neighbour's chimney. 9. Servitus claucae, or the right to a drain or sewer from a man's land or house through a neighbour's land or house.

The following are the principal Servitutes Rusticae:—1. Servitus Itineris, or the right to a foot-path through another man's ground or to ride through on horseback or in a sella or lectica, for a man in such cases was said iure et non agere. Viewed with reference to the person who exercised the right, this Servitus was properly called Jus eundi. (Gaius, iv. 3.) 2. Actus or Agendi, or the right of driving a beast or carriage through another man's land. 3. Vide or the right eundi et agendi et ambulandi. Via of course included the other Servitutes. 4. Servitus pascendi or the right of a man in respect of the ground to pasture his cattle on another's ground. 5. Servitus aquaeductus or the right of a man in respect of the ground to take water from another's aqueductus or ducendi aquam per fundum alienum. There were also other Servitutes as Aquae haustus, Pecoris ad aquam appulsus, Calcis coquendae, and Arenae sododierae. If a Publicius locus or a Via publica intervened, no servitus aquaeductus could be imposed, but it was necessary to apply to the Principles for permission to form an aqueductus across a public road. The intervention of a Sacer et religiosus locus was an obstacle to imposing an Itineris servitus, for no Servitus could be due to a personal Servitude with the death of the person who possessed it. 6. Servitus Stercolinii, or the right of placing dung or manure against a neighbour's wall, &c. 8. Servitus fumi immittendi, or the right of sending one's smoke through a neighbour's chimney. 9. Servitus claucae, or the right to a drain or sewer from a man's land or house through a neighbour's land or house.

thing, but against any person who impeded the exercise of the right. The plaintiff had of course to prove his title to the Servitus. The Actio Negatoria or Vindicatio libertatis, might be brought by the owner of the property against any person who claimed a Servitus in it. The object was to establish the freedom of the property from the servitus, for damages, and for security to the owner against future disturbance in the exercise of his ownership. The plaintiff had of course to prove his ownership and the defendant to prove his title to the Servitus. (Gaiss. iv. 3; Dig. 8. tit. 5.)

In the case of Personal Servitudes, the Interdict was not, as in the case of proper Possession, a Utile Interdictum. The acquisition of the Juris Quasi Possessio is effected by an act which is done simply as an exercise of the Right, independent of any other Right. The interference with the exercise of the right was prevented by Interdicts applicable to the several cases. A person who disturbed the exercise of a jus Itineris, Actus, Viae by any person whatever, whether the owner of the servient land or any other person, had a right to the Interdict: the object of this Interdict was protection against the disturbance, and compensation: its effect was exactly like that of the Interdict Uti possidetis. Another Interdict applied to the same objects as the preceding Interdict, but its object was to protect the person intitled to the servitude from being disturbed by the owner while he was putting the way or road in a condition fit for use.

There were various other Interdicts as in the case of the Jus aquae quotidianae vel aestivaeducendae (Dig. 43. tit. 20); in the case of the repair of water passages (43. tit. 21, de ripia); in the case of the Jus aquae hauriendae (43. tit. 22).

The second class of Positive Servitudes consists in the exercise of the servitude in connection with the possession of another piece of property. The Interdicts applicable to this case are explained under the third class, of Negative Servitudes. In the case of Praedial Servitudes, there are only two modes in which the Juris quasi Possessio can be acquired: 1, when the owner of the servient property attempts to do some act, which the owner of the dominant property considers inconsistent with his Servitus, and is prevented; 2, by any legal act which is capable of transferring the Jus Servitutis. The possession is lost when the owner of the servient property does an act which is contrary to the Right. The Possession of the Servitudes of the second and third class was protected by the Interdict Uti possidetis. There was a special interdict about sewers (De Claustris, Dig. 43. tit. 23).

It has been stated that Quasi-servitudes were sometimes founded on positive enactments. These were not Servitudes properly so called, for they were limitations of the exercise of ownership made for the public benefit. The only cases of the limitation of the exercise of ownership by positive enactment, which are mentioned in the Pandect, are reducible to three principal classes. The first class comprehends the limitation of ownership on religious grounds. To this class belongs Finis, or a space of five feet in width adjoining estates, which it was not permitted to cultivate. This intermediate space was sacred and it was used by the owners of the adjoining lands for sacrifice. To this class also belongs the rule, that if a man had buried a dead body on the land of another without his consent, he could not as a general rule be compelled to remove the body, but he was bound to make recompense. (Dig. 11. tit. 7. s. 2, 7, 8.)

The second class comprehends rules relating to police. According to the Twelve Tables every owner of land in the city was required to leave a space of two feet and a half vacant all round any edifice that he erected: this was called the legitimum spatium, legitimus modus. Consequently between two adjoining houses there must be a vacant space of five feet. This law was no doubt often neglected, for after the fire in Nero's reign (Tacit. Ann. xv. 43), it was forbidden to build houses with a common wall (communio parietum); and the old legitimum spatium was again required to be observed; and it is referred to in a rescript of Antoninus and Verus. (Dig. 8. tit. 2. s. 14.) This class also comprehends rules as to the height and form of buildings. Augustus (Sueton. Aug. 59) fixed the height at seventy feet; Nero also after the great fire made some regulations with the view of limiting the height of houses. Trajan fixed the greatest height at sixty feet. These regulations were general, and had no reference to the convenience of persons who possessed adjoining houses: they had therefore no relation at all to the Servitudes altius tollendi and non tollendi as some writers suppose. The rule of the Twelve Tables which forbade the removing a "tignum furtivum aedibus vel vineis juncture," had for its object the preventing of accidents. (Dig. 47. tit. 3.) Another rule declared that the owners of lands which were adjoining to public aqueducts should permit materials to be taken from their lands for these public purposes, but should receive a proper compensation. The Twelve Tables forbade the burning or interring of a dead body in the city; and this rule was enforced by a Lex Duilia. In the time of Antoninus Pius this rule prevailed both in Rome and other cities.

The third class of limitations had for its object the protection of agricultural interests. It comprised the rules relating to AQUA PLUVIA, and to the Tigum Junctum in the case of a vineyard; and it gave a man permission to go on his neighbour's premises to gather the fruits which had fallen thereon from his trees; with this limitation that he could only go every third day. (Dig. 43. tit. 28, De Glunde legenda.) The Twelve Tables enacted that if a neighbour's tree hung over into another person's land, that person might trim it to the height of fifteen feet from the ground (quindecim pedes altius cum sublucidor). The rule was a limitation of ownership, but not a limitation of the ownership of the tree-owner: it was a limitation of the ownership of the land-owner; for it allowed his neighbour's tree to overhang his ground, provided there were no branches less than fifteen feet from the ground.

With these exceptions, some of which were of great antiquity, ownership in Roman Law must be considered as unlimited. These limitations also had no reference to the convenience of individuals who had adjoining houses or lands. With respect to neighbours the law allowed them to regulate their
mutual interests as they pleased, and accordingly a man could agree to allow a neighbour to derive a certain benefit from his land which their proximity rendered desirable to him, or he could agree to abstain from certain acts on his land for the benefit of his neighbour's land. The law gave force to these agreements under the name of Servitutes, and assimilated the benefits of them to the right of ownership by attaching to them a right of action like that which an owner enjoyed.

This view of the limitation of ownership among the Romans by positive enactment is from a valuable essay by Dirksen, *Ueber die gesetzlichen beschränkungen des Eigenthums, &c. Ztschrift, vol. ii.* (Gaus, ii. 28—33; Inst. 2. tit. 3—5; Dig. 7 and 8; Cod. 3. tit. 33, 34.)

**SERVUS (GREEK).** The Greek δοῦλος, like the Latin *seruus,* corresponds to the usual meaning of our word slave. Slavery existed almost throughout the whole of Greece; and Aristotle (*Polit.* i. 3) says that a complete household is that which consists of slaves and freemen (οἶκος ὑπὸ τέλεως ἰδίων καὶ ἑλέουσων), and he defines a slave to be a living working-tool and possession. (Οἱ δοῦλοι ἑλέουσαι βραχνοί, Ethic. Nicom. viii. 13; & οἱ δοῦλοι κτίμα τι ἑλέουσαν, Polit. i. 4.) None of the Greek philosophers ever seem to have objected to slavery as a thing morally wrong; Plato in his perfect state only desires that no Greeks should be made slaves. But we also read as well of the purchase and sale of slaves (ap. Athen. vi. p. 265, b) that the Chians were the first who carried on the slave trade, where the slaves were more numerous than in any other place, except Sparta, that is in comparison with the free inhabitants. (Thuc. viii. 40.) In the early ages of Greece, a great number of slaves was obtained by pirates, who kidnapped persons on the coasts, but the chief supply seems to have come from the Greek colonies in Asia Minor, who had abundant opportunities of obtaining them from their own neighbourhood and the interior of Asia. A considerable number of slaves also came from Thrace, where the parents frequently sold their children. (Herod. v. 6.)

At Athens, as well as in other states, there was a regular slave market, called the *katarrhē,* (Harpoocrat. s. v.), because the slaves stood round in a circle. They were also sometimes sold by auction, and appear then to have been placed on a stone called the *προστήρα λίθος* (Pollux, iii. 78), as is also done when slaves are sold in the United States of North America: the same was also the practice in Rome, whence the phrase *homo de lapide emtus.* [Auctio.]

The slave market at Athens seems to have been held certain fixed days, usually the last day of the month (the ἔνα καὶ πέντε or νομοθεσία, Aristoph. *Eqn. 46,* with Schol.). The price of slaves naturally differed according to their age, strength, and qualifications. "Some slaves," says Xenophon (*Mem. ii.* 5; § 2) "are well worth two minas, others hardly half a mina; some sell for...

**SERVUS.**

[HELOTES], the Bithynians at Byzantium, the Callicyrii at Syracuse, the Mariandyni at Heraclea in Pontus, the Amphiatoma in Crete. [Cosm.] The other species of slavery consisted of domestic slaves acquired by purchase (αργοφόρατοι or χρωφόρατοι), see *Isocr. Plutae,* p. 300, ed. Steph.), who were entirely the property of their masters, and could be disposed of like any other goods and chattels: these were the δωδοί properly so called, and were the kind of slaves that existed at Athens and Corinth. In commercial cities slaves were very numerous, as they performed the work of the artisans and manufacturers of modern towns. In poorer republics, which had little or no capital, and which subsisted wholly by agriculture, they would be few: thus in Phocis and Locris there are said to have been originally no domestic slaves. (Athen. vi. p. 264, c; Clinton, *F. H.* vol. ii. pp. 411, 412.)

The majority of slaves was purchased; few comparatively were born in the family of the master, partly because the number of female slaves was very small in comparison with the males; and partly because the habitation of slaves was disregarded as it was considered cheaper to purchase than to rear slaves. A slave born in the house of a master was called *oikōτης,* in contradistinction to one purchased, who was called *oikēτης.* (Ammon. and Suid. s. v.) If both the father and mother were slaves, the offspring was called ἄμφιδωλος (Eustath. *ad Od.* ii. 290); if the parents were *οικετρῆσι, the offspring was called *oikeτρῆσιos.* (Pollux. iii. 76.)

It was a recognized rule of Greek national law that the persons of those who were taken prisoners in war became the property of the conqueror (Xen. *Cyri. vii.* 5; § 73), but it was the practice for Greeks to give liberty to those of their own nation on payment of a ransom. Consequently almost all slaves in Greece, with the exception of the serfs abovementioned, were barbarians. It appears to follow from a passage in Timaeus (ap. Athen. vi. p. 265, b) that the Chians were the first who carried on the slave trade, where the slaves were more numerous than in any other place, except Sparta, that is in comparison with the free inhabitants. (Thuc. viii. 40.) In the early ages of Greece, a great number of slaves was obtained by pirates, who kidnapped persons on the coasts, but the chief supply seems to have come from the Greek colonies in Asia Minor, who had abundant opportunities of obtaining them from their own neighbourhood and the interior of Asia. A considerable number of slaves also came from Thrace, where the parents frequently sold their children. (Herod. v. 6.)
five minas and others even for ten; and Nicias the son of Nicaratus is said to have given no less than a talent for an overseer in the mines." Böckh (Publ. Econ. of Athens, p. 67, &c., 2d ed.) has collected many particulars respecting the price of slaves; he calculates the value of a common mining slave at from 125 to 150 drachmas. The knowledge of any art had a great influence upon the value of a slave. Of the thirty-two or thirty-three sword-cutters who belonged to the father of Demosthenes, some were worth five, some six, and the lowest more than three minas; and his twenty couch-makers together were worth 40 minas (in Aphob. l. p. 816). Considerable sums were paid for courtezans and female players on the cithara; twenty and thirty minas were common prices for such (Ter. Adelph. iii. 1. 37, iii. 2. 15, iv. 7. 24; Phorm. iii. 3. 24): Neaira was sold for thirty minas. (Demosth. c. Neaur. p. 1354. 16.)

The number of slaves was very great in Athens. According to the census made when Demetrius Phalereus was archon (b.c. 309), there are said to have been 21,000 free citizens, 10,000 Metics, and 400,000 slaves in Attica (Ctesicles, ap. Athen. vi. p. 331); according to Böckh, the population is so immensely large in proportion to the free, that some writers have rejected the account altogether (Niebuhr, Hist. of Rome, vol. ii. note 148), and others have supposed a corruption in the numbers and that for 400,000 we ought to read 40,000. (Hume, Essays, vol. i. p. 443.) Böckh and Clinton (F. H. ii. p. 591), however, remark with some justice, that in computing the citizens and metics the object was to ascertain their political and military strength, and hence the census of only males of full age was taken; while in enumerating slaves, which were property, it would be necessary to compute all the individuals who possessed of only males of full age was taken; while in enumerating slaves, which were property, it would be necessary to compute all the individuals who possessed that property. Böckh takes the proportion of free inhabitants to slaves as nearly one to four in Attica, Clinton as rather more than three to one; but whatever may be thought of these calculations, the main fact, that the slave population in Attica was much larger than the free, is incontrovertible: during the occupation of Decelea by the Lacedaemonians, more than 20,000 Athenian slaves escaped to that place. (Thuc. vii. 27.) In Corinth and Aegina their number was equally large: according to Timaeus, Corinth had 460,000, and according to Aristotle Aegina 470,000 slaves (Athen. c. 6.), but these large numbers, especially in relation to Aegina, must be understood only of the early times, before Athens had obtained possession of the commerce of Greece.

At Athens even the poorest citizen had a slave for the care of his household (Aristoph. Plut. init.), and in every moderate establishment many were employed for all possible occupations, as bakers, cooks, tailors, &c. The number possessed by one person was never so great as at Rome during the later times of the republic and under the empire, but it was still very considerable. Plato (de Rep. ix. p. 578) expressly remarks, that some persons had fifty slaves and even more. This was the number which the father of Demosthenes possessed (in Aphob. i. p. 823); Lysias and Polemarchus had 120 (Lys. in Eristosth. p. 395); Philemonides had 300, Hippocion 600, and Nicias 1000 slaves in the mines alone. (Xen. de Vet. iv. 14, 15.) It must be borne in mind, when we read of one person possessing so large a number of slaves, that they were employed in various workshops, mines, or manufactories: the number which a person kept to attend to his own private wants or those of his household, was probably never very large. And this constitutes one great distinction between Greek and Roman slaves, that the labour of the former was regarded as the means by which an owner might obtain profit for the outlay of his capital in the purchase of the slaves, while the latter were chiefly employed in ministering to the wants of their master and his family, and in gratifying his luxury and vanity. Thus Athenaeus (vi. p. 272, ed. Steph.) remarks, that many of the Romans possess 10,000 or 20,000 slaves and even more, but not, he adds, for the sake of bringing in a revenue, as the wealthy Nicias.

Slaves either worked on their masters' account or their own (in the latter case they paid their masters a certain sum a day); or they were let out by their master on hire either for the mines or any other kind of labour, or as hired servants for wages (ἐπιτομοῦ). The rowsers on board the ships were usually slaves (Isocr. de Pace, p. 169, ed. Steph.); it is remarked as an unusual circumstance, that the servant of the Roman emperor (Thuc. viii. 73.) These slaves either belonged to the state or to private persons, who let them out to the state on payment of a certain sum. It appears, that a considerable number of persons kept large gangs of slaves merely for the purpose of letting out, and found this a profitable mode of investing their capital. Great numbers were required for the mines, and in most cases the mine-lessees would be obliged to hire some, as they would not have sufficient capital to purchase as many as they wanted. We learn from a fragment of Hyperides preserved by Suidas (s.v. ἀρχαῖοι ἀνθρώποι), that there were at one time as many as 150,000 slaves, who worked in the mines and were employed in country labour. Generally none but inferior slaves were confined in these mines: they worked in chains, and numbers died from the effects of the unwholesome atmosphere. (Böckh, On the Silver Mines of Laurion.) We cannot calculate with accuracy what was the usual rate of profit which a slave-proprietor obtained. The thirty-two or thirty-three sword-cutters belonging to the father of Demosthenes produced annually a net profit of 30 minas, their purchase value being 190 minas, and the twenty couch-makers a profit of 12 minas, their purchase value being 40 minas. (Demosth. in Aphob. i. p. 816.) The leather-workers of Timarchus produced to their masters two, the overseers three, oboli a day (Aeschin. in Tim. p. 118): Nicias paid an obolus a day for each mining slave which he hired. (Xen. Vet. iv. 14.) The rate of profit upon the purchase-money of the slaves was naturally high, as their value was destroyed by age, and those who died had to be replaced by fresh purchases. The proprietor was also exposed to the great danger of their running away, when it became necessary to pursue them and offer rewards for their recapture (αἰτοτροπία). Phyrtos, Xen. Mem. ii. 10. § 1, 2; Plat. Protag. p. 310. Antigones of Rhodes was the first that established an insurance of slaves. For a yearly contribution of eight drachmas for each slave that was in the army, he undertook to make good the value of the slave at the time of his running away. (Pseudo-Arist. Oecon. c. 35.) Slaves that worked in the fields were under an overracer (ἐπιτομοῦ), to whom the
whole management of the estate was frequently entrusted, while the master resided in the city; the household slaves were under a steward (ταμίας), the female slaves under a stewardess (ταμίδα). (Xen. Oecon. xii. 2, ix. 11.)

The Athenian slaves did not, like the Helots of Sparta and the Penestae of Thessaly, serve in the armies; the battles of Marathon and Arginusae, when the Athenians armed their slaves (Pausan. i. 32. § 3; Schol. ad Aristoph. Ran. 33), were exceptions to the general rule.

The rights of possession with regard to slaves differed in no respect from any other property; they could be given or taken as pledges. (Dem. in Pantaen. p. 967, in Aphob. p. 821, in Onestor. i. p. 871.) The condition, however, of Greek slaves was upon the whole better than that of Roman ones, with the exception perhaps of Sparta, where, according to Plutarch (Lyc. 28), it was the best place in the world to be a freeman, and the worst to be a slave (ἐν ἀκαδείᾳ καὶ τοῦ ἐκλείθρου μαλατη ἐκαίνε, καὶ τῶν δοῦλων μαλαται δοθέναι). At Athens especially the slaves seem to have been allowed a degree of liberty and indulgence, which was never granted to them at Rome. (Compare Plut. de Gurrall. 18; Xenoph. de Rep. Ath. i. 12.) On the reception of a new slave into a house at Athens, it was the custom to scatter sweetsmeats (καταχύψματα), as was done in the case of a newly married pair. (Aristoph. Plut. 768, with Schol.; Demosth. in Steph. 1123. 29; Pollux. iii. 77; Hesych. and Suidas, s. v. Καταχύψματα.)

The life and person of a slave were also protected by the law; a person who struck or mal-treated a slave was liable to an action (καταχύψματα), and a slave too could not be put to death without legal sentence. (Eurip. Heob. 287, 288; Antiph. de coed. Herod. p. 728.) He could even take shelter from the cruelty of his master in the temple of Theseus, and there claim the privilege of being sold by him (πραξιν αἰτείθισαν, Plut. Them. 56; Pollux. vi. 13; Meier, Att. Proc. p. 403, &c.); a slave too could not be put to death without legal sentence. (Eurip. Heob. 287, 288; Antiph. de coed. Herod. p. 728.)

The Romans viewed Liberty as a Natural State, and Slavery as a condition which was contrary to the Natural State. The mutual relation of Slave and Master among the Romans was expressed by the terms Servus and Dominus; and the power and interest which the dominus had over and in the slave was expressed by Dominium. The term Dominium or ownership, with reference to a slave, pointed to the slave merely as a thing or object of ownership, and as a slave as one of the Res Mancipii which Gaius also considers the potestas of a master over a slave as "juris gentium" (i. 52). The Romans viewed Liberty as a Natural State, and Slavery as a condition which was contrary to the Natural State. The mutual relation of Slave and Master among the Romans was expressed by the terms Servus and Dominus; and the power and interest which the dominus had over and in the slave was expressed by Dominium. The term Dominium or ownership, with reference to a slave, pointed to the slave merely as a thing or object of ownership, and as a slave as one of the Res Mancipii which Gaius also considers the potestas of a master over a slave as "juris gentium" (i. 52).

According to the strict principles of the Roman Law, it was a consequence of the relation of Master and Slave that the Master could treat the Slave as he pleased; he could sell him, punish him, and put him to death. Positive morality however and the social intercourse that must always subsist between a master and the slaves, who are immediately about him, ameliorated the condition of slavery. Still we read of acts of great cruelty committed by masters in the later Republican and earlier Imperial periods, and the Lex Petonia was enacted in order to protect the slave. The original power of life and death over a slave, which Gaius considers to be a part of the Jus Gentium, was limited by a constitution of Antoninus, which enacted that if a man put his slave to death without sufficient reason (sin causam), he was liable to the same penalty as if he had killed another man's slave. The Constitution applied to Roman citizens and to all who were under the Imperium Romanum. (Gaius, i. 52, &c.)

The same Constitution also prohibited the cruel treatment of slaves by their masters, by enacting that former master as their patron (προστάτημα), and to fulfill certain duties towards him, the neglect of which rendered them liable to the δίκη ἀποστασίου, by which they might again be sold into slavery. [Liberius, p. 705, 3; Apostasiou Dikè.]

Respecting the public slaves at Athens, see Demosil.

It appears that there was a tax upon slaves at Athens (Xen. de Vect. iv. 23), which Boch (Publ. Econ. pp. 331, 332, 2d ed.) supposes was three oboli a year for each slave.

Besides the authorities quoted in the course of this article, the reader may refer to Petitus, Leg. Att. ii. 6. p. 254, &c.; Reitermeier, Gesch. der Schawerei in Griechenland, Berl. 1789; Limburg-Brouwer, Histoire de la Civilisation des Grecs, vol. iii. p. 267, &c.; Götting, de Notione Servitutis apud Aristotelem, Jen. 1821; Herrmann, Lehrbuch der griech. Staats. art. § 114; and especially Becker, Charikles, vol. ii. p. 20, &c.
if the cruelty of the master was intolerable, he might be compelled to sell the slave; and the slave was empowered to make his complaint to the proper authority. (Senec. de Benef. iii. 22.) A Constitution of Claudius enacted that if a man exposed his slaves, who were infirm, they should become free; and the Constitution also declared that if they were put to death, the act should be murder. (Sueton. Claud. 25.) It was also enacted (Cod. 3. tit. 38. s. 11) that in sales or division of property, slaves, such as husband and wife, parents and children, brothers and sisters, should not be separated.

A slave could not contract a marriage. His cohabitation with a woman was Contubernium; and no legal relation between them could be recognized. Still nearness of blood was considered an impediment to marriage after manumission: thus a manumitted slave could not marry his manumitted sister. (Dig. 23. tit. 2. s. 14.) A slave could have no property. He was not incapable of acquiring property, but his acquisitions belonged to his master; which Gaius considers to be a rule of the Jus Gentium (i. 52). A slave could acquire for his master by Mancipatio, Traditio, Stipulatio, or in any other way. In this capacity of the slave to take, though he could not keep, his condition was assimilated to that of a filiusfamilias, and he was regarded as a person. If one person had a Nudum Jus Quiritium in a slave, and he was another's In bonis, his acquisitions belonged to the person whose he was In bonis. If a man bona fide possessed another man's slave or a free person, he only acquired through the slave in two cases: he was entitled to all that the slave acquired out of or by means of the property of the possessor (ex re ejus); and he was entitled to all that the slave acquired by his own labour (ex operis suis); the law was the same with respect to a slave of whom a man had the Ususfructus only. All other acquisitions of such slaves or free persons belonged to their owner or to themselves, according as they were slaves or free men. (Ulp. Frat. tit. 19.) If a slave was appointed heres, he could only accept the hereditas with the consent of his master, and he acquired the hereditas for his master: in the same way, the slave acquired a legacy for his master. (Gaius, ii. 97, &c.) A master could also acquire Possessio through his slave, and thus have a commonalty of Usucapion (Gaius, ii. 89); but the owner must have the possession of the slave in order that he might acquire possession through him, and consequently a man could not acquire possession by means of a pignorated slave. [Pignus.] A bona fide possessor, that is, one who believed the slave to be his own, could acquire possession through him in such cases as he could acquire property; consequently a pledgee could not acquire possession through a pignorated slave, though he had the possession of him bona fide, for this bona fide was not that which is meant in the phrase bona fide possessor. The Usufructarius acquired possession through the slave in the same cases in which the bona fide possessor acquired it. (Savigny, Das Recht des Besitzes, p. 314, ed. 5.)

Slaves were not only employed in the usual domestic offices and in the labours of the field, but also as factors or agents for their masters in the management of business [Institutioria Actio, &c.], and as mechanics, artisans, and in every branch of industry. It may easily be conceived that under these circumstances, especially as they were often intrusted with property to a large amount, there must have been a practice of allowing the slave to consider part of his gains as his own: this was his Peculium, a term also applicable to such acquisitions of a filiusfamilias as his father allowed him to consider as his own. [Patria Potestas.] According to strict law, the Peculium was the property of the master, but according to usage it was considered to be the property of the slave. Sometimes it was agreed between master and slave, that the slave should purchase his freedom with his Peculium when it amounted to a certain sum. (Tacl. Ann. xiv. 42, and the note of Lipsius.) If a slave was manumitted by the owner in his lifetime, the Peculium was considered to be given together with Libertas, unless it was expressly retained. (Dig. 15. tit. 1. s. 53, de Peculo.) Transactions of borrowing and lending could take place between the master and slave with respect to the Peculium, though no right of action arose on either side out of such dealings, conformably to a general principle of Roman Law. (Gaius, iv. 76.) If after the slave's manumission, the master paid him a debt which had arisen in the manner above mentioned, he could not recover it. (Dig. 12. tit. 6. s. 64.) In case of the claim of creditors on the slave's Peculium, the debt of the slave to the master was first taken into the account, and deducted from the Peculium. So far was the law modified, that in the case of naturales obligationes, as the Romans called them, between master and slave, a fidejussor could be bound for a slave; and he could also be bound, if the creditor was an extraneus. A naturalis obligatio might result from the dealings of a slave with other persons than his master; but the master was not at all affected by such dealings. The master was only bound by the acts and dealings of the slave, when the slave was employed as his agent or instrument, in which case the master might be liable to an Actio Exercitoria or Institutoria. (Gaius, iv. 71.) There was of course an actio against the master, when the slave acted by his orders. [Jussu, Quod, &c.] If a slave or filiusfamilias traded with his peculium with the knowledge of the dominus or father, the peculium and all that was produced by it were divisible among all creditors and masters or fathers in due proportions (pro rata portione), and if any of the creditors complained of getting less than his share, he had a tributoria aclio against the master or father, to whom the law gave the power of distribution among the creditors. (Gaius, iv. 72, &c.) The master was not liable for anything beyond the amount of the peculium, and his own demand was payable first. (Dig. 14. tit. 4. de Tributoria Actione.) Sometimes a slave would have another slave under him, who had a peculium with respect to the first slave, just as the first slave had a peculium with respect to his master. On this practice was founded the distinction between Servi Ordinarii and Vicarii. (Dig. 15. tit. 1. s. 17.) These subordinate peculia were however legally considered as included in the principal peculium. In the case of a slave dying, being sold or manumitted, the Edict required that any action in respect of the Peculium must be brought within a year. (Dig. 15. tit. 2. s. 1, which contains the words of the Edict.) If a slave or filiusfamilias had carried on dealings
The rights of the master over the slave were in
perpetuity, and the master had also a praetoria
action against any master who committed
stuprum with his female slave. (Gaius, iv. 77.) They had however a
right of action against a person who corrupted his slave
or father, there might be an action against the
slave's master for damages, he must give up the slave. [Nox.]
The slave was protected against injury from other
persons. If the slave was killed, the master might
repeal the slave in consequence of his Delicts. Other
persons might obtain rights against a slave in con-
sequence of his delicts, but their right could not be
prosecuted by action until the slave was manu-
mitted. (Gaius, iv. 77.) They had however a
right of action against the slave's master for
damages, and if the master would not pay the
damages, he must give up the slave. [Nox.]
A slave was protected against poena and was addicted
therefore, he had no master, and they lost the
property which their property was confiscated, whence,
it was established that persons condemned to death,
to make it their business to recover runaway slaves.
For instance if a slave bor-
rrowed ten souseria and paid them to the master's
creditors, the master was bound to pay the loan,
and the lender had an action against him De in ren
verso. If the slave paid any part of the borrowed
sum to his master's creditors, the master was liable to
the lender for the amount so applied, and if the
slave had wasted the other part, the master was bound
to make that to the amount of the slave's peculium;
but still with this provision, that the amount of the slave's peculium could only
be ascertained by first deducting from it what he
owed to the master. The case was the same with
the peculium of a son and a slave. Thus, as
Gaius observes (iv. 73), the Actio De peculo and
De in ren verso was one actio, but contained two
condemnationes.
A consequence of the relation of Slave and
Master, that the Master acquired no rights against
the slave in consequence of his Delicts. Other
persons might obtain rights against a slave in con-
sequence of his delicts, but their right could not be
prosecuted by action until the slave was manu-
mitted. (Gaius, iv. 77.) They had however a
right of action against the slave's master for
damages, and if the master would not pay the
damages, he must give up the slave. [Nox.]
The slave was protected against injury from other
persons. If the slave was killed, the master might
either prosecute the killer for a capitalis poena,
or sue for damages under the Lex Aquilia. (Gaius,
iii. 213.) [AQUILLIA LEX ; INJURIA.] The master had also a praetoria actio in duplum against
those who corrupted his slave (serecus, seres) and
led him into bad practices (Dig. 11. tit. 3. s. 1.
where the words of the Edict are given): the in
duplum was to twice the amount of the estimated
damage. He had also an action against a person who
committed stuprum with his female slave.
(Dig. 47. tit. 10. s. 25.)
A runaway slave (de fugitio) could not lawfully
be received or harboured; to conceal him was
Furtum. The master was entitled to pursue him
wherever he pleased; and it was the duty of all
authorities to give him aid in recovering the slave.
It was the object of various laws to check the
running away of slaves in every way, and ac-
ccordingly a runaway slave could not legally be
an object of sale. A class of persons called Fugitivarii
made it their business to recover runaway slaves.
Though the master or the slave were in no
way affected by his running away. (Dig. 11.
tit. 4. De fugitiva: there was a Lex Fabilia on
this subject, and apparently two Senatusconsulta
at least; see also Varro, de Rei Rust. iii. 14; Florus,
iii. 19, and the note in Duker's edition.)
A person was a slave either Jure Gentium or
Jure Civili. A person was born a slave Jure Gen-
tium whose mother was a slave when she gave
him birth (Gaius, i. 82) ; for it was a legal prin-
ciple that the condition of those who were not
begotten in Justae Nupiae was to be reckoned from the time of the birth. A slave born in the
master's house was Vera. But it was also a
principle of Roman Law that the status of a person
who was begotten in a slave state, from the time of
the birth might be a slave, still her child was free, if the mother had been free at any
time reckoning backwards from the time of the
birth to the time of the conception. (Paulus, S. R.
ii. tit. 24; Dig. 1. tit. 5. s. 5.) There were various
cases of children the offspring of a free parent and
a slave as to which positive law provided whether
the children should be free or slaves. (Gaius, I.
83. &c.) [SENATUSCONSULTUM CLAUDIANUM.] A person
became a slave by capture in war, also
Jure Gentium. If the slave was killed, the master might
sell as belonging to the Aerarium or distributed
among the soldiers by lot. (Walter, Geschichts
etc. p. 50, note 35, 1st ed.) In reference to the
practice of selling prisoners with a crown on their
heads, we find the expression "sub corona venire,
vendere." (Gell. vii. 4; Liv. v. 22; Caesar,
B. G. iii. 16.)
A free person might become a slave in various
ways in consequence of positive law, Jure Civili.
This was the case with Incesti [CAPUT], and
those who evaded military service. (Cic. pro
Caeceina, 34.) In certain cases, a man became a
slave, if he allowed himself to be sold as a slave in
order to defraud the purchaser; and a free woman
who conbaited with a slave might be reduced to the
same condition. [SENATUSCONSULTUM CLAU-
DIANUM.] Under the empire the rule was estab-
lished that persons condemned to death, to the
mines, and to fight with wild beasts, lost their
freedom, and their property was confiscated, whence,
concludes Gaius, it appears that they lose the
Testamenti factio. (Dig. 28. tit. 1. s. 8.) But this
was not the earlier law. A person so condemned,
though he lost his freedom, had no master, and
consequently the hereditates and legacies which
were left to him, were simply void; for such a
person was "poenae servus, non Caesaris." (Dig.
31. tit. 8. s. 3.) A man never lost his freedom by
usucaption. (Gaius, i. 48.) According to the
old law a manifestus fur was liable to a capitalis
poena and was addicted to the person whose
property he had stolen; but it was doubted
whether the effect of the addition was to make him
a servus or to put him in the condition of an
adjudicatus. (Gaius, iii. 189.)
By a Constitutio or Senatusconsultum of Clau-
dius (Sueton. Claud. 25) a freedman who miscon-
ducted himself towards his patron, was reduced to
his former state of slavery. But this was not the
rule of law in the time of Nero. (Tacit. Ann. xiii.
27; see the notes of Ernesti and Lipsius on this
passage: and PATRONUS, LIBERTUS.)
The Siste of Slavery was terminated by MANU-
MISSIO. It was also terminated by various positive
enactments, either by way of reward to the slave
or punishment to the master. The SENATUSCONS-
ULTUM SILENIANUM is an example of the former;
and various subsequent Constitutions gave freedom
to slaves who discovered the perpetrators of certain
crimes. (Cod. Theod. tit. 21. s. 2.) Liberty might
also be acquired by the Praescriptio Temporis.
After the establishment of Christianity, it might be
acquired subject to certain limitations by be-
coming a monk or a spiritual person (Nov. 5. c. 2.
and 123. c. 17. 35); but if the person left his

SERVUS.
monastery for a secular life, or rambled about in the towns or the country, he might be reduced to his former servile condition.

There were slaves that belonged to the state and were called Servi Publici (Plin. Capt. ii. 2. 85): they had the testamenti factio to the amount of one half of their property (Ulp. Frag. tit. 29), from which circumstance it appears that they were viewed in a light somewhat different from the slaves of private persons.

In times of revolution under the Republic, it was not unusual to proclaim the liberty of slaves to induce them to join in revolt (Plut. Mar. c. 41, 42); but these were irregular proceedings, and neither justifiable nor examples for imitation. Lord Dunmore, the last British Governor of Virginia, at the commencement of the American Revolution, followed this bad example. [G. L.]

The preceding account treats of the legal condition of slaves in relation to their masters. It remains to give an account of the history of slavery among the Romans, of the sale and value of slaves, of the different classes into which they were divided, and of their general treatment.

Slaves existed at Rome in the earliest ages of the republic. The different trades and the mechanical arts were chiefly carried on by the clientes of the patricians, and the small farms in the country were cultivated for the most part by the labours of the proprietor and of his own family. But as the territories of the Roman state were extended, the patricians obtained possession of large estates out of the ago publicus, since it was the practice of the Romans to deprive a conquered people of part of their land. These estates probably required a larger number of hands for their cultivation than could readily be obtained among the free population, and since the freemen were constantly liable to be called away from their work to serve in the armies, the lands began to be cultivated almost entirely by slave labour. (Compare Liv. vi. 12.) Through war and commerce slaves could easily be obtained, and at a cheap rate, and their number soon became so great, that the poorer class of freemen was thrown almost entirely out of employment. This state of things was one of the chief arguments used by Cicero in defending his master, Cato, when he went to Spain as consul, took only three slaves with him. (Apul. Apol. p. 430. ed. Ouden.) But during the latter times of the republic and under the empire the number of domestic slaves greatly increased, and in every family of importance there were separate slaves to attend to all the necessities of domestic life. It was considered a reproach to a man not to keep a considerable number of slaves. Thus Cicero, in describing the meanness of Piso's housekeeping, says "Idem coquus, idem atricles: pietor domi nullus" (in Pis. 27). The first question asked respecting a person's fortune was "Quos pascit servos?" (Juvis. iii. 141). Horace (Sat. i. 3. 12) seems to speak of ten slaves as the lowest number which a person in tolerable circumstances ought to keep, and he ridicules the praetor Tullius for being attended by no more than five slaves in going from his Tiburtine villa to Rome. (Sat. i. 6. 107.) The immense number of prisoners taken in the constant wars of the republic, and the increase of wealth and luxury augmented the number of slaves to a prodigious extent. The statement of Athenaeus (vi. p. 272, e), that very many Romans possessed 10,000 and 20,000 slaves and even more, is probably an exaggeration, but a freedman under Augustus, who had lost much property in the civil wars, left at his death as many as 4,116. (Plin. H. N. xxxii. 10. s. 47.) Two hundred was no uncommon number for one person to keep (Hor. Sat. i. 3. 11), and Augustus permitted even a person that was exiled to take twenty slaves or freedmen with him. (Dion Cass. lvi. 27.) The mechanical arts, which were formerly in the hands of the Clients, were now entirely exercised by slaves (Cic. de Off. ii. 42): a natural growth of things, for where a slave possesses the use of certain tools, or practises certain arts, such duties or arts will be thought degrading to a freedman. It must not be forgotten that the games of the amphitheatre required an immense number of slaves trained for the purpose. [GALITATORI.] Like the slaves in Sicily, the gladiators in Italy rose in b. c. 73 against their oppressors, and under the able generalship of Spartacus, defeated a Roman consular army, and were not subdued till b. c. 71, when 60,000 of them are said to have fallen in battle. (Liv. Epit. 97.)

Under the empire various enactments, mentioned above (p. 1036. a.), were made to restrain the cruelty of masters towards their slaves; but the spread of Christianity tended most to ameliorate their condition, though the possession of them was for a long time by no means condemned as contrary to Christian justice. The Christian writers, however, inculcate the duty of acting towards them as we would be acted by (Clem. Alex. Paedagog. iii. 12), but down to the age of Theodosius wealthy persons still continued to keep as many as two or
three thousand. (Chrysost. vol. vii. p. 633.) Justinian did much to promote the ultimate extinction of slavery; but the number of slaves was again increased by the invasion of the barbarians from the north, who not only brought with them their own slaves who were chiefly Sclavi or Schavonins (whence our word Slave), but also reduced many of the inhabitants of the conquered provinces to the condition of slaves. But all the various classes of slaves became merged in course of time into the Adscripti Glebae or serfs of the middle ages.

The chief sources from which the Romans obtained slaves have been pointed out above. Under the republic one of the chief supplies was prisoners taken in war, who were sold by the quaestores (Plaut. Capt. Prot. 34, and i. 2. 1, 2) with a crown on their heads (see above, p. 1038, b), and usually on the spot where they were taken, as the care of a large number of captives was inconvenient. Consequently slave-dealers generally accompanied an army, and frequently after a great battle had been gained many thousands were sold at once, when the slave-dealers obtained them for a mere nothing. In the camp of Lucullus on one occasion slaves were sold for four drachmæ each. The slave trade was also carried on to a great extent, and after the fall of Corinth and Carthage Delos was the chief mart for this traffic. When the Cilician pirates had possession of the Mediterranean as many as 10,000 slaves are said to have been imported and sold there in one day. (Strab. xiv. p. 668.) A large number came from Thrace and the countries in the north of Europe, but the chief supply was from Africa, and more especially Asia, whence we frequently read of Phrygians, Lyceans, Cappadocians, &c. as slaves.

The trade of slave-dealers (mangones) was considered disreputable, and expressly distinguished from that of merchants (mangones non mercatores sed venaliciarii appellantur, Dig. 50. tit. 16. s. 207; Plaut. Trin. ii. 2. 51); but it was very lucrative, and great fortunes were frequently realized from it. The slave-dealer Thoranius, who lived in the time of Augustus, was a well-known character. (Suet. Aug. 69; Macrobr. Sot. ii. 4; Plin. H. N. vii. 12. s. 10.) Martial (viii. 13) mentions another celebrated slave-dealer in his time of the name of Gargilianus.

Slaves were usually sold by auction at Rome. They were placed either on a raised stone (hence de lapide emtus, Cic. in Pis. 15; Plaut. Bacch. iv. 7. 17), or a raised platform (catasta, Tibull. ii. 3. 60; Persius, vii. 77, Casaubon, ad loc.), so that every one might see and handle them, even if they did not wish to purchase them. Purchasers usually took the time to have them tried naked (Senec. Ep. 80; Suet. Aug. 69), for slave-dealers had recourse to as many tricks to conceal personal defects as the horse-jockeys of modern times: sometimes purchasers called in the advice of medical men. (Claudian, in Eutrop. i. 35, 36.) Slaves of great beauty and rarity were not exhibited to public gaze in the common slave-market, but were shown to purchasers in private (arona talulata catasta, Mart. ix. 60). Newly imported slaves had their feet whitened with chalk (Plin. H. N. xxxv. 17. s. 58; Ovid. Am. i. 8. 64), and those that came from the East had their ears bored (Juv. i. 104), which we know was a sign of slavery among many Eastern nations. The slave-market, like all other markets, was under the jurisdiction of the aediles, who made many regulations by edicts respecting the sale of slaves. The character of the slave was set forth in a scroll (titulus) hanging round his neck, which was a warranty to the purchaser (Gell. iv. 2; Propert. iv. 5. 51): the vendor was bound to announce fairly all his defects (Dig. 21. tit. 1. s. 1; Hor. Sat. ii. 3. 264), and if he gave a false account had to take him back within six months from the time of his sale (Dig. 21. tit. 1. s. 19. § 6), or make up to the purchaser what the latter had lost through obtaining an inferior kind of slave to what had been warranted. (Dig. 19. tit. 1. s. 13, § 4; Cic. de Off. iii. 16, 17, 23.) The vendor might however use general terms of commendation without being bound to make them good. (Dig. 18. tit. 1. s. 43; 21. tit. 1. s. 19.) The chief points which the vendor had to warrant, was the health of the slave, especially freedom from epilepsy, and that he had not a tendency to thievery, running away, or committing suicide. (Cic. de Off. iii. 17.) The situation of a slave was considered important, and had to be set forth by the vendor. (Dig. 21. tit. 1. s. 31. § 21.) Slaves sold without any warranty were at the time of sale a cap (pileus) upon their head. (Gell. vii. 4.) Slaves newly imported were generally preferred for common work; those who had served long were considered artful (veteratores, Ter. Heaut. v. 1. 16); and the pertness and impudence of those born in their master's house (servae, see above, p. 1038) were proverbial. (Vernae processe, Hor. Sat. ii. 6. 66; Mart. i. 42, x. 3.)

The value of slaves depended of course upon their qualifications; but under the empire the increase of luxury and the corruption of morals led purchasers to pay immense sums for beautiful slaves, or such as ministered to the caprice or whim of the purchaser. Emnuchs always fetched a very high price (Plin. H. N. vii. 39. s. 40), and Martial (iii. 62, xi. 70) speaks of beautiful boys who sold for as much as 100,000 or 200,000 sesterces each (685l. 8s. 4d. and 1770l. 16s. 0d.). A morio or fool sometimes sold for 20,000 sesterces. (Mart. viii. 15.) Slaves who possessed a knowledge of any art which might benefit their owners, also sold for a large sum. Thus literary men and doctors frequently fetched a high price (Suet. de Id. Gram.; Plin. H. N. vii. 39. s. 40), and also slaves fitted for the stage, as we see from Cicero's speech on behalf of Q. Roscius. Female slaves who might bring in gain to their masters by prostitution were also dear; sometimes 60 minae were paid for a girl of this kind. (Plaut. Pers. iv. 4. 113.) Five hundred drachmæ (perhaps at that time about 181l.) seem to have been a fair price for a good ordinary slave in the time of Horace. (Sat. ii. 7. 43.) In the Augustan age the value of bearing arms was valued at 25 solidi or aurei, [Aurum, p. 162, a.] (Cod. Theod. 7. tit. 13. s. 13.) In the time of Justinian the legal valuation of slaves was as follows: common slaves, both male and female, were valued at 20 solidi a piece, and under ten years of age at half that sum; if they were artificers, they were worth 30 solidi, if notarii 50, if medical men or midwives 60; eunuchs under ten years of age were worth 30 solidi, above that age 50, and if they were artificers also, as much as 70. (Cod. 6. tit. 44. s. 3.) Female slaves, unless possessed of personal attractions, were generally cheaper than males. Six hundred sesterces (about 5l.) were thought too
much for a slave girl of indifferent character in the
of the vendor. (Dig. 47. tit. 2. s. 76.) We have
then of Justinian the legal value
as at earlier times, and that therefore recourse was
nurses for keeping up the number of
Slaves were divided into many various classes:
the first division was into public or private. The
former belonged to the state and public bodies,
and their condition was preferable to that of the
common slaves. They were less liable to be sold,
and under less control than ordinary slaves; they
also possessed the privilege of the testamenti facio
to the amount of one half of their property (see
above, p. 1039, a), which shows that they were re
no. therefore, on the taking of Nova Carthago,
doubt of her having come honestly into the hands
of the master. But under the republic and in the early
times of the empire this was done to a very limited
degree, as it was found cheaper to purchase than
former belonged to the state and public bodies,
common slaves. They were less liable to be sold,
considered in a different light from other slaves. Sci-
ficio, therefore, on the taking of Nova Carthago,
remitted 2000 artizans, who had been taken pris-
ons and were consequently liable to be sold as
common slaves, that they should become public
slaves of the Roman people, with a hope of speedy
manumission, if they assisted him in the war. (Liv.
xxvi. 47.) Public slaves were employed to take
have upon the magistrates and priests.
thus the Aediles and Quaestors had great numbers
of public slaves at their command (Gell. xiii. 13),
and the Triumviri Nocturni, who employed
of household economy, as bakers (pistorcs), cooks
(coqui), confectioners (dulciarics), picklers (salumen-
torics), &c. it is unnecessary to mention these more
particularly. This class also included the porters
(Ostiarii), the bed-chamber slaves (Cubicularii),
the litter bearers (lecitoreii) (LECTICA), and all
personal attendants of any kind.
Mediastini. [MEDIASTINI.]
Quales-Quales are only mentioned in the Digest
(l. c.), and appear to have been the lowest class of
slaves, but in what capacities they differed from
Mediastini is doubtful: Becker (Collis. vol. i. p.
125) imagines they may have been a kind of slaves,
qua&quales conditione viventis, which however does
not give us any idea of their duties or occupations.
Literati, literary slaves, were used for various
purposes by their masters, either as readers [ANA-
Gnostae], copyists or amanuenses [LIBRARII; 
AMANUENSIS], &c. Complete lists of all the
duties performed by slaves are given in the works
of Pignorius, Popma, and Blair, referred to at the
close of this article.
The treatment of slaves of course varied greatly
according to the disposition of their masters, but
they appear upon the whole to have been treated
with greater severity and cruelty than among the
Athenians. Originally the master could use the
slave as he pleased: under the republic the law
does not seem to have protected the person or life
of the slave at all, but the cruelty of masters was
to some extent restrained under the empire, as has
been stated above (p. 1036, b). The general treat-
ment of slaves, however, was probably little affected
by legislative means. In early times, when the
number of slaves was small, they were treated
with more indulgence, and more like members of
the family: they joined their masters in offering
up prayers and thanksgivings to the gods (Hor. Ep.
ii. 1. 142), and partook of their meals in common
with their masters (Plut. Coriol. 24), though not
at the same table with them, but upon benches
(sulciatlas) placed at the foot of the lectus. But
with the increase of numbers and of luxury among
masters, the ancient simplicity of manners was
changed: a certain quantity of food was allowed
them (dimensum or decumenum), which was granted
to them either monthly (menstruum, Plut. Stich.
i. 2. 3), or daily (diarium, Hor. Ep. i. 14. 41; 
Mart. xi. 108). Their chief food was the corn,
called far, of which either four or five modii were
granted them a month (Donat. in Ter. Phorm. i. 1.
9; Sen. Ep. 80), or one Roman pound (libra) a day.
(Hor. Sat. i. 6. 69.) They also obtained an allowance
of salt and oil: Cato (R. R. 58) allowed his slaves
a sextarius of oil a month and a modius of salt a

SERVUS.

(SERVUS.)
year. They also got a small quantity of wine with an additional allowance on the Saturnalia and but seldom vegetables. Butcher's meat seems to have been hardly ever given them.

Under the republic they were not allowed to serve in the army, though after the battle of Cannae, when the state was in such imminent danger, 8000 slaves were purchased by the state for the army, and subsequently manumitted on account of their bravery. (Liv. xxii. 57, xxiv. 14—16.)

The offences of slaves were punished with severity and frequently the utmost barbarity. One of the mildest punishments was the removal from the familia urbana to the rustica, where they were obliged to work in chains or fetters. (Plant. iii. 1. 18; Ter. Phorm. ii. 1. 20.) They were frequently beaten with sticks or scourged with the whip (of which an account is given under Flavius), but these were such every-day punishments, that many slaves ceased almost to care for them: thus Chrysalis says (Plaut. Bacchid. ii. 3. 131), "Si illi sunt virgae ruri, at mihi tergum est domi."

Runaway slaves (fugitivi) and thieves (furii) were branded on the forehead with a mark (stigma), whence they are said to be notati or inscripti. (Mart. viii. 75. 9.) Slaves were also punished by being hung up by their hands with weights suspended to their feet (Plaut. Asin. ii. 2. 37, 38), or by being sent to work in the Ergastulum or Pistri-num. (Ergastulum; Mola.) The carrying of the furca was a very common mode of punishment. (Furca.) The toilet of the Roman ladies was a dreadful ordeal to the female slaves, who were often barbarously punished by their mistresses for the slightest mistake in the arrangement of the hair or a part of the dress. (Ovid. Am. i. 14. 15, Ar. Am. iii. 236; Mart. ii. 66; Juv. vi. 498, &c.)

Masters might work their slaves as many hours in the day as they pleased, but they usually allowed them holidays on the public festivals. At the festival of Saturnus in particular, special indulgences were granted to all slaves, of which an account is given under Saturnalia.

There was no distinctive dress for slaves. It was once proposed in the senate to give slaves a number. (Sen. de Clem. i. 4, 11.) The number of asses in the denarius was made equal to 2. 5 asses. Hence the name, which is an abbreviation of semis tertius (se, nummus, the Roman mode of expressing 2. 5). (Varro, L. L. v. 173, ed. Muller; Festus, s. e.; Plin. H. N. xxxiii. 3. s. 13.) The word Nummus is often expressed with sestertius, and often it stands alone, meaning sestertius.

Hence the symbol H S or I I S, which is used to designate the sestertius. It stands either for L L S (Libra Libra et Semis), or for H I S, the two I's merely forming the numeral two (se. asses or librae), and the whole being in either case equivalent to dupondius et semis. (Praec. de Ponder. p. 1347; Festus, p. 347, Muller.)

When the as was reduced to half an ounce, and the number of asses in the denarius was made sixteen instead of ten (as, Denarius), the sestertius was still 2. 5 of the denarius, and therefore contained no longer 2. 5, but 4 asses. The old reckoning of 10 asses to the denarius was kept, however, in paying the troops. (Plin. xxxiii. 2.)

After this change the sestertius was coined in brass called ORICHALCUM, which was much finer than the common AES, of which the asses were made. (Plin. xxxiv. 2.)

The sum of 1000 sestertii was called sestertium. This was also denoted by the symbol H S, the obvious explanation of which is "I I S (2. 5) mil- lia;" but Grorusius considers it as 2. 5 pounds of silver (sestertium pondus argentii), which he considers to have been worth originally 1000 sestertii, and therefore to have represented this value ever after. (Poe. Vet. i. 4, 11.) The sestertium was always a sum of money, never a coin: the coin used in the payment of large sums was the denarius.

According to the value we have assigned to the Denarius, up to the time of Augustus, we have

Taking the earlier value of the sestertius, and neglecting the half farthing, we have 1 sestertius = two-pence, 6 sestertii = 1 shilling, and 120 sestertii = 1. sterling. Hence we get the following very convenient RULE: to convert sestertius into...
pounds sterling divide by 120; and correct the result by adding to it the quotient obtained by dividing the original number by 1920: for '5 of a farthing is \( \frac{1}{360} \) of a pound.

The sestertius was the denomination of money almost always used in reckoning considerable amounts. There are a very few examples of the use of the denarius for this purpose. The mode of reckoning was as follows:—

\[
\text{Sestertius} = \text{sestertius nummus} = \text{nummus}.
\]

Sums below 1000 sestertii were expressed by the numeral adjectives joined with either of these forms.

The sum of 1000 sestertii = \( 1000 \text{ sestertii} = \text{M sestertiorum} = \text{M nummi} = \text{M nummus} \) (for nummorum) = \( \text{M sestertii nummi} = \text{sestertium numnum = sestertium} \).

These forms are used with the numeral adjectives below 1000, for sums between 1000 and 1,000,000 sestertii: sometimes \( \text{milia} \) is used instead of \( \text{sestertius} \); sometimes both words are omitted: sometimes \( \text{nummum} \) or \( \text{sestertium} \) is added. For example, 600,000 sestertii = \( \text{sessa} \text{ centesimae sestertiorum} = \text{sessa milli milli} = \text{sessa} = \text{sessa centesimae sestertiorum} \).

For sums of a thousand sestertia (i.e. a million \( \text{sestertii} \)) and upwards, the numeral adverbs in \( \text{sescenta} \text{ sestertiorum} \) are used, with which the words \( \text{centena millia} \) (a hundred thousand) must be understood. With these adverbs the neuter singular \( \text{sestertium} \) is joined in the case required by the construction. (Nepos, \( \text{Att. xiv. 2} \) gives \( \text{sestertio vicies et sestertio centesimae} \).) Thus, \( \text{decies sestertium} = \text{decies centena millia sestertium} \) is ten times a hundred thousand sestertii = \( 1,000,000 \) sestertii = \( \text{M sestertiorum} = \text{M sestertiorum milli milli} = \text{sessa centena milli milli} = \text{sessa} = \text{sescente centesimae sestertiorum} \).

The sestertius was the denomination of money and measures in the Roman system, and the connecting point between it and that of the Greeks, for it was equal to the \( \text{Sester} \text{ of the latter} \); and there can be little doubt that the \( \text{Sester} \) was not an original Greek measure, but that the word was introduced into the Greek system from the Romans, for the purpose of establishing a unit of agreement. (\[ \text{Quadantal.} \]) It was one-sixth of the \( \text{congius} \), and hence its name: in the Greek system it was one-sixth of the \( \text{chous} \). It was divided, in the same manner as the \( \text{As} \), into parts named \( \text{uncia, sextans, quadrans, triens, quinsextum, semissis, &c.} \). The \( \text{uncia} \), or twelfth part of the \( \text{sestertius} \), was the \( \text{Cyathus} \); its \( \text{sestertia} \) was therefore two cyathi, its \( \text{quadras} \) three, its \( \text{triens} \) four, its \( \text{quinsextum} \) five, &c. (Wurm, \( \text{de Pont.} \) \&c. \( \text{p. 110}, \) comp. the Tables.)

\[ \text{Sexta, the sixth part of the \text{uncia} was the smallest denomination of money in use among the \text{Romans}.} \] (Varro, \( \text{L. L. v. 171}, \) ed. \text{Müller}.)

It was also applied, like the \( \text{uncia} \), to other kinds of magnitude. (\[ \text{Uncia.} \])

\[ \text{Sibyllini Libri.} \] These books are said to have been obtained in the reign of Tarquinius Priscus, or according to other accounts in that of Tarquinius Superbus, when a \( \text{Sibyl} \) \( \text{Prophecy} \) presented herself before the king, and offered nine books for sale. Upon the king refusing to purchase them she went and burnt three, and then returned and demanded the same price for the remaining six as she had done for the nine. The king again refused to purchase them, whereupon she burnt three more and demanded the same sum for the remaining three, as she had done at first for the nine: the king's curiosity now became excited, so that he purchased the books, and then the \( \text{Sibyl} \) vanished. (\[ \text{Dionys. iv. 62} \) \&c. \( \text{Varro, ap. } \text{Laot.} \text{ i. 6} \) \&c. \( \text{Gell. i. 19} \) \&c. \( \text{Plin. H. N. xiii. 27} \) \&c. \( \text{respecting the \text{Sibyl}, and the different Sibyls mentioned by ancient writers see } \text{Divinatio, p. 416} \) \&c.)

These books were probably written in Greek, as the later ones undoubtedly were, and if so consequently came from a Greek source, though it is doubtful from what quarter: \( \text{Niebuhr (Hist. of Rome, vol. i. p. 506)} \) supposes them to have come from \( \text{Ionia} \), but they were more probably derived from \( \text{Cumae in Campania}. \) (\[ \text{Götting. Gesch. der Röm. Staaten, p. 212}. \]) They were kept in a stone chest under ground in the temple of Jupiter Capitolinus, under the custody of certain officers, at first only two in number, but afterwards increased successively to ten and fifteen, of whom an account is given under \( \text{Decemvir} \text{ p. 387} \) \&c. The public were not allowed to inspect the books, and they were only consulted by the officers, who had the charge of them, at the special command of the senate (\[ \text{ad libros ire}, \] 3 x 2)
SIGNA MILITARIA.

The Sibylline books were also called Fata Sibyllina (Cic. Cat. iii. 4) and Liber Fatales. (Liv. v. 15, xiiii. 57). Those that were collected after the burning of the temple on the Capitol, were undoubtedly written in Greek verses, and were acrostics (ἀκροστίας, Cic. De Div. ii. 54; Dionys. l. c.). Along with the Sibylline books were preserved under the guard of the same officers the books of the two prophetic brothers, the Marcii (Serv. ad Virg. Aen. vi. 72; Cic. de Div. i. 40, ii. 55), the Etruscan prophecies of the nymph Byoe, and those of Albina or Albunea of Tibur. (Lactant. i. 6.) Those of the Marcii, which had not been placed there at the time of the battle of Cannae, were written in Latin: a few remains of them have come down to us in Livy (xxvi. 12) and Macrobius (Sat. i. 17). See Niebuhr, vol. i. p. 597; Götting., Gesch. d. Röm. Staatsw. p. 213; Hartung, Die Religion d. Rüm., vol. i. p. 129, &c.

SICA, dina. SICILIA, whence the English sickle, and SICILICA (Plaut. Rud. iv. 4. 125), a curved dagger, adapted by its form to be concealed under the clothes, and therefore carried by robbers and murderers. (ACINACÆ.) (Cic. Cat. iii. 3.) Sica may be translated a scimitar to distinguish it from PUGIO, which denoted a dagger of the common kind. Sicarius, though properly meaning one who murdered with the sica, was applied to murderers in general. (Quintil. x. i. § 12.) Hence the forms de sicarius and inter sicarios were used in the criminal courts in reference to murder. Thus judicium inter sicarios, “a trial for murder” (Cic. pro Rosc. 5); defendere inter sicarios, “to defend against a charge of murder” (Phil. ii. 4). [J.Y.] SICARIUS, SICA; LEX CORNELIA, p. 687. SICILICUS. SCRUPULUS; UNCIA.

SIGILLARIA. (SATURNALIA.) SIGMA. (MENSA.) SIGNA MILITARIA (σημεία, σημαία), military ensigns or standards. The most ancient standard employed by the Romans is said to have been a handful of straw fixed to the top of a spear or pole. Hence the company of soldiers, belonging to it, was called Manipulus. (EXERCITUS, p. 500, b.) The bundle of hay or fern was soon succeeded by the figures of animals, of which Pliny (H. N. x. 4. s. 5) enumerates five, viz. the eagle, the wolf, the minotaur (Festus, e. v. Minotaur), the horse, and the boar. In the second consulship of Marius, b. c. 104, the four quadrigae were entirely laid aside as standards, the eagle being alone retained. It was made of silver, or bronze, and with expanded wings, but was probably of a small size, since a standard-bearer (sigillum) under Julius Caesar is said in circumstances of danger to have wrested the eagle from its staff and concealed it in the folds of his girdle. (Flor. iv. 12.)

Under the later emperors the eagle was carried, as it had been for many centuries, with the legion, a legion being on that account sometimes called aquila (Hirt. Bull. Hisp. 39), and at the same time each cohort had for its own ensign the serpent or dragon (dracon, ῥάπαζων), which was woven on a square piece of cloth (textilis anguis, Sidon. Apoll. Carn. v. 409), elevated on a gilt staff, to which a cross-bar was adapted for the purpose (Themist. Orat. i. p. 1, xviii. p. 267, ed. Dindorf; Claud. i. 22, Cons. Honor. 546; vi. 8, Cons. Honor. 566), and carried by the draconarius. (Veget. de Re Mil. ii. 13; compare Tac. Ann. i. 18.)

Another figure used in the standards was a ball (pila), supposed to have been emblematic of the dominion of Rome over the world (Isid. Orig. xviii. 3); and for the same reason a bronze figure.
of Victory was sometimes fixed at the top of the staff, as we see it sculptured, together with small statues of Mars, on the Column of Trajan and the Arch of Constantine. (See the next woodcut, and Causeus de Sig. in Graevii Thes. vol. x. p. 2329.) Under the eagle or other emblem was often placed a head of the reigning emperor, which was to the army the object of idolatrous adoration. (Josephus, B. J. ii. 9. § 2; Suet. Tiber. 48; Calig. 14; Tac. Ann. i. 39, 41, iv. 62.) The name of the emperor, or of him who was acknowledged as emperor, was sometimes inscribed in the same situation. (Sueton. Vespas. 6.) The pole, used to carry the eagle, had at its lower extremity an iron point (cuspis) to fix it in the ground, and to enable the aquilifer in case of need to repel an attack. (Suet. Jul. 62.) The minor divisions of a cohort, called centuries, had also each an ensign, inscribed with the number both of the cohort and of the century. By this provision, together with the diversities of the crests worn by the centurions (galea), every soldier was enabled with the greatest ease to take his place. (Veget. i. c.)

In the Arch of Constantine at Rome there are four sculptured panels near the top, which exhibit a great number of standards, and illustrate some of the forms here described. The annexed woodcut is copied from two out of the four. The first panel represents Trajan giving a king to the Parthians: seven standards are held by the soldiers. The second, containing five standards, represents the performance of the sacrifice called suovetaurilia. (Bartoli, Arc. Triumph.) When Constantine had embraced Christianity, a figure or emblem of Christ, woven in gold upon purple cloth, was substituted for the head of the emperor. This richly ornamented standard was called labarum. (Prudent. cont. Symm. i. 468, 488; Niceph. H. E. vii. 37.) Since the movements of a body of troops and of every portion of it were regulated by the standards, all the evolutions, acts, and incidents of the Roman army were expressed by phrases derived from this circumstance. Thus siga inferre meant to advance (Caesar, B. G. i. 23, ii. 23), referre to retreat, and convertere to face about; efferre, or castris vellere, to march out of the camp (Virg. Georg. i. 109); ad signa convenire, to re-assemble. (Caesar, B. G. vi. 1. 37.) Notwithstanding some obscurity in the use of terms, it appears that, whilst the standard of the legion was properly called aquila, those of the cohorts were in a special sense of the term called signa, their bearers being signiferi, and that those of the manipuli or smaller divisions of the cohort were denominated vexilla, their bearers being vexillarii. Also those who fought in the first ranks of the legion before the standards of the legion and cohorts were called antesignani. (Caesar, B. C. i. 43, 44, 56.) A peculiar application of the term vexillarii is explained on p. 507, b.

In military stratagems it was sometimes necessary to conceal the standards. (Caesar, B. G. vii. 45.) Although the Romans commonly considered it a point of honour to preserve their standards, yet in some cases of extreme danger the leader himself threw them among the ranks of the enemy in order to divert their attention or to animate his own soldiers. (Florus, i. 11.) A wounded or dying standard-bearer delivered it, if possible, into the hands of his general (signis acceptis, Tac. Ann. i. 42). In time of peace the standards were kept in the AERARIUM under the care of the QUAESTOR.

We have little information respecting the standards of any other nation besides the Romans. The banners of the Parthians appear to have had a similar form to that of the Romans, but were more richly decorated with gold and silk. (Sericum.) A golden eagle with expanded wings was the royal standard of Persia. (Xen. Cyrop. vii. 1. § 4, Anab. i. 10. § 12.) The military ensigns of the Egyptians were very various. Their sacred animals were represented in them (Diod. i. 86), and in the paintings at Thebes we observe such objects as a king's name, a sacred boat, or some other emblem, applied to the same purpose. (Wilkinson, Man. and Cust. vol. i. p. 294.) The Jewish army was probably marshalled by the aid of banners (Ps. xx. 5; 2 x 3).
SISTRUM.

There was a proverbial expression *excitare fluctus in simpulo*, "to make much ado about nothing" (Cic. de Leg. iii. 16).

SINDON. [PALLIUM, p. 851, b.]

SINGULA'RES. [EXERCITUS, p. 508, b.]

SIPA'RIUM, a piece of tapestry stretched on a frame, which rose before the stage of the theatre (Festus, s. v. ; Cic. Prov. Cons. 6 ; Juv. viii. 186), and consequently answered the purpose of the drop-scene with us, although, contrary to our practice, it was depressed when the play began, so as to go below the level of the stage (aqua ex praecantur, Hor. Epist. ii. 1. 109), and was raised again when the performance was concluded (tolluntur, Ovid. Met. iii. 111—114). From the last-cited passage we learn that human figures were represented upon it, whose feet appeared to rest upon the stage when this screen was drawn up. From a passage of Virgil (Georg. iii. 25) we further learn, that the figures were sometimes those of Britons woven in the canvass and raising their arms in the attitude of lifting up a purple curtain, so as to be introduced in the same manner as ATLANTES, Persae, and CARYATIDES.

In a more general sense *sapparium* denoted any piece of cloth or canvass stretched upon a frame. (Quintil. vi. 1. § 32.)

SISTRUM (*σιστρον*), a mystical instrument of music, used by the ancient Egyptians in their ceremonies, and especially in the worship of Isis. (Ovid. Met. ix. 784, Amor. ii. 13. 11, iii. 9. 34, de Ponto, i. 1. 38.) It was held in the right hand (see woodcut), and shaken, from which circumstance it derived its name (*aera repulsa manu*, Tibull. i. 3. 24). Its most common form is seen in the right-hand figure of the annexed woodcut, which represents an ancient sistrum formerly belonging to the library of St. Genovefa at Paris.

SITOPHY'LACES.

Plutarch (de Is. et Osir. pp. 670, 671, ed. Steph.) says, that the shaking of the four bars within the circular apsis represented the agitation of the four elements within the compass of the world, by which all things are continually destroyed and reproduced, and that the cat sculptured upon the apsis was an emblem of the moon. Apuleius (Met. xi. pp. 119, 121, ed. Aldi) describes the sistrum as a bronze rattle (*aureum crepitaculum*), consisting of a narrow plate curved like a sword-belt (*balileus*), through which passed a few rods, that rendered a loud shrill sound. He says that these instruments were sometimes made of silver or even of gold. He also seems to intimate, that the shakes were three together (*tergeminus fersus*), which would make a sort of rude music.

The introduction of the worship of Isis into Italy shortly before the commencement of the Christian aera made the Romans familiar with this instrument. The *"liningeri calvi, sistrataque turba* " (Mart. xii. 29) are most exactly depicted in two paintings found at Portici (Ant. d'Ercoleano, vol. ii. pp. 309—320), and containing the two figures of a priest of Isis and a woman kneeling at her altar, which are introduced into the preceding woodcut. The use of the sistrum in Egypt as a military instrument to collect the troops is probably a fiction. (Virg. Aen. viii. 696 ; Propert. iii. 11. 43.) The sistrum is used in Nubia and Abyssinia to the present day.

Sistrum, which is in fact, like SCEPTRUM, a Greek word with a Latin termination, the proper Latin term for it being *crepitaculum*, is sometimes used for a child's rattle. (Martial, xiv. 54 ; Pollux, ix. 127.)

SITELLA. [SITULA.]

SITON'AIE (σητωναίες). [SITOS.]

SITOPHY'LACES (σιτοφυλάκες), a board of officers, chosen by lot, at Athens. They were at first three, afterwards increased to fifteen, of whom ten were for the city, five for the Peiraeus. Their business was partly to watch the arrival of the corn ships, take account of the quantity imported, and see that the import laws were duly observed ; partly to watch the sales of corn in the market, and take care that the prices were fair and reasonable, and none but legal weights and measures used by the factors ; in which respect their duties were much the same as those of the Agoranomi and Metronomi with regard to other salable articles. (SITOS.) Demosthenes refers to the entry in the
books of the Sitophylaces (τὴν παρὰ τοῖς σιτοφυλάκιοι ἀπογραφὴν) to prove the quantity of corn imported from Pontus, which (he says) was equal to the produce of the country. The necessity of the Athenians would be to import the corn that were unladen, (Paus. s. e. Σιτοφυλάκες: Böckh, Publ. Econ. of Athens, p. 83, 2d ed.) [C. R. K.]

SITOS (σίτος), corn. The soil of Attica, though favourable to the production of figs, olives, and grapes, was not so favourable for corn, and the population being very considerable at a time when the period of the Athenian republic, it was necessary to import corn for their subsistence. According to the calculation of Böckh, which does not materially differ from that of other writers, there were 135,000 free men and 365,000 slaves residing in Attica. The country, which contained an area of 64,000 stadia, produced annually about two millions of medimni of corn, chiefly barley. The medimnus was about 1 bushel, 3 gallons, and 5¾ pints, or 46 Attic χόος. A χόος was considered a fair allowance of meal (μησομαγία τρόφι) for a slave. The consumption of the whole population in a day was about 1 bushel, 3 gallons, and 5¾ pints, or 46 Attic χόος, for a day. The consumption of the whole population was three million medimni, and one-third therefrom was imported. It came from the countries bordering on the Euxine Sea (Pontus, as it was called by the Greeks), and more especially from the Cimmerian Bosporus and the Thracian Chersonese; also from Syria, Egypt, Libya, Cyprus, Rhodes, Sicily, and Euboeea. The necessities of the Athenians made them exceedingly anxious to secure a plentiful supply, and every precaution was taken for that purpose by the government as well as by the legislature. Siumium was fortified, in order that the corn vessels (σιταγωγικόν ὀλίκη) might come safely round the promontory. Ships of war were often employed to carry the cargo (παραπέμποντας τῶν οὖν σιτον) beyond the reach of an enemy. (Dem. de Coron. 250, 251, c. Polyg. 1311.) When Pollis, the Lacedaemonian admiral, was stationed with his fleet off Aegina, the Athenians embarked in haste, under the command of Chabrias, and offered him battle, in order that the corn-ships, which had arrived as far as Gerasus in Euboeea, might get into the Peiraeeus. (Xenoph. Hellen. v. 4. § 61.) One of the principal objects of Philip in his attack on Byzantium was that, by taking that city he might command the entrance to the Euxine, and so have it in his power to distress the Athenians in the corn trade. Hence the great exertions made by Demosthenes to relieve the Byzantines, of the success of which he justly boasts (de Coron. 254, 307, 326.) The measures taken by the legislature to obtain supplies of corn may appear harsh, and their policy is at least doubtful, but they strongly evince the anxiety of the people on the subject. Exportation was entirely prohibited, nor was any Athenian or resident alien allowed to carry corn to any other place than Athens (σιταγωγοὶ ἀλλάζοντες ἢ Ἀθηναῖοι). Whoever did so, was punishable with death. (Dem. c. Phorm. 918; Lycurg. c. Leocr. 151, ed. Steph.) Of the corn brought into the Athenian port two-thirds was to be brought into the city and sold there. (Harp. s. v. Ξέστισελπηστὶς ἐμπορίῳ.) No one might lend money on a ship that did not sail with an express condition to bring a return cargo, part of it corn, to Athens. If any merchant, capitalist, or other person advanced money or entered into any agreement according to the definition of these laws, not only was he liable to the penalty, but the agreement itself was null and void, nor could he recover any sum of money, or bring any action in respect thereof. (Dem. c. Locr. 941.) Information against the offenders was to be laid before the ἐκεμελητρά ποιορίον. (Meier, Att. Proc. p. 87.) Strict regulations were made with respect to the sale of corn in the market. Conspiracies among the corn-dealers (σιτοκαλαί) to buy up the corn (συναπασχον), or raise the price (συνιπασκόν τὸν τιμῆς), were punished with death. They were not allowed to make a profit of more than 5 per cent, (Dem. c. Phorm. 918.) Neither was it unlawful to buy more than fifty φορμοὶ at a time. It is not certain what the size of a φορμὸς was; Böckh supposes it to be about as much as a medimnus. These laws remind us of our own statutes against engrossing and re-grating; but they appear to have been easily evaded by the corn-dealers. (See the speech of Lysias κατὰ τῶν σιτοκαλῶν: Dem. c. Leon. 1285.) The sale of corn was placed under the supervision of a special board of officers called Σιτοφυλάκες (σιτοφυλάκες), while that of all other marketable commodities was superintended by a special board of officers called ἀρμικτοσ (ἀρμικτοί) (Lys. id. 165, ed. Steph.) It was their business to see that meal and bread were of the proper quality, and sold at the legal weight and price. They were bound to detect the frauds of the factor and the baker, and (if we may believe Lysias) they sometimes suffered death for their want of vigilance. The mode of proceeding against them was by εἰσαγγελία before the senate. (Platner, Proc. and Klag. vol. ii. p. 149.)

Notwithstanding these careful provisions, scarcities (σιτοδίκαια) frequently occurred at Athens, either from bad harvests, the misfortunes of war, or other accidental causes. The state then made great efforts to supply the wants of the people by importing large quantities of corn, and selling it at a low price. Public granaries were kept in the Odeum, Pompeum, Long Porch, and naval store-house near the sea. (Pollux, ix. 45; Dem. c. Phorm. 918.) Sitona (σιτόνων) were appointed to get in the supply and manage the sale. (Pollux, ix. 45; Dem. c. Phorm. 918.) They sometimes suffered death for their want of vigilance. The mode of proceeding against them was by εἰσαγγελία before the senate. (Platner, Proc. and Klag. vol. ii. p. 149.)

Public spirited individuals would sometimes import grain at their own expense, and sell it at a moderate price, or distribute it gratuitously. (Dem. c. Phorm. 918.) We read of the Athenian state receiving presents of corn from kings and princes. Thus Leonus, king of the Bosporus, sent a large present, for which he had the honour of ἀξίμαχος (εἰσαγγελία) received the corn, measured it out, and distributed it in certain quantities. (Pollux, viii. 114.) Public spirited individuals would sometimes import grain at their own expense, and sell it at a moderate price, or distribute it gratuitously. (Dem. c. Phorm. 918.)
payable on the importation of corn, see *Pentcoste*.  

Σίτον is strictly wheat-flour, δόρητα barley-flour, πυριδα τρεχαι, κρυστα barley, αρόγα wheat bread, μῆλα barley bread. Σίτον, however, is often applied to all kinds of corn and even in a larger sense to provisions in general.  

[SITOU DIKE (*σίτου δίκη*)]. The marriage portion (προτίξ) being intended as a provision for the wife, although it was paid to the husband by her father, brother, or other natural guardian (κόρας), if anything happened to sever the marriage contract, the husband or his representative was bound to repay it; or, if he failed to do so, he was liable to pay interest upon it at the rate of eighteen per cent, per annum (εν ετεκ νόμοδο λογοφέρων). This was the law in case of a divorce (Demosth. c. Neer, 1362); and also when, after a contract of marriage, and after payment of the marriage portion, the intended husband refused to perform his engagement. (Demosth. c. Aphob. 818.) Upon the death of the husband without children, the wife and her money went back to the natural guardian (Isaeus, de Pyrr. her. 41, ed. Steph.) but if he died leaving children, she had the option of staying with them or going back to her κόρας. If she did the latter, the children (or their guardian, if they were under age) were bound to pay back the portion to the κόρας, or eighteen per cent. interest in the meantime. (Isaeus, de Pyrr. her. 38, 46, ed. Steph.) And if she married again, her κόρας was bound in honour to give the same sum to her new husband. (Demosth. c. Neer. 1362.) This was the law in case of a divorce (Demosth. c. Neer. 1362); and also when, after a contract of marriage, and after payment of the marriage portion, the intended husband refused to perform his engagement. (Demosth. c. Aphob. 818.) Upon the death of the husband without children, the wife and her money went back to the natural guardian (Isaeus, de Pyrr. her. 41, ed. Steph.) but if he died leaving children, she had the option of staying with them or going back to her κόρας. If she did the latter, the children (or their guardian, if they were under age) were bound to pay back the portion to the κόρας, or eighteen per cent. interest in the meantime. (Isaeus, de Pyrr. her. 38, 46, ed. Steph.) And if she married again, her κόρας was bound in honour to give the same sum to her new husband. (Demosth. c. Bocot. de dole, 1010.) Upon the transfer of a woman from one husband to another, which was not uncommon, the προτίξ was transferred with her. (Demosth. c. Oen. 866.) A woman's fortune was usually secured by a mortgage of the husband's property; but whether this was so or not, her guardian, in any of the cases above mentioned, might bring an action against the party who unjustly withheld it; δίκη προτίξ, to recover the principal, δίκη σίτου, for the interest. The interest was called σίτος (alimony or maintenance), because it was the income out of which the woman had to be maintained, α ορεισκόμεναι τροφανή, ἡ διδασκόμεν πρόσοδος ἐπὶ τρόφησι ταῖς γυναιχίν. (Harro. s. v. Σίτος: Pollux, viii. 33; Demosth. c. Aphob. 839, 844.) The word σίτος is often used generally for provisions, just as we use the word *bread*. So in the law, which required the son to maintain his mother when he came of age and took possession of her inheritance, the expression is τὸν σίτον μετεξέτη τῇ μητρί. (Demosth. c. Steph. 1135.) The allowance for rations given to soldiers was called *στράτευμα* (Bückh, *Publ. Econ. of Athens*, p. 272, 2d ed.) The δίκη σίτου was tried before the archon in the Odeum, the same building in which the corn granaries were kept, which makes it not improbable that in earlier times the defendant was called upon to pay the damages *in kind*, that is, in corn or some other sort of provisions; though it was soon found to be more convenient to commute this for a money payment. This cause, like the δίκη προτίξ, seems to have belonged to the *έμματος δίκαι*, as it was presumed that the woman could not wait long for the means of her daily subsistence. It was ἀμησος, for the damages were clearly liquidated, being a mere matter of calculation, when the payment of the marriage portion was proved. (Suidas, s. v. 'Σίτου: Pollux, iii. 47, vi. 153, viii. 31, 33; Meier, *Att. Proc.* pp. 43, 423—427; Platner, *Proc. und Krag.* vol. ii. p. 265.)  

[SITYYBAE. [LIBER.]]  

*Situla*, dim. *Sitella* (ἔπια), was probably a bucket or pail for drawing and carrying water (Plaut. *Amph.* ii. 2, 30), but was more usually applied to the vessel from which lots were drawn: *Sitella*, however, was more commonly used in this signification. (Plaut. *Cas.* ii. 34, 43, iii. 6, 7, 11, Liv. xxv. 3, xlii. 18.) It appears that the vessel was filled with water (as among the Greeks, whence the word ἔπια), and that the lots (sortes) were made of wood; and as, though increasing in size below, it had a narrow neck, only one lot could come to the top of the water at the same time, when it was shaken. (Suidas, s. v. *Sitellum* *lusus* *afferto* *cum* *aquâ* *et* *sortes*, *Plaut.* *Cas.* ii. 4, 17; *Cic.* in *Verr.* ii. 51; *Vopisc. Prob.* 8.) The vessel used for drawing lots was also called *urna* or *orcos* as well as *Situla* or *Sitella*. (Cic. in *Vatin.* 14; Val. Max. vi. 3. § 4; *Virg. Aen.* vi. 431, &c.; *Lucian*, v. 394, with Schol.; compare Pers. iii. 48.)  

It is important to understand the true meaning of *Sitella*, since almost all modern writers have supposed that the name of *Sitella* or *Cista* was given indifferently to the ballot-box, into which those who voted in the comitia and courts of justice cast their tabellae: but Wunder (*Codex Erfurtensis*, p. clviii. &c.) has proved, that the opinion of *Manutius* (*de Comitis Romanis*, c. 15. p. 537, ed. Græv.) is correct, who maintained that the *Sitella* was the urn, from which the names of the tribes or centuries were drawn out by lot, so that each might have its proper place in voting, and that the *Cista* was the box into which the tabellae were cast. *Cista.*  

The form of the *Sitella* is preserved on a coin of the Cassia gens, which is represented in the annexed cut.  

*SOCCUS, dim. SO'C'CLULUS*, was nearly if not altogether equivalent in meaning to *Crepida*, and denoted a slipper or low shoe, which did not fit closely, and was not fastened by any tie. (Isid. *Orig.* xii. 33.) Shoes of this description were worn, more especially among the Greeks together with the *Pallium*, both by men and by women. But those appropriated to the female sex were finer and more ornamented (*Pline. H. N.* ix. 33, s. 56; *Soccus muliebris*, *Suet. Calig. 52, Vitell. 2), although those worn by men were likewise in some instances richly adorned according to the taste and means of the wearer. (Plaut. *Bocch.* ii. 3. 98.)
For the reasons mentioned under the articles BAXA and CREPIDA the Societas was worn by comic actors (Hor. Ars Poet. 80, 90), and was in this respect opposed to the COTHURNUS. (Mart. viii. 3. 13; Plin. Epist. ix. 7.) The preceding wording is taken from an ancient painting of a buffoon [MIMUS], who is dancing in loose yellow slippers (luteum soccum, Catull. Epithal. Jul. 10). This was one of their most common colours. (De L'Aulnaye, Sull. Theat. pl. iv.) [SOLKÀ.] [J. Y.]

SOCIETAS. Societas is classed by Gaius (iii. 185) and in the Institutions of Justinian among transactions between individuals, to be distinguished from the judicium (societas). When several persons unite for a common purpose, which is legal, and contribute the necessary means, such a union is Societas, and the persons are Socii. (Dig. 17. tit. 2. s. 57.) The contract of Societas might either be made in words or by the acts of the parties, or by the consent of the parties signified through third persons: it required no particular form of agreement. A Societas might be formed either for the sake of gain to arise from the dealings and labour of the Socii (quaestus), or for the purpose of quaestus corresponds to the English Partnership. A Societas might be formed which should comprise all the property of the Socii (societas omnium bonorum); in which case as soon as the Societas was formed, all the property of all the Socii immediately became common (res quae coeuntiam sunt continuo communicatur). But the Societas might be limited to the use of the Socii or to a single thing, as the buying and selling of slaves, or to carrying on trade in a particular place. (Cic. pro Q. Quinio, c. 3.) The communion of property in a Societas might also be limited to the use of the things. A Societas might be formed either in perpetuum, that is, so long as the parties lived, or ad tempus or in tempore or sub conditione. (Dig. 17. tit. 2. s. 1.)

Each Socius was bound to contribute towards the objects of the Societas according to the terms of the contract. But it was not necessary that all the Socii should contribute money: one might supply money and another might supply labour (opera), and the profit might be divisible between them, for the labour of one might be as valuable as the money of the other. In the case of Roscius the actor, Fannius had a slave Panurgus, who by agreement between Roscius and Fannius was made their joint property (commends). Roscius paid nothing for his one half of the man, but he undertook to instruct him in his art. Apparently they became partners in his man in equal shares, for Cicero makes a point of the terms of the Societas in which the instruction was worth much more than the price of the slave before he was taught his art. (Cic. pro Q. Roscio Com. 10.) The agreement between the Socii might also be, that one Socius should sustain no loss and should have a share of the gain, provided his labour was so valuable as to render it equitable for him to become a partner on such terms. If the shares of the Socii were not fixed by agreement they were considered to be equal. (Dig. 17. tit. 2. s. 29.) One partner might have two or more shares, and another might have only one, if their contributions to the Societas in money or in labour were in these proportions. If the agreement was merely as to the division of profit, it followed that the Socii must bear the losses in the same proportion. Each Socius was answerable to the others for his conduct in the management of the business: he was bound to use Diligentia and was answerable for any loss through culpa. The action which one socius had against another in respect of the contract of partnership, was an actio directa and called Pro Socio (cur non arbitrum pro socio adogenes Qu. Roscius, &c; Cic. pro Q. Roscio Com. 9). The action might be brought for any breach of the agreement of partnership, for an account and for a dissolution. A partner might transfer his interest to another person, but this transf er did not make that other person a partner, for consent of all parties was essential to a Societas. In fact such a transfer was a dissolution of the partnership, and the person to whom the transfer was made might have his action De Communi dividendo. But there might be the pro socio actio against the heres of a socius, for though the heres is not a socius, yet he succeeds to the interest of his testator or intestate in the partnership (emolumento successor est; Dig. 17. tit. 2. s. 63. § 6).

Each socius had a right of action in proportion to his interest against any person with whom any of the socii had contracted, if the socii had committed him to make the contract or had approved of the contract; or if it was an action arising from a delict. Thus in the case of Roscius and Fannius, they had severally sued a third person in respect of their several claims as partners, and yet Fannius still claimed the half of what Roscius had recovered in respect of his share in the partnership. (Pro Q. Rosce Com. 11, 17, 18.) In all other cases the person who made the contract could alone sue. All the socii could be sued if they had all joined in the contract with a third person, and each in proportion to his share. If one socius contracted on behalf of all, being commissioned to do so, all were liable to the full amount (in solidum). If a socius borrowed money, the other socii were in no case bound by his contract, unless the money had been brought into the common stock. In fact the dealings of one partner did not bind the other partners, except in such cases as they would be bound indirectly by the existence of the Societas. Condemnatio in an Actio Pro Socio was sometimes attended with infamia.

A Societas, unless it was for a limited period, could be ended at the pleasure of any one of the socii: any member of the body could give notice of dissolution when he pleased (renuntiare societati), and therefore the Societas was dissolved (solvit). But in the case of a societas omnium bonorum, if one socius had been appointed heres, he could not by giving notice of dissolution deprive his co-partners of their share of the hereditas. The death of a partner dissolved the Societas, and a Capitalia diminutio was said to have the same effect. If the property of any one of the socii was sold either publice (bonorum publicatio) or privatim, the Societas was dissolved. It was also dissolved when the purpose for which it was formed was accomplished; or the things in which there was a Societas, had ceased to exist; or by the lapse of the time for which it was formed.

If on the dissolution of a partnership there was no profit, but a loss to sustain, the loss was borne, as already stated, by the socii in proportion to their shares. If one man contributed money and another labour, and there was a loss, how was the loss borne? If the money and the labour were con-
considered equivalent, it would seem to follow that until the partnership property were exhausted by the payment of the debts, there should be no pecuniary contribution by the person who supplied the labour. This principle is a consequence of what Gaius states that the capital of one and the labour of another might be considered equal, and the gain might be divided, and if there was a loss the loss must be divided in the same proportion.

Societies were formed for the purposes of farming the public revenues. [PUBLICANS.

(Gaius, iii. 148—154 ; Dig. 17, tit. 2 ; Inst. 3. tit. 26 ; Cod. 4. tit. 37 ; Mühlenbruch, Doctrina Pandectarum ; Mackeldy, Lehrbuch, &c.; Haase, Die Culpa des Röm. Rechts, s. 46, 49.) [G. L.]

SOCII (σωματείον). In the early times, when Rome formed equal alliances with any of the surrounding nations, these nations were called Socii. (Liv. ii. 55.) After the dissolution of the Latin league, when the name Latini, or Nomen Latinum, was artificially applied to a great number of Italians, few only of whom were real inhabitants of the old Latin territory, and there had been made Latins by the will and the law of Rome, there necessarily arose a difference between these Latins and the Socii, and the expression Socii Nomen Latinum is one of the old asyndeta, instead of Socii et Nomen Latinum. The Italian allies again must be distinguished from foreign allies. Of the latter we shall speak hereafter. The Italian allies consisted, for the most part, of such nations as had formed an alliance with nations or towns of Italy became gradually fewer in number: alliances of this kind had come under the Roman dominion (Liv. viii. 25, xliii. 2 ; Cic. pro Balb. 8). They had restored their autonomy after they were conceded to them by the will and the law of Rome; but the condition of each of these classes must be distinguished from foreign allies. Of the latter we shall speak hereafter. The former were such as had formed an alliance with Rome, which was sworn to by both parties; the latter were those people to whom the senate had restored their autonomy after they were conquered, such as the Hernican towns. (Liv. ix. 43.)

But the condition of each of these classes must again have been modified according to circumstances. The cases in which Rome had an equal alliance with nations or towns of Italy became gradually fewer in number: alliances of this kind existed indeed for a long time with Tibur, Praeneste, Naples, and others (Polyb. vi. 14 ; Liv. xlix. 2 ; Cic. pro Balb. 8); but these places were, nevertheless, in reality as dependent as the other Socii. It was only a few people, such as the Cameretes and Hermelanes, that maintained the rights of their equal alliance with Rome down to a very late time. (Liv. xxvii. 6 ; Plut. Mar. 28 ; Cic. pro Balb. 20, pro Arch. 4.) With these few exceptions, most of the Italians were either Socii (in the later sense) or Latini. During the latter period of the republic they had the connection with Rome (Diodor. Excerc. Mai, xxxvii. 6), but not the suffrage of the Latins. It sometimes happened, as in the case of the Macedonian Oesi-
The Socii were also sometimes sent out as colonists with the Romans. (Appian, de Bell. Civ. i. 24.) They were never allowed to take up arms of their own accord, and disputes among them were settled by the senate. Notwithstanding all this, the socii fell gradually under the arbitrary rule of the senate and the magistrates of Rome; and after the year B.C. 175, it even became customary for magistrates, when they travelled through Italy, to require the authorities of allied towns to pay homage to them, to provide them with a residence, and to furnish them with beasts of burden when they continued their journey. (Liv. xiii. 1.)

Gellius (x. 3) mentions a number of other vexations, which the Roman magistrates inflicted upon the socii, who could not venture to seek any redress against them. The only way for the allies to obtain protection against such arbitrary proceedings, was to enter into a kind of clientela with some influential and powerful Roman, as the Samnites were in the clientela of Fabricius Luscinus (Val. Max. iv. 3, § 6), and the senate, which was at all times regarded as the chief protector of the socii, not only recognised such a relation of clientela between socii and a Roman citizen, but even referred to such patrons cases for decision which otherwise it might have decided itself. (Dionys. ii. 11; Liv. xi. 20; Cic. pro Sull. 21.) Socii who revolted against Rome were frequently punished with the loss of their freedom, or of the honour of serving in the Roman armies. (Gell. i. c.; Appian, de Bell. Hannib. 61; Strab. v. p. 383, vi. p. 389; Fest. s. v. Brutanti.) Such punishments however varied according to circumstances. After repeated and fruitless attempts to obtain the full Roman franchise by legal means, the Italian allies broke out in open war against Rome, the result of which was that she was compelled to grant what she had before obstinately refused. After the civitas had been obtained by all the Italians by the Lex Julia de Civitate, the relation of the Italian Socii to Rome ceased. But Rome, though the meaning of the word in this case differed from that of the Socii Italici. Livy (xxxiv. 57; comp. xxxv. 46) distinguishes two principal kinds of alliances with foreign nations: 1. foedus aequum, such as might be concluded either after a war in which neither party had gained a decisive victory, or with a nation with which Rome had never been at war; 2. a foedus iucundum, when a foreign nation conquered by the Romans was obliged to enter the alliance, on any terms proposed by the conquerors. In the latter case the foreign nation was subject to Rome, and obliged to comply with anything that Rome might demand. But all foreign socii, whether they had an equal or unequal alliance, were obliged to send subsidies in troops when Rome demanded them; these troops, however, did not, like those of the Italian socii, serve in the line, but were employed as light-armed soldiers, and were called milites auxiliares, auxilarii, auxilia, or sometimes auxilia externa. (Polyb. ii. 32; Liv. xxi. 46, &c., xxii. 22 to xxvii. 37, xxx. 11, xiii. 29, 35.) Towards the end of the republic all the Roman allies, whether they were nations or kings, sank down to the condition of mere subjects or vassals of Rome, whose freedom and independence consisted in nothing but a name. (Walter, Gesch. d. Röm. Recit., p. 192, &c.; compare Föderatkap Civi
tates.)

SOPHRO'NISTAE. [Gymnasium, p. 581, b.]

SORTES, lots. It was a frequent practice among the Italian nations to endeavour to ascertain a knowledge of future events by drawing lots (sortes): in many of the ancient Italian temples the will of the gods was consulted in this way, as at Praeneste, Caere, &c. [Oraclum, p. 843, a.] Respecting the meaning of Sors see Cic. de Div. ii. 41.

These sorts or lots were usually little tablets or counters, made of wood or other materials, and were commonly thrown into a sitiella or urn, filled with water, as is explained under SITIIIA. The lots were sometimes thrown like dice. (Suet. Tib.
14.) The name of Sortes was in fact given to anything used to determine chances (compare Cic. de Div. ii. 54), and was also applied to any verbal response of an oracle. (Cic. de Div. ii. 56; Virg. Aen. iv. 346, 377.) Various things were written upon the lots according to circumstances, as for instance the names of the persons using them, &c.: it seems to have been a favourite practice in later times to write the verses of illustrious poets upon little tables, and to draw them out of the urn like other lots, the verses which a person thus obtained being supposed to be applicable to him; hence we read of Sortes Virgiliane, &c. (Lamprid. Alex. Sever. 14; Spartian. Haedr. 2.) It was also the practice to consult the poets in the same way as the Mohammedans do the Koran and Hadiz, and many Christians the Bible, namely, by opening the book at random and applying the first passage that struck the eye to a person's own immediate circumstances. (August. Confess. iv. 3.) This practice was very common among the early Christians, who substituted the Bible and the Psalter for Homer and Virgil: many councils repeatedly condemned these Sortes Sanctorum, as they were called. (Gibbon, Decline and Fall, c. xxxviii. note 51.) The Sibylline books were probably also consulted in this way. (Sibyllini Libri.) Those who foretold future events by lots were called Sortilegi. (Lucan, i. 581.)

The Sortes Conviviales were tablets sealed up, which were sold at entertainments, and upon being opened or unsealed entitled the purchaser to things of very unequal value; they were therefore a kind of lottery. (Suet. Octav. 75; Lamprid. Heliodor. 229.)

SPECULATORES. [Exercitus, p. 506, b; comp. Hemenodromi.]

SPECULUM (καταστρων, ἐστρων, ἐστρωτρ), a mirror, a looking-glass. The use of mirrors is of very high antiquity, (Livy, vii. 10; Cato, l. cit. 178; Ecceus, xxxiii. viii. 8), but they are not mentioned by Homer, even when he describes in so circumstantial a manner the toilet of Hera. In the historical times of Greece they are frequently spoken of (Xen. Cyr. vii. 1. § 2; Eurip. Medea, 1161, Orest. 1112, &c.), and they were probably known in Greece long before, since every substance capable of receiving a fine polish would answer the purpose of a mirror. Thus basins were employed instead of mirrors (Artemiod. Onex. iii. 30. p. 275, ed. Reiß), and also cups, the inside of which was sometimes so disposed, that the image of the person who drank from them was seen multiplied. (Plin. H. N. xxxiii. 9. s. 45; compare Vopisc. Prob. 4.)

The looking-glasses of the ancients were usually made of metal, at first of a composition of tin and copper, but afterwards more frequently of silver. (Plin. l. c.) Pliny says that silver mirrors were first made by Praxiteles in the time of Pompey the Great, but they are mentioned as early as that of Plautus. (Most. i. 3. 111.) Under the empire the use of silver mirrors was so common, that they began to be used even by maid servants (Plin. H. N. xxxiv. 17. s. 48): they are constantly mentioned in the Digest, when silver plate is spoken of (33. tit. 6. s. 3; 34. tit. 2. s. 19. § 8). At first they were made of the purest silver, but metal of an inferior quality was afterwards employed. (Plin. H. N. xxxiii. 9. § 45.) Frequently too the polished silver plate was no doubt very slight, but the excellence of the mirror very much depended on the thickness of the plate, since the reflection was stronger in proportion as the plate was thicker. (Vitruv. vii. 3. p. 294, ed. Bip.) We find gold mirrors mentioned once or twice by ancient writers (Eurip. Hecub. 925; stnec. Quest. Nat. i. 17; Aelian, V. H. xii. 58); but it is not impossible, as Beckmann has remarked, that the term golden rather refers to the frame or ornaments than to the mirror itself, as we speak of a gold watch, though the cases only may be of that metal.

Besides metals, the ancients also formed stones into mirrors, but these are mentioned so seldom that we may conclude they were intended for ornament rather than for use. Pliny (H. N. xxxvi. 26. s. 67) mentions the obsidian stone, or, as it is now called, the Icelandic agate, as particularly suitable for this purpose, and this stone is moreover furnished with pithonites, which by its reflection showed everything that was done behind his back (Suet. Dom. 14), by which Beckmann understands a calcareous or gypseous spar, or selenite, which is indeed capable of reflecting an image; but we cannot therefore conclude that the ancients formed mirrors of it. Mirrors were also made of rubies according to Pliny (H. N. xxxvii. 7. s. 25), who refers to Theophrastus for his authority, but he seems to have misunderstood the passage of Theophrastus (de Lapid. 61), and this stone is never now sufficiently large to enable it to be made into a mirror. The emerald, it appears, also served Nero for a mirror. (Plin. H. N. xxxvii. 8. s. 16; Isidor. xvi. 7.)

The ancients seem to have had glass mirrors also like ours, which consist of a glass plate covered at the back with a thin leaf of metal. They were manufactured as early as the time of Pliny at the celebrated glass-houses of Sidon (Plin. H. N. xxxvi. 26. s. 60), but they must have been inferior to those of metal, since they never came into general use and are not mentioned by ancient writers among costly pieces of furniture, whereas metal mirrors frequently are. Pliny seems to allude to them in another passage (H. N. xxxiii. 9. s. 45), where he speaks of gold being applied behind a mirror, which we can understand, if we admit that Pliny was acquainted with glass mirrors.

Of mirrors made of a mixture of copper and tin, the best were manufactured at Brundisium. (Plin. H. N. xxxiii. 9. s. 45, xxxiv. 17. s. 48.) This mixture produces a white metal, which, unless preserved with great care, soon becomes so dirty that it cannot be used until it has been previously cleaned and polished. For this reason a sponge with pounded pumice-stone was generally fastened to the ancient mirrors. (Plat. Timaeus, p. 72, c.; Vossius, ad Catull. p. 97.)

Looking-glasses were generally small and such as could be carried in the hand. Most of those which are preserved in our Museums are of this kind; they usually have a handle, and are of a round or oval shape. Their general form is shown in the woodcut annexed. (Caylus, Recueil d'Antiquités, vol. v. pl. 65.)

Instead of their being fixed so as to be hung against the wall or to stand upon the table or floor, they
were generally held by female slaves before their mistresses when dressing (Propert. iv. 7. 75, 76), which office was also performed sometimes by the lover, when admitted to the toilet of his mistress. (Ovid. Ar. Am. ii. 210.) On ancient vases we sometimes find female slaves represented holding up mirrors to their mistresses. (Tischbein, Engrav. from ancient Vases, vol. i. pl. 10.)

Looking-glasses, however, were also made of the length of a person's body (specula totis pariae corporibus, Senec. Quaest. Nat. i. 17); of which kind the mirror of Demosthenes must have been. (Quintil. Inst. Or. xi. 3. § 68.) They were fastened to the walls sometimes (speculum parieti affixum, Dig. 34. tit. 2. s. 19. § 8; Vitruv. ix. 6. (9.) p. 286. Brip.), though not generally. Suetonius in his life of Horace speaks of an apartment belonging to that poet, which was lined with mirrors (speculum cubiculum), which expression, however, Leeser considers as contrary to the Latin idiom, and therefore regards the whole passage as a forgery. That there were, however, rooms ornamented in this way, is probable from Claudian's description of the chamber of Venus, which was covered over with mirrors, so that whichever way her eyes turned she could see her own image. (Hymn. in Nupt. Honor. et Mar. 106, &c.) We frequently find the mirror mentioned in connection with Venus (Athen. xv. p. 687, c.), but Minerva was supposed to make no use of it. (Callim. Hymn. in Laocoon. Pallad. 17.)

**SPECUS.** [Aquaeductus, p. 113.]

**SPHAERISTERIUM.** [Gymnasium, p. 582, b; Pila.]

**SPICULUM.** [Hasta, p. 589, a.]

**SPINTEL or SPINTHER.** [Armilla.]

**SPIRA (σπίρα), dim. SPIRULA** (Servius in Virg. Aen. ii. 217), the base of a column.

This member did not exist in the Doric order of Greek architecture [COLUMN], but was always present in the Ionic and Corinthian, and, besides the bases properly belonging to those orders, there was one called the Attic, which may be regarded as a variety of the Ionic [ATTICUS]. The term occurs frequently in Vitruvius (iii. 3. § 2; 4. § 1, 5; 5. § 1—4, iv. 1. § 7, v. 9. § 4, ed. Schneider) and in Pliny (H. N. xxxvi. 5. s. 4; 23. s. 56). They adopted it from the writings of Greek architects, whose works have perished. It is in fact the Greek term σπίρα, which was applied to this member of a column (Pollux, vii. 121) probably on account of its resemblance to a coil of rope. In ancient Greek inscriptions σπίρα denotes the base of Ionic and Corinthian pillars, being applied to those of the temples of Minerva Polias at Athens (C. O. Müller, Min. Pol. Stauro, pp. 33, 59; Boch, Corp. Inscr. Gr. i. pp. 261—268), and of Jupiter at Labraunda. (C. Fellows, Exc. in Asia Minor, pp. 262, 331, 372.)

In the Tuscan and the Roman Doric the base consisted of a single torus (Feustus, s. v. Spira), sometimes surmounted by an astragal. In the Ionic and Attic it commonly consisted of two tori (tornus superior and tornus inferior) divided by a scotia (τρύφηδας), and in the Corinthian of two tori divided by two scotiae. The upper torus was often fluted (παπάδωτος), and surmounted by an astragal [ASTRAGALUS], as in the left-hand figure of the annexed woodcut, which shows the form of the base in the Ionic temple of Panope on the Illisus. The right-hand figure in the same woodcut shows the corresponding part in the temple of Minerva Polias at Athens. In this the upper torus is wrought with a plaited ornament, perhaps designed to represent a rope or cable. In these two temples the spira rests not upon a plinth (plinthus, πλίνθος), but on a podium. In Ionic buildings of a later date it rests on a square plinth corresponding in its dimensions with the ABACUS. For other examples, see Mauch, Architektonische Ordnungen. (J. Y.)

**SPI'THAME (σπιθαμή), a span, a Greek measure equal to 3-4ths of the foot. There was no proper Roman measure corresponding to it, but the later writers used palmar in this sense; the early writers express the Greek span properly by dodrans. [Mensura, p. 751, b; PALMUS.] [P.S.]**

**SPO'LIA.** Four words are commonly employed to denote booty taken in war, Praedia, Manubiae, Exuviae, Spolia. Of these, praedia bears the most comprehensive meaning, being used for plunder of every description. [PRADA.] Manubiae was the money which the quaestor realised from the sale of those objects which constituted praedia (Gell. xiii. 24; Cic. de Leg. Agr. ii. 22.) The term Exuviae indicates any thing stripped from the person of a foe, while Spolia, properly speaking, ought to be confined to armour and weapons, although both words are applied loosely to trophies such as cha-
riot, standards, beaks of ships and the like, which might be preserved and displayed. (See Doederlein, Lat. Syn. vol. iv. p. 357; Ramshorn, Lat. Syn. p. 356.) In the heroic ages no victory was considered complete unless the conquerors could succeed in stripping the bodies of the slain, the spoils thus obtained being viewed (like scalps among the North American Indians) as the only unquestionable evidence of successful valor; and we find in Homer that when two champions came forward to contend in single combat, the manner in which the body and arms of the vanquished were to be disposed of formed the subject of a regular compact between the parties. (Hom. i. vii. 75, &c., xxii. 254, &c.) Among the Romans, spoils taken in battle were considered the most honourable of all distinctions; to have twice stripped an enemy, in ancient times, entitled the soldier to promotion (Val. Max. ii. 7. § 14), and during the second Punic war, Fabius when filling up the numerous vacancies in the senate caused by the slaughter at Cannae and other disastrous defeats, after having selected such as had borne some of the great offices of state, named those next "qui spolia ex hoste fixa domi haberent, aut civicam coronam accipierint." (Liv. xxiii. 28.) Spoils collected on the battle field after an engagement, or found in a captured town were employed to decorate the temples of the gods, triumphal arches, porticoes, and other places of public resort, and sometimes in the hour of extreme need served to arm the people (Liv. xxii. 57, xxiv. 21, x. 47 ; Val. Max. viii. 6. § 1 ; Sil. Ital. x. 599), but those which were gained by individual prowess were considered the undoubted property of the successful combatant, and were exhibited in the most conspicuous part of the house passed into the hands of Antonius the triumvir (Cic. Philipp. i. c.), and was eventually repair

SPOLIA. (s. v. Opima) gives the same definition as Livy, but adds "M. Varro ait opima spolia esse [etiam] si manipuliris miles detraxerit dummodo duci hostium," a statement, if correctly quoted, directly at variance with the opinion generally received and acted upon. Thus when M. Crassus, in the fifth consulship of Octavius (b. c. 29), slew Deldo, king of the Bastarnae, he was not considered to have gained spolia opima because acting under the auspices of another (Dion Cass. li. 24 ; compare Val. Max. iii. 2. § 6), and Plutarch (Marcell. 8) expressly asserts that Roman history up to his own time afforded but three examples. The first were said to have been won by Romulus from Acro, king of the Caenienes, the second by Aulus Cornelius Cossus from Lar Tolumnius king of the Veientes, the third by M. Claudius Marcellus from Viridomaros (or Pertiacapros as he is called by Plutarch), king of the Gaesates. In all these cases, in accordance with the original institution, the spoils were dedicated to Jupiter Feretrius. The honours of spolia opima were voted to Julius Caesar during his fifth consulship (b. c. 44, the year of his death), but it was not even pretended that he had any legitimate claim to this distinction. (Dion Cass. xlv. 4.) The question with regard to the true definition of spolia opima is discussed with great learning by Perizonius, Animad. Hist. c. 7.)

STABULARIUS. [ΕΚΧΕΙΝ ΑΝΤΙΟ.] STADIUM (δ σταδίου and το στάδιον) I. The foot-race course at Olympia and the other places in Greece where games were celebrated. It was originally intended for the foot-race, but the other contests which were added to the games from time to time (Ολυμπια) were also exhibited in the Stadium, except the horse-races, for which a place was set apart, of a similar form with the stadium, but larger; this was called the HIPPODROMUS (ἱππόδρομος).

The stadium was an oblong area terminated at one end by a straight line, at the other by a semi-circle having the breadth of the stadium for its base. Round this area were ranges of seats rising above one another in steps.

It was constructed in three different ways, according to the nature of the ground. The simplest form was that in which a place could be found which had by nature the required shape, as at Laodicea. Most commonly, however, a position was chosen on the side of a hill, and the stadium was formed on one side by the natural slope, on the other by a mound of earth (γῆς ξύλα), as at Olympia, Thebes, and Epidaurus. (Pausan. ii. 27. § 6, vi. 20. § 5, 6, ix. 23. § 1.) Sometimes, however, the stadium was on level ground, and mounds of earth were cast up round it to form seats, and covered with stone or marble. We have two celebrated examples of this construction in the Pythian Stadium at Delphi and the Panathenaeic at Athens. The former was originally constructed of Parnassian stone, and afterwards covered with Pentelic marble by Herodes Atticus (Paus. x. 32. § 1), who

home (iii. 249). If the sketches of the satirist are not too highly coloured, we must conclude that in his time great numbers of the lower orders derived the means of their livelihood from the games. The ordinary expenditure exclusively from this source, while even the higgledy did not scruple to increase their incomes by taking advantage of the ostentatious profusion of the rich and vain. (Juv. i. 96.) A regular roll was kept at each mansion of the persons, male and female, entitled to receive the allowance; the names were called over in order, the individuals were required to appear in person, and the almoner was ever on his guard to frustrate the roguery of false pretenders (Juv. l. c.), whence the proverb quoted by Tertullian (c. Mart. x. 16), sportulam furarumus capita. The morning, as we have seen above (Juv. i. 128), was the usual period for these distributions, but they were sometimes made in the afternoon. (Martial. x. 70.)

The accounts left by ancient writers of the arrangement of the parts of the stadium are scanty, but from a comparison of them with existing remains of stadia we may collect the following particulars.

At one end a straight wall shut in the area, and here were the entrances, the starting-place for the runners, and (at Olympia) an altar of Endymion. At the other end, at or near the centre of the semicircle, and at the fixed distance from the starting-place, was the goal, which was the termination of the simple foot-race, the runners in which were called σταδιόδρομοι; the race itself is called στάδιον and δρόμοι: in the διάυλος δρόμοι the racers turned round this and came back to the starting-place. The starting-place and goal had various names: the former was called βρετες, γραμμή, βελαγίς, and βαλείς: the latter τέρμα, βατέρα, τέλος, καυμάρη and νίσσα. The term γραμμή is explained as the line along which the racers were placed before starting; βελαγίς, which means the lash of a sekin, is supposed to have been a cord which was stretched in front of the racers to restrain their impatience, and which was let fall when the signal was given to start; the name καυμάρη was applied to the goal because the runners in the διάυλος and διάλυκς turned round it to complete their course. These terms are often applied indifferently to the starting-place and the goal; probably because the starting-place was also the end of all races, except the simple στάδιον. The starting-place and goal were each marked by a square pillar (στάδιον, κόμων κυκλάδας), and half way between these was a third one. On this pillar was inscribed the word ἀρίστεων, on the second σταδε, on the third κάμψων. The διάλυκς turned round both the extreme pillars till they had completed the number of stadia of which their course consisted, which appears to have been different on different occasions, for the length of the
so as to resemble the amphitheatre by making both
86
20, and 24 stadia. (Schol. called
and Messenian stadia, in the latter of which it is
generally adorned with altars and statues.
its ends semicircular, and by surrounding it with
seats supported by vaulted masonry, as in the
of this stadium is given in the following woodcut,
copied from Krause.

The semicircular end of the area, which was
called σφαιρινή, and was not used in the races,
was probably devoted to the other athletic sports.
This σφαιρινή is still clearly seen in the Ephesian
and Messenian stadia, in the latter of which it is
surrounded by 16 rows of seats. The area of the
stadium was surrounded by the seats for spectators,
which were separated from it by a low wall or po-
dium.

Opposite to the goal, on one side of the stadium,
were the seats of the Hellanodicae, for whom there
was a secret entrance into the stadium (κρυπτὴ επαθός), and on the other side was an altar of
white marble, on which the priestesses of Demeter
Chamyne sat to view the games. The area was
generally adorned with altars and statues.

Such was the general form and arrangement of
the Greek stadium. After the Roman conquest of
Greece the form of the stadium was often modified
so as to resemble the amphitheatre by making both
its ends semicircular, and by surrounding it with
seats supported by vaulted masonry, as in the
Roman amphitheatre. The Ephesian stadium still
has such seats round a portion of it. A restoration
of this stadium is given in the following woodcut,
copied from Krause.

A is the boundary wall at the Aphesis, 77 feet
deep, B C the sides, and D the semicircular end,
of the same depth as A; F F the area, including
the σφαιρινή; b b pieces of masonry jutting out
into the area; e e the entrances; from o to p
is the length of an Olympic stadium; from q to z
the range of amphitheatrical seats mentioned above.

(Krause, Die Gymnastik u. Agnostik der Hel-
lemen, p. 131, § 14; Müller, Archäol. der Kunst,
§ 290; OLYMPIA.)

2. The word also signifies the chief Greek mea-
sure for itinerary distances, which was adopted by
the Romans also, chiefly for nautical and astro-
onomical measurements. It was equal to 600 Greek
or 625 Roman feet, or to 125 Roman paces; and
the Roman mile contained 8 stadia. (Herod. ii.
149; Plin. H. N. ii. 23. s. 21; Columell. R. R. v.
1; Strabo, vii. p. 497.) Hence the stadium con-
tained 606 feet 9 inches English. (See the Tables.)
This standard prevailed throughout Greece, under
the name of the Olympic stadium, so called because,
as above stated, it was the exact length of the
stadium or foot-course at Olympia, measured
between the pillars at the two extremities of the
course. There were multiples of the measure,
corresponding to the longer races; thus the
σταθίον was 2 στάδια, and the δάλεα 6 or more. (See
above.) The ἵππον of 4 stadia we may presume
to have been the length of one double course in
the chariot race, which would give 2 stadia for the
distance between the pillars in the hippodrome
(Hippodromus, p. 611, a). In mathematical geo-
ography, the ordinary computation was 600 stadia
to a degree of a great circle of the earth's surface.
The important question, whether the stadium was
a uniform measure throughout Greece, is fully dis-
cussed under MENSURA, p. 755. [P.S.]

STATER. [ΣΤΑΤΕΡ.]

STATER (στατήρ), which means simply a
standard (in this case both of weight and more
particularly of money), was at first the name of
the chief coin in the early Greek systems, namely, the
didrachm. [NUMMUS, pp. 811, b, 812, a.] When
gold began to be coined, the name was applied to
the principal gold coin of Greece, which was also
called Chrysus (χρυσός), and which in the major-
city of cases was conformal to the Attic stan-
dard, and therefore a stater commonly signifies a
gold coin equal in weight to two Attic drachmae and
in value to twenty; but there are also staters of the
Euboic scale. The general subject of Greek gold
money has been discussed under AURUM, where
it is stated that the Greeks obtained their principal
supply of gold from Asia. To the same quarter
we must look for the origin of their gold money.
The Daricus, which came to them from Persia, has
been already treated of. [DARICUS.] The stater
is said to have been first coined in Lydia by
Croesus. To this country, indeed, one tradition
ascribes the origin both of gold and silver money
(Herod. i. 94); but be this as it may, the stater of
Croesus was the first gold coinage with which the
Greeks were acquainted. (Herod. i. 84; Pollux,
iii. 87, ix. 84.) Böckh (Metrolog. Untersuch. p.
129) asserts that these staters were undoubtedly
formed of the pale gold or electrum which was
washed down from Tmolus by the Pactolus, and
which Sophocles speaks of as Sardian electrum.
(ANTIG. 1037.) [ELECTRUM.] There is, in the
Hunterian collection (Plate 66, fig. 1), a very an-
cient coin of this pale gold, of an oval ball-like
shape, impressed with the figure of a man kneeling, holding a fish in his left hand, and in his right a knife hanging down, which Pinkerton takes for a coin of Croesus. But nothing more can be said with safety than that it is a very ancient specimen of Asiatic money. Its weight is 240 English grains, or allowing for the loss of weight by wear, about that of the Attic tetradrachm, which was twice the weight of the stater. This, therefore, would be a double stater. (Böckh, l.c.) At all events, in the absence of certain specimens of the Lydian stater and of an express statement of its value, we may suppose from the very silence of the Greek writers, that it did not differ materially from the stater which was afterwards current in Greece; and which was equal in weight to two drachmae, and in value to twenty. (Hesych. s. v. Χρυσός: Φοιυξ, iv. 173; Harpocration, s. v. Δαρείκως.)

Macedonian Stater. British Museum.

The following were the principal Greek staters: 1. The Attic stater, which has been spoken of under ΑΡΧΗΜ. The weights of the coins there mentioned are 1323, 1327, 1326, and 13275 grains, the average of which is 1325875 grains, which only falls short of the weight of the Attic didrachm by a little more than half a grain. [DRAECA.] The gold of the Attic coins is remarkably pure. 2. The stater of Cyzicus was common in Greece, especially at Athens. We learn from Demosthenes (π. 914) that at a particular period (a little after B.C. 335) this stater passed on the Bosporus for 28 Attic drachmae, which, by a comparison with the then value of the daric or DARIUS, would give for its weight about 180 grains. Several Cyzicene staters exist, but none of them come up to this weight. Hence we may conclude that the price of gold on the Bosporus was at that time unusually high. Some of the existing coins give 160 grains, and others not more than 120, for the weight of the Cyzicene stater; but, allowing for wear in the minting, and for subsequent wear, we may perhaps take 180 grains for its true value, and if so, it belongs to the Attic standard. Its value, calculated from the number of drachmae it passed for, would be 1L.

3. The Stater of Lampasces is mentioned in an Attic inscription of B.C. 434. Several gold coins of Lampasces are extant; they may be known by the impression of a sea-horse upon them. There are two in the British Museum of the weight of about 120 grains, which is just that of the daric. The weights of the Lampasene staters are very unequal; and both Lampasces and Cyzicus appear to have had gold coins which were multiples of different standards. It is not improbable, that the Λάμπασι and Attic standards existed together.

4. The stater of Phocaean is mentioned by Thucydides (iv. 52) and Demosthenes (in Ἰεραι. p. 160) as in circulation in their times. Sestini gives several of these, the largest of which, stamped with a Φ, weighs 255.42 English grains. This is a double stater, giving a single one of 127.71 grains, or 5 grains less than the Attic, and it seems to follow the standard of the daric or DARIUS. Most of the others are thirds of the stater, and of a lighter comparative weight. There was also Athens a Phocaean coin called έκτης, and its half ἰμιστάτηρ, and Hesychius (s. v. έκτης) mentions the έκτης, τρίτης, and τετάρτης, as coins of gold or silver or copper. Respecting these coins, see ZECA.

5. The stater of Macedonia was coined by Philip II. and Alexander the Great after the standard of the Attic didrachm, and of very fine gold. Under those princes it came into general circulation in Greece and throughout the Macedonian empire. The extant specimens of this coinage are very numerous.

Mr. Hussey gives the following report of an assay which was made for him of a stater of Alexander.

Gold 11 oz. 9 dwts. 6 grs.
Silver 18
Alloy 0

The silver is an accidental admixture, or, if known to be present, was not allowed for, so that this coin may be reckoned at 133 grains of fine gold. Our sovereign, after deducting the alloy, contains 113.12 grains of fine gold. Therefore the Macedonian stater = 113.12 of the English sovereign, or 1L. 3s. 6d. 0.672 farthing. The average is however a little below this stater, but not more so than is due to wear. The stater of Philip was very recently current in Greece at the value of about 25 shillings. This standard was preserved, or very nearly so, under the latter Macedonian kings, and was adopted by other states, as Ephesia, Aetolia, Acarnania, and Syracuse.

Besides the staters noticed above, most of the cities of Ionia had gold coins, but their value is very doubtful. There are specimens in existence from Chios, Teos, Colophon, Smyrna, Ephesus, and many other places. Samos, Siphnos, Thasos, the Greek cities of Sicily, and Cyrene had gold money at an early period.

Pollux mentions a Corinthian stater as used in Sicily which he calls Σπηλαγας στατής, and makes equal to 10 Aeginetan obols. (Pollux, iv. 174, ix. 80.) The explanation of this statement is very difficult, and depends in a great measure on the disputed question whether the Corinthian money followed the Attic or the Aeginetan standard. [See NUMMUS, p. 812, a.]

In calculating the value of the stater in our money, the ratio of gold to silver must not be overlooked. Thus the stater of Alexander, which we have valued, according to the present worth of gold, at 1L. 3s. 6d., passed for twenty drachmae, which, according to the present value of silver, were worth only 16s. 3d. But the former gives the better idea of the worth of the stater, the difference arising from the greater value of silver in ancient times than now. [ARGENTUM.]

Besides the stater itself, there were, as appears from the above remarks, double staters, and the halves (ἡμιστάτηρ, ἡμιστάτηρ), quarters, thirds, sixths, and twelfths of the stater. The coins of the last four denominations are, however, much less common than the single, double, and half staters.

The term στατής, in later times, was applied to
the silver tetradrachm, but whether it was so used in the flourishing times of Athens is doubtful. [Drachma.]

It was also used in reference to weight, apparently like the Hebrew shekel and the Latin pound, in a general sense. Themina (Pollux, ix. 6) and the Sicilian litra (Pollux, iv. 24), are both called stater.

(Sestini, degli Slateri Antichi; Hussey; Warm; Böckh.) [P. S.]

Statera, a steel-yard. [Libra; Trusina.]

Statia dies. [Dies, p. 409, b.]

Statium Nes [Castra, p. 259, b.]

Statium (castro) [Fiscus. The process was divided into various departments, called Stationes, according to the different revenues belonging to it.

(Cod. 4. tit. 31. s. 1; 10. tit. 5. s. 1.) Thus we read of a Statio XX. hereditatium (Orelli, Inscr. n. 3332), a Statio Hereditatium (Orelli, n. 3207; Gruter, p. 451, n. 3); a Statio Annomae (Orelli, n. 4107, 4420.) See Walter, Gesch. des Röm. Rechts, § 314. 2d ed.

Statium Nes Municipiorum. [Graccostasis.]

Statator, a public servant, who attended on the Roman magistrates in the provinces. The Statators seem to have derived their name from the side of the magistrate, and thus being at hand to execute all his commands; they appear to have been chiefly employed in carrying letters and messages. (Cic. ad Fam. ii. 17, 19, x. 21; Dig. 4. tit. 6. s. 10.) Alexander Severus forbade the use of statores in the provinces, and commanded that their duties should be discharged by soldiers. (Dig. 4. tit. 6. s. 19; Lamprid. Alex. Sac. 11.)

Statia liber. [Manumissio.]

Statua'ria Ars is in its proper sense the art of making statues or busts, whether they consist of stone or metal or other materials, and includes the art of making the various kinds of reliefs (alto, basso, and mezzo relievo). The art of the Greeks in this art. On the other hand, we have still no right to infer that the Greeks learnt them from the Egyptians or any other nation. We may add, that no other nation presents such a phenomenon in the earliest history of its arts. The Heraeans, therefore, cannot have arisen from an incapability of forming a whole human figure. They appear rather to point to the time when the Greeks began to represent their gods in a human form. To give to a god the entire form of a man would have been irreverent, whereas the head was necessary, and at the same time sufficient, to represent him as a distinct individual being and endowed with spiritual and thinking powers. The process of humanizing the gods must have been preceded by the custom of representing them in unnatural forms, or such as were partly human and partly animal. The earliest images of the gods were pure images (not the gods themselves), and intended to express some thought or idea: now as the natural figure of man is only expressive of itself, the significant parts of two or more beings were put together to express the idea which men made of their gods. Such monstrous figures were retained as representative forms to the latest times. As instances of this we may mention Glaucus with the tail of a fish (Philol. Icon. ii. 15), the Arcadian Pan with goat's feet (Hist. Mythol. Bilderb. ii. p. 161, &c.), and the Demeter of Phigaleia with the head and mane of a horse. (Paus. viii. 42. § 3.) Homer's silence on such compound representations of the gods is no proof that they did not exist in early times.

Before proceeding to consider statuary in its several stages of development, it is necessary to make a few preliminary remarks respecting the materials used by the Greeks in this art. On the whole it may be said that there is no material applicable to statuary which was not used by the Greeks. As soft clay is capable of being shaped without difficulty into any form, and is easily dried either by being exposed to the sun or by being baked, we may consider this substance to have been the earliest material of which figures were made. We have a trace of this in the story, that Zeus, in his anger at Prometheus having stolen the fire, ordered Hephaestus to form Pandora of
earth moistened with tears. (Hesiod. Theogon. 571, &c; Stob. Serm. 1.) The name plastic art (παστική), by which the ancients sometimes designate the art of statuary, properly signifies to form or shape a thing of clay. But notwithstanding the great facility of making figures of clay, they are not often mentioned in the early ages of Greece, while in Italy the Diic fictiles (πικατικός) were very common from the earliest times. Clay figures, however, never fell into disuse entirely, and in later times we find not only statues of clay, but the pediments in small or rural temples frequently contained the most beautiful reliefs in clay, which were made by means of the same relief of larger temples. When Pliny (H. N. xxxv. 43) speaks of Rhoeus and Theodorus of Samos as the inventors of the plastici, he seems to labour under a mistake and to confound the art of working in clay with that of casting in metal, as in later times the latter of these two arts was commonly called plastic. Some ancient figures of clay are still preserved.

The second material was wood, and figures made of wood were called ἄρχα, from ἀρχεῖν, to polish" or " carve." Various kinds of wood were used in statuary. We find the mention of cypress, cedar, cypress, sycamore, pine, fig, box, and ebony. It was chiefly used for making images of the gods, and probably more on account of the facility of working in it, than for any other reason. If it should, however, be remarked, that particular kinds of wood were used to make the images of particular deities: thus the statues of Dionysus, the god of figs, were made of fig-wood. The use of wood for statues of the gods continued to the latest times; but statues of men, as, for example, some of the victors in the public games, were likewise made of wood. At a time when the Greeks were sufficiently acquainted with the art of working in stone and metal.

Stone was little used in statuary during the early ages of Greece, though it was not altogether unknown, as we may infer from the relief on the Lion-gate of Mycenae. In Italy, where the soft terebrino afforded an easy material for working, stone appears to have been used at an earlier period and more commonly than in Greece. But in the historical times we find the Greeks used all the principal varieties of marble for their statues; the most celebrated kinds of which were the marbles of Paros and of Mount Pentelicus, both of which were of a white colour. Different kinds of marble and of different colours were sometimes used in one and the same statue, in which case the work is called Πολυχρωμία. Bronze (χάλκος, aces), silver, and gold were used profusely in the state of society described in the Homeric poems, which is a sufficient proof that works of art were likewise used more for the sake of unknown in those times. At that period, however, and long after, the works executed in metal were made by means of the hammer, and the different pieces were joined together by pins, rivets, cramps, or other mechanical fastenings, and, as the art advanced, by a kind of glue, cement, or solder. Iron came into use much later, and the art of casting both bronze and iron is ascribed to Rhoeus and to Theodorus of Samos. (Paus. x. 38, § 3.) LASSI: METALLUM.) Ivory came into use at a later period than any of the before-mentioned materials, and then was highly valued both for its beauty and rarity. In its application to statuary, ivory was generally combined with gold, and was used for the parts representing the flesh. Winckelmann has calculated that about one thousand statues of this kind are mentioned by the ancients.

The history of ancient art, and of statuary in particular, may be divided into five periods.

I. First Period, from the earliest times till about Ol. 58, or 590 B.C.

The real history of the arts is preceded by a period of a purely mythical character, which tradition has peopled with divine artists and most extraordinary productions. Two kinds of artists, however, may be distinguished in this mythical period: the first consists of gods and daemons, such as Athena, Hephaestus, the Phrygian or Dardanian Dactyls, and the Cabiri. The second contains whole tribes of men distinguished from others by the mysterious possession of superior skill in the practice of the arts, such as the Telchines and the Lycean Cyclopes. The third consists of individuals who are indeed described as human beings, but yet are nothing more than personifications of particular branches of art, or the representatives of families of artists. Of the latter the most celebrated is Daedalus, whose name indicates nothing but a smith, or an artist in general, and who is himself the mythical ancestor of a numerous family of artists (Daedalidae), which can be traced from the time of Homer to that of Plato, for even Socrates is said to have been a descendant of this family. It is, however, very probable that, in Homer, Daedalus is merely an epithet of the god Hephaestus. (See Dict. of Biog. s. v.) He was believed to be an Athenian, but Crete also claimed the honour of being his native country. The stories respecting him are more like allegorical accounts of the progress of the arts than anything else. He was principally renowned in antiquity for his έρασις, and several parts of Greece, as Boeotia, Attica, Crete, and even Libya in later times, were believed to possess specimens of his workmanship. (Paus. vii. 5, ix. 40, § 2, l. 18. § 5; Scylax, p. 53, ed. Huds.) Numerous inventions also, especially of instruments used in carving wood, are ascribed to him. He is said to have made winged figures, which appears to mean that before his time human figures were represented with their legs close together, and that in his statues the legs were separated, which was at once a great step forward, as it imparted, greater life and activity to a figure. Smilis (from σμίλως, a carving-knife) exercised his art in Samos, Aegina, and other places, and some remarkable works were attributed to him. (Müller, Agisnet. p. 97.) Endoeus of Athens is called a disciple of Daedalus. Various works were attributed to him by his native country. The stories respecting them were a colossal έρασις of Athena Polias in a temple at Erythre in Ionia. She was represented sitting upon a βάριον, holding a spindle in her hand, and with a φόριος on her head. Pausanias (vii. 5. § 4) saw this έρασις himself. (See Dict. of Biog. s. v. Daedalus, Endoeus, Smilis.) According to the popular traditions of Greece, there was no period in which the gods were not represented in some form or other, and there is no doubt that for a long time there existed no other statues in Greece, than those of the gods; a statue of a man appears for a long time to have been a thing unheard of in Greece. The earliest repre-
sentedations of the gods, however, were by no means regarded as the gods themselves or even as images of them, but only as symbols of their presence; and as the imagination of a people—primitive spirits that do not require much to be reminded of the presence of the deity—the simplest symbols were sometimes sufficient to produce this effect. Hence we find that in many places the presence of a god was indicated by the simplest and most shapeless symbols, such as unhewn blocks of stone (Ἄθων ἄργυρος, Paus. ix. 27. § 1, 33. § 1, viii. 22. § 3), and by simple pillars or pieces of wood. (Paus. vii. 22. § 3; Clem. Alex. Strom. i. p. 410, and p. 540, ed. Syllburg; Docana and Darebala.) Many such symbolic representations of gods were held in the greatest esteem, even in the historical ages, as sacred inheritances of former times, and remained the conventional representations of the gods notwithstanding the progress which the arts had made. The general name for a representation of a god not consisting of such a rude symbol was ἄγαλμα. (Ruhnken, ad Tim. p. 2.)

In the Homeric poems, although the shield of Achilles, the gold and silver dogs which kept watch at the palace of Alcyoneus, and other similar things may have been representations of gods, there are sufficient traces of the existence of statues of the gods; but it would seem that, as the ideas of the gods were yet gigantic and undefined, the representations of several superhuman beings were more calculated to inspire awe than to display any artistic beauty. (II. xi. 36, &c.; Hesiod, Scut. ii. 144, 156, 248, &c.) This was however not always the case. Temples are mentioned in several places (II. i. 39, vii. 63, &c.), and temples presuppose the existence of representations of the gods. A statue of Athena is mentioned at Ilium, upon whose knees the queen places a magnificent peplus. (II. vi. 96; comp. 275.) The statue thus appears to have been in a sitting position like the statues of Athena among the Ionians in general. (Strab. xiii. p. 601.) The existence of a statue of Apollo must be inferred from Iliad i. 28, for the σκέυα σεόι can only mean the wreath or diadem with which his statue itself used to be adorned. This statue must moreover have been represented carrying a bow, for attributes like ἀργυρόποδος could have no meaning unless they referred to something existing and well-known. Many such symbolic representations of gods were the two brothers Telecles and Theodoras of Corinth, and for which the wealthy Corinthians were obliged to sacrifice a considerable part of their property. (Strab. viii. pp. 553, 578; Phot. and Suid. s. v. Κοσέλα.) About the same time, as some think, the Ionians of Sparta made a bronze statue of Athena. (Paus. iii. 17. § 13.) There is, however, very great uncertainty respecting the true dates of these artists. (See Dict. of Biography, s. v.; Gitiadas, Leuchus.) Another great work in bronze belonging to this period is the colossal statue of Zeus which was dedicated at Olympia by Cypselus or Periander of Corinth, and for which the wealthy Corinthians were obliged to sacrifice a considerable part of their property. (Strab. viii. pp. 553, 578; Phot. and Suid. s. v. Κοσέλα.)

The time which elapsed between the composition of the Homeric poems and the beginning of the fifth century before our era may be termed the age of discovery; for nearly all the inventions, upon the application of which the development of the arts is dependent, are assigned to this period, which may at the same time be regarded as the first historical period in the history of art. Glaucus of Chios or Samos is said to have invented the art of soldering metal (σκέπαρα κάλλιστα, Herod. i. 25). The two artists most celebrated for their discoveries were the two brothers Telecles and Theodorus of Samos, about the time of Polycrates. The most important of their inventions was the art of casting figures of metal. It is a singular circumstance, that the very two artists to whom this invention is ascribed, are said to have made their studies in Egypt; and the curious story of the two brothers executing a διάκονος of the Pythonian Apollo in such a manner, that while Telecles made the one half of the statue at Delos, the other half was to be made by Theodorus at Ephesus, and that when the two halves were put together, they talked as accurately as if the whole had been the work of one artist (Diodor. i. 98), has been thought to support the Egyptian tradition that these artists were greatly assisted in the exercise of their art by what they had learnt in Egypt. But, in the first place, the whole story has a very fabulous appearance, and even admitting that the artists, as the Egyptians asserted, had actually been in their country, nobody will on this ground maintain that they learnt their art there: the utmost they could have learnt might have been some mechanical processes; the art itself must be vindicated for the Greeks. In the second place, Telecles and Theodorus are called by Diodorus sons of Rhoceus, and Pausanias himself, who was unable to discover a bronze work of Theodorus, saw at Ephesus a bronze statue which was the work of Rhoccus (x. 38. § 3). Hence we have reason to suppose that Telecles and Theodorus learnt at any rate the art of casting metal from
their father, and not in a foreign country. Respecting the various accounts of these two artists and the time at which they lived, see the *Dict. of Biog.* Pliny (H. N. xxxv. 55) says, that Pasiteles called the art of modelling clay the mother of the art of casting figures in metal (statuaria), and this passage has been explained as if Pasiteles meant to say that it was from the former of these arts that the latter had given rise to the latter. But this is manifestly wrong, for from the words which follow in the text of Pliny it is clear that the meaning is, that he never executed any work in metal, marble, &c. without previously taking a model in clay.

Statues of gods in baked clay, though in general more used for domestic and private than for public worship, continued to be made as before. Many specimens of small dimensions and of very rude workmanship have been discovered in Attic graves. (See Schol. ad Aristoph. *Av.* 436.) Ornaments and reliefs on houses, porticoes, and temples were likewise very commonly made of clay, especially at Corinth and in the Ceramicus. (Paus. i. 2. § 4, iii. 3. § 1.)

Representations of the gods in marble are not mentioned in Homer, although they may have existed in his time, as well as statues of wood, which are likewise not expressly mentioned. Marble is found in the ancient Thesaurus of Orchomenos. Pliny (H. N. xxxvi. 4. s. 2) calculates that works in marble were executed by Malas in Chios at the beginning of the Olympiads; and about Ol. 50 (550 B.C.). Dipoenus and Scyllis were renowned for their works in marble. The most ancient specimen of a marble statue was seen by Pausanias (i. 43. § 7) in the market-place of Megara. The work consisted of two figures, Coroebus killing Poene. There are still extant some works in marble which may with certainty be ascribed to the period previous to Ol. 50.

Before we conclude our account of the works produced during this period, we have to mention the celebrated chest of Cypselus at Olympia, which Pausanias saw and described (iv. 17. § 2, &c.). It was made of cedar-wood, which was thought most durable. It was adorned on its four sides and on the cover with figures, partly in ivory, partly in gold, and partly in the cedar-wood itself, which represented various scenes taken from the stories of the heroic ages. Pausanias does not express his opinion as to their artistic merits, but the mistakes with which he describes them is a sufficient proof that he did not consider them as bad either in design or execution. Quatremère de Quincy has attempted (in his *Jupiter Olympien*) to restore this chest and its ornaments from the description of Pausanias; but the restoration is so egregiously bad, that an eye accustomed to the contemplation of genuine works of art shrinks from it with disgust.

During the whole of this period we scarcely hear of any statues except those of the gods, and although marble and bronze began to be extensively applied, yet wood was much more generally used for representations of the gods. These statues were painted (*Pictura*, p. 905), and in most cases dressed in the most gorgeous attire. The general character of the statues produced in the earlier times of this period is the whole the same as among other nations at such an early period. The style in which they are executed is called the *arkeai* or the *kieratic* style. The figures are stiff and clumsy, the countenances have little or no individuality, the eyes long and small, and the outer angles turned a little upwards, the mouth, which is likewise drawn upwards at the two corners, has a smiling appearance. The hair is carefully worked, but has a stiff wiry appearance, and generally falls down in straight lines which are curled at the ends. The arms hang down the sides of the body, unless the figure carries something in its hands. The drapery is likewise stiff, and the folds are very symmetrical and worked with little regard to nature. As the arts during this period were chiefly employed in the service of religion, they could, notwithstanding the many mechanical discoveries of the time, make but slow progress towards the production of arts of sublimity or beauty, for in the representation of the gods for public worship ancient forms hallowed by time and custom were retained and repeated without the artist being allowed, even if he was able to do it, to depart from these forms or to introduce any material change. Art therefore could not make any great progress, until it was applied to purposes in which the artist's genius was not restrained by religious custom, and not bound to conventional forms. Religion, although the fostering mother of the arts in their infancy, became a tedious restraint when they grew up to manhood. But as soon as other spheres of action were opened, religion, in her turn, could not escape from the influence of the advancement of the arts, and the old conventional forms in many places gave way to works of real merit and genius. This great and important change took place about and after Ol. 50.

II. Second Period, from Ol. 50 to Ol. 75. (580—480 B.C.)

This period, although comprising no more than one century, developed all these arts which combined to make Grecian art what it became during the third and most flourishing period of its history. Greece now came into close contact with the nations of the East and with Egypt; commerce flourished at Corinth, Aegina, Samos, Miletus, Phocæa, and other places; gold became more abundant in Greece than it had been before, and the tyrants, who sprang up in several parts of Greece, surrounded themselves with splendour and magnificence, and acted as the patrons of art to palliate their own usurpation. But all these were only external influences, and could not have produced a nation of artists like the Greeks. Epic poetry had gradually created in the minds of the people more defined ideas of their gods and heroes, while philosophy began to make men look beyond what was conventional and traditional. The athletic and orcheastic arts attained about Ol. 50 a high degree of perfection, and the circumstance that about the same time the gymnastic and athletic contests at the great public festivals began to be performed naked, directed the attention of the artists as well as of the public to nature, and tended to familiarize them with the beautiful forms of the human body. But the imitation of nature was at first of a very hard and severe character, and the influence of conventional forms still acted in many cases as an obstacle.

The number of artists who flourished during this period is truly astonishing. It has been said that the close connection of father and son among...
the artists ceased at this time, and that individual artists worked free and according to the dictates of their own genius. But this is going too far, for it still continued to be the common practice for a son to be instructed by his father, and although this relation is usually expressed by the term μεταγγιστας, yet on statues we only meet with the term ιδιος. But, along with these families of artists, schools now became more general, in which the arts were taught and cultivated according to certain principles which were or became traditio	

eous in each school; the schools thus acquired something of the spirit of castes or corporations.

The Ionians of Asia Minor and the islanders of the Aegean, who had previously been in advance of the other Greeks in the exercise of the fine arts, had their last flourishing period from Ol. 55 to Ol. 63 (560—528 B.C.). But this short period must have been one of the greatest as well as one of the most active and productive of numerous costly works of art. The presents which Croesus sent to Delphi, and some of which were said to have been made by the Samian Theodorus, must have been executed at the beginning of these forty years. Our want of information respecting the Ionians must be ascribed to the circumstance that we have no Pausanias to take us through their cities, and to describe and explain the works of art with which they were adorned. It is owing to the same circumstance that we know so little of Rhodes, Lemnos, Naxos, and Cyprus, although we may take for granted that these flourishing islands did not by any means neglect the arts. Respecting Chios and Samos we possess more information. Works in metal were produced in high perfection in the latter island, in Aegina and Argos, while Chios gained the greatest reputation from its possessing the earliest great school of sculptors in marble, in which Bupalus and Anthermus were the most distinguished about Ol. 60. Their works were scattered over various parts of Greece, and their value may be inferred from the fact that Augustus adorned with them the pediment of the temple of Apollo on the Palatine. (Plin. H. N. xxxvi. 4.) These works must be supposed originally to have belonged to a Greek temple of the same god, and must certainly have been of superior beauty to the works discovered in the island of Aegina, otherwise Augustus would not have chosen them as ornaments for the Palatine temple. Sicyon also possessed a celebrated school of sculptors in marble, and about Ol. 50 Dipoenus and Scyllis, who had come from Crete, were at the head of it, and executed several marble statues of gods. (Plin. l. c.) In Aetolia, whither they withdrew for a time, and at Argos, there likewise existed works in marble by these artists. Disciples of them, such as Dorycleidas, Medon, and Theocles, were engaged at Sparta and in other places. (Paus. v. 17. § 1, vi. 19.) Respecting Magna Graecia and Sicily we know few particulars, though it appears that the arts here went on improving and continued to be in advance of the mother-country. The most celebrated artists in southern Italy were Damas of Croton and Pythagoras of Rhegium. (See the lives of these artists in the Dictionary of Biography.)

In Greece itself Sicyon continued from early times to be the seat of a distinguished school of artists. Here Canachus and Aristocles flourished about Ol. 70 as statuaries in metal, though the former was also celebrated in the art of carving in wood and in toreutic. Pliny (H. N. xxxvi. 4) calls Sicyon: dio officinarum omnium mettalorum patria. Canachus, whose works Cicero (Brut. 18) calls more rigid and hard than was consistent with the truth of nature, was the most distinguished among the Sicyonian artists, and his skill found employment in other parts of Greece also. His most celebrated work was a colossal bronze statue of Apollo Phileus in the Didymaean, the description of which may give us an idea of the character of temple-statues at this period. The whole figure was stiff, very muscular, and without any elegance. In his right hand, which was stretched out, the god held a fasces and in the left, which was somewhat lower, a bow. The features of the countenance were hard and worked in the old hieratic style; the hair was divided and hung down like wire with little curls at the end. (Müller, Archäol. p. 64.)

In Aegina the arts appear likewise to have continued to flourish as before, and the most celebrated among its artists was Callon, about Ol. 66. (Paus. iii. 18. § 5, iv. 14. § 2.) Athens, which at this time rivalled Aegina in the fine arts, appears in a short space to have made great progress, for great artists as well as great works now appear to be a part of the influence of the Peisistratids. After the death of Peisistratus himself, the first quadriga of bronze was erected in front of the temple of Pallas. The most celebrated among the Athenian sculptors were Critias and Hegias or Hegesias, both distinguished for their works in bronze. The former of them made in Ol. 75 the statues of Harmodius and Aristogen. (See the articles in the Dict. of Bio.)

Argos also distinguished itself, and it is a curious circumstance, that the greatest Attic artists with whom the third period opens, and who brought the Attic art to its culminating point, are disciples of the Argive Ageledas (about Ol. 66), which at once raises this city and her other artists, such as Aristomedon, Glaucus, Dionysius, and others to a greater importance than we might otherwise be inclined to attribute to them.

Among the numerous works produced during this period we shall first mention the representations of the gods (ἅγιαμώσα). In all the statues which were made for temples as objects of worship, the hieratic style was more or less conscientiously retained, and it is therefore not in these statues that we have to seek for proofs of the progress of art. They were for the most part, as of old, made of wood, and when an old statue was to be replaced by a new one, the latter was generally a faithful copy of the former. Thus the wooden statue of Demeter at Phigaleia with a horse's head, from which dragons and other monsters sprang forth, and which bore a dolphin and a dove in its hands, was imitated by Onatas in bronze after the wooden figure had been burnt. (Paus. viii. 42.) The same adherence to ancient forms of the gods was also visible in other cases; for when colonies were sent out the images of the gods of the mother-city were for the most part faithfully copied for the colony, and such copies were called ἅγιαμώσα. (Dionys. Hal. ii. 22, viii. 56; Strab. iv. p. 179.)

The instances of the Apollo Phileus and of the Demeter of Onatas show that even in temple-statues wood began to give way to other and better materials. Besides bronze, marble also, and ivory and gold were now applied to statues of the gods,
and it was not very uncommon to form the body of a statue of wood, and to make its head, arms, and feet of stone (δρυκτικές), or to cover the whole of such a wooden figure with ivory and gold. (Paus. ii. 4. § 1, vi. 25. § 4, &c., ii. 22. § 6; Eurip. Trood. 1001.) The latter method, which about this time became a distinct and much admired branch of statuary, was practised by Dorycleides, Theocles, Medon, Canacus, Menaecemus, and others, and appears to have been introduced by Dipoenus and Scyllis. Quatremère de Quincy considered this kind of sculpture, which the moderns call chryselephantine sculpture, as a part of the art which the ancients called toporic (τοπορικός). There are few errors more surprising than this, and yet the opinion of the French critic has been repeated as if there could be no doubt about it. [Elephas.]

From the statues of the gods erected for worship we must distinguish those statues which were dedicated in temples as áραιάματα, and which now became customary instead of craters, tripods, &c. But here too the change was not sudden, for the statues at first were frequently connected with tripods and similar ornaments. At Amyclae there were tripods made by Callon and Githadas with small statues of goddesses under them. (Paus. iii. 18.) In the execution of statues to be dedicated as áραιάματα, even though they were representations of gods, the artists were not only not bound to any traditional or conventional forms, but were, like the poets, allowed to make free use of mythological subjects, to add, and to omit, or to modify the stories, so as to render them more adapted for their artistic purposes.

A third class of statues, which were erected during this period in great numbers, were those of the victors in the great national games and of other distinguished persons (άραιάματα). The custom of erecting statues of the victors in public appears to have commenced about 01. 58 (Paus. vi. 18. § 5); but these statues soon became extremely numerous, and many of them were executed by the first artists of the time. In some the influence of the hieratic style was visible, or they were even made in that style, as the statue of Mylon by Damæas. (Philost. Apoll. Tyän. iv. 28; comp. Paus. iv. 28. vii. § 2.) Although these statues were generally portraits for Pheid (H.W. xxxiv. 10) states that only those who had gained the victory three times were allowed to have an iconic statue erected, yet they were destined to preserve the memory of the particular physical powers and the bodily development of the athletes, or even to show the peculiar skill or the peculiar stratagems by which an athlete had excelled and overcome his adversary, and thus afforded to the artists numerous opportunities of representing figures in a variety of attitudes and actions. (Paus. vi. 10. § 1, viii. § 40; Schol. ad Pind. Ol. vii. init.; Xenoph. Mem. iii. 10. § 6.) Statues erected in public or dedicated in temples in honour of other distinguished persons are mentioned very rarely during this period, but they appear generally to have been portraits (εἰκώνες, statue iconiques). The earliest statues of this kind we know of are those of Cleobis and Biton of Argos, which were dedicated in the temple of Delphi about Ol. 50. (Herod. i. 31.) The first iconic statues of Harmodius and Aristogitón were made by Antenor in 509 b. c., and in 477 b. c. new statues of the same persons were made by Critias. It is allowed on all hands that nothing contributed more to the advancement of statuary than the contests at the public games, as they not only rendered the artists familiar with the greatest variety of attitudes, and with the most beautifully developed forms of the bodies of the athletes, but also afforded to them numerous opportunities to represent in their works those same persons and attitudes which they had seen and admired. The widest field for study and exercise was thus opened to the artists.

We have seen that at a very early period of Grecian art attempts were made to adorn the outside of temples and public buildings, but it was not till the period we are now describing that it became customary to adorn the pediments, friezes, and other parts of temples with reliefs or groups of statues of marble. We still possess two great works of this kind which are sufficient to show their general character during this period. 1. The Selinuntine Marbles, or the metopes of two temples on the acropolis of Selinus, in Sicily, which were discovered in 1825 by W. Harris and Sam. Angell, and are now at present in the Museum of Palermo. Those belonging to the western temple appear to have been made at the beginning of this period, as they show a very great resemblance to the works in the hieratic style. The figures of the other or middle temple show indeed a considerable advance of Grecian art attempts were made to adorn the out

III. Third Period from Ol. 75 to Ol. 111. (480—336 b. c.)

During this period Athens was the centre of the fine arts in Greece. The Persian wars awakened in the hearts of the people the feeling and the conviction of their own power, and the Greeks, who had at first only ward off the attacks of the bar

STATUARIA ARS. 1063

STATUARIA ARS.
barians, now felt strong enough to act on the offensive. The fall of the Spartan Pausanias raised Athens in 472 B.C. to the supremacy in the wars against Persia. Athens had now acquired a powerful navy, and the tributes of the allies, which amounted at different times from 460 to 1200 talents, and which from 462 B.C. were deposited in the treasury at Athens, raised the city to a height of power such as few cities have ever possessed. Only a small portion of these treasures was spent upon war; the rest was applied at first to the fortification of the city, and afterwards to the building of temples, porticoes, theatres, gymnasiums, &c. Among them we need only mention the Theseum, the Parthenon, the Propylaea, the stone theatre, the Poecile, and the Odeum. After the wars with Persia Athens appears by no means exhausted or broken down, but refreshed and strengthened like nature after a heavy storm.

Statuary during this period went hand in hand with the other arts and with literature: it became emancipated from its ancient fetters, from the stiffness and conventional forms of former times. The free and noble spirit of the Athenian democracy showed its influence in all departments of literature and art, and among the latter statuary reached its culminating point in the sublime and mighty works of Pheidias. (See Dict. of Biog. s. v. Pheidias.) The democratical spirit did not however lead to any kind of extravagance in the arts: no vehement passions or actions were represented, and although the character of those works which belong to the latter half of this period differs very much from those of the former half, yet on the whole all show a calm dignity and an almost passionless tranquillity of mind, a feature so peculiar to all the great masterpieces of Grecian art. The Peloponnesian war and the calamities which accompanied it produced a change in the state of things; a new generation now stepped into the place of the heroic race which had partaken in or witnessed the memorable events of the Persian war. Sensuality and an indulgence of the passions became the prominent features in the character of the Athenian people; and the prevailing desire after pleasures and strong excitements could not fail to bear the most striking analogy with the three phases of tragedy as they lie before us in the works of Aeschylus, Sophocles, and Euripides.

Argos was next to Athens, the most distinguished seat of the arts during this period, and the works of the Athenian and Argive artists spread over all Greece, and became the models for other Greek artists.

The development of statuary at Athens and Argos had been prepared by Calamis of Athens and Pythagoras of Rhegium, the former of whom, although not quite free from the hardness of the earlier style, yet produced a great variety of works, among which are mentioned representations of gods in a sublime style, graceful statues of women, and spirited horses, in which he was unrivalled. (Plin. H.N. xxxiv. 19. § 11; Quinctil. xii. 10. § 7; Cic. Brut. 18; Lucian, Imag. 6.) Pythagoras was distinguished for the perfection with which he expressed the muscles, veins, and hair in his athletic statues, for the beautiful proportions and the powerful expression of these statues which, as Pliny says, made the beholders feel the pains which the individuals represented were suffering. (Plin. H.N. xxxiv. 19. § 4; Paus. vi. 6. § 1; 13. § 4.) Several of his works are specified by Pausanias and Pliny. (See Dict. of Biog. s. v.) The career of Pheidias the Athenian begins about Ol. 82. The genius of this artist was so great and so generally recognised, that all the great works which were executed in the age of Pericles were placed under his direction, and thus the whole host of artists who were at that time assembled at Athens were engaged in working out his designs and ideas. (Plut. Peric. 12.) He himself was chiefly engaged in executing the colossal works in ivory and gold, the expenses of which were supplied by the Greek states with the greatest liberality, and other works in bronze and marble. (For an account of the chryselephantine statues of Athens at Athens, and of Zeus at Olympia, and of other gods, see the Dict. of Biog. s. v. Pheidias was greatest in the representation of the gods, and especially in portraying the character of Athena, which he represented with various modifications, sometimes as a warlike goddess, and sometimes as the mild and graceful protectress of the arts. (Plin. H.N. xxxiv. 8. s. 19. § 1; Paus. i. 28. § 2; Lucian, Imag. 6.)

We do not read of many disciples of Pheidias, but the most distinguished among them were Agoracritus of Samos and Alcamenes of Athens. Both, though the latter with greater independence, applied their skill like their master to statues of the gods; both were especially renowned for the great beauty, softness, and calm majesty with which they represented goddesses, in the composition of which they rivalled each other. Some of the statues of Alcamenes were very highly valued in antiquity, especially his Hecate, Athena, Aphrodite in the gardens, Hephaestus, and also the groups in the pediment of the temple at Olympia. The most celebrated statue of Agoracritus was the Nemesis of Rhamnus, which had originally been intended as an Aphrodite to compete with that of Alcamenes, but was afterwards by the addition of the proper attributes consecrated as a Nemesis at Rhamnus.

We still possess a series of sculptured works in marble which were made by the school of Pheidias, and some of them undoubtedly by the great master himself. These works are:

1. Some parts of the eighteen sculptured metopes, together with the frieze of the small sides of the cella of the temple of Theseus. Ten of the metopes represent the exploits of Hercules, and the eight others those of Theseus. The figures in the frieze are manifestly gods, but their meaning is uncertain. All the figures are full of life and activity, and worked in the sublime style of the school of Pheidias. Some antiquarians value them even higher than the sculptures of the Parthenon. Casts of these figures are in the British Museum. (Compare Stuart, Aut. iii. chap. 1.)

2. A considerable number of the metopes of the Parthenon, which are all adorned with reliefs in marble, a great part of the frieze of the cella, some colossal figures, and a number of fragments of the
two pediments of this temple. The greater part of these works is now in the British Museum, where there are called under the name of the Elgin Marbles. They have been described and commented upon so often, that they require no further mention here. (See Dict. of Biog. s. v. Pheidias.)

3. The marble reliefs of the temple of Nike Apteros belong indeed to a later age than that of Pheidias, but they are manifestly made in the spirit of his school. They represent with great liveliness and energy contests of Greeks with Persians, and of Greeks among themselves. These also are in the British Museum.

All these sculptures breathe on the whole the same sublime spirit, though it would seem that some, especially some figures of the metopes of the Parthenon, were executed by artists who had not emancipated themselves entirely from the influence of an earlier age. With this exception and some other slight defects, which are probably the consequences of the place which the sculptures occupied in the temples they adorned, we find everywhere a truth in the imitation of nature, which, without suppressing or omitting anything that is essential, and without any forced attempt to go beyond nature, produces the purest and sublimest beauty: these works show lively movements combined with calmness and ease, a natural dignity and grace united with unaffected simplicity; no striving after effect, or excitement of the passions. These sculptures alone afford us ample means to justify the characteristic features of Pheidias and his school. (De Saltat. p. 542.) Pheidias was the Aeschylus of statuary, and it may be safely asserted that, although the art excelled by subsequent generations, it was most pleasing, but was careless in the conception as well as in the execution of the whole, which destroyed the value of his works, whence he was designated by the ancient artists as a canon of rules on this point. (Cic. Brut. 86, 87; Quintil. v. 12, § 21; Lucian, de Saltat. 75.) Polycleitus is said to have written a work on the same subject, and it may be that his Doryphorus was intended to give a practical specimen of the rules he had laid down in his treatise. He gained a victory over Pheidias in the representation of an Amazon, which must consequently have been a figure in the greatest luxuriance of female beauty combined with a manly character. (Müller, Archäol. § 121.)

Myron of Eleutherae, about Ol. 87, was also distinguished for his statues of gods we only mention two as the most important. (Comp. Dict. of Biog. s. v.)

1. The Phigaleian marbles, which belonged to the temple of Apollo Epicurius, built about Ol. 86 by Ictinus. They were discovered in 1812, and consist of twenty-three plates of marble belonging to the inner frieze of the cella. They are now in the British Museum. The subjects represented in them are fights with centaurs and amazons, and one plate shows Apollo and Artemis drawn in a chariot by stags. Many of the attitudes of the figures appear to be repetitions of those seen on the Attic temples, but there are at the same time great differences, for the Phigaleian marbles sometimes show a boldness of design which almost borders on extravagance, while some figures are incorrectly drawn and in forced attitudes. The best descriptions of them are those in Dossi raccolte della Grecia, disgn. da G. M. Wagner (1814), and in Stackelberg's INDIVIDUALPANJUG. zu D Ass in Archäen u. die desselven ausgeg. Bildwerke, 1828.

2. Marbles of the temple of the Olympian Zeus, which were made by Paenius of Mende and Alcamenes of Athens. (Paus. v. 16.) Several fragments of these sculptures were discovered in 1829, and are now at Paris (Expédit. Scientif. de la Morée, pl. 74-78.) The figures of these marbles are indeed free from the fetters of the ancient style, and show a true imitation of nature, but do not nearly come up to the ideal simplicity of the works of Pheidias.

About the same time that the Attic school rose to its highest perfection under Pheidias, the school of Argos was likewise raised to its summit by Polycleitus, who was inferior to the former in his statues of gods (Quinctil. xii. 10. § 7, &c.; Cic. Brut. 18), though he advanced the toretic art in his colossal statue of Hera at Argos further than Pheidias. (Plin. H. N. xxxiv. 6. s. 19. § 2.) But the art of making bronze, statues of athletes was carried by him to the greatest perfection: ideal youthful and manly beauty was the sphere in which he excelled. Among his statues of gods we only know two, that of Hera and another of Hermes. Pliny mentions several of his representations of human beings, in which without neglecting to give them individuality, he made youthful figures in their purest beauty, and with the most accurate proportions of the several parts of the human body. (Plin. l. c.; comp. Strab. viii. p. 372.) One of these statues, a youthful Doryphorus, was made with such accurate observation of the proportions of the parts of the body, that it was looked upon by the ancient artists as a canon of rules on this point. (Cic. Brut. 86, Orat. 2; Quintil. v. 12, § 21; Lucian, de Saltat. 75.) Polycleitus was also distinguished in portrait-statues, among which that of Artemon Periphoretus, a mechanician of the time of Pericles, is mentioned with especial praise. (Comp. Dict. of Biog. s. v.)
of Pheidias, may yet be regarded as having only continued and developed its principles of art in a certain direction; but towards the end of this period Euphronor and Lysippus of Sicyon carried out the principles of the Argive school of Polycleitus. (Cic. Brut. 86.) Their principal object was to represent the highest possible degree of physical beauty and of athletic and heroic power. (See their lives in the Dict. of Biog.)

The chief characteristic of Lysippus, and his school is a close imitation of nature, which even contrived to represent bodily defects in some interesting manner, as in his portraits of Alexander; its tendency is entirely realistic. The ideal statues of former times disappear more and more, and make way for mere portraits. Lysippus, it is true, made statues of gods; but they did not properly belong to his sphere; he merely executed them because he had received orders which he could not well refuse. His greatest care was bestowed upon the execution of the details (argutiae operum), upon the correct proportions of the parts of the human body, and upon making his statues slender and tall above the common standard. In short, all the features which characterise the next period appear in the school of Lysippus.

IV. Fourth Period, from Ol. 111 to Ol. 158. (386—146 B.C.)

Within a few generations Grecian art had passed through the various stages of development, and each of them had produced such an abundance of masterpieces that it was difficult for a new generation of artists to produce new and original works. Hence the artists of the periods which followed could not do much more than imitate, and their productions are better or worse in proportion as they were founded upon the study of earlier works or not. But even this period of eclecticism has nevertheless produced masterpieces and groups worthy of the highest admiration, and which can be placed by the side of the best works of antiquity. The very slow decay of the arts, in comparison with the rapid decline of literature, is indeed a strange phenomenon.

During the first fifty years of this period the schools of Praxiteles and Lysippus continued to flourish, especially in works of bronze; but after this time bronze statues were seldom made, until the art was carried on with new vigour at Athens about the end of the period. The school of Lysippus gave rise to that of Rhodes, where his disciple Chares formed the most celebrated among the hundred colossal statues of the sun. It was seventy cubits high and partly of metal. It stood near the harbour, and was thrown down by an earthquake about 1506 near the baths of Titus, and is at present in the hands of Antiquarians.

The celebrated Farnesian bull of Athens was in the time of Pliny; he made his art subservient to passion and sensual desires. (Plin. H. N. xxxiv. 3. s. 6.) Antiquarians assign to this part of the fourth period several very beautiful works still extant, as the magnificent group of Laocoon and his sons, which was discovered in 1506 near the baths of Titus, and is at present in the hands of Antiquarians; it was according to Pliny the work of three Rhodian artists: Agesander, Polycorus, and Athenodorus. (Plin. H. N. xxxvi. 5. s. 4. § 11.)

Lessing's Laocoon. The celebrated Farnese bull is likewise the work of two Rhodian artists, Apollonius and Tauriscus. (Plin. H. N. xxxvi. 5. s. 4. § 10.)

nickname of ναυτιτήρευς. Quinctilian (xii. 10. § 9) says of him nimius in veritate. (Comp. Lucian, Philops. 18; Plin. Epist. iii. 6.) On the whole it should be observed, that near the end of the Peloponnesian war and afterwards the greater part of the artists continued to work in the spirit and style of Polycleitus, and that the principal productions in Peloponnesus were bronze statues of athletes and statues erected in honour of other distinguished persons. (Paus. x. 9. § 4, vi. 2. § 4; Plut. Lysead. 1, 18, de Orac. Pyth. 2.)

The change which took place after the Peloponnesian war in the art of statuary, could not fail to show its influence upon the arts also; and the school of statuary, which had gradually become developed, was as different from that of Pheidias as the then existing state of feeling at Athens was from that which had grown out of the wars with Persia.

It was especially Scopas and Praxiteles of Athens, about one generation after Myron and Polycleitus, who gave the reflex of their time in their productions. They worked with a new spirit of the age, with a noble and sublime conception of the ideas which they embodied in their works.

Scopas and Praxiteles were both distinguished as sculptors in marble, and both worked in the same style; the legendary circles to which most of their ideal productions belong are those of Dionysus and Aphrodite, a fact which also shows the character of the age. There was a time when this school of statuary was considered superior even to that of Pheidias, and it is indeed true that its productions are distinguished by exquisite beauty and gracefulness, whence their female statues in particular are, in one sense, unrivalled; but the effect they produced upon the minds of the beholders was by no means of the same pure and elevating nature as that of the works of their predecessors.

(For an account of their works, see the articles Praxiteles and Scopas in the Dictionary of Biography.)

Cephasiodorus and Timarchus were sons of Praxiteles. There were several works of the former at Rome in the time of Pliny; he made his art subservient to passion and sensual desires. (Plin. H. N. xxxvi. 5. s. 4. § 6) mentions an ivory statue of a hunting scene, and works a celebrated Symplegma at Pergamus, which is the first instance of this kind that we hear of. (Paus. xxxiv. 8. s. 19. § 17 and 20; Plut. de Aud. Poet. 3, Sympos. v. 1; see Dict. of Biog. s. v.)

Leochares also made a number of portrait-statues in ivory and gold of members of the royal family of Macedon, and of other persons. (Paus. v. 20.) Such portrait-statues about this time began to give much occupation to the artists. About the year 350 B.C. several of the greatest artists of the age, such as Scopas, Leochares, Timotheus, and Bryaxis, were engaged in Caria in making the magnificent mausoleum of Mausolus, a general description of which is given under Mausolus.

Most of the above-mentioned artists, however, widened their works differed from those of the school
In the various kingdoms which arose out of the conquests of Alexander the arts were more or less cultivated, and not only were the great master-works of former times copied to adorn the new capitals, but new schools of artists sprang up in several of them. Alexandria, Pergamus, and Seleucia rivalled each other in art no less than in literature.

At Pergamus the celebrated groups were composed which represented the victories of Attalus and Eumenes over the Gauls. (Plin. H.N. xxxiv. 8. s. 19; Paus. 1. 25. § 2; Plut. Anton. 60.) It is believed by some ( Müller, Arch. § 158) that the so-called dying gladiator at Rome is a statue of a Gaul, which originally belonged to one of these groups. Ephesus also had a flourishing school of art, which appears to have followed in the main the style of Lysippus, and excelled, like that of Pergamus, in the representation of battle scenes. The Borghese fighter in the Louvre is supposed to be the work of an Ephesian Agasias, and to have originally formed a part of such a battle-scene. In Syria too, art flourished at Antioch until the time of Antiochus IV., before whose reign a number of statues had already been carried away by Scipio.

In the same style of the gods were seldom made, and when they were executed they were in most cases copies from earlier works, as the character in which the gods were represented had gradually become fixed, and few artists ventured to alter the forms, which had become typical. Portrait-statues of kings increased, on the other hand, to a great extent. The vanity of the kings and the flattery of the artists created a new kind of statues: the princes were frequently identified with certain deities, and were consequently represented as such with all the requisite attributes. In many cases the mere bust of a king was put upon the body of a statue of a god. This was a most dangerous rock for artists; for the simple representation of a king in the shape of a god, which commenced as early as the time of Alexander, was soon thought an insufficient mark of veneration, and art degenerated into a mere instrument of the most vulgar flattery: pomp and show and tasteless ornaments were mistaken for art.

Flattery towards the great was also shown in the monstrous number of statues that were erected to one and the same individual. Demetrius Phalereus, who added 360, or according to others 1500 statues erected to him. (Athen. xii. p. 537; Paus. v. 24. § 3; Plut. Anton. 60.) Among those who contributed most to this revival of statuary were Cleomenes (who made the Medicean Venus, an imitation of that of Cnidus, but inferior in point of taste and delicacy), his son Cleomenes (by whom there is a statue in the Louvre, which shows exquisite workmanship but little life), Glycon, Apollonius, and others. (See their lives in the Dict. of Biog.)

About the close of this period, and for more than a century afterwards, the Romans, in the conquest of the countries where the arts had flourished, made it a regular practice to carry away the works of art; and although they were driven away by value and merit, they acted in many cases no better than rude barbarians, regarding the most precious relics of art in no other light than that of chairs and tables, which might be made again at pleasure and at any time. At first these robberies were carried on with some moderation, as by Marcellus at Syracuse and by Fabius Maximus at Tarentum, and only with a view to adorn their triumphs and the public buildings of Rome. The triumphs over Philip, Antiochus, the Aetolians, the Gauls in Asia, Perseus, Pseudo-Philip, and above all the taking of Corinth, and subsequently the victories over Mithridates and Cleopatra, filled the Roman temples and porticoes with the greatest variety of works of art. After the taking of Corinth, the Roman generals and governors of provinces began to show a kind of amateurship in works of art, which was probably more owing to the fashion prevailing among the Roman grandees than to any real taste or love for the fine arts: they now carried off whatever they could, to adorn their own residences. Sometimes either their vanity or necessity induced them to melt down the most precious works without any regard to artistic worth. The sacrilegious plunder of temples and the carrying away of the sacred statues from the public sanctuaries, which had at first been prevented to some extent by the pontiffs, became afterwards a common practice. The manner in which Verres acted in Sicily is but one of many instances of the extent to which these robberies were carried on. The emperors, especially Augustus, Caligula, and Nero, followed these examples, and the immense number of statues which notwithstanding all this remained at Rhodes, Delphi, Athens, and Olympia, is truly astonishing. (See Völkel, Über die Wegführung der alten Kunstwerke aus den eroberten Ländern nach Rom; Müller, Archäol. § 164, &c.)

Before we proceed to describe the state of statuary during the last stage, in which Rome was the centre of the ancient world, it will be necessary to give an outline of the history of statuary among the Etruscans and Romans down to the year 146 B.C.
The Etruscans were on the whole an industrious and enterprising people. Different hypotheses have been proposed to account for the cultivation of the arts, in which this nation excelled all others in central and northern Italy, as well as for the peculiar style of some of their productions. Some writers think that it was owing to colonies from Lydia, which were established at Caere and Tarquinii, others that the Etruscans themselves were a Pelasgian tribe. With the works of Grecian art they must have become acquainted at an early time through their intercourse with the Greeks of southern Italy, whose influence upon the art of the Etruscans is evident in numerous cases. The East also appears to have exercised some influence upon the Etruscans, as many works of art found in Etruria contain precisely the same representations as those which we find in Asia, especially among the Babylonians. However this may have been effected, we know for certain that the whole range of the fine arts was cultivated by the Etruscans at an early period. Statuary in clay (which here supplied the place of wood, ἡδερα, used in Greece) and in bronze appears to have acquired a high degree of perfection. In 267 B.C. no less than 2000 bronze statues are said to have existed at Volatinni (Plin. H. N. xxxiv. 16, 18; compare Vitruv. iii. 2), and numerous works of Etruscan art are still extant, which show great vigour and life, though they do not possess a very high degree of beauty. Among them we may mention the Chimaera of Arretium (at Florence); the Capitoline She-wolf (Dionys. i. 79; Liv. x. 23), which was dedicated in B.C. 296; the Minerva of Arezzo (now at Florence); and others. Some of their statues are worked in a Greek style; others are of a character peculiar to themselves, and entirely different from works of Grecian art, being stiff and ugly; others again are exaggerated and forced in their movements and attitudes, and resemble the figures which we meet with in the representations of Asiatic nations. Etruscan utensils of bronze, such as candelabra, patenae, cups, thrones, &c., embellished with various ornaments and figures, were very highly valued in antiquity, and even at Athens at a time when the arts were still flourishing there. (Ath. i. p. 329 with pl. 140.) Their works in stone, especially the alto and basse-relievo, which are found in considerable numbers on chests containing the ashes of the dead, are with few exceptions, of very inferior merit.

The Romans previously to the time of the first Tarquin are said to have had no images of the gods; and for a long time afterwards their statues of gods in clay or wood were made by Etruscan artists. (Plin. H. N. xxxv. 45, xxxiv. 16.) During the early part of the republic the works executed at Rome were altogether of a useful and practical and not of an ornamental character; and statuary was in consequence little cultivated. But in the course of time the senate and the people, as well as foreign states which desired to show their gratitude to some Roman, began to erect bronze statues to distinguished persons in the Forum and other places. (Plin. H. N. xxxiv. 14.) The earliest works of this kind, which we can consider as really historical, are the statues of Attus Navius (Plin. H. N. xxxiv. 11; Cie. de Divin. i. 11), of Minucius outside the Porta Trigemina, and of Pythagoras and Alebiades, which stood in the corners of the comitium from the year B.C. 314 down to the dictatorship of Sulla. (Plin. H. N. xxxiv. 12.) The last two statues were undoubtedly Greek workmanship. The earliest metal statue of a deity was, according to Pliny, a Ceres which was made of the confiscated property of Spurius Cassius, about 485 B.C. (Plin. H. N. xxxiv. 9.) Two other metal statues of gods were the Capitoline Hercules, 306 B.C. (Liv. ix. 44), and the colossal statue of the Capitoline Jupiter, which, according to Livy, was made about 490 B.C. (Liv. ix. 40, x. 39; Plin. H. N. xxxiv. 18.) The number of statues of men in the Forum appears soon to have become very great, and many persons seem to have had them erected there without any right: hence in 161 B.C. the censors P. Cornelius Scipio and M. Popilius removed from the Forum all the statues or magistrates which had not been erected with the sanction of the senate or the people. (Plin. H. N. xxxiv. 14.) A statue of Cornelia, the mother of the Gracchi, stood in the porticus of Metellus. The artists by whom these and other statues were executed were undoubtedly Greeks and Etruscans.

During this period Rome was the capital of nearly the whole of the ancient world, not through its intellectual superiority, but by its military and political power. But it nevertheless became the centre of art and literature, as the artists resorted thereto from all parts of the empire for the purpose of seeking employment in the houses of the great. The mass of the people, however, had as little taste for and were as little concerned about the arts as ever. (Horat. Art. Poët. 323; Petron. 88.) In addition to this there was still a strong party of the Romans, who, either from an affected or an honest contempt for the Greeks, entertained the vain hope of being able to restore the olden times. These circumstances account for the fact that a man like Cicero thought it necessary to conceal and disguise his love and knowledge of the fine arts. It was, therefore, only the most distinguished and intellectual Romans that really loved and cherished the arts. This was both a fortunate and an unfortunate circumstance: had it not been so, art would have perished in Rome, as it did in Athens, because it continued in some degree to be cultivated, but it experienced the same fate which it has met with at all times, when it has continued its existence without the sympathies of the people, and merely under the patronage of the great. Notwithstanding these unfavourable circumstances, there were a number of distinguished artists at Rome during the latter period of the republic, who had really imbued the spirit of the ancient Greeks and who produced works of great beauty and merit. We need only mention such names as Pasiteles of southern Italy, who was a Roman citizen, and who made an ivory statue of Jupiter for the temple of Metellus (Plin. H. N. xxxv. 3, a. 4. § 12); Arcessilas, of whom Pliny mentions several highly valued works, and whose models were praised more than the statues of others; Decius, who even ventured to rival Chares in the art of founding metal statues; Diogene, and others. During the empire the arts declined, and, with some noble exceptions, merely administered to the vanity, luxuries, and caprices of the emperors. (Senec. Epist. 88.) The ineritance of the times, says Pliney (Plin. H. N. xxxv. 2), has destroyed the arts; and as there were no more minds to be represented, the repro-
sentations of the bodies were likewise neglected. Occasionally, however, excellent and gifted sculptors still arose, and adorned the palaces of the emperors with beautiful groups. Pliny (H. N. xxxvi. 4. § 11) mentions as such Craterus, Pythodorus, Polydeuces, Hermolaus, a second Pythodorus, Artemon, and Aphrodisius of Tralles. (See the articles in the Dict. of Bio.) In the time of Nero, who did much for the arts, we meet with Zeno-
dorus, a founder of metal statues, who was com-
missioned by the emperor to execute a colossal statue of 110 feet high, representing Nero as the sun. The work was not completely executed, as the art of using the metal had fallen into oblivion. In A. D. 75 the statue was consecrated as a Sol, and was afterwards changed into a statue of Com-
modus by altering the head. (Plin. H. N. xxxiv. 18; Herodian, i. 15.) The principal sculptured works that were produced during the empire, were, 1. Reliefs on public monuments, such as those adorning the triumphal arch of Titus, which repre-
"sented the apotheosis of the emperor, and his tri-
umph over Judea. The invention and grouping of the figures are good and tasteful, but the exe-
cution is careless. The same may be said of the reliefs of the temple of Minerva in the Forum of

2. Statues and busts of the emperors. These may again be divided into classes, and are easiest distinguished by the costumes in which they are represented. They are (a) faithful portraits in the costume of ordinary life (toga), or in the attire of warriors (statuae thoracatae) generally in an at-
titude as if they were addressing a body of men, as,
c. e. the colossal statue of Augustus in the palace of
Gratian. To this class also belong the equestrian
statues, and the statues upon triumphal cars with
from two to six horses, and sometimes even with
elephants, which were frequently made for emperors out of mere vanity, and without there having been
any real triumph to occasion such a work. (Dion
Cass. lii. 22; Stat. Siv. i. 1; Mart. ix. 69; Tacit.
de Orat. 8. 11; Juv. vii. 126; Plin. H. N. xxxiv.
10.) b. Such statues as were intended to show the individual in an exalted, heroic or deified
character. Among those were reckoned the so-
called Achillean statues, which were first made in
the time of Alexander; they consisted of a statue of An-
tinous, for whom the emperor entertained a
passionate partiality, and who was represented in
innominate works of art. The colossal bust of
Antinous in the Louvre is reckoned one of the
finest works of ancient art, and is placed by some
critics on an equality with the best works that
Greece has produced. The two centaurs of black
marble on the Capitol probably belong to the reign of Hadrian; one of them is executed in an old
and noble style, and is managed by a little Eros
riding on his back; the other looks more like an
intoxicated Satyr. There are also some very
good works in red marble which are referred to
this period, as that material is not known to have
been used before the age of Hadrian.

As the arts had received such encouragement and
brought forth such fruits in the reign of Ha-
drian, the effects remained visible for some time
during the reigns of the Antonines. Antoninus
Pius built the great villa at Lanuvium, of which
works of art have been discovered. But sophistry
and pedantic learning now began to regard the arts
with the same contempt as the ignorance of the
Romans had formerly done. The frieze of a tem-
ple, which the senate caused to be erected to
Antoninus Pius and Faustina, is adorned with
griffins and vessels of very exquisite workmanship;
but the busts and statues of the emperors show in
many parts an affected elegance, while the features of the countenance are tasteless and trivial copies
of nature. The best among the extant works of this
time are the equestrian statue of M. Aurelius
of gilt bronze, which stands on the Capitol, and
the column of M. Aurelius with reliefs represent-
ing scenes of his war against the Marcomanni.
The busts which we possess of M. Aurelius, Faus-
tina, and Lucius Verus, are executed with very
great care, especially as regards the hair. The
number of extant busts of the Antonines amounts
to above one hundred; and the rate at which busts

Down to the reign of Hadrian statuary had be-
come more and more confined to the representation of subjects of a common nature, so that at length we scarcely find anything else but the records of
victories in the reliefs on the public monuments,
and the various kinds of statues of the emperors
and the members of their families. But in the reign of Hadrian the arts seemed to begin a new
era. He himself was undoubtedly a real lover
and connoisseur of art, and he encouraged it not
only at Rome, but in Greece and Asia Minor.
The great Villa of Hadrian below Tivoli, the ruins
of which cover an extent of ten Roman miles in
circumference, was richer in works of art than any
other place in Italy. Here more works of art have been dug out of the ground than anywhere else
within the same compass. Hadrian was fond of
art in form as well as in language, and
many works in the archaic style still extant may
have been executed at this time. Some statues
made at this time combine Egyptian stiffness with
Grecian elegance; but the representations of Egyptian deities, such as that of Isis, are
half Greek and half Egyptian. But, by the side of
this strange school, there existed another, in which
the pure Greek style was cultivated, and which has
produced works worthy of the highest admiration.
Foremost among these stand the statues and busts of Antinous, for whom the emperor entertained a
passionate partiality, and who was represented in
innominate works of art. The colossal bust of
Antinous in the Louvre is reckoned one of the
finest works of ancient art, and is placed by some
critics on an equality with the best works that
Greece has produced. The two centaurs of black
marble on the Capitol probably belong to the reign
of Hadrian; one of them is executed in an old
and noble style, and is managed by a little Eros
riding on his back; the other looks more like an
intoxicated Satyr. There are also some very
good works in red marble which are referred to
this period, as that material is not known to have
been used before the age of Hadrian.
of emperors were sometimes multiplied may be inferred from the fact, that the senate sometimes ordained that the bust of an emperor should be in the house of every citizen.

After the time of the Antonines the symptoms of decline in the arts became more and more visible. The most numerous works continued to be busts and statues of the emperors, but the best among them are not free from affectation and mannerism. The hair, especially in the representations of female figures, becomes gradually utterly tasteless, and instead of the natural hair the artists made it a point to show that it was a large peruke, which in some cases might be put on and taken off at pleasure. [Galerus.] In the time of Caracalla many statues were made, especially of Alexander the Great. Alexander Severus was a great admirer of statues, not from a genuine love of art, but because he delighted in the representations of great and good men. (Lamprid. Al. Sec. 25.) The reliefs on the triumphal arch of Septimius Severus, representing his victories over the Parthians, Araxes, and Dahae, bear scarcely any artistic merits. During this time of decay the custom arose of adorning sarcophagi with figures in high relief, representing scenes from the legends of Demeter and Dionysus, and from the heroic ages of Greece, sometimes also the fable of Eros and Psyche: all these contained allusions to the immortality of the soul. Art, however, now declined with great rapidity: busts and statues were more seldom made than before, and are awkward and poor; the hair is frequently indicated by nothing else but holes bored in the stone. The reliefs on the sarcophagi gradually become monotonous, lifeless, and evidently executed without spirit. The reliefs on the arch of Constantine, which are not taken from that of Trajan, are perfectly rude and worthless, and those on the column of Theodosius were not better. Art in the proper sense of the word ceased to exist; statues of victors in the public games continued to be erected down to the fourth, and statues of the emperors (at Constantinople) down to the eighth century; but at Rome, as at Constantinople, those who were honoured in this way were more concerned for their rank and dignity being properly represented in their statues, than about the real artistic merit of the work. Statuary became mere manual labour, and required nothing but mechanical skill. At Constantinople, however, where statues had been collected from Rome, Greece, and Asia Minor, the events of history allowed the plastic arts to die away more gradually than in Italy.

Before concluding, it remains to say a few words on the destruction of ancient works of art. During the latter part of the reign of Constantine many statues of the gods were destroyed and melted down, and not long after his time a systematic destruction began, which under Theodosius spread to all parts of the empire. The spirit of destruction, however, was not directed against works of art in general and as such, but only against the pagan idols. The opinion, therefore, which is entertained by some, that the losses we have sustained in works of ancient art, are mainly attributable to the introduction of Christianity, is too sweeping and general. Of the same character is another opinion, according to which the final decay of ancient art was the consequence of the spiritual nature of the new religion. The coincidence of the general introduction of Christianity with the decay of the arts is merely accidental. That the early Christians did not despise the arts as such, is clear from several facts. We know that they erected statues to their martyrs, of which we have a specimen in that of St. Hippolitus in the Vatican library; and it is expressly stated that Christians devoted themselves to the exercise of the arts. (Baronius, Annal. ad A. 303.) The numerous works, lastly, which have been found in the Christian catacombs at Rome, might alone be a sufficient proof that the early Christians were not hostile towards the representation of the heroes of their religion in works of art. The hostility, such as it appears in the writings of Tatian and Augustine, cannot therefore have been general; and, in fact, Christianity during the middle ages became as much the mother of the arts of modern times, as the religion of Greece was the mother of ancient art. Another very general and yet incorrect notion is, that the northern barbarians after the conquest of Rome intentionally destroyed works of art. This opinion is not supported by any of the contemporary historians, nor is it at all probable. The barbarians were only anxious to carry with them the most precious treasures in order to enrich themselves; a statue must have been an object of indifference to them. What perished, perished naturally by the circumstances and calamities of the times: in times of need bronze statues were melted down and the material used for other purposes; marble statues were frequently broken to pieces and used for building materials. If we consider the history of Rome during the first centuries after the conquest of Italy by the Germans, we have every reason to wonder that so many specimens of ancient art have come down to our times.

The greatest destruction, at one time, of ancient works of art is supposed to have occurred at the taking of Constantinople, in the beginning of the thirteenth century. The collection of statues had been made with great care, and their number had accumulated to an amount which seems quite surprising when it is considered how long a time had elapsed since art had been encouraged or protected. At the period alluded to we are told that some of the finest works of the ancient masters were purposely destroyed; either in mere wantonness, or with the view of turning the material into money, or for sale to the metal founders for the value of the bronze. Among the few works saved from this devastation are the celebrated bronze horses which now decorate the exterior of St. Mark's church at Venice. They have been ascribed, but without sufficient authority, to Lysippus.

The finest collection of ancient bronzes is in the Musèo Borbonico at Naples. They have been found chiefly in the ruins of Herculaneum and Pompeii, and among them are some examples of great skill and beauty. A few of the heads offer peculiarities in the treatment of the hair, the small corkscrew curls, and the ends of the beards being formed of separate pieces of metal fastened on. Several of the statues have the eyes of paste, and of stones, or sometimes of a different metal from the material of the rest of the work. Silver was often united with bronze. Cicero (Verr. iv. 43) mentions a statue of Apollo oeneus, cuja in femore litterula minuta argenteis nomen Myronis erat inscriptum. In this bronze statue, of a youth, in the collection at Paris, are the remains of a Greek
inscription in silver letters. They are inserted into the left foot. The Museo Borbonico possesses some examples of inlaid silver work. There are also instances of it in the collection of bronzes in the British Museum. Many of the examples of bronze works that have reached us exhibit signs of having been gilt, and the writers of antiquity refer occasionally to the practice. It does not seem to have been employed till taste had much deteriorated; probably when the value and richness of the material were more highly estimated than the excellence of the workmanship. Nero commanded a statue of Alexander, the work of Lysippus, to be gilt; but Pliny (H. N. xxxiv. 19, c. o) tells us it was found to injure the beauty and effect of the work, and the gold was removed. (Winckelmann, Gesch. der Kunst; Meyer, Gesch. der bildenden Künste bei den Griechen; F. Thiersch, Über die Epochen der bildenden Kunst unter den Griechen; K. O. Müller, Handbuch der Archäologie der Kunst, 2nd ed. 1835, 3d ed. with notes by Welcker, 1848.)

STILUS. (Vivaria.) [Furus, p. 555, b.]

STILLATUS. [Exercitus, p. 505, a.]

STHENIA (σθηνία), a festival with contests celebrated by the Argives in honour of Zeus surnamed Sthenius, who had an altar consisting of a large rock in the neighbourhood of Hermione. (Hesych. s. v. 2664: compare Paus. ii. 32, § 7, 34, § 6.) Plutarch (de Mus. p. 1140, c) states that the ῥάδην or wrestling, which formed a part of the contests at this festival, was accompanied by the flute; and he also mentions a tradition according to which the festival had originally been held in honour of Danaus, and that it was afterwards consecrated to Zeus Sthenius. (L. S.)

STIBIUM. [Missana.]

STILLICIDIUM. [Sarvivutes, p. 1031, b.]

STILUS or STYLiUS is in all probability the same word with the Greek στῆλος, and conveys the general idea of an object tapering like an architectural column. It signifies,

1. An iron instrument (Ovid. Met. ix. 521; Martial, xiv. 21), resembling a pencil in size and shape, used for writing upon waxed tablets. (Plaut. i. 182; Plin. H. N. xxxiv. 14.) As one end it was sharpened to a point for scratching the characters upon the wax (Quintil. i. 1. § 27), while the other end being flat and circular served to render the surface of the tablets smooth again, and so to obliterate what had been written. Thus, vertere stilum means to erase, and hence to correct, as in the well-known precept sape stilum vertas. (Hor. Sat. i. 10, 72; Cic. Verr. ii. 41.) The stylus was also termed graphium (Ovid. Amor. i. 11, 35; Suet. Jul. 92), and the case in which it was kept graphiatrium (Martial. xiv. 21) or graphiaria theae. (Suet. Claud. 35.) The annexed cut is from a picture found in Herculaneum. (Mus. Borbon. vol. vii. tav. 35.)

2. A sharp stake or spike placed in pitfalls before an entrenchment to embarrass the progress of an attacking enemy. (Bell. Africam, 31; Sil. Ital. x. 415.) It was intended to answer the same purpose as the contrivances called cippi, libas, and stimuli by Caesar (B. G. vii. 73).

3. A bronze needle or rod for picking worms off fruit-trees (Pallad. iv. 10. § 20), also a wooden probe employed in gardening operations. (Colunell. v. 10. § 21, xi. 3, § 46), which is perhaps the primary signification of στῆλος. [W. R.]

STIPENDIARIUM. The Stipendiariae urbes of the Roman provinces were so denominated, as being subject to the payment of a fixed money tribute, "stipendium," in contradistinction to the vectigales, who paid a certain portion, as a tenth or twentieth of the produce of their lands, their cattle, or customs. The word "stipendium" was used to signify the tribute paid, as it was originally imposed for and afterwards appropriated to the purpose of furnishing the Roman soldiers with pay (stipendium, Liv. iv. 60; Tacit. Hist. iv. 74). The condition of the urbes stipendiariae is generally thought to have been more honourable than that of the vectigales, but the distinction between the two terms was not always observed. (Liv. xxxvii. 35.)

The word stipendarius is also applied to a person who receives a fixed salary or pay, as a "stipendiarius miles" (Hirtius, de Bell. Africam, 43), a phrase which is sometimes used to denote a veteran who has received pay for many years, or served in many campaigns. (Veget. de Re Milit. i. 18.) Some MSS. have stipendiosus in the passage last quoted, which is perhaps a better reading. (Götting, Gesch. der Röm. Staatswurf, p. 418.) [R. W.]

STIPENDIUM, a pension or pay, from stipem and pendo, because before silver was coined at Rome the copper money in use was paid by weight and not by tale. (Varro, L. L. v. 182, ed. Müller; Plin. H. N. xxx. 3.) According to Livy the practice of giving pay to the Roman soldiers (stipendium miles de publico accepert) was not introduced till n. c. 405, on the occasion of the taking of Tarracina or Anxur. He represents the change as the spontaneous and unsolicited act of the senate, but from another passage (iv. 35) we learn that in the year 421 b. c. the tribunes had proposed that the occupiers of the public land should pay their vectigal regularly, and that it should be devoted to the payment of the troops. The concession was probably accelerated by the prospect of the last war with Veii, and made with a view of conciliating the plebs, who without some such favour would in their then humour have refused to vote for the war. Livy also represents the funds for the payment to have been raised by a tributum or general tax, but as Arnold observes (Hist. of Rome, vol. i. p. 369; compare Niebuhr, vol. ii. p. 440), "The vectigal, or tithe, due from the occupiers of the public land, was to provide pay for the soldiers; and if this were not sufficient, it was to be made good by a tax or tribute levied upon the whole people. This tithe, however, was probably paid very irregularly, and hence the pay of the soldiers would in point of fact be provided chiefly out of the tributum." A few years after this concession (n. c. 403), and
during the hostilities against Veii, a certain amount of pay was assigned (certus numerus aeris est asignatus, Liv. v. 7) to the knight also. [Equites, p. 472, a.] Livy, however, seems to be here speaking of the citizens who possessed an equestrian fortune, but had no horse (equus publicus) assigned to them by the state. For it had always been customary for the knights of the 18 centuries to receive pay out of the common treasury, in the shape of an allowance for the purchase of a horse, and a yearly pension of 3000 asses for its keep. [Ars Equestre; Ars Hordarium.] Hence Niebuhr (vol. i. p. 474, and vol. ii. p. 441) doubts the accuracy of the account which is given by Livy (iv. 59), and observes that “the Velentine war cannot have been the occasion on which the practice of giving pay to the troops was first established; the aerarii must undoubtedly have always continued to pay pensions (capita) to the infantry, in the same way as single women and minors did to the knights; and the change consisted in this, that every legionary now became entitled to pay, which the number of pensioners had previously been limited by that of the persons liable to be charged with them; and hence the deficiency was supplied out of the aerarium, from the produce of the vectorial, and when this failed, by a tribute levied even from those plebeians who were themselves bound to serve.” Consequently the tribunes murmured that the tribute was only imposed for the sake of ruining the plebs. (Liv. iv. 60.) In support of his opinion Niebuhr (l. c.) advances arguments which at least make it very probable that the “patera legislation” of Servius Tullius provided for the pay of the infantry in the manner mentioned, but even admitting this, the practice might have been discontinued so as to justify the statement made on this subject by Livy. We have not space to repeat or discuss those arguments here, and therefore simply refer to vol. i. p. 574, and vol. ii. p. 441, of his History. According to Polybius (vi. 37) the daily pay of a legionary amounted, in his time, to two oboli, which, as he makes a drachma equivalent to a denarius, and a denarius in paying the soldiers was then estimated at ten denarii (certus numerus aeris est as- signed to) per annum, as was usual in other money transactions, gives §4 asses a day, or 100 a month. Now the yearly pension of the knights (1000 asses), observes Niebuhr, gives, if we take the old year of 10 months, 200 a month; just double the pay of the foot soldiers. In later times the knights received triple pay (triple stipendium meroveant). This allowance was first established by the military tribune Cn. Cornelius Cossus (400 B.C.), and according to Niebuhr was then designed as a compensation to those who served with their own horses; it did not become the general custom till some time afterwards. Polybius (vi. 37) thus speaks of the stipendium of his day, which he calls θεσμοφορος, as St. Luke (iii. 14) also does. “The foot soldier receives as pay two oboli a day; the centurion twice as much: the horsemann a drachma or denarius. The foot soldiers also receive in corn every month an allowance (demensum) of 3 of an Attic medimnus or about 2 bushels of wheat: the horsemen 7 medimni of barley and 5 of wheat. The infantry of the allies receive the same allowance (αρτοίας) as the Romans; the horsemen 7 medimni of wheat and 5 of barley. But there is this difference, that the allied forces receive their allowances as a gratuity; the Roman soldiers, on the contrary, have deducted from their pay the money value of whatever they receive, in corn, armour or clothes.” There was indeed a law passed by C. Gracchus (Plut. C. Gracch. 5) which provided that besides their pay the soldiers should receive from the treasury an allowance for clothes; but from Tacitus (Ann. i. 17) this law seems either to have been repealed or to have fallen into disuse. The two oboli of Polybius, which we make equal to §4 asses, are reckoned by Plautus in round numbers at 3 asses. Thus he says (Most. i. 1. 10). “Isti qui trium nummorum causa subeunt sub falsas.” This amount was doubled for the legionsaries by Julius Caesar (Sueton. Jul. Caes. 26) before the civil war. He also gave them corn whenever he had the means, without any restrictions (sine modo mensuratae). Under Augustus (Suet. Aug. 49; Tacit. l. c.) it appears to have been raised to 10 asses a day (three times the original sum), or 300 a month, or 1200 in four months. Now as the original amount of their pay had been tripled, the soldiers could not complain if the denarii were reckoned at 16 asses in payments made to themselves, as well as other persons; and taking this value, the 1200 asses amount to exactly 3 aurei, or 3 x 400 asses. This sum was then considered as an unit, and called stipendium, being paid three times a year. Hence Suetonius says of Domitian (Dom. 7): “Addidit et quartum stipendium, ternus aureos;” a fact which Zonaras (Ann. ii. p. 196) otherwise expresses by stating, that instead of 75 drachmae (i.e. denarii) Domitian gave the soldiers 100, i.e. he made an addition of 25 denarii or 1 aureus to their pay. The expression of Suetonius supposes that 3 aurei were paid every quarter instead of every four months, after the addition made by Domitian; that of Zonaras implies, that 4 aurei instead of 3 were paid, as before, every three months, the annual amount being the same either way, and the quarterly or four months’ instalment of 3 or 4 aurei being called a stipendium. Niebuhr’s (vol. ii. p. 443) statement on this subject is only partially correct or else obscure: at any rate, if the soldiers received 10 aurei a year, a pay they must have received more than 1200 a year. The Praetorian cohorts received twice as much as the legionsaries. (Tacit. l. c.) The pay of the tribunes is not known; but it was considered very great (Juvén. iii. 132), and probably was not less than 48 aurei per annum, after the time of Domitian. We must not omit to mention that if his pay were withheld the Roman soldier was allowed by an old unwritten custom to distrain the goods (per pigmoris capiendum) of the officer whose duty it was to supply it. The eques was allowed the same privilege against the persons who were bound to furnish him with the aes equestre, for the purchase of his horse, and the aes hordarium for its keep. (Gaius, lib. iv. § 26—28.) From an expression which Livy (v. 4) puts into the mouth of a patrician orator, it might be supposed that the soldiers always received a full year’s pay, independent of the length of their service. This, however, seems so unreasonable, that we cannot but agree with Niebuhr in supposing that the historian was misled by the custom of his own time, when a full year had long become the stipulated term of a soldier’s pay as well as of his service. [R. W.]
STOLA. [TIARA.]

STOLA. [PORTICUS.]

STOICHEION. [HOROLOGIUM.]

STOLA, was a female dress worn over the tunic; it came as low as the ankles or feet (ad talos stola demissa, Hor. Sat. i. 2. 99), and was fastened round the body by a girdle, leaving above the breast broad folds (regosorem stola frontem, Mart. iii. 55. 4). The tunic did not reach much below the knee, but the essential distinction between the tunic and stola seems to have been, that the latter always had an instiga or flounce sewed to the instep. (Hor. Sat. i. 2. 29; Ovid. Ars. Amat. i. 32.) Over the Stola the toga virilis of a man was worn [PALLIUM], as we see in the cut annexed. (Mus. Borbon. ii. tav. 37.)

The stola seems to have been usually fastened over the shoulder by a Fibula or clasp, and generally had sleeves, but not always.

The Stola was the characteristic dress of the Roman matrons as the toga was of the Roman men. (Cic. Phil. ii. 18.) Hence the meretrices were not allowed to wear it, but only a dark-coloured toga (Tibull. iv. 10. 3; Mart. i. 36. 8); and accordingly Horace (Sat. i. 2. 63) speaks of the marthora in contradistinction to the toga. For the same reason women, who had been divorced from their husbands on account of adultery, were not allowed to wear the Stola, but only the toga (Schoel. ad Hor. l. c.) to which Martial alludes (iii. 39, vi. 64. 4). See Becker, Gallus, vol. i. p.

STRAGULUM. [TAPES.]

STRA'GULUM. [TAPES.]

The office and function of strategus, or General, seem to have been more especially peculiar to the democratic states of ancient Greece: we read of them, for instance, at Athens, Iarentum, Syracuse, Argos, and Thurii; and when the tyrants of the Ionian cities in Asia Minor were deposed by Aristogoras, he established strategi in their room, to act as chief magistrates.

The Strategi at Athens were instituted after the remodeling of the constitution by Cleisthenes, to discharge the duties which had in former times been performed either by the king or the Archon acemarchus. They were ten in number, one for each of the ten tribes, and chosen by the suffrages (suumonia) of the people. (Pollux, vii. 3.) Before entering on their duties, they were required to submit to a bimiaeria, or examination of their character (Lysias, c. Alcib. 144); and no one was eligible to the office unless he had legitimate children, and was possessed of landed property in Attica. (Dinarch. c. Demosth. 93.) They were, as their name denotes, entrusted with the command on military expeditions, with the superintendence of all warlike preparations, and with the regulation of all matters in any way connected with the war department of the state. They levied and enrolled the soldiers (kardelqarp), either personally or with the assistance of the Taxisarchs. (Lysias, c. Alcib. 140, pro Milit. 114.) They were entrusted with the collection and management of the eisphorai, or property taxes raised for the purposes of war; and also presided over, or officiated as Eokratistes in the courts of justice in which any disputes connected with this subject or the trierarchy were decided. (Wolf, ad Lept. p. 94; Dem. c. Lacr. 940, 16.) They also nominated from year to year persons to serve as trierarchs (Dem. c. Boost. 1. 997; Xenoph. de Rep. Athen. 3), and took cognizance of the cases of Antidosis arising out of the trierarchy and property taxes (eiioiws r&i aitioirois, c. Phoc. p. 1040.) They also presided at courts-martial and at the trials in cases of accusation for non-performance of military and naval duties. (Astrathias and Anaumachion Graphar.) They likewise had the power of convening extraordinary assemblies of the people in cases of emergency [Ecclesia, pp. 440, b, 441, a], and from the instance of Pericles it would always seem that in critical times they had the power of preventing an assembly being held. (Thucyd. ii. 22.) But their most important trust was the command in war, and it depended upon circumstances to how many of them it was given. At Marathon all the ten were present, and the chief command came to each of them in turn. The Archon Polemarchus also was there associated with them, and according to the ancient custom, his vote in a council of war was equal to that of any of the generals. (Herod. vi. 109.) In the expedition against Samos, also, all the ten generals were engaged (Thucyd. ii. 116), the poet Sophocles being one of the number (Müller, Literature of Ancient Greece, p. 339); but it was obvious that in most cases it would be more convenient to send out the whole number on the same undertaking, and during the course of a protracted war it would be necessary for some of them to be left at home, in charge of the war department there. Accordingly, in the best times of Athens, three only were for the most part sent out; one of these (pritos aitóoi) was considered as the commander-in-chief, but his colleagues had an equal voice in a council of war. Sometimes a strategus, as Pericles, was vested with extraordinary powers (Thucyd. ii. 63); in like manner, the three generals engaged in the Sicilian expedition, Nicias, Alcibiades, and Lamarchus, were made atroqoep-tropes, or supreme and independent in all matters connected with it. (Thucyd. vi. 8, 26.) So also was Aristides in his command at Plateaeae. But even in ordinary cases the Athenian generals were not fettered in the conduct of a campaign by any council of war, or other controlling authority, as the Spartan kings sometimes were; still they were responsible for it, and in the time of Demosthenes (Philip, i. 58) exposed on the termination of their command to capital indictment at the capitol of
the people, or from the malevolence of personal enmity. (c. Med. 533, c. Aristoecr. 676.) Even Pericles himself (Thucyd. ii. 63) was fined by the people for imported mismanagement, but really because the Athenians were disappointed in their expectations.

In the times of Chabrias and Phocion, however, the greater part of the generals regularly remained at home to conduct the processions, &c., as the citizens did to enjoy them, leaving their wars to be conducted by mercenaries and their leaders. (Demosth. Phil. i. 47. 12.) Some of them too were not commanders of all the troops, but only of the horse and foot of separate armies (στρατηγὸς δ ἐν τῶν θυάλεων οἱ διαλήκτων, and ἐν τῶν ἱππεῖων); and one of them, the general of the administration (τὸ γραμματείου), performed part of the judicial labours of the strategi, and other civil services, such as that of giving out the pay of the troops. (Büchh, Publ. Econ. of Athens, p. 181, 2d ed.; Dem. pro Coro. 265. 11.) We must also remember that the Athenian navy as well as the army was commanded by the Strategi, whence the "praetoria navis" or flag-ship is called στρατηγὸς ἱππος (Ihrmann, Lehrbuch der grie. Staatsk. § 152.).

The strategi at Athens were perhaps the most important officers of the republic, especially during war; and amongst them are numbered some of her most distinguished citizens, Miltiades, Themistocles, Pericles, Phocion, &c. But the generals of the early times differed in many respects from the contemporaries of Demostenes. Formerly the general and the statesman were united in one person; the leader in the field was the leader in the assembly, and thus acquired a double influence, accompanied with a double responsibility. But in later times, the general and the professed orator or statesman were generally perfectly distinct (Isocr. de pace, 173), and the latter, as ought always to be the case in free states, had by far the greater influence. The last of the Athenian generals who was considered to unite the two characters, was Phocion, who was general no less than forty-five times. (Plut. Phoc. 5.) Accordingly the various parties into which the state was then divided had each their orator and general, the former acting as a recognized leader (Isocr. N. 1. 5) and a general, when absent on foreign expeditions, was liable to be maligned or misrepresented to the people by an unfriendly and influential demagogue. (Demosth. de Cherson. 97. 12.) Hence we cannot wonder that the generals of the age of Demostenes were neither so patriotic nor so distinguished as those of former times, more especially when we call to mind, that they were often the commanders of mercenary troops, and not of citizens, whose presence might have been of use. Moreover, they suffered in moral character by the contamination of the mercenary leaders with whom they were associated. The necessity they were under of providing their hired soldiers with pay, habituated them to the practice of levying exactions from the allies; the sums thus levied were not strictly accounted for, and what should have been applied to the service of the state was frequently spent by men like Chares upon their own pleasures, or in the purchase of a powerful orator. (Thirlwall, Hist. of Greece, vol. v. p. 214.) Another effect of the separation of the two characters, was that the responsibility of the general and of the orator or minister was lessened, and it was in most cases easy for a general to purchase an apparently disinterested advocacy of his conduct. There was this further abuse connected with the system, that according to Isocrates (de Pace, 168), military command was so much coveted, that the election of generals was often determined by the most profligate bribery.

The most eminent generals of the time of Demosthenes were Timotheus, Chabrias, Phociprates, and Diopithes: Chares and Lysicles were inferior to them both in both of skill, but the former and the mercenary Charidemus were frequently employed. Towards the decline of the Roman empire the chief magistrate at Athens was called στρατηγὸς, or the Duke: Constantine bestowed on him the title of Μέγας στρατηγὸς ου τῆς Εὐρώπης. (Julian. Orat. i.) The military chieftains of the Aetolian and Achaean leagues were also called Strategi. The Achaean Strategi had the power of convening a general assembly of the league on extraordinary occasions. [ACHAIUM FORUM. p. 5, b.]

STRATO'RES. 1. Imperial Equerries subject to the Tribunus Stabuli. Their proper duty, as the name implies, was to saddle the horses; they also led them from the stable and assisted the emperor to mount. Hence they were termed in Greek ἐκλάθεισθαι. From the addition of miles to their title it appears that they were considered as part of the military establishment. (Spartian. Caracall. 7; Amm. Marc. xxx. 5; see Dacier, s. v.) Consuls and praetors had their stratores as we learn from inscriptions (Orell. Insc. n. 1300, 3250, 3523), and perhaps aequae also. (Orat. n. 1384.)

2. Officers sent into the provinces to select horses for the study of the prince or for the general service of the state. (Amm. Marc. xxix. 5; see Dacier, s. v.) Consuls and praetors had their stratores as we learn from inscriptions (Orell. Insc. n. 1584.) These in all probability belonged to the same body with those mentioned above; the title stratores a publicis rationibus, by which they are usually distinguished in works upon Roman antiquities, rests upon no authority except the letters STR. A. P. R. in an inscription (Grueter, n. 173, 352), and perhaps aequae also. (Orat. n. 1384.)

3. Jailors under the orders of the Commentariensis or Chief Inspector of Prisons. (Amm. Marc. xxx. 9; see Dacier, s. v.) To these Ulpian refers (Ulp. tit. 16. s. 4), "nemo proconsulii stratores habere potest, sed vice eorum milites ministrum in provincis funguntur," although the passage is quoted in most dictionaries as bearing upon the stratores of the stable. (Compare the Notitia Dominius Imperialis Orientis, c. 13 and c. 19 in infra.)

4. In the later Latin writers and especially in the monkish historians of the middle ages, stratores denote a chosen body of soldiers sent in advance of an army to explore the country, to determine the proper line of march, to select the spots best suited for encamping, and to make all the arrangements necessary for the safety and comfort of the troops when they hailed, their duties being in some respects analogous to those of the classical medertas, and in others to those of a modern corps-a-guerre. (Symmach. Epist. ad Theod. et Valentin. 1; Ducange, s. v.)
5. We find in an inscription the words Dio-

merdes An. Strat. (which is generally under-

stood to commemorate the labours of some individual

in paving the Appian Way, and mention is made of

stratores of this description in another inscrip-

tion found at Mancense. (Orell. n. 1450 ; compare

Lucan, de concitate von Mainz.)

[W. R.]

STRENA, a present given on a festive day and

for the sake of good omen (Festus, s. v.), whence a

good omen is called by Plautus bona strene. (Stich.

v. 2. 24.) It was however chiefly applied to a new

year’s gift, to a present made on the Calends of

January. In accordance with a Senatusconsultum

me tne Capitol, even when he was absent. (Suet.

count of the trouble it gave him and also of the ex-

strictly forbade any such presents to be offered

him after the first of January, as he used to be

annoyed by them during the whole of the month.

so far as the emperor was concerned, thus seems to

reign of Tiberius. It was revived again by Caligula

(Suet. 42 ; Dion Cass. liv. 35.) The person

who received such presents was accustomed to

make others in return (strenarem commercium) ;

but Tiberius, who did not like the custom on ac-

count of the trouble it gave him and also of the ex-

pense in making presents in return, frequently left

home at the beginning of January, that he might

be out of the way (Dion Cass. ivii. 6), and also

strictly forbade any such presents to be offered

him after the first of January, as he used to be

annoyed by them during the whole of the month.

(Suet. Tb. 34 ; Dion Cass. ivii. 17.) The custom,

so far as the emperor was concerned, thus seems to

have taken almost entirely into disuse during the

reign of Tiberius. It was revived again by Caligula

(Suet. Cal. 42 ; Dion Cass. lix. 24), but abolished

by Claudius (Dion Cass. lx. 6) ; it must, however,

have been restored afterwards, as we find it men-

tioned as late as the reigns of Theodosius and

v. 72.)

STRIAE. [COLUMNNA.]

STRIGA. [CAstra, p. 254.]

STRIGIL. [Balneum, pp. 185, a, 192, a.]

STROPHIUM (travula, travis, avouergamos) was a

girdle or belt worn by women round the

stomach and over the inner tunic or chemise. (Non.

xiv. 8 ; tereti strophio lactantes vincula papillae,

Catull. Ivix. 65.) It appears from an epigram of

Martial (xiv. 66) to have been usually made of

royal cloth and worn over the outer tunic. (Becker,

Gaius, vol. i. p. 321.)

STRUCTOR. [Corna, p. 307, b.]

SUBLIGACULUM or SUCCINCTORIUM (διαλώμα, περὶλώμα), drawers. (Joseph. Ant. iii. 7.

§ 1.) This article of dress, or a bandage wound

about the loins so as to answer the same purpose,

was worn by athletes at the public games of Greece

in the earliest ages [ATHLETAE] ; but the use of

it was soon discontinued, and they went entirely

naked. (Schol. in Hom. Il. xxii. 683 ; Isid. Orig.

xviii. 17.) The Romans, on the contrary, and all

other nations except the Greeks, always adhered to

the use of it in their gymnastic exercises. (Thucyd.

i. 6 ; Schol. in loc. ; Clem. Alex. Paedag.

iii. 9 ; Isid. Orig. xix. 22.) It was also worn by

actors on the stage (Cic. de Of. i. 35), by those

who were employed in treading grapes [TORCU-

LAR] (Geopon. vi. 11), and by the Roman popa

at the sacrifices, and it then received the de-

nomination hirmos (Virg. Aen. xii. 120 ; Servius,

in loc.), which name was also applied to it as worn

by Roman slaves. (Gell. xii. 3.) The circumstance

of the slaves in India wearing this as their only

covering (Strabo, xv. 1. § 73, p. 156, ed. Sieb.) is

agreeable to the practice of modern slavery in the

West Indies and other tropical countries. [J. Y.]

SUBTEMEN. [TELA.]

SUBUSCULA. [TUNICA.]

SUCCES/IO. This word is used to denote a

right which remains unchanged as such, but is

changed with reference to its subject. The change

is of such a nature that the right when viewed as

attached to a new person is founded on a preceding

right, is derived from it and depends upon it. The

right must accordingly begin to be attached to the

new person at the moment when it ceases to be at-

tached to the person who previously had it ; and

it cannot be a better right than it was to the per-

son from whom it was derived (Dig. 50. tit. 17.

s. 175. § 1). When the owner of the right ceases

(potesetas) and the condition of a

wife in manu may be objects of succession. It

applies also to the case of adoption.

Successio is divided into Singular Succession

and Universal Succession. These terms conve-

niently express the notion, but they are not Roman

terms. The Roman terms were as follows : in

universum jus, in eam dumtaxat rem succedere

(Dig. 21. tit. 3. s. 3) ; per universitatem, in rem

succedere (Gaius, lii. 97 ; Dig. 43. tit. 3. s. 1) ; in

omne jus mortui, in singularum rerum dominium

succedere (Dig. 29. tit. 2. s. 37) ; in universa bona,

in rei tantum dominium succedere. (Dig. 39. tit. 2.

s. 24.)

It is Singular succession when a single thing as

an object of ownership is transferred, or several

things together, when they are transferred as indi-

vidual things, and not as having any relation to

one another in consequence of this accidental com-

mon mode of transfer. The person into whose

place another comes by Singular succession, is

3 2 2.
called Auctor with respect to his successor. In order to be Singular succession, the whole right of the auctor must be transferred. He to whom an estate in fee simple is transferred, takes by Singular succession; he to whom a life estate is granted out of an estate in fee simple, does not take by Singular succession.

The object of Universal succession is property as an ideal whole (universitas) without any reference to its component parts. Yet the notion of succession applies as well to a fraction of this ideal whole as to the unit which this ideal whole is conceived to be; for the whole property being viewed as a unit, it may be conceived to be divided into fractional parts without any reference to the several things which are included in the whole ideal whole. It was also consistent with this species of succession that many particular things should be incapable of being transferred: thus in the case of an hereditas the usufructus of the deceased did not pass to the heres, and in the case of adrogation neither the usufructus nor the debts of the adrogated person, according to the old law.

In the case of Obligationes there is no Singular succession; there is either the change of the Obligatio into another by Novatio, or the suing for the debt by another (cessio actionis).

The object of Universal succession is a Universitas as such, and it is by means of the words Universitas and Universum, that the Romans denote this kind of succession; but it would be erroneous to infer from this use of the term that succession applies to all Universitas. Its proper application is to property, and the true character of Universal succession is the immediate passing over from one person to another of all the credits and debts that belong or are attached to the property. This happens in the case of an hereditas: heres in omne jus mortui, non tantum singularum rerum dominion succedit, quam et ea quae in nominibus sunt ad heredem transant (Dig. 29. tit. 2. s. 37); and in the case of adrogation as to most matters. The debts would be transferred by adrogation if this were not accompanied with a capitis deminutio. Credits and debts could not be transferred by Singular succession. The cases of Universal succession are limited and the notion could not be applied and made effectual at the pleasure of individuals. The most important cases of Universal succession were the property of a deceased person; as hereditas, honorum possessio, fideicommisaria hereditas, and others of the like kind. The property of a living person might be transferred in this way, in the case of adrogatio, conventio in manum, and the bonorum emtio. (Gains, ii. 98.)

In many other cases though the object is to transfer a whole property, it is in fact effected by the transfer of the several things: the following are instances of this kind of transfer, the gift of a whole property, or its being made a Dos, or being brought into a Societas, or the sale of an hereditas by a heres.

The notion of a Universal succession among the Romans appears to have been derived from the notion of the hereditas, to which it was necessary to attach the credits and debts of the deceased and the sacra. Other instances of Universal succession such as the Bonorum Possessio grew out of the notion of the hereditas; and it was found convenient to extend it to other cases such as Adrogation. But, as already observed, the extension of the notion was not left to the pleasure of individuals, and accordingly this doctrine was, to use a Roman phrase, Juris Publici.

The words Successio, Successor, Succedere by themselves have a general meaning and comprise both kinds of Succession. Sometimes these words by themselves signify universal succession, as appears from the context (Gains, iii. 82), and by such expressions as heredes ceterique successores. In other cases the kind of succession is denoted by appropriate words as per universitatem succedere, acquirere, transire, in universum jus succedere, &c. in the case of Universal Succession; and in rem, in rei dominium, in singularum rerum dominium succedere, &c. in the case of Singular Succession.

In the phrase "per universitatem succedere" the notion of universal succession is not directly expressed; for the phrase has immediate reference to the acquisition of a single thing, and it is only by means of the word Universitas that we express the notion, that the acquisition of the individual thing is effectuated by means of the acquisition of the whole.

(Avignon, System, &c. iii. p. 8; Gains, ii. 97. &c.; Puchtia, Inst. ii. § 198.) [G. L.]

SUCCESSOR. [SUCCESSIO.]

SUCCINCTORIUM. [SUBLIGACULUM.]

SUFTAIO, SUDATO RIUM. [BALNAE p. 190, b.]

SUFI BULUM. [VESTALES.]

SUFFRAGIA SEX. [ÆQUITES, p. 472, b.]

SU FRAGIUM, a vote. At Athens the voting in the popular assemblies and the courts of justice was either by show of hands or by ballot, as is explained under Cheirotonia and Psephus. It is commonly supposed that at Rome the people were always polled in the comitia by word of mouth, till the passing of the Leges Tabellariae about the middle of the second century before Christ [Tabellariae Leges], when the ballot by means of tabellae was introduced. [Tabella.]

Wunder (Codex Erfutensis, p. clxvii. &c.) however has shown, that the popular assemblies voted by ballot, as well as by word of mouth, long before the passing of the Leges Tabellariae, but that instead of using tabellae they employed stones or pebbles (the Greek i|/7j<£ot), and that each voter received two stones, one white and the other black, the former to be used in the approval and the latter in the condemnation of a measure. The voting by word of mouth seems to have been adopted in elections and trials, and the use of pebbles to have been confined to the enactment and repeal of laws. That the latter mode of voting was adopted in early times is proved by many passages of Dionysius, and especially by x. 41: ἢ δόμοι ἀκροτίζει τάς ψήφους, οἱ νεώτατοι τῶν πατρικίων — τὰ ἀρχαῖα τῶν ψήφων τῶν ἑκατέρων ἀρχιστήριον; and by xi. 32: ἐκλέγεται καθισκόν τεθὺμα ὑπὲρ τῆς πάλεως 'Ρωμαίων, καθ' ἐκάστης φωλής, ἔνω ἀνέσθησαν τὰς ψήφους. It is also confirmed by the common expressions used with respect to voting, as suffragium ferre, mittere in suffragia, inire, or ire in suffragia, which lead us to suppose that the suffragium probably signified something which was put by the hand from one place into another. For if the Romans had from the first been polled only by word of mouth, it is scarcely possible that such an expression as suffragium ferre would have been used, when they had nothing to carry; but on the contrary, some such
word as diere would have been employed, more especially as it is certain that in the most ancient times those who voted by word of mouth did not go up one by one to the officer who received the votes, but remained in their places, and were asked for their votes by the Regatores, who thence derived their name. Besides which the word sufframa can scarcely signify the same as sententia or vox. The etymology is uncertain, for the opinions of those who connect it with ϕυλλήγων or φρογρον do not deserve notice. Wunder thinks that it may possibly be allied with suffrago, and signifies originally an ankle-bone or knuckle-bone. On the passing of the Leges Tabellariae the voting with stones or pebbles went out of use. For further particulars with respect to the voting in the comitia, see Comitia, p. 336; Diribitores; Situla; Tabella; Tabellaria Leges.

Those who had the Jus Suffragii or the right of voting in the comitia, as well as the capacity of enjoying magistracies, were citizens opimus jure. (Iul. p. 291, b.)

SUΣΘΡΟΙ US means in general any elevated place made of materials heaped up (sub and pero), and is specially applied: 1. To the stage or pulpit from which the orators addressed the people in the comitia. (Rostra.) 2. To the elevation from which a general addressed the soldiers. (Tact. Hist. i. 35.) 3. To the elevated seat from which the emperor beheld the public games (Suet. i.) From which the orators addressed the people in the comitia, see Comitia, p. 336; Diribitores; Situla; Tabella; Tabellaria Leges.

SUGGRUNDARIUM. [Funes, p. 559, b.]
SUI HERedes. [Herpes, p. 586, b.]

SUMTUA'RIAE LEGES, the name of various laws passed to prevent inordinate expense (sumptus) in banquets, dress, &c. (Gellius, ii. 24, xx. 1.)

In the states of antiquity it was considered the duty of government to put a check upon extra expense which the law had prescribed, but also all who were present at such entertainments, should be liable to the penalties of the law. We are not however told in what these consisted. (Macrobius Sat. ii. 13.)

LICINIA agreed in its chief provisions with the Lex Fannia, and was brought forward, we are told, that there might be the authority of a new law upon the subject, inasmuch as the Lex Fannia was beginning to be neglected. It allowed 200 asses to be spent on entertainments upon marriage days and on other public occasions, and no other fowl but one hen should be served up, and that not fattened for the purpose. (Gellius, ii. 24; Macrobius Sat. ii. 13; Plin. H. N. x. 50, s. 71.)

DIDIA, passed B. C. 143, extended the Lex Fannia to the whole of Italy, and enacted that not only those who gave entertainments which exceeded in expense what the law had prescribed, but also all who were present at such entertainments, should not be served up more than three pounds of fresh and one pound of salt meat. (Gellius, ii. 24; Macrobius, l. c.)

These laws also, that on ordinary days there should not be more than 10 asses should be expended: also that no other fowl but one hen should be served up, and that not fattened for the purpose. (Gellius, ii. 24; Macrobius, l. c.)

Oppia, proposed by the tribune C. Oppius in the consulship of Q. Fabius and T. Sempronius in the middle of the second Punic war B. C. 213, enacted that no woman should have above half an ounce of gold, nor wear a dress of different colours, nor ride in a carriage in the city or in any town, or within a mile of it, unless on account of public sacrifices. This law was repealed twenty years afterwards (Liv. xxxiv. 1, 8; Val. Max. ix. 1. § 38), whence we frequently find the Lex Oppia mentioned as the first Lex Sententiae. Tacitus (Ann. iii. 33, 34) speaks of Oppia Leges, the name of various laws passed to prevent inordinate expense (sumptus) in banquets, dress, &c. (Gellius, ii. 24, xx. 1.)

Orchia, proposed by the tribune C. Orchius in the third year after the censorship of Cato B. C. 181,
SUPERFICIES.

Julia, proposed by the dictator C. Julius Caesar, enforced the former sumptuary laws respecting entertainments, which had fallen into disuse. (Dion Cass. xiiii. 25.) Julius Caesar adopted strong measures to carry this law into execution, but it was violated when he was absent from Rome. (Cic. ad Att. xiiii. 7.) He stationed officers in the provision market to seize upon all estates forbidden by the law, and sometimes sent lictors and soldiers to banquets to take away every thing which was not allowed by the law. (Suet. Jul. 43.) Cicero seems to refer to this law in two of his epistles (ad Fam. vii. 29, ix. 15).

Julia, a lex of Augustus, allowed 200 sestercies to be expended upon festivals on dies profesti, 300 upon those on the Calends, Ides, Nones, and some other festive days, and 1000 upon marriage feasts. There was also an edict of Augustus or Tiberius by which as much as from 300 to 2000 sestercies were allowed to be expended upon entertainments, the increase being made with the hope of securing thereby the observance of the law. (Gell. i. c.; Sueton. Octe. 34.)

Tiberius attempted to check extravagance in banquets (Suet. Tib. 34.) and a senatusconsultum was passed in his reign for the purpose of restraining luxury, which forbade gold vessels to be employed, except for sacred purposes, and which also prohibited the use of silk garments to men. (Plutarch's Life of Sulla, c. 2.)

Sumptuary laws were not peculiar to antiquity. "Our own legislation, which in its absurd as well as its base parts has generally some parallel in that of the Romans, contains many instances of Sumptuary laws. (Dissert, antiquario-juridica de Leg. Rom. Sumptuaris, Lugd. Batav. 1816.)"

Sumptuary laws were not peculiar to antiquity. "Our own legislation, which in its absurd as well as its base parts has generally some parallel in that of the Romans, contains many instances of Sumptuary laws. (Dissert, antiquario-juridica de Leg. Rom. Sumptuaris, Lugd. Batav. 1816.)"

The furniture of a banquet was a ground-rent. (Dig. 43. tit. 8. s. 2.)

Superficies solo cedit. (Gaius, i. 73.) If then a man erected a building on it, he obtained a ground-rent. (Gaius, ii. 73.) If a man was ejected, he had the Interdictum de possessione. (Gemellus. Digest, xliii. 25.)

Superficiarium. The Lex Icilia de Aventino, B. c. 167, also belongs. (Gaiss, Dig. 43. tit. 18. a. 2.)

Cicero (ad Att. iv. 2) uses the expression "superficies medius." Every building then was considered a part of the ground on which it stood; and the ownership and possession of the building were inseparable from the ownership and possession of the ground. The Superficies resembles a Servitus and is classed among the Jura reale. According to the definition, the Superficiarius had not the thing even in bonis; and as the animus Dominus could not exist in the case of Superficies, he consequently could not be Possessor. He had however a Jus Quasi Possessor. The Superficiarius had the right to the enjoyment of the Superficies: he could alienate the Superficies and pledge it for the term of his enjoyment; he could dispose of it by testament; and it could be the object of succession ab intestato; he could also make it subject to a Servitus; and he could prosecute his right by a utilis in rem actio. As he had a Jus Quasi Possessor, he was protected against threatened disturbance by a special Interdict, which is given in the Digest (43. tit. 10), and in its effect resembles the Interdictum Uti possidetis. The explanation of the passage relating to this Interdict (Dig. 43. tit. 18. a. 3) is given by Savigny (Das Recht des Besitzes, p. 289, 5th ed.). If he was ejected, he could have the Interdictum de vi, as in the case of proper Possession; and if he had granted the use of the Superficies to another Precario, who refused to restore it, he had the Interdictum de precario.

A man could obtain the use of a Superficies by agreement with the owner of the land for permission to erect a building on it: he thus obtained a Jus Superficiarium; and he might also by agreement have the use of an existing Superficies. He was bound to discharge all the duties which he owed in respect of the Superficies, and to make the proper payment in respect of it (solarium), if any payment had been agreed on. The solarium was a ground-rent. (Dig. 43. tit. 8. a. 2. § 17.)

The rule of law that the Superficies belonged to the owner of the soil was expressed thus: Superficies solo cedit. (Gaiss, i. 73.) If then a man built on another man's land, he became the owner of the property of the owner of the land. But if the owner of the land claimed the house, and would not pay the expense incurred by building it, the builder of the house could meet the claimant with a plea of dolus malus (exceptio dolii mali), that is to say, if he was a Bonae fidei possessor. In any other case, he had of course no answer to the owner's claim.

According to Coke (Co. Litt. 48, b), "a man may have an inheritance in an upper cnamero, though the lower buildings and the soil be in another, not seeing it is an inheritance corporeal, it shall pass by livery." But this doctrine is open to serious objections, and contradicts a fundamental principle of law.

At Rome if a man received permission to ouud on a locus publicus, he thereby obtained a Jus Superficiarium. The Lex Icilia de Aventino, n. c. 456, probably gave the ground in ownership to the Plebs. Dionysius, who speaks particularly of this law, says that several persons united to build a house on the same plot of ground, and encroached the stories among them; this, however, would not be a case of superficies, but a communio pro indiviso. In later times, it was common at Rome
for the ground on which Insulae were built to remain the property of the owner of the soil, while other persons had a Jus Superfaciarii in the different stories, in respect of which a rent (so-called) was payable to the dominus of the soil. Rudorff (Beitr. zur Geschichte der Superficies, Zeitschrift für Geschicht. Reclmn. &c., No. xi.) says that these terms were as common in Rome as they now are in London where great landholders, in consideration of a rent of nine and ninety years, and the reservation of the ownership of the soil, allow others to occupy building ground and slightly built houses. He who builds on another's land on a building lease has a Jus Superfaciarii and building more.

(Gaius, l. 73—75; Dig. 43, tit. 18; Lex Iulia, Dionys. Antiq. Rom. x. 32; Puchta, Inst. ii. § 244; Zeitschrift. &c. xi. 219; Staair, Institutes, book ii. tit. 7; McDowall, Inst. i. 676; Code Civil, art. 224.)

SUPPERNUMERATUM. (ACCESSII.)

SUPPARUM. [NAVIS, p. 790, a; TUNICA.]

SUPPLICATIO was a solemn thanksgiving or supplication to the gods decreed by the senate, according to the importance of the victory and to the wishes of the people. The more causes came into court, the more fees accrued to the judges, and fines and confiscations enriched the public treasury. The more success made the employment a lucrative one. It was the policy of the legislator to encourage the detection of crime, and a reward (such as half the penalty) was frequently given to the successful accuser. Such a power, with such a temptation, was likely to be abused, unless checked by the force of public opinion, or the vigilance of the judicial tribunals. Unfortunately, the character of the Athenian democracy and the temper of the judges furnished additional incentives to the informer. Eminent statesmen, orators, generals, magistrates, and all persons of wealth and influence were regarded with jealousy by the people. The more causes came into court, the more fees accrued to the judges, and fines and confiscations enriched the public treasury. The prosecutor therefore in public causes, as well as the plaintiff in civil, was looked on with a more favouring eye than the defendant, and the chances of success made the employment a lucrative one. It was not always necessary to go to trial or even to commence legal proceedings. The timid defendant was glad to compromise the cause, and the conscious delinquent to avert the threat of a prosecution by paying a sum of money to his opponent. Thriving informers found it not very difficult to procure witnesses, and the profits were divided between them. According to Theophrastus (ap. Athen. vi. 254, b), Athens was full of &omukalikov kai latostov kai sykophantov kai sykophatov kai sycophatov. The character of the sycophant will be best understood by the examples and descriptions found in the Attic writers. Aristophanes directs the keenest edge of his satire against them. (See particularly, Astor. 818, Ares, 1410, Plut. 820.) Demosthenes says: πονηρόν ο συκόφατος καὶ βάθαντων καὶ σφιχτῶν (de Corun. 307; compare e. Eubul. 1309). Συκοφάτων τρίδοντα μήνιν in Lylyas (a. Eckard. 177, ed. Steph.) signifies to extort thirty minas by Sycophant-like practices. (See further Lys. Δημ. Katal. Απολ. 171 · Asche. de Fals. Leg. 36, ed. 3 z 4.)
SYLAE.

SYMBOLAEON.

Steph.; Dem. de Cor. 291; Xenoph. Mem. ii. 9, § 4, de Rep. Ath. i. 4.) That the increase of litigation and perjury was in some measure owing to the establishment of clubs and political associations and the violation of public spirit, may be gathered from various passages of the Attic writers. (Thuc. cly. viii. 54; Demosth. c. Boost. de dote, 1010, c. Pantaen. 997, c. Zenoth. 885.)

The Athenian law did indeed provide a remedy against this mischievous class of men. There was a γραφή συνοριαστία tried before the Themostoteia. Any person who brought a false charge against another, or extorted money by threat of legal proceedings, or suborned false witnesses, or engaged in a conspiracy to ruin the character of an innocent man, was liable to this κώμα. He might also be proceeded against by ἀφαίρεσις, ἀπαγωγή, προδολή or εἰσαγγελία. (See articles PHAŚIS, &c.; Aesch. de Fals. Legy. 47, ed. Steph.; Dem. c. Theocr. 1835.) The trial was an ιγνως τιμίστα. The heaviest punishment might be inflicted, together with ἀτύμια and confiscation of property. Besides this, if any man brought a criminal charge against another, and neglected to prosecute it (ἐπεξελεξθεῖν), he was liable to a penalty of 1000 drachmas, and lost the privilege of instituting a similar proceeding in future, which was considered to be a Species of ἀτύμια. (Dem. c. Mid. 57; THuc. viii. 1235.) The same consequence followed, if he failed to obtain a fifth part of the votes at the trial. The ἄγωθλα in civil actions was a penalty of the same kind and having the same object; viz., to prevent the abuse of legal process, and check frivolous and unjust actions. Such were the remedies provided by law, but they were found inefficacious in practice; and the words of Aristophanes (Plutus, 885) were not more severe than true: "there is no charm against the bite of a Sycophantes." (See Platner, Schömann, Ant. Jur. pub. Gr. pp. 101, 185; Pollux, vii. 31, 46, 48.)

SYLAE (σύλαι). When a Greek state, or any of its members, had received an injury or insult from some other state or some of its members, and the former was unwilling, or not in a condition, to declare open war, it was not unusual to give a commission, or grant public authority to any of their subjects might commit depredations on the Athenians (Ἀρησίας, de Coron. 1232) declares that the deputy captains of triremes so misbehaved themselves in foreign countries, plundering everybody they came near, that no Athenian could travel safely διὰ τῶν ὑπὸ τῶν τινῶν ἀδρομολογίας καὶ σύλαις κατασκευασμένων, where ἀδρομολογία refers to the arrest of the person, σύλας to the seizure of goods. Suidas explains σύλαι by the synonym συμβαλλει, as to ἀδρομολογία for another purpose, see PHNOS. In the ναυτική συγγραφή in the speech of Demostenes (c. Lecr. 927), one of the conditions is that goods may be landed only ὧν ἢ μὴ σύλας δοῦν Ἀθηναίοις, "where no hostilities are exercised against Athenians." The people of Athens passed a special decree to authorise privateering; and when any booty was taken by Athenian subjects, they reserved to themselves the right of determining whether it was lawfully taken, whether it ought to be kept or restored, and what should be done with it. (Demosth. c. Timocr. 703; Argum. 694, 695.)

The ancient practice may be compared with the modern one of granting letters of marque and reprisal. (Harpoer. s. v. Συλλογής; Schömann, de Comit. p. 284, Ant. Jur. Pub. Gr. p. 967.)[C.R.K.] SYLLOGEIS (συλλογείς), usually called Συλλογὲς τῶν δήμων, or the Collectors of the People. They were special commissioners at Athens, who made out a list of the property of the oligarchs previously to its confiscation. (Lec. Rhet. p. 304, Dekker.) They formed an ἀρχή (Harpoer. s. c. Συλλογής), and seem to have been introduced after the dominion of the Thirty Tyrants. It appears from an inscription that the Sylogenes had to attend to the sacred rites connected with the worship of Athena and the Olympian Zeus, whence Böckh conjectures that they collected or summoned the citizens to certain sacred rites, in which the people were feasted, and that from this circumstance they derived their name: the property of the oligarchs, of which they are said to have made out a list for the purpose of confiscation, may have been applied to these public banquets, or given to the hoplites, or frequently divided among the citizens. (Corpus Inscr. Gr. No. 99, pp. 137, 138, No. 157, p. 250.)

SYMBOLA. [COENA, p. 304, b; Dicaster.] SYMBOŁAEON, SYNALLAGMA, SYNTHÉCE (συμβόλαιον, συνάλλαγμα, συνθήκη), are all words used to signify a contract, but are distinguishable from one another. Συμβόλαιον is used of contracts and bargains between private persons, and peculiarly of loans of money. Thus, συμβόλαιον εἰς ἀδικίαν ἐστὶν to lend upon the security of a slave. (Demosth. c. Aphob. 825, c. Zenoth. 894, c. Phron. 907, c. Timoth. 1185, c. Dionys. 1284.) Συνάλλαγμα signifies any matter negotiated or transacted between two or more persons, whether a contract or anything else. (Demosth. c. Oen. 867, 869, c. Timocr. 760.) Συνθήκη is used of more solemn and important contracts, not only of those made between private individuals, but also of treaties and conventions between kings and states. (Thucyd. i. 40, v. 18, vii. 57; Xenoph. Hell. vii. 1, § 2; Demosth. de Rhot. 129, de Coron. 251, c. Aristas. 774; Dinarch. c. Demosth. 101, ed. Steph.)

As to the necessity or advantage of having written agreements between individuals, see SYNCHRÔME. National compacts, on account of their great importance, and the impossibility of otherwise preserving evidence of them, were almost always committed to writing, and commonly inscribed on pillars or tablets of some durable material. (Thucyd. v. 23, 47; see Aristoph. Acharn. 727.) Upon a breach, or on the expiration, of the treaty, the pillars were taken down. (Demosth. de Coron. 255, c. Aristot. 774.)

For breaches of contract actions were maintainable at Athens, called συμβολαίων (or συνδημόσων) παραβαθέων δίκαια. (Pollux, vi. 155, viii. 31.) Such actions, it is apprehended, applied only to express contracts, not to obligations 'se delicio, or the αἰκόνια συναλλάγματα of Aristotle, (Ethic. Nicon. v. 4.) Thus, if I had promised to pay a sum or money by a certain day, and failed to perform that
promise, an action for breach of contract would have lain at Athens. But if my cow had broken my neighbour's fence, my obligation to repair the damage would have given rise not to an action for breach of contract, but to a dike khoair. (Meier. Att. Proc. pp. 476, 477.) On the other hand, a dike khoair would lie against a person who had committed a breach of contract; for he was regarded as a wrongdoer, and liable to pay compensation to the party injured. Therefore Dionysodorus, who had failed to perform the conditions of a nautic nvggyvzg, had a dike khoair brought against him by the persons who lent him money on his ship. (Demosth. 1262; see also pro Phorm. 956, c. Callipp. 1240.) The Athenian law frequently gave an option between various forms of action. It is not, however, improbable that the oike sunvkeia paraqadevoe was only one species of the dike khoair, and the name one of a less technical kind. Wherever a debt had become due to a man by reason of some previous contract, we may suppose that he had the option between an action of debt (xreivos) and one for breach of contract. The same observation will apply to the oike sunvkeia paraqadevoe, which the court had nothing more to do than to determine whether the plaintiff was entitled to it or not; the agvov was dixvmtos. All such actions were tried before the Thesmothetai. (Meier. Att. Proc. pp. 67, 184, 493—497, 510.)

"Omoeia appears to be a word of less technical nature than sunvkeia, though (as we might expect in words of this sort) they are often used indifferently. Grammarians make them synonymous. (Harppcr. s. v. Συνομοειας; Suidas, s. v. Συνομοειας. Συνομοεια παίσαθαι αυτοκελες μετα τινος τον ανεμα, τας υπος υπος ετος, to abide by it; ὑποτελευιας or παραβαλευιας, to break or transgress. Here we may observe, that sunvkeia is constantly used in the plural. Instead of sunvkeia, the only difference being, that strictly the former signifies the terms or articles of agreement, in the same manner as diathke, the testamentary dispositions, is put for xatov, the will. Συνομοεια also signifies a compact or agreement, but had become (in Attic parlance) obsolete in this sense, except in the expression δικαι απο συνομοειαν. (See below.) [C.K.K.]"
that the object of the Athenians in bringing such causes to Athens was, not to give the allies a better or speedier means of obtaining justice, but to make use of them to the imperial city. (Xenoph. de Republ. Alt. i. 16.) It is, however, not improbably that the arrangement was called σύμβολον, for the very purpose of softening the harshness of the measure, by giving an honourable name to that which in reality was a mark of servitude. For the same reason the confederate states were called σύμμαχοι, allies, while in point of fact they were rather ἰθνείοι ὑπὸ σώματος.

These causes were tried in the summer months, when the voyage to Athens was more convenient, and (like all other σύμβολα ὑπὸ σώματος) belonged to the jurisdiction of the Thesmothetae. We have but one example of such a cause preserved to us, viz. the speech of Antiphan on the death of Herodes, where both the prosecutor and the defendant are natives of Mytilene. (Harpoc. s. e. Σύμβολον: Thusyd. i. 77, c. not. Goeller; Platner, Proc. und Klag. vol. i. pp. 105—114; Meier, Att. Proc. pp. 67, 773; Schömann, Ant. jur. publ. Gr. p. 376.)

SYMBOLICUS (σύμβολον). [PARENDI.]
SYMBOLUM (σύμβολον). [EISPHEREA.]
SYMBOLIS (σύμβολον).
SYMPHORES (συμφορής). [EXERCITUS, p. 485, b.]

SYMPOS/IIUM (συμπόσιον, comitissatio, convivium), a drinking-party. The συμπόσιον, or the πότος, must be distinguished from the δείπνον, for though drinking almost always followed a dinner-party, yet the former was regarded as entirely distinct from the latter, was regulated by different customs, and frequently received the addition of many guests, who were not present at the dinner. For the Greeks did not usually drink at their dinner, and it was not till the conclusion of the meal, that wine was introduced, as is explained under COENA [p. 306, a]. Thus we read in the Symposium of Plato, that even the Athenians frequently concluded their drinking-parties in rather a rivotus manner, and it was to guard against this that such parties were forbidden at Sparta and in Crete. (Plit. Min. p. 320, a.)

The wine was almost invariably mixed with water, and to drink it unmixed (εἰκαστος) was considered a characteristic of barbarians. (Plat. Leg. i. p. 637, e.) Zaleucus is said to have enacted a law among the Locrians, by which anyone who was ill and drank of unmixed wine without the command of his physician, was to be put to death (Aelian, V. h. ii. 37); and the Greeks in general considered unmixed wine as exceedingly prejudicial to physical and mental health. (Athen. ii. p. 96, b.) The Spartans attributed the insanity of Cleomenes to his indulging in this practice, which he learnt from the Scythians. (Herod. vi. 84.) So universal it was not to drink wine unless mixed with water, that the word ὕλος is always applied to such a mixture, and whenever wine is spoken in connection with drinking, we are always to understand wine mixed with water, unless the word ἐκαστος is expressly added (τὸ κράμα, καλτὸς ἐκαστος μετέχοις πλείονοι, ὕλον καλώμενον, Plat. Cyp. Pr. 29).

The proportion in which the wine and water were mixed, naturally differed on different occasions. To make a mixture of even half wine and half water (τοῦ ἑκαστος) was considered injurious (Athen. l. c.), and generally there was a much greater quantity of water than of wine. It appears from Plutarch (Symp. iii. 9), Athenaeus (χ. p. 426), and Eustathius (ad Od. ix. 209. p. 1624), that the most common proportions were 3 : 1, or 2 : 1, or 3 : 2. Hesiod (Op. 596) recommends the first of these.

The wine was mixed either with warm or cold water; the former, which corresponded to the Calida or Calida of the Romans [CALIDA], was by far the less common. On the contrary, it was endeavoured to obtain the water as cool as possible, and for this purpose both snow and ice were frequently employed. [PSYCTR.]

Honey was sometimes put in the wine (Athen. i. p. 32, a.), and also spices (Id. p. 31, c.): in the latter case it received the name of τριμμα, and is frequently mentioned by the writers of the New Comedy. (Pollux, vi. 10.) Other ingredients were also occasionally added.

The mixture was usually poured into a large vessel called the γραστήρ [CRATER], from which it was conveyed into the drinking-cups by means of ὑλοράκως or κήδωμ. [SAYTHUS.] The cups usually employed were the κύλις, φιάλη, καρχίστον, and κάβαρος, of which an account is given in separate articles. The βυτόν, or drinking-horn, was also very commonly used. We find several craters on vases representing drinking scenes. (See for example Mus. Borbon. vol. v. t. 51.)

The guests at a Symposium reclined on couches and were crowned with garlands of flowers, as is explained under COENA. A master of the revels (ὑλοντριαγγείον συμβολον, or βασιλεύς) was usually chosen to conduct the Symposium (ῥηξιαγγείου συμβολον, Plat. Leg. i. p. 641, a. b.), whose commands the whole company had to obey, and who regulated the whole order of the entertainment, proposed the amusements, &c. The same practice prevailed among the Romans, and their Symposium was called the Magister or Rex Convivii, or the Arbitor Bilunii. The choice was
SYMPOSIUM.

Generally determined by the throwing of Astragali or Tali; but we find in Plato (Symp. p. 213, e.) Alcibiades constituting himself Symposiarch. The proportion in which the wine and water were mixed was fixed by him, and also how much each of the company was to drink. The servants, usually young slaves, who had to mix the wine and present it to the company, were also under his orders; but if there was no Symposiarch, the company called for the wine just as they pleased. (Xen. Symp. ii. 27.)

Before the drinking commenced, it was agreed upon in what way they should drink (Plat. Symposium p. 176, a. b.), for it was not usually left to the option of each of the company to drink as much or as little as he pleased, but he was compelled to take whatever the Symposiarch might order. At Athens they usually began drinking out of small cups (μικρα ποτηρια, Athen. x. p. 431, e.), but as the entertainment went on, larger ones were introduced. (Diog. Laërt. i. 104.) In the Symposium of Plato (pp. 213, 214) Alcibiades and Socrates each empty an immense cup, containing eight co-tylae, or nearly four English pints; and frequently such cups were emptied at one draught (άτενεστι or ἀμυστι νινευ, ἀμυστις, Athen. x. p. 431, b.; Lucian, Leaiph. 8; Suidas, s. v. Αμυστι).

The cups were always carried round from right to left (ετη δεξια), and the same order was observed in the conversation and in everything that took place in the entertainment (ετη δεξια διαπελιω, Plat. Rep. iv. p. 420, a., ετη δεξια λήγον εστιν, Symp. p. 214, b.; Athen. xi. p. 463, e.). The company frequently drank to the health of one another (προτιεις φιλοτητιας, Lucian, Gall. 12; Athen. xi. p. 498, d.), and each did it especially to the one to whom he handed the same cup. This seems to have been the custom, which Cicero alludes to, when he speaks of “drinking after the Greek fashion.” (Graeco more bibere, Verr. i. 26; compare Tusc. i. 40, Graeci in conviviis solent nominare, cui pocalum tradituri sunt.)

Music and dancing were usually introduced, as already stated, at Symposia, and we find few representations of such scenes in ancient vases without the presence of female players on the flute and the cithara. Plato, indeed, decidedly objects to their presence, and maintains that it is only men incapable of amusing themselves by rational conversation, that have recourse to such means of enjoyment (Protag. p. 347, c. d., Symp. p. 176, e.); but this says nothing against the general practice, and Xenophon in his Symposium represents Socrates mightily pleased with the mimetic dancing and other feats performed on that occasion. The female dancers and the players on the flute and the cithara were frequently introduced at the Symposia of young men for another purpose, and were oftentimes actually έταίραι (ΗΤΑΕΒΑΙ), as we see clearly represented on many ancient vases. (See for example Mus. Borbon. vol. v. t. 51.)

Respecting the different kinds of dances performed at Symposia, see Saltatio.

Representations of Symposia are very common on ancient vases. Two guests usually reclined on each couch (κλίνη), as is explained on p. 305, and illustrated by the following cut from one of Sir W. Hamilton’s vases, where the couch on the right hand contains two persons, and that on the left is represented with only one, which does not appear to have been the usual practice. The guests wear garlands of flowers, and the two who are reclining on the same couch hold a φιάλη each in the right hand.

Sometimes there were four or five persons on one couch, as in the following woodcut, taken from Millin (Peintures de Vases Antiques, vol. ii. pl. 58). Three young and two older men are reclining on a couch (κλίνη), with their left arms resting on striped pillows (προκεφαλαία or οπτιγκώνια). Before the couch are two tables. Three of the men are holding a κάλυξ or κόραξ suspended by one of the handles to the fore-finger; the fourth holds a φιάλη, and the fifth a φιάλη in one hand and a ρυθν in the other. [CALIX ; PHIALA ; RHYTON.] In the middle Comos is beating the tympanum.
Respecting the games and amusements by which the Symposia were enlivened, it is unnecessary to say much here, as most of them are described in separate articles in this work. Enigmas or riddles (αἰνίγματα or γράμματα) were among the most usual and favourite modes of diversion. [ΑΝΝΙΓΜΑ.] The Cottabos was also another favourite game at Symposia, and was played at in various ways. [ΚΟΤΤΑΒΟΣ.] The other games at Symposia, which require no further mention, are, the διατραγαυκόμενος and κοῦκλος, explained under ΤΑΠ and ΤΕΣΣΕΡΑ, the πεττέια, spoken of under ΛΑΤΡΙΝΓΟΛ, and the χάλασµατος. The latter consisted in turning round a piece of money placed upright on its edges, and causing it suddenly to stop while moving by placing a finger on its top. (Pollux, ix. 118; Eustath. ad II. xiv. 291, p. 986.)

A drinking-party among the Romans was sometimes called Convexium, but the word Commissatio more nearly corresponds to the Greek συνήγορος. [COMMISSATIO.] The Romans, however, usually drank during their dinner (comens), which they frequented in company (conviva). In the later times of the republic and under the empire. Their customs connected with drinking differed little from those of the Greeks, and have been incidentally noticed above.

The preceding account has been mainly composed from Becker's Charitides (vol. i. p. 451, &c.) and Gallus (vol. ii. p. 235, &c.), where the subject is treated at length. SYNALLAGMA (συνάλλαγμα). [SYNALLAGM.] SYNDICUS (σύνδικος), an advocate, is frequently used as synonymous with the word συνήγορος, to denote any one who pleads the cause of another, whether in a court of justice or elsewhere. Συναγωνίζεσθαι also is used indifferently with συνήγοροι or συναγωνιζόμενοι. (Andoc. de Myst. 19, ed. Steph.; Demost. c. Aristoc. 689, c. Zenoth. 885, c. Steph. 1127.) Thus, the five public advocates, who were appointed to defend the ancient laws before the Court of Helists, when an amendment or a new law in abrogation thereof was proposed, are called ἀνσυνήγοροι. As to the cities Nomotethes and also Schömann, de Comit. p. 255, Ant. Jur. Publ. Gr. p. 228. The name of σύνδικοι seems to have been peculiarly applied to those orators who were sent by the state to plead the cause of their countrymen before a foreign tribunal. Aeschines, for example, was appointed to plead before the Amphictyonic council on the subject of the Delian temple; but a certain discovery having been made not very creditable to his patriotism, the court of Areopagus took upon themselves to remove him, and appoint Hyperides in his stead. (Demost. c. Aristoc. 274, 281.) These extraordinary advocates are not to be confounded with the Pyлагорαε, or ordinary Amphictyonic deputies. (Schömann, de Comit. p. 321, Ant. Jur. Publ. Gr. p. 257.) There were other σύνδικοι, who acted rather as magistrates or judges than as advocates, though they probably derived their name from the circumstance of their being appointed to protect the interests of the state. These were extraordinary functionaries, created from time to time, to exercise a jurisdiction in disputes concerning confiscated property; as when, for instance, an information was laid against a man for having in his possession the goods of a condemned criminal, or which were liable to be seized in execution on behalf of the state; or when the goods of a convict having been confiscated, a claim was made by a mortgagee, or other creditor having a lien thereupon, to have his debt satisfied out of the proceeds. Such a claim was called ἐνεπικήγαγμα, and to prosecute it ἐνεπικήγαγμαν. (Harpeoc. and Suidas, s. v.) On this subject the reader is referred to the speeches of Lyaius de Publ. Pecun., de Nie. Fratr. Pecun., de Aristoph. Pecun., and more especially pp. 140, 151, 154, ed. Steph. The first appointment of these judicia σύνδικοι took place after the expulsion of the thirty tyrants; and one of their duties appears to have been to receive informations from the φίλαρχοι against those persons who had served in the cavalry during the interregnum, and who by a special decree of the people were ordered to restore to the treasury all the pay which they had received for that service. (Lysias, ἐν γαμήλιῳ Μιστ. 146, ed. Steph.) See SYNEGORUS; Harpeoc. s. v. ΣΥΝΕΙΔΑΣ; Meier, Att. Proc. p. 110; Schömann, de Comit. p. 316. [C. R. K.]

SYNEGORUS (συνήγορος), a name given to the members of a council, or any body of men who sat together to consult or deliberate. The congress of Greeks at Salamia is called συνήγοροι. (Herod. viii. 75, 79.) Frequent reference is made to the general assembly of the Greeks, ο ὕπο τῶν Ἑλλήνων συνήγορων, at Corinth, Thermopylae, or elsewhere. (Aesch. c. Clytem. 62, ed. Steph.; Demosth. περὶ τῶν πρὸς Ἀλέξανδρον, 215.) When the new alliance of the Athenians was formed after b. c. 377, upon fairer and more equitable principles than the former, the several states who were included therein were expressly declared to be independent, and a congress was held at Athens, to which each of the allied states sent representatives. The congress was called συνήγοροι, and the deputies σύνεθες, and the sums furnished by the allies συνάτεις, in order to avoid the old and hateful name of φόρος or tribute. (Harpeoc. s. v.; Plut. Sol. 15.) Many allusions to this new league are made by the orators, especially Isocrates, who strongly urges his countrymen to adhere to the principle on which the league was formed, and renounce all attempts to restore the old supremacy. (De Pace, 165, ed. Steph.) Perhaps the term συνήγορος mentioned in the oath of the Διασταεις are the Athenian members of this congress. (Schömann, Att. Proc. 130.) For further information on the subject of this confederacy, see Schömann, Ant. Jur. Pubb. Gr. p. 434; Böckh, Pubb. Econ. of Athens, p. 418, 2d ed.; Thirlwall, Hist. of Greece, vol. v. p. 42, 203. The name of συνήγοροι was given at Athens to any magisterial or official body, as to the court of Areopagus (Aesch. c. Timarch. 13; Dinarch. c. Demosth. 91, ed. Steph.) or to the place where they transacted their business, their board or council-room. (Isocrat. περὶ Ἀριστοδείδας, 318, ed. Steph.; Demosth. c. Theoc. 1324.) [C. R. K.]

SYNEGORICON (συνηγορικόν). [SYNEGORUS.]

SYNEGORUS (συνήγορος), may be translated an advocate or counsel, though such translation will convey to the English reader a more comprehensive meaning than the Greek word strictly bears.

According to the ancient practice of the Athenian law, parties to an action were obliged to conduct their own causes without benefit of counsel. The increase of litigation the sciences of law and rhetoric began to unfold themselves; and men, who had
raided no attention to these, were unable to compete with more experienced opponents. To consult a friend before bringing an action, or about the best means of preparing a defence, were obvious expedients. It was but another step to have a speech prepared by such friend out of court, to be delivered by the party himself when the cause was brought to trial. A class of persons thus sprung up, somewhat in the nature of chamber counsel, who received money for writing speeches and giving legal advice to those who consulted them. Of this class Antiphanes was the first who acquired any celebrity. Lycurgus, Isaeus, and Isocrates obtained considerable success by their written productions. Demosthenes followed the same profession for some time, until his engagements in public business forced him to relinquish it. (Dem. c. Zenod. 390.) These persons were called not συνήγοροι, but λογογράφοι, a name applied to Demosthenes reproachfully by his rival, who accuses him also of betraying his clients by showing the speeches which he had written to the adversary. (Aesch. c. Ctesiph. 7, c. Timarch. 18, ed. Steph.) [LOGOGRAPH.] Still, whatever assistance the party might have received out of court, the law which compelled him to appear in person at the trial, and to plead, not on account of any incapacity in the party, but in order that by their presence they might exert an influence on the bench, is evident from an attentive perusal of the orators. In some cases this might be a perfectly legitimate course, as where a defendant charged with some serious crime or through any physical or mental debility was unable to conduct his own cause without manifest disadvantage, he might (by permission of the court) procure a relation or friend to speak for him. (Aesch. c. Phorm. 18.) This was usual to appoint public advocates (called συνήγοροι, σύνδικοι, or κατήγοροι) to manage the prosecution. Thus, Pericles was appointed, not at his own desire, to assist in the impeachment of Cimon. (Plut. Peric. 10.) Public prosecutors were chosen by the people to bring to trial Demosthenes, Aristogiton, and others charged with having received bribes from Harpalus. (Diarch. c. Demosth. 30, 96, ed. Steph.) In ordinary cases however the principal prosecutor (if any) was a distinct person from the συνήγοροι, who acted only as auxiliary to him. It might be, indeed, that the συνήγοροι performed the most important part at the trial, as Anytus and Lycon are said to have done on the trial of Socrates, wherein Melitus was a subordinate part, making only a short speech in support of the prosecution, like those of Lysias against Epicrates, Ergocles, and Philocrates, which are called ἐπίρροι. But however this might be, he was in point of law an auxiliary only, and was neither entitled to a share of the reward (if any) given by the law to a successful accuser, nor liable, on the other hand, to a penalty of a thousand drachmas, or the δίμια consequent upon a failure to get a fifth part of the votes. Here we must distinguish between an advocate and a joint prosecutor. The latter stood precisely in the same situation as his colleague, just as a co-plaintiff in a civil action. The names of both would appear in the bill (ἔγκλημα), both would attend the ἀνακρισις an equal interest with his father in preserving the inheritance, and therefore he would be considered in the light of a party. The law which prohibited the advocate from taking fees, under peril of a γραφή before the Thesmothetae (Demosth. c. Steph. 1137), made no provision (and perhaps it was impossible to make an effective provision) against an influence of a more pernicious kind, viz. that of political association, which induced men to support the members of their club or party without the least regard for the right or justice of the case. Hence the frequent allusions by the orators to the ἐργαστήρια συνήγορων. In causes of importance, wherein the prohibition to speak by counsel was so far restricted, the advocate was looked upon with more favour on this ground, and was called a man of high reputation to speak in his behalf, and pledge himself thereby that he believed the charge was groundless. With such view Aeschines, on his trial for misconduct in the embassy, prayed the aid of Eubulus and Phocian, the latter of whom he had previously called as a witness. (Aesch. de Fals. Leg. 51, 52, ed. Steph.)
and would in short have the same rights and liabilities; the elder of the two only having priority in certain matters of form, such as the processoLogia. (Argum. Or. Dem. c. Androt. 592.) In the proceeding against the law of Leptines there were two prosecutors, Apheesion and Ctesippus, the son of Chabrias; each addressed the court, Apheesion first, as being the elder; each had his advocate, the one Phormio, the other Demothenes, who tells us in the exordium that he had undertaken to speak, partly from a conviction of the impolicy of the law, and partly to oblige the son of Chabrias, who would have been deprived of certain privileges inherited from his father, if the law had taken effect. (See Argum. 453.)

There seems to have been no law which limited the number of persons who might appear as advocates, either in public or private causes. There was however this practical limitation, that as the time allowed for speaking to either party was measured by the clepsydra, if either chose to employ a friend to speak for him, he subtracted so much from the length of his own speech as he meant to leave for that of his friend, and the whole time allowed was precisely the same, whatever the number of persons who spoke on one side. Both parties were usually allowed to make two speeches, the plaintiff beginning, the defendant following, again. These are often called logoi προτέρου and ὀπτέρου respectively, but are not to be confounded with the συνηγοροι οἱ δευτερολογοι, which might, and usually did, immediately follow the speech of the party in whose favour they were made, though as a matter of arrangement it might be convenient sometimes to reserve the speech of the advocate for the reply, in which case the συνηγοροι οἱ δευτερολογοι and the ὀπτεροι λόγοι would be the same. (Schumann, Att. Proc. pp. 707—712, 715; Plutarch, Proc. und Klag. vol. i. p. 91.)

With respect to the custom of producing friends to speak in mitigation of damages or punishment, see Timma. As to the public advocates appointed to defend the old laws before the Court of Helias, see Syndicus, Nomothetes.

The fee of a drachm (ρυππος) was probably the sum paid to the public advocate whenever he was employed on behalf of the state. It has been shown clearly by Schumann, that Petit was wrong in supposing that the orators or statesmen who spoke in the assembly were called συνηγοροι. They are always distinguished by the title of ἰπτεροι or δημηγυροι, or if they possessed much influence with the people, δημαργοι: and it is not to be supposed that they constituted a distinct class of persons, inasmuch as any Athenian citizen was at liberty to address the assembly when he pleased; though, as it was found in practice that the possession of the δημαρχος was confined to a few persons who were best fitted for it by their talent and experience, such persons acquired the title of ἰπτεροι, &c. (De Comit. pp. 107—108, 210.) There appears however to have been at least at one period a regular appointment of συνηγοροι, ten in number, with whom the Scholast on Aristophanes (l.c.) confounded the ἰπτεροι or orators. For what purpose such ten συνηγοροι were appointed, is a matter about which we have no certain information. Some think they were officers connected with the board of Scrutators who audited magistrates' accounts. Aristotle (Polit. vi. 8) says the authorities to whom magistrates rendered their accounts were called in some of the Greek states ενδονια, in others λογοτατια. In others συνηγοροι αἱ ἐκταστατια, and the author of the Lexicon Rhetoricum, published by Becker (Apoc. i. 301), says that the Synegori were ἄρχοντες κληρονομἱ οἱ ἐκταστατια τῶν λογοτατια πρὸς τὰς εἰδύναι. But what sort of assistance at all they render? Is it not probable that they performed the duty which their name imports, viz. that of prosecuting such magistrates as, in the opinion of the Logistae, had rendered an unsatisfactory account? Any individual, indeed, might prefer charges against a magistrate when the time for rendering his account had arrived; but the prosecution by a συνηγορος would be an ex officio proceeding, such as the Logistae were bound to institute, if they had any reason to suspect the accounting party of malversation or misconduct. If this conjecture be well-founded, it is not unreasonable to suppose that these ten συνηγοροι were no other than the public advocates who were employed to conduct state prosecutions of a different kind. They might be appointed annually, either by lot or by election (according to Harpocrat. s. v. Συνῆγορος). Their duty would be only occasional, and they would receive a drachm as their fee whenever they were employed. Böckh's conjecture, that they received a drachm a day for every day of business, is without much foundation. (C. R. K.)

SYNGENETIA (συγγένεια). [Heres, p. 485. b.]

SYNGRAPHIE (συγγραφή), signifies a written contract; whereas συνθήκη and συμβάλλων do not necessarily import that the contract is in writing: and διαμυχασμοι, strictly speaking, a verbal agreement. Pollux explains the word, συνθήκη συγγραφας, διαμυχασμοι γύγραφος (viii. 140). At Athens important contracts were usually reduced to writing; such as leases (μονδώσις), loans of money, and all executory agreements, where certain conditions were to be performed. The rent, the rate of interest, with other conditions, and also the penalties for breach of contract (ἐντύμια τὰ ἐκ τῆς συγγραφῆς) were particularly mentioned. The names of the witnesses and the sureties (if any) were specified. The whole was contained in a little tablet of wax or wood, (βαλάλος), which was sealed, and deposited with some third person, mutually agreed on between the parties. (Iosect.Ὑγραφ. 362, ed. Steph.; Demos. c. Apot. 903, 904, c. Dionysod. 1283.) An example of a contract on a bottomless loan (ναυτική συγγραφή) will be found in Demosth. c. Laci. 926, where the terms are carefully drawn up, and there is a declaration at the end, κυριώτερον δὲ περὶ τοῦτων ἀλλὰ μηδὲν εἶναι τῆς συγγραφῆς, "which agreement shall be valid, anything to the contrary notwithstanding."

Anything might form the subject of a written contract—a release (ἀφεσις), a settlement of disputes (διδαλωσις), the giving up of a slave to be examined by torture, or any other accepted challenge (πρόλογος); in short, any matter wherein the contracting parties thought it safer to have documentary evidence of the terms. Εὐκινδυνοι ἀνθρώπου κατὰ συγγραφήν is, to give an order for the making of a statue of certain dimensions, of a certain fashion, at a certain price, &c., as specified in the agreement. (Demost. de Con. 263.) No
SYNTELEIA (συντελεία). [SYMBOLAEON.]

SYNTHE'SIS, a garment frequently worn at dinner, and other elegant occasions, by the men of the above class, of whom mention was made before. It is regarded as a convenient and comfortable kind of dress, as we should say, and it was generally worn at dinner, and sometimes also on other occasions. As the Romans had no regular dinner, but dined at various times of the day, they had a variety of names for the several parts of their dress, and these were also frequently worn. (Mart. i. 87, xiv. 35, Petr. 21, Accubatoria, Mart. ii. 46, x. 29.)

The word Synthesis is also applied to a set of wearing apparel or a complete wardrobe. (Dig. 34. 2.) It was customary to wear a complete wardrobe, and that leave was granted to those in the city who were of the higher class, and that leave could not purchase houses of their own. (Demosth. pro Phorm. 946.) As they, with their families, formed a population of about 45,000, the number of synoikias must have been considerable. Pasion, the banker, had a lodging-house valued at 100 minas. Xenophon recommended that the melitai should be encouraged to invest their money in houses, and that leave should be granted to the most respectable to build and become house-proprietors. (Oekonom. i. 6.) The Synoikia was the name of the lodging-house of Xenophon, and he had a lodging-house of that name, with the same family, and that leave could not purchase houses of their own. (Demosth. pro Phorm. 946.) As they, with their families, formed a population of about 45,000, the number of synoikias must have been considerable. Pasion, the banker, had a lodging-house valued at 100 minas. Xenophon recommended that the melitai should be encouraged to invest their money in houses, and that leave should be granted to the most respectable to build and become house-proprietors. (Oekonom. i. 6.)

SYNTAGMA (σύνταγμα). [EXERCITUS, p. 483, a.]

SYNTAXEIS (συνταξείς). [SYNEDRI.]

SYNTELEIA (συντελεία). [TRIBRACHIA.]

SYNTHESIS (σύνθεσις). [SYMBOLAEON.]
SYRINX (συρίγκη), the Pan’s Pipe, or Pandean Pipe, was the appropriate musical instrument of the Arcadian and other Grecian shepherds, and was regarded by them as the invention of Pan, their tutelary god (Virg. Buc. ii. 32, vili. 24), who was sometimes heard playing upon it (συρίγκης: see Theocrit. i. 3, 14, 16; Schol. in loc.; Longus, iv. 27), as they imagined, on mount Maenalus. (Paus. viii. 36. § 5.) It was of course attributed to Faunus, who was the same with Pan. (Hor. Carm. i. 17. 10.) When the Roman poets had occasion to mention it, they called it fistula (Virg. Buc. ii. 36, iii. 22, 25; Hor. Carm. iv. 12. 10; Ovid. Met. viii. 192, xii. 784; Mart. xiv. 63; Tibull. i. 5. 20.) It was also variously denominated according to the materials of which it was constructed, whether of cane (τενευρ αργινίνη, Virg. Buc. vi. 8; Hom. Hymn. in Pan, 13; πουμερίτοι βορβάρης, Brunck, Anot. i. 405), reed (ἐσδαμο, Virg. Buc. i. 10, ii. 34, v. 2; κάλαμος, Theocrit. viii. 24; Longus, i. 4), or hemlock (κινητά, Virg. Buc. v. 85). In general seven hollow stems of these plants were fitted together by means of wax, having been previously cut to the proper lengths, and adjusted so as to form an octave (Virg. Buc. ii. 32, 36), but sometimes nine were admitted, giving an equal number of notes. (Theocrit. viii. 18—22.) Another refinement in the construction of this instrument, which, however, was rarely practised, was to arrange the pipes in a curve so as to fit the form of the lip, instead of arranging them in a plane. (Theocrit. i. 129.) A syrinx of eight reeds is shown in the gem figured on page 846. The annexed woodcut is taken from a bas-relief in the collection at Appledurcombe in the Isle of Wight. (Mus. Wordeanum, pl. 9.) It represents Pan reclining at the entrance of the cave, which was dedicated to him in the Areopolis at Athens. He holds in his right hand a drinking-horn [RHYTON] and in his left a syrinx, which is strengthened by two transverse bands.

The ancients always considered the Pan’s Pipe as a rustic instrument, chiefly used by those who tended flocks and herds (Hom. Il. xviii. 526; Apoll. Rhod. i. 577; Dionys. Perieg. 396; Longus, i. 2, i. 14—16, ii. 24—26); but also admitted to regulate the dance. (Hes. Soui. 278.) The Lydians, whose troops marched to military music, employed this together with other instruments for the purpose. (Herod. i. 17.) This instrument was the origin of the organ [HYDRAULA].

The term συρίγκη was also applied to levels, or narrow subterranean passages, made either in searching for metals, in mining at the siege of a city (Polyaen. v. 17), or in forming catacombs for the dead. (Aelian, H. A. vii. 43, xvi. 15.)

SYRMA (συρίμα), which properly means that which is drawn or dragged (from συρίμα), is applied to a dress with a train. The long Pegasus worn by the Trojan matrons was consequently a dress somewhat of the kind (H. Art. vii. 443.) The Syrma, however, was more especially the name of the dress worn by the tragic actors, which had a train to it trailing upon the ground; whence the word is explained by Pollux (vii. 67), as a τραγῳδον φόρμα ταπεινωμένας, and is alluded to by Homer (Ar. Pod. 215), in the words,—

traxitque vagus per pulpitum vestem.

(Compare Juv. viii. 229.) Hence we find Syrma used metaphorically for tragedy itself. (Juv. xv. 30; Mart. iv. 49.)

SYSSITIA (συσσίτια). The custom of taking the principal meal of the day in public prevailed extensively amongst the Greeks from very early ages. It existed not only with the Spartans and Cretans, amongst both of whom it was kept up till comparatively recent times, but also at Megara in the age of Theognis (v. 305), and at Corinth in the time of Periander, who it seems abolished the practice as being favourable to aristocracy. (Arist. Pol. v. 3, § 2.) Nor was it confined to the Hellenic nation: for according to Aristotle (Pol. vii. 9), it prevailed still earlier amongst the Oenotrians in the south of Italy, and also at Carthage, the political and social institutions of which state resembled those of Sparta and Crete. (Pol. ii. 8.) The origin of the usage cannot be historically established; but it seems reasonable to refer it to infant or patriarchal communities, the members of which being intimately connected by the ties of a close political union and kindred, may naturally be supposed to have lived together almost as members of the same family. But however and wherever it originated, the natural tendency of such a practice was to bind the citizens of a state in the closest union; and accordingly we find that at Sparta, Lycurgus availed himself of it for this purpose, though we cannot determine with any certainty whether he introduced it there, or merely perpetuated and regulated an institution, which the Spartans brought with them from their mother-country and retained at Sparta as being suitable to their position and agreeable to their national habits. The latter supposition is perhaps the more probable. The Cretan usage Aristotle (Pol. vii. 9) attributes to Minos; this, however, may be considered rather "the philosopher’s opinion than as an historical tradition:" but the institution was confined so high antiquity, that the Peloponnesian colonists may well be supposed to have found it already existing in Crete, even if there had been no Dorian settlers in the island before them. (Thirlwall, Hist. of Greece, vol. i. p. 287.)

The Cretan name for the Syssitia was Ανδρέας (Arist. Pol. i. 7), the singular of which is used to denote the building or public hall where they were given. This title affords of itself a sufficient indication that it was confined to men and youths only: a conclusion justified and supported by all the authorities on the subject. (Plat. Leg. vi. p. 780, d.) It is not however improbable, as Hoeck (Creta, vol. iii. p. 123) suggests, that in some of the Dorian states there were syssitia of the young
unmarried women as well as of the men. (Comp. Pindar, Pyth. ix. 18.) All the adult citizens partook of the public meals amongst the Cretans, and were divided into companies or "messes," called 'Epythia, or sometimes 'Epyttia. (Athen. iv. p. 143.) These divisions were perhaps originally confined to persons of the same house and kindred, but afterwards any vacancies in them were filled at the discretion of the members. (Hoeck, vol. iii. p. 126.) The divinity worshipped under the name of Zeus 'Epyttos (Hesych. s. v.) was considered to preside over them.

According to Dosiadas, who wrote a history of Crete (Athen. i. c.), there were in every town of the island (παράγωγοι) two public buildings, one for the lodging of strangers, (τῆς συστημάτος), the other a common hall (συστήματα) for the citizens. In the latter of these the syssitia were given, and in the upper part of it were placed two tables for the entertainment of foreign guests (ζυκικά σφάτα), a circumstance deserving of notice, as indicating the extent to which the Dorians of Crete encouraged mutual intercourse and hospitality. Then came the tables of the citizens. But besides these there was also a third table on the right of the entrance dedicated to Ζεύς ζυγός, and perhaps used for the purpose of making offerings and libations to the divinity worshipped under the name of Zeus 'Epyttos (Hesych. s. v.), a consequence of the Cretan religious usages.

The Syssitia of the Cretans were distinguished by simplicity and temperance. They always sat at their tables, even in later times, when the custom of reclining had been introduced at Sparta. (Cic. pro Mur. 35.) The entertainment began with prayer to the gods and libations. (Athen. iv. p. 143, c.) Each of the adult citizens received an equal portion of fare, with the exception of the "Archon," or "Master of the Tables," who was perhaps in ancient times one of the μέσης, and more recently a member of the γενεασία or council. An ans magistrate received a fourfold portion; "one as a common citizen, a second as President, a third for the house or building, a fourth for the furniture" (τῶν σκευῶν, Heracl. Pont. iii.): an expression from which it would seem that the care of the building and the provision of the necessary utensils and furniture devolved upon him. The management of all the tables was under the superintendence of a female of free birth (ἡ προστήρευσια τῆς συστημάτος γυνῆ), who openly took the best place and presented it to the citizen who was most eminent in council or the field. She had three or four male assistants under her, each of whom again was provided with two menial servants (καλλιφόροι, or wood-carriers). Strangers were served before the citizens, and even before the Archon or President. (Hercul. Pont. i. c.) On each of the tables was placed a cup of mixed wine, from which the messmates of the same company drank. At the close of the repast this was replenished, but all intemperance was strictly forbidden by a special law. (Plut. Minos, p. 263.)

Till they had reached their eighteenth year, when they were classed in the δύκας, the youths accompanied their fathers to the syssitia with the orphans of the deceased. (Hoeck, vol. iii. p. 185.) In some places the youngest of the orphans waited on the men; in others this was done by all the boys. (Ephor. ap. Strab. x. p. 483.) When not thus engaged, they were seated near to the men on a lower bench, and received only a half portion of meat; the eldest of the orphans appear to have received the same quantity as the men, but of a plainer description of fare. (Athen. iv. p. 143.) The boys like the men had also a cup of mixed wine in common, which however was not replenished when emptied. During the repast a general cheerfulness and gaiety prevailed, which were livened and kept up by music and singing. (Aleman, ap. Strab. i. c.) It was followed by conversation, which was first directed to the public affairs of the state, and afterwards turned on valiant deeds in war and the exploits of illustrious men, whose praises might animate the younger hearers to an honourable emulation. While listening to this conversation, the youths seem to have been arranged in classes (άρδεια), each of which was placed under the superintendence of an officer (παραστρατιώτης) especially appointed for this purpose; so that the syssitia were thus made to serve important political and educational ends.

In most of the Cretan cities, the expenses of the syssitia were defrayed out of the revenues of the public lands and the tribute paid by the Perioeci, the money arising from which was applied partly to the service of the gods, and partly to the maintenance of all the citizens both male and female. (Arist. Pol. ii. 7. 4): so that in this respect there might be no difference between the rich and the poor. From the statement of Aristotle (i. c.), it appears probable that each individual received his separate share of the public revenues, out of which he paid his quota to the public table, and provided with the rest for the support of the females of his family. This practice however does not appear to have prevailed exclusively at all times and in all the cities of Crete. In Lycutas, for instance, a colony from Sparta, the custom was different: the citizens of that town contributed to their respective tables a tenth of the produce of their estates; a practice which may be supposed to have obtained in other cities, where the public domains were not sufficient to defray the charges of the syssitia. But both at Lycutas and elsewhere, the poorer citizens were in all probability supported at the public cost.

In connection with the accounts given by the ancient authors respecting the Cretan syssitia there arises a question of some difficulty, viz. how could one building accommodate the adult citizens and youths of such towns as Lyctus and Gortyna? The question admits of only two solutions: we are either misinformed with respect to there being only one building in each town used as a common hall, or the number of Dorian citizens in each town must have been comparatively very small.

The Spartan Syssitia were in the main so similar to those of Crete that one was said to be borrowed from the other. (Arist. Pol. ii. 7.) In later times they were called φιλήστηρια, or the "spare meals," a term which is probably a corruption of φιλαττική, the "love-feasts," a word corresponding to the Cretan 'Επύττια. (Gittling, ad Arist. Oecon. p. 190; Müller, Dör. iv. 3. § 8.) Anciently they were called ἀρδεία, as in Crete, (Plut. Lycur. 12.) They differed from the Cretan in the following respects. Instead of the expenses of the tables being defrayed out of the public revenues, every head of a family was obliged to contribute a certain portion at his own cost and charge; those who were not able to do so were excluded from the public tables. (Arist. Pol. ii. 7. 4.) The guests were divided into companies generally of fifteen persons each, and all
SYSSITIA.

vacancies were filled up by ballot, in which unani-
mous consent was indispensable for election. No
persons, not even the kings, were allowed what was
called an ἀδίκτους ἡμέρα (Heasch. s. n.) or excused
from attendance at the public tables, except for some
satisfactory reason, as when engaged in a sacrifice,
or a chase, in which latter case the individual was
required to send a present to his table. (Plut. l. c.
Agis, c. 10.) Each person was supplied with a
cup of mixed wine, which was filled again when
required; but drinking to excess was prohibited at
Sparta as well as in Crete. The repast was of a
plain and simple character, and the contribution of
each member of a mess or φεστίγης was settled by
Plut. l. c.) The principal dish was the μελας
ζωμός or black broth, with pork. (Athen. iv. p.
141.) The ἐπαύξιον or aftermeal (from the Doric
ἀύξιον, a meal) was however more varied, and
richly supplied by presents of game, poultry, fruit,
&c., and other delicacies which no one was allowed
to purchase. Moreover, the entertainment was
enlivened by cheerful conversation, though on
public matters. (Xen. Rev. Lacnon. v. 6.) Sing-
ing also was frequently introduced, as we learn
from Alcman (Frg. 31.), that “at the banquets
and drinking entertainments of the men it was fit
for the guests to sing the paean.” The arrange-
ments were under the superintendence of the
Polemarchs.

The use and purposes of the institutions de-
scribed above are very manifest. They united
the citizens by the closest ties of intimacy and
union, making them consider themselves as mem-
bers of one family, and children of one and the
same mother, the state. They maintained a strict
and perfect separation between the higher and the
subject classes both at Sparta and in Crete, and
kept up in the former a consciousness of their su-
perior worth and station, together with a strong
feeling of nationality. At Sparta also they were
eminently useful in a military point of view, for
the members of the syssitia were formed into cor-
responding military divisions, and fought together
in the field, as they had lived together at home,
with more bravery and a keener sense of shame
(ἀληθῆ), chance comrades. (Herod, i. 65.) Moreover “they
gave an efficacy to the power of public opinion
which must have nearly superseded the necessity
of penal laws.” (Thirlwall, vol. i. p. 289.) With
respect to the political tendencies, they were de-
cidedly arranged upon aristocratical principles,
tho no individual of a company or mess was
looked upon as superior to his fellows. Plutarch
(Quaes. Sympos. vii. p. 322) accordingly calls them
ἐνέδρια ἀριστοκρατικά, or aristocratical meetings,
and compares them with the Prytaneum and Thes-
mothæum at Athens.

The simplicity and sobriety, which were in early
times the characteristic both of the Spartan and
Cretan Syssitia, were afterwards in Sparta at least
supplanted by luxury and effeminate indulgence.
The change was probably gradual, but the kings
Aresus and Acrotatus (s. c. 300) are recorded as
having been mainly instrumental in accelerating it.
The reformer Agis endeavoured but in vain to re-
store the old order of things, and perished in the
attempt. In his days Sparta contained 4500
families, out of which he proposed to make fifteen
syssitia, whence Müller infers that formerly, when,

the number of families was 9000, the number of
syssitia was thirty; and consequently that Her-
dotus, when he spoke of Lycurgus having instituted
the “syssitia” for war, alluded to the larger divi-
sions and not the single banqueting companies;
and a conclusion justified by the context. Müller
moreover supposes, that in this sense the Syssitia at
Sparta corresponded to the divisions of the state
called obae, and sometimes φαρσαῖα, which were
also thirty in number. (Doriuns, iii. 5. § 8, and
12. § 4.)

(Hoeck, Creta, vol. iii. pp. 120—139; Hällman’s
Anfänge, § 138; Thirlwall, Hist. of Greece, vol. i.
pp. 268, 331; Hermann, Lehrbuch der Griech.
Staats. §§ 22, 23.)

SYSTYLÖS. [TEMPLUM.]

T.

TABELLA. dim. of TABULA, a billet or
tablet, with which each citizen and judex voted in
the comitia and courts of justice. In the comitia,
if the business was the passing of a law, each citi-
en was provided with two Tabellae, one inscribed
V. R. i.e. Uti Rogers, “I vote for the law,”
the other inscribed A. i.e. Antiquo, “I am for the
old law.” (Compare Cic. ad Att. i. 14.) If the busi-
ness was the election of a magistrate, each citizen
was supplied with only one tablet, on which the
names of the candidates were written, or the ini-
tials of their names, as some suppose from the or-
ation pro Domino, c. 49; the voter then placed a mark
(punctuau) against the one for whom he voted,
whence puncta are spoken of in the sense of votes.
(Cic. pro Plane, 22.) For further particulars re-
specting the voting in comitia, see DIRITORES,
CISTA, STELLA, and SUFFRAGium.

The judices were provided with three Tabellae:
one of which was marked with A. i.e. Absolvo,
“I acquit;” the second with C. i.e. Condemno,
“I condemn;” and the third with N. i.e. Non
Liget, “It is not clear to me.” The first of these
was called Tabella absolutaria and the second Ta-
bellæ damnatoriae (Suet. Octan. 33.), and hence
Cicero (pro Mil. 6) calls the former litera salutaris,
and the latter litera tristia. It would seem that in
some trials the Tabellae were marked with the let-
ters L. and D. respectively, i.e. Liberó and Damno,
since we find on a denarius of the Caelian gens a
Tabella marked with the letters L. D.; and as we
know that the vote by ballot in cases of Perduellio
was first introduced by C. Caecilius Calidus [TABEL-
LARIAE LEGES], the Tabella on the coin undoubt-
edly refers to that event. There is also a passage
in Caesar (B. C. iii. 33), which seems to intimate
that these initial letters were sometimes marked
on the tabellae: “Unam fore tabellam, qui liber-
atus omni periculo censerent; alteram, qui capitis
damnarunt,” &c. (Compare Spanheim, Numism.
vol. ii. p. 199.)
TABERNA.

The preceding cut contains a copy of a coin of the Cassian gens, in which a man wearing a toga is represented in the act of placing a tabella, marked with the letter A. (i.e. absolvo), in the cista. The letter on the tabella is evidently intended for A.

For the other meanings of Tabella see TABULA.

TABELLARIAE LEGES, the laws by which the ballot was introduced in voting in the comitia. As to the ancient mode of voting at Rome, see Suffragium. There were four enactments known by the name of Tabellarinae Leges, which are enumerated by Cicero (de Leg. iii. 16). They are mentioned below according to the order of time in which they were passed.

1. GABINIA LEG, proposed by the tribune Gabinius n. c. 139, introduced the ballot in the election of magistrates (Cic. l.c.); whence Cicero (Agri. ii. 2) calls the tabella "vindex tacitae libertatis."

2. CASSIA LEG, proposed by the tribune L. Cassius Longinus n. c. 137, introduced the ballot in the "Judicium Populi," with the exception of cases of Perduellio. The "Judicium Populi" undoubtedly applies to cases tried in the comitia by the whole body of the people (Judex, p. 649), although Ernesti (Index Leg.) wishes to give a different interpretation to the words. This law was supported by Scipio Africanus the younger, for which he was censured by the aristocratic party. (Cic. de Leg. iii. 16; Brut. 25, 27, pro Sextio, 48; Ascon. in Cornel. p. 78, ed. Orelli.)

3. PAPIRIA LEG, proposed by the tribune C. Papirius Carbo n. c. 131, introduced the ballot in the enactment and repeal of laws. (Cic. de Leg. iii. 16.)

4. CAELIA LEG, proposed by C. Caelius Caldus n. c. 97, introduced the ballot in cases of Perduellio, which had been excepted in the Cassian law. (Cic. de Leg. iii. 16; de Fin. iv. 37, 38.)

There was also a law brought forward by Marius n. c. 118, which was intended to secure freedom and order in voting. (Cic. de Leg. iii. 17; Plut. Mar. 4.)

TABELLARIUS, a letter-carrier. As the Romans had no public post, they were obliged to employ special messengers, who were called Tabellarii, to convey their letters (tabellae, literae), when they had not an opportunity of sending them otherwise. (Cic. Phil. ii. 31; Cic. ad Fam. xii. 12, v. 27.)

TABLELLIO, a notary. (Suidas. s. v.) Under the empire the Tabelliones succeeded to the business of the Scribae in the times of the republic. (Scribae.) They were chiefly employed in drawing up legal documents, and for this purpose usually took their stations in the market-places of towns. (Cod. 4. tit. 21. s. 17; Novell. 73. c. 5, &c.) They formed a special order in the state. (Gothfr. ad Cod. Theod. 12. tit. 1. s. 3.)

TABERNA is defined by Ulpian as any kind of building fit to dwell in "nonem ex eo, quod tabula clauditur." (Dig. 50. tit. 10. § 183,) or according to the more probable etymology of Festus, because it was made of planks. (Festus, s. v. Contubernae, tabernaculum.) Festus (s. v. Aditubernae) asserts that this was the most ancient kind of abode used among the Romans, and that it was from the early use of such dwellings that the words taberna and tabernaculum were applied to military tents, though the latter were constructed of skins. We know very little of the form and materials of the ancient tents; but we may infer from the notices we have of them that they were generally composed of a covering of skins partly supported by wooden props, and partly stretched on ropes. Sometimes, in a permanent camp, they may have been constructed entirely of planks; and sometimes, in cases of emergency, garments and rushes were spread over any support that could be obtained. (Lipsius, de Mili. Rom. in Oper. vol. iii. pp. 154—155.) From taberna, when used in this sense, are derived tabernaculum, the more common name of a tent, and Contubernales.

The usual meaning of taberna is a shop. Originally the shops were stalls or booths in or round the market place (Agora; Forum); afterwards they were permanently established both on the sides of the market-place, and in other parts of the city. Neither the ancient authors nor the remains of Pompeii led us to suppose that tradesmen often had their shops forming part of their houses, as with us. A few houses are indeed found in Pompeii entirely devoted to the purposes of trade, consisting, that is, of the shop and the rooms occupied by the tradesman and his family. Most commonly, however, the shops formed a part of a large house, to the owner of which they belonged, and were by him let out to tradesmen. (Domus, p. 430.) Some of the shops round a house were retained by the owner for the sale of the produce of his estates. This arrangement of the shops was probably an improvement on an older plan of placing them against the walls of houses. Even under the emperors we find that shops were built out so far into the street as to obstruct the thoroughfare. Martial (vii. 61) mentions an edict of Domitian by which this practice was put down, and the shops were confined within the areas of the houses.

The following are the most remarkable classes of shops of which we have notices or remains:

1. Shops for the sale of wine, hot drinks, and ready-dressed meat. (Caufona.)

2. Bakers' shops. Of these several have been found at Pompeii, containing the mill as well as the other implements for making bread. (Mola; Pistor.)

3. Booksellers' shops. (Liber.)

4. Barbers' and Hairdressers' shops. (Barba.) (P. S.)

TABERNA'CULUM. (Taberna; Templum.)

TABLE 'NUM. (Domus, p. 428, &c.)

TABULA. This word properly means planks or boards, whence it is applied to several objects, as gaming-tables (Juv. i. 90), pictures (Cic. de Fin. v. 1; Propert. i. 2, 22), but more especially to tablets used for writing, of which alone we have to speak here. The word Tabulae was applied to any flat substance used for writing upon, whether stone or metal, or wood covered with wax. Livy (i. 24) indeed distinguishes between Tabulacae and Cera, by the former of which he seems to mean tablets of stone or metal; but Tabulae and Tabellae more frequently signify waxen tablets (tabulae ceraeae), which were thin pieces of wood usually of an oblong shape, covered over with wax (cera). The wax was written on by means of the stylus. (Stilus.) These tabulae were sometimes made of ivory and citron-wood (Mart. xiv. 3, 5), but generally of a wood of a more common tree, as the beech, fir, &c. The outer sides of the tablets consisted merely of the wood; it was only the inner sides that were covered over with wax. They were fastened together at the back by means of wires, which answered the purpose of hinges, so
that they opened and shut like our books; and
to prevent the wax of one tablet rubbing against
the wax of the other, there was a raised margin
around each, as is clearly seen in the woodcut under
Suet. There were sometimes two, three, four
five, or even more, tablets fastened together in
the above-mentioned manner. Two such tablets
were called Diptycha (δίπτυχα), which merely means
"twice-folded" (from τυπός "to fold"), whence we have πτυχήν, or with the τ omitted, πτυχήν.
The Latin word pugilares, which is the name fre-
quently given to tablets covered with wax (Mart.
iv. 3; Gell. xvii. 9; Plin. Ep. i. 6), may perhaps be
connected with the same root, though it is
usually derived from pugilis, because they were
small enough to be held in the hand. Such tablets
are mentioned as early as the time of Homer, who
speaks of a πιάεις πτυχήν. (Ili. vi. 169.) Three
tablets fastened together were called Triptycha
(τριπτυχα), which Martial (xiv. 6) translates by
triplices (cerae); in the same way we also read of
Pentaptycha (πενταπτυχα) called by Martial (xiv. 4)
Quintuplices (cerae), and of Polyptycha (πολυπτυχα)
or Multiplices (cerae). The pages of these tablets
were frequently called by the name of cerae alone;
thus we read of prima cera, altera cera, "first page,"
"second page." (Compare Suet. Ner. i. 17.) In
tablets containing important legal documents, espe-
cially wills, the outer edges were pierced through
with holes (foramina), through which a triple
thread (linum) was passed, and upon which a seal
was then placed. This was intended to guard
against forgery, and if it was not done such docu-
ments were null and void. (Suet. Ner. 42.) Waxen
tablets were used among the Romans for almost
every species of writing, where great length
was not required. Thus letters were frequently
written upon them, which were secured
by being fastened together with packthread and
sealed with wax. Accordingly we read in Plautus
(Bacchid. iv. 6. 44) when a letter is to be written,

"Effer cito stilum, ceram, et tabellas, et linum."
The sealing is mentioned afterwards (I. 96). (Com-
pare Cic. in Catil. iii. 5.) Tabulae and tabellae are
therefore used in the sense of letters. (Ovid. Met.
ix. 522.) Love-letters were written on very small
tablets called Filiiella (Mart. xiv. 8, 9), of which
word however we do not know the origin. Tab-
ulae of this kind are presented by Amor to Poly-
phemos on an ancient painting. (Mas. Borbon.
vol. i. tav. 2.) Legal documents, and especially wills, were
almost always written on waxen tablets, as men-
tioned above. Such tablets were also used for
accounts, in which a person entered what he re-
ceived and expended (Tabulae or Codex accepti et
emissi, Cic. pro Rosc. 92), whence Nomina
Tabulorum, an abolition of debts either wholly or
in part. (Suet. Jul. 42; Cic. de Off. ii. 23.)
The above are merely instances of the extensive
use of waxen tablets; it is unnecessary to pursue
the subject further.

Two ancient waxen tablets have been discovered
in a perfect state of preservation, one in a gold
mine four or five miles from the village of Abru-
bânyâ in Transylvania, and the other in a gold
mine in the village itself. Of this interesting dis-
covery an account has been published by Massmann
in a work intitled "Libellus Aurarius, sive Tabulae
Ceratae, et antiquissimae et unice Romanae in
Fodina Auraria apud Abrudbanyam, oppidulum
Transsylvanum, super repertae," Lipsiae (1841).
An account of these tablets, taken from Massmann's
description, will serve as a commentary on what
has been said above. Both the tabulæ are tri-
pychæ, that is, consisting of three tablets each.
One is made of fir-wood, the other of beech-wood,
and each is about the size of what we call a small
octavo. The outer part of the two outside tablets
of each exhibit the plain surface of the wood, the
inner part is covered with wax, which is now al-
most of a black colour, and is surrounded with a
raised margin. The middle tablet has wax on
both sides with a margin around each; so that
each of these tabulæ contains four sides or four
pages covered with wax. The edges are pierced
through, that they might be fastened together by
means of a thread passed through them. The wax
is not thick in either; it is thinner on the beechen
tablæ, in which the stilus of the writer has some-
times cut through the wax into the wood. There
are letters on both of them, but on the beechen
tablæ they are few and indistinct; the beginning
of the first tablet contains some Greek letters, but
they are succeeded by a long set of letters in un-
known characters. The writing on the tabulae
made of fir-wood is both greater in quantity and in
a much better state of preservation. It is written
in Latin, and is a copy of a document relating to
some business connected with a collegium. The
name of the consula is given, which determines its
date to be A.D. 169. One of the most extraor-
dinary things connected with it is, that it is written
from right to left. The writing begins on what
we should call the last or fourth page, and ends at
the bottom of the third; and by some strange good
fortune it has happened that the writing is read
over again, beginning on the second
page and ending at the bottom of the first; so that
where the writing is effaced or doubtful in the one
it is usually supplied or explained by the other.
Waxen tablets continued to be used in Europe
for the purposes of writing in the middle ages; but
the oldest of these with which we are acquainted
belongs to the year 1501 A. D., and is preserved in
the Florentine Museum.
The tablets used in voting in the comitia and
the courts of justice were also called tabulæ as
well as tabellæ. (Tabellæ.)

TA' BULAE PUBLICÆ. [TABULARIUM.]

Tabulæ RII were notaries or accountants,
who are first mentioned under this name in the
time of the empire. (Sen. Ep. 88; Dig. 11. tit. 6.
s. 7; 50. tit. 13. s. 1. § 6.) Public notaries, who
had the charge of public documents, were also
called tabulāri (Dig. 43. tit. 5. s. 3), and these
seem to have differed from the tabelliones in the
circumstance, that the latter had nothing to do
with the custody of the public registers. Public
tablārii were first established by M. Antonius
in the provinces, who ordained that the births of
all children were to be announced to the tabulārii
within thirty days from the birth. (Capitol. M. Anto.
9.) Respecting the other duties of the public tabulārii,
see Cod. Theod. 8. tit. 2, and
Gothofr. ad loc.

TABULARIUM, a place where the public
records (tablæ publicæ) were kept. (Cic. pro t.:
Rohrb. 6, pro Arch. 4.) These records were of
various kinds, as for instance Senatusconsulta, Ta-
The Thessalians were a Thesprotian tribe (Herod. vii. 176; Vell. Pat. i. 3), and originally came from the Thesprotian Ephrya. Under the guidance of leaders, who are said to have been descendants of Hercules, they invaded the western part of the country afterwards called Thessaly, and drove out or reduced to the condition of Penestae or bondsmen the ancient Aeolian inhabitants (την τότε μὲν Ἀιολίδαν νῦν δὲ Θεσσαλιάν καλομένην, Diol. iv. 57). The Thessalians afterwards spread over the other parts of the country, and took possession of the most fertile districts, and compelled the Peraeans, Magnesians, Achaeans, and other neighbouring people to submit to their authority and to pay them tribute. (Thucyd. ii. 101, iv. 78, viii. 3; Aristot. Pol. ii. 6.) The population of Thessaly therefore consisted, like that of Laconia, of three distinct classes. 1. The Penes-tae, whose condition was nearly the same as that of the Helots. [PENESTAE.] 2. The subject people, who inhabited the districts which were not occupied by the Thessalian invaders. They paid tribute, as stated above, but were personally free, though they had no share in the government. They corresponded to the Perioeci of Laconia, by which name they are called by Xenophon. (Hed. vi. 1. § 19.) [PERIOECI.] 3. The Thessalian conquerors, who alone had any share in the public administration, and whose lands were cultivated by the Penestae.

For some time after the conquest Thessaly seems to have been governed by kings of the race of Heracles, who may however have been only the heads of the greater aristocracies, the supreme power for a certain time. Under one of these princes, named Aleuas, the country was divided into four districts, Phthiotis, Histiaeotis, Thessaliotis, and Pelasgiotis. (Aristot. op. Harpo- crat. s. v. Θεσσαλία: Strab. ix. p. 430.) This division continued till the latest times of Thessalian history, and we may therefore conclude that it was not merely a nominal one. Each district may perhaps have regulated its affairs by some kind of provincial council, but respecting the internal government of each we are almost entirely in the dark. (Thirlwall, Hist. of Greece, vol. i. p. 437.)

When occasion required, a chief magistrate was elected under the name of Tagus (ταγύς), whose commands were obeyed by all the four districts. He is sometimes called king (βασιλεύς, Herod. vi. 63), and sometimes ἀρχής. (Dionys. v. 74.) His command was of a military rather than of a civil nature, and he seems only to have been appointed when there was a war or one was apprehended. Pollux (i. 120) accordingly in his list of military designations classes together the Boeotarchs of the Thebans, the King of the Lacedaemonians, the Polemarch of the Athenians (in reference to his original duties), and the Tagus of the Thessalians. We do not know the extent of the power which the Tagus possessed constitutionally, nor the time for which he held the office; probably neither was precisely fixed, and depended on the circumstances of the times and the character of the individual. (Thirlwall, vol. i. p. 438.) He levied soldiers from the states in each district, and seems to have fixed the amount of tribute to be paid by the allies. (Xenoph. Hell. vi. 1. § 19.) When Jason was tagus he had an army of more than 8000 cavalry and not less than 20,000 hoplites (Xenoph. l. c.), and Jason himself says that when Thessaly is under a tagus, there is an army of 6000 cavalry and 10,000 hoplites. (Id. vi. 1. § 8.) The tribute which Jason levied from the subject towns was the same as had been previously paid by one of the Scopaeae, whom Buttmann supposes to be the...
same Scopas as the one mentioned by Aelian (V. II. xii. 1) as a contemporary of Cyrus the younger. When Thessaly was not united under the government of a tagus the subject towns possessed more independence. (Xenoph. Hell. vi. 1. § 9.) In later times some states united their ordinary magistrates to form a body known as the tauri (Böckh, Corp. Lyc. n. 1770), which may have been done however, as Hermann suggests, only out of affection.

Thessaly was however hardly ever united under one government. The different cities administered their own affairs independent of one another, though the smaller towns seem to have frequently been under the influence of the more important ones (των δ' ὄων τῶν Φαρσάλων ἤρθηκέναι πέλεκου, Xenoph. Hell. vi. 1. § 9). In almost all the cities the form of government was aristocratical (δυναστεία μάλλον ἢ ἑαυτού ἐγχειρεῖτο ἐγχώριον οἱ θεσσαλοὶ, Thucyd. iv. 78), and it was chiefly in the hands of a few great families, who were descended from the ancient kings. Thus Larissa was subject to the Aleuadae, whence Herodotus (vii. 6) calls them kings of Thessaly; Crannon or Larissa of a democratical kind, called Camarina; and Pharsalus to the Creonidae. (Compare Theocr. xvi. 34, &c.) These nobles had vast estates cultivated by the Penestae; they were celebrated for their hospitality and lived in a princely manner (φιλανδίας τε και μεγαλοπρεπῆς τῶν Φαρσάλων τρόπων, Xenoph. Hell. vi. 1. § 3), and they attracted to their courts many of the poets and artists of southern Greece. The Thessalian commonwealth did not however submit quietly to the exclusive rule of the nobles. Contentions between the two classes seem to have arisen early, and the conjecture of Thirlwall (vol. i. p. 438), that the election of a tagus, like that of a dictator at Rome, was sometimes used as an expedient for keeping the commonalty under, appears very probable. At Larissa the Aleuadae made some concessions to the popular party. Aristotle (Pol. v. 5) speaks, though we do not know at what time he refers to, of certain magistrates at Larissa, who bore the name of πολιτοφόρακες, who exercised a suprindentence over the admission of freemen, and were elected themselves out of the body of the people, whence they were led to curtail the privileges of the commonalty. Aristotle in the works of other magistrates at Larissa of a democratical kind, called Δαρκαντορίσθαι. (Aristot. Pol. iii. 1.) Besides the contests between the oligarchical and democratical parties, there were feuds among the oligarchs themselves; and such was the state of parties at Larissa under the government of the Aleuadae two generations before the Persian war, that a magistrate was chosen by mutual consent, perhaps from the commonality, to mediate between the parties (ἀρχεῖον μεσιάδος, Aristot. Pol. v. 5). At Pharsalus too at the close of the Peloponnesian war the state was torn asunder by intestine commotions, and for the sake of quiet and security the citizens entrusted the acropolis and the whole direction of the government to Polydamas, who discharged his trust with the strictest integrity. (Xenoph. Hell. vi. 1. § 2, 3.)

The power of the aristocratical families however seems to have continued with little diminution till towards the close of the Peloponnesian war, when decided democratical movements first begin to appear. At this time the Aleuadae and the Scopadae had lost much of their ancient influence. Pheme and Pharsalus then became the two leading states in Thessaly. At Phere a tyranny, probably arising from a democracy, was established by Lycophron, who opposed the great aristocratical families, and aimed at the dominion of all Thessaly. (Xenoph. Hell. ii. 3. § 4; Diod. xiv. 82.) The latter object was successfully attained by his son, who probably was the son of Lycophron, who effected an alliance with Polydamas of Pharsalus, and caused himself to be elected tagus about B.C. 374. While he lived the whole of Thessaly was united as one political power, but after his murder in B.C. 370 his family was torn asunder by intestine discord and did not long maintain its dominion. The office of tagus became a tyranny under his successors, Polydorus, Polyphron, Alexander, Tisiphonous, and Lycophron; till at length the old aristocratical families called in the assistance of Philip of Macedon, who deprived Lycophron of his power in B.C. 353, and restored the ancient government in the different towns. At Phere he is said to have restored popular or at least republican government. (Diod. xvi. 38.) The country however only changed masters for a few years later (B.C. 344) he made it completely subject to Macedonia by placing at the head of the four divisions of the country, tributaries or tetraglyphs, which he re-established, and placed as their governors the aged members of the ancient noble families, who had now become little better than his vassals. (Dem. Philip. ii. p. 71, iii. p. 117; Harpocrat. s. v.) Thessaly from this time remained in a state of dependence on the Macedonian kings (Polyb. iv. 76), till the victory of T. Flaminius at Cynoscephalae in B.C. 197 again gave them a show of independence under the protection of the Romans. (Liv. xxxiii. 34. xxxiv. 51, Polyb. xviii. 30.)

TALARIA, small wings, fixed to the ankles of Mercury and reckoned among his attributes. (ἡλιόλ, Athen. xii. p. 537, t. πτερωσόλιος, Orph. Hymn. xxvii. 4; Ovid. Met. ii. 756; Fulgent. Mythol. 3.) In many works of ancient art they are represented growing from his ankles, as if they were a part of his bodily frame; but more frequently they are attached to him as a part of his dress, agreeably to the description of the poets (Hor. II. xxiv. 340, Od. v. 44; Virg. Aen. ix. 239); and this is commonly done by representing him with sandals, which have wings fastened to them on each side over the ankles. But there is a most beautiful bronze statue of this divinity in the
museum at Naples, in which the artist, instead of the sole of a sandal, has made the straps unite in a rosette under the middle of the foot (see the woodcut), evidently intending by this elegant device to represent the messenger of the gods as borne through space without touching the ground.

Besides Mercury the artists of antiquity also represented Persus as wearing winged sandals (Mon. Math. iii. 28; Ingraham, Vasi Fittiti, i. tav. 70, iv. tav. 166); because he put on those of Mercury, when he went on his aërial voyage to the rescue of Andromeda. (Ovid. Met. iv. 665—677; Res. Stat. 216—220; Eratost. Catast. 23; Hygin. Poet. Astron. i. 12.) The same appendage was ascribed to Minerva, according to one view of her origin, viz. as the daughter of Pallas. (Cic. de Nat. Deor. ii. 29; Tzetzes, Schol. in Lyoph. 355.) [J. Y.]

TALARUS (ταλαρος). [CALATHUS.]

TALA/SASIO. [MATERIALIUM, p. 743, b.]

TALENTUM. [LIBRA, 2d art.; PONDERA; NUMMUS.]

TALIO, from Talis, signifies an equivalent, but it is used only in the sense of a punishment or penalty the same in kind and degree as the mischief which the guilty person has done to the body of another. A provision as to Talio occurred in the Twelve Tables: Si membrum rupit ni cum eo pacit talio esto. (Festus, s. Talionis.) This passage does not state what Talio is. Cato as quoted by Priscian (vi. p. 710, Putsch) says: Si quis membrum rupit aut os fregit, talione proximus cognatus ulciscatur. The law of Talio was probably enforced by the individual or his friends: it is not probable that the penalty was inflicted under a decision of a court of justice. It seems likely that it bore some analogy to the permission to kill an adulterer and adultress in certain cases, which the Julia Lex confirmed; and if so, the law would define the circumstances under which an injured person or his cognati might take this talio. The punishment of death for death was talio; but it is not said that the cognati could inflict death for death. Talio, as a punishment, was a part of the law of Talio, according as it was done to a slave or a free person or to any other person. The law of Talio was probably as follows (Pollux, l. c.; Enstat. in Hom. i. xxiii. 88; Suet. August. 71; Mart. xiii. 1. 6):—1. Mors, eis, eis, Xías (Brunck, Anat. i. 85, 242); 2. Iam, Ómni, Vultus,consis (Propert. iv. 9. 17; Ovid. Art. Amat. ii. 205, Fast. ii. 473), 3. Tekos: Turnio; 4. Tépssai Quaternio; 5. Eās, dērνe, Kósai: Sonia.

Whilst the tali were without artificial marks, the game was entirely one of skill; and in ancient, no less than in modern times, it consisted not merely in catching the five bones on the back of the hand as shown in the woodcut, but in a great variety of exercises requiring quickness, agility, and accuracy of sight. When the sides of the bone were marked with different values, the game became one of chance. [Alea; Tessera.] The two ends were left blank, because the bone could not rest upon either of them on account of its curvature. The four remaining sides were marked with the numbers 1, 3, 4, 6; 1 and 6 being on two opposite sides, and 3 and 4 on the other two opposite sides. The Greek and Latin names of the numbers were as follows (Pollux, l. c.; Enstat. in Hom. i. xxiii. 88; Suet. August. 71; Mart. xiii. 1. 6):—1. Mors, eis, eis, Xías (Brunck, Anat. i. 85, 242); 2. Iam, Ómni, Vultus,consis (Propert. iv. 9. 17; Ovid. Art. Amat. ii. 205, Fast. ii. 473); 3. Tekos: Turnio; 4. Tépssai Quaternio; 5. Eās, dērνe, Kósai: Sonia.

As the bone is broader in one direction than in the other, we say nothing of the bone being thrown or cast up into the air, or emptied out of a dice-box [Frictillus], and observing the numbers on the uppermost sides. The numbers on the four sides of the four bones admitted of thirty-five different combinations. The lowest throw of all was four aces (Ject voltorios quatoor, Plaut. Caro. ii. 3. 78). But the value of a throw (υδως, jactus,) was not in all cases the sum of the four numbers turned up. The highest in value was that called Venus, or jactus Veneraeus (Plaut. Asin. v. 2. 55; Cic. de Div. ii. 59; Suet. l. c.), in which the numbers cast up were all different (Mart. xiv. 14), the sum of them being only fourteen. It was by obtaining this throw that the king...
of the feast was appointed among the Romans (Hor. Car. i. 4, 16, ii. 7. 25) [Symposium], and hence it was also called Basilius. (Plaut. Curc. ii. 3. 90.) Certain other throws were called by particular names, taken from gods, illustrious men and women, and heroes. Thus the throw, consisting of two aces and two trumps, making eight, was denominated Stesichorus. When the object was simply to throw the highest numbers, the game was called plexistodilia. (Polliu.s, vii. 206, ix. 95, 110, 117.) Before a person threw the talii, he often invoked either a god or his mistress. (Plaut. Capt. i. 1. 5. Curc. ii. 3. 77—79.) These bones, marked and thrown as above described, were also used in divination. (Sueton. Fibcr. 14.) [J. Y.]

TAMIAS (ταμιας), was a name given to any person who had the care, managing, or dispensing of money, stock, or property of any description, confided to him; as a steward, butler, housekeeper, storehousekeeper, or treasurer. And the word is applied metaphorically in a variety of ways. But the ταμιας, who will fall under our notice in this article, are certain officers entrusted with important duties by the Athenian government; and more especially the treasurers of the temples and the revenue.

In ancient times every temple of any importance had property belonging to it, beside its furniture and ornaments; and a treasury where such property was kept. Lands were attached to the temple, from which rents accrued; fines were made payable to the god; trophies and other valuables were dedicated to him by the public; and various sacred offerings were made by individuals. There was a ταμιας της χρηματης, who, together with ἐπιταται and ἱεροποιοι, had the custody and management of these funds. The wealthiest of all the temples at Athens was that of Athena in the Acropolis, in which were kept the spoils taken from the Persians (τὰ ἀμύματα τῆς πόλεως), besides magnificent statues, painting, and other works of art. (Demosth. c. Timoc. 741.) To the Goddess large fines were specially appropriated by the law or given by decree of the courts or the assembly; and besides this she received a tenth of all the fines that went to the state, a tenth of all confiscations and prizes taken in war. Her treasurers were called ταμιας τῆς δεοῦ, or τῶν τῆς δεοῦ, or ταμιας της χρηματής τῆς δεοῦ, and sometimes ταμιας τῆς ἱερᾶς (Demosth. c. Androt. 615.) They appear to have existed from an early period. Herodotus (viii. 51, 53) relates that the ταμιας τω λεοφ with a few other men awaited the attack of Xerxes upon the Acropolis, and perished in its defence. They were ten in number, chosen annually by lot from the class of Pentacosimodimni, and afterwards when the distinction of classes had ceased to exist, from among the wealthiest of Athenian citizens. (Harpocr. and Suid. s. v. Ταμιας.) The treasurers of the other gods were chosen in like manner; but they, about the 90th Olympiad, where all united into one board, while those of Pallas remained distinct. (Demosth. c. Timoc. 743.) Their treasurer, however, was transferred to the same place as that of Athena, viz. to the Ophiostodomus of the Parthenon, where they were kept not only all the treasures belonging to the temples, but also the state treasure (δόσια χρήματα, as contra-distinquished from λεοφ), under the care of the treasurers of Pallas. (Aristoph. Pfit. 1194.) All the funds of the state were considered as being in a manner consecrated to Pallas; while on the other hand the people reserved to themselves the right of making use of the sacred monies, as well as the other property of the temples. If the safety of the state should require it. (Thucyd. ii. 13.) Payments made to the temples were received by the treasurers in the presence of some members of the senate, just as public monies were by the Apodectae; and then the treasurers became responsible for their safe custody. As to fines see Epitale, Praktomes, and on the whole of this subject, Böckh, Publ. Econ. of Athens, pp. 160—164.

The treasurer of the revenue, ταμιας or ἐπιτάτη τῆς κοινῆς προσόδου, was a more important personage than those last mentioned. He was not a mere keeper of monies, like them, nor a mere receiver, like the Apodectae; but a general paymaster, who received through the Apodectae all money which was to be disbursed for the purposes of the administration (except the property-taxes which were paid into the war-office, and the tribute from the allies, which was at first paid to the Hellenotamiae, and afterwards to other persons hereafter mentioned), and then distributed it in such manner as he was required to do by the law; the surplus (if any) he paid into the war-office or the θηρίκιον fund. As this person knew all the channels in which the public money had to flow, and exercised a general superintendence over the expenditure, he was competent to give advice to the people upon financial measures, with a view to improve the revenue, introduce economy, and prevent abuses; he is sometimes called ταμιας τῆς διοικήσεως, or ο ἐπι τῆς διοικήσεως, and may be regarded as a sort of minister of finance. To him Aristophanes refers in Epit. 947. He was elected by χρηστόσαρα, and held his office for four years, but was capable of being re-elected. A law, however, was passed during the administration of Lycurgus, prohibiting re-election; so that Lycurgus, who is reported to have continued in office for twelve years, must have held it for the last eight years under fictitious names. The power of this officer was by no means free from control; insomuch as any individual was at liberty to propose financial measures, or institute criminal proceedings for malversation or waste of the public funds; and there was an ἄττητος τῆς διοικήσεως appointed to check the accounts of the superior. Anciently there were persons called Ποισταῖοι, who appear to have assisted the ταμιας in some part of their duties. (Böckh, id. 168) [Poristai.] The money disbursed by the treasurer of the revenue was sometimes paid directly to the various persons in the employ of the government, sometimes through subordinate pay offices. Many public functionaries had their own paymasters, who were dependent on the ταμιας τῆς προσόδου, receiving their funds from him, and then distributing them in their respective departments. Such were the τραπεζαίοι, τεχνητοί, διατοι, ταφρονειοι, ἐκεμελετοι τεφαρων, who received through their own ταμιας such sums as they required from time to time for the prosecution of their works. The payment of the judicial fees was made by the Colacretae (κολακρηται), which, and the providing for the meals in the Prytaneum, were the only duties that remained to them after the establishment of the Apodectae by Cleisthenes. (Aristoph. Vesp. 695, 724.) The ταμιας of the sacred vessels, τῶν

ΤΑΡΡΙΟΙΣ (ταφής). [NAVIS, p. 788, a.]

ΤΑΡΤΙΙ ΛΟΥΙ. [LUDI SACRULARES.]

ΤΑΧΙΑΡΧΙ (ταξιαρχος), were military officers at Athens, who were next in rank to the Strategi. [STRATEGUS.] They were ten in number like the strategi, one for each tribe, and were elected in the same way, namely by χειροτονία. (Dem. Philip. i. p. 47; Polyb. viii. 87.) In war each commanded the infantry of his own tribe (Dem. in Boeot. p. 999; Polyb. vii. 233), and they were frequently called to assist the Strategi with their advice at the war-council. (Thucyd. vii. 60.) In peace they assisted the Strategi in levying and enlisting soldiers, as is stated under STRATEGUS, and they seem to have also assisted the latter in the discharge of many of their other duties.

The Taxiarchs were so called from their commanding ταξις, which were the principal divisions of the hoplites in the Athenian army. Each tribe (φαλάξ) formed a ταξις, whence we find φαλάξ used as synonymous with τάξις. (Lyca. in Agorat. pp. 498, 501.) As there were ten tribes, there were consequently in a complete Athenian army ten ταξις, but the number of men contained in each would of course vary according to the importance of the war. Among the other Greeks the ταξις was the name of a much smaller division of troops. The Λόχος among the Athenians was a subdivision of the ταξις, and the λόχος were probably appointed by the taxiarchs. (Schömann, Ant. Juir. p. 253, &c.)

ΤΑΧΙΑΡΧΙ (ταξιαρχι). [TAXIARCHI.]

ΤΕΓΟΛΑ, TECTOR, TECTORIUM OPUS. [PARIES, p. 870, a.]

ΤΕΓΟΛΑ (νέφυμος, dim. νεφαν, Xen. Hellen. vi. 5. § 9), a roofing-tile. Roofing-tiles were originally made, like bricks, of baked clay (γῆς ὀστής). Byzes of Naxos first introduced tiles of marble about the year 620 B.C. (Paus. v. 10. § 2.) Besides the superior beauty and durability of the material, these tiles could be made of a much larger size than those of clay. Consequently, when they were employed in the construction of the greatest temples, such as that of Jupiter at Olympia (Paus. i.e., the Parthenon at Athens, and the Serapeum at Puteoli, their dimensions were in exact proportion to the other parts of the building; and the effect of the parallel rows of joint-tiles descending from the ridge to the eaves, and terminated by ornamental fronts, with which the lions'-heads (κερατά λεοντις, Vitruv. iii. 5. § 15; χαλέαρα, Hor. Ap. ii. 21) over the cornice alternated, was exceedingly grand and beautiful. How highly this invention was prized by the ancients is proved by the attempt of the Roman censor Q. Fulvius Flaccus to despoil the temple of the Lacinian Juno of some of its marble tiles (τεγολαμα μαρμορωες), in order to adorn another temple which he had vowed to erect in Rome. (Livy. xii. 4; Val. Max. i. 1. § 20.) A still more expensive and magnificent method of roofing consisted in the use of tiles made of bronze and gilt. (Plin. H. N. xxxii. 3. s. 18.)

At Rome the houses were originally roofed with shingles, and continued so by the order of the war with Pyrrhus, when tiles began to super-sede the old roofing material. (Plin. H. N. xvi. 10. s. 36; Niebuhr, Hist. of Rome, vol. iii. p. 559.)

Tiles were originally made perfectly flat, or with nothing more than the hook or nozzle underneath the upper border, which fulfilled the purpose of fixing them upon the rafters. They were afterwards formed with a raised border on each side, as is shown in the annexed woodcut representing the section of four of the tiles remaining at Pompeii.

In order that the lower edge of any tile might overlap the upper edge of that which came next below it, its two sides were made to converge downwards. See the next woodcut representing a tiled roof, from a part of which the joint-tiles are removed in order to show the overlapping and the convergence of the sides. It was evidently necessary to cover the lines of junction between the rows of flat tiles, and this was done by the use of semicylindrical tiles called imbrices. The above woodcut shows the section of three imbrices found at Pompeii, and indicates their position relatively to the flat tiles. This is also shown in the next woodcut. The roof, by the exact adaptation of
Museum and brought thither from Athens. The lions'-heads upon the third and fourth are perforated. [A N T E F I X A .] The frontons, which were ranged along the cornice at the termination of the rows of joint-tiles, were either painted or sculptured so as to represent leaves, aplustria [A P L U S T R E S], or masks. The first woodcut shows three examples of such frontons, which belong to the Elgin collection in the British Museum. They are drawn on a much larger scale than the other objects in the same woodcut. The invention of these graceful ornaments is ascribed to Dibutades of Corinth. (P l i n. H. N. x x x v. 12. s. 43.)

Other highly curious details upon the tiled roofs of Greek temples may be seen in the Unedited Antiquities of Attica, Lon. 1817.

The same arrangement of tiles which was placed round a temple was also to be found within a house which was formed with an opening in the centre. Hence any person who descended from the roof into the open court or impluvium of a house, was said to pass "through the tiles" (p e r t e g u l a s, T e r. E u n. iii. 5. 40; compare G e l i u s, x. 15; S i a t t o w, S t. L u k e, v. 19).

Pilny mentions a kind of tiling under the name p a s o n o c e u m (H. N. x x x x v. 22. s. 44), so called probably because the tiles were semicircular at their lower edge, and overlapped one another like the feathers in the train of a peacock. Ancient sepulchres and urns, made in the form of small temples [F U N U S], often represent very exactly the appearance of a roof with the above-mentioned varieties in the form of the tiles. [J. Y.]

T E I C H O P O E U S (τειχοποιός). Among the various persons to whom was entrusted the management of public works at Athens (ὑποστάται δημοσίων ἔργων), were those whose business it was to build and keep in repair the public walls. It is needless to observe how important to the city of Athens were her walls and fortifications, more especially the long walls, which connected the upper city with the Peiraeeus, and which gave it the advantages of an island. These were maintained at considerable expense. The τειχοποιοί appear to have been elected by χιματοσκία, one from each tribe, and probably for a year. They were considered to hold a magisterial office (ἀρχής), and in that capacity had an ἀγαθοποίησις διαστάσεως. Aeschines calls them ὑποστάται τῶν μεγίστων τῶν ἔργων, and further describes their power and responsibility, for which they had their treasurer (ταγμός), dependent on the treasurer of the revenue. They were liable to render an account (ἐπεθνών) of their management of these funds, and also of their general conduct, like other magistrates. The office of τειχοποιός has been invested with peculiar interest in modern times, on account of its having been held by Demosthenes, and its having given occasion to the famous prosecution of Ctesiphon, who proposed that Demosthenes should receive the honour of a crown before he had rendered his account according to law. As to the nature of the office, and the laws thereto relating, we may probably rely upon the account given by Aeschines. (A e s c h. c. C t e s i p h. 55—57, ed. St e p h e n i u s; B ö c k h, P u b l. E c o n. of A t t l i a n, pp. 170, 203, 2d ed.)

T E L A (τελά), a loom. Although weaving was amongst the Greeks and Romans a distinct trade carried on by a separate class of persons (ὑφάστατα, t e x t o r e s and t e x t r i c e s, t i n t o n e s), who more particularly supplied the inhabitants of the towns with the productions of their skill (C a t o, d e R e R u s t. 135), yet every considerable domestic establishment, especially in the country, contained a loom (C a t o, d e R e R u s t. 10, 14) together with the whole apparatus necessary for the working of wool (λαννικίαι, ρασκείαι, ταναξικίαι). (H e s i o d. O p. e t D i e s, 779; V i r g. G e n e r y c h r. 292—294.)

These occupations were all supposed to be carried on under the protection of Minerva, specially denominated Ἐριδάμης, who was always regarded in this character as the friend and patroness of industry, sobriety, and female decorum. (S e r v. in V i r g. E c l. v. 3.)

When the farm or the palace was sufficiently large to admit of it, a portion of it called the ἰπτώς (ίπτως, V a r r. d e R e R u s t. i. 2) or τετραγωνίου, was devoted to this purpose. (C i c . F . v . r . v i. 26.) The work was there principally carried on by female slaves (q u a s s i l l a r i a e, aι ἐρίδαμης, Τ h e o c r i t . x v. 80; Η o m. O d. i. 356—360, ii. 252, xxi. 250) under the superintendence of the mistress of the house, who herself also together with her daughters took part in the labour, both by instructing beginners and by finishing the more tasteful and ornamental parts. (V i r g . v i. 7. p. 164, ed. S c h n e i d e r; S y m m a c h u s, E p i s t. v i. 40.) But although weaving was employed in providing the ordinary articles of clothing amongst the Greeks in the earliest times, yet as an inventive and decorative art, subservient to luxury and refinement, it was almost entirely Oriental. Persia, Babylonia, Egypt, Phoenicia, Phrygia, and Lydia, are all celebrated for the wonderful skill and magnificence displayed in the manufacture of scarfs, shawls, carpets and tapestry. (C h l a m y s, P a l l i u m, P e p l u m, T a p e s.)

Among the peculiarities of Egyptian manners Herodotus (i. 55; compare A t h e n. i. p. 48, b) mentions that weaving was in that country the employment of the male sex. This custom still continues among some Arab and negro tribes. (W e l s t e d, T r a v e l s, v o l. i. p. 123; P r i c h a r d, R e s e a r c h e s, v o l. i. p. 60, 3d edit.) Throughout Europe, on the other hand, weaving was in the earliest ages the task of women only. The matron, assisted by her daughters, wove clothing for the husband and the sons. (C o l o m. d e R e R u s t. x i i . P r o o f ; P l i n. H. N. v i i i. 48. s. 74; H e r o d. i x. 108.) This domestic custom gives occasion in the works of the epic and tragic poets to some very interesting δείκνυμαι and expressions of affection between near relations. Indeed the recognition, or ἀναγνώσμα, as Aristotle calls it (de A r t. P o e t. 6. § 18, 14. § 21), often depends on this circumstance. Thus Creusa proves herself to be the mother of Ion (E u r i p. I o n. 1416, 1417) by describing the pattern of a shawl which she had made in her youth, and in which she had wrapped her infant son. Iphigenia recognises her brother Orestes on one occasion (E u r i p. I o h. i n T a u r. 814—817), and Electra recognises him on another (A e s c h. C o l o m. 225) by the figured clothing which he wore, and which they had long before woven for him.

Besides the shawls which were frequently given to the temples by private persons, or obtained by commerce with foreign nations, companies or colleges of females were attached to the more opulent temples for the purpose of furnishing a regular supply. Thus the sixteen women, who lived together in a building destined to their use at Olympia, wove a new shawl every five years to be displayed at the games which were then celebrated in honour of
of Hera, and to be preserved in her temple. (Paus. vi. 16. § 2—4; vi. 24. § 8.) [HERAEA.] A similar college at Sparta was devoted to the purpose of weaving a tunic every year for the sitting statue of the Amyclean Apollo, which was thirty cubits high. (Paus. iii. 16. § 9, 10. § 3.) At Athens the company of virgins called ἓρματρις or ἓρμανός, and ὀπφίφωνοι, who were partly of Asiatic extraction, wove the shawl which was carried in the Panathenian procession and which represented the battle between the gods and the giants. (Eurip. Hec. 461—469; Virg. Ciris, 21—35.) [ARRHEPHORIA; PANTHANAEA.] A similar occupation was assigned to young females of the highest rank at Argos. (Eurip. Iph. in Taur. 213—215.) In the fourth century the task of weaving began to be transferred in Europe from women to the other sex, a change which St. Chrysostom deplores as a sign of prevailing sloth and effeminacy. (Ovid. Epist. iv. 371; Plin. H. N. xi. 24. s. 20; Pers. Sat. vi. 75), in Greek κοράς and κρόκη. (Plato, Polit. pp. 297, 301, 393, ed. Bekker; Aelian, H. A. ix. 17; Plut. de Is. et Osir. p. 672.) Instead of κρόκη Plato (Leg. v. p. 386, ed. Bekker) sometimes uses ἐσκηνή, and in the passages referred to he mentions one of the most important differences between the warp and the woof: viz. that the threads of the former are strong and firm in consequence of being more twisted in spinning, whilst those of the latter are comparatively soft and yielding. This is in fact the difference which in the modern silk manufacture distinguishes organzine from tram, and in the cotton manufacture twist from woof. Another name for the woof or tram was ἱβάτην. (Hom. Batr. 181; Eustath. in Hom. ll. xxiii. 762, Od. v. 121.)

The warp was called stamen in Latin (from store) on account of its erect posture in the loom, (Varro, L. L. v. 113, ed. Muller.) The corresponding Greek term στήμως and likewise λστός have evidently the same derivation. For the same reason the very first operation in weaving was to set up the loom, λστόν στήβασα (Hom. Od. ii. 94; Hesiod, Op. et Dies, 779); and the web or cloth, before it was cut down or "descended" from the loom (κατέθεσα ἀπ' ἱστός, Theocrit. xv. 33), was called "vestis pendens," or "pendula tela" (Ovid, Met. iv. 395, Epist. i. 10), because it hung from the transverse beam or Jungh. These particulars are all clearly exhibited in the picture of Circe's loom, which is contained in the very ancient illuminated MS. of Virgil's Aeneid preserved at Rome in the Vatican Library.
with which Gray has made us familiar in his translation, and which describes the loom of "the Fatal Sisters," represents warriors' skulls as supplying the place of these round stones (pondera, Sen. Epist. 91; Plin. H. N. l. c.). The knotted bundles of threads, to which the stones were attached, often remained after the web was finished in the form of a fringe. [Fimbriæ.]

Whilst the comparatively coarse, strong, and much-twisted thread designed for the warp was thus arranged in parallel lines, the woof remained upon the spindle [Funus], forming a spool, bobbins, or pen (πηρη, dim. πηνον, Hom. II. xxiii. 702; Eurip. Her. 469). This was either conveyed through the warp without any additional contrivance, as is still the case in Iceland, or it was made to revolve in a shuttle (παραθλακος, Hesych. s. v. Πηνον: ταιων, Lucret. v. 1352). This was made of box brought from the shores of the Euxine, and was pointed at its extremities, that it might easily force its way through the warp. (Virg. Aen. ix. 476; Ovid. Met. iv. 275, vi. 56, 132, Past. iii. 879.) The annexed woodcut shows the form in which it is still used in some retired parts of our island for common domestic purposes, and which may be regarded as a form of great antiquity. An oblong cavity is seen in its upper surface, which holds the bobbin. A small stick, like a wire, extends through the length of this cavity, and enters its two extremities so as to turn freely. The small stick passes through a hollow cane, which our manufacturers call a quill, and which is surrounded by the woof. This is drawn through a round hole in the front of the shuttle, and, whenever the shuttle is thrown, the bobbin revolves and delivers the woof through this hole. The process of winding the yarn so as to make it into a bobbin or pen, was called irrjjvafeiav (Theocrit. xviii. 32) or ordiri telam (H. A. xxiii. 760-763.) Suppose the warp to have been thus adjusted, and the pen or the shuttle to have been carried through it, it was then decussated by drawing forwards the proper rod, so as to carry one set of the threads of the warp across the rest, after which the shutter was shot back again, and by the continual repetition of this process the warp and woof was interlaced. (Plutarch, vii. sup. conv. p. 592, ed. Reiske; Hom. II. xxiii. 760-763.)

The knotted bundles of threads, to which the stones were attached, often formed the warp, by which the loom was superseded by the comb (pecten, criscis). From the verb σαιδον, to beat with the spatha, cloth rendered close and compact by this process was called σαιδοντος. (Athen. xii. p. 525, d.) This instrument is still used in Iceland exactly as it was in ancient times, and a figure of it copied from Olden, is given in the second woodcut. The spatha was, however, in a great degree superseded by the comb (pecten, criscis), the teeth of which were inserted between the threads of the warp, and thus made by a forcible impulse to drive the threads of the woof close together. (Ovid. Fast. iii. 880, Met. vi. 58; Juv. ix. 26; Virg. Aen. vii. 14; Hom. I. xxii. 448; Aristoph. Aves, 832; Eurip. Ion, 509, 760, 1418, 1492.) It is probable that the teeth were sometimes made of metal (Hom. Od. vi. 63); and they were accommodated to the purpose intended by being curved (pectus uncii, Claudian, in Eutrop. ii. 322), as is still the case in the combs which are used in the same manner by the Hindoos. Among us the office of the comb is executed with greater ease and effect by the reed, lay, or batten.

The lyre [Lyra], the favourite musical instrument of the Greeks, was only known to the Romans as a foreign invention. Hence they appear to have described its parts by a comparison with the loom, with which they were familiar. The terms jugum and stamina were transferred by an obvious resemblance from the latter to the former.
object; and, although they adopted into their own language the Greek word *plectrum* (Ovid. *Met.* xi. 167—170), they used the Latin *rectus* to denote the same thing, not because the instrument used in striking the lyre was at all like a comb in shape and appearance, but because it was held in the right hand and inserted between the stamena of the lyre as the comb was between the stamena of the loom. (Virg. *Aen.* vi. 647; Juv. vi. 290—293; Pers. vi. 2.)

After enumerating those parts of the loom which were necessary to produce even the plainest piece of cloth, it remains to describe the methods of producing its varieties, and more especially of adding to its value by making it either warmer and softer, or more rich and ornamental. If the object was to produce a checked pattern (*sectula dividere*, Plin. *H. N.* viii. 48. s. 74; Juv. ii. 97), or to weave what we should call a Scotch plaid, the threads of the warp were arranged alternately black and white, or of different colours in a certain series according to the pattern which was to be exhibited. On the other hand, a striped pattern (*fasciae*, Dion. *histor.* 33; *viris subtegmine*, Virg. *Aen.* viii. 660) was produced by using a warp of one colour only, but changing at regular intervals the colour of the woof. Of this kind of cloth the Roman *trabea* (Virg. *Aen.* vii. 188) was an example. Checked and striped goods were, no doubt, in the first instance, produced by combining the natural varieties of wool, white, black, brown, &c. [*PALLIUM.*] The wool also was the medium, through which almost every other diversity of appearance and quality was effected. The warp as mentioned above was generally more twisted, and consequently stronger and firmer than the woof; and with a view to the same object different kinds of wool were spun for the warp and for the woof. The consequence was, that after the piece was woven, the fuller drew out its nap by carding, so as to make it like a soft blanket (Plato, *Polit.* p. 302) [*FULLO*]; and, when the intention was to guard against the cold, the warp was diminished and the wool was increased in order to produce a thin kind of cloth, which resembled our dimity or cloth, and the Germans *zwillich.* The sprigs or other ornaments produced in the texture at regular intervals were called flowers (*fiorros*, *fiorrivos*, *frons*, &c.) or feathers (*plumae*). Another term, adopted with reference to the same machinery, was *ξύματον* or *ξύματος*, denoting velvet. In the middle ages it became *ξύματος*, and thus produced the German *sammet.*

The Fates are sometimes mentioned by classical writers in a manner very similar to the description of "the Fatal Sisters" above referred to. (Divus sororum licia, Stat. *Achill.* i. 529; *fatorum incertitudinis contorta licia*, Apul. *Met.* xi.)

As far as we can form a judgment from the language and descriptions of ancient authors, the productions of the loom appear to have fallen in ancient times very little, if at all, below the beauty and variety of the damasks, shawls, and tapestry of the present age, and to have vied with the works of the most celebrated painters, representing first mythological, and afterwards scriptural subjects. In addition to the notices of particular works of this class, contained in the passages and articles which have been already referred to, the following authors may be consulted for accounts of some of the finest specimens of weaving: Euripid., *Ion* 190—202, 1141—1165; Aristot., *Mir. Auscult.* 99; Athen. xii. p. 541; Asterii, *Homilia de Deo et Luz*; Theod. *Prodrom.* *Ith. et Dos. Amor.* ad id.; *Verg. Aen.* v. 250—257, *Virg.* xi. 440; *Plin.* *Met.* vi. 61—128; *Stat. Theb.* vi. 64, 540—547; *Auson.* *Epig.* 36; Lamprid. *Helig.* 28; Claudian, *de VI. Cons. Honor.* 561—577, in *Stichic.* ii. 330—365.

**TELAMONES.** [*ATLANTES.*]

**TELATAE (TELATAI).** [*MYSTERIA.*]

**TELONES (TELONES).** Most of the *taxes* at Athens were farmed by private persons, who took upon themselves the task of collecting, and made periodical payments in respect thereof to the state. They were called by the general name of *telones*, while the farmers of any particular tax were called *εικοστιωναι, πεντακοστολογοι*, &c., as the case might be. The duties were let by auction to the highest bidder. Companies often took them in the name of one person, who was called *φρξωνις* or *τελωνώνις*, and was their representative to the state. Sureties were required of the farmer for the payment of his dues. The office was frequently undertaken by resident aliens, citizens not liking it, on account of the vexatious proceedings to which it often led. The farmer was armed with considerable powers; he carried with him his books, searched for contraband or uncustomed goods, watched the harbour, markets and other places, to
prevent smuggling, or unlawful and clandestine sales; brought a ἰδίαις or other legal process against those whom he suspected of defrauding the revenue; or even seized their persons on some occasions, and took them before the magistrate. To enable him to perform these duties, he was exempted from military service. Collectors (ἐκλογεῖς) were sometimes employed by the farmers; but frequently the farmer and the collector were the same person. (Böckh, *Publ. Econ. of Athens*, p. 355, &c., 2d ed.)

The taxes were let by the Commissioners, acting under the authority of the Senate. (ΠΟΛΕΤΑΚ.) The payments (καταβολαὶ τέλων) were made by the farmer on stated Prytaneias in the Senate-house. There was usually one payment made in advance (προκαταβολῆς), and one or more afterwards, called προσκαταβολήματα. Upon any default of payment, the farmer became ἅϋμος, if a citizen, and he was liable to be imprisoned at the discretion of the court, upon an information laid against him. If the debt was not paid by the expiration of the month Prytaneias, or if not then paid, his property became forfeited to the state, and proceedings to confiscation might be taken forthwith. Upon this subject the reader should consult the speech of Demosthenes against Timocrates. (Schömann, *Ant. Jur. publ. Gr.* p. 317.)

[C. R. K.]

**TELOS (τέλος), a tax.** The taxes imposed by the Athenians and collected at home were either ordinary or extraordinary. The farmer constituted a regular or permanent source of income; the latter were only raised in time of war or other emergency. The ordinary taxes were laid mostly upon property, and upon citizens indirectly in the shape of toll or customs; though the resident aliens paid a poll-tax, called μετοξίων, for the liberty of residing at Athens under protection of the state. (ΜΕΤΟΧΙΟ.) As to the customs and harbour dues, see ΠΕΝΤΕΚΩΣΤη. An excise was paid on all sales in the market, called ἐφορία, though we know not what the amount was. (Harras, *s. v.* Ἐφορία.) And a duty was imposed on aliens for permission to sell their goods there. Slave-owners paid a duty of three obols for every slave they kept; and slaves who had been emancipated paid the same. This was a very productive tax before the fortification of Deceleia by the Lacedaemonians. (Xen. *de Vectig.* iv. 25.) There was also a πορυκόν τέλων, and some others of minor importance, as to which the reader is referred to Böckh (*Publ. Econ. of Athens*, p. 333, 2d ed.). The justice fees (Πραγματικα, Παράστασις, &c.) were a lucrative tax in time of peace. (Thucyd. vi. 91; Böckh, *Id.* p. 345, &c.)

The extraordinary taxes were the property tax (ἐισφορά), and the compulsory services called λειτουργίαι. Some of these last were regular, and recurrent annually; the most important, the τρηποργία, was a war-service, and performed as occasion required. As these services were all performed, wholly or partly, at the expense of the individual, they may be regarded as a species of tax. (*Εισφοράς*; *Λειτουργίας*; *Τρικαρχίας*.)

The tribute (φόρος) paid by the allied states to the Athenian forces, in the flourishing period of the republic, a regular and most important source of revenue. In n. c. 415 the Athenians substituted for the tribute a duty of five per cent. (citéαστη) on all commodities exported or imported by the subject states, thinking to raise by this means a larger income than by direct taxation. (Εικοστ.) A duty of ten per cent. (δεκατάρον) on merchandise passing into and from the Euxine Sea was established for a time by Alcibiades and other Athenian generals. (ΔΕΚΑΜΕ.) This may be regarded as an isolated case. In general, where δεκατάρον are mentioned among the Greeks, they denote the tithes of land; such as the Persian Satraps collected from conquered countries, or such as tyrants exacted of their subjects for the use of land held under them as lords of the whole country. For instance, Peisistratus took a tithe of this kind, which was reduced by his sons to a twentieth. The state of Athens held the tithes of some lands; other tithes were assigned to the temples or service of the Gods, having been dedicated by pious individuals, or by reason of some conquest or vow, such as that recorded by Herodotus (vi. 132).

Other sources of revenue were derived by the Athenians from their mines and public lands, and from fines, confiscations. The public demesne lands, whether pasture or arable, houses or other buildings, were usually let by auction to private persons. The conditions of the lease were engraved on stone. The rent was payable by Prytaneis. If not paid at the stipulated time, the lessee, if a citizen, became ἅϋμος, and subject to the same consequences as any other state debtor. (ΤΕΙΧΕΜΑ.)

These various sources of revenue produced, according to Aristophanes, an annual income of two thousand talents in the most flourishing period of the Athenian empire. (Vesp. 600.) See the calculations of Böckh, *Id.* p. 453, &c.

Τέλειον signifies "to settle, complete, or perfect," and hence "to settle an account," and generally "to pay." Thus Τέλος comes to mean any payment in the nature of a tax or duty. The words are connected with συλλέω in German, and the old sense of talle in English, and the modern word tall. (Arnold, *ad Titus, i. 58.*) Though τέλος may signify any payment in the nature of a tax or duty, it is more commonly used of the ordinary taxes, as customs, &c. Τέλος, τέλειον is used with reference to the property-tax, in the sense of being rated in a certain proportion, or, which is the same thing, belonging to a particular class of rate-payers. Thus ἴσην δέ γὰρ οἱ ἴσην τέλειον, or οἱ ἴσην τέλειον, means, to belong to the class of knights. And the same expression is used metaphorically, without any immediate reference to the payment of a tax. Thus οἱ ἄνδραι τέλειοι, is to be classed among adults. So οἱ Βουλατοὶ τέλειοι, Herod. vi. 108. Ἡρόδ. *Ἑορτάλεια* signifies the right of being taxed on the same footing, and having other privileges, the same as the citizens; a right sometimes granted to resident aliens. (ΜΕΤΟΧΙΟ.) Ἀτέλειον signifies an exemption from taxes, or other duties and services; an honour very rarely granted by the Athenians. (ἈΤΕΛΕΙΑ.) As to the farming of the taxes, see ΤΕΛΟΝΕΣ. For an epitome of the whole subject, see Schömann, *Ant. Jur. publ. Gr.* p. 314, &c.

[C. R. K.]

**ΤΕΜΕΝΟΣ (τέμενος), a piece of land cut or marked off from other land. The name was particularly applied to a piece of land cut off from the public land and appropriated to the support of a king in the heroic age (Hom. *Od.* vi. 193, vii. 319, xx. 184, Od. vi. 293, xi. 183), and likewise to a
TEMPLE.

piece of land, cut off from common uses, and dedicated to a god. In Attica, there appears to have been a considerable quantity of such sacred lands (teµe³nu), which were let out by the state to farm; and the income arising from them was appropriated to the support of the temples, and the maintenance of public worship. (Xen. Vech. iv. 19; Harpocrat. s. v. ναος Μονοπατου; Böckh, Publ. Econ. of Athens, p. 365, 2d ed.)

TEM. [ARPATRUM; CURRUS.]

TEMPLE is the same word as the Greek τεµενος, from τεµενειν to cut off, for templum, according to Servius (ad Aen. i. 446), was any place which was circumscribed and separated by the augurs from the rest of the land by a certain solemn formula. The technical terms for this act of the augurs are liberare and effari, and hence a templum itself is a locus liberatus et effatus. A place thus set apart and hallowed by the augurs was always intended to serve religious purposes, but chiefly for taking the auguria, ("Templum locus augari aut auspicii causa quibustam conceptis verbis finitus," Varro, de Ling. Lat. vi. p. 65, Bip.) When Varro (de Ling. Lat. v. p. 65, Bip.) says that a locus ef-fìtus was always outside the city, we must remember that this only means outside the pomoerium, for the whole space included within the pomoerium was itself a templum, i.e. a place in which auspices could be taken [POMOERIUM]; but when they were to be taken in any place outside the pomoerium, it was always necessary for such a place to be first circumscribed and sanctified by the augur (liberare et effari). The place in the heavens within which the observations were to be made was likewise called templum, as it was marked out and separated from the rest by the staff of the augur. When the augur had defined the templum within which he intended to make his observations, he fixed his tent in it (tabernaculum capere), and this tent was likewise called templum, or more accurately, templum minus. To this minus templum we must refer what Servius (ad Aen. iv. 200) and Festus (s. v. minora templum) state, that a templum was enclosed with planks, curtains, &c., attached to posts fixed in the ground, and that it had only one door (exitus). The place chosen for a templum was generally an eminence, and in the city it was the are, where the fixing of a tent does not appear to have been necessary, because here a place called auguraculum was once for all consecrated for this purpose. (Paul Dic. s. v. Augura-canum; comp. Liv. i. 18, iv. 18; Cic. de Off. iii. 16.)

Besides this meaning of the word templum in the language of the augurs, it also had that of a temple in the common acceptation. In this case too, however, the sacred precinct within which a temple was built, was always a locus liberatus et effatus by the augurs, that is, a templum or a fanum (Liv. x. 37; Varro, de Ling. Lat. v. p. 65, Bip.); the consecration was completed by the pontiffs, and not until inauguration and consecration had taken place, could sacra be performed or meetings of the senate be held in it. (Serv. ad Aen. i. 446.) It was necessary then for a temple to be sanctioned by the gods, whose will was ascertained by the augurs, and to be consecrated or dedicated by the will of man (the pontiffs). Where the sanction of the gods had not been obtained, and where the mere act of man had consecrated a place to the gods, such a place was only a sacrum, sacrarium, or sacellum. [SACRARUM; SACELLUM.] Varro (ap. Coll. xiv. 7 § 7) justly considers the ceremony performed by the augurs as essential to a temple, as the consecration by the pontiffs took place also in other sanctuaries which were not templum, but mere sacra or aedes sacrae. Thus the sanctuary of Vesta was not a templum but an aedes sacra, and the various curiae (Hostilia, Pompeia, Julia) required to be made templum by the augurs before senatorial consulta could be made in them. In what manner a templum differed from a delubrum is more difficult to decide, and neither the ancient nor modern writers agree in their definitions. Some ancients believed that delubrum was originally the name given to a place before or at the entrance of a temple, which contained a font or a vessel with water, by which persons, before entering the temple, performed a symbolic purification (Serv. ad Aen. iv. 56, ii. 225; Corn. Fronto, quoted by Dacier on Fest. s. v. Delubrum); others state that delubrum was originally the name for a wooden representation of a god (δελευρος), which derived its name from librum (the bark of a tree), which was taken off (delibarere) before the tree was worked into an image of the god, and that hence delubrum was applied to the place where this image was erected. (Fest. s. v. Delubrum; Massur, Sab. ap. Serv. ad Aen. ii. 225.) Hartung (Die Rel. d. Röm. i. p. 143, &c.) derives the word delubrum from liber (anciently laber), and thinks that it originally meant a locus liberatus, or a place separated by the augur from the profane land, in which an image of a god might be erected, and sacred rites be performed. A delubrum would therefore be a sanctuary, whose chief characteristic was its being separated from the profane land. But nothing certain can be said on the subject. (Comp. Macrobi. Sat. iii. 4.)

After these preliminary remarks, we shall proceed to give a brief account of the ancient temples, their property, and their ministers, both in Greece and Rome. We must, however, refer our readers for a more detailed description of the architectural structure of ancient temples to other works, such as Stieglitz, Archäologie der Baukunst, and others, especially as the structure of the temples varied according to the divinities to whom they were dedicated, and other circumstances.

Temples in Greece.—Temples appear to have existed in Greece from the earliest times. They were separated from the profane land around them (τατον βηθυλα, οτα βηθυλα), because every one was allowed to walk in the latter. (Schol. ad Soph. Oed. Col. 10.) This separation was in early times indicated by very simple means, such as a string or a rope. (Paus. viii. 10 § 2.) Subsequently, however, they were surrounded by more efficient fences, or even by a wall (ἐκαταβολος, ιερονος, Herod. vi. 134; Polux. i. 19; Paus. passim), the entrance to which was decorated, as architecture advanced, with magnificent Propylaæ [PROPYLEA]. The whole space enclosed in such a περιβολος was called τεμενος, or sometimes λεπν (Herod. ix. 36, vi. 19, with Valckenaer's note; Thucyd. v. 18); and contained, besides the temple itself, other sacred buildings, and sacred ground planted with groves, &c. Within the precincts of the sacred enclosure no dead were generally allowed to be buried, though there were some exceptions to this rule, and we have instances of persons being buried in or at least near certain temples. The religious laws of the island of Delos did not allow any
TEMPLUM.

corpses to be buried within the whole extent of the island (Thucyd. iii. 104 : comp. Herod. i. 64), and when this law had been violated, a part of the island was first purified by Peisistratus, and subsequently the whole island by the Athenian people.

The temple itself was called  ναός, and at its entrance fonts ( νεφελονταίμα) were generally placed, that those who entered the sanctuary to pray or to offer sacrifices might first purify themselves. (Poll. i. 10 ; Herod. i. 51.) In the earliest times the Greek temples were either partly or wholly made of wood (Paus. v. 20. § 3 ; 16. § 1, viii. 10. § 2), and the simplest of all appear to have been the στυγοι, which were probably nothing but hollow trees in which the image of a god or a hero was placed, as in the Isthmian tripod. (see Gropfling; Schol. ad Soph. Tract. 1169 ; ) for a temple was originally not intended as a receptacle for worshippers, but simply as an habitation for the deity. The act of consecration, by which a temple was dedicated to a god, was called τεμπερος. The character of the early Greek temples was dark and mysterious, for they had no windows, and they were always towards the west, but most of the temples still existed in Attica, Ionia, and Sicily have their entrance towards the east. Architecture, however, in the construction of magnificent temples, made great progress even at an earlier time than either painting or statuary, and long before the Persian wars we hear of temples of extraordinary grandeur and beauty. All temples were built either in an oblong or round form, and were mostly adorned with columns. Those of an oblong form had columns either in the front alone, in the fore and back fronts, or on all the four sides. Respecting the original use of these porticoes see Porticus. The classification of temples, according to the number and arrangement of their columns, will be described presently. The friezes and megaliths of temples, both Greek and Roman, the latter being chiefly imitated from the former. They were either quadrangular or circular. Quadrangular Temples were described by the following terms, according to the number and arrangement of the columns on the fronts and sides.

1. ιστυλος, astyle, without any columns, (Leo-
nidas Tarent. in Brunn. Anal. i. p. 237 ; Plin. H. N. xxxiv. 8.)

2. Εν παραπτασι, in antis, with two columns in front between the antae. (Pind. Ol. vi. 1.)

3. Πρωστυλος, prostyle, with four columns in front.

4. Αμφιφροστυλος, amphiprostyle, with four columns at each end.

5. Περιπτερος or ἄμφιπτερον, peripteral, with columns at each end and along each side.

6. Διπτερος, dipleral, with two ranges of columns (τετερας) all round, the one within the other.

7. Ψευδοπεριτερος, pseudoperipteral (Vitruv. iv. 7), where the sides had only half-columns (at the angles three-quarter columns), attached to the walls of the cella, the object being to have the cella large without enlarging the whole building, and yet to keep up something of the splendour of a peripteral temple. Names were also applied to the temples, as well as to the porticoes themselves, according to the number of columns in the portico at either end of the temple; namely, τετράτυλος, tetrastyle, when there were four columns in front, εξάτυλος, hexastyle, when there were six, δέκατυλος, decastyle, when there were ten. There were never more than ten columns in the end portico of a temple; and when there were only two, they were always arranged in that peculiar form called in antis (Εν παραπτασι). The number of columns in the end porticoes was never uneven, but the number along the sides of a temple was generally uneven. The number of the side columns varied: where the end portico was tetrastyle, there were never any columns at the sides, except false ones, attached to the walls, as in the temple of Fortuna Virilis at Rome, which has a tetrastyle portico, with a column behind each corner column, and then five false columns along each side of the cella: where it was hexastyle or octastyle, there were generally 13 or 17 columns at the sides, counting in the corner columns; sometimes a hexastyle temple had only eleven co-
TEMPLUM.

The last arrangement resulted from the rule adopted by the Roman architects, who counted by intercolumniations (the spaces between the columns), and whose rule was to have twice as many intercolumniations along the sides of the building as in front; another example of the rule is furnished by the above-mentioned temple of Fortuna Virilis, which has four columns in front and, altogether, seven on each side. The Greek architects, on the contrary, counted by columns, and their rule was to have twice as many columns along the sides as in front, and one more*, counting the corner columns in each case: sometimes, however, they followed the other rule, as in the temple at Mylasa, where there are six columns in front and eleven at each side. Another set of terms, applied to temples and other buildings having porticoes, as well as to the porticoes themselves, was derived from the distances between the columns as compared with the lower diameters of the columns. They were the following:—

1. Πυκνότυπος, pycnostyle, the distance between the columns a diameter of a column and half a diameter.
2. Σύστυλος, systyle, the distance between the columns two diameters of a column.
3. Εὐστυλός, eustyle, the distance between the columns two diameters and a quarter, except in the centre of the front and back of the building, where each intercolumniation (intercolumnium) was three diameters; called eustyle, because it was best adapted both for beauty and convenience.
4. Διαστυλός, diastyle, the intercolumniation, or distance between the columns, three diameters.
5. Ἀραιόστυλος, aracostyle, the distances excessive, so that it was necessary to make the epistyle (ἐπίστυλον), or architrave, not of stone, but of timber. [ΕΠΙΣΤΥΛΙΟΝ.]

These five kinds of intercolumniation are illustrated by the following diagram: —

The following elevations and plans of temples will aid the reader in understanding the different terms descriptive of the number and arrangement of the columns. They are taken from the plates to Hirt's Geschichte der Baukunst; and although, for the sake of greater clearness and convenience, they are not all taken from actual buildings, but are general representations of each form, yet they are not merely imaginary, for they are founded on a careful comparison of existing remains with the descriptions of Vitruvius.

I. IN ANTIS.

An engraving of a temple of this form has been given under ΑΝΤΑΞΕ.

* The Roman rule might also be stated according to the number of columns thus:—twice as many columns along the sides as in front, and one less.

II. PROSTYLE, TETRASTYLE, of the Ionic order.

The above engraving exhibits clearly the prodomus or pronaoς, or space enclosed by the portico and the side walls projecting beyond the front wall; and the cela, with the statue of the god opposite to the entrance.
Vitruvius (iii. 1) says that "the Amphiprostyle has every part which the Prostyle has, and moreover it has columns and a pediment in the posticum after the same manner." This posticum (the Greek opisthodomus) appears to have been of two kinds; either a mere portico attached to the back wall of the cella, or a larger space, as shown in the figure.

The above plan is that of a Roman Peripteros: to represent the Grecian Peripteros two columns should be added to each side, and the length thus gained thrown into the opisthodomus. In this form there were two columns between the antae terminating the projecting walls; and the three intercolumniations thus formed were fenced with marble railings (plutei, Vitruv. iv. 4), with gates in them giving access to the prodomus, as shown by the lines in the figure.

This species of temple was not only more splendid than the former, but also more fully adapted for the performance of grand religious ceremonies, as the continuous portico all round it would give shelter and passage to a large number of people. Accordingly we find that several of the most celebrated Greek temples are of this form; such as that of Zeus Nemeus between Argos and Corinth, of Concord at Agrigentum, of Theseus at Athens, which has no pillars between the antae of the posticum.
V. Dipteral and Pseudodipteral, Octastyle, of the Ionic order. To save space, the one side of the cut represents half of the dipteral temple, the other side half of the pseudodipteral.

The Dipteros may be considered as a Peripteros, increased in size and magnificence by the addition of another row of pillars along each side; the Pseudodipteros as a Peripteros with the side columns moved outwards over the space of one column and intercolumniation, so as to allow of eight columns in front. Vitruvius, who describes the latter first, assigns its invention to the architect Hermogenes. From the expense of such edifices, there were naturally very few examples of them. The far-famed temple of Artemis at Ephesus, and that of Quirinus at Rome, were dipteral. That of Artemis at Magnesia, built by Hermogenes, was pseudodipteral.

VI. Hypaethral, Decastyle, of the Corinthian order.

Every decastyle temple was also hypaethral, but there were also octastyle and even hexastyle hypaethral temples. A question has lately been raised whether there ever were any hypaethral temples. The two sides of the question will be found discussed in the following works: Ross, Keine Hypäthraltempel mehr, in his Hellenika, pt. i. pp. 1—39, Halle, 1846, 4to., and Bötticher, Der Hypäthraltempel, auf Grund des Vitruwischen Zeugnisses, gegen Prof. D. L. Ross, erwiesen, Potsdam, 1847, 4to.
These were the chief normal forms of quadrangular temples. The variations made upon them, especially by the union of two or more temples in one building, were very numerous. (See Hirt, Stieglitz, and the other authorities.) One form deserves particular notice, inasmuch as it was certainly very ancient, and some writers have supposed that it contained the germs of all the other forms; this was what Vitruvius called the Tuscan Temple. (Vitruv. iv. 7.) The passage of Vitruvius is very difficult, and has been differently explained. (Comp. Stieglitz and Hirt.) The following engraving is so constructed as to contain a representation of the three chief forms, real or supposed, of the Tuscan temple.

The above plan is divided by the lines $a$, $b$, into three portions, by completing each of which, we have three different plans. Thus, if the middle portion be retained as it is, and the part to the right of $b$ be made like that to the left of $a$, we have one of the supposed forms. Again, if the middle portion be retained, and the two sides completed on the same plan, namely, like the portion to the left of $a$, but without the projecting side wall, and with a round column in place of the square pillar which terminates it, we have what others suppose to have been the true original form of the Tuscan temple. In either case, the characteristic feature is the union of three cellae in one temple, dedicated to three associated deities, the middle cella, which (as shown in the figure) was larger than the other two, being assigned to the chief of the three divinities; as in the great temple on the Capitol, the middle cella of which was dedicated to Jupiter, the cella on the right side of the middle one to Minerva, and the remaining cella to Juno. Lastly, a later variation of the Tuscan temple, in which its chief peculiarity was lost, was made by retaining only the middle cella, and carrying a peristyle of columns.
along each side of it, as represented in the right-hand division of the plan and elevation.

Circular Temples, properly so called, were probably not used by the Greeks in early times. The round buildings of which we have notices were either tholi or mere monumental edifices. Several round buildings of this kind are mentioned by Pausanias; such as the tholus at Athens, in which there were several small silver statues; where the Prytaneis sacrificed (Paus. i. 5), and where, according to Pollux (viii. 155) they also banquetsed. There was another tholus at Epidaurus, in the sacred grove of Asclepios, which he describes as well worth seeing: it was built of white marble, after the design of Polycleitus, and adorned on the inside with paintings by Pausias. (Paus. ii. 27.) Vitruvius (iv. 7) however recognizes two regular forms of circular temples, to which a third must be added.

I. The MONOPTEROS consisted of a single circle of columns, standing on a platform (tribunal), the outer wall of which formed a stylobate or continuous pedestal for the columns, and surmounted by a dome; but without any cella. For the proportions see Vitruvius. The remains of such a temple have been found at the ruins of Puteoli.

II. The PERIPTEROS had a circular cella surrounded by a single peristyle of columns, standing on three steps, and the whole surmounted by a dome. Specimens are preserved in the so-called temples of Vesta at Rome (see wood-cut on p. 299) and at Tivoli.

The proportions of the temples of this form were very carefully regulated. The existing specimens agree in most particulars with the rules laid down by Vitruvius, according to whom the distance of the wall of the cella from the edge of the substruction was one-fifth of the whole diameter of the substruction; and consequently the diameter of the cella (including its walls) was three-fifths of the whole; the internal diameter of the cella was equal to the height of the columns: the height of the dome was equal to a semi-diameter of the whole building; and the centre of the dome was surmounted by a pyramid (or cone), to support an ornament equal in height to the capitals of the columns. (For a full discussion of the passage, see Hirt, Lehre d. Gebäude, pp. 29, 30.)

Both species of round temples are mentioned by Servius (ad Aen. ix. 406), who says that they were peculiar to Vesta, Diana, Hercules, and Mercury; and he distinguishes the Monopteros by the following description: — tectum sine parietibus columnis subnixum.
III. Another form, of which we have the chief example in the Pantheon, besides some smaller specimens (see Hirt, § 15), consists of a circular cela surmounted by a dome, without a peristyle, but with an advanced portico. The following engraving represents such a temple, with a prostyle tetrastyle portico, of two slightly different kinds (compare the left and right sides of the portico in the plan); the niches are for the statues of three associated deities, such as Apollo, Diana, and Latona; and thus this form of temple may be regarded, in its religious design, as a variation of the old Tuscan temple.

The portico of such a temple might be hexaetyle, or even octastyle, as in the Pantheon. Respecting the more minute details of the construction of temples of both sorts, which our space does not permit us to enter into, the reader is referred to the works of Hirt and Stieglitz, as quoted above; and lists and brief descriptions of the chief Greek and Roman temples, with references to the works in which they are more fully described, will be found in Müller's *Handbuch der Archäologie der Kunst*, under the heads of the respective periods in the history of the art.

Besides the terms which have now been explained, temples were designated by the names of the deities to whom they were dedicated, as the *Ωλυμπίων θέατρον* or temple of Zeus Olympius; the *Ναός νεράιδων*, or temple of Athena Parthenos, &c.; and sometimes a name was given according to some peculiar feature of the structure, as in the case of the Parthenon at Athens, which was called *Hecatompedon*, because its front was exactly 100 feet wide.

Independently of the immense treasures contained in many of the Greek temples, which were either utensils or ornaments, and of the tithes of spoils, &c. (Herod. vii. 132; Diodor. xi. 3; Polyb. iv. 33), the property of temples, from which they derived a regular income, consisted of lands (*τεύχη*), either fields, pastures, or forests. In Attica we sometimes find that a demos is in possession of the estates of a particular temple: thus the Peiraeus possessed the lands belonging to the Theseum: in what their right consisted is not known; but of whatever kind it may have been, the revenues accruing from such property were given to the temples, and served to defray the expenses for sacrifices, the maintenance of the buildings, &c. For this purpose all temple-property was generally let out to farm, unless it was, by some curse which lay on it, prevented from being taken into cultivation. (Harpocrat. s. v. Ἀνδρωποβράχων: comp. Isocrat. *Areop. 11.* The rent for such sacred domains was, according to Demosthenes (*in Eubulid*. p. 1318), received by the demarch, probably the demarch of the demos by which the sacred domain was occupied; for in other cases we find that the rents were paid to the authorities entrusted with the administration of the temples. (Büch., *Saatke*. i. p. 327, &c., ii. p. 338.) The supreme control over all property of temples belonged to the popular assembly. (Demosth. in *Nexer*. p. 1330.)

Respecting the persons entrusted with the superintendence, keeping, cleaning, etc., of temples, we scarcely possess any information. [ÆDI IT U L I]

We have mention of persons called κλεισότοι, κρηζότοι, νεοθάλακες, who must have been employed as guards and porters (Aeschyl. *Suppl*. 294), although it is not certain whether these functions were not performed by priests who were occasionally called by names derived from some particular function. At Olympia *φασοβράχων* were appointed who belonged to the family of Pheidias, and had to keep clean the statue of the Olympian Zeus. (Paus. v. 14. § 5.)

**Temples at Rome.** In the earliest times there appear to have been very few temples at Rome, and in many spots the worship of a certain divinity had been established from time immemorial, while we hear of the building of a temple for the same divinity at a comparatively late period. Thus the foundation of a temple to the old Italian divinity Saturnus, on the capitoline, did not take place till

The portico of such a temple might be hexastyle, or even octastyle, as in the Pantheon.
TERMINALIA.

498 B.C. (Liv. ii. 21; Dionys. vi. 1; Plut. Pomp. 12.) In the same manner Quirinus and Mara had temples built to them at a late period. Jupiter also had no temple till the time of Ancus Martius, and the one then built was certainly very insignificant. (Dionys. ii. 34; Liv. i. 33.) We may therefore suppose that the places of worship among the earliest Romans were in most cases simple altars or sacella. The Roman temples of later times were constructed in the Greek style. The cella was here, as in Greece, the inner spacious part of the temple which contained the statue or statues of the gods, and an altar before each statue. (Vitruv. iv. 5.) The roof which covered the cella is called testudo, but it was in most cases not wholly covered, in order to let the light in from above. (Varro, ap. Serv. ad Aen. i. 505.) The entrance of a Roman temple was, according to Vitruvius, if possible, always towards the west, which side was at the same time faced by the image of the divinity, so that persons offering prayers or sacrifices at the altar looked towards the east. (Comp. Isid. xv. 4, 7; Hygin. de Lem. 53, ed. Goes.) If it was not practicable to build a temple in such a position, it was placed in such a manner that the greater part of the city could be seen from it; and when a temple was erected by the side of a street or road, it was always so situated that those who passed by could look into it, and offer their salutations to the deity.

As regards the property of temples, it is stated that in early times lands were assigned to each temple, but these lands were probably intended for the maintenance of the priests alone. (Sackros.) The sacra publica were performed at the expense of the treasury, and in like manner we must suppose, that whenever the regular income of a temple, arising from fees and fines, was not sufficient to keep a temple in repair, the state supplied the deficiency, unless an individual volunteered to do so.

The supreme superintendence of the temples of Rome, and of all things connected with them, belonged to the college of pontiffs. Those persons who had the immediate care of the temples were the arktylos. [L.S.] and [P. S.] The tempora liques actio. [Actio.] temporis praescriptio. [Praescriptio.]

TENSEAE. [Thenesae.]

TEPIDARIUM. [Balneae, p. 190, a.]

TERMINALIA, a festival in honour of the god Terminus, who presided over boundaries. His statue was merely a stone or post stuck in the ground to distinguish between properties. On the day of the festival the two owners of adjacent property crowned the ground to distinguish between properties. On the god Terminus, who presided over boundaries. His praises of the god. (Ovid. Fast. i. 509.) They concluded with singing the psalms of the god. (Ovid. Fast. ii. 639, &c.) The public festival in honour of this god was celebrated at the sixth milestone on the road towards Laurentum (Ed. 628), doubtless because this was originally the extent of the Roman territory in that direction.

The festival of the Terminalia was celebrated a. d. VII. Kal. Mart., or the 23rd of February on the day before the Regifugium. The Terminalia was celebrated on the last day of the old Roman year, whence some derive its name. We know that February was the last month of the Roman year, and that when the intercalary month Mercedonius was added, the last five days of February were added to the intercalary month, making the 23rd of February the last day of the year. (Varro, L. L. vi. 13, ed. Müller; Macroth. Sat. i. 13.) When Cicero in a letter to Atticus (vi. 1) says, Acepia tuus litteras a. d. V. Terminalia (i.e. Feb. 19), he uses this strange mode of defining a date, because being then in Cilicia he did not know whether any intercalation had been inserted that year. (Calendarium, pp. 299, b. 250, a.)

TERNUCIIUS. [As, p. 141, a.]

 Tesserae, dim. Tesseraria, tesserea, and tesseller (κέβος), a square or cube; a die; a token.

The use of small cubes of marble, earthenware, glass, precious stones, and mother-of-pearl for making tessellated pavements (parvinuenta tessellata.) Sueton. Juv. 46) is noticed under Domus, p. 431 and Pictura, p. 915.

The dice used in games of chance [Alea] had the same form, and were commonly made of ivory, bone, or some hard, especially privet wood, especially privet, which is often distinguished from tesserae by classical writers. (Gellius, xviii. 13; Cic. de Sen. 16.) Whilst four tail were used in playing, only three tesserae were anciently employed. Hence arose the proverb, ἧ τρις ἕκτος ἴ ἑ τρεῖς κέβοι, i.e. "either three sizes or three aces," meaning, all or none (Plut. Leg. xii. ad fin.; Schol. in loc. Pherecrates, p. 49, ed. Runkel); for κέβοι was used to denote the ace, as in the throw διὸ κέβοι καλεῖ τίττορα, i.e. c. l. 1, 1, 5, = 6. (Rupoli, p. 174, ed. Runkel; Aristoph. Ran. 1447; Schol. in loc.) Three sizes is mentioned as the highest throw in the Agamemnon of Aeschylus (32). As early as the time of Eustaithius (in Od. 1. 107) we find that the modern practice of using two dice instead of three had been established.

The ancient sometimes played with dice λασιστoδαί (⟩) when the object was simply to throw the highest numbers. At other times they played with two sets of Latriunculi or draughtsmen, having fifteen men on each side. The board (alexis tessaria, Plin. H. N. xxvii. 2. s. 6; alveolus, Gellius, i. 20, xiv. 1) was divided by twelve lines, so that the game must have been nearly or altogether the same with tri-crac or backgammon. (Brunck, Ausl. iii. 60; Jacobs, ad loc.) Perhaps the duodecim scripta of the Romans was the same game. (Abacus.)

Objects of the same materials with dice, and either formed like them or of an oblong shape, were used as tokens for different purposes. The tessera hospitalis was the token of mutual hospitality, and is spoken of under Hostiutum, p. 619, a. This token was probably in many cases of earthenware, having the head of Jupiter Hospitalis stamped upon it. (Plaut. Poen. 1. 25; 2. 87-99.)

Tesserae frumentariae and nummulariae were tokens given at certain times by the Roman magistrates to the poor, in exchange for which they received a fixed amount of corn or money. (Sueton. Aug. 40, 42, Nero, 11.) [Frumentariae leges.] Similar tokens were used on various occasions, as they arose in the course of events. For example, when
the Romans sent to give the Carthaginians their choice of peace or war, they sent two tesserae, one marked with a spear, the other with a caduceus, requesting them to take either the one or the other. (Gellius, x. 27.)

From the application of this term to tokens of various kinds, it was transferred to the word used as a token among soldiers. This was the tessera militaris, the ωὐρήμα of the Greeks. Before joining battle it was given out and passed through the ranks in a method by which the soldiers might be able to distinguish friends from foes. Thus at the battle of Cannae the word was “Zeus the Saviour and Victory,” and so a subsequent engagement by the same troops “Zeus the Saviour, Hercules the Leader.” (Xen. Anab. i. 8. § 16, vi. 3. § 25.) The soldiers of Xenophon used a verbal sign for the same purpose when they were encamped by night (vii. 3. § 34). Aeneas Tacticus (e. 24) gives various directions necessary to be observed respecting the word. Respecting the tessera or watchword in the Roman camp, see Castrea, p. 251, a. [J. Y.]

TESTA. [Fictile.]

TESTAMENTUM is "mentis nostrae justa contestatio in id solemniter facta at post mortem nostram valeat." (Gell. Epig. tit. 20; comp. Ulp. Dig. 28. tit. 1. s, 1, where he has "justa sententia.") In this passage the word Justa means "juro facta," "as required by law." The word Contestatio is apparently used with reference to the origin of the term Testamentum, which is to be referred to "Testari," which signifies "to make a solemn declaration of one's will." Gellius (vi. 12) properly finds fault with Servius Sulpicius for saying that the word is compounded "a mentis contestatione." The person who made a Testamentum was Testator. (Sucton. Ner. 17; Dig. 28. tit. 3. § 17.)

In order to be able to make a valid Roman will, the Testator must have the Testamentificatio (Cic. ad Fam. vii. 21), which term expresses the legal capacity to make a valid will: the word has also another signification. [Heres, p. 598, b.] The testamentificatio was the privilege only of Roman citizens who were patresfamilias. The following persons consequently had not the testamentificatio: those who were in the Potestas or Manus of another, or in Mancipii causa, as sons and daughters, wives in marriage and slaves with respect to their master. Caesar Peculum [Patria Potestas] a filiusfamilias had the privilege of testamentary disposition: Latini Juniani, Dediticii: Peregrini could not dispose of their property according to the form of a Roman will: a person who was doubtful as to his status, as for instance if his father had died abroad and the fact was not ascertained, could not make a testament: an Impubes could not dispose of his property by will even with the consent of his Tutor; when a male was fourteen years of age, he obtained the testamentificatio, and a female obtained the power, subject to certain restraints, on the completion of her twelfth year: muti, surdi, furiosi, and prodigi "quibus lege bonus interdictum est" had not the testamentificatio; the reasons why these several classes of persons had not the testamentificatio illustrate the Roman mode of deducing legal conclusions from general principles: — the Mutus had not the Testamentificatio, because he could not utter the words of Necuncipatio; the Surdus, because he could not hear the words of the Emor familiae; the Furiosus, because he had not intellectual capacity to declare his will (testari) about his property; and the Prodigus, because he was under a legal restraint, so that he had no commercium, and consequently could not exercise the formal act of the familiae mancipatio. (Ulp. Frag. tit. 20. s. 13; Curator; Imperius.) As to the testament which a man has made before he becomes Furiosus, see Dig. 28. tit. 1. s. 20. § 4.

Women had originally no testamentificatio, and when they did acquire the power, they could only exercise it with the auctoritas of a Tutor. Of course a daughter in the power of her father, whether she was unmarried or married, and a wife in manu of her husband, could never make a will. The rules therefore as to a woman’s capacity to make a will, could apply only to unmarried women after the death of their father and to widows who were not in the power of a father. This subject requires explanation.

Cicero (Top. 4) observes “if a woman has made a will, and has never undergone a capitis diminutio, it does not appear that the Bonorum Possessio can be granted in pursuance of such will according to the Praetor’s Edict; for if it could, the Edict must give the Possessio in respect of the wills of Servi, Exules, and Pueri.” Cicero means to say that if a woman made a will without having sustained a capitis diminutio, the will could have no effect at all: and he derives his argument “ab adjunctis,” for if such a will could have any effect, then the wills of other persons, who had not the testamentificatio, might be effectual so far as to give the Bonorum Possessio. It is not a logical inference from the language of Cicero that a woman who had sustained a capitis diminutio could make a will; but this is the ordinary meaning of such language and it does not appear to be contrary to this, with this, Ulpian says “ab adjunctis,” “women after their twelfth year can make a will with the auctoritas of a Tutor, so long as they are in tutela;” and the comment of Boëthius on the passage of the Topica clearly shows that he understood it in this way. A woman then could make a will with the auctoritas of her Tutor and not without. Now if a woman was in Tutela Legitima, it might be correctly said that she could not make a will; for, if she was Ingemina, the tutela belonged of right to the Agnati and Gentiles, and if she was unmaried or married, and a wife in manu of her husband, she was deprived of the testamentificatio. In these cases a woman could indeed make a valid will with the consent of her Tutors, but as her Tutors were her heirs in case of intestacy, such consent would seldom be given, and though a woman under such circumstances might be allowed to make a will, it may be assumed that it was a circumstance altogether unusual, and thus the rule as to a woman in Tutela Legitima, as above stated, might be laid down as generally true. The passage of Cicero therefore does not apply to the Tutela Legitima, but to something else. Since the discovery of the Institutes of Gaius the difficulty has been cleared up, though it had been solved in a satisfactory manner by Savy before the publication of Gaius. (Beytrag zur Geschichte der Geschichtsstudie, Zeitschrift, vol. iii. p. 328.)

A woman could make a “coescriptio fiduciæ causa,” in order to qualify herself to make a will; for “at that time women had not the power of making a will, except certain persons, unless they made a co-emptio and were remanicipated and manumitted; but on the recommendation of Ha-
drian the senate made the ceremony of coemiptio unnecessary for this purpose." (Gaius, 115, a.)

The coemiptio was accompanied with a capitis diminutio, and this is what Cicero alludes to in the passage of the Topica. [Matrimonium (Roman.]

A woman who came in manum viri had sustained a capitis diminutio, but it must not be inferred from this that if she became a widow she could make a will. The Capitis diminutio of Cicero means that the will must be made with the auctoritas of a tutor. Now if the husband died, when the wife had been in manu, and he appointed no tutor for her, she was in the legitima tutela of her nearest agnati, who would be her own children and stepchildren, if she had any. But the tutela legitima in such a case would seem something unnatural, and accordingly the magistratus would give a tutor to the woman; and such a tutor, as he had no interest in the woman's property, could not prevent her from making a will. The husband might by his will give the wife a power to choose a Tutor (tutoris optio), and such a Tutor could not refuse his consent to the woman making a will; for instead of the woman being in the potestas of the tutor, he was in the potestas of the woman, so far as to be bound to assent to her testamentary dispositions. (Compare Liv. xxxix. 19; Cic. pro Muren. c. 17; Gaius, i. 150.)

The case of Silius (Cic. ad Fam. vii. 21) may be a case of a woman's making a will, without the auctoritas of a tutor, for it appears that a woman (Turpilia) had disposed of property by will, and Servius Sulpicius was of opinion that this was not a valid will, because the will-maker had not the testamentiactio. There may however have been other reasons why the will-maker had not the testamentiactio, than the want of a capitis diminutio (in the sense of Cic. Top. 4), and consequently the opinion of those critics who refer the case mentioned in this letter to the principle of the Capitis diminutio is not a certain truth.

The following references may be consulted as to this matter: Cic. pro Caecin. 6. 25, pro Flacc. 35, pro Muren. 12, ad Att. vii. 9; Liv. xxxix. 19; Gaius, i. 154.

Libertiæ could not make a testament without the auctoritas of their patronus, except so far as this rule was altered by enactments; for they were in the legitima tutela of their patronus. Libertæ, who had a certain number of children, could make a will without the auctoritas of their patronus. [Patronus.]

The Vestal Virgin had no tutor, and yet they could make a Testament. The Twelve Tables released them from all tutela " in honorem sacerdottii." (Cic. de Rep. iii. 10; Gaius, i. 145.)

As to the order of making a testament, Cicero has already hinted it was necessary that a heres should be instituted, which might be done in such terms as follow: — Titius heredes esto, Titium heredem esse jubeo. [Heres (Ro-man.]

All persons who had the commercium could be heredes; slaves also and others who were not sui juris could be made heredes, but they could not take for themselves. [Heres; Servius, p. 1037.]

But there were many classes of persons who could not be heredes: Peregrini, who had not received the commercium: persons who were imperfectly described: Jubilationes, or universitates, except by their liberti; a privilege granted by a senatusconsultum: Gods, or the temples of Gods, except such as were excepted by a senatusconsultum and Imperial Constitutions, such as Jupiter Tarpeius, Apollo Didymaeus, Mars in Gallia, Minerva Iliensis, Hercules Gaditanus, and others enumerated by Ulpian (Frag. tit. 22. 6): a Postumus alienus could not be made a heres, for he was an incerta persona: it is a disputed question whether, according to the old law, women could be made heredes; but the question concerns only those who were sui juris, as to whom there seems no sufficient reason why they could not be made heredes; the capacity of women to take under a will was limited by the Lex Voconia: unmarried persons and persons who had no children were limited as to their capacity to take under a will by the Papia Poppaea lex. [Lex Julia et Papia Poppaea.]

The first question as to the validity of a will was the capacity of the testator: the next question was as to the proper observance of the forms required by law, " except in the case of soldiers, who, in consideration of their little acquaintance with such matters, were allowed to make their wills as they pleased or as they could." (Gaius, ii. 114.) This remark of Gaius seems to refer to the Imperial period.

As to the Form of wills, Gaius (ii. 101) and Ulpian (Frag. tit. xx.) are now the best authorities. Originally there were two modes of making wills; for people made their wills either at Calata Comitia, which were appointed twice a year for the making of wills; or they made wills in procinctu, that is, when they were going to battle; for an army in movement and under arms is Procinctus. A third mode of making wills was introduced, which was effected per aes et libram, whence the name of Testamentum per aes et libram. If a man had neither made his will at Calata Comitia nor in procinctu, and was in imminent danger of death, he would mancipate (mancipio dabat) his familia, that is, his Patrimonium to a friend and would tell him what he wished to be given to each after his death. The old form of making a will per aes et libram was this. The Familiae emtor, that is the person who received the Familia by mancipation, filled the place of heres, and accordingly the testator instructed him what he wished to be given to each after his death. In the time of Gaius the practice was different. One person was instituted heres (heres testamenti institutus), who was charged with the payment of the legacies, or, as it is expressed in the phraseology of the Roman Law, " a quo etiam legata relinquebat; " and another person was present as familiæ emtor from a regard to the old legal form. The mode of proceeding was this. The testator, after having written his will (tabulae testamenti), called together five witnesses, who were Roman citizens and puberes, and a liberans, as in the case of other mancipationes, and mancipated his familia to some person in compliance with legal forms (dicis causa). The words of the Familiae emtor (Gaius, ii. 104) show clearly the original nature of the transaction: " Familiam pennitamque tuam endo mandatum tutelam custodiamque meam recipio etaque quo tu jure testamentum facere possis secundum legem publicam hoc acre (acenaque libra) esto mihionta." (As to the reading of this passage, see Puchta, Inst. iii. § 506, note g.) The testator then struck the scales with a piece of money, which he gave to the testator as a guarantee of the Familia. Then the testator taking the will in his
hand said: "Haece ita ut in his tabulis ceriseque (or ceriseve) scripta sunt ita do ioa lego ista est voc quo Qurleas testimonium meli perhibetote." This was called the Nuncupatio or publishing of the will; in other words the testator's general confirmation of all that he had written in his will. As the Familiae emtor was supposed to be a real transaction between the Emotor and Testator, the testimony of their several families was excluded, and consequently a person who was in the power of the Familiae Emotor, or in the power of the Testator could not be a witness. If a man who was in the power of another was the familial emtor, it followed that his father could not be a witness, nor could his brother, if the brother was in the power of the father. A filiusfamilias who after his Missio disposed of his Castrense peculium by testament, could not have his father as witness nor any one who was in the power of his father. The same rules applied to the libripens, for he was a witness. A person who was in the power of the heres or of a legatee, or in whose power the heres or legatee was, or who was in the power of the same person as the heres or a legatee, and also the heres or a legatee could all be witnesses; for as Ulpian observes, there were no other persons to the number of witnesses from the same family. But Gaius observes that this ought not to be considered as law with respect to the heres, and him who is in the power of the heres and him in whose power the heres is.

According to Gaius, wills were originally made only at Calata Comitia, and In Procinctu. The Comitia were held twice a year for the purpose of making wills, and a will not made there was invalid. It is sometimes assumed that these Comitia were held in order that the Gentes might consent to the testamentary disposition, in which it is implied that they might refuse their consent. But there is no direct evidence for this opinion, and it derives no support from a consideration of the mode of disposing of property per aes et libram. The form per aes et libram was a form introduced in cases when the will had not been made at the Calata Comitia nor In Procinctu. It had effect because it was an alienation of property inter vivos without the consent of any parties except the buyer and seller, which alienation must be assumed to have been a legal transaction at the time when this new form of will was introduced. This new form was a sale and the familial emtor undertook a trust; he resembled the heres fiduciarius of later times. It is probable enough that there were originally no means of compelling him to execute the trust, but opinion would be a sufficient guarantee that the testator's will would be observed, and thus would arise one of those parts of Law which had its source in Mos. Now when the Romans introduced new legal forms, they always assimilated them to old forms, whence we have a probable conclusion that the form of mancipatio was also observed at the Calata Comitia; and if so, the consent of the Gentes was not necessary, unless it was necessary to every alienation of property, which in the absence of evidence must not be assumed, though such may have been the fact. The difference then between the will made at the Calata Comitia and the will per aes et libram, consisted in the greater solemnity and notoriety of the former, and the consequent greater security that the testator's intentions would be observed. Written wills are not spoken of with reference to this time, nor is it probable that wills were written: it does not appear that a written will was ever required by law. The testator's disposition of his property would be short and simple in those early times, and easily remembered; but there would be greater security for an unwritten will made at the Comitia than for an unwritten will made per aes et libram; whence in course of time Tabulae became a usual part of the ceremony of a will.

As we are ignorant of the true nature of private property among the Romans, viewed with respect to its historical origin, we cannot determine with certainty such questions as these respecting testamentary disposition, but it is of some importance to exclude conjectures which are devoid of all evidence. Rein (Das Röm. Privatrecht, p. 375, note) has referred to the modern writers who have discussed this subject: he has adopted the opinion of Niebuhr, according to which "as the property of an extinct house escheated to the cury, that of an extinct cury to the publicum of the citizens at large, the consent of the whole populus was requisite; and this is the origin of the rule that testaments were to be made in the presence of the pontiff and the curies." (Hist. of Rome, vol. ii. p. 536.) But there is no evidence of a number of witnesses from the same family. Niebuhr further observes that "the plebeian houses were not so connected; but the whole order had a public coffer in the temple of Ceres; and when the army, being assembled in centuries, either on the field of Mars, or before a battle, passed the last will of a soldier into a law, it thereby resigned the claims of the whole body to the property." This assertion also is not supported by evidence, and is therefore a mere conjecture against the probability of which there are sufficient reasons.

The Testamentum in procinctu is, for anything we know to the contrary, as old as the testament at the Calata Comitia. In this case the forms of the Calata Comitia were of necessity dispensed with, or the soldier would often have died intestate. This power of disposition in the case of a Testamentum in procinctu could not depend on the consent of the whole populus, in each particular instance; for the nature of the circumstances excluded such consent. He had therefore full power of disposition In Procinctu, a circumstance which leads to the probable conclusion that the will made at the Calata Comitia differed only from the other will in its forms and not in its substance. Some writers assert that the Testamentum in Procinctu could only be made after the auspices were taken, which gave the testament the religious sanction, and that when the auspices ceased to be taken in the field, this kind of testament ceased to be made; but Niebuhr, according to which "the property of the publicum of the citizens at large, the consent of the whole populus was requisite; and this is the origin of the rule that testaments were to be made in the presence of the pontiff and the curies." (Hist. of Rome, vol. ii. p. 536.) But there is no evidence of a number of witnesses from the same family. Niebuhr further observes that "as the property of the plebeian houses was not so connected; but the whole order had a public coffer in the temple of Ceres; and when the army, being assembled in centuries, either on the field of Mars, or before a battle, passed the last will of a soldier into a law, it thereby resigned the claims of the whole body to the property." This assertion also is not supported by evidence, and is therefore a mere conjecture against the probability of which there are sufficient reasons.

Caesar probably introduced the practice. (Dig. 29. tit. 1. De Testamento Militis.) Cicero however speaks of the will In procinctu (de Or. i. 53) as then in use, and he describes it as made "sine libra et tabulis," that is, without the forms which were used after the introduction of the testamentum.
per aes et libram. Thus the Testamentum in Pro- cinetu always retained its characteristic of being exempted from legal forms, but as to the capacity of the Testator it was always subject to the same rules of law as other wills, so far as we know.

The form of Mancipatio owed its origin to positive enactments: it was a form of alienation accompanied with certain public ceremonies, the presumed object of which was to secure evidence of the transfer. The form of Mancipatio as applied to a will was exactly the same form as Mancipatio applied to any other purpose: it was an alienation of the property, and according to strict principles it must have been irrevocable. It may be concluded that Roman wills were originally irrevocable. It is sometimes assumed that the five witnesses to the Testament (cives Romani puerus) were representatives of the five Classes of Servius Tullius. If this is true (which is a mere assumption) the classes were represented as witnesses only, not as persons who gave their consent to the act. Engelbach states: “Mancipatio was originally a formal sale in which the publicness of the transaction constituted the essential characteristic. When the seller had transferred to the buyer the ownership of a thing before the five representatives of the five classes of the Roman People, this was as valid as any other Lex which was brought before the assembly of the People and passed into a Lex.” (Ueber die Ueberschrift zur Zeit der Zwoif Tafeln, p. 80.) The whole meaning of this is not clear, but so far as this it is clear and true: the Testamentum per aes et libram differed in no respects as to the capacity of the alienor, from any other Mancipation. Now we must either suppose that the associated consent of the people to the Testamentary disposition at the Calata Comitia, was expressed by a special enactment which should transfer the property according to the Testator’s wish, or that the consent only must have been given to the transfer, and the transfer must have been made in the usual way: the latter is the only conceivable case of the two. In assuming this original necessity of consent on the part of the people to the testamentary disposition, we assume that Roman property was originally inalienable at the will of the owner. This may be true, but it is not yet shown to be so.

The Twelve Tables recognize a man’s power to dispose of his property by will as he pleased: “Uti legassit super pecunia tutelave suae rei ita jus esto.” (Ulp. Freg. tit. xi. 14.) It is generally admitted, and the extant passages are consistent with the opinion, that the new testamentary form per aes et libram existed while the two original forms were still in use. Now in the testamentum per aes et libram there is no pretence for saying that any consent was required except that of the buyer and seller, and the Twelve Tables recognize the testator’s power of disposition. If then the form of testament at Comitia Calata subsisted after the Twelve Tables, we have, according to the views of some writers, a form of testamentum to which the consent of the testator was sufficient and another form in which it was not. There still remains to those who support this opinion, the power of saying that the consent of the sovereign people had become a form, and therefore it was indifferent, so far as concerns this consent, whether the will was made at the Comitia where it would be fully witnessed, or per aes et libram where it would be witnessed by the five representatives. But it is easy to suggest possibilities; less easy to weigh evidence accurately and to deduce its legitimate consequences. As already observed, there seems to have been no rule of law that a testament must be written. The Mancipatio required no writing, nor did the institution of a heres, and the number of witnesses was probably required in order to secure evidence of the testator’s intentions. Thus it is said (Dig. 28. tit. 1. s. 21) that the heres might either be made by oral declaration (mancipatio) or by writing. Written wills however were the common form among the Romans at least in the later republican and in the imperial periods. They were written on tablets of wood or wax, whence the word “cera” is often used as equivalent to “tabella;” and the expressions prima, secunda cera are equivalent to prima, secunda pagina. The will might be written either by the testator or any other person with his consent, and sometimes it was made with the advice of a lawyer. It was written in the Latin language, until a. d. 439 when it was enacted that wills might be in Greek. (Cod. 6. tit. 12. s. 1.) By the old law a legacy could not be given in the Greek language, though a fidecommissium could be so given. It does not appear that there was originally any signature by the witnesses. The will was sealed, but this might be done by the testator in secret, for it was not necessary that the witnesses should know the contents of the will; they were witnesses to the formal act of mancipatio, and to the testator’s declaration that the tabula which he held in his hand contained his last will. It must however have been in some way so marked as to be recognized, and the practice of the witnesses (testes) sealing and signing the will became common. (As to the will of Claudius, see Suetonius, Claudius, 44.) It was necessary for the witnesses both to seal (signare), that is, to make a mark with a ring (annulus) or something else on the wax and to add their names (adscibere). The five witnesses signed their names with their own hand, and their adscription also declared whose will it was that they sealed. (Dig. 28. tit. 1. s. 30.) The seals and adscription were both on the outside. A Senatus- consultum, which applied to wills among other instruments, enacted that they should be witnessed and signed as follows: they were to be tied with a triple thread (linum) on the upper part of the margin which was to be perforated at the middle part, and the wax was to be put over the thread and sealed. Tabulae which were produced in any other way had no validity. (Compare Paulus, S. R. v. tit. 25. s. 6, where impostae seems to be the true reading, with Sueton. Ner. 17.) A man might make several copies of his will, which was often done (ut vulgo fieri solet, Dig. 31. tit. 4. s. 47; a case put to Proculus) for the sake of caution. Both Augustus and Tiberius made two copies of their wills. (Sueton. Aug. 101, Tiber. 76.) When sealed, it was deposited with some friend, or in a temple, or with the Vestal Virgins; and after the testator’s death it was opened (resignare) in due form. The witnesses or the major part were present, and after they had acknowledged their seals, the thread (linum) was broken and the will was opened and read, and a copy was made; the original was then sealed with the public seal and placed in the archivum, where it would if it would if the first copy should ever be lost. (Paulus, iv. 6.) This practice described by Paulus may have been of
considerable antiquity. The will of Augustus which had been deposited with the Vestal Virgins was brought into the Senate after his death (Tacit. Ann. i. 9): none of the witnesses were admitted except those of Senatorian rank; the rest of the witnesses acknowledged their signatures outside of the Curia. (Sueton. Tit. 23.)

A passage in a Novel of Theodosius II. (A. D. 439, De Testamentis) states the old practice as to the signature of the witnesses. "In ancient times a testator showed (offerebat) his written testament to the witnesses, and asked them to bear testimony that the will had so been shown to them (oblatarum tabularum pervire testamotum") which are almost the words of Gaian. The Novel goes on to state that the ignorant presumption of posterity had changed the cautious rule of the ancient law, and the witnesses were required to know the contents of the will; the consequence of which was that many persons preferred dying intestate to letting the contents of their wills be known. The Novel enacted what we may presume to have been the old usage, that the testator might produce his will sealed, or tied up, or only closed, and offer it to seven witnesses, Roman citizens and puberes, for their sealing and adscription, provided at the same time he declared the instrument to be his will and signed it, in the presence, and then the witnesses affixed their seals and signatures at the same time also. Valentinian III. enacted that if a Testamentum was holographum, witnesses were not necessary.

A fragment of a Roman will, belonging to the time of Trajan, was published by Pugge in the Rheinisches Museum, vol. i. p. 249, &c.; and it is explained by Rudorff (Das Testament des Das unsius, Zeitschrift, &c. vol. xii. p. 301). The penalties against fraud in the case of wills and other instruments were fixed by the Lex Cornelia. [Falsum.]

The Decret established a less formal kind of will, since it acknowledged the validity of a written will when there had been no mancipatio, provided there were seven witnesses and seven seals, and the testator had the testamentificatio at the time of making the will and at the time of his death. (Gaius, ii. 147.) The terms of the Edict are given by Cicero (in Verr. i. 1, 45.) The Edict only gave the Bonorum Possessio which is the sense of hereditas in the passage of Cicero referred to, as well as in Gaius (ii. 119.) This so-called Praetorian Testament existed in the Republican period, and for a long time after. Thus a man had his choice between two forms of making his will; the Civil form by Mancipatio, and the Praetorian with seven seals and seven witnesses, and without Mancipatio. (Savigny, Beitrag zur Geschichte der Rom. Testam., Zeitschrift, vol. i. p. 78.)

The Praetorian Testament prepared the way for the abolition of Mancipatio, the essential character of a will made according to the Jus Civile, and in the Legislation of Justinian the form of making a testament was simplified. It required seven male witnesses of competent age and legal capacity, and the act must be done in the presence of all, at the same place, and at the same time, that is, must be continuous. The testator might declare his last will orally (sine scriptis) before seven witnesses, and this was a good will. If it was a written will, the testator acknowledged it before the witnesses as his last will, and put his name to it, and the witnesses then subscribed their names and affixed their seals. The testator might write his will or have it written by another person, but such other person could derive no advantage under the will. [Senatusconsultum jisionianum.]

The cases in which a will was not valid, because the heredes sui were not expressly exheredated, are stated in Heres (Roman.

A testament which was invalid from the first was Injustum and never could become valid: it was Non jure factum, when the proper forms had not been observed; it was Nullius Momenti, as in the case of a filiusfamilias who is "præteritus." A Testamentum Justum might become either Ruptum or Irritum in consequence of subsequent events. (Dig. 28. tit. 3. s. 1.)

A testament became Ruptum, if the testator made a subsequent testament in due form as required by law: and it made no matter, whether or not there turned out to be a heres under the second will; the only question was whether there could have been one. If then the heres named in the second will refused the hereditas, or died either in the lifetime of the testator, or after his death, and before the creto, or failed to comply with the provisions of the will, or lost the hereditas under the Lex Julia et Papia Poppaea—in all these cases the paterfamilias sustained a capitis diminutio after the date of the will; but this principle does not apply to mental insanity, for the will was valid if the testator became insane. But the will became Irritum if the testator sustained a capitis diminutio after the date of the will; or if it failed of effect because there was no heres. Thus a prior will which was invalidated by a subsequent will was Ruptum, and if there was no heres under the subsequent will, such will was Irritum.

If a man who had made a will was taken prisoner by the enemy, his will was good jure postliminii if he returned home; if he died in captivity, it was made as valid by the Lex Cornelia as if he had not been a captive.

Though a will might be Ruptum or Irritum by the Jus Civile, it was not always without effect; for the Bonorum Possessio secundum tabulas might be had by the scriptus heres, if the will was witnessed by seven witnesses, and if the testator had the testamentificatio. The distinction between the case of a will which was invalid Jure Civili for want of due forms, and one which was invalid for want of legal capacity to dispose of property by will was well recognized in the time of Cicero. (Top. 11.) A will also became Ruptum by adgnatio, that is, if a suus heres was born after the making of the will who was not either instituted heres or exheredated, as the law required. A quasi adgnatio also arose by adoption, or by the in manum conventio, or by succession to the place of a suus heres, as in the instance of a grandson becoming a suus heres in consequence of the death of the emancipation of a son: a will also became Ruptum by the manumission of a son, that is, where the son after a first and second mancipatio returned into the power of his father. [Emancipatio.]

A testament was called Inofficiosum which was made in legal form, "sed non ex officio pietatis." For instance, if a man had exheredated his own children, or passed over his parents, or brothers or sisters, the will was in form a good will, but if there was no sufficient reason for this exheredation...
or praeterition, the persons aggrieved might have
an Inofficiosi querela. The ground of the compla
int was the allegation that the testator was
"non sanae mentis," so as to have capacity to
make a will. It was not alleged that he was
Furiosus or Demens, for these were technical words
which implied complete legal incapacity. The dis-
tinction was a fine one, and worthy of the subtlety
of the Jurists, to whom it may be presumed to
owe its origin. By the legislation of Justinian
no person could maintain a Querela inofficiosi beyond
the degree of brothers and sisters; and brothers
and sisters could only maintain their claim against
"scripti heredes," who were "turpes personae." The
Querela inofficiosi could only be maintained in
cases where the complaining parties had no other
right or means of redress. If any portion, how-
ever small, was left by the will to the complaining
party, he could not maintain a Querela inofficiosi,
and he was only intitled to so much as would make
up his proper share. If the judex declared the
testamentum to be Inofficiosum, it was rescinded;
but if there were several heredes, the testament
would only be rescinded as to him or them against
whose institution the Judex had pronounced. The
portion of an hereditas which might be claimed
by the Querela inofficiosi was one-fourth, which
was divided among the claimants pro rata. (Plin.
Ep. v. 1; Inst. 2. tit. 18; Dig. 5. tit. 2, De
Inofficioso Testamento.)

The Querela Inofficiosi is explained by Savigny
with his usual perspicuity (System, &c. ii. p.
127). When a testator passed over in his will
any of his nearest kinsfolk, who in the case of
intestacy would be his heredes, this gave rise to the
opinion that the person thus passed over had
meant this mark of the testator's disapprobation.
If this opinion was unfounded, the testator had done
an unmerited injury to the person, and his remedy
was by getting the will set aside, as made under
the influence of passion. If the will was set aside,
the testator was thereby declared to have died in
the influence of passion. If the will was set aside,
an unmerited injury to the person, and his remedy
merited this mark of the testator's disapprobation.

The complaint also could only be maintained in
cases where the complaining parties had no other
right or means of redress. If any portion, how-
ever small, was left by the will to the complaining
party, he could not maintain a Querela inofficiosi,
and he was only intitled to so much as would make
up his proper share. If the judex declared the
testamentum to be Inofficiosum, it was rescinded;
but if there were several heredes, the testament
would only be rescinded as to him or them against
whose institution the Judex had pronounced. The
portion of an hereditas which might be claimed
by the Querela inofficiosi was one-fourth, which
was divided among the claimants pro rata. (Plin.
Ep. v. 1; Inst. 2. tit. 18; Dig. 5. tit. 2, De
Inofficioso Testamento.)

The Querela Inofficiosi is explained by Savigny
with his usual perspicuity (System, &c. ii. p.
127). When a testator passed over in his will
any of his nearest kinsfolk, who in the case of
intestacy would be his heredes, this gave rise to the
opinion that the person thus passed over had
meant this mark of the testator's disapprobation.
If this opinion was unfounded, the testator had done
an unmerited injury to the person, and his remedy
was by getting the will set aside, as made under
the influence of passion. If the will was set aside,
the testator was thereby declared to have died in

The subject of Roman Testaments can only be
satisfactorily expounded in a large treatise, and it
would require to be treated historically. The pre-
ceding sketch may be useful, and generally true,
and it affects to be nothing more. (Gaius, ii. 101
pro non scriptis habendi,) because they were not
confirmed by the will. Now, as already observed,
it appears from Gaius (ii. 273), that a person who
was appointed heres by a will, might be required
by codicilli to give the whole hereditas or a part to
another, even though the codicilli were not con-
irmed by a will. But Pliny is speaking of codicilli
which were void for want of a testamentary con-
firmation; and this, as we learn from Gaius, is the
true case of a legal partition. These four modes are
referred to in Gaius: the first two are contained in
the words above quoted, Si in testamento, &c.: the
second is the case of the heredes institutus being re-
quired to give the hereditas to another person by
CODICILLI non confirmati; and the fourth is the case
of a fideicommissum given by codicilli of a person
who made no other testamentary disposition. It
was a rule of law that codicilli, when duly made,
were to be considered (except in a few cases) as
incorporated in the will at the time when the will
was made, a principle which led to various legal
conclusions, which the Roman jurists deduced with
their usual precision. (Dig. 27. tit. 7. &c.)

Originally there was probably no particular form
required for codicilli; but there must have been
evidence of their containing the testator's intention.
Subsequently witnesses were required and five wit-
nesses were sufficient for codicilli made in writing,
if the witnesses subscribed their names to the codi-
cilli. (Cod. 6. tit. 36.) But a man could without
writing and in the presence of five witnesses
impose a fideicommissum on his heredes. A testa-
ment which was defective as such, might be ef-
factual as codicilli. The power to make codicilli
was the same as the power to make a testament.
(Dig. 29. tit. 7. De Juro Codicillorum; Inst. 2. tit.
25.)

The subject of Roman Testaments can only be
satisfactorily expounded in a large treatise, and it
would require to be treated historically. The pre-
ceding sketch may be useful, and generally true,
and it affects to be nothing more. (Gaius, ii. 101
pro non scriptis habendi,) because they were not
confirmed by the will. Now, as already observed,
pavilion in the centre, the Cavum Aedium was called Testudo. (Varr. L. L. v. 161, ed. Müller.)

3. To a military machine moving upon wheels and roofed over, used in besieging cities, under which the soldiers worked in undermining the walls or otherwise destroying them. (Caes. B. G. v. 42, 43, B. C. ii. 2.) It was usually covered with raw hides or other materials which could not easily be set on fire. The battering-ram thence was used in a testudo of this kind, which was then called Testudo Astiraria. (Vitruvius, x. 19, p. 202, Bipp.) Vitruvius also mentions and explains the construction of several other military machines to which the name of Testudines was given (x. 20, 21; compare Polyb. ix. 41).

4. The name of Testudo was also applied to the covering made by a close body of soldiers who placed their shields over their heads to secure themselves against the darts of the enemy. The shields fitted so close together as to present one unbroken surface without any interstices between them, and were also so firm that men could walk upon them, and even horses and chariots be driven over them. (Dion Cass. xlix. 30.) A testudo was formed (testudinem fuisse) either in battle to ward off the arrows and other missiles of the enemy, or, which was more frequently the case, to form a protection to the soldiers when they advanced to the walls or gates of a town for the purpose of attacking them. (Dion Cass. t. c.; Liv. x. 43; Caes. B. G. ii. 6; Sall. Jug. 94; see cut annexed, taken to form this kind of testudo, as an exercise, in the games of the circus. (Liv. xlv. 9; Polyb. xxviii. 12.)

TETRADRACHMON. [Drachma.]

TETRARCHA or TETRARCHES (τετράρχης). This word was originally used, according to its etymological meaning, to signify the governor of the fourth part of a country (τετράρχεια or τετράρχια) (Liv. xliv. 9; Polyb. xxviii. 12.) Each of the three Gallic tribes which settled in Galatia was divided into four testudines, as are called by a testudo.

(T. S.) Each of the three Gallic tribes which settled in Galatia was divided into four testudines, as are called by a testudo. (Strabo, xii. pp. 566, 567; Plin. H. N. v. 42.) This arrangement subsisted till the latter times of the Roman republic (Appian, Mithrid. 46, Syp. 50, Bell. Civ. iv. 88), but at last the twelve tetrarches of Gallo-Graecia were reduced to one, namely Deiotarus. (Liv. Epit. xiv.; Cic. pro Deiot. 15; Hirtius, de Bell. Alex. 67.) Some of the tribes of Syria were ruled by tetrarches, and several of the princes of the house of Herodes bore this title. (Plin. H. N. v. 16, 19; Joseph. Antiq. xiv. 13, § 1, xvii. 8, § 1, xi. 4, § 18, xvii. 11, § 1, xi. 2, § 1, Vit. 11.) Niebuhr (Hist. of Rome, ii. p. 135) remarks that the tetrarchies in Syria were zemindars, who occupied the rank of sovereigns, in the same way as the zemindars of Bengal succeeded under Lord Cornwallis in getting themselves recognised as dependent princes and absolute proprietors of the soil.

In the latter period of the republic and under the empire, the Romans seem to have used the title (as also those of ethnarch and pagarch) to designate those tributary princes who were not of sufficient importance to be called kings. (Compare Lucan, vii. 227; Sallust, Cixil. 20; Cic. pro Mil. 28, in Vatin. 12; Horat. Sat. i. 8, 12; Vell. Patric. ii. 51; Tacit. Annal. xv. 25.) [P. S.]

TETRASYLLOS. [Templum.]

TETROBOLUS. [Drachma.]

TETTARACONTA, HOI (of τετταράκοντα), the Forty, were certain officers chosen by lot, who made regular circuits through the demes of Attica, whence they were called δικαιαρχοι, δήμων, to decide all cases of ἄλογα and τὰ περὶ τῶν βιαλων, and also all other private causes, where the matter in dispute was not above the value of ten drachmae. Their number was originally thirty, but was increased to forty after the expulsion of the thirty tyrants, and the restoration of the democracy by Thrasybulus, in consequence, it is said, of the hatred of the Athenians to the number of thirty. They differed from other δικαιαρχοι, inasmuch as they acted as ἐναντιωγιεῖς, as well as decided causes; that is, they received the accusation, drew up the indictment, and attended to all that was understood in Athenian law by ἱγγημα τοῦ δικαιαρχοὶ. They consequently may be classed among the regular magistrates of the state. (Pollux, viii. 40; Harpocrat. s. v. Κατά δήμων δικαστῆς; Rhetor. Lex. 310, 21; Demosth. c. Timocr. p. 735, 11, c. Pantaen. p. 976, 10; Schubert, De Aedil. pp. 96—98; Meier, Att. Proc. pp. 77—82; Schömann, Ant. Jur. Publ. Graec. p. 267, 10.)

THALAMITAE, THALAMII (θαλαμία, ἔγκαιοι). [Navis, p. 788, s.]

from the Antonine column.) Sometimes the shields were disposed in such a way as to make the testudo slope. The soldiers in the first line stood up right, those in the second stooped a little, and each line successively was a little lower than the preceding down to the last, where the soldiers rested on one knee. Such a disposition of the shields was called Fastigata Testudo, on account of their sloping like the roof of a building. The advantages of this plan were obvious: the stones and missiles thrown upon the shields rolled off them like water from a roof; besides which, other soldiers frequently advanced upon them to attack the enemy upon the walls. The Romans were accus-
THARGELIA. [Pana-

THALYSIA (§αλλίσια), a festival celebrated in honour of Dionysus and Demeter (Menand. Rhet. quoted by Meursius), or according to others of Demeter alone, as it is described by Theocritus in his seventh idyll, and by the grammarians who wrote the argumenta to the same. It was held in autumn, after the harvest, to thank the gods for the benefits they had conferred upon men. (Spanel. ad Callimach. hymn. in Cer. 29 and 137; Wiesemann, ad Theorici. Idyll. vii. 2.) [L.S.]

THARGELIA (§αργιλία), a festival celebrated at Athens on the 6th and 7th of Thargelion in honour of Apollo and Artemis (Etymol. M.; Suidas, s. v. §αργιλία), or according to the Schole in Aristophanes (Equit. 1405) in honour of Helios and the Horae; the latter statement however is in substance the same as the former. The Apollo who was honoured by this festival was the Delian Apollo. (Ath. x. p. 424.)

The real festival, or the Thargelia in a narrower sense, seems to have taken place on the 7th, and on the preceding day the city of Athens or rather its inhabitants were purified. (Plut. Symp. viii. 1; Diog. Laërt. ii. 44; Harpocrat. s. v. §αρμικός.) The manner in which this purification was effected is very extraordinary and certainly a remnant of very ancient rites, for two persons were put to death on that day, and the one died on behalf of the men and the other on behalf of the women of Athens. The name by which these victims were designated was §αρμακός; according to some accounts both of them were men, but according to others the one dying on behalf of the women was a woman and the other a man. (Hesych. s. v. §αρμακός.) On the day when the sacrifice was to be performed the victims were led out of the city to a place near the sea, with the accompaniment of a peculiar melody, called κραδίς νόμος, played on the flute. (Hesych. s. v.) The neck of the one who died for the men was sur

THATEUM. (§αργιλία). The Athenians before the time of Aeschylus had only a wooden scaffold on which their dramas were performed. Such a wooden theatre was only erected for the time of the Dionysiac festivals, and was afterwards pulled down. The first drama that Aeschylus brought upon the stage was performed upon such a wooden scaffold, and it is recorded as a singular and ominous coincidence that on that occasion (500 b. c.) the scaffolding broke down. To prevent the recurrence of such an accident the building of a stone theatre was forthwith commenced on the south-eastern descent of the acropolis, in the Lenaeum; for it should be observed that throughout Greece theatres were always built upon eminences, or on the sloping side of a hill. The new Athenian theatre was built on a very large scale, and appears to have been constructed with great skill in regard to its acoustic and perspective arrangements, but the name of the architect is not known. It is highly probable that dramas were performed in this new theatre as soon as it was practicable, and before it was completely finished, which did not take place till about b. c. 440, unless we adopt the untenable supposition that the completion of the Attic theatre at this time refers to a second theatre. (Paus. i. 29 § 16; Plut. Vit. X. Orat. § 152, c.) During this long interval of forty Olympiads theatres were erected in all parts of Greece and Asia Minor, although Athens was the centre
of the Greek drama and the only place which produced great masterworks in this department of literature. It should also be borne in mind that theatres are mentioned in several parts of Greece where the worship of Dionysus and the drama connected with it did not exist, so that these buildings were devoted to other public exhibitions. Thus at Athens itself there were in later times, besides the theatre in the Lenaea, two others, viz. the Αγρίππειον and the ἔπι Πηγίλη Σέατρον, which were not destined for dramatic performances, but were only places in which the sophists delivered their declamations. At Sparta there was a theatre of white marble (Paus. iii. 14. § 1) in which assemblies of the people were held, choral dances performed, and the like (Athen. iv. p. 139, xiv. p. 631), for the festive joy of Dionysus and the regular drama were foreign to the Spartans. All the theatres however which were constructed in Greece were probably built after the model of that of Athens, and with slight deviations and modifications they all resembled one another in the main points, as is seen in the numerous ruins of theatres in various parts of Greece, Asia Minor, and Sicily. Some of them were of prodigious dimensions. The theatre at Epidaurus in the grove of Asclepius, of which considerable ruins are still extant, excelled in beauty the Roman theatres (Paus. ii. 27. § 5), and in size even that of Megalopolis, which was reckoned the largest theatre in Greece. (Paus. viii. 32. § 1.) The great number of ruins of theatres may enable us to form an idea of the partiality of the Greeks for such magnificent buildings, and of their gigantic dimensions. The ruins of the theatre at Argos enclose a space of 450 feet in diameter; the theatre of Ephesus is even 660 feet in diameter. Upon these ruins see the works of Clarke, Dodwell, Leake, Hughes, Arundell, and the Supplement to Stuart's Antiquities of Athens. The construction of the Greek theatres has been the subject of much discussion and dispute in modern times, and although all the best writers agree on the great divisions of which a theatre consisted, the details are in many cases mere matters of conjecture. The Attic theatre was, like all the Greek theatres, placed in such a manner that the place for the spectators formed the upper or north-western, and the stage with all that belonged to it the south-eastern part, and between these two parts lay the orchestra. We shall consider each of these three divisions separately, together with its parts and subdivisions, referring the reader to the annexed plan which has been made from the remains of Greek theatres still extant, and from a careful examination of the passages in ancient writers which describe the whole or parts of a theatre, especially in Vitruvius and Pollux.

1. The place for the spectators was in a narrower sense of the word called Σέατρον. The seats for the spectators, which in most cases cut into the rock, consisted of rows of benches rising one above another; the rows themselves (a) formed parts (nearly three-fourths) of concentric circles, and were at intervals divided into compartments by one or more broad passages (b) running between them and parallel with the benches. These passages were called διασώματα, or καταστοματα, Lat. praecinctiones (Vitruv. v. 3 and 7; Bekker, Aene.-

4 c
persons might ascend from the lowest to the highest. But these stairs ran in straight lines only from one praecinctio to another; and the stairs in the next series of rows were just between the two stairs of the lower series of benches. By this course of the stairs the seats were divided into a number of compartments resembling cones from which the tops are cut off; hence they were termed κεραυλεῖς, and in Latin canei. The whole of the place for the spectators (Στάδιον) was sometimes designated by the name κώλον, Latin cavea, it being in most cases a real excavation of the rock. Above the highest row of benches there rose a covered portico (c), which of course far exceeded in height the opposite buildings by which the stage was surrounded, and appears to have also contributed to increase the acoustic effect. (Apul. Met. iii. p. 49, Bipp.) The entrances to the seats of the spectators were partly underground, and led to the lowest rows of benches, while the upper rows must have been accessible from above. (Pollux, iv. 123; Athen. xiv. p. 622.)

2. The orchestra (δραχθύστρα) was a circular level space extending in front of the spectators, and somewhat below the lowest row of benches. But it was not a complete circle, one segment of it being appropriated to the stage. The orchestra was the place for the chorus, where it performed its evolutions and dances, for which purpose it was covered with boards. As the chorus was the element out of which the drama arose, so the orchestra was originally the most important part of a theatre: it formed the centre around which all the other parts of the building were grouped. In the centre of the circle of the orchestra was the θυμέλαι, that is, the altar of Dionysus (d), which was of course nearer to the stage than to the seats of the spectators, the distance from which was precisely the length of a radius of the circle. In a wider sense the orchestra also comprised the broad passages (πάροδος, e) on each side between the projecting wings of the stage and the seats of the spectators, through which the chorus entered the orchestra. The chorus generally arranged itself in the space between the thymele and the stage. The thymele itself was of a square form, and was used for various purposes, according to the nature of the different plays, such as a funeral monument, an altar, &c. It was made of boards and surrounded on all sides with steps. It thus stood upon a raised platform, which was sometimes occupied by the leader of the chorus, the flute-player, and the rhabdophori. (Müller, Dissert. on the Eumen of Aeschyl. p. 249, &c. transl.) The flute-player as well as the prompter (σπόδωλεύς, monitor) were generally placed behind the thymele, so as to face the stage and not to be seen by the spectators. (Plut. Rei publ. general. proloc. p. 813, e; Athen. xiv. p. 631.) The orchestra as well as the Στάδιον lay under the open sky; a roof is nowhere mentioned.

3. The stage. Steps led from each side of the orchestra to the stage, and by them the chorus probably ascended the stage whenever it took a real part in the action itself. The back side of the stage was closed by a wall called the σκηνή or scena, from which on each side a wing projected which was called the παρασκηνή. The whole depth of the stage was not very great, as it only comprised a segment of the circle of the orchestra. The whole space from the scena to the orchestra was termed the proscenium (προσκήνιον), and was what we should call the real stage. That part of it which was nearest to the orchestra, and where the actors stood when they spoke was the λογシア, also called διπήδιος or διπήδιατον, in Latin pulpitum, which was of course raised above the orchestra and probably on a level with the thymele. What the προσκήνιον was not clear; some think that it was a place to which the actors withdrew when they had acted their parts, others think that it was the same as the κοινήστα (Suidas, s. v. Σκηνή); but as it is stated that the προσκήνιον was adorned with statues, it seems more probable that it was the wall under the λογシア which faced the orchestra and the spectators. The σκηνή or scena was, as we have already stated, the wall which closed the stage (proscenium and logeum) from behind. It represented a suitable background or the locality in which the action was going on. Before the play began, it was covered with a curtain (παραστάσαμα, προσκήνιον, αὐθάλαι, Latin aulaeae or sipparium; Etymol. M. s. v. Αὐθάλα: Athen. xiii. p. 567; Pollux, iv. 122.) When the play began this curtain was let down and was rolled upon a roller under the stage. The proscenium and logeum thus were never concealed from the spectators. In regard to the scenery represented on the σκηνή, it was different for tragedy, comedy, and the satyrical draus, and for each of these kinds of poetry the scenery must have been capable of various modifications according to the character of each individual play; at least that this was the case with the various tragedies, is evident from the scenes described in the tragedies still extant. In the latter however the back-ground (σκηνή) in most cases represented the front of a palace with a door in the centre (1) which was called the royal door. This palace generally consisted of two stories (Στάδιγμα, Pollux, iv. 129), and upon its flat roof there appears to have sometimes been some elevated place from which persons might observe what was going on at a distance. (Eurip. Phoenix, 88, &c.) The palace presented on each side a projecting wing, each of which had its separate entrance. These wings generally represented the habitations of guests and visitors. All the three doors must have been visible to the spectators. (Vitr. v. 7.) The protagonists always entered the stage through the middle or royal door, the deuteragonists and tritagonists through those on the right and left wings. In tragedies like the Prometheus, the Persians, Philoctetes, Oedipus in Colonus, and others the back-ground did not represent a palace. There are other pieces again in which the scena must have been changed in the course of the performance, as in the Eumenides of Aeschylus and the Ajax of Sophocles. The dramas of Euripides required a great variety of scenery; and if in addition to this we recollect that several pieces were played in one day, it is manifest that the mechanical parts of stage performance, at least in the days of Euripides, must have been brought to great perfection. The scena in the Satyrical drama appears to have always represented a woody district with hills and grottoes; in comedy the scena represented, at least in later times, the fronts of private dwellings or the habitations of slaves. (Vitr. v. 8. § 1; Pollux, iv. 125.) The art of scene-painting must have been applied long before the time of Sophocles, although Aristot. (Poet. iv. 16) ascribes its introduction to him. [Pictura, p. 908, b.] The machines in the Greek theatres were ex-
tremely numerous, but we are in many cases unable to form an exact idea of their nature and their effect. We shall only mention the most important among them. 1. The περίσταυροι (m) stood near the two side entrances of the scene; their form was that of a prisma, and by a single turn they produced a change in the scenery. (Vitr. v. 7; Pollux, iv. 126.) 2. The χαράνιοι κίλιακες, or the Charonian steps, by which the shades ascended from the lower world upon the stage. (Pollux, iv. 132.) 3. The μυκείαι, κρήνας or ώραμα, a machine by which gods or heroes were represented passing through or floating in the air: hence the proverb, δεσμος in machina. (Pollux, iv. 126, 129, 131; Suidas, s. v. Εώρημα : Πενεχ. s. v. Κρήνας.) 4. The έξορτα or έκκλησία. [Εξόρτα.] 5. The θεάληγοι, an especial elevated place above the scena for the Olympian gods when they had to appear in their full majesty. (Pollux, iv. 130; Phot. Lyc. p. 597.) 6. The βρωτικες, a machine for imitating thunder. It appears to have been placed underneath the stage, and to have consisted of large brzene vessels in which stones were rolled. (Pollux, iv. 130; Suidas, s. v. Βρωτώς ; Vitr. v. 7.) Respecting several other machines of less importance, see Pollux, iv. 465, μηρε προς θεάληγον.

It is impossible to enter here upon the differences, which are presented by many ruins of theatres still extant, from the description we have given above. It is only necessary to mention, that in the theatres of the great cities of the Macedonian time the space between the thymele and the logeum was converted into a lower stage, upon which mimes, musicians, and dancers played, while the ancient stage (proscenium and logeum) remained destined, as before, for the actors in the regular drama. This lower stage was sometimes called thymele or orchestra. The construction of a Roman theatre resembled, on the whole, that of a Greek one. The principal differences are, that the seats of the spectators, which rose in the form of an amphitheatere around the orchestra, did not form more than a semi-circle; and that the whole of the orchestra likewise formed only a semicircle, the diameter of which formed the front line of the stage. The Roman orchestra contained no thymele, and was not destined for a chorus, but contained the seats for senators and other distinguished persons, such as foreign ambassadors, which are called "primum subsellii" or "ordo." In the year 68 B. C. the tribune L. Roscius Otho carried a law which regulated the places in the theatre to be occupied by the different classes of Roman citizens: it enacted that fourteen ordinaries of benches were to be assigned as seats to the equites. (Liv. Epit. 99; Ascon. ad Cornel. p. 76, ed. Mill.) Hence these quarterdecim ordinaries are sometimes mentioned without any further addition as the honorary seats of the equites. They were undoubtedly close behind the seats of the senators and magistrates, and thus consisted of the rows of benches immediately behind the orchestra. Velleius (ii. 32) and Cicero (pro Mur. 19) speak of this law in a manner to lead us to infer that it only restored to the equites a right which they had possessed before. Another part of this law was that spendthrifts and persons reduced to poverty (decures), whether through their own fault or not, but who belonged to the senatorial or equestrian order, should no longer occupy the seats assigned to their order, but occupy a separate place set apart for them. (Cic. Philipp. ii. 18.) In the reign of Augustus the senate made a decree, that foreign ambassadors should no longer enjoy the privilege mentioned above, as it had sometimes happened that freedmen were sent to Rome as ambassadors. The soldiers also were separated from the people by the same decree; the same was the case with women, praetextatae and paederasts. (Suet. Aug. 44.) This separation consisted probably in one or more cunei being assigned to a particular class of persons. The woodcut on the following page contains a probable representation of the plan of a Roman theatre.

For a fuller account of the construction of Greek and Roman theatres see the commentators on Vitruvius (l. c.), J. Chr. Genuil, Das Theater zu Athen, hinsichtlich auf Architektur, Scenare und Darstellungs Kunst, über Köln, Berlin, 1818, 8vo. 2. G. C. W. Schneider, Das Attische Theatervor.
It remains to speak of a few points respecting the attendance in the Greek theatres. Theatrical representations at Athens began early in the morning, or after breakfast (Aeschyl. c. Ctesiph. p. 466; Athen. xi. p. 464); and when the concourse of people was expected to be great, persons would even go to occupy their seats in the night. The sun could not be very troublesome to the actors, as they were in a great measure protected by the buildings surrounding the stage, and the spectators protected themselves against it by hats with broad brims. (Suidas, s. v. ἑρακρός and ἀπακός.) When the weather was fine, especially at the Dionysiac festivals in spring, the people appeared with garlands on their heads; when it was cold, as at the Lena in January, they used to wrap themselves up in their cloaks. (Suidas, l.c.) When a storm or a shower of rain came on suddenly, the spectators took refuge in the porticoes behind the stage, or in those above the uppermost row of benches. Those who wished to sit comfortably brought cushions with them. (Aeschyl. c. Ctesiph. l.c.; Theophr. Char. 2.) As it was not unusual for the theatrical performances to last from ten to twelve hours, the spectators required refreshments, and we find that in the intervals between the several plays, they used to take wine and cakes. (Athen. xi. p. 464; Aristot. Ech. Nid. x. 5.)

The whole of the cavea in the Attic theatre must have contained about 50,000 spectators. The places for generals, the archons, priests, foreign ambassadors, and other distinguished persons, were in the lowest rows of benches, and nearest to the orchestra (Pollux, iv. 121, viii. 133; Schol. ad Aristoph. Equit. 572), and they appear to have been sometimes covered with a sort of canopy. (Aeschyl. l.c.) The rows of benches above these were occupied by the senate of 500, those next in succession by the ephesoi, and the rest by the people of Athens. But it would seem that they did not sit indiscriminately, but that the better places were let at a higher price than the others, and that no one had a right to take a place for which he had not paid. (Plut. Apolog. p. 26; Aelian. V. H. ii. 13; Demosth. in Mid. p. 572.)

The question, whether in Greece, and more especially at Athens, women were present at the performance of tragedies, is one of those which have given rise to much discussion among modern scholars, as we have scarcely any passage in ancient writers in which the presence of women is stated as a positive fact. But Jacobs (Vermischte Schriften, iv. p. 272), and Passow (in Zimmermann's Zeitschr. für die Alterth. 1837. n. 29), have placed it almost beyond a doubt, from the various allusions made by ancient writers, that women were allowed to be present during the performance of tragedies. This opinion is now perfectly confirmed by a passage in Athenaeus (xiv. p. 534), which has been quoted by Becker (Charikles, ii. p. 560), in corroboration of the conclusion to which the above mentioned writers had come. In this passage we find that at Athens, and at the time of the Peloponnesian war, the spectators in the theatre consisted of men and women. We have, however, on the other hand, every reason to believe that women were not present at comedies, while boys might be present both at tragedy and comedy. (Theophr. Charact. 9; Isaeus, de Ciron. hered. p. 206; Aristoph. Nub. 557, &c.; Lucian, de Gymnast. 22.)

The seats which women occupied in the Greek theatres appear to have been separated from those of the men. (Göttling, in the Rheinisches Mus. 1834, p. 103, &c.)

For the purpose of maintaining order and preventing excesses, the ancients had a sort of theatre-police; the persons who held this office were called
THENSAE.

in Greece ἄντεσαις or ἄντεσικες, and at Rome Praecenses. (Schol. ad Aristoph. Pax, 718.)

Respecting the attendance at the Greek theatres, and the conduct of the people, see a very good dissertation of Becker, in his Chariteis, ii. pp. 249—278.

THENSAE or TENSES (for the orthography and etymology of the word are alike doubtful, although the oldest MSS. generally omit the aspirate) were highly ornamented sacred vehicles, which, in the solemn pomp of the Circensian games, conveyed the statues of certain deities with all their decorations to the pulvinaria, and after the sports were over bore them back to their shrines. (Cic. in Ferr. ii. 1, 59, and note of Pseudo-Ascon. iii. 27, v. 72; Serv. ad Virg. Aen. i. 21; Festus, s. v. 56; Diomedes, i. p. 372, ed. Futsch; Dion Cass. xlvii. 40; Tertull. de Spect. 7.) We are ignorant of their precise form; for although we find several representations upon ancient medals and other works of art, of gods seated in cars, and especially of the sun-chariot of Elagabalus (Herod. v. 6; see Vailhant, Numismata Imp. vol. ii. p. 269; Ginzrot, Die Wagen und Fuhrwerke, &c. tabl. xlii. fig. 6), yet we have no means of deciding which, if any, of these are tensae. We know that they were drawn by horses (Plut. Coriol. 23, who calls them Στέναις), and escorted (deduae) by the chief senators in robes of state, who, along with pueri patrimi [Patremi], laid hold of the bridle and traces, or perhaps assisted to drag the carriage (for deduae is used as well as deduae, Liv. v. 41), by means of thongs attached for the purpose (and hence the proposed derivation from teado). So sacred was this duty considered, that Augustus, when labouring under sickness, deemed it necessary to accompany the tensae in a litter. If one of the horses knocked up or the driver took the reins in his left hand, it was necessary to recommence the procession, and for one of the attendant boys to let go the thong or to stumble was profanation. (Liv. v. 41; Plut. l. c. Ascon. l. c.; Armob. adv. gent. iv. 31; compared with the oration de Haresp. resp. 11; Tertull. de cor. mil. 18, and de Spectac. 7; Suet. Octav. 43.)

The only gods distinctly named as carried in tensae are Jupiter and Minerva (Suet. Vespas. 5; Dion Cass. xlvii. 40, l. 8, lxvi. 1), to which number Mars is usually added on the authority of Dion Cassius (lxxviii. 8), but, in the passage referred to, he merely states, that at the Circensian games referred to, he merely states, that at the Circesian games celebrated a. d. 216, the statue of Mars, which was in the procession (σαμαρίαος), fell down, and it is very remarkable that Dionysius (vi. 72), in his minute description of the Pompa Circensia, takes no notice whatever of the Tensae, but represents the statues of the gods as carried on men's shoulders, i. e. on fercula. That a considerable number of deities however received this honour seems probable from the expression of Cicero, in his solemne Oration, "omnesque dii, qui vehiculis tensarium solemnes ostias ludorum initiis," though we cannot determine who these gods were. We frequently hear of the chariot of Juno (Virg. Georg. iii. 531), of Cybele (Aen. vi. 784), and many others, but as these are not mentioned in connexion with the Pompa Circensia, there is no evidence that they were tensae. Among the impious flatteries heaped on Caesar, it was decreed that his ivory statue should accompany the images of the gods to the circus in a complete chariot (Δραμα δεον, that is, a tensa, in opposition to a mere ferulaam), and that this chariot should stand in the Capitol immediately opposite to that of Jupiter. (Dion Cass. xliii. 15, 21, 45, xlv. 6.)

Similar honors were paid in the high festivals to the images of their gods by other ancient nations. Thus, in the curious ceremonies performed at Paphremis connected with the worship of the Egyptian deity, whom Herodotus (ii. 63) imagined to be identical with Ares, the statue, enshrined in a chapel made of gilded wood, was dragged in a four-wheeled car by a body of priests. So also, in the account given by Athenaeus (v. c. 27, &c.), after Callixenes of Rhodes, of the gorgeous pageant at Alexandria, during the reign of Polemy Philadelphus, we read of a car of Bacchus of prodigious size, most costly materials, and most elaborate workmanship, which was dragged by 180 men, and to such customs we may find a parallel in modern times in the usages which prevail at the festival of S. Agatha at Catania, and S. Rosalia at Palermo.

(Scheffer de Revehicularum, 24; Ginzrot, Die Wagen und Fuhrwerke der Griechen und Römer, c. 55; but the latter author, both here and elsewhere, allows his imagination to carry him further than his authorities warrant.)

W. R.

THEODOSIANUS CODEX. [CODEX THEODOSIANUS.]

THEOPHANIA (Θεοφάνεια), a festival celebrated at Delphi, on the occasion of which the Delphians filled the huge silver crater which had been presented to the Delphic god by Croesus. (Herod. i. 51.) Valckenenaer on Herodotus (l. c.) thought that the reading was corrupt, and that Θεοφάνεια should be read, as this festival is well known to have been celebrated by the Delphians. (Plut. de his qui servo a num. pun. p. 557, 1; Polemon, ap. Athen. ix. p. 572.) But both festivals are mentioned together by Pollux (i. 34), and Philostratus (Vit. Apollon. iv. 31). The Theophanias were intended as a celebration of the return of Apollo to Delphi from which he was believed to be absent during the winter months. An agon called theoxenia was also celebrated at Pellene in Achaia in honour of Hermes and Apollo. (Schol. ad Pind. Od. vii. 156, ix. 146.) But no particulars of any of these festivals are known.

[D. S.]

THEORI (Θεώρι), were persons sent on special missions (Θεώρια) to perform some religious duty, as to consult an oracle, or to offer a sacrifice, on behalf of the state. (Scheffer, Wagen und Fahrwerke der Griechen und Römer, pp. 130, 395.) At Athens there were no official persons called Θεώρι, but the name was given to those citizens who were appointed from time to time to conduct religious embassies to various places; of which the most important were those that were sent to the Olympic, Pythian, Nemean, and Isthmian games, those
that went to consult the God at Delphi, and those that led the solemn procession to Delos, where the Athenians established a quadriennial festival, in revival of the ancient Ionian one, of which Homer speaks. (Thucyd. iii. 104.) The expense of these embassies was defrayed partly by the state and partly by wealthy citizens, to whom the management of them was entrusted, called ἄρχων, chiefs of the embassy. This was a sort of λειτουργία, and frequently a very costly one; as the chief conductor represented the state, and was expected to appear with a suitable degree of splendour; for instance, to wear a golden crown, to drive into the city with a handsome chariot, return, &c. Nicias, who was very rich, is reported to have incurred great expenses on his embassy to Delos, beyond what was required of him; and Alcibiades astonished all the spectators at Olympia by the magnificence of his horses, chariots, &c., and the profuseness of his expenditure. (Böckh, Publ. Econ. of Athens, p. 214, &c. 2d ed.; Thirlwall, Hist. of Greece, vol. iii. pp. 217, 330.)

The Salaminian, or Delian, ship was also called λειτουργία ναὸς, and was principally used for conveying embassies to Delos, though, like the Paralus, it was employed on other expeditions besides. (Suidas, l. c.; Böckh, Id. p. 240.) [C. R. K.]

THEORICA (τεορικ). Under this name at Athens were comprised the monies expended on festivals, sacrifices, and public entertainments of various kinds; and also monies distributed among the people in the shape of largesses from the state.

There were, according to Xenophon, more festivals at Athens than in all the rest of Greece. (De Rep. Ath. iii. 8.) Besides those which were open to the whole body of the people, there were many confined to the members of each tribe, deme, and house. These last were provided for out of the private funds of the community who celebrated them. At the most important of the public festivals, such as the Dionysia, Panathenaea, Eleusinia, Thargelia, and some others, there were not only sacrifices, but processions, theatrical exhibitions, gymnastic contests, and games, celebrated with great splendour and at a great expense. A portion of the expense was defrayed by the individuals, upon whom the burden of λειτουργία devolved; but a considerable, and perhaps the larger, part was defrayed by the public treasury. Demosthenes complains, that more money was spent on a single Panatheniac or Dionysiac festival than on any military expedition. (Philip. i. 50.) The religious embassies to Delos and other places, and especially those to the Olympian, Nemean, Isthmian, and Pythian games, drew largely upon the public exchequer, though a part of the cost fell upon the wealthier citizens who conducted them. (Schömann, Ant. Jur. publ. Gr. p. 305.)

The largesses distributed among the people had their origin at an early period, and in a measure apparently harmless, though from a small beginning they afterwards rose to a height most injurious to the commonwealth. The Attic drama used to be performed in a wooden theatre, and the entrance was free to all citizens who chose to go. It was found, however, that the crushing to get in led to much confusion and even danger. On one occasion, about b. c. 500, the scaffolding which supported the roof fell in, and caused great alarm. It was then determined that the entrance should no longer be gratuitous. The fee for a place was fixed at two obols, which was paid to the lessee of the theatre, (called διατρώης, διατροπᾶς, or ἄρχων, who undertook to keep it in repair, and constantly ready for use, on condition of being allowed to receive the profits. This payment continued to be exacted after the stone theatre was built. Pericles, to relieve the poorer classes, passed a law which enabled them to receive the price of admission from the state; after which all those citizens who were too poor to pay for their places applied for the money in the public assembly, which was then frequently held in the theatre. (Schömann, Id. p. 219.) In process of time this donation was extended to other entertainments besides theatrical ones; the sum of two oboli being given to each citizen who attended; if the festival lasted two days, four oboli; and if three, six oboli; but not beyond. Hence all theoretic largesses received the name of διωκλησία. The sums thus given varied at different times, and of course depended on the state of the public exchequer. These distributions of money, like those of grain and flour, were called διανομή, or διαδόσεις. They were often made at the Dionysia, when the allies were present, and saw the surplus of their tribute distributed from the orchestra. The appearance of the public largesses grew by encouragement, stimulated from time to time by designing demagogues; and in the time of Demosthenes they seem not to have been confined to the poorer classes. (Philip. iv. 141.) Böckh calculates that from 25 to 30 talents were spent upon them annually. (Publ. Econ. of Athens, p. 224, 2d ed.)

So large an expenditure of the public funds upon shows and amusements absorbed the resources, which were demanded for services of a more important nature. By the ancient law the whole surplus of the annual revenue which remained after the expense of the civil administration (τὰ περιοντα χρήματα τῆς διοικήσεως) was to be carried to the military fund, and applied to the defence of the commonwealth. Since the time of Pericles various demagogues had sprung up, who induced the people to divert all that could be spared from the other branches of civil expenditure into the Theoric fund, which at length swallowed up the whole surplus, and the supplies needed for the purpose of war or defence were left to depend upon the extraordinary contributions, or property-tax (εἰρήματος). An attempt was made by the demagogue Eubulus, of whom Theopompus says, that τὰς προσδόκους καταμιθροφόρων διετέλει (Athen. iv. p. 166), to perpetuate this system. He passed a law, which made it a capital offence to propose that the Theoric fund should be applied to military service. In a. 353 Apollodorus carried a decree empowering the people to determine whether the surplus revenue might be applied to the purpose of war; for which he was indicted by a γραφή παραβάσεως, convicted and fined; and the decree was annulled, as a matter of course. (Demosth. c. Juc. L., 1346—1348.) The law of Eubulus was a source of great embarrassment to Demosthenes, in the prosecutions of his schemes for the national defence; and he seems at last, but not before b. c. 339, to have succeeded in repealing it. (Harpocr. and Suidas, s. v. θεορικ and ἐθνολογος; Böckh. Id. i. pp. 219—223; Schömann, Id. p. 307.)
In the earlier times there was no person, or board of persons, expressly appointed to manage the Theoric fund. The money thus appropriated was disbursed by the Hellenotamiae. After the anarchy, the largess system having been restored by Agyrrhius, a board of managers was appointed, who are called ἀρχηγες ἐπὶ τῶν ἱερωρικῶν, οἱ ἐπὶ τῶν ἱερωρικῶν τεταγμένοι οἱ κεχειροτονημένοι, θεωρικὴ ἀρχηγή, &c. They were elected by show of hands at the period of the great Dionysia, one from each tribe. In the time of Eubulus many other branches of the administration were placed under the control of docks, arsenals, streets, &c. This was dictated by an anxiety on the part of the people that no part of the revenue should be improperly diverted from the Theoric fund, which they thought would be prevented by increasing the powers of its managers. But these extraordinary powers appear not to have been of long continuance. (Aeschin. c. Coseiph. 57, ed. Steph.; Böckh, p. 170, &c.; Schömann, l. c. 329; Wachsmuth, Hellen. Alt. vol. ii. pt. i. pp. 124—127, 1st ed.) [C. R. K.]

THEO'XENIA. [THEOPHANIA.]

THERAPON (Θεράπων). [Θερατης.]

THERMAE. [ΒΑΛΝΩΝ, p. 193, b.]

THERMOPO'LIUM. [CALIDA; CAUPONA.]

THESAURUS (Θησαυρός), a treasure-house. That buildings of this description were required, especially by kings and states, in the earliest period of civilization, is self-evident; and tradition points to subterranean buildings in Greece, of unknown antiquity and of peculiar formation, as having been erected during the heroic period, for the purpose of preserving precious metals, arms, and other property (κεφαλή). Such are the treasure of Myriax, at Orchomenus, described by Pausanias (ix. 38), and of which some remains still exist (Dodwell, vol. i. p. 227), and those of Atreus and his sons at Mycenae (Paus. ii. 16), the chief one of which, the so-called Treasury of Atreus, still exists almost in a perfect state. The preceding woodcut shows a ground-plan of the building, and a section of the principal chamber, which is about 48 feet in diameter, and 50 high, and is vaulted over in the manner described under ARCA, p. 128, a. The remains of similar structures have been found at various places in Greece and Italy.

It is, however, very questionable whether these edifices were treasuries at all: some of the best archaeologists maintain that they were tombs. The question cannot be entered into here: a full discussion of it, with a description of the buildings themselves, will be found in the works now quoted. (Müller, Archit. d. Kunst, §§ 48, 291, Welcker's edition; Welcker's review of Müller's Archäologie, in the Rhein. Mus. for 1834, vol. ii. pp. 469, foll.; Col. Mur., Uber die Königlichen Grabmälern des heroischen Zeitalters, in the Rhein. Mus. for 1838, vol. vii. pp. 263—267, foll.; we are not aware whether this Essay has been published in English; Abeeken, Mittelitalien, pp. 234, foll.)

In the historical times, the public treasury was either in a building attached to the agora, or in the opisthodomus of some temple. (Hirt, Lehre d. Gbldichte, pp. 189, 190.)

Respecting the public treasury at Rome, see AERARIUM. [P. S.]

THESAELA (Θεσελα), a festival celebrated by the Athenians in honour of their national hero Theseus (Aristoph. Plut. 222, &c. with the Schol. Thesmoph. 241; Suidas, s. v. Θησαλος), whom they believed to have been the author of their democratic form of government. In consequence of this belief donations of bread and meat were given to the poor people at the Theseia, which thus was for them a feast at which they felt no want and might fancy themselves equal to the wealthiest citizens. We learn from Gellius (xx. 20, § 3) that a contest also was held on this occasion, but we are not informed in what it consisted. The day on which this festival was held was the eighth of every month (εὔσελα), but more especially the eighth of Pyanepsion, because it was believed that Theseus returned from Crete on that day. (Schol. ad Aristoph. l. c. Plut. Thes. 36.) Hence the festival was sometimes called εὔσελαν. (Heacy, s. v.)

From the passages above referred to, compared with Diodorus (v. 52), it appears highly probable that the festival of the Theseia was not instituted till n. c. 469, when Cimon brought the remains of Theseus from Scyros to Athens.

THESMOPHORIA (Θησμοφορία), a great festival and mysteries celebrated in honour of Demeter in various parts of Greece, and only by married women, though some ceremonies also were performed by maidens. The Attic Thesmophoria were held in the mouth of Pyanepson and began on the eleventh. Its introduction is ascribed by Demochares, Diodorus Siculus, and Plutarch (ap. Theodoret. Therap. 1) to Orpheus, while Herodotus (ii. 171) states that it was introduced into Greece...
from Egypt by the daughters of Danaus, who made the Pelasgian women of Pelopennusus acquainted with the mysteries, that after the Dorian conquest they fell into disuse, and were only preserved by the Arcadians, who remained undisturbed in their ancient seats. Thus much appears certain from the name of the festival itself, that it was intended to commemorate the introduction of the laws and regulations of civilized life, which was universally ascribed to Demeter. (Diodor. v. 5.)

Respecting the duration of the Atic Thesmophoria, various opinions are entertained both by ancient and modern writers. According to Hesychius (s. v. θεσμοφορία), it lasted four days; it has been inferred from Aristophanes (Thesmoph. 80) that it lasted for five days. Such discrepancies have undoubtedly arisen from the circumstance that the women spent several days before the commencement of the real festival in preparations and purifications, during which they were especially bound to abstain from sexual intercourse, and for this purpose they slept and sat upon particular kinds of herbs which were believed to have a purifying effect. (Hesych. θεσμοφορίας. Aelian. Nat. An. ii. 29; Schol. on Theocrit. iv. 53; Diocles. s. v. θεσμοφωρίας. Plin. Hist. Nat. xii. 132; Plin. H. N. xxiv. 19; Stephan. Byz. s. v. θεσμοφωρίας). During this time the women of each demos appointed two married women from among themselves to conduct the preliminary solemnities (δρυχεν εις τα θεσμοφωρία, Isaen, de Ciron. hered. p. 208, ed. Reisk.), and their husbands who had received a dowry amounting to three talents, had to pay the expenses for the solemnity in the form of a liturgy. (Isaeus, de Pyrrh. herod. p. 69.) The festival itself, which according to the most probable supposition also adopted by Wellauer (de Thesmophoris, p. 6), lasted only for three days, began on the 11th of Pyanepsion, which day was called διημερέων (Athen. xiv. p. 647), Eretria in Euboea (Plut. Quaest. Gr. p. 298, b. &c.), Delos (Athen. iii. p. 109), Ephesus (Strab. iv. p. 633; Herod. vi. 16), Agrigentum (Polyaen. s. v. Λευκαρα, § 15), and other places.

But of their celebration in these towns we know no more than a few isolated particulars which are mentioned in the passages referred to.

THESMOPHORY' LACES (θεσμοφόρλακες).

[HENDECAL.]

THIESMOS (θεσμός). [NOMOS.]

THESMOTHETAEE (θεσμοβατες). [AHCION.]

THÆSAA (θῆσας). [HARES, p. 597, b.]

THETES (θῆτες).

In earlier times this name denoted any freemen who were called for hire (οἱ ἔκεικα τροφὴς δουλεύσαντες, Photius, s. r.c. ἐξεναπάμεισαν ὦμοι διά πενταν ἐπ' ἀργυρῷ δουλεύσαντων, Pollux, iii. 32). Homer (Od. iv. 614, xviii. 336) speaks of ἰδείς τε δημώς τε, the latter properly signifying those who became slaves by captivity. They are to be distinguished not only from all common slaves, but also from those persons who were in the condition of the Penestae or Helots. (Wachsmuth, Hellen. Alt. vi. p. 323, ed. &c.; Schämmann, Ant. Jur. pub. Gr. p. 70.) The persons best known by the name of ἰδείς are the members of the fourth or lowest class at Athens, according to the political division of Solon. They are spoken of under CENSUS.

[CR.K.]

THIASOS (θιασός). [DIONYSIA, p. 411, a; ERAN., p. 475, b.]

THOLIA (θωλία). [UMBRAEULUM.]

THOLUS (θώλος, ος and ης, also called θυάδα) is a name which was given to any round building which terminated at the top in a point, whatever might be the purpose for which it was used. (Hesych. and Suidas, s. v. θώλος: Od. xxii. 442, 459, 466.) At Athens the name was in particular applied to the new round prytaneum near the senate-house, which should not be confounded with the old prytaneum at the foot of the acropolis. (Paus. i. 5. § 1, 18. § 13.) It was therefore the place in which the prytaneus took their common meals and offered their sacrifices. It was adorned with some small silver statues (Pollux, viii. 135; Demosth. de Fals. Leg. p. 419), and near it stood

THIUSUS (θίους).

[Symbol, 1835, n. 98; and in Thesmophoria were also celebrated in many other parts of Greece, as stated above. The principal places where they are mentioned by ancient authors are the following:—Sparta, where the festival lasted for three days (Hesych. s. v. θεσμοφωρίας); Drymænæ in Phocis (Paus. x. 33, § 6; Steph. Byz. s. v. θρύμνα); Thebes in Boeotia (Plut. Polop. p. 280; Xenoph. Hellen. v. 2. § 29); Miletus (Steph. Byz. s. v. Μιλέτος: Diog. Laërt. ix. § 43), Synnace (Athen. xiv. p. 647), Eretria in Euboea (Plut. Quaest. Gr. p. 298, b. &c.), Delos (Athen. iii. p. 109), Ephesus (Strab. iv. p. 633; Herod. vi. 16), Agrigentum (Polyaen. s. v. Λευκαρα, § 15, &c.).

[LS.]
monarchs were sometimes deposited in the temples as _DONARIA_. (Paus. ii. 19. § 4, v. 12. § 3.)

The following woodcut, taken from a fictile vase in the _Museo Borbonico_ at Naples, represents Juno seated on a splendid throne, which is elevated, like those already described, on a basement. She holds in her left hand a sceptre, and in her right the apple, which Mercury is about to convey to Paris with a view to the celebrated contest for beauty on Mount Ida. Mercury is distinguished by his _TALAIRA_, his _CADUCEUS_, and his petasus thrown behind his back and hanging by its string. On the right side of the throne is the representation of a tigress or panther.

The elevated seat used by a schoolmaster was called his throne. (Brunck, _Anat. ii. 417._) [J. Y.]

**THYMELE (θυμέλη).** [THEATRUM, p. 1122.]

**THYRSUS** (θῦρσος), a pole carried by Dionysus, and by Satyrs, Maenades, and others who engaged in Bacchic festivities and rites. (Athen. xiv. p. 631, a.; Vell. Pat. ii. 62.) [DIONYSIA, p. 411, a.] It was sometimes terminated by the apple of the pine, or fir-cone (κοινόφύλλος, Brunck, _Anat. i. 421_), that tree (ποιάν) being dedicated to Dionysus in consequence of the use of the turpentine which flowed from it, and also of its cones, in making wine. (Walpole, _Mem. on Eur. and As. Turkey_, p. 285.) The monuments of ancient art, however, most commonly exhibit instead of the pine-apple a bunch of vine or ivy leaves (Ovid. _Met._ xi. 27, 28; Propert. iii. 3. 35) with grapes or berries, arranged into the form of a cone. The following woodcut, taken from a marble ornament (_Mom. Math._ ii. tab. 86), shows the head of a thyrus composed of the leaves and berries of the _ivy_, and surrounded by acanthus-leaves. Very frequently also a white fillet was tied to the pole just below the head, in the manner represented in the woodcut on p. 136, b., where each of the figures holds a thyrus in her hand. See also the woodcut to _FUNAMBULUS_ and _VANNUS_. (Statius, _Thib._ vii. 654.) [INSITIF._] The fabulous history of Bacchus relates that he converted the _thyrsus_ carried by himself and his followers into dangerous weapons, by concealing an iron point in the head of leaves. (Diod. iii. 64, iv. 4.; Macrobi. _Sat._ i. 19.) Hence his _thyrsus_ is called "a spear enveloped in vine-leaves" (Ovid. _Met._ iii 667), and

TIARA or TIA'RIAS (τιάρα or τιάρας; Att. κυψέλα, Moeris, s.v.; Herod. v. 49, vii. 64; Aristoph. Aves, 487), a hat with a large high crown. This was the head-dress which characterized the north-western Asiatics, and more especially the Armenians (Xen. Cyr. 1. § 13; Sueton. Nero, 13), the Parthians, and the Persians (Herod. iii. 12; Philost. Sen. Imag. ii. 21; Plaut. Pers. iv. 2, 2), as distinguished from the Greeks and Romans, whose hats fitted the head or had only a low crown. The Mysian hat, or "Phrygian bonnet," as it is now called (PILEUS, p. 919, b.), was a kind of tiara (Virg. Aen. vii. 247; Servius, in loc.; Sen. Thyest. iv. 1. 40, 41; Philostr. Jun. Imag. 8), formed with lappets to be tied under the chin (Juv. vi. 516; Val. Flacc. vi. 700), and dyed purple. (Ovid. Met. xi. 161.)

The king of Persia wore an erect tiara, whilst those of his subjects were soft and flexible, falling on one side. (Herod. vii. 61; Xen. Anab. ii. 5. § 23, Cyrop. viii. 3. § 13; Schol. in Aristoph. L.c.) He was also distinguished by the splendid colours of his tiara (Themist. Orat. 2. p. 36, c., 24. p. 306, c.), and by a DIADEMA, which encircled it, and which was variegated with white spots upon a blue ground. The Persian name for this regal head-dress was cidasia. (Curt. iii. 8; κίδασις, Strabo, xi. 12. § 9; Pollux, vii. § 58.) The preceding woodcut shows the cidasia as represented on a gem in the Royal Cabinet at Paris, and supposed by Caylus to be worn by a sovereign of Armenia. (Recueil d’Ant. ii. p. 124.) From a very remote period (Aeschyl. Pers. 668) down to the present day the tiara of the king of Persia has been commonly adorned with gold and jewellery.

J. Y.

TIBIA (αὔδόν), a pipe, the commonest musical instrument of the Greeks and Romans. It was very frequently a hollow cane perforated with holes in the proper places. (Plin. H. N. xvi. 36, s. 66; Athen. iv. p. 182.) In other instances it was made of some kind of wood, especially box, and was bored with a gimbolt (torebrato laoco, Ovid. Fast. vi. 697). The Phoenicians used a pipe, called gingræs, or αὔδόν γιγγράνων, which did not exceed a span in length, and was made of a small reed or straw. (Athen. iv. p. 174, f.; Festus, s. v. Gingræa.) The use of the same variety in Egypt is proved by specimens in the British Museum, which were discovered in an Egyptian tomb.

When a single pipe was used by itself, the performer upon it, as well as the instrument, was called monaulos. (Mart. xiv. 64; μοναύλος, Brunch, Anal. i. 484.) Thus used, it was much in fashion at Alexandria. (Athen. iv. p. 174, b.) When its size became considerable, and it was both strengthened and adorned by the addition of metallic or ivory rings (Hor. Art. Poet. 202–205; Propert. iv. 6, 8), it must have been comparable to the flageolet, or even to the clarionet of modern times. Among the varieties of the single pipe the most remarkable were the bag-pipe, the performer on which was called sistrulos (Sueton. Nero, 54) or δασθήνας (Onomast.); and the αὔδον πάλαιος or παλαίγιανων (Theocrit. xx. 29; Longus, i. 2; Heliodor. Aethiop. v.; Aelian, H. A. vi. 19; Eustath. in Hom. H. ii. xviii. 495), which, as its name implies, had a mouth-piece inserted into it at right angles. Its form is shown in a restored terminal statue of Pan in the Townley collection of the British Museum. Pan was the reputed inventor of this kind of tibia (Bion, iii. 7) as well as of the fistula or syrinx.

But among the Greeks and Romans it was much more usual to play on two pipes at the same time. Hence a performance on this instrument (tibicinium, Gellius, iv. 13), even when executed by a single person, was called canere or cantare tibiae. (Gellius, N. A. xv. 17; Corn. Nepos, xv. 2. § 1.) This act is exhibited in very numerous works of ancient art, and often in such a way as to make it manifest that the two pipes were perfectly distinct, and not connected, as some have supposed, by a common mouth-piece. We see this more especially in two beautiful paintings, which were found at Resina and Civita Vecchia, and which represent Marsyas teaching the young Olympus to play on the double pipe. (Ant. d’Ercolan. i. tav. 9; i. tav. 19; compare Paus. x. 30. § 5.) The tibiae pares in the British Museum, which were found with a lyre in a tomb at Athens, appear to be of cedar. Their length is about 15 inches. Each of them had a separate mouth-piece (γαλαύσις), and besides the hole at the end it has five holes along the top and one underneath. The circumstance of these three
TIBIA.

Instruments being found together, is in accordance with the fact, that they are very commonly mentioned together by ancient authors (Pind. O. i. 8, x. 97, 98, Isthm. iv. 398, ed. Böckh; 1 Cor. xiv. 7); and the reason of this was, that performances on the double pipe were very frequently accompanied by the music of the lyre. (Hor. Epod. i. 5.)

The mouth-pieces of the two pipes often passed through a capistrum. (See woodcut, p. 553.)

Three different kinds of pipes were originally used to produce music in the Dorian, Phrygian, and Lydian modes. [MusiCA, p. 777.] About the third century B.C., Pronomus, the Theban, invented adjustments (σπορίατι) by which the same set of pipes might be fitted to all the modes. (Paus. ix. 12. § 1; Athen. xiv. p. 691, e.) In what these adjustments consisted we are not clearly informed. Probably stopples or plugs (δακτοι) were used for this purpose. It appears also, that to produce the Phrygian mode the pipe had only two holes above (biforis, Virg. Aen. i. 617—620), and that it terminated in a horn bending upwards. (Tibull. ii. 1. 86; Ovid. Met. iii. 533.) It thus approached to the nature of a trumpet, and produced slow, grave, and solemn tunes. The Lydian mode was much quicker, and more varied and animating. Horace mentions “Lydian pipes” as a proper accompaniment, when he is celebrating the return of Theseus (i. 17) as “male and female,” i.e. probably bass and treble, corresponding to the ordinary sexual difference in the human voice. The corresponding Latin terms are tibia dextra and sinistra (loeva, Plin. i. c.): the respective instruments are supposed to have been so called, because the former was more properly held in the right hand and the latter in the left. The “tibia dextra” was used to lead or commence a piece of music, and the “sinistra” followed it as an accompaniment.

Hence the former was called inoiceta, the latter succentoria. (Varro, de Re Rustr. i. 2.) The comedies of Terence having been accompanied by the pipe, the following notices are prefixed to explain the kind of music appropriate to each: tibias parilias, i.e. with pipes in the same mode; tib. imparibus, pipes in different modes; tib. dubius dextra, two pipes of low pitch; tib. par. dextrae et sinistrae, pipes in the same mode and of both low and high pitch.

The use of the pipe among the Greeks and Romans was threefold, viz. at sacrifices (tibia sacrifica), entertainments (ludicrae, Plin. l. c.); woodcut, p. 508); and funerals. (Ovid. Fast. vi. 657.) 1. A sacrifice was commonly attended by a pipe (tibicen, Varro, de Re Rustr. iii. 17; woodcut, p. 1045, b), who partook of the food offered, so that “to live like a piper” became a proverb applied to those who maintained themselves at the expense of other people. (Suidas, s. v. ἀρνάτης; Aristoph. Pax, 552.) The worshippers of Bacchus (Virg. Aen. xi. 737), and all of ancient Cybele, the the Boreae, and maenads, (Hor. Carm. iv. 1. 22), used the Phrygian pipe, the music of which was on this account denominated τῷ Μυρτίων αἰθήμα. (Paus. x. 30. § 5.)

2. At public entertainments the tibicines wore tunics reaching down to their feet (Ovid. Fast. vi. 686), as is exemplified in one of the woodcuts under Tunica. In conformity with the use of this kind of music at public festivals, a band of tibicines preceded a Roman general when he triumphed. (Florus, ii. 2.) 3. The gravity and solemnity of the Phrygian mode impressed the worship of Cybele, also caused them to be used at funerals. (Statur. Theb. vi. 120; compare Joseph. B. J. iii. 8. 5; Matt. ix. 23.) The pipe was the instrument principally used to regulate the dance [SALTATIO], whether at sacrifices, festivals, or private occasions in domestic life (Herod. vi. 129); by means of it also the rovers kept time in a trireme. (Max. Tyr. 23.)

Notwithstanding the established use of the pipe for these important purposes, it was regarded, more especially by the Athenians, as an inelegant instrument, greatly inferior to the lyre. (Plut. Alcib. p. 331; Gellius, N. A. xv. 17; Aristot. Polit. viii. 6.) Horace, however, represents Clio as performing according to circumstances either on the lyre or the pipe (Carm. i. 12. 2; compare Philost. Sen. Imag. ii. 5); and it is certain that the pipe was by no means confined anciently, as it is with us, to the male sex, but that ἀρρητοὶ, or female tibicines, were very common. (Xen. Symp. ii. 1; Hor. Epist. i. 14. 25.) The Thebans always esteemed this instrument, and excelled greatly in the use of it. (Anthol. ed. Jacobs. ii. 633.)

TIBICEN (Τίβικέν).

TIGNI IMMITTENDI SERVITUS. [Servites, p. 1031, b.]

TIME'MA (τίμημα). The penalty imposed in a court of criminal justice at Athens, and also the damages awarded in a civil action, received the name of Τίμημα, because they were estimated or assessed according to the injury which the public or the individual might respectively have sustained. The penalty was either fixed by the judge, or merely declared by him according to some estimate made before the cause came into court. In the first case the trial was called ἀγών τιμητικός, in the second case ἄγων ἀριτμητος, a distinction which applies to civil as well as to criminal trials.

It is obvious that on a criminal charge two inquiries have to be made; first, whether the defendant is guilty, secondly, if he be found guilty, what punishment ought to be inflicted upon him. It may be advisable to leave the punishment to the discretion of the judge, or it may not. In some cases the Athenian law-giver thought that the judge ought to have no discretion. Thus, in cases of murder and high treason sentence of death was imposed by the law and only pronounced by the judge [PHONOS; PRODOSIA], and in many other cases the punishment was likewise fixed by the law. But where the exact nature of the offence could not be foreseen by the lawgiver, or it might so far vary in its character and circumstances as to admit of many degrees of culpability, it might be desirable or even necessary to leave the punishment to the discretion of the judge. The law then directed that the same court which passed sentence on the culprit should forthwith impose the penalty which his crime deserved. Thus in the κόροι ἀνέρων (Demosth. c. Mid. 70) it is enacted: ὃν τὸν ν ἐκ τοῦ ἐπεστράφη ἓν ἑλέας, παραξενία, ἢν ἐν δήκη ἄρας ἐναι πατέρων ἢ ἀποστόλων, ἢν ἐπαρκεῖ σημεία τοις αἰτίοις ἢ τοις παραξενίοις, ἢν ἐν δήκη ἄρας ἐναι πατέρων ἢ ἀποστόλων, ἢν ἐπαρκεῖ σημεία τοις. Sometimes a special provision was made as to the means of enforcing the punishment; as in the law last cited, and also
in the laws in Demosth. c. Timoer. 733, it is declared, that if a fine be imposed, the party shall be imprisoned until it is paid.

In civil causes the sentence by which the Court awarded redress to the injured party would vary according to the nature of his complaint. Where he sought to recover an estate in land, or a house, or any specific thing, as a ring, a horse, a slave, nothing further was required, than to determine to whom the estate, the house, or the thing demanded, of right belonged. [Heres (Greek); Oikias (Greek).] The same would be the case in an action of debt, χρόνος δικη, where a sum certain was demanded; as for instance, where the plaintiff had lent a sum of money to the defendant, and at the trial no question was made as to the amount, but the dispute was, whether it was a loan or a gift, or whether it had been paid or not. So, in an action for breach of contract, if by the terms of the contract a certain penalty had been attached to its violation, it would be unnecessary to have an inquiry of damages, they being already liquidated by the act of the parties themselves. (Demosth. c. Dionys. 1291, 1296, et argum.) In these and many other similar cases the trial was ἀπίμητος. On the other hand, wherever the damages were in their nature unliquidated, and no provision had been made concerning them either by the law, or by the agreement of the parties, they were to be assessed by the dicasts.

The following was the course of proceeding in the τιμητοί ἄγωνες.

Let us suppose that on a criminal prosecution the defendant had been found guilty. The superintending magistrate then called upon the prosecutor to say, what punishment he proposed to be inflicted on him, and what he had to say thereupon. The bill of indictment (ἐγκλημα) was always superscribed with some penalty by the person who preferred it. He was said ἐπικρατεῖν τίμημα, and the penalty proposed is called ἐπικρατεία. (Demosth. c. Naumid. 395.) We find also the expressions ἐπίταξαι τίμημα, τιμᾶσθαι τῷ φεύγοντι, τίμησαι ποιεῖσθαι. When a charge was brought not by a private individual, but by a magistrate ex officio, the law required him in like manner to write down the penalty which he thought the case merited. (Demosth. c. Macart. 1076.) The prosecutor was now called upon to support the allegation in the indictment, and for that purpose to mount the platform and address the dicasts (ἀναφηματίζει εἰς τίμημα). Here he said what he considered to be likely to aggravate the charge, or increase the dicasts against his opponents. He was not bound, however, to abide by the proposal made in the bill, but might, if he pleased (with the consent of the court) ask for a lower penalty than he had demanded before. This was often done at the request of the defendant himself, or of his friends; sometimes from motives of humanity; and sometimes from prudential considerations. If the accused submitted to the punishment proposed on the other side, there was no further dispute; if he thought it too severe, he made a counter proposition, naming the penalty (commonly some pecuniary fine) which he considered would satisfy the demands of justice. He was then said ἀντίκραται, or ἐπικρατεῖ τιμῶσθαι. (Demosth. c. Timoer. 743, c. Nicostr. 1252; Aesch. de Fals. Leg. 29, ed. Steph.) He was allowed to address the court in mitigation of punishment; to say what he could in extenuation of his offence, or to appeal to the mercy of his judges. This was frequently done for him by his relations and friends; and it was not unusual for a man, who thought himself in peril of life or freedom, to produce his wife and children in court, to excite compassion. (Demosth. c. Mid. 573, 575, c. Aristoc. 793, de Fals. Leg. 431, 434, c. Onetor. 878, c. Aphiob. 834; Aristoph. Vesp. 560.) After both parties had been heard, the dicasts were called upon to give their verdict.

Here occurs a question, about which there has been much difference of opinion, and which it is impossible to determine with any certainty; viz. whether the dicasts, in giving this verdict, were confined to a choice between the estimates of the opposing parties, or whether they had a discretion to award what punishment they pleased. Without entering upon any controversial discussion, the following appears to the writer the most probable view of the matter.

The dicasts had no power of discussing among themselves, or agreeing upon the fine or penalty to be awarded. Such power was incompatible with their mode of voting by ballot. [Πρεπεύει.] At the same time it would be absurd to suppose that the Athenian court had no means of controlling the parties in the exercise of that privilege which the law gave them, or that it was the common practice for the parties to submit widely different estimates to the dicasts, and leave them no alternative but the extreme of severity on the one side, and the extreme of mercy on the other. Many passages in the orators are opposed to such a view, and especially the words of Demosthenes, c. Timoer. 757.

The course of proceeding seems to have been as follows. The prosecutor usually superscribed his indictment with the highest penalty which the law or the nature of the case would admit of. In the course of the trial there might be various indications on the part of the dicasts of a disposition to favour one side or the other. They often exhibited their feelings by vehement gestures, clamour, interruption, and questioning of the parties. It was not unusual for the speakers to make allusions to the punishment before the first verdict had been given. (Aesch. c. Timarck. 12, de Fals. Leg. 48, ed. Steph.; Demosth. c. Mid. 523, c. Doet. de dot. 1022, 1024, c. Spud. 1033, c. Macart. 1060, c. Steph. 1129; Plater, Proc. und Klug. vol. i. p. 384.) All this enabled both parties to feel the pulse of the court before the time had arrived for the second verdict. If the prosecutor saw that the dicasts were greatly incensed against his opponent, and he himself was not mercifully inclined, he would persist in asking for the highest penalty. If he was himself disposed to be merciful, or thought that the dicasts were, he would relax in his demand. Similar views would prevent the defendant from asking for too small a penalty, or would induce him to effect a compromise (if possible) with his opponent. We may reasonably suppose, that it was competent for the prosecutor to mitigate the penalty demanded at any time before the magistrate called on the dicasts to divide; but not after, without the consent of the court. (Demosth. c. Nicostrat. 1252, 1254, c. Theocrit. 1343, c. Neomm. 1347.) If the parties were endeavouring to come to an arrangement, the court would give them a reasonable time for that purpose; and there
TIMEMA.

is reason to believe, that the petitions addressed by the defendant or his friends to the prosecutor were made aloud in the hearing of the dicasts. As to the suggested explanation of τιμῶν τὴν μάκρων, see PSEPHUS.

We cannot doubt that in case of heinous offences, or those which immediately concerned the state, the court would not permit of a compromise between the opposing parties; but in ordinary cases, a public prosecutor was looked on by the Athenians much in the light of a plaintiff, especially where his object was to obtain some penalty given by the law to an informer. When the parties could not come to terms, the dicasts, after hearing what each had to say, divided on their respective propositions, and the majority of votes determined the penalty. (Platner, Proc. und Klag., vol. i. pp. 198—202; Meier, Att. Proc. pp. 178—182.)

The course thus pursued at Athens must have led to injustice occasionally, but was, perhaps, the only course that could be adopted with so large a number of judges. Aristotle tells us, that Hippodamus of Miletus (who, no doubt, adopted the evils of this system) proposed that the verdict should not be given by ballot (διὰ ψυφοφόριας), but that each judge should bring in a tablet with a special statement of his opinion; upon which proposal Aristotle remarks, that its effect would be to make each judge a διαίτης: that it was an object with most of the ancient lawgivers, that the judges should not confer with each other (κοινολογώντας), and then he comments on the confusion that would arise, if the judges were allowed to propose a penalty different from that submitted to him by the parties. (Arist. Polit. ii. 5, §§ 3, 4.)

As a general rule, only one penalty could be imposed by the court, though the law sometimes gave more than one. (Demosth. c. Lept. 504, c. Neer. 1363.) Sometimes the law expressly empowered the jury to impose an additional penalty (προστιμὰς) besides the ordinary one. Here the proposition emanated from the jury themselves, any one of whom might move that the punishment allowed by the law should be awarded. He was said προστιμᾶσθαι, and the whole dicasts, if (upon a division) they adopted his proposal, were said προστιμῶν. (Demosth. c. Timocr. 733; Meier, Att. Proc. pp. 183, 725.) We may observe, that the preposition πρὸς in the verb προστιμᾶν does not always imply that a second penalty is imposed, but is sometimes used with reference to other matters, as in Demosth. c. Aristoc. 790.

In private actions the course of proceeding with respect to the assessment of damages was much the same as described above. In some cases, where the plaintiff's demand was made up of several charges, or arose out of various matters, he would give in his bill of plaint a detailed account, specifying the items, &c., instead of including them in one gross estimate. This seems to have been discovered if any guard was absent from his post, or did not answer to the bell in consequence of being asleep. Hence to prove or try a person was called κωσωνίζειν (Aelian, H. A. vii. 28); to perform the office of patrol was καθαυτοφόρειν.

TIMOCRATIA. [OLIGARCHIA.]

TIMINNA'BULUM (κάδων), a bell. Bells were used for a great variety of purposes among the Greeks and Romans, which it is unnecessary to particularize here. One use, however, of them, for the purpose of keeping watch and ward in the fortified cities of Greece, deserves mention. (Thucyd. iv. 135; Aristoph. Aves, 843, 1159; Schol. in loc.) A guard (ψυφόσ) being stationed in every tower, a περίστολος (see p. 463, a) walked to and fro on the portion of the wall between two towers. It was his duty to carry the bell, which he received from the guard at one tower, to deliver it to the guard at the next tower, and then to return, so that the bell by passing from hand to hand made the circuit of the city. By this arrangement it was discovered if any guard was absent from his post, or did not answer to the bell in consequence of being asleep. Hence to prove or try a person was called κωσωνίζειν (Aelian, H. A. vii. 28); to perform the office of patrol was καθαυτοφόρειν.

The forms of bells were various in proportion to the multiplicity of their applications. In the Museum at Naples are some of the form which we call bell-shaped; others are more like a Chinese gong. The bell, fig. 1 in the annexed woodcut, is a simple disk of bell-metal; it is represented in a painting as hanging from the branch of a tree. (Bartoli, Sepi. Ant. 13.) Figure 2 represents a bell of the same form, but with a circular hole in the centre, and a clapper attached to it by a chain. This is in the Museum at Naples, as well as the bell, fig. 3, which in form is exactly like those still commonly used in Italy to be attached to the necks of sheep, goats, and oxen. Fig. 4 is represented
on one of Sir W. Hamilton's vases (i. 43) as carried by a man in the garb of Pan, and probably for the purpose of illustration (Tibull. ii. 36; Schol. in loc.) Fig. 5 is a bell, or rather a collection of twelve bells suspended in a frame, which is preserved in the Antiquarium at Munich. This jingling instrument, as well as that represented by fig. 6 (from Bartoli, Loc. Sep. ii. 25), may have been used at sacrifices, in Baccanalian processions, or for lustration. Fig. 7 is a fragment of ancient sculpture, representing the manner in which bells were attached to the collars of chariot-horses. (Ginzoit, über Wügen, ii. pl. 57.) [J. Y.]

TIRO was the name given by the Romans to a newly enlisted soldier, as opposed to veterans, one who had had experience in war, (Caeusar, Bell. Civ. iii. 28.) The mode of levying troops is described under EXERCITUS, pp. 496, 499. The age at which the liability to military service commenced was 17.

From their first enrolment the Roman soldiers, when not actually serving against an enemy, were perpetually occupied in military exercises. They were exercised every day (Veget. i. 1), the tirones twice, in the morning and afternoon, and the veterans once. The exercises included not only the use of their weapons and tactics properly so called, but also whatever could tend to increase their strength and activity, and especially carrying burdens and enduring toil. Vegetius (i. 9—27) enumerates among the exercises of the tirones marching, running, leaping, swimming, carrying the shield, fighting at a post [PALUS], thrusting with the sword in preference to striking, using their armour, hurling spears and javelins, shooting arrows, throwing stones and leaden bullets, leaping on and off their horses, carrying artillery, fortifying the camp, and forming the line of battle.

Vegetius also gives rules for choosing tirones according to their country, their being rustics or townspeople, their age, stature, personal appearance, and previous occupation (i. 2—8). But these rules refer almost exclusively to the state of things under the emperors, when the army was no longer recruited from the citizens of Rome, but from the inhabitants of the provinces. At this period, the tiro, when approved as fit for the army, was branded and tattooed in the hand with a mark [PUNCTA SIGNORUM], as opposed to which Lipsius conjectures to have been the name of the emperor. The state of a tiro was called tirocinium; and a soldier who had attained skill in his profession was then said tirocinium ponere, or deponere. (Justin. xii. 4, 1.)

(TIROS, de Milt. Roman. in Oper. vol. iii. pp. 32, 33, 184, 193—197.) In civil life the terms tiro and tirocinium were applied to the assumption of the toga virilis, which is expressly said to have been the name of the emperor. The state of a tiro was called tirocinium; and a soldier who had attained skill in his profession was then said tirocinium ponere, or deponere. (Justin. xii. 4, 1.)

games, at least when the emperor was present. (Suet. Claud. 6; Lamprid. Commod. 16.) Under Alexander Severus guests at the emperor’s table were expected to appear in the toga. (Lamprid. Sever. 1.)

The form of the toga, and the manner of wearing it, are matters which are much disputed, and about which indeed it seems almost impossible, with our present information, to arrive at certainty.

The form was, undoubtedly, in some sense round (Quintil. xi. 3. § 137; Isid. Orig. xix. 24), semicircular according to Dionysius (iii. 61), who calls it περιβλάμμα ἡμικύκλιον. It seems, however, impossible, from the way in which it was worn, that it could have been always a semicircle. Such may perhaps have been its form as worn in the most ancient times, when it had no great fulness; but to account for the numerous folds in which it was afterwards worn, we must suppose it to have had a greater breadth in proportion to its length, that is, to have been a smaller segment than a semicircle. Probably the size of the segment which the toga formed (on which its fulness depended) was determined by the fashion of the time or the taste of the wearer. This appears to be the true explanation of Quintilian’s words (xi. 3. § 139), “Ipsam togam rotundam, et apte caesam velim,” which could have no meaning if nothing more were required than to give the garment the very simple form of a semicircle. The only other point to be noticed respecting the form of the toga, is the question whether, when it came to be worn in many complicated folds, the art of the tailor may not have been employed to keep these folds in their position. This question, however, belongs more properly to the mode of wearing the toga.

On this subject our principal information is derived from Quintilian (xi. 3. §§ 137, &c.) and Tertullian (de Pallio), whose statements, however, refer to the later and more complicated mode of wearing the garment, and from statues in Roman costume.

Frequent reference is made to the Sinus of the toga. This was a portion of the garment, which hung down in front of the body, like a sling; it will be more fully explained presently.

We must make a clear distinction between the more ancient and simpler mode of wearing the toga, and the full form, with many complicated folds, in which it was worn at a later period. Quintilian (xi. 3. § 137) says that the ancients had no sinus, and that afterwards the sinuses were very short. The passage in Livy (xxi. 18, sinu ex toga facto, iterum sinu effuso) seems to refer not to the sinus, technically so called, but a sinus which Fabius made at the moment by gathering up some part of his toga.

The ancient mode of wearing the toga is shown in the following cut, which is taken from the Augusteum, pl. 117 (Becker, Gallus, vol. ii. p. 83), and represents a statue at Dresden.

Let the toga, which in this case was probably not far from an exact semicircle, be held behind the figure, with the curved edge downwards. First, one corner is thrown over the left shoulder; then the other part of the garment is placed on the right shoulder, thus entirely covering the back and the right side up to the neck. It is then passed over the front of the body, leaving very little of the chest uncovered, and reaching downwards nearly to the feet (in the figure, quite to one of them). The remaining end, or corner, is then thrown back over the left shoulder, in such a manner as to cover the greater part of the arm. By this arrangement the right arm is covered by the garment, a circumstance noticed by Quintilian (§ 138); but it was occasionally released by throwing the toga off the right shoulder, and leaving it to be supported on the left alone. This arrangement is seen in many ancient statues; an example is shown in the following cut, which represents the celebrated statue of Anius Metellus (commonly called the Etruscan orator) in the Florence Gallery. (Müller, Denkmäler; vol. i. pl. lviii. No. 289.) The portion of the toga which, in

The next cut represents the later mode of wearing the toga, and is taken from an engraving in the Museo Borbonico (vol. vi. tav. 41) of a statue found at Herculaneum.

By comparing this and other statues with the description of Quintilian, we may conclude that the mode of wearing the toga was something like the following:—

First, as above remarked, the form in this case was a segment less than a semicircle. As before, the curved side was the lower, and one end of the
TOGA.

The garment was thrown over the left shoulder, and hung down in front, but much lower than in the former case. This seems to be the part which Quintilian (§ 139) says should reach down half-way between the knee and the ankle. In our figure it reaches to the feet, and in some statues it is even seen lying on the ground. The garment was then placed over the back, as in the older mode of wearing it, but, instead of covering the right shoulder, it was brought round under the right arm, to the front of the body. This is the most difficult part of the dress to explain. Quintilian says (§ 140):—“Sinus decentissimus, si aliquanto suprā imam togam fuerit, manu quam certe sit inferior. Ille, qui sub humero dextro ad sinistrum oblique ductit velum balteus, nec straungulet nec flult.” Becker’s explanation of this matter seems perfectly satisfactory. He supposes that the toga, when carried under the right arm, was then folded into two parts; one edge (namely, the lower or round edge) was then brought almost close under the arm, and drawn, but not tightly, across the chest to the left shoulder, forming the velut balteus of Quintilian, while the other part was allowed to fall gracefully over the lower part of the body, forming the sinus, and then the remaining end of the garment was thrown over the left shoulder, and hung down nearly as low as the other end, which was first put on. It is to this part that Quintilian seems to refer when he says (§ 140):—“Pars togae, quae postea imponitur, sit inferior: nam ita et sedet melius, et continetur;” but the true application of these words is very doubtful. By the bottom of the toga (imam togam) in the above quotation, he seems to mean the end of the toga first put on. The part last thrown over the left shoulder, as well as the end first put on, covered the arm, as in the older mode of wearing the garment. The outer edge (extrema oris) of this part ought not, says Quintilian (§ 140), to be thrown back. He adds (§ 141), “Super quod (i.e. sinistram brachium) ora et toga duplex aequailiter sedeat,” by which he probably means that the edge of this portion should coincide with the edge of the end which was first thrown over the left shoulder, and which is of course covered by this portion of the garment. He says (§ 141) that the shoulder and the whole of the throat ought not to be covered, otherwise the dress will become narrow and that dignity which consists in width of chest will be lost. This direction appears to mean that the part brought across the chest (velut balteus) should not be drawn too tight.

Tassels or balls are seen attached to the ends of the toga, which may have served to keep it in its place by their weight, or may have been merely ornaments.

There is one point which still remains to be explained. In the figure a mass of folds is seen in the middle of the part of the toga drawn across the chest (velut balteus). This is the umbó mentioned by Tertullian (de Pallio, 5), and used by Persius for the toga itself (Sat. v. 35). It was either a portion of the balteus itself, formed by allowing this part of the garment to hang loose (which perhaps it must have done, as it is the curved, and therefore longer edge that is thus drawn across the chest), and then gathering it up in folds and tucking these folds in, as in the figure, or else the folds which composed it were drawn out from the sinus, and either by themselves, or with the loose folds of the balteus, formed the umbó. It seems to have been secured by passing the end of it under the girdle of the tunicle; and perhaps this is what Quintilian means by the words (§ 140), “Subducenda etiam pars aliqua tunicae, ne ad lacertum inactu redeat.” See above.

A garment of the supposed shape of the toga, put on according to the above description, has been found by the writer of this article to present an appearance exactly like that of the toga as seen on statues, and Becker states that he has made similar experiments with equally satisfactory results.

Tertullian (de Pallio, 5) contrasts the simplicity of the Pallium with the complication of the toga, and his remarks apply very well to the above description. It appears by his account that the folds of the umbó were arranged before the dress was put on, and fixed in their places by pins or hooks; but generally speaking it does not seem that the toga was held on by any fastening: indeed the contrary may be inferred from Quintilian’s directions to an orator for the management of his toga while speaking (§§ 144—149).

Another mode of wearing the toga was the cinctus Gabinus. It consisted in forming a part of the toga itself into a girdle, by drawing its outer edge round the body and tying it in a knot in front, and at the same time covering the head with the toga, which may have served to keep it in its place and to add ornament. It was worn by persons offering sacrifices (Liv. v. 46; Lucan. i. 596), by the consul when he declared war (Virg. Aen. vii. 612), and by devoted persons, as in the case of Decius (Liv. v. 46). Its origin was Etruscan, as its name implies (Servius in Virg. l. c.; Müller, Etrusker, vol. i. p. 265; Thiersch in Annal. Acad. Bavar., vol. i. p. 29, quoted by Müller, Annot. ad Festum, p. 235). Festus (l. c.) speaks of an army about to fight being girt with the cinctus Gabinus. Persons wearing this dress were said to be procnētis (or incinneti) cincta (or rita) Gabinis.

The colour of the toga worn by men (toga
toga praetexta (Pullatus.)

Rites or paying vows. (Liv. xxxiv. 7; Festus.)

Toga palmata

Orders. (See the passages in Forcellini, s. v. Pullus, Pullatus.) The toga picta, which was ornamented with Phrygian embroidery, was worn by generals in triumphs [Triumphus], and under the emperors by the consuls, and by the praetors when they celebrated the games. It was also called Capitolina. (Lamprid. Alex. Sever. c. 40.) The toga palmata was a kind of toga picta. The toga praetexta had a broad purple border. It was worn by the consuls, the praetors (who laid aside the praetexta at festivals), the aediles, the triumviri faciundis [DECEMVIRI], the censors, and those of the equestrian order. Lastly, the toga worn by the Roman emperors was wholly of purple. It appears to have been first assumed by Julius Caesar. (Cic. Phil. ii. 34.)

The material of which the toga was commonly made was wool. It was sometimes thick and sometimes thin. The former was the toga densa, pinguis, or hirta. (Suet. Aug. 82; Quintil. xii. 10.) A new toga, with the nap neither worn off nor close, was called pera, to which is opposed the trita or ras, which was used as a summer dress. (Martial. ii. 83.) On the use of silk for toga see Scuirum.

It only remains to speak of the general use of the toga. It was originally worn by both sexes; but when the stola came to be worn by matrons, the toga was only worn by the meretrices and by persons of disrepute. It may be more particularly mentioned: the dictator, the consuls, the praetors (who laid aside the praetexta when about to condemn a Roman citizen to death), the augurs (who, however, are supposed by some to have worn the toga when in the temple), the decemviri sacris faciundis [DECEMVIRI], the medici, the triumviri eponomeni, the senators on festival days (Cic. Phil. ii. 43), the magistrates, and the magistrates vicorum when celebrating games. [Magister.] In the case of the tribuni plebis, censors, and quaestors there is some doubt upon the subject. The toga praetexta might only be worn at the celebration of a funeral. (Festus, l. c.)

The toga praetexta, as has been above remarked, is said to have been derived from the Etruscans. It is said to have been first adopted, with the latus clavus [CLAVUS LATUS], by Tullus Hostilius as the badge of the equestrian order. Lastly, the toga worn by the Roman emperors was wholly of purple. It appears to have been first assumed by Julius Caesar. (Cic. Phil. ii. 34.)

On the use of silk for toga see Scuirum.

It only remains to speak of the general use of the toga. It was originally worn by both sexes; but when the stola came to be worn by matrons, the toga was only worn by the meretrices and by women who had been divorced on account of adultery. (Stola.) Before the use of the toga became almost restricted to the upper classes, their toga was only distinguished from that of the lower classes by being fuller and more expensive. In war it was laid aside and replaced by the paululentum and sagum. Hence togatus is opposed to miles. The toga was, however, sometimes used by soldiers, but not in battle, nor as their ordinary dress; but rather as a cloak or blanket. It was chiefly worn in Rome, and hence togatus is opposed to rusticus. The toga was often used as a covering in sleeping; and lastly, as a shroud for the corpse.

4 D
dry or rotten were carefully removed (Geopon. vi. 11) [FORFEX], and the rest carried from the vineyard in deep baskets (quali, Virg. Georg. ii. 241; ταλάριον, Hes. Sat. 296; ὀξύς, Longus, ii. 1; ζοφόν, Geopon. i.c.) to be poured into a shallow vat. In this they were immediately trodden by men, who had the lower part of their bodies naked (Verg. Georg. ii. 7), except that they wore drawers [SUBLIGACULUM]. At least two persons usually trod the grapes together. To “tread the wine-press alone” indicated desolation and distress. (Is. lixii. 3.) The Egyptian paintings (Wilkinson, Man. and Cust. vol. ii. pp. 152—157) exhibit as many as seven treading in the same vat, and supporting themselves by taking hold of ropes or poles placed above their heads. From the size of the Greek and Roman vats there can be no doubt that the company of treading was often still more numerous. To prevent confusion and to animate them in their labour they moved in time or danced, as is seen in the ancient mosaics of the church of St. Constantia at Rome, sometimes also leaning upon one another. The preceding circumstances are illustrated in the following woodcut, taken from a bas-relief. (Mon. Math. iii. tab. 45.) An antefixa in the British Museum (Combe, Anc. Terra-cottas, No. 59) shows a person by the side of the vat performing during this act on the scopellum and tibiae pares, for the purpose of aiding and regulating the movements of those in it. Besides this instrumental music they were cheered with a song, called μέλος ἐπιλάφων (Athen. v. p. 193, a.) or ὄνομα ἐπιλάφων, specimens of which may be seen in Anacreon (Od. xvii. 1 and iii.; and Brunck, Anal. ii. 293). See Jacobs, ad loc.; compare Theocrit. vii. 25). After the grapes had been trodden sufficiently, they were subjected to the more powerful pressure of a thick and heavy beam [PRELUM] for the purpose of obtaining all the juice yet remaining in them. (Vitruv. x. 1; Virg. Georg. ii. 242; Servius in loc.; Hor. Carm. i. 20. 9.) Instead of a beam acted on by wedges, a press with a screw [COCHLEA] was sometimes used for the same purpose. (Vitruv. vi. 6; Plin. Epist. x. 29; Colum. de Re Rust. xii. 18.)

From Ἀργός Bactea was called Lenaea (Ἀνίαρος). The festival of the Lenaea was celebrated on the spot where the first Attic wine-press was said to have been constructed. [DIONYSIA.]

Olives as well as grapes were subjected to the prelum for the sake of their oil. [Olea, p. 826.]

The building erected to contain all the vessels and other implements [torcola vasa, Varno, de Re Rust. iii. 2] for obtaining both wine and oil was called torcularium (Cato, de Re Rust. 12, 13, 18; Col. de Re Rust. xii. 18) and ἄνθρωπος (Geopon. vi. 1). It was situated near the kitchen and the wine-cellar. (Vitruv. vi. 6.) [J. Y.]

TREORUTICE. [CARLATURA.]

TORCENTUM (ἀφέργηρον ἀργανον), a military engine. All the missiles used in war, except those thrown from the sling [Funda], are projected either by the hand alone or with the aid of elastic substances. Of elastic instruments the bow [ARCUS] is still used by many nations. But the tormentum, so called from the twisting (torquendo) of hairs, thongs and vegetable fibres (Polych. iv. 56), has fallen into disuse through the discovery of gun-powder. The word tormentum is often used by itself to denote engines of various kinds. (Cic. ad Fam. xv. 4; Caes. B. C. iii. 44, 45, B. Alex. 10; Liv. xx. 11; Vell. Pat. ii. 62; Curt. iv. 9. 16.) Often also these engines are specified separately under the names of Balistae and Catapultae, which names however most commonly occur together in the accounts of sieges and other military operations, because the two kinds of engines denoted by them were almost always used in conjunction. [HELEPOLIS.] The balista (ἱερόδελφος) was used to shoot stones (Ovid. Trist. i. 2. 48; Lucan, vi. 190; Non. Marc. p. 555, ed. Merceri), the catapulta (καταπελτης, κατατωλην) to project darts, especially the Falarica [HASTA], and a kind of missile, 4½ feet long, called τρίβας. (Festus, s. v.) Whilst in besieging a city the ram [AIRES] was employed in destroying the lower part of the wall, the balista was used to overthrow the battlements (propagacula, Plaut. Bacch. iv. 4. 56—61; ἐπαλέξις), and the catapult to shoot any of the besieged who appeared between them. (Diod. xvii. 42. 45, xx. 48, 88.) The forms of these machines being adapted to the objects which they were intended to throw, the catapult was long, the balista nearly square, which explains the following humorous enumeration by Plantus (Copt. iv. 2. 16) of the three μαγαρι, the application of which has just been explained.

“Meus est balista pugnus, cubitus catapulta est mibi, Humerus aries.”

In the same armament the number of catapults was commonly much greater than the number of balistae. (Non. Marc. p. 552, ed. Merceri; Liv. xxvi. 47.) Also those two classes of machines were often on them distinguished into the greater and the less, the number of “the less” being much more considerable than the number of “the greater.” When Carthago Nova, which had served the Carthaginians for an arsenal, was taken by the Romans, the fol-
loving were found in: 120 large and 201 small catapults; 23 large and 52 small ballistae. (Liv. l.c.) Three sizes of the ballista are mentioned by historians, viz. that which threw stones weighing half a hundred-weight (πτερόδελθειν τραγάνας, Polyb. ix. 34), a whole hundred-weight (ballista centumaria, Non. Marc. l.c. λιθοθέλα ταλαντάς, Polyb. l.c.; Diod. xx. 27, 28), and three hundred-weight (πτερόδελθειν τραγάνας, Diod. xx. 48). Besides these, Vitruvius (x. 11) mentions many other sizes, even down to the balista which threw a stone of only two pounds weight. In like manner Polyb. ix. 34), a whole hundred-weight in like manner gives some remarkable instances of the destructive force of the balista, it threw stones to the distance of a quarter of a mile. (B. J. iii. 7, § 19, 23; comp. Procop. B. & G. i. 21, 23.) Neither from the descriptions of authors nor from the figures on the column of Trajan (Bartoli, Col. Traj. tab. 45—47) are we able to form any exact idea of the construction of these engines. Still less are we informed on the subject of the writers subsequent to Julius Caesar, and Diodorus Siculus often uses καταπέτρας to include both bafastae and catapults, distinguishing them by the epithets πτερόδελθείαι and òψετὴς (xiii. 51, xx. 48, 97, etc.).

The various kinds of torments appear to have been invented shortly before the time of Alexander the Great. When horse- and other materials υπενεκί, the women in several instances cut off their own hair and twisted it into ropes for the engines. (Caes. B. C. iii. 9; Veget. de Rei Mil. iv. 9.) These machines, with those who had the management of them, and who were called balistarii and φρεναταί (Polyb. iv. 59), were drawn up in the rear of an advancing army, so as to throw over the heads of the front ranks. In order to attack a maritime city, they were carried on the decks of vessels constructed for the purpose. (Diod. xx. 83—86; See Ann. ii. 6.)

The meaning of tormentum as applied to the torture of slaves is explained on p. 750, a. [J. Y.]

TORMENTUM (βασανις), torture. 1. GREEK. By a decree of Scamandrius it was ordained that no free Athenian could be put to the torture (Ανδρ. de Mysn. 22; compare Lyra, p. 874; Steph. 159—162.) Any person might offer his own slave to be thus examined, such a refusal was looked upon as a strong presumption against him. The πρόκλησις appears to have been generally made in writing (Demosth. c. Pant. 978), and to have been delivered to the opponent in the presence of witnesses in the most frequented part of the Agora (Demosth. c. Aphyd. iii. 848); and as there were several modes of torture, the particular one to be employed was usually specified (Demosth. c. Steph. i. 1120). Sometimes, when a person offered his slave for torture, he gave his opponent the liberty of adopting any mode of torture which the latter pleased. (Antiph. De Chrest. 777.) The parties interested either superintended the torture themselves, or chose certain persons for this purpose, hence called βασανισταί, who took the evidence of the slaves (φθίδοντας βασανισταί, άπεργησανε δε το Χναθειόν, Isocr. Trup. c. 9; compare Demosth. c. Pant. 978, 979; Antiph. Καταργ. Φωρμ. 609.) In some cases, however, we find a public slave attached to the court, who administered the torture (παρὰτείνει δὲ χίλιον της δύναμις, καὶ βασανιζεῖν εναντίον ὑμῶν, Aesch. De Leg. 284, ed. Tayl.) but this appears only to have taken place when the torture was administered in the court, in presence of the judges. (Aesch. l.c.; Demosth. c. Eury. 1144.) This particular mode of administering the torture was, however, certainly contrary to the usual practice (βασανιζεῖν ὑμῖν ἐναντίον ὑμῶν, Dimosth. c. Steph. i. 1106.) The general practice was to read at the trial the depositions of the slaves, which were called βασάκλης (Harpoc. Suid. s. n.; Demosth. c. Nicocr. 1254), and to confirm them by the testimony of those who were present at the administration of the torture. (Meier, Ait. Process, p. 680, &c.)

2. ROMAN. During the time of the republic, freemen were never put to the torture, and slaves only were exposed to this punishment. Slaves, moreover, could not be tortured to prove the guilt of their own master, except in the case of incestus, which was a crime against the gods, or unless the senate made an exception in some special instance, as was done in the Catilinarian conspiracy. (Cic. pro Mil. 22, pro Deid. 1, Part. Orat. 34; Dion Cass. iv. 5; Tac. Ann. ii. 30, iii. 67; Dig. 48. tit. 16. s. 1. § 16.) At a later time slaves might be tortured to bear witness against their masters in cases of majestas (Cod. 9. tit. 8. ss. 6, 7) and adultery. (Dig. 48. tit. 18. s. 17; Cod. 9. tit. 9. ss. 3, 6, 4 & 2. Antiphon to death by the rack (στρεθλασθαντες), Compare Plut. Philoc. c. 35.)

The evidence of slaves was, however, always taken with torture, and their testimony was not otherwise received. (Antiph. Tetral. i. p. 633.) From this circumstance their testimony appears to have been considered of more value than that of freemen. (De Chrest. Hered. 202.) says, "When slaves and freemen are at hand, you do not make use of the testimony of freemen; but, putting slaves to the torture, you thus endeavour to find out the truth of what has been done." Numerous passages of a similar nature might easily be produced from the orators. (Comp. Demosth. c. Onor. i. p. 874; Antiphon, De Chrest. 778; Lycurg. c. Icocr. 159—162.)
32) Under the emperors even free persons were put to the torture to extract evidence from them in cases of majestas; and although this indignity was confined for the most part to persons in humble circumstances, we read of cases in which even Roman senators and equites were exposed to it. (Dion Cass. l. 15; Suet. Tib. 58; Dig. 48. tit. 18. s. 10. § 1.) For further information see Dig. 48. tit. 18, De Questio. De Questo; Walter, Geschichte des Römischen Rechts, pp. 875, 876, 1st ed.; Rein, Das Criminalrecht der Römer, p. 542.

TORQUES or TORQUIS (τρέπτωτης), an ornament of gold, twisted spirally and bent into a circular form, which was worn round the neck by men of distinction among the Persians (Curt. iii. 5; Themist. Oret. 24, p. 306, e.), the Gauls (Florus, i. 13, ii. 4), and other Asiatic and northern nations. (Ibid. Orig. xix. 58.) Torque was the name of it among the Britons and ancient Irish. Virgil (Aen. v. 555, 559) thus describes it as part of the attire of the Trojan youths:

“It pectore summo
Flexilis obtorti per collum circulus auri.”

Ornaments of this kind have been frequently found both in France and in many parts of Great Britain and Ireland (Petrie, Trans. of R. Irish Acad. vol. xviii.; AntSy, pp. 181—184), varying in size and weight, but almost always of the form exhibited in the annexed woodcut, which represents a torque found in Brecknockshire, and now preserved in the British Museum. The same woodcut contains a section of this torque of the size of the original. It shows, as Mr. Petrie observes concerning some found in the county of Meath, “four equidistant radiations from a common centre.” The torque in the British Museum is four feet and a half in length. Its hooks correspond well to the description of the fall of a Celtic warrior:

“Torquis ab incisa decidit unca gula.” (Propr. iv. 10. 44.) A torque, which instead of being bent into a circular form was turned into a spiral, became a bracelet, as is shown in the lowest figure of the woodcut to ARMILLA. A torque contrived to answer this purpose, is called torquis brachialis. (Vopisc. Anrel. 7.) Such bracelets and torques are often found together, having been worn by the same people.

The head in the preceding woodcut is that of a Persian warrior in the mosaic of the battle of Issus, mentioned in p. 431. It illustrates the mode of wearing the torque, which in this instance ter-

minates in two serpents’ heads instead of hooks. It was by taking this collar from a Gallic warrior that T. Manlius obtained the cognomen of Torquatus. (Cic. de Fin. ii. 22, de Off. iii. 31; Gallius, ix. 13; Non. Marc. pp. 227, 228, ed. Mercuri.)

Torques, whether in the form of collars or bracelets, no doubt formed a considerable part of the wealth of those who wore them. Hence they were an important portion of the spoil, when any Celtic or Oriental army was conquered, and they were among the rewards of valour bestowed after an engagement upon those who had most distinguished themselves. (Juv. xvi. 60; Plin. H.N. xxxiii. 2. s. 10; Sidon. Apollin. Carn. xxiii. 424.) The monuments erected to commemorate Roman soldiers and to enumerate the honours which they had obtained, often mention the number of torques conferred upon them. (Maffei, Mus. Veron. p. 218.)

[PHALERA.] [J. Y.]

TORUS, a bed; originally made of straw (Plin. H.N. viii. 48. s. 73), hay, leaves, woolly plants (Mart. xiv. 160, 162), sea-weed (de mollibus uelis, Ovid. Met. vii. 656), also stuffed with wool, and afterwards with feathers (xi. 611), or swans-down (Mart. xiv. 161), so as to be as much raised and as soft as possible. (Virg. Aen. vi. 603; Ovid. Amor. ii. 4. 14.) It was sometimes covered with the hide of a quadruped (Virg. Aen. viii. 177), but more commonly with sheets or blankets, called Torula. (Hor. Sot. i. 4. 34, Epist. i. 5. 22.) The torus may be observed on the sophia in the first woodcut, p. 308; and its appearance there may suffice to explain the transference of its name to the larger semi-circular mouldings in the base of columns. [ATTICURGES; SPIRA.]

TO'XOTAE (τοξοται), [DEMOSIL].

TRA'BEA. [TOGA.]

TRADITIO. [DOMINIUM.]

TRAGOEDIA (τραγῳδία), tragedy. I. GREEK. The tragedy of the ancient Greeks as well as their comedy confessedly originated in the worship of the god Dionysus. It is proposed in this article to explain from what element of that worship Tragedy took its rise, and (2) to trace the course of its development, till it reached its perfect form and character in the drama of the Attic tragedians, Aeschylus, Sophocles, and Euripides.

The peculiarity which most strikingly distinguishes the Greek tragedy from that of modern times, is the lyrical or choral part. This was the offspring of the dithyrambic and choral odes from which, as applied to the worship of Dionysus, Greek tragedy took its rise. This worship, we may observe, was of a twofold character, corresponding to the different conceptions which were anciently entertained of Dionysus as the changeable God of flourishing, decaying, or renovating nature, and the various fortunes to which in that character he was considered to be subject at the different seasons of the year. Hence Müller observes (Lit. of Greece, p. 260), “at the festivals of Dionysus at Athens and elsewhere were all solemnized in the months nearest to the shortest day, coincidently with the changes going on in the course of nature, and by which his worshippers conceived the god himself to be affected.” His mournful or joyous fortunes (παθη), his mysterious death, symbolizing the death of all vegetation in winter, and his birth (Plat. de Leg. iii. p. 700: Proclus in Gaisford’s Hephaest. p. 353), indicating the renovation of all nature in the spring.
and his struggles in passing from one state to
another, were not only represented and symp-
rathised in by the Dithyrambic singers and dan-
cers, but they also carried their enthusiasm so far,
as to fancy themselves under the influence of the
same events as the god himself, and in their at-
ttempts to identify themselves with him and his
oracles, assumed the character of the subordinate
divinities, the Satyrs, Nymphs, and Panes (Nym-
phorumque leces cum Satyris choros), who formed
the mythical train of the god. Hence, as is ex-
plained under Dionysia (p. 410, b), arose the
custom of the disguise of Satyrs being taken by the
worshippers at the festivals of Dionysus, from the
choral songs and dances of whom the Grecian tra-
gedy originated, " being from its commencement
connected with the public rejoicings and ceremo-
nies of Dionysus in cities; while comedy was more
a sport and merriment of the country festivals."
In the very nature of Tragedy (τραγῳδία), far from
signifying anything mournful or pathetic, is most
probably derived from the goatlike appearance of
the Satyrs who sang or acted with mimetic gestica-
tions (ακρανία) the old Bacchic songs, with Silenus,
the constant companion of Dionysus, for their leader.
(Bode, Gesch. d. Hellen. Dichtkunst, vol. iii. p. 31.)
From their resemblance in dress and action to goats,
they were sometimes called τραγοί, and their song
τραγῳδία. Thus Aeschylus in a fragment of the
Prometheus Periploton calls a Satyr Τραγός, and
the Satyric chorus in the Cyclops of Euripides
τραγῳδεύειν appears in the skin of a goat (χαλινα
τραγανά). The word Στάτυρος also is apparently
the same as τίτυρος, a kind of goat. (Phot. Lex.
s.v.) According to another opinion, the " word
Tragedy was first coined from the goat that was
the prize of it, which prize was first constituted in
Thespis' time." (Bentley, Phalar. p. 249.)
This derivation, however, as well as another, connecting
it with the goat offered on the altar of Bacchus
(Müller, Literat. of Greece, p. 291), around which
the chorus sang, is not equally supported either by
the etymological principles of the language, or the
analogous instance of κωπινία, the " rovel-song,"
(τραγῳδομαλαγ). p. 764: Eurip. Bacch. 131; Aelian,

But the Dionysian dithyrambs were not always
of a gay and joyous character: they were capable
of expressing the extremes of sadness and wild
lamentation as well as the enthusiasm of joy; and
it was from the Dithyrambic songs of a mournful
cast, probably sung originally in the winter months,
that the stately and solemn tragedy of the Greeks
arose. That there were Dithyrambs of such a
character, expressive of the sufferings of Dionysus
(τα του Διόνυσου πάθη), appears from the state-
ment in Herodotus (v. 67), that at Sicyon in the
time of Cleisthenes (B.C. 600) it was customary to
celebrate (γεραίευν) the sufferings of that god
with " tragic choruses." But it must be remarked that
in the most ancient times the Dithyrambic song
was not executed by a regular chorus. Thus
Aristarchus says in Trochia verse, " I know how
when my mind is inflamed with wine to lead off
the dithyrambs, the beautiful song of Dionysus,"
whence we may infer that in his time (B.C. 700)
the dithyramb was sung by a band of revellers led
by a mute lyre. Lyric choruses, indeed, had
been even then established, especially in the Dorian
states of Greece, in connection with the worship of
Ares, the eunuch or φωρύς of being the instrument
to which the choroeutae sang and danced. (Müller,
Literat. of Greece, p. 204; Dories, iv. 7. § 8.)
In fact the connection of the Dorian choral poetry
with the worship of Apollo, the direct opposite to
that of Dionysus, and its consequent subjection to
established rules and forms, admitting too, from
the Dorian character but little innovation, affords
the most obvious explanation of the striking cir-
mstance that nothing decidedly dramatic sprang
from it, as from the dithyrambic performances.
(Bode, p. 16.) Still there were some points in
which the Dorian worship of Apollo resembled
that of Dionysus, e.g. the dances with which the
former god was honoured, and the kind of mimicry
which characterised them. Other circumstances
also, on which we cannot here dwell, would pro-
bably facilitate the introduction of the Dionysian
Dithyramb amongst the Dorian states, especially
after the improvements made in it by Arion (B.C.
600), which were so great, that even the invention of
that species of poetry is ascribed to him, though
it had been known in Greece for a century before
his time. The worship of Dionysus was celebrated
at his native place, Methymnae in Lesbos, with
music and orgiastic rites; and as Arion travelled
extensively in the Dorian states of Hellas, he had
ample opportunities of observing the varieties of
choral worship, and of introducing any improve-
ments which he might wish to make in it. (Bode,
p. 22.) He is said to have been the inventor of the
" tragic turn " (τραγῳδος τρόπος), a phrase of
doubtful significance, but which seems to mean,
that he was the inventor of a grave and solemn style
of music, to which his Dithyrambs were danced and
sung. (Hermann, Oursic. vol. vii. p. 216.) Suidas
(s.v.) adds of him, λέγεται καί πρώτος χοροσ στήται,
καί διδασμὸν ἄσαι καί ὄνομασε το άδόμενον ὑπὸ
tου χορού, καί Στάρυφος εἰσενεχεῖν εὕμετρα λέ-
γοται. From the first clause, in connection with
other authorities (Schol. in Aristoph. Aves, 1403),
we learn that he introduced the cyclic chorus (a
fact mythologically expressed by making him the
son of Cycles); i.e. the Dithyramb, instead of
being sung as before his time in a wild irregular
manner, was danced by a chorus of fifty men
around a blazing altar: whence in the time of
Aristophanes, a dithyrambic poet and a teacher of
cyclical choruses were nearly synonymous. (Müller,
p. 204.) As the alteration was made at Corinth,
we may suppose that the representation of the
Dithyramb was assimilated in some respects to
that of the Dorian choral odes. The clause to the
effect that Arion introduced Satyrs, i. e. τραγοί,
speaking in verse (ιδρολόγος), is by some thought
another expression for the invention of the " tra-
gic style." A simpler interpretation is, that he
introduced the Satyrs as an addition and contrast
of the Dithyramb into the dance and song of the
cyclic chorus of the Dithyramb, thus preserving it to
its old character as a part of the worship of Bacchus.
The phrase βροδαράται (compare Herod. i. 23) alludes to
the different titles given by him to his different Dithy-
rambs according to their subjects, for we need not
suppose that all those related directly to Bacchus.
(Wecker, Nachtrag, p. 233.) As he was the first
cithara player of his age (Herod. i. 23), it is pro-
bable that he made the lyre the principal instru-
ment in the musical accompaniment.

From the more solemn Dithyrambs then, as im-
proved by Arion, with the company of Satyrs, who
probably kept up a joking dialogue, ultimately

43
sprang the dramatic tragedy of Athens, somewhat in the following manner. The choruses which represented them were under the direction of a leader or exarchus, who, it may be supposed, came forward separately, and whose part was sometimes taken by the poet himself. (Plato, Rep. iii. p. 394, c.) We may also conjecture that the exarchus in each case led off by singing or reciting his part in a regular metre, the rest of the chorus then expressing their feelings of joy or sorrow at his story, representing the perils and sufferings of Dionysus, or some hero, as it might be. Accordingly some scholars have recognized in such choral songs, or in a proximate deviation from them, what has been called a "lyrical tragedy," performed without actors distinct from the chorus, and conceived to be a transition step between the Dithyramb and the dramatic Tragedy. The title, however, does not occur in ancient writers, and therefore, if it means anything, can only refer to representations of the character we have just ascribed to the Dithyrambs of Arion, modified from time to time, according to circumstances or the fancy of the writer. That the names τραγεία and τραγείδιον are applied, indeed, to works and writers before the time of Thespis, and that the "tragedy" of that age was entirely choral, without any regular formal dialogue, is evident from many authorities. Thus Athenaeus (xiv. p. 630, c), observes that the whole satyrical poetry formerly consisted of choruses, as did the "tragedy" of old times (ἡ τῶν τραγείων). Again, Diogenes Laërtius (iii. 56) states that formerly the chorus alone acted (διειρισμένος) or performed a drama, on which Hermann (Opp. v. vii. 218) observes, "after the Dithyramb was sung, some of the chorus in the guise of Satyrs came forward and improvised some ludicrous stories; but in exhibitions of this sort, he adds, "we see rather dramaticae spatio initia, quam ullum lyrici cujusdam generis vestigium." Lyric poets also seem to have represented them, what has been called a "lyrical tragedy," i.e. a piece of dithyrambic poetry on a subject unconnected with Dionysus, which was consequently received with the cry of οὐδεὶς πρὸς τὸν Διόνυσον, or "this has nothing to do with Bacchus." (Apollonius, xv. 13.) If this anecdote be true, and Epigenes preceded Arion, the introduction of the Satyras into the Dithyramb chorus by the latter, may possibly have been meant to satisfy the wishes of the people; but whether it was so or not, there is scarcely any doubt that from the time of Arion, the tragic dithyramb gradually became less satyrical and sportive in its character, till the creation of the independent Satyric drama and the Attic dramatic tragedy. (Bode, p. 23.)

As to the steps by which this was effected, Aristotle (Poet. iv. 14) says, "Tragedy was at the first an extemporaneous effusion (ἐν' ᾳρχήν ἠτο-σχεδιαστὴν), and was derived ἀπὸ τῶν ἐξαρχό-των τῶν Διόνυσος, i.e. from the leaders or the chief singers of the Dithyramb, who probably sang or recited their poetry in the guise of Satyrs, when the main body of the ode was written in iambic verse. It is easy to conceive how the introduction of an actor or speaker independent of the chorus might have been suggested by the exarchus or exy-phai, coming forward separately and making short off-hand speeches (Welcker, Nachtrag. p. 320), whether learnt by heart beforehand, or made on the spur of the moment. [CHORUS.] Denn es ist also möglich, if not probable, that it was suggested by the rhapsodical recitations of the epic and gnomic poetry formerly prevalent in Greece; the gnomic poetry being generally written in iambic verse, the metre of the Attic dialogue, and which Aristotle (Poet. 4) says was used by Homer in his Margites, though its invention is commonly ascribed to Archilochus. In fact the rhapsodists themselves are sometimes spoken of as aktai (ἀκταί) of the pieces they recited, which they are also said to act (ἐποκρινομένοις, Athen. xiv. p. 629, d; Müller, Literatur, c.c., p. 93). But no two or more rhapsodes were called upon to act through an episode of a poem, a regulation which was only attained at the Panathenaica, and the Isthmian, and at the Solon or Hipparchus (Wolf, Proleg. p. 57; Plato, Hipp. p. 223), it is clear that they would present much of a dramatic dialogue. In Herod. (Prose, 2, p. 6) the principal scenes of the whole drama might in this way have been represented as parts of a drama. These recitations then being so common, it was natural to combine with the re-
presentation of the Dithyramb, itself a mixture of recitative and choral song, the additional element of the dialogue, written in Iambic verse, a measure suggested perhaps by the gnomic poetry, and used by Solon about the time of the origin of the dialogue (Solon, Frag. 29, Gaisford), more especially as one of the most noble and noble of all Greek metres (λέκτορικ), and that into which common conversation most readily falls. It is indeed only a conjecture that the dialogue or the Ionian element of Attic tragedy was connected with the rhetorical recitations, but it is confirmed by the fact that Homeric rhapsodies were common at Sicyon (Herod. v. 67), the cradle of the Dorian tragedy, and also at Brauron in Attica, where the worship of Dionysus existed from ancient times. (Hesych. s. v. Βραυρωνιός.)

This however is certain, that the Ionian dialogue of the Attic tragedy was introduced at Athens under Peisistratus, and that it was attributed to Thespis, a native of Icarus, one of the country demes or parishes of Attica where the worship of Dionysus had long prevailed. The introduction of this worship into Attica, with its appropriate choruses, seems to have been partly owing to the commands of the Dorian oracle (Dem. c. Mid. p. 531), in very early times. Thus it is stated (Plato, Mens, p. 321; Plut. Sol. 29), that tragedy (i.e. the old Dithyrambic and Satyrical tragedy) was very ancient in Attica, and did not originate with Thespis or his contemporaries. This alteration made by him, and which gave to the old tragedy — his homilies (ἐκθέσεις ἀπό τὸν Παρθένιον καὶ τὸν Αιαδάνιον καὶ τὸν Παρθενικόν) a new and dramatic character (making it an ignotum tragicoae genus, Hor. Art. Poet. 275), was very simple but very important. He introduced an actor, as it is recorded, for the sake of giving rest to the chorus (Diog. Laërt. iii. 50) and independent of it, in which capacity he probably appeared himself (Plut. Sol. 29), taking various parts in the same piece, under various disguises, which he was enabled to assume by means of the linen masks, the invention of which is attributed to him. Now as a chorus, by means of its leader, could maintain a dialogue with the actor, it is easy to see how with one actor only "a dramatic action might be introduced, continued, and concluded, by the speeches between the choral songs expressive of the joy or sorrow of the chorus at the various events of the drama." Thus Müller observes that in the play of Pentheus, supposed to have been composed by Thespis, "a single actor might appear successively as Dionysus, Pentheus, a messenger, Agave the mother of Pentheus, and in these characters express designs and intentions, or relate events which could not be represented as the murder of Pentheus by his mother: by which means he would represent the substance of the fable as it appears in the Bacchae of Euripides." (Müller, p. 29; Bode, p. 57.)

With respect to the character of the drama of Thespis there has been much doubt: some writers, and especially Bentley (Phalar. p. 218), have maintained that his plays were all satyrical and ludicrous, i.e. the plot of them was some story of Bacchus, the chorus consisted principally of satyrs, and the argument was merely a series of scenes, to which was added by the fact that in the early part of his time, the satyrical drama had not acquired a distinctive character. It may also appear to be confirmed by the statement (Aristot. Poet. 4) that at first the Tragedians made use of the trochaic tetramer, as being better suited to the satyrical and saltatorial nature of their pieces. But perhaps the truth is that in the early part of his career Thespis retained the satirical character of the older tragedy, but afterwards inclined to more serious compositions, which would almost obligate him to introduce the Satyrs into his choruses. That he did write serious dramas is intimated by the titles of the plays ascribed to him, as well as by the character of the fragments of Iambic verse quoted by Plutarch as his (Bentley, Phalar. p. 214), and which even if they are forgeries of Herculides Ponticus, at least prove what was the opinion of a scholar of Aristotle on the subject. Besides the assertion that Sophocles (Suidas, in elic) wrote against the chorus of Thespis seems to show that there was some similarity of character between the productions of the two poets. (Bode, p. 47.) A summary of the arguments in favour of the serious character of the tragedy of Thespis is given by Welcker (Nachtrag, pp. 257—276). The invention of the prologus and rhesis of tragedy (an expression clearly in some measure identical with the introduction of an actor) is also ascribed to Thespis by Aristotle. (Themist. p. 392, ed. Dind.) By the former word is meant the first speech of the actor (Aristot. Poet. 12), or the prooemium with which he opened the piece; the chorus then sang the first ode or πάροδος, after which came the βρᾶσις or dialogue between the actor and the principal choruses. The invention of this dialogue is also alluded to in the phrase λέγεται δὲ γεγομένη. (Id. 4.) It is evident that the introduction of the dialogue must also have caused an alteration in the arrangement of the chorus, which could not remain cyclic or circular, but must have been drawn up in a rectangular form about the thymele or altar of Bacchus in front of the actor, who was elevated on a platform or table (θέατρον), the forerunner of the stage. The statement in Pollux (iv. 129), that this was the case before Thespis seems incorrect. (Welcker, Nachtrag, p. 268.) If we are right in our notion of the general character of the Thespian drama, the phrase οὖν πρὸς Δίωνονων, which was certainly used in his time, was first applied to his plays at Athens, as being unconnected with the fortunes of Dionysus, and as deviations from the μικρὸν μύθον καὶ λέγεις γελοῖα of his predecessors. Plutarch however (Sump. i. 5) supposes that its first application was later: he says "when Phrynichus and Aeschylus continued to elevate tragedy to legends and tales of sufferings (εἰς μύθους καὶ πάθη πραγματών), the people missing and regretting the old Satyric chorus, said, "What is this to Bacchus?" Hence the expression was used to signify what was mal-à-propos, or beside the question.

The reader may have observed that we have not noticed the lines of Horace (Ar. Poet. 276): "Dictur et plausitia vexisse poenata Thespia, Quae cenerent agerentque peruncti faecibus or." The fact is that they are founded on a misconceptions of the origin of the Attic tragedy, and that the tale about the wagons of Thespis is purely the result of a confusion of the wagon of the comic poet Sunnios with the platform of the Thespian actor. The first representation of Thespis was in B. C. 535. His immediate successors were the Athenian Chorilus and Phrynichus, the former of whom represented
plays as early as B.C. 524. He is said by Suidas to have written 150 pieces: from the title of one of them, the “Alope,” its subject seems to have been a legend of Attic origin. (Paus. i. 14. § 5; Bode, p. 60.) That he excelled in the Satyrical drama invented by Pratinas, is indicated by the line of an unknown author,

‘Heke μὲν βασιλέως ξυφρίλας ἐν Σατύροις,

and if he wrote anything like the number of dramas ascribed to him, it is also evident that the custom of contending with Tetralogies must have been of early origin, for there were only two dramatic festivals during the year.

Phrynichus was a pupil of Thespis, and gained his first victory in the dramatic contests B.C. 511. In his works, the lyric or choral element still predominated over the dramatic, and he was distinguished for the sweetness of his melodies, which in the time of the Peloponnesian war were very popular with the admirers of the old style of music. The esteem in which his “ambrosial songs” were then held is shown in several passages of Aristophanes (Aesch, 748, Theoc. 164), and in the line (Vesp. 219) where the dicasts are made to chant the old Sidonian sweet songs of Phrynichus,

Καὶ μνημείανά γάρ
Ἀρχαίων εἰσι ταυτηθαράχα.

“Sidonian” being an allusion to the play which he wrote called the Phoenissae. The first use of female masks is also attributed to him (Suidas, v. 74), and he so far deviated from the general practice of the Attic tragedians as to write a drama on a subject of contemporary history, the capture of Miletus by the Persians, B.C. 494. (Herod. vi. 21.)

We now come to the first writer of Satyrical dramas, Pratinas of Phlius, a town not far from Sicyon, and which laid claim to the invention of tragedy as well as comedy. (Bode, p. 53.) For some time previously to this poet, and probably as early as Thespis, tragedy had been gradually depopulated more and more from its old characteristics, and inclining to heroic fables, to which the chorus of Satyrs was not a fit accompaniment. But the fun and merriment caused by them were too good to be lost, or displaced by the severe dignity of the Aeschylean drama. Accordingly the Satyrical drama, distinct from the recent and dramatic tragedy, but suggested by the sportive element of the old Dithyramb, was founded by Pratinas, who however appears to have been surpassed in his own invention by Choerilus. It was always written by tragedians, and generally three tragedies and one Satyrical piece were regularly represented together, which in some instances at least formed a connected whole, called a tetralogy (τετραλογία). The Satyrical piece was acted last, so that the minds of the spectators were agreeably relieved by a merry after-piece at the close of an earnest and engrossing tragedy. The distinguishing feature of this drama was the chorus of Satyrs, in appropriate dresses and masks, and its subjects seem to have been taken from the same class of the adventures of Bacchus and of the heroes as those of tragedy; but of course they were so treated and selected, that the presence of rustic satyrs would seem appropriate. In their jokes and drollery and naïveté consisted the merriment of the piece; for the kings and heroes who were introduced into their company were not of necessity thereby divested of their epic and legendary character (Horace, Ars. Poet. 222, speaks of the “incolumi gravitate”), though they were obliged to conform to their situation and suffer some diminution of dignity, from their position. Hence Wielcker (Nachtr., p. 321) observes, the Satyrical drama, which, so to speak, was “the Epos turned into prose, and interspersed with jokes made by the chorus,” is well spoken of as a “playful tragedy” (παιδουκτα τραγῳδία), being both in form and materials the same as tragedy. Thus also Horace (Ars. Poet. 231) says:

Efatùre loves indigna Tragoedia versus
Interdict Satyris paulum pudibunda potestivis,

alluding in the first line to the mythic or epic element of the Satyrical drama, which he calls Tragodia, and in the second representing it as being rather ashamed of its company. The scene was of course laid in the supposed haunts of the Satyrs, as we learn from Vitruvius (v. 8): “Satyrical scenes orantur arboribus, montibus reliquisque plantis, in all keeping with the incidents of the pieces, and reminding the spectators of the old Dithyramb and the god Dionysus, in whose honour the dramatic contests were originally held. We must however observe that there were some characters and legends, which as not presenting any serious or pathetic aspects, were not adapted for tragedy, and therefore were naturally appropriated to the Satyrical drama. Such were Sisyphus, Autolycus, Circe, Callisto, Midas, Omphale, and the robber Skiron. Hercules also, as he appears in Aristophanes (Rauae) and the Alcestis of Euripides, was a favourite subject of this drama, as being no unfit companion for a drunken Silenus and his crew. (Müller, 295.) The Odyssey also, says Lessing (Leben des Sophocles, § 115), was in general a rich storehouse of the Satyrical plays; but though the Cyclops of Euripides, the only satyrical play extant, was taken from it, the list of Satyrical pieces given by Wielcker (Nachtr., p. 264—322) hardly confirms this assertion.

We now come to the improvements made in tragedy by Aeschylus, of which Aristotle (Poet. iv. § 16) thus speaks:—“He first added a second actor and diminished the parts of the chorus, and made the dialogue the principal part of the action” (Τνδ λόγον προταγωγονην παρεσκευαστην). He also availed himself of the aid of Agatharchus, the scene-painter, and improved the costume of his actors by giving them thick-soled boots (ἐμπυρέμα), as well as the masks, which he made more expressive and characteristic. Horace (Ars. Poet. 270) thus alludes to his improvements:

“personae pallaeque repertor honestae
Aeschylus, et modicia in instravit pulpitum dignit;
Et docuit magnumque loqui, nitique cothurno

The custom of contending with trilogies (τριλογίαι), or with three plays at a time, is said to have been introduced by him. In fact he did so much for tragedy, and so completely built it up to its “towering height,” that he was considered the father of it. The subjects of this drama, as we have before intimated from Plutarch, were not connected with the worship of Dionysus; but rather with the great cycle of Hellenic legend, and some of the myths of the Homeric Epos. Accordingly he said of himself (Athen. viii. p. 347, e) that his dramas were but scraps and fragments from the great feasts of
Homer. Another instance of his departure from the spirit and form of the old tragedy, as connected with Dionysus, is shown in his treatment of the Dithyrambic chorus of fifty men, which in his trilogy of the Oresteia he did not bring on the stage at all, but divided it into separate parts making a different set of choruses for each of the three pieces. (Müller, *Eumenides.*) In the latter part of his life Aeschylus made use of one of the improvements of Sophocles, namely the *πραγματωτικός,* or third actor. This was the finishing stroke to the dramatic element of Attic tragedy, which Sophocles is said to have matured by further improvements in costuming and scene-painting. Under him tragedy appears with less of sublimity and sternness than in the hands of Aeschylus, but with more of calm grandeur and quiet dignity and touching incident. His latter plays are the perfection of the Grecian tragic drama, as a work of art and poetic composition in a thoroughly chastened and classic style, written when as he says of himself he had put away the boisterous pomp of Aeschylus (τὸν Ἀείχλον διασπεπαιρχός ὑμνόν), and the harsh obscurity of his own too great refinements, and attained to that style which he thought the best, and most suited for portraying the characters of men. (Plut. *de Pro. V. S.* p. 79, b.) The introduction of the third actor enabled him to do this the more effectually, by showing the principal characters on different sides and under different circumstances, both as excited by the opposition of one and drawn out by the sympathies of another. [Histrio, p. 611.] Hence though the plays of Sophocles are longer than those of Aeschylus, still there is not a corresponding increase of action, but a more perfect delineation of character. Creon for instance in the Antigone, and Ajax are more perfect and minutely drawn characters than any in Aeschylus. The part of the chorus is, on the other hand, considerably diminished in his plays. Another distinguishing feature in them is their moral significance and ethical teaching. Though the characters in them are taken from the old subjects of Homer and the Iliad, yet the level of common humanity, but in such situations and under the influence of such motives, passions, and feelings as fall to the lot of men in general: so that "every one may recognise in them some likeness of himself."

In the hands of Euripides tragedy deteriorated not only in dignity, but also in its moral and religious significance. He introduces his heroes in rags and tatters, and buses them with petty affairs, and makes them speak the language of every-day life. As Sophocles said of him (Arist. *Poet.* 253), he represented men not as they ought to be, but as they are, with all their weakness and failings — thoroughly prosaic persons. His dialogues too were little else than the rhetorical and forensic language of his day cleverly put into verse: full of sophistry and quibbling distinctions. One of the peculiarities of his tragedies was the πρόλογος, an introductory monologue, with which some hero or god opens the play, telling who he is, what is the state of affairs, and what has happened up to the time of his address, so as to put the audience in possession of every fact which it might be necessary for them to know: a very business-like proceeding no doubt, but a poor make-shift for artistical skill. The "Deus ex machina," also, though not always, in a "nodus, tali vindice dignus," was frequently employed by Euripides to effect the dénouement of his pieces. The chorus too no longer discharged its proper and high functions either as a representative of the feelings of unprejudiced observers, or, "as one of the actors, and a part of the whole," joining in the development of the piece. Many of his chorals odes in fact are but remotely connected in subject with the action of the play. Another novelty of Euripides was the use of the "monodies" or lyrical songs, in which not the chorus, but the principal persons of the drama, declare their emotions and sufferings. They were amongst the most brilliant parts of his pieces, and being sung by persons on the stage, are sometimes described as φώναι ἀνδρών ψυχῆς. (Phot. *Lex. s. v.*) Aristophanes often parodied them, and makes Euripides say of himself (*Rhaee,* 914), that he "nurtured tragedy with monodies, introducing Cephasphon" his chief actor, to sing them.

Εἰς ἀνέτρεψον μονήδας, Κηρυσσόμενα μυρίν.

Euripides was also the inventor of tragi-comedy, which not improbable suggested, as it certainly resembled, the Ἄποργογραφία of the Alexandrian age, the latter being a half-tragic, half-comic drama, or rather a parody or travesty of tragical subjects. A specimen of the Euripidean tragi-comedy is still extant in the Alcestis, acted B. c. 438, as the last of four pieces, and therefore as a substitute for a Satyrical drama. Though tragic in its form and some of its scenes, it has a mixture of comic and satyrical characters (e. g. Hercules) and concludes happily.

It remains to make some remarks on the nature and object of Greek tragedy in general, and on the parts into which it was divided. According to Plato (*Leg.* vii. p. 817) the truest tragedy is an imitation of the noblest and best life: μιμησις τοι καλλιστον καὶ δριστον βιου. Aristotle's definition is more comprehensive and perhaps perfect. "Tragedy is an imitation of an action that is important (σποδαίας), and entire, and of a proper magnitude, in pleasurable language, by means of action, not of narration, and effecting through terror and pity the refinement and correction of such passions "(τῆς ταυτότης παιθμάτων καθήμου). He then adds, Tragedy contains six parts: the story, i. e. the combination of incidents or plot, manners, expression, sentiment, decoration, and music (μούδος καὶ θύη, καὶ λέξη, καὶ δίδωμα, καὶ ὁψ, καὶ μελο-ποιεία). Of these the story is the principal part, developing the character of agents, and being in fact the very soul of tragedy. The manners come next, and manifest the disposition of the speakers. The sentiments take the third place, and comprehend whatever is said, whether proving anything, or expressing some general reflection. Afterwards he adds, Fables are of two sorts, simple and complicated (οἱ μὲν ἁπλοὶ, οἱ δὲ πεπλεγμένοι), the catastrophe of the former produced without a revolution or discovery, of the latter with one or both. Now a revolution (*περιτέτεια*) is a change to the reverse of what is expected from the circumstances of the action: a discovery (*ἀναγνώσεις*) is a change from known or unknown, happening between characters whose happiness or unhappiness forms the catastrophe of the drama. The best sort of discovery is accompanied by a revolution, as in the Oedipus. Aristotle next enumerates the parts of quantity (καρμίς τοῦ τόνου) or division in tragedy: these are, the prologue, episode, exode, and choral
TRAGOEDIA.

songs; the last divided into the parode and stasimon. The πρόλογος is all that part of a tragedy which precedes the parode of the chorus, i.e. the first act. The ἐπεισόδιον is all the part between whole choral odes. The ἔξοδος that part which has no choral ode after it. Of the choral part the πάροδος is the first speech of the whole chorus (not broken up into parts): the stasimon is without anapaests and trochees. These two divisions were sung by all the choreutae (κοιμοὶ διάταγμαν), but the "songs on the stage" and the κλίματοι by a part only (τὰ ὑπὸ τῆς σκηνῆς καὶ κλίματος). The commus, which properly means a wailing for the dead, was generally used to express strong excitement, or lively sympathy with grief and suffering, especially by Aeschylus. It was common to the actors and a portion only of the chorus (κοιμοὶ δὲ θρίμως, κοιμὰς χοροῦ, καὶ ἀπὸ σκηνῆς), whence its derivative κοιμαστικά is used to designate broken and interrupted songs sung either by individual choreutae or divisions of the chorus. (Müller, Eunyn. p. 64.) Again the πάροδος was so named as because the passage-song of the chorus was sung while it was advancing to its proper place in the orchestra, and therefore in anapaestic or marching verse: the στάσιμον, as being chanted by the chorus when standing still in its proper position. (Swift, and Elym. Mag.)

With respect to the ends or purposes of Tragedy, Aristotle observes that they are best effected by the representation of a change of fortune from prosperity to adversity, happening to a person neither eminently virtuous nor just, nor yet involved in misfortune by deliberate vice or villany, but by some error of human frailty, and that he should also be a person of high fame and eminent prosperity, like Oedipus or Thyestes. Hence, he adds, Euripides is not censurable, as is generally supposed; for tragedies with an unhappy termination like his, have always the most tragic effect; and Euripides is the most tragic of all poets, i.e. succeeds best in producing pity: an expression especially true of some scenes in the Medea. In Aeschylus, the feelings of pity and melancholy interest are generally excited by the relation in which the hero stands to destiny. He mostly represents them as vainly struggling against a blind but irresistible fate, to whose power (according to the old Homeric notion) even the father of gods and men is forced to yield, and it is only occasionally, as in the splendid chorus of the Eumenides (522), that we trace in him any intimations of a moral and retributive government of the world. Hence there is a want of moral lessons in his tragedies, the "Capture of Miletus," by Phrynichus, and the "Jason and the Argonauts," that strongly distinguishes the ancient tragedy from the modern, and to which is owing in some measure the practical and quiet irony in the handling of a subject, described by Thirlwall (Phil. Mus. ii. p. 483, &c.) as a characteristic of the tragedy of Sophocles.

The functions of the Chorus in Greek Tragedy were very important, as described by Horace (Ars. Poet. 193),

"Actoris partes chorus officiumque virile
Defendat: ne quid medios intercinct actus
Quod non proposito conducat, et hercule apte," &c.

We must conceive of it, says A. W. Schlegel, as the personification of the thought inspired by the represented action; in other words, it often expresses the reflections of a dispassionate and right-minded spectator, and inculcates the lessons of morality and resignation to the will of heaven, taught by the occurrence of the piece in which it is engaged. Besides this, the chorus enabled a poet to produce an image of the "council of elders," which existed under the Homeric government, and under whose advice and in whose presence the ancient princes of the Greek tragedy generally acted. This image was the more striking and vivid, inasmuch as the chorus was taken from the people at large, and did not at all differ from the appearance and stature of ordinary men; so that the contrast or relation between them and the actors was the same as that of the Homeric Λαοί and ἀνδρεῖς. Lastly, the choral songs produced an agreeable pause in the action, breaking the piece into parts, while they presented to the spectator a lyrical and musical expression of his own emotions, or suggested to him lofty thoughts and great arguments. As Schlegel says, the chorus was the spectator idealised. With respect to the number of the chorus, Müller (Lit. of Greece, 300) thinks that out of the dithyrambic chorus of 50 a quadrangular chorus of 48 persons was first formed, and that this was divided into acts of 12, one for each play of a tetraloge; but in the time of Sophocles, the tragic chorus amounted to 15, a number which the ancient grammarians always presuppose in speaking of its arrangements, though it might be that the form of the Aeschylean tragedy afterwards became obsolete. The preceding account should be read in connection with the articles CHORUS, DIONYSIA, HISTRIO, and THEATRUM.

The explanation of the following phrases may be useful.

Παραχρονίσμα: this word was used in case of a fourth actor appearing on the stage; probably because the choragus was required to be at an extra expense in supplying him with costume, &c.; sometimes actors so called spoke, as the character of Pyldes does (Aesch. Choep. 900—902); sometimes they were mutes.

Пαρασκήψις: this phrase was used when one of the choreutae spoke in song, instead of a fourth actor, probably near or behind the side-scenes. Παρεγγέλματα were voices off the stage, and not seen, as the frogs in the Iliad. (Pollux, iv. 109; Schol. in Aristoph. Pac. 113.)

Παραχρονίσματα, persons who came forward but once, something like the προφθαρτικά, or introductory persons who open a drama and never appear again, as the watchman in the Agamemnon, and Polydorus in the Iliad. Terence also

The materials of Greek tragedy were the national mythology,

"Presenting Thebes, or Pelops' line,
Or the tale of Troy divine."

The exceptions to this were the two historical tragedies, the "Capture of Mileus," by Phrynicus, and the "Persiana" of Aeschylus; but they belong to an early period of the art. Hence the plot and story of the Grecian tragedy were of necessity known to the spectators, a circumstance which strongly distinguishes the ancient tragedy from the modern, and to which is owing in some measure the practical and quiet irony in the handling of a subject, described by Thirlwall (Phil. Mus. ii. p. 483, &c.) as a characteristic of the tragedy of Sophocles.

The functions of the Chorus in Greek Tragedy were very important, as described by Horace (Ars. Poet. 193),

"Actoris partes chorus officiumque virile

Παραχρονίσματα, persons who came forward but once, something like the προφθαρτικά, or introductory persons who open a drama and never appear again, as the watchman in the Agamemnon, and Polydorus in the Iliad. Terence also
frequently uses the persona protatica. (Donat. Ter. Prolog. ad Andr.)

The ἄξων was a movable chorus, formed of the choruses of two separate plays; thus at the end of the Eumenides of Aeschylus the Furies of one play and the festal train of another come on the stage together. (Müller, Literat. doc. p. 300.)

The principal modern writers on the Greek Tragedy are mentioned in the course of the article. The reader may also consult Wachsmuth, vol. ii. pt. ii. pp. 467, 421; Gruppe, Ariadne, Die Tragische Kunst der Griechen in ihrer Entwicklung und in ihrem Zusammenhange mit der Volkspoesie, Berlin 1834; Museum Criticum, vol. ii. p. 69, &c.; Copleston, Praelectiones Academicae; Schneider, Ueber das Attische Theaterwesen, an exceedingly valuable book.

2. Roman. The tragedy of the Romans was, for the most part, an imitation of, or rather a borrowing from, the Greek, the more imperfect and unnatural, as the construction of the Roman theatre afforded no appropriate place for the chorus, which was therefore obliged to appear on the stage, instead of in the orchestra. The first tragic poet and actor at Rome (Gellius, xxi. 17) was Livius Andronicus, a Greek by birth, who began to exhibit in B.C. 240. From the account in Livius (vii. 2), it would seem that in his monodies (or the lyrical parts sung, not by a chorus, but by one person), it was customary to separate the singing from the mimetic dancing, leaving the latter only to the actor, while the singing was performed by a boy placed near the flute-player (ante tibiunum); so that the dialogue only (diceremia) was left to be spoken by the actors. One of the plays written by him was an "Andromeda;" and he also made a Latin prose translation of the Odyssey. The next tragic poet at Rome was Naevius, who resembled the latter in being an epic poet as well as a tragedian. Amongst the plays written by him and Naevius, who however appears to have written comedies as well as tragedies (Hieron. in Euseb. Olymp. 144. 3), and a history of the first Punic war: so that the writing of tragedies was not a distinct profession at Rome, as at Athens. An "Aecestis" seems to have been written by him. To the same epoch as Livius Andronicus, and Naevius, belongs Ennius, who resembled the latter in being an epic poet as well as a tragedian. Amongst the plays written by him are mentioned, a Medea, an Ajax, a Phoenissae, an Iphigenia, an Andromache, and a Hebeba. The metre used by him and Naevius was iambic or trochaic in the dialogue, and anaepaestic for the lyrical parts. (Gellius, xii. 4.) The next distinguished tragedian was Pacuvius, a nephew of Ennius, and a painter also. His style was more remarkable for spirit and vigour of expression than polish or refinement, a deficiency attributable to his age and provincial origin, as he was born at Brundisium. Among his plays occur an Antiope, a Chrysace, and a Dolorcestes (Quintil. x. i.; Cicero, Orat. iii. 39); and his tragedies found admirers even in the time of Pernius (i. 77). Cicero (l.c.) quotes from him a spirited translation of the concluding lines of the Prometheus Vinctus of Aeschylus. Attius or Accius the younger was junior to Pacuvius by about fifty years. His earlier plays were, as he himself admitted, harsh and obscure (Gellius, xiii. 2); but his style probably altered with increasing years. Many fragments of his plays occur in Cicero and the Latin grammarians, Diomedes, Nonius, and Varro. He was also a writer of annals in hexameter verses. (Macrobi. Sat. i. 7.) The five poets mentioned above belong to the earlier epoch of Roman tragedy, in which little was written but translations and imitations of the Greek, with occasional insertions of original matter. How they imitated the structure of the choral odes is doubtful, perhaps they never attempted it. Ennius, Pacuvius, and Accius are contrasted by Cicero (de Orat. iii. 7), with Aeschylus, Sophocles, and Euripides; and of the two last Quintilian (x. 1. § 97) says, "Virium Accio plus tribuitur; Pacuvium videri doctiorem, qui esse docti affectant, volunt."

In the age of Augustus the writing of tragedies, whether original or imitations, seems to have been quite a fashionable occupation. The emperor himself attempted an Ajax, but did not succeed; and when his friends asked him, "Quidnam Ajax ageret?" his reply was "Ajaxem suum in spongiam incubuisse." (Suet. Aug. 85.) One of the principal tragedians of this epoch was Asinius Pollio, whom the line (Virg. Eclog. viii. 10)

"Sola Sophocleo tua carmina digna costhurno,

is supposed to apply: he also excelled in other literary accomplishments. (Hor. Carm. ii. 1; Ovid. Fast. ii. 568; Varro de ling. Lat. v. xviii.; Quintilian. x. 1. § 98) says, "Ovidii Medea videtur mihi ostendere, quantum ille vir praestare potuerit si ingenio suo temperare quam indulgere maluisse." His "armorum judicium" (Metamor. xiii.) between Ajax and Ulysses, on which Pacuvius and Accius also wrote dramas, proves that he might have rivalled Euripides in rhetorical skill. Quintilian also says of Varrus, who was distinguished in epic as well as tragic poetry (Hor. Carm. ii. 5; Arn. Poet. 55; Tacit. Dipl. xii. 1), that his Thysteis might be compared with any of the Greek tragedies. Some fragments of this Thysteis are extant, but we have no other remains of the tragedy of the Augustan age. The loss perhaps is not great; for the want of a national and indigenous mythology must have disabled the Roman poets from producing any original counterparts of the Greek tragedy; besides which, in the later days of the republic, and under the empire, the Roman people were too fond of gladiatorial shows, and beast-fights, and gorgeous spectacles, to encourage the drama. Moreover, it is also manifest that a tragedy like that of the Greeks could not have flourished under a despotism.

The only complete Roman tragedies that have come down to us are the ten attributed to the philosopher Seneca. But whether he wrote any of them or not is a disputed point. It is agreed that they are not all from the same hand, and it is doubtful whether they are all of the same age even. In one of them, the Medea, the author made his heroine kill her children on the stage, "coram populo," in spite of the precept of Horace. Schlegel (Lect. viii.) thus speaks of them: "To whatever age they belong, they are beyond description bombastic and frigid, utterly unnatural in character and action, and full of the most revolting violations of propriety, and barren of all theatrical effect. With the old Grecian tragedies they have nothing in common but the name, the exterior form, and the matter. Their persons are neither ideal nor real men, but misshapen giants of puppets, and the wire that moves them is at one time an unnatural heroism, at another a passion alike
TRIBULA.

unnatural, which no atrocity of guilt can appal." Still they have had admirers: Heinsius calls the Hippolytus "divine," and prefers the Troades to the Hecuba of Euripides: even Racine has borrowed from the Hippolytus in his Phedre.

Roman tragedians sometimes wrote tragedies on subjects taken from their national history. Pausanias, e.g., wrote a Paulus, L. Accius a Brutus and a Decius. (Cie. de Div. i. 22.) Curtius Maternus, also a distinguished orator in the reign of Domitian, wrote a Domitius and a Cato, the latter of which gave offence to the rulers of the state (potentium animos offendid, Tacit. Dial. 2 ; Lang. Vind. Trag. Rom. p. 14). The fragments of the Thystoe of Varius are given by Bothius, Post. Soc. Lat. Frang. p. 279. [R. W.]

TRIBULA. [Auxilia, p. 495-497, 501, b.]

TRIBULA or TRIBULUM (τρίβολος), a corn-drag, consisting of a thick and ponderous wooden board, which was armed underneath with pieces of iron or sharp flints and drawn over the corn by a yoke of oxen, either the driver or a heavy weight being placed upon it, for the purpose of separating the grain and cutting the straw. (Varro, de Re Rust. i. 52; Ovid. Met. xiii. 803; Plin. H. N. xviii. 30; Longus, ii. 22; Brunck, Amal. ii. 215; Amos, i. 3.) Together with the tribula another kind of drag, called trauals, was also sometimes used, which is probably was either entirely of stone or made of the trunk of a tree. (Verg. Georg. i. 164; Servius, ad loc.; Col. de Re Rust. ii. 21.) These instruments are still used in Greece, Asia Minor, Georgia, and Syria, and are described by various travellers in those countries, but more especially by Paul Lucas (Voyage, vol. i. p. 182), Sir R. K. Porter (Travels, vol. i. p. 158), Jackson (Journey from India, p. 249), and C. Fellows, (Journal, p. 70, 333). The corn is threshed upon a circular floor (arca, αρχα), either paved, made of hardened clay, or of the natural rock. It is first heaped in the centre, and a person is constantly occupied in throwing the sheaves under the drag as the oxen draw it round. Lucas and Fellows have given prints representing the tribula as now used in the East. The verb tribulare (Cato, de Re Rust. 23), and the verbal noun tribulatio was applied in a secondary sense to denote affliction in general. [J. Y.]

TRIBULUS (τρίβολος), a caltrop, also called marces. (Val. Max. iii. 7. § 2; Curt. iv. 13. § 36.) When a place was beset with troops, the one party endeavoured to impede the cavalry of the other party either by throwing before them caltrops, which necessarily lay with one of their four sharp points turned upwards, or by burying the caltrops with one point at the surface of the ground. (Veget. de Re Mil. iii. 24; Jul. Afric. 69, ap. Pet.

Math. Graec. p. 311.) The annexed woodcut is taken from a bronze caltrop figured by Caylus (Recueil, iv. pl. 98). [J. Y.]

TRIBU'NAL (Σινα), a raised platform, or, to use the term adopted from the French, tribune, on which the praetor and judges sat in the Basilica. It is described under BASILICA (p. 199).

There was a tribunal in the camp, which was generally formed of turf, but sometimes, in a stationary camp, of stone, from which the general addressed the soldiers, and where the consuls and tribunes of the soldiers administered justice. When the general addressed the army from the tribunal, the standards were planted in front of it, and the army placed round it in order. The address itself was called Allocutio. (Plut. Pomp. 41; Lipsius, de Milit. Rom. iv. 9; Castr.)

A tribunal was sometimes erected in honour of a deceased emperor; as, for example, the one raised to the memory of Germanicus. (Tacit. Annal. i. 83.) Pliny (H. N. xvi. 1) applies the term to embankments against the sea. [P. S.]

TRIBU'NUS. This word seems originally to have indicated an officer connected with a tribe (tribus), or who represented a tribe for certain purposes; and this is indeed the character of the officers who were designated by it in the earliest times of Rome, and may be traced also in the later officers of this name. We subjoin an account of all the Roman officers known under this name.

1. TRIBUNES OF THE THREE ANCIENT TRIBES. At the time when all the Roman citizens were contained in the three tribes of the Ramnes, Tities, and Luceres, each of them was headed by a tribune (φύλαρχος, Dionys. ii. 7; Dig. 1. tit. 2 s. 2. § 20; Serv. ad Aen. v. 560), and these three tribes represented their respective tribes in all civil, religious, and military affairs; that is to say, they
TRIBUNUS.

were in the city the magistrates of their tribes, and performed the sacra on their behalf, and in times of war they were their military commanders. (Liv. i. 59; Dionys. ii. 64; Varro, de Ling. Lat. v. 81.)

Niebuhr (Historia di Roma, i. p. 431) supposes that the *tribunus celerum* was the tribune of the Romans, the oldest and noblest among the three tribes, and in this opinion he is followed by Götting (Gesch. d. Röm. Staatsw. p. 166), though it is in direct contradiction to Dionysius (ii. 13) and Pompomius (de Orig. Jur. Dig. i. tit. 2. s. 2 § 15), according to whom the tribunus celerum was the commander of the celere, the king's body-guard, a statement which is rejected by Niebuhr as his being supported by no ancient authority, except that Dionysius in one passage (i. 64) vaguely speaks of tribuni celerum in the plural. That however the tribunus celerum was really distinct from the three tribes of the tribes, is acknowledged by Niebuhr himself in a subsequent part of his work (iii. p. 41). In what manner the tribunus celerum was appointed is uncertain, but notwithstanding the statement of Dionysius, that Tarquinius Superbus gave this office to L. Junius Brutus, it is much more probable that he was elected by the tribes or curiae; for we find that when the imperium was to be conferred upon the king, the comitia were held under the presidency of the tribunus celerum, and in the absence of the king, to whom this officer was next in rank, he convoked the comitia: it was in an assembly of this kind that Brutus proposed to deprive Tarquiniius of the imperium. (Liv. i. 59.) A law passed under the presidency of the tribunus celerum was called a lex tribunicia, to distinguish it from one passed under the presidency of the tribunes (lex tribunicia). (Liv. i. 23.) The tribunes of the three ancient tribes ceased to be appointed when these tribes themselves ceased to exist as political bodies, and when the patricians became incorporated in the local tribes of Servius Tullius. ( Tribuni Romanos.)

2. Tribunes of the Servian Tribes. When Servius Tullius divided the commonalty into thirty local tribes, we again find that at the head of each of these tribes there was a tribune, whom Dionysius calls θεραπόν, like those of the patrician tribes. (Dionys. vi. 49.) The tribunes of the three ancient tribes, for the most part, continued together with the city the tribes, but there can be no doubt that each of these tribes was likewise headed by a tribune. The duties of these tribunes, who were without doubt the most distinguished persons in their respective districts, appear to have consisted at first in keeping a register of the inhabitants in each district and of their property, for purposes of taxation and for levying the troops for the armies. When subsequently the Roman people became exempted from taxes, the main part of their business was taken from them, but they still continued to exist. Niebuhr (i. p. 421) supposes that the *tribuni aerarii*, who occur down to the end of the republic, were only the successors of the tribunes of the tribes. Varro (de Ling. Lat. vi. 86) speaks of curatores omnium tribuum, a name by which he probably means the tribunes of the tribes. When in the year 406 B.C. the custom of giving pay to the soldiers was introduced, each of the tribuni aerarii had to collect the tributum in his own tribe, and with it to pay the soldiers (Varro, de Ling. Lat. v. 181), and in case they did not fulfil this duty, the soldiers had the right of pignoria capio against them. (Cato, op. Gell. vii. 10.) In later times their duties appear to have been confined to collecting the tributum, which they made over to the military quaestors who paid the soldiers. (Quaestor.)

The lex Aurelia (70 B.C.) called the tribuni aerarii to the exercise of judicial functions, along with the senators and equites, as these tribunes represented the body of the most respectable citizens. (Orelli, Onom. Tullii. iii. p. 142; Appian, de Bell. Civ. iii. 23.) But of this distinction they were subsequently deprived by Julius Caesar. (Suet. Cæs. 41.)

3. Tribuni Plebis. The ancient tribes of the plebeian tribes had undoubtedly the right of convoking the meetings of their tribes, and of maintaining the privileges granted to them by king Servius and subsequently by the Valerian laws. But this protection was very inadequate against the insatiable ambition and usurpations of the patricians. When the plebeians were impoverished by wars and cruelly oppressed by the patricians, at last seceded in the year 494 B.C. to the Mons Sacer, the patricians were obliged to grant to the plebeians the right of appointing tribunes (tribuni plebis) with more efficient powers to protect their own order than those which were possessed by the heads of the tribes. The purpose for which they were appointed was only to afford protection against any abuse on the part of the patrician magistrates; and that they might be able to afford such protection, their persons were declared sacred and inviolable, and it was agreed that whoever acted against this inviolability should be an outlaw, and that his property should be forfeited to the temple of Ceres. (Liv. ii. 53; Dionys. vi. 89.) This decree seems to contain a difficult question, whether these tribunes in their attempts to protect members of their own order had been subject themselves to insult and maltreatment; and that similar things occurred even after the sanctity of the tribunes was established by treaty, may be inferred from the fact, that, some time after the tribuneship was instituted, heavy punishments were again enacted against those, who should venture to annoy a tribune when he was making a proposition to the assembly of the tribes. The law by which these punishments were enacted ordained that no one should obstruct a tribune while addressing the people, and that whoever should act contrary to this ordinance should give bail to the tribunes for the payment of whatever fine they should affix to his offence in arraigning him before the comitia: if he refused to give bail, his life and property were forfeited. (Dionys. vii. 17.) It should however be observed that this law belongs to a later date than that assigned to it by Dionysius, as has been shown by Niebuhr (ii. p. 98); it was in all probability made only a short time before its first application in 461 B.C. In the case of Caeso Quinctius. (Liv. iii. 13.) The tribunes were thus enabled to afford protection to any one who appealed to the assembly of the commonalty, or required any other assistance. They were essentially the representatives and the organs of the plebeian order, and their sphere of action was the comitia tributa. With the patricians and their comitia they had nothing to do. The tribunes themselves were not judges and could inflict no punishments (Gellius, xiii. 12), but could only propose the imposition of a fine to the commonalty (multam irrogare). The tribunes were thus in their origin only a protecting magistracy of
As regards the number of the tribunes of the people, all the ancient writers agree (see the passages in Niebuhr, i. n. 1356), that at first they were only two, though the accounts differ as to the names of the first tribunes. Soon afterwards, however, the number of tribunes was increased to five, one being taken from each of the five classes. (Ascon. in Cic. Corn. p. 56, ed. Orelli; Zonar. v. 15.) When this increase took place is quite uncertain. According to Dionysius (vi. 89) three new tribunes were added immediately after the appointment of the first two. Cicero (Fragm. Cornal. p. 451, Orelli) states, that the year after the institution of the office, the tribunes' number was increased to ten; according to Livy (ii. 33) the first two tribunes immediately after their appointment elected themselves three new colleagues; according to Piso (ap. Liv. ii. 50) there were only two tribunes down to the time of the Publilian law. (Niebuhr, ii. p. 190.) During the republic, however, the old regulations involved in considerable obscurity. Cicero (Fragm. Cornal. L. C.) states that they were elected by the comitia of the curies; the same is implied in the accounts of Dionysius (i. c.) and Livy (ii. 56), according to whom the comitia of the tribes did not obtain this right till the Lex Publilia (472 B.C.; Liv. ii. 56; Dionys. x. 41). Niebuhr thinks (i. p. 618) that down to the Publilian law they were elected by the centuries, the classes of which they represented in their number, and that the curies, as Dionysius himself mentions in another place (vi. 30), had no right of election except to sanction it. The election in the later centuries however does not remove the difficulties, whence Götting (p. 289) is inclined to think, that the tribunes before the expiration of their office appointed their successors, after a previous consultation with the plebeians. The necessity of the sanction of the curies cannot be doubted, but it appears to have ceased even some time before the Publilian law. (Niebuhr, ii. p. 190.) After this time it is never heard of again, and the election of the tribunes was left entirely to the comitia tributa, which were convoked and held for this purpose by the old tribunes previously to the expiration of their office. (Liv. ii. 56, &c.; Dionys. ix. 43, 49.) One of the old tribunes was appointed by lot to preside at the election. (Liv. iii. 64; Appian, de Bell. Civ. i. 14.) As the meeting could not be prolonged after sunset, and the business was to be completed in one day, it sometimes happened that it was obliged to break up before the election was completed, and that those who were elected filled up the legitimate number of the college by cooptatio. (Liv. i. c.) But in order to prevent this irregularity the tribune L. Trebonius in 443 B.C. got an ordinance passed, according to which the college of the tribunes should never be completed by cooptatio, but the elections should be continued on the second day, if they were not completed on the first, till the number ten was made up. (Liv. iii. 64. 65, v. 10; comp. Niebuhr, ii. p. 383.) The place where the election of the tribunes was held was originally and lawfully the Forum, afterwards also the Campus Martius, and sometimes the area of the Capitol.

We now proceed to trace the gradual growth of the tribunitian power. Although its original character was merely auxilium or protectorate against patrician magistrates, the plebeians appear early to have regarded their tribunes also as mediators or arbitrators in matters among themselves. This statement of Lydus (de Magist. i. 38, 44; Dionys. vii. 56) has been pointed out by Walter (Gesch. d. Röm. Rechts, p. 65). The whole power possessed by the college of tribunes is represented by the name tribunitia potestas, and extended at no time further than one mile beyond the gates of the city; at a greater distance than this they came under the imperium of the magistrates, like every other citizen. (Liv. iii. 20; Dionys. viii. 87.) As they were the public guardians, it was necessary that every one should have access to them and at any time; hence the doors of their houses were open day and night for all who were in need of help and protection, which they were empowered to afford against any wrong, even against the highest magistrates. For the same reason a tribune was not allowed to be absent from the city for a whole day,
except during the Feriae Latinae, when the whole people was assembled on the Alban Mount. (Macrobi. Sat. i. 3.)

In the year 456 B.C. the tribunes, in opposition to the consuls, assumed the right to convocate the senate, in order to lay before it a rogation and discuss the same (Liv. vi. 17); for until that time the consuls alone had had the right of laying plebiscita before the senate for approbation. Some years after, 452 B.C., the tribune demanded of the consuls to request the senate to make a senatus-consultum for the appointment of persons to frame a new legislation; and during the discussions on this subject the tribunes themselves were present in the senate. (Dionys. x. 50, 52.) The written legislation which the tribunes then wished could only have related to their own order; but as such a legislation would only have widened the breach between the two orders, they afterwards gave way to the remonstrances of the patricians, and the new legislation was to embrace both orders. (Liv. iii. 31; Zonaras vii. 18.) From the second decemvirate the tribuneship was suspended, but was restored after the legislation was completed, and now assumed a different character from the change that had taken place in the tribes. [TRIBUS (ROMAN.)]

The tribunes now had the right to be present at the deliberations of the senate (Liv. iii. 69, iv. 1); but they did not sit among the senators themselves, but upon benches before the opened doors of the senate-house. (Val. Max. ii. 2, 7; F. Hofmann, Der Röm. Senat, p. 109, &c.) The inviolability of the tribunes, which had before only rested upon a contract between the two estates, was now sanctioned and confirmed by a law of M. Horatius. (Liv. iii. 55.) As the tribes now also included the patricians and their clients, the tribunes might naturally be asked to interpose on behalf of any citizen, whether patrician or plebeian. Hence the patrician ex-decemvir, Appius Claudius, implored the protection of the tribunes. (Liv. iii. 56; comp. also viii. 23, 34; Niebuhr, ii. p. 374.) About this time the tribunes also acquired the right to take the auspices in the assemblies of the tribes. (Zonaras, vii. 19.) They also assumed again the right which they had exercised before the time of the decemvirate, to bring patricians who had violated the rights of the plebeians before the comitia of the tribes, as is clear from several instances. (Liv. iii. 56, &c., iv. 44, v. 11, &c.) Respecting the authority which a plebiscitum pro-posed to the tribes by a tribune received through the lex Valeria, see Plebiscitum. While the college thus gained outwardly new strength every day, a change took place in its internal organisation, which to some extent paralysed its powers. Before the year 394 B.C. every thing had been decided in the college by a majority (Liv. i. 43, 44; Dionys. ix. 1, 2, 41, x. 31); but about this time, we do not know how, a change was introduced, which made the opposition (intercessio) of one tribune sufficient to render a resolution of his colleagues void. (Zonaras, vii. 15.) This new regulation was still applied in B.C. 421 and 415. (Liv. iv. 42, 48; comp. Niebuhr, ii. p. 438.) From their right of appearing in the senate, and of taking part in its discussions, and from their being the representatives of the whole people, they gradually obtained the right of intercession against any action which a magistrate might undertake during the time of his office, and this even without giving any reason for it. (Appian, de Bell. Civ. i. 23.) Thus we find a tribune preventing a consul convoking the senate (Polyb. vi. 10), preventing the proposal of new laws or elections in the comitia (Liv. vi. 55, vii. 17, 26); and they interceded against the official functions of the censors (Dion Cass. xxxvii. 9; Liv. xiii. 16); and even against a command issued by the praetor. (Liv. xxxviii. 60; Gell. vii. 19.) In the same manner a tribune might place his veto upon an ordinance of the senate (Polyb. vi. 16; Dion Cass. xii. 2); and thus either compel the senate to submit the subject in question to a fresh consideration, or to raise the session. (Caes, de Bell. Civ. i. 2; Appian, de Bell. Civ. i. 25.) In order to propose a measure to the senate they might themselves convok a meeting (Gellius, xiv. 7), or when it had been convened by a consul they might make their proposal even in opposition to the consul, a right which no other magistrates had in the presence of the consuls. The senate, on the other hand, had itself, in certain cases, recourse to the tribunes. Thus, in 431 B.C. it requested the tribunes to compel the consuls to appoint a dictator, in compliance with a decree of the senate, and the tribunes compelled the consuls, by threatening them with imprisonment, to appoint A. Postumius Tubertus dictator. (Liv. iv. 26.) From this time forward we meet with several instances in which the tribunes compelled the consuls to comply with the decrees of the senate, si non essent in auctoritate senatus, and to execute its commands. (Liv. v. 9, xxviii. 45.) In their relation to the senate a change was introduced by the Plebiscitum Atiniun, which ordained that a tribune, by virtue of his office, should be a senator. (Gellius, xiv. 8; Zonaras vii. 15.) When this plebiscitum was made is uncertain; but we know that in 170 B.C. it was not yet in operation. (Liv. xiv. 15.) It probably originated with C. Atinius, who was tribune in B.C. 132. (Liv. Epit. 59; Plin. H. N. vii. 45.) But as the quaestorship, at least in later times, was the office which persons held previously to the tribuneship, and as the quaestorship itself conferred upon a person the right of being present and expressing his opinion in the senate, the law of Atinius was in most cases superfluous.

In their relation to other magistrates we may observe, that the right of intercessio was not confined to stopping a magistrate in his proceedings, but they might even command their victorii [VIATOR] to seize a consul or a censor, to imprison him, or to throw him from the Tarpeian rock. (Liv. ii. 56, iv. 26, v. 9, ix. 34, Epit. 48, 55, 59; Cic. de Leg. iii. 9, in Vatini 9; Dion Cass. xxxvii. 50.) It is mentioned by Lubo and Varro (ap. Gell. xiii. 12) that the tribunes, when they brought an accusation against any one before the people, had the right of prehensuso, but not the right of uexatio, that is, they might command a person to be dragged by their victorii before the comitia, but they did not summon him. An attempt to account for this singularity is made by Gellius (l. c.). They might, as in earlier times, propose a fine to be inflicted upon the person accused before the comitia, but in some cases they dropped this proposal and treated the case as a capital one. (Liv. viii. 33, xxv. 4, xxvi. 3.) The college of tribunes had also the power of making edicts, as
of the power of the tribunes had been gradually rising to such a height that there was no other in the state to equal it, and whose proposals were indeed usually made ex auctoritate senatus, or had been communicated to and approved by the people that a tribune obstinately persisting in his veto should be deprived of his office. (Appian, de Bell. Civ. i. 12; Plut. Tib. Gracch. 11, 12, 15; Cic. de Leg. iii. 10; Dion Cass. xxxvi. 13.) From the time of the Hortensian law the powers of the tribunes had been now divided between two new magistrates, viz. the tribuni militum cum consulari potestate and the censors. Consequently, in 444 B.C. three military tribunes, with consular power, were appointed, and to this office the plebeians were to be equally eligible with the patricians. (Liv. iv. 7; Dionys. xi. 60, &c.) For the years following however, the people were to be at liberty, on the proposal of the senate, to decide whether consuls were to be elected according to the old custom, or consular tribunes. Henceforth, for many years, sometimes consuls and sometimes consular tribunes were appointed, and the number of the latter varied from three to four, until in 405 B.C. it was increased to six, and as the censors were regarded as their colleagues, we have sometimes mention of eight tribunes. (Liv. iv. 61, v. 1; Diodor. xv. 59; Liv. vi. 27; Diodor. xv. 51; Liv. vi. 30.) At last, however, in 367 B.C. the office of these tribunes was abolished by the Licinian law, and the consularship was restored. The consular tribunes were elected in the comitia of the centuries, and undoubtedly with less solemn auspices than the consuls. Concerning the irregularity of their number, see Niebuhr, ii. p. 325, &c., p. 389, &c.; comp. Götting, p. 326, &c.; Becker, Handb. der Röm. Alterth. vol. ii. pt. ii. p. 136, &c.

5. TRIBUNI MILITARES. [Exercitus, pp. 503, 504.] TRIBUS.  

6. TRIBUNUS VOLUPTATUM, was an officer who does not occur till after the time of Cicero, and who had the superintendence of all public amusements, especially of theatrical performances. (Cassiodor. Varior. vii. 10.) [L. S.] TRIBUS (φόλον, φόλα). 1. GREEK. In the earliest times of Greek history mention is made of people being divided into tribes and clans. Homer speaks of such divisions in terms which seem to imply that they were elements that entered into the composition of every community. Nestor advises Agamemnon to arrange his army κατ' φόλα, κατ' ψηφαρά, so that each may be encouraged by the presence of its neighbours. (II. ii. 362.) A person not included in any clan (ἄφρηστος), was regarded as a vagrant or outlaw. (II. ix. 63.) These divisions were rather natural than political, depending on family connection, and arising out of those times, when each head of a family exercised a patriarchal sway over its members. The bond was cemented by religious communion, sacrifices and festivals, which all the family or clansmen attended, and at which the chief usually presided. The aggregate of such communities formed a political society. (Aristot. Pol. i. 87.) In the ages succeeding the heroic tribes continued to exist, though in the progress of civilisation they became more extended, and assumed a territorial or political, rather than a fraternal character. The tribes were not in general distinctions between nobles and commons, unless the people were of different races, or unless there had been an accession of foreigners, who were not blended with the
original inhabitants. It is true, that in the common course of things, nobles, or privileged classes, sprang up in various countries, by reason either of wealth, or of personal merit, or of descent from the ancient kings; and that in some cases all the land was possessed by them, as by the Gamori of Syracuse (Herod, vii. 135); sometimes their property was inalienable, as under our feudal law (Arist. Pol. ii. 4. § 4); and the Baechiadai are an instance of a noble family, who intermarried only among themselves. (Herod. v. 92.) Still, however, as a general rule, there was no decided separation of tribe, much less of caste, between nobles and commons of the same race. Nor was there any such distinction of a sacerdotal order. The priestly function was in early times united to that of the king (Arist. Pol. iii. 9. § 7); afterwards the priesthood of particular deities became hereditary in certain families, owing either to a supposed transmission of prophetic power, as in the case of the Eumolpids, Branchidae, Lamidae; or not separated, as an order, from the rest of the people, (Wachsmuth, Hell. Alt. vol. i. pt. i. pp. 76, 149, 1st. ed.; Schömann, Ant. jur. publ. Gr. p. 78.) The most important distinctions of a class nature between the invaders and the same government, arose in those countries that were conquered by the migratory hordes of Thessalians, Boeotians, and Dorians, in the century subsequent to the heroic age. The revolutions which they effected, though varying in different places according to circumstances, had in many respects a uniform character. The conquering body took possession of the country, and became its lords; the former built cities, usually at the foot of some citadel that had belonged to the ancient princes, (Herod. vii. 153); but the priests were not separated, as an order, from the rest of the people. (Wachsmuth, Hell. Alt. vol. i. pt. i. pp. 76, 149, 1st. ed.; Schömann, Ant. jur. publ. Gr. p. 78.) But their condition varied according to the manner in which the invaders effected their settlement, and other circumstances prior or subsequent to that time. In many places the new comers was received under a treaty, and as equal privilages were extended to them as to the natives, so that a union of citizenship would take place between them and the original inhabitants. Thus was the case in Elis, Messenia, Phlius, Troezen. (Pausan. ii. 13. § 1, v. 4. § 1; Thirlwall, Hist. of Greece, vol. i. p. 342.) So the Cretans, who invaded Miletus, mingled with the ancient Carians, and the Ionians and the Cretans of Colophon. (Pausan. vii. 2. § 5, viii. 3. § 1.) In Megara, the ruling class, after a lapse of some time, amalgamated with the lower. (Thirlwall, vol. i. p. 430.) In other places the περιόκις were more degraded. Thus, in Sicyon they were compelled to wear sheep-skins, and called κατα-νικοφόροι (Athenaeus vi. 271); in Epidaurus they were styled κομπότες, dully-footed, a name which denoted their agricultural occupation, but was meant as a mark of contempt. (Miller, Dor. iii. 4. § 2.) But in general they formed a sort of middle order between the ruling people and the serv or slave. Thus, in Argos, there was a class of persons called Gymnesii or Gymnetae, corresponding to the Helots. (Gymnesii.) So in Thessaly, in the districts not immediately occupied by the Thessalian invaders, there dwelt a population of ancient Aeolians, who were not serfs, like the Pelasgians [Pelasgii], but only tributary subjects, who retained their personal liberty, though not admitted to the rank of citizens. (Thirlwall, vol. i. p. 438; Schömann, Id. p. 491.) So the first who invaded Argos were the Dorian freemen, the περιόκης or old inhabitants, similar to the Lacedaemonians, and the slaves. (Cosm.) We may observe that the term περιόκης is sometimes used in rather a different sense; as when Xenophon gives that name to the Thespians, who were not subjects of the Thebans, as the Achaean were of the Spartans. (Hell. v. 4. § 46.) In some of the maritime states the condition of the subject classes was somewhat different; they were suffered to reside more in the towns; as in Corinth they were called πριστίς, where they were fishermen. (Wachsmuth, vol. i. pt. i. p. 162; Schömann, Id. pp. 80, 107.)

The ruling people, thus remaining distinct from the rest, were themselves divided into tribes and other sections. Of the Dorian race there were originally three tribes, traces of which are found in all the countries which they colonized. Hence they are called by Homer Δωρικές τρεχιδες. (Od. xix. 177.) These tribes were the Ἄτλες, Ἄθανατοι, and Αἰγαλεός, from which they derived their name from Hyllus, son of Hercules, the last two from Pamphylius and Dymas, who are said to have fallen in the last expedition when the Dorians took possession of the Peloponnesus. The Hylean tribe was perhaps the one of highest dignity; but at Sparta there does not appear to have been much distinction, for all the freemen there were by the constitution of Lycurgus on a footing of equality. To these three tribes others were added in different places, either when the Dorians were joined by other foreign allies, or when some of the old inhabitants were admitted to the rank of citizenship or equal privileges. Thus the Cadmean Aegeans are said by Herodotus to have been a great tribe at Sparta, descended (as he says) from Aegeus, grandson of Theseus (Herod. iv. 149), though others have thought they were incorporated with the three Doric tribes. (Thirlwall, vol. i. pp. 257, 268, 514.) At Argos, Aegina, and Epidaurus there was an Hymetean tribe besides the three Doric. (Miller, Arg. p. 140.) In Sicily Cleisthenes having changed the names of the Doric tribes, to degrade and insult their members, and given to a fourth tribe, to which he himself belonged, the name of Archelai, sixty years after his death the Doric names were restored, and a fourth tribe added, called Αἰγαλεός, from Aigaleos, son of the Argive hero Aдрαστος. (Herod. v. 68.) Eight tribes are mentioned in Corinth (Suidas, s. v. Πάτρα δικαιοτατον), four in Tegea. (Pausan. viii. 53. § 6.) In Elis there were twelve tribes, that were afterwards reduced to eight by a war with the Arcadians (Paus. v. 9. § 6), from which they appear...
to have been geographical divisions. (Wachswach, vol. ii. pt. i. p. 17.) Sometimes we find mention of only one of the Doric tribes, as of the Hyleans in Cydonia (Hesych. s. v. 'Tàlaxeis), the Dymanes in Halicarnassus; which probably arose from colonies having been founded by the members of one tribe only. (Wachsmuth, vol. ii. pt. i. p. 15.)

Of all the Doric states, the Spartans kept themselves the longest unmixed with foreign blood. So jealous were they to maintain their exclusive privileges, that they had only admitted two men into their body before the time of Herodotus. (Herod. ix. 35, 35.) Afterwards their numbers were occasionally recruited by the admission of Lacconians, Helots, and foreigners; but this was done very sparingly, until the time of Agis and Cleomenes, who created large numbers of citizens. But we cannot further pursue this subject. (Schömann, Id. p. 114.)

The subdivision of tribes into ὕπαται or πάτρες, γένη, πριττίνες, &c. appears to have prevailed in various places. (Wachsmuth, vol. ii. pt. i. p. 18.) A Sparta each tribe contained ten ἄθαν, a word, like κώμας, denoting a local division or district; each ὄνωσ contained ten τρικάδες, communities containing thirty families. But very little appears to be known of these divisions, how far they were local, or how far genealogical. After the time of Cleomenes, who created large numbers of citizens. (Schomann, Ant. Jur. Pub. p. 115; Müller, Dor. iii. 5.)

The four Ionian tribes, Teleontes or Geleontes, Hopletes, Argadenses, Aegicores, who are spoken of below in reference to Attica, were found also in Cyzicum. In Samos a φυλή Αἴξεργοι is mentioned by Herodotus (iii. 26), which was probably a Carian race that mingled with the Ionians. In Ephesos five tribes are mentioned, of different races. With respect to these the reader is referred to Wachsmuth, vol. ii. pt. i. p. 16.

The first Attic tribes that we read of are said to have existed in the reign, or soon after the reign, of Cecrops, and were called Cecrops (Κεκρόπης), Αὐτόκλεος (Αὐτόκλεος), Actaeon (Ἀκτάιος), and Παραλία (Παραλία). In the reign of a subsequent king, Cranias, these names were changed to Κρανάις (Κρανάις), Αἴτης (Αἴτης), Μεσοπος (Μεσοπός), and Αἰγίκος (Δαίμον). Afterwards, we find a new set of names: Δίας (Δίας), Αθηναίος (Ἀθηναῖος), Ποιοδοκος (Ποιοδόκος), and Ποιεστικας (Ποιεστικας); evidently derived from the deities who were worshipped in the country. (Compare Pollux, viii. 109.) Some of those secondly mentioned, if not all of them, seem to have been geographical divisions; and it is not improbable that, if not independent communities, they were at least connected by a very weak bond of union. But all these tribes were superseded by four others, which were probably founded soon after the Ionic settlement in Attica, and seem (as before observed) to have been adopted by other Ionic colonies out of Greece. The names Geleontes (Γελεοντες), Hopletes (Ὅπλητες), Argadhes (Ἀργάδες), Αἴγικορες (Ἀϊγικορεῖς), are said by Herodotus (v. 66) to have been derived from the sons of Ion, son of Xuthus. (Compare Eurip. Ion, 1596, &c.; Pollux, l. c.) Upon this, however, many doubts have been thrown by modern writers, who have suggested various theories of their own, more or less ingenious, to which reference will be found in the books cited below. It is impossible within our limits to discuss the question at any length. The etymology of the three last names would seem to suggest, that the tribes were so called from the occupations which their respective members followed; the Hopletes being the armed men, or warriors; the Argadhes, herders; and the Aegicores, shepherds or herders. It is difficult, however, to discover in the first name any such meaning, unless Τελεοντες, and not Τελεοντες, be the true reading, in which case it has been supposed that this tribe might be a sacerdotal order, from τελεοντα, used in its religious sense; or a peasantry who paid rent to the lords of the soil, from τελοντα, in the sense of to pay. Against the former of these interpretations it may be objected, that no trace of a priestly order is to be found in later times of Attic history; and against the latter, that the Argadhes and the Teleontes would denote a similar class of people, unless we resort to another interpretation of the word Argadhes, viz. artisans, who would hardly constitute a distinct tribe in so early a period of society. It may be observed, however, that Argadhes and Aegicores may be taken to signify a local distribution of inhabitants, the former being the tillers of the soil, dwelling in the plain, the latter mountaineers; and this agrees very well, not only with the known character of the country of Attica, but also with the division above mentioned as having existed in the reign of Cranias, viz. Mesogeuma and Diaeria. There is no more difficulty in the one case than in the other, in supposing that some of the tribes were denominated from their localities or occupations, while others owed their names to other circumstances. Argadhes and Aegicores might be the old inhabitants, according to their previous division; while the other two tribes might be the Ionic settlers, Hopletes the most warlike portion of these, Teleontes the great body, so called from a son of Ion. Or the last night, as Schömann thinks, be the ancient nobility, as distinguished from the Ionic settlers. Whatever be the truth with respect to the origin of these tribes, one thing is more certain, that, before the time of Theseus, whom historians agree in representing as the great founder of the Attic commonwealth, the various people who inhabited the country continued to be disunited and split into factions.

Those in some measure changed the relations of the tribes to each other, by introducing a gradation of ranks in each; dividing the people into Εὐνατριῆς, Γεωμυρῶν, and Δυμονόργοι, of whom the first were nobles, the second agriculturists or yeomen, the third labourers and mechanics. At the same time, in order to consolidate the national unity, he enlarged the city of Athens, with which seat of government, encouraged the nobles to reside there, and surrendered a part of the royal prerogative in their favour. The Tribes or Phyla were divided, either in the age of Theseus or soon after, each into three φρατρίαι (a term equivalent to fraternities, and analogous in its political relation to the Roman Curiae), and each φρατρία into thirty γένη (equivalent to the Roman Genes), the members of a γένος being called γενετοῦρι or δυσγεναλατεῖς. Each γένος was distinguished by a particular name of a patronymic form, which was derived from some hero or mythic ancestor. We
learn from Pollux (vii. 111) that these divisions, though they seem to import family connection, were in fact artificial; which shows that some advance had now been made towards the establishment of a closer political union. The members of the φρατρίαι and γένη had their respective religious rites and festivities, which were preserved long after these communities had lost their political importance, and perhaps prevented them from being altogether dissolved. (Compare Niebuhr, Hist. of Rome, vol. i. p. 311, &c.)

The relation between the four Ionic tribes and the three classes, into which Theseus divided the nation, is a difficult and perplexing question. It would appear from the statements of ancient writers on the subject that each of the four tribes was divided into Eupatridae, Geomori, and Demiurgi; which is confirmed by the fact that the four φωλαίατοι, who were the assessors of the sovereign, were all taken from the Eupatridae, but at the same time one from each tribe. [PHYLOBASILEIS.] This, as Thirlwall (Hist. of Greece, vol. ii. p. 10) has remarked, can only be conceived possible on the supposition, that the distinctions which originally separated the tribes had become merely nominal; but Malden (Hist. of Rome, p. 140), who rejects the notion that the four Ionic tribes were castes, who were derived from their employment, supposes that the Tribes or Phyleae consisted of the Eupatridae alone, and that the latter were divided into four Phyleae like the patricians at Rome into three. The Geomori and Demiurgi had therefore, according to his supposition, nothing to do with the tribes. This view of the subject would remove many difficulties and is most in accordance with the subsequent history and political analogies in other states, but seems hardly supported by sufficient evidence to warrant us in receiving it.

After the age of Theseus, the monarchy having been first limited and afterwards abolished, the whole power of the state fell into the hands of the Eupatridae or nobles, who held all civil offices, and had besides the management of religious affairs, and the interpretation of the laws. Attica became again dominated by feuds, and we find the people, shortly before the legislation of Solon, divided into three parties, Πεσανες or lowlanders, Δικαιοποιοι or highlanders, who were derived from people of the sea coast. The two first remind us of the ancient division of tribes, Mesogaei and Diacria; and the three parties appear in some measure to represent the classes established by Theseus: the first being the nobles, whose property lay in the champaign and most fertile part of the country; the second, the smaller landowners and shepherds; the third, the trading and mining class, who had by this time risen in wealth and importance. To appease their discords, Solon was applied to; and thereafter framed his celebrated constitution and code of laws. Here we have only to notice, that he retained the four tribes as he found them, but abolished the existing distinctions of rank, or at all events greatly diminished their importance, by introducing his property qualification, or division of the people into Πεστακοσομώνεοι, Πεστακοσομῶνεοι, Πεστακοσομῶνεοι, and Ωίκες. The enactments of Solon continued to be the law at Athens, though in great measure suspended by the tyranny, until the democratic reform effected by Cleisthenes. He abolished the old tribes, and created ten new ones, according to a geographical division of Attica, and named them after ten of the ancient heroes: Erechtheus, Aigeus, Pandionis, Leontis, Acamantis, Gennes, Cecrips, Hippodoeonitis, Acarius, Antiochus. These tribes were divided each into ten δήμοι, the number of which was afterwards increased by subdivision; but the arrangement was so made, that several, or almost one another were joined to make up a tribe. [DEMUS.] The object of this arrangement was, that by the breaking of old associations a perfect and lasting revolution might be effected, in the habits and feelings, as well as the political organization of the people. He allowed the ancient φρατρίαι to exist, but they were deprived of all political importance. All foreigners admitted to the citizenship were registered in a Phyle and Demus, but not in a Phratry or Genos; whence Aristophanes (Rene, 419, lb. 75) says a taunting mode of designating new citizens, that they have no phratries, or only barbarous ones (quoted by Niebuhr, vol. i. p. 312). The functions which had been discharged by the old tribes were now mostly transferred to the δήμοι. Among others, we may notice that of the forty-eight ναυπαρηγοί into which the old tribes had been divided for the purpose of taxation, but which now became useless, the taxes being collected on a different system. The reforms of Cleisthenes were destined to be permanent. They continued to be in force (with some few interruptions) until the downfall of Athenian independence. The ten tribes were blended with the whole machinery of the constitution. Of the Senate of five hundred, fifty were chosen from each tribe. The allotment of δικαστής was according to tribes; and the same system of election may be observed in most of the principal offices of state, judicial and magisterial, civil and military; as that of the διαυτάρκης, δικαστής, νομολόγητος, τεχνοφόρος, φωλαίατος, &c. In course of time the number of tribes was in some degree diminished.

2. ROMAN. The three ancient Romulian tribes, the Rames, Tribes, and Luceres, or the Rames, Titienses, and Lucerenses, to which the patricians alone belonged, must be distinguished from the thirty plebeian tribes of Servius Tullius, which were entirely local, four for the city, and twenty-six for the country around Rome. The history and organization of the three ancient tribes is spoken of under PATRICII. They continued of political importance almost down to the time of the decemviral legislation; but after this time they no longer occur in the history of Rome, except as an obsolete institution.

The institution and organization of the thirty plebeian tribes, and their subsequent reduction to
TRIBUS.

The names of the six tribes continued to belong to Rome after the conquest of Persia, are in their assemblies, transacted any business, the number of tribes also was gradually increased. When Appius Claudius, with his numerous train of clients, emigrated to Rome, lands were assigned to them in the district where the Anio flows into the Tiber, and a new tribe, the tribus Claudia, was formed. This tribe, which Livy (ii. 16, if the reading is correct) calls vetus Claudia tribus, was subsequently enlarged, and was then designated by the name Crustium or Custantium. (Niebuhr, i. n. 1236.) This name is the first instance of a country tribe being named after a place, for the sixteen older ones all derived their names from persons or heroes who were in the same relation to them, as the Attic heroes called divs were to the Attic phylae. In n. c. 357, the number of tribes was increased to twenty-five by the addition of four new ones, viz. the Saffatina, Tertentina, Sabatina, and Arnensia. (Liv. vi. 5; Niebuhr, ii. p. 575.) In 353 B.C. two more, the Pomptina and Publitia, were formed of Volscians. (Liv. vii. 15.) In n. c. 332, the Censors Q. Publilius Philo and Sp. Postumius increased the number of tribes to twenty-nine, by the addition of the Musea and Soptula. (Liv. viii. 17.) In n. c. 515 the Ugentina and Polerina were added. (Liv. ix. 20.) In n. c. 299 two others, the Aniensia and Terentina were added by the censors (Liv. x. 9), and at last, in n. c. 241, the number of tribes was augmented to thirty-five, by the addition of the Quirina and Velina. This number was never afterwards increased, as none of the conquered nations were after this incorporated with the sovereign Roman state. (Liv. Epit. 19, i. 43.) When the tribes, in their assemblies, transacted any business, a certain order (ordo tribuum) was observed, in which they were called upon to give their votes. The first in the order of succession was the Suburnana, and the last the Arnensia. (Cic. de Leg. Agr. ii. 29.) Any person belonging to a tribe had in important documents to add to his own name that of his tribe, in the ablative case. (Nomini, p. 802, b, Compare Becker, Handb. der Röm. Alterth. vol. ii. pt. 1, p. 164, &c.)

Whether the local tribes, as they were established by the constitution of Servius Tullius, contained only the plebeians, or included the patricians also, is a point on which the opinions of modern scholars are divided. Niebuhr, Walter, and others, think that the patricians were excluded, as they had already a regular organization of their own; Wachs- muth, Gerlach, Rein, Becker, and others, on the contrary, maintain that the patricians also were incorporated in the Servian tribes; but they allow, at the same time, that by far the majority of the people in the assemblies of the tribes were plebeians, and that hence the character of these assemblies was essentially plebeian; especially as the patricians, being so few in numbers, and each of them having no more influence in them than a plebeian, seldom attended the meetings of the tribes. The passages, however, which are quoted in support of this opinion, are partly insufficient to prove the point (as Liv. ii. 50, 69; Dionys. ix. 41); and partly belong to a later period, when it certainly cannot be doubted that the patricians belonged to the tribes. We must therefore suppose, with Niebuhr, that down to the decemviral legislation the tribes and their assemblies were entirely plebeian.

The assemblies of the tribes (comitia tributae), as long as they were confined to the plebeians, can scarcely have had any influence upon the affairs of the state; all they had to do was to raise the tributum, to hold the levies for the armies, and to manage their own local and religious affairs. (TRIBUNUS; PLEBES.) But the time from which the increase of the power of the comitia of the tribes must be dated, is that in which the tribuni plebis were instituted (494 B.C.). During the time of the decemviral legislation the comitia were for a short time deprived of their influence, but we have every reason to believe that immediately after, probably by this legislation itself, the comitia tributa, instead of a merely plebeian, became a national assembly, inasmuch as henceforth patricians and freeborn clients were incorporated in the tribes, and thus obtained the right of taking part in their assemblies. (Liv. iv. 24, v. 30, vi. 19, xxix. 47.)

This new constitution of the tribes also explains the otherwise unaccountable phenomena mentioned in the article TRIBUTUM, that patricians sought the protection of the tribunes, and that on one occasion even two of the tribunes were patricians. From the latter fact it has been inferred, with great probability, that about that time attempts were made by the patricians to share the tribuneship with the plebeians. But notwithstanding the incorporation of the patricians in the tribes, the comitia tributa remained essentially plebeian, as the same causes, which would have acted, had the patricians been included in the tribes by Servius Tullius, were still in operation; for the patricians were now even fewer in number than two centuries before. Hence the old name of plebscitus, which means originally a resolution of the plebes only, although in a strict sense of the word no longer applicable, was still retained, as a resolution of the comitia tributa was practically a resolution of the plebes, which the patricians, even if they had voted against it unanimously, could not have prevented. Moreover, owing to this, the patricians probably attended the comitia tributa very seldom. For a more detailed account of the comitia tributa, see COMITIA TRIBUTA. [L. S.]

TRIBUTA COMPTIA. (Comitia.)

TRIBUTORIA ACTIO. (Servus, p. 1037.)

TRIBUTUM is a tax which, as Niebuhr (Hist. of Rome, i. p. 468) supposes, was at first paid only by the plebeians, since the name itself is used by
the ancients in connection with the Servian tribes; for Varro (de Ling. Lat. v. 181) says “tributum dictum a tribus,” and Livy (i. 45) “tribus appellatae a tributo.” But this seems to be only partially correct, as Livy (iv. 60) expressly states that the patres also paid the same tax. It is indeed true, that the patricians had little real landed property, and that their chief possessions belonged to the aediles publici, which was not accounted in the census as real property, and of which only the tithes had to be paid, until at a late period an alteration was attempted by the Lex Thoria. (App. de Bell. Civ. i. 27.) But there is no reason for supposing that the patricians did not pay the tributum upon their real property, although the greater part of it naturally fell upon the plebeians. (Livy. iv. 60, v. 10.) The impost itself varied according to the exigencies of the state, and was partly applied to cover the expenses of war, and partly those of the fortifications of the city. (Livy. vi. 32.) The usual amount of the tax was one for every thousand of a man’s fortune (Livy. xxiv. 15, xxxix. 7, 44), though in the time of Cato it was raised to three in a thousand. The tributum was not a property tax in the strict sense of the word, for the accounts respecting the plebeian debtors clearly imply, that the debts were not deducted in the valuation of a person’s property, so that he had to pay the tributum upon property which was not his own, but which he owed, and for which he had consequently to pay the interest as well. It was a direct tax upon objects without any regard to their produce, like a land or house tax, which in a direct tax upon objects without any regard to their produce, like a land or house tax, which in the republic, it was designated by the name of TRIBUTUM. 1157

TRICLINIUM, the dining-room of a Roman house, the position of which, relatively to the other parts of the house, is explained in p. 428. It was of an oblong shape, according to Vitruv. de Arch. 3. § 8) ought to be twice as long as it was broad. The same author (§ 10) describes triclinia, evidently intended to be used in summer, which were open towards the north, and had on each side a window looking into a garden. The “house of the Tragic Poet” at Pompeii, and also that of Actaeon, deditio a tribubus,” and Livy (i. 43) “tribus ap-

The articles LECTUS, TORUS and PULVINAR, contain accounts of the furniture used to adapt these couches for the acantinatio, i. e. for the act of reclining during the meal. When so prepared for an entertainment they were called triclinia strata (Caes. B. C. iii. 92 ; comp. Athen. ii. pp. 47, 48), and they were made to correspond with one another in substance, in dimensions, and in shape. (Varro, L. L. ix. 47, etc.) According to Plutarch’s mode of solving the problem respecting the increase of room for the guests as they proceeded with their meal. (Sympos. v. 6.) Each man in order to feed himself lay flat upon his breast or nearly so, and stretched out his hand towards the table; but afterwards, when his hunger was satisfied, he turned upon his left side, leaning on his elbow. To this Horace alludes in describing a person sated with a particular dish, and turning
TRICLINIUM.

in order to repose upon his elbow. (Sat. ii. 4, 39.)

We find the relative positions of two persons who lay next to one another, commonly expressed by the prepositions super or supra and infra. A passage of Livy (xxxix. 43), in which he relates the cruel conduct of the consul L. Quintius Flaminius, shows that infra aliquem cubare was the same as in sinu alienius cubare, and consequently that each person was considered as below him to whose breast his own head approached. On this principle we are enabled to explain the denominations both of the three couches, and of the three places on each couch.

Supposing the annexed arrangement to represent the plan of a Triclinium, it is evident that, as each guest reclined on his left side, the countenances of the guests are enumerated in the order of their actual approach, the guests being supposed to go in the same direction, the couch to the right of each person being considered as below the others, and the couch to the left hand below the others. Accordingly the following passage of Salust (ap. Serv. in Virg. Aen. i. 698) contains the denominations of the couches as shown on the plan: "igitur discutuere: Sertorius (i.e. No. 6) inferior in medio; super eum L. Fabius Hispaniensis senator ex proscriptis (No. 5): in summum Antonius (No. 1) et infra scriba Sertorii Verius (No. 2): et alter scriba Maecenas (No. 3) in imo, medius inter Tarquiniun (No. 7) et dominum Perpennam (No. 9)." On the same principle, No. 1 was the highest place (Lectus summum) on the highest couch; No. 3 was Lectus imus in lecto summum; No. 2 Lectus medius in lecto summum; and so on. It will be found that in the following passage (Hor. Sat. ii. 8. 20—23) the guests are enumerated in the order of their accommodation—an order exhibited in the annexed diagram.

Fundarius, one of the guests, who was at the top relatively to all the others, says,

"Summus ego, et prope me Viscus Thurinus, et infra,
Si memini, Varius: cum Servilio Balatrones
vibidius, quos Maecenas adduxerat umbras.
Nomentanus erat super ipsum, Porcius infra."

TRIERARCHIA.

It is possible that Maecenas ought to be in the place No. 4 instead of No. 5, since the entertainment was given more especially in honour of him, and No. 4 was an honourable place. The host himself, Nasidienus, occupies the place No. 8, which was usually taken by the master of the feast, and was a convenient situation for giving directions and superintending the entertainment. Unless there be an exception in the instance of No. 4, it is to be observed that at each table the most honourable was placed in front. (Virg. Aen. i. 23.)

The general superintendence of the dining-room in a great house was intrusted to a slave called tricliniarcha, who, through the instrumentality of other slaves of inferior rank, took care that everything was kept and proceeded in proper order. [J. Y.]

TRIENS. [FUSCINA.]

TRIENS. [As.]

TRIERARCHIA (τριεραρχία). This was one of the extraordinary war services or liturgies (Λοιπονεία) at Athens, the object of which was to provide for the equipment and manning of the ships of war belonging to the state. The persons who were charged with it were called Τριεράρχοι, or Trierarchs, as being the captains of Trieremes, though the name was also applied to persons who bore the same charge in other vessels. It existed from very early times in connection with the forty-eight naucraries of Solon, and the fifty of Cleisthenes; each of which corporations appears to have been obliged to equip and man a vessel. (Comp. NAUCRARIA; Lac. Rheus, p. 283.) Under the constitution of Cleisthenes the ten tribes were at first severally charged with five vessels. This charge was of course superseded by the later forms of the Trierarchy, explained in the course of this article.

1. The services to which the Trierarchs were liable.

What these were previously to 356 B. C. there can be no doubt; the vessel was furnished by the state, though sometimes a wealthy and patriotic individual served in his own ship. Cleinias, for instance, did so at Artemisium (Herod. viii. 17), but as it is particularly recorded that this ship was his own, we may infer, that he supplied at his own cost what the state was bound to provide. The same custom prevailed during the Peloponnesian war also. The 100 ships prepared and reserved at the beginning of the war, for any critical emergency, were supplied by the state. (Thucyd. ii. 24.) In the expedition against Sicily (Id. vi. 31) the state furnished the hull of the vessel (νησίκ κηρω), and the pay of the crews, a drachma per day for each man: but the equipment of the ships was at the cost of the Trierarchs, who also gave τιμήµατα (Pollux, iii. 94), or additional pay to secure the best men. The same conclusions are also deducible from the credit which a Trierarch takes to himself for saving his vessel, when the city lost her ships at Aegospotami (Isocr. c. Calim. 382); and from the further statement that he paid the sailors out of his own pocket. From the threat of Cleon (Aristoph. Equl. 916) that he would (as στρατηγὸς) make an adversary a Trierarch, and give him an old ship with a rotten mast (λιθίων σαρκίδω), it appears that the state furnished the hull and mast also, but that the Trierarch was bound to keep and return them in good repair: an obligation expressed in the inscriptions quoted by Böckh (Urkunden über das Seewesen des Attischen Staates, p. 197), by the phrase, δει τὴν...
ravν δεξιων καλ ιντελη παραδουναι. Consequently the statement in the oration against Midianas (p. 564. 22) that when Demosthenes was quite young (b.c. 364) the Trierarchs paid all the expenses themselves (τα ανολαμβανε τα των ιδιων) only implies that they defrayed the expenses which were customary at that time, and which were afterwards diminished by the regulation of the symmoriae; but not that they supplied the ship, or pay and provisions for the crew. The whole expenditure, says Böckh, means nothing more than the equipment of the vessel, the keeping it in repair, and the procuring of the necessary stores, and which was attended with much trouble and expense, as the Trierarchs were sometimes obliged to give bounties in order to induce persons to serve, foreign sailors not being admissible. From the oration of Demosthenes against Polycles (b. c. 361), we learn the following particulars about the Trierarchy of that time. The Trierarchs were obliged to launch their ship; the sailors were supplied from particular parishes (δημιουργοι), through the agency of the demarchi; but these supplies were not paid for by the client of Demosthenes but few and inefficient, consequently he mortgaged his estate (υποθετειν την οικιαν), and hired the best men he could get, giving great bounties and premiums (προβολεις). He also equipped the vessel with his own tackle and furniture, taking nothing from the public stores (εκ των δημιουργων οικεων έλαβον). Compare the Speech on the Crown of the Trierarchy, p. 1229. Moreover in consequence of his sailors deserting when he was out at sea, he was put to additional and heavy expenses in hiring men at different ports. The provision money for the sailors (εντερπαιροι) was provided by the state, and paid by the strategi, and so generally speaking was the pay for the marines (ζηταται): but Demosthenes' client only received it for two months, and as he served for five months more than his time, (from the delay of the Crown of the Trierarchy, p. 1229). Moreover we may here observe, that the expression in Isaeus (de Apoll. Hered. 67), that a Trierarch "had his ship made himself" (την ναιον ποιησανειν), does not mean that he was at the cost of building it (ναυουγραφανειν), but only of fitting it up and getting it ready for sea. That the ships always belonged to the state, is further evident from the fact that the senate was intrusted with the inspection of the ship-building (Dem. c. Androt, 599. 13); and is placed beyond all doubt by the "Athenian Navy List" of the inscriptions in Böckh. (Urkunden, &c.) Some of the ships there mentioned are called ανωτεροερημωτοι, whence it appears that the public vessels were assigned by lot to the respective Trierarchs. A τριηρης επιστελμος was a ship presented to the state as a free gift, just as τριηρης ευδοκια means to present the state with a trireme (εντερπαιραμε). As to the duration of a Trierarchy was a year, and if any Trierarch served longer than his legal time, he could charge the extra expenses (τα επιτραπαρχημα) to his successor. To recover these expenses an action (επιτραπαρχηματος δικη) might be brought against the successor, of which we have an example in the speech of Apollodorus against Polycles, composed by Demosthenes for the former.

II. On the expenses of the Trierarchy. These would of course depend upon circumstances; but except in extraordinary cases, they were not more than 60, nor less than 40 minae: the average was about 50. Thus about the year b.c. 360, a whole Trierarchy was let out for 40 minae; in later times the general amount of a contract was 60. (Dem. c. Mid. 559, 564. 20, de Coron. 260, 262.)

III. On the different forms of the Trierarchy. In ancient times one person bore the whole charge, afterwards it was customary for two persons to share it, who were then called Syntrierarchs (συντριπταρχοι). When this practice was first introduced is not known, but Böckh conjectures that it was about the year 412 b.c., after the defeat of the Athenians in Sicily, when the union of two persons for the Choregia was first permitted. The most ancient account of a syntrierarchy is later than 410 (Lys. c. Diogit. 907, 909), and we meet with one so late as b.c. 358, the year of the Athenian expedition into Euboea. (Dem. c. Mid. 566. 24.) The syntrierarchy to which we allude was indeed a voluntary service (ευθεναι), but there can be little doubt that it was suggested by the ordinary practice of that time; and even under the next form of the service, two Trierarchs were sometimes employed for the immediate direction of the Trierarchy. The syntrierarchy, however, did
not entirely supersede the older and single form, being only meant as a relief in case of emergency, when there was not a sufficient number of wealthy citizens to bear the expense singly. Numerous instances in fact occur of single Trierarchies, between 410 and 355 B.C., and in two passages of Isaeus (de Dicereg. Her. 54, de Apoll. 67), referring to this period, the single and double Trierarchy are mentioned as contemporaneous. Apollo-
dorus also was sole Trierarch (Dem. c. Polyc. 5) so late as B.C. 361. In the case of a syntrierarchy the two Trierarchs commanded their vessel in turn, six months each (Id. 1219), according as they agreed between themselves.

The third form of the Trierarchy was connected with, or suggested by, the syntrierarchy. In B.C. 358, the Athenians were unable to procure a sufficient number of legally appointed Trierarchs, and accordingly they summoned the volunteers. This, however, was but a temporary expedient; and as the actual system was not adequate to the public wants, they determined to manage the Trierarchy somewhat in the same way as the property taxes (Eetrov. 521), namely, every person who took charge of a symmoria or ship, according to the law of Periander passed, as Böckh shows, in the year 358, and which was the primary and original enactment on the subject. With this view 1200 synellesis, or partners (Dem. c. Mid. 564) were appointed, who were probably the wealthiest individuals of the state, according to the census or valuation. These were divided into 20 symmoria, or classes; out of which a number of persons (σωματα) joined for the equipment or rather the maintenance and management of a ship, under the title of a συντελεως (Harpocr. s.v.) or union. Sometimes, perhaps, by special enactment, when a great number of ships was required, a synulleia of this kind consisted of four or five wealthy individuals, who bore jointly the expenses of one trireme (Harpocr. s.v. Συμμορια); but generally to every ship there was assigned a synelleia of fifteen persons of different degrees of wealth, as we may suppose, so that four only were provided for by each symmoria of sixty persons. These synelleiae of fifteen persons each seem to have been also called symmoriae by Hyperides. (Harpocr. s.v. Symmoria. Dem. de Symmor. 183.)

It appears, however, that before Demosthenes carried a new law on this subject (a. c. 340), it had been customary for sixteen persons to unite in a synelleia or company for a ship (Dem. pro Cor. 261), who bore the burden in equal shares. This being the case it follows, either that the members of the symmoriae had been by that time assigned to a third part (τριτης) of the tribe to whom the whole was allotted, so that each third would receive ten ships. Whether this scheme was to be subdivided into thirds, each of which was to be assigned to a third part (τριτης) of the tribe to whom the whole was allotted, so that each third would receive ten ships. Whether this scheme was put into practice does not appear, but it seems that it was not, for the mismanagement of the Trierarchy appears to have continued till Demosthenes carried his law about the Trierarchy according to the Valuation, or one of the chief evils connected with it was, that the triremes were never equipped...
in time; and as Demosthenes (Phil. 50) complains of this, in B.C. 352, we may conclude that his proposal fell to the ground. But these evils were too serious to remain without a remedy; and therefore when the orator was the ἐπιστάτης τοῦ ναυτικοῦ or the superintendent of the Athenian navy, he brought forward and carried a law for altering and improving the system of the symmoriae and companies, the members of which no longer called themselves Trierarchs, but partners (σωμελεῖς) (Id. de Cor. 260), thereby introducing the “Fourth form of the Trierarchy.” The provisions of the law were as follows. The naval services required from every citizen were to depend upon and be proportional to his property, or rather to his taxable capital (τίμαμα, see Eἰσφόρα), as registered for the symmoriae of the property taxes, the rate being one trireme for every ten talents of taxable capital, up to three triremes and one auxiliary vessel (ὑποπέρασον) for the largest properties; i.e. no person, however rich, could be required to furnish more. Those who had not ten talents in taxable capital were to club together in symmoriae till they had made up that amount; and if the valuation of the year of Nansinicus (B.C. 357) was still in force, the taxable capital (for the highest class) was one-fifth of the whole. By this law great changes were effected. All persons paying taxes were rated in proportion to their property, so that the poor were benefited by it, and the state likewise: for, as Demosthenes (de Cor. 261) says, those who had formerly contributed one-sixteenth to the Trierarchy of one ship were now Trierarchs of two, in which case they must either serve by proxy, or done duty in successive years. He adds that the consequences were highly beneficial. During the whole war, carried on after the law was in force, no Trierarch implored the aid of a temple, or was put into prison by the persons whose duty it was to dispatch the fleet (τῶν τριεράστων ἔξω), nor was any trireme lost at sea, or lying idle in the docks for want of stores and tackle, as under the old system, when the service (ΤΟ ΑΕΙΟΤΥΠΙΟΝ) fell on the poor. The duties and services to which the Trierarchs were subject under the law new were much lighter than those under the third form of the Trierarchy, the symmoriae.

On the relation which, in this system, the cost of a Trierarchy bore to the property of a Trierarch Bückh makes the following remarks, which may be verified by a reference to Eἰσφόρα. “If we reckon that, as formerly, it cost about a talent, the total expense of the Trierarchs, for 100, 200, or 300 triremes amounted to an equal number of talents, or a sixtieth, a thirtieth, and a twentieth of the valuation of Attica: i.e. for the first class one-third, for the poorer a proportionally less amount: and of the annual incomes, taken as a tenth part of the property, 3/4, 6/5, and 10 per cent. for the most wealthy. But we may reckon that Athens at that time had not more than 100 or 200 triremes at sea, very seldom 300; so that this war-tax did not for the richest class amount on an average to more than one-third, and two-thirds per cent. of their property.”

This arrangement of Demosthenes was calculated for 300 triremes, for which number 300 persons serving in person would be necessary; so that the chief burden must have fallen upon the leaders of the former symmoriae. The year of passing this law Bückh fixes at B.C. 340 or 332. How long it remained in force is uncertain. In the speech for the crown (B.C. 330), where much is said on the subject of the Trierarchy, it is neither mentioned that the law was in existence, nor that it was repealed; but Demosthenes (p. 329) says that Aeschines had been bribed by the leaders of the symmoriae to nullify it.

It appears then that the Trierarchy, though the most expensive of the liturgies, was not of necessity oppressive, if fairly and economically managed, though this, as has been before observed, was not always the case. (Demosth. c. Polyc.)

With respect to the amount of property which rendered a man liable to serve a Trierarchy or syntrierarchy, Bückh observes, “I am aware of no instance of liability arising from a property of less value than 500 minae, and as an estate of one or two talents never obliged the possessor to the performance of any liturgy (Dem. c. Aphob. p. 639), the assertion of Isaeus (de Dicoeg. Herod. p. 54) that many had served the office of Trierarch whose property was 300 minae, and if (if true) to suppose that public-spirited individuals were sometimes found to contribute to a Trierarchy (rather perhaps to a syntrierarchy) out of a very small property.”

The disadvantages which in later times resulted from the Trierarchs not being ready for sea by the time for sailing, were in early times prevented by their appointments being made beforehand; as was the case with the Trierarchs appointed to the 100 ships which were reserved at the beginning of the Peloponnesian war against an attack upon Athens by sea.

The appointment to serve under the first and second forms of the Trierarchy was made by the strategi (Demosth. c. Lacr. 940. 18), and in case any person was appointed to serve a Trierarchy, and thought that any one else (not called upon) was better able to bear it than himself, he offered the latter an exchange of his property (Ἀντιδοσις) subject to the burden of the Trierarchy.

In cases of extreme hardship, persons became suppliants to the people, or fled to the altar of Artemis at Munychia. If not ready in time, they were sometimes liable to imprisonment (συντριεράστων) (e. of Dem. c. Poiyc. 1229. 6), the Trierarchs were by a special decree subjected to imprisonment if they were not off the pier (χώμα) by the end of the month; on the contrary, whoever got his ship ready first, was to be rewarded with the “crown of the Trierarchy;” so that in this way considerable emulation and competition were produced. Moreover, the Trierarchs were ὑποπέρασον, or liable to be called to account for their expenditure; though they applied their own property to the service of the state. (Dem. c. Polyc. 1222. 11; Aeschin. c. Cleisth. 56.) But they also received money out of the treasury for various disbursements, as the pay of the soldiers and sailors, and the extra hands (ὑποπερίσασι: thus, on one occasion, each Trierarch is stated to have received 30 minae, ἑπὶ ἐξέκλησι. (Dem. de Cor. Trier. 1231. 14.) The Trierarchs may also have been considered ὑποπέρασον, from being required to show that they had performed their duties properly. The Sacred Triremes, the Famulis and the Salamis, had special treasurers (Ταμίας) appointed to them (Pellux,
TRIARCHIA.

viii. 116) and, on the authority of Ulpian (ad Dom. c. Mid. 668), it has been believed that the state acted as Triarch for each of them; but in the inscriptions quoted by Böckh (Urkunden, &c., p. 169), no difference is made between the Triarchs of the Paralus and other vessels, and therefore it would seem that the state appointed Triarchs for them as well as for other vessels, and provided out of the public funds for those expenses only which were peculiar to them.

IV. On the exemptions from the Triarchy.—By an ancient law, in force c. 355 (Dem. c. Lept.), no person (but minors or females) could claim exemption from the Triarchy, who were of sufficient wealth to perform it, even not the descendants of Harmodius and Aristogiton. But from Isaeus (De Apoll. Hiered. 67) it appears that in the time of the single Triarchy no person could be compelled to serve a second time within two years after a former service (δύο ἐτῶν διαληπτών). The nine archons also were exempt, and the Trierarchs of whom this is said had returned their service within two years after a former service (θηρίαμα, &c. p. 226.) The phrase διάληπτος τριήρης καὶ τῆς ἀπώδειας, which occurs in inscriptions, does not apply to an undertaking for giving a new trireme, but merely for putting one in a complete state of repair.

The phrase φαίνεται πληθών (Dem. c. Lukan. 541), to lay an information against a vessel, is used not of a public ship, but of a private vessel, engaged perhaps in smuggling or privateering. (Böckh, Publ. Econ. of Athens, pp. 541—576, 2d ed.) [R.W.]

TRIPLICATIO. [Actio, p. 12, a.]

TRIPOS (τριπός), a tripod, i.e. any utensil or article of furniture supported upon three feet. More especially

I. A three-legged table. [Mensa.] The first woodcut, at p. 303, shows such a table in use. Its three supports are richly and tastefully ornamented. Various single legs (trapezophoroi, Cic. ad Fam. ii. 23), wrought in the same style out of white marble, red porphyry, or other valuable materials, and consisting of a lion’s head or some similar object at the top, and a foot of the same animal at the bottom, united by intervening foliage, are preserved in the British Museum (Combe, Ancient Marbles, i. 3, i. 13, iii. 38) and in other collections of antiquities. The tripod used at entertainments to hold the CRATER had short feet, so that it was not much elevated. These tables were probably sometimes made to move upon castors. [Poll. Hist. rom. xvi. 275.]

II. A pot or caldron, used for boiling meat, and either raised upon a three-legged stand of bronze, as is represented in the woodcut, p. 827, or made with its three feet in the same piece. Such a utensil was of great value, and was sometimes offered as a prize in the public games (xviii. 264, 702, 703).

III. A bronze altar, not differing probably in its original form from the tall tripod caldron already described. In this form, but with additional ornament, we see it in the annexed woodcut, which represents a tripod found at Fréjus. (Spon, Misc. Erud. Ant. p. 118.) That this was intended to be used in sacrifice may be inferred from the bull’s head with a fillet tied round the horns, which we see at the top of each leg.

All the most ancient representations of the sacrificial tripod exhibit it of the same general shape, together with three rings at the top to serve as handles (obesa, Hom. ll. xviii. 378). Since it has this form on all the coins and other ancient remains, which have any reference to the Delphic oracle, it has been with sufficient reason concluded that the tripod, from which the Pythian priestess gave responses, was of this kind. The right-hand figure in the woodcut is copied from one
TRIPOS. published by K. O. Müller (Böttiger’s Amalthea, i. p. 119), founded upon numerous ancient authorities, and designed to show the appearance of the oracular tripod at Delphi. Besides the parts already mentioned, viz. the three legs, the three handles, and the vessel or caldron, it shows a flat, round plate, called δαμος, on which the Pythia seated herself in order to give responses, and on which lay a laurel wreath at other times. This figure also shows the position of the cortina, which, as well as the caldron, was made of very thin bronze, and was supposed to increase the prophetic sounds which came from underneath the earth. (Virg. Aen. iii. 92.)

The celebrity of this tripod produced innumerable imitations of it (Diod. xvi. 26), called “Delphic tripods.” (Athen. v. p. 199.) They were made to be used in sacrifice, and still more frequently to be presented to the treasury both in that and in many other Greek temples. (Athen. vi. pp. 231, t—232, d.; Paus. iv. 32. § 1.)

[DONARIA.] Tripods were chiefly dedicated to Apollo (Paus. iii. 16. § 5) and to Bacchus. Partly in allusion to the fable of the rape of a tripod from Apollo by Heracles, and the recovery of it by the former (Paus. iii. 21. § 7, x. 13. § 4), the tripod was one of his usual attributes, and therefore occurs continually on coins and ancient marbles which have a relation to him. Of this we have an example in the bas-relief engraved on p. 117, which also exhibits two more of his attributes, the lyre and the serpent. In conformity with the same ideas it was given as a prize to the conquerors at the Pythian and other games, which were celebrated in honour of Apollo. (Herod. i. 144.)

TRIUMPHUS. a solemn procession in which a victorious general entered the city in a chariot drawn by four horses. He was preceded by the captives and spoils taken in war, was followed by his troops, and after passing in state along the Via Sacra, ascended the Capitol to offer sacrifice in the temple of Jupiter. The use of bronze tripods as altars evidently arose in a great degree from their suitableness to be removed from place to place. We have an example of this mode of employing them in the scene which is represented in the woodcut on p. 1045. To accommodate them as much as possible to this purpose, they are sometimes made to fold together into a small compass by a contrivance, which may be understood from an inspection of the preceding woodcut. The right-hand figure represents a tripod in the British Museum. A patera, or a plain metallic disk, was laid on the top, when there was occasion to offer incense. Many of these movable folding tripods may be seen in Museums, proving how common they were among the Romans.

Another species of tripods deserving of notice are those made of marble or hard stone. One was discovered in the villa of Hadrian, five feet high, and therefore unsuitable to be used in sacrifice. It is very much ornamented, and was probably intended merely to be displayed as a work of art. (Caylus, Recueil, ii. pl. 53.)

TRIUMPHUS, a solemn procession in which a victorious general entered the city in a chariot drawn by four horses. He was preceded by the captives and spoils taken in war, was followed by his troops, and after passing in state along the Via Sacra, ascended the Capitol to offer sacrifice in the temple of Jupiter.
TRIUMPHUS.

Such displays have been so universal among all warlike tribes from the earliest times, and are so immediately connected with some of the strongest passions of the human heart, that it would be as useless as it is impossible to trace their origin historically. It is scarcely necessary to advert to the fancies of those ancient writers, who refer their first institution to the mythic conquests of Bacchus in the East (Diodor. iv. 5; Plin. H. N. vii. 57), nor need we attach much importance to the connection between triumphus and παρεία, according to the etymology doubtless proposed by Varro (L. L. vi. 68). Rejoicing after a victory, accompanied by processions of the soldiery with their plunder, must have been coeval with the existence of the Romans as a nation, and accordingly the return of Romulus with spolia opima after he had defeated the Caeninenses and slain Acro their king, is described by Dionysius (i. 34; compare Prop. iv. 1. 32) with all the attributes of a regular triumph. Piutarch (Rom. 16) admits that this event was the origin of and first step towards the triumph of after times, but censures Dionysius for the statement that Romulus made his entrance in a quadriga, which he considers disproved by the fact that all the triumphal (παρειαφόροι) statues of that king, as seen in his day, represented him on foot. He adds that Tarquinius Priscus, according to some, or Poplicola, according to others, first triumphed in a chariot; and in corroboration of this we find that the first triumph recorded by Livy (i. 38; compare Flor. i. 5; Eutrop. i. 6) is that over the Sabines by Tarquinius, who according to Varro (Plin. H. N. xxxiii. 19) wore upon this occasion a robe of cloth or gold. Whatever conclusion we may form upon these points, it is certain that from the dawn of authentic history down to the explosion of liberty a regular triumph (justus triumphus) was recognized as the summit of military glory, and was the cherished object of ambition to every Roman general. A triumph might be granted for successful achievements either by land or sea, but the latter were comparatively so rare that we shall for the present defer the consideration of the naval triumph.

When a decisive battle had been won, or a province subdued by a series of successful operations, the Imperator forwarded to the senate a laurel-wreathed despatch ( ITERAE LAUREATAE, Zonar. vii. 21; Liv. xlvi. 1; Plin. H. N. xv. 40) containing an account of his exploits. If the intelligence proved satisfactory the senate decreed a public thanksgiving. [SUPPLICATIO.] This supplication was so frequently the forerunner of a triumph, that Cato thinks it necessary to remind Cicero that it was not invariably so. (Cic. ad Fam. xiv. 5.) After the war was concluded the general with his army repaired to Rome, or ordered his army to meet him there on a given day, but did not enter the city. A meeting of the senate was held without the walls, usually in the temple of Bellona (e.g. Liv. xxvi. 21, xxxvi. 39) or Apollo (Liv. xxxix. 4), that he might have an opportunity of urging his pretensions in person, and these were then scrutinized and discussed with the most jealous care. The following rules and restrictions were for the most part rigidly enforced, although the senate assumed the discretionary power of relaxing them in special cases.

1. That no one could be permitted to triumph unless he had held the office of dictator, of consul, or of praetor. (Liv. xxviii. 33, xxxi. 20.) Hence a triumph was not allowed to P. Scipio after he had expelled the Carthaginians from Spain, because he had commanded in that province "sine ullo magistratu." (Val. Max. ii. 8. § 5; Liv. l.c.) The honours granted to Pompey, who triumphed in his 24th year (n. c. 81), before he had held any of the great offices of state, and again ten years afterwards, while still a simple eques, were altogether unprecedented. (Liv. Epit. 89; Cic. pro Leg. Man. 21; Vell. Pat. ii. 30; Val. Max. viii. 15. § 9; Plut. Pomp. 12, 22; Dion Cass. xxxvi. 8.)

2. That the magistrate should have been actually in office both when the victory was gained and when the triumph was to be celebrated. This regulation was insisted upon only during the earlier ages of the commonwealth. Its violation commenced with Q. Publiliius Philo, the first person to whom the senate ever granted a "prorogatio imperii" after the termination of a magistracy (Liv. viii. 20), and thenceforward consuls and praetors were permitted to triumph without question (Liv. xxxix. 45, xl. 25, 34), although for a considerable time the event was of rare occurrence. It was long held, however, that it was necessary for the "prorogatio imperii" to follow immediately upon the termination of the magistracy, for a triumph was refused to L. Lentulus, who succeeded P. Scipio in Spain, on the ground that, although he had been formerly praetor, his imperium had not been continued uninterruptedly from the period when the command expired, but had been renewed "extra ordinem" after a lapse of some years. (Liv. xxxi. 20.) But towards the close of the republic this principle was entirely abandoned. Consuls and praetors seldom quitted the city until their term of office had ceased, and when at any subsequent period they entered upon the government of a province, either in regular rotation or "extra ordinem," they enjoyed the full status and all the privileges of proconsuls and propraetors. The position of Pompey when sent against the pirates and afterwards against Mithridates, and of Cicero when he went to Cicilia, will be sufficient to illustrate this without multiplying examples.

3. That the war should have been prosecuted or the battle fought under the auspices and in the province and with the troops of the general seeking the triumph (Liv. xxxi. 48, xxxiv. 10; Val. Max. ii. 8. § 3), and hence the triumph of the praetor Furius (Liv. xxxi. 49) was considered irregular and imperfect. Thus if a victory was gained by the legatus of a general who was absent from the army, the honour of it did not belong to the former, but to the latter, inasmuch as he had the auspices.

4. That at least 5000 of the enemy should have been slain in a single battle (Val. Max. ii. 8, § 1), that the advantage should have been positive and not merely a compensation for some previous disastere (Oros. v. 4), and that the loss on the part of the Romans should have been small compared with that of their adversaries. (Liv. xxxii. 22.) By a law of the tribunes L. Marius and M. Cato penalties were imposed upon all Imperatores who should be found guilty of having made false returns to the senate, and it was ordained that so soon as they returned to the city they should be required to attest the correctness of such documents upon oath before the city quaestor. (Val. Max. l.c.) It is...
clear that these provisions could never have existed during the petty contests with which Rome was ruly occupied for some centuries; and even when wars were waged upon the most extensive scale we note many instances of triumphs granted for general results, without regard to the numbers slain in any one engagement (e. g. Liv. viii. 26, xl. 38).

5. That the war should have been a legitimate contest against public foes (justis hostilibusque bellis, Cic. pro Deiot. 5), and not a civil contest. Hence Catulus celebrated no triumph over Lepidus, nor Antonius over Catiline, nor Cinna and Marius over their antagonists of the Sullan party, nor Caesar after Pharsalia, and when he did subsequently triumph after his victory over the sons of Pompey it caused universal disgust. Hence the line in

"Bella geri placuit nullos habitura triumphos."

(See Val. Max. ii. 8 § 7 ; Dion Cass. xliii. 42; Plut. Caes. 56.) [Ovatt.]

6. That the dominion of the state should have been extended and not merely something previously lost regained. Hence Fulvius, who won back Capua after its revolt to Hannibal, did not receive a triumph. (Val. Max. i. c. ; compare Liv. xxxi. 5, xxvi. l.) The absolute acquisition of territory does not appear to have been essential. (Duker, i. 3.)

7. That the war should have been brought to a conclusion and the province reduced to a state of peace so as to permit of the army being withdrawn, the presence of the victorious soldiers being considered indispensable in a triumph. In consequence of this condition not being fulfilled an ovation only was granted to Marcellus after the capture of Syracuse (Liv. xxvi. 21, compare xxviii. 29, xxx. 48) and to L. Manlius upon his return from Spain. (Liv. xxxix. 29.) We find an exception in Liv. xxxi. 48, 49, but this and similar cases must be regarded as examples of peculiar favour. (See also Isaeu. Ann. i. 55, compared with ii. 41.)

The senate claimed the exclusive right of deliberating upon all these points and giving or withholding the honour sought (Liv. iii. 63; Polyb. vi. 13), and they for the most part exercised the privilege without question, except in times of great political excitement. The sovereignty of the people, however, in this matter was asserted at a very early date, and a triumph is said to have been voted by the tribes to Valerius and Horatius, the first plebeian dictator (Liv. vii. 17), while L. Postumius Megellus, consul B. c. 294, celebrated a triumph over the sons of Pompey and once extended and not merely something previously lost regained. (Cicero pro Deiot. 5.)

8. That the precipitation of the soldiers being considered as examples of peculiar favour. (See also Val. Max. ii. 8 § 7; Dion Cass. xliii. 42; Plut. Caes. 56.) [Ovatt.]

9. That the question of a triumph was decided, since by so doing he would ipso facto have forfeited all claim. We have a remarkable example of this in the case of Cicero, who after his return from Cilicia lingered in the vicinity of Rome day after day, and dragged about his lictors from one place to another, without entering the city, in the vain hope of a triumph.

Such were the preliminaries, and it only now remains to describe the order of the procession. This in ancient days was sufficiently simple. The leaders of the enemy and the other prisoners were led along in advance of the general's chariot, the military standards were carried before the troops who followed laden with plunder, banquets were spread in front of every door, and the populace brought up the rear in a joyous band, filled with good cheer, chanting songs of victory, jeering and bantering as they went along with the pleasantries customary on such occasions. (Liv. iii. 29.) But in later times these pageants were marshalled with extraordinary pomp and splendour, and presented a most gorgeous spectacle. Minute details would necessarily be different according to circumstances, but the general arrangements were as follows. When the day appointed had arrived the whole population poured forth from their abodes in holiday attire, some stationed themselves on the steps of the public buildings in the forum and along the Via Sacra, while others mounted scaffolds erected for the purpose of commanding a view of the show. The temple were all thrown open, garlands of flowers smoked on every altar. (Plut. Aemil. Paul. 32; Dion Cass. lxxvi. 4.) Meanwhile the Emperor called an assembly of his soldiers, delivered an oration commending their value, and concluded by distributing rewards to the most distinguished and a sum of money to each individual, the amount depending on the value of the spoils. He then ascended his triumphal car and advanced to the Porta Triumphalis (where this gate was is a question which we cannot here discuss; see Cic. in Pis. 28; Suet. Oct. 101; Josephus, B. J. vii. 24), where he met with the whole body of the senate.
headed by the magistrates. The procession then
filed in the following order:

1. The Senate headed by the magistrates. (Dion
Cass. lii. 21; Serv. ad Virg. Aen. 543.) 2. A body
of trumpeters. 3. A train of carriages and frames
(Josephus, B. J. vii. 24) laden with spoils, those
articles which were especially remarkable either in
account of their beauty or rarity being disposed in
such a manner as to be seen distinctly by the
crowd. (Suet. Jul. 37.) Boards were borne aloft
on ferrula, on which were painted in large letters
the names of vanquished nations and countries.
Here, too, models were exhibited in ivory or wood
(Quintili. vi. 3) of the cities and forts captured
(Plin. v. 5), and pictures of the mountains, rivers,
and other great natural features of the subdued
region, with appropriate inscriptions. Gold and
silver in coin or bullion, arms, weapons, and horse
furniture of every description, statues, pictures,
vases, and other works of art, precious stones,
elaborately wrought and richly embroidered stuffs,
and every object which could be regarded as valu-
able or curious. 4. A body of flute-players. 5. The
white bulls or oxen destined for sacrifice, with
gilded horns, decorated with infulae and sera,
attended by the slaughtering priests with their im-
plements, and followed by the Camilli bearing in
their hands paterae and other holy vessels and in-
struments. 6. Elephants or any other strange
animals, natives of the conquered districts. 7. The
arms and insignia of the leaders of the foe. 8.
The leaders themselves, and such of their kindred
as had been taken prisoners, followed by the whole
band of inferior captives in fetters. 9. The coronae
of chains and the influence of the evil eye, and for the
same purpose a fascinum, a little bell, and a scourge
were attached to the vehicle. (Plin. H. N. xxviii.
7; Zonar. vii. 21.) Tertullian (Apol. 33) tells us
that the slave ever and anon whispered in the ear
of the Emperor the warning words "Respice post
te, hominem memento te," and this statement is
translated into Latin from an earlier writer. Isidorus
(xviii. 2), misunderstanding Pliny (xxviii. 7), imagines that the slave
in question was a common executioner. 12. Be-
hind the chariot or on the horses which drew it
(Zonar, l. c.) rode the grown-up sons of the Im-
perator, together with the legati, the tribuni (Cic.
in Pis. 25), and the equites, all on horseback. 13.
The rear was brought up by the whole body
of the infantry in marching order, their spears
dordored with laurel (Plin. xv. 40), some shouting
in Triumph ( Varro, L. L. v. 7, ed. Muller ; Hor.
Carm. iv. 2, 49; Tibull. ii. 6, 121), and sinning
hymns to the gods, while others proclaimed the
praises of their leader or indulged in keen sarcasms
and coarse ribaldry at his expense, for the most
perfect freedom of speech was granted and exer-
cised. (Liv. iv. 53, v. 49, xlv. 38, Dionys. vii. 72;
Suet. Jul. 49, 51; Mart. i. 5, 3.)

The arrangement of the procession as given
above is taken, with some changes, from the treatise
of Onuphrius Panvinius De Triumpho in the 9th
volume of the Theaurus of Graevius. The dif-
ferent particulars are all collected from the accounts
transmitted to us of the most celebrated triumphs,
such as that of Pompey in Appian (Bell. Mith.
116, 117), of Aemilius Paullus in Plutarch (Paull.
32) and in Livy (xlv. 40), of Vespasian and Titus
in Josephus (B. J. vii. 5. § 4, 5, 6), and of Camil-
lius in Zonaras (vii. 21), together with the remarks
of Dionysius (ii. 34, v. 47), Servius (ad Virg. Aen.
iv. 545), and Juvenal (Sat. x. 38—45).

Just as the pomp was ascending the Capitoline
hill some of the hostile chiefs were led aside into
the adjoining prison and put to death, a custom so
barbarous that we could scarcely believe that it
existed in a civilized age were it not attested by
the most unquestionable evidence. (Cic. in Verr. v. 30; Liv. xxvi. 13; Joseph. vii. 21.) Pompey, indeed, refrained from perpetrating this atrocity in his third triumph (Appian, Bell. Mith. 117), and Aurelian on like occasion spared Zenobia, but these are quoted as exceptions to the general rule. When it was announced that these murders had been completed (Joseph l.c.) the victims were then sacrificed, an offering from the spoils was presented to Jupiter, the laurel wreath was deposited in the lap of the god (Senec. Consol. ad Helv. 10; Plin. H. N. xv. 40; Plin. Paneg. 8; Stat. Sylv. iv. 1. 41), the Imperator was entertained at a public feast along with his friends in the temple, and returned home in the evening preceded by torches and pipes, and escorted by a crowd of citizens. (Flor. ii. 1.) Plutarch posited in the lap of the god (Senec. Consol. ad Helv. 10; Plin. Paneg. 8; Stat. Sylv. iv. 1. 41), the Imperator was entertained at a public feast along with his friends in the temple, and returned home in the evening preceded by torches and pipes, and escorted by a crowd of citizens. (Flor. ii. 1.) Plutarch

But the glories of the Imperator did not end with the show nor even with his life. It was customary (we know not if the practice was invariable) to provide him at the public expense with a site for a house, such mansions being styled triumphales domus. (Plin. xxxvi. 24. § 6.) After death his kindred were permitted to deposit his ashes within the walls (such at least, is the explanation given to the words of Plutarch, Q. R. 77) and Valerius Maximus (ii. 8. § 8) says that it was the practice to invite the consuls to this banquet, and then to send a message requesting them not to come, in order, doubtless, that the Imperator might be the most distinguished person in the company. The whole of the proceedings, generally speaking, were brought to a close in one day, but when the quantity of plunder was very great, and the troops very numerous, a longer period was required for the exhibition, and thus the triumph of Flaminius continued for three days in succession. (Liv. xxxix. 52; Plut. Flam. Prov. 32.)

The last triumph ever celebrated was that of Belisarius, who entered Constantinople in a quadriga, according to the fashion of the olden time, after the recovery of Africa from the Vandals. The total number of triumphs upon record down to this period has been calculated as amounting to 330. Orosius (vii. 9) reckons 320 from Romulus to Vespasian, and Vitruvius (Lexic. Antiq. s. v. Triumphus) estimates the number from Vespasian to Belisarius at 30.

TRIUMVIRI or TRESVIRI, were either ordinary magistrates or officers, or else extraordinary commissioners, who were frequently appointed at Rome to execute any public office. The following is a list of the most important of both classes, arranged in alphabetical order.

1. TRIUMVIRI AGRO DIVIDENDO. [TRIUMVIRI COLONIAR DEDUCENDAE.]

2. TRIUMVIRI CAPITALES were regular magistrates first appointed about b.c. 292. (Liv. Epit. 11; Dig. 1. tit. 2. s. 2. § 30.) The institution of their office is said to have been proposed by L. Papirius, whom Festus (s. v. Sacramentum) calls tribune of the plebs, but whom Niebuhr (Hist. of Rome, vol. iii. pp. 487, 482) supposes to be L. Papirius Cursor, Epit. iv. 10. They were elected by the people, the comitia being held by the praetor. (Festus, l.c.) They succeeded to many of the functions of the Quaestores Parici. (Varro, L. L. v. 81, ed. Muller; Quaestor.) It was their duty to inquire into all capital crimes, and to receive informations respecting such (Varro, l.c.; Plaut. Asin. i. 2. 5, Aulul. iii. 2. 2; Cic. pro Cluent. 13), and consequently they apprehended and committed to prison all criminals whom they detected. (Liv. xxxix. 17; Val. Max. vi. 1. § 10; Cic. l.c.) In conjunction with the Aediles, they had to preserve the public peace, to prevent all unlawful assemblies, &c. (Liv. xxxv. 1, xxxix. 14.) They enforced the payment of fines due to the state (Fest. l.c.) They had the care of public prisons, and carried into effect the sentence of the law upon criminals. (Liv. xxxii. 26; Val. Max. v. 4. § 7, viii. 4. § 2; Sall. Cat. 53; Tacit. Ann. v. 9.) In these points they resembled the magistracy of the Eleven at Athens. (Hendeca.) They had the power of inflicting summary punishment upon ancient constitution, he alone had a legitimate claim to a triumph. This principle was soon fully recognised and acted upon, for although Antonius had granted triumphs to his legati (Dion Cass. xlix. 42), and his example had been freely followed by Augustus (Suet. Octan. 38; Dion Cass. liv. 11, 12) in the early part of his career, yet after the year b.c. 14 (Dion Cass. liv. 24), he entirely discontinued the practice, and from that time forward triumphs were rarely, if ever, conceded to any except members of the imperial family. But to compensate in some degree for what was then taken away, the custom was introduced of bestowing what were termed Triumphalia Ornamenta, that is, permission to receive the titles bestowed upon and to appear in public with the robes worn by the Imperatores of the commonwealth when they triumphed, and to bequeath to their descendants triumphal statues. These triumphalia ornamenta are said to have been first bestowed upon Agrippa (Dion Cass. l.c.) or upon Tiberius (Suet. Octan. 9), and ever after were a common mark of the favour of the prince. (Tacit. Ann. i. 72, ii. 52, iii. 72, &c.; Hist. i. 79, ii. 78, &c.)

TRIUMVIRI or TRESVIRI, were either ordinary magistrates or officers, or else extraordinary commissioners, who were frequently appointed at Rome to execute any public office. The following is a list of the most important of both classes, arranged in alphabetical order.
slaves and persons of lower rank: their court appears to have been near the Maenian column. (Festus, l. c.; Gell. iii. 3; Plaut. Amph. i. 1 3; Cic. pro Cluent. 13.) Niebuhr (l. c.), who is followed by Arnold (Hist. of Rome, vol. ii. p. 389), supposes that they inflicted summary punishment on all offenders against the public peace who might be taken in the fact; but the passage of Festus, which Niebuhr quotes, does not prove this, and it is improbable that they should have had power given them of inflicting summary punishment upon a Roman citizen, especially since we have no instance recorded of their exercising such a power. (Walter, Gesch. d. Röm. Rechts, pp. 165, 358, 1st ed.; Götting, Gesch. d. Röm. Staatsw. p. 370.)

3. TRIUMVIRI COLONIAE DEDUCENDAE were persons appointed to superintend the formation of a colony. They are spoken of under COLONIA, Augustus, and besides to superintend the distribution of the land to the colonists, we find them also called TRIUMVIRI COLONIAE DEDUCENDAE AGROQUE DIVIDUANDO (Liv. viii. 16), and sometimes simply TRIUMVIRI AGRO DANDO (Liv. iii. 15).

4. TRIUMVIRI EPUلونES. [EPUلونES.]

5. TRIUMVIRI EQUITUM TURMAS RECOGNOSCENDI, or LEGENDIS EQUITUM DECURSIS, were magistrates first appointed by Augustus to revise the lists of the Equites, and to admit persons into the order. This was formerly part of the duties of the censors. (Suet. Aug. 37; Tacit. Ann. iii. 30.)

6. TRIUMVIRI MENSARII. [MENSARII.]

7. TRIUMVIRI MONETALES. [MONETA.]

8. TRIUMVIRI NOCTURNI, were magistrates elected annually, whose chief duty it was to prevent fires by night; and for this purpose they had to go round the city during the night (vigilias circumvire). If they neglected their duty they were sometimes accused before the people by the tribunes of the plebs. (Val. Max. viii. i. § 5, 6.) The time at which this office was instituted is unknown, but it must have been previously to the year B.C. 304. (Liv. ix. 46.) Augustus transferred their duties to the Praefectus Vigilum. (Dig. i. tit. 15. s. 1) [PRAEFECTUS VIGILUM.]

9. TRIUMVIRI REPICENDIS ARDIBUS, extraordinary officers elected in the Comitia Tributa in the time of the second Punic war, were appointed for the purpose of repairing and rebuilding certain temples. (Liv. xxv. 7.)

10. TRIUMVIRI REIPUBLICAE CONSTITUENDAE. Niebuhr (Hist. of Rome, vol. iii. p. 43) supposes that magistrates under this title were appointed as early as the time of the Licinian Rogations, in order to restore peace to the state after the commotions consequent upon those Rogations. (Lydyus, de Mag. i. 35.) Niebuhr also thinks that these were the magistrates intended by Varro, who mentions among the extraordinary magistrates, the right of summing up the senate. Triumvirs for the regulation of the republic, along with the Decemvirs and Consular Tribunes. (Gell. xiv. 7.) We have not, however, any certain mention of officers or magistrates under this name, till towards the close of the republic, when the supreme power was shared between Caesar (Octavianus), Antonius, and Lepidus, who administered the affairs of the state under the title of TRIUMVIRI REIPUBLICAE CONSTITUENDAE. This office was conferred upon them in B.C. 43 for five years (Liv. Epit. 120; Appian, B.C. iv. 2—12; Dion Cass. xliii. 54—56; Vell. Pat. ii. 63; Plut. Cis. 46); and on the expiration of the term, in B.C. 38, was conferred upon them again, in B.C. 37, for five years more. (Appian, B.C. v. 85; Dion Cass. xliii. 54.) The coalition between Julius Caesar, Pompeius, and Crassus, in B.C. 60 (Vell. Pat. ii. 44; Liv. Epit. 103) is usually called the first triumvirate, and that between Octavianus, Antony, and Lepidus, the second; but it must be borne in mind that the former never bore the title of triumviri, nor were invested with any office under that name, whereas the latter were recognized as regular magistrates under the above-mentioned title.

11. TRIUMVIRI SACRIS CONQUIRENDIS DONISQUE PERSIGNANDIS were extraordinary officers elected in the Comitia Tributa in the time of the second Punic war, seem to have had to take care that all property given or consecrated to the gods was applied to that purpose. (Liv. xxxv. 7.)

12. TRIUMVIRI SENATUS LEGENDI were magistrates appointed by Augustus to admit persons into the senate. This was previously the duty of the censors. (Suet. Aug. 37.)

TROCHILUS. [SPIRA.]

TROCHUS (Trox), a hoop. The Greek boys used to exercise themselves like ours with trundling a hoop. It was a bronze ring, and sometimes bells attached to it. (Marc. ii. 22, xiv. 168, 169.) It was impelled by means of a hook with a wooden handle, called odexis (Propert. iii. 12), and odasthr. From the Greeks this custom passed to the Romans, who consequently adopted the Greek term. (Hor. Carm. iii. 24, 57.)

The hoop was used at the Gymnasia (Propert. l. c.; Ovid. Trist. ii. 485); and, therefore, on one of the gems in the Stosch collection at Berlin, which is engraved in the annexed woodcut, it is accompanied by the jar of oil and the laurel branch, the signs of effort and of victory. On each side of this we have represented another gem from the same collection. Both of these exhibit naked youths trundling the hoop by means of the hook or key. These show the size of the hoop, which in the middle figure has also three small rings or bells on its circumference. (Winckelmann, Desc. des Pierres Gravées, pp. 452—453.)

In a totally different manner hoops were used in the performances of tumblers and dancers. Xenophon describes a female dancer who receives twelve hoops in succession, throwing them into the air and catching them again, her motions being regulated by another female playing on the pipe. (Sympos. ii. 7, 8.)

On the use of τροχής, to denote the potter's wheel, see FICITILE. [J. Y.]

TROJABEUS. [Circus, p. 286, b.]

TROPAEUM (τρόπαιον, At. τρόπαιον, Schol. ad Aristoph. Plut. 453), a trophy, a sign and memorial of victory, which was erected on the field.
of battle where the enemy had turned (τρέφω, τρέπω) to flight, and in case of a victory gained at sea, on the nearest land. The expression, for raising or erecting a trophy, is τροπαίων στήριξι or στήρισθανα, to which may be added ἀνέδω ἢ κατὰ τῶν πολεμιῶν. (Wolf, *ad Dem. in Lept.* p. 296.)

When the battle was not decisive, or each party considered it had some claims to the victory, both erected trophies. (Thucyd. i. 54, 105, ii. 92.)

Trophies usually consisted of the arms, shields, helmets, &c., of the enemy that were defeated; and from the descriptions of Virgil and other Roman poets, which have reference to the Greek rather than to the Roman custom, it appears that the spoils and arms of the vanquished were placed on the trunk of a tree, which was fixed on an elevation. (Virg. *Aen.* xi. 5; *Serv. ad loc.*; *Stat. Theb.* iii. 707; *Juven.* x. 133.)

It was consecrated to some divinity with an inscription (ἐπιγραφή, εἰρήνη), recording the names of the victors and of the defeated party (Eurip. *Phoen.* 583; *Schol. ad loc.*; *Paus.* v. 27. § 7; *Virg. Aen.* iii. 208; *Ovid. Ar. Am.* ii. 744; *Tact. Am.* ii. 22); whence trophies were regarded as inviolable, which even the enemy were not permitted to remove. (Dion Cass. xlii. 58.)

Sometimes, however, a people destroyed a trophy, if they considered that the enemy had erected it without sufficient cause, as the Milesians did with a trophy of the Athenians. (Thucyd. viii. 24.)

That rankling and hostile feelings might not be perpetuated by the continuance of a trophy, it seems to have been originally part of Greek international law that trophies should be made only of wood and not of stone or metal, and that they should not be repaired when decayed. (Plut. *Quaest. Rom.* c. 37. p. 273. c.; *Diod. xiii.* 24.) Hence we are told that the Lacedaemonians accused the Thessalians before the Amphictyonic council, because the latter had erected a metal trophy. (*Cic. de Invent.* ii. 23.)

The trophies erected to commemorate naval victories were usually ornamented with the beaks or acroteria of ships [ΑΚΡΟΤΕΡΙΑΜΑ, ΡΟΣΤΡΑ]; and were generally consecrated to Poseidon or Neptune. Sometimes a whole ship was placed as a trophy. (Thucyd. ii. 84, 92.)

The following woodcut taken from a painting found at Pompeii (*Mas. Borbon.* vol. vii. t. 7) contains a very good representation of a tropaeum, which Victory is engaged in erecting. The conqueror stands on the other side of the trophy with his brows encircled with laurel.

The Macedonian kings never erected trophies, for the reason given by Pausanias (ix. 40. § 4), and hence the same writer observes that Alexander raised no trophies after his victories over Darius and in India. The Romans too, in early times, never erected any trophies on the field of battle (*Florus,* i. e. 121, after their conquest of the Allobroges, when they built at the junction of the Rhone and

the Isara towers of white stone, upon which trophies were placed adorned with the spoils of the enemy. (*Florus,* l. c.; *Strabo,* iv. p. 185.) Pompey also raised trophies on the Pyrenees after his victories in Spain (*Strabo,* iii. p. 156; *Plin. H. N.* iii. 3; *Dion Cass.* xii. 24.; *Sall. ap. Serv. in Virg. Aen.* xi. 6); Julius Caesar did the same near Zela, after his victory over Pharnaces (*Dion Cass.* xlii. 48), and Drusus, near the Elbe, to commemorate his victory over the Germans. (*Dion Cass.* li. 1; *Florus,* iv. 12.) Still, however, it was more common to erect some memorial of the victory at Rome than on the field of battle. The trophies raised by Marius to commemorate his victories over Jugurtha and the Cimbri and Teutoni, which were cast down by Sulla and restored by Julius Caesar, must have been in the city. (Suet. *Jul.* i.)

In the later times of the republic, and under the empire, the erection of triumphal arches was the most common way of commemorating a victory, many of which remain to the present day. [ARCUS.] We find trophies on the Roman coins of several families. The annexed coin of M. Furius Philus is an example; on the reverse, Victory or Rome is represented crowning a trophy.

---

**TROSAUL. [EQUITES, p. 472, a.]**

**TRUA.**

TRUA, *dim.* TRULLA (τοπωρίς), derived from τρόπω, τρόπος, &c., to perforate; a large and flat spoon or ladle pierced with holes; a trowel. The annexed woodcut represents such a ladle, adapted to stir vegetables or other matters in the pot (*Schol. in Aristoph. *Av.* 70), to act as a strainer.
when they were taken out of the water, or to dispel the froth from its surface. (Non. Marcell. p. 19, ed. Merceri.) The ladle here drawn was found in the kitchen of "the house of Pansa," at Pompeii.

The *trulla vinaria* (Varro, *L. L.* v. 118, ed. Müller) seems to have been a species of colander [*colum*], used as a wine-strainer. (Cic. *Verr.* iv. 27; Hor. *Sat.* ii. 3. 144.) Though generally applied to these domestic and culinary purposes (Eupolis, p. 174, ed. Runkel) the trulla was found to be convenient for putting bees into a hive. (Col. *de Re Rust.* i. 12.) It was also commonly used to plaster walls ( Pallad. *de Re Rust.* i. 13, 15), and thus gave rise to the verb *trulliare.*

Follows (*Exc. in Asia Minor*, p. 153) explains the Eastern method of using a kind of colander in washing the hands. It is placed as a cover upon the jar [*olla*], which receives the dirty water. This may therefore be the *trulla*, which the ancients used, together with the basin and ewer, to wash their hands. (Non. Marcell. p. 547, ed. Merceri.)

**TRUBLION.** [*Cotyla.*]

TRUTINA (*xorvatn*), a general term including both *libra*, a balance, and *statra*, a steelyard. (Non. Marc. p. 180.) Payments were originally made by weighing, not by counting. Hence a balance (*trubia*) was preserved in the temple of Saturn at Rome. (Varro, *L. L.* v. 183, ed. Müller.)

The balance was much more ancient than the steel-yard, which according to Isidore of Seville is preserved in the Museum of the Capitol at Rome. Consistently with this remark, steelyards have been found in great numbers among the ruins of Herculaneum and Pompeii. The construction of some of them is more elaborate and complicated than that of modern steelyards, and they are in some cases much ornamented. The annexed wood-cut represents a remarkably beautiful statera which is preserved in the Museum of the Capitol at Rome. Its support is the trunk of a tree, round which a serpent is entwined. The *equipoise* is a head of Minerva. Three other weights lie on the base of the stand, designed to be hung upon the hook when occasion required. (*Mis. Capit.* vol. ii. p. 213.)

Vitrivius (*x. 3. s. 8. § 4*) explains the principle of the steelyard, and mentions the following constituent parts of it: the scale (*lancula*) depending from the head (*excutit*), near which is the point of revolution (*centrum*) and the handle (*ansa*). On the other side of the centre of the scale is the beam (*corpus*) with the weight or equipoise (*aequipondium*), which is made to move along the points (*per puncta*) expressing the weights of the different objects that are put into the scale.

**TUBA.**

(*Sat.* vi. 8) copies him, intend to affirm that the tuba was crooked. The words of the former do not mean that both the litus and the tuba were crooked, but that both that kind of trumpet which was called a litus and also the staff of the augur were crooked, and that it was doubtful which of the two had lent its name to the other. [*LITUS*]

The tuba was employed in war for signals of every description (*Tacit.* Hist. ii. 29; Caesar, *B. C.* iii. 46; *Hirt. B. G.* viii. 20; *Liv. xxiii. 27*), at the games and public festivals (*Juv. vi. 249, x. 214; *Virg. Aen.* v. 113; *Ovid, Fast.* i. 718), also at the last rites to the dead (*luna tuba*, *cornelus*, Pers. iii. 103; *Virg. Aen.* xi. 191; *Ovid, Herod.* xii. 140, *Amor.* ii. 6. 6), and Aulus Gellius (xx. 15, ed. Kreel) endeavoured to imitate in the line

"At tuba terrribili sonitu tarantantara dixit."

The invention of the tuba is usually ascribed by ancient writers to the Etruscans (*Athenaeus*, iv. c. 82; Pollux, iv. 85, 87; Diodor. v. 40; *Serv. ad Virg. Aen.* viii. 516; Clem. Alex. *Stron.* i. p. 306), and the epithet *tndissare* (i.e. robber-trumpeters, Photius and Hesych. s. v. and Pollux, l. c.) would seem to indicate that they had made it famous by their piracies. It has been remarked that Homer never introduces the *oxakaoy* in his narrative but in comparisons only (*R. xix. 210, xx. 330*; Eustath, and Schol.), which leads us to infer that although known in his time it had been but recently introduced into Greece, and it is certain that notwithstanding its eminently martial character, it was not until a late period used in the armies of the leading states. By the tragedians its Tuscan origin was fully recognized: Athena in Aeschylus orders the deep-toned piercing Tyrrhenian trumpet to sound (*Eumen.* 567), Ulysses in Sophocles (*Aj. 17*) declares that the accents of his beloved goddess fell upon his ears like the tones of the brazen-mouthed Tyrrhenian bell (*kxovrnyov, i.e. the bell-shaped aperture of the trumpet*), and similar epithets are applied by Euripides (*Phoen.* 1376).
sent precisely the same appearance on monuments of very different dates, as may be seen from the cuts annexed, the former of which is from Trajan’s column, and the latter from an ancient fictile vase. (Hope, Costumes of the Ancients, pl. 156.)

The scholiast on the Iliad (l. c.) reckons six varieties of trumpets; the first he calls the Grecian τάχνης which Athena discovered for the Tyrrhenians, and the sixth, termed by him κατ’ ἑξάχνης, the τυραννική σάλτης, he describes as bent at the extremity (κάθουσα κεκλαμενήν ἑξώσα) but by this we must unquestionably understand the sacred trumpet (ἱππαγόν ἱππαγόν, Λυδική, de Mens. iv. 6), the ἀτίτοις already noticed at the beginning of this article. (Compare Lucan, i. 431.) [W. R.]
TUNICA. (Compare Herod. v. 87; Schol. ad Eurip. Hecub. 938.) Euripides (Hecub. l. c. Androm. 596) incorrectly calls this Doric dress Peplos, and speaks of a Doric virgin as μονόκεπτος. From the circumstance of their only wearing one garment, the Spartan virgins were called γυμνοί (Plut. Lycurg. 14) [ΝΥΔΟΝ], and also μονόγυμνοι. (Schol. ad Eurip. l. c.; Athen. xiii. p. 588, f.) They appeared in the company of men without any further covering ; but the married women never did so without wearing an upper garment. This Doric Chiton was made, as stated above, of woollen stuff; it was without sleeves, and was fastened over both shoulders by clasps or buckles (περθαυ, περθαυ), which were often of considerable size. (Herod. Schol. ad Eurip. l. c.) It was frequently so short as not to reach the knee (Clem. Alex. Paed. ii. 10, p. 258), as is shown in the figure of Diana, on p. 276, who is represented as equipped for the chase. It was only joined together on one side, and on the other was left partly open or slit up (σχιστός χίτων, Pollux, vii. 55), to allow a free motion of the limbs: the two skirts (πτεργες) thus frequently flew open, whence the Spartan virgins were sometimes called ρυπαπρίπες (Pollux, l. c.), and Euripides (Androm. l. c.) speaks of them as with γυμνοίς μηροῖς καὶ πέπλοις δρειμένοις.

Examples of this σχιστός χίτων are frequently seen in works of art: the following cut is taken from a bas-relief in the British Museum, which represents an Amazon with a Chiton of this kind: some parts of the figure appear incomplete, as the original is mutilated. (See also Mus. Borbon. vol. iv. t. 21.)

The Ionic Chiton, on the contrary, was a long and loose garment, reaching to the feet (ποδήμα), with wide sleeves (στύμα), and it was generally made of linen. The sleeves, however, appear usually to have covered only the upper part of the arm; for in ancient works of art we seldom find the sleeves extending further than the elbow, and sometimes not so far. The sleeves were sometimes slit up, and fastened together with an elegant row of brooches (Aelian, V. H. i. 18), and it is to this kind of garment that Boettiger (Kleine Schrift. vol. iii. p. 55) incorrectly gives the name of σχιστός χίτων. The Ionic Chiton, according to Herodotus (v. 87, 88), was originally a Carian dress, and passed over to Athens from Ionia. The women at Athens originally wore the Doric Chiton, but were compelled to change it for the Ionic after they had killed, with the buckles or clasps of their dresses, the single Athenian who had returned alive from the expedition against Aegina, because there were no buckles or clasps required in the Ionic dress. The Muses are generally represented with this Chiton. The woodcut annexed, taken from a statue in the British Museum, represents the Muse Thalia wearing an Ionic Chiton. The Peplum has fallen off her shoulders, and is held up by the left hand. The right arm holding a Pedum is a modern restoration. Both kinds of dress were fastened round the middle with a girdle (ΖΟΝΑ), and as the Ionic Chiton was usually longer than the body, part of it was drawn up so that the dress might not reach further than the feet, and the part which was so drawn up overhung or overlapped the girdle, and was called κόλπος.

There was a peculiar kind of dress, which seems to have been a species of double Chiton, called δι-πλός, διπλός, and μεσόπλός. Some writers suppose that it was a kind of little cloak thrown over the Chiton, in which case it would be an Amictus, and could not be regarded as a Chiton; but Becker and others maintain that it was not a separate article of dress, but was merely the upper part of the cloth forming the Chiton, which was larger than was required for the ordinary Chiton, and was therefore thrown over the front and back. The following cuts (Mus. Borbon. vol. ii. t. 4, 6) will give a clearer idea of the form of this garment than any description.
TUNICA.

It seems impossible to determine with certainty whether the Diploidion formed part of the Chiton, or was a separate piece of dress. Those writers who maintain the former view, think that it is quite proved by the left-hand figure in the preceding cut; but this is not conclusive evidence, since the Chiton may have been merely a garment itself.

In the right-hand figure we see that the Chiton is girded round the middle of the body, as described above, and that the fold which overhangs (κόλπος) forms, with the end of the Diploidion, a parallel line, which was always the case. This is also plainly seen in the woodcut to the article UMBRACULUM. Since the Diploidion was fastened over the shoulders by means of buckles or clasps, it was called ἑτερόστετος, which Müller (Archäol. d. Kunst, § 339. 4) supposes from Eurip. Hecub. 533, and Athen. xiii. p. 608, b, to have been only the end of the garment fastened on the shoulder; but these passages do not necessarily prove this, and Pollux (vii. 49) evidently understands the word as meaning a garment itself.

Besides the word χιτών, we also meet with the diminutives χιτώνικος and χιτώνιον, the former of which is generally applied to a garment worn by men, and the latter to one worn by women, though this distinction is not always preserved. A question arises whether these two words relate to a different garment from the Chiton, or mean merely a smaller one. Many modern writers think that the Chiton was worn immediately next the skin, but that there was worn under it a shirt (χιτώνικος) or chemise (χιτώνιον). In the dress of men, however, this does not appear to have been the case; since we find χιτωνικοίς frequently used as identical with χιτών, and spoken of as the only under garment worn by individuals. (Tô ιμάτων καὶ τῶν χιτωνικῶν, Plat. Hipp. Min. p. 363 ; Dem. in Mid. p. 583. 21 ; Aesch. in Tim. p. 145 ; Athen. xii. p. 545, a.) It appears, on the contrary, that females were accustomed to wear a chemise (χιτώνιον) under their Chiton, and a representation of such an one is given in p. 182. (Compare Athen. xiii. p. 590, f.; Aristoph. Lysistr. 48, 150.)

It was the usual practice among the Greeks to wear an Himation, or outer garment, over the Chiton, but frequently the Chiton was worn alone. A person who wore only a Chiton was called μονοχίτων (μονοχίτων in Homer, Od. xiv. 489), an epithet given to the Spartan virgins, as explained above. In the same way, a person who wore only an Himation, or outer garment, was called ἄγχιτων. (Xen. Mem. i. 6. § 2 ; Aelian, V. H. vii. 13 ; Dio. Sic. xi. 26.) The Athenian youths, in the earlier times, wore only the Chiton, and when it became the fashion, in the Peloponnesian war, to wear an outer garment over it, it was regarded as a mark of effeminacy. (Aristoph. Nub. 964, compared with 987.)

Before passing on to the Roman under garment, it remains to explain a few terms which are applied to the different kinds of Chiton. In later times, the Chiton worn by men was of two kinds, the ἀμφιμάχαλος and the ἱματίδιον Μάχαλος, the former being a dress worn over the skin, the latter that of slaves. (Pollux, vii. 47.) The ἀμφιμάχαλος appears to have signified not only a garment which had two sleeves, but also one which had openings for both arms; while the ἱματίδιον Μάχαλος, on the contrary, had only a sleeve, or rather an opening for the left arm, leaving the right, with the shoulder and a part of the breast uncovered, whence it is called ἑτερόλυτος, a representation of which is given on p. 512. When the sleeves of the Chiton reached down to the hands, it seems to have been properly called χειροπάτως (Gell. vii. 12, see woodcut, p. 329), though this word seems to have been frequently used as equivalent at the waist to ἀμφιμάχαλος. (Hesych. s. v. ἀμφιμάχαλος.)

A χιτών ἄγραστος was one which was not fastened round the body with a girdle (Pollux, vii. 48; Phot. Lex. p. 316, Pors.;) a χιτών στολιστός seems to have had a kind of flounce at the bottom. (Pollux vii. 54; Xenoph. Cyrop. vi. 4. § 2.)

On the subject of the Greek Chiton in general, see Müller, Doriana, iv. 2. § 3, 4. Archäologie der Kunst, § 327, 339; Becker, Charicles, vol. ii. p. 309, &c.

2. ROMAN. The Tunica of the Romans, like the Greek Chiton, was a woollen under garment, over which the Toga was worn. It was the Indumentum or Indutus, as opposed to the Amictus, the general term for the toga, pallium, or any other outer garment. [AMICTUS.]

The Romans are said to have had no other clothing originally but the toga; and when the Tunica was first introduced, it was merely a short garment without sleeves, and was called Colobium. (Gell. vii. 12; Serv. ad Virg. Aen. ix. 616.) It was considered a mark of effeminacy for men to wear Tunics with long sleeves (manicatae) and reaching to the feet (talares). (Cic. Cat. ii. 10.) Julius Cæsar was accustomed to wear one which had sleeves, with fringes at the wrist (ad manus fimbriata, Suet. Jul. 45), and in the later times of the empire, tunics with sleeves, and reaching to the feet, became common.

The Tunica was girded (cineta) with a belt or girdle around the waist, but was usually worn loose, without being girded, when a person was at home, or wished to be at his ease. (Hor. Sat. i. 1. 79; Ovid, Am. i. 9. 41.) Hence we find the terms cinetus, praeceinctus, and succinctus, applied, like the Greek ἑτερόλυτος, to an active and diligent person, and succinctus to one who was idle or dissolute. (Hor. Sat. i. 5. 6, ii. 6. 107, Epod. i. 34.)

The form of the Tunic, as worn by men, is represented in many woodcuts in this work. In works of art it usually terminates a little above the knee; it has short sleeves, covering only the upper part of the arm, and is girded at the waist (see cuts, pp. 90, 860): the sleeves sometimes, though less frequently, extend to the hands (cut, p. 141).

Both sexes usually wore two Tunics, an outer and an under, the latter of which was worn next the skin, and corresponds to our shirt and chemise. Varro (ap. Non. xiv. 36) says, that when the Romans began to wear two Tunics, they called them Subcucla and Indusium, the former of which Böttiger (Sabina, vol. ii. p. 113) supposes to be the name of the under tunic of the men, and the latter of that of the women. But it would appear from another passage of Varro (L. L. v. 131, ed. Müller) referred to by Becker (Gullus, vol. ii. p. 89), as if Varro had meant to give the name to the under tunic, and that of Indusium or Indutus to the outer, though the passage is not without difficulties. It appears, however, that Subcucla was chiefly used to designate the under tunic of men. (Suet. Aug. 82; Hor. Epist. i. 1. 95.) The word interula was of later origin, and seems to have applied equally to the under tunic of both sexes.
TUNICA.

(Apul. Florid. ii. p. 32; Metam. viii. p. 533, ed. Oud.; Vopisc. Prob. 4.) The Supparus or Supparum is said by Festus (s. v.) to have been a linen vest, and to have been the same as the Subucula; but Varro (v. 131), on the contrary, speaks of it as a kind of outer garment, and contrasts it with Subucula, which he derives from sudus, while supparus he derives from super. The passage of Lucan (ii. 364) in which it is mentioned does not enable us to decide whether it was an outer or under garment, but would rather lead us to suppose that it was the former. Persons sometimes wore several tunics, as a protection against cold: Augustus wore four in the winter, besides a Subucula. (Suet. Aug. 42.)

As the dress of a man usually consisted of an under tunic, an outer tunic, and the toga, so that of a woman, in like manner, consisted of an under tunic (Tunica intima, Gell. x. 15), an outer tunic, and the palla. The outer tunic of the Roman matron was properly called Stola [Stola], and is represented in the woodcut on p. 1073; but the annexed woodcut, which represents a Roman empress in the character of Concordia, or Abundantia, gives a better idea of its form. (Visconti, Monumenti Cubini, n. 34; Büttiger, Sabina, tav. x.)

Over the Tunic or Stola the Palla is thrown in many folds, but the shape of the former is still distinctly shown.

The tunics of women were larger and longer than those of men, and always had sleeves; but in ancient paintings and statues we seldom find the sleeves covering more than the upper part of the arm. An example of the contrary is seen in the Museo Borbonico, vol. vii. tav. 3. Sometimes the tunics were adorned with golden ornaments called Leria. (Festus, s. v.; Gr. Διαφορα, Hesych. Suid. s. v.)

Poor people, who could not afford to purchase a toga, wore the tunic alone, whence we find the common people called Tunicati. (Cic. in Rull. ii. 34; Hor. Epist. i. 7. 63.) Persons at work laid aside the toga; thus, in the woodcut on p. 808, a man is represented ploughing in his tunic only. A person who wore only his tunic was frequently called NUDUS.

Respecting the Clavus Latus and the Clavus Angustus, worn on the tunics of the Senators and Equites respectively, see CLAVUS.

When a triumph was celebrated, the conqueror wore, together with an embroidered toga (Toga picta), a flowered tunic (Tunica palmata), also called Tunica Jovis, because it was taken from the temple of Jupiter Capitolinus. (Liv. x. 7; Mart. vili. 1; Juv. x. 32.) [Triumphus, p. 1166, a.] Tunics of this kind were sent as presents to foreign kings by the senate. (Liv. xxv. 15, xxxi. 11.)

TURRIS. [EXERCITUS, p. 497, b.]

TURRIS (tòpôs), a tower. The word tòpôs, from which comes the Latin turris, signified according to Dionysius (i. 26) any strong building surrounded by walls; and it was from the fact of the Pelasgians in Italy dwelling in such places that the same writer supposes them to have been called Tyrsenians or Tyrrenians, that is, the inhabitants of towns or castles. Turris in the old Latin language seems to have been equivalent to urbs. (Polyb. xxvi. 4; Götting, Gesch. d. Röm. Staatsw. p. 17.) The use of towers by the Greeks and Romans was various.

I. Stationary Towers. 1. Buildings of this form are frequently mentioned by ancient authors, as forming by themselves places of residence and defence. This use of towers was very common in Africa. (Diod. Sic. iii. 49; Itin. Ant. pp. 34, 35, with Wesseling's notes.) We have examples in the tower of Hannibal on his estate between Acholla and Thapsus (Liv. xxxili. 48), the turris
The towers were strengthened by towers, which were placed drawn round a besieged town. [VALLUM.] They were generally used at the gates of towns and of statice camps. [PORTA.] The use of temporary towers on walls to repel an attack will be noticed below.

II. Moveable Towers. These were among the most important engines used in storming a fortified place. They were of two kinds. Some were so made that they could be taken to pieces and carried to the scene of operations: these were called folding towers (πόρφιον πτυκτός οἵ τε ἐπισημένοι, turres plicatiles, or portable towers, φορτηγό πυργοί). The other sort were constructed on wheels, so as to be driven up to the walls; and hence they were called turres ambulatoriae or subrotatae. But the turres plicatiles were generally made with wheels, so that they were also ambulatoriae.

The first invention or improvement of such towers is ascribed by Athenaeus the mechanician (quoted by Lipsius, Oper. vol. iii. p. 297) to the Greeks of Sicily in the time of Dionysius I. (b. c. 405.) Diodorus (xiv. 51) mentions towers on wheels as used by Dionysius at the siege of Motya. He had before (xiii. 54) mentioned towers as used at the siege of Selinus (b. c. 409), but he does not say that they were on wheels. According to others, they were invented by the engineers in the service of Philip and Alexander, the most famous of whom were Polyidus, a Thessalian, who assisted Philip at the siege of Byzantium, and his pupils Chaereas and Diades. (Vitruv. x. 10.) Heron (c. 13) ascribes their invention to Diades and Chaereas, Vitruvius (l.c.) to Diades alone, and Athenaeus (l.c.) says that they were improved in the time of Philip at the siege of Byzantium. Vitruvius states that the towers of Diades were carried about by the army in separate pieces. Respecting the towers used by Demetrius Poliorcetes at the siege of Rhodes, see HELPOLIS.

Appian mentions the turres plicatiles (Bell. Civ. v. 36, 37), and states that at the siege of Rhodes Cassius took such towers with him in his ships, and had them set up on the spot. (Id. iv. 72.)

Besides the frequent allusions in ancient writers to the moveable towers (turres mobiles, Liv. xxi. 11), we have particular descriptions of them by Vitruvius (x. 19. a. 13), and Vegetius (iv. 17).

They were generally made of beams and planks, and covered, at least on the three sides which were exposed to the besieged, with iron, not only for protection, but also, according to Josephus, in order to increase their weight and thus make them steadier. They were also covered with raw hides and quilts, moistened, and sometimes with alum, to protect them from fire. The use of alum for this purpose appears to have originated with Sulla at the siege of Athens. (Amm. Marcell. xx. and Claud. Quadrig. op. Lips. p. 300.) Their height was such as to overtop the walls, towers, and all other fortifications of the besieged place. (Liv. xxi. 11.) Vitruvius (l.c.), following Diades, mentions two sizes of towers. The smallest ought not, he says, to be less than 60 cubits high, 17 wide, and one-fifth smaller at the top; and the greater 120 cubits high and 234 wide. Heron (c. 13), who also follows Diades, agrees with Vitruvius so far, but adds an intermediate size, half-way between the two, 90 cubits high. Vegetius mentions towers of 50, 40, and 50 feet square. They were divided into stories (tabulata or testa), and hence they are called turres contabulatae. (Liv. xxi. 34.) Towers of the three sizes just mentioned consisted respectively of 10, 15, and 20 stories. The stories decreased in height from the bottom to the top. Diades and Chaereas, according to Heron, made the lowest story 7 cubits and 12 digits, those about the middle 5 cubits, and the upper 4 cubits and one-third of a cubit.

The sides of the towers were pierced with windows, of which there were several to each story.

These rules were not strictly adhered to in practice. Towers were made of 6 stories, and even fewer. (Diod. xiv. 51.) Those of 10 stories were very common (Hirt. Bell. Gall. viii. 41; Sil. Ital. xiv. 300), but towers of 20 stories are hardly, if ever, mentioned. Plutarch (Lucull. 10) speaks of one of 100 stories high used by Mithridates at the siege of Cyzicus.

The use of the stories was to receive the engines of war [TORMENTA], and slingers and archers were stationed in them and on the tops of the towers. (Liv. xxi. 11.) In the lowest story was a battering-ram [ARIBS]; and in the middle one or more bridges [pontes] made of beams and planks, and protected at the sides by hurdles. Scaling-ladders (scalae) were also carried in the towers, and when the missiles had cleared the walls, these bridges and ladders enabled the besiegers to rush upon them.

The towers were placed upon wheels (generally 6 or 8), that they might be brought up to the walls. These wheels were placed for security inside of the tower.

The tower was built so far from the besieged place as to be out of the enemy's reach, and then pushed up to the walls by men stationed inside of and behind it. (Cesar, B. G. ii. 30, 31; Q. Curt. viii. 10.) The attempt to draw them forward by means of elephants was sometimes made, but was easily defeated by shooting the beasts. (Procop. Bell. Goth. i. ap. Lips. p. 298.) They were generally brought up upon the AGGER (Hirtius, l.c.), and it not unfrequently happened that a tower stuck fast or fell over on account of the softness of the agger. (Liv. xxxiii. 17; Q. Curt. iv. 6, § 9.)
were placed on the agger before it was completed, to protect the soldiers in working at it. (Sall. Jugurth. 76; Caesar, B. G. vii. 22.) When the tower was brought up to the walls without an agger, the ground was levelled before it by means of screws and ropes.

These towers were accounted most formidable engines of attack. They were opposed in the following ways.

1. They were set on fire, either by sallies of the besieged, or by missiles carrying burning matter, or by letting men down from the walls by ropes, close to the towers, while the besiegers slept. (Veget. iv. 18; Sil. Ital. xiv. 305.)

2. By undermining the ground over which the tower had to pass, so as to overturn it. (Veget. iv. 20.)

3. By pushing it off by main force by iron-shod beams, asserae or trabes. (Veget. l. c.)

4. By breaking or overturning it with stones thrown from catapults, when it was at a distance, or, when it came close to the wall, by striking it with an iron-shod beam hung from a mast on the wall, and thus resembling an Ariete.

5. By increasing the height of the wall; first with masonry, and afterwards with beams and planks, and also by the erection of temporary wooden towers on the walls. (Caesar, B. G. vii. 22; Veget. iv. 15.) This mode of defence was answered by the besiegers in two ways. Either the agger on which the tower stood was raised, as by Caesar at the siege of Avaricum (B. G. l. c.), or a smaller tower was constructed within the upper part of the tower, and when completed was raised by screws and ropes. (Veget. l. c.) On these towers in general see Lipsius, Poliorcet. in Oper. vol. iii. pp. 296—356.

III. Caesar (B. C. ii. 8—9) describes a peculiar sort of tower, which was invented at the siege of Massilia, and called turris latericia, or laterculum. It partook somewhat of the character both of a fixed and of a besieging tower. It was built of masonry near the walls of the town to afford the besiegers a retreat from the sudden sallies of the enemy; the builders were protected by a movable cover; and the tower was pierced with windows for shooting out missiles.

IV. Towers in every respect similar to the turres ambulatoriae (excepting of course the wheels) were constructed for ships, on the attack of fortified places by sea. (Caes. Bell. Civ. iii. 40, where, respecting the term ad libram, see the commentators; Liv. xxiv. 34; Appian. Mith. 73, Bell. Civ. v. 106; Ann. Marc. xxii. 12.)

V. Small towers carrying a few armed men were placed on the backs of elephants used in battle. (Liv. xxxvii. 40.)

VI. The words πόροιος and turris are applied to an army drawn up in a deep oblong column. (Gell. x. 9; Cato, de Re Milit. ap. Fest. s. v. Serva proelii, p. 344, ed. Müller; Eustath. ad Hom. II. xii. 43.)

---

**TUTOR.**

The difference between a Tutor and Curator, and Curator and Curatio or Curta, is explained in the article CURATOR. In the Roman system there might be persons who were under no potestas, and had property of their own, but by reason of their age or sex required protection for their own interest, and for the interest of those who might be their heredes. This protection was given by the tutela to Impuberes and women.

A Tutor derived his name a "tuendo" from protecting another (quasi Tutor). His power and office were "tutela," which is thus defined by Servius Sulpicius: "Tutela est, quae propter ac potestas in capite liberum ad tuendum eum suam suo servatum, ut eum neque siti neque publici nec neque privato defendere." After the word "suam" it has been suggested by Rustemm that something like what follows has been omitted by the copyists: "Canve quoque potestas sexum"; a conjecture which seems very probable. Tutela expresses both the status of the Tutor and that of the person who was in Tutela. The tutela of Impuberes was a kind of Potestas, according to the old law: that of Mulieres was merely a Jus.

As to the classification of the different kinds (genera) of Tutela, the jurists differed. Some made five genera, as Quintus Mucius; others three, as Servius Sulpicius; and others two, as Labeo. The most convenient division is into two genera, tutela of IMPUBERES (pupilli, pupillae), and the tutela of Women. The pupillus or the pupilla is the male or the female who is under Tutela.

Every paterfamilias had power to appoint by testament a Tutor for his children who were in his power; if they were males, only in case they were Impuberes; if they were females, also in case they were marriageable (nubiles), that is above twelve years of age. Therefore if a tutor was appointed for a male, he was released from the Tutela on attaining puberty (fourteen years of age), but the female still continued in tutela, unless she was released from it by the Jus Liberorum under the Lex Julia et Papia Poppaea. A man could only appoint a Tutor for his grandchildren, in case they would not upon his death come into the power of their father. A father could appoint a tutor for Postumi, provided they would have been in his power, if they had been born in his life-time. A man could appoint a tutor for his wife in manu, and for his daughter-in-law (nurus) who was in the manus of his son. The usual form of appointing a Tutor was this: "Lucium Titium Liberis meis tutorem do." A man could also give his wife in manu the power of choosing a tutor (tutoris optio); and the optio might be either plena or angusta. She who had the plena optio might choose (and consequently change) her tutor any number of times: she who had the angusta optio was limited in her choice to the number of times which the testator had fixed. (Testamentum.)

The power to appoint a tutor by will was either given or confirmed by the Twelve Tables. The earliest instance recorded of a testamentary Tutor is that of Tarquiniius Priscus being appointed by the will of Ancus (Liv. i. 34), which may be taken to prove this much at least, that the power of appointing a tutor by will was considered by the Romans as one of their oldest legal institutions. The nearest kinsmen were usually appointed Tutores, and if a testator passed over such, it was a reflection on their character (Cic. pro F. Scipio, 72), that is, we must suppose, if they were assigned, if to himself was a man in good repute. Persons named and appointed Tutores by a will were Tutores Dativi: those who were chosen under the power given by a will were Tutores Optivi. (Gaius, i. 154.)

If the testator appointed no tutor by his will, the tutela was given by the Twelve Tables to
TUTOR.

nearest Agnati, and such Tutores were called Legiti-
mi. The nearest Agnati were also the heredes in
case of the immediate heredes of the Testator dying intestate and without issue, and the tutela was therefore a right which they claimed as well as a duty imposed on them. Persius (ii. 12) alludes to the claim of the Tutor as heres to his pupillus. A son who was 'pubes' was the legitimus tutor of a son who was impubes; and if there was no son who was pubes, the son who was impubes had his father's brother (patruus) for his tutor. The same rule applied to females also, till it was altered by a Lex Claudia. If there were several agnati in the same degree, they were all tutores. If there were no Agnati, the tutela belonged to the Gentiles, so long as the Jus Gentile was in force. (Gaius, iii. 17, and i. 164.) The tutela in which a freedman was with respect to his Patronus was also Legitima; not that it was expressly given by the words (lex) of the Twelve Tables, but it flowed from the lex as a consequence (per consequentiam, Ulp. Frgg. tit. i. i.) ; for as the hereditates of intestate liberti and libertae belonged to the patronus, it was assumed that the tutela belonged to him also, since the Twelve Tables allowed the same persons to be tutor and Acting Dativus. If a free person had been emancipated to another either by the parent or a court, and such person manumitted the free person, he became his tutor fiduciarius by analogy to the case of freedman and patron. (Compare Gaius, i. 166 with Ulp. Frgg. tit. 11. 8, 5.) EMANcipatio; FIDucia.

If an impubes had neither a tutor Dativus nor Legitimus, he had one given to him, in Rome, under the provisions of the Lex Atilla by the Praetor Urbanus and the major part of the Tribuni Plebis; in the provinces in such cases a tutor was appointed by the Praesides under the provisions of the Lex Julia et Titia. If a tutor was appointed by testament either sub conditione or ex die certo, a tutor might be given under these Leges so long as the condition had not taken effect or the day had not arrived; and even when a tutor had been appointed absolutely (pure), a tutor might be given under these Leges so long as there was no heres ; but the power of such tutor ceased as soon as there was a tutor under the testament, that is, as soon as there was a heres to take the hereditas. If a tutor was captured by the enemy, a tutor was also given under these Leges, but such tutor ceased to be tutor, as soon as the original tutor returned from captivity, for he recovered his tutela Juris Postliminii.

Before the passing of the Lex Atilla tutors were given by the praetor in other cases, as for instance, when the leges actiones were in use, the Praetor appointed a tutor if there was any action between a tutor and a woman or ward, for the tutor could not give the necessary authority (auctoritas) to the acts of those whose tutor he was, in a matter in which his own interest was concerned. Other cases in which a tutor was given are mentioned by Ulpian, Frgg. tit. 11.

Ulpian's division of Tutores is into Legitimi, Senatusconsulti constituti, Moribus introducti. His legitiimi tutores comprehend all those who become tutores by virtue of any Lex, and specially by the Twelve Tables: accordingly it comprises tutores in the case of intestacy, tutores appointed by testament, for they were confirmed by the Twelve Tables, and tutores appointed under any other Lex as the Atilla. Various Senatusconsulti declared in what cases a tutor might be appointed; thus the Lex Julia de marinandis ordinibus (Papia et Poppaea) enacted that the Praetor should appoint a tutor for a woman or a virgin, who was required to marry, under promise of 100 marks. The Lex Julia de legibus, promittendae, if her Legitimus tutor was himself a Pupillus: a Senatusconsultum extended the provision to the provinces, and enacted that in such case the preasides should appoint a tutor; and also that if a tutor was mutus or furious, another should be appointed for the purposes of the Lex. The case above mentioned of a tutor being given in the case of an action between a tutor and his ward, is a case of a tutor Moribus datus. In the Imperial period from the time of Claudius tutores extra ordinem were appointed by the consults also.

Only those could be Tutores who were sui juris. A person could not be named Tutor in a Testament, unless he had the Testamentifactio with the Testator, a rule which excluded such persons as Peregrini. The LatinJuniani were excluded by the Lex Junia. Women could not be Tutores. Many persons who were competent to be Tutores, might excuse themselves from taking the office: these grounds of excuse (excusationes) were, among others, age, absence, the being already Tutor in other cases, the holding of particular offices and other grounds which are enumerated in the Fragmenta Vaticana (123—247). In the system of Justinian the tutela is viewed as a Publicum munus.

The power of the Tutor was with respect to the property and pecuniary interests, not the person of the Pupillus, and the passage of the Twelve Tables which gives or confirms to a testator the power of disposing of his property, uses the phrase, Uti legassit his rebus et auctori-

tatem interponere. Thus the natural act of the Tutor formed one complete person, as to legal capacity to act. No particular form was required for the expression of the tutor's auctoritas, and his presence, when the act was done by the pupilus,
was enough, if he made no opposition to it. (Ulp. Frag. tit. 11. s. 25.) The Negotiorum Gestiò in which the Tutor acted alone took place when the Pupillus was an Infans, or absent, or Furiosus: it was his duty to preserve and improve the property and to do all necessary acts for that purpose. When the Pupillus was no longer Infans, he could do various acts with the Authoritas of his Tutor: the authoritas was the consent of the Tutor to the act of the Pupillus, which was necessary in order to render it a legal act. Thus it was a rule of law that neither a woman nor a pupillus could alienate a Res mancipi without the authoritas of a Tutor: a woman could alienate a Res nec mancipi without such consent, but a pupillus could not. (Gaius, ii. 60.) The incapacity of the pupillus is best shown by the following instance: if his debtor paid a debt to the pupillus, the money became the property of the pupillus, but the debtor was not released, because a pupillus could not release any duty that was due to himself without the authoritas of his Tutor, for he could alienate nothing without such authoritas, and to release his debtor was equivalent to parting with a right. Still if the money really became a part of the property of the pupillus, or, as it was expressed according to the phraseology of the Roman Law, si ex ea pecunia locupletior factus sit, and he afterwards sued for it, the debtor might answer his demand by an Exception doli mali.

The case of a Tutor being taken prisoner by the enemy might have also a Calumniae judicium, in case he could show that the pupillus had brought an action against him from malicious motives. He had to prove his innocence, and frequently in such a judicium, the consequent was Infamia. (Infamia.) The tutor was intituled to all proper allowances in respect of what he had expended or done during his management of the property of the pupillus. The Tutor had the Actio tutelae contraria against the pupillus for all his proper costs and expenses; and he might have also a Calumniae judicium, in case he could show that the pupillus had brought an action against him from malicious motives.

In order to secure the proper management of the property of a pupillus or of a person who was In cura testamenti, the Praetor required the Tutor or Curator to give security; but no security was required from Testamentary Tutores, because they had been selected by the testator; nor, generally, from Curatores appointed by a Consul, Praetor or Praeses, for they were appointed as being fit persons.

The Tutela of women who are puberes, requires a separate consideration. If they were not in Potestas or In Manu, yet they were under a Tutor. It was an old rule of Roman Law that a woman could do nothing " sine auctore," that is without a tutor to give her acts a complete legal character. (Liv. xxxiv. 2, the speech of Cato for the Lex Oppia.) The reasons for this rule are given by Cicero (pro Murena, c. 12), by Ulpian (Frag. tit. 11. s. 1) and by Gaius (i. 190); but Gaius considers the usual reasons as to the rule being founded on the inferiority of the sex, as unsatisfactory; for women who are puberes (perfectae aetatis) manage their own affairs, and in some cases a tutor must interpose his authoritas (in causa), and frequently he is compelled to give his authoritas to the Praetor. (Gaius, i. 190.) Ulpian also observes (Frag. tit. 11. s. 25): "in the case of pupilii and pupillae, tutors both manage their affairs and give their authoritas (et negotia gerunt et auctoritatem interponunt); but the tutores of women (mulieres, that is women who are puberes) only give their auctoritas as suspectus, or when his excusatio was allowed to be justa; but in other cases a new tutor would be necessary. (Gaius, i. 182.)

The Tutor, as already observed, might be removed from his office, if he was misconducting himself; this was effected by the Accusatio suspectus, which is mentioned in the Twelve Tables. (Gaius, i. 182; Dirksen, Uebersicht, d. der zweil Tafeln, 599-604.)

The Twelve Tables also gave the pupillus an action against the Tutor in respect of any mismanagement of his property, and if he made out his case, he was entitled to double the amount of the injury done to his property. This appears to be the action which in the Digest is called Rationibus distrahendis, for the settlement of all accounts between the Tutor and his Pupillus. There was also the Judicium tutelae, which comprehended the Actio tutelae directa and Contraria, and like the Actio distrahendis rationibus came only be brought when the Tutela was ended. The Actio tutelae directa was for a general account or the property managed by the Tutor, and for its delivery to the pupillus now become Pubes. The tutor was answerable not only for loss through dolus malus, but for loss occasioned by want of proper care. This was an action Bonae fidei and consequently In incertum (Gaius, iv. 62). If the tutor was condemned in such a judicium, the consequent was Infamia. (Infamia.) The tutor might have had all proper allowances in respect of what he had expended or done during his management of the property of the pupillus. The Tutor had the Actio tutelae contra the pupillus for all his proper costs and expenses; and he might have also a Calumniae judicium, in case he could show that the pupillus had brought an action against him from malicious motives.

In order to secure the proper management of the property of a pupillus or of a person who was In cura testamenti, the Praetor required the Tutor or Curator to give security; but no security was required from Testamentary Tutores, because they had been selected by the testator; nor, generally, from Curatores appointed by a Consul, Praetor or Praeses, for they were appointed as being fit persons. (Gaius, i. 190.)

The Tutela of women who are puberes, requires a separate consideration. If they were not in Potestas or In Manu, yet they were under a Tutor. It was an old rule of Roman Law that a woman could do nothing " sine auctore," that is without a tutor to give her acts a complete legal character. (Liv. xxxiv. 2, the speech of Cato for the Lex Oppia.) The reasons for this rule are given by Cicero (pro Murena, c. 12), by Ulpian (Frag. tit. 11. s. 1) and by Gaius (i. 190); but Gaius considers the usual reasons as to the rule being founded on the inferiority of the sex, as unsatisfactory; for women who are puberes (perfectae aetatis) manage their own affairs, and in some cases a tutor must interpose his authoritas (in causa), and frequently he is compelled to give his authoritas to the Praetor. (Gaius, i. 190.) Ulpian also observes (Frag. tit. 11. s. 25): "in the case of pupilii and pupillae, tutors both manage their affairs and give their authoritas (et negotia gerunt et auctoritatem interponunt); but the tutores of women (mulieres, that is women who are puberes) only give their aucto-
There were other cases also in which the capacity of a Mulier was greater than that of a pupilla or pupilla. The object of this rule seems to have been the same as the restriction on the testamentary power of women, for her Agnati who were a woman's Legitimi Tutores were interested in preventing the alienation of her property. A Mulier might have a Tutor appointed by her tutores testamenti; or by the Testament of her husband in whose hand she was (tutor dativus), one might also receive from her husband's will the tutus opus (tutor opavis). Women who had no testamentary Tutor, were in the tutela of their Agnati. until this rule of law was repealed by a Lex Claudia, which Gaius (i. 157) illustrates as follows: "a masculus impubes has his frater miles or his patruus for his Tutor; but women (tutancne) cannot have such a Tutor." This old tutela of the Twelve Tables (legitima tutela) and that or mammmisores (patronum tutela) could be transferred by the In jure cessio, while that of cutanni could not, "being," as Gaius observes, "not onerous, for it terminated with the period of minority." But, as already suggested, there were other reasons why the Agnati could part with the tutela, which in the case of Patroni are obvious. The tutela of Patroni was not included within the Lex Claudia. The Tutela fiduciaria was apparently a device of the lawyers for releasing a woman from the tutela legitima (Cic. ii. 83, 85, iii. 171.) She could not manumit a mulier to be in servandum with the slave of another person, or alienate her Res Mancipi without the auctoritas of a Tutor: if, however, she did not receive the money, but affected to release the debtor by acceptilatio, this was not a valid release to him. (Cic. ii. 173, &c.; Ulp. Frag. tit. 11.) The Vestal Virgins were exempt from tutela; and both Ingenuae and libertane were exempted from tutela by the Lex Ligerorum. (Gaius, i. 145, 194.) Octavia, the sister of Caesar Octavianus, and his wife Livia, were released from Tutela by a special enactment. (Cic. pro Flacco, c. 34) The tutela of feminae was determined by the death of the Tutor, or that of the woman; and by her acquiring the Lex Ligerorum, either by bearing children, or from the imperial favour. The abdicatio of the Tutor, and the In jure cessio (so long as the In jure cessio was in use) merely effected a change of Tutor.

Mulieres differed from pupilli and pupillae in having a capacity to manage their affairs, and only requiring in certain cases the Auctoritas of a Tutor: if the woman was in the legitima tutela of patroni or parentes, the Tutore could not be compelled, except in certain very special cases, to give their Auctoritas to acts which tended to deprive them of the woman's property, or to diminish it before it might come to their hands. (Gaius, 192.) Other Auctores could be compelled to give their Auctoritas.

The special cases in which the Auctoritas of a Tutor was required were, if the woman had to sue "lege," or in a legitimum judicium, if she was going to bind herself by a contract, if she was doing any Civil act, or permitting her freedwoman to be in contubernium with the slave of another person, or alienating a Res Mancipi. Among Civil Acts (eiusdem negotia) was the making of a Testament, the rules as to which are stated in the article TESTAMENTUM. Libertae could not make a will without the consent of their Patroni, for the will was an act which deprived the Patron of his rights (Gaius, iii. 43) as being a Legitimus tutor. Gaius mentions a Rescript of Antoninus, by which those who claimed the bonorum possessio secundum tabulas non jure factas, could maintain their right against those who claimed it ab intestato. He adds, this Rescript certainly applies to the wills of males, and also of feminae who had not performed the ceremony of Mancipatio or Nuncupatio; but he does not decide whether it applies to the testaments of women made without the auctoritas of a tutor; and by tutor he means not those who exercised the legitima tutela of parents or Patroni; but Tutore of the other kind (alterius generis, compare i. 122 and i. 194, 195) who could be compelled to give their Auctoritas. It would be a fair conclusion, however, that a woman's will made without the Auctoritas of such tutors, ought to be valid under the Rescript.

A payment made to a mulier was a release to the debtor, for a woman could part with Res nec Mancipi without the auctoritas of a Tutor: if, however, she did not receive the money, but affected to release the debtor by acceptilatio, this was not a valid release to him. (Cic. Top. 11; Gaius, ii. 83, 85, iii. 171.) She could not manumit without the Auctoritas of a tutor. (Ulp. Frag. tit. s. 17; compare Cic. pro M. Coel. c. 29.) Gaius (ii. 47) states that no alienation of a Res Mancipi by a mulier in agratorum tutela was valid unless it was delivered with the Auctoritas of a Tutor, which he expresses by saying that the Mulier could not otherwise be the object of Usucapion; and that this was a provision of the Twelve Tables (ii. 47). In other cases, if a Res Mancipi was transferred by tradition, the purchaser acquired the Quiritarian ownership by Usucapion; but in the case of a woman's Res Mancipi, the Auctoritas of the Tutor was required in order that Usucapion might be effected. In another passage (ii. 80) Gaius observes that a woman cannot alienate her Res Mancipi without the auctoritas of her tutor, which means that the formal act of mancipatio is null without his Auctoritas; and such act could not operate as a traditio for want of his Auctoritas as appears from the other passage (ii. 47).

The passage of Cicero (pro Fuscno, c. 34) is in accordance with Gaius; but another (ad Att. i. 5) is expressed so vaguely, that though the explanation is generally supposed to be clear, it seems exceedingly doubtful, if it can be rightly understood. The possibility of Usucapion, when there was the auctoritas of the Tutor, appears from Gaius; but it does not appear why Cicero should deny, generally, the possibility of Usucapion of a woman's property, when she was in Legitima Tutela. The passage, however, is perfectly intelligible on the supposition of there having been a transfer without the Auctoritas of a Tutor, and on the further supposition of Cicero thinking it unnecessary to state
the particular facts of a case which must have been known to Atticus. (See Casaubon's note on Cic. ad Att. i. 5.)

The auctoritas of a Tutor was not required in the case of any Obligatio by which the woman's condition was improved; but it was necessary in cases where the woman became bound. (Gaius, i. 192, iii. 108; Ulp. Frag. tit. 11. s. 27; Cic. pro Coecin. 25.) If the woman wished to promise a Dos, the auctoritas of a Tutor was necessary. (Cic. pro Flacc. 35.) By the Lex Julia, if a woman was in the legitima tutela of a pupillus, she might apply to the Praetor Urbanus for a Tutor who should give the necessary auctoritas in the case of a Dos constitutendi. (Gaius, i. 178; Ulp. Frag. tit. 11. s. 29.) As a woman could alienate Res nec mancipi without the consent of a Tutor, she could contract an obligation by lending money, for by delivery the money became the property of the receiver. A senatorseconsultum allowed a woman to apply for a Tutor in the absence of her Tutor, unless the Tutor was a Patronus; if he was a Patronus, the woman could only apply for a Tutor in order to have his auctoritas for taking possession of an hereditas (ad hereditatem aedun- dam) or contracting a marriage.

The Tutela of a woman was terminated by the death of the Tutor or that of the woman; but by a marriage by which she came in manum viri; by the privilege of children (ius hereditarium); by abdicatio, and also by the in jure cessio, so long as the Agnatorum tutela was in use; but in these two last cases there was only a change of Tutor.

A woman had no right of action against her Tutor in respect of his Tutela, for he had not the Negotiorum gestio, or administration of her property, but only interposed his Auctoritas. (Gaius, i. 191.)

The tutela mulierum existed at least as late as Diocletian, a. d. 293 (Vat. Frag. § 325). There is no trace of it in the Code of Theodotus, or in the legislation of Justinian.

(The most recent and the most complete work on the Roman Tutela is said to be by Rudorff (Das Recht der Vormundschaft, 1833–1834), the substance of which appears to be given by Rein, Das Röm. Privatrecht, p. 239, &c.; Gaius, i. 142–200; Ulp. Frag. xi. xii.; Inst. 1. tit. 13–26; Dig. 26 and 27; Cod. 5. tit. 26–75.)

TUTULUS was the name given to a pile of hair on a woman's head. Great pains were taken by the Roman ladies to have this part of the hair dressed in the prevailing fashion, whence we read in an inscription of an ornativia a tutulo. (Gruter, 579. 3.) Sometimes the hair was piled up to an enormous height. (Lucan, ii. 358; Juv. vii. 503; Stat. Silv. i. 2. 114.) The Tutulus seems to have resembled very much the Greek κόρυφας, of which a representation is given in the first woodcut on p. 329, a.

The Flaminiae always wore a Tutulus, which was formed by having the hair plaited up with a purple band in a conical form. (Festus, s. v.)

TYMPANUM (τύμπανον), a small drum carried in the hand. Of these, some resembled in all respects a modern tambourine with bells. Others presented a flat circular disk on the upper surface and swelled out beneath like a kettledrum, a shape which appears to be indicated by Pliny when he describes a particular class of pearls in the following terms: & Quibus usum tam tantum est facies, et al

ca rotunditas, aversis planitis, ob id tympana vocantur." (H. N. ix. 54.) Both forms are represented in the cuts below. That upon the left is from a painting found at Pompeii (Mus. Borbon. tom. vii. tav. 37), that on the right from a modern vase (Millin, Peintures de Vases Antiques, vi. 191), and here the convexity on the under side is distinctly seen. Tympana were covered with the hides of oxen (Ovid. Fast. iv. 342; Stat. Theb. ii. 79) or of asses (Phaedr. iii. 20. 4), were beaten (Suet. Aug. 68) with a stick (Phaedr. l. c.) or with the hand (Ovid. Met. iv. 30; see cuts), and were much employed in all wild enthusiastic religious rites (Aristoph. Lysistr. i. 387), especially the orgies of Bacchus and of Cybele (Catull. lxv. 262; Claud. de Cons. Stella. iii. 365; Lucert. ii. 618; Catull. liii. 8; Virg. Aen. ix. 619; Claud. Eutrop. i. 278; compare Lobeck, Agrarvitalium, pp. 630, 652), and hence Piantus (Virg. i. 7. 449) characterises an effeminate coxcomb as "Moeschem malacum, cincinatunum, tympanontiram." According to Justin (xli. 2) they were used by the Parthians in war to give the signal for the onset.

2. A solid wheel without spokes for heavy waggons (Virg. Georg. iv. 444), such as is shown in the cut on page 923. These are to this day common in the rude carts of southern Italy and Greece, and Sir C. Fellows (Excursions in Asia Minor, p. 72), from whose work the figure below is copied, found them attached to the farm vehicles of Mysia. "The wheels are of solid blocks of wood, or thick planks, generally three, held together by an iron hoop or tire; a loud creaking noise is made by the friction of the galled axle." a satisfactory commentary on the "stridentia plaustra" of Virgil (Georg. iii. 536).
TYRANNUS.

Tyranny (τύρανος), which properly means a blow, and hence the effect of a blow, and specifically a mark or impress made by a blow, is applied in the arts to any die or mould, and to any figure formed by striking from a die, or by casting in a mould, or even by cutting, as a cameo or intaglio, and, more generally, to any figure whatever, as being the type or facsimile of the thing represented by it. (See the Lexicons.) By the commissions Atticus obtained to turn his small plasterings into the plasterings of his atrium, he probably means reliefs of any sort. The different specific meanings included in the word are more exactly expressed by certain compounds, such as 

\[\text{αντιτύρανος, the copy or impress of a τύρανος, a die or mould; \, εντύρανος \, \text{en} \, \text{túranos}, a pattern, or type; \, \text{έπτυρανος, a relief of any kind, especially a cameo, and, more specifically, a high-relief, as opposed to \text{πρότυρανος, a low-relief.}}\]

Comp. Fictile, týrannw, týrannos.

[ P. S.]

TYRANNUS (τυραννος).

In the heroic age the governments in Greece were monarchical, the king uniting in himself the functions of the priest, the warrior, and military chief. These were not limited to the two or three centuries following the Trojan war (see The Lexicon) by the terms 

\[\text{πρωτοποιός, a die or mould, was changed no less than his name. Noble and wealthy families began to be considered on a footing of equality with royalty; and thus in process of time sprang up oligarchies or aristocracies, which were not possessed of the elements of social happiness or stability. The principal families contended with each other for the greatest share of power, and were only unanimous in disregarding the rights of those whose station was beneath their own. The people, enervated by the privileged classes, began to regret the loss of their old paternal form of government; and were ready to assist any one who would attempt to restore it. Thus were opportunities afforded to ambitious and designing men to raise themselves, by starting up as the champions of popular and specifically a despot, to further their own interests. Thus the Syracusan Dionysus, who had been expelled by the populace, on receiving the protection of Gelon, sovereign of Gela and Camarina, enabled him to take possession of Syracuse, and establish his kingdom there. (Herod. vii. 154, 155.) Sometimes the conflicting parties in the state, by mutual consent, chose some eminent man, in whom they had confidence, to head their discissions; investing him with a sort of dictatorial power for that purpose, either for a limited period or otherwise. Such a person they called \text{αἰσχυνόμενης.} \, \text{[AESYMNETER.]}\]

A similar authority was conferred upon Solon, when Athens was torn by the contending factions of the Δεισδήμος, Πέθαινος, and Παραλός, and he was requested to act as mediator between them. Solon was descended from Codrus, and some of his friends wished him to assume the sovereignty; this he refused to do, but, taking the constitutional title of Archon, he celebrated his form of polity and code of laws. (Herod. i. 29.; Plut. Solon. c. 13, &c.; Schömann, Antiq. Jur. publ. Gr. p. 173.) The legislative powers conferred upon Draco, Zaleucus, and Charondas, were of a similar kind, investing them with a temporary dictatorship. The τύραννος must be distinguished, on the one hand, from the \text{αἰσχυνόμενης, inasmuch as he was not elected by general consent, but commonly owed his elevation to some cope d'état, some violent movement or stratagem; such as the creation of a body-guard for him by the people, or the seizure of the citadel (Herod. i. 59; Thucyd. i. 126) ; and on the other hand, from the ancient king, whose right depended, not on usurpation, but on inheritance and traditional acknowledgment. The power of a king might be more absolute than that of a tyrant; as Peisistratus and his celebrated form of tyranny. (Aristot. Politi. v. 8.) The name of tyrant was originally so far from denoting a person who abused his power, or treated his subjects with cruelty, that Peisistratus is praised by Thucydides (vi. 54) for the moderation of his government; and Herodotus says, he governed \text{όστε τιμάς τὰς εὐστάθεις οὐσίας, διότι δέμα μεταλλάξα, έπε τούτωι κατεστοίχει ένεμο τὴν πάλιν κοισμόν καλόν το θαλήν, (i. 59.) Therefore we find the words \text{βασιλεύς \, \text{and} τύραννος used prominently by the Attic tragedians passim (see the Argument of the Oedipus Tyrannus), and even by prose authors. Thus Herodotus calls the Lydian Candaules \text{τύραννος (i. 7), the kingdom of Macedonia \text{τυραννος (viii. 137), and Periander of Corinth \text{βασιλεύς.} (iii. 52; compare v. 27, 92.) Afterwards, when tyrants themselves had become odious, the name also grew to be a word of reproach, just as \text{rex did among the Romans.} (Wachsmuth, Hellen. Alt. vol. i. pt. i. pp. 279—288, 1st ed.; Thirlwall, Hist. of Greece, vol. i. pp. 401, 404.)}
Among the early tyrants of Greece those most worthy of mention are:—Cleisthenes of Sicyon, grandfather of the Athenian Cleisthenes, in whose family the government continued for a century since its establishment by Orthagoras, about B. C. 673 (Herod. v. 67, 69); Cypselus of Corinth, who expelled the Bacchiadæ, b. c. 656, and his son Periander, both remarkable for their cruelty; their dynasty lasted between seventy and eighty years (Herod. v. 32); Procles of Epidaurus (Herod. iii. 30, 32); Panteleon of Pisa, who celebrated the thirty-fourth Olympiad, depriving the Eleans of the presidency (Pausan. vi. 21, 32); Thengiones of Megara, father-in-law to Cylon the Athenian (Thucyd. i. 126); Peisistratus, whose sons were the last of the early tyrants on the Grecian continent.

In Sicily, where tyranny most flourished, the principal were Phalaris of Agrigentum, who established his power in B. C. 568, concerning whose supposed epistles Bentley wrote his famous treatise; Theron of Agrigentum; Gelo, already mentioned, who, in conjunction with Theron, defeated Hamilcar the Carthaginian, on the same day on which the battle of Salamis was fought; and Hicra, his brother; the last three celebrated by Pindar. (See Herod. vii. 156, 163, 166."

In Grecian Italy we may mention Anaxilus of Rhegium, who reigned B. C. 496 (Herod. vi. 23, vii. 165); Cleomias of Croton, who rose after the dissolution of the Pythagorean league; (as to which see Polyb. i. 39; Athen. xii. p. 522, xiv. p. 623; Thirlwall, vol. i. p. 154.) The following also are worthy of notice: Polycrates of Samos (Herod. iii. 39, 56, 120, 125; Thucyd. i. 13); Lygdamis of Naxos (Herod. i. 61, 64); Histiaeus and Aristogoras of Mileus. (Herod. iv. 137, v. 38, 39, 37, vi. 29.) Perhaps the last mentioned can hardly be classed among the Greek tyrants, as they were connected with the Persian monarchy. (Wachsmuth, Id. vol. i. pt. i. p. 274.)

The general characteristics of a tyrant were, that it was bound by no laws, and had no recognized limitation to its authority, however it might be restrained in practice by the good disposition of the tyrant himself, or by fear, or by the spirit of the age. It was commonly most odious to the wealthy and noble, whom the tyrant looked upon with jealousy as a check upon his power, and sought to get rid of by sending them into exile or putting them to death. The advice given by Thrasylus of Miletus to Periander affords an apt illustration of this. (Herod. v. 92.) The tyrant usually kept a body-guard of foreign mercenaries, by aid of whom he controlled the people at home; but he seldom ventured to make war, for fear of giving an opportunity to his subjects to revolt. The Sicilian sovereigns form an exception to this. (Thucyd. i. 17.) He was averse to a large congregation of men in the town, and endeavoured to find rustic employments for the populace; but was not unwilling to indulge them with shows and amusements. A few of the better sort cultivated literature and the arts, adorned their city with handsome buildings, and even passed good laws. Thus, Peisistratus commenced building the splendid temple of Jupiter Olympus, laid out the garden of the Lyceum, collected the Homeric poems, and is said to have written poetry himself. Tribute was imposed on the people, to raise a revenue for the tyrant, to pay his mercenaries, and maintain his state. Peisistratus had the tithe of land, which his sons reduced to the twentieth. (Telos.)

The causes which led to the decline of tyranny among the Greeks were partly the degeneracy of the tyrants themselves, corrupted by power, insolence, flattery, and bad education; for even where the father set a good example, it was seldom followed by the son; partly the cruelties and excesses of particular men, which brought them all into disrepute; and partly the growing spirit of anarchy among the Greek people, who began to speculate upon political theories, and soon became discontented with the form of government which had nothing in theory, and little in practice, to recommend it. Few dynasties lasted beyond the third generation. Most of the tyrannies, which flourished before the Persian war, are said to have been overthrown by the excretions of Sparta, jealous perhaps of any innovation upon the old Doric constitution, especially of any tendency to ameliorate the condition of the Perioeci, and anxious to extend her own influence over the states of Greece by means of the benefits which she conferred. (Thucyd. i. 18.) Upon the fall of tyranny, the various republican forms of government were established, the Dorians generally favoring oligarchy, the Ionian democracy. (Wachsmuth, vol. i. n. i. p. 289; Schömann, Id. pp. 84, 89—91.)

As we cannot in this article pursue any historical narrative, we will shortly refer to the Tyrannides Graphie. Few dynasties lasted beyond the third generation. Most of the tyrannies, which flourished before the Persian war, are said to have been overthrown by the excretions of Sparta, jealous perhaps of any innovation upon the old Doric constitution, especially of any tendency to ameliorate the condition of the Perioeci, and anxious to extend her own influence over the states of Greece by means of the benefits which she conferred. (Thucyd. i. 18.) Upon the fall of tyranny, the various republican forms of government were established, the Dorians generally favouring oligarchy, the Ionian democracy. (Wachsmuth, vol. i. n. i. p. 289; Schömann, Id. pp. 84, 89—91.)

As we cannot in this article pursue any historical narrative, we will shortly refer to the Tyrannides Graphie. Among the early tyrants of Grecia were partly the degeneracy of the tyrants themselves, corrupted by power, insolence, flattery, and bad education; for even where the father set a good example, it was seldom followed by the son; partly the cruelties and excesses of particular men, which brought them all into disrepute; and partly the growing spirit of anarchy among the Greek people, who began to speculate upon political theories, and soon became discontented with the form of government which had nothing in theory, and little in practice, to recommend it. Few dynasties lasted beyond the third generation. Most of the tyrannies, which flourished before the Persian war, are said to have been overthrown by the excretions of Sparta, jealous perhaps of any innovation upon the old Doric constitution, especially of any tendency to ameliorate the condition of the Perioeci, and anxious to extend her own influence over the states of Greece by means of the benefits which she conferred. (Thucyd. i. 18.) Upon the fall of tyranny, the various republican forms of government were established, the Dorians generally favouring oligarchy, the Ionian democracy. (Wachsmuth, vol. i. n. i. p. 289; Schömann, Id. pp. 84, 89—91.)
VALLUM.

U. V.

VACANTIA BONA. [Bona Vacantia.]

VACATIO. [Excursus, p. 499.]

VADIMO'NIUM. [Actio, p. 11; Praes.]

VAGI'NA. [Gliadius.]

VALLUM, a term applied either to the whole or a portion of the fortifications of a Roman camp. It is derived from vallus (a stake), and properly means the palisade which ran along the outer edge or the top of the agger, but it very frequently includes the agger also. The former and more limited sense, was composed, as it is derived from complete fortification. [AGGER.]

Described by Polybius (xviii. i. 1, xvii. 14) and Livy (xxxiii. 5), who make a comparison between the latter. Both used for larger trees, with the side branches on them ; but more branches than those of the Romans, which close together, and made the branches interlace, large oranges and pulled from its place, and when it was removed a large opening was left in the vallum. The Roman vallus, on the contrary, presented no convenient handle, required very great force to pull it down, and even if removed left a large opening. The Greek valli were cut on the spot : the Romans prepared theirs beforehand, on a march. (Polyb. ii. 16.) They were made of any large oranges, and these generally on the same side. The Greeks placed their valli in the agger at considerable intervals, the spaces between them being filled up by the branches ; the Romans fixed theirs close together, and made the branches interlace, and sharpened their points carefully. Hence the tares vannis could easily be taken hold of by its large branches and pulled from its place, and when it was removed a large opening was left in the vallum. The Roman vallus, on the contrary, presented no convenient handle, required very great force to pull it down, and even if removed left a very small opening. The Greek valli were cut on the spot ; the Romans prepared theirs beforehand, and each soldier carried three or four of them when on a march. (Polyb. l. c.; Virg. Georg. iii. 346, 547; Civ. Tusc. ii. 16.) They were made of any strong wood, but oak was preferred.

The word vallus is sometimes used as equivalent to vallum. (Caesar, Bell. Civ. iii. 63.)

A fortification like the Roman vallum was used by the Greeks at a very early period. (Hom. II. ....)

Varro's etymology of the word is not worth much (L. L. v. 117, ed. Müller).

In the operations of a siege, when the place could not be taken by storm, and it became necessary to establish a blockade, this was done by drawing defences similar to those of a camp round the town, which was then said to be circumvallatum. Such a circumvallation, besides cutting off all communication between the town and the surrounding country, formed a defence against the sallies of the besieged. There was often a double line of fortifications, the inner against the town, and the outer against a force that might attempt to raise the siege. In this case the army was encamped between the two lines of works.

This kind of circumvallation, which the Greeks called ἀποτεχνασμός and περιτεχνασμός, was employed by the Peloponnesians in the siege of Platæae. (Thucyd. ii. 78, iii. 20—23.) Their lines consisted of two walls (apparently of turf) at the distance of 16 feet, which surrounded the city in the form of a circle. Between the walls were the huts of the besiegers. The walls had battlements (εἰκονικῶν), and at every tenth battlement was a tower, filling up by its depth the whole space between the walls. There was a passage for the besiegers through the middle of each tower. On the outside of each wall was a ditch (τάφρος). This description would almost exactly answer for the Roman mode of circumvallation, of which some of the best examples are that of Carthage by Scipio (Appian, Punic. 113, &c.), that of Numantia by Scipio (Appian, Hispan. 90), and that of Alesia by Caesar (Bell. Gall. vii. 72, 73). The towers in such lines were similar to those used in attacking fortified places, but not so large, and of course not movable. [Turris.]

(Lipsius, de Milit. Rom. v. 5, in Oper. iii. pp. 156, 157; Poliorc. ii. 1, in Oper. iii. 283.) [P.S.]

VALLUS. [Vallum.]

VALVAE. [Janua, p. 625, b.]

VANNUS (λεγόμενος, λικνων), a winnowing-fan, i.e. a broad basket, into which the corn mixed with chaff (acus, ἐχυρος) was received after threshing, and was then thrown in the direction of the wind. (Col. de Re Rust. ii. 21; Virg. Georg. iii. 134.) It thus performed with greater effect and convenience the office of the pola lignea, or winnowing-shovel. [Pala.] Virgil (Georg. i. 166) dignifies this simple implement by calling it mysticus vannus Iacchii. The rites of Bacchus, as well as those of Ceres, having a continual reference to the occupations of rural life, the vannus was borne in the processions celebrated in honour of both these divinities. Hence ἀνεθρος (Heuch. s. v.) was one of the epithets of Bacchus. In an Antefixa in the British Museum (see the annexed woodcut) the infant Bacchus is carried in a vannus by two dancing bacchantes clothed in skins, the one male and carrying a Thyrus, the other female and carrying a torch [FAX]. Other divinities were sometimes conceived to have been eredlated in the same manner. (Callim. Jot. 48; Schol. in loc.; Hom. H. in Moro, 254.) The vannus was also used in the processions to carry the instruments of sacrifice and the first fruits or other offerings, those who bore them being called the λικνοφόροι. (Callim. Cer. 127.) [J. Y.]

VAPPA. [Vinum.]

VAS. [Actio, p. 11; Praes.]

VAS (pl. vasa), a general term for any kind of vessel. Thus we read of vas vinarium (Cic. Verr. iv. 27), vas argentum (Cic. l. c.; Hor. Sat. ii. 7, 72), vasa Cornithia et Delicae (Cic. pro Rosc. Amn.
VECTIGALIA.

The word *vas* was used in a still wider signification, and was applied to any kind of utensil used in the kitchen, agriculture, &c. Thus Plautus says (Aulul. i. 3. 17) —

"Cultrum, securim, pistillum, mortarium, Quae utenda vasam semper vicini rogant, Fures venisse, atque abestului dicito."

(Comp. Dig. 33. tit. 7. s. 8; 34. tit. 2. s. 20.) The utensils of the soldiers were called *vasa*, and hence *vasa colligere* and *vasa conclamare* signify to pack up the baggage, to give the signal for departure (Cic. Verr. iv. 19; Liv. xxi. 47, xxvii. 47; Caes. B. C. i. 66, iii. 37).

UDO, a sock of goats-hair or felt. (Mart. xiv. 140.) Hesiod (Op. et Dies, 542) advises country-men to wear brogues (perones, kartharvae) made of ox-hide, with socks of the above description within them. Socks of a finer felt were sometimes worn by the Athenians. (Cratinus, p. 29, ed. Runkel.)

VECTIGALIA, the general term for all the regular revenues of the Roman state. (Cic. pro Leg. Munid. 6.) The word is derived from *vaho*, and is generally believed to have originally signified the duties paid upon things imported and exported (quaes velobstantur). If this were true, it would necessarily imply that these duties were either the most ancient or the most important branch of the Roman revenues, and that for either of these reasons the name was subsequently used to designate all the regular revenues in general. But neither point is borne out by the history of Rome, and it seems more probable that vectigal means anything which is brought (vehitur) into the public treasury, like the Greek *phoos*. The earliest regular income of the state was in all probability the rent paid for the use of the public and pastures. This revenue was called *paseva*, a name which was used as late as the time of Pliny (H. N. xviii. 3), in the tables or registers of the censors for all the revenues of the state in general.

The senate was the supreme authority in all matters of finance, but as the state itself did not occupy itself with collecting the taxes, duties, and tributes, the censors were entrusted with the actual business. These officers, who in this respect may not unjustly be compared to modern ministers of finance, used to let the various branches of the revenue to the publicani for a fixed sum, and for a certain number of years. (Censor; Publican.)

As most of the branches of the public revenues of Rome are treated of in separate articles, it is only necessary to give a list of them here, and to explain those which have not been treated of separately.

1. The tithes paid to the state by those who occupied the ager publicus. [Decumae; AGRARIAE LEGES.]

2. The sums paid by those who kept their cattle on the public pastures. [Scriptura.]

3. The harbour duties raised upon imported and exported commodities. [Portorium.]

4. The revenue derived from the salt-works. [Salinae.]

5. The revenues derived from the mines (metalla). This branch of the public revenue cannot have been very productive until the Romans had become masters of foreign countries. Until that time the mines of Italy appear to have been worked, but this was forbidden by the senate after the conquest of foreign lands. (Plin. H. N. xxxvii. 4, xxxviii. 15.) The mines of conquered countries were treated like the salinae, that is, they were partly left to individuals, companies, or towns on condition of a certain rent being paid (Plin. H. N. xxxiv. 1; Cic. Philo. ii. 19), or they were worked for the direct account of the state, or were leased to the publicani. In the last case, however, it appears always to have been fixed by the lex censoria how many labourers or slaves the publicani should be allowed to employ in a particular mine, as otherwise they would have been able to derive the most enormous profits. (Plin. H. N. xxxiii. 4.) Among the most productive mines belonging to the republic we may mention the rich gold-mines near Aquileia (Polyb. xxxiv. 10), the gold-mines of Ictimuli near Vercelli, in which 25,000 men were constantly employed (Plin. H. N. xxxii. 4: Strab. v. p. 151), and lastly the silver-mines in Spain in the neighbourhood of Cartago Nova, which yielded every day 25,000 dinars to the Roman acriarium. (Polyb. xxxiv. 9; comp. Liv. xxxiv. 21.) Macedonia, Thrace, Illyricum, Africa, Sardinia, and other places also contained very productive mines, from which Rome derived considerable income.

6. The hundredth part of the value of all things which were sold (centesima rerum venantium). This tax was not instituted at Rome until the time of the civil wars; the persons who collected it were called *exactorum*. (Cic. Ep. ad Brut. i. 18, pro coass. Postul.) Tiberius reduced this tax to a two-hundredth (ducentesima), and Caligula abolished it for Italy altogether, whence upon several coins of this emperor we read *R. C. C.,* that is, *Remissa Ducentesima.* (Tact. Annal. i. 78, ii. 42; Suet. Calig. 16.) According to Dion Cassius (liviii. 16. ix. 9) Tiberius restored the centesima, which was afterwards abolished by Caligula. (Comp. Dig. 50. tit. 16. s. 17. § 1.) Respecting the tax raised upon the sale of slaves see Quinquagesima.

7. The vicesima hereditatum et manumissionum. [VICTESIMA.]

8. The tribute imposed upon foreign countries was by far the most important branch of the public revenue during the time of Rome's greatness. It was sometimes raised at once, sometimes paid by instalments, and sometimes changed into a poll-tax, which was in many cases regulated according to the census. (Cic. c. Verri. ii. 53, 55, &c.; Paus. vii. 16.) In regard to Cilicia and Syria we know that this tax amounted to one per cent, of a person's census, to which a tax upon houses and slaves was added. (Cic. ad Fam. iii. 8, ad Att. v. 16; Appian, de Reb. Syr. 50.) In some cases the tribute was not paid according to the census, but consisted in a land-tax. (Appian, de Bell. Civil. v. 4; comp. Walter, Gesch. des Röm. Rechts, p. 224, &c.)

9. A tax upon bachelors. [Ars Uxorium.]

10. A door-tax. [OSTIARIUM.]

11. The octoeaca. In the time of Caesar an liberti living in Italy and possessing property of 200 seesettaria, and above it, had to pay a tax consisting of the eighth part of their property. (Dion Cass. l. 10.) It would be interesting to ascertain the amount of income which Rome at various periods derived from...
from these and other sources; but our want of information renders it impossible. We have only the general statement that previously to the time of Pompey the annual revenue amounted to fifty millions of drachmas, and that it was increased by num to eighty-five millions. (Plin. H. N. xxxii.)

(Burmann, de Vectig. Pop. Romani; Hegewisch, Versuch über die Röm. Finanzen; Bosse, Grundzüge des römischen Stat.; Durean de la Maigre, Economie Politique des Romains, Paris, 2 v. p. 196. c: Pollux, iv. 122; Tacitus, Ann. iv. 24, which shows that this term did not always denote a fixed quantity. With the Romans, however, as with us, the load was likewise used as a measure, a load of manure being equal to eighty modii, which was about twenty bushels. (Col. de Re Rust. ii. 15, 16, xi. 2.) The trunk of a tree, when squared, was also reckoned millions of drachmas, and that it was increased by num these and other sources; but our want of in-

In private houses curtains were either used as coverings over doors (Sen. Epist. 81.) The Janua was a name given to the Accensi in the Roman army, who were only supernumerary soldiers ready to supply any vacancies in the legion. [ACCESSI.] They were called Velati, because they were only clothed (velati) with the sapa, and were not regularly armed. (Festus, s.e. Velati, Adscripticii.)

VELA'TI was a name given to the Accensi in the Roman army, who were only supernumerary soldiers ready to supply any vacancies in the legion. [ACCESSI.] They were called Velati, because they were only clothed (velati) with the sapa, and were not regularly armed. (Festus, s.e. Velati, Adscripticii.)

VELI'TES. [EXERCITUS, pp. 503, a, 506, b.]

VELUM (ab аката, Theophrast. Char. 3; Athen. v. p. 156, c.; Pollux. iv. 122; παναπέτρακα, Plato. Polit. p. 294, ed. Bekker; Synes. Epist. 4; καταπέτρακα, Matt. xxvii. 51), a curtain; (λωτος), a sail. In private houses curtains were either hung as coverings over doors (Sueton. Claud. 10), or they were served in the interior of the house as substitutes for doors. (Sen. Epist. 81.) [JANUA.]

In the palace of the Roman emperor a slave, called velarius, was stationed at each of the principal doors to raise the curtain when any one passed through. (Inscript. op. Pignor. de Servis, p. 470.) Wooden curtains were used in addition to window-shutters. (Juvi. ix. 80.) Curtains sometimes formedarrantions in the rooms (Plin. Epist. iv. 19), and, when drawn aside, they were kept in place by the use of large brooches (fibulas). Iron curtain-rods have been found extending from pillar to pillar in a building at Herculanum. (Gell, Pompeiana, vol. i. p. 160, Lon. 1832.)

In temples curtains served more especially to veil the statue of the divinity. They were drawn aside occasionally so as to discover the object of worship to the devout. (Apuleius, Met. xi. p. 127, ed. Aldi.) [PASTOPHORUS.] Antiochus presented to the temple of Jupiter at Olympia a woollen curtain of Assyrian manufacture, dyed with the Tyrian purple and interwoven with figures. When the statue was displayed, this curtain lay upon the ground, and it was afterwards drawn up by means of coras; whereas in the temple of Diana at Ephesus the corresponding curtain or veil was attached to the ceiling, and was let down in order to conceal the statue. (Paus. v. 12, § 2.)

In the theatres there were hanging curtains to decorate the scene. (Virg. Georg. iii. 23; Propert. iv. 1. 15.) The siparium was extended in a wooden frame. The velarium was an awning stretched over the whole of the cavea to protect the spectators from the sun and rain. (Juvi. iv. 121; Sueton. Calig. 26.) These awnings were in general either woollen or linen; cotton was used for this purpose a little before the time of Julius Caesar, (Plin. H. N. xix. 1. s. 6; Dion Cass. xliii. 24; Lucret. vi. 108.) This vast extent of canvas was supported by masts (mali, Lucret. l. c.) fixed into the outer wall. The annexed woodcut shows the form and position of the great rings, cut out of lava, which remain on the inside of the wall of the Great Theatre at Pompeii near the top, and which are placed at regular distances, and one of them above another, so that each mast was fixed into two rings. Each ring is of one piece with the stone behind it. At Rome we observe a similar contrivance in the Coliseum; but the masts were in that instance ranged on the outside of the wall, and rested on 340 consoles, from which...
they rose so as to pass through holes cut in the cornice. The holes for the masts are also seen in the Roman theatres at Orange and other places.

**Velum**, and much more commonly its derivative **velamen**, denoted the veil worn by women. (Prudent. c. Spars. ii. 147.) That worn by a bride was especially called **flaminia** [MAGNIMONIUM, p. 743, a]: another special term was **rica**. Greek women, when they went abroad, often covered their heads with the shawl [PEPLUM], thus making it serve the purpose of a veil. But they also used a proper head-dress, called καλυτήριον (Apollod. ii. 6; § 6; Aelian, V. H. vii. 9), which besides serving to veil their countenances, whenever they desired it, was graceful and ornamental, and was therefore attributed to Venus (Pans. iii. 15 § 8; Druck, **Anal.** ii. 459) and Pandora (Hes. *Theog.* 578). The veil of Ilione, the eldest daughter of Priam, was one of the seven objects preserved at Rome as pledges of the permanency of its power. (Serv. in Virg. *Aen.* vii. 186.)

**Velum** also meant a sail (λιττος, NAVIS, p. 790, a; λαύδης, Callim. *Epic.* v. 4; Enurip. *Hec.* 109). Sail-cloth was commonly linen, and was obtained in great quantities from Egypt; but it was also woven at other places, such as Tarquinii in Etruria. (Liv. xxviii. 43.) But cotton sail-cloth (carbasus) was also used, as it is still in the Mediterranean. The separate pieces (lintea) were taken as they came from the loom, and were sewed together. This is shown in ancient paintings of ships, in which the seams are represented as distinct and regular. [J. Y.]

VENABULUM, a hunting-spear. This may have been distinguished from the spears used in warfare by being barbed; at least it is often so formed in ancient works of art representing the story of Meleager (Bartoli, *Admir.* 84) and other hunting scenes. It was seldom, if ever, thrown, but held so as to slant downwards and to receive the attacks of the wild bears and other beasts of chase. (Virg. *Aen.* iv. 131, ix. 553; Var. *L. L.* viii. 53, ed. Müller; Apul. *Met.* viii. pp. 78, 83, ed. Aldi; Plin. *Ep.* i. 6.) [J. Y.]

VENALICIAE/RII. [SERVUS, p. 1040, a.]

VENATIO, hunting, was the name given among the Romans to an exhibition of wild beasts, which fought with one another and with men. These exhibitions originally formed part of the games of the Circus. Julius Caesar first built a wooden amphitheatre for the exhibition of wild beasts, which is called by Dion Cassius (xliii. 22) άνεμον επιγόνεον, and the same name is given to the amphitheatre built by Sulpicius Sabinus (Id. li. 23), and also to the celebrated one of Titus (Id. lv. 24); but even after the erection of the latter we frequently read of Venationes in the Circus. (Spart. *Hadri.* 19; Vopisc. *Proc.* 19.) The persons who fought with the beasts were either condemned criminals or captives, or individuals who did so for the sake of pay and were trained for the purpose. [BASTARI.] The Romans were as passionately fond of this entertainment as of the exhibitions of gladiators, and during the latter days of the republic and under the empire an immense variety of animals was collected from all parts of the Roman world for the gratification of the people, and many thousands were frequently slain at one time. We do not know on what occasion a venatio was first exhibited at Rome; but the first mention we find of any thing of the kind is in the year B.C. 251, when L. Metellus exhibited in the Circus 142 elephants, which he had brought from Sicily after his victory over the Carthaginians, and which were killed in the Circus according to Verrius, although other writers do not speak of their slaughter. (Plin. *N. H.* viii. 6.) This can scarcely be regarded as an instance of a venatio, as it was understood in later times, since the elephants are said to have been only killed because the Romans did not know what to do with them, and not for the amusement of the people. There was, however, a venatio in the later sense of the word in B.C. 186, in the games celebrated by M. Fulvius in fulfilment of the vow which he had made in the Aetolian war; in these games lions and panthers were exhibited. (Liv. *xxxi.* 22.) It is mentioned as a proof of the growing magnificence of the use that in the Ludi Circenses, exhibited by the curule aediles P. Cornelius Scipio Nasica and G. Lentulus B.C. 168, there were 63 African panthers and 40 bears and elephants. (Liv. *xlv.* 18.) From about this time combats with wild beasts probably formed a regular part of the Ludi Circenses, and many of the curule aediles made great efforts to obtain rare and curious animals, and put in requisition the services of their friends. (Compare Cælius's letter to Cicero, *ad Fam.* viii. 9.) Elephants are said to have first fought in the Circus in the curule aedils' ship of Claudius Pulcher, B.C. 50, and twenty years afterwards, in the curule aedils' ship of the two Luculli, they fought against lions. (Plin. *N. H.* vii. 7.) A hundred lions were exhibited by Sura in his praetorship, which were destroyed by youths sent by king Bocchus for the purpose. This was the first time that lions were allowed to be loose in the Circus; they were previously always tied up. (Senec. *de Brev.* *Vit.* 13.) The games, however, in the curule aedils' ship of Scaurus B.C. 58 surpassed anything the Romans had ever seen; among other novelties he first exhibited an hippocotomus and five crocodiles in a temporary canal or trench (*euripus*, Plin. *N. H.* vii. 49). At the venatio given by Pompey in his second consulship B.C. 55, upon the dedication of the temple of Venus Victrix, and at which Cicero was present (Cic. *ad Fam.* vii. 1), there was an immense number of animals slaughtered, among whom we may mention of 600 lions, and 18 or 20 elephants: the latter fought with Gaetulians, who buried darts against them, and they attempted to break through the railings (*clatri*) by which they were separated from the spectators. (Senec. *ad C."*; Plin. *viii.* 12.) To guard against this danger Julius Caesar surrounded the arena of the amphitheatre with trenches (*euripis*).

In the games exhibited by Caesar in his third consulship, B.C. 45, the venatio lasted for five days and was conducted with extraordinary splendour. Camelopards or giraffes were then for the first time seen in Italy. (Dion Cass. xini. 20; *Suet. Jul.* 39; Plin. *N. H.* vii. 7; Appian, *B. C.* ii. 102; *Vell. Pat.* ii. 56.) Julius Caesar also introduced bulls (*catauro*) into which the Etruscan horsemen pursued the bulls round the circus, and when the latter were tired out, seized them by the horns and killed them. This seems to have been a favourite spectacle; it was repeated by Claudius and Nero. (Plin. *N. H.* vii. 70; *Suet. Claud.* 21; *Dion Cass.* lxi. 9.) In the games celebrated by Augustus, B.C. 29, the hippopotamus and the rhinoceros were
Venatio.

Venatio, according to Dion Cassius (li. 22), but the hippopotamus is spoken of by Pliny, as mentioned above, in the games given by Scaurus. Augustus also exhibited a snake 50 cubits in length (Suet. Aug. 43), and thirty-six crocodiles, which are seldom mentioned in the spectacles of later times. (Dion Cass. Iv. 10.)

The occasions on which Venationes were exhibited have been incidentally mentioned above. They seem to have been first confined to the Ludi Circenses, but during the later times of the republic, and under the empire, they were frequently exhibited on the celebration of triumphs, and on many other occasions, with the view of pleasing the people. The passion for these shows continued to increase under the empire, and the number of beasts sometimes slaughtered seems almost incredible. At the consecration of the great amphitheatre of Titus, 5000 wild beasts and 4000 tame animals were killed (Suet. Tit. 7; Dion Cass. Iv. 25), and in the games celebrated by Trajan, after his victories over the Dacians, there are said to have been as many as 11,000 animals slaughtered. (Dion Cass. Ixiviii. 15.) Under the emperors we read of a particular kind of Venatio, in which the beasts were not killed by bestiarii, but were given up to the people, who were allowed to rush into the area of the circus and carry away what they pleased. On such occasions a number of large trees, which had been torn up by the roots, was planted in the circus, which thus resembled a forest, and none of the more savage animals were admitted into it. A Venatio of this kind was exhibited by the elder Gordian in his aedileship, and a painting of the forest with the animals in it is described by Julius Capitolinus. (Gordian, 3.) One of the most extraordinary venationes of this kind was that given by Probus, in which there were 1000 ostriches, 1000 stags, 1000 boars, and numbers of wild goats, wild sheep, and other animals of the same kind. (Vopisc. I. c.)

It is unnecessary to multiply examples, as the above are sufficient to give an idea of the numbers and variety of animals at these spectacles; but the list of beasts which were collected by the younger Gordian for his triumph, and were exhibited by his successor Philip at the Secular Games, deserve mention on account of their variety and the rarity of some of them. Among these we find mention of 32 elephants, 10 elks, 10 tigers (which seem to have been very seldom exhibited), 60 tame lions, 30 tame leopards, 10 hyenas, an hippopotamus and rhinoceros, 10 aurochs (it is unknown what they were), 10 camelopards, 20 onagri (wild asses, or perhaps zebras), 40 wild horses, and an immense number of similar animals. (Vopisc. Gordian, 33.) How long these spectacles continued is uncertain, but they were exhibited after the abolition of the shows of gladiators. There is a law of Honorius and Theodosius, providing for the safe convoy of beasts intended for the spectacles, and inflicting a penalty of five pounds of gold upon any one who injured them. (Cod. 11. tit. 44.) They were exhibited at this period at the praetorian games, as we learn from Symmachus. (Epist. ix. 70, 71, 126, &c.) Wild beasts continued to be exhibited in the games at Constantinople as late as the time of Justinian. (Procop. Hist. Arc. c. 9.)

Combats of wild beasts are sometimes represented on the coins of Roman families, as on the annexed coin of M. Livineius Regulus, which probably refers to the venatio of Julius Caesar mentioned above.

In the bas-relieфа on the tomb of Scaurus at Pompeii, there are representations of combats with wild beasts, which are copied in the following woodcuts from Mazois (Pomp. i. pi. 32, 33). On the same tomb gladiatorial combats are represented, which are figured on p. 576 of the present work.

The first represents a man naked and unarmed between a lion and a panther. Persons in this defenceless state had of course only their agility to trust to in order to escape from the beasts. In the second cut we see a similar person against whom a wild boar is rushing, and who appears to be preparing for a spring to escape from the animal. In the same relief there is a wolf running at full speed, and also a stag with a rope tied to his horns who has been pulled down by two wolves or dogs.
third relief is supposed by Mazois to represent the training of a bestiarius. The latter has a spear in each hand; his left leg is protected by greaves, and he is in the act of attacking a panther, whose movements are hampered by a rope, which fastens him to the bull behind him, and which accordingly places the bestiarius in a less dangerous position, though more caution and activity are required than if the beast were fixed to a single point. Behind the bull another man stands with a spear, who seems to be urging on the animal. The fourth woodcut represents a man equipped in the same way as the matador in the Spanish bull-fights in the present day, namely, with a sword in one hand and a veil in the other. The veil was first employed in the arena in the time of the emperor Claudius. (Plin. H. N. viii. 21.)

VENEFICIUM, the crime of poisoning, is frequently mentioned in Roman history. Women were most addicted to it; but it seems not improbable that this charge was frequently brought against females without sufficient evidence of their guilt, like that of witchcraft in Europe, in the middle ages. We find females condemned to death for this crime in seasons of pestilence, when the popular mind is always in an excited state and ready to attribute the calamities under which they suffer to the arts of evil-disposed persons. Thus the Athenians, when the pestilence raged in their city during the Peloponnesian war, supposed the wells to have been poisoned by the Peloponnesians (Thucyd. ii. 48), and similar instances frequently occurred. The speech of Cicero in behalf of Cluentius supplies us with several particulars on this subject. Under the Roman emperors it was carried on to a great extent, and some females, who excelled in the art, were in great request. One of the most celebrated of these was Locusta, who poisoned Claudius at the command of Agrippina, and Britannicus at that of Nero, the latter of whom even placed persons under her to be instructed in the art. (Tacit. Hist. ii. 23.)

The first legislative enactment especially directed against poisoning was a law of the dictator Sulla—Lex Cornelia de Sicariis et Veneficiis—passed in B. C. 82, which continued in force, with some alterations, to the latest times. It contained provisions against all who made, bought, sold, possessed, or gave poison for the purpose of poisoning. (Cic. pro Cluent. 54; Marci. Dig. 48. tit. 8. s. 3; Inst. 4. tit. 18. s. 5.) The punishment fixed by this law was, according to Marcius, the deportatio in insulam and the confiscation of property; but it was more probably the interdictio aquis et ioniis, since the deportatio under the emperors took the place of the interdictio, and the expression in the Digest was suited to the time of the writers or compilers. (Lex Cornelia, p. 687.) By a senatusconsultum all druggists (pignmentarii), who administered poisons carelessly "purgationis causa," were liable to the penalties of this law. In the time of Marcius (that of Alexander-Severus) this many as a hundred and seventy matrons were condemned. (Liv. viii. 18; compare Val. Max. i. 3. § 3; August. De Civ. Dei, iii. 17.) We next read of poisoning being carried on upon an extensive scale as one of the consequences of the introduction of the worship of Bacchus. (Liv. xxxix. 8.) [Dionys. B. C. 413.] In B. C. 184, the praetor, Q. Naevius Matho. was commanded by the senate to investigate such cases (de veneficia quaerere): he spent four months in the investigation, which was principally carried on in the municipia and conciliabula, and, according to Valerius of Antium, he condemned 2000 persons. (Liv. xxxix. 38. 41.) We again mention of a public investigation into cases of poisoning by order of the senate, in B. C. 190, when a pestilence raged at Rome, and many of the magistrates and other persons of high rank had perished. The investigation was conducted in the city and within ten miles of it by the praetor C. Claudius, and beyond the ten miles by the praetor C. Maenius. Hostilia, the widow of the consul C. Calpurnius, who had died in that year, was accused of having poisoned her husband, and condemned on what appears to have been mere suspicion. (Liv. xl. 37.) Cases of what may be called private poisoning, in opposition to those mentioned above, frequently occurred. The speech of Cicero in behalf of Cluentius supplies us with several particulars on this subject. Under the Roman emperors it was carried on to a great extent, and some females, who excelled in the art, were in great request. One of the most celebrated of these was Locusta, who poisoned Claudius at the command of Agrippina, and Britannicus at that of Nero, the latter of whom even placed persons under her to be instructed in the art. (Tacit. Annal. xii. 66, xiii. 15; Suet. Ner. 33; Juv. i. 71.)

The word Veneficus was also applied to potions, incantations, &c. (Cic. Brut. 60 ; Petron. 118) ; whence we find Veneficus and Venefica used in the sense of a sorcerer and sorceress in general.

VER SACRUM (Eros iepus). It was a custom among the early Italian nations, especially among the Sabines, in times of great danger and distress, to vow to the deity the sacrifice of every thing born in the next spring, that is between the first of March and the last day of April, if the calamity under which they were labouring should be removed. (Fast. s. ev. Ver sacrum ; Liv. xxxii. 9, 10, xxxiv. 44 ; Strab. v. p. 172 ; Silsenna ap. Non. xii. 10 ; Serv. ad Aen. vii. 796.) This sacrifice in the early times comprehended both men and domestic animals, and there is little doubt that in many cases the vow was really carried into effect. But in later times it was thought cruel to sacrifice so many innocent infants, and accordingly the following expedient was adopted. The children were allowed to grow up, and in the spring of their twentieth or twenty-first year they were with covered faces driven across the frontier of their native country, whereupon they went whithersoever fortune or the deity might lead them. Many a colony had been founded by persons driven out in this manner ; and the Mamertines in Sicily were the descendants of such devoted persons. (Fast. s. c. and s. ev. Munerinti : compare Dionys. i. 16 ; Plin. H. N. iii. 18 ; Justin. xxiv. 4 ; Liv. iv. 1 ; etc.)

In the two historical instances in which the vow was vowed a ver sacrum, that is, after the battle of Lake Trasimenus and at the close of the second Punic war, the vow was confined to domestic animals, as was expressly stated in the vow. (Liv. i. c. ; Plut. Fab. Max. 4.) [L. S.]

VESTALES, the virgin priestesses of Vesta who ministered in her temple and watched the eternal fire. Their existence at Alba Longa is connected with the earliest Roman traditions, for Silvia the mother of Romulus was a member of the sisterhood (Liv. i. 20 ; Dionys. i. 76) ; their establishment in the city, in common with almost all other matters connected with state religion, is generally ascribed to Numa (Dionys. ii. 63 ; Plut. Num. 10) ; who selected four (their names are given in Plutarch), two from the Titiienses and two from the Ramnes (Dionys. ii. 67 ; Festus, s. ev. Nam Vestae), and two more were subsequently added from the Luceres, by Tarquinius Priscus according to one authority (Plut. Num. l. c.), by Servius Tullius according to another. (Dionys. iii. 67.) This number of six remained unaltered at the time when Plutarch wrote, and the idea that it was afterwards increased to seven rests upon very unsatisfactory evidence. (See Mémoires de l'Académie des Inscriptions, vol. iv. p. 167 ; Ambrose Epist. v. 31, c. Symmach. and the remarks of Lipsius.) They were originally chosen (expero is the technical word) by the king (Liv. i. 3. 20 ; Dionys. ii. c.) and during the republic and empire by the Pontifex Maximus. It was necessary that the maiden should not be under six nor above ten years of age, perfect in all her limbs, in the full enjoyment of all her senses, patrime et matrimine (Patrimi), the daughter of free and freeborn parents who had never been in slavery, who followed no dishonourable occupation, and whose home was in Italy. (Gell. i. 12.) The lex Papia ordained that when a vacancy occurred the Pontifex Maximus should name at his discretion twenty qualified damsels, one of whom was publicly (in concione) fixed upon by lot, an exemption being granted in favour of such as had a sister already a vestal and of the daughters of certain priests of a high class. (Gell. l. c.) The above law appears to have been enacted in consequence of the unwillingness of fathers to resign all control over a child, and this reluctance was manifested so strongly in later times that in the age of Augustus libertinae were declared ineligible. (Dion Cass. iv. 22 ; Suet. Octav. 31.) The casting of lots moreover does not seem to have been practised if any respectable person came forward voluntarily and offered a daughter who fulfilled the necessary conditions. As soon as the election was concluded the Pontifex Maximus took the girl by the hand and addressed her in a solemn form preserved by Aulus Gellius from Fabius Pictor.

SACERDOTEM. VESTALEM. QUAE. SACRA. FACIAT. QUAE. Iouis. SERT. SACERDOTEM. VESTALVM. FACERE. PRO. POPULO. ROMANO. QUIRITUM. UTEL. QUAE. OPTIMA. LEGE. FOWIT. ITA. TE. AMATA. CAPIO, where the title Amata seems simply to signify a beloved one, and not to refer as Gellius supposes to the name of one of the original Vestals, at least no such name is to be found in the list of Plutarch alluded to above. After these words were pronounced she was led away to the atrium of Vesta, and lived thenceforward in the sacred precincts under the special superintendence and control of the pontifical college. (Dionys. ii. 67 ; Liv. iv. 44, viii. 15 ; Plin. Ep. iv. 11 ; Suet. Octav. 31 ; Gell. i. 12.)

The period of service lasted for thirty years. During the first ten the priestess was engaged in learning her mysterious duties, being termed discipulina (Val. Max. i. 1. § 7), during the next ten in performing their duties of the daughters of certain priests of a high class (Dionys. ii. 67 ; Liv. iv. 44, viii. 15 ; Plin. Ep. iv. 11 ; Suet. Octav. 31 ; Gell. i. 12.)

The period of service lasted for thirty years. During the first ten the priestess was engaged in learning her mysterious duties, being termed discipulina (Val. Max. i. 1. § 7), during the next ten in performing their duties of the daughters of certain priests of a high class (Dionys. ii. 67 ; Liv. iv. 44, viii. 15 ; Plin. Ep. iv. 11 ; Suet. Octav. 31 ; Gell. i. 12.)

Few however availed themselves of these privileges ; those who did were said to have lived in sorrow and remorse (as might indeed have been expected from the habits they had formed) : hence such a proceeding was considered ominous, and the priestesses for the most part died as they had lived in the service of the goddess. (Tacit. Ann. ii. 86 ; Inscript. quoted by Gronov. ad Tacit. Ann. iii. 64.)

The senior sister was entitled Vestalis Maxima, or Virgo Maxima (Ovid. Fast. iv. 633 ; Suet. Jul. 4 6 3.}
Their chief office was to watch by turns, night and day, the object warded, but by no\nmeans blazed upon the altar of Vesta (Virginsque Vestaales in urbe custodiunt ignem Foci Publici Sempiternum, Cic. de Leg. ii. 8, 12; Liv. xxviii. 11; Val. Max. i. 1. § 6; Seneca de Prov. 5), its exci\ntion being considered as the most fearful of all pro\ndigies, and emblematic of the extinction of the state. (Dionys. ii. 67; Liv. xxvi. 1.) If such misfortune befell and was caused by the careless\nness of the priestess on duty, she was stripped and scourged by the Pontifex Maximus, in the dark and with a screen interposed, and he rekindled the flame by the friction of two pieces of wood from a\nfate arbor. (Dionys., Plat., Val. Max. ii. 10; Festu\nus. s. v. Igm.) Their other ordinary duties con\nsisted in presenting offerings to the goddess at stated times, and in sprinkling and purifying the shrine each morning with water, which according to the institution of Numa was to be drawn from the Etruscan fount, although in later times it was considered lawful to employ any water from a living spring or well, but not such as had passed through pipes. When used for sacrificial purposes it was mixed with\nmurio, that is, salt which had been poured in a mortar, thrown into an earthen jar and baked in an oven. (Ovid. Fast. iii. 11; Propert. iv. 4, 15; Plat. Num. 13; Festus. s. v. Murio.) They assisted moreover at all great public holy rites, such as the festivals of the Bona\nDea, (Dion Cass. xxxvii. 45) and the consecration of temples (Tact. Hist. iv. 59), they were invited to priestly banquets (Macrob. ii. 9; Dion Cass. xviii. 19), and we are told that they were present at the solemn appeal to the gods made by Cicero during the conspiracy of Catiline. (Dion Cass. xxxvii. 35.) They also guarded the sacred relics which formed the\nfate piumus imperii, the pledge granted by fate for the permanency of the Roman sway, deposited in the innermost adytum (penus Vestaee, see Festus, s. v.) which no one was permitted to enter save the virgins and the chief pontiff. Was not this thing as no one knew, some supposed that it was the Palladium, the pre-Romanic gods carried by Dardanus to Troy and transported\ngods which preserved the state of the gens (Num. ii. 69, ix. 32, Hist. iii. 81), and if any one passed\nunder their litter he was put to death. (Plut. Num. 10.) Augustus granted to them all the rights of\nmatria which had borne three children (Dion Cass. lxi. 10; Plut. l.c.), and assigned them a conspicuous\nplace in the theatre (Suet. Octav. 44; Tact. Ann. iv. 18), a privilege which they had enjoyed\nbefoee at the gladiatorial shows. (Cic. pro Murea. 35.) Great weight was attached to their interces\nsion on behalf of those in danger and difficulty, of which we have a remarkable example in the en\ntrances which they addressed to Sulla on behalf of\nJulius Caesar (Suet. Jul. 1; compare Cic. pro Font. 17; Suet. Vitell. 16, Dion Cass. lxv. 18; Tact. Ann. iii. 69, xi. 32, Hist. iii. 81), and if they\nchanced to meet a criminal as he was led to punish\nment they had a right to demand his release, provided it could be proved that the encounter was\naccidental. Wills, even those of the emperors, were committed to their charge (Suet. Jul. 85,\nOctav. 101; Tact. Ann. i. 8), for when in such a caso were bequeathed to it.
VESTALES.

Here well seen. The second is from a denarius of the gens Clodia, representing upon the reverse a female priestess with a simpulum in her hand, and bearing the legend VESTALIS; on the obverse is a head of Flora with the words c. CLODIVS c. F. Two Vestals belonging to this gens were celebrated in the Roman Annals. (See Ovid. Fast. iv. 279; Suet. Tib. 2; Augustin. de Civ. Dei, x. 16; Herodian. i. 11.) [TRIUMPHUS, p. 1165, a.] The coin seems to have been struck to commemorate the splendour of the Flora triumvirs exhibited during the famous aedileship of C. Clodius Pulcher n. c. 99. (Cir. de Off. ii. 16; c. Ferr. iv. 2; Plin. H. N. xxxv. 4.)

(Vipsius, de Vesta et Vestalibus Syntagma, and Nochoden, "On the worship of Vesta, &c. Class.)

sical Journal, vol. xv. 123, vol. xvi. 321," have collected most of the authorities on this subject; Göttling, Geschichte der Römisch. Staatsverfassung, p. 183.)

VIAE. Three words are employed by the Roman jurists to denote a road, or a right of road, Iter, Actus, Via. The different meanings of these three words are given under SERVITUTES, p. 1032.

We next find Viae divided into priuca or aquae and publicae; the former being those the use of which was free while the soil itself remained private property, the latter those of which the use, the management, and the soil were alike vested in the state. Viae Vicinales (qua in vicis sunt vel quae in vicis ducent), being country cross-roads merging in the great lines, or at all events not leading to any important terminus, might be either publicae or privatæ according as they were formed and maintained at the cost of the state or by the contributions of private individuals. (Dig. 43. tit. 8. s. 2. § 21, 22; tit. 7. s. 3; Sicul. Flacc. cond. Agr. p. 9, ed. Goes.) The Viae publicae of the highest class were distinguished by the epithets militares, consulares, praetoriae, answering to the terms ἀτατοῖκα among the Greeks and king's highway among ourselves.

That public roads of some kind must have existed from the very foundation of the city is manifest, but as very little friendly intercourse existed with the neighbouring states for any length of time with which the country of each to the other, and the probability not extend beyond the narrow limits of the Roman territory, and would be mere muddy tracks used by the peasants in their journeys to and from market. It was not until the period of the long protracted Samnite wars that the necessity was strongly felt of securing an easy, regular, and safe communication between the city and the provinces, and then for the first time we hear of those famous paved roads, which, in after ages, keeping pace with the progress of the Roman arms, connected Rome with her most distant provinces, constituting not only the most useful, but the most lasting of all her works. (Stenbo, v. p. 253.) The excellence of the principles upon which they were constructed is sufficiently attested by their extraordinary durability, many specimens being found in the country around Rome which have been used without being repaired for more than a thousand years, and are still in a high state of preservation.

The Romans are said to have adopted their first ideas upon this subject from the Carthaginians (Isidor. xiv. 16. § 6), and it is extremely probable that the latter people, from their commercial activity, and the sandy nature of their soil, have...
been compelled to turn their attention to the best means of facilitating the conveyance of merchandize to different parts of their territory. It must not be imagined, however, that the Romans employed from the first the elaborate process which we are about to describe. The first step would be from the Via Torrens (Dig. 43, tit. 11, s. 2), the mere track worn by the feet of men and beasts and the wheels of waggons across the fields, to the Via Glaracu, where the surface was hardened by gravel; and even after pavement was introduced the blocks seem originally to have rested merely on a bed of small stones. (Liv. xii. 27; compare Liv. x. 23, 47.)

Livy has recorded (ix. 29) that the censorship of Appius Caecus (s. c. 312) was rendered celebrated in after ages from his having brought water into the city and paved a road (quo viam munivit et aquam in urbem perduxit), the renowned Via Appia, which extended in the first instance from Rome to Capua, although we can scarcely suppose that it was carried so great a distance in a single stratum. (Nebuhr, Rom. Gesctt. iii. p. 356.) We unite all the long before this period of the Via Latina (Liv. ii. 39), the Via Cohina (Liv. ii. 11, iii. 6, v. 49), and the Via Salaria (Liv. vii. 9), &c.: but even if we allow that Livy does not employ these names by a sort of prolepsis, in order to indicate conveniently a particular direction (and that he does speak by anticipation when he refers to milestones in some of the above passages is certain), yet we have no proof whatever that they were laid down according to the method afterwards adopted with so much success. (Compare Liv. vii. 39.)

Vitruvius enters into no details with regard to road-making, but he gives most minute directions for pavements, and the fragments of ancient pavements still existing and answering to his description indicate conveniently a particular direction (and the terms still existing and answering to his description correspond so exactly with the remains of the military roads, that we cannot doubt that the processes followed in each case were identical, and thus Vitruvius (vii. 1), combined with the poem of Statius (Silv. iv. 3), on the Via Domitiana, will supply all the terms

In the first place, two shallow trenches (sulci) were dug parallel to each other, marking the breadth of the proposed road; this in the great lines, such as the Via Appia, the Via Flaminia, the Via Valeria, &c., is found to have been from 13 to 15 feet, the Via Tusciana is 11, while those of less importance, from not being great thoroughfares, such as the Via which leads up to the temple of Jupiter Latialis, on the summit of the Alban Mount, and which is to this day singularly perfect, seem to have been exactly 8 feet wide. The loose earth between the Sulci was then removed, and the excavation continued until a solid foundation (gremium) was reached, upon which the materials of the road might firmly rest; if this could not be attained, in consequence of the swampy nature of the ground or from any peculiarity in the soil, a basis was formed artificially by driving piles (fisuctionibus). Above the gremium were four distinct strata. The lowest course was the statumen, consisting of stones not smaller than the hand could just grasp; above the statumen was the rudus, a mass of broken stones cemented with lime, (what masons call rubble-work) rammed down hard and nine inches thick; above the rudus came the nucleus, composed of fragments of bricks and pottery, the pieces being smaller than in the rudus, cemented with lime and six inches thick. Uppermost was the pavimentum, large polygonal blocks of the hardest stone (silic), usually, at least in the vicinity of Rome, basaltic lava, irregular in form but fitted and jointed with the greatest nicety (ant a junctura arte silic, Tibull. iv. 7. 60) so as to present a perfectly even surface, as free from gaps or irregularities as if the whole had been one solid mass and presenting much the same external appearance as the most carefully built polygonal walls of the old Pelasgian towns. The general aspect will be understood from the cut given below of a portion of the street at the entrance of Pompeii. (Manns Les Ruines de Pompei, vol. i. pl. xxxvii.)

The centre of the way was a little elevated so as to permit the water to run off easily, and hence the terms agger eive (Isidor. xvi. 16. § 7; Ammian. Marcellin. xix. 16 ; compare Virg. Aen. v. 273); and summum dorsum (Stat. l. c.), although both may be applied to the whole surface of the pavement. Occasionally, at least in cities, rectangular slabs of softer stone were employed instead of the irregular polygons of silex, as we perceive to have been the case in the forum of Trajan, which was paved with travertine, and in part of the great forum under the column of Phocas, and hence the distinction between the phrases silice sternere and sacro quadrato sternere. (Liv. x. 23, xii. 27.) It must be observed, that while on the one hand recourse was had to piling, when a solid foundation could not otherwise be obtained, so, on the other hand, when the road was carried over rock, the statumen and the rudus were dispensed with altogether, and the nucleus was spread immediately on the stony surface previously smoothed to receive it. This is seen to have been the case, we are informed by local antiquaries, on the Via Appia, below Albano, where it was cut through a mass of volcanic peperino.

Nor was this all. Regular foot-paths (Margines, Liv. xii. 27, crepitaines, Petron. 9; Orelli, Inscrip. n. 3844; uniones, Stat. Silv. iv. 3, 47) were raised upon each side and strewed with gravel, the different parts were strengthened and bound together with goypi or stone wedges (Stat. l. c.), and stone blocks were set up at moderate intervals.
on the side of the foot-paths, in order that travellers on horseback might be able to mount without the aid of an augur to hold them up. (Plut. C. Gracch. 7.) [Stratores.]

Finally, C. Gracchus (Plut. L. c.) erected milestones along the whole extent of the great highways, marking the distances from Rome, which appear to have been counted from the gate at which each road issued forth. The passage of Vintarchan, however, may only mean that Gracchus erected milestones on the roads which he made or repaired; for it is probable that milestones existed much earlier. [Milliare.] Augustus, when appointed inspector of the city, erected in the forum a gilded column (χρυσόπουλα χλωρίω, milliariwm aurem), Dion Cass. liv. 8; Plin. H. N. iii. 5; Suet. Oth. 6; Tacit. Hist. i. 27), on which were inscribed the distances of the principal points to which the viae conducted. Some have imagined, from a passage in Plutarch (Galb. 24), that the distances were calculated from the millarium aureum, but this seems to be disproved both by the fact that the roads were all divided into miles by C. Gracchus nearly two centuries before, and also by the position of various ancient inscriptions discovered in modern times. See Holsten, de Milliarium Aureo in Graec. Theor. Antiq. Rom. vol. iv. and Fabretti de Aquis et Aquaeductibus, Diss. iii. n. 25.)

It is certain that during the earlier ages of the republic the construction and general superintendence of the roads without, and the streets within, the city, were committed to the quaestors. As the same office was held by men of great eminence, we shall not attempt to give a list of all who held it. (De Viris illust. c. 72; Lips. Eusc. ad Toc. Ann. iii. 31.) These duties, when no census were in office, devolved upon the consuls, and in their absence upon the Praetor Urbanus, the Aediles, or such persons as the senate thought fit to appoint. (Liv. xxxix. 2; Cie. c. Ferr. i. 48, 50, 59.) But during the last century of the commonwealth, when the administration of the roads was as well as of every other department of public business, afforded the tribunes a pretext for popular agitation. C. Gracchus, in what capacity we know not, is said to have exerted himself in making great improvements, both from a conviction of their utility and with a view to the acquisition of popularity (Plut. C. Gracch. 7.), and Curio, when tribune, introduced a Lex Viae for the construction and restoration of many roads and the appointment of himself to the office of inspector (στυράρχης) for five years, (Appian, B. C. ii. 20; Cass. de Att. 1. i. 5, 6.) We learn from Cicero (ad Att. i. 1), that Thermus, in the year B. C. 65, was Curator of the Flaminian Way, and from Plutarch (Cas. 5), that Julius Caesar held the same office (ἐπιμελήτης) with regard to the Appian Way, and laid out great sums of his own money upon it, but by whom these appointments were conferred we cannot tell. During the first years of Augustus, Agrippa, being aedile, repaired all roads at his own proper expense; subsequently the emperor, finding that the roads had fallen into disrepair through neglect, took upon himself the restoration of the Via Flaminia as far as Ariminum, and distributed the rest among the most distinguished men in the state (triumphalibus viris), to be paved out of the money obtained from spoils (see manubilia pecunia sternendas, Suet. Octav. 30; Dion Cass. liii. 22). In the reign of Claudius we find that this charge had fallen upon the quaestors, and that they were relieved of it by him, although some give a different interpretation to the words. (Suet. Claud. 24.) Generally speaking, however, under the empire, the post of inspector-in-chief ( curator), and each great line appears to have had a separate officer with this appellation, — was considered a high dignity (Plin. Ep. v. 15), insomuch that the title was frequently assumed by the emperors themselves, and a great number of inscriptions are extant, bearing the names of upwards of twenty princes from Augustus to Constantine, commemorating their exertions in making and maintaining public ways. (Gruter, Corp. Inscrip. exilix. clix.)

These curatores were at first, it would appear, appointed upon special occasions, and at all times must have been regarded as honorary functionaries rather than practical men of business. But from the beginning of the sixth century of the city there existed regular commissioners, whose sole duty appears to have been the care of the ways, four (quatuorvirii viarum) superintending the streets within the walls, and two the roads without. (Dig. 1. tit. 2. s. 2. § 30. compared with Dion Cass. liv. 26.) When Augustus remodelled the inferior magistrates he included the former in the vigintivirate, and abolished the latter; but when he undertook the care of the viae around the city, he appointed under himself two road-makers (duoviri virorum), Dion Cass. liv. 6; persons of praetorian rank. From him he assigned two lictors. These were probably included in the number of the new superintendents of public works instituted by him (Suet. Octav. 37), and would continue from that time forward to discharge their duties, subject to the supervision and control of the curatores or inspectors-general.

Even the contractors employed (mancipes, Tacit. Ann. ii. 31) were proud to associate their names with these vast undertakings, and an inscription has been preserved (Orell. Inscrip. n. 3221) in which a name, in paying the last tribute to her husband, inscribes upon his tomb Mancip. Viae App. The funds required were of course derived, under ordinary circumstances, from the public treasury (Dion Cass. lii. 22; Sicul. Flacc. de cond. agr. p. 9, ed. Goes.), but individuals also were not unfrequently found willing to devote their own private means to these great national enterprises. This, as we have already seen, was the case with Caesar and Agrippa, and we learn from inscriptions that the example was imitated by many others of less note. (e.g. Gruter, exil. i. 1 and 2.) The Viae Vicinales were in the hands of the rural authorities (magiæ pagorum), and seem to have been maintained by voluntary contribution or assessment, like our parish roads (Sicul. Flacc. p. 9), while the streets within the city were kept in repair by the inhabitants, each person being answerable for the portion opposite to his own house. (Dig. 43. tit. 10. s. 3.)

Our limits preclude us from entering upon so large a subject as the history of the numerous military roads which intersected the Roman dominions. We shall content ourselves with simply mentioning those which issued from Rome, together with their
most important branches within the bounds of Italy, naming at the same time the principal towns through which they passed, so as to convey a general idea of their course. For all the details and controversies connected with their origin, gradual extensions, and changes, the various stations upon each, the distances, and similar topics, we must refer to the treatises enumerated at the close of this article, and to the researches of the local antiquaries, the most important of whom, in so far as the southern districts are concerned, is Romanelli.

Beginning our circuit of the walls at the Porta Capena, the first in order, as in dignity, is,

I. The Via Appia, the Great South Road. It was commenced, as we have already stated, by Appius Claudius Caecus, when censor, and has always been the most celebrated of the Roman Ways. It was the first ever laid down upon a grand scale and upon scientific principles, the natural obstacles which it was necessary to overcome were of the most formidable nature, and when completed it well deserved the title of Queen of Roads (regina viarum, Stat. Silv. ii. 12). We know that it was in perfect repair when Ptolemaeus wrote (Bell. Goth. i. 14), long after the devastating roads of the northern barbarians; and even to this day the cuttings through hills and masses of solid rock, the filling up of hollows, the bridging of ravines, the substructions to lessen the rapidity of steep descents, and the embankments over swamps, demonstrate the vast sums and the prodigious labour that must have been lavished on its construction. It issued from the Porta Capena, and passing through Aricia, Tres Tabernae, Appii Forum, Tarraconia, Fundi, Formiae, Minturnae, Stabiae, and Cassia, terminated at Capua, but was eventually extended through Casilis and Castrum to Beneventum, and finally from thence through Venusia, Tarentum, and Uria, to Brundusium. The ramifications of the Via Appia most worthy of notice, are,

(1.) The Via Setina, which connected it with Setina. Originally it would appear that the Via Appia passed through Velitrae and Setina, avoiding the marshes altogether, and travellers, to escape this circuit, embarked upon the canal, which in the days of Tiberius traversed a portion of the swamps.

(2.) The Via Domitiana struck off at Stabiae, and keeping close to the shore passed through Liternum, Cumae, Puteoli, Neapolis, Herculaneum, Oplontis, Pompeii, and Stabiae to Surrentum, making the complete circuit of the bay of Naples.

(3.) The Via Campana or Consularis from Capua to Cumae sending off a branch to Puteoli and another through Atella to Neapolis.

(4.) The Via Aquillia began at Capua and ran south through Nola and Nuceria to Salernum, from thence sending off a branch to Puteotum, it took a wide sweep inland through Eburni and the region of the Mons Albarnum up the valley of the Tanager; it then struck south through the very heart of Lucania and Bruttium, and passing Nerusium, Interamnia and Cosenza, returned to the sea at Vibo, and thence through Modena to Rhegium. This road sent off a branch near the sources of the Tanager, which ran down to the sea at Blunda on the Laxis Sinus and then continued along the whole line of the Bruttian coast through Laxis and Terina to Vibo, where it joined the main stem.

(5.) The Via Egnatia began at Beneventum, struck north through the country of the Hirpini to

Egnatia, entered Apulia at Acro, and passing through Herdonia, Canusium, and Rodia, reached the Adriatic at Barium and followed the coast through Egnia to Brundusium. This was the route followed by Horace. It is doubtful whether it bore the name given above in the early part of its course.

(6.) The Via Trajana began at Venusia and ran in nearly a straight line across Lucania to Hercules on the Sinus Tarentinus, thence following southwards the line of the east coast it passed through Tauris, Croto, and Scylacium, and completed the circuit of Bruttium by meeting the Via Aquillia at Rhegium.

(7.) A Via Minucia is mentioned by Cicero (ad Att. ix. 6), and a Via Numilia by Horace (Epist. i. 18. 20), both of which seem to have passed through Samnium from north to south, connecting the Valerian and Aquilian and cutting the Appian and Latin ways. Their course is unknown. Some believe them to be one and the same.

Returning to Rome, we find issuing from the porta Capena, or a gate in its immediate vicinity

II. The Via Latina, another great line leading to Beneventum, but keeping a course farther inland than the Via Appia. Soon after leaving the city it sent off a short branch (Via Tusculana) to Tusculum, and passing through Compitum Anagni, Ferentium, Frusina, Frepeliae, Fabrateria, Aquatium, Casinum, Venafrum, Tanum, Altafissi, and Telesia, joined the Via Appia at Beneventum.

A cross-road called the Via Hadriana, running from Minturnae through Sessa Aurunca to Tanum, connected the Via Appia with the Via Latina.

III. From the Porta Equeolii issued the Via Labicana, which passing Labicum fell into the Via Latina at the station ad Dictum 30 miles from Rome.

IV. The Via Praenestina, originally the Via Gabina, issued from the same gate with the former. Passing through Gabii and Praeneste, it joined the Via Latina just below Anagnia.

V. Passing over the Via Collatina as of little importance, we find the Via Tiburtina, which issued from the Porta Tiburtina, and proceeding N. E. to Terni, a distance of about 20 miles, was continued from thence in the same direction, under the name of the Via Valeria, and traversing the country of the Sabines passed through Curseoli and Corfinium to Aternum on the Adriatic, thence to Adria, and so along the coast to Castrum Trescentium, where it fell into the Via Salaria.

The branch of the Via Valeria led to Sulaqueum, and was called Via Sublakensis. Another branch extended from Adria along the coast southwards through the country of Frentani to Carinus, being called, as some suppose, Via Frentana Apulia.

VI. The Via Nomentana, anciently Tuscullana, ran from the porta Collina, crossed the Anio to Nomentum, and a little beyond fell into the Via Salaria at Eretum.

VII. The Via Salaria, also from the porta Collina (passing Fidenas and Crustrum) ran north and east through Sabini and Picenum to Rete and Asculum Picenum. At Castrum Trescentium it reached the coast, which it followed until it joined the Via Flaminia at Arcona.

VIII. Next comes the Via Flaminia, the Great North Road commenced in the censorship of C. Flaminius and carried ultimately to Ariminum.
It issued from the Porta Flaminia and proceeded nearly north to Oriculum and Narbonia in Umbria. Here a branch struck off, making a sweep to the east through Interamna and Spoleto, and fell again into the main trunk (which passed through Narnia) at Pulcinita. It continued through Flaminia and Narnia, where it again divided, one line running south to the Po at Aquilea and Agrippa to Tergeste on the coast, and through Novaria, Vercolli, Eporedia and Augusta Praetoria to the Alpes Graiae on the west, besides another branch in the same direction through Ticinum and Industria to Augusta Taurinorum. Not must we omit the Via Postumia, which struck from Verona right down across the Appenines to Genoa, passing through Mantua and Cremona, crossing the Po at Placentia and so through Iria, Dertona and Libarna, sending off a branch from Dertona to Asta. One line running straight to Pons Malvius in the immediate vicinity of Rome is the most important is the Via Cassia, which diverging near the Pons Malvius and passing not far from Veii traversed Etruria through Baccanae, Sutrium, Valsinii, Clusium, Arezzo, Florence, Pistoia, and Lucca, joining the Via Aurelia at Luni. (a) The Via Amerina broke off from the Via Cassia near Baccanae, and held north through Palerdi, Tuder, and Perusia, re-uniting itself with the Via Cassia at Clusium. The other line running west to Pons Malvius the Via Clodia separated from the Via Cassia, and proceeding to Sabate on the Lago Sabatines there divided into two, the principal branch passing through central Etruria to Rosellae and thence due north to Florence, the other passing through Tarquinii and then falling into the Via Aurelia. (b) Beyond Baccanae the Via Cimina branched off, crossing the Mons Ciminius and rejoining the Via Cassia near Fano Volumniae.

IX. The Via Aemilia, the coast road, started from the Porta Julia in the Porta Flaminia and subsequently from the Porta Aurelia. It reached the coast at Abium and followed the shore of the lower sea along Etruria and Liguria by Genoa as far as Forum Julii in Gaul. In the first instance it extended no farther than Pisa.

X. The Via Portuensis kept the right bank of the Tiber to Portus Augusti.

XI. The Via Ostiensis originally passed through the Porta Trigentina, afterwards through the Porta Ostiense, and kept the left bank of the Tiber to Ostia. From thence it was continued under the name of Via Severiana along the coast southward through Laurentum, Antium, and Circeii, till it joined the Via Appia at Tarrauena. The Via Laurentina, leading direct to Laurentum, seems to have branched off from the Via Ostiensis at a short distance from Rome.

XII. Lastly, the Via Aedea to Rome to Ardea. According to some this branch off from the Via Appia.

The most elaborate treatise upon Roman Roads is Bergier, Histoire des Grands Chemins de l'Empire Romain, published in 1822. It was translated into Latin in the tenth volume of the Thesaurus of Grevius, and with the notes of Hennius occupies more than 800 folio pages. In the first part of the above article the essay on of Nibby, Delle Vie degli Antichi dissertazioni, appended to the fourth volume of the fourth Roman edition of Nardin, has been closely followed. Considerable caution, however, is necessary in using the works of this author, who, although a profound local antiquary, is, by no means an accurate scholar. To gain a knowledge of that portion of the subject which has been touched upon at the close of the article, it is necessary to consult the various commentaries upon the Tabula Peutingeriana and the different ancient Itineraries, together with the geographical works of Collarius, Cluverius, and D'Anville. [W. R.]

VIA'TICUM (épídon) is, properly speaking, every thing necessary for a person setting out on a journey, and thus comprehends money, provisions, dresses, vessels, &c. (Plaut. Epid. v. 1. 9 ; Plin. Epist. vii. 12 ; Cic. de Senec. 15.) It was a Roman magistrate, prætor, proconsul, or quaestor who was sent to his province, the state provided him with all that was necessary for his journey. But as the state in this as in most other cases of expenditure preferred paying a sum at once to having any part in the actual business, the state engaged contractors (redemptores), who for a stipulated sum had to provide the magistrates with the victuall, the principal parts of which appear to have been beasts of burden and tents (muli et tabernacula). Julius Caesar introduced some modification of this system, by his Lex De Repetundis (Repetundae), and Augustus once for all fixed a certain sum to be given to the proconsuls (probably to other provincial magistrates also) on setting out to their provinces, so that the redemptores had no more to do with it. (Cic. ad Fam. xii. 3; Suet. Aug. 36; Gallia, xvii. 2, 13; comp. Soginius de Antig. Jure Prov. iii. 11; Casaubon de Theophrast. 11.) [L. S.]

VIA'TOR was a servant who attended upon the magistrates, to whom he bore the same relation as the lictor did to other magistrates. The name viator was derived from the circumstance of their being chiefly employed on messages either to call upon senators to attend the meeting of the senate, or to summon the people to the comitia, &c. (Cic. de Senec. 16.) In the earlier times of the republic we find viatores as ministers of such magistrates also as had their licet; viatores of a dictator and of the consul were mentioned by Livy (vi. 15, xxi.

[1] In the earlier times of the republic we find viatores as ministers of such magistrates also as had their licet; viatores of a dictator and of the consul were mentioned by Livy (vi. 15, xxi.
VICUS.

In later times however viatores are only mentioned with such magistrates as had only potestas and not imperium, such as the tribunes of the people, the censors, and the aediles. They were, in short, the attendants of all magistrates who had the praefectura, (Gell. xii. 13; Liv. ii. 56, xxx. 39, xxxix. 34; Lydia, de Magist. i. 44.) How many viatores attended each of these magistrates is not known; one of them is said to have had the right at the command of his magistrate to bind persons (ligare), whence he was called lictor. (Gell. xii. 3.)

It is not improbable that the ancient writers sometimes confound viatores and lictori. (Sis.iius, de Aut. Jur. Civ. Romaniarum, ii. 15; Becker, Handb. der Röm. Alterth. vol. ii. pt. ii. p. 579.)

VICTORIANI SERVI. (Suet. vi. 1037, b.)

VICAERIUS. (Exercitus, p. 504, a.)

VICE SIMA, a tax of five per cent. Every Roman, when he manumitted a slave, had to pay to the state a tax of one-twentieth of his value, whence the tax was called vicissima manumissionis. This tax appears to have been levied from the earliest times, and was not abolished when all other imposts were done away with in Rome and Italy. (Liv. vi. 16, xxvii. 10; Cicer. Ad Att. ii. 16.)

Caracalla raised this tax to a decima, that is, ten per cent., but Augustus again reduced it to the old standard. (Dion. Cass. lxxvii. 9, lxxviii. 12.) The persons employed in collecting it were called Vice-simarii. (Petron. Fragm. Tragur. 65; Orelli, Inscrip. n. 3333, &c.)

A tax called vicissima hereditatium et legatum was introduced by Augustus (Lex Julia Vicissimaria): it consisted of five per cent, which every Roman citizen had to pay to the aerarium militare, upon any inheritance or legacy left to him, with the exception of such as was left to a citizen by his nearest relatives, and such as did not amount to above a certain sum. (Dion Cass. iv. 25, 28; Plin. Paneg. 37, &c.; Capitol. M. Antonin. 11.) Peregrini and Latini who had become Roman citizens had, in a legal sense, no relative, and were therefore obliged in all cases to pay the vicissima hereditatium. (Plin. Paneg. 1. e.) As only citizens had to pay this tax, Caracalla, in order to make it more productive, granted the franchise to all the subjects of the empire, and at the same time raised it to ten per cent. (Dion. Cass. lxxiv. 9, lxxv. 12.) According to the regulation of Augustus, it had generally sought and obtained a place in the college of the vigintivir, the vigintivir being twenty. (Dion. Cass. i. 5; Tacit. Annal. iii. 29, with Lipsius' note; Suet. Aug. i. 11.) A number of these officers attending each of these magistrates has been given in separate articles. (L. S.)

VICTIMA. (Sacrificium.)

VICTORIATUS. (Denarius.)

VICUS is the name of the subdivisions into which the four regions occupied by the four city tribes of Servius Tullius were divided, while the country regions, according to an institution ascribed to Numa, were subdivided into Pagi. (Dionys. ii. 76.) This division, together with that of the four regions of the four city tribes, remained down to the time of Augustus, who made the vic subdivision of the fourteen regions into which he divided the city. (Suet. Aug. 30.) In this division each vicus consisted of one main street, including several smaller by-streets; their number was 424, and each was superintended by four officers, called vicomagistri, who had a sort of local police, and who, according to the regulation of Augustus, were every year chosen by lot from amongst the people who lived in the vicus. (Suet. l. c.; Dion Cass. iv. 8.) On certain days, probably at the celebration of the compitales, they wore the praetexta, and each of them was accompanied by two licteri. (Dion Cass. l. c.; Ascon. ad Cic. in Pison. p. 7. ed. Orelli.) These officers, however, were not a new institution of Augustus, for they had existed during the time of the republic, and had had the same functions as a police for the vicus of the Servian division of the city. (Liv. vii. 7; Fest. Magistri; comp. Sextus Rufus, Breviarivm de Regionibus Urbis Romae; and P. Victor, de Regionibus Urbis Romae.) (L. S.)

VILLA.

VILLA, a farm or country-house. The Roman writers mention two kinds of villa, the villa rustica or farm-house, and the villa urbana or pseudourbana, a residence in the country or in the suburbs of a town. When both of these were attached to an estate, they were generally united in the same range of buildings, but sometimes they were placed at different parts of the estate. The part of the villa rustica, in which the produce of the farm was kept, is distinguished by Columella by a separate name, villa fructuaria.

1. The villa rustica is described by Varro (R. R. i. 11, 13); Vitruvius (vi. 9.), and Columella (i. 4. § 5).

The villa, which must be of size corresponding to that of the farm, is best placed at the foot of a wooded mountain, in a spot supplied with running water, and not exposed to severe winds nor to the effluvia of marshes, nor (by being close to a public
VILLA.

The outer court was the abode of the \textit{viginti tres}, \textit{cortes}, and where the slaves could be injured by fire should be stored without though it requires the warmth of the sun, should be placed on the level ground, and the granaries, which were in the upper stories of the farm-buildings, and carefully protected from damp, heat, and insects. These labours of the day, and where they performed could be injured by fire should be stored without though it requires the warmth of the sun, should be placed on the level ground, and the granaries, which were in the upper stories of the farm-buildings, and carefully protected from damp, heat, and insects. These store-rooms form the separate \textit{villae fructuariorum} of Columella; Varro places them in the \textit{villas rusticae}, but Vitruvius recommends that all produce which could be injured by fire should be stored without the villa.

In both courts were the chambers (\textit{cellae}) of the slaves, fronting the south; but the \textit{ergastulum} for those who were kept in chains (\textit{vincti}) was underground, being lighted by several high and narrow windows.

The inner court was occupied chiefly by the slaves, fronting the south; but the \textit{ergastulum} for those who were kept in chains (\textit{vincti}) was underground, being lighted by several high and narrow windows. The inner court was occupied chiefly by the slaves, fronting the south; but the \textit{ergastulum} for those who were kept in chains (\textit{vincti}) was underground, being lighted by several high and narrow windows.

A reservoir of water was made in the middle of each court, that in the outer court for soaking pulse and other vegetable produce, and that in the inner, which was supplied with fresh water by a spring, for the use of the cattle and poultry.

2. The \textit{Villa urbana} or \textit{pseudo-urbana} was so called because its interior arrangements corresponded for the most part to those of a town-house. [\textit{Housr.}]

Vitruvius (vi. 6) merely states that the description of the latter will apply to the former also, except that in the town the atrium is placed close to the door, but in the country the peristyle comes first, and afterwards the atrium, surrounded by paved porticoes, looking upon the palestra andambulatio. The chief sources of information on this subject are two letters of Pliny, in one of which (ii. 17) he describes his Laurentine villa, in the other (v. 6) his Tuscan, with a few allusions in one of Cicero's letters (ad Quint. iii. 1), and, as most important illustration of these descriptions, the remains of a suburban villa at Pompeii. (\textit{Pompeii}, i. c. 11, Lond. 1832.)

The clearest account is that given by Pliny in the first of the two letters mentioned above, from which, therefore, the following description is for the most part taken.

The villa was approached by an avenue of plane trees leading to a portico, in front of which was a \textit{xystus} divided into flower-beds by borders of box. This \textit{xystus} formed a terrace, from which a grassy slope, ornamented with box-trees cut into the figures of animals, and forming two lines opposite to one another, descended till it was lost in the plain, which was covered with acanthus. (\textit{Plin.} v. 6.) Next to the portico was an atrium, smaller and plainer than the corresponding apartment in a town-house. In this respect Pliny's description is

VILLICUS.

\textit{Villicus} (\textit{virius} in Greek writers, \textit{Plut. Cross}, 4), a slave who had the superintendence at variance with the rule of Vitruvius; and the villa at Pompeii also has no atrium. It would appear from Cicero (\textit{l.c}) that both arrangements were common. Next to the atrium in Pliny's Laurentine villa was a small elliptic peristyle (\textit{porticus in O iter o circumpunctum}), where, however, the readings \textit{D} and \textit{A} are also given instead of \textit{O}). The intervals between the columns of this peristyle were closed with tall windows (\textit{speculariae}, see \textit{Domus}, p. 432), and the roof projected considerably, so that it formed an excellent retreat in unfavourable weather. The open space in the centre of this peristyle seems often to have been covered with moss and ornamented with a fountain. Opposite to the middle of this peristyle was a pleasant \textit{cortile}, and beyond it an elegant \textit{triclinium}, standing out from the other buildings, with windows or glazed doors in the front and sides, which thus commanded a view of the grounds and of the surrounding country, while behind there was an uninterrupted view through the cavaedium, peristyle, atrium, and portico into the \textit{xystus} and the open country beyond.

Such was the principal suite of apartments in Pliny's Laurentine villa. In the villa at Pompeii the arrangement is somewhat different. The entrance is in the street of the tombs which leads through a small vestibule into a large square peristyle paved with \textit{opus signinum}, and having an impluvium in the centre of its uncovered area. Beyond this is an open hall, resembling in form and position the \textit{tablinium} in a town-house. Next is a long gallery extending almost across the whole width of the house, and behind it is a large cyziocene ocus, corresponding to the large triclinium in Pliny's villa. This room looks out upon a spacious court, which was no doubt a \textit{xystus} or garden, and which is surrounded on all sides by a colonnade composed of square pillars, the top of which forms a terrace. In the farthest side of this court is a gate leading out to the open country.

As the ground slopes downward considerably from the front to the back of the villa, the terrace just spoken of is on a level with the cyziocene ocus, the windows of which opened upon it; and beneath the ocus itself is a range of apartments on the level of the large court, which were probably used in summer, on account of their coolness.

The other rooms were so arranged as to take advantage of the different seasons and of the surrounding scenery. Of these, however, there is only one which requires particular notice, namely, a state bed-chamber, projecting from the other buildings in an elliptic or semicircular form, so as to admit the sun during the whole course. This apartment is mentioned by Pliny, and is also found in the Pompeian villa. In Pliny's Laurentine villa its wall was fitted up as a library.

The villa contained a set of baths, the general arrangement of which was similar to that of the public baths. [\textit{Balnear.}]

Attached to it were a garden, \textit{ambulatio}, \textit{gymnasium}, \textit{hippodromus}, \textit{spieristerium}, and in short all necessary arrangements for enjoying different kinds of exercise. [\textit{Horst.} ; \textit{Gymnasm.}]

(\textit{Becker, Gallus}, vol. i. p. 238; \textit{Schneider's notes} on Columella and Varro, and Gierig's on Pliny, contain many useful remarks.) [\textit{P. S.}]
of the *villa rustica*, and of all the business of
the farm, except the cattle, which were under the
care of the *magister pecorum*. (Varro, *R. R.* i. 2.)

The duties of the villicus were to obey his master
impliesly, and to govern the other slaves with
moderation, never to leave the villa (i.e. *posti* to go
market, to have no intercourse with soothsayers,
to take care of the cattle and the implements of
husbandry, and to manage all the operations of
the farm. (Cato, *R. R.* 5. 142.) His duties are
described at great length by Columella (xi, 1, and
i. 8), and those of his wife (*villicus*) by the same
writer (xii, 1), and by Cato (c. 143).

The word was also used to describe a person to
whom the management of any business was en-
adicated. (See the passage quoted in Forcellini’s
Lexicon.)

### VINDICATIO.

**Actiones in Rem** were called
*Vindicationes*. (Gaius, iv. 5.) Vindicationes therefore
were actions about the title to *res corporales*,
were actions *in personam*, "quibus vindicavit D Aeris sacramento te provoco." The
opponent replied : "Jus peregi sicut Vindictam
imposui." Then he who had made the first vindicatio thus addressed his opponent:
"Postulo anne dicas qua ex causa vindicaveris." The
opponent replied : "Jus peregi scecut Vindictam
imposui." Then who had made the first vindicatio proceeded to that part of the process called the
Sacramentum, which was in the form of a wager
as to the Right; he said : "Quando tu injuria vin-
dicasti D Aeris sacramento te provoco." The
opponent replied : "Jus peregi sicut Vindictam
incertum ;" then the other claimed (as on this occasion the wine
casks which had been filled the preceding autumn
were opened for the first time, and the wine tasted.
(Plin. *H. N.* xviii. 69. § 2) But before men ac-
tuallly tasted the new wine, a libation was offered
to Jupiter (Fest. *s. v. Vinalia*), which was called
culpar. (Fest. *s. v. Culpar*.)

The rustic vinalia, which fell on the 19th of
August (xiv. *Calend. Sept.*), was celebrated by
the inhabitants of all Latium, was the day on
which the vintage was opened. On this occasion the flamen dialis offered lambs to Jupiter, and
by this act he, as it were, opened the
vintage which was called *vindenialia auspiciis*; *Varro, de Ling. Lat.*
vi. 20), and no must was allowed to be conveyed
into the city until this solemnity was performed.
(Plin. *H. N.* xviii. 69. § 4.) This day was
sacred to Jupiter, and Venus too appears to have
had a share in it. (Varro, *i. c.* ; *de Re Rust.* i. 1 ;
Macrob. *Sat.* i. 4 ; Ovid, *Fast.* iv. 897, &c.)
An account of the story which was believed to have
given rise to the celebration of this festival is given by
Columella (xi. 1, and *Rustic* ; *Fast.* iv. 863, &c ; and
Sueton. *Vit. de Orig. Gent.* Rom. 15.)

### VINDEMIATUS.

*Feriae.* (Feriae, p. 530, a.)

### INDEX. (Actio, p. 11, a; *Manus In-
jectio*.)

**VINDICATIO.** *Actiones in Rem* were called
*Vindicationes*. *Actiones in Personam*, "quibus
dari fieri oporetre intendimus," were called
*Condictiones*. (Gaius, iv. 5.) Vindicationes therefore
were actions about the title to *res corporales*,
and to *Jura* in *re*. (Gaius, iv. 3.) The distinction
between *Vindicationes* and *Condictiones* was an
essential distinction which was not affected by
the change in the form of procedure from the
*Legis Actiones* to that of the *Formulae*. The
*Legis Actiones* fell into disuse (Gaius, iv. 31)
except in the case of *Damnum Infectum* and a
*Judicium Centumviralie*, and from this time both
*Vindicationes* and *Condictiones* were prosecuted
by the *Formulae*. (Actio.) The peculiar process
of the Vindicatio belonged to the period when
the *Legis Actiones* were in force.

### Five modes of proceeding in Lex (Gaius, iv.
12), were *Sacramento* ; *Per judicis postulationem* ; 
*Per conditionem* ; *Per manus injectionem* ; *Per
pignoris capionem*. (Per judicis postulationem ; *Per Conditionem* ; *Manus In-
jectio* ; Per *Pignoris Capionem*.)

A man might proceed Sacramento either in the
case of an *Actio in personam*, or an *Actio in rem*.
The part of the process which contained the *sacra-
mentum contendere*, or the challenge to the deposit
of a sum of money originally, and afterwards to
the engagement to pay a penalty, was applicable
both to an action in personam and an action in
rem. The condition of the penalty was in fact
the existence or non-existence of the right claimed
by the plaintiff; whatever the right might be ; and
the process thus assumed the form of a suit for the
penalty. It was the *Sacramentum* which gave to
this form of action its peculiar character. When
the parties were in judicio, they briefly stated their cases
severally, which was called *causae coniectio*. If it
was an *Actio in rem*, that is a *Vindicatio*, moveable
things and moving things (*mobilia et moventa*)
which could be brought before the *Prætor in jus*,
were claimed before the *Prætor in jur[e vindica-
bantur] ; thus he who claimed a thing as his
property (*qui vindicabat*), held a rod in his hand,
and laying hold of the thing, said to the other
thing, he said ; "Hunc ego hominem ex jure Quiritium Meum esse aeo secundum causam
sciant dixi. Ecce tibi Vindictam impusii ;" and
saying this he placed the rod on the thing. The
other claimed (*adversarius*) did and said the same.
This claiming of a thing as property by laying the
hand upon it, was "in jure manum conscrere," a
phrase as old as the *XII Tablets*. (Gell. xx. 10.)

The *Prætor* then said : "Mittite ambo hominem,"
and the claimant is ordered. Then he who had made
the first vindicatio thus addressed his opponent:
"Postulo anes dicas qua ex causa vindiceaeris." The
opponent replied : "Jus peregi scecut Vindictam
imposui." Then who had made the first vindicatio proceeded to that part of the process called the
Sacramentum, which was in the form of a wager
as to the Right; he said : "Quando tu injuria vin-
dicasti D Aeris sacramento te provoco." The
opponent replied by giving the *Similiter* ; "Simi-
liter ego te." The process of the Sacramentum, as already observed, was applicable to an *Actio in personam* ;
but as that was founded on an obligatio, there was
of course no specific object to claim. In the case of a
*Vindicatio* the *Prætor* declared the *Vindicæae*
in favour of one of the parties, that is, in the mean-
time he established one of the parties as Possessor,
and compelled him to give security to his opponent
for the thing in dispute and the mesne profits, or
as it was technically expressed, "jabet paedes
adversarius in *Vindicium*.* (See *s. v. Vindicatio*.)

The Praetor took security from both for the
amount of the Sacramentum; for the party who
failed paid the amount of the Sacramentum as a
penalty (*poenae nomine*) which penalty belonged
to the state (*in publicum cedebat*). The sums of
money were originally deposited in *sacro* : the
successful party took his money back, and the de-
posit of the unsuccessful party was paid into the
*aeurnium*. (Varro, *de L. L.* 100; Müller; *Fastius*,
*s. v. Sacramentum*.)

The Poena of the Sacramentum was quingenaria,
that is, quingenti asses, in cases when the property
in dispute was of the value of a thousand asses and

VINDICATIO.

This Sponsio Prejudicialis was merely a technical mode of converting an actio in rem into an actio in personam, and we must suppose that there was some good reason for the practice. It might be conjectured that it was introduced in order to obviate the trouble and difficulties attendant on the old process of the Vindicatio. From the expression of Gaius, it appears that there was also a Sponsio Poenalis, that is both the defendant made a sponsio and the plaintiff made a restipulatio. Thus in the case of "certa pecunia credita," the defendant's sponsio was made at the risk of losing the sum, if he could not sustain his denial of the plaintiff's claim; and the plaintiff's restipulatio was made at the like risk if he could not support his claim. The poena of the Sponsio and restipulatio belonged to the successful party. (Gaius, iv. 13.) There was also a Poenalis sponsio in the case of Interdicts (Gaius, iv. 141, 165, &c.), and Pecunia Constituta. In the case of Cœta Pecunia the sponsio was to the amount of one-third of the sum demanded, which was called legitiwn paras. (Cic. pro Rosc. Com. 4, 5.) In the case of Constituta Pecunia the sponsio was to the amount of one-half. (Gaius, iv. 171.) These stipulations were fixed by law; in other cases they were fixed by the Edict.

These sponsiones were introduced probably partly with a view to check litigation, and partly with a view to give compensation to the party who ultimately obtained a verdict; for otherwise there do not appear in the Roman law to be any direct provisions as to the costs of suits. Thus Gaius (iv. 174) enumerates four modes in which the Actoris calamia is checked; the Calumniae judicium, Contrarium judicium, Josjurandum, and the Restipulatio. The Restipulatio, he says, "is allowed in certain cases," and as to the Contrarium judicium, the plaintiff has in all cases judgment against him, if he cannot sustain his case, and it matters not whether or not he knows that his claim was not good, so in all cases the plaintiff (that is if he cannot sustain his case) is condemned in the penalty of the restipulatio.

As to the form of the Sponsio the passage of Gaius already referred to is an example; and there is another in the oration of Cicero, pro P. Quintio (5-57). The use of the word Si or Nisi in the Sponsio would depend on the fact which was affirmed or rather on the mode of affirmation and the party affirming. Cicero (pro Cae. 23) alludes to the use of these words (sine, nive). Brisonius (de Formulis, &c. v. 7, p. 540) has collected instances of them.

The other mode of procedure in the case of Vindicatio, that was in use after the Legis Actiones fell into disuse, was the Sponsio. In cases which were brought before the P Creatures or Peregrinus in order that the matter might be put in the old form of the Sacramentum. (Gaius, iv. 31, 95; Gell. xx. 10.) An hereditas was sued for like any other thing
either by the Sacramentum, so long as it was in use, or the Sponsio, or the Petitoria Formula. (Gaius, iv. 11, 31; Walter, Geschichte des Röm. Rechts; Puchta, Inst. lib. ii. § 161.) [G. L.]

**VINDICIAE. [VINDECATIO.]**

**VINDICTA. [MANUMISSIO; VINDICATIO.]**

**VINDICTA.** A class of actions in the Roman Law have reference to Vindicta as their object, which is thus expressed: *ad utilem pertinent, in sola vindicta constitutam est, Vindictam continebat.* (Dig. 47. tit. 12. a. 6. 10; 29. tit. 2. s. 29. § 5.) Some of these actions had for their object simply compensation, as the Actio doli. Others had for their object to give the complainant something more (*poena*) than the amount of his injury, as in the *Furti actio*, and sometimes in addition to this compensation also as in the *Vi Bonorum raptorum actio.*

A third class of actions had for its immediate object money or property, but this was not the ultimate object as in the cases already mentioned, but merely a means; the real object was Vindicta. This *Vindicta* consists in the re-establishment of a right which has been violated in the person of the complainant, in which case the individual discharges the office which the State discharges generally in matters of Crime. Those actions of which Vindicta is the object, are distinguished from other actions by their object as such as the legal capacity of those who may institute them, such as a *filiusfamilias* and one who has sustained a capsitio dimissio.

The following are actions of this kind:

1. Actio Injuriarum. When a *filiusfamilias* was injured, a wrong was done both to him and to his father. The injury done to the son is the only one that belongs to the head of the *Vindicta* (Tit. 12. s. 3). The father generally brought the action, for he could acquire through his son all rights of action. But the injury done to the son is the only one that belongs to the head of the *Vindicta.*

2. Actio sepulcri violati. When a free person was injured by anything being poured or thrown from a house, he had an actio in bonum et aequum concepta, and the right was not destroyed by a *capitis deminutio.*

3. Actio de effusis. When a free person was injured by anything being poured or thrown from a dangerous animal belonging to another, when it happened through the want of proper caution on the part of the owner. (Dig. 21. tit. 1. a. 49—43.)

4. Interdictum quod vi aut clam. This is a plaint which could be instituted by a *filiusfamilias* in his own name, because the object was *Vindicta.* The ground of this capacity of a *filiusfamilias* was an injury done to him personally by a person who acted in opposition to his remonstrance. If for instance the son inhabited a house belonging to his father or one hired from a stranger, and was disturbed in his enjoyment by some act of his neighbour, the *filiusfamilias* might have an action for the amount of the damage, but the pecuniary satisfaction would belong to the father as in the case of the Actio Injuriarum. But the action was not in bonum et aequum concepta, since it had a definite object, which was either the restoration of things to their former condition, which might be immediately for the benefit of the *filiusfamilias,* or to ascertain the value of the wrong done (good interest).

6. The action against a Libertus in respect of an In Jus vocatio. [PATRONUS.] If the Libertus had proceeded against the son of his patron, and the father was absent, the son could institute the suit himself, as in the case of the Actio Injuriarum.

7. Querela Inofficiosi. [TESTAMENTUM.]

8. Actiones Populares, which are actions in which the plaintiff claims a sum of money, but not as a private individual: he comes forward as a kind of representative of the State. If the act complained of be such as affects the interests of individuals as such, they can bring an action in preference to any other person and the action is not purely popular: to this class belong such actions as the *Actio sepolcri violati.* But if there are no persons who are individually interested in the matter complained of, or none such bring an action, any person (*unus ex populo*) may bring the action as the *Procurator of the State,* and he is not bound to give the security which an ordinary procurator must give. A *filiusfamilias* can bring such action. By virtue of the *Litis contestatio* the action becomes the same as if it were founded on an obligatio, and this right of action as well as the money which may arise from it is acquired by the *filiusfamilias* for his father. These actions being for fixed sums of money are not in bonum et aequum conceptae.

With the populaces actions may be classed as belonging to the same kind, the *Interdicta Publica* or *Populare,* which is for the protection of *Publicum Jus;* with this distinction, that the proceedings have not for their object the recovery of a sum of money. But in the general capacity of all persons to bring such actions, independent of the usual rules as to legal capacity, all these modes of proceeding agree.

(Savigny, System des heut. Rom. Rechts, ii. 121.) [G. L.]

**VINEA.** In its literal signification, is a bower formed of the branches of vines, and from the protection which such a leafy roof affords, the name was applied by the Romans to a roof under which the besiegers of a town protected themselves against darts, stones, fire, and the like, which were thrown by the besieged upon the assailants. The description which Vegetius *(De Re Milit. iv. 15)* gives of such a machine perfectly agrees with what we know of it from the incidental mention of other writers. The whole machine formed a roof, resting upon posts eight feet in height. The roof itself was generally sixteen feet long and seven broad. The wooden frame was in most cases light, so that it
could be carried by the soldiers; sometimes, however, when the purpose which it was to serve required great strength, it was heavy and then the whole fabric probably was moved by wheels attached to the posts. The roof was formed of planks and wicker-work, and the uppermost layer or layers consisted of raw hides or wet cloth as a protection against fire. The walls were strengthened by frequently destroying the vineae. (Liv. ii. 17, v. 7, xxxi. 61.)

The sides of a vinea were likewise protected by wicker-work. Such machines were constructed in a safe place at some distance from the besieged town, and then carried or wheeled (agere) close to its walls. Here several of them were frequently joined together, so that a great number of soldiers might be employed under them. When vineae had taken their place close to the walls the soldiers began their operations, either by undermining the walls, and thus opening a breach, or by employing the battering-ram (ares, Liv. xxxi. 7, 8). In the time of Vegetius the soldiers used to call these machines causaeae. (J. Lipsius, Poltorect. i. 14. 7.) [L. S.]

VINUM (olos). The general term for the fermented juice of the grape.

The native country of the vine was long a vexata question among botanists, but, although many points still remain open for debate, it seems now to be generally acknowledged that it is indigenous throughout the whole of that vast tract which stretches southward from the woody mountains of Mazanderan on the Caspian to the shores of the Persian Gulf and the Indian sea, and eastward through Khurasan and Cabul to the base of the Himalaya,—the region to which history and philosophy alike point as the cradle of the human race. Hence, when we consider the extreme facility of the process in its most simple form, we need little wonder that the art of making wine should have been discovered at a very remote epoch.

In the earliest of profane writers the cultivation of the grape is represented as familiar to the Heroic Greeks, and of some of the most beautiful and vivid pictures of rural life being closely connected with the toils of the vineyard. It is worth remarking that the wine upon whose excellence Homer dilates in a tone approaching to hyperbole is represented as having been produced on the coast of Thrace, the region from which poetry and civilization spread into Hellas, and the scene of several of the more remarkable exploits of Bucechus. Hence we might infer that the Pelasgians introduced the culture of the grape when they wandered westward across the Hellespont, and in that in like manner it was conveyed to the valley of the Po, when at a subsequent period they made their way round the head of the Adriatic. It seems certain from the various legends that wine was both rare and costly in the earlier ages of Italian and Roman history. Thus, a tradition preserved by Varro (ap. Plin. H. N. xiv. 14) told that when Mezentius agreed to aid the Rutulians he stipulated that the produce of the Latian vineyards should be his recompense. Romulus is said to have used milk only in his offerings to the gods (Plin. L. c.); Numa, to check extraneous influences, prohibited the sprinkling of wine upon the funeral pyre, and, to stimulate the energies of the rustic population, he ordained that it should be held impious to offer a libation to the gods of wine which had flowed from an unpruned stock. So scarce was it at a much later period that Publius the dictator, when about to join in battle with the Samnites, vowed to Jupiter a small cupful (vinii pocillam) if he should gain the victory. That wine was racked off into amphorae and stored up in regular cellars as early as the era of the Gracchi Pliny considers proved by the existence in his own day of the Vinum Opimianum, as described hereafter. But even then no specific appellation was given to the produce of different localities, and the jar was marked with the name of the consul alone. For many years after this foreign wines were considered far superior to native growths, and so precious were the Greek vintages esteemed in the times of Marius and Sulla that a single draught only was offered to the guests at a banquet. The rapidity with which luxury spread in this matter is well illustrated by the saying of M. Varro, that Lucullus when a boy never saw an entertainment in his father's house, however splendid, at which Greek wine was handed round more than once, but when in manhood he returned from his Asiatic conquests he bestowed on the people a largesse of more than a hundred thousand cadi.

Four different kinds of wine are said to have been presented for the first time at the feast given by Julius Caesar in his third consulship (n. c. 46), these being Galernaean, Chian, Lesbian, and Mamertine, and not until after this date were the merits of the numerous varieties, foreign and domestic, accurately known and fully appreciated. But during the reign of Augustus and his immediate successors the study of wines became a passion, and the most scrupulous care was bestowed upon every process connected with their production and preservation. (Plin. H. N. xiv. 28.) Pliny calculates that the number of wines in the whole world deserving to be accounted of high quality (nobilia) amounted to eighty, of which his own country could claim two-thirds (xiv. 13); and in another passage (xiv. 29) he asserts that 195 distinct kinds might be reckoned up, and that if all the varieties of these were to be included in the computation, the sum would be almost doubled. (Plin. H. N. xiv. 6. 29.)

The process followed in wine-making was essentially the same among both the Greeks and the Romans. After the grapes had been gathered, they were first trodden with the feet and afterwards submitted to the action of the press. This part of the process of wine-making is described in the article TORCULUM.

The sweet unfermented juice of the grape was termed μέλος by the Greeks and mustum by the Romans, the latter word being properly an adjective signifying new or fresh. Of this there were several kinds distinguished according to the manner in which each was originally obtained and subsequently treated. That which flowed from the clusters, in consequence merely of their pressure upon each other before any force was applied, was known as ρέεμα (Geopon. vi. 16) or protorropia (Plin. H. N. xiv. 11), and was reserved for manufacturing a particular species of rich wine described by Pliny (L. c.) to which the inhabitants of Mytilene gave the name of ράφομος or ραφώμας. (Athen. i. p. 30, b, ii. p. 45, e.) That which was obtained next, before the grapes had been fully trodden, was the mustum liovium, and was considered best for keeping. (Geopon. vi. 16 ; Colum. xii. 41.) After the grapes had been fully trodden and pressed, the mass was taken out, the edges of the husks cut,
and the whole again subjected to the press; the result was the mustum torticium or circumcinctum (Cato, R. R. 23; Varr. i. 54; Colum. xii. 36), which was set apart and used for inferior purposes.

A portion of the must was used at once, being drunk fresh after it had been clarified with vinegar. (Geopon. vi. 13; Cato, R. R. 120; Colum. xii. 29; Plin. H. N. xiv. 11.) A considerable quantity of must from the best and oldest vines was insepimented by boiling, being then distinguished by the Greeks under the general names of Ψυμα or γαλακτις (Athen. i. 31, c.), while the Latin writers have various terms according to the extent to which the evaporation was carried. Thus, when the must was reduced to two-thirds of its original volume it became carenum (Pallad. Octob. tit. xviii.,) when one-half had evaporated, defrutum (Plin. H. N. xiv. 9), when two-thirds, sapa (known also by the Greek names sirazem and kepsemena, Plin. l. c.), but these words are frequently interchanged. (See Varr. ap. Non. c. 17, n. 14; Colum. xii. 19.) Similar preparations are at the present time called in Italy musto cotto and sapa, and in France soute. The process was carried on in large caldrons of lead (vasa defrutaria), iron or bronze being supposed to communicate a disagreeable flavour, over a slow fire of chips, on a night when there was no moon (Plin. xviii. 74), the scum being carefully removed with leaves (Plin. l. c.; Virg. Georg. i. 269, iv. 296), and the liquid constantly stirred to prevent it from burning. (Plin. xxii. 2; Cato, R. R. 103; Colum. xii. 19, 20, 21; Pallad. xi. 18; Dioscorid. v. 9.) These great vessels, for they were nothing else, were used extensively for giving body to poor wines and making them keep, and entered as ingredients into many drinks, such as the barruntaca potio, so called from its red colour, which was formed by mixing sapa with milk (Festus, s. v. Barruntica; compare Ov. Fast. iv. 732), and others described hereafter.

The whole of the mustum not employed for some of the above purposes was conveyed from the collecting tanks to the cella vinaria (σωλήθην, πίνεων, Geopon. vi. 2, 12), an apartment on the ground-floor or a little below the surface, placed in such a situation as to secure a moderate and equable temperature, and at a distance from dunghills or other objects emitting a strong odour. (Varr. R. R. i. 13; Geopon. l. c.) Here were the dolia (πῖθοι), otherwise called seriae or cupae, long bell-mouthed vessels of earthenware, hooped tubs of wood being employed in cold climates only, Plin. xiv. 21) very carefully formed of the best clay and lined with a coating of pitch (πινευθήναι, píuta), the operation (πινευσιων, píuta) being usually performed while the wine was warm. They were normally sunk (déssopa, defissas, demera) one-half or two-thirds in the ground; to the former depth if the wine to be contained was likely to prove strong, to the latter if weak, and attention was paid that they should repose upon a dry bed. They were moreover sprinkled with sea-water, fumigated with aromatic plants and rubbed with their ashes, all rank smelling substances, such as rotten leather, garlic, cheese, and the like, being removed, lest they should impart a tint to the wine. (Geopon. vi. 2, 3, 4; Cato, R. R. 23; Varr. i. 13; Colum. xii. 18, 23; Dig. 23. tit. 6. c. 1.) When the process of fermentation took place. They were not filled quite full, in order that the scum only might boil over, and this was also cleared off at regular intervals by skimming, and carried to a distance. The fermentation usually lasted for about nine days, and as soon as it had subsided and the mustum had become vinum, the dolia were closely covered, the upper portion of their interior surface as well as the lids (opercula doliorum) having been previously well rubbed over with a compound of defrutum, suffron, old pitch, mastic, and fir-cones. (Geopon. vi. 12; Cato, R. R. 107; Varro, i. 65; Colum. xii. 25, 30.) The opercula were taken off about once every thirty-six days, and oftener in hot weather, in order to cool and give air to the contents, to add any preparation required to preserve them sound, and to remove any impurities that might be thrown up. Particular attention was paid to the peculiar light scum, the άρθος ουνο (flos vini), which frequently appeared on the surface after a certain time, since it was supposed to afford indications by its colour and consistence of the quality of the wine. If red (πορτοφωλην), broad, and soft, it was a sign that the wine was sound: if glutinous, it was a bad symptom; if black or yellow, it denoted want of body; if white, it was a proof that the wine would keep well (μυκηνευν). Each time that the opercula were replaced they were well rubbed with fir-cones. (Geopon. vii. 15; Colum. xii. 38.) [Thysurus.]

The commoner sorts of wine were drunk direct from the dolium, and hence draught wine was called vinum doliare or vinum de cupa (Dig. 16. tit. 6. s. i. § 4; Varr. ap. Non. c. 2. n. 113), but the finer kinds, such as were yielded by choice localities or by vines and possessions of a body to bear keeping, were kept in large jars or amphorae, and in France in repositories designated by the names of glass, little tickets being attached from them indicating these particulars. (Petron. 34.) The amphorae were then stored up in cellas or repositories (apothecae, Colum. i. 6; Plin. Ep. ii. 17; horrea, Senec. Ep. 115; tabulata, Colum. xii. 41) completely distinct from the cella vinaria, and usually placed in the upper story of the house (whence descende, testa, Hor. Carm. iii. 21. 7; disepere horrea, iii. 28, 7) for a reason explained afterwards.

It is manifest that wines prepared and bottled, if we may use the phrase, in the manner described above must have contained a great quantity of dregs and sediment, and it became absolutely necessary to separate these before it was drunk. This was sometimes effected by fining with yelka
of eggs, those of pigeons being considered most ap-
propriate by the fastidious (Hor. Sat. ii. 4. 51), or
with the whites whipped up with salt (Geopon.
vii. 22), but more commonly by simply straining
through small cup-like utensils of silver or bronze
perforated with numerous small holes, and distin-
guished by the various terms, πρόσφωνος, νυμφιακός,
σάββατος, σαμβατικός, ζυγίτης, σαμπατικός, (Geopon.
vii. 37.) [Colum.] Occasionally a piece of linen cloth (δάκρυς, σακχάς) was placed over the πτέρυγας or column (Pollux, vi.
19, x. 75) and the wine (καυκόλας, σακχατός) filtered through.
(Martial, viii. 45.) The use of the sacchus was considered objectionable for all delicate wines, since it was believed to injure (Hor. Sat. ii. 4. 51) if not entirely to destroy their flavour, and in every instance to diminish the strength of the liquor.
For this reason it was employed by the dissipated in order that they might be able to swallow a greater quantity without becoming in-
toxticated. (Plin. xiv. 23, compare xxiii. 1, 24,
xix. 4. 19 ; Cic. ad Fam. ii. 8.) The double pur-
pose of cooling and weakening was effectually ac-
complished by placing ice or snow in the filter, which under such circumstances became a σακχατός
(Martial, xiv. 103) or sacchus nivarius (xiv. 104).
The wine procured from the μυστήμα τοίχου, which was always kept by itself, must have been the
finest and best, but a still inferior beverage was made by pouring water upon the husks and
stalks after they had been fully pressed, allowing them to soak, pressing again, and fermenting the liquor thus obtained. This, which was given to labourers in winter instead of wine, was the Σάφος or δευτέρος of the Greeks, the lora or vinum ope-
rarium of the Romans, and according to Varro (op. Num. xvii. 13) was, along with sapa, defrutum, and passum, the drink of elderly women. (See Athen. x. p. 440.) The Greeks added the
water in the proportion of 2 of the must pre-
viously drawn off, and then boiled down the mixture until had evaporated ; the Italians added the water in the proportion of 3 of the must, and threw in the skimnings of the defru-
tum and the dregs of the lacus. Another drink of the same character was the ἁσάρατος from wine-
lees, and we hear also of vinum pródelgacum given to the vintagers, which appears to have been manufactured from inferior and half-ripe fruit gathered before the regular period. (Geopon. vi. 3 ; Cato, N. R. 23, 57, 153 ; Varro, i. 54 ; Colum. xii. 40 ; Plin. xiv. 12.) We find an analogy to the above processes in the manufacture of cider, the best
wine was placed over the ἦλιος or κύριος, and passum
which flowed forth was measured, and an equal quantity of water added to the pulpy residuum, which was again pressed and the product employed for an inferior passum called secundarium, an ex-
pression exactly analogous to the δευτέρος mention-
ed above. The passum of Crete was most prized
(Mart. xiii. 106 ; Juv. xiv. 270), and next in rank were those of Cilicia, Africa, Italy, and the neigh-
bouring provinces. The kinds known as Potassium and Melampygion possessed the peculiar flavour of the grape and not that of wine, the Σεπηλίτης
from Galatia and the Halantum from Sicily in like manner tasted like must. The grapes most suitable for passum were those which ripened early, espe-
cially the varieties Απίασα (called by the Greeks Στιχή), Scirypula and Ψίθεια. (Geopon. vii. 18 ;
Colum. xii. 39 ; Plin. H. N. xiv. 11 ; Virg. Georg. ii. 93.)
The Greeks recognized three colours in wines: red (μελας), white, i.e. pale, straw-colour (λευκός), and brown or amber-coloured (μπόρος). (Athen. i. p. 32.) Pliny distinguishes four: ἄλως answering to Λευκός, Λευκός to μέλας, while μπόρος is sub-
divided into σαμπατικός and σιγαρέας, the former being doubtless applied to bright glowing wines like Tent and Burgundy, while the σηγερ to 27er (Plaut. Menaech. v. 6. 17) would resemble Port. In the ordinary Greek authors the epithet ἐφύδος is as common as μελας, and will represent the σαμπατικός.
We have seen that wine intended for keeping was racked off from the doli into amphorae.
When it was necessary in the first instance to transport it from one place to another it was car-
ried by travellers on a journey, it was contained in bags made of goat-skin (δασκόλ, υτερ) well pitched over so as to make the seams perfectly tight. The cut below, from a bronze found at Herculanenum (Mus. Borlon. vol. iii. tav. 28), exhibits a Silenus astride upon one of them. When the quantity was large a number of hides were sewed together, and the leathern tun thus
constructed carried from place to place in a cart, as

VINUM.
VINUM.
Among the ancients recourse was had to various devices for preventing or correcting acidity, heightening the flavour, and increasing the durability of the inferior kinds of wine. This subject was reduced to a regular system by the Greeks: Pliny mentions four authors who had written formal treatises, and the authors of the Geoponic collection, together with Cato, Varro, and Columella, supply a multitude of precepts upon the same topic. The object in view was accomplished sometimes by merely mixing different kinds of wine together, but more frequently by throwing into the dolia or amphorae various condiments, or seasonings (αρωματες, medicinae, conditurae). When two wines were mixed together those were selected which possessed opposite good qualities and defects. (Athen. i. p. 32. 6.)

The principal substances employed as conditurae were, 1. sea-water; 2. turpentine, either pure, or in the form of pitch (pix liquida), or resin (resina). 3. Lime, in the form of gypsum, burnt marble, or calcined shells. 4. Insipid must. 5. Aromatic herbs, spices, and gums; and these were used either singly, or cooked up into a great variety of complicated confections.

We have already seen that it was customary to line the interior of both the dolia and the amphorae with a coating of pitch; but besides this it was common to add this substance, or resin, in powder, to the must during the fermentation, from a conviction that it not only rendered the wine more full-bodied, but also communicated an agreeable bouquet, together with a certain degree of raciness or piquancy. (Plin. N. H. xiv. 25; Plutarch, Synop. v. 3.) Wine of this sort, however, when new (novitium) was accounted unwholesome and apt to induce headache and giddiness. From this circumstance it was denounced crupula, and was itself found to be serviceable in checking the fermentation of the must when too violent.

It must be remembered, that when the vinous fermentation is not well regulated, it is apt to be renewed, in which case a fresh chemical change takes place, and the wine is converted into vinegar (ετορ, acetum), and this acid, again, if exposed to the air, loses its properties and becomes perfectly insipid, in which form it was called vappa by the Romans, who used the word figuratively for a worthless blockhead.

Now the great majority of inferior wines, being thin and watery, and containing little alcohol, are constantly liable to undergo these changes, and hence the disposition to accecision was closely watched and combated as far as possible. With this view those substances were thrown into the dolia, which it was known would neutralize any acid which might be formed, such as vegetable ashes, which contain an alkali, gypsum, and pure lime, besides which we find a long list of articles, which must be regarded as preventives rather than correctives, such as the various preparations of turpentine already noticed, almonds, raisins steeped in must, parched salt, goats’ milk, cedar-cones, gall-nuts, blazing pine-torches, or red-hot irons quenched in the liquid, and a multitude of others. (Geopon. vii. 12, 15, 16, &c.) But in addition to these, which are all harmless, we find some traces of the use of the highly poisonous salts of lead for the same purpose (Geopon. vii. 19), a practice which produced the most fatal consequences in the middle ages, and was prohibited by a series of the most stringent enactments. (See Beckmann’s History of Inventions, vol. i. p. 396, Trans.)

Defrutum also was employed to a great extent; but being itself liable to turn sour, it was not used until its soundness had been tested by keeping it for a year. It was then introduced, either in its simple state, in the proportion of a sextarius to the amphor, that is, of 1 to 48, or it was combined with a great variety of aromatics, according to a prescription furnished by Columella (xii. 20). In this receipt, and others of the same kind, the various herbs were intended to give additional efficacy to the nourishing powers of the defrutum, and great pains were taken to prevent them from affecting the taste of the wine. But from a very early period it was customary to flavour wines highly by a large admixture of perfumes, plants, and spices. We find a spiced drink (ετορ αρωματωσ καταπευξησμεοσ) noticed under the name of τριμα by Athenaeus and the writers of the new comedy (Athen. i. p. 31, e.; Pollux, vi. 18), and for the whole class Pliny has the general term aromatis (xiv. 19, § 5).

There was another and very numerous family of wines, entitled αλου γυσεων, into which drugs were introduced to produce medicinal effects. Such were vinus marrubii (horehound) for the scillites (squill-wine), to assist digestion, promote expectoration, and act as a general tonic, oblationis (wine of wormwood), corresponding to the modern vermouth, and above all the myrtites (myrtle-berry-wine), which possessed innumerable virtues. (Columell. 32, 33; Geopon. viii. 1, &c.)

Pliny, under the head of vinus fictilia, includes not only the αλου γυσεων, but a vast number of others bearing a strong analogy to our British home-made wines, such as cowalip, ginger, elder-berry, and the like; and as we manufacture Champagne out of gooseberries, so the Italians had their imitations of the costly vintages of the most favoured Asiatic isles. These vinus fictilia show in the illustration on page 90. (Compare Lucian, Lex. 6.)
were, as may be imagined, almost countless, every variety of fruit, flower, vegetable, shrub, and perfume being put in requisition: figs, cornels, medlar, mulberries, parsley, rushes, laurels, jujupes, caseia, cinnamon, saffron, mard, malabathrum, afford but a small sample. It must be remarked, that there was one material difference between the method followed by the Greeks and that adopted by the Romans in cooking these potions. The former included the drug, or whatever it might be, in a bag, which was suspended in a jar of wine, and allowed to remain as long as was thought necessary; the latter mixed the flavouring ingredient with the sweet must, and fermented them together, thus obtaining a much more powerful extract; and this is the plan pursued for British wines, except that we are obliged to substitute sugar and water for grape-juice. (Geopon. viii. 32, 33, 34; Plin. H. N. xiv. 19; Colum. ll. cc. Cato, R. R. 114, 115.)

But not only were spices, fragrant roots, leaves, and gums, steeped in wine or incorporated during fermentation, but even the precious perfumed essential oils (anguenta) were mixed with it before it was drunk. The Greeks were exceedingly particular to this kind of drink. (Aelian, V. H. xii. 31.) We also learn from Pliny (H. N. xiv. 53) that it was called the *mykophyas*, which seems to be the same with the *muolys* of Posidippus (Athen. i. p. 32, b.), the *muolys* of Hesychius, the *muylos* of Pollux (vi. 2), and the *murrins* of Plautus (Pseudol. ii. 4. 50; compare *narda* amphonkar, Miles Gl. iii. 2. 11; Festus, s. v. *Murrata potio* and *Murrina*). The Romans were not slow to follow the example set to Theophrastus (Athen. i. p. 32, a.) the wine required to be kept for twenty or twenty-five years (Plin. xiv. 10.) Many of the Italian varieties, however, as we shall see below, were, ns may be imagined, almost countless, every *vinum* of Isidorus (Orig. xx. 3, § 11), according to the Greek authorities (Geopon. viii. 20.), was made of must evaporated on half of its original bulk, Attic honey being added in the proportion of one to ten. This, therefore, was merely a very rich fruit syrup in no way allied to wine. The virtues of *mulsum* are detailed by Pliny (H. N. xxi. 4; compare Geopon. l. c.) it was considered the most appropriate draught upon an empty stomach, and was therefore swallowed immediately before the regular business of a repast began (Hor. Sat. ii. 4. 25; Senec. Ep. 122), and hence the white (*muolata*) coming before the cup of mulsum was called the *promounaios*. (Cic. ad Fam. ix. 16 and 20.) We infer from Plautus (Bacch. iv. 9. 149; compare Liv. xxxviii. 55) that *mulsum* was given at a triumph by the Emperor to his soldiers.

*Mulsum* (sc. *vinum*) or *sivinule* is perfectly distinct from *mulus* (sc. *aqua*). The latter, or *mead*, being made of honey and water mixed and fermented, is the *melikeraton* or *thepsiloi* of the Greeks (Geopon. viii. 28; Dioscorid. v. 9; Isidor. Orig. xx. 3, § 10; Plin. H. N. xiv. 20), although *pollux confonensis* (vi. 2) *melikeraton* with *sivinule*. Again, *thepsiloi* (Geopon. viii. 27) or *hydromelum* (Isidor. Orig. xx. 3, § 10) is the same with *muoli* (Plin. H. N. xiv. 20) was a compound of vinegar, honey, salt, and pure water, boiled together and kept for a long time; *thapsiloi* was a mere confec of expressed juice of rose-leaves and honey. (Geopon. viii. 29.)

The ancients considered old wine not only more grateful to the palate but also more wholesome and invigorating (Athen. i. p. 26, a.; ii. p. 36, e.), and curiously enough, Pliny supposes that it grew more strong and fiery by age in consequence of the dissipation of the watery particles (*H. N.* vii. 3). Generally speaking the Greek wines do not seem to have required a long time to ripen. Nestor in the Odyssee, indeed, drinks wine ten years old (iii. 391), and wine kept for sixteen years is incidentally mentioned by Athenæus (xiii. p. 584, b.); but the connoisseurs under the Empire pronounced that all transmarine wines arrived at a moderate degree of maturity (*ad vetustatem medianum*) in six or seven. (Plin. xiv. 16.) Many of the Italian varieties, however, as we shall see below, required to be kept for twenty or twenty-five years before they were drinkable. (Plin. xiv. 19; compare Liv. xxxviii. 55; accord *Sat.* iv. 9, 3.) Thus it was customary to expose the amphorae for some years to the full fervour of the sun's rays, or to construct the *apodokeuse* in such a manner as to be exposed to the hot air and smoke of the bath-furnaces (Colum. i. 6), and hence the name *fumaria* applied to such apartments, and the *fumario* of Pollux (ii. 4. 50) or *viti* (orig. xxviii. 55) was a mere confec of expressed juice of rose-leaves and honey. (Geopon. viii. 29.)

This leads us on to notice the most generally popular of all these compound beverages, the *sivinule* of the Greeks, the *mulsum* of the Romans. This was of two kinds; in the one honey was mixed with wine, in the other with must. The former was said to have been invented by the legendary hero Aристæus, the first cultivator of bees (Plin. iv. 4. 4), and was considered most perfect and palatable when made of some old rough (*amsterum*) wine, such as Masic or Falernian (although Horace objects to the latter for this purpose, Sat. ii. ii. 4. 24), and new Attic honey. (Mart. iv. 13, xiii. 108; Dioscor. v. 16; Macrobr. Sat. vii. 12.) The proportions as stated in the Geoponie collection were four, by measure, of wine to one of honey, and various spices and perfumes, such as myrrh, cassia, costum, malabathrum, mard, and pepper, might be added. The second kind, the *oemoneilem* of Isidorus (Orig. xx. 3, § 11), according to the Greek authorities (Geopon. viii. 20), was made of must evaporated or reduced to half, Attic honey being added in the proportion of one to ten. This, therefore, was merely a very rich fruit syrup in no way allied to wine. The virtues of mulsum are detailed by Pliny (H. N. xxi. 4; compare Geopon. l. c.) it was considered the most appropriate draught upon an empty stomach, and was therefore swallowed immediately before the regular business of a repast began (Hor. Sat. ii. 4. 25; Senec. Ep. 122), and hence the white (muolata) coming before the cup of mulsum was called the promulaios. (Cic. ad Fam. ix. 16 and 20.) We infer from Plautus (Bacch. iv. 9. 149; compare Liv. xxxviii. 55) that mulsum was given at a triumph by the Emperor to his soldiers.
not conducted with care, and the amphorae not stopped down perfectly tight, a disagreeable effect would be produced on the contents, and it is in consequence of such carelessness that Martial pours forth his malcontents on the funerals of Marseilles (x. 36, iii. 92, xii. 123).

The year B.C. 121 is said to have been a season singularly favourable to all the productions of the earth; from the great heat of the autumn the wine was of an unprecedented quality, and remained long celebrated as the Vinum Opimianum, from L. Opimius the consul of that year, who sowed C. Gracchus. A great quantity had been treasured up and sedulously preserved, so that samples were still in existence in the days of the elder Pliny, nearly two hundred years afterwards. It was reduced, he says, to the consistency of rough honey, and, like other very old wines, so strong and harsh and bitter as to be undrinkable until largely diluted with water. Such wines, however, he adds, were useful for flavouring others when mixed in small quantities.

Our most direct information with regard to the price of common wine in Italy is derived from Columella (iii. 3. § 12), who reckons that the lowest market price of the most ordinary quality was 300 sesterces for 40 urnas, that is 1.5 sesterces for the amphora, or 6d., a gallon nearly. At a much earlier date, the triumph of L. Metellus during the first Punic war (a. D. 250), wine was sold at the rate of 3 asses the amphora (Varro, ap. Plin. ii. N. viii. 4), and in the year B.C. 89 the censors P. Licinius Crassus and L. Julius Caesar issued a proclamation that no one should sell Greek and Aminian wine at so high a rate as 8 asses the amphora; but this was probably intended as a prohibition to their being sold at all, in order to check the taste then beginning to display itself. In fact, we find in his own time they positively forbade the use of exotic wines, and ordered it particularly unpalatable to the Athenians.

But the wines of greatest renown during the brilliant period of Grecian history and after the Roman conquest were grown in the islands of Thasos, Lesbos, Chios and Cos, and in a few favoured spots on the opposite coast of Asia (Strabo, xiv. p. 637), such as the slopes of Mount Tmolus, the ridge which separates the valley of the Hermus from that of the Caýster (Plin. v. 29; Virg. Georg. ii. 97; Ovid. Med. vi. 15), Mount Messogis, which divides the tributaries of the Caýster from those of the Maeander (Strabo, xiv. p. 656), the volcanic region of the Càtaceae (Vitr. iii. 3) which still retains its fame (Keppell's Travels, ii. p. 335), the environs of Ephesus (Dioscorid. v. 12), of Chersonesus, and of Clazomenae. (Plin. iv. 9.) Among these the first place seems to have been by general consent conceded to the Chian, of which the most delicious varieties were brought from the heights of Ariasion, in the central parts (Virg. Eccl. v. 71; Plin. ii. N. xiv. 7; Silius, vii. 210), and from the promontory of Phaene at the southern extremity of the island. (Virg. Georg. ii. 97.) The Thasians and Lesbians occupied the second place, and the Coun disputed the palm with them. ( Athen. i. p. 28, 29, &c.) In Lesbos the most highly prized vineyards were around Mytilene (Athen. i. p. 30, b, iii. p. 86, e; p. 92, d.), and Methymna. (Athen. viii. p. 363, b; Pausan. x. 19; Virg. Georg. ii. 89; Ovid. Ar. Arm. i. 57.) Pliny (xiv. 9), who gives the preference over all others to the Clazomenæans, says that the Lesbian had naturally a taste of salt water, while the epithet "innocens," applied by Horace, seems to point out that it was light and wholesome.

It may here be observed that there is no foundation whatever for the remark that the finest Greek wines, especially the products of the islands in the Aegean and Ionian seas, belonged for the most part to the luscious sweet class. The very reverse is proved by the epithets αὐστηρὸς, σκληρός, λεπτός, and the like, applied to a great number, while γλυκὸς and γλυκάδας are designations comparatively rare, except in the vague language usually standing alone without any distinguishing epithet. The wine of most early celebrity was that which the minister of Apollo, Maron, who dwelt upon the skirts of Thracian Ismarus, gave to Ulysses. It was red (νίφων), and honey-sweet (μεληνή), so precious, that it was unknown to all in the mansion, save the wife of the priest and one trusty housekeeper; so strong, that a single cup was mingled with twenty of water; so fragrant, that even when thus diluted it diffused a divine and most tempting perfume. (Od. ix. 203.) Pliny (H. N. xiv. 6) asserts that wine endowed with similar noble properties was produced in the same region in his own day. Homer mentions also more than once (H. xii. 638, Od. x. 234) Πραμνιαῖα οίνοι (ol'os Hyppocastani), an epithet which is variously interpreted by certain different writers. (Athen. i. p. 26, f.) In after times a wine bearing the same name was produced in the island of Icaria, around the shrine of Cybele, and in Lesbos. (Athen. i. p. 30, e &c.; Plin. xiv. 6.) The Pramnian of Icaria is characterized by Eparchides as dry (ἐκθρῆς), harsh (ἀστρηρός), astringent and remarkably strong, qualities which, according to Aristophanes, rendered it particularly unpalatable to the Athenians. (Athen. i. p. 30, a.)

But the wines of greatest renown during the brilliant period of Grecian history and after the Roman conquest were grown in the islands of Thasos, Lesbos, Chios and Cos, and in a few favoured spots on the opposite coast of Asia (Strabo, xiv. p. 637), such as the slopes of Mount Tmolus, the ridge which separates the valley of the Hermus from that of the Caýster (Plin. v. 29; Virg. Georg. ii. 97; Ovid. Med. vi. 15), Mount Messogis, which divides the tributaries of the Caýster from those of the Maeander (Strabo, xiv. p. 656), the volcanic region of the Càtaceae (Vitr. iii. 3) which still retains its fame (Keppell's Travels, ii. p. 335), the environs of Ephesus (Dioscorid. v. 12), of Càni- dus (Athen. i. p. 29, a.), of Miletus (Athen. l. c.), and of Clazomenæae. (Plin. iv. 9.) Among these the first place seems to have been by general consent conceded to the Chian, of which the most delicious varieties were brought from the heights of Ariasion, in the central parts (Virg. Eccl. v. 71; Plin. ii. N. xiv. 7; Silius, vii. 210), and from the promontory of Phaene at the southern extremity of the island. (Virg. Georg. ii. 97.) The Thasians and Lesbians occupied the second place, and the Coun disputed the palm with them. (Athen. i. pp. 28, 29, &c.) In Lesbos the most highly prized vineyards were around Mytilene (Athen. i. p. 30, b, iii. p. 86, e; p. 92, d.), and Methymna. (Athen. viii. p. 363, b; Pausan. x. 19; Virg. Georg. ii. 89; Ovid. Ar. Arm. i. 57.) Pliny (xiv. 9), who gives the preference over all others to the Clazomenæans, says that the Lesbian had naturally a taste of salt water, while the epithet "innocens," applied by Horace, seems to point out that it was light and wholesome.

It may here be observed that there is no foundation whatever for the remark that the finest Greek wines, especially the products of the islands in the Aegean and Ionian seas, belonged for the most part to the luscious sweet class. The very reverse is proved by the epithets αὐστηρός, σκληρός, λεπτός, and the like, applied to a great number, while γλυκὸς and γλυκάδας are designations comparatively rare, except in the vague language
of poetry. "Vinum omne dulce minus odoratum," says Pliny (H. N. xiv. 11), and the ancients appear to have been fully sensible that sweet wines could not be swallowed either with pleasure or safety, except in small quantities. The mistake has arisen from not perceiving that the expressions ὄντως γλαύκος and ὄντως νῆσος are by no means necessarily synonymous. The former signifies wine positively sweet, the latter wine agreeable to the taste from the absence of acidity, in most cases indicating nothing more than sound vine.

It is well known that all the most noble Italian wines, with a very few exceptions, were derived from Latium and Campania, and for the most part grew within a short distance of the sea. "The whole of these places," says Strabo (v. p. 234), when describing this coast, "yields excellent wine; among the most celebrated are the Caecuban, the Fundanian, the Setinian, and so also are the Fa- lenarian, the Alban, and the Statinian." But the classification adopted by Pliny (xiv. 6) will prove our best guide, and this we shall follow to a certain extent.

In the first rank, then, we must place the Setinum which fairly deserves the title of Imperial, since it was the chosen beverage of Augustus and most of his courtiers. It grew upon the hills of Setia, above Forum Appii, looking down upon the Pompeian marshes. (Pendula Pompinitos quae spectat Setia campos, Mart. xiii. 112; see also vi. 86, ix. 3, x. 74, xiii. 112; Juv. v. 34; Silius, viii. 379; Plin. H. N. l. c.) Before the age of Augustus the Caecubum was the most prized of all. It grew in the poplar swamps bordering on the gulf of Amycla, close to Fundi. (Mart. xiii. 115.) In the time of Pliny its reputation was entirely gone, partly in consequence of the carelessness of the cultivators, and partly from its proper soil, originally a very limited space, having been cut up by the canal of Nero extending from Baiae to Ostia.

Falernus ager, full bodied and heady, not arriving at maturity until it had been kept for many years. (Plin. xxiii. 21), and sharp (φασάριον), it was invigorating (νερίς οὔτε), and in perfection after being kept for fifteen years. (Plin. H. N. iii. 23; Mart. xiii. 109; Hor. Sat. ii. 8, 14; Juv. v. 33; Athen. i. p. 26, d.) Here too we place the Sarrentinae, from the promontory forming the southern horn of the bay of Naples, which was not drinkable until it had been kept for five and twenty years, for being destitute of richness (ἀμπερίας) and very dry (φασάριον), it required a long time to ripen, but was strongly recommended to convalescents, on account of its thinness and wholesomeness. Galen, however, was of opinion that it agreed with those only who were accustomed to use it constantly; Tiberius was wont to say that the physicians had conspired to dignify what was only generous vinegar; while his successor, Caligula, styled it nobilis cuppa. (Plin. H. N. c.; Athen. i. c.)

Of equal reputation were the Caecuban, from the hills which formed the boundary between Latium and Campania, although somewhat harsh, as would seem, from the precautions recommended by the epicure in Horace (Sat. ii. 4, 51: compare Carm. i. 19, i. 7, 21, iii. 21; Mart. xiii. 111; Silius, vii. 207), and the Gaeronum, from the ridge above Baiae and Puteoli, produced in small quantity, but of very high quality, full bodied (εὖρως) and thick (σέριος). (Athen. i. c.; Plin. H. N. iii. 5; Hor. iii. 5.) In the same class are to be included the Caelenum from Cales, and the Fundaenum from Fundi. Both had formerly held a higher place, but vineyards, moralizes Pliny, "as well as states, have their periods of rise, of glory, and of fall." The Caelenum was light (κούφιος), and better for the stomach than Falernian; the Fundaenum was full bodied (εὖρως) and nourishing, but apt to attack both stomach and head; therefore little sought after at banquets. (Strabo, v. p. 234; Athen. i. p. 27, a; Hor. Carm. i. 31, 9; Juv. i. 69; Mart. xiii. 111, 114.) This list is closed by the Veliternianum, Privernatium, and Signinum, from Velitrae, Privernum, and Signia, towns on the Volscian hills; the first was a sound wine, but had this peculiarity, that it always tasted as if mixed with some foreign substance; the second was thin and pleasant; the last was looked upon only in the light of a medicine, valuable for its astringent qualities. (Athen. i. p. 27, b; Plin. l. c.; Mart. xiii. 116.) We may safely bring in one more, the Formisinum, from the gulf of Caieta (Locastrensis Bacchus in amphora. Hor. Carm. iii. 16, 34), associated by Horace with the Caecuban, Falernian, and Calenian (Hor. Carm. i. 20, iii. 16), and compared by Galen (op. Athen. i. p. 26).

(Plin. i. p. 31, e.), prepared in greatest perfection
near Beneventum, from the κατάνεια (smoke-wine) of Phito the comic poet.

On the other hand, the οὔπερρια, on whose
divine fragrance Hermippus descants in such glowing
language (Athen. i. p. 29, e.), is simply some
rich wine of great age, "toothless, and sere, and
wondrous old." (ὁδοράσεις οὖν ἐκεῖν, ὕδε σμύρρω

γέρας γε δαμιοίναι, Athen. x. p. 441, d.; see Eustath. ad Hom. Od. i. 340; Casaub. ad Athen.
i. p. 29.) The origin of the title δόθρουσις is some
what more doubtful: some will have it to denote
wine from a sweet-smelling spot (Suid. s. v.); others
more reasonably refer it to the "bouquet" of the
wine itself (Hesych. s. v.); according to Phanias of
Eresus, in one passage, it was a compound, formed
by adding one part of sea-water to fifty of must,
although, in another place, he seems to say, that it
was wine obtained from grapes gathered before they
were ripe, in which case it might resemble Cham-
pagne. (Athen. i. p. 32, a.; compare p. 462, e.)

Those who desire more minute details upon this
very extensive subject may consult the Geoponic
Collection, books iii. to viii. inclusive; the whole
of the 14th book of Pliny's Natural History, to
gether with the first thirty chapters of the 23d ;
the 12th book of Columella, with the commentary
of Schneider and others; the 2d book of Virgil's
Georgics, with the remarks of Heyne, Voss, and
the old grammarians; Galen, i. 9, and xii. 4;
Julia of the dictator Caesar on this subject, which is not possible to describe it very accurately. The Lex was imposed the penalty of aquae et ignis interdictio. It was also a case of Vis Privata, when persons combined to prevent another being brought before the praetor. The Senatus-consultum Volusianum extended the penalties of the Lex to those who maintained another in his suit, with the view of sharing any advantage that might result from it. The penalties of this Lex were the loss of a third part of the offender’s property; and he was also declared to be incapable of being a Senator or Decurio, or a Judex: by a Senatus-consultum, the name of which is not given, he was incapacitated from enjoying any honour, quasi infamis. (This matter is discussed at length by Rein, Das Criminalrecht der Romer, p. 732.)

VIRGA, dim. VIRGULA (pædœs), a rod or wand. This was in many cases the emblem of a certain rank or office; being carried, for example, by the Salii, by a judge or civil officer (see woodcut, p. 98), a herald [CADUCEUS] (Non. Marc. p. 528; Ovid. Met. i. 710), and by the Tricliniorchæa [TRICLINIUM]; or any other person who had to exercise authority over slaves. (Senec. Epist. 47.) The use of the rod (pædœs; acta, xvi. 22) in the punishment of Roman citizens was abolished by the Lex Porcia (p. 696, a). In the FASCIAS a number of rods were bound together.

The wand was also the common instrument of magical display, as in the hand of Circe (Horn. x. 238, 293, 318, 389), and of Minerva (xvi. 172). The wand was also the common instrument of magic. A singular amount of ignorance and scepticism long prevailed with regard to the knowledge possessed by the ancients in the art of glass-making. Some asserted that it was to be regarded as exclusively a modern invention, while others, unable altogether to resist the mass of evidence to the contrary, contented themselves with believing that the substance was known only in its coarsest and rudest form. It is now clearly demonstrated to have been in common use at a very remote epoch. Various speculations on the existence prove that the manufacture had in some branches reached a point of perfection to which recent skill has not yet been able to attain; and although we may not feel disposed to go so far as Winckelmann (i. c. 2. § 20), who contends that it was used more generally and for a greater variety of purposes in the old world than among ourselves, yet when we examine the numerous collections arranged in all great public museums, we must feel convinced that it was employed as an ordinary material for all manner of domestic utensils by the Egyptians, Greeks, and Romans.

We find the process of glass-blowing distinctly represented in the paintings of Beni Hassan, which if any faith can be reposed in the interpretation of hieroglyphics according to the phonetic system, were executed during the reigns of Osirtasen the First, the contemporary of Joseph, and his immediate successors, while a glass bead has been found at Thebes bearing the name of a monarch who lived 3503 years ago, about the time of the Jewish Exodus. Vases also, wine-bottles, drinking-cups, bugles, and a multitude of other objects have been discovered in sepulchres and attached to mummmies both in Upper and Lower Egypt, and although in most cases no precise date can be affixed to these relics, many of them are referred by the most com-
petent judges to a very early period. (Wilkinson, Ancient Egyptians, vol. iii. p. 88, &c.)

A story has been preserved by Pliny (H. N. xxxvi. 65), that glass was first discovered accidentally by some merchants who having landed on the Syrian coast at the mouth of the river Belus, and being unable to find stones to support their cooking-pots, fetched for this purpose from their ship some of the lumps of nitre which composed the cargo. This being fused by the heat of the fire, united with the sand upon which it rested and formed a stream of vitrified matter. No conclusion can be drawn from this tale, even if true, in consequence of its vagueness; but it probably originated in the fact recorded by Strabo (xvi. p. 758) and Josephus (B. J. ii. 9), that the sand of the district in question was esteemed peculiarly suitable for glass-making, and exported in great quantities to the workshops of Sidon and Alexandria, long the most famous in the ancient world. (See Hamberger and Michaelis on the Glass of the Hebrews and Phoenicians, Commentar. Soc. Gcol. vol. iv.; Heeren, Idem, i. 2, p. 94.) Alexandria sustained its reputation for many centuries; Rome derived a great portion of its supplies from this source, and as late as the reign of Aurelian we find the manufacture still flourishing. (Cic. pro Rabir. Post. 14; Strabo, I. c.; Martial, xi. 11, xii. 74, xiv. 115; Vopisc. Aen. 45; Boudet, Sur l’Arte de la Verrerie ne en Egypte: Description de l’Egypte, vol. i. p. 213.)

There is some difficulty in deciding by what Greek author glass is first mentioned, because the term ἁλάος, like the Hebrew word used in the book of Job (xxviii. 17) and translated in the LXX. by ἁλάος, unquestionably denotes not only artificial glass but rock-crystal, or indeed any transparent stone or stone-like substance. (Schol. ad Aristoph. Nab. 757.) Thus the ἁλάος of Herodotus (iii. 24), in which the Ethiopians excused the bodies of their dead, cannot be glass, although understood in this sense by Ctesias and Diodorus (ii. 15), for we are expressly told that it was dug in abundance out of the earth; and hence commentators have conjectured that this term was applied to rock-crystal or rock-salt, or amber, or oriental alabaster, or some bituminous or gummy product might be indicated. But when the same historian in his account of sacred crocodiles (ii. 69) states that they were decorated with ear-rings made of melted stone (ἀρτηματα τε λιθυα χυτα πα χρεστα ης τα ομηθετες), we may safely conclude that he intends to describe some vitreous ornament for which he knew no appropriate name. The σφερας which the hid σφεραγωγας αναθης of an Athenian inscription referred to a. c. 398 (Böckh, Corp. Inscrip. n. 150, § 50), together with the passage in Aristophanes (Acharn. 74) where the envoy boasts that he had been drinking with the great king “και ἐλλαινας ἐκποιιουτων” decide nothing, especially since in another comedy (Nab. 737) Strepsiades describes a ἁλάος, or burning-glass, as a transparent stone sold in the shops of apothecaries, and we know that any solid diaphanous substance ground into the form of a lens would produce the effect. Setting aside the two problems with regard to glass, attributed to Aristotle, as confessedly spurious, we at length find a satisfactory testimony in the works of his pupil and successor, Theophratus, who notices the circumstance alluded to above, of the fitness of the sand at the mouth of the river Belus for the fabrication of glass.

Among the Latin writers Lucretius appears to be the first in whom the word vitrum occurs (iv. 604, vi. 991); but it must have been well known to his countrymen long before, for Cicero names it, along with paper and linen, as a common article of merchandise brought from Egypt (pro Rab. Post. 14). Scenurus, in his aedileship (B. C. 58), made a display of it such as was never witnessed even in after-times; for the scena of his gorgeous theatre was divided into four tiers, of which the under portion was of marble, the upper of alabaster, and the middle compartment of glass. (Plin. H. N. xxxvi. 34, § 7.) In the poets of the Augustan age it is constantly introduced, both directly and in similes, and in such terms as to prove that it was an object with which every one must be familiar (e. g. Virg. Georg. iv. 396, Aen. vii. 759; Ovid. Amor. i. 6. 55; Prop. iv. 6. 37; Hor. Carm. iii. 13. 1). Strabo declares that in his day a small drinking-cup of glass might be purchased at Rome for half an as (xvi. p. 758; compare Martial, ix. 60), and so common was it in the time of Juvenal and Martial, that old men and women made a livelihood by trucking sulphur matches for broken fragments. (Juv. v. 48; Martial, i. 42, x. 3; Stat. Silv. i. 6. 73; compare Dion Cass. lvi. 17.) When Pliny wrote manufactories had been established not only in Italy, but in Spain and Gaul also, and glass drinking-cups had entirely superseded those of gold and silver (H. N. xxxvi. 60, 67), and in the reign of Alexander Severus we find vitreadi ranked along with curriers, coach-makers, goldsmiths, silversmiths, and other ordinary artificers whom the emperor taxed to raise money for his throne. (Lamprid. Aecr. Sec. 24.)

The numerous specimens transmitted to us prove that the ancients were well acquainted with the art of imparting a great variety of colours to their glass; they were probably less successful in their attempts to render it perfectly pure and free from all colour, since we are told by Pliny that it was considered most valuable in this state. It was wrought according to the different methods most practised, being fashioned into the required shape by the blowpipe, cut, as we term it, although ground (territur) is a more accurate phrase, upon a wheel, and engraved with a sharp tool, like silver (“aliud flatu figuratur, aliud torno teritur, aliud argenti modo coelestar.” Plin. H. N. xxxvi. 69).

Doubts have been expressed touching the accuracy of the last part of this statement; but since we have the most positive evidence that the diamond (adamant) was employed by engravers of gems (Plin. H. N. xxxvi. 15; Solin. 52; Isid. xvi. 13. 3), and might therefore have been applied with still greater facility to scratching the surface of glass, there is no necessity for supposing that Pliny was not himself aware of what he meant to say, nor for twisting his words into meanings which they cannot legitimately assume, especially since hieroglyphics and various other devices are now to be seen on Egyptian vases and trinkets which have been engraved by some such process. (Wilkinson, vol. iii. p. 105.) The diatresis of Martial (xii. 70) were glass cups cut or engraved according to one or other of the above methods. The process was difficult, and accidents occurred so frequently (Mart. xiv. 115) that the jurists found it necessary to define accurately the circumstances under which
the workman became liable for the value of the vessel destroyed. (Dig. 9. tit. 2. s. 27. § 29; see Sent. 1. 1. 1. 8.) The art of etching upon glass, now so common, was entirely unknown, since it depends upon the properties of fluoric acid, a chemical discovery of the last century. It is a glass cup contained within a sort of net-work, also of glass, to which it is attached. (Dig. 9. tit. 2. s. 27. § 29.) Its shape was ascertained to be composed of dark blue glass; a very rich tint, on the surface of which are delineated in relief several minute and elaborately wrought figures of opaque white enamel. It has been determined by persons of the greatest practical experience, that these figures must have been moulded separately, and afterwards fixed to the blue surface by a partial fusion; but the union has been effected with such extraordinary care and dexterity, that no trace of the junction can be observed, nor have the most delicate lines received the slightest injury. With such samples before us, we need not wonder that in the time of Nero a pair of moderate-sized glass cups with handles (petri) sometimes cost fifty pounds (His. sex millibus, Plin. H. N. xxxvi. 66). For a full description of the Portland Vase, see the eighth volume of the Archaeologia.

1. Bottles, vases, cups, and cinerary urns. A great number of these may be seen in the British Museum and all the principal continental cabinets, but especially in the Museo Borbonico at Naples, which contains the spoils of Herculaneum and Pompeii, and includes upwards of 2400 specimens of ancient glass. These sufficiently prove the taste, urgency, and consummate skill lavished upon such matters: many which have been shaped by the potter's wheel only, are remarkable for their graceful form and brilliant colours, while others are of the most delicate and complicated workmanship. A very remarkable object belonging to the last class, the property of the Trivulci family, is described in the notes to Winckelmann (i. c. 2. § 21) and figured here. It is a glass cup contained within a sort of network, also of glass, to which it is attached by a series of short and very fine glass props placed at equal distances from each other. Round the rim are several letters connected with the cup in the same manner as the network, and forming the words BIBE VIVAS MULTOS ANNOS. The characters of the inscription are green, the network is blue, the cup itself resembles opal, shades of red, white, yellow and blue predominating in turn according to the angle at which the light falls upon it. It was at first believed that this effect was the result of long interment beneath the ground; but it is much more likely to have been produced by the artist, for it corresponds precisely to the account given of two precious cups presented by an Egyptian priest to the emperor Adrian, and characterised as calices allusenses versicolorres. (Vopisc. Saturn. c. 8.) Neither the letters nor the network have been soldered to the cup, but the whole has been cut out of a solid mass, after the manner of a cameo, the marks of the wheel being still visible on the little props, which are more or less angular according as the instrument was able to reach them completely or not. But the great triumph of ancient genius in this department is the celebrated Portland Vase, formerly known as the Barberini Vase, which is now in the British Museum. It was found about three hundred years ago, at a short distance from Rome, in a marble coffin within a sepulchral vault, pronounced upon very imperfect evidence to have been the tomb of Alexander Severus. The extreme beauty of this urn led Montfaucon and other antiquaries to mistake it for a real sardonyx. Upon more accurate examination it was ascertained to be composed of dark blue glass, of a very rich tint, on the surface of which are delineated in relief several minute and elaborately wrought figures of opaque white enamel. It has been determined by persons of the greatest practical experience, that these figures must have been moulded separately, and afterwards fixed to the blue surface by a partial fusion; but the union has been effected with such extraordinary care and dexterity, that no trace of the junction can be observed, nor have the most delicate lines received the slightest injury. With such samples before us, we need not wonder that in the time of Nero a pair of moderate-sized glass cups with handles (petri) sometimes cost fifty pounds (His. sex millibus, Plin. H. N. xxxvi. 66). For a full description of the Portland Vase, see the eighth volume of the Archaeologia.

2. Glass Pastes presenting fac-similes, either in relief or intaglio, of engraved precious stones. In this way have been preserved exact copies of many beautiful gems, of which the originals no longer exist, as may be seen from the catalogues of Stosch, of Tassie, of the Orleans collection, and from similar publications. These were in demand for the rings of such persons as were not wealthy enough to purchase real stones, as we perceive from the phrase "vitae gemmis ex vulgi annulis." (Plin. H. N. xxxv. 80.) Large medallions also of this kind are still preserved, and bas-reliefs of considerable magnitude. (See Winckelmann, i. c. 2. § 27.)

3. Closely allied to the preceding were imitations of coloured precious stones, such as the carbuncle, the sapphire, the amethyst, and above all, the emerald. These counterfeiters were executed with such fidelity, that detection was extremely difficult, and great profits were realised by dishonest dealers who entrapd the unwary. (Plin. H. N. xxxvi. 75.) That such frauds were practised even upon the most exalted in station is seen from the anecdotc given by Trebellius Pollio of the whimsical vengeance taken by Gallienus (Gall. c. 12) on a rogue who had cheated him in this way, and collections are to be seen at Rome of pieces of coloured glass which were evidently once worn as jewels, from which they cannot be distinguished by the eye. (Plin. H. N. xxxvii. 26. 35. 75; Senec. Ep. 90; Isidor. Orig. xvi. 15. § 27; Beckmann, History of Inventions, vol. i. p. 199. Eng. Trans. 5d edit.)

4. One very elegant application of glass deserves to be particularly noticed. A number of fine stalks of glass of different colours were placed vertically, and arranged in such a manner as to depict upon the upper surface some figure or pattern, upon the principle of a minute mosaic. The filaments thus combined were then subjected to such a degree of heat as would suffice to soften without melting them, and were thus cemented together into a solid mass. It is evident that the picture brought out upon the upper surface would extend down through the whole of the little column thus formed, and hence if it was cut into thin slices at right
angles to the direction of the fibres, each of these sections would upon both sides represent the design which would be multiplied to an extent in recent years. A recent discovery brought from Egypt is shown on the frontispiece of the third volume of Wilkinson's work. Many mosaic pavements and pictures (opus mus- tum) belong to this head, since the cubes were frequently composed of opaque glass as well as marble, but these have been already discussed in p. 915 of this work.

5. Thick sheets of glass of various colours appear to have been laid down for paving floors, and to have been attached as a lining to the walls and ceilings of apartments in dwelling houses, just as scagliola is frequently employed in Italy, and occasionally in our own country also. Rooms fitted up in this way were called vittreone cameræ, and the panels vittreae quadraturæ. Such was the kind of decoration introduced by Scaurus for the scene of his theatre, not columns nor pillars of glass as some, nor bas-reliefs as others have imagined. (Plin. H. N. xxxvi. 64; Stat. Silv. i. 5. 42; Senec. Ep. 76; Vopisc. Firm. c. 3; Winckelmann, i. c. 2. § 21; Passeri, Lucernæ Fidiales, p. 67, tab. lixii.)

6. The question whether glass windows were known to the ancients has, after much discussion, been set at rest by the excavations at Pompeii, for not only have many fragments of flat glass been disinterred from time to time, but in the tepidarium of the public baths a bronze lattice came to light with some of the panes still inserted in the frame, so as to determine at once not only their existence, but the mode in which they were secured and arranged. (Mazois, Palais de Scaurus, c. viii. p. 97; Ruines de Pompéï, vol. iii. p. 77; Becker, Gallus, vol. ii. p. 29.) [Dumou, p. 432.]

7. From the time that pure glass became known, it must have been remarked how when darkened upon one side, it possessed the property of reflecting images. We are certain that an attempt was made by the Sidonians to make looking-glasses (Plin. H. N. xxxvi. 66), and equally certain that it must have failed, for the use of metallic mirrors, which are more costly in the first instance, which require constant care, and attain but imperfectly the end desired, was universal under the Empire. Respecting ancient mirrors, see Speculum.

8. A strange story with regard to an alleged invention of malleable glass is found in Petronius (c. 51), is told still more circumstantially by Cassius (vii. 21), and is alluded to by Pliny (H. N. xxxvi. 66), with an expression of doubt, however, as to its truth. An artist appeared before Tiberius with a cup of glass. This he dashed violently upon the ground. When taken up it was neither broken nor cracked, but dinted like a piece of metal. The man then produced a mallet, and hammered it back into its original shape. The emperor inquired whether any one was acquainted with the secret, and was answered in the negative, upon which the order was given that he should be instantly beheaded, lest the precious metals might lose their value, should such a composition become generally known. [W. R.]

VITTA. or plural VITTAE, a ribbon or fillet, is to be considered. I. As an ordinary portion of female dress. II. As a decoration of sacred persons and sacred things.

1. When considered as an ordinary portion of female dress, it was simply a band encircling the head, and serving to confine the tresses (crinæs vittæ) the ends, when long (longae tæniae vittæ), hanging down behind. (Virg. Aen. vii. 351, 443; Ovid. Met. ii. 413, iv. 6; Isidor. xix. 31. § 6.) It was worn (1) by maidens (Virg. Aen. ii. 168; Prop. iv. 11. 34; Val. Placc. viii. 6; Serv. ad Virg. Aen. ii. 153); (2) by married women when the vitta assumed on the nuptial day being of a different form from that used by virgins. (Prop. iv. 3. 15, iv. 11. 34; Plaut. Mil. Pul. iii. 1. 194; Val. Max. v. 2. § 1.)

The Vitta was not worn by libertines even of fair character (Tibull. i. 6. 67), much less by mistresses; but it was looked upon as an insigne pudoris, and, together with the stola and infula, served to point at once at the freeborn matron. (Ovid. A. A. i. 31, R. A. 356, Trist. ii. 247, Ep. ex Pont. iii. 3. 51.)

II. When employed for sacred purposes, it was usually twisted round the infula (Infula), and held together the loose flock of wool. (Virg. Geor. iii. 487, Aen. x. 537; Isidor. xix. 30. § 4; Serv. ad Virg. Aen. x. 536; the expression of Lucan v. 142, &c. is obscure.) Under this form it was employed as an ornament for (1.) Priests, and those who offered sacrifice. (Virg. Aen. ii. 221, vi. 637, x. 537; Tacit. Aen. i. 67.) (2.) Priestesses, especially those of Vesta, and hence vittate sacerdotes for a Vestal, κατ’ ἐξοντιον (Virg. Aen. vii. 418; Ovid. Fast. iii. 30, vi. 437; Juv. iv. 9, vi. 50.) (3.) Prophets and poets, who may be regarded as priests, and in this case the Vittae were frequently intertwined with chaplets of olive or laurel. (Virg. Aen. iii. 81, vi. 655; Stat. Silv. ii. 1. 26; Achill. i. 11, Theb. iii. 456; (4.) Statues of deities. (Virg. Aen. ii. 168, 296; Juv. vi. 50; compare Stat. Silv. iii. 3. 3.) (5.) Victims decked for sacrifice. (Virg. Geor. iii. 487, Aen. i. 133, 156, v. 366; Ovid. Ep. ex Pont. iii. 2. 74, Stat. Achill. ii. 301.) (6.) Altars. (Virg. Ecl. viii. 64, Aen. iii. 64; (7.) Temples. (Prop. iv. 9. 27; compare Tacit. Hist. iv. 53;) (8.) The ikerygia of suppliants. (Virg. Aen. vii. 237, viii. 128.)
UMBRACULUM.

UNCIA.

1213

The sacred vittae, as well as the infulae, were of the aliens (/ue'rotKoi) at Athena had to carry
made of wool, and hence the epithets lanea (Ovid. parasols after the Athenian maidens at the PanaFasr. iii. 30) and mollis. (Virg. Ed. viii. 64.) thenaea, as is mentioned under HYDRIAPHORIA.
i ney were white (niveae, Virg. Georg. iii. 487 ; The parasols of the ancients seem to have been
Ovid. Met. xiii. 643; Stat. Theb. iii. 466), or pur- exactly like our own parasols or umbrellas in
nle \mmiceae. Prop. iv. 9. 27), or azure (caeruleae) form, and could be shut up and opened like ours.
when wreathed round an altar to the manes. (Virg. (Aristoph. Equit. 1348 ; Schol. ad loc.; Ovid. Ar.

Am. ii. 20.9.) They are often represented in paint
ings on ancient vases: the annexed woodcut is
taken from Millin's Peintures de Vases Antiques,
vol. i. pi. 70. The female is clothed in a long
Chiton or Diploidion [TUNICA, p. 1172, b.], and
[W. R.]
•-' " ;
has a small Himation, which seems to have fallen
ULNA (toAeVrj), properly the fore-arm from off her shoulders.

Vitta is also used in the general sense of a string
mr tying up garlands (Plin. //. N. xviii. 2 ; Isidor.
xix = 31, 6), and vittae loreae for the leathern straps
nr braces hv which a machine was worked. (Plin.

the snouiaer to the wrist, is also used for the
whole arm. and even for the whole span of both
arms : and hence, as a measure of length, it apnears to he used with different significations. In
the chief passages in which it occurs (Virg. Buc.
iii. 105, Georg, iii. 355 ; Ovid, Metam. viii. 750 ;
Hor. Epod. iv. 8) there is nothing to determine its
lengtn, except, perhaps, in the last quoted passage,
where, however, we may easily suppose the exag
geration of caricature. Servius, however, in his
note on the first of these passages, says that it was
ihe space between the outstretched hands, that is,
the same as the Greek opyvla of six feet; and this
is evidently its meaning in Pliny (ff.N. xvi. 40.
a. 76, 32. s. 57), where it is important to observe
thai crassitudo refers to the circumference of the
trunk, not- to its diameter. Later writers use it
as equivalent to the cubit or a modification of it,
and hence the modern ell. (Pollux, ii. 140 ; Solin.

UMBRA'CULUM, UMBELLA ((ntuiSeiov,
ffKidSiov. ffKtaSiffKT)) a parasol, was used by Greek
and Roman ladies as a protection against the sun.

They seem not to have been carried generally by
the ladies themselves, but by female slaves who
held them over their mistresses. The daughters

It was considered a mark of effeminacy for men
to make use of parasols. (Anacreon, ap. Atlien. xii.
p. 534, a.) The Roman ladies used them in the
amphitheatre to defend themselves from the sun
or some passing shower (Mart. xiv. 28), when the
wind or other circumstances did not allow the ve
larium to be extended. To hold a parasol over a
lady was one of the common attentions of lovers
(Mart. xi. 73 ; Ovid. /. c.), and it seems to have
been very common to give parasols as presents.
(Juv. ix. 50.)
Instead of parasols the Greek women in later
times wore a kind of straw hat or bonnet,
called Sto\la. (Pollux, vii. 174 ; compare x. 127 ;
Theocr. xv. 39.) The Romans also wore a hat with
a broad brim (petasits) as a protection against the
sun. (Suet. Aug. 82 ; Dion Cass. lix. 7.) See Paciaudi, de Umbellae gestatione, Rom. 1752; Becker,
Charikles, vol. ii. p. 73.
UNCIA (oyKia, ovyicia, ovyyia), the twelfth
part of the As or LIBRA, is derived by Varro from
unus, as being the unit of the divisions of the as
(L. L. v. 171, Miiller). It was subdivided into
2 semunciae, 3 duellae, 4 sicilici, 6 sextulae, 24 scru
pula, and 144 siliquae. The values of the Uncia
and its subdivisions, in terms of our own weights,
will be found in the Tables.
In connecting the Roman system of weights and
money with the Greek, another division of the uncia
was used. When the drachma was introduced
into the Roman system as equivalent to the dena
rius of 96 to the pound [DENARIUS ; DRACHMA]
the uncia contained 8 drachmae, the drachma, 3
scrupula, the scrupulum 2 oboli (since 6 oboli made
up the drachma), and the obolos 3 siliquae (Kfparia.).
Therefore the uncia was divided into 8 drachmae,
24 scrupula, 48 oboli, 144 siliquae. In this division
we have the origin of the modern Italian system,
in which the pound is divided into 12 ounces, the
ounce into 8 drams, the dram into 3 scruples, and
the scruple into 6 carats. In each of these systems
1728 Keparia, siliquae, or carats make up the pound.
The uncial system was adopted by the Greeks
of Sicily, who called their obol Airpa (the Roman
libra), and divided it into twelve parts, each of
which they called oyttia. or ovyitia. (the Roman
uncia). In this system the byKia. was reckoned
equal to the %aAKouy. [LiTRA ; NUMMUS, pp.
813, 814.]
Miiller considers that the Greeks of Sicily, and
also the Romans themselves, obtained the uncial
system from the Etruscans. (Etrusker, i. p. 309.)
The Romans applied the uncial division to all
kinds of magnitude. [As.] In length the uncia
was the twelfth of a foot, whence the word inch,
in area the twelfth of a jugerum, in content the
twelfth of a sextarius, in time the twelfth of aa


hour. [As, sub fin.] Respecting the uncia as a coin see As, p. 141, a.

UNCTUA'RIUM. [BALNEAE, p. 190, b.

UNGUENTA, ointments, oils, or salves. The application of Unguenta in connection with bathing and the athletic contests of the ancients is stated under BALNEAE, Athletae, &c. But although their original object was simply to prevent the health and clarity of the human frame, they were, in later times, not only used medicinally, but also as a means of luxury. They were then not only employed to impart to the body or hair a particular colour, but also to give to them the most beautiful fragrance possible; they were, moreover, not merely applied after a bath, but at any time, to render one's appearance or presence more pleasant than usual. In short they were used then as oils and pomatums are at present.

The numerous kinds of oils, soap, powders, and other perfumes with which the ancients were acquainted, are quite astonishing. We know several kinds of soap which they used, though, as it appears, more for the purpose of painting the hair than for cleaning it. (Plin. H. N. xvii. 12, 51; Mart. viii. 23, 20, xiv. 26, 27.) For the same purpose they also used certain herbs. (Ovid. Amat. iii. 163, Amor. i. 14.)

Among the various and costly oils which were partly used for the skin and partly for the hair, the following may be mentioned as examples: meseidium, megesium, metopium, amaranhum, Cyprium, susium, mardinum, spicatum, lasmineum, nardum, and coccus-oil, which was considered the most costly. (Becker, Gallus, ii. p. 27.) In addition to these oils the ancients also used various kinds of powder as perfumes, which by a general name are called Diaspassato. To what extent the luxury of using fragrant oils and the like was practised, is still seen in some ancient works of art representing ladies in the act of painting themselves. Sometimes they are seen painting themselves with a brush and sometimes with their fingers. (Böttiger, Sabina, ii. tab. ix. and i. tab. vi.)

The Romans, towards the end of the republic and under the empire, were no less fond of painting themselves than the Greeks. (Horat. Epod. xii. 10; Ovid. Amor. iii. 199; Plin. H. N. xxxiii. 8.) The red colour was at Rome, as in many parts of Greece, prepared from a kind of moss which the Romans called fucus (the roccella of Linnaeus), and from which afterwards all kinds of paint were called fucus. Another general term for paint is aeratum. For embellishing and cleaning the complexion the Greeks as well as the Romans used a substance called oseipum (see the comment on Suidas, s. v. OEIPUM), which was prepared of the wool taken from those parts of the body of a sheep in which it perspired most. Another remedy often applied for similar purposes consisted of pounded excrementa of the Egyptian crocodiles. (Horat. and Plin. i. c.)

Respecting the subjects here mentioned and everything connected with the toilet of the ancients, see Böttiger, Sabina oder Morgenscenen im Putszinnern einer röthichen Römerin. Leipzig. 1806. 2 vols.

[AS, sub fin.]

UNIVER'ITAS. The philosophical division of things (Res) in the widest sense of the term, is into things Corporeal (Res Corporales), objects or sense, and things Incorporeal (Res Incorportales), objects of intellect only (Cic. Top. 5.), and this division was applied by the Roman Jurists to things as the objects of Rights. When a man said of a thing "meum est," it might be either a Corporeal thing, as a piece of land or an animal; or it might be an Incorporeal thing, as a Jus utendi fruendi. Obligationes were also classed among Incorporeal things. But this is not a division of things, in the limited sense, for things in that sense are always Corporeal; it is a division of things in the wider sense.

In a thing Corporeal we may consider that there are parts, in reference to which the whole is a Universitas or a unit. If then the division into parts is made with reference to the subtraction of a part to a person's will, the part is viewed as a whole.
as a thing in itself, that is, the whole is viewed
as a divisum; for division in this case is the same as
making many wholes out of one whole. It is
here assumed that the thing is in its nature di-
visible; as a piece of land which is capable of
being divided into parts.

But there are parts of things corporeal which
are not essential to the constitution of the whole, so that
the whole cannot be divided into parts without
the destruction of its nature; as a living animal
is being divided into parts.

Besides the corporeal parts into which a (cor-
poral) thing is divisible, we may suppose incorpo-
real, ideal parts of a corporeal thing (Dig. 45. tit.
3, s. 5). These parts are assumed fractions of a
whole, not corporeal parts. If such a part is the
object of thought, the whole corporeal thing is
viewed pro indiviso: the corporeal object of the will
is the thing, and the limitation of the will to a
part, is merely intellectual. Thus several persons
may be joint owners of a piece of undivided land,
but no one can say that any particular part belongs
to him. The case just put is that of a corporeal
whole and ideal parts. But the whole may be
ideal and the parts corporeal: as when there
is a number of independent corporeal things, not
materially connected, but they are intellectually
connected so as to form in idea a whole: thus a
flock of sheep is an ideal whole, and the several
sheep are the independent corporeal things. The
ideal whole is not composed of the several corporeal
things, for an ideal whole cannot be composed of
corporeal parts; but the ideal whole is a notion
which is formed with reference to some particular
purpose. It is necessary that the purpose of the
several things shall not be different from and inde-
pendent of the general purpose for which the notion
is formed, but subservient to it. Thus as separate
corporeal things may be often materially united to
form a new corpus; so the several independent
things which are not capable of such material
union, may be viewed as an ideal union or as a
universitas for some purpose; the flock of sheep
may be viewed as a whole, as a universitas, for
the purpose of ownership. Such a universitas, as
already observed, is independent of the several cor-
poreal things; it still exists if they are all changed.
Thus in a flock of sheep we have a fictitious, a
juristical whole or thing, and in the notion of
a universitas of persons we have a fictitious or jur-
istic person, which is still the same person
though all the individuals are changed. As a
number of sheep must have a name, a flock, in order
to be comprehended in one notion, so a juristic
person must have a name, as the universitas of
Fabri, or the city of Rome.
The term universitas then may have various
senses. 1. Both the universitas and the parts may
be corporeal (Dig. 50. tit. 16. s. 239. § 3): territo-
torium est universitas agrorum intra fines cuju-
sque civitatis. 2. The universitas may be cor-
poral, and the parts incorporeal, as when we imagine
fractional parts of a thing. 3. The universitas
may be incorporeal, and the parts corporeal, as a flock
of sheep. 4. The universitas and the parts may
both be incorporeal.
The fourth is the case when the notion of a
whole and its parts is not applied to things, but to
rights: thus a man's whole property may be
viewed as a unit, or as a universitas, which compre-
prehends the several rights that he has to the several
material things which form the ideal unit of his
property.

In this way we arrive at the correct notion of a
universitas of persons, which is the notion of a
fictitious person imagined for certain purposes, as
the notion of a universitas of independent material
things is the notion of a fictitious thing, imagined
for certain purposes.

A single person only can properly be viewed as
the subject of rights and duties; but the notion of
legal capacity may by a fiction be extended to an
imaginary person, to a universitas personarum, but
the fictitious person is not a unit composed of the
real persons: it is a name in which the several
persons or a majority may act for certain permanent
purposes. The purpose itself is sometimes the
fictitious person, as when property is given for
the service of religion, whether it is administered
by one person or several persons. Such juristical
persons have certain legal capacities as individuals
have, but their legal capacities are limited to
property as their object. It is true that the Ro-
mans often considered persons as a collective unity,
simply because they all exercised the same
functions; thus they speak of the Collegium
of the consuls (Collegium), and of the Tribuni
Plebis. In like manner they say that the Duum-
viri of a municipium are to be viewed as one person.
(Dig. 50. tit. 1, s. 25). But these fictitious
unities have only reference to Jus Publicum, and
they have no necessary connection with juristical
persons, the essential character of which is the
capacity to have and acquire property by some
name.

Juristical persons could be subjects of owner-
ship, Jura in re, obligationes, and hereditas:
they could own slaves and have the Patronatus;
but all the relations of Familia, as the Patria
Po-
testas and others of a like kind, were foreign to the
notion. But though the capacity to have property
is the distinguishing characteristic of Juristical
persons viewed with relation to Jus Privateum, the
objects for which the property is had and applied
may be any; and the capacity to have property
implies a purpose for which it is had, which is
often much more important than this mere capacity.
But the purposes for which Juristical persons have
property are quite distinct from their capacity to
have it. This will appear from all or any of the
examples hereinafter given.

The following are Juristical persons: (1) Civi-
tas; (2) Municipium: this term is more common
than Municipium, and comprehends both citizens
of a Municipium and a Colony: it is also used
when the object is to express the Municipium as
a whole opposed to the individual members of it.
(3) Respublica. In the republican period, when
used without an adjunct, Respublica expressed
Rome, but in the old jurists it signifies a Civitas
dependent on Rome. (4) Respublica Civitatis or
Municipii: (5) Commune, Communitas. Besides
the Civitates, component parts of the Civitates are
also Juristical persons: (1) Curiae or Decuriones;
the word Decuriones often denotes the individuals
composing the body of Decuriones as opposed to
the Civitas (Municipies), which appears from a
passage in the Digest (4. tit. 3. s. 15), where it is
stated that an action for Dolus will not lie against
the Municipes, for a fictitious person cannot be
guilty of Dolus, but such action will lie against the
individual Decuriones who administer the affairs
of the Municipes. Sometimes the word Curia is used as equivalent to Civitas; and sometimes the Decuriones are spoken of as a Juristical person, which has property as such. (2) Vici; which have no political self-existence, but are attached to some Respublica; yet they are juristical persons, can hold property, and maintain suits. (3) Fora, Consilii, Casamia. These were places between Civitates and Vici as to extent and importance; they belonged to a Respublica, but had the rights of juristical persons: they are not mentioned in the legislation of Justinian, but the names occur in the Tablet of Heraclea, in the Lex Galliae Cisalpinae, and in Paulus (S. R. iv. tit. 6. s. 2.) In the later period of the Empire, Provinces were viewed as juristical persons.

In the writings of the Agrimensores, communities, and, particularly, colonies (coloni), are designated by the appropriate name of Publicae Personae, and property is spoken of as belonging to the Colonii, that is, the Colonii, Colonii being used here in the same sense in which Municipes was used as above explained.

Other juristical persons were (1) Religious bodies, as Collegia of Priests, and of the Vestal Virgins, which could hold property and take by testament. (2) Associations of official persons, such as those who were employed in administration: the body of Scribae became one of the most numerous and important, as they were employed in all branches of administration; the general name was Scribae, a term which includes the particular names of librarii, fiscales and others; they were divided into subdivisions called Decuriae, a term which even under the Republic and also under the Empire denoted the corporations of Scribae: the individual members were called decuriati, and subsequently decuriales; the decuriati had great authority; and this is quite distinct from the other provision contained in the same rule, which punished associations of persons who acted as corporations, for this part of the rule relates only to such associations as were dangerous, or of an undefined character.

There were also in the Imperial period the Collegia tenensorum, or associations of poor people, but they were allowed to meet only once a month and they paid monthly contributions. (Dig. 47. tit. 22. s. 1, 3.) A man could only belong to one of them. Slaves could belong to such a collegium, with the permission of their masters.

Communities of cities and towns have a kind of natural or necessary existence; and other bodies, called corporations, have been fashioned by a kind of analogy to them, and like them can have property, and be represented in law by an agent, wherein consists the essence of a juristical person. Some of these corporations, like communities of cities and towns, were of a permanent character, as Colleges of Priests, Decuriae, and Companies of artisans; others had a temporary character, as Societates and Sodalitates. All these corporations are designated by the name either of Collegium or Corpus, between which there is no legal distinction; for it appears that one corporation was called a Collegium and another a Corpus, as it might happen. But both of these terms denote a Corporation, as above explained, as opposed to a Civitas or Respublica. The members of such corporations were Collegae and Sodales, which is a more general and an older term than Socialitas. Altogether they were called Collegiati and Corporati; the members of particular kinds of corporations were Decuriati, Decuriales, Socii. The common name which includes all Corporations and Civitates is Universitas, as opposed to which any individual is singularis persona.

The notion of individual property as a unity is founded on the notion of the unity of the owner. But this notion of unity, when once established, may for certain purposes be arbitrarily assumed, and accordingly it is applied to the case of Peculiom, Dos, and Hereditas, and modern writers have designated these as cases of a Universitas Juris. The name Universitas Juris does not occur in the Roman law. On this subject see Puchta, Inst. ii. § 222. The nature of Succession is explained under Successio.

The term Universitas was adopted in the middle ages to denote certain great schools, but not as Schools; the term denoted these places as corporations, that is, as associations of individuals. The adjunct which would express the kind of persons associated would depend on circumstances: thus in Bologna, the expression Universitas Scholarium was in common use; in Paris, Universitas Magistrorum. The School as such was called Schola,
and from the thirteenth century, most commonly Studium; and if it was a distinguished school, it was called Studium Generale. The first occasion on which the term Universitas was applied to a great school is said to be in a Decretal of Innocent III., on the beginning of the thirteenth century, addressed to scholars Parisienses. (Savigny, System des Heutigen Röm. Rechts, i. 378, ii. 293, iii. 8; Savigny, Geschichte des Röm. Rechts im Mittelalter, vol. iii. 318, 380; Puchta, Röm. Recht, ii. 232.)

GAIUS ADDS, "In the case of moveable things the Usucapio is completed in a year, but in the case of a fundus or aedes two years are required; and so it is provided by the Twelve Tables."

In this passage he is evidently speaking of Res Mancipi only, and of them only when transferred to the purchaser by the owner. From this then it might be safely concluded that the Twelve Tables provided a remedy for defective modes of conveyance of Res Mancipi from the owner; and this is all that the Twelve Tables did; for Gaius (ii. 43) proceeds to say, "But (Ceterum) there may be Usucapio even in the case of those things which have come to us by tradition from a person who was not the owner, whether they are Res Mancipi or not, provided we have received them bona fide, believing that he who delivered (qui tradiderit) them to us was the owner. And this rule of law seems to have been established, in order that the owner of things might not be long in uncertainty, seeing that one or two years has little force in it and possibly no historic truth; but it is clear from this passage that this application of the rule of Usucapio was formed from analogy to the rule of the Twelve Tables, and that it was not contained in them. The limitation of the time of Usucapio is clearly due to

Plin. Epist. x. 3; Juv. vili. 4): also to receive the ashes of the dead. [Fenus, p. 560, a.] For this purpose urns were made of marble, porphyry, baked clay, bronze, or glass, of all forms and sizes, some quite simple, and others sculptured in bas-relief, or ornamented in an endless variety of ways. [J. Y.]

VOCATIO IN JUS. [Actio, p. 10, b.]

VOLO'NES is synonymous with Voluntarii (from volo), and might hence be applied to all those who volunteered to serve in the Roman armies without there being any obligation to do so. But it was applied more especially to slaves, when in times of need they offered or were allowed to fight in the Roman armies. Thus when during the second Punic war after the battle of Cannae there was not a sufficient number of freemen to complete the army, about 8000 young and able-bodied slaves offered to serve. Their proposal was accepted; they received armour at the public expense, and as they distinguished themselves they were generally rewarded. (Liv. xxiv. 11, 14; Fest. s. v. Volones.) In after times the name volones was retained whenever slaves chose or were allowed to take up arms in defence of their masters, which they were the more willing to do, as they were generally rewarded with a vessel for holding water, or any other substance, either fluid or solid. (Plaut. Pseud. i. 2, 24; Hor. Sat. i. 5, 91, ii. 6, 10; Ovid. Met. iii. 172.)

An urn was used to receive the names of the judges (judices) in order that the praetor might draw out of it a sufficient number to determine causes (Hor. Carm. iii. 1, 16; Virg. Aen. vi. 432;
USUCAPIO.

1218

the Twelve Tables, and the time applied only to purchases of Res Mancipi from the owner, when the legal forms of conveyance had been neglected. But the origin of Usucapio was probably still more remote.

When Gaius states that there was originally only one kind of ownership at Rome, and that afterwards ownership was divided, he immediately shows how this arose by taking the case of a Res Mancipi. This division of ownership rested on the division of things into Res Mancipi and Res Nec Mancipi, a distinction that had reference to nothing else than the mode of transferring the property of them. Things were merely called Res Mancipi, because the ownership of them could not be transferred without Mancipatio. Things were Res nec Mancipi, the alienation of which could be effected without Mancipatio. There could be no division of things into Mancipi and Nec mancipi, except by determining what things should be Res Mancipi. Res nec Mancipi are determined negatively: they are all things that are not Res Mancipi. But the negative determination pre-supposes the positive. Therefore Res Mancipi were determined before Res nec Mancipi could be determined; and before the Res Mancipi were determined, there was no distinction of things into Res Mancipi and Res nec Mancipi. But this distinction, as such, only affected the condition of those things to which it had a direct application: consequently all other things remained as they were before. The conclusion then is certain, that the Res Mancipi as a class of things were posterior in order of time to the class of Res nec Mancipi, which comprehended all things except Res Mancipi. Until then the class of Res Mancipi was established, all property at Rome could be alienated by tradition, as Res nec Mancipi could be alienated by tradition after the class of Res Mancipi was constituted.

The time when the class of Res Mancipi was formed is not known; but it is most consistent with all that we know to suppose that it existed before the Twelve Tables. If we consider the forms of Mancipatio [Mancipatio], we cannot believe that they arose in any other way than by positive enactment. As soon as the forms of Mancipatio were established, it followed that mere tradition of things was posterior in order of time to Mancipatio. Things were Res nec Mancipi, a distinction that had reference to nothing else than the mode of transferring the possession of the purchaser. The transfer gave the purchaser merely a Possessio, and the original owner retained the property. In course of time the purchaser obtained the Publiciana actio, and from this time it might be said that a double ownership existed in the same thing.

The introduction of Mancipatio, which gave rise to the double ownership, was also followed by the introduction of Usucapio. The bona fide Possessor of a Res Mancipi had not been transferred by Mancipatio, but the owner, against whom he claimed the thing, had the exception, and subsequently the Exception rei venditae et traditae by which he could protect himself against the owner; and as Possessor he had the protection of the Interdict against third persons. He had the full enjoyment of the thing, and he could transfer the possessio, but he could do no act with respect to it for which Quiritarian ownership was necessary; consequently he could not alienate it by Mancipatio or In jure Cessio, and it was a necessary consequence that he could not dispose of it by Testament in the same way in which Quiritarian ownership was disposed of by Testament. The necessity for such a rule as that of Usucapio was evident, but it could arise in no other way than by positive enactment, for its effect was to be the same as that of Mancipatio. The Twelve Tables fixed the term of Usucapio, but we do not know whether they fixed or merely confirmed the rule of law as to Usucapio.

It is a mistake to suppose that tradition or delivery was a part of Mancipatio as such. Mancipatio was merely a form of transferring ownership which was fixed by law, and the characteristic of which was publicity: a certain kind of thing would of course generally follow, but it was no part of the transfer of ownership. Land (praedia) for instance could be mancipated without delivery (in absentia mancipari solent, Ulp. Frgg. tit. 18; Gaius, i. 121.) In the case of moveable things, it was necessary that they should be present, not for the purpose of delivery, but that the thing mancipated might be identified by apprehension. The essential to the transfer of ownership in all countries, is the consent of two persons, who have legal capacity to consent, the seller and the buyer. All the rest is form that may be varied infinitely: this consent is the substance. Yet tradition as a form of transfer was undoubtedly the old Roman form, and consent alone was not sufficient; and it may be admitted that consent alone was never sufficient for the transfer of ownership without affecting the principle laid down that consent alone is essential in the transfer of ownership. This apparent incongruity is ingeniously and sufficiently explained in the following manner: "Tradition owes its origin to a time when men could not sufficiently separate in their minds Physical ownership, or the dominion over a thing, from Legal ownership. As a man could only call a bird in the air or a wild animal in the forest his own when he has caught it; so men thought that tradition must be added to contract in order to enable a man to claim the thing as his own." (Engelbach, Uber die Usucapio, &c. p. 60.)

Besides the case of property there might be Usucapio in the case of Servitutes, Marriage, and Hereditas. But as Servitutes praediorum rusticorum could only be established by contract and could be fully acquired only by establishing the same form by which ownership of Res Mancipi was transferred, so according to the old law, these Servitutes alone could be the object of Usucapio; and, as it is contended by Engelbach, only in the case of Aquaeductus, Haustus, Iter and Actus. But as the ownership of Res Mancipi could be acquired by bare tradition followed by usucapio, so these servitutes could be established by contract and could be fully acquired by usucapio. In the later Roman law, when the form of Mancipatio was replaced by mere tradition, servitutes could be established per pacta et stipulaciones only. In the case of a Marriage Coemptione, the form of Mancipatio was used, and the effect was that the woman came into the hand of her husband, and became part of his Familia. The marriage Uso could not of itself effect this, but if the woman lived with her husband a year, she passed into his Familia by Usucapio (velut annua possessione usuqueipotatur); and accordingly it was provided by the laws of the Twelve Tables, that if
she did not wish thus to come into her husband's hand, she must in every year absent herself from him for three nights in order to interrupt the usus. (Gaius, i. 110.) Thus Usucapio added to Usus the effect of Quiritium. In the case of the hereditas, when the testator had the testamenti facio, and had disposed of his property without observing the forms of Mancipatio and Nuncupatio, the person whom he had named his heres, could obtain the legal ownership of the hereditas by Usucapio. (Gaius, ii. 54.) In all these cases then the old law as to Usucapio was this: when the positive law had required the forms of Mancipatio in order that a certain end should be effected, Usucapio supplied the defect of form, by converting a possessio (subsequently called In bonis) into Dominium ex jure Quiritium. Usucapio then was not originally a mode of acquisition, but it was a mode by which a defect in the mode of acquisition was supplied, and this defect was supplied by the use of the law had required the forms of Mancipatio in order to obtain the legal ownership of the hereditas by Usucapio. (Gaius, i. 110.) Such a possession was acquired again, this was called justa causa possessionis. The causa might be a bargain (de offici. i. 15.) The Quinque pedes are the limits linearii, the breadth of which was fixed at five feet by a Lex Mamalia. The approach to a sepulchre was also not an object of Usucapio. Free men could not be objects of Usucapio. (Gaius, ii. 48.)

In the time of Gaius (ii. 51) a man might take possession of another person's land, provided he used no force (via), the possession of which was vacant either from the carelessness of the owner, or because the owner had died without a Successor (successio), or had been long absent; and if he transferred the field to a bona fide purchaser, the purchaser could acquire the ownership by Usucapio, even though the seller knew that the field was not his own. This rule was established against the opinion of those who contended that a Fundus could be Furtivus or an object of theft. But a man might in some cases acquire by Usucapio the ownership of a thing which he knew to be not his own; as if a man had possession of a thing belonging to the hereditas, of which the heres had never acquired the possession, provided it was a thing that could be an object of Usucapio. This species of possessio and usucapio was called Pro herede; and even things immovable (quaes solo continentur) could be thus acquired by one year's usucapio. The reason was this: the Twelve Tables...
declared that the ownership of res soli could be acquired by usucapio in two years, and all other things in one year: now as the hereditas was not a res soli it must be included in the "other things," and it was further determined that the several things which made up the hereditas must follow the rule of the res soli; though the rule as to the hereditas was changed, it continued as to all the things comprised in it. (Seneca, De Benef. vi. 5.) The reason of this "improba possessio et usucapio," says Gaius, was that the heres might be induced the sooner to take possession of the hereditas, and that there might be somebody to discharge the sacra, which in ancient times (illis temporibus) were very strictly observed; and also that there might be somebody against whom the creditors might make their demands. This kind of Possessio and Usucapio was called Latucaitia. In the time of Gaius it had ceased to exist, for a Senatus consultum of Hadrian's time enabled the heres to recover that which had been acquired by Usucapio, just as if there had been no Usucapio; but in the case of a heres necessarius, the old rule still remained. (Gaius, ii. 52-58; Cic. Top. 6; Plin. Ep. v. 1.)

Gaius mentions a mode of acquisition under the name of Usureceptio. If a man mancipated a thing to a friend or transferred it by the In Jure Cessio, simply in order that the thing might be in his friend's safe keeping (fideicus custodes; quod tutius nostrae res apud eum esset), he had always a capacity for recovering it. In order to recover immediately the Quiritarian ownership of the thing, Remancipatio was necessary; but if the thing was transferred to him by traditio, the Remancipatio was completed by Usucapio, or as it is here called by Usureceptio: for Usureceptio differs in no respect from Usucapio, except that the person who acquires the Quiritarian ownership by Usus, in the one case acquires (acipi), in the other re-acquires (recepti) the thing. In the case of a pignorated thing, the debtor's capacity to recover by Usureceptio was the same as in the case of Fiducia as to the establishment of servitutes; it did not affect that Usucapio by which the freedom of a servient piece of land was effected. It became a maxim of law: servitutes praediorum rusticorum non utendo utile et longo temporis possessionibus) it was enacted that there might be possession of the thing neither by hiring it from the creditor, nor precario, he had a lucrativa usucapio, which was a Usureceptio and was probably formed from analogy to the lucrativa usucapio pro herede.

Servitutes praediorum rusticorum were established, at least according to the old law, by Mancipatio; the right to the Servitutes could only be properly extinguished by a Remancipatio. If the Servitus was extinguished by mere agreement, there must be a usucapio on the part of the owner of the servient tenement in order to complete its legal release from the Servitus. In order that the possession of the libertas of the servient land might be enjoyed uninterrupted for two years, there must be for the same time a total abstinence from all exercise of the right on the part of him who had the servitus. Subsequently, it was considered sufficient if the person entitled to the Servitus did not exercise his right for two years.

When usucapio was established as a means of giving the Quiritarian ownership to him who had acquired a thing In bonis, the form of mancipatio must have gradually lost its importance, and Usucapio came to be viewed as a mode of acquisition. Accordingly, it has been already observed, it became applicable to all cases of bona fide possession, whether the thing was a Res Mancipi or not. Formerly if a will had been made in due form except as to Mancipation and Nuncupation, the heres acquired the hereditas by Usucapio; but with the introduction of the Praetorian Testament [TESTAMENTUM] and the Bonorum Testamentum, the Bonorum Possessor obtained the right to actiones fictitiae or utiles in all cases where the deceased had a right of action, and he acquired by Usucapio the Quiritarian ownership of the several things which were included in the hereditas. In course of time it came to be considered by the jurists as a rule of law that there could be no Usucapio of an hereditas. (Gaius, ii. 54.) In like manner in the case of Servitutes established by contract, the introduction of the Acto Publicianus rendered the doctrine of Usucapio unnecessary, and a Scribonia Lex is mentioned which repealed all Usucapio of Servitutes. (Dig. 41. tit. 3. s. 4. § 29.) But this Lex only applied to the establishment of servitutes; it did not affect that Usucapio by which the freedom of a servient piece of land was effected. It became a maxim of law: servitutes praediorum rusticorum non utendo amittuntur, which, viewed with respect to the servient land, was a Usureceptio. In this sense "usurpatur receptio" seems to be used in a passage of Paulus (S. R. i. tit. 17. s. 2). "Usurpatur" is commonly used in the sense of "usu recipitur;" though this is not the meaning that has usually been given to this passage.

In the case of marriage also Usucapio fell into disuse (Gaius, i. 111).

But in other respects usucapio subsisted. He who had acquired a Res Mancipi by tradition, had now a Praetorian ownership, and he had a right of action in respect of this ownership, which was analogous to the Rei Vindicatio. But Usucapio was still necessary to give him Quiritarian ownership and its consequent advantages. The distinction between Res Mancipi and Nec Mancipi existed, and as a consequence the Testamentum per aetas et libram subsisted at the same time with the Praetorian Testament.

When finally all distinction was abolished between Res Mancipi and Nec Mancipi, and the ownership of all things could be acquired by Traditio and Occupatio, that kind of Usucapio ceased by which a thing In bonis became a man's Ex Jure Quiritium. All Usucapio was now the same, and its general definition became "adjectio dominii per continuationem possessionis temporis legibus definitii." (Dig. 41. tit. 3. s. 2, De Usurpationibus et Usucapionibus.) By a constitution of Justinian (Inst. 2. tit. 6, De Usucapionibus et longi temporis possessionibus) it was enacted that there might be usucapio of Res Mobiles in three years, and of Res Immobiles "per longi temporis possessionem," which is explained to be ten years "inter praeventum, and twenty years "inter absentem." and this applied to the whole Roman Empire, so that ownership of all things could be acquired on these terms within the whole Roman empire; but the conditions of "justus titulus," "bona fides," and the capability of the thing to be an object of usucapion were still required. The absence of a justus titulus or the fact of the thing being not capable of usucapion, did not deprive the possessor of the title by usucapion, but a possession of thirty, or
in some cases, forty years was required. From this time the terms Usucapio and Longi temporis praesscriptio, were used indifferently, as some writers suppose, though on this point there is not uniformity of opinion. Engelbach, Ueber die Usucapion zur zeir der Zeit, Tafeln, Marburg 1828; Mühlenbruch, Douvin, Pandect. § 261, &c.; Ueber die Usucapion, pro herede von Arndt, Rhein. M. für Jurisprudenz, vol. ii. p. 125; Puchta, Inst. ii. § 239.) [G. L.]

USURAE. [Fanus, p. 526, b.]

USURPATIO. One sense of this word is "Usurcapionis interruptio," (Dig. 41. tit. 3. s. 2.) Appius Claudius, not the Decemvir, but he who made the Appian Via and brought the Aqua Claudia to Rome, wrote a book De Usurpeiis latinis, which was not extant in the time of Pomponius. (Dig. 1. tit. 2. s. 36.) In some cases "usurpatio" means the preservation of a right by the exercise of it, as "jus usurpatum," in the case of a Servitus aquae ductvae; and this nearly agrees with that sense of Usurpare which is equivalent to Uti. [Usucapio.] As to the passage in Gallus, lib. 2, see Savigny, System, &c. iv. 365. [G. L.]

USUS. [MATRIMONIUM, p. 741.]

USUS. [USUSFRUCTUS.]

USUSFRUCTUS and USUS were Personal Servitudes. [USURPARES.] (Dig. 8. tit. 1. s. 1.) Ususfructus is defined to be "jus alienis rebus utendi fruendi salva rerum substantia." (Dig. 7. tit. 1. s. 1.) Accordingly Ususfructus comprehended the "jus utendi" and the "jus fruendi." Usus comprehended only the "jus utendi." The complete distinction between Ususfructus and Usus will only appear from a statement of what each is.

A ususfructus was the right to the enjoyment of the fruits of a thing by one person, while the ownership (proprietas) belonged to another. This could be established by Testament, which was the common case, as when the Heres was required to give to another the ususfructus of a thing; and it could also be established by contract between the owner of a thing and him who contracted for the Ususfructus. He who had the Ususfructus was Ususfructarius or Fructuarius, and the object of the Ususfructus was Res Fructuaria. The utmost limit of Ususfructus and Usus was the life of the person who had the right. Thus the Ususfructus and Usus were general life estates; but not more. (Dig. 45. tit. 1. s. 26. § 12.)

There might be Ususfructus both in Praedia Rustica and Urbana, in slaves, beasts of burden and other things; and a Ususfructus of a whole property (omnium bonorum) might be given; or of some aliquot part. (Dig. 32. tit. 2. s. 37, 43.)

If the Ususfructus of a thing was bequeathed to a person, all the "fructus" of the thing belonged to the Fructuarius during the time of his enjoyment. Consequently if the Ususfructus of a piece of lands was given to him, he was intitled to collect and have for his own all the fructus that were already on the land, and all that were produced on it during the time of his enjoyment. But as he only acquired the ownership of the fructus by collecting them (perceptio), he was not intitled to prove it, but not such as would in any way deteriorate the thing, or even render the maintenance of it a greater burden. Consequently he had greater power over cultivated land than over the space or pleasure-grounds, for a part of the value of houses or pleasure-grounds and things of the like kind consists in opinion, and must be measured by the rank, wealth, and peculiar disposition of the owner.

The fructuarius could maintain or defend his rights by action and by interdicts. On the completion of the time of the Ususfructus, the thing was to be restored to the owner, who could generally require securities from the fructuarius both for the proper use of the thing and for its restoration in due time. This security was in some cases dispensed with by positive enactments, and in other cases by agreement; but it could not be dispensed with by testament.

Originally there could be no Ususfructus in things unless they were things corporeal and such as could be restored entire, when the time of Ususfructus had expired. But by a Senatusconsultum of uncertain date, there might be quasi Ususfructus of things which were consumed in the use, and in this case the fructuarius in fact became the owner of the things, but was bound to give security that he would either restore as much in quantity and value as he had received, or the value of the things in money. (Dig. 7. tit. 5. s. 7; and compare Randall v. Russell, 3 Mer. 190.) It is generally supposed that this Senatusconsultum was passed in the time of Augustus, and a passage of Cicero (Top. 3) is alleged to show that it did not exist in the time of Cicero: "Non debet ea mulier, cui vir honore suo ususfructum in vinariis et oleariis plenius relictea, putare id ad se pertinere. Usus enim non abusus legitur." The only difficulty is in the words "id ad se pertinere," which are usually translated "these things, (the cellae vinariae, &c.) are not objects of Ususfructus," from which it is inferred that there was at that time no Ususfructus in things which were consumed in the use. But if this is the sense, the words which follow, "for the usus, not the abusus (power to consume) is the object of the legacy," have no clear meaning. These words simply sig-
nify that a Usus is given, not an Abusus; but this does not prove that an abusus could not be given. Puchtia shows that the phrase "res pertinent ad ususfructuum," which exactly corresponds to the phrase in Cicero, does not mean "that the thing is an object of ususfructum," but that "it belongs to the fructuarius." In the Digest (7. tit. 1. s. 68) the question is, whether the young child of a female slave belongs to the fructuarius (an partus ad fructuum pertinent), and it is answered in the negative, with the following explanation: "nece ususfructum in eo fructuarius habebit." The passage of Cicero therefore will mean, that wine and oil in the testator's possession are not given to her by a bequest of the ususfructus of his property, for it is assumed, that he bequeathed to her the fruits, which is given, and not "abusus" or the power to consume fruits which already exist. In other words the testator gives the woman a Ususfructus in all his property, that is a right to gather the fruits, but he does not give the wine and oil, which are fruits already gathered, to the woman to be her property as if she had gathered them during her Ususfructus. Puchtia contends that "abusus" does not necessarily signify that there could be "abusus" only in the case of things "that be consumed in the future," but he says that in the place of wine and oil Cicero might have given the young of animals, as an example without altering his expression. If this interpretation is correct, Puchtia contends that the Senatusconsultum as to Quasi ususfructus is older than the time of Cicero.

Usus is defined (Dig. 7. tit. 8. s. 2) by the negation of "frui: " cui usus relictus est, uti potest, frui vero non potest." The title of the Digest is intitled to a moderate allowance of milk. If the usus of cattle was left, the usuarius was in most respects like the fructuarius. In the Digest (7. tit. 8. s. 19.) as to his duties the usuarius was in some cases Ususfructus, as the fructuarius was in other cases Ususfructus. Such jurisdiction was exercised by the Ephori. Usus could not be given as a legacy, though per perhaps...
be dangerous for an enemy to know. The intention of Lycurgus, more probably, was to preserve the family of Alcibiades. (Thucyd. v. 43, vi. 89, 37.) They worshipped a Zeus εξειδειας and Αδειας εξειδειας. (Passan. iii. 1. § 111.) The connection, called by the Greeks προσφειδα, was cultivated at Sparta both by the state and by individuals; of which their connection with the Peisistratidae is an example; and also that of a Spartan family with the family of Alcibiades. (Thucyd. v. 43, vi. 89, viii. 6; Herod. v. 91; compare vi. 57.) The Ignatius was highly esteemed by the nation, and made Spartan προσφειδα. (See further on the subject of the εξειδεια, Thucyd. i. 144, with Goeller's notes; Aristoph. Aves, 1015; Harpocr. s. v. Καλ γαρ το μηθέναι.) This was a prosecution at Athens for unlawfully usurping the rights of citizenship. As no man could be an Athenian citizen, except by birth or creation (γεένει ου ποιείνει), if one, having neither of those titles, assumed to act as a citizen, either by taking part in the popular assembly, or by serving any office, judicial or magisterial, or by attending certain festivals, or doing any other act which none but a citizen was privileged to do, he was liable to a γραφή εξειδια, which any citizen might institute against him. (Demosth. c. Timoth. 1204.) Or he might be proceeded against by εισαγγελία. (Schömann, de Comit. p. 187.) If condemned, his property and person were forfeited to the state, and he was forthwith to be sold for a slave. (Demosth. Epist. i. 1481.) The judgment however was arrested, if he brought a δίκη πεθομαρτυρίων against the witnesses who had procured his conviction, and convicted them of giving false testimony. During such proceeding he was kept in safe custody to abide the event. (Μαρτυρία.) When a person tried on this charge was acquitted by means of fraudulent collusion with the prosecutor or witnesses, or by any species of bribery, he was liable to be indicted afresh by a γραφή δομοπειδίας, the proceedings in which, and the penalty, were the same as in the γραφή εξειδια. The jurisdiction in these matters belonged, in the time of Demosthenes, to the Thesmothetae, but, at least, at an early date, to the time of Lyssias, to the Nautodiceae. (Harpocr. s. v. Δομοπειδία, Παραδοσία, Ναυτοδίκαια; Harpocr. and Suidas, s. v. Εξειδια Βίκνα, Ναυτοδικαία; Pollox, viii. 40. 126; Meier, Att. Proc. pp. 83, 347, 761.)

In order to prevent fraudulent enrolment in the register of the δήμοι, ουκ εξαιρετικοί γραμματείων, which was important evidence of citizenship, the δημαρχοι themselves were at liberty to revise their register, and expunge the names of those who had been improperly admitted. From their decision there was an appeal to a court of justice, upon which the question to be tried was much the same as in the γραφή εξειδια, and the appellant, if he obtained a verdict, was restored to the register; but if judgment was given against him, was sold for a slave. (Demus.) (Harpocr. s. v. Διαφοράς; Schömann, de Comit. p. 281.) For an example of this see the speech of Demosthenes against Eumelides.

XENI (ξένοι), mercenaries. (MERCENARIL) XENUS, XENIA (ξένοι, ἁξια). (Hospit.)

XESTES (ξέστης), a Greek measure of capacity, both fluid and solid, which contained 12 cyathoi or 2 cotyla, and was equal to 1-6th of the χοῦς, 1-40th of the Roman amphora quadrantal, and 1-72nd of the Attic amphora metretes; or, viewing it as a dry measure, it was half the octoe巴斯 and 1-96th of the medimnus. It contained very nearly a pint English.

It is thought desirable to add here a few words to the remarks made under MENSURA, PONDERA, and QUADRANTAL, respecting the connection between the Greek and Roman measures of weight and capacity, according to the views of Böckh.

At this point the Roman and Attic systems of measures coincide; for, though the ξέστης may perhaps have varied in different states of Greece, there is no doubt that the Attic ξέστης was identical, both in name and in value, with the Roman sextarius; in fact the word ξέστης seems to be only an Hellenic form of sextarius. Also the Attic χοῦς was equal to the Roman congīus, for the ξέστης was the sixth of the former, and the sextarius the sixth of the latter. Further, the Attic metretes or amphora contained 12 χοῦς, and the Roman amphora contained 8 congīs; giving for the ratio of the former to the latter 3 : 2 or 1⅓ : 1. Again, the Attic medimnus was the double of the Roman amphora, and was to the metretes in the ratio of 4 : 3; and the Roman modius was the sixth of the Attic medimnus, and the third of the Roman amphora. Hence the two systems are connected by the numbers 2 and 3 and their multiples.

How and when did this relation arise? It cannot be accidental, nor can we suppose that the Greek system was modelled upon the Roman, since the former existed long before the Roman conquest of Greece. We must therefore suppose that the Roman system was in some way adapted to the Greek. It is a remarkable circumstance that the uncial system of division, which characterised the Roman weights and measures [As; UNCI], is not found in the genuine Roman measures of capacity (for the use of the cyathus as the uncia of the sextarius appears to have originated with the Greek physicians in later times); and this is the more remarkable, as it is adopted in the Greek system; the Greek amphora being divided into 12 χοῦς, and the Roman into 8 congīi, instead of 12. In the Roman foot again, besides the uncial division, we have the division into 4 palmi and 16 digitii, which seems clearly to have been borrowed from the Greek division into 4 palmi and 16 δάκτυλοι. It seems therefore highly probable that the Greek system of measures had a considerable influence on that of the Romans.

To find the origin of this connection, we must
look from the measures to the weights, for both systems were undoubtedly founded on weight. The Roman amphora or quadrantal contained 80 pounds (whether of wine or water does not matter here), and the congus 10 pounds. Also the Attic talent was reckoned equal to 80 Roman pounds, and contained 60 minae. Therefore the Attic mina had to the Roman pound the ratio of 80 : 60 or 4 : 3.

Now if we look at the subject historically, we find all the principal features of the Roman system in existence as early as the time of Servius Tullius. We must therefore seek for the introduction of the Greek element before that time. At that early period Athens does not appear to have had any considerable commercial intercourse with Italy, but other Grecian states had, through the colonies of Magna Graecia. The Phocaeans, a very early period had a traffic with the Tyrrhenians, the Aeginetans had a colony in Umbria, and Corinth and her colonies were in intercourse with the people of Central Italy, besides the traces of Corinthian influence upon Rome, which are preserved in the legend of the Tarquinius. It is therefore to the Aegineto-Corinthian system of weights and measures that we must look for the origin of Grecian influence on the Roman system. Now the half of the Aeginetan mina had to the Roman pound the ratio of 10 : 9; and since the Aeginetan mina was to the Attic as 5 : 3, we get from the comparison of these ratios the Attic mina to the Roman pound as 4 : 3, as above.

(Böckh, *Metrologische Untersuchungen*, xi. § 10.)

**Xystus.** [Gymnasium, p. 580, b.; Horitrus.]

**Z.**

**Zacori (ξακοροι).** [Aediul.] Zetetae (ζητείται) Inquisitors, were extraordinary officers, appointed by the Athenians to discover the authors of some crime against the state, and bring them to justice. Public advocates, συνήγοροι or κατηγοροι, were sometimes directed to assist them in this duty. Frequently the court of Areopagus performed the office of inquisitors for the state, and indeed it was the duty of every magistrate to assist in procuring information against offenders. (Andoc. de Myst. 3, 5, 6; Dimarch. c. Demosth. pp. 90, 97, ed. Steph.; Zonarius.) Zeigetai were more frequently appointed to search for concealed property, the goods of condemned criminals and state debtors; to receive and give information against any persons who concealed, or assisted in concealing them, and to deliver an inventory of all such goods (ἀνευρέθηνεν) to the proper authorities. The delinquent was then prosecuted, either before the σύνδικος, or it might be before the ζητείται themselves, if their commission extended to the holding of an ἡγεμονία δικαιουσία. Any person, however, who thought himself entitled to the goods, or any part of such information, or to any part of them, might appeal against the inquisitor or informer, and petition to have the goods or the part to which he was entitled, or their proceeds, restored to him. This proceeding was called ἐνεικηκμα. [Syndiocr; Paramatacle.] Inquisitors were also called Μακτῆρες.
fastened to the girdle; and still more frequently the fold of the tunic, formed by tucking it up, and called sinus, was used as a pocket to carry whatever was necessary.

As the girdle was worn to hold up the garments for the sake of business or of work requiring despatch, so it was loosened and the tunic was allowed to fall down to the feet to indicate the opposite condition, and more especially in preparing to perform a sacrifice (veste recincta, Virg. Aen. iv. 518; Ovid, Met. vii. 182), or funeral rites (discincti, Sueton. Aug. 160; incinctae, Tibull. iii. 2. 18).

A girdle was worn by young women, even when their tunic was not girt up, and removed on the day of marriage, and therefore called τάνα ταταραίην. (Jacobs, Anthol. ii. p. 673; παρθένου πίτης, Brunck, Aedul. iii. 299; Sen. Oed. ii. 3. 17; Hom. Od. v. 231; Longus, i. 2; Ovid. Epist. Her. ii. 116, ix. 66, Festus, s. v. Cingulum; Catull. ii. 13, lxiv. 28.) The Flora in the museum at Naples (see the annexed woodcut) shows the appearance of the girdle as worn by young women.

A horse's girth, used to fasten on the saddle [EPHIPPIUM], was called by the same names, and was sometimes made of rich materials, and embroidered in the most elaborate manner. (Ovid, Rem. Am. 236; Claud. Epig. 34, 36.) These terms, zona and cingulum, were also used to signify the five zones as understood by geographers and astronomers. (Virg. Georg. i. 233; Plin. H. N. ii. 68; Macrobo. Som. Sulp. ii.) [J. Y.]

ZO'PHORUS (ΤΟΦΘΟΡΟΣ or ΣΙΔΦΘΑΝΟΣ), the frieze of an entablature. (See COLUMNA, p. 324, a, and the woodcuts.) [P. S.]

XIII. Roman Weights.
(1) The As and its Uncial Divisions.
XIV. Roman Weights.
(2) Subdivisions of the Uncia.
XV. Roman Money. (1) Before Augustus.
XVI. Roman Money. (2) After Augustus.

In the construction of these Tables, the same authorities have been used as those referred to in the articles in the body of the work. Particular acknowledgment is due of the assistance which has been derived from the Tables of Hussey and Wurm. The last two Tables (of Greek and Roman money) have been taken without alteration from Mr. Hussey's, because they were thought incapable of improvement, except one addition in the Table of Attic money. All the calculations, however, have been made de novo, even where the results are the same as in Mr. Hussey's Tables.

The Tables are so arranged as to exhibit the corresponding Greek and Roman measures in direct comparison with each other. In some of the Tables the values are given, not only in our several measures, but also in decimals of a primary unit, for the purpose of facilitating calculations. In others, approximate values are given, that is, values which differ from the true ones by some small fraction, and which, from their simplicity, will perhaps be found far more useful for ordinary purposes than the precise quantities, while the error, in each case, can easily be corrected. Fuller information will be found under MENSURA, NUMMUS, PONDERA, and the specific names. [P. S.]

(1) NOTES TO TABLE I.

* Some make the δοξαθ = συβαμή.
† The accounts of these measures are various and somewhat confused. (See Wurm, p. 91; Hussey, p. 235.)
A measure mentioned by some late writers, which, from its name, may be presumed to have been used for measuring timber.
N. B. — Approximate Values. From the above Table, it will be seen that the Greek Foot, Cubit, and Orquias, only exceed the English Foot, Foot and a half, and Fathom, by about 1-10th, 2-10ths, and 8-10ths of an inch respectively.

(2) NOTES TO TABLE II.

* It is not thought necessary to give the whole scale of the Uncia divisions of the foot. They can easily be calculated from the Uncia.
N. B. — Approximate Values. The Roman Uncia, Pes, and Cubitus only fall short of our Inch, Foot, and Foot and a half, by less than 1-10th, 4-10ths, and 6-10ths of an inch respectively.

#### NOTES TO TABLE III.

* In order to show the relations more clearly, the foreign measures most familiar to the Greeks are included in this Table.

† This is, of course, not the true number of English statute miles contained in a degree of a great circle of the earth, but the number computed from the data exhibited in the Table, some of which are only approximate; namely, 1 Degree = 75 Roman miles = 600 Greek Stadia, and 1 Greek foot = 12·135 inches. The true value of a degree in English miles is $69\frac{27}{60}$, and the difference is only about 7·100ths of a mile.

#### NOTES TO TABLE IV.

* See Actus and Mensura.
† See Note to Table III.

N. B. — The Roman mile only differs from the English by less than 1·10th.
### TABLE V.

**GRECIAN MEASURES OF SURFACE.**

<table>
<thead>
<tr>
<th>ORDINARY LAND MEASURES.</th>
<th>Square Feet.</th>
<th>Perches.</th>
<th>Square Feet.</th>
</tr>
</thead>
<tbody>
<tr>
<td>ΠΟΥΣ (Square Foot)</td>
<td>-</td>
<td>-</td>
<td>1.0226</td>
</tr>
<tr>
<td>36</td>
<td>36.81456</td>
<td>36.81456</td>
<td></td>
</tr>
<tr>
<td>100</td>
<td>102.26266</td>
<td>102.26266</td>
<td></td>
</tr>
<tr>
<td>833(\frac{1}{3})</td>
<td>852.1888</td>
<td>3</td>
<td>35.439</td>
</tr>
<tr>
<td>1666(\frac{2}{3})</td>
<td>1704.3776</td>
<td>6</td>
<td>70.877</td>
</tr>
<tr>
<td>2500</td>
<td>2556.5664</td>
<td>9</td>
<td>106.318</td>
</tr>
<tr>
<td>10,000</td>
<td>10,226.2656</td>
<td>37</td>
<td>153.02*</td>
</tr>
</tbody>
</table>

* This differs from a rood, or a quarter of an acre, by little more than 2 perches; for the rood contains 41\(\frac{1}{4}\) perches.

N. B. — It is worth while to notice how the decimal and duodecimal systems are combined in the above scale, and shown.

TABLE XI.
GRECIAN WEIGHTS.

### 1. Ratios of the three chief Systems.

<table>
<thead>
<tr>
<th>System 1</th>
<th>System 2</th>
<th>System 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aeginetan : Euboic or old Attic</td>
<td>Aeginetan : Solonian or later Attic</td>
<td>Euboic : Solonian</td>
</tr>
<tr>
<td>Aeginetan : Euboic or old Attic</td>
<td>Aeginetan : Solonian or later Attic</td>
<td>Euboic : Solonian</td>
</tr>
<tr>
<td>Aeginetan : Euboic or old Attic</td>
<td>Aeginetan : Solonian or later Attic</td>
<td>Euboic : Solonian</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Ratios</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aeginetan : Euboic or old Attic 1 : 138f : 100</td>
</tr>
<tr>
<td>Aeginetan : Solonian or later Attic 1 : 72</td>
</tr>
<tr>
<td>Euboic : Solonian 1 : 18</td>
</tr>
</tbody>
</table>

The Aeginetan Talent = 6000 Aeginetan Drachmae = 7200 Euboic = 10,000 Solonian.

Euboic " = 5000 " = 6000 " = 8333* "

Solonian* " = 3600 " = 4320 " = 6000 "

* Also called the Attic Silver Talent. When Attic weights are spoken of without any further distinction, these are generally intended.

### 2. Aeginetan Weights.

<table>
<thead>
<tr>
<th>Obol (Ὀσολός)</th>
<th>6 Drachma (Δραχμῆς)</th>
<th>36,000 Mina (Μῖνα)</th>
</tr>
</thead>
<tbody>
<tr>
<td>lb.</td>
<td>oz.</td>
<td>grs.</td>
</tr>
<tr>
<td>1</td>
<td>18·472½</td>
<td>20</td>
</tr>
<tr>
<td>600</td>
<td>100</td>
<td>145·831</td>
</tr>
<tr>
<td>95</td>
<td>15</td>
<td>190·631</td>
</tr>
</tbody>
</table>

* In this and the other tables the English weights used are those of the avoirdupois scale as fixed by statute; namely, the grain = the Troy grain, the ounce = 437½ grains, the pound = 16 ounces = 7000 grains.

### 3. Euboic or Attic Commercial Weights.*

<table>
<thead>
<tr>
<th>Obol</th>
<th>6 Drachma</th>
<th>36,000 Mina</th>
</tr>
</thead>
<tbody>
<tr>
<td>lb.</td>
<td>oz.</td>
<td>grs.</td>
</tr>
<tr>
<td>79</td>
<td>2</td>
<td>291·634</td>
</tr>
</tbody>
</table>

* See pp. 933, b., 934, a. It is here assumed that the Attic commercial mina was exactly 138½ silver drachmae, not 138, as stated in the decree. The difference is not quite half a grain in the drachma.

### 4. Attic Commercial Weights increased.*

<table>
<thead>
<tr>
<th>1 Mina = 150 Drachmae (silver)</th>
<th>5 Minæ = 6 Minæ (commercial)</th>
<th>1 Talent = 65 Minæ (commercial)</th>
</tr>
</thead>
<tbody>
<tr>
<td>lb.</td>
<td>oz.</td>
<td>grs.</td>
</tr>
<tr>
<td>1</td>
<td>14</td>
<td>190</td>
</tr>
</tbody>
</table>

* See p. 934, a.

### 5. Attic Silver Weights.

<table>
<thead>
<tr>
<th>Obol</th>
<th>6 Drachma</th>
<th>36,000 Mina</th>
</tr>
</thead>
<tbody>
<tr>
<td>lb.</td>
<td>oz.</td>
<td>grs.</td>
</tr>
<tr>
<td>57</td>
<td>15</td>
<td>87·5†</td>
</tr>
</tbody>
</table>

* This value is, if any thing, too small. Böckh makes it 67·4. Respecting other scales of weight, see Pondera.

† Or ½ of an oz.
### TABLES OF WEIGHTS AND MEASURES.

* Respecting the sense in which sums of ancient money are said to be equivalent to certain sums of our money, see Nummus, p. 815, a.

† The Drachma was very nearly equal to the French Franc.

† Or, approximately, 250l., the difference being only 1-40th.

**II. AEGINETAN AND EUBOIC SILVER.** — The coins of these systems can be easily calculated from the Attic, according to the ratios given in Table XI, No. 1. As thus calculated, the Aeginetan Talent was equal to 408l. 5s., and the Euboic was equal to 398l. 10s. 10d., and the Drachmae were equal respectively to 1s. 4½d. for the Aeginetan, and 1s. 1½d. + 4 of a farthing for the Euboic. Respecting the values of the coins actually found, see Nummus.

**III. GREEK GOLD.** — The values of the Grecian gold money cannot be conveniently reduced to the tabular form; they will be found in the articles Stater and Dareius.
