The Articles which have no initials attached to them are written by the Editor.
PREFACE

to

THE SECOND EDITION.

It was inevitable that many defects should be found in the first Edition of a work like the Dictionary of Greek and Roman Antiquities, embracing a great variety of subjects, written by different persons, and published periodically. Of these no one was more fully aware than the Editor; and accordingly, when the sale of a very large impression rendered the preparation of a second Edition necessary, he resolved to spare no pains and exertions to render the work still more worthy of the approbation with which it had been already received. The following will be found to be the principal improvements in the present Edition.

1. Many of the most important articles are rewritten. This is especially the case in the earlier portion of the work, since it was originally intended to complete it in a much smaller compass than was afterwards found advisable; and accordingly many subjects in the earlier letters of the alphabet were treated in the first Edition with a brevity which prevented the writers from giving a full and satisfactory explanation of several important points.

2. Many subjects which were entirely omitted in the first Edition are here supplied. Any one who has had experience in the arrangement of a work in alphabetical order will not be surprised that there should be many omissions in the first Edition of such a work. Some idea may be formed of the extensive additions made to the work, when it is stated that, including the articles which have been rewritten, the present Edition contains upwards of three hundred pages of entirely new matter.

3. Those articles which have not been rewritten have been carefully revised, and in many of them errors have been corrected, extraneous matter omitted, and much additional information given. In this part of his labours the Editor has received the most valuable assistance from Mr. George Long, Dr. Schmitz, and Mr. Philip Smith.

4. Additional illustrations have been given by means of new woodcuts, wherever the subjects appeared to require them. Many of these new wood-
cuts are of considerable importance, as the reader may see by referring to the articles *Amphitheatrum*, *Aquaeductus*, *Columna*, *Templum*, and many others.

5. An alteration has been made in the arrangement of the work, which will tend to facilitate its use. In the former Edition there was some inconsistency in the use of Greek, Latin, and English words for the names of articles. In the present Edition the Latin language has been always employed for the heading of the articles, except in those subjects connected with Greek Antiquities where no corresponding words existed in Latin; as, for instance, in legal terms, and in the names of magistrates. In these cases the Greek language has been necessarily employed; but, in compliance with a wish expressed by many persons, the Greek words are given in Latin letters, with the Greek characters subjoined.

In conclusion, the Editor has to express his regret that he is unable in any way to make the additions and alterations in the present Edition available to the purchasers of the former one. He had at one time thought of publishing them in a separate form; but he found, as the work proceeded, that this was quite impossible, on account of their great number and length. In fact, the present Edition must be regarded, to a considerable extent, as a new work.

WILLIAM SMITH.

London, August 1st, 1848.
PREFACE

To

THE FIRST EDITION.

The study of Greek and Roman Antiquities has, in common with all other philological studies, made great progress in Europe within the last fifty years. The earlier writers on the subject, whose works are contained in the collections of Gronovius and Graevius, display little historical criticism, and give no comprehensive view or living idea of the public and private life of the ancients. They were contented, for the most part, with merely collecting facts, and arranging them in some systematic form, and seemed not to have felt the want of any thing more: they wrote about antiquity as if the people had never existed; they did not attempt to realise to their own minds, or to represent to those of others, the living spirit of Greek and Roman civilisation. But by the labours of modern scholars life has been breathed into the study: men are no longer satisfied with isolated facts on separate departments of the subject, but endeavour to form some conception of antiquity as an organic whole, and to trace the relation of one part to another.

There is scarcely a single subject included under the general name of Greek and Roman Antiquities, which has not received elucidation from the writings of the modern scholars of Germany. The history and political relations of the nations of antiquity have been placed in an entirely different light since the publication of Niebuhr's Roman History, which gave a new impulse to the study, and has been succeeded by the works of Böckh, K. O. Müller, Wachsmuth, K. F. Hermann, and other distinguished scholars. The study of the Roman law, which has been unaccountably neglected in this country, has been prosecuted with extraordinary success by the great jurists of Germany, among whom Savigny stands preeminent, and claims our profoundest admiration. The subject of Attic law, though in a scientific point of view one of much less interest and importance than the Roman law, but without a competent knowledge of which it is impossible to understand the Greek orators, has also received much elucidation from the writings of Meier, Schömann, Bunsen, Platner, Hudtwalcker, and others. Nor has the private life of the ancients been neglected. The discovery of Herculaneum and Pompeii has supplied

a
us with important information on the subject, which has also been discussed with ability by several modern writers, among whom W. A. Becker, of Leipzig, deserves to be particularly mentioned. The study of ancient art likewise, to which our scholars have paid little attention, has been diligently cultivated in Germany from the time of Winckelmann and Lessing, who founded the modern school of criticism in art, to which we are indebted for so many valuable works.

While, however, so much has been done in every department of the subject, no attempt has hitherto been made, either in Germany or in this country, to make the results of modern researches available for the purposes of instruction by giving them in a single work, adapted for the use of students. At present, correct information on many matters of antiquity can only be obtained by consulting a large number of costly works, which few students can have access to. It was therefore thought that a work on Greek and Roman Antiquities, which should be founded on a careful examination of the original sources, with such aids as could be derived from the best modern writers, and which should bring up the subject, so to speak, to the present state of philological learning, would form a useful acquisition to all persons engaged in the study of antiquity.

It was supposed that this work might fall into the hands of two different classes of readers, and it was therefore considered proper to provide for the probable wants of each, as far as was possible. It has been intended not only for schools, but also for the use of students at universities, and of other persons, who may wish to obtain more extensive information on the subject than an elementary work can supply. Accordingly numerous references have been given, not only to the classical authors, but also to the best modern writers, which will point out the sources of information on each subject, and enable the reader to extend his inquiries further if he wishes. At the same time it must be observed, that it has been impossible to give at the end of each article the whole of the literature which belongs to it. Such a list of works as a full account of the literature would require, would have swelled the work much beyond the limits of a single volume, and it has therefore only been possible to refer to the principal modern authorities. This has been more particularly the case with such articles as treat of the Roman constitution and law, on which the modern writers are almost innumerable.

A work like the present might have been arranged either in a systematic or an alphabetical form. Each plan has its advantages and disadvantages, but many reasons induced the Editor to adopt the latter. Besides the obvious advantage of an alphabetical arrangement in a work of reference like the present, it enabled the Editor to avail himself of the assistance of several scholars who had made certain departments of antiquity their particular study. It is quite impossible that a work which comprehends all the subjects included under Greek and Roman Antiquities can be written satisfactorily by any one individual. As it was therefore absolutely necessary to divide the labour, no other arrangement offered so many facilities for the purpose as that which has been adopted; in addition to which, the form of a Dictionary has the additional advantage of enabling the writer to give a complete account of a subject under one head, which cannot so well be done in a systematic work. An example will illustrate what is meant. A history of the patrician and plebeian orders at Rome can
only be gained from a systematic work by putting together the statements contained in many different parts of the work, while, in a Dictionary, a connected view of their history is given from the earliest to the latest times under the respective words. The same remark will apply to numerous other subjects.

Some subjects have been included in the present work which have not usually been treated of in works on Greek and Roman Antiquities. These subjects have been inserted on account of the important influence which they exercised upon the public and private life of the ancients. Thus, considerable space has been given to the articles on Painting and Statuary, and also to those on the different departments of the Drama. There may seem to be some inconsistency and apparent capriciousness in the admission and rejection of subjects, but it is very difficult to determine at what point to stop in a work of this kind. A Dictionary of Greek and Roman Antiquities, if understood in its most extensive signification, would comprehend an account of every thing relating to antiquity. In its narrower sense, however, the term is confined to an account of the public and private life of the Greeks and Romans, and it is convenient to adhere to this signification of the word, however arbitrary it may be. For this reason several articles have been inserted in the work which some persons may regard as out of place, and others have been omitted which have sometimes been improperly included in writings on Greek and Roman Antiquities. Neither the names of persons and divinities, nor those of places, have been inserted in the present work, as the former will be treated of in the "Dictionary of Greek and Roman Biography and Mythology," and the latter in the "Dictionary of Greek and Roman Geography."

The subjects of the woodcuts have been chosen by the writers of the articles which they illustrate, and the drawings have been made under their superintendence.* Many of these have been taken from originals in the British Museum, and others from the different works which contain representations of works of ancient art, as the Museo Borbonico, Museo Capitolino, Millin's Peintures de Vases Antiques, Tischbein's and D'Hancarville's engravings from Sir William Hamilton's Vases, and other similar works. Hitherto little use has been made in this country of existing works of art, for the purpose of illustrating antiquity. In many cases, however, the representation of an object gives a far better idea of the purposes for which it was intended, and the way in which it was used, than any explanation in words only can convey. Besides which, some acquaintance with the remains of ancient art is almost essential to a proper perception of the spirit of antiquity, and would tend to refine and elevate the taste, and lead to a just appreciation of works of art in general.

Mr. George Long, who has contributed to this work the articles relating to Roman Law, has sent the Editor the following remarks, which he wishes to make respecting the articles he has written, and which are accordingly subjoined in his own words.

"The writer of the articles marked with the letters G. L. considers some apology necessary in respect of what he has contributed to this work. He has never had the advantage of attending a course of lectures on Roman Law, and he has written these articles in the midst of numerous engagements, which left

* The woodcuts have been executed by Mr. John Jackson.
little time for other labour. The want of proper materials also was often felt, and it would have been sufficient to prevent the writer from venturing on such an undertaking, if he had not been able to avail himself of the library of his friend, Mr. William Wright, of Lincoln's Inn. These circumstances will, perhaps, be some excuse for the errors and imperfections which will be apparent enough to those who are competent judges. It is only those who have formed an adequate conception of the extent and variety of the matter of law in general, and of the Roman Law in particular, who can estimate the difficulty of writing on such a subject in England, and they will allow to him who has attempted it a just measure of indulgence. The writer claims such indulgence from those living writers of whose labours he has availed himself. if any of these articles should ever fall in their way. It will be apparent that these articles have been written mainly with the view of illustrating the classical writers; and that a consideration of the persons for whose use they are intended, and the present state of knowledge of the Roman Law in this country, have been sufficient reasons for the omission of many important matters which would have been useless to most readers and sometimes unintelligible. Though few modern writers have been used, compared with the whole number who might have been used, they are not absolutely few, and many of them to Englishmen are new. Many of them also are the best, and among the best, of the kind. The difficulty of writing these articles was increased by the want of books in the English language; for, though we have many writers on various departments of the Roman Law, of whom two or three have been referred to, they have been seldom used, and with very little profit.

It would be improper to close these remarks without stating the obligations this work is under to Mr. Long. It was chiefly through his advice and encouragement that the Editor was induced to undertake it, and during its progress he has always been ready to give his counsel whenever it was needed. It is therefore as much a matter of duty as it is of pleasure, to make this public acknowledgment to him.

WILLIAM SMITH.

London, April 2nd, 1842.
ABACUS.

Abacus (αβακος) denoted primarily a square tablet of any material; and was hence applied in the following significations:

1. In Architecture it denoted the flat square stone, which constituted the highest member of a column, being placed immediately under the architrave. The annexed figure is drawn from that in the orsanum museum, which was taken from the Parthenon at Athens, and is a perfect specimen of the capital of a Doric column.

In the more ornamented orders of architecture, such as the Corinthian, the sides of the abacus were curved inwards, and a rose or some other decoration was frequently placed in the middle of each side; but the name Abacus was given to the stone thus diversified and enriched, as well as in its original form. (Vitruv. iii. 3, iv. 1 § 7.)

2. A painted panel, coffer, or square compartment in the wall or ceiling of a chamber. (Plin. t. v. xxxiv. 56, xxxv. 1, 12; Vitruv. vii. 3. § 19; Lebrume, Peintur. mur. p. 476.)

3. A wooden tray, used for a variety of purposes in domestic economy. It was, for instance, the name given to the μακρα (μακρα), or tray for kneading dough. (Cratin. Frag. p. 27, ed. Hunkel; Polièx. vi. 90, x. 105; Cato, R. R. 10; Hesych. s. v. μακρα; Schol. in Theoc. iv. 61.)

4. A board, covered with sand or dust, used by mathematicians for drawing diagrams (Eustath. in Od. i. 107), and by arithmeticians for the purposes of calculation. (Petr. Sot. i. 131.) For the latter purpose perpendicular lines or channels seem to have been drawn in the sand upon the board; but sometimes the board had perpendicular wooden divisions, the space on the right-hand being intended for units, the next space for tens, the next for hundreds, and so on. Thus was constructed the abacus on which they calculate, i.e. reckon by the use of stones (ψηφος, calculi). (Comp. Pol. v. 26.) The figure following represents the probable form and appearance of such an abacus. The reader will observe, that stone after stone might be put into the right-hand partition until they amounted to 10, when it would be necessary to take them all out as represented in the figure, and instead of them to put one stone into the next partition. The stones in this division might in like manner amount to 10, thus representing 10 x 10 = 100, when it would be necessary to take out the 10, and instead of them to put one stone into the third partition, and so on. On this principle the stones in the abacus, as delineated in the figure, would be equivalent to 352,310.

5. A board adapted for playing with dice or counters, resembling a draught-board or backgammon-board. (Caryst. ap. Ath. x. p. 435, d.; Suet. Ner. 22; Macrobi. Sat. i. 5.) The Greeks had a tradition ascribing this contrivance to Palamedes, hence they called it "the abacus of Palamedes." (To Palaimides abakes, Eustath. in Od. i. 107.)

[LATRUNCULL]

6. A table or sideboard, chiefly used for the display (exponere) of gold and silver cups. The tops of such tables were sometimes made of silver, but more usually of marble, and appear in some cases to have had numerous cells or partitions beneath, in which the plate was likewise placed. The use of abaci was first introduced at Rome from Asia Minor after the victories of Cn. Manlius Vulso, B.C. 187, and their introduction was regarded as one of the marks of the growing luxury of the age.
ABORTIO.

(Cic. Verr. iv. 16; Tusc. v. 21; Liv. xxxix. 6; Plin. H.N. xxxvii. 6; Petron. 73; Sid. Apoll. xvii. 7, 8.) These abaci are sometimes called mensae Delphicae. (Cic. Verr. iv. 59; Mart. xii. 67; Becker, Collars, vol. i. p. 140.)

7. A part of the theatre on or near the stage.

8. The diminutive ABACULUS (ἄβακούλος) denoted a tile of marble, glass, or any other substance used for making ornamental pavements. They were of various colours. (Plin. H.N. xxxvi. 67; Moschion, ap. Ath. v. 207, d.) [J. Y.]

ABACTUS VENTER. [ABORTIO.]

ABALIENATIO. [MANCIPIUM.]

ABALIENATUR. [MAGISTRATUS.]

ABALUS. The Latin form of ἄβαλος, a loose woollen cloak. Nonius quotes a passage of Varro to show that it was a garment worn by soldiers (vestis militaris), and thus opposed to the toga. Its form and the mode of wearing it are seen in the figures annexed, taken from the bas-reliefs on the triumphal arch of Septimius Severus at Rome.

It was, however, not confined to military occasions, but was also worn in the city. (Suet. Cal. 35.) It was especially used by the Stoic philosophers at Rome as the pallium philosophicum, just as the Greek philosophers were accustomed to distinguish themselves by a particular dress. (Juv. iv. 75; Mart. iv. 53, viii. 48.) Hence the expression of Juvenal (iv. 75) fœcundus majoris abolue merely signifies, "a crime committed by a very deep philosopher." (Heinrich, ad Juv. Lc.; Becker, Collars, vol. ii. p. 90.)

ABORTIO. This word and the cognate word abortivus, abortus, were applied to a child prematurely born, whence it appears that they were applied to signify a premature birth brought about designedly. The phrase abactus venter in Paulus (Sent. Rep. iv. 9) simply means a premature birth. That abortion in the secondary sense of the word was practised among the Romans, appears from various passages and from there being an enactment against it. (Dig. 48. tit. 19, s. 38.) It is not stated at what time a penalty against procuring abortion was established. It is maintained by some modern writers that the practice of abortion became so common among the Romans, that combined with celibacy and other causes it materially diminished the population of Rome. But this general assertion is not sufficiently proved. The practice of abortion appears not to have been viewed in the same light by the Greeks and Romans as by the Christian nations of modern times. Aristotle in his Politik (vii. 14), recommends it on the condition that the child has not yet got sensation and life, as he expresses it. In Plato's Republic (v. p. 25), it is also permitted. At Athens, a person who had caused the abortion of a child by means of a potion (ἄβαλοβιον), was liable to an action (ἄβαλων ἀποκαθήμενον), but we do not know what was the penalty in case of conviction: it was certainly not death. There was a speech of Lycurgus on this subject, which is lost. (Frag. p. v. ed. Reiske.)

ABROGATIO. [LEX.]

ABSOLUTIO. [JUDEX.]

ABSTINENDI BENEFICIUM. [HERES.]

ABUSUS. [USUS FRUCTUS.]

ACCA. (Ἀκκα, ἄκα, or in later Greek ἄκα, in one place ἄκαν) is a very ancient Greek word, for it is said to have been derived from the Thessalians or from the Pelasgians. It seems originally to have meant a pointed stick; thus it was applied both to a goad and to a shepherd's staff. Afterwards it came (like our pæse and pæna, and the German stange) to mean a measuring rod of the length of ten Greek feet, or, according to Hesychius, 9§ οἱ χρύοι, which is the same thing. It was used in measuring land, and thus it resembles the Roman demipedia. It is doubtful whether there was a corresponding square measure. (Schol. in Apoll. Rhod. lll. 1326; Suid. s. v.; Hesych. s. v.; Schow, Hesych. Restit. p. 648; Olympiodor. ad Aristot. Meteorolog. p. 25; Heron. ap. Salins. ad Solin. p. 481; Wurn, de Pond. p. 93.) Compare ACNA.

P. S.

ACA'TIUM. [NAVIS.]

ACCENSI. 1. Public officers who attended on several of the Roman magistrates. They summoned the people to the assemblies, and those who had lawsuits to court; they preserved order in the assemblies and the courts, and proclaimed the time of the day when it was the third hour, the sixth hour, and the ninth hour. An accensius anciently preceded the consul who had not the fasces, and licitors without fasces walked behind him, which custom after being disused was restored by Julius Caesar in his first consulship. (Varr. L. L. vii. 56, ed. Müller; Plin. H. N. vii. 60; Suet. Jul. 20 : Liv. iii. 38.) Accensi also attended on the governors of provinces (Cic. ad Pratr. i. 1. § 4), and were commonly freemen of the magistrate on whom they attended.

2. A body of reserve troops, who followed the Roman army without having any military duties to perform, and who were taken one by one to supply any vacancies that might occur in the legions. They were according to the census of Servius Tullius taken from the fifth class of citizens. They were placed in battle in the rear of the army, behind the triarii, and seem to have acted sometimes as orderlies to the officers. They were also called Adscripticii and in later times Supernumerarii. (Fest. s. v. Accensi, Adscripticii; Liv. i. 45, viii. 8, 10; Veget. ii. 19; Niebuhr, Rom. Hist. vol. i. p. 443, &c.)

ACCEPTILATIO. This word is defined to be a release by mutual interrogation between debtor and creditor, by which each party is exonerated from the same
contract. In other words acceptilatio is the form of words by which a creditor releases his debtor from a debt or obligation, and acknowledges he has received that which in fact he has not received (veluti imaginaria solutio). This release of debt by acceptilatio applies only to such debts as have been contracted by stipulatio, conformably to a rule of Roman law, that only contracts made by words can be put an end to by words. But the astuteness of the Roman lawyers found a mode of complying with the rule, and at the same time extending the acceptilatio to all kinds and to any number of contracts. This was the invention of Gallus Aquilius, who devised a formula for reducing all and every kind of contracts to the stipulatio. This being done, the acceptilatio would immediately apply, inasmuch as the matter was by such formula brought within the general rule of law above mentioned. The acceptilatio must be absolute and not conditional. A part of a debt or obligation might be released as well as the whole, provided the thing was in its nature capable of division. A pupilus could not release a debt by acceptilatio, without the auctoritas of his tutor, but he could be released from a debt. A woman also could not release a debt by stipulatio without the auctoritas of a tutor. The phrase by which a creditor is said to release his debtor by acceptilatio is, debitori acceptum facere, or accepto facere, or acceptum haberere. When anything was done on the behalf of or for the state, such as a building for instance, was approved by the competent authorities, it was said, in acceptum ferri, or referri. (Dig. 46. tit. 4.; 48. tit. 11. s. 7; Gaius, ii. 84, &c. iii. 169, &c. [G. L.])

ACCESIO is a legal term which signifies that two things are united in such wise that one is considered to become a component part of the other; one thing is considered the principal, and the other is considered to be an accession or addition to it. Sometimes it may be doubtful which is to be considered the principal thing and which the accession. But the owner of the principal thing, whichever it is, became the owner of the accession also. The most undisputed kind of accessio is that which arises from the union of a thing with the ground; and when the union between the ground and the thing it is, the thing belongs to him who is the owner of the ground. Thus if a man builds on the ground of another man, the building belongs to the owner of the ground, unless it is a building of a moveable nature, as a tent; for the rule of law is "superficies soli cedit." A tree belonging to one man, if planted in the ground of another man, belongs to the owner of the ground as soon as it has taken root. The same rule applies to seeds planted on the ground of another.

If one man wrote on the papyrus (chartulae) or parchment (membrane) of another, the material was considered the principal, and of course the writing belonged to the owner of the paper or parchment. If a man painted a picture on another man's wood (tabula) or whatever the materials might be, the painting was considered to be the principal (tabula picturae cedit). The principle which determined the acquisition of a new property by accession was this—the intimate and inseparable union of the accessory with the principal. Accordingly, there might be accession by pure accident without the intervention of any rational agent. If a piece of land was torn away by a stream from one man's land and attached to the land of another, it became the property of the man to whose land it was attached after it was firmly attached to it, but not before. This must not be confounded with the case of ALLUVIO.

The person who lost his property by accession had as a general rule a right to be indemnified for his loss by the person who acquired the new property. The exceptions were cases of mala fides.

The term accession is also applied to things which are the products of other things, and not added to them externally as in the case just mentioned. Every accession of this kind belongs to the owner of the principal thing: the produce of a beast, the produce of a field, and of a tree belongs to the owner. In some cases one man may have a right to the produce (fructus) of a thing, though the thing belongs to another. (USUS FRUCTUS.)

The term accessiones was also applied to those who were sureties or bond for others, as fiduciaries. (Dig. 45. tit. 1. s. 91; Puchta, Cursus der Institutionen, ii. p. 661; Dig. 41. tit. 1; Gaius, ii. 73, &c. Confess. i. 22; G. L.)

ACCLAMATIO was the public expression of approbation or disapprobation, pleasure or displeasure, &c. by loud acclamations. On many occasions, there appear to have been certain forms of acclamations always used by the Romans; as, for instance, at marriages, I0 Hymen, Hymenaeae, or Talasso (explained by Liv. i. 9;) at triumphs, Io triumphae, Io triumphi; at the conclusion of plays the last actor called out Plaudite to the spectators; orators were usually praised by such expressions as Bene et praeclarae, Belle et festivae, Non potest melius, &c. (Cic. De Orat. iii. 26.) Under the empire, the name of acclamations was given to the praises and flatteries which the senate bestowed upon the emperor and his family. These acclamations, which are frequently quoted by the Scriptores Historiae Augustae, were often of considerable length, and seem to have been chanted by the whole body of senators. There were regular acclamations shouted by the people, of which one of the most common was Dit is servent. (Capitol. Massim. duo, 16, 26, Gordian. tres, 11; Lamprid. Alex. Sever. 6—12; Vopisc. Tac. 4, 5, 7, Prob. 11.) Other instances of acclamations are given by Ferrarius, De Veterem Acclamationum Origine et Flussus, in Graevius, Theor. Rom. Antiq. vol. vi.

ACCUBATIO, the act of reclining at meals. (CORNNA.)

ACCUBITA, the name of couches which were used in the time of the Roman emperors, instead of the triclinium, for reclining upon at meals. The mattresses and feather-beds were softer and higher, and the supports (fulcra) of them lower in proportion than in the triclinium. The clothes and pillows spread over them were called accubulata. (Lamprid. Helig. 10, 23; Schol. ad Juv. Sat. v. 17.)

ACCUBATIO. (JUDEX.)

ACERRA. (KéStovopis), the incense box used in sacrifices. (Hor. Carm. iii. 8; 2; Verg. Aen. v. 745.) The incense was taken out of the acerra and let fall upon the burning altar; hence, we have the expression de acerra libare. (Ov. ex Pont. iv. 8, 39; Pers. ii. 5.) [TURBULUM.] The acerra represented below is taken from a bas-releif in the museum of the Capitol.

The acerra was also, according to Festus (s. v.), a small altar, placed before the dead, on which
perfumes were burnt. There was a law in the Twelve Tables, which restricted the use of aceraria at funerals. (Cic. de Leg. ii. 24.) [J. Y.]

ACETA'BULUM (αχητῆβολος), a vinegar-cup, which, from the fondness of the Greeks and Romans for vinegar, was probably always placed on the table at meals to dip the food before eating it. The vessel was wide and open above, as we see in the annexed cut, taken from Panofka's work on Greek vases; and the name was also given to all cups resembling it in size and form, to whatever use they might be applied. They were commonly of earthenware, but sometimes of silver, bronze, or gold. (Aristoph. Av. 361; Athen. vi. p. 230, xi. p. 494; Quintil. viii. 6.) The cups used by jugglers in their performances were also called by this name. (Som. Ep. 45.)

ACETA'BULUM, a Roman measure of capacity, fluid and dry, equivalent to the Greek ἀχητῆβολος. It was one-fourth of the hemina; and therefore one-eighth of the sextarius. It contained the weight in water of fifteen Attic drachmae. (Plin. H.N. xxi. 34, s. 109.) [P. S.]

ACHAICUM FOEDUS, the Achaean league. In treating of the Achaean league we must distinguish between two periods, the earlier and the later; the character of the former was pre-eminent religious, and that of the latter pre-eminent political.

1. The earlier period. — When the Heraclidæ took possession of Peloponnæus, which had until then been chiefly inhabited by Achæans, a portion of the latter, under Tisamenus, turned northwards and occupied the north coast of Peloponnæus, which was called αἰγαλακτής, and from which the Ionians, its former inhabitants, were expelled and sought refuge in Attica. The country which was thus occupied by the Achæans and derived from them its name of Achaia, contained twelve confederate towns, which were governed by the descendants of Tisamenus, till at length they abolished the kingly rule after the death of Ogyges, and established a democracy. In the time of Herodotus (i. 145; comp. Strab. viii. p. 333, &c.) the twelve towns of which the league consisted were: Pellene, Aegeira, Aegae, Bura, Helice, Aegium, Rhypes, Pharae (Phareis), Patrae (Patreis), Olenus, Dyme, and Tritaeæ (Tritaeæ). After the time of Herodotus, Rhypes and Aegae disappear from the number of the confederated towns, as they had become deserted (Paus. vii. 23. 25; Strab. viii. p. 387), and Ceryneia and Leontium stepped into their place. (Polyb. ii. 41; comp. Paus. vii. 6.) The common place of meeting was Helice, which town, together with Bura, was swallowed up by the sea during an earthquake in B.C. 373, whereupon Aegium was chosen as the place of meeting for the confederates. (Strab. viii. p. 384; Diod. xv. 48; Paus. vii. 24.)

The bond which united the towns of the league was not so much a political as a religious one, as is shown by the common sacrifice offered at Helice to Poseidon. This solemn sacrifice was perfectly analogous to that offered by the Ionians at the Panionia, and it is even intimated by Herodotus that it was an imitation of the Ionian solemnity. After the destruction of Helice, and when Aegium had become the central point of the league, the common sacrifice was offered up to the principal divinities of the latter town; that is, to Zeus, surnamed Homagryius, and to Demeter Panachaea. (Paus. vii. 24.) In a political point of view the connection between the several towns appears to have been very loose, for we find that some of them acted quite independently of the rest. (Thuc. ii. 9.) The confederation exercised no great influence in the affairs of Greece down to the time when it was broken up by the Macedonians. The Achæans kept aloof from the restless commotions in the other parts of Greece, and their honesty and sincerity were recognised by the circumstance of their being appointed, after the battle of Leuctra, to arbitrate between the Thebans and Lacedæmonians. (Polyb. ii. 39.) Demetrius, Cassander and Antigonus Gonatas placed garrisons in some of their towns, and in others tyrants rose supported by Macedonian influence. The towns were thus torn from one another, and the whole confederacy destroyed.

2. The later period. — When Antigonus in B.C. 281 made the unsuccessful attempt to deprive Ptolemaeus Ceraunus of the Macedonian throne, the Achæans availed themselves of the opportunity of shaking off the Macedonian yoke, and renewing their ancient confederation. The grand object however now was no longer a common worship, but a real political union among the confederates. The towns which first shook off the yoke of the oppressors were Dyme and Patrae, and the alliance concluded between them was speedily joined by the towns of Tritaeæ and Pharae. (Polyb. ii. 41.) One town after another now expelled the Macedonian garrisons and tyrants; and when, in B.C. 277, Aegium, the head of the earlier league, renounced the example of the other towns, the reunation of the new confederacy was laid, and the main principles of its constitution were settled, though afterwards many changes and modifications were introduced. The fundamental laws were, that henceforth the confederacy should form one inseparable state, that each town, which should join it, should have equal rights with the others, and that all members, in regard to foreign countries, should be
regarded as dependent, and bound to obey in every respect the federal government, and those officers who were entrusted with the executive. Polyb. ii. 37, &c.) No town therefore was allowed to treat with any foreign power without the sanction of the others. Aegium, for religious reasons, was at first appointed the central point of the league, and retained this distinction until the time of Philipopoemen, who carried a decree that the meetings might be held in any of the towns of the confederacy. (Liv. xxxviii. 30.) Aegium therefore was the seat of the government, and it was there that the citizens of the various towns met at regular stated times, to deliberate upon the common affairs of the league, and if it was thought necessary, upon those of separate towns, and even upon individuals, and to elect the officers of the league. After having thus established a firm union among themselves, they zealously exerted themselves in delivering other towns also from their tyrants and oppressors. The league, however, acquired its great strength in B. c. 251, when Aratus united the oppressors. The league, however, acquired its towns of Peloponnesus to join the confederacy, and thus Megalopolis, Argos, Hermione, Phlius, and Sicyon, his native place, with it, and some years afterwards Aratus persuaded all the more important members of the community had such a perfect equality of rights, and so much liberty, and, in respect the federal government, and those officers held regularly twice every year, in the spring and in the autumn. These meetings which lasted three days, were held in a grove of Zeus Homagryus in the neighbourhood of Aegium, and near a sanctuary of Demeter Panachaea. (Polyb. ii. 54, iv. 37, v. 1, xxix. 9; Liv. xxxii. 22, xxxviii. 32; Strab. viii. p. 383; Paus. vii. 24.) In cases of urgent necessity, however, extraordinary meetings might be convened, either at Aegium or in any other of the confederate places. (Liv. xxxii. 25; Polyb. xxv. 1, xxix. 8; Plut. Arat. 41.) Every citizen, both rich and poor, who had attained the age of thirty, might attend the assembly and propose any measure, to which they were invited by a public herald. (Polyb. xxix. 9; Liv. xxxii. 20.) Under these circumstances the assemblies were sometimes of the most tumultuous kind, and a wise and experienced man might find it difficult to gain a hearing among the crowds of ignorant and foolish people. (Polyb. xxxviii. 4.) It is, however, natural to suppose that the ordinary meetings, unless matters of special importance were to be discussed, were attended chiefly by the wealthier classes, who had the means of paying the expenses of their journey, for great numbers lived at a considerable distance from the place of meeting.

The subjects which were to be brought before the assembly were prepared by a council (υμηληρης), which seems to have been permanent. (Polyb. xxiii. 7, xxviii. 5, xxix. 9; Plut. Arat. 55.) The principal subjects on which the great assembly had to decide were—peace and war (Polyb. iv. 15, &c.); the reception of new towns into the confederacy (Polyb. xxv. 1); the election of the magistrates of the confederacy (Polyb. iv. 37, 82; Plut. Arat. 41); the punishment of crimes committed by these magistrates, though sometimes special judges were appointed for that purpose, as well as the honours or distinctions to be conferred upon them. (Polyb. iv. 14, xvii. 14, xi. 3; Paus. vii. 9.) The ambassadors of foreign nations had to appear before the assembly, and to deliver the messages of their states, which were then discussed by the assembly. (Polyb. iv. 7, xxvii. 7, &c., xxviii. 7; Liv. xxxii. 9.) The assembly likewise had it in its power to decree, as to whether negotiations were to be carried on with any foreign power or not, and no single town was allowed to send embassies to a foreign power on its own responsibility even on matters of merely local importance, although otherwise every separate town managed its own internal affairs at its own discretion, so long as it did not interfere with the interests of the league. No town further was allowed to accept presents from a foreign power. (Polyb. xxiii. 8; Paus. vii. 9.) The votes in the assembly were given according to towns, each having one vote, whether the town was large or small. (Liv. xxxii. 22, &c.)

The principal officers of the confederacy were: 1. at first two strategi (στρατηγοι), but after the year B. c. 255, there was only one (Strab. viii. p. 385), who in conjunction with an hipparchus (ιππαρχος) or commander of the cavalry (Polyb. v. 95, xxviii. 6) and an under-strategus (υποστρατηγός, Polyb. iv. 59) commanded the army furnished by the confederacy, and was entrusted with the whole conduct of war; 2. a public secretary (δημαρχος, Strab. i. c.; Liv. xxxii. 22, xxxviii. 30; Polyb. v. 1, xxi. 10, who calls the demiurgi (εραυνος). These officers seem to have presided in the great assembly, where they probably formed the body of men which Polybius (xxxviii. 5) calls the γεροφυλας; the demiurgi or the strategus might convene the assembly, though the latter only when the people were convened in arms and for military purposes. (Polyb. iv. 7; Liv. xxxv. 25.) All the officers of the league were elected in the assembly held in the spring, at the rising of the Pleiades (Polyb. ii. 43, iv. 6, 37, v. 1), and legally they were invested with their several offices only for one year, though it frequently happened that men of great merit and distinction were re-elected for several successive years. (Plut. Arat. 24, 30, Cleom. 15.) If one of the officers died during the period of his office, his place was filled by his predecessor, until the time for the new elections arrived. (Polyb. xi. 2.)
close union existing among the confederate towns
was, according to Polybius (ii. 37), strengthened by their adopting common weights, measures, and coins.

But the perpetual discord of the members of the league, the hostility of Sparta, the intrigues of the Romans, and the folly and rashness of the later strategi, brought about not only the destruction and dissolution of the confederacy, but of the freedom of all Greece, which with the fall of Corinth, in a. c. 146, became a Roman province under the name of Achaia. (Comp. Schorn, Gesch. Griechenland's von der Entstehung des Aetol. u. Achäisch. Bundes, especially pp. 49, &c. 60, &c.; A. Matthiae, Vornämiscbe Schriften, p. 239, &c.; Drumm, Ideen zur Gesch. des Verfalls der Griech. Staaten, p. 447; Tittmann, Griech. Staatsverfuss. p. 673, &c.; K. F. Hermann, Griech. Staatsaltert. § 185.) [L. S.]

ACHANE (άχάνη), a Persian and Boeotian measure, equivalent to 45 Attic medimni. (Aristoph. Acharn. 108, 109; Suid. s. v.) According to Herarchius a Boeotian άχάνη was equal to one Attic medimnus. [P. S.]

ACINES. [EXECHRITUS.]

ACINES (ακίνης), a Persian sword, whence Horace (Car. i. 27, 5) speaks of the Medus acinaces. It was a short and straight weapon, and thus differed from the Roman sica, which was curved. (Pollux, i. 138; Joseph. Ant. Jud. xx. 7. § 10. [SICA.] It was worn on the right side of the body (insignis acinace dextro, Val. Flacc. Argen. vi. 701), whereas the Greeks and Romans usually had their swords suspended on the left side.

The form of the acinaces, with the method of using it, is illustrated by the following Persepolitan figures. In all the bas-reliefs found at Persepolis, the acinaces is invariably straight, and is commonly suspended on the right thigh, never over the left, but sometimes in front of the body. The form of the acinaces is also seen in the statues of the god Mithras, one of which is figured in the cut on the title-page of this work.

A golden acinaces was frequently worn by the Persian nobility, and it was often given to individuals by the kings of Persia as a mark of honour. (Herod. viii. 120; Xen. Anab. i. 2, § 27, 8, § 28.)

The acinaces was also used by the Caspii. (Herod. vii. 67.) It was an object of religious worship among the Scythians and many of the northern nations of Europe. (Herod. iv. 62; Comp. Mela, ii. 1; Amm. Marc. xxxi. 2.) [J. Y.]

ACROTERIUM. [ACROSTOïL].

ACROPLIS (ακρόπλοις). In almost all Greek cities, which were usually built upon a hill, rock, or some natural elevation, there was a kind of tower, a castle, or a citadel, built upon the highest part of the rock or hill, to which the name of acropolis was given. Thus we read of an acropolis at Athens, Corinth, Argos, Messene, and many other places. The Capitoline at Rome answered the same purpose as the Acropolis in the Greek cities; and of the same kind were the tower of Antonia at Jerusalem. (Joseph. B. J., v. § 8, Act. Apostol. xxxi. 34.) At Athens, the Acropolis served as the treasury, and as the names of all public debtors were registered there, the expression of “registered upon the Acropolis” (ἐγγράφοντος ἐν ἀκρόπολει) always means a public debtor (ἐν ἀκρόπολει γεγραμμένος, Dem. c. Theocr. p. 1387. 24; Böckh. Publ. Econ. of Athens, p. 308, 2nd edit.).

ACROSTOÎLUM (ακροστοιλον). [NAVIS.]

ACROTERIUM (ακρότεριον) signifies an extremity of any thing. It is generally used in the plural.

1. In Architecture it seems to have been used originally in the same sense as the Latin fustigium,
namely, for the sloping roof of a building, and more particularly for the ornamental front or gable of such a roof, that is, the pediment. (Plut. Caes. 63, compared with Cic. Philipp. ii. 43, and Suet. Caes. 81.) The usual meaning of aceretorius, however, is the pedestal placed on the summit of a pediment to receive statues or other ornamental figures. There were three aceretoria, one above each angle of the pediment. Vitruvius says that those over the outer angles (aceret angles) should be as high as the apex of the tympanum, and the one over the highest angle one-eighth part higher. (Vitruv. iii. 5, or iii. 5. § 12, ed. Schneider.) Some writers include the statues themselves as well as the bases under the name; but the only authority for this seems to be an error of Salmasius. (In Ael. Spart. Pescen. Nig. 12.) 2. The extremities of the prow of a vessel, which were usually taken from a conquered vessel as a mark of victory: the act of doing so was called ἀκροτηρία. (Xen. Hel. ii. 3, § 8, vi. 2, § 36 ; Herod. iii. 59, viii. 121.) 3. The extremities of a statue, wings, feet, hands, &c. (Dem. c. Timaer. p. 730 ; Athen. v. p. 195, e.) [P. S.] ACTA. 1. Signified the public acts and orders of a Roman magistrate, which after the expiration of his office were submitted to the senate for approval or rejection. (Suet. Caes. 19, 23 ; Cic. Phil. i. 7, &c.) After the death of Julius Caesar the triumvirs swore, and compelled all the other magistrates to swear, to observe and maintain all the acts (in acta jurares, comp. Tac. Ann. i. 72 ; Suet. Tib. 67) ; and hence it became the custom on the accession of each emperor for the new monarch to swear to observe and respect all the acts of his predecessors from Julius Caesar downwards, with the exception of those who had been branded with inamy after death, such as Nero and Domitian. Every year all the magistrates upon entering upon their office on the 1st of January swore approval of the acts of the reigning emperor: this oath was originally taken by one magistrate in each department on behalf of his colleagues, but subsequently it was the usual practice for each magistrate to take the oath personally. (Dion Cass. xlvii. 18, liii. 28 ; Tac. Ann. vii. 22, with the Excerpts of Lipsius ; Dion Cass. lvii. 17, lx. 25.) 2. ACTA FORENSIA were of two kinds: first, those relating to the government, as leges, plebiscita, edicta, the names of all the magistrates, &c., which formed part of the tobox publicus ; and secondly, those connected with the courts of law. The acts of the latter kind contained an account of the different suits, with the arguments of the advocates and the decisions of the court. In the time of the republic the names of those who were acquitted and condemned were entered on the record offices in particular departments of the public libraries, to which access could only be obtained by the express permission of the praefectus urbi. They were consulted and are frequently referred to by the later historians (Vopisc. Prob. 2 ; Lamprid. Sever. 58 ; Capitol. Opit. Mucr. 6), and many extracts from them were published in the Acta Diurna. Tacitus and Suetonius never refer to the Acta Senatus as authorities, but only to the Acta Diurna. 5. ACTA DIURNA, a gazette published daily at Rome by the authority of the government during the later times of the republic, and under the empire, corresponding in some measure to our newspapers. (Tac. Ann. iii. 3, xiii. 31, xvi. 22.) In addition to the title Acta Diurna, we find them referred to under the names of Diurna, Acta Publica.
litas, Acta Urbana, Acta Rerum Urbanarum, Acta Populi, and they are frequently called simply Acta. The Greek writers on Roman history call them τα υπομνήματα, τα δημόσια υπομνήματα, τα δημόσια γράμματα and τα κοινά υπομνήματα. The nature of their contents will be best seen from the following passage of Petronius (c. 53) where in imitation of them is given by the actuaries of Trimalchio:—

From this passage, and from the numerous passages in ancient writers, in which the Acta Diurna are quoted (references to which are given in the works of Le Clerc and Liberkühn cited below), it would appear that they usually contained the following matters:—1. The number of births and deaths in the city, an account of the money paid into the treasury from the provinces, and every thing relating to the supply of corn. These particulars would be extracted from the tabulae publicae. By an ancient regulation, ascribed to Semus Tullius (Dion. iv. 15), all hissia Baiae regulatae; jam res facta dissipata; et judicium inter cubicularios actum.

2. Extracts from the Acta Forensia, containing the edicts of magistrates, the testaments of distinguished persons, the names of those who were acquitted and condemned, and likewise a list of magistrates who were elected.

3. Extracts from the acta senatus, especially all the decrees and accusations [Acta Lex] in honor of the reigning emperor. 4. A court circular, containing an account of the births, deaths, festivals, and movements of the imperial family.

5. An account of such public affairs and foreign wars as the government thought proper to publish. 6. Curious and interesting occurrences, such as prodigies and miracles, the erection of new edifices, the confimation of buildings, funerals, sacrifices, a list of the various games, and especially amatory tales and anecdotes rendered it improbable that such was the case. The Acta Diurna continued in use to the downfall of the western empire, or at least till the removal of the seat of government to Constantinople, but they were never published at the latter city.

(ACTIA, "Actis," a festival of Apollo, celebrated at Nicopolis in Epeir, with wrestling, musical contests, horse-racing, and sea-fights. It was established by Augustus, in commemoration of his victory over Antony off Actium, and was probably the revival of an ancient festival; for
**ACTIO.**

there was a celebrated temple of Apollo at Actium, which is mentioned by Thucydides (i. 29), and Strabo (vii. p. 325), and which was besieged by Augustus. The games instituted by Augustus were celebrated every four years (σπεστατις, una quinquennalis) ; they received the title of a sacred Agon, and were also called Olympia. (Strab. i. c.; Dion Cass. li. 1; Suec. Aug. 18; Büchö, Corp. Inscr. No. 1720, p. 845; Krause, Olympia, ...).

*ACTIO* is defined by Celsus (Dig. 44, tit. 7, s. 51) to be the right of pursuing by judicial means (ius actio) was a man's due.

With respect to its subject-matter, the actio was divided into two main divisions, the *in personam actio*, and the *in rem actio*. The *in personam actio* was against a person who was bound to the plaintiff by contract or delict, that is, when the claim against such person was 'dare, facere, praesumere aportere': the *in rem actio* applied to those cases where a man claimed a corporal thing (corporalis res) as his property, or claimed a right, as for instance the use and enjoyment of a thing, or the right to a road over a piece of ground (actus).

The five modes of proceeding by legal action as named and described by Gaius (iv. 12), were, *sacramento*, *Per judicis postulationem*, *Per condictionem*, *Per manus injectionem*, *Per pignoris*

But these forms of action gradually fell into disuse, in consequence of the excessive nicety required, and the failure consequent on the slightest error in the pleadings; of which there is a notable example given by Gaius himself (iv. 11), in the case of a plaintiff who complained of his vines (vitae) being cut down, and was told that his action was *nulla causa* as he ought to have used the term (arbores) and not vines; because the law of the Twelve Tables, which gave him the action for damage to his vines, contained only the general expression "trees" (arbores). The Lex Aebutia and two *leges* Juliane abolished the old *legitima actiones*, except in the case of *damnum infectum* [DANNUM INCEPTUM], and in matters which fell under the cognizance of the Centumviri. [CENTUMVIRI.]

In the old Roman constitution, the knowledge of the law was closely connected with the institutes and ceremonial of religion, and was accordingly in the hands of the patricians alone, whose aid their clients were obliged to ask in all their legal disputes. Appius Claudius Caecus, perhaps one of the earliest writers on law, drew up the various forms of actions, probably for his own use and that of his friends; the manuscript was stolen by his scribe, Cn. Flavius, who made it public; and thus, according to the story, the plebeians became acquainted with those legal forms which hitherto had been the exclusive property of the patricians. (Cic. De Orat. i. 11, pro Marone, c. 11; Dig. 1. tit. 2. s. 2, § 7.)

Upon the old legal actions being abolished, it became the practice to prosecute suits according to certain prescribed forms or formulae, as they were called, which will be explained after we have noticed various divisions of actions, as they are made by the Roman writers.

The division of actions in the Roman law is somewhat complicated, and some of the divisions must be considered rather as emanating from the schools of the rhetoricians than from any other source. But this division, though complicated, may be somewhat simplified, or at least rendered more intelligible, if we consider that an action is a claim or demand made by one person against another, and that in order to be a valid legal claim it must be founded on a legal right. The main division of actions must therefore have a reference or analogy to the main division of rights; for in every system of law, the form of the action must be the expression of the legal right. Now the general division of rights in the Roman law is into rights of dominion or ownership, which are rights against the whole world, and into rights arising from contract, and quasi contract, and delict. The actio in rem implies a complainant, who claims a certain right against every person who may dispute it, and the object and end of the action are to compel an acknowledgment of the right by the particular person who disputes it. By this action the plaintiff maintains his property in or to a thing, or his rights to a benefit from a thing (servitutes). Thus the actio in rem is not so called on account of the subject-matter of the action, but the term is a technical phrase to express an action which is in no way founded on contract, and therefore has no determinate individual as the other necessary party to the action; but every individual who disputes the right becomes, by such act of disputing, a party liable to such action. The actio in rem does not ascertain the complainant's right, and from the nature of the action the complainant's right cannot be ascertained; it was called "actio in rem," because the action or the thing has the right, and is thus the object of the suit. The plaintiff or defendant is not within the world; but the action determines that the defendant has or has not a claim which is valid against the plaintiff's claim. The actio *in personam* implies a determinate person or persons against whom the action lies, the right of the plaintiff being founded on the acts of the defendant or defendants: it is, therefore, in respect of something which has been agreed to be done, or in respect of some injury for which the plaintiff claims compensation. The *actio mixta* of Justinian's legislation (Inst. iv. tit. 6, s. 20) was so called from its being supposed to partake of the nature of the *actio in rem* and the *actio in personam*. Such was the action among co-heirs as to the division of the inheritance, and the action for the purpose of settling boundaries which were confused.

Rights, and the modes of enforcing them, may also be viewed with reference to the sources from which they flow. Thus, the rights of Roman citizens flowed in part from the sovereign power, in part from those to whom power was delegated.
That body of law which was founded on, and flowed from the edicts of the praetors, and curule aediles, was called *jus honorarium*, as opposed to the *jus civilis*, in its narrower sense, which comprised the *leges*, *plebiscita*, *senatus consultus*, &c. The *jus honorarium* introduced new rights and modified existing rights; it also provided remedies suitable to such new rights and modifications of old rights, and this was effected by the actions which the praetors and aediles allowed. On this jurisdiction of the praetors and aediles is founded the distinction of actions into *civiles* and *honoriae*, or, as they are sometimes called, *praetorines*, from the greater importance of the praetor's jurisdiction.

There were several other divisions of actions, all of which had reference to the forms of procedure. A division of actions was sometimes made with reference to the object which the plaintiff had in view. If the object was to obtain a thing, the action was called *perecursoria*. If the object was to obtain damages (*poena*) for an injury, as in the case of a thing stolen, the action was *poenalis*; for the thing itself could be claimed both by the *vidicatio* and the *condictio*. If the object was to obtain both the thing and damages, it was probably sometimes called *actio mixta*, a term which had however another signification also, as already observed. The division of actions into *directae* and *utilis* must be traced historically to the *actiones fictitiae* or fictions by which the rights of action were enlarged and extended. The origin of this division was in the power assumed by the praetor to grant an action in special cases where no action could legally be brought, and in which an action, if brought, would have been *transis* or *inutilis*. After the decline of the praetor's power, the *actiones utilis* were still extended by the contrivances of the *juris praedancis* and the rescripts of the emperors. Whenever an *actio utilis* was granted, it was framed on some analogy to a legally recognised right of action. Thus, in the examples given by Gaius (iv. 34), he who obtained the *bonorum possessio* by the praetor's edict, succeeded to the deceased by the praetor and not the civil law: he had, therefore, no direct action (*directa actio*) in respect of the rights of the deceased, and could only bring his action on the fiction of his being what he was not, namely, *heres*.

Actions were also divided into *ordinariae* and *extraordinariae*. The *ordinariae* were those which were prosecuted in the usual way, first before the praetor, *in jure*, and then before the judex, *in judicio*. When the whole matter was settled before or by the praetor in a summary way, the name *extraordinaria* was applicable to such action. [INTERDICT.]

The term *condictiones* only applies to personal actions; but not to all personal actions. It does not comprehend actions *ex delicto*, nor *bonae fidei* actions. As opposed to *bonae fidei* actions, *condictiones* were sometimes called *actiones stricti juris*. In the *actiones stricti juris* it appears that the formula of the praetor expressed in precise and strict terms the matter submitted to the judex, whose authority was thus confined within limits. In the *actiones bonae fidei*, or *ex fide bona* (Cic. Top. 17), more latitude was given, either by the formula of the praetor, or was implied in the kind of action, such as the action *ex empto*, *vendito*, *locato*, &c., and the special circumstances of the case were to be taken into consideration by the judex. The *actiones arbitrariae* were so called from the judex in such case being called an arbiter, probably, as Festus says, because the whole matter in dispute was submitted to his judgment; and he could decide according to the justice and equity of the case, without being fettered by the praetor's formula. It should be observed also, that the judex neverly could only condemn in a sum of money; but the arbiter might declare that any particular act should be done by either of the parties, which was called *his arbitrium*, and was followed by the *condictio* if it was not obeyed.

The division of actions into *perpetuas* and *temporales* had reference to the time within which an action might be brought, after the right of action had accrued. Originally those actions which were given by a lex, *senatus consultum*, or an imperial constitution, might be brought without any limitation as to time; but those which were granted by the praetor's authority were generunity limited to the year of his office. A time of limitation was, however, fixed for all actions by the late imperial constitutions.

The division of actions into *actiones in jus* and *in factum* is properly no division of actions, but has merely reference to the nature of the formula. In the formula *in juxta conceptus*, the praetor might direct the judex barely to inquire as to the fact which was the only matter in issue; and on finding the fact, to make the proper *condictio* as in the case of a freedman bringing an action against his patronus. (Gaius, iv. 46.) In the formula *in jure* the fact was not in issue, but the legal consequences of the fact were submitted to the discretion of the judex. The formula *in factum* commenced with the technical expression *Si veret* &c., “If it should appear,” &c.; the formula *in jus* commenced, *Quod A. A.* &c., “Whereas A. A. did so and so.” (Gaius, iv. 47.)

The actions which had for their object the punishment of crimes, were considered public; as opposed to those actions by which some particular person claimed a right or compensation, and which were therefore called *privata*. The former were properly called *judicia publica*; and the latter, as contrasted with them, were called *judicia privata*. [JUDICIUM.]

The actions called *noxales* arose when a *filius familias* (a son in the power of his father), or a slave, committed a theft, or did any injury to another. In either case the father or owner might give up the wrong-doer to the person injured, or else he must pay competent damages. These actions, it appears, take their name either from the injury committed, or because the wrong-doer was liable to be given up to punishment (*noxae*) to the person injured. Some of these actions were of legal origin, as that of theft, which was given by the Twelve Tables; that of *damnum injuriarum*, which was given by the Aquilia Lex; and that of *injuriarum et vi bonorum raptorum*, which was given by the edict, and therefore was of praetorian origin. This instance will serve to show that the Roman division and classification of actions varied according as the Roman writers contemplated the sources of rights of action, or the remedies and the modes of obtaining them.

An action was commenced by the plaintiff summoning the defendant to appear before the praetor or other magistrate who had *jurisdiction*: this process was called *in jus vocatio*; and, according to
the laws of the Twelve Tables, was in effect a dragging of the defendant before the praetor if he refused to go quietly. This rude proceeding was modified in later times, and in many cases there could be no in jure vocatio at all, and in other cases it was necessary to obtain the praetor's permission under pain of a penalty. It was also established that a man could not be dragged from his own house; but if a man kept his house to avoid, as we should say, being served with a writ, he ran the risk of a kind of sequestration (m bona mitteltatur). Tit. 4.) If the defendant would not go quietly, the praetor gave him leave to amend his claim or to have sureties from him.

When before the praetor, the parties were said sue aveae. The plaintiff then prayed for an action, and if the praetor allowed it (dabat actionem), he then declared what action he intended to bring against the defendant, which was called edere actionem. This might be done in writing, or orally, or by the plaintiff taking the defendant to an aemum, and showing him which action he intended to rely on. (Dig. 2. tit. 4.) As the formulae comprehended, or were supposed to comprehend, every possible form of action that could be required by a plaintiff, it was presumed that he could find among all the formulae some one which was adapted to his case, and he was accordingly supposed to be without excuse if he did not take pains to select the proper formula. (Cic. Pro Ros. com. c. 6.) If he took the wrong one, or if he claimed more than his due, he lost his action; thus the contract might be, that the plaintiff required the defendant to give security for his appearance before the praetor (in jure) on a day named, commonly the day but one after the in jus vocatio, unless the matter in dispute was settled at once. The defendant, on finding a surety, was said vades dare (Hor. Serm. i. i. 11), vadimonium promittere, or facile; the surety, was said spondere; the plaintiff when satisfied with the surety was said, vadari rerum, to let him go on his sureties, or to have sureties from him.

When the defendant promised to appear in jure on the day named, without giving any surety, this was called vadimonium purum, or vadimonium. In some cases reperitores were named, who, in case of the defendant making default, condemned him in the sum of money named in the vadimonium.

If the defendant appeared on the day appointed, he was said vadimonium sisterae; if he did not appear, he was said vadimonium deserisse, and the praetor gave to the plaintiff the honorum possessio. (Hor. Serm. i. 9. 36—41; Cic. Pro P. Quintio, c. 6.) Both parties, on the day appointed, were summoned by a crier (praeco), when the plaintiff made his claim or demand, which was very briefly expressed, and may be considered as corresponding to our declaration at law.

The defendant might either deny the plaintiff's claim, or he might reply to it by a plea, exceptio. If he simply denied the plaintiff's claim, the cause was at issue, and a judex might be demanded. The forms of the exceptio also were contained in the praetor's edict, or upon hearing the facts the praetor averted the plea to the case. The exceptio was the defendant's defence, and was often merely expressed, or he might put in a plea of fraud (dolus malus), or that he had been constrained to come to such agreement. The exceptio was in effect something which negated the plaintiff's demand, and it was expressed by a negative clause: thus, if the defendant asserted that the plaintiff fraudulently claimed a sum of money which he had not given to the defendant, the exceptio would run thus: Si in ea re nihil doloro malo Auli Agerii factum sit necque fiat. Though the exceptio proceeded from the defendant, it was expressed in this form, in order to be adapted for insertion in the formula, and to render the condemnatio subject to the condition.

Exceptions were peremptoria or dilatoriae. Peremptory exceptions were a complete and perpetual answer to the plaintiff's demand, such as an exceptio of dolus malus, or of res judicata. Dilatory exceptions were, as the name imports, merely calculated to delay the plaintiff's demand; as, for instance, by showing that the debt or duty claimed was not yet due. Gaius considers the exceptio litis divisuae et rei residuae (iv. 122) as belonging to this class. If a plaintiff prosecuted his action after a dilatory exception, he lost altogether his right of action. There might be dilatory exceptions also to the person of the plaintiff, of which class is the exceptio cognitoria, by which the defendant objected either that the plaintiff is not entitled to sue by a cognitor, or that the cognitor whom he had named was not qualified to act as a cognitor. If the exception was allowed, the plaintiff could either sue himself, or name a proper cognitor, as the case might be. If a defendant neglected to take advantage of a peremptory exceptio, the praetor
might afterwards give him permission to avail himself of it; whether he could do the same in the case of a dilatory was a doubtful question. (Gaius, iv. 125.)

The plaintiff might reply to the defendant's exceptio, for the defendant by putting in his plea became an actor. [Acron.] The defendant's plea might be good, and a complete answer to the plaintiff's demand, and yet the plaintiff might allege something that would be an answer to the plea. Thus, in the example given by Gaius (iv. 126), if an argentarius claimed the price of a thing sold by auction, the defendant might put in a plea, which, when inserted in the formula, would be of this shape: — Ut ista demum emptam damnetur, si eis quam emerit, tradita sit; and this would be in form a good plea. But if the conditions of sale were that the article should not be handed to the purchaser before the money was paid, the argentarius might put in a replicatio in this shape: — Nisi prodeedtum est ne aliter emptori res traderetur quam si pretium emtor solverit. If the defendant answered the replicatio, his answer was called duplicatio; and the parties might go on to the triplicatio and quadruplicatio, and even further, if the matters in question were such that they could not otherwise be brought to an issue.

The praescriptio, which was so called from being written at the head or beginning of the formula, was adapted for the protection of the plaintiff in certain cases. (Gaius, iv. 130, &c.; Cic. De Orat. i. 37.) For instance, if the defendant was bound to make to the plaintiff a certain fixed payment yearly or monthly, the plaintiff had a good cause but in order to avoid making his demand for the same he might be required to give security, which was so called from being written at the head or beginning of the formula, was adapted for the protection of the plaintiff in certain cases. (Gaius, iv. 130, &c.; Cic. De Orat. i. 37.) For instance, if the defendant was bound to make to the plaintiff a certain fixed payment yearly or monthly, the plaintiff had a good cause but in order to avoid making his demand for the future payments not yet due, it was necessary to use a praescriptio of the following form: — Eia res aputer cujus rei dies fuit.

A person might maintain or defend an action by his cognitor or procurator, or, as we should say, by his attorney. The plaintiff and defendant used a certain form of words in appointing a cognitor, and it would appear that the appointment was made in the presence of both parties. The cognitor needed not to be present, and his appointment was complete when he had signed his assent. (Cic. Pro Q. Roscio, c. 2; Hor. Serm. i. 5. 35.) No form of words was necessary for appointing a procurator, and he might be appointed without the knowledge of the opposite party.

In many cases both plaintiff and defendant might be required to give security (satislare); for instance, in the case of an actio in rem, the defendant who was in possession was required to give security, in order that if he lost his cause and value, the plaintiff might have an action against him or his sureties. When the cause was brought to an issue, a judex or judices might be demanded of the praetor who named or appointed a judex and delivered to him the formula which contained his instructions. The judices were said dari or audici. So far the proceedings were said to be in iure; the prosecution of the actio before the judex requires a separate discussion. (Jugurcanum.)

The following is an example of a formula taken from Gaius (iv. 47): — Judex esto. Si parer Aulum Agerium opud Numeriam Negidium mensan arycumentum deposuisse ex quoque dolo malo Numerum Negidii Aulo Agerio reddatum non esse quanti ea res orta tantum pectumur judex Numerium Negidiam Aulo Agerio condemnato: si non paret, absolveo.

The nature of the formula, however, will be better understood from the following analysis of it by Gaius: — It consisted of four parts, the demonstratio, intentio, adjudicatio, condamnatio. The demonstratio is that part of the formula which explains what the subject-matter of the actio is. For instance, if the subject-matter be a slave sold, the demonstratio would run thus: — Quod Aulus Agerius Numerio Negidio hominem vendidit. The intentio contains the claim or demand of the plaintiff: — Si parer hominem ex iure Aule Agerii esse. The adjudicatio is that part of the formula which gives the judex authority to adjudicate the thing which is the subject of dispute to one or other of the litigant parties. If the action be among partners for dividing that which belongs to them all, the adjudication would run thus: — Quantum adjudicatis operat judex Titio adjudicato.

The condamnatio is that part of the formula which gives the judex authority to condemn the defendant in a sum of money, or to acquit him: for example, Judex Numerium Negidium Aulo Agerio sesterium millia condemna: si non paret, absolveo. Sometimes the intentio alone was resitute, as in the formulae called praegjudiciales (which some modern writers make a class of actions), in which the matter for inquiry was, whether a certain person was a freedman, what was the amount of a don, and other similar questions, when a fact solely was the thing to be ascertained.

Whenever the formula contained the condemnatio, it was framed with the view to pecuniary damages; and accordingly, even when the plaintiff claimed a particular thing, the judex did not adjudge the defendant to give the thing, as was the ancient practice at Rome, but condemned him in a sum of money equivalent to the value of the thing. The formula might either name a nixem sum, or leave the estimation of the value of the thing to the judex, who in all cases, however, was bound to name a definite sum in the condemnation.

The formula then contained the pleadings, or the statements and counter-statements, of the plaintiff and the defendant; for the intentio, as we have seen, was the plaintiff's declaration; and if this was met by a plea, it was necessary that this also should be inserted in the formula. The formula also contained the directions for the judex, and gave him the power to act. The English and Roman procedure are severally stated in Mr.
Scenes work on the course of time, which it is not very easy to describe; but it has been remarked by Hollweg that the system of procedure maintained itself in all essential particulars unaltered for many centuries, and what we learn from Cicero (B. c. 70) is almost the same as what we learn from Gaius (A. D. 160). Modern writers, however, differ on various points; and the subject requires a complete examination from one who is fully acquainted with the Roman law, and practically versed in the nature of legal proceedings.

The following are the principal actions which we find recorded in the Roman writers, and which are briefly described under their several heads:

**ACTIO.**
- *Actio Aquae pluviae arcendae.*
- *Bonomerum vi autorum.*
- *Certi et Incerti.*
- *Commodati.*
- *Exercitoria.*
- *Ad Exhirmentum.*
- *Exercitoria.*
- *Ad Exhimenurium.*
- *Institorum.*
- *Judicii.*
- *Quod jusse.*
- *Legis Aquiae.*
- *Locati et conducti.*
- *Mandati.*
- *Mutui.*
- *Nupta.*
- *Peculio.*
- *Pignoraticia.*
- *Porosis.*
- *Pignoriae.*
- *Quanti minoris.*
- *Rationibus unanam.*
- *Sapiens.*
- *Serviana.*
- *Pro socio.*
- *Tributoria.*

**ACTOR.**
Actor signified generally a plaintiff. In a civil or private action, the plaintiff was often called *victor;* in a public action (*causa publica*), he was called *accusator.* (Cie. ad Att. i. 16.) The defendant was called *resis,* both in private and public causes: this term, however, according to Cicero (De Orat. ii. 43), might signify either party, as indeed we might conclude from the word itself. In a private action, the defendant was often called *adversarius,* but either party might be called *adversarius* with respect to the other. Originally, no person who was not *sui juris* could maintain an action; a *filius familias,* therefore, and a slave, could not maintain an action; but in course of time certain actions were allowed to a *filius familias* in the absence of his parent or his procurator, and also in case the parent was incompetent to act from madness or other like cause. (Dig. 47. tit. 10. s. 17.) Wards (*pupilli*) brought their actions by their tutor (*tutor*); and in case they wished to bring an action against their tutor, the praetor named a tutor for the purpose. (Gaius, i. 104.)

**ACTUS.**
- A Roman measure of land, which originally meant a way between fields for beasts of burden to pass (or, as some say, the length of a furrow), was given to such a way when of a definite width and length, and also to a square piece of land of the same length. The former was called *actus minimus* or *simplex,* and was 120 feet (Roman) long by 4 feet wide. (Varro, L. L. iv. 4, or v. 34, Müller; Colum. v. 1. § 5, ed. Schneider; Festus, s. v. iter inter vicinas [polu latum].) The *actus quadratus,* which was the square unit in the system of Roman land measurement, was of the same length as the *actus minimus,* and of a width equal to its length: it was thus 120 feet square, and contained 14,400 square feet. It was the half of a juger. (Colum. l.c.; Varro, l.c. and R. R. i. 10. § 2, ed. Schneider.) The following are the etymological explanations of the word: *Actus vocabatur, in quo boves aperentur cum aratro, uno impetu justo.* (Plin. xviii. 3; Ut ejus quo agi poterat, sic qua agi actus. [Varro, L. L. i. c.] The *actus* furnishes an example of the use of the number twelve among the Romans, its length being twelve times the standard *decempeda.* Columella (c. § 6) says that the Gauls called the *actus quadratus,* *aripennis,* but this could only be an approximate identification, for the *actus quadratus* is somewhat smaller than the great French *arpent* and much larger than the small *arpent.* (Compare ACNA; Niebuhr, Hist. of Rome, vol. ii. Appendix I.)

**ACTUS.**
- *Servitutes.*

**ACUS.**

**ACTUARIAE NAVES.**

**ACTUAII, or ACTAII, clerks who compiled the Acta Publica.** (Acta, p. 8, b.) The name is also sometimes given to the *Notarii,* or short-hand writers, who took down the speeches in the senate and the courts (Suet. Jul. 55; Sen. Ep. 33); respecting whom and the use of shorthand among the Romans, see Notaril.

2. Military officers whose duty it was to keep the accounts of the army, to see that the contractors supplied the soldiers with provisions according to agreement, &c. (Amm. Marc. xx. 5; Cod. 12. tit. 37. s. 3. 16; 12. tit. 49.)

3. The title of certain physicians at the court of Constantinople. (Medicus.)

**ACTUS.**
- A Roman measure of land, which formed the basis of the whole system of land measurement. In that system the name *actus* (from *aqua,* which originally meant a way between fields for beasts of burden to pass (or, as some say, the length of a furrow), was given to such a way when of a definite width and length, and also to a square piece of land of the same length. The former was called *actus minimus* or *simplex,* and was 120 feet (Roman) long by 4 feet wide. (Varro, L. L. iv. 4, or v. 34, Müller; Colum. v. 1. § 5, ed. Schneider; Festus, s. v. iter inter vicinas [polu latum].) The *actus quadratus,* which was the square unit in the system of Roman land measurement, was of the same length as the *actus minimus,* and of a width equal to its length: it was thus 120 feet square, and contained 14,400 square feet. It was the half of a juger. (Colum. l.c.; Varro, l.c. and R. R. i. 10. § 2, ed. Schneider.) The following are the etymological explanations of the word: *Actus vocabatur, in quo boves aperentur cum aratro, uno impetu justo.* (Plin. xviii. 3; Ut ejus quo agi poterat, sic qua agi actus. [Varro, L. L. i. c.] The *actus* furnishes an example of the use of the number twelve among the Romans, its length being twelve times the standard *decempeda.* Columella (c. § 6) says that the Gauls called the *actus quadratus,* *aripennis,* but this could only be an approximate identification, for the *actus quadratus* is somewhat smaller than the great French *arpent* and much larger than the small *arpent.* (Compare ACNA; Niebuhr, Hist. of Rome, vol. ii. Appendix I.)

**ACTUS.**

**ACTUS.**

**ACTUS.**

**SERVITUTES.**

**ACUS.**

**ACUS.**
taken from originals in bronze, vary in length from an inch and a half to about eight inches. They were used for the same purposes as with us, and also in dressing the hair. (Mart. xiv. 24.) The mode of plaiting the hair, and then fastening it with a pin or needle, is shown in the annexed figure of a female head, taken from a marble group which was found at Apt, in the south of France. (Montfaucon, *Ant. Exp. Suppl.* iii. 3.) This fashion has been continued to our own times by the females of Italy, and of some parts of Germany, as for instance, in the neighbourhood of Coblenz.

ADDICTI. [Nexi.] ADDICTIO. [Actio.] ADDIX (ἀξίς), a Greek measure of capacity, equal to four χοῦνες. (Hesych. s. v.; Schol. ad *Hom. Od.* 19.) [P. S.]

ADEIA (ἀδεία), freedom from fear, or security, in any public action. When any one in Athens, who had not the full privileges of an Athenian citizen, such as a foreigner, a slave, &c., wished to accuse a person of any offence against the people, he was obliged to obtain first a permission to do so, which permission was called adæia. (Plut. *Peric.* 31.) An Athenian citizen who had incurred atimia, was also obliged to obtain adæia before he could take part in public affairs (Plut. *Phoc.* 26); and it was not lawful for any one to propose to the people, that an atimia should be restored to his rights as a citizen, or that a public debtor should be released from his debt, till adæia had been granted for this purpose by a decree passed in an assembly of 6000 citizens voting secretly by ballot. (Dem. c. *Timoc.* p. 715; *Andoc. de Myst.* p. 36; Böckh, *Public Economy of Athens*, p. 392, 2d ed.)

ADJACENT. [Loc. Adjacent.]

ADJEANTIA. [Cognate.]

ADJUCTION. [Actio.]

ADLECTI. 1. Those who were chosen to fill up a vacancy in any office or collegium, and especially those who were chosen to fill up the proper number of the senate. As these would be generally equites, Festus (s. v.) defines the adlecti to be equites added to the senate: and he appears in this passage to make a difference between the adlecti and conscripti. But they were probably the same; for in another passage (s. v. conscripti), he gives the same definition of the con-

ADLECTOR, a collector of taxes in the provinces in the time of the Roman emperors. (Cod. *Theod.* 12. tit. 6. s. 12.)

ADMISSIONALES were chamberlains at the imperial court, who introduced persons to the presence of the emperor. (Lamprid. *Sever.* 4: *officium admissionis*, Suet. *Vesp.* 14.) They were divided into four classes; the chief officer of each class was called proximus admissionis (Amm. *Marc.* xxii. 7); and the proximi were under the magister admissionum. (Amm. *Marc.* xv. 5: *Von. Aurel.* 12.) The admissionales were usuallly freedmen. (Cod. *Theod.* 6. tit. 2. s. 12; tit. 9. s. 2; tit. 35. s. 3.)

Friends appear to have been called amicus admissionis primus, secundus, or tertius. According to some writers, they were so called in consequence of the order in which they were admitted; according to others, because the atrium was divided into different parts, separated from one another by hangings, in to which persons were admitted according to the different degrees of favour in which they were held. (Sen. *de Benef.* vi. 33, 34, *Chem.* i. 10.)

ADOLESCENS. [Infans.]

ADOBIA (Ἀδοβία), a festival celebrated in honour of Aphrodite and Adonis in most or the Greek cities, as well as in numerous places in the East. It lasted two days, and was celebrated by women exclusively. On the first day they brought into the streets statues of Adonis, when they were laid out as corpses; and they observed all the rites customary at funerals, beating themselves and uttering lamentations. The second day was spent in mourning for the return of Adonis to life, and spent near or the year with Aphrodite. (Aristoph. *Pax.* 412. *Schol. ad loc.*; *Plut. Aisch.* 18. *Nic.* 13.) For fuller particulars respecting the worship and festivities of Adonis, see Dict. *of Biogr.* s. v. *Adonis.*

ADOPTIO. adoption. 1. *Græk* was called by the Athenians εἰκος or συνεκος or δας. The Greek writers use δας also as equivalent to the Roman adoptio, and serio as equivalent to adoptio. (App. B. C. iii. 13, 14.) The adoptive father was said πεψας, εικοσις, or sometimes ποισι; and the father or mother (for a mother because her husband could consent to her son being adopted) was said εικονοις; the son was said εικονοις, with reference to the family which he left; and εικοσις, with reference to the family into which he was received. The son, when adopted, was called πεψας, εικοσις, or δας; in opposition to the legitimate son born of the body of the father, who was called γης. A man might adopt a son either in his lifetime or by his testament, provided he had no male offspring and was of sound mind. He might also, by testament, name a person to take his property, in case his son or sons should die under age. (Dem. *...
2. ROMAN. The Roman term was adoptio or adoptatio. (Gell. v. 19.) The Roman relation of parent and child arose either from a lawful marriage or from adoption. Adoptio was the general name which comprehended the two species, adoptio and adoptatio; and the adopted person passed from his own family into that of the person adopting, adoptio caused a capitās diminutio, and the lowest of the three kinds, Adoption, in its specific sense, was the ceremony by which a person who was in the power of his parent (in potestate parentem), whether child or grandchild, male or female, was transferred to the power of the person adopting him. It was effected under the authority of a magistrate (magistratus), the praetor, for instance, at Rome, or a governor (praeses) in the provinces. The person to be adopted was mancipated [Mancipatio] by his natural father before the competent authority, and surrendered to the adoptive father by the legal form called in jure cessio. (Gell. v. 19; Suet. Aug. 64.)

When a person was not in the power of his parent (sui juris), the ceremony of adoption was called adrogatio. Originally, it could only be effected at Rome, and only by a vote of the populus (populi auctoritate) in the comitia curiata (lege curiata); the reason of this being that the caput or status of a Roman citizen could not, according to the laws of the Twelve Tables, be affected except by a vote of the populus in the comitia curiata. Clodius, the enemy of Cicero, was adrogated into a plebeian family by a law known by the name of curiata, in order to qualify himself to be elected a tribunus plebis. (Cic. ad Att. ii. 7, p. Dom.) Females could not be adopted by the adrogatio. Under the emperors it became the practice to effect the adrogatio by an imperial rescript (principis auctoritate, ex rescripto principis); but this practice had not become established in the time of Gaius, or, as it appears, of Ulpian. (Compare Gaius, i. 98, with Gaius as cited in Dig. i. tit. 7. s. 2; and Ulpian, Prag. tit. 8.) It would seem, however, from a passage in Tacitus (Hist. i. 10), that Galba adopted a son in his dominium without the vestigia of the Twelve Tables, and that this practice of adrogatio, as it is called, was first adopted by the emperor Titus. By a rescript of the Emperor Antoninus Pius, addressed to the pontifices, those who were under age (impuberes), or wards (pupilli), could, with certain restrictions, be adopted by the adrogatio. If a father who had children in his power consented to be adopted by another person, both himself and his children became in the power of the adoptive father. All the property of the adopted son became at once the property of the adoptive father. (Gaius, ii. 98.) A person could not legally be adopted by the adrogatio till he had made out a satisfactory case (iucunda, domo, eussa) to the pontifices, who had the right of insisting on certain preliminary conditions. This power of the pontifices was probably founded on their right to preserve the due observance of the sacra of each gens. (Cic. p. Dom. 13, &c.) It would accordingly have been a good ground of refusing their consent to an adrogatio, if the person to be adopted was the only male of his gens, for the sacra would in such case be lost. It was required that the adoptive father also had no children, and no reasonable hopes of any; and that he should be older than the person to be adopted. It is generally assumed that all adrogations were made before the curiae. Gaius, however, and Ulpian use the expressions per populum, auctoritate populi, expressions
of very doubtful import with reference to their period. After the comitia curiata fell into disuse, it is most probable that there was no formal assembly of the curiae, and that they were represented by the thirty lictors.

A woman could not adopt a person, for even her own children were not in her power.

The rules as to adoption which the legislation of Justinian established, are contained in the Institutes (i. tit. 11).

The effect of adoption, as already stated, was to create the legal relation of father and son, just as if the adopted son were born of the blood of the adoptive father in lawful marriage. The adopted child was intitled to the name and sacra privata of the adopting parent, and it appears that the preservation of the sacra privata, which by the laws of the Twelve Tables were made perpetual, was frequently one of the reasons for a childless person adopting a son. In case of intestacy, the adopted child would be the hero of his adoptive father. He became the brother of his adoptive father and therefore could not marry his father's wife, for adoption only gave to the adopted son the jura agnationis. (Gaius, i. 97—107; Dig. 1. tit. 7; Cic. p. Domu.)

The phrase of “adoption by testament” (Cic. Brut. 50) seems to be rather a misapplication of the term; for though a man or woman might by testament name a hero, and impose the condition of the heroes taking the name of the testator or testatrix, this so-called adoption could not produce the effects of a proper adoption. It could give to the person so said to be adopted, the name or property of the testator or testatrix, but nothing more. Niebuhr (Lectures, vol. ii. p. 100) speaks of the testamentary adoption of C. Octavius by C. Julius Caesar, as the first that he knew of; but the passage of Cicero in the Brutus and another passage (Ad Hirt. viii. 8), show that other instances had occurred before. A person on passing from one gens into another, and taking the name of his new familia, generally retained the name of his old gens also, with the addition to it of the termination unus. (Cic. ad Att. iii. 20, and the note of Varr. Thus, C. Octavius, afterwards the Emperor Augustus, when being adopted by the testament of his uncle the dictator, assumed the name of Caius Julius Caesar Octavianus; but he caused the adoption to be confirmed by the curiae. As to the testamentary adoption of C. Octavius, see Drummans, Geschichte Roms, vol. i. p. 337, and the references there given. Livia was adopted into the Julia gens by the testament of Augustus (Tac. Ann. i. 8); and it was not stated that this required any confirmation. But things were changed then. The Lex Julia et Papia Poppaea gave certain privileges to those who had children, among which privileges was a preference in being appointed to the praetorship and such offices. This led to an abuse of the practice of adoption; for childless persons adopted children in order to qualify themselves for such offices, and then emancipated their adopted children. This abuse was checked by a senatus consultum in the time of Nero. (Tac. Ann. xvi. 19; Cic. de Off. iii. 18, ad Att. vii. 8; Suet. Jul. Cæs. 53, Tib. 2, &c.; Heinic. Syntagma; Dig. 36. tit. 1. a. 63.)

Adoratio (εὐθυκυμή) was paid to the gods in the following manner: — The person stretched out his right hand to the statue of the god whom he wished to honour, then kissed his hand and waved it to the statue. While doing this he moved round his whole body, for which custom Plutarch (Num. 14) gives some curious reasons; but the true reason probably was, that the person might be the more surely put into communication with the deity, as it was uncertain where he would reveal himself as the deus praesens. It was also the practice to have the head and ears covered, so that only the face remained uncovered. (Plin. N. H. xxviii. 5; Minucius Felix, 2; Lucret. v. 1197.) The adoratio differed from the oratio or prayers, which were offered with the hands folded together and stretched out to the gods, the natural attitude prescribed by nature to the suppliant, and which we find mentioned by Homer. (H. vii. 177; ἐπιτάξεις χερῶν, Αἰσχ. Prom. 1004; ἐπαλαίτησις foras manus, Hor. Curn. iii. 23. 1.) The adoration paid to the Roman emperors was borrowed from the eastern mode of adoration, and consisted in prostration on the ground, and kissing the feet and knees of the emperor.

Adulatorium, adultery. 1. Graecus.
Adoratio, the adoration. 1. Lact. and another passage (Ad Hirt. viii. 8), show that other instances had occurred before. A person on passing from one gens into another, and taking the name of his new familia, generally retained the name of his old gens also, with the addition to it of the termination unus. (Cic. ad Att. iii. 20, and the note of Varr. Thus, C. Octavius, afterwards the Emperor Augustus, when being adopted by the testament of his uncle the dictator, assumed the name of Caius Julius Caesar Octavianus; but he caused the adoption to be confirmed by the curiae. As to the testamentary adoption of C. Octavius, see Drummans, Geschichte Roms, vol. i. p. 337, and the references there given. Livia was adopted into the Julia gens by the testament of Augustus (Tac. Ann. i. 8); and it was not stated that this required any confirmation. But things were changed then. The Lex Julia et Papia Poppaea gave certain privileges to those who had children, among which privileges was a preference in being appointed to the praetorship and such offices. This led to an abuse of the practice of adoption; for childless persons adopted children in order to qualify themselves for such offices, and then emancipated their adopted children. This abuse was checked by a senatus consultum in the time of Nero. (Tac. Ann. xvi. 19; Cic. de Off. iii. 18, ad Att. vii. 8; Suet. Jul. Cæs. 53, Tib. 2, &c.; Heinic. Syntagma; Dig. 36. tit. 1. a. 63.)

Adoratio (εὐθυκυμή) was paid to the gods in the following manner: — The person stretched out his right hand to the statue of the god whom he wished to honour, then kissed his hand and waved it to the statue. While doing this he moved round his whole body, for which custom Plutarch (Num. 14) gives some curious reasons; but the true reason probably was, that the person might be the more surely put into communication with the deity, as it was uncertain where he would reveal himself as the deus praesens. It was also the practice to have the head and ears covered, so that only the face remained uncovered. (Plin. N. H. xxviii. 5; Minucius Felix, 2; Lucret. v. 1197.) The adoratio differed from the oratio or prayers, which were offered with the hands folded together and stretched out to the gods, the natural attitude prescribed by nature to the suppliant, and which we find mentioned by Homer. (H. vii. 177; ἐπιτάξεις χερῶν, Αἰσχ. Prom. 1004; ἐπαλαίτησις foras manus, Hor. Curn. iii. 23. 1.) The adoration paid to the Roman emperors was borrowed from the eastern mode of adoration, and consisted in prostration on the ground, and kissing the feet and knees of the emperor.
ADULTERIUM.

2. ROMAN. Adulterium properly signifies, in the Roman law, the offence committed by a man, married or unmarried, having sexual intercourse with another man’s wife. Stuprum (called by the Greeks φθηνός) signifies the commerce with a widow or a virgin. It was the condition of the female which determined the legal character of adultery; there was no adultery unless the female was married. It is stated, however (Dig. 48. tit. 5. s. 19), that a woman might commit adultery whether she was “justa iure se invista,” the meaning of which is not quite certain; but probably it means whether she was living in a marriage recognised as a marriage by the Roman law or merely by the jus gentium. The male who committed adultery was adulter, the female was adultera. The Latin writers were puzzled about the etymology of the word adulterium; but if we look to its various significations besides that of illegal sexual commerce, we may safely refer it to the same root as that which appears in adultus. The notion is that of “growing to,” “fixing,” or “fastening to,” one thing on another and extraneous thing; hence, among other meanings, the Romans used adulterium and adulteratio as we use the word “adulteration,” to express the corrupting of a thing by mixing something with it of less value.

In the time of Augustus a lex was enacted (probably n. c. 17), intitled Lex Julia de Adulteris coœcendis, the first chapter of which repealed some prior enactments on the same subject, with the provisions of which prior enactments we are, however, unacquainted. Horace (Carm. iv. 5. 21) alludes to the Julian law. In this law, the terms adulterium and stuprum are used indifferently; but, strictly speaking, these two terms differed as above stated. The chief provisions of this law may be collected from the Digest (48. tit. 5), from Paulus (Sentent. Recept. ii. tit. 26. ed. Schulting), and Brissomus (Ad Legem Julianam De Adulteriis, Lib. Sing.). It seems not unlikely that the enactments repealed by the Julian law contained special penal provisions against adultery; and it is also not improbable that, by an old law or custom, if the adulterer was caught in the fact, he was at the mercy of the injured husband, and that the husband might punish with death his adulterous wife. (Pliny. ii. 25; Suet. Tit. 33. 5.) It seems, also, that originally the act of adultery might be prosecuted by any person, as being a public offence; but under the emperors the right of prosecution was limited to the husband, father, brother, patricius, and avunculus of the adulteress.

By the Julian law, if a husband kept his wife after an act of adultery was known to him, and let the adulterer off, he was guilty of the offence of renunciation. The husband or father in whose power the adulteress was, had sixty days allowed for commencing proceedings against the wife, after which time any other person might prosecute. (Tact. Ann. ii. 85.) A woman convicted of adultery was mulcted in half of her dowry and the third parts of her property (bona), and banished (transitus) to some miserable island, such as Sceriphnos, for instance. The adulterer was mulcted in half her property, and banished in like manner, or was exiled to the same island as the woman. The adulterer and adulteress were subjected also to civil incapacities; but this law did not inflict the punishment of death on either party; and in those instances under the emperors in which death was inflicted, it must be considered as an extraordinary punishment, and beyond the provisions of the Julian law. (Tact. Ann. i. 50, iii. 24; J. Lips. Excerps. ad Tact. Ann. iv. 42; Noodt, Op. Omm. i. 286, &c.) But by a constitution of Constantine (Cod. ix. 30, if it is genuine), the offence in the adulterer was made capital. By the legislation of Justinian (Nov. 134. c. 10), the law of Constantine was probably only confirmed; but the adulteress was put into a convent, after being first whipped. If her husband did not take her out in two years, she was compelled to assume the habit, and to spend the rest of her life in the convent.

The Julian law permitted the father (both adoptive and natural) to kill the adulterer and adulteress in certain cases, as to which there were several nice distinctions established by the law. If the father killed only one of the parties, he brought himself within the penalties of the Cornelian law De Siciriis. The husband might kill persons of a certain class, described in the law, whom he caught in the act of adultery with his wife; but he could not kill his wife. The husband, by the fifth chapter of the Julian law, could detain for twenty hours the adulterer whom he had caught in the fact, for the purpose of calling in witnesses to prove the adultery. If the wife was divorced for adultery, the husband was intitled to retain part of the dos. (Ulpian, Fr. vi. 12.) The authorities for the Lex Julia de Adulterius, both ancient and modern, are collected by Rein, Des Criminalrechts der Römer, 1844. [3.1.1.]

ADVERSA/RIA, note-book, memorandum-book, posting-book, in which the Romans entered memoranda of any importance, especially of money received and expended, which were afterwards transcribed, usually every month, into a kind of ledger. (Tabula JUST. codex accepti et expensi.) They were probably called Adversaria, because they lay always open before the eyes. (Cic. p. Rose. Com. 3; Prop. iii. 23. 20.)

ADVERSA/RIOUS. [ACTOR.]

ADVOCATUS. [ADVOCATE.]
of property. (Cic. pro Cæc. c. 8.) It was also used to express a person who gave his advice and aid to another in the management of a cause, as a juris-consultus did; but the word did not signify the orator or patronus who made the speech (Cic. de Orat. 74) in the time of Cicero. Under the emperors, it signified a person who in any way assisted in the conduct of a cause (Dig. 50. tit. 13. s. 1), and was sometimes equivalent to orator. (Tacit. Ann. x. 6.) The advocate had then a fee, which was called honorarium. [ORATOR, PATRONUS, LEX CINCIJA.]

The advocatus is defined by Ulpian (Dig. 50, tit. 13) to be any person who aids another in the conduct of a suit or action; but under the empire the jurisconsulti no longer acted as advocates, in which was called honorarium. [ORATOR, PATRONUS, LEX CINCIJA.]

The advocate was an important officer established by Hadrianus. (Spart. Hadriana. 60.) It was his business to look after the interests of the fiscus or the imperial treasury, and, among other things, to maintain its title to bona caduceus. The various meanings of advocatus in the Middle Ages are given by Du Cange, Gloss. (Dig. 28. tit. 4. s. 3; Hollweg, Handbuch des Civilprozesses, p. 196.) [G. L.]

ADYTYUM. [TEMPLUM.]

AEECEIA (aëcae), a festival of the Aeginetans in honour of Aeacus, the detail of which are not known. The victor in the games which were solemnised on the occasion, consecrated his chaplet in the magnificent temple of Aeacus. (Schol. ad Pind. Ol. vii. 156, xiii. 155; Müller, Aeginetica, p. 140.) [L. S.]

AEDES. [DOMUS; TEMPLUM.]

AEDES VITIO©SAE, RUINO©SAE. [DAM- NUM INFECTUM.]

AEDICULAÆ, signifies in the singular, a room, but in the plural, a small house. It is, however, more frequently used in the sense of a shrine, attached to the walls of temples or houses, in which the statue of a deity was placed. The aediculae, sometimes contained the pænas of the house, but more frequently the guardian gods of the street in which they were placed. (Liv. xxxv. 41; Petron. 29.)

AEDILES (ἀγορασμοί). The name of these functionaries is said to be derived from their having the care of the temple (aedes) of Ceres. The aediles were originally two in number, and called aediles plebeii; they were elected from the plebes, and the institution of the office dates from the same time as that of the tribuni plebis, n. c. 494. Their duties at first seem to have been merely ministerial; they were the assistants of the tribunes in such matters as the tribunes entrusted to them, among which are enumerated the hearing of causes of smaller importance. At an early period after their institution (n. c. 446), we find them appointed the keepers of the senatus consultus, which the consuls had hitherto arbitrarily suppressed or altered. (Liv. iii. 55.) They were also the keepers of the plebscita. Other functions were gradually entrusted to them, and it is not always easy to distinguish their duties from some of those which belong to the censors; nor to distinguish all the duties of the plebeian and curule aediles, after the establishment of the curule aedilschip. They had the general superintendence of buildings, both sacred and private: under this power they provided for the support and repair of temples, curiae, &c., and took care that private buildings in which were reigned (villas rusticas) were repaired by the owners, or pulled down. The superintendence over the supply and distribution of water at Rome was, at an early period, a matter of public administration. According to Frontinus, this was the duty of the censors; but when there were no censors, it was within the province of the aediles. The care of each particular source or supply was farmed to undertakers (reduxmptores), and all that they did was subject to the approbation of the censors or the aediles. (De Aquæduct. Rom. lib. ii.) The care of the streets and pavements, with the cleansing and draining of the city, belonged to the aediles, and the care of the cloacae. They had the office of distributing corn among the plebes, which was sometimes given gratuitously, sometimes sold at a cheap rate; but this distribution of corn at Rome must not be confounded with the duty of purchasing or procuring it from foreign parts, which was performed by the consuls, quaestors, and praetors, and sometimes by an extraordinary magistrate, as the praefectus annonae. The aediles had to see that the public lands were not improperly used, and that the pasture-grounds of the state were not trespassed on; and they had power to punish by fine any unlawful act in this respect. The fines were employed in paving roads, and in other public purposes. They had a general superintendence over buying and selling, and, as a consequence, the supervision of the markets, of things exposed to sale, such as slaves, and of weights and measures: from this part of their duty is derived the name under which the aediles are mentioned by the Greek writers (ἀγορασμοί). It was their business to see that no new deities or religious rites were introduced into the city, to look after the observance of religious ceremonies, and the celebrations of the ancient feasts and festivals. The general superintendence of police comprehended the duty of preventing murder, breaking into the houses of the state, the resistance of the public lands were not improperly used, and that the pasture-grounds of the state were not trespassed on; and they had power to punish by fine any unlawful act in this respect. The fines were employed in paving roads, and in other public purposes. They had a general superintendence over buying and selling, and, as a consequence, the supervision of the markets, of things exposed to sale, such as slaves, and of weights and measures: from this part of their duty is derived the name under which the aediles are mentioned by the Greek writers (ἀγορασμοί). It was their business to see that no new deities or religious rites were introduced into the city, to look after the observance of religious ceremonies, and the celebrations of the ancient feasts and festivals. The general superintendence of police comprehend the duty of preventing murder, breaking into the houses of the state, the resistance of the public lands were not improperly used, and that the pasture-grounds of the state were not trespassed on; and they had power to punish by fine any unlawful act in this respect. They had a general superintendence over buying and selling, and, as a consequence, the supervision of the markets, of things exposed to sale, such as slaves, and of weights and measures: from this part of their duty is derived the name under which the aediles are mentioned by the Greek writers (ἀγορασμοί). It was their business to see that no new deities or religious rites were introduced into the city, to look after the observance of religious ceremonies, and the celebrations of the ancient feasts and festivals. The general superintendence of police comprehend the duty of preventing murder, breaking into the houses of the state, the resistance of the public lands were not improperly used, and that the pasture-grounds of the state were not trespassed on; and they had power to punish by fine any unlawful act in this respect. The fines were employed in paving roads, and in other public purposes. They had a general superintendence over buying and selling, and, as a consequence, the supervision of the markets, of things exposed to sale, such as slaves, and of weights and measures: from this part of their duty is derived the name under which the aediles are mentioned by the Greek writers (ἀγορασμοί). It was their
and of buying and selling in general. Accordingly, their edicts had mainly, or perhaps solely, reference to the rules as to buying and selling, and contracts for bargain and sale. They were the foundation of the actions aedilicium, among which are included the *actio redhibitoria*, and *quantum minoris*. (Dig. 21. tit. 1. De Aedilicio Edicto; Gell, iv. 2.) A great part of the provisions of the aediles’ edict relate to the buying and selling of slaves. The persons both of the plebeian and curule aediles were sacrosancti. (Liv. iii. 55.)

It seems that after the appointment of the curule aediles, the functions formerly exercised by the plebeian aediles were exercised, with some few exceptions, by all the aediles indifferently. Within five days after being elected or entering on office, they were required to determine by lot, or by agreement among themselves, what parts of the city each should take under his superintendence; and each aedile alone had the care of looking after the paving and cleansing of the streets, and other matters, it may be presumed, of the same local character within his district. (Tubal. Herod. ed. Marci. 2.)

In the superintendence of the public festivals and solemnities, there was a further distinction between the two sets of aediles. Many of these festivals, such as those of Flora (Cic. Verr. v. 14; Ovid. Fast. v. 278, &c.) and Ceres, were superintended by either set of aediles indifferently; but the plebeian games (*pleei ludi*) were under the superintendence of the plebeian aediles (Liv. xxxi. 50.), who had an allowance of money for that purpose; and the fines levied on the pecunia, and others, seem to have been appropriated to those among other public purposes. (Liv. x. 23; xxxvii. 6; Ovid. Fast. v. 278, &c.) The celebration of the Ludi magni or Romani, of the Ludi scenici, and the Ludi Megalesii or Megalenses, belonged specially to the curule aediles (Liv. xxxi. 50.; and the Didascaliae to the plays of Ierence), and it was on such occasions that they often incurred a prodigious expense, with the view of pleasing the people and securing their votes in future elections. This extravagant expenditure of the aediles arose after the close of the second Punic war, and increased with the opportunities which individuals had of enriching themselves after the Roman arms were carried into Greece, Africa, and Spain. Even the prodigality of the emperors hardly surpassed that of individual curule aediles under the republic; such as C. Julius Caesar (Plut. Caesar, 5) afterwards the dictator, P. Cornelius Lentulus Spinther; and, above all, M. Antonius Scarrus, whose expenditure was not aimed to bare show, but comprehended objects of public utility, as the reparation of walls, dockyards, ports, and aqueducts. (Cic. de Off. ii. 17; Plin. H. N. xxxvii. 3, xxxvi. 13.) An instance is mentioned by Dion Cassius (xiii. 48) of the Ludi Megalesii being superintended by the plebeian aediles; but it was done pursuant to a senator's consultation, and thus the particular exception confirms the general rule. In B.c. 45, Julius Caesar caused two curule aediles and four plebeian aediles to be elected; and thenceforward, at least so long as the office of aedile was of any importance, six aediles were annually elected. The two new plebeian aediles were called Cereales, and their duty was to look after the supply of corn. Though their office may not have been of any great importance after the institution of a praefectus annonae by Augustus, there is no doubt that it existed for several centuries, and at least as late as the time of Gordian.

The aediles belonged to the class of the minores magistratus. Dionysius states that the aediles were originally chosen at the comitia curiata (ix. 43); but this is not probable. The plebeian aediles were originally chosen at the comitia centuriata, but afterwards at the comitia tributa (Dionys. vi. 90. ix. 43. 49; Liv. ii. 56, 57), in which comitia the curule aediles also were chosen, at the same time (Plut. Marius, 5); but it appears that there was a separate voting for the curule and the plebeian aediles, and that the curule aediles were elected first. It appears that until the lex annalis was passed, a Roman citizen might be a candidate for any office after completing his twenty-seventh year. This lex annalis, which was passed at the instance of the tribune L. Villius Tappalus, b. c. 180, fixed the age at which each office might be enjoyed. (Liv. xi. 44.)

The passage of Livy does not mention what were the ages fixed by this law, but other explanations from various passages of Roman writers, that the age fixed for the aedileship was thirty-six. This, at least, was the age at which a man could be a candidate for the curule aedileship, and it does not appear that there was a different rule for the plebeian aedileship. In Cicero's time, the aediles were elected some time in July, the usual place of election was the Field of Mars (Campus Martius), and the presiding magistrate was a consul.

The aediles existed under the emperors; but their powers were gradually diminished, and their functions exercised by new officers created by the emperors. After the battle of Actium, Augustus appointed a praefectus urbi, who exercised the general police, which had formerly been one of the duties of the aediles. Augustus also took from the aediles, or exercised himself, the office of superintending the religious rites, and the banishing from the city of all foreign ceremonials; he also assumed the superintendence of the temples, and thus may be said to have destroyed the aedileship by depriving it of its old and original functions. This will serve to explain the fact mentioned by Dion Cassius (iv. 24), that no one was willing to hold so contemptible an office, and Augustus was therefore reduced to the necessity of compelling persons to take it: persons were accordingly chosen by lot, out of those who had served the office of quaeator and tribune; and this was done more than once. The last recorded instance of the splendours of the aedileship is the administration of Agrippa, who volunteered to take the office, and repaired all the public buildings and anything from the treasury. (Dion Cass. alix. 43; Plin. H. N. xxxvii. 15.) The aedileship had, however, lost its true character before this time. Agrippa had already been consul before he accepted the office of aedile, and his munificent expenditure in this nominal office was the close of the splendour of the aedileship. Augustus appointed the curule aediles specially to the office of putting out fires, and placed a body of 600 slaves at their command; but the praefecti vigilum afterwards performed this duty. In like manner the *curatores viarum* were appointed by him to superintend the roads near the city, and the quattuorviri to superintend those
within Rome. The curatores operum publicorum and the curatores olivi Tiberis, also appointed by Augustus, stripped the aediles of the remaining few duties that might be called honourable. They lost also the superintendence of wells, or springs, and of the aqueducts. (Frontinus ii. De Aquae-
ductibus.) They retained, under the early emperors, a kind of police, for the purpose of repressing open licentiousness and disorder: thus the baths, eating-houses, and brothels were still subject to their inspection, and the registration of prostitutes was still within their duties. (Tacit. Annal. ii. 85.) We read of the aediles under Augustus making search after libellous books, in order that they might be burnt; and also under Tiberius (Tacit. Ann. iv. 33.)

The coloniae, and the municipia of the later period, had also their aediles, whose numbers and functions varied in different places. They seem, however, as to their powers and duties, to have resembled the aediles of Rome. They were chosen annually. (De Aedil. Col., &c. Otto, Lips. 1732.)

The history, powers, and duties of the aediles are stated with great minuteness by Schubert, De Romanorum Aedilitibus, lib. iv. Regiomonti, 1828. See also Wunder, De Romanorum Comitiis Aedilium Curulium, in his edition of Cicero's Oration Pro Cn. Plancio, Leipzig, 1830. [G. L.]

AEDITUI, AEDITUMI, AEDITIMI (νεωκηθοι, ἰκονοι), persons who took care of the temples, and attended to the cleaning of them. Notwithstanding this menial service, they partook of the priestly character, and are sometimes even called priests by the Greek grammarians. (Suid. Hesych. Etym. M. s.v. ἰκονος ; Pollux, i. 14.)

In many cases they were women, as Timo in Herodotus (vi. 134), who also speaks of her as ἰποκηθοι, from which it is clear that in some places several of these priests must have been attached to one and the same temple, and that they differed among themselves in rank. Subsequently the menial services connected with the office of the Neocori were left to slaves, and the latter became a title given to priestly officers of high rank, of whom an account is given in a separate article. [NNEOCORI.]

The aeditui lived in the temples, or near them, and acted themselves as attendants, though not without rejoicing. [L. S.]

AEGIS (αἰγής), the shield of Zeus, signifies literally a goat-skin, and is formed on the same analogy with ἑτέρας, a fawn-skin. (Herod. iv. 189.) According to ancient mythology, the aegis worn by Zeus was the hide of the goat Amaltheia, which had suckled him in his infancy. Hyginus relates (Astron. Poet. 13), that, when he was preparing to resist the Titans, he was directed, if he wished to conquer, to wear a goat-skin with the head of the Gorgon. To this particular goat-skin the term aegis was afterwards confined. Homer always represents it as part of the armour of Zeus, whom on this account he distinguishes by the epithet aegis-bearing (αἰγίςχεος). He, however, asserts, that it was borrowed on different occasions both by Apollo (H. ii. 447—449, xviii. 204, xxi. 400).

The skins of various quadrupeds having been used by the most ancient inhabitants of Greece for clothing and defence, we cannot wonder that the goat-skin was employed in the same manner. It must also be borne in mind that the heavy shields of the ancient Greeks were in part supported by a belt or strap (τελαιόμων, balleus) passing over the right shoulder, and, when not elevated with the shield, descending transversely to the left hip. In order that a goat-skin might serve this purpose, two of its legs would probably be tied over the right shoulder of the wearer, the other extremity being fastened to the inside of the shield. In combat the left arm would be passed under the hide, and would raise it together with the shield, as is shown in a marble statue of Athena, preserved in the museum at Naples, which, from its style of art, may be reckoned among the most ancient in existence.

AEGINETARUM FERIAE (Ἀειγνητῶν ἡμέρα), a festival in honour of Poseidon, which lasted sixteen days, during which time every family took its meals quietly and alone, no slave being allowed to wait, and no stranger invited to partake of them. From the circumstance of each family being closely confined to itself, those who solemnised this festival were called μυοφόδαυς. Plutarch (Quaest. Graec. 44) traces its origin to the Trojan war, and says that, as many of the Aeginetans had lost their lives, partly in the siege of Troy and partly on their return home, those who reached their native isle were received indeed with joy by their kinsmen; but in order to avoid hurting the feelings of those families who had to lament the loss of their friends, they thought it proper neither to show their joy nor to offer any sacrifices in public. Every family, therefore, entertained privately their friends who had returned, and Other statues of Athena represent her in a state of repose, and with the goat-skin falling obliquely from its loose fastening over her right shoulder, so as to pass round the body under the left arm. The annexed figure is taken from a classical statue of Athena at Dresden.
Another mode of wearing this garment, also of peaceful expression, is seen in a statue of Athena at Dresden, of still higher antiquity than that last referred to, and in the very ancient image of the same goddess from the temple of Zeus at Aegina. In both of these the aegis covers the right as well as the left shoulder, the breast, and the back, falling behind so as almost to reach the feet. Schorn (in Bottiger's Amalthea, ii. 215) considers this as the original form of the aegis.

By a figure of speech, Homer uses the term aegis to denote not only the goat-skin, which it properly signified, but together with it the shield to which it belonged. By thus understanding the word, it is easy to comprehend both why Athena is said to throw her father's aegis around her shoulders (II. v. 738, xviii. 204), and why on one occasion Apollo is said to hold it in his hand and to shake it so as to terrify and confound the Greeks (II. xv. 229. 307. 321), and on another occasion to cover with it the dead body of Hector in order to protect it from insult (xxiv. 20). In these passages we must suppose the aegis to mean the shield, together with the large expanded skin or belt by which it was suspended from the right shoulder.

As the Greeks prided themselves greatly on the rich and splendid ornaments of their shields, they supposed the aegis to be adorned in a style corresponding to the might and majesty of the father of the gods. In the middle of it was fixed the appalling Gorgon's head (II. v. 741), and its border was surrounded with golden tassels (στάβλων), each of which was worth a hecatomb (ii. 446—449). In the figures above exhibited, the serpents of the Gorgon's head are transferred to the border of the skin.

By the later poets and artists, the original conception of the aegis appears to have been forgotten or disregarded. They represent it as a breast-plate covered with metal in the form of scales, not used to support the shield, but extending equally on both sides from shoulder to shoulder; as in the annexed figure, taken from a Roman cameo.

The Roman emperors also assumed the aegis, intending thereby to exhibit themselves in the character of Jupiter. Of this the armed statue of Hadrian in the British Museum presents an example. In these cases the more recent Roman conception of the aegis is of course followed, coinciding with the remark of Servius (Aen. viii. 435), that this breast-armor was called aegis when worn by a god; lorica, when worn by a man. (Comp. Mart. vii. 1.)
AEINAUTAE (ἀειαυταῖ), magistrates at Milesia, consisting of the chief men in the state, who supervised the deposition of the tyrants, Thous and Damasenover. Whenever they wished to deliberate on important matters, they embarked on board ship (hence their name), put out at a distance from land, and did not return to shore till they had transacted their business. (Plut. Quest. Graec. 32.)

AENIGMA (ἀειγμα), a riddle. It appears to have been a very ancient custom among the Greeks, especially at their symposia, to amuse themselves by proposing riddles to be solved. Their partiality for this sort of amusement is attested by the fact that some persons, such as Theodectes of Phaselis and Aristonymus, acquired considerable reputation as inventors and writers of riddles. (Athen. x. pp. 451, 452, xii. p. 538.) Those who were successful in solving the riddle proposed to them received a prize, which had been previously agreed upon by the company, and usually consisted of wreaths, taeniae, cakes, and other sweetmeats, or kisses, whereas a person unable to solve a riddle was condemned to drink in one breath a certain quantity of wine, sometimes mixed with salt water. (Athen. x. p. 457; Pollux, vi. 107; Hesych. s. v. γρίφος.) Those riddles which have come down to us are mostly in hexameter verse, and the tragic as well as comic writers not unfrequently introduced them into their plays. Pollux (l. c.) distinguishes two kinds of riddles, the αἰγμα and γρίφος, and, according to him, the former was of a jocose and the latter of a serious nature; but in the writers whose works have come down to us, no such distinction is observed; and there are passages where the name γρίφος is given to the most ludicrous jokes of this kind. (Aristoph. Vesp. 20; comp. Becker, Charides, vol. i. p. 478.) The Romans seem to have been too serious to find any great amusement in riddles; and when Gallius (xvii. 2) introduces some Romans at a banquet engaged in solving riddles, we must remember that the scene is laid at Athens; and we do not hear of any Romans who invented or wrote riddles until a very late period. Appuleius wrote a work entitled Liber Ludiororum et Grīphorum, which is lost. After the time of Appuleius, several collections of riddles were made, some of which are still extant in MS. in various libraries. [L. S.]

AEJNUM, or AHEJNUM (ae, aex), a brine vessel, used for boiling, is defined by Paullus to be a vessel hanging over the fire, in which water was boiled for drinking, whereas food was boiled in the coccus. (Dig. 33. cit. 7. s. 18. § 3.) This distinction is not, however, always observed; for we read of food being cooked in the aenum. (Juven. xv. 81; Ov. Met. vi. 645.) The word is also frequently used in the sense of a dyer's copper; and, as purple was the most celebrated dye of antiquity, we find the expressions Sidoniam aenum, Tyriam aenum, &c. (Ov. Fast. iii. 922; Mart. xiv. 133.)

AEO’RA, or EO’RA (αιρά, ἔφρα), a festival at Athens, accompanied with sacrifices and banquets, whence it is sometimes called ἔδειπνος. The common account of its origin is as follows:—Icarius was killed by the shepherds to whom he had given wine, and who, being unacquainted with the effects of this beverage, fancied in their intoxication that he had given them poison. Erigone, his daughter, guided by a faithful dog, discovered the corpse of her father, whom she had sought a long time in vain; and, praying to the gods that all Athenian maidens might perish in the same manner, many Athenian women actually hung themselves, apparently without any motive whatever; and when the oracle was consulted respecting it, the answer was, that Icarius and Erigone must be propitiated by a festival. (Hygin. Poet. Astron. ii. 4.) According to the Elymologicum Magnum, the festival was celebrated in honour of Erigone, daughter of Aegisthus and Clytaemnestra, who came to Athens to bring the charge of murder against Orestes before the Areiopagus; and, when she was acquitted, hung herself, with the same wish as the daughter of Icarius, and with the same consequences. According to Hesychius, the festival was celebrated in commemoration of the tyrant Temelus, but no reason is assigned. Eustathius (ad Hom. pp. 389, 1555) calls the maiden who hung herself Aiora. But as the festival is also called 'Αιρή (apparently from the wanderings of Erigone, the daughter of Icarius), the legend which was first mentioned seems to be the most entitled to belief. Pollux (iv. 7. § 85) mentions a song made by Theodorus of Colophon, which persons used to sing whilst swinging themselves (ἐν ταῖς ἀειγμαῖς). It is, therefore, probable that the Athenian maidens, in remembrance of Erigone and the other Athenian women who had hung themselves, swung themselves during this festival, at the same time singing the above-mentioned song of Theodorus. (See also Athen. xiv. p. 618.) [L. S.]

AERA. [Chronologia.]

AERA/RII, a class of Roman citizens, who are said not to have been contained in the thirty tribes instituted by Servius Tullius. It is, however, one of the most difficult points in the Roman constitution to determine who they were; since all the passages in which they are mentioned refer only to the power of the censors to degrade a citizen, for bad conduct, by removing him from his tribe and making him an aerarius; but we nowhere find any definition of what an aerarius was. The Pseudo-Asconius (ad Cic. deinv. in Cael. p. 103, ed. Orelli), says that a plebeian might be degraded by being transferred to the tabulae Caeritum and becoming an aerarius. The error in this statement is, that not only a plebeian, but a senator and an eques also might become an aerarius, while for a plebeian there was no other punishment except that of becoming an aerarius. From the Pseudo-Asconius we collect that to have one's name transferred to the tables of the Caeretana was equivalent to becoming an aerarius; secondly, that an aerarius no longer belonged to a century; and, thirdly, that he had to pay the tribute in a different manner from the other citizens. These state-
AERARIUM.

AERARIUM. 23

ments are confirmed by the Scholiast of Cratinus on Horace (Epist. i. 6, 62) and by Gelius (xvi. 130). If we strictly limit the terms, we cannot adopt the opinion that the aervarians consisted of artisans and freedmen (Niebuhr, Hist. of Rome, vol. i. p. 472), for some artisans had a very honourable position in the Servian constitution; there were certain occupations, especially those of the retail dealers (caupones, καυπνοί), which were thought degrading, and which were carried on generally by iso-politarchs, who took up their abode at Rome, and the number of this class of persons (municipes or cives sine suffragio) may have been very great. These people we conceive to have been the aerarians, not, indeed, on account of their occupation, but because they were citizens who did not enjoy the suffrage. Hence the Caeritiae were the probably the first body of aervarians; and any Roman citizen guilty of a crime punishable by the censors, might be degraded to the rank of an aervarian; so that his cive rights were suspended, at least for the time that he was an aervarian. But we cannot suppose that the fact of a Roman citizen engaging in trade brought about such a degradation; for there can be little doubt that the persons constituting the city tribes (tribus urbaneae) were more or less all engaged in trade and commerce. Hence, to remove a man from a country tribe to a city tribe, cannot have been equivalent to making him an aerarian (Cic. pro Cluent. 43), and the latter can have been the case only when he was excluded from all the tribes, or when he belonged to a city tribe; so that moving him from his tribe was equivalent to excluding him from all tribes. Persons who were made infames likewise became aerarians, for they lost the jus honorum and the suffragium. (Augustin. de Civ. Dei, ii. 13; Cic. pro Cluent. 42.) The two scholiasts above referred to agree in stating that the aerarians had to pay a tributum pro capite; and that this tax was considerably higher than that paid by the other citizens, must be inferred from Livy (iv. 24), who states that Aemilius Mamercus was made an aerarian octuplicato censu. They were not allowed to serve in the legions; but as they nevertheless enjoyed the protection of the state, such a high rate of taxation cannot be considered unjust.

It has been asserted that the libertaini, as such, belonged to the class of the aerarians; but this opinion is founded upon a wrong statement of Plutarch (Poplic. 7), that freedmen did not obtain the suffrage till the time of Appius Claudius; for Dionysius (iv. 22) informs us that Servius Tullius incorporated them with the city tribes. (Comp. Zonaras, vii. 9; Huaehke, Verfassung des Serv. Stal. p. 494, &c.; Göttling, Gesch. der Röm. Staatsverf. p. 260, &c.); Becke, Handbuch der Röm. Alterth. vol. ii. pp. 185—196. [L. S.]

AERARIUS TRIBUS I. [AENS EQUISTANE; AIBJUS.]

AERARIUM (τὸ ἀεραρίου), the public treasury at Rome, and hence the public money itself. After the banishment of the kings the temple of Saturn was employed, upon the proposition of Valerius Poplicola, as the place for keeping the public money, and it continued to be so used till the later times of the empire. (Plut. Popil. 12, Quaest. Rom. 42; Festus, s. v. Aerarium.)

* Of this temple three Corinthian pillars with sides the public money and the accounts connected with its receipts, expenditure, and debts, various other things were preserved in the treasury; of these the most important were: — 1. The standards of the legions (Liv. iii. 69, iv. 22, vii. 23). 2. The various laws passed from time to time, engraved on brazen tables (Suet. Caes. 28). 3. The decrees of the senate, which were entered there in books kept for the purpose, though the original documents were preserved in the temple of Ceres under the custody of the aediles. (Joseph. Ant. xiv. 10. § 10; Plut. Cat. Min. 17; Cic. de Leg. iii. 4; Tac. Ann. iii. 51.) [AEDILES.]

4. Various other public documents, the reports and despatches of the aediles, the names of all foreign ambassadors that came to Rome (Legatus), &c.

The aervarium was the common treasury of the state, and must be distinguished from the publicum, which was the treasury of the populus or the patricians. It is mentioned as one of the grievances of the plebeians that the booty gained in war was frequently paid into the publicum (redigitur in publicum), instead of being paid into the aervarium, or distributed among the soldiers (Liv. ii. 42); but since we no longer read, after the time of the decemvirs, of the booty being paid into the publicum, but always into the aervarium, it is supposed by Niebuhr that this was a consequence of the decemviral legislation. (Niebuhr, Hist. Rom. vol. ii. notes 386, 954.) Under the republic the aervarium was divided into two parts: the common treasury, in which were deposited the regular taxes (tributum; vectigalium), and from which were taken the sums of money needed for the ordinary expenditure of the state; and the sacred treasury (aervarium sanctum or sanctius, Liv. xxvii. 10; Flor. iv. 2; Caes. B. C. i. 14; Cic. ad Att. vii. 21), which was never touched except in cases of extreme peril. Both of these treasuries were in the temple of Saturn, but in distinct parts of the temple. The sacred treasury seems to have been first established soon after the capture of Rome by the Gauls, in order that the state might always have money in the treasury to meet the danger which was ever most dreaded by the Romans,—a war with the Gauls. (Appian, B. C. ii. 41.) At first, probably part of the plunder which the Romans gained in their wars with their neighbours was paid into this sacred treasury; but a regular means for augmenting it was established in B.C. 357 by the Lex Manilia, which enacted that a tax of five per cent. (vicesima) upon the value of every manumitted slave should be paid into this treasury. As this money was to be preserved, and therefore space was some object, it had, at least at a later time, either to be paid in gold or was kept in the treasury in gold, since Livy speaks of aurum vicesimarum (Liv. vii. 16, xxvii. 10; comp. Cic. ad Att. i. 16). A portion of the immense wealth obtained by the Romans in their conquests in the East was likewise deposited in the sacred treasury; and though we cannot suppose the architrave are still extant, standing on the Clivus Capitolinus to the right of a person ascending the hill. It was rebuilt by L. Munatius Plancus in the time of Augustus (Suet. Aug. 29; Orelli, Inser. No. 590), and again restored by Septimius Severus. (Becker, Handbuch der Röm. Alterthumere, vol. i. p. 315.)
that it was spared in the civil wars between Marius and Sulla, yet Julius Caesar, when he appropriated it to his own use on the breaking out of the second civil war, B. C. 49, still found in it enormous sums of money. (Plut. H. N. xxxiii. 3. 17; Dion Cass. xii. 17; Oros. vi. 15; Lucan, iii. 155.)

Upon the establishment of the imperial power under Augustus, there was an important change made in the public income and expenditure. He divided the provinces and the administration of the government between the senate, as the representative of the old Roman people, and the Caesar; all the property of the former continued to be called aerarium, and that of the latter received the name of fiscus. [Fiscus.] The aerarium consequently received all the taxes from the provinces belonging to the senate, and likewise most of the taxes which had formerly been levied in Italy itself, such as the revenues of all public lands still remaining in Italy, the tax on manumissions, the custom-duites, the water-rates for the use of the water brought into the city by the aqueducts, the sewer-rates, &c.

Besides the aerarium and the fiscus, Augustus established a third treasury, to provide for the pay and support of the army, and this received the name of aerarium militare. It was founded in the consulsiphip of M. Aemilius Lepidus and L. Arruntius, A. D. 6, in consequence of the difficulty which was experienced in obtaining sufficient funds from the ordinary revenues of the state to give the soldiers their rewards upon dismissal from service. Augustus paid a very large sum into the treasury upon its foundation, and promised to do so every year. In the Monumen.tum Ancyranum, Augustus is said to have paid into the treasury in the consulsiphip of Aemilius and Arruntius 170 millions of sesterces; but this sum is probably the entire amount which he contributed to it during his whole reign. As he reigned eight years and a half after the establishment of the treasury, and would probably have made the payments half yearly, he would in that case have contributed ten millions of sesterces every half year. He also imposed several new taxes to be paid into this aerarium. (Suet. Aug. 49; Dion Cass. iv. 23, 24, 25, 32; Monumentum Ancyranum, pp. 92, 65, ed. Franzius and Zumptius, Berol. 1845.) Of these the most important was the vicesima hereditatum et legatorum, a tax of five per cent., which had to be paid by every Roman citizen upon any inheritance or legacy being left to him, with the exception of such as were left to a citizen by his nearest relatives, or such as were below a certain amount. (Dion Cass. iv. 25, lvi. 28; Plut. Paneg. 37—40; Capitol. M. Anton. 11.) This tax was raised by Caracalla to ten per cent., but subsequently reduced by Macrinus to five (Dion Cass. lxxvii. 9, lxxviii. 12), and eventually abolished altogether. (Cod. 6. tit. 33. s. 5.) There was also paid into the aerarium militare a tax of one per cent. upon every thing sold at auctions (contesima rerum venales), reduced by Tiberius to half per cent. (ducentesima), and afterwards abolished by Caligula altogether for Italy (Tac. Ann. i. 78, ii. 42; Suet. Col. 16); and likewise a tax upon every slave that was sold, at first of two per cent. (quinquagesima), and afterwards of four per cent. (quinta et vicesima) of its value. (Dion Cass. iv. 31; Tac. Ann. xiii. 31; Orelli, Insers. No. 3336.) Besides these taxes, no doubt the booty obtained in war and not distributed among the soldiers was also deposited in the military treasury.

The distinction between the aerarium and the fiscus continued to exist at least as late as the reign of M. Aurelius (το βασιλείων κατ τ ή δημοσίων, Dion Cass. lxxxi. 33; Vulp. Gallic. Acid. Cass. 7); but as the emperor gradually concentrated the administration of the whole empire into his hands, the aerarium likewise became exclusively under his control, and thus we find to have been the case even in the reign of M. Aurelius, when the distinction between the aerarium and the fiscus was still retained. (Dion Cass. lxxi. 33.) When the aerarium ceased to belong to the senate, this distinction between the aerarium and fiscus naturally ceased also, as both of them were now the treasury of the Caesar; and accordingly later jurists used the words aerarium and fiscus indiscriminately, though properly speaking there was no treasury but that of the Caesar. The senate, however, still continued to possess the management of the municipal chest (aerarium publicum) of the city. (Vopisc. Aurelian. 20.)

In the time of the republic, the entire management of the revenues of the state belonged to the senate; and under the superintendence and control of the senate the quaestors had the charge of the aerarium. [Senatus; Quaestor.] With the exception of the consuls, who had the right of drawing from the treasury whatever sums they pleased, the quaestors had not the power to make payments to any one, even to a dictator, without a special order from the senate. (Polyb. vi. 12, 13; Liv. xxxviii. 55; Zonar. vii. 13.) In B. C. 45, when no quaestors were chosen, two prefects of the city had the custody of the aerarium (Dion Cass. xliii. 48); but doubtless passed again into the hands of the quaestors, when they were elected again in the following year. In their hands it seems to have remained till n. c. 28, when Augustus deprived them of it and gave it to two prefects, whom he allowed the senate to choose from among the praetors at the end of their year of office; but as he suspected that this gave rise to canvassing, he enacted, in n. c. 23, that two of the praetors in office should have the charge of the aerarium by lot. (Suet. Octav. 96; Dion Cass. liii. 2, 32; Tac. Ann. xiii. 29.) They were called praetores aerarii (Tac. Ann. i. 75; Frontin. de Aqae Duct. 100) or ad aerarium (Orelli, Insers. n. 723). This arrangement continued till the reign of Claudius, who restored to the quaestors the care of the aerarium, depriving them of certain other offices which they had received from Augustus (Tac. Ann. xiii. 29; Suet. Claud. 24; Dion Cass. lx. 24); but as their age seemed too young for so grave a trust, Nero took it from them and gave it to those who had been praetors, and who received the title of praefecti aerarii. (Tac. Ann. xiii. 28, 29.) During the latter part of the reign of Trajan, or the beginning of that of Vespasian, a fresh change seems to have been made, for we read of praefecti aerarii in the time of the latter (Tac. Hist. iv. 9); but in the reign of Trajan, if not before, it was again entrusted to praefects, who appear to have held their office for two years; and henceforth no further change seems to have been made. (Plut. Paneg. 91, 92, Ep. x. 20; Suet. Claud. 24.) They are called in inscriptions praefecti aerarii Saturni, and they appear to have had quaestors also to assist them in their duties, as we find mention of quaes-
lores aerarii Saturni in inscriptions under Hadrian and Severus. (Gudius, Ant. Insér. p. 125, n. 6, p. 131, n. 3; Gruter, p. 1027, n. 4.) These praefects had jurisdiction; and before their court in the temple of Saturn, all informations were laid respecting property due to the aerarium and fiscus. (Plin. Paneg. 36;Dig. 49, tit. 14, ss. 13, 15.)

The aerarium militare was under the care of distinct praefects, who were first appointed by lot among those who had filled the office of praetor, but were afterwards nominated by the emperor. (Dion. Cass. lv. 25; comp. Tac. Ann. v. 8.) They frequently occur in inscriptions under the title of praefecti aerarii militaris. (Walter, Gewichichte des Römischen Rechts, pp. 201, &c., 397, &c. 2d edition; Lipsius, Geschichte des Römischen Rechts, 1832, No. 97.)

At a later period than that to which some of the above works may be referred, the addition of a variety of metals seems to have been made to the original combination of copper and tin. The writers on art make particular mention of certain of these bronzes which, notwithstanding the changes they underwent by the introduction of novel elements, were still described by the words χαλκός and aes. That which appears to have held the first place in the estimation of the ancients was the aes Corinthiacum, which some pretended was an alloy made accidentally, in the first instance, by the melting and running together of various metals (especially gold and bronze), at the burning of Corinth by Lucius Mummius, in n. c. 146. (Plin. H.N..xxxiv. 2, s. 3; Florus, ii. 16.) This account is obviously incorrect, as some of the artists whose productions are mentioned as composed of this highly valued metal, lived long before the event alluded to. Pliny (l. c.) particularises three classes of the Corinthian bronze.

The abundance of copper sufficiently accounts for its general use among the ancients; money, vases, and utensils of all sorts, whether for domestic or sacrificial purposes, ornaments, arms offensive and defensive, furniture, tables for inscriptions, musical instruments, and indeed every object to which it could be applied, being made of it. (Hesiod, Op. et Di. 150, 151; Lucret. v. 1296.) We have a remarkable result of this fact in the use of χαλκός and χαλκέαυς, where working in iron is meant. (Hom. Od. ix. 391; Aristot. Polit. 25.) For all these purposes the pure metal would be comparatively useless, some alloy being necessary both to harden it and to make it more fusible. Accordingly, the origin of the art of mixing copper and tin is lost in the mythical period, being ascribed to the Idaean Daetyli. The proportions in which the component parts were mixed seemed to have been much studied, and it is remarkable now nearly they agree in all the specimens that have been analysed. Some bronze nails from the ruins of the Treasury of Atreus at Mycenae; some ancient coins of Corinth; a very ancient Greek helmet, on which is a boustrophedon inscription, now in the British Museum; portions of the breastplates of a piece of armour called the Bronzes of Siria, also preserved in our national collection; and an antique sword found in France, produced in 100 parts, 87-43 and 88 copper 12-53 and 12 tin 99-96 100

AES. (χαλκός). These words signify both pure copper and a composition of metals, in which copper is the predominant ingredient. In the latter sense they should not be translated brass, but rather bronze. Brass is a combination of copper and zinc, while all the specimens of ancient objects formed or in compound material called ores, are found upon analysis to contain no zinc; but, with very limited exceptions, to be composed entirely of copper and tin, which mixture is properly called bronze. Our chief information about the copper and bronze of the ancients is derived from Pliny (H. N. xxxiv). Copper, being one of the most abundant and generally distributed of the metals, was naturally used at a very early period by the Greeks and Romans. Pliny (H.N. xxxiv. 1) mentions three of its ores (lapisdes aerosteri), namely, calomia, chalcitis, and aurichalcum or orichalcum, into the exact nature of which this is not the place to enter.

In the most ancient times we can ascend to the chief supply came from Cyprus, whence the modern name of copper is said to be derived. (Comp. Horn. Odys. i. 184, and Nitzsch's Note; Plin. H.N. vii. 90. s. 57;) but according to an old tradition it was first found in Euboea, and the town of Chalcis took its name from a copper-mine. (Plin. H.N. iv. 12. s. 2l.) It was also found in Asia and the south of Italy, in Gaul, in the mountains of Spain (comp. Paus. vi. 19. § 2), and in the Alps. The art of smelting the ore was perfectly familiar to the Greeks and Romans. Pliny (H. N. 25.) says that it was inferior to the island of Delos became the mart to which all who required works of art in metal crowded, and led, in time, to the establishment there of some of the greatest artists of antiquity. (Plin. i.e. 2. s. 4.)

The abundance of copper sufficiently accounts for its general use among the ancients; money, vases, and utensils of all sorts, whether for domestic or sacrificial purposes, ornaments, arms offensive and defensive, furniture, tables for inscriptions, musical instruments, and indeed every object to which it could be applied, being made of it. (Hesiod, Op. et Di. 150, 151; Lucret. v. 1296.) We have a remarkable result of this fact in the use of χαλκός and χαλκέαυς, where working in iron is meant. (Hom. Od. ix. 391; Aristot. Pol. 25.) For all these purposes the pure metal would be comparatively useless, some alloy being necessary both to harden it and to make it more fusible. Accordingly, the origin of the art of mixing copper and tin is lost in the mythical period, being ascribed to the Idaean Daetyli. The proportions in which the component parts were mixed seemed to have been much studied, and it is remarkable now nearly they agree in all the specimens that have been analysed. Some bronze nails from the ruins of the Treasury of Atreus at Mycenae; some ancient coins of Corinth; a very ancient Greek helmet, on which is a boustrophedon inscription, now in the British Museum; portions of the breastplates of a piece of armour called the Bronzes of Siria, also preserved in our national collection; and an antique sword found in France, produced in 100 parts, 87-43 and 88 copper 12-53 and 12 tin 99-96 100

AES.

At a later period than that to which some of the above works may be referred, the addition of a variety of metals seems to have been made to the original combination of copper and tin. The writers on art make particular mention of certain of these bronzes which, notwithstanding the changes they underwent by the introduction of novel elements, were still described by the words χαλκός and aes. That which appears to have held the first place in the estimation of the ancients was the aes Corinthiacum, which some pretended was an alloy made accidentally, in the first instance, by the melting and running together of various metals (especially gold and bronze), at the burning of Corinth by Lucius Mummius, in n. c. 146. (Plin. H.N. xxxiv. 2, s. 3; Florus, ii. 16.) This account is obviously incorrect, as some of the artists whose productions are mentioned as composed of this highly valued metal, lived long before the event alluded to. Pliny (l. c.) particularises three classes of the Corinthian bronze. The first, he says, was white (zanditium), the greater proportion of silex that was employed in its composition giving it a light colour. In the second sort or quality, gold was introduced, in sufficient quantity to impart to the mixture a strong yellow or gold tint. The third was composed of equal portions of the different metals. Some, however, contend that the aes Corinthiacum was no composition of precious metals at all, but merely a very pure and highly refined bronze. (Fiorillo, in the Kunstdblatt, 1832, No. 97.)

The next bronze of note among the ancient Greek sculptors is distinguished by the title of hepatison, which it seems it acquired from its colour. In the second sort or quality, gold was introduced, in sufficient quantity to impart to the mixture a strong yellow or gold tint. The third was composed of equal portions of the different metals. Some, however, contend that the aes Corinthiacum was no composition of precious metals at all, but merely a very pure and highly refined bronze. (Fiorillo, in the Kunstdblatt, 1832, No. 97.)

The abundance of copper sufficiently accounts for its general use among the ancients; money, vases, and utensils of all sorts, whether for domestic or sacrificial purposes, ornaments, arms offensive and defensive, furniture, tables for inscriptions, musical instruments, and indeed every object to which it could be applied, being made of it. (Hesiod, Op. et Di. 150, 151; Lucret. v. 1296.) We have a remarkable result of this fact in the use of χαλκός and χαλκέαυς, where working in iron is meant. (Hom. Od. ix. 391; Aristot. Pol. 25.) For all these purposes the pure metal would be comparatively useless, some alloy being necessary both to harden it and to make it more fusible. Accordingly, the origin of the art of mixing copper and tin is lost in the mythical period, being ascribed to the Idaean Daetyli. The proportions in which the component parts were mixed seemed to have been much studied, and it is remarkable now nearly they agree in all the specimens that have been analysed. Some bronze nails from the ruins of the Treasury of Atreus at Mycenae; some ancient coins of Corinth; a very ancient Greek helmet, on which is a boustrophedon inscription, now in the British Museum; portions of the breastplates of a piece of armour called the Bronzes of Siria, also preserved in our national collection; and an antique sword found in France, produced in 100 parts, 87-43 and 88 copper 12-53 and 12 tin 99-96 100

AES.
bronze was of a light and somewhat sickly tint. (See Quatremère de Quincy, Jupiter Olympien; Plut. De Pyth. Orac. 2.) Plutarch says, that in his time its composition was unknown. For further information on the composition of bronze, see L. Savot (Num. Ant. p. li. c. 17), Fabbroni (in the Atti dell' Acad. Ital. vol. i. pp. 203—245, and Götting. Gel. Anzeig. 1811, No. 87), and Winckelmann (Werke, vol. v.).

Nor were any such wares, properly so called, have yet been discovered, though it has been affirmed that zinc was found in an analysis made of an antique sword (see Mongez, Mém. de l'Institut); but it appeared in so extremely small a quantity, that it hardly deserved notice; if it was indeed present, it may rather be attributed to some accident of nature than to design. On the subject of metals and metallurgy in general, see Metallum, and for the use of bronze in works of art see Statuaria. [P. S.]

AES (money, nummi aëni or aerii). Since the most ancient coins in Rome and the old Italian states, were made of aes, this name was given to money in general, so that Ulpius (Dig. 50, tit. 16. a. 159) says, Etiain aurocos nummos aes dicimus. (Compare Hor. Ars Polt. 345, Ep. i. 7. 23.) For the same reason we have aes alienum, meaning debt, and aera in the plural, pay to the soldiers. (Liv. v. 4 ; Plin. H. N. xxiv. l.) The Romans had no other coinage except bronze or copper (aes), till B. c. 269, five years before the first Punic war, when silver was first coined; gold was not coined till sixty-two years after silver. (Plin. H. N. xxxii. 13.) For this reason Argentum, in the Italian mythology, was made the son of Ascula. (Quint. prius aerem pecunia in usu fuit, August. De Civ. Dei. iv. 21.) Respecting the Roman copper money, see As, and respecting the Greek copper money see Chalcous. [P. S.]

AES CIRCUMFORAÆ NEUM, money borrowed from the Roman bankers (argentarii), who had shops in porticoes round the forum. (Cic. Ad Attic. ii. 1.)

AES EQUESTRE, AES HORDEARIUM, and AES MILITARE, were the ancient terms for the pay of the Roman soldiers, before the regular stipendium was introduced. The aes equestre was the sum of money given for the purchase of an equestre, the money paid yearly for the keep of the horse of an equestre, in other words the pay of an equestre; and the aes militare, the pay of a foot soldier. (Gaius, iv. 27.) None of this money seems to have been taken from the public treasury, but to have been paid by certain private persons, to whom this duty was assigned by the state.

The aes hordearium, which amounted to 2000 asses, had to be paid by single women (viduæ, i. e. both maidens and widows) and orphans (orbi), provided they possessed a certain amount of property, on the principle, as Niebuhr remarks, that in a military state, the women and orphans ought to contribute for those who fight in behalf of them and the commonwealth; it being borne in mind, that they were not included in the census. (Liv. i. 43 ; Cic. de Rep. ii. 20.) The equites had a right to distrain (pignoris capio) if the aes hordearium was not paid. (Gaius, l. c.)

The aes equestre, which amounted to 10,000 asses, was to be given, according to the statement of Livy (l. c.), out of the public treasury (ex publico); but as Gaius says (l. c.), that the equites had a right to distrain for this money likewise, it seems impossible that this account can be correct; for we can hardly conceive that a private person had a right of distress against a magistrate, that is against the state, or that he could distrain any one of the public property of the state. It is more probable that this money was also paid by the single women and orphans, and that it was against these that the equites had the same right to distrain, as they had in the case of the aes hordearium.

The aes militare, the amount of which is not expressly mentioned, had to be paid by the tribuni aëriarii, and if not paid, the foot soldiers had a right of distress against them. (Cato. ap. Cest. vii. 10 ; Varr. L. L. v. 181, ed. Müller; Festus, s. r. aëriarii tribuni; Gaius, l. c.) It is generally assumed from a passage of the Pseudo-Asconius (in Verr. p. 167, ed. Orelli), that these tribuni aëriarii were magistrates connected with the treasury, and that they were the assistants of the quaestors: but Mattiae (De aes 345, Opuscula, vol. ii. pp. 258—261), has brought forward good reasons for believing that the tribuni aëriarii were private persons, who were liable to the payment of the aes militare, and upon whose property a distress might be levied, if the money were not paid. He supposes that they were persons whose property was rated at a certain sum in the census, and that they obtained the name of tribuni aëriarii, either because they received money from the treasury for the purpose of paying the soldiers, or because, which is the more probable, they levied the tributum, which was imposed for the purpose of paying the soldiers, and upon whose property a distress might be levied.

The state thus avoided the trouble of collecting the tributum, and of keeping minute accounts, for which reason the vectigalia were afterwards abandoned, and the foot-soldiers were thus paid in a way similar to the horse-soldiers. These tribuni aëriarii were no longer needed when the state took into its own hands the payment of the troops (Exercitii, but they were revived in B. c. 70, as a distinct class in the commonwealth by the Lex Aurelia, which gave the judicaria to the senators, equites and tribuni aëriarii. [Tribuni Aëriarii.] The opinion of Niebuhr (Hist. of Rome, vol. i. p. 474.), that the aes aëriarii, which was paid by the aëriarii, and which amounted to 2000 asses, was private property, had to be paid by the aëriarii, and which amounted to 2000 asses, had to be paid by the aëriarii, (see M. Postumius, in B. C. 403, but we do not

AES UXORIUM was the money won in playing with dice, manus collectum. Manus was the throw in the game. All who threw certain numbers, were obliged to put down a piece of money; and whoever threw the Venus (the highest throw) won the whole sum, which was called the aest umarium. (Gell. xvii. 13 ; Suet. Aug. 71.)

AES UXORIUM, a tax paid by men who reached old age without having married. It was first imposed by the censors, M. Furias Camillus and M. Postumius, in B. c. 403, but we do not
know whether it continued to be levied afterwards. 

(Festus, s. v.; Val. Max. ii. 9, § 1; Plut. Camill. 2.)

LEX JULIA ET PAPIA POPPÆA.

[AESTIMATIO LIITIS. [JUDEX.]

AYSYMNETES (⍺ιςυμνήτης, from ἀος, “a just portion,” hence “a person who gives every one his just portion”), originally signified merely a judge in the heroic games, but afterwards indicated an individual who was occasionally invested voluntarily by his fellow-citizens with unlimited power in a Greek state. His power, according to Aristotle, partook in some degree of the nature both of kingly and tyrannical authority; since he was appointed regularly and not from the mere willing wish of the citizens, but at the same time was not bound by any laws in his public administration. (Aristot. Polit. iii. 9, § 5, iv. 8, § 2; Hesych. s. v.) Hence Theophrastus calls the office τυπάρεις ἀριστής, and Dionysius (v. 73) compares it with the dictatorship at Rome. It was not hereditary; but it was sometimes held for life, and at other times only till some object was accomplished, such as the reconciling of the various factions in the state, and the like. We have only one express instance in which a person received the title of Aesymnetes, namely, that of Aesymnestes, whose name is known, was Eurydamus, who commanded the Aetolians in the war against the Galatians. (Paus. x. 16. § 2.) The strategus had the right to convoke the assembly; he presided in it, and this assembly unquestionably had the right to discuss all questions respecting peace and war, and to elect the great civil or military officers of the league. It is however clear, that those assemblies could not be attended by all the Aetolians, for many of them were poor, and lived at a great distance, in addition to which the roads were much more impassable than in other parts of Greece. The constitution of the league was thus in theory a democracy, but under the cover of that name it was in reality an aristocracy, and the name Panaelticum, which Livy (xxxii. 29) applies to the Aetolian assembly, must be understood accordingly, as an assembly of the wealthiest and most influential persons, who occasionally passed the most arbitrary resolutions, andscreened the maddest and most unlawful acts of the leading men under the fine name of a decree of all the Aetolians.

We have already mentioned that the ordinary place of meeting was Thermon, but on extraordinary occasions assemblies were also held in other towns belonging to the league, though they were not situated in the country of Aetolia Proper, e.g. at Hermeliea (Polyb. xiii. 217 &c.), Maleme (xxxvi. 12), Hyapatia (xxxi. 2, 8), and Lamia (xxxv. 43, 44). The questions which were to be brought before the assembly were sometimes discussed previously by a committee, selected from the great mass, and called Apocleti (ἀποκλετοι, Suid. s. v.; Liv. xxxvi. 28.) Some writers believe that the Apocleti formed a permanent council, and that the thirty men sent out to negotiate with Antiochus were only a committee of the Apocleti. (Polyb. iv. 9, xx. 10, xxxi. 3; Tittmann, Griech. Staatsverf.; p. 727.)

The general assembly usually met in the autumn, when the officers of the league were elected. (Polyb. iv. 37.) The highest among them, as among those of the Achaean league, bore the title of στρατηγὸς, whose office lasted only for one year. The first whose name is known, was Eurydamus, who commanded the Aetolians in the war against the Galatians. (Paus. x. 16, § 2.) The strategus had the right to convocate the assembly; he presided in it, introduced the subjects for deliberation, and levied the troops. (Liv. xxxviii. 4.) He had his share
of the booty made in war, but was not allowed to vote in decisions upon peace and war. (Liv. xxxv. 25.) This was a wise precaution, as a sanguine strategus might easily have involved the league in wars which would have been ruinous to the nation. His name was signed to all public documents, treaties, and decrees of the general assembly. An exception occurs in the peace with the Romans, because they themselves dictated it and abandoned the usual form. (Polyb. xxii. 15.) Respecting the mode of election, we are informed by HaeCythius (s. v. κοινωνευτης), that it was decided by white and black beans, and not by voting, but by drawing lots, so that we must suppose the assembly nominated a number of candidates, who then had to draw lots, and the one who drew a white bean was strategus.

The officers next in rank to the strategus were the hipparchus and the public scribe. (Polyb. xxii. 15; comp. Liv. xxxviii. 11.) We further hear of συνεχειος, who act as arbiters (Böckh, Corp. Inser. vol. ii. p. 633), and νουτραφας, who however may have had no more to do with the writing down of laws, than the Athenian nomothetae. (Böckh, l. c. 857, 858.)

With the exception of the points above mentioned, the constitution of the Aetolian league is involved in great obscurity. There are, however, two things which appear to have had an injurious effect upon the confederacy, first the circumstance that its members were scattered over a large tract of country, and that besides Aetolia Proper and some neighbouring countries, such as Locris and Thessaly, it embraced towns in the heart of Pelo-

ponsesus, the island of Cephalenia in the west, and in the east the town of Cius on the Propontis; in the second place, many of the confederates had been forced to join the league, and were ready to abandon it again as soon as an opportunity offered. (Polyb. iv. 25; comp. xxii. 13, 15; Liv. xxxviii. 9, 11.) The towns which belonged to the league of course enjoyed isopolity; but as it endeavoured to increase its strength in all possible ways, the Aetolians also formed connections of friendship and alliance with other states, which did not join the league. (Polyb. ii. 46.) The political existence of the league was destroyed in B.C. 189 by the treaty with Rome, and the treachery of the Roman party among the Aetolians themselves caused in B.C. 167 five hundred and fifty of the leading patriots to be put to death, and those who survived the massacre, were carried to Rome as prisoners. (Liv. xlv. 31; Justin, xxxiii. 2; comp. Tittmann, Darstellung der Grisch. Staatsverf. p. 721, &c.; Lucas, Über Polyb. Darstellung des Aetol. Bundes, Königsegg, 1827, 4to; K. F. Hermann, Grisch. Staatsalterth. § 183; Schorn, Geschichte Griechenl. p. 25, &c.; Brandstätter, Die Gesch. des Aetol. Landes, Volkes und Bundes, p. 258, &c.)

AGELA. In time of war the kings of Sparta had a body-guard of 300 knights (πεντηκοστης), of whom the five eldest retired every year, and were employed for one year, under the name of agathoergus in missions to foreign states. (Herod. i. 67.) It has been maintained by some writers that the agathoergus did not attain that rank merely by seniority, but were selected from the πεντηκοστης by the ephors without reference to age. (Ruhnken, Ad Timaei Lexic. Plat. s.v.; HaeCythius, s. v.; Bekker, Anecd. vol. i. p. 209.)

A'GELA (αγέλα), an assembly of young men in Crete, who lived together from their eighteenth year till the time of their marriage. Up to the end of their seventeenth year they remained in their father's house; and from the circumstance of their belonging to no ογδοα, they were called ἀγέλαιοι. They were then enrolled in ογδοα, which were of an aristocratic nature, and gave great power to particular families. An ογδα always consisted of the sons of the most noble citizens, who were usually under the jurisdiction of the father of the youth who had been the means of collecting the ογδα. It was the duty of this person, called ἀγέλαςτης, to superintend the military and gymnastic exercises of the youths (who were called
AGER

(συγκοινωνία), to accompany them to the chase, and to punish them when disobedient. He was accountable, however, to the state, which supported the agela at the public expense. All the members of an agela were obliged to marry at the same time. When they ceased to belong to an agela, they parted of the public meals for men (ἀνδρεία)

These institutions were afterwards preserved in only a few states of Crete, such as Lycus. (Ephorus, ap. Strab. x. p. 480, &c.; Hemni. Pont. c. 3; Höck, Creta, ii. p. 100, &c.; Müller, Dor. iv. § 3; Hermann, Griech. Staatsweisen, § 22; Wachsmuth, Hell. Alterthumskunde, vol. i. p. 302, 2d ed.; Krause, Die Agieren u. Agraristik d. Hellenen, p. 690, &c.) At Sparta the youths left their parents' houses at seven years of age and entered the boia.

AGEMA (Κηνήμα from Τήγω), the name of the chosen body of troops in the Macedonian army, consisting of horse-soldiers and foot-soldiers, but usually of the former. It seems to have varied in number; sometimes it consisted of 150 men, at times of 1000 or 2000 men. (Diod. xix. 27, 40; lv. xxxvii. 40; xiii. 51. 58; Curt. iv. 13; Ptoyl. v. 25, 65, xxxi. 6; Hesych. and Suid. s. v.; Eustath. iv. 5. § 3; Hermann, Griech. Staatsweisen, § 22; Wachsmuth, Hell. Alterthumskunde, vol. i. p. 302, 2d ed.; Krause, Die Agieren u. Agraristik d. Hellenen, p. 690, &c.)

AGER is the general term for a district or tract of country, which has some definite limits, and belongs to some political society. Ager Romanus is the own territory of the Romans. Agri, in the plural, often means lands in the country as opposed to town; "est in agris," means "he is in the country;" "mutere in agris," a phrase that occurs in speaking of the agrarian laws, means to assign portions of the Ager Publicus to individuals. (Liv. vi. 17. 2.).

Terra is an indefinite term: it is a whole country without reference to political limits, as Terra

Ager Publicus was the property of the Roman state, part of the Publicum. Ager Privatus was the property of individuals. Some remarks on the general division of land into Publicus and Privatus, and on the nature of land that was Sacer and Religious, are contained in the article on the Agrarian Laws. Ager Occupatorius is land occupied by a victorious people when the conquered people had been driven out (Rei Agrariae Auctores, p. 45, ed. Goes.;) the possessions [AGRARII LEGES] were included in the Ager Occupatorius. Such a tract was restored to those who had lost it by conquest, was called Reditus. The Ager Occupatorius was also called Ager Arcifinius or Arcifinalis, so denominated "ab arcendis hostibus" (p. 38, ed. Goes.). But the terms Ager Arcifinius and Occupatorius do not appear to be exactly equivalent, though some of the writers on the Res Agraria make them so. Ager Arcifinius appears to express the whole of a territory, which had only some natural or arbitrary boundary, and was not defined by measurement. (qui nulla mensura continetur; romanus.) Such were the scattered portions of the Roman Ager Publicus. The Ager Occupatorius might signify so much of the public land included in the Arcifinis as was held by possessors (occupatorius), or, as Niebuhr explains it, the term Occupatorius was confined to the public land, strictly so called, and designated the tenure under which it was occupied.

Frontinus divides lands into three heads (qualitas): Ager Divius et Assignatus; Ager mensura comprehensus; Ager Arcifinius. He defines the Arcifinis, as above stated. The Ager mensura comprehensus appears to signify a tract, of which the limits were defined by measurement, which was given in the mass to some community (inquo modulus univeros civitatii est assignatus), of which he mentions two examples.

Ager Divius et Assignatus was public land that was assigned or granted to private persons. The verb divido, or some form of it, is used by Livy (iv. 51, v. 30) to express the distribution of the land. The word assigno indicates the fixing of the limits or boundaries. Ager Quaestorius was the public land, which was sold by the quaestors (pp. 2, 14, ed. Goes.), in square patches, each side of which was the length of ten linear actus: the square consequently contained 100 quadrati actus or fifty jugera.

Ager Limitatus was public land marked out by limits for the purpose of assignment to coloni or others. The limits were drawn with reference to the heavens (p. 150, ed. Goes.) and this mode of dividing the land was founded on the old Etruscan doctrine, for the Etruscans divided the earth into parts, following the course of the sun by drawing a line from east to west, and another from south to north. This was the foundation of the limits of a temple, a term which means the celestial vault, and also so much of the earth's surface as the augur could comprehend in his view. This was the foundation of the Roman Limitatio of land. A line (limes) was drawn through a given point from east to west, which was called the Decumanus, originally Duocimanas* (according to Hyginus), because it divides the earth into two parts; another line was drawn from south to north, which was called Cardo, "a mundi cardine." The length of these two chief limits would be determined by the limits of the land which was to be divided. The points from which the two chief limits were drawn varied according to circumstances. Those which were parallel to the Decumanus were Prorsi, direct; those which were parallel to the Cardo were Transversi, transverse. The lines was therefore a term applied to a boundary belonging to a tract of land, and the centuries included in it, and is different from finis, which is the limit of any particular property. The Decumanus, Cardines, and other limits of a district form an unchangeable kind of network in the midst of the changeable properties which have their several lines (Rudorff). The distance at which the limits were to be drawn, would depend on the magnitude of the squares or centuries, as they were called, into which it was proposed to divide the tract. The whole tract might not be square: sometimes the Decumanus Limites would be only half as long as the Cardines (p. 154. ed. Goes.). Every sixth line, reckoning from the Decumanus and including it, was wider than the intermediate limits, and these wider limits served as roads, but they were not included under the term of Vinea Publica, though a limes and a via publica might sometimes coincide. (Hyginus, ed. Goes. p. 163.) The narrower limits were called Linearii in the provinces, but in Italy

* Duocimana, according to Hyginus, was changed into Decumanus; "Decumanus," says Niebuhr, "probably from making the figure of a cross, which resembles the numeral X, like decus-satus." Neither explanation is satisfactory.
they were called Subruncivi. The limits parallel to the cardo were drawn in the same way.

The Roman measure of length used for land was the actus of 120 feet: the square actus was 14,400 square feet; and a juger or jugera was two actus quadra. The word centuria properly means a hundred of any thing. The reason of the term centuria being applied to these divisions may be, that the plebeian centuries contained 100 actus, which is 50 jugera, the amount contained in the portions put up to sale by the quaestors; but Siculus Flaccus (p. 15, ed. Goes.) gives a different account. The centuria sometimes contained 200 jugera, and in later periods 240 and 400. When a centuria was divided, the proprietors would plant oak posts (termini robusti, pali roborei.) Sometimes pali actuarii are mentioned, from which it appears that the boundaries of the centuria were sometimes determined by wooden posts. The stones used in a particular limitation were of the same kind and colour in order to make them more useful as boundary stones. The stones used as boundary stones in Roman times were either polished (politi, dolati) or rough-hewn (tactavi a ferro), or in their entire rough state. The size varied from half a foot to two and a half feet, and the larger might sometimes be mistaken by ignorant people for mile stones. The form of the stones also varied, as we see from the representations contained of them in the MSS. of the Agrimensores. The number of angles varied in those which were angular: some were cylindrical, some pointed, others of a pyramidal form. The head stones at the beginning and end of a boundary were more conspicuous than those which lay between them. Inscriptions and marks were also put on the termini. The termini on the boundaries of the limited land have often considerable inscriptions; the circumvallae and pleurite termini give the number of the century and the name of the limes. Various kinds of marks were also devised to facilitate the ascertaining of boundaries without the trouble of referring to the plan.

As to the marks by which boundaries were distinguished, they were different in the case of Ager Arcifinis and Ager Limitatus. In the case of Ager Arcifinis, the boundaries were either natural or artificial, as mountain ridges, roads, water sheds, rocks, hills, rampsarts of earth, walls of rubble, and so forth: rivers, brooks, ditches and water conduits were also used as boundaries. Marks were also made on rocks, caves, trees, or stones for this purpose, or were left standing (arbores intactae, antemissae). Trees were often marked; those which were the common property of two land-owners were marked on both sides; and those which belonged to a single proprietor were marked on the side which was turned from the proprietor's land (arbores insignes, sigmatea, notatae). By cutting off a piece of the bark, a scar would be formed which would answer as a signum. In angles, such as a trinitium or quadrinimum, more special boundary marks were used, for instance, at a trinitium three trees would be planted. Taps, or pieces of wood, lead and iron, were also inserted in trees to point to some piece of water as the nearest boundary.

The Ager Limitatus was marked in a different way by boundary stones and posts, not by natural barriers. The boundaries of the territory were marked by termini, which received their names under the empire from the emperor who gave the commission for partitioning the land. Accordingly, we find the expressions Lapides Augustales, Tiberti, and so forth, mentioned as the termini fixed by these emperors for the boundaries of the colonies which they founded. The Terminii Territoriales marked the limits of the district, the Pleurici ran parallel to the Decumani and Cardines, the Acturii Centuriatae were at the angles of the centuria, the Epipedonici in the centre of the centuria, the Proportionales at the beginning and end of the jugera. The boundaries of a property were also marked by stones, or a property might place termini within it to mark the pieces into which he divided it for his children.

The termini were either posts of wood or stones. In the colonies of Augustus, the boundaries of the centuriatae were marked by stones; those of the several allotments by oak posts (termini robusti, pali roborei.) Sometimes pali actuarii are mentioned, from which it appears that the boundaries of the centuriatae were sometimes determined by wooden posts. The stones used in a particular limitation were of the same kind and colour in order to make them more useful as boundary stones. The stones were either polished (politi, dolati) or rough-hewn (taxati a ferro), or in their entire rough state. The size varied from half a foot to two and a half feet, and the larger might sometimes be mistaken by ignorant people for mile stones. The form of the stones also varied, as we see from the representations contained of them in the MSS. of the Agrimensores. The number of angles varied in those which were angular: some were cylindrical, some pointed, others of a pyramidal form. The head stones at the beginning and end of a boundary were more conspicuous than those which lay between them. Inscriptions and marks were also put on the termini. The termini on the boundaries of the limited land have often considerable inscriptions; the circumvallae and pleurite termini give the number of the century and the name of the limes. Various kinds of marks were also devised to facilitate the ascertaining of boundaries without the trouble of referring to the plan.

These precautions were not all. A stone might be removed and a boundary might thus become uncertain. It was accordingly the practice to bury something under the stone that was not perishable, as bones, embers and ashes from the offering made at the time when the stone was set up. Smaller coins were also put under it, and fragments of glass, pottery, and the like, which would serve to determine the place of the stone. The same practice is enjoined by the laws of Manu (viii. 249, 250, 251), a fact noticed by Dureus de la Malle. On the introduction of Christianity, the practice of making such offerings was discontinued, and this kind of evidence was lost. Under the old religion it was also the practice to traverse the boundaries at the terminalia. In the month of February. In the case of the territorial boundaries, this was done by the whole community; and pursuant to this old custom, the boundaries of the original territory of Rome, six miles from the city, were traversed at the terminalia.

Private persons also examined their boundaries at the terminalia, and the usual offerings were made. The parish perambulations and other perambulations
tions of modern times bear some resemblance to this Roman usage.

It has been observed that finis, a term which expresses the boundary of separate properties, must not be confounded with limes; nor must fundus be confounded with locus. A fundus has determinate boundaries (fines); a locus is indeterminate, and may be part of a fundus or comprise more than a runa. A dispute about a fundus is a question of property; a dispute about a locus or finis is a dispute about boundaries.

Niebuhr conjectures "that a fundus assigned by the state was considered as one entire farm, as a whole, the limits of which could not be changed." But he adds, "This did not preclude the division of estates, nor even the sale of duodecimal parts of them;" and further, "The sale or transfer of them, when the whole was not alienated, was in parts according to the duodecimal scale." But to this it is replied by Bureau de la Malle, that when there were five, seven or nine heredes, there must be a duodecimal division. A fundus generally had a particular name which was not changed, and it is stated that both in Italy and France many of these properties still have Roman names. But the fact of a fundus (Digit. 10. tit. 1. s. 4.), prove that a fundus according to the duodecimal scale. But to this it ja replied by Bureau de la Malle, that when there were five, seven or nine heredes, there must be a duodecimal division. A fundus generally had a particular name which was not changed, and it is stated that both in Italy and France many of these properties still have Roman names. But the fact of a fundus generally having a name, and the fact of the name being often preserved, does not prove that all fundi retained their original limits according to Roman usage; nor does the fact, that there were sometimes two, sometimes three owners of one fundus (Dig. 10, tit. 1. s. 4.), prove that a fundus never had its limits changed, while it disproves anyone's assertion as to duodecimal parts, unless he proves that the same name was not changed, and it is probable enough, that an original fundus would often retain its limits unchanged for centuries. But it is certain that the bounds (fines) of private properties often changed. Rudorff remarks: "The boundary of a property is changeable. It may be purchased, exchanged, and other alienation, be pushed further, and be carried back." The localities of the great laborious, locumani, and other Limites, as the same writer has been already quoted to show, are unchangeable.

The difficulty of handling this subject is very great, owing to the corrupt text of the writers on the Res Agraria. The latest edition of these writers is by Goesius, Amsterdam, 1674. A new and corrected edition of these writers with a suitable commentary would be a valuable contribution to our knowledge of the Roman land system. (Res Agrarum Auctores, ed. Goes.) Rudorff, Zeitschrift für Geschicht. Rechtswiss. Ueber die Gränzegleichung. (G. L.)

AGER SANCTUS (πτεχερος). For an account of the ianuas in Greece devoted to the service of religion, see TEMENOΣ: for an account of those in Rome, see SACREROS.

AGETOURIA (αγετουρια). [Carniola.]

AGGER (አኛመ), from ad and gero, was used in general for a heap or mound of any kind which might be made of stones, wood, earth or any other substance. It was more particularly applied to a mound, usually composed of earth, which was raised round a besieged town, and which was gradually increased in breadth and height, till it equalled or overtopped the walls. Hence we find the expressions aggere oppidum oppugnare, aggere oppidum cingere; and the making of the agger is expressed by the verbs construere, construere, susare, susare, &c. Some of these aggers were gigantic works, flanked with towers to defend the workmen and soldiers, and surmounted by parapets, behind which the soldiers could discharge missiles upon the besieged towns. At the siege of Avaricum, Caesar raised in twenty-five days an agger 330 feet broad, and 80 feet high. (B. G. vii. 24.) As the agger was sometimes made of wood, hurdles, and similar materials, we sometimes read of its being set on fire. (Liv. xxxvi. 23; Caes. B. G. vii. 24, B. C. ii. 14, 15.) The word agger was also applied to the earthen wall surrounding a Roman encampment, composed of the earth dug from the ditch ( fossa), which was usually nine feet broad and seven feet deep; but if any attack was apprehended, the depth was increased to twelve feet, and the breadth to thirteen feet. Sharp stakes, &c., were usually fixed upon the agger, which was then called vallum. When both words are used (as in Caesar, B. G. vii. 72, agger ac vallum), the agger means the mound of earth; and the vallum the sharp stakes (valli), which were fixed upon the agger.

At Rome, the formidable rampart erected by Servius Tullius to protect the western side of Rome was called agger. It extended from the further extremity of the Quirinal to that of the Esquiline. It was fifty feet broad, having a wall on the top, defended by towers. When it was stretched across a hundred feet wide and thirty feet deep. (Cic. de Rep. ii. 6; Dionys. ix. 68.) Pline (H. N. iii. 5, s. 9) attributes the erection of this rampart to Tarquinius Superbus, but this is in opposition to all the other ancient writers who speak of the matter. AGITATORES. [Circus.]

AGMEN. [Exercitus.]

AGNA'TI. [Cognati.]

AGNO'MEN. [Nomem.]

AGONALIA, or AGONIA (Ov. Fast. v. 721), one of the most ancient festivals at Rome, celebrated several times in the year. Its institution, like that of other religious rites and ceremonies, was attributed to Numa Pomplius. (Macrobr. Saturn. i. 4.) We learn from the ancient calendars that it was celebrated on the three following days, the 9th of January, the 21st of May, and the 11th of December. (a d. V. Id. Jan.; XII. Kal. Jun.; III. Id. Dec.) to which we should probably add the 17th of March (a d. XVI. Kal. Apr.), the day on which the Liberia was celebrated, since this festival is also called Agonia or Agonium Martiale. (Var. L. L. vi. 14, ed. Muller; Macrobr. l. c.; Kalender von Patroclus.) The object of this festival was a disputed point among the ancients themselves; but as Hartung has observed (Die Religion der Römer, vol. ii. p. 33), when it is recollected that the victim which was offered was a ram, that the person who offered it was the rex sacrificulus, and that the place where it was offered was the regia (Var. L. L. vi. 12; 0v. Fast. l. 333; Fest. s. v. Agonium), we shall not have much difficulty in understanding the significance of this festival. The ram was the usual victim presented to the guardian gods of the state, and the rex sacrificulus took the regia could be employed only for such ceremonies as were connected with the highest gods and affected the weal of the whole state. Regarding the sacrifice in this light, we see a reason for its being offered several times in the year.
The etymology of the name was also a subject of much dispute among the ancients; and the various etymologies that were proposed are given at length by Ovid. (Fast, i. 319—323.) None of these, however, are at all satisfactory; and we would therefore suggest another. It is well known that the Quirinal hill was originally called Agonias, and the Colline gate Agonensis. (Fest, s. vv, Agonias, Quirinalis; comp. Dionys. i. 37.) What is then more likely than that this sacrifice should have been originally offered on this hill, and should thence have received the name of Agonalia? It is expressly stated that the sacrifice was offered in the regia, or the domus regia, which in the historical times was situated at the top of the sacrae viae, near the arch of Titus (Becker, Handbuch d. Röm, Alterth. vol. i. pp. 237, 238); but in the earliest times the regia is stated by an ancient writer to have been upon the Quirinal (Solin. i. 21), and this statement seems to render our supposition almost certain. (Classical Museum, vol. iv. pp. 154—157.)

The Circus Agonensis, as it is called, is supposed by many modern writers to have occupied the place of the present Piazza Navona, and to have been built by the emperor Alexander Severus on the spot where the victims were sacrificed at the Agonalia. Becker (Ibid. pp. 668—670) has however brought forward good reasons for questioning whether this was a circus at all, and has shown that there is no authority whatever for giving it the name of circus Agonensis.

AGON' NES (άγοννες), the general term among the Greeks for the contests at their great national games. [CERTAMINA.] The word was also used to signify law-suits, and was especially employed in the phrase άγοννες τιμητοί and διτιμητοί. [Τιμήματα.]

AGON'O THETA' EAI (άγωνοθηται), were persons, in the Grecian games, who decided disputes and adjudged the prizes to the victors. Originally, the person who instituted the contest and offered the prize was the agonothetes, and this continued to be the practice in those games which were instituted by kings or private persons. But in the great public games, such as the Isthmian, Pythian, &c., the agonothetes were either the representatives of different states, as the Amphictyons at the Pythian games, or were chosen from the people in whose country the games were celebrated. During the flourishing times of the Grecian republics, the Eleians were the agonobetae in the Olympic games, the Corinthians in the Isthmian games, the Amphictyons in the Pythian games, and the Corinthians, Argives, and inhabitants of Cleoneae in the Nemean games. The άγονοθηται were also called αίγωνοθηται, άγωνοθρηται, γωνόθρηται, αθλοθηται, παράθρηται or παραθρητοι (from the staff they carried as an emblem of authority), βραδεῖται, βρασβεῖται.

AGORA (άγορα), properly means an assembly of any nature, and is usually employed by Homer for the general assembly of the people. The agora seems to have been considered an essential part in the constitution of the early Grecian states, since the barbarity and uncivilised condition of the Cypriotes is characterised by their wanting such an assembly. (Hom, Od. ix. 112.) The agora, though usually convoked by the king, appears to have been also summoned at times by some distinguished chiefman, as for example, by Achilles before Troy. (Hom, R. i. 54.) The king occupied the most important seat in these assemblies, and near him sat the nobles, while the people sat in a circle around them. The power and rights of the people in these assemblies have been the subject of much dispute. Platner, Tittman, and more recently Nitzsch in his commentary on the Odyssey, maintain that the people was allowed to speak and vote; while Miller (Dor, iii. 1 § 3), who is followed by Grote (Hist, of Greece, vol. ii. p. 91), maintains that the nobles were the only persons who proposed measures, deliberated, and voted, and that the people was only present to hear the debate, and to express its feeling as a body; which expressions might then have been noticed by a prince of a mild disposition. The latter view of the question is confirmed by the fact, that in no passage in the Odyssey is any of the people represented as taking part in the discussion; while, in the Iliad, Ulysses inflicts personal chastisement upon Thersites, for presuming to attack the nobles in the agora. (II. ii. 211—277.) The people appear to have been only called together to hear what had been already agreed upon in the council of the nobles, which is called βουλή (II. ii. 53, vi. 114, γεροντες βουλεύουσαι), and δόκως (Od. ii. 26), and sometimes even άγορα (Od. ix. 112; άγορα βουληθείς). Justice was administered in the agora by the king or chiefs (Hes. Thoug. 85; Hom, Il. xviii. 497, &c. Od. xii. 439), but the people had no share in its administration, and the agora served merely the purpose of publicity. The common phrases used in reference to the agora are εἰς άγοραν καλεῖν; άγοραν ποιοῦσαι, πίστευσαι; εἰς τὴν άγοραν εἰσίναι, ἀγορησθεσθαι, &c. (Wachsmuth, Hellen. Alterthumsk. vol. i. p. 346, 2d ed.; Hermann, Lehrbuch. d. Griech. Staatsalt. § 55; Grote, Hist, of Greece, vol. ii. pp. 91—101.)

Among the Athenians, the proper name for the assembly of the people was ηκκλησία, and among the Dorianst αἱλία. The terra agora was confined at Athens to the assemblies of the phylae and demi. (Aesch. c. Cles. § 27. p. 50. 37; Schömann, De Comitis Athen. p. 27, Antiq. Jur. Publ, Græc. pp. 203, 205; Böckh, Corp. Inscript. vol. i. p. 125.)

In Crete the original name άγορά continued to be applied to the popular assemblies till a late period. (Bekker, Anecdol. vol. i. p. 210.)

A'GOR' A (άγορα), was the place of public assembly in a Greek city, both for traffic, and for the transaction of all public business. It answers to the Roman forum; and, in fact, it is impossible to keep these two subjects entirely separate.

In the earliest times, the agora was merely an open piece of ground, which was generally in front of the royal palace, and, in sea-port towns, close to the harbour. The Agora of Troy was in the citadel. Here, the chiefs met in council, and sat in judgment, and the people assembled to witness athletic games. It was evidently also the place of traffic and of general intercourse; in one passage of Homer, we have a lively picture of the idlers who frequented it. It was enclosed with large stones sunk into the earth, and seats of marble were placed in it for the chiefs to sit in judgment, and it was hallowed by the shrine of one or more divinities. In the Agora which Homer particularly describes,—that of the Phaeacians,—there was a temple of Poseidon. (Hom, II. iii. 788, vii. 345, 346, xviii. 487—506, Od. vi. 263—265, viii. 16. 109, xvi. 361.)
AGORA.

Out of this simple arrangement arose the magnificent ἀγορά of later times, which consisted of an open space, enclosed by porticoes or colonnades, divided into separate parts for the various occupations which were pursued in it, adorned with statues, altars, and temples, and built about with edifices for the transaction of public and private business, and for the administration of justice.

We have, first of all, in this, as in other departments of architecture, to distinguish the ancient style from that introduced by the Greeks of Ionia after the Persian war, and more especially by Hippodamus of Miletus (see Dict. of Biog. s. v.), whose connection with the building of the ἀγορά of a new form is marked by the name Ἰπποδάμεια, which was applied to the Agora in the Peiraeus. (Harpocr. s. v. Ἰπποδάμεια.) The general character of the Greek ἀγορά is thus described by Vitruvius (v. 1) — "The Greeks arrange their fora in a square form, with very wide double colonnades, and adorn them with columns set near one another and with stone or marble entablatures, and they make walks in the upper stories."

Among the ἀγοραί described by Pausanias, that of the Eleians is mentioned by him (vi. 24) as being not on the same plan as those of the Ionians and the Greek cities adjoining Ionia, but it is built in the more ancient fashion, with porticoes separated from one another, and streets between them. But the name of the Agora in our days is Ἱπποδρομός, and the people of the country exercise their horses there. But of the porticoes, the one towards the south is of the Dorian style of Hippodamus, and the temple and statue of Apollo Acesius; the statues of the Sun and Moon; the temple of the Graces, with their wooden statues, of which the dress was gilt, and the hands and feet were of white marble; the temple of Seilenus, dedicated to public assemblies and exercise, and the ἄγορα ἱπποδρομός, which thus supports the roof: and images are placed on both sides against the wall." He then proceeds to mention the ornaments of the Agora, namely, the statue of the philosopher Pyrrhon; the temple and statue of Apollo Acesius; the statues of the Sun and Moon; the temple of the Graces, with their wooden statues, of which the dress was gilt, and the hands and feet were of white marble; the temple of Seilenus, dedicated to public assemblies and exercise, and the ἄγορα ἱπποδρομός, which thus supports the roof: and images are placed on both sides against the wall."

Hirt has drawn out the following plan from the description of Pausanias. (Geschichte der Baukunst bei den Alten, Taf. xxi. fig. 5.) We give it, not as feeling satisfied of its complete accuracy, but as a useful commentary on Pausanias.

AGORA.

This the Hellanodicae generally pass the day) but against these (pillars) they place altars to Zeus. To one going along this portico, into the Agora, there lies on the left, along the further side of this portico, the dwelling of the Hellanodicae (δ ’Ελλανοδίκαιον); and there is a street which divides it from the Agora. And near the portico where the Hellanodicae pass the day, is another portico, there being one street between them: this the Eleians call the Corecyrean portico (because it was built from the tithe of spoil taken from the Carystians in war). "But the style of the portico is Dorian and double, having columns on the one side towards the Agora, and on the other side towards the parts beyond the Agora; and along the middle of it is a wall, which thus supports the roof: and images are placed on both sides against the wall."

In this Agora the Stoa, b, answers to the later ἡκτώρα, and the house c, to the πρύτανειον in other Greek ἀγοραί. With respect to the other parts, it is pretty evident that the chief open space, a, which Pausanias calls τὸ ἐπικεφαλοῦς τῆς ἀγορᾶς, was devoted to public assemblies and exercise, and the σταυρός (a), with their intervening streets (b), to private business and traffic. Hirt traces a resemblance of form between the Eleian agora and the Forum of Trajan. It is evident that the works of Vitruvius, above quoted, refer to the more modern, or Ionian form of the Agora, as represented in the following plan, which is also taken from Hirt (Geschichte der Baukunst, xxii. fig. 1). —
AGORA.

PLAN OF A GREEK AGORA, ACCORDING TO VITRUVIUS.

A, the open court, surrounded by double colonnades and shops; B, the Curia; C, the chief temple, also used as a treasury; D, the Basilica, or court of justice; E, the Tholus, in connection with the other rooms of the Prytaneum, C, D.

The cut below, which is also from Hirt, represents a section of the Agora made along the dotted line on the plan.

We gain further information respecting the buildings connected with the Agora, and the works of art with which it was adorned, chiefly from the statements of Pausanias respecting those of particular cities, such as Athens (i. 5. § 2), Thebes (ix. 17. § 1), Sicyon (ii. 7. § 7, 9. § 6), Argos (ii. 21), Sparta (iii. 11), Tegea (viii. 47. § 3), Megalopolis (viii. 30. § 2), to which passages the reader is referred for the details. The buildings mentioned in connection with the Agora are:

1. Temples of the gods and shrines of heroes [ΤΕΡΑΜΙΟΝ], besides altars and statues of divinities. The epithet ἀγοράς is often applied to a divinity who was thus worshipped in the Agora (Paus. II. cc.; Aesch. Eumen. 976; Soph. Oed. Tyr. 161, where mention is made of the circular throne of Artemis in the Agora), and Aeschylus expressly refers to the διον χαίρειν ἐπισκόποι (Sept. c. Tith. 271, 272).

2. The Senate-house [ΒΑΣΙΛΙΚΑ].

3. The residence of the magistrates for the time being [ΠΡΥΤΑΝΕΙΟΝ].

4. Courts of justice [ΒΑΣΙΛΙΚΑ].

5. The public treasury [ΘΕΣΑΥΡΟΣ].

6. The prison [ΧΑΡΚΗ].

7. The police station, if such a term may be applied to an ancient Agora.

At Athens, for example, the station of the thousand Scythian bowmen, who formed the police force of the state, was in the middle of the Agora: this does not, however, seem to have been a permanent building, but only a number of tents.

8. Buildings used for the regulation of the standards of measure, and so forth; such as the building vulgarly called the Temple of the Winds at Athens [ΗΡΟΛΟΓΙΟΝ], and the Milliarium Aureum at Rome, which seems to have been imitated from a similar standard at Athens [ΜΙΛΙΑΡΙΟΝ].

To these various buildings must be added the works of art, with which the open area and the porticoes of the Agora were adorned; and in which also stood the statues of the ten heroes (ΔΡΥΣΕΤΑ), after whom the Προπελειος of Cleisthenes was named, of Solon, of Harmodius, and Aristogeiton, of the orator Lycurgus, and of very many others. It was customary also to build new porticoes out of the spoils taken in great wars, as examples of which we have the Corean portico at Elis, mentioned above, and the Persian portico at Sparta.

The open area of the Agora was originally the place of public assembly for all purposes, and a general resort. Its use for political purposes is described in the preceding article. Here also were celebrated the public festivals. At Sparta, the part of the Agora in which stood the statues of Apollo, Artemis, and Leto, was called χαίρειν because the choruses of the Ephelai performed their dances there at the festival of the Gymnopaedia. (Paus. iii. 9.) Lastly, it was the place of social and fashionable resort. At Athens, fashionable loungers were called ἄγορας.

Originally the Agora was also the market, and was surrounded with shops, as shown in the above plan. As commerce increased, it was found convenient to separate the traffic from the other kinds of business carried on in the Agora, and to assign to each its distinct place, though this was by no means universally the case. The market, whether identical with, or separate from the Agora for political and other assemblies, was divided into parts for the different sorts of merchandise, each of
course furnished with colonnades, which the climate rendered necessary, and partly with shops and stalls, partly with temporary booths of wicker-work (ἐκτήραν, Ἑρακλ. σ. c. σκήπτρας; Demosth. de Cor. p. 284). Each of these parts was called a κόμας. It is generally stated that this term was applied only to that division of the market where meat, fish, and such things were sold; but Becker has shown that it was used also for other parts of the market (Charicles, vol. i. pp. 268, 269). The several divisions of the market were named according to the articles exposed for sale in them. (Poll. ix. 47, x. 15.) Of these divisions, the following are the most important.

The part in which fish and other delicacies for the table were exposed to sale was called ἵθες, ὄφος, or ἰχνάτωμα ἀγοράς, and was the chief centre of business. It was open only for a limited time, the signal for commencing business being given by the sound of a bell, which was obeyed with an eagerness that is more than once pleasantly referred to by the ancient writers. (Plut. Arch. Sympos. iv. 4, 2; Strab. xiv. p. 638.)

The coarseness and impositions of the fish-sellers, and the attempts of purchasers to haggle them down, are frequently alluded to by the comic poets. (Amphis, ap. Ath. vi. p. 224, c.; Alexis, ibid.; Xenarch. ibid. p. 225, c.; Alexis, ibid. p. 226, a, b.; comp. Plat. Leg. xi. p. 917.) It is not quite clear whether meat, poultry, and so forth, were sold in the same place as the fish, or had a separate division of the market assigned to them. Bread was partly sold in the assigned place in the market, which was perhaps the same as the meal-market (τὰ ἄλφες), and partly carried round for sale: the sellers were generally women, and were proverbially abusive. (Aristoph. Ran. 537, Vesp. 1339.) In another part of the market, called μηθύπσια, were the women who sold garlands of myrtle and flowers for festivals and parties. (Plut. Arat. 6; Aristoph. Thesm. 448, 457.) Near these, probably, were the sellers of ribands and fillets for the head. (Demosth. in Eucl. p. 1308.)

The wholesale traffic in wine, as distinct from the country in carts, from which it was transferred to amphorae: the process is represented in two passages (iii. 104, iv. 181) makes a distinction between the country in carts, the wine being brought in from the country in carts, from which it was transferred to amphorae. (Demosth. in Eucl. p. 1308.) The time of the conclusion of the market was called ἀγοράς διαλύσεις (Herod. iii. 104, comp. Xenoph. Con. 12, 1; and for a further discussion respecting the time of the full market, see Duker, ad Thuc. viii. 92; Wesseling, ad Diod. Sic. s. l.; Porson, ad Vit. xii. 30; Gesner and Reitz, ad Lucian. Philadelphia, 11, vol. iii. p. 38; Bühr, ad Herod. ii. 173.) During these hours the market was a place not only of traffic but of general resort. Thus Socrates habitually frequented it as one of the places where he had the opportunity of conversing with the greatest number of persons. (Xen. Mem. i. 1. § 10; Plat. Apol. p. 17.)

It was also frequented in other parts of the day, especially in the evening, when many persons might be seen walking about or resting upon seats placed under the colonnades. (Demosth. in Con. p. 1258; Pseudo-Plut. Vit. X. Or. p. 849, d.; Lucian. Iup. Trag. 16, vol. ii. p. 660.) Even the shops themselves, not only those of the barbers, the perfumers, and the doctors, but even those of the leather-sellers and the harness-makers, were common places of resort for conversation; and it was even esteemed credible to avoid them altogether. (Aristoph. Plut. 337, Av. 1439; Xen. Mem. iv. 2. § 1; Lysias, in Pand. pp. 730, 732, de Invad. p. 754; Demosth. in Aristog. p. 786.)

The persons who carried on traffic in the market were the country people (ἀγοραῖοι), who brought
in their commodities into the city, and the retail dealers (κάμπλοι) who exposed the goods purchased of the former, or of producers of any kind (αὐτοπωλεῖα), or of foreign merchants (μυροί), for sale in the markets. (Plat. de Repub. ii. p. 571; Xen. Mem. iii. 7, § 6; Plat. Arat. 8; Καῦπος.) A certain degree of disgrace was attached to the occupation of a retail dealer, though at Athens there were positive enactments to the contrary. (Andoc. de Myg. p. 68; Aristot. de Repubh. i. 10, iii. 5; Plat. Legg. xi. pp. 918, 919; Dioq. Laêír. i. 104, ix. 66; Aristoph. Εὐκ. 181; Demosth. c. Eubul. 30, p. 1303.) There is an interesting but very difficult question as to the effect which the occupation of selling in the market had upon the social position of women who engaged in it. (Demosth. in Neær. p. 1367; Lys. in Theocr. p. 361; Plat. Sol. 23; Harpoer. and Suid. s. v. Παλλάσ; Becker, Charicles, vol. i. pp. 260—266.) The wholesale dealers also sold their goods by means of a sample (σφύσα), either in the market, or in the place called στήγια, attached to the port. (Harpoer. s. v. σέργα; Poll. ix. 34; Plat. Demosth. 23; Plat. Λεγ. vii. p. 788; Diphil. op. Ath. xi. p. 499, e.; Böckh, Econ. of Ath. p. 58, 2d ed.) The retail dealers either exposed their goods for sale in their shops, or hawked them about. (Aristoph. Acharn. 33; Plut. Αὁρ. Λαο. 62, p. 236.) The privilege of freely selling in the market belonged to the citizens: foreigners had to pay a toll. (Demosth. in Eubul. p. 1306; Böckh, Econ. of Ath. p. 313.)

Most citizens either made their own purchases in the market (Asch. o. Timarch. p. 87; Aristoph. Lysistr. 555—559), or employed a slave, who was called, from his office, ἀγοραστής (Xen. Mem. i. 5, § 2; comp. Ath. iv. p. 171; Poll. iii. 126; Teront. Άνδρ. ii. 2. 31.) Sometimes female slaves performed this office (Lysias, de Cael. Eratosth. p. 18, comp. p. 11), but such an appearance in public was not permitted to any free woman, except a courtezan (Machon, ap. Ath. xii. p. 580.) The philosopher Lyneus, of Samos, wrote a book for the guidance of purchasers in the market. (Ath. vi. p. 228.) It was esteemed disgraceful for people to carry home their purchases from the markets, and there were therefore porters in attendance for that purpose, who were called προβιοκει, πανδρώνει, and πασύδειν. (Theophr. Char. xii.—xxii.; Heusch. s. v. προβιοκεῖα.) The preservation of order in the market was the office of the ἀγορανόμοι.

Both the architectural details of the Agora and the uses of its several parts might be further illustrated by the remains of the στήγια or στήγοι (for it is even doubtful whether there were two or only one) at Athens; but this would lead us too far into topographical details. This part of the subject is fully discussed in the following works: Leake, *Topography of Athens*; Krauss, *Hellen*. vol. ii.; Müller, in Ersch and Gruber’s *Encyclopædia*, art. *Attica*; Hirt, *Lekte d. Gebiûde d. Griechen und Römer*, ch. v.; Steglich, *Archit. d. Baukunst*; Wachsmuth, *Hellenische Altertumskunde*; Böckh, *Public Economy of Athens*; and especially Becker, *Charicles*, 4th scene, vol. i. pp. 236—296, in the original. [*P.S.*]
sum of money to the state (οἱ τῶν δημοσίων οφειλομένοι) were registered by the practores (πράκτορες), upon tablets kept for that purpose in the temple of Athena, on the Acropolis (Dem. c. Aristog. i. p. 791; Harpocr. and Suidas, s. v. θεοθετήγραφος); and hence the expression of being registered on the Acropolis (ἐγγραφομένος τῇ Ἀκρόπολις) always meant being indebted to the state. (Dem. c. Theocr. p. 1337.) Whoever paid his fine after registration was erased, either wholly or in part, according to the amount paid; but if a person's name was improperly erased, he was subject to the action for non-registration (ἀγραφοῦ γραφῆς), which was under the jurisdiction of the thesmothetae. If an individual was not registered, he could only be proceeded against by ἑθέξιος, and was not liable to the ἀγραφοῦ γραφῆς. (Dem. in Theocr. p. 1338.) Hesychius, whose account has been followed by Hemsterhuis and Wesseling, appears to have been mistaken in saying that the ἀγραφοῦ γραφῆς could not be instituted against debtors, who had not been registered. (Meier, Att. Process, pp. 353, 354; Böckh, Publ. Econ. of Athens, pp. 388, 389, 2nd ed.)

ἈΓΡΑΙΑΕ ΛΕΓΕΣ. "It is not exactly true that the agrarian law of Cassius was the earliest that was so called: every law by which the Commonwealth disposed of its public land, bore that name; as, for instance, that by which the dominium of the kings was parcelled out among the commonalty, and those by which colonies were planted. Even in the narrower sense of a law whereby the state exercised its ownership in removing the old possessors from a part of their dominium, and making over its right of property to others, such a law existed among those of Servius Tullius." (Niebuhr, Rom. Hist. vol. ii. p. 129.)

The complete history of the enactments called agrarian laws, either in the larger and more correct sense, or in the narrower sense of the term, as explained in this extract, would be out of place here. The particular objects of each agrarian law must be ascertained from its provisions. But all those numerous enactments had reference to the public land; and many of them were passed for the purpose of settling Roman colonies in conquered districts, and assigning to the soldiers, who formed a large part of such colonists, their shares in such lands. The true meaning of all or any of these enactments can only be understood when we have formed a correct notion of property in land, as recognised by Roman law. It is not necessary, in order to obtain this correct notion, to ascend to the remote origin of the Roman state, though if a correct history of Rome could be written, our conception of the real character of property in land, as recognised by Roman law, would be more enlarged and more precise. But the system of Roman law, as it existed under the emperors, contained both the terms and the notions which changed to those early ages, of which they are the most faithful historical monuments. In an inquiry of the present kind, we may begin at any point in the historical series which is definite, and we may ascend from known and intelligible notions which belong to a later age, towards their historical origin, though we may never be able to reach it.

Gaius (ii. 2, &c.), who probably wrote under the Antonines, made two chief divisions of Roman land; that which was divini juris, and that which was humani juris. Land which was divini juris was either sacer or religiosus. (Compare Frontinus, De Re Agraria, xii. or p. 42. ed. Goes.) Land which was sacer was consecrated to the Dii Superior; land which was religiosus belonged to the Dii Manes. Land was made sacer by a lex or senatus consultum; and, as the context shows, such land was land which had belonged to the state (populus Romanus). An individual could make a portion of his own land religiosus by the interment in it of one of his family; but it was the better opinion that land in the provinces could not thus be made sacer; and the reason given is this, that the ownership or property in provincial lands is either in the state or in the Caesar, and that individuals have only the possession and enjoyment of it (possessio et usus fructus). Provincial lands were either stipendiaria or tributaria: the stipendiaria were in those provinces which were considered as the property of the state; the tributaria were in those provinces which were considered as the property of the Caesar. Land which was humani juris, was divided into public and private: public land belonged to the state; private land, to individuals.

It would seem to follow from the legal form observed in making land sacer, that it thereby ceased to be publicus; for if it still continued publicus, it had not changed its essential quality. Niebuhr (Appendix I. vol. ii.) has stated that "all Roman land was either the property of the state (common land, domain), or private property, — aut publicus aut privatus:" and he adds that "the landed property of the state was either consecrated to the gods (sacer), or allotted to men to reap its fruits (professus, humani juris)." Niebuhr then refers to the view of Gaius, who makes the division into divini juris and humani juris, the primary division; but he relies on the authority of Frontinus, supported by Livy (viii. 14), as evidence of the correctness of his own division. *

Though the origin of that kind of property —

* It is obvious, on comparing two passages in Frontinus (De Re Agraria xi. xiii.), that Niebuhr has mistaken the meaning of the writer, who clearly intends it to be inferred that the sacred land was not public land. Besides, if the meaning of Frontinus was what Niebuhr has supposed it to be, his authority is not equal to that of Gaius on a matter which specially belongs to the province of the jurist, and is foreign to that of the agrimensor. The passage of Gaius is not consistent with Niebuhr's assertion. Livy merely states that the temple and grove of Sospita Juno should be common to the Lamuvini municipes and the Roman people; and in what other terms could he express the fact that the temple should be used by both people? That does not prove that a temple was considered the same kind of public property as a tract of unconstituted land was. The form of dedication in Livy (i. 30) may easily be explained.
called public land must be referred to the earliest ages of the Roman state, it appears from Gaibus that under the emperors there was still land within the limits of the empire, the ownership of which was not in the individuals who possessed and enjoyed it, but in the populus Romanus, or the Caesar. This possession and enjoyment are distinguished by him from ownership (dominium). The term possession frequently occurs in those jurists from whom the Digest was compiled; but in these writers, as they are known to us, it applies only to private land, and the Ager Publicus is hardly, if at all, ever noticed by them. Now this term Possessio, as used in the Digest, means the possession of private land by one who has no kind of right to it; and this possession was protected by the praetor's interdict, even when it was without bona fides or justa causa: but the term Possessio in the Roman historians, Livy for instance, signifies the occupation (occupatio) and enjoyment of public land; and the true notion of this, the original Possessio, contains the whole solution of the question of the Agrarian Laws. For this solution we are mainly indebted to Niebuhr and Savigny.

This latter kind of Possessio, that which has private land for its object, is demonstrated by Savigny (the term here used can hardly be said to be too strong) to have arisen from the first kind of possessio: and thus it might readily be supposed that the Roman doctrine of possession, as applied to the occupation of private land, would throw some light on the nature of that original possessio out of which it grew. In the imperial period, public land had almost ceased to exist in the Italian peninsula, but the subject of possession in private lands had become a well understood branch of Roman law. The remarks in the three following paragraphs are from Savigny's valuable work, Das Recht des Besitzes (5th ed. p. 172):—

1. There were two kinds of land in the Roman state, ager publicus and ager privatus: in the latter alone private property existed. But conformably to the old constitution, the greater part of the ager publicus was occupied and enjoyed by private persons, and apparently by the patricians only, or at least by them chiefly till the enactment of the Licinian Rogations: yet the state could resume the land at pleasure. Now we find no mention of any legal form for the protection of the occupier, or Possessor as he was called, of such public land against any other individual, though it cannot be doubted that such a form actually existed. But if we assume that the interdict which protected the possession of an individual in private land, was the form which protected the possessor of the public land, two problems are solved at the same time,—the historical origin of discovered for possession in private land, and a legal form for the protection of possession in public land.

An hypothesis, which so clearly connects into one consistent whole, facts otherwise incapable of such connection, must be considered rather as evolving a latent fact, by placing other known facts in their true relative position, than as involving an independent assumption. But there is historical evidence in support of the hypothesis.

2. The words possessio, possessor, and possidere are the technical terms used by writers of very different ages, to express the occupation and the enjoyment of the public lands; that is, the notion of occupying and enjoying public land was in the early ages of the republic distinguished from the right of property in it. Nothing was so natural as to apply this notion, when once fixed, to the possession of private land as distinct from the ownership; and accordingly the same technical terms were applied to the possession of private land. Various applications of the word possessio, with reference to private land, appear in the Roman law, in the bonorum possessor of the praetorician heroes and others. But all the uses of the word possessio, as applied to ager privatus, however they may differ in other respects, agreed in this:— they denoted an actual possession and enjoyment of a thing, without the strict Roman (Quiritarian) ownership.

3. The word possessio, which originally signified the right of the possessor, was in time used to signify the object of the right. Thus aser signifies a piece of land, viewed as an object of Quiritarian ownership; possessio, a piece of land, in which a man had only a bonitarian or beneficial interest, as, for instance, Italic land not transferred by mancipation, or land which from its nature could not be the subject of Quiritarian ownership, as provincial lands and the old ager publicus. Possessio accordingly implies usus; ager implies proprietas or ownership. This explanation of the terms ager and possessio is from a jurist of the imperial times, quoted by Savigny (Javolenus, Dig. 50. tit. 16. s. 115); but its value for the purpose of the present inquiry is not on that account the less. The ager publicus, and all the notions attached to it, as to their origin and to the legal form in which they occur in the extant Roman jurists; but the name possessio, as applied to private land, and the legal notions attached to it, are of frequent occurrence. The form of the interdict, uti possidetis...vim fieri veto. But the original form of the interdict was: Uti nunc possidetis...est. &c. (Festus in Possessio); the word fundus, for which acedes was afterwards substituted, appears to indicate an original connection between the interdict and the ager publicus.

We know nothing of the origin of the Roman public land, except that it was acquired by conquest, and when so acquired it belonged to the state, that is, to the popular, as the name publicus (populicus) imports; and the original populus was the patricians only. We may suppose that in the early periods of the Roman state, the conquered lands being the property of the populius, might be enjoyed by the members of that body, in any way that the body might determine. But it is not quite clear how these conquests had been originally acquired. The following passage from Appian (the Wars, i. 7) appears to give a probable account of the matter, and one which is not inconsistent with such facts as are otherwise known:—"The Romans," he says, "when they conquered any part of Italy, seized a portion of the lands, and either built cities in them, or sent Roman colonists to settle in the cities which already existed. Such cities they designed to be garrison places. As to the land thus acquired from time to time, they either divided the cultivated part among the colonists, or sold it, or let it to tenants. At the land which had fallen out of cultivation in consequence of war, and which, indeed, was the larger
part, having no time to allot it, they gave public notice that any one who chose might in the meantime cultivate this land, on payment of part of the yearly produce, namely, a tenth of the produce of arable land, and a fifth of the produce of olive-yards and vineyards. A rate was also fixed to be paid by those who pastured cattle (on this undivided land) both for the larger and smaller animals. And this they did with a view to increase the numbers of the Italian people, whom they considered to be most enduring of labour, in order that they might have domestic allies. But it turned out just the contrary of their expectations. For the rich occupied the greater part of this undivided land, and at length, feeling confident that they should never be deprived of it, and getting hold of such portions as bordered on their lands, and also of the smaller portions in the possession of the poor, some by purchase and others by force, they became the cultivators of extensive districts instead of farms. And in order that their cultivators and shepherds might be free from military service, they employed slaves instead of freemen; and they derived great profit from their rapid increase, which was favoured by the immunity of the slaves from military service. In this way the great became very rich, and slaves were numerous all through the country. But this system reduced the number of the Italians, who were ground down by poverty, taxes, and military service; and whenever they had a respite from these evils, they had nothing to do, the land being occupied by the rich, who also employed slaves instead of freemen. This passage, though it appears to contain above 20,000 inhabitants, "none of the land was occupied, the possessor, when once in possession, was, as we have seen, protected by the praetor's interdict. The patron who permitted his client to occupy any part of his possession as tenant at will (precario), could eject him at pleasure by the interdictum de precario; for the client did not obtain a possession by such permission of his patron. The patron would, of course, have the same remedy against a trespasser. But any individual, however humble, who had a possession, was also protected in it against the aggression of the rich; and it was "one of the grievances bitterly complained of by the Greeks, and all the patriots of their age, that while a soldier was serving against the enemy, his powerful neighbour, who coveted his small estate, ejected his wife and children." (Nieb.) The state could not only grant the occupation or possession of its public land, but could sell it, and thus convert public into private land. A remarkable passage in Orosius (Savigny, p. 176, note), shows that public lands, which had been given to certain religious corporations to possess, were sold in order to raise money for the exigencies of the state. The selling of that land which was possessed, and the circumstance of the possession having been a grant or public act, are both contained in this passage.

The public lands which were occupied by possessors, were sometimes called, with reference to such possession, occupatorii; and, with respect to the state, concessi. Public land which became private by sale was called quaestorius; that which is often spoken of as assigned (assignatus), was marked out and divided (limitatus) among the plebeians in equal lots, and given to them in absolute ownership, or it was assigned to the persons who were sent out as a colony. Whether the land so granted to the colony should become Roman or not, depended on the nature of the colony. The name ager publicus was given to the public lands which were acquired even after the plebs had become one of the estates in the Roman constitution, though the name publicus, in its original sense, could no longer be applicable to such public lands. After the establishment of the plebs as an estate, the possession of public land was still claimed as the peculiar privilege of the patricians, as before the establishment of the plebs it seems to have been the only way in which public lands were enjoyed by the populus: the assignment, that is the grant by the state of the ownership of public land in fixed shares, was the privilege of the plebs. In the early ages, when the populus was the state, it does not appear that there was any assignment of public lands among the plebeians; though it may be assumed that public lands would occasionally be sold; the mode of enjoyment of public land was that of possession, subject to an annual payment to the state. It may be conjectured that this ancient possession, which we cannot consider as having its origin in anything else than the consent of the state, was a good title to the use of the land so long as the annual payments were made. At any rate, the plebs had no claim upon such ancient possessions. But with the introduction of the plebs as a separate estate, and the acquisition of new lands on the only security which either the squatter or the person who purchases from him, has for the improvements made on the land.
by conquest, it would seem that the plebs had as a good a title to a share of the newly conquered lands, as the patricians to the exclusive enjoyment of those lands which had been acquired by conquest before the plebs had become an estate; and according to Livy (iv. 49), the plebs founded their claim to the conquered lands upon their services in the war. The determination of what part of newly conquered lands (arable and vineyards) should remain public, and what part should be assigned to the plebs, which, Niebuhr says, "it need scarcely be observed was done after the completion of every conquest," ought to have been an effectual way of settling all disputes between the patricians and plebs as to the possessions of the former; for such an appropriation, if it were actually made, could have no other meaning than that the patricians were to have as good a title to possess their share as the plebs to the ownership of their assigned portions. The plebs at least could never fairly claim an assignment of public land, appropriated to remain such, at the time when they received the share of the conquered lands to which they were intitled. But the fact is, that we have no evidence at all as to such division between lands appropriated to remain public and lands assigned in ownership, as Niebuhr assumes. All that we know is, that the patricians possessed large tracts of public land, and that the plebs from time to time claimed and enforced a division of part of them. In such a condition of affairs, many difficult questions might arise; and it is quite as possible to conceive that the claims of the plebs might in some cases be as ill founded as the conduct of the patricians was alleged to be rapacious in extending their possessions. In the course of time, owing to sales of possessions, family settlements, permanent improvements made on the land, the claims on the land of creditors who had lent money on the security of it, and other causes, the equitable adjustment of rights under an agrarian law was impossible; and this is a difficulty which Appian (i. 10, 18) particularly mentions as resulting from the law of Tib. Gracchus.

Public pasture lands, it appears, were not the subject of assignment. The property (publicum) of the Roman people consisted of many things besides land. The conquest of a territory, unless special terms were granted to the conquered, seems to have implied the acquisition by the Roman state of the conquered territory and all that it contained. Thus not only would land be acquired, which was available for corn, vineyards, and pasture; but mines, roads, rivers, harbours, and, as a consequence, tolls and duties. If a Roman colony was sent out to occupy a conquered territory or town, a part of the conquered lands was assigned to the colonists in complete ownership. [COLONIA.] The remainder, it appears, was left or restored to the inhabitants. Not that we are to understand that they had the property in the land as they had before; but it appears that they were subject to a payment, the produce of which belonged to the Roman people. In the case of the colony sent to Antium, Dionysius (ix. 60) states, "that all the Antiates who had houses and lands remained in the country, and cultivated both the portions that were set aside for them and the portions appropriated to the colonists, on the condition of paying to them a fixed portion of the produce;" in which case, if the historian's statement is true, all the sums paid by the original landholders were appropriated to the colonists. Niebuhr seems to suppose, that the Roman state might at any time resume such restored lands; and, no doubt, the notion of a possibility of resumption under some circumstances at least was involved in the tenure by which those lands were held; but it may be doubted if the resumption of such lands was ever resorted to except in extraordinary cases, and except as to conquered lands which were the public lands of the conquered state. Private persons, who were permitted to retain their lands subject to the payment of a tax, were not the possessors to whom the agrarian laws applied. In many cases large tracts of land were absolutely seized, their owners having perished in battle or been driven away, and extensive districts, either not cultivated at all or very imperfectly cultivated, became the property of the state. Such lands as were unoccupied could become the subject of possession; and the possessor would, in all cases, and in whatever manner he obtained the land, be liable to a payment to the state, as above-mentioned in the extract from Appian.

This possessio was a real interest, for it was the subject of sale: it was the use (usuus) of the land; but it was not the ager or property. The possessio strictly could not pass by the testament of the possessor, at least not by the municipatio. (Galus, ii. 102.) It is not easy, therefore, to imagine any mode by which the possession of the heroes was protected, unless there was a legal form, such as Savigny has assumed to exist for the general protection of possessions in the public lands. The possessor of public land never acquired the ownership of his possession; it was not subject to usucapion. The ownership of the land which belonged to the state, could only be acquired by the grant of the ownership, or by purchase from the state. The state could at any time, according to strict right, sell that land which was only possessed, or assign it to another than the possessor. The possession was, in fact, with respect to the territory, a quasi-propriety, and we may suppose that the lands so sold would at first receive few permanent improvements. In course of time, and particularly when the possessors had been undisturbed for many years, possession would appear, in an equitable point of view, to have become equivalent to ownership; and the hardship of removing the possessors by an agrarian law would appear the greater, after the state had long acquiesced in their use and occupation of the public land.

In order to form a correct judgment of these enactments which are specially cited as agrarian laws, it must be borne in mind that the possessors of public lands owed a yearly tenth, or fifth, as the case might be, to the state. These annual payments were, it seems, often withheld by the possessors, and thus the state was deprived of a fund for the expenses of war and other general purposes.

The first mention by Livy of conquered land being distributed among the plebs belongs to the reign of Servius Tullius (i. 46, 47). The object of the agrarian law of Sp. Cassius (Livy. ii. 41; Dionys. viii. 70), b. c. 484, is supposed by Niebuhr to have been "that the portion of the populous in the public lands should be set apart, that the rest should be divided among the plebeians, that the tithe should again be levied and paid to the army." The agrarian law of C. Licinius Scauro (Livy. vi. 52):
Appian, B. C. i. 8) B. C. 365, limited each individual's possession of public land to 500 jugera, and imposed some other restrictions; but the possessor had no better title to the 500 jugera which the law left him, than he formerly had to what the law took from him. [Leges Liciniae.] The surplus land was to be divided among the plebeians, as we may assume from this being an agrarian law. The Licinian law not effecting its object, Tiberius Sempronius Gracchus, B. C. 133, revived the measure for limiting the possession of public land to 500 jugera. The arguments of the possessors against this measure, as they are stated by Appian (B. C. i. 10), are such as might reasonably be urged; but he adds that Gracchus proposed to give to each possessor, by way of compensation for improvements made on the public land, the full ownership of 500 jugera, and half that quantity to each of his sons if he had any. Under the law of Tiberius Gracchus three commissioners (triunviri) were to be chosen annually by the thirty-five tribes, who were to decide all questions that might arise as to the claims of the state upon lands in the occupation of possessors. The law provided that the land which was to be resumed should be distributed in small allotments among the poorer citizens, and they were not to have the power of alienating their allotments. Gracchus also proposed that the ready money which Attalus III., King of Pergamus, had with all his other property bequeathed to the Roman state, should be divided among the persons who received allotted lands, in order to enable them to stock their land. Tiberius Gracchus lost his life in a riot B. C. 133; but the Senate allowed the commissioners to continue their labours. After the death of Tiberius Gracchus, a tragic event happened at Rome. P. Cornelius Scipio, who had maintained the cause of the possessors, both Roman and Italian, against the measure of Gracchus, was found dead in his bed. Suspicion was strong against the party of Caius Gracchus, the younger brother of Tiberius, whose sister Sempronia was the wife of Scipio, but no inquiry was made into the cause of Scipio's death. Caius Gracchus became a triumvir of the plebs, B. C. 132, and he put the law of his brother again in force, for it had virtually been suspended by the Senate, B. C. 129, by their withdrawing the powers from the three commissioners, of whom Gracchus was one, and giving them to the consuls, C. Sempronius Tudinnus, who, being ensured in the Illyrian war, could not attend to the business. Caius Gracchus proposed the establishment of various colonies under the provisions of the law. To check his power, the Senate called in the aid of another triumvir, M. Livius Drusus, who outbid Caius in his popular measures. The law of Sempronius proposed that those who received allotted lands of land should pay the state a small sum in respect of each. Drusus released them from this payment. Caius proposed to found two colonies: Drusus proposed to found twelve, each consisting of three thousand men. Caius Gracchus lost his life in a civil commotion B. C. 121. Shortly after his death, that clause of the Sempronian law which forbade the alienation of the allotments, was repealed; and they forthwith began to fall into the hands of the rich by purchase, or by alleged purchases as Appian obscurely states (B. C. i. 21). A triumvir, Spurius Borius (Borius is the name in the MSS. of Appian), carried a law to prevent future divisions of the public land, with a provision that the sums payable in respect of this land to the state, should be formed into a fund for the relief of the poor. But another tribune, Spurius Thorius, B. C. 111, repealed this law as to the tax from the public lands, and thus the plebs lost everything for the future, both lands and poors' money. [Lex Thoria.] Other agrarian laws followed. In the sixth consulship of Marius, B. C. 100, agrarian laws were carried by the tribune L. Appuleius Saturninus and his party, the object of which was chiefly to provide for the veteran soldiers of Marius. These measures were carried by violence, but they were subsequently declared null. The tribune, M. Livius Drusus the younger, B. C. 91, proposed the division of all the public land in Italy and the establishment of the colonies which had been projected; he was for giving away everything that the state had (Florus, iii. 16). This Drusus was also a tool of the Senate, whose object was to humble the equestrian order by means of the plebs and the Italian Socii. But the Socii were also interested in opposing the measures of Drusus, as they possessed large parts of the public land in Italy. To gain their consent, Drusus promised to give them the full Roman citizenship. But he and the Senate could not agree on all these measures. Drusus was murdered, and the Socii, seeing their hopes of the citizenship balked, broke out in open war (B. C. 90). The measures of Drusus were declared null, and there was no investigation as to his death. The Social or Marse war, after threatening Rome with ruin, was ended by the Romans conceding what the allies demanded. [Lex Julia.] The land to which all the agrarian laws, prior to the Thoria Lex, applied, was the public land in Italy, south of the Maen and the Rubico, the southern boundaries of Gallia Cisalpina on the west and east coasts respectively. The Thoria Lex applied to all the public land within these limits, except what had been disposed of by assignation prior to the year B. C. 133, in which Tiberius Gracchus was tribune, and except the Ager Campanus. It applied also to public land in the province of Africa, and in the territory of Corinth. [Thoria Lex.] The object of the agrarian law of P. Servilius Rullus, proposed in the consulship of Cicero B. C. 63, was to sell all the public land both in and out of Italy, and to buy lands in Italy on which the poor were to be settled. Ten commissioners, with extraordinary powers, were to carry the law into effect, and a host of surveyors, clerks, and other officers, were to find employment in this agrarian job. The job was defeated by Cicero, whose three extant orations against Rullus contain most instructive matter on the condition of the Roman state at that time. The tribune Flavius, B. C. 60, at the instigation of Cn. Pompeius, brought forward a measure for providing the soldiers of Pompeius with lands. Cicero was not altogether opposed to this measure, for he wished to please Pompeius. One clause of the law provided that lands should be bought for distribution with the money that should arise in the next five years from the new revenues that had been created by the Asiatic conquests of Pompeius. The law was dropped, but it was reproduced in a somewhat altered shape by C. Julius Caesar in his consulship, B. C. 50, and it included the Stellatus Ager.
and the Campanus Ager, which all previous agrarian laws had left untouched. The fertile tract of Capua (Campanus Ager) was distributed among 20,000 persons, who had the qualification that the law required, of three or more children. After this distribution of the Campanian land, and the abolition of the port duties and tolls (portoria), Cicero observes (ad Att. ii. 16), "there was no revenue to be raised from Italy, except the five per cent. (vicesima)" from the sale and manumission of slaves.

The lands which the Roman people had acquired in the Italian peninsula by conquest were greatly reduced in amount by the laws of Gracchus and by sale. Confiscations in the civil wars, and conquests abroad, were, indeed, continually increasing the public lands; but these lands were allotted to the soldiers and the numerous colonists to whom the state was continually giving lands. The system of colonisation which prevailed during the republic, was continued under the emperors, and considerable tracts of Italian land were disposed of in this manner by Augustus and his successors. Vespasian assigned lands in Samnium to his soldiers, and grants of Italian lands are mentioned by subsequent emperors, though we may infer that at the close of the second century of our era, there was little public land left in the peninsula. Vespasian sold part of the public lands called subsecivia. Domitian gave the remainder of such lands all through Italy to the possessors (Aggusia). The conquests beyond the limits of Italy furnished the emperors with the means of rewarding the veterans by grants of land, and in this way the institutions of Rome were planted on a foreign soil. But, according to Gaius, property in the land was not acquired by such grant; the ownership was still in the state, and the provincial landholder had only the possession. If this be true, as against the Roman people or the Caesar, his interest in the land was one that might be resumed at any time, according to the strict rules of law, though it is easily conceived that such foreign possessions would daily acquire strength, and could not safely be dealt with according to the notions of Roman law. It had not that kind of ownership which, according to the notions of Roman law, was complete ownership, it is difficult to conceive that the ultimate ownership of provincial lands (with the exception of those of the liberae civitates) could reside anywhere else than in the populus Romanus, and, after the establishment of the imperial power, in the populus Romanus or the Caesar. This question is, however, by Niebuhr well deserves further examination. It may be doubted, however, if Gaius means to say that there could be no Quiritarian ownership of private land in the provinces; at least this would not be the case in those districts to which the Jus Italicum was extended. The case of the Recentoric lands, which is quoted by Niebuhr (Cic. c. Reddum. i. 4), may be explained. The land here spoken of was land in Sicily. One object of the measure of Rullus was to exact certain extraordinary payments (exigatio) from the public lands, that is, from the possessors of them; but he excepted the Recentoric lands from the operation of his measure. If this is private land, Cicero argues, the exception is unnecessary. The argument, of course, assumes that there was or might be private land in Sicily; that is, there was or might be land which would not be affected by this part of the measure or Rullus. Now the opposition of public and private land in this passage certainly proves, what can easily be proved without it, that individuals in the provinces owned land as individuals did in Italy: and such land might with propriety be called privatus, as contrasted with that called publicus in the provinces; in fact, it would not be easy to have found another name for it. But we know

* Niebuhr observes that Frontinus speaks of the "area publica in the provinces, in contradistinction to the agri privati there;" but this he certainly does not. This contradistinction is made by his commentator Aggenus who, as he himself says, only conjectures the meaning of Frontinus; and, perhaps, he has not discovered it. (Rei Agr. Script. pp. 30, 46, 47.) Saven's explanation of this passage is contained in the Zeitschrift für Gesch. Recldsw. vol. xi. p. 24.
that ager privatus in the provinces, unless it had received the Jus Italicum, was not the same thing as ager privatus in Italy, though both were private property. Such a passage then as that just referred to in Cicero, leads to no necessary conclusion that the ultimate ownership or dominion of this private land was not in the Roman people.

It only remains briefly to notice the condition of the public land with respect to the fructus, or vectigal which belonged to the state. This, as already observed, was generally a tenth, and hence the ager publicus was sometimes called decemnian. It was also sometimes called ager vectigalis. The tithe was generally farmed by the publican, who paid their rent mostly in money, but sometimes in kind. The letting was managed by the censors, and the lease was for five years. The form, however, of leasing the tenths was that of a sale, municipatio. In course of time the word locatio was applied to these leases. The phrase used by the Roman writers was originally fructus locatio, which was the proper expression; but we find the phrase, agrum fruendum locare, also used in the same sense, an expression which might appear somewhat ambiguous; and even agrum locare, which might mean the leasing of the public lands, and not of the tenths due from the possessors of them. Strabo (p. 622), when speaking of the port duties of Cumae in Aenolus, says they were sold, by which he no doubt means that they were farmed on certain terms. It is, however, made clear by aevum, that in some instances at least the phrase agrum locare, does mean the leasing of the tenths; whether this was always the meaning of the phrase, it is not possible to affirm.

Though the term ager vectigalis originally expressed the public land, of which the tithe was received, it afterwards came to signify lands which were leased by the state, or by different corporations. This latter description would comprehend even the ager publicus; but this kind of public property was gradually reduced to a small amount, and we find the term ager vectigalis, in the later period, applied to the lands of towns which were so leased that the lessee, or those who derived their title from him, could not be ejected so long as they paid the vectigal. This is the ager vectigalis of The Digest, model of which was norma xemphyteuticus, or ager emphyteuticus.  

The rights of the lessee of the ager vectigalis were different from those of a possessor of the old ager publicus, though the ager vectigalis was derived from, and was only a new form of the old ager publicus. Though he had only a usus in re, and though he is distinguished from the owner (dominus), yet he was considered as having the possession of the land. He had, also, a right of action against the town, if he was ejected from his tenure, provided he had always paid his vectigal.

The nature of these agrarian laws, of which the first was the proposed law of Spurius Cassius, and the last, the law of C. Julius Caesar, n. c. 59, is easily understood. The plebs began by claiming a share in those conquered lands of which the patricians claimed the exclusive enjoyment, subject to a fixed payment to the state. It was one object of the Rogations of Licinius to check the power of the nobles, and to limit their wealth; and as they had at that time little landed property, this end would be accomplished by limiting their enjoyment of the public land. But a more important object was to provide for the poorer citizens. In a country where there is little trade, and no manufacturing industry, the land is the only source to which the poorer classes can look for subsistence. Accordingly, at Rome there was a continual demand for allotments, and these allotments were made from time to time. These allotments were not only made in order to maintain a man and his family, and the encouragement of population was one of the objects contemplated by these grants of land. (Liv. v. 30.) Rome required a constant supply of soldiers, and the system was well adapted to give the supply. But this system of small holdings did not produce all the results that were anticipated. Poverty and mismanagement often compelled the small owners to sell their lands to their richer neighbours, and one clause of the law of Tiberius Gracchus forbade persons selling their allotments. This clause was afterwards repealed, not, as some would suppose, to favour the rich, but simply because the repeal of so absurd an enactment would be beneficial to all parties.

In the later republican agrarian laws were considered as one means of draining the city of the sum of the population, which is only another proof of the impolicy of these measures, for the worthless populace of a large city will never make a good agricultural population. (Cic. ad Att. i. 18.) They were also used as means of settling veteran soldiers, who must either be maintained as soldiers, or provided for in some way. Probably from about the close of the second Punic war, when the Romans had large standing armies, it became the practice to provide for those who had served their period by giving them a grant of land (Liv. xxxi. 4); and this practice became common under the later republic and the empire. The Roman soldier always looked forward to a release from service after a certain time, but it was not possible to send him away empty-handed. At the present day none of the powers of Europe which maintain very large armies could safely disband them, for they could not provide for the soldiers, and the soldiers would certainly provide for themselves at the expense of others. It was perhaps not so much a system of policy with the Romans as necessity, which led them from time to time to grant lands in small allotments to the various classes of citizens who have been enumerated.

The effects of this system must be considered from several points of view— as a means of silencing the clamours of the poor, and one of the modes of relieving their poverty, under which aspect they may be classed with the Leges Frumentariae; of diffusing Roman settlers over Italy, and thus extending the Roman power; as a means of providing for soldiers; and as one of the ways in which popular leaders sought to extend their influence. The effects on agriculture could hardly be beneficial, if we consider that the fact of the settlers often wanting capital is admitted by ancient authorities, that they were liable to be called from their lands for military service, and that persons to whom the land was given were often unacquainted with agriculture, and unaccustomed to field labour. The evil that appears in course of time in all states is the poverty of a large number of the people, for which different countries attempt to provide different remedies. The Roman system of giving land failed to remedy this evil; but it
was a system that developed itself of necessity in a state constituted like Rome.

Those who may choose to investigate the subject of the agrarian laws, will find the following references sufficient for the purpose:—Liv. i. 46, 47; ii. 41, 42, 43, 44, 48, 52, 61, 63, iii. 1, 5, iv. 12, 36, 43, 44, 47, 48, 49, 51, 52, 53, 58, v. 24, 30, vi. 5, 6, 16, 21, 35, vii. 16, x. 15, 47, xxi. 1, xxi. 2, xxiv. 40; Dionys. ii. 1.3, vili. 19, &c. ix. 51, &c., x. 36; Plut. Camillus, c. 30; T. Graec. C. Graecus; Appian, B. C. i. 7, &c.; Cic. c. Richum; ad Att. i. 19, ii. 16; Dion Cass. xxxviii. 1, &c. xlv. 9, &c. xlvii. 14, xlviii. 2; Vell. History, vol. ii. p. 129, &c.; Savigny, Das Recht des Besitzes, 5th ed.; Classical Museum, Parts V. VI. VII., articles by the author of this article, and an article by Professor Puchta, of Berlin; Political Dictionary, art. Agrarian Law, by the author of this article. [G. L.]

AGRAULLA (άγραυλα) was a festival celebrated by the Athenians in honour of Agraulos, the daughter of Cecrops. (Dict. of Biogr. s. v.) We possess no particulars respecting the time or mode of its celebration; but it was, perhaps, connected with the solemn oath, which all Athenians, when they arrived at manhood (ἐγερέοντο), were obliged to take in the temple of Agraulos, that they would fight for their country, and always observe the laws. (Lycurg. c. Lemon. p. 189; Dem. de Legat. p. 438; Plut. Aetcb. 18; Stobaeus, Serm. xil. 141; Schömann, De Compl. c. 1; Wachsmuth, Hellen. Alterth. vol. i. p. 476, 2nd ed.)

Agraulos was also honoured with a festival in Cyprus, in the month Aphrodisius, at which human sacrifices were offered. (Porphyry, De Abst. ab Anim. i. 2.)

AGRICULTURA, agriculture.

Authorities.—When we remember that agriculture, in the most extended acceptance of the term, was for many centuries the chief, we may say, almost the sole peaceful occupation followed by any large portion of the free population in those European nations which first became highly civilised, we shall not be surprised to find that the contemporaries of Cicero were able to enumerate upwards of fifty Greek writers who had contributed to this science. But although the Homeric poems are filled with a series of the most charming pictures derived from the business of a country life, although Hesiod supplies abundance of wise saws and pithy aphorisms, the traditional wisdom accumulated during many successive generations, although Xenophon has bequeathed to us a most graceful essay on the moral beauty of rustic pursuits interspersed with not a few instructive details, and although much that belongs to the Natural History of the subject will be found treasured up in the vast storehouses of Aristotle and Theophrastus, yet nothing which can be regarded in the light of a formal treatise upon the art as exhibited in the pastures and cornfields of Hellas, has descended to us, except a volume, divided into twenty books, commonly known as the Gειοντικα (Γειοντικα), whose history is somewhat obscure, but which, according to the account commonly received, was drawn up at the close of the first century B.C., and published, not by a certain Cassianus Bassus, and consists of extracts from numerous writers, chiefly Greek, many of whom flourished in the second, third, and fourth centuries. This collection is systematically arranged and comprehends all the chief branches; but it has never been considered of much value, except in so far as it tends to confirm or illustrate the statements found elsewhere. The information conveyed by it is, upon many points, extremely meagre, the materials were worked up at a late period by an editor with whose knowledge and qualifications for his task we are altogether unacquainted, while the most important quotations are taken from authors of whom we know little or nothing, so that we cannot tell whether their precepts apply to the same or to different climates, whether they give us the fruit of their own experience, or, as we have great reason to suspect in many instances, were themselves mere compilers.

The Romans, during the bright periods of their history, were devotedly attached to the only lucrative profession in which any citizen could embark with honour, and from the first dawn of the decline of their literature, rural economy formed a favourite theme for composition both in prose and verse. The works of the Saseurum, father and son, those of Scrofa Tremellius, or Julius Hyginus, of Cornelius Celsius, of Julius Atticus, and of Julius Graecinus have perished—but we still possess, in addition to Virgil, four "Scriptores de Re Rustica," two, at least, of whom were practical men. We have, in the first place, 102 chapters from the pen of the elder Cato (c. 234—149), a strange medley, containing many valuable hints for the management of the farm, the olive garden, and the vineyard, thrown together without order or method, and mixed up with medical prescriptions, charms for distempered and broken bones, culinary receipts, and sacrosanct litanies, the whole forming a remarkable compendium of simplicity and shrewdness, quaint wisdom and blind superstition, bearing, moreover, a strong impress of the national character; in the second place, we have the three books of Varro (c. 116—20), drawn up at the age of eighty, by one who was not only the most profound scholar of his age, but likewise a soldier, a politician, an enthusiastic and successful farmer; in the third place, the thirteen books of Columella (A. D. 40 [2]), more minute than the preceding, especially in all that relates to the vine, the olive, gardening, and fruit trees, but evidently proceeding from one much less familiar with his subject; and, lastly, the fourteen books of Palladius (a writer of uncertain date who closely copies Columella), of which twelve form a Farmer's calendar, the different operations being ranged according to the months in which they ought to be performed. Besides the above, a whole book by Pliny and many detached chapters are devoted to matters connected with the labours of the husbandman but in this, as in the other portions of that remarkable encyclopaedia, the assertions must be received with caution, since they cannot be regarded as exhibiting the results of original investigation, nor even a very correct representation of the opinions of others.

We ought not here to pass over unnoticed the great work of Mago the Carthaginian, who, as a native of one of the most fertile and carefully cultivated districts of the ancient world, must have had ample opportunity of acquiring knowledge. This production, extending to forty-eight books, had attained such high fame that, after the de-
Agriculture proper teaches the art of raising the various crops necessary for the sustenance and comfort of man and of the domestic animals, in such a manner that the productive energies of the soil may be fully developed but not exhausted nor enfeebled, and teaches, farther, how this may be accomplished with the least possible expenditure of capital.

I. Different kinds of grain, such as wheat and barley; leguminous vegetables cultivated for their seeds, such as beans, peas, and lupines; herbs cut green for forage, such as grass, tares, and lucerne; and plants which furnished the raw material for the textile fabrics, such as hemp and flax. 2. Fruit trees, especially the vine, the olive, and the fig. 3. Garden stuffs.—For the second of these divisions we refer to the articles OLEUM und VINCA; and we shall not touch at all upon gardening, since the minute details connected with this topic are of little or no service in illustrating the classics.

Agriculture in its restricted sense comprehends

I. Of the subject of our operations, that is, the farm (fincus, praeidum), which must be considered.
   a. with reference to its situation and soil (quo loco et qualis), and b. with reference to the dwelling-house and stables (villa et stabula).
   
   II. Of the instruments (instrumenta) required to perform the various operations (quae in finculo omnis sint ac debent esse culturiae causa), these instruments being twofold, a. men (homines); and b. the assistants of men (administrifici hominum), viz. domestic animals (boves, equi, canes, &c.) together with tools (instrumenta), properly so called, such as ploughs and harrows.

III. Of the operations themselves, such as drowning, narrowing, and sowing (quae in finullo colonisd causa sint facienda), and of the time when they are to be performed (quae quidquid teneo.

IV. Of the object of these operations, viz. the various plants considered with reference to their species, varieties, and habits. Under this head we may also conveniently include what is termed the rotation of crops, that is, the order in which they ought to succeed each other upon the same ground.

Agriculture proper may be treated of under two

B. The management of stock (Pastio).

while the worst was that which was at once dry,
versus quadratus, a square whose side was 100 feet, the words actus and versus marking the ordinary length of furrow in the two regions. (Varr. R. R. i. 10, L. L. iv. 4; Col. v. 1; Plin. H. N. ii. 10.)

FENCES (sepae, septima) were of four kinds:—
1. Sepimentum naturale, the quickest hedge
2. Sepimentum agreste, a wooden paling made with upright stakes (polis) interlaced with brushwood (virgulæ implicatae), or having two or more cross-spars (amantes, longuaria) passed through holes drilled in the stakes, after the manner of what are now termed flaxes (polis latis perforatis et per eas curvam irregulam fere binis aut ternis).
3. Sepimentum militare, consisting of a ditch (fossa) with the earth dug out and thrown up in a bank so as to form an embankment (upper), a fence used chiefly along the sides of public roads or on

4. Sepimentum fabrile, a wall which might be formed either of stones (maceria), as in the vicinity of Tusculum, or of baked bricks as in the north of Italy, or of unbaked bricks as in Sabiniun, or of masses of earth and stone pressed in between upright boards (in formis), and hence termed formicæ. These last were common in Spain, in Africa, and near Tarentum, and were said to last for centuries uninjured by the weather. (Varr. i. 17; Cat. iii. n. xxx. 14; comp. Col. v. 10, x. 3; Plin. n. 54; vi. 3.)

Finally, after the land had been drained, divided, and fenced, the banks which served as

—- Versus fuidaeus, (sepae, sepimenta) were deposited, and within this, a lock-up room for the reception of the iron tools (ferramenta). In so far as the distribution of rooms was concerned, the overseer (villicus) was to have his chamber beside the main entrance (janua), in order that he might observe all who came in or went out, the book-keeper (procurator) was to be placed over the gate, that he might watch the villicus as well as the others, while the shepherds (galliones), oxmen (baladoci), and such persons were to be lodged in the immediate vicinity of the animals under their charge.

3. Fructuaria. This comprehended that part of the building where the produce of the farm was preserved, consisting of the oil cellar (cella olearia), the press-house (cella torcularia), the vault for wines in the cask (cella vinaria), the boiling-room for inspissating must (defrutaria), all of which were on the ground floor, or little depressed below the level of the soil. Above were hay-lofts (foemilia), repositories for chaff, straw, leaves, and other fodder (palaeria), granaries (hora, granaria), a drying-room for newly cut wood (fusarium) in connection with the rustic bath flues, and store-rooms (apothecae) for wine in the amphor, some of which communicated with the fusarium, while others received the jars whose contents had been sufficiently mellowed by the influence of heat.

In addition to the conveniences enumerated above, a mill and bake house (sepium et farœnum) were attached to every establishment; at least two open tanks (piscine, lacus sub dio), one for the cattle and geese, the other for steeping lupines, osiers, and objects requiring maceration; and, where there was no river or spring available, covered reservoirs (cisternas sub tecta) into which rain water was conveyed for drinking and culinary purposes. (Cat. 3, 4, 14; Varr. i. 11—14; Col. i. 6; Geopon. ii. 3.)

II. INSTRUMENTA.

The instrumenta employed to cultivate the ground were two-fold: a. Persons (homines); b. Aids to human toil (adminicula hominum), namely, oxen and other animals employed in work; together with tools (instrumenta), in the restricted sense of the word.

II. a. HOMINES.

The men employed to cultivate a farm might be either, 1. free labourers (opararii), or 2. slaves (serui).

1. Free labourers. Cato considers the facility of procuring persons of this description, whom in one place he calls mercenarii poliiores, as one of the
circumstances that ought to weigh with a purchaser in making choice of a farm; for although a large proportion of the work upon great estates was, during the later periods of the Roman republic, always performed by slaves, it was considered advantageous to employ hirelings for those operations where a number of hands were required for a limited period, as in hay-making, the corn harvest, and the vintage, or, according to the cold-blooded recommendation of Varro, in unhealthy situations where slaves would have died off fast, entailing a heavy loss on their owner. Operarii consisted either of poor men with their families, who were hired directly by the farmer, or of gangs (conductitiae liberorum operae) who entered into an engagement with a contractor (mercenariae), who in his turn bargained with the farmer for some piece of work in the slum, or lastly, of persons who had incurred debt which they paid off in work to their creditors. This, which was an ordinary practice in the earlier ages of the Roman republic, seems in later times to have been confined to foreign countries, being common especially in Asia and Illyria. Free labourers worked under the inspection of an overseer (profectus), whose zeal was stimulated by rewards of different kinds.

2. Slaves (servi). Rustic slaves were divided into two great classes, those who were placed under the direct hire of the farmer (servi soluti), and those who worked in fectors (servi vinicti) when abroad, and when at home were confined in a kind of prison (ergastulum), where they were guarded and their wants supplied by a gaoler (ergastarius). Slaves, moreover, in large establishments, were ranked in bodies according to the duties which they were appointed to perform, it being a matter of obvious expediency that the same individuals should be regularly employed in the same tasks. Hence there were the ox-drivers (babulci), who for the most part acted as ploughmen also (aratores), the stable-men (dominus), who harnessed the domestic animals and tended them in their stalls, the vine-dressers (vinitores), the leaf-strippers (frondatores), the ordinary labourers (mediastini), and many other classified bodies. These, according to their respective occupations worked either singly, or in small gangs placed under the charge of inspectors (magistri operum). When the owner (dominus) did not reside upon the property and in person superintend the various operations in progress, the whole farming establishment was under the control of a general overseer (villicus, actor), himself a slave or freedman, who regulated the ordinary duties of the hired food and clothing to the labourers, inspected the tools, kept a regular account of the stock, performed the stated sacrifices, bought what was necessary for the use of the household, and sold the produce of the farm, for which he accounted to the proprietor, except on very extensive estates where there was usually a book-keeper (procurator) who managed the pecuniary transactions, and held the villicus in check. With the villicus was associated a female companion (contubernalis mulier) called villica, who took charge of the female slaves, and the indoor details of the family. The duties and qualifications of a villicus were thus explained in Cat. c. 5, and Colum. i. 8; comp. Geopon. ii. 44, 45.

The food of the slaves composing the household (familia) was classed under three heads, 1. Cibaria. 2. Pulmentaria. 3. Palmentarium.

1. Cibaria. The serui compositi, being kept constantly in contact with the earth, received their food in the shape of bread at the rate of 4 pounds (Roman pound=114 oz. avoirdupois) per diem in winter, and 5 pounds in summer, until the figs came in, when they went back to 4 pounds. The servus soluti received their food in the shape of corn, at the rate of 4 modii (pecks) of wheat per month in winter, and 44 in summer. Those persons, such as the villaeus, the villicus, and the shepherd (opi-lio), who had no hard manual labour to perform, were allowed about one fourth less.

2. Pulmentaria. The quantity of wine allowed varied much according to the season of the year, and the severity of the soil imposed, but a servus soluti received about 8 amphorae (nearly 48 imperial gallons) a year, and a servus compositus about 16 amphorae, besides sora [see Vinum] at discretion for three months after the vintage.

3. Palmentarium. As pulmentaria they received olives which had fallen from the trees (oleae ca-ducose), then those ripe olives (oleae tempestivae), from which the least amount of oil could be expressed, and, after the olives were all eaten un. salt fish (halae), and vinegar (acetum). In addition to the above, each individual was allowed a sextarius (very nearly an imperial pint) of oil per month, and a modius of vinegar.

The clothing (vestimenta) of the rustic labourers was of the most coarse description, but such as to protect them effectually from cold and wet, enabling them to pursue their vocations in all weathers. It consisted of thick woollen blanket shirts (tunicae), skin coats with long sleeves (pelles manicatae), cloaks with hoods (sagae cucullatae, cuculiones), patch-work wrappers (contones) made out of the old and ragged garments, together with strong sabots or wooden shoes (sculponeae). A tunic was given every year, a saon and a pair of sculptoneae every other year.

The number of hands required to cultivate a farm, depended almost entirely on the nature of the crops.

An arable farm of 200 jugers where the ordinary crops of corn and leguminous vegetables were raised required two pairs of oxen, two unasses and six ordinary labourers, if free from trees, but 14 laid out as an arbustum, three additional hands.

An olive garden of 240 jugers required three pairs of oxen, three asses for carrying manure (asini orniiti ditellaris), one ass for turning the mill, five score of sheep, a villicus, a villica, five ordinary labourers, one pair or one subulcus, one ass-driver (asinarium), one shepherd (gulo), one swine-farmer (subulus) ; in all twelve men and one woman.

A vineyard of 100 jugers required one pair or oxen, one pair of draught asses (asini piosorvari), one mill ass (asius molaris), a villicus, a villica, one subulcus, one asinarium, one man to look after the plantations of willows used for withes (sulci- tarii), one subulcus, ten ordinary labourers; in all fifteen men and one woman. (cat. 5, 20—21, 10, 11; Varr. i. 19; Colum. i. 7, 8, ii. 12.)

In what has been said above, we have assumed that the proprietor was also the farmer, but it was by no means uncommon to let (locare) land to a tenant (polior, partiarior, Cat.; colonus, Varr. Colum.), who paid his rent either in money (pen- sio; od pecuniam numeratum conduxit), as seems to
have been the practice when Columella wrote, or by making over to the landlord a fixed proportion of the produce (non nummo sed partibus locare), according to the system described by Cato, and added to by the younger Pliny. These coloni sometimes tilled the same farm from father to son for generations (coloni indigienen), and such were considered the most desirable occupants, since they had a sort of hereditary interest in the soil, while on the other hand frequent changes could scarcely fail to prove injurious. The worst tenants were those who did not cultivate in person, but, living in towns (urbanus colonus), employed gangs of slaves. Upon the whole Columella recommends says nothing with regard to the manner in which the cost of cultivation was divided between the landlord and the husbandman were: 1. Ploughing (aratio'); 2. Sowing (satio'); 3. Hoeing (stercoratid); 4. Harrowing (runcatio); 5. Weeding (sarritio); 6. Thrashing (lirare); 7. Pastio, (pastum); 8. Storing (practicum); 9. Harvesting (ventilatio); 10. Planting (messio). The domestic animals employed in labour, and the separate articles devoted to each of the above functions of the last deity alone do not fall within our limits; but we shall add another to the list in preference to mere scratching (scarcificatio) with light shares (carcifera). The plough was almost invariably drawn by oxen, although Homer (II. x. 351; Od. viii. 124) prefers mules, yoked close together in such a manner as to pull by their necks and not by the horns, guided and stimulated chiefly by the voice. The lash was used very sparingly, and the young steer was never pricked by the goad (stimulus), since it was apt to render him restive and unmanageable. The animals were allowed to rest at the end of each furrow, but not to stop in the middle of it: when unharnessed, they were carefully rubbed down, allowed to cool, and watered, before they were tied up in the stall, their mouths having been previously washed with wine. (Col. ii. 2.)

The ploughman (labaculis) was required to make perfectly straight and uniform furrows (subul porato ne ares), so close to each other as altogether to obliterate the mark of the share, and was particularly cautioned against missing over any portion of the ground, and the leaving scarnum—that is, masses of hard unrotted earth (nocii crudum solum et inmodum relinquat, quod agricultae scarnum vo-
Manuring (stercoratio).

Manure (fumus, stercus). The manure chiefly employed was the dung of birds and of the ordinary domestic animals (stercus columbinum, balaum, ovulum, caprimum, suillum, aquinum, assimimum, &c.). This differed considerably in quality, according to the source from which it was procured; and hence those who raised different kinds of crops are enjoined to keep the different sorts of dung separate, in order that each might be applied in the most advantageous manner. That derived from pigeon-houses (columbariorum), from aviaries in which the trash of the birds was fattened (ae aviaris turorum et merularum), and from birds in general, except water-fowl, was considered as the hottest and most powerful, and always placed apart, being sown by the hand exactly as we deal with guano at the present day. It was very valuable ; the same time is allowed for the three ploughings of the rich upland soil (colles pinguis soli) as for the four ploughings of the uliginous campus, the fatigue being much greater, although the difficulties presented by the acacia were in some measure relieved by ploughing hills in a slanting direction, instead of straight up and down. (Cat. i. 37, 29; Col. ii. 4, 4; Plin. H. N. xviii. 19, 20, 26; Pallad. i. 6, ii. 5, viii. 1, x. 1; Geopon. ii. 23; and comp. Hom. ii. xii. 704; xvi. 370, 540; Od. v. 127.)

2. Manuring (stercoratio).

The system of manuring by penning and feeding sheep upon a limited space of ground was neither unknown nor neglected, as we perceive from the precepts of Cato (30), Varro (ii. 2. § 12), and Pliny (H. N. xvii. 53), all of whom recommend the practice.

The ashes obtained by burning weeds, bushes, prunings, or any sort of superfluous wood, were found to have the best effect. (Virg. Georg. i. 81; Cat. ii. 15; Plin. xvii. 9; Geopon. xii. 4.) and sometimes, as we know from Virgil (Georg. i. 84), it was deemed profitable to set fire to the stubble standing in the fields. (Plin. H. N. xviii. 30.) Caustic lime was employed as a fertiliser by some of the tribes of Transalpine Gaul in the time of Pliny, but in Italy its application seems to have been very limited and to have been confined to vines, olives, and cherry-trees. (Cat. 38; Pallad. i. 6; Plin. H. N. xvii. 9, xviii. 25, 30.)

Marl also (marga) of different kinds was known to the Greeks, was applied by the Romans to wet cold lands, and was extensively employed in Gaul and Britain; but not being found in Italy, did not enter into the agricultural arrangements of the Latins. Pliny devotes several chapters to an elaborate discussion upon these earths, of which he describes various sorts which had been made the subject of experiment, classifying them according to their colour, their constitution, and their qualities: the white (alba), the red (rufa), the dove-coloured (columbina), the clayey (aryllacea), the sandy (arenacea), the stony (tophacea), the fat (pinguis), and the caustic (?) (aspera). Some of them we recognise at once, as for example, the fat white clayey marl chiefly used in Britain, the ef-
AGRICULTURA.

feats of which were believed to endure for eighty years. (Plin. H. N. xvii. 5, 8; comp. Varro, i. 7.

In Gallia Transalpina inlux ad Rhenum aliquot regiones accessit... ubi agros stercorare candida fossica orditu.)

Somewhat analogous to the use of marl was the system strongly recommended by Theophrastus and Columella, but condemned by Pliny, of combining soils in which some quality existed in excess, with those possessing opposite characters—dry gravel with chalky clay, or heavy wet loam with sand,—the object being frequently attained to a certain extent by subsoil ploughing, which was greatly approved of as a means of renovating fields exhausted by severe cropping. (Theophrastus II. Φ. A. iii. 25; Colum. ii. 15; Plin. H. N. xvii. 5.)

When ordinary manures could not be procured in sufficient quantity, a scheme was resorted to which was at one time pursued in this country, and is still adopted with considerable success in many parts of Italy and in the sandy tracts of southern France. The field was sown about the middle of September with beans or lupines, which were ploughed into the ground the following spring, in all cases before the pod was fully formed, and at an earlier stage of their growth on light than on stiff soils. Nay, many crops, such as beans, peas, lupines, vetches, lentils (cernua, cicurula), even when allowed to come to maturity, were exercised to exhaust (sere) the soil, which then required either repose or manure to restore its powers. (Theophrastus II. Φ. A. viii. 9; Cat. 37; Varro, i. 29; Colum. ii. 13—15, xi. 2; Pallad. i. 6, vi. 4, x. 9; Plin. H. N. xvii. 9, xviii. 10. 14—16.)

3. Sowing (satio)

May be considered under three heads. 1. The time of sowing. 2. The manner of sowing. 3. The choice, preparation, and quantity of the seed.

1. The seed-time (semenis) carr' ἁγορα, commenced at the autumnal equinox and ended fifteen days before the winter solstice. Few, however, began before the setting of the Pleiades (23d Oct.). This was usually put to the test of the weather or the position of the sun, except in those latitudes where bad weather set in soon; indeed, it was an old proverb that, while a late sowing often disappointed the hopes of the husbandman, an early one never realised them (maurum sationem esse decipere solere, sermon numquam quin mala sit); and the virginum maxim is to the same purpose. Spring sowing (trimestris satio) was practised only in very deep stiff land, which would admit of being cropped over several years in succession (restibilia ager), or where, from peculiar circumstances connected with the situation or climate, such as the great inclemency of the winters, it was impossible for the farmer to sow in autumn; and hence, generally speaking, was resorted to very sparingly, and for the most part from necessity rather than inclination.

2. We can infer from incidental notices in agricultural writers, that the seed was committed to the ground in at least three different modes.

a. The seed was cast upon a flat surface finely pulverised by the plough and harrow, and then covered over by ribboning the land (terrta cum arenz, jacto semine, boves livare dicuntur). (Varro, i. 29; comp. Colum. ii. 15.)

b. The land, when ribbed, the seed was then dropped upon the tops of the lirae or elevated ridges, according to our fashion for turnips, liras aulam rustici vocant eaulam porcos cum sic aratum est, ut inter duas latine distantes suolos, medius cumulus siccam sedem frumentis praebet. (Colum. ii. 4. § 8.) This plan was followed on wet land to secure a dry bed for the seed, which would probably be covered up by hand-nakes (rastris).

c. The land was ribbed as in the former case; but the seed, instead of being dropped upon the ridge of the furrow, was cast into the depression of the furrow, and might be covered up either by the harrow or by ploughing down the middle of the lira.

This was practised on light, sloping, and therefore dry, land (sequa in lira sed sub suolo talis ager seminandus est, Colum. ii. 4. § 11).

It will be seen clearly that, whichever of the above modes was adopted, the seed would spring up in regular rows, as if sown by a drill, and that only one half of the land would be covered with seed. In point of fact, the quantity of seed sown on a given extent of ground was not above half of what we employ.

Vetches, fenugreek, and some other crops, as will be noticed below, were frequently thrown upon land unprepared (cruuda terra), and the seeds then ploughed in. The seed seems to have been cast out of a three-peck basket (tridomidia satorio, sc. corbem), which from superstitious motives was frequently covered over with the skin of a hyaena. Pliny points out how necessary it was that the hand of the sower should keep time with his stride, in order that he might scatter the grains with perfect uniformity.

3. The points chiefly attended to in the choice of seed corn were, that it should be perfectly fresh and free from mixture or adulteration, and of a uniform reddish colour throughout its substance. When the crop was reaped, the largest and finest ears were selected by the hand, or, where the produce was so great as to render this impossible, the heaviest grains were separated by a sieve (quidquid exteratur capisterio expurgandum erit) and reserved. In addition to these precautions it was not unusual to doctor seeds of all sorts (medicare semina) by sprinkling them with an alkaline liquid (sitra, i.e. probably carbonate of soda), or with the deposit left by newly expressed oil (amurca), or by steeping them in various preparations, of which several are enumerated by Columella and Pliny; the object being twofold, in the first place to increase the quantity and quality of the produce, and in the second place to protect it from the ravages of vermin, especially the little animal called curculio, probably the same insect with our weevil.

The quantity of seed sown varied according to the soil, the situation, the season, and the weather, the general rule being that less was required for rich and finely pulverised (pînge et pâte), or light and sharp (gracile), or thin poor soil (maurum, exile) than for such as was stiff and heavy (crossum, cretosum), or moderately tenacious; less for an open field than for an arbustum, less at the beginning of the season than towards the close (although this is contradicted by Pliny, H. N. xvii. 24), and...
Agricultura.

less in rainy than in dry weather, maxims which are fully explained by the authorities quoted below. The average amount of seed used for the five, ten, and six modii per juger. (Xenoph. Oecon. 17; Theopom. ii. 6. and ii. 25; Cat. 34, 35; Varr. i. 29, 34, 40, 52; Colum. ii. 2, 3, 8, 9, 10, 13, xii. 2; Pallad. i. 6, 34, x. 2; Virg. Georg. i. 193, 219, 225; Plin. H. N. xiv. 21, xvi. 27, xviii. 24, 73; Geopon. i. 15—20.)

4. Harrowing (occatio)

Might be performed at two different periods:

-- after the first or second ploughing, in order to power the soil completely; and after sowing, in order to cover up the seed. When the land was cultivated with roots and deep-seated weeds, a grubber (irpes, Cat. 10. Varr. L. L. iv. 31) formed of a strong plank set with iron spikes was employed, but in ordinary cases wicker hurdles (ximeae eubatae), sometimes fitted with teeth (dentatae), were dragged over the ground; or the clods were broken with hand-rakes (rastra). The seed, as we have seen above, being for the most part ploughed in, and the operation for that reason placed under the patronage of a god (Obarator, the second harrowing (iteratio) was omitted, except where the surface still rose in lumps (Virg. Georg. i. 104); but since it was the business of a good farmer to have his fields in the best order before he began to sow, the older Roman writers considered harrowing after sowing as a proof of bad husbandry. — "Veteres Romani dixerunt male subactum agrum, qui satis frugibus occandus sit." (Colum. ii. 4, 13, xi. 2; Plin. H. N. xviii. 20; Virg. Georg. i. 94, 104.)

5. Hoeing (serratio).

The next care, after covering up the seed, was to loosen the earth round the roots of the young blades, in order that air and moisture might gain free access and enable them to send forth more rapidly than in dry weather, maxims which are fully explained by the authorities quoted below. The average amount of seed used for the five, ten, and six modii per juger. (Xenoph. Oecon. 17; Theopom. ii. 6. and ii. 25; Cat. 34, 35; Varr. i. 29, 34, 40, 52; Colum. ii. 2, 3, 8, 9, 10, 13, xii. 2; Pallad. i. 6, 34, x. 2; Virg. Georg. i. 193, 219, 225; Plin. H. N. xiv. 21, xvi. 27, xviii. 24, 73; Geopon. i. 15—20.)

Hoeing was followed by weeding (botanymus, runcatio), which in the case of grain crops took place immediately before they began to blossom, or immediately after a frost had passed away. The weeds were either pulled up by the roots (evalis inutilibus herbis), or cut over with a bill-hook, which Palladius terms runco. (Cat. 37; Varr. i. 30; Colum. ii. 11, xi. 2; Pallad. i. sub. fin.; Plin. H. N. xviii. 21; Geopon. i. 24.)

But after the farmer had laboured with unremitting zeal in cleaning and pulverising the soil, in selecting and medicating the seed, in hoeing the young blades, and in extirpating the common noxious weeds (lubum, tribuli, lupgae, cardui, rudis, arenas), the safety of the crop was threatened by a vast number of assailants (sum versus succinctum pedes); such as worms of various kinds (vermicelium) attacking both root and ear, caterpillars (urice), spiders (phalangyia), snails (limaces, cockles), mice (mures), moles (talpae), and the whole race of birds, besides which, each kind of plant was believed to have its own special vegetable enemy, which, if not carefully watched, would spring up, choke, and destroy it. The most formidable of these pests are enumerated by Pliny (H. N. xviii. 17), who proposes sundry precautions and remedies, of which many are ridiculous superstitions. But the foe dreaded above all others in the vineyard and the cornfield was a peculiar blight or mildew termed robigo, which wrought such havoc in damp lovelying situations that it was regarded as a manifestation of wrath on the part of a malignant spirit, whose favour the rustic sought to propitiate by the annual festival of the Robigalia. (Robigalia.)

Another danger of an opposite description arose from the grain shooting up so rapidly that the stalk was likely to become immoderately long and weak. The danger in this case was averted by pasturing down the too luxuriant herbage with sheep (inacriem segetum tenera depascit in herba), or by dragging over it an iron-toothed harrow (crusia et hoe genus dentatuse stilis ferreis), by which it was said to be combed (sectanieri). (Plin. H. N. xviii. 17—21; Virg. Georg. i. 151.)

7. Reaping (messio).

The corn was reaped as soon as it had acquired a uniform yellow tint, without waiting until it had become dead ripe, in order to avoid the loss sustained by shaking, and by the ravages of animals. The necessity of pursuing this course with regard to barley, is especially insisted upon: but is quite at variance with modern practice. (Colum. ii. 9.)

Varro describes three distinct methods of reaping (itra genera messiosis).

1. That followed in Umbria, where the stalk was shorn close to the ground with a hook (falta): each handful was laid down; and when a number of these had accumulated, the ears were cut off, thrown into baskets (coreses), and sent to the threshing-floor, the straw (stramentum) being left upon the field, and afterwards gathered into a heap.

2. That followed in Picenum, where they used a small iron saw (serrula ferrea) fixed to the extremity of a crooked wooden handle (hieum incurvatum batilum); with this they laid hold of a bundle of ears which were cut off, the straw being left standing to be mown subsequently.

3. That followed in the vicinity of Rome and

Agricultura.
most other places, where the stalks were grasped in the left hand and cut at half their height from the ground, the whole of the portion detached being conveyed in baskets to the thrashing-floor, and the part left standing being cut afterwards.

The last two methods only are particularly noticed by Columella, who describes the instruments employed in the second under the names of pectines and mergi [wheat] (multi merget, ali pectines spicem ipsam levant); and those employed in the third as falsae vericultae (multi falsae vericultatis, atque is vel rostratis vel denticulis medium culumum secant); a series of terms which have never been very satisfactorily explained. In addition to the above, Pliny and Palladius describe a reaping-machine worked by oxen, which was much used in the extensive level plains of the Gauls. Virgil (Georg. i. 316), perhaps, alludes to binding up the corn in sheafs; but his words are not so clear upon this point as those of Homer in the charming picture of a harvest-field contained in the eighteenth book of the Iliad. (Varr. i. 50; Colum. ii. 20; Plin. H. N. xviii. 30; Pallad. vii. 2; Geopon. ii. 25; comp. Hom. II. vi. 499; xiii. 588.)

8. Thrashing (tritura).

After the crop had been properly dried and hardened (torreficta) by exposure to the sun, it was conveyed to the thrashing-floor (Δας, Δας, or Δας, arca). This was an open space, on some elevated spot over which the wind had free course, of a circular form, slightly raised in the centre to allow moisture to run off. The earth was compressed by heavy rollers (gravi cylindro, molaris lapide), pounded with rammers (paticula), and reduced to a solid consistency with clay and chaff, so as to present an even unyielding surface; or, better still, paved with hard stones. Here the corn was spread out and beaten with flails (exterere) by the feet of a number of men or horses, who were driven backwards and forwards within the ring. To produce the effect more easily and more perfectly, the cattle were frequently yoked to a machine (tribulum, tribula, trahes, traha), consisting of a board made rough by attaching to it stones or pieces of iron, and loaded with some heavy weight; or, what was termed a Pune winst (pustellum Poenicum) was employed, being a set of toothed rollers covered with planks, on which sat the driver who guided the team.

Attached to the area was a huge shed or half-enclosed barn (nubilarium), of sufficient dimensions to contain the whole crop. Here the corn was dried in unfavourable seasons before being thrashed, and lither it was hurriedly conveyed for shelter when the harvest work was interrupted by any sudden storm. (Cat. 91, 129; Varr. i. 13, 51, 52; Colum. i. 6, ii. 19; Pallad. i. 36, viii. 1; Plin. H. N. xviii. 29, 30; Hom. II. xii. 588; xx. 495; xxi. 77; Virg. Georg. i. 178; Geopon. ii. 26.)

9. Winnowing (ventilatio).

When the grain was mixed with chaff, it was laid down in small piles upon the area, in order that the lighter particles might be borne away by the passing breeze; but when the wind was not sufficiently strong, it became necessary to winnow (ventilare) it. This was effected by a labourer (λυκωρικ, ventilator) who tossed it up from a sieve (vannus, capisterium) or shovel (πτωμ, ventilobrum), when the heavy portion fell down in a heap, and the chaff floated off through the air. When it was intended to keep the corn for any length of time, it was common to repeat the process (repurgare, repolire), that it might be thoroughly cleaned. (Varr. i. 62; Colum. ii. 9. 20; comp. Hom. II. v. 499; xiii. 588.)

After the corn had been thrashed out and winnowed, or at least the cars separated from the stalk, the next care was to store up (condere) the grain in fitting repositories (granaria, horrea), the great object in view being to preserve it from becoming mouldy or rotten, and to protect it from the ravages of vermin, especially the weevil (caroelio), we find that very great diversity of opinion existed as to the means by which those ends might best be attained. By some the store-houses were built with brick walls of great thickness, for the purpose, it would seem, of securing a uniform temperature, and had no windows or aperture, except a hole in the roof, through which they were filled. Others, again, raised these structures aloft on wooden columns, and allowed currents of air to pass through on all sides and even from below; while others admitted particular winds only, such, namely, as were of a drying character. Many plastered the walls with a sort of hard stucco worked up with amurca, which was believed to act as a safeguard against vermin, while others considered the use of lime under any form as decidedly injurious. These and many different opinions, together with receipts for various preparations whereby to sprinkle the grain, will be found detailed in the authorities cited below, among whom Pliny very sensibly observes that the principal consideration ought to be the condition of the grain itself when housed; since, if not perfectly dry, it must of necessity breed mischief. In many countries, as in Thrace, Cappadocia, Spain, and Africa, the corn was laid up in pits (scrobibus) sunk in a perfectly dry soil and well lined with chaff, a practice now extensively adopted in Tuscany. Wheat in the ear (cum spica su) might, according to Varro, if the air was excluded, be preserved in such receptacles for fifty years, and millet for an hundred. (Cat. 92; Varr. i. 57; Colum. i. 6; Pallad. i. 19; Plin. H. N. xviii. 30; Geopon. ii. 27—31.)

IV. Crops.

Crops, as already remarked, may be divided into four classes:—1. Grain or corn crops. 2. Leguminous crops, or pulse. 3. Crops cut green for forage. 4. Crops which supply the raw materials for textile fabrics. We might extend the number of classes did we purpose to treat of certain plants, such as poppies (papaveras) and sesamum, raised to a small extent only, and confined to particular localities; but our limits do not permit us to embrace so wide a field of inquiry.

In addition to the above, much attention was devoted to what may be termed secondary crops; those, namely, which did not afford directly food or clothing for man or beast, but which were required in order to facilitate the cultivation and collection of the primary crops. Thus, beds of willows (salices) for baskets and withes, and of...
The word applied in a general sense to denote what we now call "the cereal grasses" was *frumenta*; but of these wheat being by far the most important, it is not wonderful that the term in question should be employed frequently to denote wheat specially, and occasionally in such a manner as to exclude other kinds of grain, as when Pliny remarks, "calamus altior frumento quam hordeo," meaning "in what wheat the stalk is longer than in barley." The only frumenta which it will be necessary for us to consider particularly in this place are—

1. *Triticum* and *Far*. No one entertains any doubt that *triticum* (τριτικόν in Greek, and by the later writers αὐτός) is the generic name for the grain which we denominate *wheat*; but when we proceed to examine the different species or varieties, we are involved in many difficulties, for the botanical descriptions transmitted to us by the ancients are in all cases so imperfect, and in many instances so directly at variance with each other, that it becomes almost impossible to identify with certainty the objects to which they refer, with those familiar to ourselves. Columella (ii. 6; comp. Dioeclet. vii. 1. 28), who attempts a systematic classification, assigns the first place among "frumenta" to *Triticum* and *Semen adorum*, each of which contained several species or varieties. Among many different kinds of triticum he deems the following only deserving of particular notice:

2. *Siligo*, very white, but deficient in weight. (Colum. ii. 9, § 13; Plin. H. N. xviii. 8.)
3. *Triticum* (τριτικόν or τριτίς), receiving its name from lying three months only in the ground, being spring-sown. We find this kind sometimes denominated *Siligos* also, since in very warm situations it came to maturity in two months after it was sown.

Among the different kinds of *Semen adorum*, the following are particularly noticed:

1. *Far Clusinum*, distinguished by its whiteness.
2. *Far venuculum rutulum*.
3. *Far venuclusadorum*.
4. *Far milo*.
5. *Far triticiadorum*.
6. *Far triticiadormilum*.
7. *Far triticiadorum clausinum*.
8. *Far triticiadormilum clausinum*.
9. *Far triticiadormilum adorum*.
10. *Far adorum triticiadorum*.
11. *Far adorum triticiadorum clausinum*.
12. *Far adorum triticiadorum adorum*.
13. *Far adorum triticiadorum adorum clausinum*.
14. *Far adorum triticiadorum adorum adorum clausinum*.
15. *Far adorum triticiadorum adorum adorum adorum clausinum*.
16. *Far adorum triticiadorum adorum adorum adorum adorum clausinum*.
17. *Far adorum triticiadorum adorum adorum adorum adorum adorum clausinum*.
18. *Far adorum triticiadorum adorum adorum adorum adorum adorum adorum clausinum*.
19. *Far adorum triticiadorum adorum adorum adorum adorum adorum adorum adorum clausinum*.
20. *Far adorum triticiadorum adorum adorum adorum adorum adorum adorum adorum adorum clausinum*.

Now, with regard to the three kinds of *triticum* enumerated above, we shall have little difficulty in deciding that they were not distinct species, but merely varieties of the same species; for we are assured by Columella (ii. 9), that triticum, when sown in wet land, passed in the course of three years into *siligo*, and by Pliny (xviii. 8) that *siligo*, in most parts of Gaul, passed, at the end of two years, into *triticum*; again, Columella, in describing *trimestre*, admits (although contradicted by Plin. H. N. xviii. 7) that it is a variety of *siligo*, while modern experience teaches us that winter and spring wheats are convertible by subjecting them to peculiar modes of cultivation. Hence we conclude that *robus* and *siligo* were varieties of what is now termed by botanists *Triticum hybernum*, and that *trimestre* was a variety of our *Triticum aestivum*, which is itself a variety of the *hybernum*.

The question with regard to *Far, Ador, Semen adorum*, *Semen, Adorum*, names used indifferently by the Latin writers, does not admit of such an easy solution. But after a careful examination of the numerous, vague, perplexing, and contradictory statements scattered over the classics, the discussion of which separately would far exceed our limits, we may with considerable confidence decide that *far* was a variety of the Greek *καρακός* or *καράκος*, and of the modern *Triticum spelta*, if not absolutely identical with one or both. Spelt, which is fully recognised by botanists as a distinct species of *triticum*, is much more hardy than common wheat, succeeding well in high exposed situations where the latter would not ripen, and its chaff adheres with singular firmness to the grain, both of which circumstances were prominent characteristics of *far*. (Colum. ii. 8; Plin. H. N. xviii. 7, 8, 30.) Indeed, it was found impossible to get rid of the thick double case in which it was enclosed, by the ordinary modes of thrashing; therefore it was stored up with the chaff attached (conventum polum sus condi et stipula tantum et aristis liberat); and when used as food it was necessary to pound it in a mortar, or rub it in a mill of a peculiar construction, in order to separate the tenacious husks—a process altogether distinct from grinding, and indicated by the words *pinsere, pistrura, pistores*. (Cat. 2; Plin. H. N. xviii. 10.) The idea entertained by some commentators, that the distinction between *triticum* and *far* consisted in the circumstance that the latter was sown in the spring, while the former was sown in the autumn, is altogether untenable; for not only does Pliny say expressly in one passage (xviii. 10), *far sine aristae est*, and in another (xviii. 30), as distinctly that far had *aristae*, but it is perfectly clear from Varro (i. 48; compare Plin. H. N. xviii. 7), that ordinary *triticum* had a beard, and from Pliny that *siligo* was generally, although not uniformly, without one—a series of assertions whose contradictory nature need occasion no surprise, since it is now well known that this, like colour, is a point which does not amount to specific difference, for white, red, awned, and beardless wheats are found to change and run into each other, according to soil, climate, and mode of culture. Another fact noticed by Pliny, to which, if correct, botanists seem not to have given due attention, is, that *triticum* had four joints in its stalk, *far* six, and barley eight.

All agree that *triticum* (we shall use the word hereafter in the restricted sense of common winter-wheat) succeeded best in dry, slightly elevated, open ground, where the whole influence of the sun's rays was not impeded by trees, while *siligo* and *far* were well adapted for low damp situations and stiff clayey soils (Cato 34, 35; Varr. i. 9; Colum. ii. 6; Plin. xviii. 8). The sowing of winter wheat (*satio autunnalis*) whether *triticum*, *siligo*, or *adorum*, commenced for the most part, according to the
Virginian precept, after the morning setting of the Pleiades, that is, by the Roman calendar (ix. Kal. Nov.), after the 24th of October, and was always concluded before the 9th of December, it being a maxim strictly observed among prudent husbandmen to abstain from all field work for fifteen days before, and fifteen days after the winter solstice. In wet or light soils, however, and in all exposed situations, where it was important that the roots should have a firm hold of the ground before the rains and frosts set in, the sowing was frequently completed by the end of September.

Spring sowing (statio trimestris) was practised only when the farmer had been prevented by accidental circumstances from completing his work in autumn; or in those localities where, from the extreme cold and heavy snows, it was feared that the young blades would be destroyed in winter; or finally, where, from the depth and stiffness of the soil (crassitudine), it might be cropped repeatedly without a fallow. In every case it was considered advisable to throw the seed as soon as the weather would permit, that is, in ordinary seasons, early in March. The quantity of seed required was from four to six modii of triticum or siligo to the juger according as the soil was rich or poor; and from nine to ten modii of far. To understand this difference, we must recollect that the far was stored up and sown out in its thick husks; and, therefore, would occupy almost twice as much space as when cleaned like the triticum. The various operations performed upon the above quantity of seed before it could be brought to the threshing-floor, required ten days and a half of work. For the ploughman (labulceus) one for the harrower (serrator); three for the hoer (sarritor), two days on the first occasion, and one on the second; one for the weeder (runecator); one and a half for the reaper (messor).

The finest Italian wheat weighed from twenty-five to twenty-six pounds the modius, which corresponds to upwards of seventy English pounds avoirdupois to the imperial bushel, the Roman pound being very nearly 11⅞ oz. avoird., and the modius 99⅛ of an imperial peck. The lightest counts were in all likelihood greatly exaggerated. In the richest and most highly cultivated districts where agriculture had fallen into decay, the average return was less than 4 for 1. The proportion which the produce bore to the seed sown varied, when Cicero and Varro wrote, from five to twenty-six pounds the modius, which corresponded to the juger of Columella. But it was not only the grain, but a particular preparation of it, that even siligo is in like manner used to denote, not only the solid grain, but the flour produced by grinding it. This being promised, we may proceed to examine the meaning of the terms polien, similo s. similora, cibarium, siligo, flos, alien, amyllum, grano, &c., several of which have never been clearly explained. Here again we can give the result only of an investigation, in the course of which we are obliged to thread our way through statements at once obscure and irreconcilable. Regarding triticum and siligo as two well distinguished varieties of wheat, their products when ground were thus classed by millers:

From triticum,
1. Polien, the finest flour dust, double dressed.
2. Silina, or Similo, the best first flour.
3. Cibarium secundarium, second flour.
4. Furfurace, bran.

From siligo,
1. Siligo, the finest double-dressed flour, used exclusively for pastry and fancy bread.
2. Flos (siligines), first flour.
3. Cibarium secundarium, second flour.
4. Furfurace, bran.

It would appear that Celsus (ii. 18), considering wheat generally as triticum, called the finest and purest flour siligo; ordinary flour, simila; the whole produce of the grain, bran, and flour mixed together, abricarius. (Plin. H. N. xviii. 8, 9, 10, 11.)

Alica is placed by Pliny among the different kinds of corn (xviii. 7), and is probably the same with the Haliccatrum, Alicastrum, or spring-sown far of Columella. But alica is also used to denote, not only the grain, but a particular preparation of it, most clearly described in another passage of Pliny (xviii. 11). The finest was made from Campanian zea, which was first rubbed in a wooden mortar to remove the husk, and then (scurrasicum) the pure grain (medula medulla) was pounded. In this manner three sorts were produced and classed according to their fineness, the minimum, the secundarium, and the coarsest or aphaeromma, and each was mixed with a kind of fine white chalk, found between Naples and Puteoli, which became intimately amalgamated with it (transit in corpus, coloremque et teneritatem offerat). This compound was the principle ingredient in a sort of porridge also called alica, while alicastrum, signifying properly one who pounded alica, frequently denotes a miller in general. (Plin. H.-N. xvii. 11, 12, xxii. 25; Cat. 76; Cels. vi. 6; Mart. ii. 37, xiii. 6; Geopon. iii. 7.)

Amyllum is starch, and the modes of preparing it are described by Cato (87), and Pliny (H. N. xviii. 7).

Granum was wheat, not ground, but merely divested of its husk, and made into a sort of porridge by boiling it in water and then adding milk. (Cat. 86.)

b. Hordeum s. Ordeum (κρύθυ; κρι, Hom.). Next in importance to triticum and adormum, was hordeum or barley, which was a more appropriate food for the lower animals than wheat, was better
for man when made into porridge than of wheat of an indifferent quality, and furnished excellent straw and chaff (strumentum, palaeo).

The species most generally cultivated, termed horeustum, or antherinum, was, we can scarcely doubt, identical with what we now call bear or bolo, the Hordeum hexastichon or six-rowed barley of botanists. It was sown after the vernal equinox (hence called τωρημία, Theophr. H. P. vii. 1), upon land that had been twice ploughed, at the rate of five modii to the juger; succeeded best in a dry, loose, rich soil; and being an exhausting crop, the land from which it had been reaped was summer fallowed, or recruited by Majesty. It was cut as soon as it was ripe; for the stalk being brittle, was liable to be beaten down; and the grain not being enclosed in an outer husk, was easily shaken.

Another species, termed Galatium or distichum, the same as the modern Hordeum vulgare, or with the modern Hordeum distichum, varieties of the common two-rowed barley, was remarkable for its weight and whiteness, and answered well for mixing with wheaten flour in baking bread for slaves. It was sown in autumn, winter or early spring, at the rate of six modii to the juger. Five modii of seed horeustum required six days and a half of labour to bring it to the threshing-floor; viz. ploughing three days, harrowing (oculatoria opera) one, hoeing (surritoria) one and a-half, reaping (messoria) one.

Pliny speaks of horeustum as the lightest of all the wheat of botanists, weighing only 15 pounds to the modius (Roman pound=11.8 oz. avoird.). In mild climates it might be sown early in autumn. (Theophr. H. P. viii. 1; Cat. 35; Varr. i. 34; Colum. ii. 9. §§ 14, 15, 16; Virg. Georg. i. 210; Plin. H. N. xvii. 7, 10; Geopon. i. 14.)

c. Panicum and Milium are commonly spoken of together, as if they were only varieties of the same grain. The first is in all probability the Panicum militaceum or common millet of botanists, the διαµαρα or μελλον of the Greeks; the second is perhaps the Setaria Italica or Italian millet, which corresponds to the description of καοκρασία; while the species noticed by Pliny as having been brought from India less than ten years before the period when he wrote is, we can scarcely doubt, the Sorghum vulgare, or Durra of the Arabs.

Panicum and milium were sown in spring (Virg. Georg. i. 210), towards the end of March, at the rate of four sextarii (pints) only to the modius; but they required repeated hoeing and weeding to keep them clean. They succeeded well in light loose soil, even on sand if well irrigated; and as soon as the ears were fairly formed, they were gathered by the hand, hung up to dry in the sun, and in this state would keep for a longer period than any other grain. Milium was baked into bread or cakes, very palatable when eaten hot, and both panicum and milium made good porridge (pula). Although not much used by the population of Italy, except perhaps in Campania, they formed a more important article of food in the Gauls, in Pontus, in Sarmatia, and in Ethio-
pia. (Cat. 6; Colum. ii. 9. § 17; Plin. H. N. xviii. 7, 10, 26; Pallad. iv. 3; Geopon. ii. 38; Theophr. Π. Φ. A. ii. 17, H. P. viii. 3; Diocor. ii. 26.)

Secale, rye, the Secale cereale of botanists, is not mentioned by any of the Greek writers unless it be the βιπλα described by Galen (De Aliment. Facult. i. 2) as cultivated in Thrace and Macedonia (but this, in all probability, was a coarse variety of spelt), nor by Cato, Varro, Columella, nor Palladius. Pliny alone (H. N. xviii. 40) speaks of it, and in the following terms:—"Secale Taurini sub Alibus Asiae vocant, determinium, et tantum ad arcendum facultatem. Ita seminatum sed gaulti stipula, nigritia treta, sed pondere praecipuum. A. Admi-
cetur hic far ut sit mitigerat amaritudinem ejus; et tamen sic quoque ingratisseum ventri est. Nas-
citur quacunque solo cum centesimo grano, ip-
sunque pro laetanam est." In the previous chapter he makes it identical with farago, that is, corn sown for the purpose of being cut green as fodder. See remarks upon farago below.

Avena, the oat (βρόμοι s. βρόμων, Theophr. H. P. viii. 4; Diocorid. ii. 16), the Avena sativa of botanists, need scarcely be noticed in this place since it cannot be raised as a grain with any advantage in a climate so warm as that of Greece or of Italy. Columella (ii. 10, § 9) and Pliny (H. N. xviii. 42, Avena Graeca) recommended that it should be sown for green fodder, and the latter remarks that it became a sort of corn (frumenti fit instar) in Germany, where it formed a regular crop, and where oatmeal porridge was a national dish (neque alia pulle vivant, H. N. xviii. 44. § 1. comp. iv. 27, vi. 33). In another passage (H. N. xxii. 68) the same author prescribes oatmeal (avenacea farina) steeped in vinegar as a remedy for sores on the skin. The Avena con-
demned as a troublesome weed by Cato (R. R. xxxvii. § 5) and Virgil (steriles avenue, G. i. 154) is, probably, the Avena fatua of botanists, although Pliny (H. N. xvi. 44. § 1) makes no distinction between this and the cultivated kind. Other cereals we may dismiss very briefly.

Oryza (δροσα, δρος), rice, was imported from the East, and was much esteemed for making gruel (pitaana).

Zea (ζεα, ζεια), Olyra (ολυρα), Tiphe (τιφι), and Arina, of which the first two are named by Homer, must be regarded as varieties of the Triticum Spelta or Far (Herod. ii. 36; Theophr. H. P. ii. 5, viii. 9; Diocorid. ii. 110; Galen de Al-
iment. Facult. i. 2, 13). The statements found in the eighteenth book of Pliny's Natural History in reference to these four are altogether unintelligible when compared with each other. He evidently copied, as was too often his custom, from a number of discordant authorities without attempting to reconcile or thinking it necessary to point out their contradictions. In one place (xvii. 20. § 4) he says distinctly that Arina is the Olyra of Homer, and in another he seems to say (xvii. 11) that Olyra in Egypt became Far (far in Ευρωπα ex olyra consistit). Now we know from Herodotus (ii. 36) that in his time Olyra and Zea were considered synonymous, and that these exclusively were cultivated by the Egyptians. Hence we shall be led to conclude that the wheat which has been raised recently from the seeds discovered in the mummy cases is in reality the ancient Zea or Olyra, and from its appearance we should further be induced to identify it with the Triticum ramosum of Pliny (H. N. xviii. 21).

With regard to Irio and Hormium, of which the former seems to have been the θρυμα by the Greeks, both enumerated by Pliny among frumenta, although he afterwards somewhat quali-

AGRICULTUR.
nes this assertion, we do not hazard a conjecture.

(Plin. H. N. xviii. 10. § 1—22, xxii. 75.)

We may conclude this section with an enumeration of the technical terms employed to denote the different parts of an ear and stalk of corn.

The whole ear was named spica; the beard or awn arist/a; the ear, when beardless, spica mata, the white solid substance of the grain, inti- mum, siliquae — siliqua — siliquum — grana; the husk which immediately envelopes the grain, alama, with which orixia, tunica, folliculus, are used as synonymous; the outer husk acus; the outer husk with the short straw attached, polus; the stem, stipula, culmus, to which scapus, caulis correspond in leguminous plants; the knots or joints in the stem, geniculi, articuli; the sheath- blade in the stem from which the ear issues.

2. Leguminous Crops (Ληγνήσα, Leguminia).

The vegetables falling properly under this head, chiefly cultivated by the ancients, were: a. Faba; b. Lens; c. Lens s. Lentilica; d. Cicer; e. Cicerula; f. Phaseolus; g. Pisum; to which, in order to avoid multiplying subdivisions, we may add Napi and Rapa, since in common with the legumina they served as food both for men and animals.

a. Faba. The ancient faha, the κάβωμα of the Greeks, notwithstanding all that has been urged to the contrary, was certainly one of the varieties of our common field bean, the Vicia Faba, or Faba vulgaris arvensis of botanists. It required either rich and strong, or well manured land. If sown upon moist low-lying ground that had remained long uncropped (reteratum), no previous preparation was necessary; but the seed was scattered and at once ploughed in; the field was then banked and finally narrowed (cum semen erudo solo ingererimur, inarcta, inopurataque occasibus), the object being to nurry the seed as deep as possible. But if beans were to be sown upon land from which a corn crop was removed just reaped (restibilum), after the stubble was cleared away, manure was spread at the rate of twenty four vices to the juger, and then the remaining operations were the same as above. Rich land required from four to six modii to the juger, poorer soil somewhat more. A portion of the seed was committed to the ground about the middle of the ploughing, if the land was newly broken up, but only one if it had been cropped the previous season; harrowing occupied one day and a half, the hoeing one day and a half, the second and third each one day, reaping one day; in all, seven or eight days.

Bean meal (lomentum, μετάγμα), was baked into bread or cakes (επιστήμα καλλαμός), especially if mixed with the flour of wheat or millet; when made into purée (fascola, pula fabata), it was accounted an acceptable offering to the gods and termed Refrissa,—a name properly applied to the beans brought home and set apart for holy purposes. (Hom. II. xiii. 589; Cat. 35; Varr. i. 44; Colum. ii. 10, 12; Pallad. ii. 9, vii. 3; Plin. H. N. xviii. 5, 12. xix. 3, 11; Geopon. ii. 35; Dioscorid. ii. 127; Theophr. H. P. iv. 2, vii. 3, viii. 1, comp. Fest. v. Refrissa; Gall. iv. 11, x. 15; Macrobi. Sat. i. 12; Cic. de Div. i. 30; Ov. Fast. v. 436.)

b. Lupinus, the Σπέυδος of the Greeks, seems to include the Lupinus albus, the L. lentus, and the L. pilosus of botanists, the common white, yellow, and rose lupines of our gardens. The first of the above species was that chiefly cultivated by the Romans, and is pronounced by Columella to be the most valuable of the legumina, because it demanded very little labour, was a sure crop, and instead of exhausting, actually refreshed and manured the land. Steeped in water and afterwards boiled, it formed an excellent food for oxen in winter, and might be used even for man during periods of scarcity. It could be sown as soon as threshed, might be cast upon ground unprepared by ploughing or any other operation (eradis noveltis), and was covered up anyhow, or not covered up at all, being protected by its bitterness from the attacks of birds and other animals.

The proper season for sowing was early in autumn, in order that the stalks might acquire vigour before the cold weather set in; the quantity of seed was ten modii to the juger, and the crop was reaped after it had remained a year in the ground. It succeeded well in any dry light land, but not in wet tenacious soil. Ten modii required in all only three days' work; one for covering up, one for harrowing, and one for reaping, and of these operations, the two first might, if there was a press of work, be dispensed with. (Cat. v. 35; Colum. ii. 10, 16, xi. 2; Pallad. i. 6, ii. 9, vi. 3, viii. 3, xi. 2; Plin. H. N. xviii. 14; Geopon. ii. 39; Virg. Georg. i. 75.)

c. Lens s. Lenticula, the φαυδός of the Greeks, the modern Ervum Lens, Vicia Lens, or Lentile, was sown twice a year, early in autumn (per medium sementinum) and early in spring, on dry light soil, in the proportion of rather more than a modius to the juger. It was recommended to mix the seed with dry manure, and after leaving it in this state for four or five days, then to scatter it. A modius and a half required eight days' work—ploughing, three; harrowing, one; hoeing, two; weeding, one; pulling, one. (Cat. 35; Virg. Georg. i. 228; Colum. ii. 10, 12; xi. 2; Plin. H. N. xviii. 12, 31; Pallad. xii. 11; Theophr. H. P. viii. 3; Dioscorid. ii. 129; Geopon. ii. 57; comp. Martial, xiii. 9. 1; Gell. xviii. 8.)

d. Cicer, the ἑβάζω of the Greeks. The Cicer arietinum (σπόδος) and the Cicer Punicum, varieties of our common chick-pea, were sown in rich soil, during the month of March, in the proportion of three modii to the juger, the seeds
having been previously steeped to make them germinate more readily. The crop was considered injurious to the soil, and therefore avoided by prudent husbandmen. Three modii of Cicer required four days for ploughing and sowing, two days for harrowing, one day for hoeing, one day for weeding, and three days for pulling (pulluntur trivibus). (Colum. ii. 10, 12; Plin. H. N. xviii. 12; Dioscorid. ii. 126; Theophr. viii. 1, 3, 5, 6; Georg. ii. 36.)

e. Cicercula, the ἄδρμος of the Greeks, the Lathyrus sativus of botanists, which Pliny seems to regard as a small variety of the Cicer, was sown in good land either at the end of October or at the beginning of the year, in the proportion of three modii to the juger. None of the legumina proved less hurtful to the ground, but it was rarely a successful crop, for it suffered most from the dry weather and hot winds which usually prevailed when it was in flower. Four modii of Cicercula required six days' work—ploughing, three; harrowing, one; weeding, one; pulling, one. (Colum. ii. 10, 12; Plin. H. N. xviii. 12; Pallad. ii. 5, iii. 4; Theophr. H. P. viii. 3; comp. Plutarch. Quaest. Rom.)

f. Phasius s. Phaselis (φασίλος; φασίλος; φασιλός), the common kidney-bean, succeeded best in rich land regularly cropped, and was sown towards the end of October in the proportion of four modii to the juger. These four modii required three or four days' work,—ploughing, one or two, according to the soil; harrowing, one; weeding, one; reaping, one. The pods of the phasius were sometimes eaten along with the seeds, according to our own custom. (Virg. Geor. i. 227; Colum. ii. 10, 12, xi. 2; Plin. H. N. xviii. 12; Pallad. ix. 12; x. 1.)

g. Pisum (πῖσον; πῖςος; πῖσος), the common field pea, succeeded best in a loose soil, a warm situation, and a moist climate. It was sown immediately after the autumnal equinox, in the proportion of rather less than four modii to the juger, and cultivated exactly in the same manner as the phasius. (Colum. ii. 10, 13; Plin. H. N. xviii. 7, 12; Theophr. H. P. ii. 27, viii. 3, 5.)

Napus, the savūs of Dioscorides, is the modern Rape, the Brassica rapa of botanists. Rapa succeeded best in theorden fields. The modern Turnip, the Brassica Napus of botanists. The value of these plants was in a great measure overlooked by the earlier Roman writers, while the Greeks regarded them too much in the light of garden herbs; but Pliny enlarges upon their merits, and by the Gauls beyond the Po, who wintered immediately after the autumnal equinox, in the proportion of rather less than four modii to the juger, and cultivated exactly in the same manner as the phasius. (Colum. ii. 10, 13; Plin. H. N. xviii. 7, 12; Theophr. H. P. ii. 27, viii. 3, 5.)

Rapina, the savūs of Dioscorides, is the modern Turnip, the Brassica rapa of botanists. Rapa succeeded best in low, moist situations, and were sown at the end of June after five ploughings (qunto sulco); napī, which were more adapted for dry sloping land, at the end of August or the beginning of September, after four ploughings (quarto sulco); both, however, in warm and well-watered spots might be sown in spring. A juger required four sextarii (about four imperial pints) of turnip seed and five of rape seed, because the napus does not, like the rapum, expand into an ample bulb (non in ventrem latecruit), but sends a thin root straight down (sed tenuem radicem doresum aget). Columella, however, distinctly states that the rapum and napus passed into each other, under the influence of a change of soil or climate. Rapina is the term for a bed or field of turnips. (Dioscorid. ii. 134, 136; Cat. v. 85; Colum. ii. 10; Plin. H. N. xviii. 18.)

This term included all those crops which were cut green and employed exclusively as forage for the lower animals. The most important were:—

c. Vicia (σάρπακος, the Bukiν of Galen), some

one of the varieties of the Vicia sativa, the Vetch

or Summer (or Winter) Tare of botanists. It

might be sown on dry land at different periods of the year,

usually about the autumnal equinox when intended for green fodder ; in January or later, when raised for seed. (But see Plin. H. N. xviii. 15.)

A quantity required in the former case was seven modii to the juger, in the latter six. Particular care was taken not to cast the seed when there was dew or moisture of any sort upon the surface of the ground ; the period of the day selected for the operation was therefore some hours after sunrise, and no more was scattered than could be covered up before night. It required little labour —

ploughing two days, harrowing one, reaping one ; in all, four days' work for six or seven modii.

d. Cicera, the Εξοσι of Theophrastus, the La-

tignus cicera of botanists, was sown after one or two ploughings (primo vel altero sulco), in the month of March, the quantity of seed varying, according to the richness of soil, from two and a half to four modii to the juger. In southern Italy it was given to the cattle crushed (cicera fresa), steamed in water, and then mixed with chaff. Twelve pounds of eruvum were considered equivalent to sixteen of cicera, and sufficient for a

eruvum was given to the cattle crushed (cicera fresa), steamed in water, and then mixed with chaff. Twelve pounds of eruvum were considered equivalent to sixteen of cicera, and sufficient for a

so much importance was attached to stock, that many considered a good meadow as the most valuable species of land, requiring little trouble or outlay, subject to none of the casual-
ties to which other crops were exposed, affording a sure return every year, and that twofold, in the shape of hay and of pasture. The meadows were of two kinds, the Dry Meadow (eruvum ervilae) and the Irrigated or Water Meadow (pratum riguum). The hay produced from a meadow whose own rich natural moisture did not require an artificial stimulus was the best. Any land which needed with a gentle slope, if either naturally rich and moist, or capable of irrigation, might be laid down as a meadow, and the most approved method of procedure was the following :— The land having been thoroughly ploughed and well laboured in summer, was in autumn sown with raps, or napi

beans, the following year with wheat, and in the third year, all trees, bushes, and rank weeds having been exterminated, with the vetch (vicia) mixed with grass seeds. The cloaks were broken down with rakes, the surface accurately levelled by wicker hurdles, so that the scythe of the mower (foeniseca) might nowhere encounter any obstacle. The vetches were not cut until they had arrived at maturity and begun to drop their seed ; and after they had been removed, the grass, when it had attained to a proper height, was mown and made into hay. Then the irrigation commenced, pro-

vided the soil was stiff, for in loose earth it was necessary to allow the grass roots to obtain a firm hold. For the first year no stock were permitted to graze lest their feet should poach up the soft ground, but the young blades were cut from time to time. In the second year, after the hay-making was over, if the ground was moderately dry and hard, the smaller animals were admitted, but no
AGRICULTURA.

Succession or Rotation of Crops.

It is evident from the instructions given by Columella (ii. 4) for ploughing the best land, that a summer fallow usually preceded a corn crop. For since the first ploughing was early in spring, the second in summer, and the third in autumn, it is impossible that a crop could have been raised upon the ground during any portion of the period here indicated; and the same author expressly states elsewhere (ii. 9), in accordance with the Virgilian precept (G. i. 71), that the land upon which wheat (far, silygo) was grown ought to repose every other year; in which case, however, manure might be dispensed with. Nor did this plan apply to corn alone, for it would seem to have been the general practice to permit nearly one half of the farm to remain at rest, while the productive energies of the other moiety were called into action. It will be seen from the calculations with regard to time and labour for an arable farm containing 200 jugers (Colum. ii. 12), that 100 jugers only were sown in autumn, 50 with wheat, 50 with leguminous or green crops; and if spring-sowing was resorted to, which was by no means general, 30 more, so that out of 200 jugers, at least 70, and more frequently 100, were left fallow.

There were, indeed, exceptions to this system. Some land was so peculiarly deep and rich that it might be cropped for two or more years in succession (terra restibilis); but in this case it was relieved by varying the crop, the field from which winter wheat (far) had been reaped being highly manured and sown immediately with beans, or the ground which had borne lupines, beans, vetches, or any renovating crop, was allowed to lie fallow during winter and then sown with spring-wheat (far) (Virg. Georg. i. 73; comp. Plin. H. N. xviii. 21), while a third rotation, still more favourable, was to take two leguminous or renovating crops after one exhausting or corn crop. In Campania, the extraordinary fertility of the soil allowed them to tax its energies much more severely. For there it was common to sow barley, millet, turnips (rapa), and then barley or wheat again, the land receiving manure before the millet and turnips. But never remaining vacant; while that peculiarly favoured district near Naples, called the campa Laboris, or Terra Laboris, now the Terra as Laboro, yielded an uninterrupted series of corn crops, two of far, and one of millet, without a moment of repose (seritur toto anno, panico semel bis furre). (Cat. 55; Vari. i. 44; Virg. Georg. i. 71, &c.; Colum. ii. 9, 10, 12; Plin. H. N. xviii. 21, 23.)

It will be proper, before bringing this part of the subject to a close, to explain a word which may occasion embarrassment in consequence of its signification being variously modified by the Roman agricultural writers. This is the adjective novalis, which frequently appears as a substantive, and in all the three genders, according as ager, terris, or salum is understood.

1. The original meaning of novalis or novale, looking to its etymology, must have been, land newly reclaimed from a state of nature; and in this sense it is used by Pliny (H. N. xvii. 5), Tula (sc. odor) fore est in novallis caesa vetera stylos. (Comp. Callistr. in Pand. xlvi. 21, 3.)

2. Varro, in his treatise De Lingua Latina (v. 39; comp. vi. 59, ed. Müller), places novalis ager,
land which is allowed occasionally to repose, in
opposition to *vestigia aperi*; land which is cropped
unceasingly,—*Ager vestigial qui vestigiatur ac re-
servatur quotidum annis; contra qui intermittitur a
sororando novalis,* and hence Pliny (II. N. xviii.
19), *Novale est quod alternis annis seritur.*
3. Varro, in his Treatise De Re Rustica (i. 29),
defines *Seges* to mean a field which has been
mown and sown; *arvum,* a field ploughed but
not yet sown; *novalis ubi satum fuit antequam se-
conda aratione renovetur,* ambiguous words which
may be interpreted to denote a field which has
borne a crop, but which has not been ploughed for
a second crop; in which case it will be equivalent
to a failed field.

4. Columella, in one passage (vi. praef. § 1),
employs *nouvele solum* for new or virgin land un-
touched by the plough; for in contrasting the
tastes of the agriculturist and the grazier, he re-
marks that the former delights *quam maximo sub-
acto et puro solo,* the latter *novele graminosoque;*
and Varro (ii. praef. § 4) in like manner places
*novalis as pasture land, in opposition to *seges,* as corn
land,—*bos domus causa fit ut commodius nascatur
frumentum in *sege* et polulum in *novali.*
5. Columella, in another passage, places *cula
novestia,* land under tillage in a general sense, in
opposition to *rudis ager,* land in a state of nature
; and thus we must understand the *hac tum culta
novestia* in Virgil's first Eclogue (v. 71), and *tannas
novales,* the cultivated fields from which a crop has
been reaped,—a phrase which forms the connecting
link between this meaning and that noticed above
under 3. (Comp. Pallad. i. 6, ii. 10.)

B. PASTIO.

The second great department of our subject is
*Pastio,* s. *Res Pecuaria,* s. *Scientia Pastoralis,*
these terms being all alike understood to denote the
art of providing and feeding stock so as to
yield the most ample profit.

But *Pastio* must be considered under the two-
fold forms of
a. *Pastio Agrestis* s. *Res Pecuaria,* and
b. *Pastio Villatica.*
The former comprehending the management of
*certa, sheep, horses,* &c.; the latter of poultry,
game, fish, bees, and other animals to be
noticed hereafter.

g. PASTIO AGRESTIS s. RES PECUARIA.

Contains three heads:
I. MINORES PECUDES.
1. Sheep (*pecus ovillum s. ovisarium*) were di-
vided into two classes with reference to their
wool.

(1.) *Pecus hirtum,* whose fleeces were not pro-
tected artificially.

(2.) *Pecus Tarentinum s. Pecus Graecum s. Oves
pelitus s. Oves luteas,* whose fleeces were protected
from all external injury by skin jackets. Their
wool being thus rendered finer, and being more
easily scoured and dyed, brought a higher price
than any other.

Sheep were likewise divided into two classes
according as they were home-fed or reared in
extensive and distant pastures; we first consider
them under this point of view.

Home-fed sheep (*gorges villatici*) were allowed
to pasture in the fields around the farm during a
portion of the year, wherever the nature of the
country and the system of cultivation pursued
rendered this practicable, or, more frequently,
were kept constantly confined in sheds (*stibula—
septa—cotellos,* built in warm and sheltered situa-
tions, with hard floors sloping outwards to prevent
the accumulation of moisture, which was regarded
as particularly injurious to both the feet and the
fleece. They were fed upon *citusus,* lucerne,
barley, and leguminous seeds, or when such rich
and succulent food could not be obtained, on hay,
bran, chaff, grape huks, and dry leaves, espe-
cially those of the elm, oak, and fig, being at all
times plentifully supplied with salt. They were littered with leaves and twigs, which were frequently changed, and the pens were kept carefully clean.

The more numerous flocks which were reared in extensive pastures (qui in saltibus pastuntur) usually passed the winter in the low plains upon the coast, and were driven by regular drift roads (calles publicae) in summer to the mountains of Central Italy, just as in modern times vast droves pass every autumn from the Abruzzi to seek the more genial climate of Puglia or the Maremma. Those who were employed to watch them (opiliones) being often at a great distance from home were furnished with beasts of burden for transporting the materials required in the construction of folds and huts, at their halting places, and all the stores necessary for themselves and their charge. The sheep were usually collected every night to secure them against robbers and beasts of prey; in summer they fed in the morning and evening, and repose during the noontide heat in sheltered spots, which were usually allowed to go out until the frost was off the ground. The flocks were very numerous, containing sometimes 15,000 head, one shepherd (opitio) being allowed to every five or six score.

The breeds most prized by the early Romans were the Calabrian, the Apulian, which were short woolled (breeves villo), the Milesian, and, above all, the Tarentine; but in the time of Columella those of Cisalpine Gaul from the vicinity of Altinum (Mart. xiv. 153), and those from the Campi Maecri round Parma and Mantua were especially esteemed. The system of crossing was by no means unknown; for M. Columella, the uncle of the author, produced an excellent variety by crossing the tegetic oves of Cadiz with some wild rams from Africa, and again crossing their progeny with the Tarentines. In purchasing stock attention was always paid to the localities where they were to be maintained; thus sheep of large size (procorae oves) were naturally deemed best fitted for rich pastures, and the smaller kinds (tegeticae) for mountainous regions, just as in this country the Leicesters are kept with greatest advantage in the low-lying luxuriant pastures of Lincolnshire, Cheviots in the grass hills from which they derive their name, and the black-faced on the lofty mountains of Wales and Scotland. As to colour, pure white was most sought after; but certain natural tints, such as the dark grey (pullas), which distinguished the flocks of Pollentia in Liguria (fascipere forae Pollentia vili, Silius, vii. 599), the yellowish brown (fuscus) in those of Corduba (in the house near a fire for some days, were not kept with the greatest solicitude, were generally kept until the frost was off the ground. The flocks were very numerous, containing sometimes 15,000 head, one shepherd (opitio) being allowed to every five or six score.

The management of ovae pollitae differed from that of the ordinary ovae villatae merely in the care of which they were tended. They were furnished with an ample supply of the most nutritious food, each individual receiving daily in winter three sextarii (pints) of barley or of beans crushed in their pods (fresus cum suis valescis fabae), in addition to hay, lucerne, dry or green cytisus, and other fodder. Their stalls were usually paved with stone, and kept scrupulously clean; they seldom left the house, and, when allowed to pasture, it was looked upon as essential that the ground should be free from bushes and briars of every description, which might scar their fleece or its covering. The jackets were frequently taken off to cool the animals, the wool was combed out at least thrice a year, and well washed and appointed with oil and wine. The wethers were killed at two years old, their skin being then in perfect condition. Sheep-shearing (tontura) commenced in warm districts in April; but in cold situations was deferred until the solstice. A fine day was chosen, and the operation was performed before the sun had attained to its full power, in order that the sheep might not be hot and the wool not moist. The most careful placed a rug under the animal (tegeticulatus subjectus oves tendere solent) that no portion of the clip
might be lost or damaged (ne qui flocei intervent). The wool, when fresh shorn and still impregnated with the sweat of the animal, was called lana suetida; the fleece when rolled up were termed veluta, or volumina. Oxen hirtae, when shorn, were immediately smeared with wine and oil, to which white wax and hog’s lard were occasionally added; while the jackets of the oxen pelatae were anointed with the same mixture, and then replaced on the animals. Instead of this, some rubbed in a wash composed of equal parts of boiled iuplicate juice, lees of old wine, and amurca. Any wound inflicted during the process was dressed with tar (pix liquida). On the fourth day they were bathed, if possible, in the sea; if not, in rain-water mixed with salt.

In Spain and some other places it was customary to shear the sheep twice a year. Under the belief that the additional labour was more than compensated by the increased quantity of wool. The ancient practice of plucking the wool instead of shearing it, still lingered in certain districts even when Pliny wrote. (Varr. i. 1. § 5, x. 20, ii. 2; Colum. i. Praef. § 26, vii. 2, 3, 4, xi. 2. § 14; Plin. H. N. viii. 47, 48; Pallad. ii. 16, v. 7, vi. 8, vii. 4, xii. 13.)

2. Goats (pecus caprinarum) were divided into two classes, the genus mutillus et raripillum, the rolled and thin haired, and the genus cornutum et uetorum, the horned and shaggy; but there does not appear to have been any difference in the mode of rearing them, nor indeed do they seem to have been kept distinct; but it was considered advisable that the old he-goat, the dux egregius, should be mutillus, because he was then less troublesome.

The points characteristic of a good animal will be found enumerated in Varro (ii. 3, § 2-5) and in Columella (vii. 6). The most high bred had always two long flaps of skin (verruculae, laciniae) depending from the throat. One peculiarity connected with sales was that they were never warranted in good health, for they were believed to be always more or less labouring under fever.

The management of goats was in most respects the same as that of sheep, except that, although intolerant of frost and cold, they threw better in mountainous craggy ground or among copsewood, where they browsed with great eagerness on the mountainous craggy ground or among copsewood, where they had not only water and pulse. The number in each herd varied from 100 to 150, or even more, according to circumstances and the means of the proprietor, and the proportion of one boar to ten sows was usually observed.

The sows were not considered fit for breeding until upwards of a year old, and continued prolific to the age of seven; boars (verres) were in full vigour from one year old till four; the best time for impregnation was from the middle of February up to the vernal equinox, the period of gestation was four months, and the pigs being weaned at the end of two, a double farrow might be procured in a year.

Each breeding sow (serofa) brought up her pigs (porca, porca, porcellus) in a separate styre (baro), constructed in such a manner that the superintendent (custos, porculator) might easily see into the interior and thus be prepared to relieve the progeny, which were in constant danger of being crushed by the weight of the mother who was supposed to bring forth as many young as she had teats, and was capable of sucking eight at first, but when they increased in size it was deemed advisable to withdraw one half of that number. Sucking pigs (lactantes) when ten days old were accounted pure for sacrifice, and hence were anciently termed sacræ; after the sucking time (straticatus, porculation), which lasted two months, was over, they were denomi-
nated doliæ, and sometimes nefrendes, because not yet able to crunch hard food. The males not reserved for breeding were castrated when from six to twelve months old, and were then termed magales. (Varr. ii. 4 ; Colum. vii. 9, Praef. i. § 26 ; Plin. H. N. viii. 51 ; Pallad. iv. 26.)

II. MAJORES PECUDES.

1. Kine (pecus bubulum, armentum bubulum) were divided into classes, according as they were kept at home and employed in the labours of the farm (boves domitis), or pastured in large herds (armenta). Boves domiti, wherever the nature of the soil and the mode of culture pursued permitted, were allowed to pasture; since growing grass (viride pabulum) was considered the most suitable of all food; when this could not be supplied, it became necessary to stall-feed them (aleare ad praeceps); but they were allowed to stand in the open air during the hot weather, while in winter they were kept in spacious byres (stabula, consepta) built with a southerly aspect so as to be sheltered from cold winds, the floors being hard and sloping to prevent moisture from being absorbed, and to allow it to run off freely, while to promote the warmth and comfort of the animals they were bedded with abundance of litter (strumentum pecori et bubus diligenter subternaturat, Cat. 5.), usually straw, or leaves, such as those of the ilex, which were supposed to yield little nourishment. Their staple food from the middle of April until the middle of June was vetches, lucerne, clover, and other fodder (fresae). At the time when the cow was approaching to give birth was allowed to suck freely, but as it increased in strength was tempted with green grass, and, where hay could not be procured, chaff, grape husks, acorns, or with some of the leguminous seeds, such as beans, lupines, or chick-peas previously steeped in water (maceratae), or crushed (fresae). When an ox was fed upon hay, from 30 to 40 pounds weight (Roman pound = 11\(\frac{1}{2}\) oz. avoird.) was an ample allowance, except during the months of November and December, that is, during the ploughing and sowing season, when they received from the feeder (pudalatorius) as much food of the most nutritious kind as they could consume. Lumps of salt placed near the consepta proved very attractive to the animals and conducd to their health.

Large herds were pastured chiefly in woods where there was abundance of grass, leaves, and tender twigs, shifting to the coast in winter and to the cool shady hills in summer, under the charge of herdsmen (armentarii), a class altogether distinct from the bubalei, or hinds, who worked and tended the boves domestici. The common number in a herd was from 100 to 120, the animals were carefully inspected every year, and the least promising (rugi-culæ) weeded out. The proportion of two bulls, a yearling and a two-year old, to 60 or 70 cows was usually observed, but Columella doubles the number of males. The Umbrian oxen, especially those on the Clitumnus, were the largest and finest in Italy; those of Etruria, Latium, and Gaul were smaller, but strongly made and well adapted for labour; those of Thrace were valued for sacrificial purposes in consequence of being for the most part pure white; but the cattle of Epirus, the most important pastoral district of the Roman world, were superior to all others.

The points characteristic of a good animal, and the warranty usually demanded by the buyer, was found fully detailed in Varro (ii. 5), in Columella, who here copies the description of the Carthaginian Mago (vi. 1, 20, 21), and in Palladius (iv. 11, 12).

Cows (vaccae) were not fit for breeding until they were upwards of two years old, and they continued to produce until they had reached the age of ten. Considerable variation is to be found in the agricultural writers as to the age at which the calves arrived at full vigour, Varro considering that they might be employed when a year old. Columella and Pliny recommending that they should be kept until four. The former, however, is the precept of the practical man, and is consonant with modern experience. The time of gestation being nearly ten (lunar) months, the most favourable period for impregnation was from the middle of June to the end of July, for thus the calves (vituli) would be born when spring was well advanced (maturus vere). When parturition was approaching, the pregnant cow (hora vacca) was carefully watched, fed richly, and protected from the assaults of the gad-fly and other tormenting assailants; the calf for some time after its birth was allowed to suck freely, but as it increased in strength was tempted with green food, in order that it might in some degree relieve the mother, and after six months had elapsed, was fed regularly with wheat bran, barley meal, or tender grass, and gradually weaned entirely. Castration was performed at the age of two years. The vituli intended for labour were to be handled (tractari) from an early age to render them tame, but were not to be broken in to work (domari) before their third, nor later than their fifth year. The method of breaking (domitaris) those taken from the herd is fully described by Columella (vi. 2), and Palladius fixes the end of March as the time most appropriate for commencing the operation. The members of a herd, according to age and sex, were termed, Vitulis, Vitula ; Juvenescus. Juvenca ; Bos novellus, Buculus ; Bos vetulus. Taurus, Vacca ; a barren cow was named Taura. (Cat. 5, 30 ; Varr. ii. 1, 5 ; Colum. vi. 1—3, 20—24 ; Plin. H. N. viii. 45 ; Pallad. iv. 11. 12. vi. 7. viii. 4.)

2. Horses (pecus equinum s. equitatum, armentum equinum) are divided by Columella into Generalis, blood horses; Mulares, horses adapted for breeding mules; Vulgares, ordinary horses.

The points of a horse, the method of ascertaining his age up to seven years old, and the warranty usually given by the seller, are detailed in Varro (ii. 7. § 4, 5, 6) in Columella (vi. 29), and in Palladius (iv. 13).

Horses either pastured in grass fields or were reared in the stable upon dry hay (in stabulis ad praecepibus), to which barley was added when the animal was required to undergo any extraordinary fatigue. Brood mares were frequently kept in large troops which shifted, like sheep and oxen, from the mountains to the coast, according to the season; two mounted men being attached to each herd of fifty. The mare (equa) was usually reserved for breeding at two years old, and continued prolific up to the age of ten; the stallion (admissarius) remained in vigour from three years on until
twenty, but when young was limited to twelve or fifteen females. The period of gestation being between twelve lunar months and ten days, the best time for impregnation was from the vernal equinox to the summer solstice, since parturition would then take place during the most favourable season. High area mares were not allowed to produce more than once in two years. Ten days after birth the foal (vasus equinus, equus novus) was permitted to accompany its dam to pasture; at the age of five months, it was customary to begin feeding them with barley-meal and bran, and when a year old, with plain unground barley; but the best colts were allowed to continue suckling until they had completed two years, and at three years they were broken in for the tillage to which they were destined, whether for racing (ad cursum), for draught (ad rhedam), or for carrying burdens (ad vectorem), or for military service (ad epippium), but they were not regularly worked until four off.

Race and war horses were not castrated; but the operation was frequently performed on those destined for the road, from the conviction that the gelding (castrarius), while less bold and spirited was more safe and tractable (in vis habere mutant amorem). It is to be observed that horses were, and in a sense are, very little used for agricultural purposes in Italy and Southern Europe, the ordinary toils being carried on almost exclusively by oxen, and horses never were by any means objects of such general interest to the farmer as among our Roman ancestors.

We may remark that Varro, Columella, and many other writers, repeat the absurd story传闻 by the poetry of Virgil, that mares in some districts of Spain became pregnant by the influence of a particular wind, adding that the colts conceived in this manner did not live beyond the age of three years. (Varr. i. Pref. § 26, ii. 1. s 18. ii. 7.; Colum. vi. 27, 29; Plin. H. N. viii. 42; Pallad. iv. 13.)

3. Asses (asinus, asina) were divided into two classes, the genus mansuetum, or common domestic quadruped (asinus, asellus), and the genus ferum, the wild ass (onager, onagrus), which was common in Phrygia and Lycaonia, was easily tamed and made an excellent cross.

The most celebrated breeds were those of Arcadia and of Reate. The latter was so highly esteemed in the time of Varro, that a single individual of this stock had been known to fetch sixty thousand sesterces (about 500£ sterling), and a team of four, as much as four hundred thousand (nearerwards of 3300£ sterling). Such animals were valuable for draught purposes, while less bold and spirited were the genera ad epippium, ad equus, ad equus novus. The former was concerned, and these seem to be identical with the animals employed for the same purpose at the present day in the Abruzzi. They were fed upon barley meal and whey, or in places where no cheese was made, on wheaten bread moistened with the warm liquor in which beans had been boiled. (Varr. i. 9; Colum. vi. 36, 37; Plin. H. N. viii. 44; Pallad. iv. 14.)

4. Mules. Mulas and Mula were the general terms for the hybrid between a horse and an ass, but in practice a distinction was drawn between Muli and Hinni. Hinni were the progeny of a stallion and a she-ass, Muli of a male ass and a mare. The latter were larger in proportion, and more esteemed than the former. A cross sometimes was formed between the mare and the onager as a matter of curiosity.

Uncommon care was taken by breeders of mules in the selection of the parents. A strong large-boned mare, powerful rather than swift, was usually chosen. The male asses at their birth were removed from their mother, suckled by mares, reared upon the most nourishing food (hay and barley), and attained to full vigour when three years old. A good admissarius from Arcedia or Reate was worth from thirty to forty thousand sesterces (250£ to 330£ sterling). The period of gestation was observed to be a little longer than in the case of the pure horse or ass, extending to thirteen lunar months; in all other respects their management, habits, and mode of sale were the same.

The great use of mules was in drawing travelling carriages (hiaso enim binis conjunctis omnium vehicula in viis descender); they were also employed, like asses, in carrying burdens upon pack saddles (codulae), and in ploughing light land. The finer kinds, when kept in herds, were driven in summer from the rich plains of Rosea on the Velinus to the Montes Gurgures. (Varr. ii. 1. § 16, ii. 8; Colum. vi. 36, 37; Plin. H. N. viii. 44; Pallad. iv. 14.)

III. 1. Dogs (canes) were divided into three classes:
   a. Canes Villatici, watch-dogs, whose office was to guard farm-houses against the aggressions of thieves.
   b. Canes Pastorales s. Canes Pecuarii, to protect the flocks and herds from robbers and wild beasts. Each opilio was generally attended by two of these, equipped with spiked collars (mellum), to serve as a defence in their encounters with wolves and other adversaries.

Varro and Columella describe minutely the points of the first two classes, with which alone the former was concerned, and these seem to be identical with the animals employed for the same purpose at the present day in the Abruzzi. They were fed upon barley meal and whey, or in places where no cheese was made, on wheaten bread moistened with the warm liquor in which beans had been boiled. (Varr. ii. 9; Colum. vii. 12.)

2. Feeders (pastores).

The flocks and herds which fed in the immediate neighbourhood of the farms were usually tended by old men, boys, or even women; but those which were driven to distant and mountainous pastures were placed under the care of persons in the vigour of life, who always went well armed and were accompanied by beasts of burden (jumenta dossuaria), carrying all the apparatus and stores required during a protracted absence; the whole body of men and animals being under the command of an experienced and trustworthy individual, styled Magister Pecoris, who kept all the accounts and possessed a competent knowledge of the veterinary art.

We may conclude this part of the subject with a few words upon the management of dairy pro-
Agricultura.

Cheese-making commenced in May, and the method followed by the Romans was substantially the same as that now practised. The milk unskimmed was used as fresh as possible, was slightly perforated with holes, in order that the whey soon as the curd formed, it was transferred to baskets down by weights to hasten the process. The mass was then taken out of the frame, sprinkled with (fascellae, calathii) it was again pressed more powerfully than before, (serum) thyme, with pine cones, or any other ingredient, a proper consistency. It might be flavoured with a variety of other substances.

The cheeses from cows' milk (casei bubuli) were believed to contain more nourishment, but to be the least nourishing and most digestible than those which were old

B. Villatica Pastio.

Illaviae Pastiones, from which many persons towards the close of the republic and under the empire derived large revenues, were separated into two departments, according to the names given to the buildings or enclosures adapted to the different animals:

I. Aviaaria. 11. Vivaria.

b. Columbarium, the dove-cote.
a. The Ornithon proper, the inmates of which were chiefly, 1. Thrushes and blackbirds (tordi, merulaces), especially the former. 2. Quails (coturnices). 3. Turtledoves (turtes). 4. Ortolans (?) (miliariae), all of which are in Italy birds of passage arriving in great flocks at particular seasons.

In like manner the term Vivaria, which may be employed to denote all places contrived for the reception of animals used for food or which supplied articles of food and did not fall under the denomination of pecudes or ares, must be separated into those designed for the reception of land animals, and those for fishes.

a. Leporaria. The animals kept in leporaria were chiefly, 1. Hares and rabbits (lepores).

The rennet or coagulum was usually obtained from the stomach of the hare, kid, or lamb (coagulum leporinum, hoedinum, agninum), employed for the same purpose the milky juice from the stomach of the hare, kid, or lamb (casei caprini), was then added; as soon as the curd formed, it was transferred to baskets (fascellae, calathii) perforated with holes, in order that the whey might drain off quickly, and was pressed down by weights to hasten the process. The mass was then taken out of the frame, sprinkled with thyme, with pine cones, or any other ingredient, a proper consistency. It might be flavoured with a variety of other substances.

b. Piscinea or fish-ponds, divided into — 1. Piscinae aquae dulcis, fresh-water ponds; and 2. Piscinae aquae salinæ, salt-water ponds.

We commence then with a description of the inhabitants of the Cohors in plano and their feeding.

I. Aviaaria.

1. a. Cohors in plano.

In the science of rearing poultry (Ratio Cohor- talis, ơvrrthorofhia), three precepts were of general application. The birds were to be kept scrupulously clean, were to be abundantly supplied with fresh air and pure water, and were to be protected from the attacks of weasels, hawks, and other vermin. The two former objects were attained by the choice of a suitable situation, and by incessant attention upon the part of the superintendents (caretores, castodes); the latter was effected by overlaying the walls of the houses and courts, both inside and out, with coats of smooth hard plaster or stucco, and by covering over the open spaces with large nets.

Again, the attention of those who desired to rear poultry with profit was chiefly occupied by five considerations: 1. The choice of a good breeding stock (de genere). 2. The impregnation of the hens (de foetura). 3. The management of the eggs during incubation (de ovis). 4. The rearing of the pullets (de pullis). 5. Fattening them for the market (de fartura), this last process being.

However, frequently conducted not by the farmer (rusticus), but by persons who made it their sole occupation (fartores).

1. 2. Chickens (gallinae). Of the different species of domestic fowls, the most important were gallinae, which were divided into three classes:—

a. Gallinae Villaticae s. Cohortales, the common chicken. b. Gallinae Africanae s. Numidicae, the same probably with the μελεαρπόδες of the Greeks, the distinctions pointed out by Columella scarce amounting to a specific difference; and c. Gallinae Rusticae. The last were found in great abundance in the Insula Guillaumaria, but it is so difficult to
determine from the descriptions transmitted to us what they really were, that we know not whether we ought to regard them as phasians, as red-necked partridges, as wood-grouse, or as some species of game different from any of these. The *Africanae*, always scarce and dear, were treated almost exactly in the same manner as peacocks, and never became of importance to the farmer; the *Rusticae* are little spoken of except as objects of curiosity, and Columella declares that they would not breed in confinement (*in servitute non foetant*). We therefore confine our observations to the *Vultur*.

Among the breeds celebrated for fighting were the Tanagrian, the Rhodian, and the Chalcidean; but these were not the most profitable for the market. The points of a good barn-door fowl are minutely described by Varro, Columella, and Palladius, who all agree in recommending the breeder to reject such as were white, for they were more delicate and less prolific than those whose plumage was darker. Some were permitted to roam about (*vagae*) during the day, and pick up what they could, but the greater number were constantly shut up (*clausae*) in a poultry yard (*gallarium, aviarium, custos*), which was an enclosed court (*septum*) with a warm aspect, strewn with sand or ashes wherein they might wallow, and covered over with a net. It contained hen-houses (*caveae*) to which they retired at night and roosted upon poles stretched across (*perticae*) for their convenience, nests (*cubilia*) for the hatching hens being constructed along the walls. The whole establishment was under the control of a poultry-man (*curator gallinarius*), who occupied an adjoining hut, usually assisted by an old woman and a boy, for the flocks were often very large, containing upwards of two hundred. The proportion of one cock (*gallus*) to five hens was commonly observed, the males not required for breeding being killed young or made into capons (*copi*). Their food consisted of barley with the husk removed (*hordeum pinnatum*), millet, vetches, and lentils, when these articles could be procured cheap, but when too dear, they were supplied with the refuse of wheat, bran with a little of the flour adhering, the seeds of catties, and the like.

The laying season began in January and continued until the autumnal equinox. From twenty-five to thirty eggs, the number being increased or diminished according as the weather was hot or cold, were placed beneath a clocking hen (*gallina glaciosa*) from one to two years old, who was kept constantly shut up except at feeding time, or even furnished with food while on the nest. The curator made his rounds regularly during the twenty days of incubation, turning the eggs, that they might all receive equal heat, and rejecting those which upon examination were found to contain no embryos. Such as were not required for hatching, were preserved by rubbing them with strong brine, and then storing them up in chaff or bran. The chicks for fifteen days were fed by hand on *polenta* mixed with *nasturtium* (cress) seed. Chickens, when fattened for sale, were shut up in dark narrow cribs, light and motion being unfavourable to the process; or each bird was swung separately in a basket, with a small hole at each end, one for the head, the other for the rump, and bled upon the softest hay or chaff, but so cramped in space that he could not turn round. In this state they were cramped with white, linsed, barley meal kneaded with water into small lumps (*turanidae*), and other farinaceous food, the operation requiring from twenty to twenty-five days. (*Var. iii. 9; Colum. viii. 2, &c. 12; Plin. *H. N.* x. 21; Pallad. i. 27, 29.)

3. Phasians (*phasiani*) are not mentioned among domestic poultry by Varro or Columella, but find a place in the compilation of Palladius, who directs that young birds, that is, those of a year old, should be selected as breeders in the proportion of one cock to two hens, and that the eggs should be hatched by barn-door fowls. The chicks were to be fed for the first fortnight on cold boiled barley lightly sprinkled with wine, afterwards upon bruised wheat, locusta, and an's eggs, and were to be prevented from having access to water. They became fat in thirty days if shut up and cramped with wheat flour made up into small lumps (*turanidae*) with oil. (*Pallad. i. 29.*)

4. Peacocks (*pavones, pari, pavae*) are said to have been first introduced as an article of food by Q. Hortensius in a banquet on the installation of an augur (*augurali aditiali coena*). They speedily became so much in request that soon afterwards a single full-grown bird sold for fifty denarii (upwards of a guinea and a half), and a single egg for five (upwards of three shillings), while one breeder, M. Afsulius Lucro, derived an income of 60,000 sestercus (about 500l. sterling) from this source alone. The most favourable situations for rearing peacocks were afforded by the small rocky but well-wooded islets off the Italian coast, where they roamed in freedom without fear of being lost or stolen, provided their own food, and brought up their young. Those persons who could not command such advantage, kept them in small enclosures roofed over, or under porticoes, perches (*perticae*) being supplied for them to roost upon, with a large grassy court in front, surrounded by a high wall and shaded by trees. They were fed upon all kinds of grain but chiefly barley, did not arrive at full maturity for breeding until three years old, when one cock was allowed to five hens, and care was taken to supply each bird with a separate nest (*discreta cubilia*). The hatching process was most profitably performed by common barn-door fowls, for in this way the pen-hen laid three times in a season, first five eggs (*ova pavonina*), then four, and lastly two or three, but if allowed to incubate herself could rear only one brood. In the time of Varro, three chicks (*pulli pavonina*) for each full-grown bird were considered a fair return. (*Varr. iii. 6; Colum. viii. 11; Pallad. i. 28; Plin. x. 20; comp. Juvi. i. 143.*)

5. Geese (*anseres*) were easily reared, but were not very profitable and somewhat troublesome, for a running stream or a pond with a good supply of herbage was essential, and they could not be turned out to graze in the vicinity of growing crops, which they tore up by the roots, at the same time destroying vegetation by their dung. Birds for breeding were always selected of a large size and pure white, the grey variety (*)vairi vel fusci*) being regarded as inferior on the supposition that they were more nearly allied to the wild species. Their food consisted of clever, fenugreek, lettuce, together with leguminous plants, all of which were sown for their use, and especially an herb called *stépis* by the Greeks, which seems to have been...
agriculture.

a sort of endive. Impregnation took place about mid-winter, one gander being allowed to three females, who when the laying season, which was early in spring, approached, were shut up in a structure (χυνθοσκεῖον) consisting of a court (χοῦρος), surrounded by a high wall with a portico inside containing receptacles (ὀπωροί), from two to three feet square, built of hewn stone or brick, well lined with chaff, for the eggs. Incubation, according to the weather, lasted from twenty-five to thirty days, during which period the mothers were supplied with the custus with barley crushed in water. The goslings remained in the house for about ten days, and were fed upon po-

lenta, poppy seed, and green cresses (nasturtium) chipped in water, after which they were taken out in fine weather to feed in marshy meadows and pools. It was found in practice most advantageous to employ barn-door hens to hatch the eggs, since they made more careful mothers; and in this case the goose would lay three times in a season, first five eggs, then four, and lastly three.

Goslings, when from four to six months old, were shut up to fatten in dark warm coops (συγηνο-

naria), where they were fed with barley potage and fine flour moistened with water, being allowed to eat and drink three times a day as much as they could swallow. In this way they became fit for the market in two months or less. A flock of geese furnished not only eggs but feathers also, for it was customary to pluck them twice a year, in spring and autumn, and the feathers were worth five denarii (about three shillings and fourpence) a pound. (Varro, iii. 10; Colum. viii. 13; Plin. H. N. x. 22; Pallad. i. 60.)

6. Ducks (anates). The duck-house (ηγοσο-

τρόφεος), more costly than the chenoboscium, for within its limits were confined, not only ducks, but querquedulae, phalerides, boscades (whatever these may have been), and similar birds which they made more careful mothers; and in this case the goose would lay three times in a season, at maturity, and began forthwith to lay in their turn. Those set aside for the market had their wing feathers plucked out and their legs broken, and were then fattened upon white bread previously chewed (manusculato candido farciuni pane). A handsome pair of breeding pigeons of a good stock would fetch at Rome, towards the close of the republic, two hundred sesterces (upwards of a guinea and a half); if remarkably fine, as high as a thou-

sand (nearly eight guineas); and as much as six-

teen hundred (more than thirteen pounds) was a price sometimes asked, while Columella speaks of four thousand (upwards of thirty pounds) having been given in his time; and some persons were said to have a hundred thousand (nearly a thousand pounds sterling) invested in this kind of pro-

perty. The instinct which teaches pigeons to re-

turn to the place where they have been fed was remarkably preserved by the ancients, who were wont, for the sake of amusement, to bring them to the theatres and there let them loose. (Varr. iii. 7; Colum. viii. 8; Plin. H. N. x. 52, 74, xi. 64, xviii. 42; Pallad. i. 24.)

I. c. Ornithon, Aviarium (δρυνητρόφεος).

Ornithones, in the restricted sense, were di-

vided into two classes: 1. Those constructed for pleasure merely being designed for the reception of nightingales and other singing birds. 2. Those for profit, in which thousands of wild birds were con-

fined and fattened. Varro gives a very curious and minute description of an ornithon belonging to the first class, which he himself possessed, and Lucullus endeavored to imitate the enjoyment of both, for he had a tridinium constructed for his Tuscan villa inside of an ornithon, delighting to behold one set of birds placed upon the table ready for his repast, while others were fluttering at the windows by which the room was lighted. Orni-

thones of the second class, with which alone we are
nets were drawn tight in front to prevent them from flying away. (Varr. iii. 8 ; uguims)

They fattened readily in harvest time, de-

tion, that the interior, instead of being fitted up with columbaria, contained rows of brackets (perticae), on which the birds might rest. The interior of this building numerous stakes (palli) were fixed upright, upon which the birds might alight; long poles also (perticae) were arranged in an inclined position resting against the walls with saps nailed in rows across, and lofts were con-

structed, all for the same purpose. Two smaller apartments were attached, one in which the super-intendent (curator) deposited the birds which died in the process of time, the other, called the secutorium, communicating with the great hall by a door, into which those birds wanted for the market were driven from time to time, and killed out of sight, lest the others might drop on witness-ing the fate of their companions.

Millet and wild berries were given freely, but their chief food consisted of dry figs carefully

neued (diligenter pinasta) and kneaded with far or nollen into small lumps, which were chewed by per-

sons hired to perform this operation. The birds usually kept in an orniathion have been mentioned above, but of these by far the most important were thrushes, which made their appearance in vast

ocks about the vernal equinox, and seem to have been in great request; for out of a single establish-

ment in Sabinum, in the time of Varro, five thousand

sesterces, about five hundred pounds sterling. The manure from orniathiones containing thrushes and blackbirds was not only a powerful stimulant to the soil, but was given as food to oxen and pigs, who fattened unusually rapidly.

Turtle doves (turturules, dim. turturulce) belonged to the class which did not lay eggs in captivity (nece varit nee excludit), and consequently, as soon as caught, were put up to fatten (volatura ut capitur furturale destinatur). They were not however confined in an ordinary orniathion but in a building similar to a dove-cote, with this dif-

ference, that the interior, instead of being fitted up with columbaria, contained rows of brackets (muta-

uos), or short stakes projecting horizontally from the wall and rising tier above tier. Over each row, the lowest of which was three feet from the ground, remen mats (leptiutus castrinilce) were stretched, on which the birds reposed day and night, while they were drawn tight in front to prevent them from flying away, which would have rendered them lean. They fattened readily in harvest time, de-

igning most in dry wheat, of which one-half meius per day was sufficient for 120 turtles, or in millet moistened with sweet wine. (Varr. iii. 8 ; Pallad. i. 25 ; Plin. H. N. x. 24, 34, 35, 53, 58, 74 ; comp. Plant. Mostoll. i. 1. 44 ; Juiv. vi. 38.)

II. VIVARIA.

II. a. Leporaria.

Leporaria anciently were small walled paddocks, planted thickly with shrubs to give shelter; and in-

raded, as the name implies, for the reception of animals of the hare kind ; viz. 1. The common grey

hare (Italicum hoc nostrum, s. gowes). 2. The moun-

tain or white hare from the Alps, seldom brought to Rome (toti candidis sunt). 3. Rabbits (canuiculi),

believed to be natives of Spain. These, at least the first and third, bred rapidly, were caught occa-

sionally, shut up in boxes, fattened and sold. In process of time, the name leporarium was changed for the more appropriate term δηνητροφισις, since a variety of wild animals, such as boars (apri), stags (ceres), and roe deer (aprossse), were procured from the hunter (renatur), and shut up in these parks, which now embraced several acres even in Italy, while in the provinces, especially Transalpine Gaul, they frequently comprehended a circuit of many miles of hill and swamp, glade and forest. This space, was, if possible, fenced by a wall of stone and lime, or of unburnt brick and clay, or, where the extent rendered even the latter too costly, by a strong paling (secutora) formed of upright stakes (stipites) drilled with holes (per latus efforantur), through which poles (aniites) were passed horizontally, the whole of oak or cork tree timber, braced and, as it were, latticed by planks nailed diagonally (seria transversa claturae), much in the fashion of wooden hurdles. Even in the largest enclosures it was necessary to support the animals in winter, and in those of moderate size they were frequently tamed to such an extent, that they would assemble at the sound of a horn to receive their food. (Varr. iii. 12 ; Colum. ix. 1 ; Plin. H. N. viii. 52.)

Bees (apes). The delightful experience in the management of these creatures is sufficiently proved by the space and care devoted to the subject in Virgil, and by the singularly minute instructions contained in the agricultural writers, especially in Columella, who derived his materials from the still more elaborate compilations of Hyginus and Cel-

sus, the former being the author of a regular bee calendar, in which the various precepts for the management of these creatures is sufficiently proved. (Varr. iii. i. 44 ; Colum. i. 45.)

The working bees, and drones (fisci fures), which were unknown or confounded; and to reject the absurd fancy, to which however we are indebted for the most charming episode in the Georgics, which originated with the Greeks, and is repeated

F 3
with unhesitating faith by almost every authority, that swarms might be produced by spontaneous generation from the patronus carcass of an ox (ex bulalo corpore putrefacto; and hence they were commonly termed θωγόνα by the poets, and by Archelaus θος φθιώμενος πεποιημένα τέκνα).

The early Romans placed the hives in niches, hollowed out of the walls of the farm-house itself, under the shelter of the caves (subler subterraneus), but in later times it became more common to form a regular apiary (apiastrum, alvearium, mellarium; μελιττοτροφέων, μελιττών), sometimes so extensive, as to yield 5000 pounds of honey in a season. This was a small enclosure in the immediate vicinity of the villa, in a warm and sheltered spot, as little subject as possible to great variations of temperature, or to disturbances of any description from the elements or from animals; and carefully removed from the influence of foetid exhalations, this was watched unremittingly, and when it was actually thrown off, they were deterred from a long flight by casting dust upon them, and by tinkling sounds, being at the same time tempted to alight upon some sweet substance commonly called bee-bread (propolis, προπολίς), the classical name being derived, it is said, from the circumstance that it is found in greatest abundance near the entrance between the combs where the bees were driven away by a smoking apparatus, and the mellarius cut out with peculiarly formed knives as much of the contents as he thought fit.

The honey harvest (melalio, melis vindemiens, castratio alveorum, dies castrandi, μελικρωσις), according to Varro, took place three times a year, but more usually twice only, in June and October; on the first visitation four-fifths, at the second two-thirds of the honey was abstracted; but these proportions varied much according to the season, and the strength of the particular hive. The system pursued was very simple; the moveable top was taken off, or a door contrived in the side opened, and the bees were driven away by a small ring of fire, and the mellarius cut out with peculiarly formed knives as much of the contents as he thought fit.

The comb (fervus, κπνάν), which was the product of their industry, was composed of wax (cora, κηφός) formed into hexagonal cells (ex angulis cellar), the geometrical advantages of which were soon discovered by mathematicians, containing for the most part honey (mel, μέλα), but also the more solid sweet substance commonly called bee-bread (propolis, προπόλις), the classical name being derived, it is said, from the circumstance that it is found in greatest abundance near the entrance between the combs where the bees were driven away by a smoking apparatus, and the mellarius cut out with peculiarly formed knives as much of the contents as he thought fit.

Columnella and Palladius describe ingenious plans for getting possession of wild swarms (Apis sylvestres, fervus, rusticeve, as opposed to urbane, ciares): and Pliny notices the humble bees which constructed their nests in the ground, but seems to suppose that they were peculiar to a district in Asia Minor. The marks which distinguish the various species will be found detailed by the different authorities quoted below.

(Anderson Hist. Anim. v. ix; Aelian. de Anim. i. 59, 60, v. 10, 11; Var. ii. 5, iii. 3, 16; Virg. Georg. iv.; Colum. ix. 3. &c., xi. 2; Plin. H. N. xi. 5. &c.; Pallad. i. 37—39, iv. 15, v. 8, vi. 10, vii. 7, ix. 7, xi. 13, xii. 8.)

Snails (cochliæ). Certain species of snails were favourite articles of food among the Romans, and were used also medicinally in diseases of the lungs and intestines. The kinds most prized were those from Reate, which were small and white; those from Africa of middling size, and very fruitful: those called solitana, also from Africa, larger than the former; and those from Illyria, which were the largest of all. The place where they were preserved (cochlearium) was sheltered from the sun, kept moist, and not covered over, nor waived in, but surrounded by water, which prevented the escape of the inmates who were very profligate, and required nothing except a few laurel leaves and a little bran. They were fattened by shutting them up in a jar smeared with boiled must and flour, and perforated with holes to admit air. It has been recourse being had at the same time to a slight fumigation. If distracted by sedition in consequence of the presence of two pretenders to the throne, the rivals were caught, examined, and the least promising put to death. In bad weather, those stricken down and disabled by cold or sudden rain were tenderly collected, placed in a spot warmed by artificial heat, and as they revived laid down before their hives. When the weather for any length of time prevented them from going abroad, they were fed upon honey and water, or upon fogs boiled in must and pounded into a paste.

The honey harvest (melalio, melis vindemiens, castratio alveorum, dies castrandi, μελικρωσις), according to Varro, took place three times a year, but more usually twice only, in June and October; on the first visitation four-fifths, at the second two-thirds of the honey was abstracted; but these proportions varied much according to the season, and the strength of the particular hive. The system pursued was very simple; the moveable top was taken off, or a door contrived in the side opened, and the bees were driven away by a smoking apparatus, and the mellarius cut out with peculiarly formed knives as much of the contents as he thought fit.
recorded that an individual named Fulvius Hirti-
inus constructed, near Tarquinii, the first cochin-
earium ever formed in Italy, a short time before
the civil war between Caesar and Pompey. (Varr.
iii. 14 ; Plin. H. N. ix. 56, xxx. 7, 15 ; comp.
Sallust. Jug. 93.)

Dormice (glises) were regarded as articles of
such luxury that their use as food was forbidden
in the sumptuary laws of the more rigid censors;
but, notwithstanding, a piscinarium became a
common appellation to a villa. It was a small space
of ground surrounded with a smooth wall of polished
or stuccoed stone, planted with acorn-bearing trees
to yield food, and containing holes (cave) for rear-
ing the young. They were fattened up in earthen
jars (dolii) of a peculiar construction, upon chest-
nuts, walnuts, and acorns. (Varr. iii. 15 ; Plin.
H. N. ix. 57 ; comp. Martial, iii. 58, xiii. 59 ;
Petron. 31 ; Amm. Marc. xxvii. 4.)

II. b. Piscinae.

Lastly, we may say a few words upon artificial
fish ponds, which were of two kinds—freshwater
ponds (piscinae dulces), and salt water ponds
(piscinae salae maritimae).

The former, from an early period, had frequently
been attached to ordinary farms, and proved a
source of gain; the latter were unknown until the
last half century of the republic, were mere ob-
jects of luxury, and were confined for the most part
to the richest members of the community, to many
of whom, such as Hirrus, Philippus, Lucullus, and
Hortensius, who are sneeringly termed piscinarii
by Cicero, they became objects of intense interest.
These receptacles were constructed at a vast cost
on the sea-coast, a succession being frequently
formed for different kinds of fish, and the most
ingenious and elaborate contrivances provided for
the admission of the tide at particular periods, and
for regulating the temperature of the water; large
sums were paid for the stock with which they
were filled, consisting chiefly of mullets and mu-
raenae; and a heavy expense was incurred in
maintaining them, for fishermen were regularly
employed to catch small fry for their food, and
when the weather did not permit such supplies to
be procured, salt anchovies and the like were
purchased in the market. For the most part they
yielded no return whatever, during the lifetime at
least of the proprietors, for the inmates were re
spected as articles of

Agrimensor for paying him for his services.

Under the empire the observance of the auspices
in the fixing of camps and the establishment of
military colonies was less regarded, and the prac-
tice of the Agrimensor was reduced to a system
by Julius Frontinus, Hyginus, Siculus Flaccus, and
other Grammatic writers, as they are sometimes
termed. As to the meaning of the term Groma,
and the derived words, see Facciolati,
the Index to Goesius,
the teachers of geometry in the large cities of the
empire used to give practical instruction on the
system of gromatic. This practical geometry was
one of the liberalia studia (Dig. 50. tit. 13. s. 1);
but the professors of geometry and the teachers
of law were not exempted from the obligation of being
rivals, and from other such burdens

A certain Sergius Orata, a short time before the
Marsic War, formed artificial oyster-beds (vivaria
ostreorum) from which he obtained a large revenue.
He first asserted and established the superiority
of the shell-fish from the Lucrine Lake, which have
always maintained their celebrity, although under
the empire less esteemed than those from Britain.
(Varr. R. R. iii. 17 ; Colum. viii. 16, 17 ; Plin.
H. N. ix. 54, 55 ; Cic. ad Att. i. 19.)

Of modern treaties connected with the subject
of this article the most important is Dickson's
" Husbandry of the Ancients," 2 vols. 8vo. 1788,
the work of a Scotch clergyman, who was well
acquainted with the practical details of agriculture
and who had studied the Latin writers with great
care, but whose scholarship was unfortunately so
imperfect that he was in many instances unable to
interpret correctly their expressions. Many use-
ful and acute observations will be found in the
" Economic Politique des Romains " by Dureux
de la Malle, 2 tomes, 8vo. Paris, 1840, but he also
is far from being accurate, and he is embarrassed
throughout by very erroneous views with regard to
the rate of interest among the Romans, and by the
singular misconception that from the expulsion of
the Jews the sestertius was worth only about 2.
(Alex. de la Malle, 2 tomes, 8vo. Paris, 1840.
and from other such burdens

Of modern treaties connected with the subject
of this article the most important is Dickson's
" Husbandry of the Ancients," 2 vols. 8vo. 1788,
The Agrimensor of the later period was merely employed in disputes as to the boundaries of properties. The foundation of colonies and the ascription of lands were now less common, though we read of colonies being established to a late period of the empire, and the boundaries of the lands must have been set out in due form. (Hyginus, p. 177, ed. Goes.) Those who marked out the ground in camps for the soldiers' tents are also called Memores, but they were military men. (Vegetius, De Re Militari, ii. 7.) The functions of the Agrimensor are shown by a passage of Hyginus (De Controver., p. 170): in all questions as to determining boundaries by means of the marks (signa), the area of surfaces, and explaining maps and plans, the services of the Agrimensor were required: in all questions that concerned property, right of road, enjoyment of water, and other easements (servitutes) they were not required, for these were purely legal questions. Generally, therefore, they were either employed by the parties themselves to settle boundaries, or they received their instructions for that purpose from a judge. In this capacity they were advocati. But they also acted as judges, and could give a final decision in that class of questions which concerned the quinque pedes of the Mamilia Lex [Lxx MAMILIA], as appears from Frontinus (pp. 63, 75, ed. Goes.). Under the Christian emperors the name Mensores was given to them; but they were military men. (Vegetius, De Re Militari, ii. 7.) The functions of the Agrimensor are shown by a passage of Hyginus (De Controver., p. 170): in all questions as to determining boundaries by means of the marks (signa), the area of surfaces, and explaining maps and plans, the services of the Agrimensor were required: in all questions that concerned property, right of road, enjoyment of water, and other easements (servitutes) they were not required, for these were purely legal questions. Generally, therefore, they were either employed by the parties themselves to settle boundaries, or they received their instructions for that purpose from a judge. In this capacity they were advocati. But they also acted as judges, and could give a final decision in that class of smaller questions which concerned the quinque pedes of the Mamilia Lex [Lxx MAMILIA], as appears from Frontinus (pp. 63, 75, ed. Goes.). Under the Christian emperors the name Mensores was changed into Agrimensores to distinguish them from another class of Mensores, who are mentioned in the codes of Theodosius and Justinian (vi. 34, xii. 28). By a rescript of Constantine and Constans (A. D. 344) the teachers and learners of geometry received immunity from civil burdens. According to Hyginus they were to receive an aureus for each twelfth part of the property through which he restored the limes. Further, by another constitution of the same emperors, they received jurisdiction in questions of Alluvio; but Rudorff observes, "that the decisive words 'ut judicio agrimensoris finiat,™ are a spurious addition, which is not found either in Nov. Theod. Tit. 20, nor in L. 3. C. De Alluv. (Cod. Just. vii. tit. 41)." According to another constitution of the same emperors, the Agrimensor was to receive an aurum from each of any three border proprietors whose boundaries he settled, and if he set a limes right between proprietors, he received an aureus for each twelfth part of the property through which he restored the limes. Further, by another constitution of the same emperors (Goesium, p. 343), the young Agrimensores were to be called "clarissimi™ while they were students, and when they began to practise their profession, susceptibles. All this, which is repeated by modern writers, is utterly incredible. (Rudorff, p. 420, &c., and the notes.)

(Rudorff, Uber die Feldmessers, Zeitschrift für Geschichte. Rechtsw. vol. x. p. 412, a clear and exact exposition; Niebuhr, vol. ii. appendix 2; Dureau de la Malle, Économie Politique des Romains, vol. i. p. 179; the few remarks of the last writer are of no value.)

AGRO'NIA (αγρονία), a festival which was celebrated at Orchomenus, in Bocotia, in honour of Dionysus, surnamed 'Αγριώνιος. It appears from Plutarch (Quaest. Rom. 102), that this festival was solemnized during the night only by women and the priests of Dionysus. It consisted of a kind of game, in which the women for a long time acted as if seeking Dionysus, and at last called out to one another that he had escaped to the Muses, and had concealed himself with them. After this they prepared a repast; and having enjoyed it, amused themselves with solving riddles. This festival was remarkable for a feature which proves its great antiquity. Some virgins, who were descended from the Minyans, and who probably used to assemble around the temple on the occasion, fled and were followed by the priest armed with a sword, who was allowed to kill the one whom he first caught. This sacrifice of a human being, though originally it must have formed a regular part of the festival, seems to have been avoided in later times. One instance, however, occurred in the days of Plutarch. (Quaest. Græc. 38.) But as the priest who had killed the woman was afterwards attacked by disease, and several extraordinary accidents occurred to the Minyans, the priest and his family were deprived of their official functions. The festival, as well as its name, is said to have been derived from the daughters of Minyas, who, after having for a long time resisted the Bacchanalian fury, were at last seduced by an innocent appearance of eating human flesh. They therefore cast lots on their own children, and as Hippasus, son of Leueippe, became the destined victim, they killed and ate him, whence the women belonging to that race were at the time of Plutarch still called the destroyers (δαίμειας or αἰδαίμειας) and the men mourners (ψαλείας). (Müller, Die Miger, p. 166, &c.; K. F. Hermann, Lehrbuch d. gottesdienstlichen Alterthümern d. Griechen, § 63 n. 13.)

AGRO'NOMI (αγρονόμοι), are described by Aristotle as the country police, whose duties corresponded in most respects to those of the astynomoi in the city (Achel. and V. Goesius, p. 344) as given in the collection of Goesius (p. 344), they received jurisdiction in questions of Alluvio; but Rudorff observes, "that the decisive words 'ut judicio agrimensoris finiat,™ are a spurious addition, which is not found either in Nov. Theod. Tit. 20, nor in L. 3. C. De Alluv. (Cod. Just. vii. tit. 41)." According to another constitution of the same emperors, the Agrimensor was to receive an aureus from each of any three border proprietors whose boundaries he settled, and if he set a limes right between proprietors, he received an aureus for each twelfth part of the property through which he restored the limes. Further, by another constitution of the same emperors (Goesium, p. 343), the young Agrimensores were to be called "clarissimi™ while they were students, and when they began to practise their profession, susceptibles. All this, which is repeated by modern writers, is utterly incredible. (Rudorff, p. 420, &c., and the notes.)

(Rudorff, Uber die Feldmessers, Zeitschrift für Geschichte. Rechtsw. vol. x. p. 412, a clear and exact exposition; Niebuhr, vol. ii. appendix 2; Dureau de la Malle, Économie Politique des Romains, vol. i. p. 179; the few remarks of the last writer are of no value.)

AGRO'TERAS THUSIA (αγροτέρας θυσία), a festival celebrated every year at Athens in honour of Artemis, surnamed Agrotera (from ἀγροτής, chace). It was solemnized, according to Plutarch (De Ma- lým, Harol. 26), on the sixth of the month of Boedromion, in honour of the goddess Agrotera, and of certain goats, which continued to be offered in the time of Xenophon. (Xenoph. Anab. iii. 2. § 12.) Aelian (V. H. ii. 25) places the festival on the sixth day of Thargelon, and says that 300 goats were sacrificed; but as the battle of Marathon which gave rise to this solemn sacrifice, occurred on the sixth of Boedromion, Aelian's statement appears to be wrong. (Plut. De Glor. Athen. 7.)

This festival is said to have originated in the following manner:—When the Persians invaded Attica, Callimachus, the polemarch, or, according to others, Miltiades, made a vow to sacrifice to Artemis Agrotera as many goats as there should be enemies slain at Marathon. But when the number of enemies slain was so great, that an equal number of goats could not be found at once, the Athenians decreed that 500 should be sacrificed every year. This is the statement made by Xenophon; but other ancient authors give different accounts. The Scholiast on Aristoph. (Equit. 666) relates that the Athenians, before the battle, promised to sacrifice to Artemis one ox for every enemy slain; but when
generally speaking, persons of the lowest and most respective deities. They appear to have been of Man, a citizen of the state. Any citizen, who had been forgiveness from the gods whom they served, for towns of Greece, soliciting a©.ms for the gods whom they were called (μνημονευται), images of their shoulders or on beasts of burthen, images of their individual who paid them for such services, and also promised, for a small sum of money, to obtain forgiveness from the gods whom they served, for any sins which either the individual himself or his ancestors had committed. (Plat. Rep. ii. p. 336 b; Plut. Superst. c. 3; Zosim. i. 11; Max. Tyr. xix. 3; Athen. vi. p. 366, d; Origen, c. Celts. i. p. 8; Phil. Leg. ii. p. 192; Ruhnken, ad Timaei Leon. s. v. νησιακες and ενεργειατες; K. F. Hermann, Lehrbuch d. gottesdienstlichen Altertumers d. Griechen, § 42, n. 13.)

These mendicant priests came into Italy, but at what time is uncertain, together with the worship of the gods whom they served. (Cic. De Leg. ii. 16; Heindorff, ad Hor. Soron. i. 2. 2.)

AHE'NUM. [AENUM.]

AIKIAS DIKE (αικίας δίκη), an action brought at Athens, before the court of the Forty (ὁ τετράκοσιον), against any individual, who had struck a citizen of the state. Any citizen, who had been thus insulted, might proceed in two ways against the offending party, either by the αἰκίας δίκη, which was a private action, or by the βῆςις γραφή, which was looked upon in the light of a public prosecution, since the state was considered to be wronged in an injury done to any citizen. It appears to have been a principle of the Athenian law, to give an individual, who had been injured, more than one mode of obtaining redress. If the plaintiff brought it as a private suit, the defendant would only be condemned to pay a fine, which the plaintiff received; but if the cause was brought as a public suit, the accused might be punished even with death, and if condemned to pay a fine, the latter went to the state.

It was necessary to prove two facts in bringing the αἰκίας δίκη before the Forty. First, That the defendant had struck the plaintiff, who must have been a free man, with the intention of insulting him (ἐφ' βῆςις), which, however, was always presumed to have been the intention, unless the defendant could prove that he only struck the plaintiff in joco. Thus Aristotle, after proving that he had been struck by Conon, tells the judges that Conon will attempt to show that he had only struck him in play. (Dem. c. Conon, p. 1261.)

Secondly, It was necessary to prove that the defendant struck the plaintiff first, and did not merely return the blows which had been given by the plaintiff (ἐπερχομεν ἀδίκων, or merely ἀδίκων ἐπερχομεν, Dem. c. Euseu, pp. 1141, 1151.)

In this action, the sum of money to be paid by the defendant as damages was not fixed by the laws; but the plaintiff assessed the amount according to the injury, which he thought he had received, and the judges determined on the justice of the claim. It was thus an assessed action, and resembled the procedure in public causes. The orations of Demosthenes against Conon, and of Isocrates against Lochites, were spoken in an action of this kind, and both of these have come down to us; and there were two orations of Lysias, which are lost, relating to the same action, namely, against Theopompos and Hippocrates. (Harpoerat. s. v. αἰκίας; Meier, Att. Process, p. 347, &c.; Böckh, Pall. Econ. of Athens, pp. 352, 364, 372, 374, 2nd ed.)

ATHUSIAN δίκη, a word only used by Homer, is probably for ἀδίκων δίκη, a portico exposed to the sun. From the passages in which it occurs, it seems to denote a covered portico, opening on to the court of the house, αἰκίας, in front of the vestibule, πρόθυρον. Thus a chariot, leaving the house, is described as passing out of the πρόθυρον and the ἀδίκων. (II. xxiv. 323; Od. iii. 493, xv. 146, 191.) The word is used also in the plural, to describe apparently the porticoes which surrounded the αἰκίας. (II. vi. 243; Od. viii. 57.) It was in such a portico that guests were lodged for the night. (Od. iii. 298, vii. 345.) It was also the place of reception for people flocking to the palace on a public occasion. (II. xxiv. 239.; Od. viii. 57. ; and hence perhaps the epithet ἐκδίκων, which Homer usually connects with it. [P. S.]

ALA, a part of a Roman house. [DOMUS.]

ALA, ALARIS, ALA'RII. These words, like all other terms connected with Roman warfare, were used in different or at least modified acceptations at different periods.

Ala, which literally means a wing, was from the earliest epochs employed to denote the wing of an army, and this signification it always retained, but in process of time was frequently used in a restricted sense.

1. When a Roman army was composed of Roman citizens exclusively, the flanks of the infantry when drawn up in battle array were covered on the right and left by the cavalry; and hence Ala denoted the body of horse which was attached to and served along with the foot-soldiers of the legion. (See Cincius, de Re Militari, who, although he flourished n. c. 200, is evidently explaining in the passage quoted by Aulus Gellius, vi. 4, the original acceptance of the term.)

2. When, at a later date, the Roman armies were composed partly of Roman citizens and partly of Socii, either Latini or Italici, it became the practice to marshall the Roman troops in the centre of the battle line and the Socii upon the wings. Hence ala and alarid denoted the contingent furnished by the allies, both horse and foot, and the two divisions were distinguished as dextra ala and sinistra ala. (Liv. xxvii. 2, xxx. 21, xxxi. 21; Lips. de Milit. Rom. ii. dial. 7. We find in Liv. x. 40, the expression cum cohortibus alaridi, and in x. 43, D. Brutum Scaevum legatum cum legione prima et decem cohortibus alaridi equitatuque ire . . . . jussit.)

3. When the whole of the inhabitants of Italy had been admitted to the privileges of Roman citizens the terms alaris, cohortes alarides were transferred to the foreign troops serving along with the Roman armies. In Caesar (B. G. i. 51) we see the Alarid expressly distinguished from the legioarii, and we find the phrase (B. C. i. 73) cohortes alarides et legionariae, while Cicero (ad Fam. ii. 17) speaks of the Alarid Transpadani,
ALCUINA. [ALEXANDR.] 4. Lastly, under the empire, the term ala was applied to regiments of horse, raised it would seem with very few exceptions in the provinces, serving apart from the legions and the cavalry of the legions. It is to troops of this description that Tacitus refers when (Ann. xx. 10) he mentions Aulares Pannonii röber equitatus.

Some further details on this subject are given under ERSURTIS. [W. R.]

ALABARCHES (αλαβάρχης), appears to have been the chief magistrate of the Jews at Alexandria; but whose duties, as far as the government was concerned, chiefly consisted in raising and paying the taxes. (Joseph. Ant. xviii. 18. § 1, xix. 5. § 1, xx. 5. § 2; Euseb. H. E. ii. 5.) Hence, Ciceron (ad Att. ii. 17) calls Pompey alabarches from his raising the taxes. The etymology of this word is altogether uncertain, and has given rise to great disputes; some modern writers propose, but without sufficient reason, to change it, in all the passages in which it occurs, into aravarches. The question is fully discussed by Sturzins. (De Dialect. Macedon. et Alexandrin. p. 65, &c.)

ALABASTRUM and ALABASTRER (αλαβάστρον), a box, or case for holding perfumes and ointments; so called because they were originally made of alabaster, of which the variety, called onyx-alabaster, was usually employed for this purpose. (Plin. ii. N. xii. 2. s. 3, xxxvi. 8. s. 12.) They were, however, subsequently made of other materials, as, for instance, gold (χρυσός αλάβαστρον). Such vases are first mentioned by Herodotus (iii. 20), who speaks of an "alabaster-box of perfumed ointment" (μύρου αλάβαστρον), as one of the presents sent by Cambyses to the Ethiopian king; and after his time they occur both in Greek and Roman writers. (Arystoph. Acharon. 1053; Aelcian. V. II. xii. 18; Martial. xi. 8; Matth. xxi. 7; Mark. xiv. 3; Luke. vii. 37.) These vessels were of a tapering shape, and very often had a long narrow neck, which was sealed; so that when the woman in the Gospels is said to break the alabaster-box of ointment for the purpose of anointing Christ, it appears probable that she only broke the extremity of the neck, which was thus closed.

ALABASTRITES. [ALABASTER.]

ALAEA (Αλαέα), games which were annually celebrated at the festival of Athena, surnamed Aea, near Tegea, in the neighbourhood of the magnificent temple of the same goddess. (Paus. viii. 47. § 3.) [L. S.

ALAIRII. [ALA.]

ALAUDA, a Gaulish word, the prototype of the modern French Alouette, denoting a small crested bird of the lark kind which the Latins in allusion to its tuft denominated Galerita. The name alauda was bestowed by Julius Caesar on a legion of picked men, which he raised at his own expense among the inhabitants of Transalpine Gaul, about the year B. C. 55, not as erroneously asserted by Gibbon, during the civil war; which he equipped and disciplined after the Roman fashion; and on which in a body, he at a subsequent period bestowed the freedom of the state. This seems to have been the first example of a regular Roman legion levied in a foreign country and composed of barbarians. The designation was, in all probability, applied from a plume upon the helmet, resembling the "apex" of the bird in question, or from the general shape and appearance of the head-piece. Cicero in a letter to Atticus, written in n. c. 44, states that he had received intelligence that Antonius was marching upon the city "cum legione alaudarum," and from the Philippi we learn that by the Lex Judicaria of Antonius even the common soldiers of this corps (Alaudae — manipulares ex legione Alaudarum) were privileged to act as judges upon criminal trials, and enrolled along with the veterans in the third decuria of judges, avowedly, if we can trust the orator, that the framers of the law and his friends might have functionaries in the courts of justice upon whose support they could depend.

That the legion Alauda, was numbered V. is proved by several inscriptions, one of them belonging to the age of Domitian in honour of a certain Cn. Domitianus, who among many other titles is styled TRIB. MIL. LEG. V. ALAUDAE. It had however disappeared from the army list in the time of Dion Cassius, that is, in the early part of the third century, for the historian, when giving a catalogue of such of the twenty-three or twenty-five legions which formed the establishment of Augustus, as existed when he wrote, makes no mention of any fifth except the Quinta Macedonica. (Sueton. Jul. 24; Caesar, B. C. i. 39; Plin. ii. N. xi. 44; Cic. Philipp. ii. 4. § 8. 20. § 5. § 12, xiiii. 2. § 3, 18. § 37; Gruter, Corp. Inscrip. Lat. CCCCL. 1, DXXIV. 4, DXXIX. 4, DXXI. 7; Orrelli, Inscrip. Lat. n. 773. [W. R.]

ALBOGALETUS. [APEX.]

ALBUM is defined to be a tablet of any material on which the praetor's edicts, and the rules relating to actions and interdicts, were written. [EDICTUM.] The tablet was put up in a public place in Rome, in order that all persons might have notice of its contents. According to some authorities, the album was so called, because it was either a white material, or a material whitened, and of course the writing would be a different colour. According to other authorities, it was so called because the writing was in white letters. If any person wilfully altered or erased (raserit, corrupterit, mutaverit) any thing in the album, he was liable to an action albi corrupti, and to a heavy penalty. (Dig. 2. tit. i. s. 7, 9.)

Probably the word album originally meant any tablet containing any thing of a public nature. Thus, Cicero informs us that the Annales Maximini were written on the album by the praetor's edicts. (De Orat. ii. 12.) But, however this may be, it was in course of time used to signify a list of any public body; thus we find the expression, album senatorium, used by Tacitus (Ann. iv. 42), to express the list of senators, and corresponding to the word leucoma used by Dion Cassius (iv. 3). The phrase album decurionum signifies the list of decurions whose names were entered on the album of a municipality, in the order prescribed by the lex municipalis, so far as the provisions of the lex extended. (Dig. 50. tit. 3.) Album judicium is the list of judices. (Suet. Claud. 16.) [JUDER.] [G. L.]

ALCATHOEA (Αλακθοεια). The name of games celebrated at Megara, in commemoration of the Eleian hero Alcathous, son of Pelops, who had killed a lion which had destroyed Euippus, son of King Megareus. (Pind. Isthm. viii. 148; Paus. 42. § 1.) [L. S.]

ALEA, gaming, or playing at a game of chance of any kind. Hence, alae, aleator, a gamester, a
gambler. Playing with _talis_ or _tesserae_ was generally understood; because these were by far the most common games of chance among the Romans. [TALUS; TESSERA.]

Gaming was considered deplorable at Rome; and hence _alea_ was used as a term of reproach. (Cic. _in Cat._ ii. 10, _ad Att._ xiv. 5.) It was also forbidden at Rome by special laws, during the times of the republic, and under the emperors (setita legibus alea). (Hor._Carm._ iii. 24, 50; Cic._Philip._ ii. 23; Ov._Trist._ ii. 470, &c., _Dig._ II. tit. 5.) We have, however, no express information as to the time when these laws were enacted or the exact provisions which they contained. There are three laws mentioned in the Digest (l.c.) forbidding gambling, the _Leges Titia, Publigha_, and _Conculeri_, and likewise a senatus consultum, and the prætor's edictum. At what time the two former laws were passed is quite uncertain; but the _Lex Cornelia_ was probably one of the laws of the dictator Sulla, who, we know, made gaming with private persons. [SUMTUS.] Some modern writers infer from a passage of Plautus ( _Aul. Gli._ ii. 2, 9) that gaming must have been forbidden by law in his time; but the _lex talaria_ in this passage seems rather to refer to the laws of the same time than to any public enactment. Some modern writers, however, read _lex aleoria_ in this passage. The only kinds of gaming allowed by the law were, first, playing at table for the different articles of food, and paying for money at games of chance. Convicted of gaming were condemned to pay four times the sum they had staked (Pseudo-Ascon._in Cat._ ii. 6; _Cic._ Div._ ii. 15.) Reckoning up to their eighteenth, and girls up to seven months old received nine times the ordinary allowance between the ages of seven and seven months old received nine times the ordinary monthly distribution of corn. (Aurel._Vict._ Epist._ xii. 4; _Capitolin._ _Ant._ _Pl._ 8, _M._ _Aur._ 26, _Port._ 9; _Spart._ 7; _Lamprid._ _Sev._ 51; _Orelli._ _Inscr._ 3364, 3365; _Fabretti._ 235, 619; _Bosche._ _Lex._ _Univ._ _Rei._ _Num._ s. _v._ _Tutela Italiae_; _Eckhel._ _Doct._ _Num._ _Vet._ _vol._ _vi._ p. 408; _F. A._ _Wolf._ _Von einer milden Stiftung Trajons._)

**ALEAIA ( _'Aleetas_ ), a festival celebrated to the honour of Athena Alea at Tegea with games and contests, of which we find mention in inscriptions. (Paus._viii._ 47, § 3; _Krause._ _Die Gymnastik u. Agonistik d. Hellenen_, pp._734—736; _K. F._ _Hrman._ _Lehrbuch d. gottendienstlichen Alterthümer d. Griechen_, § 31, n. 11; _comp._ _Halotius._)

**ALI CA ( _'Alias_ or _'Aalps_ ), an upper dress, which, in all probability, identical with the chlamys, although Hesychius explains it as a kind of chiton (Euphor._ _Fir._ 112, _op._ _Menechi._ _Alex._ p. 137; _Callim._ _Fr._ 149, _op._ _Nacke._ _Opusc._ vol._ _ii._ p. 36; _Hesych._ _s. v._ _Alasia_ and _environs_; _Müller._ _Arch._ _d._ _Kunst_, § 337, n. 6; _Martial._ _xi._ 83.)

**ALIMENTARI PUIERI ET PUELLEA.**

In the Roman republic, the poorer citizens were assisted by public distributions of corn, oil, and money, which were called _congiaria_. ( _Congiarium._ ) These distributions were not made at stated periods, nor to any but grown-up inhabitants of Rome. The Emperor Nerva was the first who extended them to boys and girls. He pointed them to be made every month, both to orphans and to the children of poor parents. The children who received them were called _pueri et puellae alimenter_, and also (from the emperor) _pueri puellaeque Ulpiani_; and the officers who administered the institution were called _quaestores pecuniae alimentariae, quaestores alimentorum, procuratores alimentorum_, or _prefecti alimentorum._

The fragments of an interesting record of an institution of this kind by Trajan have been found at Velleia, near Phatica, from which we learn the names which were thus distributed, and the means by which the money was raised. A similar institution was founded by the younger Pliny, at Comum. ( _Plin._ _Epist._ vii. 18, i. 8; and the inscription in Orelli, 1172.) Trajan's benevolent plans were carried on upon a larger scale by Hadrian and the Antonines. Under Commodus and Pertinax the distribution ceased. In the reign of Alexander Severus, again mention of _alimentariae puiere et puellae_ is found. ( _Mammceani_, in honour of the emperor's mother. We learn, from a decree of Hadrian ( _Ulp._ _in Dig._ 34, tit. _s._ 14), that boys enjoyed the benefits of this institution up to their fourteenth year; and, from an inscription ( _Fabretti._ 235, 619), that a boy four years and seven months old received nine times the ordinary monthly distribution of corn. ( _Aurel._ _Vict._ _Epist._ _xii._ 4; _Capitolin._ _Ant._ _Pl._ 8, _M._ _Aur._ 26, _Port._ 9; _Spart._ 7; _Lamprid._ _Sev._ 51; _Orelli._ _Inscr._ 3364, 3365; _Fabretti._ 235, 617; _Bosche._ _Lex._ _Univ._ _Rei._ _Num._ _s._ _v._ _Tutela Italiae_; _Eckhel._ _Doct._ _Num._ _Vet._ _vol._ _vi._ p. 408; _F. A._ _Wolf._ _Von einer milden Stiftung Trajons._)

**ALI PILUS, a slave, who attended on bathers, to remove the superfluous hair from their bodies. ( _Sc._ _Ep._ 56; _Pignor._ _De Sero._ 42.)**

**ALIPTAE ( _'Aliptai_ ) among the Greeks, were persons who waited on the bodies of the athletes, preparatory to their entering the palaestra. The chief object of this anointing was to close the pores of the body, in order to prevent excessive perspiration, and the weakness consequent thereon. To effect this object, the oil was not simply spread over the surface of the body, but also well rubbed into the skin. The oil was mixed with fine

**ALEAIA ( _'Aleetas_ ), a festival celebrated to the honour of Athena Alea at Tegea with games and contests, of which we find mention in inscriptions. (Paus._viii._ 47, § 3; _Krause._ _Die Gymnastik u. Agonistik d. Hellenen_, pp._734—736; _K. F._ _Hrman._ _Lehrbuch d. gottendienstlichen Alterthümer d. Griechen_, § 31, n. 11; _comp._ _Halotius._)

**ALI CA ( _'Alias_ or _'Aalps_ ), an upper dress, which, in all probability, identical with the chlamys, although Hesychius explains it as a kind of chiton (Euphor._ _Fir._ 112, _op._ _Menechi._ _Alex._ p. 137; _Callim._ _Fr._ 149, _op._ _Nacke._ _Opusc._ vol._ _ii._ p. 36; _Hesych._ _s. v._ _Alasia_ and _environs_; _Müller._ _Arch._ _d._ _Kunst_, § 337, n. 6; _Martial._ _xi._ 83.)

**ALIMENTARI PUIERI ET PUELLEA.**

In the Roman republic, the poorer citizens were assisted by public distributions of corn, oil, and money, which were called _congiaria_. ( _Congiarium._ ) These distributions were not made at stated periods, nor to any but grown-up inhabitants of Rome. The Emperor Nerva was the first who extended them to boys and girls. He pointed them to be made every month, both to orphans and to the children of poor parents. The children who received them were called _pueri et puellae alimenter_, and also (from the emperor) _pueri puellaeque Ulpiani_; and the officers who administered the institution were called _quaestores pecuniae alimentariae, quaestores alimentorum, procuratores alimentorum_, or _prefecti alimentorum._

The fragments of an interesting record of an institution of this kind by Trajan have been found at Velleia, near Phatica, from which we learn the names which were thus distributed, and the means by which the money was raised. A similar institution was founded by the younger Pliny, at Comum. ( _Plin._ _Epist._ vii. 18, i. 8; and the inscription in Orelli, 1172.) Trajan's benevolent plans were carried on upon a larger scale by Hadrian and the Antonines. Under Commodus and Pertinax the distribution ceased. In the reign of Alexander Severus, again mention of _alimentariae pueri et puellae_ is found. ( _Mammceani_, in honour of the emperor's mother. We learn, from a decree of Hadrian ( _Ulp._ _in Dig._ 34, tit. _s._ 14), that boys enjoyed the benefits of this institution up to their fourteenth year; and, from an inscription ( _Fabretti._ 235, 619), that a boy four years and seven months old received nine times the ordinary monthly distribution of corn. ( _Aurel._ _Vict._ _Epist._ _xii._ 4; _Capitolin._ _Ant._ _Pl._ 8, _M._ _Aur._ 26, _Port._ 9; _Spart._ 7; _Lamprid._ _Sev._ 51; _Orelli._ _Inscr._ 3364, 3365; _Fabretti._ 235, 617; _Bosche._ _Lex._ _Univ._ _Rei._ _Num._ _s._ _v._ _Tutela Italiae_; _Eckhel._ _Doct._ _Num._ _Vet._ _vol._ _vi._ p. 408; _F. A._ _Wolf._ _Von einer milden Stiftung Trajons._)

**ALI PILUS, a slave, who attended on bathers, to remove the superfluous hair from their bodies. ( _Sc._ _Ep._ 56; _Pignor._ _De Sero._ 42.)**

**ALIPTAE ( _'Aliptai_ ) among the Greeks, were persons who waited on the bodies of the athletes, preparatory to their entering the palaestra. The chief object of this anointing was to close the pores of the body, in order to prevent excessive perspiration, and the weakness consequent thereon. To effect this object, the oil was not simply spread over the surface of the body, but also well rubbed into the skin. The oil was mixed with fine
African sand, several jars full of which were found in the baths of Titus, and one of these is now in the British Museum. This preparatory anointing was called ἡ παρακεφαλιακή τρίψις. The athlete was again anointed after the contest, in order to restore the tone of the skin and muscles; this anointing was called ἡ ἁνίεσθαικεν. He then bathed, and had the dust, sweat, and oil scraped off his body, by means of an instrument similar to the stirgil of the Romans, and called στρεγγύς, and afterwards ἐξστρε. The athlete took advantage of the knowledge they necessarily acquired of the state of the muscles of the athlete, and their general strength or weakness of body, to advise them as to their exercises and mode of life. They were thus a kind of medical trainers, ἱσταρελείτα. (Plut. de Tued. Sant, 16. p. 430; Celsus, i. 1; Plin. H. N. xxix. i. 2.) Sometimes they very superintended their exercises, as in the case of Mileusas. (Pindar, Olym, viii. 54—71; and Böckh's note.) [ATHLETAE.] The part of the palaestra in which the athletes were anointed was called ἀλειτῳρ. Among the Romans, the athletes were slaves who scrubbed and anointed their masters in the baths. They, too, like the Greek ἀλειτῆτα, appear to have attended to their masters' constitution and mode of life. (Cic. ad Fam. i. 9, 35; Senec. Ep. 56; Juvenal, Sat. iii. 76, vi. 422; Pignor. de Serv. p. 81.) They were also called vactores. They used in their operations a kind of scraper called a stirgil, (lindexa), a cruise of oil, (guitas), which was usually of horn, a bottle [AMPULLA], and a small vessel called lenticula. [BATHS.]

The apartment in the Greek palaestra where the anointing was performed was called ἀλειττρωρ, that in the Roman baths was called unctuarius. [P. S.]

ALLUVIO. "That," says Gaius (ii. 70, &c.), "appears to be added to our land by alluvio, which a river adds to our land in the mode of life. (Cic. r-fipiov, &c.) that we cannot estimate how much is added in each moment of time; or, as it is commonly expressed, it is that which is added so gradually as to escape observation. But if a river (at once) takes away a part of your land, and brings it to your land, from that time such part appears to belong to my land." The part thus suddenly taken away should adhere for a considerable time to my land, and the trees on such part should drive their roots into my land. "The acquisitio per alluvionem was considered by the Roman jurists to be by the jus gentium, in the Roman sense of that term; and it was comprehended under the general head of Accessio. A man might protect his land against loss from the action of a river by securing the banks of his land (Dig. 43. tit. 15; De Ripa Musiendus), provided he did not injure the navigation.

If an island was formed in the middle of a river, it was the common property of those who possessed lands on each bank of the river; if it was not in the middle, it belonged to those who possessed lands on that bank of the river to which it was nearest. (Gaius, ii. 72.) This is explained more minutely in the Digest (41. tit. 1. s. 7). A river means a public river (flumen publicum).

According to a constitution of the Emperor Antoninus Pius, there was no jura alluviones in the case of agri limitati, for a certain quantity (certus e, or jura alluvionum cuitque modus) was assigned by the form of the centuriae. (Dig. 41. tit. 1. s. 16; comp. Aggenus Urbicus, in Frontin. Comment. De Alluvione, pars prior, ed. Goes; and Agger.) Circumluvio differs from alluvio in this, that the whole of the land in question is surrounded by water, and subject to its action. Cicero (De Nat. 1. 38) comments on the jura alluviones and circumluviones as matters included under the head of causae centumvirales.

The doctrine of alluvio, as stated by Bracton in the chapter De acquirendo Rorum Dominio (fol. 9), is taken from the Digest (41. tit. 1. s. 7), and is in several passages a copy of the words of Gaius, as cited in the Digest. [G. L.]

ALOA or HALOA (Ἄλαος, Ἑλάος), an Attic festival, but celebrated principally at Eleusis, in honour of Demeter and Dionysus, the inventors of the plough and protectors of the fruits of the earth. It took place every year after the harvest was over, and only fruits were offered on this occasion, partly as a grateful acknowledgment for the benefits the husbandman had received, and partly that the next harvest might be plentiful. We learn from Demeosthenes (c. Neer. p. 1385), that it was unlawful to offer any bloody sacrifice on the day of this festival, and that the priests alone had the privilege to offer the fruits. The festival was also called Ἀδηλία (Hesych. s. e.), or συγκυριαρία. [L. S.]

ἈΛΌΓΙΟΥ ΓΡΑΦΕΙ (Ἀλόγιον γραφή) an action which might be brought before the logiaste (Ἀλόγιστα) at Athens, against all persons who neglected to pass their accounts, when their term of office expired. (Suid. Hesych. Etymol. s. v.; Pollux, viii. 54; Meier, Att. Process, p. 363.)

ALTÆRE. [Ara.]

ALUTA. [Calcetus.]

ALYTAE (ἅλτατα). [Olympia.]

AMANUENSIS, or AD MANUM SERVUS, a slave, or freedman, whose office it was to write letters and other things under his master's direction. The amanuensis must not be confounded with another sort of slaves, also called ad manum servi, who were always kept ready to be employed in any business. (Suet. Caes. iii. 60, 225; Pignor. de Serv. 109.)

AMARYNTHI, or AMARYSIA (Ἀμαρντυς, or Ἀμαρννια), an Attic festival of Artemis, celebrated, as it seems, originally at Amynanthus in Euboea, with extraordinary splendour; but it was also solemnized in several places in Attica, such as Athmone (Paus. i. 81. § 3); and the Athenians held a festival, as Pausanias says, in honour of the same goddess, in no way less brilliant than that in Euboea. (Hesych. s. v. Ἀμαρννια.) The festival in Euboea was distinguished for its splendid processions; and Strabo himself (x. p. 448) seems to have seen, in the temple of Artemis Amynanthia, a column on which was recorded the splendour with which the Eretrians at one time consecrated this festival. The inscription stated, that the procession was formed of three thousand heavy-armed men, six hundred horsemen, and sixty chariots. (Comp. Schol. ad Pind. Od. xiii. 159.) [L. S.]

AMBARVÆLIA. [Arvales Fratres.]

AMBITUUS, which literally signifies "a coining about," cannot, perhaps, be more nearly expressed than by our word canvassing. After the plebs had
formed a distinct estate at Rome, and when the whole body of the citizens had become very greatly increased, we frequently read, in the Roman writers, of the great efforts which it was necessary for candidates to make, in order to secure the votes of the citizens. At Rome, as in every community into which the element of popular election enters, solicitation of votes, and open or secret influence and bribery, were among the means by which a candidate secured his election to the offices of state. The elections occurred annually, and candidates had plenty of practice in the various modes of corruption.

Whatever may be the authority of the piece entitled "Q. Ciceronis de Petitione Consulatus ad Min. Tulium Pratrem," it seems to present a pretty fair picture of those arts and means, by which a candidate might lawfully endeavour to secure the votes of the electors, and also some intimation of those means which were not lawful, and which it was the object of various enactments to repress.

A candidate was called petitor; and his opponent with reference to him, competitor. A candidate canvassing among the citizens, appearing in the public places, such as the fora and Campus Martius, before his fellow-citizens, in a whitened toga. On such occasions, the candidate was attended by his friends (edesctores), or followed by the poorer citizens (sectatores), who could in no other manner show their good will or give their assistance. (Cic. pro Murena, c. 34.) The word assiduitas expressed both the continual presence of the candidate at Rome, and his continual solicitations. The candidate, in going his rounds or taking his walk, was accompanied by a nomenedelator, who gave him the names of such persons as he might meet; the candidate was thus enabled to address them by their name, an indirect compliment which could not fail to be generally gratifying to the electors. The candidate accompanied his address with a shake of the hand (prensatio). The term benignitas comprehended generally any kind of treating, as shows, feasts, &c. Candidates sometimes left Rome, and visited the coloniae and municipia, in which the citizens had the suffrage; thus Cicero proposed to visit the Cisalpine towns, when he was a candidate for the consulship. (Cic. ad Att. i. 1.)

That ambitus, which was the object of several penal enactments, taken as a proper term, comprehended the two species — ambitus and laryctiones (bribery). Liberitas and benignitas are opposed by cicerus, as things allowable, to ambitus and largus, as things illegal. (Cic. de Orat. ii. 23; and compare pro Murena, c. 36.) The word for ambitus in the Greek writers is hexaromial. Money was paid for votes; and in order to secure secrecy and secure the elector, persons called interpretes were employed to make the bargain, sequentes to moxa the money till it was to be paid (Cic. pro Cluent. 26); and divisores to distribute it. (Cic. ad Att. i. 16.) The offence of ambitus was a matter which belonged to the judicia publica, and the enactments against it were numerous. The earliest enactment that is mentioned simply for name persons "to add white to their dress," with a view to an election. (B.C. 432; Liv. iv. 25.) This seems to mean using some white sign or token on the dress, to signify that a man was a candidate. The object of the law was to check ambitio, the name for going about to canvass, in place of which ambitus was subsequently employed.

Still the practice of using a white dress on occasion of canvassing was usual, and appears to have given origin to the application of the term candidato to one who was a petitor. (Cretata ambitio, Persius, Sat. v. 177; Polyb. x. 4. ed. Bekker.) A Lex Poetaelia (B.C. 358; Liv. vii. 15) forbade candidates canvassing on market days, and going about to the places in the country where people were collected. The law was passed mainly to check the pretensions of novi homines, of whom the nobles were jealous. By the Lex Cornelia Boeblia (B.C. 181) those who were convicted of ambitus were incapacitated from being candidates for ten years. (Liv. xl. 19; Schol. Dods. p. 361.) The Lex Aelia Calpurnia (B.C. 67) was intended to suppress treating of the electors and other like matters: the penalties were fine, exclusion from the senate, and perpetual incapacity to hold office. (Dion Cass. xxxvi. 21.) The Lex Tullia was passed in the consulship of Cicero (B.C. 63) for the purpose of adding to the penalties of the Aelia Calpurnia. (Dion Cass. xxxvii. 29; Cic. pro Murena, c. 23.) The penalty under this lex was ten years' exile to any person who should procure votes. The mode of appointing the judices was the object of various enactments to repress. The elections recurred annually, and the mode of naming the judices, and a mode of adding to the penalties of the Acilia law, appeared to have been rather a measure passed because the accuser or prosecutor nominated four of them. The judices were taken out of the other three tribes; but the mode in which they were taken is not quite clear. The penalty under the Lex Licinia was exile, but for what period is uncertain. The Lex Pompeius Magnus (B.C. 55) the Lex Licinia was passed. This lex, which is entitled De Sodalitis, did not alter the previous laws against bribery; but it was specially directed against a particular mode of canvassing, which consisted in employing agents (sectatores) to mark out the members of the several tribes into smaller portions, and to secure more effectually the votes of this division of labour. This distribution of the members of the tribes was called decuratio, (Cic. pro Plancio, c. 18.) It was an obvious mode of better securing the votes; and in the main is rightly explained by Rein, but completely misunderstood by Wunder and others. Drumm (Geschichte Roms, vol. iv. p. 93) confounds the decuratio with the cohtio or coalition of candidates to procure votes. The mode of appointing the judges in trials under the Lex Licinia was also provided by that lex. They were called Judices Editicii, because the accuser or prosecutor nominated four tribes, and the accused was at liberty to reject one of them. The judices were taken out of the other three tribes; but the mode in which they were taken is not quite clear. The penalty under the Lex Licinia was exile, but for what period is uncertain. The Lex Pompeia (B.C. 52), passed when Pompeius was sole consul for part of that year, appears to have been rather a measure passed for the occasion of the trials then had and contemplated than anything else. It provided for the mode of naming the judges, and shortened the proceedings. When C. Julius Caesar obtained the supreme power in Rome, he used to recommend some of the candidates to the people, who, of course, followed his recommendation. As to the consulship, he managed the appointments to that office just as he pleased. (Suet. Cass. c. 41.) The Lex Julia de Ambitus was passed (B.C. 18) in the time of Augustus, and it excluded from office for five years (Dion Cass. liv. 16; Suet. Oct. 34) those who were convicted of bribery. But as the penalty was milder than those under the former laws, we must conclude that they were repealed...
AMBITUUS.

in whole or in part. Another Lex Julia de Ambitu was passed (c. 8; Dion. Cass. l. v. 5) apparently to amend the law of B. c. 18. Candidates were required to deposit a sum of money before canvassing, which was forfeited if they were convicted of bribery. If any violence was used by a candidate, he was liable to exile (capua et ignis interdictio).

The popular forms of election were observed during the time of Augustus. Under Tiberius they ceased. Tacitus (Annot. 1. 13) observes:—

"The comitia were transferred from the campus to the pates;" the senate.

While the choice of candidates was thus partly in the hands of the senate, bribery and corruption still influenced the elections, though the name of ambitus was, strictly speaking, no longer applicable. But in a short time, the appointment to public offices was entirely in the power of the emperors; and the magnate, or the flamens, etc., were merely the shadow of that which had once a substantial form. A Roman jurist, of the imperial period (Modestinus), in speaking of the Julia Lex de Ambitu, observes:—

"This law is now obsolete in the city, because the creation of magnates is the business of the princeps, and does not depend on the pleasure of the people; but if any one in a municipium should offend against this law in canvassing for a sacerdotium or magistratus, he is punished, according to a senatus consultum, with infamy, and subjected to a penalty of 100 aurei." (Dig. 48. tit. 14.)

The laws that have been enumerated are probably all that were enacted, at least all of which any notice is preserved. Laws to repress bribery did not depend on the pleasure of the people; but this is quite consistent with the rest: the principle was to punish the briber and his agents, not the bribed. When, therefore, Rein, who refers to the creation of magnates in the city, says:—

"Even those who received money from the candidate, or at least those who distributed it in their names, were punished," he couples two things together that are entirely of a different kind. The proposed Lex Aufidia (Cic. ad Att. i. 10) went so far as to declare that if a candidate promised money to a tribe and did not pay it, he should be punished; but if he did pay the money, he should further pay to each tribe (annually?) 3000 sesterces as long as he lived. This absurd proposal was not carried; but it shows clearly enough that the principle was to punish the briber only.

The trials for ambitus were numerous in the time of the republic. A list of them is given by Rein. The oration of Cicero in defence of L. Munera, who was charged with ambitus, and that in defence of Gaius Plancus, who was tried under the Lex Licinia, are both extant. (Rein, Criminalrecht der Romer, where all the authorities are collected; Proc. Pro Plancio, ed. Wunder.)

AMBOLESOS GRAPHOE (μήδεσθως γραφή). [AKONTIO.]

AMBROSIA (ἀμπροσία), festivals observed in Greece, in honour of Dionysus, which seem to have derived their name from the luxuries of the table, or from the indulgence of drinking. According to Tzetzes on Hesiod (op. et d. v. 504) these festivals were solemnized in the month of Lenaecos, during the vintage. (Etym. M. x. v. Αμπρώης, p. 561. 7. : G. E. W. Schneider, Uber das Attische Theaterwesen, p. 43 ; K. F. Hermann, Lehrb. d. gottesdienstl. Alterth. d. Griechen, § 50. n. 7.)

AMBUBIAE, female musicians from Syria, who gained the name of Amburbius by performing in the circus of Rome, especially in the circus. Their name is derived from the Syrian word abub or ambub, a flute. Their moral condition was that which females of their class generally fell into. The Bayaderes of India will perhaps give the best idea of what they were. (Hor. Sat. i. 21, with Honders' Note ; Juvenal, iii. 62 ; Suet. Ner. 27 ; Prisc. 26 ; Petron. lxiv. 13.) [P.S.]

AMBURBIUM, or AMBURBIAE, a sacrifice which was performed at Rome for the purification of the city, in the same manner as the ambarvalia was intended for the purification of the country. The victims were carried through the whole town, and the sacrifice was usually performed when any danger was apprehended in consequence of the appearance of prodigies, or other circumstances. (Olsq. De Prodig. c. 43 ; Apul. Met. iii. ab init. p. 49, Bippont. ; Lucan. i. 593.) Scaliger supposed that the ambarvalia and ambarvalia were the same; but their difference is expressively asserted by Servius (ad Virg. Ec. iii. 77), and Vopiscus (ambarvaliam celebratum, ambarvalia promissa). (Aurel. c. 20.)

AMMENTUM. [HASTA.]

AMICTUS. [AMICITIA.]

AMICO RIA, a linen covering for the breasts of women, probably the same as the strophium. [STROPHIUM.] (Mart. xiv. 149.) In later times it seems to have been used in the same sense as Amictus. (Cod. Theod. 8. tit. 5. s. 48.) [AMICTUS.]

AMICTUS, AMICULUM. The verb amicire is commonly opposed to induire, the former being applied to the putting on of the outer garment; the chlamys, pallium, or toga (μακρός, φόρετος); the latter, to the putting on of the inner garment, the tunica (χωρετος). In consequence of this distinction, the verbal nouns, amictus and inditus, even without any further denomination of the dress being added, indicate respectively the outer and the inner clothing. (See Tibull. i. 9. 13.; Corn. Nep. Cimon, 4. Dat. 3. § 2 ; Virg. Aen. iii. 545. v. 421, compared with Apoll. Rhod. ii. 30.) Sometimes, however, though rarely, amicire and induire are each used in a more general way, so as to refer to any kind of clothing.

In Greek amicire is expressed by ἐφέννυσθαι, ἀμφρόνυσθαι, ἀμπέχεται, ἐπέδικεται, peri-

AMPHICTYONES.

149; Dionys. iv. 25.) That these confederacies were not merely for offensive and defensive purposes, may be inferred from their existence after the subjugation of these colonies by Croesus; and we know that Halicarnassus was excluded from the Dorian union, merely because one of its citizens had not made the usual offering to Apollo of the prize he had won in the Triopic contests. A confederation somewhat similar, but more political than religious, existed in Lycia (Strab. xiv. p. 664): it was called the "Lycian system," and was composed of twenty-three cities. But besides these and others, there was one Amphictyonic of greater celebrity than the rest, and much more lasting in its duration. This was by way of eminence called the Amphictyonic league; and differed from the other associations in having two places of meeting, the sanctuaries of two divinities. These were the temple of Demeter, in the village of Anthela, near Thermopylae (Herod. vii. 200), where the deputies or representatives met in autumn; and that of Apollo at Delphi, where they assembled in spring. The connection of this Amphictyony with the latter not only contributed to its dignity, but also to its permanence. With respect to its early history, Strabo (ix. p. 420) says, that even in his days it was impossible to learn its origin. We know, however, that it was originally composed of twelve tribes (not cities or states, it must be observed), each of which tribes contained various independent cities or states. We learn from Aeschines (De F. L. § 122, ed. Bekker), a most competent authority (B.C. 343), that eleven of these tribes were as follows:—The Thessalians, Boeotians (not Thebans only), Dorians, Ionians, Peraeans, Magnesians, Locrians, Oeaeans or Attines, Phthiots or Achaeans of Phthia, Malians, or Melians, and Phocians; other lists (Paus. x. 8. § 2) leave us in doubt whether the remaining tribe were the Dolopes or Delphians; but as the Delphians could hardly be called a distinct tribe, their nobles appearing to have been Dorians, it seems probable that the Dolopes were originally members, and afterwards supplanted by the Delphians. (Titmann, pp. 39, 43.) The preponderance of the Thessalians and northern nations of Greece proves the antiquity of the institution, no less than eight of the twelve tribes being of the Thessalian and northern nations. (Titmann, pp. 39, 43.) The preponderance of the Thessalians and northern nations of Greece proves the antiquity of the institution, no less than eight of the twelve tribes being of the Thessalian and northern nations.

The origin of the league itself has been fixed (Clinton, after quitting Thesprotia in Epeirus, and the date of the twelfth Amphictyonic congress, which he is mentioned with the nine archons. On one occasion we find that the president of the council was a Hieromnemon, and that he was chosen general of the Amphictyonic forces, to act against the Athenians. (Titmann, p. 87.) Hence it has been conjectured that the Hieromnemones, also called ἵερομνημονεῖς, were superior in rank to the pylagorae. (Titmann, pp. 84, 86.) Aeschines also contrasts the two in such a way as to warrant the inference that the former office was the more permanent of the two. Thus he says (c. Clea. § 115, ed. Bekker), "When Diognetus was Hieromnemon, ye chose me and two others Pylagorae." He then contrasts "the Hieromnemon of the Athenians with the Pylagorae for the time being." There is even good reason for supposing that the Hieromnemon was elected for life (Clinton, F. H. vol. iii. p. 621; Titmann, l. c.), although some writers are of a different opinion. (Schömann, de Const. p. 392.) Again, we find inscriptions (Böckh, Inschr. 1171), containing surveys by the Hieromnemones, as if they formed an executive; and that the council concluded their proceedings on one occasion (Aesch. c. Clea. § 124), by resolving that there should be an extraordinary meeting previously to the next regular assembly, to which the Hieromnemones should come with a decree to suit the emergency, just as if they had been a standing committee. Their name implies a more immediate connection with the temple; but whether they voted or not upon matters in general is doubtful; from the two Amphictyonic decrees quoted below, we might infer that they did not, while the inscriptions (1688 and 1699), quoted by Schümann (p. 392), and the statement of Demosthenes (pro Corom. § 277, ed. Bekker), lead to a contrary conclusion. The narrative of Aeschines (c. Clea. § 121) implies that they were more peculiarly the representatives of their constituent states. Probably the respective functions of the two classes * There is a doubt about the reading.—See Thuc. iii. 65; Titmann, p. 52.

( Dorium and) * Cytinium had equal power with the Laconcomenians, and that Eretria and Priene, Ionian colonies, were on a par with Athens (τόθε, φοι τοις Αθηναίοις). It seems therefore to follow, either that each Amphictyonic tribe had a cycle (Strab. ix. p. 420; Pausan. x. 8. § 2), according to which its component states returned deputies, or that the vote of the tribe was determined by a majority of votes of the different states of that tribe. The latter supposition might explain the fact of there being a larger and smaller assembly— a βοσκι and εκκλησία—at some of the congresses, and it is confirmed by the circumstance that there was an annual election of deputies at Athens, unless this city usurped functions not properly its own.

The council itself was called Ρυδαιοι (Πολαία) from its meeting in the neighbourhood of Pylae (Thermopylae), but the same name was given to the session at Delphi as well as to that at Thermopylae. It was composed of two classes of representatives, one called Ρυδαγωγεῖα (Πολαγώγαι), the other Ηιερομνημονεῖα (Ἱερομνημονεῖα). Of the former, three were annually elected at Athens to act with one Hieromnemon appointed by lot. (Aris- toph. Nubes, v. 607.) That his office was highly honourable we may infer from the oath of the Helists (Dem. c. Timoc. § 170, ed. Bekker), in which he is mentioned with the nine archons. On one occasion we find that the president of the council was a Hieromnemon, and that he was chosen general of the Amphictyonic forces, to act against the Athenians. (Titmann, p. 87.) Hence it has been conjectured that the Hieromnemones, also called ἵερομνημονεῖς, were superior in rank to the pylagorae. (Titmann, pp. 84, 86.) Aeschines also contrasts the two in such a way as to warrant the inference that the former office was the more permanent of the two. Thus he says (c. Clea. § 115, ed. Bekker), "When Diognetus was Hieromnemon, ye chose me and two others Pylagorae." He then contrasts "the Hieromnemon of the Athenians with the Pylagorae for the time being." There is even good reason for supposing that the Hieromnemon was elected for life (Clinton, F. H. vol. iii. p. 621; Titmann, l. c.), although some writers are of a different opinion. (Schömann, de Const. p. 392.) Again, we find inscriptions (Böckh, Inschr. 1171), containing surveys by the Hieromnemones, as if they formed an executive; and that the council concluded their proceedings on one occasion (Aesch. c. Clea. § 124), by resolving that there should be an extraordinary meeting previously to the next regular assembly, to which the Hieromnemones should come with a decree to suit the emergency, just as if they had been a standing committee. Their name implies a more immediate connection with the temple; but whether they voted or not upon matters in general is doubtful; from the two Amphictyonic decrees quoted below, we might infer that they did not, while the inscriptions (1688 and 1699), quoted by Schümann (p. 392), and the statement of Demosthenes (pro Corom. § 277, ed. Bekker), lead to a contrary conclusion. The narrative of Aeschines (c. Clea. § 121) implies that they were more peculiarly the representatives of their constituent states. Probably the respective functions of the two classes * There is a doubt about the reading.—See Thuc. iii. 65; Titmann, p. 52.
of representatives were not strictly defined, and varied at different times, if indeed they are always clearly defined by the authors who allude to them. The ἐκάστεια, or general assembly, included not only the classes mentioned, but also those who had joined in the sacrifices and were consulting the god, and as there was a large multitude annually collected at the Amphictyonic session at Thermopylae, it was probably numerously attended. (Hesychius, ad Soph. Trach. v. 639.) It was convened on extraordinary occasions by the chairman of the council (Ὁ τὰς γραμμας ἐκάστειας, Aesch. l.c.).

Of the duties of this latter body nothing will give us a clearer view than the oaths taken by the delegates made by it. The oath was as follows (Aesch. De F. L. § 121) "They would destroy no city of the Amphictyons, nor cut off their streams in war or peace; and if any should do so, they would march against him and destroy his cities; and should any pollute the property of the god, or be privy to or plan any thing against what was in his temple at Delphi, they would take vengeance on him with hand and foot, and voice, and all their might." There are two decrees given by Demosthenes, both commencing thus (Dem. de Cor. § 197) "When Cleinianus was priest (ἐγερθησαν ἡγεταὶ τετράγωνα), the sacred district..."

The resolution in the second case was, that as the Amphictyonians continued to cultivate "the sacred district," Philip of Macedon should be requested to help Apollo and the Amphictyons, and that he was thereby constituted the absolute general of the Amphictyons. He accepted the office, and soon reduced the offending city to subjection. From the oath and the decrees, we see that the main duty of the deputies was the preservation of the rights and dignity of the temple at Delphi. We know, too, that after it was burnt down (B.C. 548), they contracted with the Alcmaeonidae for the rebuilding (Herod. ii. 130, v. 62); and Athenaenus (n. c. 160) informs us (iv. p. 173, b) that in matters connected with the worship of the Delphian god they condescended to the regulation of the minutest trifles. History, moreover, teaches us that if the council produced any palpable effects, it was from their interest in Delphi; and though it kept up a standing record of what ought to have been the international law of Greece, it sometimes acquiesced in, and at other times was an accessory to, the most iniquitous and cruel acts. Of this the case of Crissa is an instance. This town lay on the Gulf of Corinth, near Delphi, and was much frequented by pilgrims from the West. The Crissaean were charged by the Delphians with undue exactions from these strangers, and with other crimes. The council declared war against them, as guilty of a wrong against the god. The war lasted ten years, till, at the suggestion of Solon, the waters of the Pleistus were turned off, then poisoned, and turned again into the city. The besieged drank their fill, and Crissa was soon raised to the ground; and thus, if it were an Amphictyonic city, was a solemn oath doubly violated. The territory—the rich Crissaean or Cirrhaean plain—was consecrated to the god, and curses imprecated upon any one who should till or dwell in it. Thus ended the First Sacred War (B.C. 556), in which the Athenians and Amphictyons were the instruments of Delphian vengeance. (Paus. x. 57. § 4; Clinton, F. H. vol. ii. p. 196; Aeschin. e. Cleo. § 100.)

The Second Sacred War (B.C. 356), was the most important in which the Amphictyons were concerned (Thirlwall, Hist. of Greece, vol. v. p. 263—372); and in this the Thebans availed themselves of the sanction of the council to take vengeance on their enemies, the Phocians. To do this, however, it was necessary to call in Philip of Macedon, who readily proclaimed himself the champion of Apollo, as it opened a pathway to his own ambition. The Phocians were subdued (B.C. 346), and the council decreed that all their cities, except Abae, should be razed, and the inhabitants dispersed in villages not containing more than fifty inhabitants. Their two votes were given to Philip, who thereby gained a pretext for interfering with the affairs of Greece; and also obtained the recognition of his subjects as Hellenes. To the causes of the Third Sacred War allusion has been made in the decrees quoted by Demosthenes. The Amphictyons tilted the devoted Cirrhaean plain, and behaved, as Strabo (ix. p. 419) says, worse, than the Crissaean of old (χειρους ἄτια περί τοις ἔξων). Their submission to Philip was immediately followed by the battle of Chaeroneia (B.C. 338), and the extinction of the independence of Greece. In the following year, a congress of the Amphictyonic states was held, and the resolution was declared, under the sanction of the council, to take vengeance on their enemies, the Phocians, as guilty of a wrong against the god. The council declared war against them, as guilty of a wrong against the god. The war lasted ten years, till, at the suggestion of Philip, the Athenians and Amphictyons were the in...
Dorians, points connected with the institution. We may § 11 14 ; Wachsmuth, Hermann, p. 420) ; and how far it is true that he first brought the confederacy into order, and determined other formation. (Thirlwall, Eurip, Or'est. as celebrated by the Amphictyons of Thessaly. migrating southwards, combined the worship of the old places of meeting. We must, however, afterwards united by the growing power of Delphi, e evidence in favour of the latter. In proof of this, we may state the preponderance of Thessalian tribes from the neighbourhood of the Malia bay, and the comparative insignificance of many of the assigned birthplace and residence of the only place of meeting, is it easy to account for which, it has been supposed enough for the meetings of such a body as the of Peloponnesus, that Delphi became important the theatre and origin of many of the most important events of early Greek history: whereas, it was only in later times, and after the Dorian conquest of Peloponnesus, that Delphi became important for the meetings of such a body as the Amphictyonic; nor if Delphi had been of old the only place of meeting, is it easy to account for what must have been a loss of its ancient dignity. But whatever was the cause, we have still the fact, that there were two places of con guerrum, and the comparative insignificance of many of them would decide according to the principles of justice. (Hesych. Suid.) Acc with a knowledge of the house, walked or danced around it. This festival is sometimes called from the day on which it took place: if on the seventh day, it is called amphidromia, and at the same time received its name, to which the guests were witnesses. (Isaeus, De Pyrrhis Haered, p. 34. a. 30. Bekker.) The carrying of the child round the hearth was the principal part of the solemnity, from which its name was derived. But the Scholiast on Aristophanes (Legistir. 150) derivates its name from the fact that the guests, whilst the name was given to the child, walked or danced around it. This festival is sometimes called from the day on which it took place: if on the seventh day, it is called amphidromia; or on the tenth day, dekath, &c. (Hesych. and Aristoph. Ar. 923; K. F. Hermann, Lekub. d. gottsdienstlichen alterthümer d. Griechen, § 48. n. 6.) [L. S.]

**AMPHITAPAE. [TAPES].**

**AMPHITHEATRE.** (Ꭰଙମିଧାଥର୍ଥର୍ଥ) a family festival of the Athenians at which the newly born child was introduced into the family, and received its name. No particular day was fixed for this solemnity; but it did not take place very soon after the birth of the child, for it was believed that most children died before the seventh day, and the solemnity was therefore generally observed after that period, that there might be at least some probability of the child remaining alive. According to Suidas, the festival was held on the fifth day, when the women who had lent their assistance at the birth washed their hands, but this purification preceded the real solemnity. The friends and relations of the parents were invited to the festival of the amphitheatre, which was held on the seventh evening, and they generally appeared with presents, among which are mentioned the cuttle-fish and the marine polyp. (Hesych. and Harpocr. s. ν.) The house was decorated on the outside with olive branches when the child was a boy, or with garlands of wool when the child was a girl; and a repast was prepared, at which, if we may judge from a fragment of Ephippus in Athenaeus (ix. p. 370 ; comp. ii. p. 65), the guests must have been rather merry. The child was then carried round the temple by the nurse, and thus, as it were, presented to the gods, and with a view of the house and residence of the Amphictyon, the names Pylaea and Pyrena. Besides, we know that Thessaly was the theatre and origin of many of the most important events of early Greek history: whereas, it was only in later times, and after the Dorian conquest of Peloponnesus, that Delphi became important enough for the meetings of such a body as the Amphictyon; nor if Delphi had been of old the only place of meeting, is it easy to account for what must have been a loss of its ancient dignity. But whatever was the cause, we have still the fact, that there were two places of congress; to account for which, it has been supposed that there were originally two confederations, and that there was a time when the associations of the Amphictyons united by the growing power of Delphi, as connected with the Dorians, but still retaining the old places of meeting. We must, however, admit that it is a matter of mere conjecture whether these were the case or not, there being strong reasons in support of the opinion that the Dorians, on migrating southwards, combined the worship of the Hellenic Apollo with that of the Pelasgian Demeter, and thus the name was given to the child, walked or danced around it. This festival is sometimes called from the day on which it took place: if on the seventh day, it is called amphidromia; or on the tenth day, dekath, &c. (Hesych. and Aristoph. Ar. 923; K. F. Hermann, Lekub. d. gottsdienstlichen alterthümer d. Griechen, § 48. n. 6.) [L. S.]

**AMPHITAPAE. [TAPES].**

**AMPHITHEATRE.** (ΑΜΦΙΘΕΑΤΡΟΣ) was a description of building arranged for the exhibition of combats of gladiators, and wild beasts, and ships, which constituted the ludus amphitheatralis. [GLADIATOES; VENATIO; NAUMACHIA.]

I. Its History. — Such exhibitions — which were peculiar to the Romans, and which were unknown to the Greeks till the Romans introduced them — originally took place in the Forum and the Circus, the shows of gladiators being given in the former, and those of wild beasts in the
AMPHITHEATRUM.

latter; indeed the amphitheatre itself is sometimes called circa. The shape of the circa, however, was much better fitted for the chariot races, for which it was at first designed, than for the gladiatorial combats, and the more wholesale slaughter of animals, which, in process of time, came to be the favourite amusements of the Romans. For these purposes, the circa was too long and too narrow, and the spina was a great impediment, so that a new form of building was required, which should accommodate a multitude of spectators in such a manner as that all might have a good view of the space occupied by the combatants, which space too required to be of quite a different shape from the circa, as the combatants were to be kept as much as possible in the same place. The idea of such a building was suggested, as the name (from 

As a mere matter of etymology, the word 

one of the kind until the building of the Flavian amphitheatre. It did not satisfy Caligula, who commenced an amphitheatre near the Septa; but the work was not continued by Claudius. (Dion Cass. ix. 10; Suet. Cal. 18, 21.) Nero too, in his second consulship, A.D. 57, erected a vast amphitheatre of wood, but this was only a temporary building. (Suet. Ner. 12; Tac. Ann. xiii. 31.) The amphitheatre of Taurus was destroyed in the burning of Rome, A.D. 64 (Dion Cass. xii. 18), and was probably never restored, as it is not again mentioned. It is still a question with the topographers whether any traces of it are now visible. (Comp. Becker, Handb. d. Rom. Alter. vol. i. pp. 542, 643, and Urlichs, Besbeschreibn. Roms. pp. 53, 54.)

The erection of an amphitheatre in the midst of Rome, proportioned to the magnitude of the city, was among the designs of Augustus, who delighted in the spectacles of the venatio, and especially in the uncommon species and immense number of the animals exhibited in them; so that, as he himself informs us, in one of his venationes there were no less than 3500 animals slaughtered. (Suet. Vesp. 9; Aurel. Vict. Epit. 1; Momum. Anecr.) It was not, however, till the reigns of Vespasian and Titus, that the design of Augustus was carried into effect by the erection of the Amphitheatrum Flavium, or, as it has been called since the time of Bede, the Colosseum or Cosseaum, a name said to be derived from the Colossus of Nero, which stood close by.

This wonderful building, which for magnitude can only be compared to the pyramids of Egypt, and which is perhaps the most striking monument at once of the material greatness and the moral degrada
tion of Rome under the empire, was commenced by Vespasian, but at what precise time is uncertain; for the genuineness of the medal, which is quoted by Lipsius, as placing its commencement in his eighth consulship, A.D. 77, is more than doubtful. (Rasche, Lex. Univ. Rci. Num. vol. v. pt. 2. p. 1017; Eckehl, Doct. Num. Vet. vol. vi. p. 840.) It was completed by Titus, who dedicated it in A.D. 80, when 5000 animals of different kinds were slaughtered. (Suet. Tit. 7; Dion Cass. lixvi. 25.) From the somewhat obscure account of an old writer (Catal. Imp. Vienn. p. 243, Ronc.), we learn that Vespasian carried the building so far as to dedicate the first three ranges of seats, that Titus added two ranges more, and that Domitian completed the building magnifice ad opea. Without professing to be able to explain these statements fully, we may observe that it is extremely probable, as will be seen more clearly from the description of the building, that Titus would dedicate the amphitheatre as soon as it was fit for use, without waiting for the final completion of the upper and less essential parts.

There is an ecclesiastical tradition, but not entitled to much credit, that the architect of the Colosseum was a Christian, and afterwards a martyr, named Gaudencius, and that thousands of the captive Jews were employed in its erection. The Flavian amphitheatre, from its enormous
size, rendered the subsequent erection of any other such building in Rome perfectly unnecessary. It became the spot whither people met together to witness those sanguinary exhibitions, the degrading effects of which on the Roman character can hardly be over-estimated. It was thoroughly repaired by Antoninus Pius. (Capit. Ant. Pl. 8.) In the reign of Macrinus, on the day of the Vulcacalia, it was struck by lightning, by which the upper rows of benches were consumed, and so much damage was done to other parts of the structure, that the games were for some years celebrated in the Stadium. (Dion Cass. lxxvi. 25.) Its restoration was commenced by Flabagabas and completed by Antoninus Socrates. (Lamprid. sive. Helv. 151; An. Sex. 24.) It was again struck by lightning in the reign of Decius (Hieron. p. 475), but was soon restored, and the games continued to be celebrated in it down to the sixth century. The latest recorded exhibition of wild beasts was in the reign of Theodoric. Since that time it has been used sometimes in war as a fortress, and in peace as a quarry, whole palaces, such as the Cancellaria and the Palazzo Farnese, having been built out of its spoils. At length the popes made efforts to preserve it: Sixtus V. attempted to use it as a wooden factory, but that of the arches into masonry, and of the lower arcades, and, in 1750, Benedict XIV. consecrated it to Christians who had been martyred in it. The best accounts of the building are contained in the following works: Lipsius de Amphitheatrum; Nibby, dell' Anfiteatro Flavio; a supplement to Nardini, vol. i. p. 233, in which we have the most complete historical account; Fea, Notizie degli scavi nell' Anfiteatro Flavio; Bunsen, Beschreibung d. Stadt Rom. vol. iii. p. 319, &c.; Creasy and Taylor, The Architectural Antiquities of Rome; Maffei, Verona Illustrata; Stiicclita, Archivio d. Buonar. Hirt, Geschichte d. Baukunst bei den Alten.

II. Description of the Flavian Amphitheatre. — Notwithstanding the damages of time, war, and spoliation, the Flavian amphitheatre still remains complete enough to give us a fair idea, excepting in some minor details, of the structure and arrangements of this description of building. The notices of the ancient authors are extremely scanty; and Vitruvius of course fails us here altogether; indeed, this description of building was so completely new in his time, that only once does the bare word amphitheatrum occur in his book (i. 7). We derive important aid from the remains of amphitheatres in the provinces of the ancient Roman empire. We shall first describe the Colisseum, and then mention the chief points of difference between it and these other amphitheatres.

The very site of the Flavian amphitheatre, as of most others, furnishes an example of the prodigious contempt of labour and expense which the Roman emperors displayed in their great works of architecture. The Greeks, in choosing the sites of their theatres, almost always avoided themselves of some natural hallow on the side of a hill; but the Roman amphitheatres, with few exceptions, stand upon a plain. The site of the Colisseum was in the middle of the city, in the valley between the Caelius, the Esquiline, and the Velia, on the marshy ground which was previously the pond of Nero’s palace, stagnum Nerovis (Suet. Vesp. 9; Martial. de Spect. ii. 5). No mere measures can give an adequate conception of this vast structure, the dimensions and arrangements of which were such as to furnish seats for 87,000 spectators, round an arena large enough to admit the movements of several hundred animals at once, for the evolutions of mimic sea-fights, and for the exhibition of artificial forests; with passages and staircases to give ingress and egress, without confusion, to the immense mass of spectators, and others for the attendants on the arena; demes for the thousands of victims devoted to destruction; channels for the rapid influx and outlet of water when the arena was used for naumachias; and the means for the removal of the carcasses, and the other abominations of the arena. Admirable pictures of the magnitude and magnificence of the amphitheatre and its spectacles are drawn in the Essais de M. de Sainte-Geneviève (iii. 6.), and in the latter part of Gibbon’s twelfth chapter. As a general description of the building the following passage of Gibbon is perfect: — "It was a building of an elliptic figure, founded on fourscore arches, and rising, with four successive orders of architecture, to the height of 140 [157] feet. The outside of the edifice was incrusted with marble, and decorated with statues. The slopes of the vast concave, which formed the inside, were filled and surrounded with sixty or eighty rows of seats, of marble likewise, covered with cushions, and capable of receiving 30,000 spectators. Sixty-four vomitories (for by that name the doors were very aptly distinguished), poured forth the immense multitude; and the entrances, passages, and staircases, were contrived with such exquisite skill, that each person, whether of the senatorial, the equestrian, or the plebeian order, arrived at his destined place without trouble or confusion. Nothing was omitted, which, in any respect, could be subservient to the convenience and pleasure of the spectators. They were protected from the sun and rain by an ample canopy, occasionally drawn over their heads. The air was continually refreshed by the playing of fountains, and profusely impregnated by the grateful scent of aromatics. In the centre of the edifice, the arena, or stage, was strewed with the finest sand, and successively assumed the most different forms. At one moment it seemed to rise out of the earth, like the garden of the Hesperides, and was afterwards broken into the rocks and caverns of Thrace. The subterranean pipes conveyed an inexhaustible supply of water; and what had just before appeared a level plain, might be suddenly converted into a wide lake, covered with armed vessels, and replenished with the monsters of the deep. In the decoration of these scenes, the Roman emperors displayed their wealth and liberality; and we read on various occasions that the whole furniture of the amphitheatre consisted either of silver, or of gold, or of amber. The poet who describes the games of Carinus, in the character of a shepherd, attracted to the capital by the fame of their magnificence, affirms that the nets designed as a defence against the wild boars were goss wire; that the porticoes were gilded; and that the belt or circle which divided the several ranks of spectators from each other, was studded with a precious mosaic of beautiful stones." The following ground-plan, external elevation, and section, are from Hirt, and contain of course some conjectural details. The ground plan is so arranged as to exhibit in each of its quarters the plan of each of the stories: thus, the lower right
AMPHITHEATRUM.

hand quarter shows the true ground-plan, or that of the lowest story; the next on the left shows a plan of the erections on the level of the second row of exterior columns, as well as the seats which sloped down from that level to the lower one; the next quarter shows a similar plan of the third order, and the upper right-hand quarter exhibits a view of the interior as it would appear to an eye looking vertically down upon it. The dotted lines on the arena are the radii, and their points of intersection the centres, of the several arcs which make up the ellipses.

GROUND PLAN OF THE FLAVIAN AMPHITHEATRE.

LONGITUDINAL ELEVATION OF THE FLAVIAN AMPHITHEATRE.

LONGITUDINAL SECTION OF THE FLAVIAN AMPHITHEATRE.
This structure, like all the other existing amphitheatres, is of an elliptical form. It covers nearly six acres of ground. The plan divides itself naturally into two concentric ellipses, of which the inner constituted the arena or space for the combats, while the ring between this and the outer circumference was occupied by the seats for the spectators. The lengths of the major and minor axes of these ellipses are, respectively, 287 feet by 180, and 620 feet by 513. The width of the space appropriated to spectators is, therefore, 156 feet all round the building. The ratio of the diameters of the external ellipse is nearly that of 6 to 5, which becomes exactly the proportion, if we take in the substructions of the foundation. Of course, the ratio of the diameters of the arena is different, on account of the diminished size: it is, in fact, nearly as 8 to 5. The minor axis of the arena is here, and generally, about one-third of that of the outer ellipse. The material used was stone, in large blocks, fastened together, where necessary, by metal clamps. The exterior was faced with marble and adorned with statues. The external elevation requires little description. It is divided into four stories, corresponding to the tiers of corridors by which access was gained to the seats at different levels. These corridors are connected with the external air by eighty arched openings in each of the three lower stories. To the piers which divide these arches are attached three-quarter columns, that is, columns one-fourth of whose circumference appears to be buried in the wall behind them. Thus, each of the three lower stories presents a continuous façade of eighty walls, radiating inwards from the inner piers of the Corinthian order; and the wall between them is pierced with windows, in the alternate intercolumniations only, and above, of course, forty in number. The whole is crowned with a bold entablature, which is pierced with holes above the brackets which supported the feet of the masts upon which the velarium or awning was extended: and above the entablature is a small attic. The whole height of that part of the building which remains entire, namely, about three-eighths of the whole circumference, is 157 feet: the stories are respectively about 30, 38, 38, and 44 feet high. The massiveness of the crowning entablature, the height of the upper story, and the great surface of blank wall in its intercolumniations, combine to give the elevation somewhat heavy appearance; while the projecting cornices of each story, intercepting the view from below, take off very much from the apparent height of the building. Indeed, it would be a waste of words to attempt to specify all the architectural defects of the composition.

The stone used in the building is a species of travertine: some of the blocks are as much as five feet high, and eight or ten feet long; and it is remarkable, that all those which form the exterior have inscribed upon them small numbers or signs, which evidently indicate the place of each in the building, and which prove how great was the care taken to adapt every single stone to the form of the whole edifice. In some parts of the interior large masses of brickwork and tufa are seen: and in the upper part there are fragments of other buildings worked in; but this, no doubt, happened in some of the various repairs.

There are coins extant, bearing on the reverse a view of the amphitheatre, so arranged as to show not only the outside, but a portion of the interior also. It is from them that we learn the fact, that the outer arches of the second and third stories were decorated with statues in their openings, unless, indeed, the figures shown in the arches are meant for rude representations of the people passing through the outer colonnade. These coins also show, on the highest story, in the alternate spaces between the pilasters, circles against the wall, corresponding to the windows in the other alternate spaces; they are, perhaps, the cippus mentioned by the old author cited above, that is, ornamental metal shields hung there to decorate the building. There are several coins of Titus and Domitian of this type (Eckhel, Doct. Num, Vet. vol. vi. pp. 357—359, 375). There are similar coins of Gordian, which are, however, very inferior in execution to those of Titus and Domitian. (Eckhel, vol. vii. p. 271.) The coins of Titus and Domitian also show a range of three stories of columns by the side of the amphitheatre, which it gave access at the northern extremity of its minor axis, as shown on the plan. At the other extremity of this axis was the entrance from the Palatine.

The eighty arches of the lower story (except the four at the extremities of the axes) formed the entrances for the spectators, and gave admission to a corridor, running uninterruptedly round the building, behind which again is another precisely similar corridor. (See the plan and section.) The space behind the second corridor is divided by eighty walls, radiating inwards from the inner piers of the second corridor; which support the structure, and between which are partly staircases leading to the upper stories, and partly passages leading into a third corridor, which, like the first and second, runs round the whole building. Beyond this corridor the radiating walls are again continued, the spaces between them being occupied, as before, partly by staircases leading on the one side to the podium, and on the other to the lower range of seats (maenienium), and partly by passages leading to a fourth continuous corridor much lower and smaller than the others, which was divided from the arena by a massive wall (called podostolium) the top of which was adorned with statues;

AMPHITHEATRUM.

The stone used in the building is a species of travertine: some of the blocks are as much as five feet high, and eight or ten feet long; and it is remarkable, that all those which form the exterior have inscribed upon them small numbers or signs, which evidently indicate the place of each in the building, and which prove how great was the care taken to adapt every single stone to the form of the whole edifice. In some parts of the interior large masses of brickwork and tufa are seen: and in the upper part there are fragments of other buildings worked in; but this, no doubt, happened in some of the various repairs.

There are coins extant, bearing on the reverse a view of the amphitheatre, so arranged as to show not only the outside, but a portion of the interior also. It is from them that we learn the fact, that the outer arches of the second and third stories were decorated with statues in their openings, unless, indeed, the figures shown in the arches are meant for rude representations of the people passing through the outer colonnade. These coins also show, on the highest story, in the alternate spaces between the pilasters, circles against the wall, corresponding to the windows in the other alternate spaces; they are, perhaps, the cippus mentioned by the old author cited above, that is, ornamental metal shields hung there to decorate the building. There are several coins of Titus and Domitian of this type (Eckhel, Doct. Num, Vet. vol. vi. pp. 357—359, 375). There are similar coins of Gordian, which are, however, very inferior in execution to those of Titus and Domitian. (Eckhel, vol. vii. p. 271.) The coins of Titus and Domitian also show a range of three stories of columns by the side of the amphitheatre, which it gave access at the northern extremity of its minor axis, as shown on the plan. At the other extremity of this axis was the entrance from the Palatine.

The eighty arches of the lower story (except the four at the extremities of the axes) formed the entrances for the spectators, and gave admission to a corridor, running uninterruptedly round the building, behind which again is another precisely similar corridor. (See the plan and section.) The space behind the second corridor is divided by eighty walls, radiating inwards from the inner piers of the second corridor; which support the structure, and between which are partly staircases leading to the upper stories, and partly passages leading into a third corridor, which, like the first and second, runs round the whole building. Beyond this corridor the radiating walls are again continued, the spaces between them being occupied, as before, partly by staircases leading on the one side to the podium, and on the other to the lower range of seats (maenienium), and partly by passages leading to a fourth continuous corridor much lower and smaller than the others, which was divided from the arena by a massive wall (called podostolium) the top of which was adorned with statues;
the second story we have the two outer colonnades repeated, and the radiating walls of the first block are continued up through this story; and between them are staircases leading out on to the second range of seats, and passages leading into a small inner corridor, from which access is obtained to a sort of terrace (praecinctio) which runs round the building between the first and second ranges of seats, and increases the facilities for the spectators getting to their proper places. Sloping down from this praecinctio to the level of the top of the podium, and supported by the inner series of radiating walls, are the lower series of seats. On the third story (above the floor of which the details are almost entirely conjectural), we have again the double colonnade, the inner wall of which rises immediately behind the top of the second range of seats, with only the interval of a narrow praecinctio, to which access was given by numerous doors in the wall just mentioned, which was also pierced with windows. Above the outer corridor of this story is a mezzanine, or small middle story, in front of which and above the inner colonnade were a few tiers of wooden benches for the lowest class of spectators. Above this mezzanine was a gallery, which ran right round the building, and the front of which is supposed to have been formed by a range of columns. It seems that the terrace formed by the top of this gallery would be also available for spectators. And, lastly, the very summit of the wall was formed into a sort of terrace which was, no doubt, occupied by the men who worked the ropes of the velarium. The doors which opened from the staircases and corridors on to the interior of the amphitheatre were designated by the very appropriate name of vomitoria. The whole of the interior was called cavea. The following section (from Hirt) exhibits these arrangements as clearly as they can be shown without the aid of perspective.

**SECTION OF THE CORRIDORS, STAIRS, AND SEATS.**

I. II. III. IV. The four stories of the exterior.
A. The arena.
B. The podium.
C. D. E. F. The four corridors.
G. H. I. The three maeniana.
K. The upper gallery; L. The terrace over it.
R. The space on the summit of the wall for the managers of the velarium.
Z. The steps which surrounded the building on the outside.
a. Stairs from the third colonnade to the podium.
b. Short transverse steps from the podium to the first maenianum. (Compare the plan.)

c. d. Stairs from the ground story to the second ; whence the second maenianum was reached in two ways, e. and q.

e. Steps to the first praecinctio, from which there were short transverse steps (f.) to the second maenianum.

f. Stairs leading direct from the corridors of the second story to the second maenianum, through the vomitorium a.

§ 4. The Avail just mentioned appears to have consisted of fourteen rows of stone of one and a half feet thick, which were first made by Julius Caesar, and were dispensed with by Nero, in order to save marble. The seats appropriated to the equestrian order. The seats appropriated to the senators and equites were covered with cushions (pulvillis), which were first used in the time of Caligula. (Juv. Sat. iii. 154; Dion, lix. 7.) Then, after a horizontal space, termed a praecinctio, and forming a continued landing-place from the several staircases which opened on to it, succeeded the second maenianum, where were the seats called popularia (Suet. Domitian. 4), for the third class of spectators, or the populus. Behind this was the second praecinctio, bounded by the high wall already mentioned; above which was the third maenianum, where there were only wooden benches for the pulvillis, or common people. (Suet. Octav. 44.)

b. Stairs from the second story to the mezzanine, or middle story, whence access was obtained to the third maenianum by passages (g).

l. Stairs in the mezzanine, leading to the upper part of the third maenianum, and to the gallery k.

m. Steps from the gallery to the terrace over it.

n. Steps from that terrace to the summit.

n. p. Grated openings to light the two inner corridors.

q. See under b.

a. Windows to light the mezzanine.

t. Windows of the gallery.

u. Rcats, and v. loop, for the masts of the velum.

The arena was surrounded by a wall of sufficient height to guard the spectators against any danger from the wild beasts, namely about fifteen feet. A further protection was afforded, at least sometimes, by a network or trellis of metal; and it is mentioned, as an instance of the profuse ostentation which the emperors were so fond of displaying, that Nero, in his amphitheatre, had this trellis gilt, and its intersections ornamented with bosses of amber. (Plin. H. N. xxxvii. 3. s. 11. § 2.) The wall just mentioned appears to have been faced with marble, and to have had rollers suspended against it as an additional protection against the possibility of the wild beasts climbing it. (Lips. de Amph. 12.) The terrace on the top of this wall, which was called podium (a name sometimes also applied to the wall itself), was no wider than to be capable of containing two, or at the most three ranges of movable seats, or chairs. This, as being by far the best situation for distinctly viewing the sports in the arena, and also more commodiously accessible than the seats higher up, was the place set apart for senators and other persons of distinction, such as the ambassadors of foreign states (Suet. Octav. 44; Juv. Sat. ii. 143, &c.); the magistrates seem to have sat here in their curule chairs (Lipsius de Amph. 11) ; and it was here, also, that the emperor himself used to sit, in an elevated place called suggeratus (Suet. Caes. 76; Plin. Paneg. 51), or cubiculum (Suet. Nero, 12); and likewise the person who exhibited the games, on a place elevated like a pulpit or tribunal (editoris tribunal). The vestal virgins also appear to have had a place allotted to them on the podium. (Suet. Octav. 44.

Above the podium were the gradus, or seats of the other spectators, which were divided into stories called maeniana. The whole number of seats is supposed to have been about eighty. The first maenianum, consisting of fourteen rows of stone of marble seats, was appropriated to the equestrian order. The seats appropriated to the senators and equites were covered with cushions (pulvillis), which were first used in the time of Caligula. (Juv. Sat. iii. 154; Dion, lix. 7.) Then, after a horizontal space, termed a praecinctio, and forming a continued landing-place from the several staircases which opened on to it, succeeded the second maenianum, where were the seats called popularia (Suet. Domitian. 4), for the third class of spectators, or the populus. Behind this was the second praecinctio, bounded by the high wall already mentioned; above which was the third maenianum, where there were only wooden benches for the pulvillis, or common people. (Suet. Octav. 44.)

The open gallery at the top was the only part of the amphitheatre, in which women were permitted to witness the games, except the vestal virgins, and perhaps a few ladies of distinction and influence who were suffered to share the space appropriated to the vestals (Suet. Octav. 44). The seats of the maeniana did not run in unbroken lines round the whole building, but were divided into portions called cunei (from their shape), by short flights of stairs which facilitated the access to the seats. (Suet. Octav. 44; Juv. Sat. vi. 61.) See the plan, and the annexed section of a small portion of the seats.
order to main space for the spectators. (Suet. Caes. 39 ; Plin. H. N. vii. 7 ; Lipsius de Amph. 12.)

The space of the arena was entirely open, except that perhaps there was, in the centre, an altar of Diana, or Pluto, or of Jupiter Latarius, on which, it is inferred from some passages of the ancient authors, that a bestiarius was sacrificed at the opening of the games; but the evidence is very slight. (Lips. de Amph. 4.) There were four principal entrances to it, at the extremities of the axes of the ellipse, by passages which led directly from the four corresponding arches of the exterior: there were also minor entrances through the wall of the podium. There is a difficulty about the position of the dens of the wild beasts. The rapidity with which vast numbers of animals were let loose into the arena proves that the dens must have been close to it. The spaces under the seats seem to have been devoted entirely to the passage of the spectators, with only the exception of the innermost corridor, the entrances from which to the arena suggest the probability that it was subsidiary to the arena; but, even if so, it was probably used rather for the introduction and removal of the animals, than for their safe keeping. Some have supposed dens in the wall of the podium: but this is quite insufficient. In the year 1013, the arena was excavated, and extensive substructions were discovered, which, it has been supposed, were the dens, from which the animals were let loose upon the arena through trap-doors. The chief difficulty is to reconcile such an arrangement with the fact that the arena was frequently flooded and used for a naval combat, and that too in the intervals between the fights of wild-beasts. (Calpurn. Eclog. vii. 64, 73; the whole poem is a very interesting description of the games of the amphitheatre.) [NAUMACHIA.] All that can be said with any approach to certainty is, that these substructions were either dens for the animals, or channels for water, and possibly they may have been so arranged as to combine both uses, though it is difficult to understand how this could have been managed. The only method of solving the difficulty in these cases in which a naumachia took place between the venationes, appears to be, to assume that the animals intended for the second venatio were kept in the innermost colonnade, or in dens in its immediate vicinity during the time of the naumachia; unless, which seems to us quite incredible, there was any contrivance for at the same time admitting the air to, and excluding the water from, their cells beneath the arena. In the amphitheatre at Verona, there are remains of channels for water under the arena, communicating with an opening in its centre; but some antiquaries believe that these were only intended for draining off the rain water.

It is unnecessary to attempt a detailed description of the statues and other ornaments with which the amphitheatre was adorned; but the velarium, or awning, by which the spectators were sheltered from the sun, requires some explanation, which will be found under VELUM. The space required for the working of the velarium, and the height necessary for keeping it from bending down by its own weight so low as to obstruct the view from the upper benches, are probably the reasons for the great disproportion between the height of the upper part of the amphitheatre, and the small number of spectators accommodated in that part.

The luxurious appliances of fountains of scented water to refresh the spectators, and so forth, are sufficiently described in the passage already quoted from Gibbon (Comm. Lucret. 159). iii. 300, originally.

III. Other Amphitheatres.—The Flavian amphitheatre, as has been already stated, was, from the time of its erection, the only one in Rome; for the obvious reason that it was sufficient for the whole population. The little Amphitheatrum Castrense was probably only intended for the soldiers of the guard, who amused themselves there with fights of gladiators. But in the provincial cities, and especially the colonies, there were many amphitheatres. Indeed, it is not a little interesting to observe the contrast between the national tastes of the Greeks and Romans, which is indicated by the remains of theatres in the colonies of the former, and of amphitheatres in those of the latter. The immense expense of their construction would, however, naturally prevent the erection of many such buildings as the Coliseum. (Cassiod. Ep. v. 42.) The provincial amphitheatres were, probably, like the earlier ones at Rome itself, generally built of wood, such as those at Puteoli and Fidenae, already mentioned. Of these wooden amphitheatres, the Flavian amphitheatre was possibly used rather for the introduction and removal of the animals, than for their safe keeping. Some of them only had two. Of the Veronese amphitheatre, the outer wall and colonnade are entirely gone, excepting four arches; but the rest of the building is almost perfect. When complete, it had seventy-two arches in the outer circle, and, of course, the same number of radiating walls, with their passages and staircases; the lengths of the axes of the outer ellipse were 500 and 404 feet, those of the arena, 242 and 146. It was probably built under Domitian and Nerva. (Maffei, Verona Illustrata.) The next in importance is that at Pisa, and of amphitheatres in those of the latter. The remains of theatres in the colonies of the Greeks and Romans, which is indicated by the contrast between the national tastes of the Romans and especially the colonies, there were many amphitheatres. The external wall, which is nearly perfect, consists of a ground storey and upper storey, each pierced with sixty arches, and is surrounded by an attic. Its height, from the level of the ground, is above 70 English feet. The lower or ground storey is adorned with pilasters, and the upper with Tuscan or Doric columns. The attic shows the holes destined to receive the posts on which was stretched the awning that covered the amphitheatre. The rows of seats are computed to have been originally 32 in number. There were four principal entrances. The amphitheatre has been computed to hold 17,000 persons: it was built with great solidity, without cement. (Pen. Cyclop. art. Nimes.) That at Arles was three stories high, and has the peculiarity of being built on uneven ground, so that the lowest story is, for the most part, below the level of the surface, and the principal entrances are on the second story. (For a detailed description, see Guis, Description de l'Amphithéâtre d'Arles, 1665; and Pen. Cyclop,
AMPHORA.

Art. Arles.) Both these amphitheatres belong probably to the time of the Antonines. (Maffeî, de Amph. Gall.) The amphitheatre at Pola stands on the side of a hill, and is higher on one side than on the other. There is little to remark respecting the other amphitheatres, except that a fragment of an inscription, found in that at Capua, informs us that it was built under Hadrian, at the cost of the inhabitants of the city, and was dedicated by Antoninus Pius; and, concerning that of Pompeii, that the earthquake, which preceded the eruption by which the city was buried, injured the amphitheatre so much, that antiquarians have been disappointed in looking for any new information from it; there is an excellent description of it in the work entitled Pompeii, vol. i. c. 9. There are traces of amphitheatres of a ruder kind, chiefly of earth, in various parts of our own country, as at Dorchester, Silchester, Caerleon, and Redruth.

IV. Uses of the Amphitheatre.—This part of the subject is treated of under GLADIATORES, NAUMACHIA, and VENATIONES. This is not the place to discuss the influence of the spectacles of the amphitheatre on the character and destinies of the Roman people; some good remarks on the subject will be found in the Library of Entertaining Knowledge, Menageries, vol. ii. c. 12. [P.S.]

AMPHOMOΣIA. [AMPHORIA.] AMPHORA (ἀμφορεύς, old form ἀμφορεύς, Hom. Il. xxiii. 107; Od. x. 164, et alib.; Schol. in Apoll. Rhod. iv. 1187; Simon, in Anth. Pal. xiii. 19). A large vessel, which derived its name from its being made with a handle on each side of the neck (from ἀμφι, on both sides, and φως to carry), whence also it was called δίκτα, that is, a vessel with two ears (Σίωτος, Σίωτος στράτων or κάδσερας. Plat. Hipp. Mag. p. 298, d.; Ath. xi. p. 473; Moeris s. v. ἀμφορεύς; Hor. Carm. i. 9, 3). The form and size varied, but it was generally made tall and narrow, and terminating in a point, which could be let into a stand or into the ground, to keep the vessel upright; several amphorae have been found in this position in the cellars at Pompeii. The following cut represents amphorae from the Townley and Elgin collections in the British Museum.

The usual material of the amphora was earthenware (Hor. de Ar. Poët. 21), whence it was also called κέλα (Curt. i. 20. 2); but Homer mentions them of gold and of stone (II. xxii. 92; Od. xxiv. 74, xiii. 105); and in later times glass amphorae were not uncommon (Petron. 34); several have been found at Pompeii: Nepos mentions, as a great rarity, amphorae of onyx, as large as Chian cald (ap. Plin. H. N. xxxvi. 7. s. 12). The amphora was often made without handles. The name of the maker, or of the place of manufacture, was sometimes stamped upon them: this is the case with two in the Elgin collection, Nos. 298 and 244. [FCTIL.] Amphi orae were used for the preservation of various things which required careful keeping, such as wine, oil, honey, grapes, olives, and other fruits (Hom. H. xxiii. 170; Cato, R. R. x. 2; Colum. R. R. xii. 16, 47; Hor. Elog. ii. 15; Cic. c. Ver. iv. 74); for pickled meats (Xen. Amb. v. 4. § 20); and for molten gold and lead (Herod. iii. 96; Nepos, Hyp. 9). There is in the British Museum a vessel resembling an amphora, which contains the fine African sand used by the athletes. It was found, with seventy others, in the baths of Tium, in 1772. Respecting the use of the amphora in the streets of Rome, see Petron. 70, 79; Propert. iv. 5. 73; Macrob. Sat. ii. 12; and the commentators on Lucretius, ib. 1923. Homer and Sophocles mention amphorae as used for cinerary urns (H. xxiii. 91, 92; Soph. Fr. 303, Dind.); and a discovery was made at Salona, in 1825, which proves that they were used as collins: the amphora was divided in half in the direction of its length to receive the corpse, and the two halves were put together again and buried in the earth: the skeletons were found still entire. (Steinbuchel, Alterthum, p. 67.) Amphorae of particular kinds were used for various other purposes, such as the amphora nasitera for irrigation (Cato, R. R. 11. § 3), and the amphora spartea, which was perhaps a wicker amphora for gathering grapes in. (Ibid. § 2.)

The most important employment of the amphora was for the preservation of wine: its use for this purpose is fully described under VINUM. The following woodcut, taken from a painting on the wall of a house at Pompeii, represents the mode of filling the amphora from a wine-cart.

The name *amphora* was also applied both by the Greeks and the Romans to a definite measure of capacity, which, however, was different among the two peoples, the Roman amphora being only two-thirds of the Greek ἀμφορεῖς. In both cases the word appears to be an abbreviation, the full phrase being in Greek ἀμφορεῖς μετρὴτις (the standard amphora), and in Latin amphora quadrantal (the cubic amphora). Respecting the measures themselves, see *Metretes, Quadrantal*.

At Rome a standard amphora, called *amphora Capitolina*, was kept in the temple of Jupiter on the Capitol (Rhemn. Fam. de Pond. 61; Capitol. *Maxim.* 4). The size of ships was estimated by amphorae (Cic. ad Fam. xii. 18; Liv. xxi. 63), and the produce of a vineyard was reckoned by the number of *amphorae*, or of *cules* (of twenty amphorae each), which it yielded. [P.S.]

**AMPLIA'TIO.** [Judicium.]

**AMPELLA** (Αἵκευσος, βομβύλιος), a bottle, usually made either of glass or earthenware, rarely of more valuable materials. Bottles both of glass and earthenware are preserved in great quantities in our collections of antiquities, and their forms are very various, though always narrow-mouthed, and generally more or less approaching to globular. From their round and swollen shape, Horace applies the word, as the Greeks did λίκευς, to indicate grand and turgid, but empty, language. (Hor. *Ep.* i. 3. 14, de Ar. Poét. 97.) Bottles were used for holding all kinds of liquors, and are mentioned especially in connection with the bath. Every Roman took with him to the bath a bottle of oil (*amphulla olearia*), for anointing the body after bathing, and as such bottles frequently contained perfumed oils we read of *ampullae cosmiinae*. (Mart. iii. 82. 26.) A bottle of this kind is figured under *Balneum*.

The dealer in bottles was called *ampullarius*, and part of his business was to cover them with leather (corium). A bottle so covered was called *amphulla rubida*. (Plut. *Rud.* iii. 4. 51, *Stich.* ii. 1. 77, compared with *Festus*, s. v. *Rubida*.)

**AMPHYX, AMPYCTER** (ἅμηκς, ἀμύκτηρ), called by the Romans *frontale*, was a broad band or plate of metal, which Greek ladies of rank wore upon the forehead as part of the head-dress. (II. xxii. 468—470; *Aeschy. Supp.* 431; *Theocr.* i. 33.) Hence it is attributed to the female divinities. Artemis wears a frontal of gold (*χρυσώματα θυσία*, *Eurip. Hee.* 64); and the epithet *χρυσάκτις* is applied by Homer, Hesiod, and Pindar to the Muses, the Hours, and the Fates. From the expression τῶν κατάμαχων θεών in a fragment of Pindar, we may infer that this ornament was sometimes made of blue steel (*κάσων*) instead of gold; and the Scholiast on the above cited passage of *Euripides* asserts, that it was sometimes enriched with precious stones.

The *frontal of a horse* was called by the same name, and was occasionally made of similar rich materials. Hence, in the Iliad, the horses which draw the chariots of Hera and of *Ares* are called χρυσάκτιοι.

The armoured woodcut exhibits the frontal on the head of *Pegasus*, taken from one of Sir William Hamilton's vases, in contrast with the correspondingly ornament as shown on the heads of two females in the same collection.

Frontals were also worn by elephants. (Liv. xxxvii. 40.)

**AMUSSIS** or **AMUSSUM**, a carpenter's and mason's instrument, the use of which was to obtain a true plane surface; but its construction is difficult to make out from the statements of the ancient writers. It appears clearly from Vitruvius (i. 6, § 6) that it was different from the *regula* (straight rule), and from the *libella* (plumbline or square), and that it was used for obtaining a truer surface, whether horizontal or perpendicular, than those two instruments together would give. It is defined by the grammarians as a *regula or tabula*, made perfectly plane and smooth, and used for making work level and for smoothing stones (*Regula ad quam aliquid creatus, Festus, s. v. amussis est ascensum levigatum, et est aequalis tabulas quaedam, qua vultur ad saxa leviganda, Var. apr. Non. i. 28*); and another grammarian very clearly poses the men to have worn frontals in Lydia. They appear to have been worn by the Jews and other nations of the East. (Deut. vi. 8, xi. 18.)

**AMULETED** (περιστους, περιμάς, φωλακτήριον), an amulet. This word in Arabic (Hamlet) means *that which is suspended*. It was probably brought by Arabian merchants, together with the articles to which it was applied, when they were imported into Europe from the East. It first occurs in the *Natural History* of Pliny.

An amulet was any object—a stone, a plant, an artificial production, or a piece of writing—which was suspended from the neck, or tied to any part of the body, for the purpose of counteracting poison, curing or preventing disease, warding off the evil eye, aiding women in childbirth, or obviating calamities and securing advantages of any kind.

Faith in the virtues of amulets was almost universal in the ancient world, so that the whole art of medicine consisted in a very considerable degree of directions for their application; and in proportion to the quantity of amulets preserved in our collections of antiquities, is the frequent mention of them in ancient treatises on natural history, on the practice of medicine, and on the virtues of plants and stones. Some of the amulets in our museums are merely rough unpolished fragments of such stones as amber, agate, cornelian, and jasper; others are wrought into the shape of beetles, quadrupeds, eyes, fingers, and other members of the body. There can be no doubt that the selection of stones either to be set in rings, or strung together in necklaces, was often made with reference to their reputed virtues as amulets. (Pfin. *H. N.* xxv. 9. s. 67, xxix. 4. s. 19, xxx. 10. s. 24, xxxvii. 8. s. 37.)

**FASCINUS.** [J.Y.]
describes it as a plane surface, covered with red ochre, which was placed on work, in order to test its smoothness, which it of course did by leaving the mark of the red ochre on any projection. (Amassin est talus: rubricata quae deinitur examinandae operis gratia, an vectum opus auguit, Sicenna, ap. Chrys. ii. p. 178, Putsch.) There was also a difference of opinion among the grammarians, whether the amassis was only an instrument for trying a level, or a tool for actually making one (Festus, s. v. Examinassis). The amassin was made sometimes of iron (Fest. ibid.), and sometimes of marble (Vitr. l. c.). It gives rise to the adverb amassin, adhamassin, and examinassin, meaning with perfect regularity and exactness. (See Forcellini, Lexicon.) [P. S.]

ANAGLYPTA. [ANAGLYPHA.]

ANAGLYPHA or ANAGLYPTA (άναγλυφα, áναγλύπτα), chased or embossed vessels made of bronze or of the precious metals, which derived their name from the work on them being in relief, and not engraved. (Plin. H. N. xxixii. 11. s. 49; Vitr. Aug. v. 267; Martial. iv. 39; Caselatura; Torutrice.) The name was also applied to sculptured gems. [P. S.]

ANAGLYPTA. [ANAGLYPHA.]

ANAGLYPTA, also called Lectures, were slaves, who were employed by the educated Romans in reading to them during meals or at other times. ( Cic. de Att. i. 12; Corn. Nep. Att. 14; Plin. Ep. i. 15, iii. 5, iv. 36.)

ANAGOGES DEIKE (άναγωγης διήν). If an individual sold a slave who had some secret disease—such, for instance, as epilepsy—without informing the purchaser of the circumstance, it was in the power of the latter to bring an action against the vendor within a certain time, which was fixed by the laws. In order to do this, he had to report (άναγεω) to the proper authorities the nature of the disease; whence the action was called ángogēs diáne. Plato supplies us with some information about this action, but it does not appear whether his remarks apply to the action which was brought in the Athenian courts, or to an imaginary form of proceeding. (Plat. Leg. xi. p. 916; Hesych. s. v. ángogē; Suid. s. v. ángogē, ángēphōia; Meier, Att. Process, p. 525.)

ANAGOGIA (άναγωγία), a festival celebrated at Eryx, in Sicily, in honour of Aphrodite. The inhabitants of the place believed that, during this festival, the goddess went over into Africa, and that all the pigeons of the town and its neighbourhood, after having departed and accompanied her (Aelian, H. A. iv. 2; V. H. i. 14; Athen. ix. p. 388), returned again on the 3rd day after the initiation of the festival (άκαταρχία), after having been brought in the Athenian courts, or to an imaginary form of proceeding. (Plat. Leg. xi. p. 916; Hesych. s. v. ángogē; Suid. s. v. ángogē, ángēphōia; Meier, Att. Process, p. 525.)

ANAKKEIA. [ANAKEION.]

ANAKKEIA (ἄνακκεια) or ANAKEION (ἄνακκειον), a festival of the Dioscuri, whose name was variously pronounced as Ανάκκειος, as they were called, (Hesych. vol. L i. p. 329; Pollux, l. 67.) Athenaeus (vi. p. 253) mentions a temple of the Dioscuri called Ανακκειεν, at Athens; he also informs us (iv. p. 137) that the Athenians, probably on the occasion of this festival, used to prepare for these heroes in the Prytanæum a meat consisting of cheese, a barley-cake, ripe figs, olives, and garlic, in remembrance of the ancient mode of living. These heroes however, received the most distinguished honours in the Dorian and Achæan states, where it may be supposed that every town celebrated a festival in their honour, though it may not have been under the name of άνάκκεια. Pausanias (x. 38. 3) mentions a festival held at Amphissa, called that of the άνάκκεων πάθος: but adds that it was disputed whether they were the Dioscuri, the Curetes, or the Cabeiri. (K. F. Hermann, Lehrb. d. godtessdienst. Alth. d. Griechen, § 62. n. 27.) [L. S.]

ANAKLETIMENA (άνακλητιμένα). [DONARIA.]

ANAKLETERIA (άνακλητερία), the name of a solemnity at which a young prince was proclaimed king, and ascended the throne. The name was chiefly applied to the accession of the Ptolemaic kings of Egypt. (Polyb. Relig. xviii. 38, xxviii. 10.) The prince went to Memphis, and was there adorned by the priests with the sacred diadem, and led into the temple of Phædra, where he vowed not to make any innovations either in the order of the year or of the festivals. He then carried some distance the yoke of Apis, in order to be reminded of the sufferings of man. Rejoicings and sacrifices concluded the solemnity. (Diod. Proem. lib. xxx.) [L. S.]

ANAKLYPETRIA. [MATRIMONIUM.]

ANAKOPSIS or ANAKEISIS. [ANAKEISMA.]

ANAKRINE (άνακρινε) is the preliminary investigation of a case by a magistrate or archon, before it was brought before the courts of justice at Athens. For the purpose of ascertaining whether the action would lie, both parties, the complainant and defendant, were summoned, separately, and if either of them did not appear without a formal request to have the matter delayed (άνακρος), he tacitly pleaded guilty, and accordingly lost the suit. (Demosth. c. Theor. p. 1324.)

The anacrisis began by both the plaintiff and the defendant taking an oath, the former thereby attesting that he had instituted the prosecution with truth and conscientiousness, and the latter, that to the best of his knowledge he was innocent (άνακρος). (Timaeus, Lex. Plat. p. 38, with Ruhnken's note; Diog. Laert. ii. 40; Plat. Apol. Soc. 3.) It was further promised by both, that the subsequent prosecution and defence should be conducted with fairness and justice. (Harpoerat., Suid., Hesych. s. v. άνακρος; Pollux, viii. 122.) If the defendant did not bring forward any objection to the matter being brought before a court of justice, the proceeding was termed άνακροικία. (Demosth. c. Phrom. p. 906, c. Steph. Nid. p. 232.) Such objections might be raised in regard to the incompetency of the court to which the matter was to be referred, or in regard to the form in which the accusation was brought forward, and the like (Lys. c. Panel. p. 732; Pollux, viii. 57); they were always looked upon with suspicion (Demosth. c. Leoch. p. 1097, c. Phrom. p. 944); but, nevertheless, they were not unfrequently resorted to by defendants, either in the form of a διαμαρτυρία, or that of a παραγραφή. In the case of a διαμαρτυρία, the plaintiff had to bring forward witnesses to show that the objections raised by the defendant were unfounded; and if this could not be done, the defendant had a right to bring witnesses to show that his objections
were founded on justice, and in accordance with the laws. But each of the litigant parties might denounced the witnesses of his opponent as false witnesses, and thus a secondary lawsuit might be interwoven with the principal one. If the διαμαρτυρία was resorted to in a civil case, the party who made use of it had to deposit a sum of money (παρασκαταβολή), and when the plaintiff lost his suit, he had to pay to the defendant a fine for having raised an accusation without foundation. In lawsuits about the succession to the property of a person, the διαμαρτυρία was the only form in which objections could be raised. (Bekker, Ανοικοτο, p. 236.) The παραγραφή was an objection in writing, which was made by the defendant, without his employing any witnesses, and which was decided upon in court; and in this, also, the loser had to pay a fine to the party that gained the suit. (Pollux, viii. 5.) When the plaintiff gained his case, the prosecution proceeded in its regular course. The αντιπαραγραφή, however, might be something more than a mere objection, inasmuch as the defendant might turn against the plaintiff, and raise an accusation against him. Such an accusation very commonly consisted in the defendant charging his accuser with having no right to claim the privileges of an Athenian citizen, in consequence of which the latter was prevented from exercising those privileges until he had established his claims to them. This kind of αντιπαραγραφή was frequently a mere device to annoy the plaintiff.

These are, in general, the proceedings in the διακρίσεις; and what thus took place, it is clear that the main part of the evidence on both sides was brought out in the διακρίσεις, and at the regular trial in court the main object was to work upon the minds of the judges through the influence of the orators, with reference to the evidence brought out in the διακρίσεις. The latter, therefore, consisted of the simple evidence which required no oratorical discussion, and which was contained, — 1. in laws; 2. in documents; 3. in the statement of free witnesses; 4. in the statement of accused and accused in court. In all these kinds of evidence, one party might have recourse to the προδοκάσια, that is, call upon the other party to bring forward such other evidence as was not already given. (Demosth. Α. Στέφ., p. 1006, c. Ταντοκ. p. 987, c. Παντακος. p. 978.) There was, however, no strict obligation to comply with such a demand (Demosth. c. Ολυμπ. Α. 1181), and in certain cases the party called upon might, in accordance with established laws, refuse to comply with the demand; for instance, persons belonging to the same family could not be compelled to appear as accused or as accusers. (Demosth. c. Τιμ. p. 1195.) But if the reading of a document, throwing light upon the point at issue, was refused, the other party might bring in a δίκαιος εἰς έμφανος κατάστασιν.

In regard to the laws which either party might adduce in its support, it must be observed, that copies of them had to be read in the anacrisis, since it would have been difficult for any magistrate or judge to fix, at once, upon the laws or laws bearing upon the question at issue. In what manner the authorities were enabled to insure faithful copies of laws being taken of the laws is not known; but it is highly probable that any one who took a copy in the archives, had to get

the signature of some public officer or scribe to attest the correctness of the copy.

Other legal documents, such as contracts (συνθήκαι, συγγραφαί), wills, books of accounts, and other records (Demosth. p. Φόρμ. p. 590), not only required the signature and seal of the party concerned, but their authenticity had to be attested by witnesses. (Demosth. c. Οντ. p. 889.)

Evidence (μαρτυρία) was given not only by free-born and grown-up citizens, but also by strangers or aliens (Demosth. c. Λοκριτ. p. 927, 929, 930, 937), and even from absent persons evidence might be procured (κεκαμαρτυρημένος, Demosth. c. Στέφ. p. 1130; Pollux, viii. 36), or a statement of a deceased person might be referred to (αὐτοψία μαρτυρεῖν, Demosth. c. Στέφ. p. 1130, c. Λεοχ. p. 1097). If any one was called upon to bear witness (καταστημένος), he could not refuse it; and if he refused, he might be compelled to pay a fine of 1000 drachmas (Demosth. de Fals. Leg. Α. 396, 403; Aeschin. c. Τιμορ. p. 71), unless he could establish by an oath (εἰσαγωγή), that he was unable to give his evidence in the case. Any one who had promised to bear witness, and afterwards failed to do so, became liable to the action of δίκαιος λαβομαρτυρημένος αὐτοκράτορος. The evidence of an avowed friend or enemy of either party might be rejected. (Aeschin. c. Τιμορ. p. 72.) All evidence was either taken down in writing as it was given by the witnesses, or in case of its having been sent in previously in writing, it was read aloud to the witness for his recognition, and he had generally to confirm his statement by an oath (Αἴσχωνω).

In lawsuits about the succession to the property of a deceased person might be referred to (αὐτοψία), and even from absent persons evidence might be procured (κεκαμαρτυρημένος, Demosth. c. Στέφ. p. 1130, c. Λεοχ. p. 1097). If any one was called upon to bear witness (καταστημένος), he could not refuse it; and if he refused, he might be compelled to pay a fine of 1000 drachmas (Demosth. de Fals. Leg. Α. 396, 403; Aeschin. c. Τιμορ. p. 71), unless he could establish by an oath (εἰσαγωγή), that he was unable to give his evidence in the case. Any one who had promised to bear witness, and afterwards failed to do so, became liable to the action of δίκαιος λαβομαρτυρημένος αὐτοκράτορος. The evidence of an avowed friend or enemy of either party might be rejected. (Aeschin. c. Τιμορ. p. 72.) All evidence was either taken down in writing as it was given by the witnesses, or in case of its having been sent in previously in writing, it was read aloud to the witness for his recognition, and he had generally to confirm his statement by an oath. (Demosth. c. Στέφ. p. 1115, 1119, 1130, c. Καν. p. 1269; comp. Dion. Lecr. Α. 7.) The testimony of slaves was valid only when extorted by instruments of torture, to which either one party might offer to expose a slave, or the other might demand the torture of a slave. (Demosth. c. Νικοστρ. p. 1254, c. Αρισδ. p. 625, c. Οντ. p. 874, c. Στέφ. p. 1135.)

A distinct oath was required in cases where there were no witnesses or documents, but it has been remarked above that oaths were also taken to confirm the authenticity of a document, or the truth of a statement of a witness. ΤΙΜΟΡΩΡΙΑ.

If the evidence produced was so clear and satisfactory, that there was no doubt as to who was right, the magistrate could decide the case at once, without sending it to be tried in a court. During the anacrisis as well as afterwards in the regular court, the litigant parties might settle their dispute by an amicable arrangement. (Demosth. c. Θεόρ. Α. 1323, c. Μετ. p. 529; Aeschin. de Fals. Leg. Α. 269; Pollux, viii. 143.) But if the plaintiff, in a public matter, dropped his accusation, he became liable to a fine of 1000 drachmae, and incurred partial attima; in later times, however, this punishment was not always inflicted, and in civil cases the plaintiff only lost the sum of money which he had deposited. When the parties did not come to an understanding during the anacrisis, all the various kinds of evidence brought forward were put into a vessel called ἀγιός, which was sealed and entrusted to some officer to be kept until it was wanted on the day of trial. (Demosth. c. Ολυμπ. Α. 1173; Schol. ad Aristoph. Fr. 1427.) The period between the conclusion of the preliminaries and investigation and until the matter was brought before the court, was considered to belong to the anacrisis, and that period...
was differently fixed by law, according to the nature of the charge. In cases of murder, the period was never less than three months, and in others the trial in court commenced on the thirtieth day after the beginning of the anacrisis, as, e.g. in the ἀδίκα ἀρραβώνα, ἀρραβώναζη, μεταλληκαί, and ὑπονόμου (Harpocrat. s. v. ἄρματος δικαία; Pollux, vii. 63, 191), and the day fixed for the trial was called κύριο τοῦ νόμου. (Demosth. c. Mid. p. 544.) In other cases, the day was fixed by the magistrate who conducted the anacrisis. But either party might petition for a postponement of the trial, and the opposite party might oppose the petition by an oath that the ground on which the delay was sought for, was not valid, or unsatisfactory. (Harpocrat. s. v. ἄνθυμος ἀνάλογον; Pollux, vii. 60.) Through such machinations, the decision of a case might be delayed to the detriment of justice; and the annals of the Athenian courts are not wanting in numerous instances, in which the ends of justice were thwarted in this manner for a number of years. (Demosth. c. Mid. p. 541; comp. M. M. Bekker, Anecd. alterth. d. Griechen, p. 629.) C. F. Hermann, Griech. Staatsalth. § 141; Schöman, Antiquit. Jur. publ. Graec. p. 279; Wachsmuth, Hellen. Alterthumskunde, ii. p. 262, & c. 2nd edit.) The examination which an archon underwent before he entered on his office, was likewise called ἀνάκρισις. [L. S.]

ANALEmma (ἀνάλημμα), in its original meaning, is anything raised or supported; it is applied in the plural to walls built on strong foundations. (Hesych. Suid. s. v.) Vitruvius uses the word to describe an instrument which, by marking the lengths of the shadows of a fixed gnomon, showed the different altitudes of the sun at the different periods of the year. (Vitr. ix. 7, 8. 6, 7, Schneider.) It must not be confounded with the modern analemma, which is much more complicated and precise than the instrument described by Vitruvius. [P. S.]

ANAPIESMAT. [Theatr.]

ANATHEMAT. (ἀναθηματα.) [Donaria.]

ANATOCISMUS. [Fktnus.]

ANAUMACHIOU GRAPHEI (ἀναμαχοῦ γραφῆ), was an impeachment of the trierarch who had kept aloof from action while the rest of the fleet was engaged. From the personal nature of the offence and the punishment, it is obvious that this action could only have been directed against the actual commander of the ship, whether he was the sole person appointed to the office, or the active partner of the perhaps many συντελεία, or the mere contractor (ὁ μαθησαμένος). In a cause of this kind, the strategi would be the natural and official judges. The punishment prescribed by law for this offence was a modified atimia, by which the Athenians were enabled to take vengeance upon a community in which an Athenian citizen had been murdered. For when the state or city in whose territory the murder had been committed, refused to bring the murderer to trial, the law allowed the Athenians to take possession of three individuals of that state or city, and to have them imprisoned at Athens, as hostages, until satisfaction was given, or the murderer delivered up, and the property found upon the persons thus seized was confiscated. (Demosth. c. Aristocr. p. 647; Harpocrat. s. v.; Pollux, viii. 49; Suid. and Etym. M. s. v.; Bekker, Anecd. p. 213.) The persons entrusted with the office of seizing upon the three hostages, were usually the trierarchs, and the commanders of ships of war. (Demosth. De Coron. Trier. p. 1232.) This Athenian custom is analogous to the clariagatio of the Romans. (Liv. viii. 14.) [L. S.]

ANDRONITIS. [Domus, Grec.]

ANGARIA (ἀγγαρία, Hdt. ἀγγαρίων) is a word borrowed from the Persians, signifying a system of posting, which was used among that people, and which, according to Xenophon, was established by Cyrus. Horses were provided, at certain distances, along the principal roads of the empire; so that couriers (ἐγγαρίοι), who also, of course, relieved one another at certain distances, could proceed without interruption, both night and day, and in all weathers. (Herod. viii. 98; iii. 126; Xen. Cyrop. vii. 6, § 17; Suid. s. v.) It may easily be supposed that, if the government arrangements failed in any point, the service of providing horses was made compulsory on individuals; and hence the word came to mean compulsory service in forwarding royal messages; and in this sense it was adopted by the Romans under the empire, and is frequently found in the Roman laws. The Roman angaria, also called angariarum exhibiitio or prae- statio, included the maintenance and supply, not only of horses, but of ships and messengers, in forwarding both letters and burdens; it is defined as a personele munus; and there was no ground of exemption from it allowed, except by the favour of the emperor. (Dig. 50. tit. 4. s. 18. §§ 4, 29; tit. 5. s. 10, 11; 49; tit. 18. s. 4. § 1; Cod. Theod. 9. tit. 5; Cod. Justin. 12. tit. 51.) According to Suidas, the Persian word was ori-
originally applied to any bearers of burdens, and next, to compulsory service of any kind. [P. S.]

ANGIPORTUS, or ANGIPORTUM, a narrow lane between two rows of houses; such a lane might have no issue at all, or end in a private house, so as to be what the French call a cul-de-

AGGUSTUS CLAVUS. [CLAVUS.]

ANNI’LE’S MA’XI MI. [Pontifex.]

ANO’NA is used to signify, 1. The produce of the year in corn, fruit, wine, &c., and hence, 2. Provisions in general, especially the corn which, in the latter years of the republic, was collected in the storeshouses of the state and sold to the poor at a cheap rate in times of scarcity; and which, under the emperors, was distributed to the people gratuitously, or given as pay and rewards. [Congiarium; Frumentatio; Praefectus Annonae.] [P. S.]

ANNULUS (Βαρτόναι), a ring. Every freeman in Greece appears to have used a ring; and, at least in the earliest times, not as an ornament, but as an article for use, as the ring always served as a seal. How ancient the custom of wearing rings among the Greeks was, cannot be ascertained; though it is certain, as even Pliny (H. N. xxxiii. 4) observes, that in the Homeric poems there are no traces of it. In works of fiction, however, and in those legends in which the customs of later ages are mixed up with those of the earliest times, we find the most ancient heroes described as wearing rings.

ANNULUS. [Βαρτόναι] a ring. Every freeman in Greece appears to have used a ring; and, at least in the earliest times, not as an ornament, but as an article for use, as the ring always served as a seal. How ancient the custom of wearing rings among the Greeks was, cannot be ascertained; though it is certain, as even Pliny (H. N. xxxiii. 4) observes, that in the Homeric poems there are no traces of it. In works of fiction, however, and in those legends in which the customs of later ages are mixed up with those of the earliest times, we find the most ancient heroes described as wearing rings. (Paus. i. 17, § 3, x. 30, § 2; Eurip. Iphig. Aul. 154, Hippol. 850.) But it is highly probable that the custom of wearing rings was introduced into Greece from Asia, where it appears to have been almost universal. (Herod. i. 195; Plat. de Re Publ. ii. p. 359.) In the time of Solon seal-rings (σφαιραίτες), as well as the practice of counterfeiting them, seem to have been rather common, for Diogenes Laërtius (i. 57) speaks of a law of Solon which forbade the artist to keep the form of a seal (σφαιρίς) which he had sold. (Instances of counterfeited seals are given in Becker’s Charîbles, ii. p. 217.) Whether, however, it was customary as early as the time of Solon to wear rings with precious stones on which figures were engraved, may justly be doubted; and it is much more probable that at that time the figures were cut in the metal of the ring itself, a custom which was never abandoned altogether. Rings without precious stones were called δακτύλοι, the name of the gem being φίλος or σφαιρίς. (Artemid. Onêrocr. i. 5.) In later times rings were worn more as ornaments than as articles for use, and persons now were no longer satisfied with one, but wore two, three, or even more rings; and instances are recorded of those who regularly loaded their hands with rings. (Plat. Hipp. Min. p. 368; Aristoph. Eccles. 632, Nub. 332, with the Schol.; Dinarch. in Demosth. p. 29; Diog. Laërt. v. 1.) Geck

women likewise used to wear rings, but not so frequently as men; the rings of women also appear to have been less costly than those of men, for some are mentioned which were made of amber, ivory, &c. (Artemid. l. c.) Rings were mostly worn on the fourth finger (παράμεσος, Plut. Symm. Fragm. lib. iv.; Gellius, x. 10). The Lae-

The custom of wearing rings was believed to have been introduced into Rome by the Sabines, who are described in the early legends as wearing gold rings with precious stones (γαμματα ανυλυ) of great beauty. (Liv. i. 11; Dionys. ii. 38.) Florus (i. 5) states that it was introduced from Etruria in the reign of Tarquinius Priscus, and Pliny (l. c.) derives it from Greece. The fact that among the statues of the Roman kings and emperors in the capitol of the state, and to Servius Tullius, were represented with rings, can scarcely be adduced as an argument for their early use, as later artists would naturally represent the kings with such insignia as characterized the highest magistrates in later times. But at whatever time rings may have become customary at Rome, thus much is certain, that at first they were always of iron, that they were destined for the same purpose as in Greece, namely, to be used as seals, and that every free Roman had a right to use such a ring. This iron ring was used down to the last period of the republic by such men as loved the simplicity of the good old times. Marius wore an iron ring in his triumph over Jugurtha, and several noble families adhered to the ancient custom, and never wore gold ones. (Plin. H. N. xxxiii. 6.)

When senators in the early times of the republic were sent as ambassadors to a foreign state, they wore during the time of their mission gold rings, which they received from the state, and which were perhaps adorned with some symbolic representation of the republic, and might serve as a state-seal. But ambassadors used gold rings only in public; in private they wore their iron ones. (Plin. xxxiii. 6.) During the course of time it became customary for all the senators, chief magistrates, and at last for the equites also, to wear a gold seal-ring. (Liv. ii. 4, xxxvi. 36; Cic. c. Verr. iv. 25; Liv. xxxii. 12; Flor. ii. 6.) This right of wearing a gold ring, which was subsequently called the jas annuli aurei, or the jas annularum, remained for several centuries at Rome the exclusive privilege of senators, magistrates, and equites, while all other persons continued to use iron ones. (Appian, de Reb. Pun. 104.) Magistrates and governors of provinces seem to have had the right of conferring upon inferior officers, or such persons as had distinguished themselves, the privilege of wearing a gold ring. Verres, when he was appointed as a consul, presented his secretary with a gold ring in the assembly at Smyrneus. (Cic. c. Verr. iii. 76, 80, ad Fam. x. 32; Suet. Cæs. 39.) During the empire the right of granting the annulus aureus belonged to the emperors, and some of them were not very scrupulous in conferring this privilege. Augustus gave it to Meno, a freedman, and to...
to his property. The freedman had thus during the annulus away from those who had received it, e.g., the annulus from those who had received it. Commodus took salvo jure patroni. Maxim, that he should be regarded as an ingenuus, as follows: Hadrian had laid down the general maxim, that he should be regarded as an ingenuus, and to have raised him to the rank of eques, provided he had the requisite equestrian census, and the princeps allowed it; through the jus annuli become an eques, if he had sued for a public office without having the jus annuli at this late period did not even raise a murmur. (Jul. Capitol. 4.) The Lex Visellina (Cod. 9. t. 21) punished those freedmen, who sued for a public office without having the jus annuli aurei. In many cases a libertus might through the jus annuli become an eques, if he had the requisite census, and the princeps allowed it; but the annulus itself no longer included this. Hence the difference in the character of the annulus appears to have differed at different times. The status of a person who had received the jus annuli appears to have differed at different times. During the republic and the early part of the empire the jus annuli seems to have made a person ingenius (if he was a libertus), and to have raised him to the rank of eques, provided he had the requisite equestrian census (Suet. Gall. 10. 14; Tacit. Hist. i. 13; Suet. Vesp. 12; Stat. Silv. iii. 3. 143, &c.) The emperors Severus and Aurelian conferred the right of wearing gold rings upon all Roman soldiers (Herodian. iii. 8; Vopisc. Aurel. 7); and Justinian at length allowed all the citizens of the empire, whether ingenii or libertini, to wear such rings.

The principal value of a ring consisted in the gem itself, which was believed to possess magic powers, and to preserve those who wore them from external dangers. Such persons are Eudamus in Aristophanes (Plut. 883, with the Schol.), and Phertatus in Antiphanes (ap. Athen. iii. p. 123). These rings were for the most part worn by the lower classes, in the form of a pendant from a chain. The practical purposes, for which rings, or rather the figures engraved upon them, were used at all times, were the same as those for which we use our seals. Besides this, however, persons, when they left their houses, used to seal up such parts as contained stores or valuable things, in order to secure them from thieves, especially slaves. (Plut. de Leg. xii. p. 954; Aristoph. Thesmoph. 414; &c.; Plaut. Cas. ii. 1. 1; Cic. ad Fam. xvi. 26; de Ora! ii. 61; Mart. ix. 88.) The ring of a Roman emperor was a kind of state-seal, and the emperor sometimes allowed the use of it to such persons as he wished to be regarded as his representatives. (Dion Cass. Ixvi. 2.) The keeping of the imperial seal-ring was entrusted to an especial officer (cura annulii, Just. Hist. xliii. 5). The signs engraved upon rings were very various, as we may judge from the specimens still extant: they were portraits of ancestors, or friends, subjects connected with the mythology, or the worship of the gods; and in many cases a person engraved upon his seal symbolical allusions to the real or mythical history of his family. (Cic. in Catil. iii. 5; Val. Max. iii. 5. 1; Cic. de Finib. v. 1; Suet. Tib. 58. 63; Plin. H. N. ii. 7, &c.) Sulla thus wore a ring with a gem, on which Jugurtha was represented at the moment he was made prisoner. (Plin. H. N. xxxvii. 4; Plut. Mar. 10.) Pompey used a ring on which three trophies were represented (Dion Cass. xliii. 18), and Augustus at first sealed with a sphinx afterwards with a portrait of Alexander the Great, and at last with his own portrait, which was subsequently done by several emperors. (Plin. H. N. xxxvii. 4; Suet. Aug. 50; Dion Cass. li. 3; Spartan. Hadr. 26.)

The part of the ring which contained the gem was framed in it, or rather in the workmanship of the engraver. The stone most frequently used was the onyx (σαρδόνιος), on account of its various colours, of which the artists made the most skilful use. In the art of engraving figures upon gems, the ancients in point of beauty and execution far surpass every thing in this department that modern times can boast of. The ring itself (σφεροθήκη), in which the gem was set, was likewise in many cases a portrait of the owner. The part of the ring which contained the gem was called pala. In Greece we find that some persons fond of show used to wear hollow rings, the inside of which was filled up with a less valuable substance. (Artemid. 1. 6.)

With the increasing love of luxury and show, the Romans, as well as the Greeks, covered their fingers with rings. Some persons also wore rings of immense size, and others used different rings for summer and winter. (Quinctil. xi. 3; Juv. i. 28.) Much superstition appears to have been connected with rings in ancient as well as in more modern times; but this seems to have been the case in the East and in Greece more than at Rome. Some persons made it a lucrative trade to sell rings, which were believed to possess magic powers, and to preserve those who wore them from external dangers. Such persons are Endamus in Aristophanes (Plut. 883, with the Schol.), and Phertatus in Antiphanes (ap. Athen. iii. p. 123). These rings were for the most part worn by the lower

ANNULUS.

Antonius Musa, a physician. (Dion Cass. xlvi. 48, lii. 30.) In A. D. 22 the emperor Tiberius ordained that a gold ring should only be worn by those ingenii whose fathers and grandfathers had had a property of 400,000 sesteria, and not by any freedman or slave. (Plin. H. N. xxxiii. 8.) But this restriction was of little avail, and the ambition for the annulus aureus became greater than it had ever been before. (Plin. Epist. vii. 28, viii. 6; Suet. Gall. 12. 14; Tacit. Hist. i. 13; Suet. Vesp. 12; Stat. Silv. iii. 3. 143, &c.) The emperors Severus and Aurelian conferred the right of wearing gold rings upon all Roman soldiers (Herodian. iii. 8; Vopisc. Aurel. 7); and Justinian at length allowed all the citizens of the empire, whether ingenii or libertini, to wear such rings.

The part of the ring which contained the gem was framed in it, or rather in the workmanship of the engraver. The stone most frequently used was the onyx (σαρδόνιος), on account of its various colours, of which the artists made the most skilful use. In the art of engraving figures upon gems, the ancients in point of beauty and execution far surpass every thing in this department that modern times can boast of. The ring itself (σφεροθήκη), in which the gem was set, was likewise in many cases a portrait of the owner. The part of the ring which contained the gem was called pala. In Greece we find that some persons fond of show used to wear hollow rings, the inside of which was filled up with a less valuable substance. (Artemid. 1. 6.)

With the increasing love of luxury and show, the Romans, as well as the Greeks, covered their fingers with rings. Some persons also wore rings of immense size, and others used different rings for summer and winter. (Quinctil. xi. 3; Juv. i. 28.) Much superstition appears to have been connected with rings in ancient as well as in more modern times; but this seems to have been the case in the East and in Greece more than at Rome. Some persons made it a lucrative trade to sell rings, which were believed to possess magic powers, and to preserve those who wore them from external dangers. Such persons are Endamus in Aristophanes (Plut. 883, with the Schol.), and Phertatus in Antiphanes (ap. Athen. iii. p. 123). These rings were for the most part worn by the lower
classes, and then not made of costly material, as may be inferred from the price (one drachma) in the two instances above referred to. There are several celebrated rings with magic powers, mentioned by the ancient writers, as that of Gyges which he found in a grave (Plat. de Republ. ii. p. 359, &c.; Plin. H. N. xxxiii. 4), that of Chariclea (Heliod. Aeth. iv. 8), and the iron ring of Eucrates (Lucian, Philop. 17). Compare Becker, Charicles, vol. ii. p. 398, &c.; Kirchmann, de Annutis, Slosvig. 1657; P. Burmann, de Jure Annullorum, Ultraject. 1734. [L. S.]

ANTEAE. [CALENDARIUM.]

ANQUISTITIO. [JUREX.]

ANSTAEAE HASTAE. [HASTE.]

ANTEAE (παραστάσεις), were originally posts or pillars flanking a doorway. (Festus, s. v. Antes.) They were of a square form, and are, in fact, to be regarded rather as strengthened terminations of the walls than as pillars affixed to them. There is no clear case of the application of the word to detached square pillars, although Nonius explains it by quadræa columnae (1 § 124).

The chief use of antae was in that form of temple, which was called, from them, in antis (vabs ἐν παραστάσει), which Vitruvius (iii. 1. s. 2 § 2, Schn.) describes as having, in front, antae attached to the walls which enclosed the cella; and in the middle, between the antae, two columns supporting the entablature. The ruins of temples, corresponding to the description of Vitruvius, are found in Greece and Asia Minor; and we here exhibit as a specimen a restoration of the front of the temple of Artemis Propylaea, at Eleusis, together with a plan of the pronaos:

Vitruvius gives the following rules for a temple in antis of the Doric order: — The breadth should be half the length; five-eighths of the length should be occupied by the cella, including its front walls, the remaining three-eighths by the pronaos or portico; the antae should be of the same thickness as the columns; in the intercolumniations there should be a marble balustrade, or some other kind of railing, with gates in it; if the breadth of the portico exceeds forty feet, there should be a pair of columns behind those between the antae, and a little thinner than they; besides other and minor details. (Vitruv. iv. 4.)

In the pure Greek architecture, the antae have no other capitals than a succession of simple mouldings, sometimes ornamented with leaves and arabesques, and no bases, or very simple ones; it is only in the later (Roman) style, that they have capitals and bases resembling those of the columns between them. The antae were generally of the same thickness throughout; the only instance of their tapering is in one of the temples of Paestum.

In a Greek private house the entrance was flanked by a pair of antae with no columns between them; and the space thus enclosed was itself called παραστάσις. (Vitruv. vi. 10. s. 7 § 1. Schn.) So also Euripides uses the term to denote either the pronaos of a temple (Iph. in Taur. 1126), or the vestibule of a palace. (Phoen. 415.)

The following are the chief of the other passages in which antae or παραστάσεις are mentioned: — Eurip. Androm. 1121, where παραστάσεις χρυσάνθη signifies the arms suspended from one of the antae of the temple; Cratin. Dies, Fr. 13; Prop. rhet. vii. 122, x. 25, Meineke, Fr. Com. Graft. vol. ii. p. 42; Xen. Hier. xi. 2; Hes. Auton. p. 269; Inscrip. ap. Gruter. p. 207. See also Stieglitz, Archäologie der Bautkunst, vol. i. pp. 236—242.

[TEMPLUM.]

ANTEAMBULONES, were slaves who were accustomed to go before their masters, in order to make way for them through the crowd. (Suet. Vesp. 2.) They usually called out dato locum domino meo; and if this were not sufficient to clear the way, they used their hands and elbows for that purpose. Pliny relates an amusing tale of an individual who was roughly handled by a Roman knight, because his slave had presumed to touch the latter, in order to make way for his master. (Ep. iii. 14.) The term anteambulones was also given to the clients, who were accustomed to walk before their patroni when the latter appeared in public. (Martial, ii. 18, iii. 7, x. 74.)

ANTECESSORES, called also ANTECURSORES, were horse-soldiers, who were accustomed to precede an army on the march, in order to choose a suitable place for the camp, and to make the necessary provisions for the army. They were not merely scouts, like the speculatores. (Hirt. Bell. Afr. 12, who speaks of speculatores et anteccessores equites; Suet. Vitell. 17; Caes. B. G. v. 47.) This name was also given to the teachers of the Roman law. (Cod. 1. tit. 17. s. 2 § 9. 11.)

ANTECEBOENA. [CORENA.]

ANTEFICIXA, terra-cottas, which exhibited various ornamental designs, and were used in architecture, to cover the frieze (zophoros) or cornice of the entablature. (Festus, s. v.) These terra-cottas do not appear to have been used among the Greeks, but were probably Etruscan in their origin, and were thence taken for the decoration of Roman buildings.

The name antefixa is evidently derived from the circumstance that they were fixed before the buildings which they adorned; and in many instances they have been found fastened to the frieze with leaden nails. They were formed in
The first of them must have formed part of the upper border of the frieze, or rather of the cornice. It contains a panther's head, designed to serve as a spout for the rain-water to pass through in descending from the roof. Similar antefixa, but with comic masks instead of animals' heads, adorned the temple of Isis at Pompeii. The second of the upper border of the frieze, or rather of the cornice. Their antefixa are remarkable for being painted: the ground of that here represented is blue; the hair of the six men is black, or brown; their flesh red; their garments white, yellow, and red; the chairs are white. The two holes may be observed, by which this slab was fixed upon the building.

Cato the Censor complained that the Romans of his time began to despise ornaments of this description, and to prefer the marble friezes of Athens and Corinth. (Liv. xxxiv. 4.) The rising taste which Cato deplored may account for the superior beauty of the antefixa preserved in the British Museum, which were discovered in Rome. A specimen of them is given at the foot of the preceding column. It represents Athena superintending the construction of the ship Argo. The man with the hammer and chisel is Argus, who built the vessel under her direction. The pilot Tiphys is assisted by her in attaching the sail to the yard.

ANTENNA. [NAVIS.]

ANTEPIGMENTA, doorposts, the jambs of a door. Vitruvius (iv. 6.) gives minute instructions respecting the form and proportions of the antepigmenta, or the doors of temples; and in general these are found in general to correspond with the examples preserved among the remains of Grecian architecture. (See Hirt, Baukunst nach den Grund-sätzen der Alten, xvi.) [JANUA.] [J. Y.]

ANTEPIA/NI. [EXERCITUS.]

ANTESIGNA/NI. [EXERCITUS.]

ANTESTA/RI. [ACTIO.]

ANTHESPHORIA (ἀνθεσφορία), a flower-festival, principally celebrated in Sicily, in honour of Demeter and Persephone, in commemoration of the return of Persephone to her mother in the beginning of spring. It consisted in gathering flowers and twining garlands, because Persephone had been carried off by Pluto while engaged in this occupation. (Pollux, i. 37.) Strabo (vi. p. 256) relates that at Hippomenon the women celebrated a similar festival in honour of Demeter, which was probably called anthesphoria, since it was derived from Sicily. The women themselves gathered the flowers for the garlands which they wore on the occasion, and it would have been a disgrace to buy the flowers for that purpose. Anthesphoria were also solemnized in honour of other deities, especially in honour of Hera, surnamed Α̂ρεία, at Argos (Paus. ii. 22. § 1), where maidens, carrying baskets filled with flowers, went in procession, whilst a tune called ἱπάσαμον was played on the flute. (Comp. Elym. Cod. p. 57.) Aphrodite, too, was worshipped at Croesus, under the name Α̂ρεία (Heav. s. v.), and has therefore been compared with Flora, the Roman deity, as the anthesphoria have been with the Roman festival of the Florifortum, or Floralia. [L. S.]

ANTHESTRIA. [DIONYSIA.]

ANTIDOSIS (ἀντίδοσις), in its literal and general meaning, "an exchange," was, in the language of the Attic courts, peculiarly applied to proceedings under a law which is said to have originated with Solon. (Demosth. c. Phae. 140, init.) By this, a citizen nominated to perform a lepturgia, such as a trierarchy or choregia, or to rank among the property-tax payers in a class disproportioned to his means, was empowered to call upon any qualified person so not charged to take the office in his stead, or submit to a complete exchange of property — the charge in question, of course, attaching to the first party, if the exchange were finally effected. For these proceedings the courts were opened at a stated time every year by the magistrates that had official cognizance of the particular subject; such as the strategi in cases of trierarchy and rating to the property-taxes, and the archon in those of choregia; and to the tribunal of such an officer, it was the first step of the challenger to summon his opponent. (Dem. c. Phae. 140; Meier, Att. Process. p. 471;
To the other party stated his objections, which, if obviously sufficient in law, might, perhaps, authorize the magistrate to dismiss the case; if otherwise, the legal resistance, and preparations for bringing the cause before the dicasts, would naturally begin here. In the latter case, or if the exchange were accepted, the law directed the challenger to repair to the houses and lands of his antagonist, and secure himself, as all the claims and liabilities of the estate were to be transferred, from fraudulent encumbrances of the real property, by observing what mortgage placards (ὄποι), if any, were fixed upon it, and against clandestine removal of the other effects, by sealing up the chambers that contained them, and, if he pleased, by putting bailiffs in the mansion. (Dem. c. Phaeiipp. pp. 1040, 1041.) His opponent was, at the same time, informed, that he was at liberty to deal in like manner with the estate of the challenger, and received notice to attend the proper tribunal on a fixed day, to take the usual oath. The entries here described seem, in contemplation of law, to have been a complete effectuation of the exchange. (Dem. c. Mid. p. 540, c. Phaeiipp. p. 1041. 29), and it does not appear that primarily the answer was legal, and so the purpose of the exchange by the dicasts; but, in practice, this must always have been required by the conflict of interests between the parties. The next proceeding was the oath, which was taken by both parties, and purported that they would faithfully discover all their property, except shares held in the silver mines at Laurion; for those were not rated to leiturgiae or property-taxes, nor consequently liable to the exchange. In pursuance of this agreement, the law enjoined that they should exchange correct accounts of their respective assets (ἀρωπόδελτα) within three days; but in practice the time might be extended by the consent of the challenger. After this, if the matter were still uncompromised, it would assume the shape and follow the course of an ordinary lawsuit [DICE®], under the conduct of the magistrate within whose jurisdiction it had originally come. The verdict of the dicasts, when adverse to the challenged, seems merely to have rendered imperative the first demand of his antagonist, viz., that he should submit to the exchange or undertake the charge in question; and as the alternative was open to the former, and a compromise might be acceded to by the latter, at any stage of the proceedings, we may infer that the exchange was rarely, if ever, finally accomplished. The irksomeness, however, of the sequestration, during which the litigant was precluded from the use of his own property, and disabled from bringing actions for embezzlement and the like against others (for his prospective reimbursement was reckoned a part of the seques-trated estate, Dem. c. Apolh. ii. p. 841, c. Mid. p. 540), would invariably cause a speedy, perhaps, in most cases, a fair adjustment of the burdens incident to the condition of a wealthy Athenian. (Böckh, Publ. Econ. of Athens, pp. 580—583, 2nd ed.)

ANTIGONEIA (ἀντιγόνεια), sacrifices instituted by Aratus and celebrated at Sicyon with paens, processions, and contests, in honour of Antigonus Doson, with whom Aratus formed an alliance for the purpose of thwarting the plans of Cleomenes. (Plut. Cleon. 16, Arat. 45; Polyb. xxvii. 16, xxx. 20.) [L.S.]

ANTIGRAPHIE (ἀντιγραφή), originally signified the writing put in by the defendant, in all causes, whether public or private, as a reply to the indictment or bill of the prosecutor. From this signification, it was applied by an easy transition to the substance as well as the form of the reply, both of which are also indicated by ἀντωμοσία, which means, primarily, the oath corroborating the statement of the accused. Harpocration has remarked that antigraphe might denote, as autonomia does in its more extended application, the bill and affidavit of either party; and this remark seems to be justified by a passage of Plato. (Apolog. Soc. p. 27. c.) Schumann, however, maintains (Att. Process, p. 465) that antigraphe was only used in this signification in the case of persons who laid claim to an unassigned inheritance. Here, neither the first nor any other claimant could appear in the character of a prosecutor; that is, no δικής or ἔγκλημα could be strictly said to be directed by one competitor against another, when all came forward voluntarily to the tribunal to defend their several titles. This circumstance Schumann has suggested as a reason why the documents of each claimant were denoted by the term in question.

Perhaps the word "plea," though by no means a coincident term, may be allowed to be a tolerably proximate rendering of antigraphe. Of pleas there can be only two kinds, the dilatory, and those to the action. The former, in Attic law, comprehends all such allegations as, by asserting the incompetency of the court, the disability of the plaintiff, or privilege of the defendant, and the like, would have a tendency to show that the cause in its present state could not be brought into court (ὑποτευχεῖσθαι ἐστιν τὴν δίκην); the latter, everything that could be adduced by way of denial, excuse, justification, and defence generally. It must be, at the same time, kept in mind, that the process called "special pleading," was at Athens supplied by the magistrate holding the anacrisis, at which both parties produced their allegations, with the evidence to substantiate them; and that the object of this part of the proceedings was, under the directions, and with the assistance of the magistrate, to prepare and enucleate the question for the dicasts. The following is an instance of the simplest form of indictment and plea.

"Apollodoros, the son of Pasion of Acharnae, against Stephanus, son of Meneclus of Acharnae, for perjury. The penalty rated, a talent Stephanus bore false witness against me, when he gave in evidence the matters in the tablets. [B. 1. p. 1115.] The pleadings might be altered during the anacrisis; but once consigned to the echinus, they, as well as all the other accompanying documents, were protected by the official seal from any change by the litigants. On the day of trial, and in the presence of the dicasts, the echinus was opened, and the plea was then read by the clerk of the court, together with its antagonist bill. Whether it was preserved afterwards as a public record, which we know to have been the case with respect to the γραφή in some causes, we are not informed. H 2
From what has been already stated, it will have been observed, that questions requiring a previous decision, would frequently arise upon the allegations of the plea; and that the plea to the action in particular would often contain matter that would tend essentially to alter, and, in some cases, to reverse the relative positions of the parties. In the first case, a trial before the dicasts would be granted by the magistrate whenever he was both to incur the responsibility of decision; in the second, a cross-action might be instituted, and carried on separately, though, perhaps, simultaneously with the original suit. Cases would also sometimes occur in which the defendant, from considering the indictment as an unwarrantable aggression, or, perhaps, one best repelled by attack, would be tempted to retaliate upon some delinquency of his opponent, utterly unconnected with the cause in hand, and to this he would be, in most cases, able to resort. An instance of each kind will be briefly given, by citing the common paragraphē, as a cause arising upon a dilatory plea; a cross-action for assault (aikēs) upon a primary action for the same (Dem. in En. et Mnesib. p. 115); and a διογγραφία, or "judicial examination of the life or morals" of an orator upon an impeachment for misconduct in an embassy (παραπροεδρία). (Aesch. in Timarch.)

All causes of this secondary nature (and there was hardly one of any kind cognisable by the Attic courts, that might not occasionally rank among them) were, when viewed in their relation with the primary action, comprehended by the enlarged signification of antigraphe, or, in other words, this term, inexpressive of form or substance, is indicative of a repellent or retaliative quality, that might be incidental to a great variety of causes. The distinction, however, that is implied by antigraphe, was not merely verbal and unsubstantial; for we are told, in order to prevent in hand, and on the one hand, and unfair elusion upon the other, the loser in a paragraphē, or cross-action upon a private suit, was condemned by a special law to pay the σταθεία, rateable upon the valuation of the main cause, if he failed to obtain the votes of one-fifth of the jury, and certain court fees (προναυία) not originally incident to the suit. That there was a similar provision in public causes, we may presume from analogy, though we have no authority to determine the matter. (Meier, Att. Process, p. 625.) [J.S. M.]

ANTIPHRON (αντιφρόν). [GRAMMATIKOS.]

ANTINOEIA (αντινωεία), annual festivals and quinquennial games, which the Roman emperor Hadrian instituted in honour of his favourite, Antinous, after he was drowned in the Nile, or, according to others, had sacrificed himself for his sovereign, in a fit of religious fanaticism. The festivals were celebrated in Bithynia, and at Mantinea, in which places he was worshipped as a god. (Spartian. Hadrian, c. 14; Dion Cass. lxx. 10; Paus. viii. 3. § 4.) [I.S.]

ANTIPHERNA (αντιφέρνα). [DOS.]

ANTICARAIR. [LIBRARI.]

ΑΝΤΛΙΑ (αντλία), any machine for raising water; a pump. The annexed figure shows a machine which is still used on the river Eissach in the Tyrol, the ancient Atagis. As the current puts the wheel in motion, the jars on its margin are successively immersed and filled with water. When they reach the top, the water is sent into a trough, from which it is conveyed to a distance, and chiefly used for irrigation.

Lucretius (v. 517) mentions a machine constructed on this principle: — "Ut fluvios versare rotas atque haustra videamus.”

In situations where the water was at rest, as in a pond or a well, or where the current was too slow and feeble to put the machine in motion, it was constructed so as to be wrought by animal force, and slaves or criminals were commonly employed for the purpose (κύ οιδινα καλακοών). Artemid. Oneirc. 1. 50; in antiquam condemnare, Sueet. Tit. 51.) Five such machines are described by Vitruvius, in addition to that which has been already explained, and which, as he observes, was termed sine operarum calculura, ipsis fluminis impulsu. These five were, 1. the tympanum; a tread-wheel, wrought hominis calcitation, 2. a wheel resembling that in the preceding figure; but having, instead of pots, wooden boxes or buckets (modoli quadrati), so arranged as to form steps for those who trod the wheel; 3. the chain-pump: the cocklea, or Archimedes' screw; and 5. the cistibica machina, or forcing-pump. (Vitruv. x. 4—7; Drieberg, Pneum. Erfindungen der Griechen, p. 44—50.)

On the other hand, the antlia with which Martial (ix. 19) watered his garden, was probably the pole and bucket universally employed in Italy, Greece, and Egypt. The pole is curved, as shown in the annexed figure; because it is the stem of a
That he was violating the laws of single combat by tortious, he should be the successor to Thymoetes. To fight for Thymoetes, on condition that, if victory, he should be the successor to Thymoetes. (Ackern. 146.) This tradition has given rise to a false etymology of the name ἀπατοφύρα, which was formerly considered to be derived from ἄπατον, to deceive. All modern critics, however (Müller, Doriana, i. 54; Welcker, Aeschy. Tril. p. 288), agree that the name is composed of ἄνω-άμα, and σταυρός, which is perfectly consistent with what Xenophon (Hellen. i. 7. § 8) says of the festival: Ἐν οἷς (ἀπατουριός) ὑπὲρ τὴν πατέρας καὶ συγγένεις ἠθύιεις σφίνοις αὐτοῖς. According to this derivation, it is the festival at which the phratrie met, to discuss and settle their own affairs. But, as every citizen was a member of a phratry, the festival extended over the whole nation, who assembled according to phratriae. Welcker (Anhang z. Trilog. p. 200), on account of the prominent part which Dionysus takes in the legend respecting the origin of the Attic ἀπατορία, conceives that it arose from the circumstance that families belonging to the Dionysian tribe of the Aegicores had been registered among the citizens.

The first day of the festival, which probably fell on the eleventh of the month of Pyanepsion, was called ἄργος, or ὑπἀρνης (Athen. iv. p. 171; Hezych. and Suid., s. v.); on which every citizen went in the evening to the phratrym, or to the house of some wealthy member of his own phratry, and there enjoyed the supper prepared for him. (Aristoph. Acharn. 146.) That the cup-bearers (ἱδικτυρία) were not idle on this occasion, may be seen from Plotius (Lex. s. v. Δαραία).

The second day was called ἀνάφωρος (ἀναφώρος) from the sacrifice offered on this day to Zeus, surnamed Ψηφέρος, and to Athena, and sometimes to Dionysus Melanagis. This was a state sacrifice, in which all citizens took part. The day was chiefly devoted to the gods, and to them must, perhaps, be confined what Harpocrates (s. v. Λαμπρίς) mentions, from the Attis of Istrus, that the Athenians at the apaturia used to dress splendidly, kindle torches on the altar of Hephaestus, and sacrifice and sing in honour of him. Proclus on Plato (Tim. p. 21 b.), in opposition to all other authorities, calls the first day of the Apaturia ἀνάφωρος, and the second ἄργος, which is, perhaps, nothing more than a slip of his pen.

On the third day, called κοιμενής (κοίμησ), children born that year, in the phratria, or such as were not yet registered, were taken by their fathers, or in their absence by their representatives (καταλογισμοὺς), before the assembled members of the phratry. For every child a sheep or goat was sacrificed. The victim was called μείνων, and he who sacrificed it μειγωγός (μειγωγεύς). It is said that the victim was not allowed to be below (Harpocrat. Suid. Phot. s. v. Μειών), or, according to Pollius (iii. 52), above, a certain weight. Whenever any one thought he had reason to oppose the reception of the child into the phratry, he stated the case, and, at the same time, led away the victim from the altar. (Demosth. c. Muc.urt. p. 1054.) If the members of the phratry found the objections to the reception of the child to be sufficient, the vic-
tine was removed; when no objections were raised, the father, or he who supplied his place, was obliged to establish by oath that the child was the offspring of free-born parents, and citizens of Athens. (Isaeus, De Haered. Chron. p. 106. 119; Demosth. e. Eudul. p. 1315.) After the victim was sacrificed, the phantores gave their votes, which they took from the altar of Jupiter Phra-tris. When the majority voted against the reception, the cause might be tried before one of the courts of Athens; and if the claims of the child were found unobjectionable, its name, as well as that of the father, was entered in the register of the phratry, and those who had wished to effect the exclusion of the child were liable to be punished. (Demosth. e. Macart. p. 1078.) Then followed the distribution of wine, and of the victims, of which every phantor received his share; and poems were recited by the elder boys, and a prize was given to him who acquitted himself the best on the occasion. (Plat. Tim. p. 21. b.) On this day, also, illegitimate children on whom the privileges of Athenian citizens were to be bestowed, as well as children adopted by citizens, and newly created citizens were introduced; but the last, it appears, could only be received into a phratry when they had previously been adopted by a citizen; and their children, when born by a mother who was a citizen, had a legitimate claim to be inscribed in the phratry of their grandfather, on their mother's side. (Platner, Beiträge, p. 168.) In later times, however, the difficulties of being admitted into a phratry seem to have been greatly diminished.

Some writers have added a fourth day to this festival, under the name of ἐπίσθα (Hechych. s. v. ἀκατάλογος: and Simplicius on Aristot. Phys. iv. p. 167. a.) but this is no particular day of the festival, for ἐπίσθα signifies nothing else but a day subsequent to any festival. (See Ruhnken, Ad Tim. Lex. Plat. p. 119.)

APEX. A cap worn by the flamines and salii at Rome. The essential part of the apex, to which alone the name properly belonged, was a pointed piece of olive-wood, the base of which was surrounded with a lock of wool. This was worn on the top of the head, and was held there either by fillets only, or, as was more commonly the case, by the aid of a cap, which fitted the head, and was also fastened by means of two strings or bands, which were called apicula (Festus, s. v.), or offentides (Festus, s. v.), though the latter word is also interpreted to mean a kind of button, by which the strings were fastened under the chin. (Comp. Serv. ad Virg. Aen. ii. 683, viii. 664, x. 270.)

The flamines were forbidden by law to go into public, or even into the open air without the apex (Gell. x. 15), and hence we find the expression of uterum apicem diadem imponeere used as equivalent to the appointment of a flamen dialis. (Liv. vi. 41.)

Sulpicius was deprived of the priesthood, only because the apex fell from his head whilst he was sacrificing. (Val. Max. i. 1 § 4.)

Dionysius (ii. 70) describes the cap as being of a conical form. On ancient monuments we see it round as well as conical. From its various forms, as shown on bas-reliefs and on coins of the Roman emperors, who as priests were entitled to wear it, we have selected six for the annexed woodcut. The middle figure is from a bas-relief, showing one of the salii with a rod in his right hand. The Albugalerus, or albus galerus was a white cap worn by the flamen dialis, made of the skin of a white victim sacrificed to Jupiter, and had the apex fastened to it by means of an olive-twig. (Festus, s. v. albugalerus; Gell. x. 15.)

From apex was formed the epithet apiculus, applied to the flamen dialis by Ovid (Fast. iii. 197).

APHLASTON (ἀφλαστον). [NAVIS.] APHORMES DIKE (ἀφρομένη δίκη), was the action brought against a banker or money-lender (τραπεζέτης), to recover funds advanced for the purpose of being employed as banking capital. Though such moneys were also styled παρακαταθήκα, or deposits, to distinguish them from the private capital of the banker (βία ἄφρομη), there is an essential difference between the actions ἄφρομη and παρακαταθήκης, as the latter implied that the defendant had refused to return a deposit intrusted to him, not upon the condition of his paying a stated interest for its use, as in the former case, but merely that it might be safe in his keeping till the affairs of the plaintiff should enable him to resume its possession in security. [ΠΑΡΑΚΑΤΑΘΕΤΟ. The former action was of the class πόσ τίπα, and came under the jurisdiction of the thesmothetae. The speech of Demosthenes in behalf of Phormio was made in a παραγραφ against an action of this kind. [J. S. M.]

APHRACTUS. [NAVIS.] APHRODISIA. (Ἀφροδίσεα), festivals celebrated in honour of Aphrodite, in a great number of towns in Greece, but particularly in the island of Cyprus. Her most ancient temple was at Paphos, which was built by Aërius or Cinyras, in whose family the priestly dignity was hereditary. (Tactit. Hist. ii. 3, Annal. iii. 62; Maxim. Tyr. Serm. 83.) No bloody sacrifices were allowed to be offered to her, but only pure fire, flowers, and incense (Verg. Aen. i. 116); and therefore, when Tacitus (Hist. ii. 3) speaks of victims, we must either suppose, with Ernesti, that they were killed merely that the priest might inspect their intestines, or for the purpose of affording a feast to the persons present at the festival. At all events, however, the altar of the goddess was not allowed to be polluted with the blood of the victims, which were mostly hogs. Mysteries were also celebrated at Paphos in honour of Aphrodite; and those who were ini-
tiated offered to the goddess a piece of money, and received in return a measure of salt and a phallus. In the mysteries themselves, they received instructions ἐν τῇ τέχνῃ μοιχικῆ. A second or new Paphos had been built, according to tradition, after the Trojan war, by the Arcadian Agapenor; and, according to Strabo (xiv. p. 663), men and women from other towns of the island assembled at New Paphos, and went in solemn procession to Old Paphos, a distance of sixty stadia; and the name of the priest of Aphrodite, Ἀπαρθέως (Hesych. s. v.), seems to have originated in his heading this procession. Aphrodite was worshipped in most towns of Cyprus, and in other parts of Greece, such as Cythera, Sparta, Thebes, Elis, &c.; and though no Aphrodia is mentioned in these places, we have no reason to doubt their existence; we find them expressly mentioned at Corinth and Athens, where they were chiefly celebrated by the numerous prostitutes. ( Athen. xiii. pp. 574, 579, xiv. p. 658.) Another great festival of Aphrodite and Adonis in Sestus is mentioned by Musaeus. (Hero and Leand. L. 42.)

APLUSTRE. [NAVIS.]

APOCLEΤΙ (ἀποκλητή). [ARTICULUM FOR-

DUS, p. 27. b.]

APODECTÆ (ἀποδέκται), the Receivers, were public officers at Athens, who were introduced by Cleisthenes in the place of the ancient colarchae (κολαρκηται). They were ten in number, one for each tribe, and their duty was to receive all the ordinary taxes and distribute them to the separate branches of the administration, which were entitled to them. They accordingly kept lists of persons indebted to the state, made entries of all monies that were paid in, and erased the names of the debtors from the lists. They had the power to decide causes connected with the subjects under their management; though if the matters in dispute were of importance, they were obliged to bring them for decision into the ordinary courts. (Pollux, viii. 97; Etymolog. Mag. Harpocrat. Suid. Hezych. s. e.; Aristot. Pol. vi. 8; Dem. c. Timocret. pp. 750, 792; Aesch. c. Oes. p. 375; Böckh, Publ. Econ. of Athens, p. 159, 2nd ed.)

APOGRAPHE (ἀπογράφη), is literally "a list, or register;" but in the language of the Attic courts, the terms ἀπογραφέων and ἀπογραφέσθαι had three separate applications: 1. Ἀπογραφή was used in reference to an action, and is connected with matters, more particularly when there were several defendants; the demunciation, the bill of indictment, and enumeration of the accused, would in this case be termed ἀπογραφή, and differ but little, if at all, from the ordinary ἀγραφή. (Andoc. de Myst. 13; Antiph. de Chorea. 763.) 2. It implied the making of a solemn protest or assertion before a magistrate, to the intent that it might be preserved by him, till it was required to be given in evidence. (Dem. in Phoen. 1040.) 3. It was a specification of property, said to belong to the state, but actually in the possession of a private person, which specification was made, with a view to the confiscation of such property to the state. (Lys. de Aristoph. Domis.)

The last case only requires a more extended illustration. There would be two occasions upon which it would occur; first, when a person held public property without purchase, as an intruder; and secondly, when the substance of an individual was liable to confiscation in consequence of a judi-

APOGERANUS. (Ἀπογεράνως) implies the method by which a father could at Athens disjove the legal connection between himself and his son; but as it is not mentioned by any of the orators or the older writers, it could rarely have taken
such extraordinary severity. Those suggested in
motion on the subject (©AiroKTjpi/TTrf/uei/os), which has
reasons were required to insure the ratification of
the treatise referred to are, deficiency in filial
A subsequent act of pardon might annul this
appear that his privileges as to his tribe or the
generally been attributed to Lucian, substantial
solemn rejection; but if it were not so avoided,
state underwent any alteration. The court of the
archon must have been that in which causes of
this kind were brought forward, and the rejection
the herald (διονυσιας). It is probable that an
adoptive father also might resort to this remedy
against the ingratitude of a son. (Meier, Att.
Process, p. 432, &c.)

APOLEIP'SIS (ἀπολέιψις). [DIVORTIUM.]
APOLLINA'RES LUDI. [LUDI.]

APOLO'NIA (Ἀπολλώνια) is the name of a
propitiatory festival solemnized at Sicyon, in honor of
Apollo and Artemis, after which Pausanias (ii. 7.
§ 7) gives the following account:—Apollo and
Artemis, after the destruction of the Python, had
wished to be purified at Sicyon (Ἀειγολαδα); but
being driven away by a phantom (whence in after-
times a certain spot in the town was called Φόδος),
they proceeded to Carmanos in Crete. Upon this
the inhabitants of Sicyon were attacked by a pesti-
ence, and the seers ordered them to appease the
deities. Seven boys and the same number of girls
were ordered to go to the river Sythas, and bathe
in its waters; then to carry the statues of the two
deities into the temple of Peitho, and from thence
back to that of Apollo. Similar rites, says Pausa-
nias, still continue to be observed; for at the fes-
tival of Apollo, the boys go to the river Sythas,
and carry the two deities into the temple of Peitho,
and thence back to that of Apollo.

Although festivals under the name of Apollonia,
in honour of Apollo, are mentioned in no other
place, still it is not improbable that they existed un-
der the same name in other towns of Greece. [L.S.]

APOPEMPSIS (ἀποπεμψίς). [DIVORTIUM.]
APOTHEAN'ISIS, or APOTHEASIS (ἀποθέασις
or ἀπώθεασις), was the proclamation of the de-
cision which the majority of the judges came to at
the end of a trial, and was thus also used to signify
the day on which the trial took place. (Dem. c.
Energet. p. 1153; Lex Rhetor. p. 210.) The word
was also employed to indicate the account of a
person's property, which was obliged to be given
when an antilosis was demanded. [ANTIDOSIS.]

APOPHORA (ἀποφόρα), which properly means
"produce or profit" of any kind, was used at
Athens to signify the profit which accrued to mas-
ters from their slaves. It thus signified the sum
which slaves paid to their masters when they la-
boured on their own account, and the sum which
masters received when they let out their slaves on
hire either for the mines or any other kind of
labour, and also the money which was paid by the
state for the use of the slaves who served in the
1.11; Böckh, Publ. Econ. of Athens, p. 72, 2nd ed.)
The term apophora was also applied to the money
which was paid by the allied states to Sparta, for
the purpose of carrying on the war against the
Persians. When Athens acquired the supremacy,
these moneys were called φόροι. (Böckh, Hid.
p. 396.)

APOPHORE'TA (ἀποφορήτα), presents which
were given to friends at the end of an entertain-
ment, to take home with them. These presents
were usually given on festival days, especially
during the Saturnalia. Martial gives the title of
Apophoretta to the fourteenth book of his Epigrams,
which contains a number of epigrams on the things
usually given away as apophoretta. (Suet. Vesp.
19; Cili. 53; Philostr. i. 75.)

APOPHRADES HEMERAI (ἀποφράδες
ἡμέραι), unlucky or unfortunate days (dies nefasti),
which were publicly discussed, but which at the end of each month,
and the twenty-fifth day of the month
Thargelion, on which the Plynteria were cele-
brated. (Epym. Mag. p. 181; Plei. Alcib. 34;
Lucian, Pseudolog. 15; Schömann, De Comitissi,
p. 50.)

APORRHE'TA (ἀπορρήτητα), literally "things
forbidden," has two peculiar, but widely different,
significations in the Attic dialect. One of these
it implies contraband goods, an enumeration of
which at the different periods of Athenian history,
is given by Bückh (Publ. Econ. of Athens, p. 53,
2nd ed.); in the other, it denotes certain con-
tumelious epithets, from the application of which
the death and the living were protected by
special laws. (Meier, Att. Process. p. 482.)

Among these, διοφψωνος, παραμαλαις, and μπα-
lalaias are certainly to be reckoned; and other
words, as μπαλως, though not forbidden nomi-
natively by the law, seem to have been equally
actionable. The penalty for using these words
was a fine of 500 drachmae (Isoc. in Loch. p. 396),
recoverable in an action for abusive language
(κακωρίαις). It is surmised that this fine was in-
curred by Meidias in two actions on the occasion
mentioned by Demostenes (in Mid. pp. 540, 543;
see also Hudtwalcker, De Diodot. p. 150). [J.S.M.]

APOSTOLEIS (ἀποστολεῖς), ten public officers
in honour of Apollo, are mentioned in no other
place, still it is not improbable that they existed un-
der the same name in other towns of Greece. [L.S.]

APOSTOLEIS. [TRIAPOIA].

APOSTOLEIS. [TRIAPOIA].
They had the power, in certain cases, of imprisoning the trierarchs who neglected to furnish the ships with victuals (p. 262); and they constituted a board, in conjunction with the inspectors of the docks (οἱ τῶν νεκρῶν εἰμικρατεῖς), for the prosecution of all matters relating to the equipment of the ships. (Dem. c. Enarg. p. 1147 ; Meier, Att. Process, p. 112 ; Bückh, publ. Econ. of Athens, p. 543.)

**APOTHEOSIS** (ἀποθέσις), the enrolment of a mortal among the gods. The mythology of Greece contains numerous instances of the deification of mortals; but in the republican times of Greece we find few examples of such deification. The inhabitants of Amphipolis, however, offered sacrifices to Brasidas after his death (Thuc. v. 9), and the people of Egeste built an herōum to Philiippus, and also offered sacrifices to him on account of his personal beauty. (Herod. v. 47.) In the Greek kingdoms, which arose in the East on the dismemberment of the empire of Alexander, it does not appear to have been uncommon for the successor to the throne to have offered divine honours to the former sovereign. Such an apotheosis of Ptolemy, king of Egypt, is described by Theocritus in his 17th Idyl. (See Cauzbon's note on Suet. Jul. Cæs. 88.)

The term apotheosis, among the Romans, properly signified the elevation of a deceased emperor to divine honours. This practice, which was common upon the death of almost all the emperors, appears to have arisen from the opinion, which was generally entertained among the Romans, that the souls or manes of their ancestors became deities; and as it was common for children to worship the manes of their fathers, so it was natural for divine honours to be publicly paid to a deceased emperor, who was regarded as the parent of his country. This apotheosis of an emperor was usually called consecratio; and the emperor who received the honour of an apotheosis, was said in deorum numerum referri, or consecrari. In the earliest times Romulus is said to have been admitted to divine honours under the name of Quirinus (Plut. Rom. 27, 28; Liv. i. 16; Cic. de Rep. ii. 10); but none of the other Roman kings appears to have received this honour, and in the republican times we also read of no instance of an apotheosis. Julius Caesar was deified after his death, and games were instituted to his honour by Augustus (Suet. Jul. Cæs. 88); and the example thus set was followed in the case of the other emperors.

The ceremonies observed on the occasion of an apotheosis have been minutely described by Herodian (iv. 2) in the following passage:—

"It is the custom of the Romans to deify those of their emperors who die, leaving successors; and this rite they call apotheosis. On this occasion a semblance of mourning, combined with festival and religious observance, is visible throughout the city. The body of the dead they honour after human fashion, with a splendid funeral; and making a waxen image in all respects resembling him, they expose it to view in the vestibule of the palace, on a lofty ivory couch of great size, spread with cloth of gold. The figure is made pallid, like a sick man. During most of the day senators sit round the bed on the left side, clothed in black; and noble women on the right, clothed in plain white garments, like mourners, wearing no gold or necklaces. These ceremonies continue for nine days; and the physicians severally approach the couch, and looking on the sick man, say that he grows worse and worse. And when they have made believe that he is dead, the noblest of the equestrian and chosen youths of the senatorial orders take up the couch, and bear it along the Via Sacra, and expose it in the old forum. Platforms like steps are built upon each side; on one of which stands a chorus of noble youths; and on the opposite, a chorus of women of high rank, who sing hymns and songs of praise to the deceased, modulated in a solemn and mournful strain. Afterwards they bear the couch through the city to the Campus Martius, in the broadest part of which a square pile is constructed entirely of logs of timber of the largest size, in the shape of a chamber, filled with faggots, and on the outside adorned with hangings interwoven with gold and ivory images and pictures. Upon this, a similar but smaller chamber is built, with open doors and windows, and above it, a third and fourth, still diminishing to the top, so that one might compare it to the light-houses which are called Phari. In the second story they place a bed, and collect all sorts of aromatics and incense, and every sort of fragrant fruit or herb or juice; for all cities, and nations, and persons of eminence emulate each other in contributing these last gifts in honour of the emperor. And when a vast heap of aromatics is collected, there is a procession of horsemen and of chariots around the pile, with the drivers clothed in robes of office, and wearing masks made to resemble the most distinguished Roman generals and emperors. When all this is done, the others set fire to it on every side, which easily catches hold of the faggots and aromatics; and from the highest and smallest story, as from a pinnacle, an eagle is let loose to mount into the sky as the fire ascends, which is believed by the Romans to carry the soul of the emperor from earth to heaven; and from that time he is worshipped with the other gods."

In conformity with this account, it is common to see on medals struck in honour of an apotheosis an altar with fire on it, and an eagle, the bird of Jupiter, taking flight into the air. The number of such medals is very numerous. We can from these medals alone trace the names of sixty individuals, who received the honours of an apotheosis, from the time of Julius Caesar to that of Constantine the Great. On most of them the word CONSECRATIO occurs, and on some Greek coins the word ΑΠΙΕΡΩΣΙΣ. The following woodcut is taken from an agate, which is supposed to represent the apotheosis of Germanicus. (Montfaucon, Ant. Expl. Suppl. vol. v. p. 137.) In his left hand he holds the cornucopia, and Victory is placing a laurel crown upon him.
A very similar representation to the above is found on the triumphal arch of Titus, on which Titus is represented as being carried up to the skies on an eagle. There is a beautiful representation of the apotheosis of Augustus on an onyx-stone in the royal museum of Paris.

Many other monuments have come down to us, which represent an apotheosis. Of these the most celebrated is the bas-relief in the Townley gallery in the British Museum, which represents the apotheosis of Homer. It is clearly of Roman workmanship, and is supposed to have been executed in the time of the Emperor Claudius.

The wives, and other female relations of the emperors, sometimes received the honour of an apotheosis. This was the case with Livia Augusta, with Poppea the wife of Nero, and with Faustina the wife of Antoninus. (Suet. Claud. 11; Dion Cass. xi. 5; Tac. Ann. xvi. 21; Capitolin. Anton. Philos. 26.)

APPELLATIO. The general name for the public servants of the magistrates at Rome, namely, the ACCENS, CARNIFEX, COACTORES, INTERPRETES, LECTORES, PHARECONES, SCRIBAE, STRATOR, VIATORES, of whom an account is given in separate articles. They were called apparitores because they were at hand to execute the commands of the magistrates (quad illa apparebant et proesto erant ad osequeum, Serv. Ad Virg. Aen. xii. 850; Cic. pro Client. 53; Liv. i. 8). Their service or attendance was called appellation. (Cic. ad Fam. xiii. 54, ad Qu. Fr. i. 1. § 4.) The servants of the military tribunes were also called apparitores. We read that the Emperor Severus forbade the military tribunes to retain the apparitores, whom they were accustomed to have.

(Lamprid. Sever. 52.)

Under the emperors, the apparitores were divided into numerous classes, and enjoyed peculiar privileges, of which an account is given in Just. Cod. 12. tit. 52—59.

APPELLATIO. 1. GREEK (ἐφίσεως, or ἀναδίκας). Owing to the constitution of the Athenian tribunals, each of which was generally appropriated to its particular subjects of cognisance, and therefore could not be considered as homogeneous with or subordinate to any other, there was little opportunity for bringing appeals properly so called. It is to be observed also, that in general a cause was finally and irrevocably decided by the verdict of the dicasts (δικαίος αὐτοκράτης). There were, however, some exceptions, in which appeals and new trials might be resorted to.

A new trial to annul the previous award might be obtained, if the loser could prove that it was not owing to his negligence that judgment had gone by default, or that the dicasts had been deceived by false witnesses. And upon the expulsio of the thirty tyrants, a special law annulled all the judgments that had been given during the usurpation. (Dem. c. Timoc. p. 718.) The peculiar title of the above-mentioned causes was ἀναδίκος δίκαιος, which was also applied to all causes of which the subject-matter was by any means again submitted to the decision of a court.

An appeal from a verdict of the helliasts was allowed only when one of the parties was a citizen of a foreign state, between which and Athens an agreement existed as to the method of settling disputes between individuals of the respective countries (δίκαιος ἀπὸ συμβολῶν). If such a foreigner lost his cause at Athens, he was permitted to appeal to the proper court in another state, which (ἐκκλησία πόλις) Böckh, Schömann, and Hudtwalcker suppose to have been the native country of the litigant. Platner, on the other hand, arguing from the intention of the regulation, viz. to protect both parties from the partiality of each other's fellow-citizens, contends that some disinterested state would probably be selected for this purpose. The technical words employed upon this occasion are ἐκκαλεῖται, ἐκκαλείσθαι, and ἐκκλησία, the last used as a substantive, probably by the later writers only, for ἐφίσεως. (Harpocr. Hudtw. De Dicat. p. 125.) This as well as the other cases of appeal are noticed by Pollux (viii. 62, 63) in the following words: — "Ἐφίσεως is when one transfers a cause from the arbitrators (βαιντατοί), or archons, or men of the township (δημοταί) to the dicasts, or from the senate to the assembly of the people, or from the assembly to a court (δικαστήριον), or from the dicasts to a foreign tribunal; and the cause was then termed ἐφίσεως. Those suits were also called ἐκκλησία δίκαιος. The deposit staked in appeals, which we now call παράβολον, is by Aristotle styled παράβολον." The appeals from the diacetae are generally mentioned by Dem. c. Αριθμ. p. 662; c. Bocout. de Dote, pp. 1013, 1017, 1024; and Hudtwalcker supposes that they were allowable in all cases except when the μὴ ὁμά ὅποσ δίκαιος was resorted to.

(DIKE.)

It is not easy to determine upon what occasions an appeal from the archons could be preferred, for after the time of Solon their power of deciding causes had degenerated into the mere presidency of a court (δικαστήριον), and the conduct of the previous examination of causes (ἀναδίκαιος). It has been also remarked (Platner, Proc. und König, vol. i. p. 243) that upon the plaintiff's suit being rejected in this previous examination as unfit to be brought before a court, he would most probably proceed against the archon in the assembly of the people for denial of justice, or would wait till the expiration of his year of office, and attack him when he came to render the account of his conduct in the magistracy (συνέδρια). (Antiph. De Chresst. p. 788.) An appeal, however, from the archons, as well as from all other officers, was very possible when they imposed a fine of their own authority and without the sanction of a court; and it might also take place when the king archon had by his sole voice made an award of dues and privileges (γέρα) contested by two priesthoods or sacerdotal races. (Lex. Hetherionic, pp. 219, 19.)
APPELLATIO.

The appeal from the demota would occur, when a person hitherto deemed one of their members, had been declared by them to be an intruder and no genuine citizen. If the appeal were made, the demota appeared by their advocate as plaintiff, and the result was the restitution of the franchise, or thenceforward the slavery of the defendant. It will have been observed, that in the three last cases, the appeal was made from few or single or local judges to the holiest, who were considered the representatives of the people or country. With respect to the proceedings, no new documents seem to have been added to the contents of the cellphone upon an appeal; but the appeal is supposed to be confined merely to an examination, as far as was necessary, of those documents which had been already put in by the litigants.

There is some obscurity respecting the two last kinds of appeal that are noticed by Pollux. It is conjectured by Schömann (Att. Process, p. 771) that the appeal from the senate to the people refers to cases which the former were for various reasons disinclined to decide, and by Platner (vol. i. p. 427), that it occurred when the senate was accused of having exceeded its powers. Upon the appeal from the assembly to court, there is also a difference of opinion between the two last-mentioned critics, Schömann maintaining (Att. Process, p. 771) that the words of Pollux are to be applied to a voluntary reference of a cause by the assembly to the dicasts, and Platner suggesting the possible case of one that incurred a prejudice of the assembly against him (προβολή, καταχειροτονία) calling upon a court (δικαστήριον) to give him the opportunity of vindicating himself from a charge that his antagonist declined to follow up. Platner also supposes the case of a magistrate summarily deposed by the assembly, and demanding to prove his innocence before the heliasts. [J.S.M.]

2. ROMAN. The word "appellatio," and the corresponding verb "appellare," are used in the early Roman writers to express the application of an individual to a magistrate, and particularly to a tribunal, in order to protect himself from some wrong inflicted, or threatened to be inflicted. It is distinguished from "provocatio," which in the early writers is used to signify an appeal to the populace in a matter affecting life. It would seem that the "provocatio" was an ancient right of the Roman citizens. The surviving Horatius, who murdered his sister, appealed from the duumviri to the populace. (Liv. i. 26.) The decemviri took away this right, and it was restored by the assembly against him (proboλή, καταχειροτονία); but it was restored by a lex comitia, after the pleadings had brought the matter to a decision. Augustus (Suét. Octavi. 33) established a system of regular appeals from litigant parties to Rome to the Praetor Urbanus, as in the provinces to the governors. Nero (Suét. Nero, 17) enacted that, all appeals from primati (Tacit. Annal. xiv. 28) should be to the senate. Appellatio among the later Roman jurists, then, signifies an application for redress from the decision of an inferior to a superior, on the ground of wrong decision, or other sufficient ground. According to Ulpian (Dig. 49. tit. 1), appeals were common among the Romans, “on account of the injustice or ignorance of those who had to decide (judices), though sometimes an appeal alters a proper decision, as it is not a necessary consequence that he who gives the last gives also the best decision.” This remark must be taken in connection with the Roman system of procedure, by which such matters were referred to a judex for his decision, after the pleadings had brought the matter into dispute and to an issue. From the emperor himself there was, of course, no appeal, and under the constitution of Hadrian, there was no appeal from the senate to the emperor. The emperor, in appointing a judex, might exclude all appeal and make the decision of the judex final. M. Aurelius by a rescript (Dig. 49. tit. 1, s. 1, 21) directed an appeal from the judgment of a judex to the magistrate who had appointed the judex. The appeal, or libellus appellatorius, showed who was the appellant, against whom the appeal was, and what was the judgment appealed from.

Appellatio also means to summon a party before a judex, or to call upon him to perform something that he has undertaken to do. (Cic. Att. i. 6.) The debtor who was summoned (appellatus) by his creditor, and obeyed the summons, was said responsore.

The system of appellations as established under the empire was of very extensive application, and was not limited to matters of criminal and civil procedure. A person might appeal in matters that related to the fiscus, to penalties and fines, and from one inferior to a superior magistrate; and from one tribune to another.

The appeals which have here been referred to, were limited to criminal matters. In civil suits there was not, and could not be any appeal under the republic, for the purpose of revising and altering a decision, for each magistrate had power to decide finally within the limits of his jurisdiction; and as a general rule, the sentence of a judex could not be reversed by the magistrate who appointed the judex. The only mode in which a person could have relief, in such cases, was by the intercessio of a superior magistrate, or the appellatio of the tribunes which would be in the nature of a stay of execution. The In integram restitutio also existed under the republic.

When the supreme power became vested in the emperors, the terms provocatio and appellatio lost their original signification. Thus Gellius (iv. 14) has used provocation for appellatio. In the Digest (49. tit. 1. De Appellationibus) provocatio and appellatio are used indiscriminately, to express what we call an appeal in civil matters; but provocatio seems so far to have retained its original meaning as to be the only term used for an appeal in criminal matters. The emperor, it seems, possessed in himself both the power of the populus and the veto of the tribunes; but the appeal to him was properly in the last resort. Augustus (Suét. Octavi. 33) established a system of regular appeals from litigant parties to Rome to the Praetor Urbanus, as in the provinces to the governors. Nero (Suét. Nero, 17) enacted that, all appeals from primati (Tacit. Annal. xiv. 28) should be to the senate. Appellatio among the later Roman jurists, then, signifies an application for redress from the decision of an inferior to a superior, on the ground of wrong decision, or other sufficient ground. According to Ulpian (Dig. 49. tit. 1), appeals were common among the Romans, “on account of the injustice or ignorance of those who had to decide (judices), though sometimes an appeal alters a proper decision, as it is not a necessary consequence that he who gives the last gives also the best decision.” This remark must be taken in connection with the Roman system of procedure, by which such matters were referred to a judex for his decision, after the pleadings had brought the matter into dispute and to an issue. From the emperor himself there was, of course, no appeal, and under the constitution of Hadrian, there was no appeal from the senate to the emperor. The emperor, in appointing a judex, might exclude all appeal and make the decision of the judex final. M. Aurelius by a rescript (Dig. 49. tit. 1. s. 1, 21) directed an appeal from the judgment of a judex to the magistrate who had appointed the judex. The appeal, or libellus appellatorius, showed who was the appellant, against whom the appeal was, and what was the judgment appealed from.

Appellatio also means to summon a party before a judex, or to call upon him to perform something that he has undertaken to do. (Cic. Att. i. 6.) The debtor who was summoned (appellatus) by his creditor, and obeyed the summons, was said responsore.

The system of appellations as established under the empire was of very extensive application, and was not limited to matters of criminal and civil procedure. A person might appeal in matters that related to the fiscus, to penalties and fines, and
to civil offices and burdents. This subject is full
treated by Hollweg, Handbuch des Civilprozesses,
p. 350. 

[ G. L. ]

APPLICATIONIS JUS. [EXSILITUM.]

APROSTA/SIOU GRAPHE (προστάσιον
graphē), an action falling under the jurisdiction of
the polemarch, which was brought against those
metoeki, or resident aliens, who had neglected to
provide themselves with a patron (προστάτης).
This action is stated to have been also brought
against those metoeki, who exercised the rights of
of twelve drachmae exacted from resident aliens;
but Meier has remarked that this action was only
applicable in such cases, provided that the metoeki
had no patron. (Harpocrat.; Zonar.; Suid. and
the other grammarians; Meier, Att. Process.
p. 315, &c.)

APSIS or ABSIS (ἀψις), in its literal meaning
from ἀπτωκα, is a fastening of any kind; for example,
the meshes of a net. (Hom. Il. v. 487.) It was
applied specially to the joining together the extremities
of a piece of wood, so as to give it the shape of a
bow; and hence it came to signify anything of
that shape, such as a bow, an arch, or a wheel.
(Ihes. Op. 424; Herod. iv. 72.) A potter's wheel
is described, in the Anthology, as ἄψιος ἄψιδος.
The modern meaning is to anything
resulted (for example, ἐπουργία ἀψις, the vault
of heaven, Plat. Phaedr. p. 247, b.); and in this
sense it was adopted in architecture, first, for any
building or portion of a building of a circular form,
or vaulted (Plin. Epist. ii. 17. § 18), and more
especially for the circular and vaulted end of a
Isid. Orig. xv. 8.) For other applications of it, all
with the general meaning of a vault or curve, see
Forsellini. [P. S.]

AQUAEDUCTUS (ἀδραγωγία), literally, a
water-conduit; would, of course, properly describe
any channel for the passage of water; but the
word is used especially for the magnificent structures
by means of which Rome and other cities of the
Roman empire were supplied with water,
and which may be described in general terms as a
channel, constructed as nearly as possible with a
regular declivity from the source whence the
water was derived to the place where it was de-
livered, carried through hills by means of tunnels,
and over valleys upon a substraction of solid
masonry or arches.

The aqueduct is mentioned by Strabo as among
the structures which were neglected by the Greeks,
and first brought into use by the Romans (v.
p. 235). It will presently be seen that this statement
requires some slight modification; but, if
understood of the grand structures we have referred
to, it is true enough that the Greeks (before the
Roman conquest) had none such, and for the
obvious reason, that they had no need of them.
There is no occasion to discuss the possibility or
impossibility of constructing aqueducts without
arches, which is the reason alleged by some
writers for their not being used by the Greeks;
there is reason enough in the physical geography
of the country. Springs (κρήτα, κρημνω) were
sufficiently abundant to supply the great cities
with water; and great attention was paid to the
preservation and adornment of them; they were
converted into public fountains by the formation of
a head for their waters, and the erection of an
ornamental superstructure; and were dedicated to
some god or hero. Pausanias (x. 4. § 1) considers
no place to deserve the name of city, which has
not such a fountain. We are indebted to the
same author and other Greek writers for accounts
of some of the most celebrated fountains; such as
that of Theagenes, at Megara (Paus. i. 40. § 1): those of Peirene and Lerna at Corinth, where
there were many other fountains, as well as a
Roman aqueduct erected by Hadrian (i. 8. §§ 2,
3, 5; 4. §§ ?), that in the grove of Asenius as
Epidauras (i. 17. § 5); and several others (iv. 31,
32, 34, v. 5, 21, viii. 13), of which we need
only mention the Enneakrounos at Athens, which
was constructed by Poisistratus and his sons, and
of which Theycydes records the interesting fact,
marking the transition from the natural springs to
the artificial fountain, and showing the importance
attached even to the former, that "it was caused
Callirhoe formerly, when the springs were visible
(πανοράμα τῶν πηγῶν οὖσαν, Thuc. ii. 15; Paus. i.
14. § 1): to this enumeration might be added the
springs of salt-water in certain temples; as in those of Erechtheus at Athens, and of Poseidon Hippus at Mantineia.
(Paus. i. 26. § 2, viii. 10, § 4."

In these cases we have no reason to suppose that
there was anything more than a fountain over or
close to the springs, forming a head for the water,
derived, either immediately, or by very snors
channels, from them. But we are not
witness examples of constructions more nearly approaching the Roman aqueducts in kind, though not in
degree. That the Greeks, at a very early period,
had some powers of hydraulic engineering is shown
by the drainage tunnels of the lake Copais, and
the similar works of Phaeax at Agrigentum
[EMISSARIUM]; and we have an instance of a
channel for water being carried through a mountain,
to supply the city of Samos. The next or
the mountain was 150 orguiae (500 Greek feet) : the length of the tunnel was seven stadia (7-6ths
of a Roman mile, or about 1420 yards); its section
was a square of eight Greek feet. The actual
channel for the water was cut below this, and was,
if the text is right, thirty Greek feet deep, and
three wide; the water passed through pipes (δια
σωληνών) from a copious spring, and was thus
brought to the city. (Herod. ii. 60.) Muller conjectures that the work was executed by
Polycrates (Archdol. d. Kunst, § 81).

The chief regulations among the Greeks respecting
fountains and springs, whether in town or
country, were the following: — Water might be
fetched from the public fountains or wells to a
distance of four stadia; beyond this, persons must
take from his neighbour's well a
pitcher of six
The waters of the Tiber, and to wells sunk in the city;
but the water obtained from those sources was very
unwholesome, and must soon have proved
insufficient, from the growth of the population, to
supp anything of the supplies afterwards required for the
naval as well as public baths. It was this neces-
sity that led to the invention of aqueducts, in order to bring pure water from a considerable distance, from the hills, in fact, which surround the Campagna. The date of the first aqueduct is assigned by Frontinus to the year B.C. 313 (De Aquaed. Urb. Rom. 4, p. 14, ed. Adler); and the number of aqueducts was gradually increased, partly at the public expense, and partly by the munificence of individuals, till, in the time of Procopius, they amounted to fourteen; and, even before they were all erected, they might well excite the admiration which Pliny expresses with respect to the Claudian aqueduct, in the following passage (H. N. xxxvi. 15. s. 24): "But if any one will carefully calculate the quantity of the public supply of water, for baths, reservoirs, villas, trenches (euvripi), gardens, and suburban villas; and, along the distance which it traverses, any one will carefully calculate the quantity of the public supply of water, for baths, reservoirs, villas, trenches, gardens, and suburban villas; and, along the distance which it traverses, the arches built, the mountains perforated, the valleys levelled; he will confess that there never was any thing more wonderful in the whole world."

But why did the Romans waste so much money and labour on works, the purpose of which might have been effected much more scientifically by the simple plan of laying pipes along the ground? Of course, it is easy to give the unthinking answer, that they were ignorant of the laws of hydraulics, and did not know that water finds its own level. It is truly marvellous that such an absurd notion should ever have been entertained, and yet it is the common explanation of the fact of their building aqueducts instead of laying down water-pipes. If it were at all necessary to prove that a nation could have advanced as far as the Romans in civilisation as the Romans, or indeed that any individual arrived at years of discretion, had discovered that water finds its own level, the proof might be supplied from passages in Latin authors, from the whole arrangements for the distribution of the water of the aqueducts, and from the very existence of their numerous fountains; as a decisive ocular demonstration, we have given above a section of one of the many fountains still existing at Pompeii. Another reason assigned for the construction of aqueducts by the Romans is their want of the principle of the New River, and the manufacturing skill, to make pipes of a sufficient size; combined, on the other hand, with the love of magnificence and the ostentatious disregard of expense, by which the architectural works of the empire are characterised. Some weight should doubtless be assigned to these considerations, although, in fact, the Romans made use of pipes as well as aqueducts; but the great point is, that it has been too hastily assumed that the aqueduct is an unscientific mode of conveying water to a large city from distant sources; or that it is peculiar to the ancients. London itself is chiefly supplied by an aqueduct, for such is the New River in principle, although the country through which it flows is such as not to require arches and tunnels like those of the Roman aqueducts; and the remark would apply to several other great cities. The whole matter is a question of the balance of advantages. On the one hand there is the expense of the aqueduct: on the other, the enormous pipes which would be required for the conveyance of an equal quantity of water, their liability to get obstructed, and to yield at the joints, the loss by friction, the waste by leakage in the bends, and the unequal pressure of the water. In fact, the most recent feat of engineering science in this country is exactly a return to the Roman aqueduct, which has been preferred to any other plan for conveying water in large quantities a considerable distance, over great inequalities of ground: we refer to the aqueduct, begun in 1857 and finished in 1842, by which the water of the river Croton is conveyed a distance of forty miles, for the supply of New York, and which is thus described: "An artificial channel, built with square stones, supported on solid masonry, is carried over valleys, through rivers, under hills, on arches and banks, or through tunnels and bridges, over these forty miles. Not a pipe, but a sort of condensed river, arched over to keep it pure and safe, is made to flow at the rate of a mile and a half an hour towards New York."

The detailed description of the arrangements of the aqueduct will be better understood, after an enumeration of the principal aqueducts by which water was conveyed to Rome across the Campagna.

They were fourteen in number; and only four of them belong to the time of the republic, while five were built in the reigns of Augustus and Claudius. Our knowledge of the subject is derived almost entirely from the treatise De Aquae ductus Urbis Romae, by S. Julius Frontinus, who was curator aquarum (keeper of the aqueducts) under Nerva and Trajan. It should be observed that the Aquaeductus is often called simply Aqua.

1. The Aqua Appia was begun by the censor Appius Claudius Cæcactus (to whom also Rome was indebted for her first great road), in B.C. 313. Its sources were near the Via Praenestina, between the seventh and eighth milestones, and its termination was at the salinae, by the Porta Trigemina.
AQUAEDUCTUS.

Its length was 11,190 passus, for 11,130 of which it was carried under the earth, and for the remaining 60 passus, within the city, from the porta Capena to the Porta Trionfetta, it was on arches. The distribution of its water began from the Cisternae Publicae. (Frontin. 5; Liv. ix. 29; Diod. xx. 36; Aur. Vict. Vir. Illust. 34, who confounds it with the Anio.) No traces of it remain.

2. The Anio Vetus was commenced four years later, in B.C. 273, by the censor M. Curius Dentatus, and was finished by M. Fulvius Flaccus. The expense was defrayed out of the spoils taken from Pyrrhus. The water was derived from the river Anio, above Tibur, at a distance of twenty Roman miles from the city; but, on account of its windings, its actual length was forty-three miles, of which length less than a quarter of a mile only (namely, 221 passus) was above the ground. There are considerable remains of this aqueduct on the Aurelian wall, near the porta Maggiore, and also in the neighbourhood of Tivoli. It was built of blocks of peperino stone, and the water-course was lined with a thick coating of cement. (Front. 6; Aur. Vict. Vir. Ill. 43.)

3. The Aqua Marcia, one of the most important of the whole, was built by the praetor Q. Marcius Rex, by command of the senate, in B.C. 144. The want of a more plentiful supply of water had been long felt, especially as that furnished by the Anio Vetus was of such bad quality as to be almost unfit for drinking; and, in B.C. 179, the censors, M. Aeilius Lepidus and M. Flaccus Nobilior, had proposed the erection of a new aqueduct; but the scheme had been defeated, in consequence of Licinius Crassus refusing to let it be carried through his lands. (Liv. xi. 51.) The two existing aqueducts had also fallen into decay by neglect, and had been much injured by private persons drawing off the water at different parts of their course. The senate therefore commissioned the prae tor Marcius to repair the old aqueducts, and to build a third, which was named after him. Some writers have pretended that the original construction of this aqueduct is to be ascribed to Ancus Marcius, alleging a passage of Pliny (Hur. xxxi. 3. s. 24), and a medal of the Marcian gens, family Philippus, which bears on the obverse a head with the legend ANCVS, and on the reverse a representation of an aqueduct, with the letters AQUAM between the arches, supporting an equestrian statue with the legend PHILIPPVS; but those who know anything of the history of Roman family records will understand that this medal bears no evidence to the point in question, and is simply a perpetuation of two of the greatest medals which are simply a perpetuation of two of the greatest Roman family records. The monument erected at the junction of these three aqueducts, is still to be seen close to the porta S. Lorenzo. It bears an inscription referring to the repairs under Caracalla. (See the woodcut below, p. 112.) The whole course of the Aqua Julia, from its source, amounted to 15,426 passus, partly on massive substructions, and partly on arches. (Frontin. 8, 9, 19.)

4. The Aqua Tepula, which was built by the censors Cu. Servilius Caepio and L. Cassius Longinus in B.C. 127, began at a spot in the Lucullan or Tuscanian land, two miles to the right of the tenth milestone on the Via Latina. It was afterwards connected with the other two, at two distinct channels, on the same substructions (which were probably the original substructions of the Aqua Tepula, newly restored), the lower channel being called the Aqua Tepula, and the upper the Aqua Julia; and this double aqueduct again was united with the Aqua Marcia, over the watercourse of which the other two were carried. The monument erected at the junction of these three aqueducts, is still to be seen close to the porta S. Lorenzo. It bears an inscription referring to the repairs under Caracalla. (See the woodcut below, p. 112.)

5. The Aqua Virgo was built by Agrippa, to supply his baths. From a source in a marshy spot by the eighth milestone on the Via Collatina, it was conducted by a very circuitous route, chiefly under the ground, to the M. Pincius, whence it was carried on arches to the Campus Martius. Its length was 14,105 passus, of which 12,865 were underground; in its subterranea course it received the water of numerous springs; and its water was as highly esteemed for bathing as that of the Aqua Marcia was for drinking. It is one of the two aqueducts on the left bank of the Tiber, which are still in use, though on a much-diminished scale. (See below.) The origin of its name is variously explained. (Frontin. 10; Dion Cass. liv. 11; Plin. H. N. xxxi. 3. s. 25; Cassiod. Var. vii. 6; Ovid, Trist. iii. 12. 22; Martial v. 20. 9; vi. 42. 18; xi. 47. 6.)

This aqueduct commenced at the side of the Via Valeria, thirty-six miles from Rome; its length was 61,710 passus, of which only 7463 were above ground; namely, 520 on solid substructions, and 6943 on arches. It was high enough to supply water to the summit of the Capitoline Mount. It was repaired by Agrippa in his aedileship, B.C. 33 (see below, No. 5.), and the volume of its water was increased by Augustus, by means of the water of a spring 800 passus from it: the short aqueduct which conveyed this water was called the Aqua Augustara, but is never enumerated as a distinct aqueduct. Pliny states that the water of the Aqua Marcia was the coldest and most wholesome of all which was brought to Rome; and Vitruvius and other writers refer to the excellence of the water as being proverbial. Several arches of the Aqua Marcia are still standing. (Frontin. 12; Plin. H. N. xxxi. 3. s. 24, who differs from Frontinus in some of the details; Strab. v. p. 240; Vitruv. viii. 3. § 1; Dion Cass. xlix. 42; Plut. Coriol. 1; Propert. iii. 22, 24; Martial vi. 42. 16; Stat. Silv. i. 5, 25.)

The Aqua Marcia gens, whose name is perpetuated in the many inscriptions of its works, was of great antiquity, and is simply a perpetuation of two of the greatest Roman family records. (Eckhel, Doctr. Num. Vet. vol. v. p. 248.)
The Aqua Alsietina (sometimes called also Aqua Augusta), on the other side of the Tiber, was constructed by Augustus from the Lacus Alsietinus (Lago di Martignano), which lay 6,500 paces of the fourteenth milestone on the Via Claudia, to the part of the Regio Transiberina below the Janiculum. Its length was 22,172 passus, of which 358 were on arches; and its water was so bad that it could only have been intended for the supply of Augustus's Nau machia, and for watering gardens. Its reservoir was 1,800 feet long by 1,200 wide. (Frontin. 11.)

8, 9. The two most magnificent aqueducts were the Aqua Claudia and the Anio Novus (or Aqua Aniena Nova), both commenced by Caligula in A. D. 36, and finished by Claudius in A. D. 50. The water of the Aqua Claudia was derived from two cooptoi and excellent springs, called Caecubus and Curtius, near the thirty-eighth milestone on the Via Sublacensis, and it was afterwards increased by a third spring, Albidinus. Its water was reckoned the best after the Marcia. Its length was 46,406 passus (nearly 461 miles), of which 9,567 were on arches. Of a still greater length was the Anio Novus, which began at the forty-second milestone, on the Via Sublacensis, and received in addition, at the thirty-eighth milestone, opposite the sources of the Aqua Claudia, a stream called the Rives Herculanuses. It was the longest and the highest of all the aqueducts, its length being nearly 59 miles (36,700 passus), and some of its arches 109 feet high. In the neighbourhood of the city these two aqueducts were united, forming two channels on the same arches, the Claudia below and the Anio Novus above. An interesting monument connected with these aqueducts, is the gate now called Porta Maggiore, which was originally a magnificent double arch, by means of which the aqueduct was carried over the Via Labicana and the Via Praenestina. The Porta Labicana was blocked up by Honorius; but the arch has been lately cleared of his barbarous constructions. Over the double arches are three inscriptions, which record the names of Claudius as the builder, and of Vespasian and Titus as the restorers of the aqueduct. (See thewoodcut.) By the side of this arch the aqueduct passes along the wall of Aurelian for some distance, and then it is continued upon the Arcus Nerontianus or Castelmontanus, which were added by Nero to the original structure, and which terminated at the temple of Claudius, which was also built by Nero, on the Campus, where the water was probably conveyed to a castellum already built for the Aqua Julia, and for a branch of the Aqua Marcia, which had been at some previous time continued to the Campus; the monument called the Arch of Dolgae is probably a remnant of this common castellum. (Becker, Handb. d. Krom. Alterth. vol. i. 402.)

These nine aqueducts were all that existed in the time of Frontinus, who thus speaks of them collectively, in terms which can hardly be thought exaggerated:—*Tot aquarum tum multa necessitas multas pyramidas videolcit iones comparas et inventa sed jam congelat opera Auterorum.* It has been calculated that these nine aqueducts maintained some with a supply of water equal to that carried down by a river thirty feet broad by six deep, flowing at the rate of thirty inches a second. There was also another aqueduct, not reckoned with the nine, because its waters were no longer brought all the way to Rome:

10. This was the Aqua Orbis, which had its source near that of the Julia, and which was originally carried through the same valley as the Aqua Julia; but the water was so bad, that Agrippa would not bring it into the Julia, but abandoned it to the people of the Tuscanal land; hence it was called Aqua Domnata. At a later period, part of its water was brought into the Aqua Julia. (Frontin. 9.)

Considerable traces of it remain.

There are still four aqueducts of later construction to be added to the list:

11. The Aqua Trajana was brought by Trajan from the Locus Sabatinus (now Bracciano), to supply the Janiculus and the Regio Transiberina. Its construction is recorded on coins of gold, silver, and bronze, of the years 111 and 112 A. D. (Eckhel, Doctr. Num. vet. vi. pp. 425, 426.) Trajan also restored and improved the other aquedtuts, especially the Anio Novus. (Frontin. 92, 93.)

12. The Aqua Alexandrina was constructed by Alexander Severus; its source was in the lands of Tuscumulum, about fourteen miles from Rome, between Gabii and the Lake Regillus. Its small height shows that it was intended for the baths of Severus, which were in one of the valleys of Rome. (Lamprid. Alex. S. 25; Fabretti, Diss. i. § 23.)

13. The Aqua Septimiana, built by Septimius Severus, was, perhaps, only a branch of the Aqua Julia, formed by the emperor to bring water to his baths. (Fabretti, Diss. iii. § 285.)

14. The Aqua Algenita had its source at M. Algidus by the Via Tusculana, 9,000 passus from Rome, according to Fabretti; but more probably 15,000. Its builder is unknown.

These seem to have been the fourteen aqueducts, which were still preserved in use at Rome in the time of Procopius (Goth. i. 19); but there is a doubt respecting some of the last five. Thus the Epitome of the Notitia mentions the Climenina, the Severiana, and the Antonia, and makes the whole number nineteen; while Aurelius Victor enumerates twenty. The account of Procopius seems the most exact, and the excess in the other statements may be explained from the enumeration of the small accessory branches of the chief aqueducts; for the Aqua Jovia of Bursae there is no sufficient authority. (Becker, Handb. d. Krom. Alterth. vol. i. p. 707.)

Great pains were taken by successive emperors to preserve and repair the aqueducts. From the Gothic wars downwards, they have for the most part shared the fate of the other great Roman works of architecture; their situation and purpose rendering them peculiarly exposed to injury in war; but still their remains form the most striking features of the Campagna, over which their lines of ruined arches, clothed with ivy and the wild fig-tree, radiate in various directions. Three of them still serve for their ancient use; and these three alone, according to Tournon, supply the modern city with a quantity of water much greater than that which is furnished to Paris by the Canal de l'Oureq, for a population six times as large. They are:—

1. The Aqua Trajana, which was restored by Pope Pius IV.
2. The Aqua Virgo, which was restored by Benedict XIV.
3. The Aqua Prima, and further embellished by Clement XIII. The chief portion of its waters gush out through the beautiful Fontana di Trevi, but it also supplies twelve other public fountains,
and the greater part of the lower city. (2.) The *Aqua Felice*, named after the conventional name of its restorer Sixtus V. (Fra Felice) is, probably, a part of the ancient *Aqua Claudia*, though some take it for the *Alexandrina*. It supplies twenty-seven public fountains, and the eastern part of the city. (3.) The *Aqua Paola*, the ancient *Alsietina*, supplies the *Trastevere* and the Vatican, and feeds, among others, the splendid fountains before St. Peter's. Of the ruins of the other aqueducts the most extensive, within Rome, are those of the *Arcus Neroniani*, and of the *Aqua Crabra*; the most interesting are the *Porta Maggiore*, with the two channels of the *Aqua Claudia* and *Anio Novus*, and the remains of the triple aqueduct of Agrippa by the Porta S. Lorenzo. The following woodcut (after Hirt) represents restored sections of them, preserving their relative proportions: —

---

![Section of the Porta Maggiore at Rome](image)

*Fig. 1.* — Section of the *Porta Maggiore* at Rome: a. the *Aqua Claudia*; b. the *Anio Novus*; c. openings to give vent to the air.

*Fig. 2.* — Section of the triple aqueduct of Agrippa: a. the *Aqua Marcia*; b. the *Aqua Tepula*; c. the *Aqua Julia*. The two latter are of brick and vaulted over. The air-vents are also shown.

The magnificence displayed by the Romans in their public works of this class, was by no means confined to the capital; for aqueducts more or less stupendous were constructed by them in various and even very remote parts of the empire,—at Athens, Corinth, Catana, Salona, Nicomedia, Ephesus, Smyrna, Alexandria in the Troad, Syracuse, Metz, Clermont in Auvergne, Nimes (the Pont du Gard), Lyon, Evora, Merida, and Segovia. Those at Ephesus and Alexandria were built by Hadrian and Herodes Atticus, and that at Athens was commenced by Hadrian and finished by Antoninus Pius, who also built those at Corinth and Nicomeden. That at Evora, which was built by Quintus Sertorius, is still in good preservation; and at its termination in the city has a very elegant *castellum* in two stories, the lower one of which has Ionic columns. Merida in Spain, the Augusta Emerita of the Romans, who established a colony there in the time of Augustus, has among its other antiquities the remains of two aqueducts, of one of which thirty-seven piers are standing, with three tiers of arches; while of the other there are only two which form part of the original constructions, the rest being modern. But that or Segovia, for which some Spanish writers have claimed an antiquity anterior to the sway of the Romans in Spain, is one of the most perfect and magnificent works of the kind anywhere remaining. It is entirely of stone, and of great solidity, the piers being eight feet wide and eleven in depth; and, where it traverses a part of the city, the height is upwards of a hundred feet, and it has two tiers of arches, the lowermost of which are exceedingly lofty.

We proceed to describe in detail the construction and arrangements of Roman aqueducts. There are three matters to be considered: the source from which the water was derived; the aqueduct itself, by which it was conveyed; and the reservoir in which it was received, and from which it was distributed for use.

(1.) The Sources. — It is unnecessary to follow Vitruvius into the minute rules which he lays down for the discovery of springs, where they were not naturally visible, and for testing the quality of the water: it is enough to refer to his statements as showing the importance attached to these points. (Vitruv. viii. 1.) It was also necessary that the springs should have such an elevation, as that, after allowing for the fall necessary to give the channel its proper inclination, the water should enter the final reservoir at a sufficient height to permit of its distribution for public and private use; for there were no engines used, as in modern waterworks, to raise the water to a higher elevation than that at which it was required. When the source had been fixed upon, whether it was an open spring (fons), or one got at by sinking a well (pudens), a head was dug for the water, and inclosed with a wall; and, if necessary, the supply was increased by digging channels from neighbouring springs: the rules for these operations also are minutely laid down by Vitruvius (viii. 7. 6. §§ 12—15).

(2.) The Channel, or Aqueduct itself. — In order to convey the water from its source to its destination, a channel was constructed, having a slight, and, as nearly as possible, a uniform declivity. An elaborate description of the means adopted to secure this object is quite needless for readers of the present day, as they were almost precisely

* Though the word *aquaeductus* is applied generally to the whole structure, yet in its special and proper meaning it seems only to have signified that part of the work in which the water-channel was carried over a valley, on arches or on solid substructions: a channel on the surface of the ground was properly called *rivus*; and one beneath the surface, *rivus subterraneus*, or *cuniculus*. 
AQUAEDUCTUS.

similar to those with which we are familiar in our railways: hills were pierced through by tunnels, and valleys crossed either by solid substructions or arches of masonry, according to the height required; and of these arches there were often two tiers, and sometimes even three. The channel itself (specus, canalis) was a trough of brick or stone, lined with cement, and covered with a coping, which was almost always arched; and the water either ran directly through this trough, or it was carried through pipes laid along the trough. When the channel was carried beneath the surface, if the hill through which it passed was of rock, it was merely cut in the rock; but if of earth or sand, it was constructed of blocks of stone.

The following woodcut represents a portion of a double-arched aqueduct, and shows a section of the specus (a): b, c, d are projecting blocks, which are often seen in such positions, and which were double the supports for the centerings used in building the arches.

The object of covering the specus was to exclude the sun and rain, and other corruptions and obstructions; but it was necessary to provide a vent for the air, which otherwise would have been compressed to such a degree as to burst the walls or roof of the specus. These vent-holes were made at regular intervals in the roof of the specus, or, when another channel passed over it, in the side. They are represented in the sections, given above, of the Aqua Claudia, Marcia, &c. To ventilate the subterranean channel of an aqueduct, a shaft (patera) of masonry was carried to the surface of the ground at intervals of an actus, or 240 Roman feet (or two actas, according to Pliny), who calls them lunulae, as shown in the following woodcut (after Hirt), which represents the plan, longitudinal section, and transverse section, of part of a rucus subterraneus, the ruins of which still exist at Paulyra.

The rucus subterraneus possessed the advantage over the aquaeductus of being less exposed to variations of temperature, and more secure from injury; on the other hand, it was of course much more difficult to get at when it required repairs. A reference to the account given above, of the Roman aqueducts, will show how large a portion of them was subterranean.

AQUAEDUCTUS.

...
Aqua Claudia, though of such different heights at Rome, have their sources at the same elevation.

At convenient points on the course of the aqueduct, and especially near the middle and end, there was generally a reservoir (piscina, piscina limosa) in which the water might deposit any sediment that it contained. The construction of these reservoirs will be understood from the following woodcut, which represents a restored section of one which still exists.

The water flowed from the aqueduct a into the first upper chamber, thence down and up again through the openings b, e, f, into the second upper chamber, out of which it passed into the continuation of the aqueduct j, having deposited its sediment in the two lower chambers, which could be cleaned out by the door d. The piscina was not always vaulted: Hirt, from whose work the above cut is taken, gives also an engraving of an open piscina. These reservoirs were not always used: for example, the Aqua Virgo and the Alsietina were without them. They were especially necessary when the water was conveyed through pipes. They were also used as reservoirs for the supply of the neighbouring country, chiefly for the purposes of irrigation.

The details, which we have now been noticing, are minutely described by Frontinus, and by Vitruvius* (viii. 7. 6), and briefly by Pliny (H. N. xxxi. 6. 31).

(3.) The Termination of the Aqueduct, and the Arrangements for the Distribution of its Water. —The water thus conducted to the city was received, when it reached the walls, in a vast reservoir called castellum, which formed the head of water and also served the purpose of a meter. The more ancient name in use, when the aqueducts were first constructed, was dividiculum. (Fest. s. n.) From this principal castellum the water flowed into other castella, whence it was distributed for public and private use. The term castellum is sometimes also applied to the intermediate reservoirs already mentioned.

The chief castellum was, externally, a highly decorated building; for example, that of Hadrian, at Athens, was adorned with Ionic pillars, and that at Evora, in Portugal, had the form of a circular temple. Internally, there was generally one vast chamber, with a vaulted roof supported by massive pillars, into which the water flowed from the aqueduct, and from which it was conducted through pipes of fixed dimensions, into three smaller reservoirs, which were, however, so arranged, that the middle one was only supplied from the overflow of the other two. Of these three reservoirs, the two outer supplied respectively the public baths and the private houses, and the middle one the public ponds and fountains (lacus et salientes): so that, in case of a deficient supply for useful purposes, none would be wasted on the fountains: the arrangement also enabled a proper account to be kept of the quantity supplied for private use, for the protection of the revenue derived from this source. (Vitruv. viii. 7. 6. §§ 1, 2.)

The minor castella, which received the water from this chief head, were distributed over the city, in such a manner that the Aqua Appia supplied seven regiones by means of twenty castella; the Anio Vetus, ten regiones through thirty-five castella; the Marcia, ten regiones through fifty-one castella: the Tepula, four regiones through fourteen castella; the Julia, seven regiones through seventeen castella; the Virgo, three regiones through eighteen castella; the Claudia and the Anio Vetus, ninety-two castella. (Frontin. 79—86.) For an account of the parts of the city supplied by the different aqueducts, see Becker, Handb. d. Röm. Alterth. vol. i. pp. 707, 708.

The subjoined plan and elevation represent a ruin still remaining at Rome, commonly called the "Trophies of Marius," which is generally considered to have been the castellum of an aqueduct.

* The particular attention which Vitruvius pays to the conveyance of water through pipes, warrants the supposition that in his time, when some of the most important of the aqueducts were not yet erected, that method was very largely employed.
The castella publica were again subdivided into six classes, which furnished water for the following uses:—(1.) The Praetorian camp (castra); (2.) the ponds and fountains (laci et salientes); (3.) the circus, nautheinae, and amphitheatres (museos); (4.) the baths, and the service of certain important handicrafts, such as the fuller, dyers, and tanners (opera publica); (5.) irregular distributions made by the special order of the emperor (nomine Caesaris); (6.) extraordinary grants to private individuals by the favour of the prince (beneficia Caesaris). The distribution under each of these heads is described by Frontinus (3, 78).

The castella privata were, as the name implies, for the supply of private houses. When a supply of water from the aqueducts was first granted for private uses, each person obtained his quantum by inserting a branch pipe, as we do, into the main; which was probably the custom in the age of Vitruvius, as he makes no mention of private reservoirs. Indeed, in early times, all the water brought to Rome by the aqueducts was applied to public purposes exclusively, it being forbidden to the citizens to divert any portion of it to their own use, except such as escaped by flaws in the ducts or pipes, which was termed aqua caduca. (Frontin. 94.) But as even this permission opened a door for great abuses from the fraudulent conduct of the aquariori, who damaged the ducts for the purpose of selling the aqua caduca, and as the subsequent method of supply required the main-pipe to be punctured in too many places (Frontin. 27), a remedy was sought by the institution of castella privata, and the public were henceforward forbidden to the citizens to divert any portion of it to their own use, except such as escaped by flaws in the ducts or pipes, which was termed aqua caduca. (Frontin. 111.) The castella privata were built at the joint expense of the families supplied by them; but they were considered as public property, and were under the control of the curatores aquarum. (Frontin. 106.) The right of water (iux aquae impturato) did not follow the heir or purchaser of the property, but was renewed by grant upon every change in the possession.

The leaden cisterns, which each person had in his own house to receive the water laid on from the custellum privatum, were called castella domus.

All the water which entered the castellum was measured, as it ingress and egress, by the size of the tube through which it passed. The former was called moximus acceptorius, the latter erogatorius. To distribute the water was termed erogare; to the reservoir, erogatio; the size of the tube, modulus acceptorius, or lumen. The smaller pipes which led from the main to the houses of private persons, were called punctae; those inserted by fraud into the duct itself, or into the main after it had left the castellum, fistulae.

The erogatio was regulated by a tube called calix, of the diameter required, and not less than a root in length, attached to the extremity of each pipe, where it entered the castellum; it was pro- priety of lead in the time of Vitruvius; such only being mentioned by him; but was made of bronze when Frontinus wrote, in order to check the luxury of the aquariori, who were able to increase or diminish the flow of water from the reservoir by compressing or extending the lead. As a further security, the calix was stamped. Pipes which had no calix, were termed solitae. Frontinus also observes that the velocity of the water passing through the calix, and, consequently, the quantity given out, could be varied according to the angle which the calix made with the side of the reservoir: its proper position was, of course, horizontal.

It is evident how watchful an oversight must have been required to keep the aqueducts in repair, to regulate their use, and to prevent the fraudulent abstraction of their water. Under the republic, this office was discharged, sometimes, by the censors, but more generally by the aediles (Cic. ad Div. viii. 6), and sometimes a special overseer was appointed. (Frontin. 95, 119.) Augustus first established the office of curator (or prorector) aquarum (Suet. Octav. 37). The duties of which are minutely described by Frontinus (99), who seems, while he held the office, to have performed it with the utmost zeal; among other cares, he had plans and models made of the whole course of all the aqueducts (17, 64). The curatores aquarum were invested with considerable authority. They were attended outside the city by two lectores, three public slaves, a secretary, and other attendants.

In the time of Nerva and Trajan, a body of four hundred and sixty slaves were constantly employed under the orders of the curatores aquarum in attending to the aqueducts. They were divided into two families, the familia publica, established by Agrippa, and the familia Caesaris, added by Claudius; and they were subdivided into the following classes:—1. The villae, whose duty it was to attend to the pipes and calices. 2. The castellarii, who had the superintendence of all the castella, both within and without the city. 3. The circuitores, so called because they had to go from post to post, to examine into the state of the works, and also to keep watch over the labourers employed upon them. 4. The siliciarri, or paviers, who had to remove and relay the pavement when the pipes beneath it required attention. 5. The tectores, who had the charge of the masonry of the aqueducts. These and other workmen appear to have been included under the general term of aquarii (Cod. xii. tit. 42 or 43. s. 10; Frontin. 116, 117.) The following are the most important works on the Roman aqueducts:—Frontinus, de Aquis ductibus Urbis Romae; Fabretti, de Aquis et Aqueductibus Veteris Romae; Sieniglitz, Archäologie der Baukunst; Hirt, Geschichte d. Baukunst; Platten und Bunsen, Beschreibung d. Stadt Rom; Becker, Handbuch d. Römische Alterthümer, vol. i. (P. S.)

AQUAE DUCTUS. [SERVITUSES.] AQUAE ET IGNIS INTERDICTIO. [EXSILIUM.] AQUAE HAUSTUS. [SERVITUSES.] AQUAE PLUVIAE ARCADÆAE ACTIO.
land; or by the owner of the lower land against the owner of the higher land, in case the latter did any thing to his land by which the water flowed from it into the lower land in a different way from what it naturally would. In the absence of any special custom or law to the contrary, the lower land was subject to receive the water which flowed naturally from the upper land; and this rule of law was thus expressed,—*ager inferior superiori servit.*

The fertilising materials carried down to the lower land were considered as an ample compensation for any damage which it might sustain from the water. Many difficult questions occurred in the application to practice of the general rules of law as to aqua pluvia; and, among others, this question,—What things done by the owners of the land were to be considered as preventing or altering the natural flow of the waters? The conclusion of Ulpian is, that acts done to the land for the purposes of cultivation were not to be considered as acts interfering with the natural flow of the waters. Water which increased from the falling of rain, or in consequence of rain changed its colour, was considered with the water of aqua pluvia; for it was not necessary that the water in question should be only rain water, it was sufficient if there was any rain water in it. Thus, when water naturally flowed from a pond or marsh, and a person did something to exclude such water from coming on his land, if such marsh received any increase from rain water, and so injured the land of a neighbour, the person would be compelled by this action to remove the obstacle which he had created to the free passage of the water.

This action was allowed for the special protection of land (*ager*): if the water injured a town or a building, the case then belonged to fluminia and stillicidia. The action was only allowed to prevent damage, and therefore a person could not have this remedy against his neighbour, who did any thing to his own land by which he stopped the water which would otherwise flow to that person's land and be profitable to it. The title in the Digest contains many curious cases. (Dig. 39. tit. 9. Pro Muren. 10. Topic. 2; Boëthius, Comment. in Cic. Top. iv. 9.)

**AQUARII** were slaves who carried water for bathing, &c., into the female apartments: they were also called aquarioli, and were held in great contempt. (Juv. vi. 332; Festus, s. v. and Müller's Note; Hieron. Ep. 27; Jul. Paul. iii. 7.) Becker imagines that the name was also applied to slaves who had the care of the fountains and ponds in gardens. (Galus, vol. i. p. 288.) The aquarii were also public officers who attended to the aqueducts under the aediles, and afterwards under the curator aquarum. (Cic. ad Fam. viii. 6; Zeno, Cod. Just. xi. tit. 42; AQUAEDUCTUS.)

The title in the Digest contains many curious cases. (Dig. 39. tit. 9. Pro Muren. 10. Topic. 2; Boëthius, Comment. in Cic. Top. iv. 9.)

**AQUARII** were slaves who carried water for bathing, &c., into the female apartments: they were also called aquarioli, and were held in great contempt. (Juv. vi. 332; Festus, s. v. and Müller's Note; Hieron. Ep. 27; Jul. Paul. iii. 7.) Becker imagines that the name was also applied to slaves who had the care of the fountains and ponds in gardens. (Galus, vol. i. p. 288.) The aquarii were also public officers who attended to the aqueducts under the aediles, and afterwards under the curator aquarum. (Cic. ad Fam. viii. 6; Zeno, Cod. Just. xi. tit. 42; AQUAEDUCTUS.)

**ARA.**

In later times altars were ornamented with festoons and garlands of flowers; and the altar represented in the next cut shows the manner in which these festoons were suspended. They were also adorned with sculpture; and some were covered with the works of the most celebrated artists of antiquity. The first cut above exhibits a specimen of the elaborate style, the outline of an Etruscan altar, in contrast with the undecorated altar. If an altar was erected before a statue of a god, it was always to be lower than the statue before which is
was placed (Vitruv. iv. 9). Of this we have an example in a medallion on the Arch of Constantine at Rome, representing an altar erected before a statue of Apollo. See the annexed cut.

ARATEIA. The Greeks appear to have had from the earliest times diversities in the fashion of their ploughs. Hesiod (Op. et Dies, 432) advises the farmer to have always two ploughs, so that if one broke the other might be ready for use; and they were to be of two kinds, the one called αὐτόγυνον, because in it the plough-tail (γένος, barris, burs) was of the same piece of timber with the share-beam (Χαμυ, dens, dentale) and the pole (ῥύμος, λιθοβοκός, temo); and the other called τερσόν, i.e. compacted, because in it the three above-mentioned parts, which were moreover to be of three different kinds of timber, were adjusted to one another, and fastened together by means of nails (γυμφωσίων). (Comp. Hom. II. x. 353, xiii. 703.)

The method of forming a plough of the former kind was by taking a young tree with two branches proceeding from its trunk in opposite directions, so that whilst in ploughing the trunk was made to serve for the pole, one of the two branches stood upwards and became the tail, and the other penetrated the ground, and, being covered sometimes with bronze or iron, fulfilled the purpose of a share. This form is exhibited in the uppermost figure of the annexed woodcut, taken from a medal.

It was necessary that an altar should be built in the open air, in order that the steam of the sacrifice might be wafted up to heaven, and it might be built in any place, as on the side of a mountain, on the shore of the sea, or in a sacred grove. But as the worship of the gods was in later times chiefly connected with temples, altars became an indispensable part of the latter, and though there could be altars without temples, there could hardly be temples without altars. The altars of burnt-offerings, at which animal sacrifices were represented, were erected before the temples (Βασιλικος, Aesch. Suppl. 497), as shown in the woodcut in the article ΑΝΤΑΕ; but there were also altars, on which incense was burnt and bloodless sacrifices offered, within the temple, and principally before the statue of the divinity to whom they were dedicated. All altars were places of refuge. The suppliants were considered as placing themselves under the protection of the deities to whom the altars were consecrated; and violence to the unfortunate, even to slaves and criminals, in such circumstances, was regarded as violence towards the deities themselves. It was also the practice among the Greeks to take solemn oaths at altars, either taking hold of the altar or of the statue of the god. Cicero (pro Balb. 5) expressly mentions this as a Greek practice. (Comp. K. F. Hermann, Gottesdienst. Alterth. d. Griechen, § 17, and § 22: n. 9.)

next figure shows the plough still used in Mysia, as described and delineated by Sir C. Fellows. It is a little more complicated than the first plough, inasmuch as it consists of two pieces of timber instead of one, a handle (ἕξημα, stecu) being inserted into the larger piece at one side of it. Sir C. Fellows
Another recent traveller in Greece gives the following account of the plough which he saw in that country—a description approaching still nearer to the πντξεναλεγγράματα of Homer and Hesiod. “It is composed,” says he, “of two curved pieces of wood, one longer than the other. The long piece forms the pole, and one end of it being joined to the other piece about a foot from the bottom, divides it into a share, which is cased with iron, and a handle. The share is, besides, attached to the pole by a short cross-bar of wood. Two oxen, with no other harness than yokes, are joined to the pole, and driven by the ploughman, who holds the handle in his left hand, and the goad in his right.” (Hobhouse, Journey through Albania, &c., vol. i. p. 140.) A view of the plain of Elis, representing this plough in use, is given by Mr. S. Stanhope in his Excursion in Asia Minor, xviii. 48.

The yoke and pole used anciently in ploughing did not differ from those employed for draught in general. Consequently they do not here require any further description. [JUGUM.] To the bottom of the pole, in the compacted plough, was attached the plough-tail, which, according to Hesiod, might be made of any piece of a tree (especially the πντςα, i. e. the ilex, or holm-oak), the natural curvature of which fitted it to this use. But in the time and country of Virgil pains were taken to force a tree into that form which was most ex

According to Palladius (i. 43), it was desirable to have ploughs both with earth-boards (aures) and with mould-boards (aurida) and without them (simplicio):

1. The earth-boards, or mould-boards (aures), rising on each side, bending outwardly, in such a manner as to throw on either hand the soil which had been previously loosened and raised by the share, and adjusted to the share-beam which was either sheathed with metal, or driven bare into the ground, according to circumstances.

2. The handle (stiva), which is seen in Fellows’s woodcut, and likewise in the following representation of an ancient Italian plough. Virgil considers this part as used to turn the plough at the end of the furrow. “Stivaque, quae currus a tergo torqueant imos.” Servius, however, in his note on this line explains stiva to mean “the handle by which the plough is directed.” It is probable that, as the dentalia, i. e. the two share-beams, which Virgil supposed were in the form of the Greek letter A, which he describes by duplēi dorso,
ARCHIATER.  

being appointed "to rule over" the physicians (ἅρωχος, i.e., in fact, to be "archiater".) 4. Augustine (De Civit. Dei, iii. 17) applies the word to Aesculapius, and St. Jerome (metaphorically of course) to our Saviour (xiii. Homil. in S. Luc.), in both which cases it evidently means "the chief physician." 5. It is apparently synonymous with protomedicus, supra medicos, dominus medicorum, and superpositus medicorum, all which expressions occur in inscriptions, &c., and also with the title Rais ʿala ʿl-ʿtābēkh, among the Arameans. 6. We find the names of several persons who were physicians to the emperor, mentioned without the addition of the title of the archiater. 7. The archiaters were divided into Archiatri sancti palatii, who attended on the emperor, and Archiatri populares, who attended on the people; so that it is certain that all those who bore this title were not "physicians to the prince." The chief argument in favour of the contrary opinion seems to arise from the fact, that of all those who are known to have held the office of Archiater the greater part certainly were also physicians to the emperor; but this is only what might a priori be expected, viz. that those who had attained the highest rank in their profession would be chosen to attend upon the prince. 8. The first person whom we find bearing this title is Andromachus, physician to Nero, and inventor of the Theriaca (Galen. l. c.; Erotian. Lex. Voc. Hippocr. Praef.); but it is not known whether he had at the same time any sort of authority over the rest of the profession. In fact, the history of the title is as obscure as its meaning, and it is chiefly by means of the laws respecting the medical profession that we learn the rank and duties attached to it. In after times (as was stated above) the order appears to have been divided, and we find two distinct classes of archiater, viz. those of the palace and those of the people. (Cod. Theodos. iii. tit. 3; De Medicis et Professoribus.) The archiatri sancti palatii were persons of high rank, who not only exercised their profession, but were judges on occasion of any disputes that might occur among the physicians of the place. They had certain privileges granted to them, e.g., they were exempted from all taxes, as were also their wives and children; they were not obliged to lodge soldiers or others in the provinces; they could not be put in prison, &c.; for though these privileges were established for the relief of the poor, and each city was to be provided with five, seven, or ten, according to its size, (Dig. 27. tit. 1. s. 6.) Rome had fourteen, besides one for the vestal virgins, and one for the gymnasia. (Cod. Theodos. l. c.) They were paid by the government, and were therefore obliged to attend their poor patients gratis; but were allowed to receive fees from the rich. (Cod. Theodos. l. c.) The archiatri populares were not appointed by the

A'RBITER. [Judex.]  

ARBITRA'RIA A'CTIO. [Actio.]  

ARCA, a chest or coffer. — 1. A chest, in which the Romans were accustomed to place their money: (Vopisc. viii. 736), or the bier on which the corpse was placed previously to burial. (Dig. 11. tit. 7. s. 7.) 2. A chest, in which the name area was usually given to the chests in which the rich kept their money, and was opposed to the smaller signified the city-funds, which were distinct from those chests. (Symm. x. 33.) 3. A chest or coffer in which persons were buried (Aur. Vict. De Vir. Ill. 42; Lucan, viii. 736), or the bier on which the corpse was placed. (Dem. 11. tit. 7. s. 7.) 4. It was also a strong cell made of oak, in which the name area was usually given. (Apx. Αρχητρατήρ, χρησίμως, ἔφορος, αρχήτατς, ἀρχητρατός, ἀρχητρατικός, &c.) There is no one that has any reference to "the prince." 2. We find the title applied to physicians who lived at Edessa, Alexandria, &c., where no king was at that time reigning. 3. Galen (de Tiber. ad Pis. c. 1, vol. xiv. p. 211, ed. Klün) speaks of Andromachus as the chief of the physicians (ἅρωχος, i.e., in fact, to be "archiater"). Just as in England the President of the College of Physicians is (or used to be) ex-officio physician to the sovereign.
governors of the provinces, but were elected by the people themselves. (Dig. 50. tit. 9. s. 1.) The office appears to have been more lucrative than that of archiatri sancti palatii, though less honourable. In later times, we find in Cassiodorus (see Melhorn, Comment. in Cas. Formul. Archiatr. Helmst. 1668) the title "comes archiatriorum," "count of the archiatri," together with an account of his duties, by which it appears that he was the arbiter and judge of all disputes and difficulties, and ranked among the officers of the empire as a vicarius or duum. (See Le Clerc, and Sprengel, Hist. de la Méd. Further information on the subject may be found in several works referred to in the Oxford edition of Theophilus De Corp. Hum. Polior. p. 275; and in Goldhorn, De Archiatris Romanor et eorum Origines usque ad fines imperii Romani Occidentalis, Lips. 1841.)

ARCHIM'US. [Mimus.]

ARCHITECTURA (ἀρχιτεκτονία, ἀρχιτεκτονική), in its widest sense, signifies all that we understand by architecture, and by civil and military engineering: in its more restricted meaning, it is the science of building according to the laws of proportion and the principles of beauty. In the former sense, it has its foundation in necessity: in the latter, it has its origin in a free invention, taking occasion from necessity.

The art of building a house is properly speaking, a work of architecture; neither, on the other hand, is a building in which different and incongruous styles are exhibited side by side. An architectural construction, in the artistic sense, must possess not only utility, but beauty, and also unity: it must be suggestive of some idea, and referable to some model.

The architecture of every people is not only a most interesting branch of its antiquities, but also a most important feature in its history; as it forms one of the most durable and most intelligible evidences of advancement in civilization. If the Greek and Roman literature and history had been a blank, what ideas of their knowledge, and power, and social condition would their monuments have still suggested to us! What a store of such ideas is even now being developed from the monuments of Asia, Egypt, and America!

The object of the present article is to give a very comprehensive account of the history and principles of the art, as practised by the Greeks and Romans.

The details of the subject will be, for the most part, referred to their separate and proper heads. The lives of the architects will be found in the Dictionary of Greek and Roman Mythology and Biography.

It is well observed by Stieglitz that architecture has its origin in nature and religion. The necessity for a habitable abode, the habitations which were intended for the gods, are the two causes from which the art derives its existence. In early times we have no reason to suppose that much attention was paid to domestic architecture, but we have much evidence to the contrary. The resources of the art were lavished upon the temples of the gods; and hence the greater part of the history of Grecian architecture is inseparably connected with that of the temple, and has its proper place under Tempulum, and the subordinate headings, such as Columna, under which heads also the different orders are described.

But, though the first rise of architecture, as the science of construction, it must have been employed, even earlier, for other purposes, such as the erection of fortifications, palaces, treasuries, and other works of utility. Accordingly, it is the general opinion of antiquaries, that the very earliest edifices, of which we have any remains, are the so-called Cyclopean works, in which we see huge unsquared blocks of stone built together in the best way that their shapes would allow; although it can be proved, in some instances, that the rudeness of this sort of work is no sufficient proof of its very early date, for that it was adopted, not from want of skill, but on account of the object of the work, and the nature of the materials employed. (Bunbury, On Cyclopean Remains in Central Italy, in the Classical Museum, vol. ii.) [Murus.] The account of the early palaces cannot well be separated from that of domestic architecture in general; it is therefore given under Domus; that of erections intended, or supposed to be intended, for treasuries, will be found under Thesaurus.

In addition to these, however, there are other purposes, for which architecture, still using the term in its lower sense, would be required in a very early stage of political society; such as the general arrangement of cities, the provision of a place for the transaction of public business, with the edifices appertaining to it [Agora, Forum], and the whole class of works which we embrace under the head of civil engineering, such as those for drainage [Cloaca, Emissarium], for communication [Via, Pons], and for the supply of water [Aquaductus]. The nature of these several works among the Greeks and Romans, and the periods of their development, are described under the several articles. Almost equally necessary are places devoted to public exercise, health, and amusement, Gymnasi, Stadium, Hippodromus, Circum, Amphitheatrum. Lastly, the skill of the architect has been from the earliest times employed to preserve the memory of departed men and past events; and hence we have the various works of monumental and triumphal architecture, which are described under the heads Funus, Arcus, Columna.

The materials employed by the architect were marble or stone, wood, and various kinds of earth, possessing the property of being pliable and hardening in drying, with cement and metals clamps for fastenings: the various metals were also extensively used in the way of ornament. The details of this branch of the subject are given in the descriptions of the several kinds of building.

The principles of architectural science are utility, proportion, and the imitation of nature. The first requisite is that every detail of a building should be subordinate to its general purpose. Next, the form of the building and its parts must be derived from simple geometrical figures; namely, the straight line, the plane surface, and regular or symmetrical rectilinear figures, as the equilateral or isosceles triangle, the square or rectangle, and the regular polygons; symmetrical curves, as the circle and ellipse; and the solids arising out of these various figures, such as the cube, the pyramid, the cylinder, the cone, the hemisphere, &c. Lastly, the ornaments, by which these forms are relieved and beautified, must all be founded either on geometrical forms or on the imitation of nature.

To this outline of the purposes and principles of
the art, it only remains to subjoin a brief sketch of its history, which Hirt and Müller divide into five periods: the first, which is chiefly Oriental, comes down to the time of Cyrus and Persia, Ol. 30, B. C. 560 (Müller brings this period down to the 50th Olympiad, B. C. 580); the second period comes down to the termination of the Persian war, Ol. 75, 2, B. C. 476 (Müller brings it down to Ol. 80, B. C. 460): the third is the brilliant period from the end of the Persian war to the death of Alexander the Great, Ol. 114, B. C. 323 (Müller closes this period with the death of Philip, Ol. 111, B. C. 336): the fourth period is brought down by Hirt to the battle of Actium, B. C. 31, but by Müller only to the Roman conquest of Greece, B. C. 146; the latter division has the convenience of marking the transition from Greek to Roman architecture: Hirt's fifth period is that of the Roman empire, down to the dedication of Constantinople, A. D. 330; while Müller's fifth period embraces the whole history of Roman architecture, from the time when it began to imitate the Greek, down to the middle ages, when it became mingled with the Gothic: Hirt's division requires us to draw a more definite line of demarcation than is possible, between the Roman and Byzantine styles, and also places that line too early.

The characteristics of these several periods will be developed under the articles which describe the several classes of buildings: they are therefore noticed in this place with the utmost possible brevity. Our information respecting the first period is derived from the Homeric poems, the traditions preserved by other writers, and the most ancient monuments of Greece, Central Italy, and the coast of Asia Minor. Strongly fortified cities, palaces, and treasuries, are the chief works of the earlier part of this period; and it may be referred most of the so-called Cyclopean remains; while the era of the Dorian invasion marks, in the promontory, the commencement of the Dorian style of temple architecture. The principal names of artists belonging to this period are Daedalus, Euryalus, Hyperbors, Docus, and some others. In the second period the art made rapid advances under the powerful patronage of the aristocracies in some cities, as at Sparta, and of the tyrants in others, as Cypselus at Corinth, Theagones at Megara, Cleisthenes at Athens, the Persian Diogenes, and Polycrates at Samos. Architecture now assumed decidedly the character of a fine art, and became associated with the sister arts of sculpture and painting, which are essential to its development. The temples of particular deities were enriched and adorned by presents, such as those which Croesus sent to the Pythonian Apollo. Magnificent temples sprung up in all the principal Greek cities; and while the Doric order was brought almost, if not quite, to perfection in Greece proper, in the Doric colonies of Asia Minor, and in Central Italy and Sicily, the Ionic order appeared, already perfect at its first invention, in the great temple of Artemis at Ephesus. The ruins now existing at Paestum, Syracuse, Agrigentum, Corinthus, Aegina, and other places, are imperishable monuments of this period. Nor were works of woody neglected, as we see in the fountain of the Aeusaurus at Athens, the aqueduct at Samos, (M.C. D. 24), the sewers (δόρνος) and baths (n. έθνος) at Agrigentum. To this period also belong the great works of the Roman kings. The commencement of the third and most brilliant period of the art was signalized by the rebuilding of Athens, the establishment of regular principles for the laying out of cities by Hippodamus of Miletus, and the great works of the age of Pericles, by the contemporaries of Pheidias, at Athens, Eleusis, and Olympia; during its course every city of Greece and her colonies was adorned with splendid edifices of every description; and its termination is marked by the magnificent works of Deinocrates and his contemporaries at Alexandria, Antioch, and other cities. The first part of the fourth period saw the extension of the Greek architecture over the countries conquered by Alexander, and, in the West, the commencement of the new style, which arose from the imitation, with some alterations, of the Greek forms by Roman architects, to which the conquest of Greece gave, of course, a new impulse. By the time of Augustus, Rome was adorned with every kind of public and private edifice, surrounded by villas, and furnished with roads and aqueducts; and these various erections were adorned by the forms of Greek art; but already Vitruvius begins to complain that the purity of that art is corrupted by the intermixture of heterogeneous forms. The process of deterioration went on rapidly during the fifth period, though combined at first with increasing magnificence in the scale and number of the buildings erected. The early part of this period is made illustrious by the numerous works of Augustus, and his successors, especially the Flavi, Nerva, Trajan, Hadrian, and the Antonines, at Rome and in the provinces; but from the time of the Antonines the decline of the art was rapid and decided. In one department, a new impulse was given to architecture by the rise of Christian churches, which were generally built on the model of the Roman Basilica. One of the most splendid specimens of Christian architecture is the church of S. Sophia at Constantinople, built in the reign of Justinian, A. D. 537, and restored, after its partial destruction by an earthquake, in 554. But, long before this time, the Greco-Roman style had become thoroughly corrupted, and that new style, which is called the Byzantine, had arisen out of the mixture of Roman architecture with ideas derived from the Northern nations. It is beyond our limits to pursue the history of that latter epoch of ancient art.

Of the ancient writers, from whom our knowledge of the subject is derived, the most important is, of course, Vitruvius. The following are the principal modern works on the general subject: — Winckelmann, Anmerkungen über die Baukunst der Alten, 1762; Stieglitz, Archäologie der Baukunst, 1801, and Geschichte der Baukunst, 1827; Hirt, Baukunst nach den Grundsätzen der Alten, 1809, and Geschichte der Baukunst bei den Alten, 1821; Müller, Handbuch der Archäologie der Kunst, 1825; the various works of travels, topography, and antiquities, such as those of Stuart, Chandler, Clarke, Dodwell, &c., all the most important of which will be found cited by the authorities referred to; and, for Central Italy, Müller's Etrusker, and Abeken's Mittelitalien vor der Römischen Herrschaft.
after passing through a dynasty* and aristocracy, ended in democracy. Of the kings of Athens, considered as the capital of Attica, Theseus may be reckoned the first. He was then styled as a real individual or a representative of a certain period, is attributed the union of the different and independent states of Attica under one head. (Thuc. ii. 15.) The last was Codrus; in acknowledgment of whose patriotism in meeting death for his country, the Athenians are said to have determined that no one should succeed him with the title of βασιλέως, or king. It seems, however, equally probable, that it was the nobles who availed themselves of this opportunity to serve their own interests, by abolishing the kingly power for another, the possessors of which they called ἐργοντες, or rulers. These for some time continued to be, like the kings of the house of Codrus, appointed for life: still an important point was gained by the nobles, the office being made ὑπερήφανος, or accountable (Paua. iv. 5, § 4; Dem. c. Neer, p. 1370; Aristot. Politi. ii. 3; Böckh, Pub. Econ. of Athens, vol. ii. p. 27. 1st ed.), which of course implies that the nobility had some control over it; and perhaps, like the barons of the feudal ages, they exercised the power of deposition.

The state of things lasted for twelve reigns of archons. The next step was to limit the continuance of the office to ten years, still confining it to the Medontidae, or house of Codrus, so as to establish what the Greeks called a dynasty, till the archonship of Eryxias, the last archon of that family elected as such, and the seventh decennial archon. (Clinton, F. H., vol. i. p. 182.) At the end of his ten years (B. c. 684), a much greater change took place: the archonship was made annual, and its duration divided among a college of nine, chosen by suffrage (χειροτονία) from the Eupatridae, or Patricians, and no longer elected from the Medontidae exclusively. This arrangement continued till the timocracy established by Solon, who made the qualification for office depend not on birth, but property, still retaining the election by suffrage, and, according to Plutarch, so far impairing the authority of the archons and other magistrates, as to legalise an appeal from them to the courts of justice instituted by himself. (*Οσα παῖς ἔρχαι ἑταὶ κρίνει, ὡμιλοι καὶ περί ἐκείνων εἰς τὸ δικαστήριον χειροτονεῖ δικαύς, Plut. Solon. 18.) The election by lot is believed to have been introduced by Cleisthenes (B. c. 508; Herod. vi. 109); for we find this practice existing shortly after his time; and Aristotle (Politi. ii. 9) expressly states that Solon made no alteration in the αἰρετις, or mode of election, but only in the qualification for office. If, however, there be no interpolation in the oath of the Heliastai (Dem. c. Timocr. p. 747), we are forced to the conclusion that the election by lot was as old as the time of Solon; but the authority of Aristotle and other evidence strongly incline us to some such supposition, or rather leave no doubt of its necessity. The last change is supposed to have been made by Aristides (Γράφει τῷ ψύφῃμα κοινῷ εἶναι τὴν πολιτείαν, καὶ τοῖς ἐργονταῖς καὶ ἀθέτοιν πάντων ἀνεπόμενοι, Plut. Arist. 22), who, after the battle of Platea (B. c. 479), abolished the property qualification, throwing open the archonship and other magistracies to all the citizens, that is, to the Thetes, as well as the other classes, the former of whom were not allowed by Solon's laws to hold any magistracy at all; in conformity with which, we find that, even in the time of Aristides, the archons were chosen by lot from the wealthiest class of citizens (ὅι πεντακοσίοι μέθημοι, Plut. Arist. ad init.).

* By this is meant that the supreme power, though not monarchical, was confined to one family.
By and registered in his name. The second was an eponymus, distinguish what belonged to them individually.

Duties of the archons, it is sometimes difficult to consider a considerable portion of the judicial functions of representatives (οἱ ἐπίσημοι τῶν ἐκπροσώπων), widows left pregnant, and to see that they were not amount, or to bring the parties to trial. Heiresses, was empowered to inflict a fine of a certain wronged in any way. Should any one do so, he another. Again we find of a lower class, or to portion her in marriage to care; for we read (Demosth. c. Macar. p. 1069), that he could compel the next of kin either to marry a poor heirless himself, even though she were of a lower class, or to portion her in marriage to another. Again we find (Id. p. 1055; Pollux, viii. 62) that, when a person claimed an inheritance or heirless adjudged to others, he summoned the party in possession before the archon eponymus (Ἐνδικαιασία) who brought the case into court, and made arrangements for trying the suit. We must, however, bear in mind that this authority was only exercised in cases where the parties were citizens, the polemarch having corresponding duties when the heirless was an alien. It must also be understood that, except in very few cases, the archons did not decide themselves, but merely brought the causes into court, and cast lots for the diestans who were to try the issue. (Dem. c. Steph. ii. p. 1136.) Another duty of the archons was to receive ἐπαγγελία (Harpoc. s. v.), or informations against individuals who had wronged heirless, children who had maltreated their parents, guardians who had neglected or defrauded their wards. (Κακωσία ἐπικήθρων, γωνίων, ὀρφανῶν. Dem. c. Macar. p. 1069; Schömann, p. 181.) Informations of another kind, the ἐνδικαίων καὶ φαίνων, were also laid before the eponymus, though Demosthenes (c. Timoc. p. 707) assigned the former to the thesmothetai. (Εὐρωπ. p. 63.) It's last office of the archon which we shall mention was of a sacred character; we allude to his superintendence of the greater Dionysia and the Thargelia, the latter celebrated in honour of Apollo and Artemis. (Pollux, viii. 89.)

The functions of the Βασιλεῖς, or King Archon, were almost all connected with religion: his distinguishing title shows that he was considered a representative of the old kings in their capacity of high priest, as the Rex Sacrificulus was at Rome. Thus he presided at the Lenaean, or older Dionysia; superintended the mysteries and the games called λαμπαδοθηριαί, and had to offer up sacrifices and prayers in the Eleusinum, both at Athens and Eleusis. Moreover, indictments for impiety, and controversies about the priesthood, were laid before him; and, in cases of murder, he brought the trial into the court of the Areiopagus, and voted with its members. His wife, also, who was called Βασίλισσα ή Βασίλινα, had to offer certain sacrifices, and therefore it was required that she should be a citizen of pure blood, without stain or blemish. His court was held in what was called ἢ τοῦ βασιλείου στοά. (Dem. c. Lecr. p. 940; c. Adurol. p. 601; c. Neacr. p. 1570; Lyttos, c. Andoc. p. 105, where the duties are enumerations; Arclion Επικρατείαν ἢ Πολιτείαν; Plato, Εὐθυκρ. ad init. et Theoct. ad fin.; Pollux, viii. 90.) The Polemarch was originally, as his name denotes, the commander-in-chief (Herod. vi. 109, 111; Pollux, viii. 91); and we find him discharging military duties as late as the battle of Marathon, in conjunction with the ten στρατηγοὶ; he there took, like the kings of old, the command of the right wing of the army. This, however, seems to be the last occasion on which an archon was appointed by lot, being invested with such important functions; and in after ages we find that his duties ceased to be military, having been in a great measure transferred to the protection and superintendence of the resident aliens, so that he resembled in many respects the prae tor peregrinus at Rome. In fact, we learn from Aristotle, in his “Constitution of Athens,” that the polemarch stood in the same relation to foreigners as the archon to citizens. (Demosth. c. Lecr. p. 940; Arist. apud Harpoc. s. e.; Pollux, viii. 91, 92.) Thus, all actions affecting aliens, the isocles and prozoni, were brought before him previously to trial; as, for instance, the δική ἀποστασίαν against a foreigner, for living in Athens without a patron; so was also the δική ἀποστασίαν against a slave who failed in his duty to the master who had freed him. Moreover, it was the polemarch's duty to offer the yearly sacrifice to Artemis, in commemoration of the vow made by Callimachus, at Marathon, and to arrange the funeral games in honour of those who fell in war. These three archons, the Βασιλεῖς, Πολιτείας, and Πολιερχοὶ, were each allowed two assessors to assist them in the discharge of their duties.

The Θεσμοθεταί were extensively connected with the administration of justice, and appear to have been called legislators (Thirlwall, Hist. of Greece, vol. ii. p. 17), because in the absence of a written code, they might be said to make laws, or θέσεις, in the ancient language of Athens, though in reality they only declared and explained the laws. They were required to review, every year, the whole body of laws, that they might detect any inconsistencies or superfluities, and discover whether any laws which were abrogated were in the public records amongst the rest. (Aeschin. c. Clesiph. p. 59.) Their report was submitted to the people, who referred the necessary alterations to a legislative committee chosen for the purpose, and called νομοθέται.

The chief part of the duties of the thesmothetae consisted in receiving informations, and bringing cases to trial in the courts of law, of the days of sitting in which they gave public notice. (Pollux, viii. 87, 88.) They did not try them themselves; but seem to have constituted a sort of grand jury, or inquest. Thus they received ἐνδικαίως against parties who had not paid their fines, or owed any money to the state; and in default of bringing the former parties to trial, they lost their right of going up to the Areiopagus at the end of their year of office. (Dem. c. Meid. p. 529; c. Macar. p. 1075; c. Timoc. p. 707; Böckh, vol. i. p. 59, vol. ii. p. 72.) Again, indictments for personal injuries
ARCHON.

(ἀρχόντες γραφαί) were laid before them, as well as informations against olive growers, for rooting up more trees than was allowed to each proprietor by law. So, too, were the indictments for bribing the Heliaea, or any of the courts of justice at Athens, or the senate, or forming clubs for the overthrow of the democracy, and against retained advocates (συνήγοροι) who took bribes either in public or private causes. Again, an information was laid before them if a foreigner cohabited with a citizen, or a man gave in marriage as his own daughter the child of another, or confined as an adulterer one who was not so. They also had to refer informations (ἐπιστηγία) to the people; and where an information had been laid before the senate, and a condemnation ensued, it was their duty to bring the judgment into the courts of justice for confirmation or revision. (Dem. c. Steph. ii. p. 1137 ; c. Neuter. pp. 1351, 1363, 1368, c. Timmcr. p. 720 ; Pollux, viii. 88 ; Böckh, vol. i. pp. 253, 317.)

A different office of theirs was to draw up and ratify the σύμβολα, or agreements, with foreign states, settling the terms on which their citizens should sue and be sued by the citizens of Athens. In their collective capacity, the archons are said to have had the power of death in case an exile returned to an interdicted place: they also superintended the ἐπιχειρήσεις of the magistrates, held every pytany (ἐπετρωταὶ οἱ δοκεῖ καλῶς ἥρκειν), and brought to trial those whom the people depoosed, if an action or indictment were the consequence of it. Moreover, they allotted the dicasts or jurors, and probably presided at the annual election of the strategi and other military officers. (Pollux, viii. 87, 88 ; Harpocr. s. v. Καταχειριστῆς: Schömann, p. 291 ; Dem. c. Aris. p. 630.)

We may here remark, that it is necessary to be cautious in our interpretation of the words ἄρχει and ἄρχοντες, since in the Attic orators they have a double meaning, sometimes referring to the archons peculiarly so called, and sometimes to any other magistrate. Thus in Isaeus (De Cleonymi Haeered.) we might on a cursory perusal infer, that when a testator left his property away from his heir-at-law, by what was technically called a δήσεις (Harpocr. s. v. ; Isaeus, πείλακ λάθων), the archon took the original will and informations (ἐπιστηγία) to the people; at the making of any addition or codicil to it. A more accurate observation proves that by εἰς τῶν ἄρχοντων is meant one of the ἀρτοῦμοι, who formed a magistracy (ἀρχεῖα) as well as the nine archons.

A few words will suffice for the privileges and honours of the archons. The greatest of the former was the exemption from the hierarchies a boon of their year of service, were admitted among the members of the Areiopagus. [AREIOPOGUS.]

The Archon Eponymus being an annual magistrate at Athens, like the consul at Rome, it is manifest that a correct list of the archons is an important element in the determination of Athenian chronology. Now from Creon (B.C. 684), the first annual archon, to Comice (B.C. 650), we have the names of about twenty-four. From B.C. 650 to the invasion of Xerxes (B.C. 480), the names and years of about twenty-four more have been determined. From B.C. 480 to 292, Diodorus and Dionysius Halicarnassus furnish an almost unbroken succession for a period of nearly 200 years. The names, so far as they are known, are given by Clinton (F. H.), who remarks that the compiler of the Parian marbles places the annual archons one year too high respectively. He also states (vol. ii. p. 12) that the best list is that of Corsini, who however is surpassed by Wesseling within the period embraced by the names of Diodorus. [R.W.]

ARCHON'NES (ἄρχωνής). [TELONES.]

ARCHIFNIUS AGER. [AGER.]

ARCUS.

It would seem that the arch, as thus defined, and as used by the Romans, was not known to the Greeks in the early periods of their history, otherwise a language so copious as theirs, and of such ready application, would not have wanted a name properly Greek by which to distinguish it. But the constructive principle, by which an arch is made to hold together, and to afford a solid resistance against the pressure upon its circumference, was known to them even previously to the Trojan war, and its use is exemplified in two of the earliest buildings now remaining—the chamber built at Orchomenus, by Minyas, king of Bocotia, described by Pausanias (ix. 38), and the treasury of Atreus at Mycenae. (Paus. ii. 16.) Both these works are constructed under ground, and each of them consists of a circular chamber formed by regular courses of stones placed one upon another, from both sides of the opening, till they meet at top, and then cutting the ends of the projecting stones to a regular curve, as shown below. This form is found in the most ancient architecture of nearly all nations, but it does not constitute a true arch. A true arch is formed of a series of wedge-like stones, or of bricks, supporting each other, and all bound firmly together by their mutual pressure.

It will be observed that the innermost end of each stone is bevelled off into the shape of a wedge, the apex of which, if continued, would meet in the centre of the circle, as is done in forming an arch; while the outer ends against the earth are left rough, and their interstices filled up with small irregular-shaped stones, the immense size of the principal stones rendering it unnecessary to continue the sectional cutting throughout their whole length. Indeed, if these chambers had been constructed upon any other principle, it is clear that the pressure of earth all around them would have caused them to collapse. The method of construction here described was communicated to the writer.
of the present article by the late Sir William Gell. Thus it seems that the Greeks did understand the constructive principle upon which arches are formed, even in the earliest times; although it did not occur to them to divide the circle by a diameter, and set the half of it upright to bear a superincumbent weight. But they made use of a contrivance even before the Trojan war, by which they were enabled to gain all the advantages of our archway in making corridors, or hollow galleries, and which in appearance resembled the pointed arch, such as is now termed Gothic. This was effected by cutting away the superincumbent stones in the manner already described, at an angle of about $45^\circ$ with the horizon. The mode of construction and appearance of such arches is represented in the annexed drawing of the walls of Tiryns, copied from Sir William Gell's Argolis. The gate of Signia (Seyni) in Latium exhibits a similar example.

The principle of the true arch seems to have been known to the Romans from the earliest period; it is used in the Cloaca Maxima. It is most probably an Etruscan invention. The use of it constitutes one leading distinction between Greek and Roman architecture, for by its application the Romans were enabled to execute works of far bolder construction than those of the Greeks.

ARCUS TRIUMPHALIS (a triumphal arch), was a structure peculiar to the Romans, among whom it seems to have taken its origin from the Porta Triumphalis, the gate by which a general celebrating a triumph led his army into the city, on which occasions the gate was adorned with trophies and other memorials of the particular victory celebrated. In process of time other arches were erected, both at Rome and in the provinces, to celebrate single victories, the memorials of which were carved upon them or fixed to them, and these remained as permanent monuments. They even came to be erected in memory of a victory for which there had been no triumph; nay, even to commemorate other events than victories. That at Ancona, for example, was erected in honour of Trajan, when he had improved the harbour of the city at his own expense.

Triumphal arches were insulated structures built across the principal streets of the city, and, according to the space of their respective localities, consisted of either a single arch-way, or of a central one for carriages, with two smaller ones on each side for foot passengers, which sometimes have side communications with the centre arch. Sometimes there were two arches of equal height, side by side. Each front was ornamented with trophies and bas-reliefs, which were also placed on the sides of the passages. Both façades had usually columns against the piers, supporting an entablature, surmounted by a lofty attic, on the front of which was the inscription, and on the top of it bronze chariots, war-horses, statues, and trophies.

Stertinius is the first upon record who erected anything of the kind. He built an arch in the Forum Boarium, about B.C. 196, and another in the Circus Maximus, each of which was surmounted by gilt statues. (Liv. xxxiii. 27.) Six years afterwards, Scipio Africanus built another on the Clivus Capitolinus, on which he placed seven gilt statues and two figures of horses (Liv. xxxvii. 3); and in B.C. 121, Fabius Maximus built a fourth in the Via Sacra, which is called by Cicero (in Verr. i. 7) the Fornix Fabianus. None of these remain, the Arch of Augustus at Rimini being one of the earliest among those still standing. That these erections were either temporary or very insignificant, may be inferred from the silence of Vitruvius, who says nothing of triumphal arches. We might be sure, from the nature of the case, that such structures would especially mark the period of the empire.

There are twenty-one arches recorded by different writers as having been erected in the city of Rome, five of which now remain:—1. Arcus Drusi, which was erected to the honour of Nero Claudius Drusus on the Appian way. (Suet. Claud. 1.) 2. Arcus Titi, at the foot of the Palatine, which was erected to the honour of Titus, after his conquest of Judaea, but was not finished till after his death; since in the inscription upon it he is called Deus, and he is also represented as being carried up to heaven upon an eagle. The bas-reliefs of this arch represent the spoils from the temple of Jerusalem carried in triumphal procession; and are among the best
specimens of Roman sculpture. This arch has only a single opening, with two columns of the Roman or composite order on each side of it. 3. Arcus Septimii Severi, which was erected by the senate (A.D. 203) at the end of the Via Sacra, in honour of that emperor and his two sons, Caracalla and Geta, on account of his victories over the Parthians and Ambians. 4. Arcus Gallieni, erected to the honour of Gallienus by a private individual, M. Aurelius Victor. 5. Arcus Constantini, which is larger and more profusely ornamented than the Arch of Titus. It was erected by the senate in honour of Constantine, after his victory over Maxentius. It consists of three arches, with columns against each front, and statues on the entablatures over them, which, with the other sculptured ornaments, originally decorated the arch of Trajan. [P. S.]

ARCUS (bôs, τὸ ράβδον), the bow used for shooting arrows, is one of the most ancient of all weapons, but is characteristic of Asia rather than of Europe. Thus in the description given by Herodotus (vii. 61—80) of the various nations composing the army of Xerxes, we observe that nearly all the troops without exception used the bow. The Scythians and Parthians were the most celebrated archers in the East, and among the Greeks the Cretans, who frequently served as a separate corps in the Greek armies, and subsequently also among the auxiliary troops of the Romans. (Comp. Xen. Ἀναβ. i. 2. § 9; Liv. xlii. 35.)

The form of the Scythian and Parthian bow differed from that of the Greeks. The former was in the shape of a half-moon, and is shown in the upper of the two figures here exhibited, which is taken from one of Sir W. Hamilton's fictile vases. (Comp. Amm. Marc. xxii. 8.) The Greek bow, on the other hand, the usual form of which is shown in the lower of the preceding figures, has a double curvature, consisting of two circular portions united in the middle (πυξως). According to the description in Homer (II. iv. 105—126), the bow was made of two pieces of horn, hence frequently called κέιας and κορνη. The bow-string (τενεάς) was twisted, and was frequently made of thongs of leather (τενόι βότην). It was always fastened to one end of the bow, and at the other end there hung a ring or hook (καράδων), usually made of metal (κουραν), to which the string was attached, when the bow was to be used. In the same passage of Homer we have a description of a man preparing to shoot, and this account is illustrated by the following outline of a statue belonging to the group of the Aeginetan marbles. The bow, placed in the hands of this statue, was probably of bronze, and has been lost.

ARDA'LION (ἀρδαλίων). [FUNUS.]
A'REA. [AGRICULTURA, p. 44.]
AREIOPAGUS. The Areiopagus (ὁ Ἀρειος πάγος, or hill of Arei), at Athens, was a rocky eminence, lying to the west of, and not far from the Acropolis. To account for the name, various stories were told. Thus, some said that it was so called from the Amazons, the daughters of Ares, having encamped there when they attacked Athens; others again, as Aeschylus, from the sacrifices there offered by them to that god; while the more received opinion connected the name with the legend of Ares having been brought to trial there by Poseidon, for the murder of his son Halirrhothius. (Dem. c. Aristocr. p. 642; Aeschyl. Eum. 659.) To none, however, of these legends did the place owe its fame, but rather to the council (Ἡ ἐν Ἀρείῳ πάγῳ βουλή), which held its sittings there, and was sometimes
AREIOPAGUS. 

called 'H εναρμονία, to distinguish it from the senate of Five Hundred, which sat in the Ceramicus within the city. That it was a body of very remote antiquity, acting as a criminal tribunal, was evidently believed by the Athenians themselves. In proof of this, we may refer to the express assertions of the orators, and the legend of Orestes having been tried before the council for the murder of his mother—a trial which took place before Athena, and which Aeschylus represents as the origin of the court itself. Again, we find that even before the first Messenian war (b.c. 740) began, the Messenians offered to refer the points in dispute to the Argive Amphictyon, or the Athenian Areopagus (Paus. iv. 5; § 1; Thirlwall, Hist. Greece, vol. i. p. 345), because this body was believed to have had jurisdiction in cases of manslaughter (Σισαίονα), "from of old."

There is sufficient proof, then, that the Areopagus existed before the time of Solon, though he is admitted to have so far modified its constitution and sphere of duty, that he might almost be called its founder. What that original constitution was, must in some degree be left to conjecture, though there is every reason to suppose that it was aristocratical, the members being taken, like the Ephetae, from the noble patrician families (ἀπαρχή). We may remark that, after the time of Solon, the Ephetae, fifty-one in number, sat collectively in four different courts, and were charged with the hearing of such cases of accidental or justifiable homicide as admitted of or required expiation, before the accused could resume the civil and religious rights he had lost: a resumption impossible in cases of wilful murder, the capital punishment for which could only be escaped by banishment for life, so that no expiation was required or given. (Müller, Eumen. § 64; Pollux, viii. 123.) Now the Ephetae formerly administered justice in five courts, and for this and other reasons it has been conjectured that they and the Areopagus then formed one court, which decided in all cases of murder, whether wilful or accidental.

In support of this view, it has been urged that the separation of functions was rendered necessary by that change of Solon which made the Areopagus no longer an aristocratic body, while the Ephetae remained so, and as such were competent to administer the rights of expiation,形成, as they did, a part of the sacred law of Athens, and therefore left in the hands of the old patricians, even after the loss of their political privileges. On this point we may remark, that the connection insisted on may to a great extent be true; but that there was not a complete identity of functions is proved by Plutarch (Solon. c. 19), in a quotation from the laws of Solon, showing that even before that legislator the Areopagites and Ephetae were in some cases distinct.

It has been observed, in the article ARCHON, that the principal change introduced by Solon in the constitution of Athens, was to make the qualification for office depend not on birth but property; also that, agreeably to his reforms, the nine archons, after an unexceptionable discharge of their duties, "went up" to the Areopagus, and became members of it for life, unless expelled for misconduct. (Deinan. c. Demosth. p. 97; Plut. Sol. c. 18.)

The council then, after his time, ceased to be aristocratic in constitution; but, as we learn from Attic writers, continued so in spirit. In fact, Solon is said to have formed the two councils, the senate and the Areopagus, to be a check upon the democracy; that, as he himself expressed it, "the state, riding upon them as anchors, might be less tossed by storms." Nay, even after the archons were no longer elected by suffrage but by lot, and the office was offered by Aristides to all the Athenian citizens, the "Areiopagites and Ephetae" continued to retain its former tone of feeling. We learn, indeed, from Isocrates (Areop. p.147), that no one was so bad as not to put off his old habits on becoming an Areiopagite; and though this may refer to private rather than public conduct, we may not unreasonably suppose that the political principles of the younger would always be modified by the older and more numerous members—a modification which, though continually less in degree, would still be the same in direction, and make the Areiopagus what Pericles found it, a counteracting force to the democracy. Moreover, besides these changes in its constitution, Solon altered and extended its functions. Before his time it was only a criminal court, trying cases of "wilful murder and wounding, of arson and poisoning" (Pollux, viii. 117; Dem. c. Ari. p. 627), whereas he gave it extensive powers of a censorial and political nature. Thus we learn that he made the council an "overseer of everything, and the guardian of the laws," empowering it to inquire how any one got his living, and to punish the idle. (Plutarch. Solon. c. 22; Isoc. c.)

We learn from other authorities that the Areiopagites were "superintendents of good order and decency," terms rather unlimited and undefined, as it is not improbable Solon wished to leave their authority. There are, however, recorded some particular instances of its exertion. (Athen. iv. pp.167, c.—168, b. vi. 245, c. ed. Din-dorf; Pollux, viii. 112.) Thus we find that they called persons to account for extravagant and dissolute living, and that too even in the later days of Athenian history. On the other hand, they occasionally rewarded remarkable cases of industry, and, in company with certain officers called γυναικοὺσι, made domiciliary visits at private entertainments, to see that the number of guests was not too large, and also for other purposes. But their censorial and political authority was not confined to matters of this subordinate character. We learn from Aristotle (Plut. Themis. 10; see Böckh, vol. i. p. 206), that at the time of the Median invasion, when there was no money in the public treasury, the Areiopagus advanced eight drachmas a man to each of the sailors—a statement which proves that they had a treasury of their own, rather than any control over the public finances, as some have inferred from it. (Thirlwall, Hist. Greece, vol. iii. app. 1.) Again, we are told (Lycurg. c. Leoc. p. 154) that at the time of the battle of Chaeroneia, they seized and put to death those who deserted their country, and that they were thought by some to have been the chief preservation of the city.

It is probable that public opinion supported them in acts of this kind, without the aid of which they must have been powerless for any such objects. In connection with this point, we may add that when heinous crimes had notoriously been committed, but the guilty parties were not known, or no accuser appeared, the Areiopagus inquired into the subject, and reported (ἀναφορὰς) to the
AREIOPAGUS.

The report or information was called ἀναφορά. This was a duty which they sometimes undertook on their own responsibility, and in the exercise of an old-established right, and sometimes on the order of the demos. (Deinarch. c. Dem. p. 97; Schömann, De Comitia, p. 217, transl.) Nay, to such an extent did they, on one occasion, they apprehended an individual (Antiphon) who had been acquitted by the general assembly, and again brought him to a trial, which ended in his condemnation and death. (Dem. De Cor. pp. 271, 273; Deinarch. c. Dem. p. 98.) Again, we find them revoking an appointment of the people whereby Aeschylus was made the advocate of Athens before the Amphictionic council, and substituting Hyperides in his room. In these two cases also, they were most probably supported by public opinion, or by a strong party in the state. (Dem. l.c.)

They also had duties connected with religion, one of which was to superintend the sacred olives growing about Athens, and try those who had charged with destroying them. (Lyssias, Περὶ τοῦ Σήκου, p. 110.) We read, too, that in the discharge of their duty as religious censors, they on one occasion examined whether the wife of the king archon was, as required by law, an Athenian; and finding she was not, imposed a fine upon her husband. (Dem. c. Neaer. p. 157.) We learn from the same passage, that it was their office generally to punish the impious and irreligious. Again we are told, though rather in a rhetorical way, that they relieved the needy from the resources of the rich, controlled the studies and education of the young, and interfered with and punished public characters as such. (Isocr. Areiop. p. 151.)

Independent, then, of its jurisdiction as a criminal court in cases of wilful murder, which Solon continued to the Areiopagus, its influence must have been sufficiently great to have been a considerable obstacle to the aggrandisement of the democracy at the expense of the other parties in the state. In fact, Plutarch (Solen. c. 18), expressly states that Solon had this object in view in its reconstruction; and accordingly, we find that Pericles, who never was an archon or Areiopagite, and who was opposed to the aristocracy for many reasons, resolved to diminish its power and circumscribe its sphere of action. His conditor in this work was Ephialtes, a statesman of inflexible integrity, and also a military commander. (Plut. Cim. l. Peric. 10, 13.) They experienced much opposition in their attempts, not only in the assembly, but also on the stage, where Aeschylus produced his tragedy of the Eumenides, the object of which was to impress upon the Athenians the dignity, the sacredness, and constitutional worth of the institution which Pericles and Ephialtes wished to reform. He reminds the Athenians that it was a tribunal instituted by their patron goddess Athena, and puts into her mouth a popular harangue full of warnings against innovations, and admonishing them to leave the Areiopagus in possession of its old and well grounded rights, that under its watchful guardianship they might sleep in security.

(Müller, Eum. § 35.) Still the opposition failed: a decree was ordered about b.c. 438, by which, as Aristotle says, the Areiopagus was "mutilated," and many of its hereditary rights abolished. (Arist. Pol. ii. 9; Cic. De Nat. Deor. ii. 29, De Rep. i. 27.)

Cicero, who in one place speaks of the council as governing Athens, observes in another that from that time all authority was vested in the ekklesia, and the state robbed of its ornament and honour. Plutarch (Cimon, 15) tells us that the people deprived the Areiopagus of nearly all its judicial authority (τὰς κρίσεις τόμην δὲ ἀποκέφαλωσαν), establishing an unmixed democracy, and making themselves supreme in the courts of justice, as if there had formerly been a superior tribunal. But we infer from another passage, that the council lost considerable authority in matters of state; for we learn that Athens then entered upon a career of conquest and aggrandisement to which she had previously been a stranger; that, "like a rampant horse, she would not obey the reins, but snapp'd at Euboea, and leaped upon the neighbouring islands." These accounts in themselves, and as compared with others, are sufficiently vague and inconsistent to perplex and embarrass; accordingly, there has been much discussion as to the precise nature of the alterations which Pericles effected; some, amongst whom we may mention Müller (Eum. § 57), are of opinion that he deprived the Areiopagus of their old jurisdiction in cases of wilful murder, and one of his chief arguments is that it was evidently the design of Aeschylus to support them in this prerogative, which therefore must have been assailed. For a sufficient answer to this, we would refer our readers to Bishop Thirlwall's remarks (Hist. of Greece, vol. iii. p. 24), merely stating in addition, that Demosthenes (c. Aristocr. p. 641) expressly affirms, that neither tyrant nor democracy had ever dared to take away from them this jurisdiction. In addition to which it may be remarked, that the consequences ascribed to the innovation do not indicate that the Areiopagus lost its authority as a criminal tribunal, but rather that it was shorn of its power as superintending the morals and conduct of the citizens, both in civil and religious matters, and as exercising some control over their decisions. Now an authority of the former kind seems far removed from any political influence, and the popular belief as to its origin would have made it a dangerous object or attack, to say nothing of the general satisfaction the verdicts had always given. We may observe, too, that one of the chief features of a democracy is to make all the officers of the state responsible: and that it is not improbable that one of the changes introduced by Ephialtes was, to make the Areiopagus, like other functionaries, accountable to the demos for their administration, as, indeed, we know they afterwards were. (Anach. c. Cle. p. 56; Böckh, vol. i. p. 333.) This simple regulation would evidently have made them subservient, as they seem to have been, to public opinion: whereas no such subserviency is recorded in criminal matters, their tribunal, on the contrary, being always spoken of as most just and holy; so much so, that Demosthenes says (c. Arist. pp. 641. 642) that not even the condemned whispered an insinuation against the righteousness of their verdicts. Indeed, the proceedings before the Areiopagus, in cases of murder, were by their solemnity and fairness well calculated to insure

* For an able vindication of this statement of Demosthenes, the reader is referred to Hermann, Opusc. vol. iv. p. 299.
just decisions. The process was as follows: — The king archon (Pollux, viii. 90) brought the case into court, and sat as one of the judges, who were assembled in the open air, probably to guard against any contamination from the criminal. (Antiphon, De Caede Herod. p. 130 ; Dem. c. Arist. l. c.; Pollux, viii. 33.) The accuser, who was said to be the Peireus pagon episketerion, first came forward to make a solemn oath (diazoménta) that his accusation was true, standing over the slaughtered victims, and impressing extirpation upon himself and his whole family, were it not so. The accused then denied the charge with the same solemnity and form of oath. Each party then stated his case with all possible plainness, keeping strictly to the subject, and not being allowed to appeal in any way to the feelings or passions of the judges (προσωπα, εν ουρει, ου ουτω ακριτεσθαι, Aristot. Rhet. i. 1; Pollux, viii. 117.) After the first speech (μετα των κρίτων λόγων), a criminal accused of murder might remove from Athens, and thus avoid the capital punishment fixed by Draco's θεσμόν, which on this point were still in force. In cases of parricide, neither the accuser nor the court had power to prevent this; but the party who thus evaded the extreme punishment was not allowed to return home (φειδεία διεσφιλνα), and when any decree was passed at Athens to legalise the return of exiles, an exception was always made against those who had thus left their country (οι εις Ἀρειον πἀγων φειδιντες). See Plata, Leges, ix. 11.

The reputation of the Areiopagus as a criminal court was of long continuance, as we may learn from an anecdote of Aulus Gellius, who tells us (xiii. 7) that C. Dolabella, proconsul of the Roman province of Asia, referred a case which pertained to investigate. This respect might, of course, have been greater in the Areiopagus even durante during that time; a statement which can only be reconciled with the general opinion on the subject, by supposing that they formed a part of the council during their year of office, but were not permanent members till the end of that time, and after passing a satisfactory examination. [R. W.]

ARENA, [AMPHITHEATRUM.]

ARETAILOGI, a class of persons whose conversation formed one of the entertainments of the Roman dinner-tables. (Suet. Octav. 74.) The word literally signifies persons who discourse about virtue; and the class of persons intended seem to have been poor philosophers, chiefly of the Cynic and Stoic sects, who, unable to gain a living by their public lectures, obtained a maintenance at the tables of the rich by their philosophical conversation. Such a life would naturally degenerate into that of the parasite and buffoon; and accordingly we find these persons spoken of contemptuously by Juvenal, who uses the phrase mendax aretalogus: they became a sort of scurrus. (Juuv. Sat. xiv. 15, 16; comp. Casaubon. ad Suet. l. c.; and Ruperti and Heinrich, ad Juv. l. c.) [P. S.]

ARIGEI. We learn from Livy (i. 22) that Numa consecrated places for the celebration of religious services, which were called by the pontifices "argei." Varro calls them the chapels of the argae, and says they were twenty-seven in number, distributed in the different districts of the city. We know little of the particular uses to which they were applied, and that little is unimportant. Thus we are told that they were solemnly visited on the Liberalia, or festival of Bacchus; and also, that whenever the flamen dialis went (invit) to them, he was to adhere to certain observances. They seem also to have been the depositaries of topographical records. Thus we read in Varro, In saeculis Argumentorum scriptum est sic: Oppium mora primopos, etc., which is followed by a description of the neighbourhood. There was a tradition that these argae were named from the chieftains who came with Hercules, the Argives,
The name argei was also given to certain figures thrown into the Tiber from the Sublician bridge, on the Ides of May in every year, and freedmen was done by the officers, the senators, the praetors, and other citizens, after the performance of the customary sacrifices. The images were thirty in number, made of bulrushes, and in the form of men (εἰσωά λα μπείκα, προσερικοὶ συμμελικοὶ νηστίν). Ovid makes various suppositions to account for the origin of this rite; we can only conjecture that it was a symbolic offering to propitiate the gods, and that the number was a representative either of the thirty patrician curiae at Rome, or parts of the thirty Roman townships (i. e. 19, 38) that the custom continued to his times, and was instituted by Hercules to satisfy the scruples of the natives when he abolished the human sacrifices formerly made to the Romans. (Varr. ii. 44; Ov. Fast. v. 621; Plut. Quaest. Rom. p. 102, Reiske; Arnold, Rom. Hist. vol. i. p. 67; Bunsen and Platner, Beschreib. Roms, vol. i. p. 688—702.) [R. W.]

ARGENTARI (παραστέρρεια), bankers or money changers. 1. GREEK. The bankers at Athens were called παραστερία from their tables (πάραστερία) on which they carried on their business. Public or state banks seem to have been a thing unknown in antiquity, though the state must have exercised some kind of supervision, since without it there is scarcely possible to conceive how persons could have placed such unlimited confidence in the bankers, as they are known to have done at Athens. They had their stands or tables in the market place (Plat. Apol. p. 17, Hipp. Men. p. 98b), and although the banking and money changing business was mostly carried on by resident aliens and free men, still these persons do not seem to have been looked upon with any disrespect, and the business itself was not disreputable. Their principal occupation was that of changing money at an agio (Isocrat. Traper. 21; Dem. De fols. Leg. p. 376, c. Polyl. p. 1218; Pollix, iii. 84, vii. 170); but they frequently took money, at a moderate premium, from persons who did not like to occupy themselves with the management of their own affairs. Thus the father of Demosthenes, e. g., kept a part of his capital in the hands of bankers. (Dem. c. Aphob. i. p. 816.) These persons then lent the money with profit to others, and thus, to a certain degree, obtained possession of a monopoly. The greater part of the capital with which they did business in this way, belonged to others (Dem. p. Phorm. p. 948), but sometimes they also employed capital of their own. Although their sole object was pecuniary gain (Dem. p. Phorm. p. 953), and not by any means to connect themselves with wealthy or illustrious families, yet they acquired great credit in Athens, and formed business connections in all the principal towns of Greece, whereby their business was effectually supported. (Dem. p. Phorm. p. 958, c. Polyl. p. 1224.) They even maintained so great a reputation that not only were they considered as secure merely by virtue of their calling, but such confidence was placed in them, that sometimes business was transacted with them without witnesses (Isocr. Traper. 2), and that money and contracts of debt were deposited with them, and agreements were concluded or cancelled in their presence. (Dem. c. Callip. p. 1243, c. Dionysod. p. 1287.) The great importance of their business is clear from the immense wealth of Pison, whose bank produced a net annual profit of 100 minae. (Dem. p. Phorm. p. 964.) There are, however, no records of bankers losing everything they possessed, and becoming utterly bankrupt. (Dem. p. Phorm. p. 967, c. Steph. i. p. 1120.) That these bankers took a high interest when they lent out money, scarcely needs any proof, their loans on the deposits of goods are sufficient evidence. (Dem. c. Nicostr. p. 1249.) Their usual interest was 36 per cent., an interest that scarcely occurs anywhere except in cases of money lent on bottomry. The only instance of a bank recognized and conducted on behalf of the state occurs at Byzantium, where, at one time it was let by the republic to capitalists to farm. (Arist. Oecon. ii. p. 283; comp. Böckh, Publ. Economic of Athens, p. 126, &c. 2d edit.)

2. ROMAN. The Argentarii at Rome were also called argentiae mensae exercitores, argentii tractatores and negotiatores stipis argentariorum. (Orelli, Inscription. n. 4060.) They must be distinguished from the mensarii or public bankers, though even the ancients confound the terms, as the mensarii sometimes did the same kind of business as the argentarii, and they must also be distinguished from the nummularii. [MENSARI; NUMMULARII.] The argentarii were private persons, who carried on business on their own responsibility, and were not in the service of the republic; but the shops or tabernae which they occupied and in which they transacted their business about the forum, were state property. (Dig. 18. tit. 1. s. 32; Liv. xl. 51.) As their chief business was that of changing money, the argentarii probably existed at Rome from very early times, as the intercourse of the Romans with other Italian nations and foreigner could not well exist without them; the first mention, however, of their existing at Rome and having their shops or stalls around the forum, occurs about B. C. 350, in the wars against the Samnites. (Liv. vii. 21.) The business of the argentarii, with which that of the mensarii coincided in many points, was very varied, and comprised almost everything connected with money or mercantile transactions, but it may be divided into the following branches: 1. Permutatio, or the exchange of foreign coin for Roman coin, in which case a small agio (collybus) was paid to them. (Cic. in Verr. ii. 78.) In later times when the Romans became acquainted with the Greek custom of using bills of exchange, the Roman argentarii, e. g., received sums of money which had to be paid at Athens, and then drew a bill payable at Athens by some bank in that city. This mode of transacting business is likewise called permutatio (Cic. ad Att. xii. 24, 27, xx. 15; comp. v. 15, xi. 1, 24, ad Fam. ii. 17, iii. 5, ad Quinf. frat. i. 3, p. Rabir. 14), and rendered it necessary for the argentarii to be acquainted with the current value of the same coin in different places and at different
times. (See the comment, on Cic. pro Quinct. 4.)

2. The keeping of sums of money for other persons. Such money might be deposited by the owner merely to save himself the trouble of keeping it and making payments, and in this case it was called depositum; the argentarius then paid no interest, and the money was called vacua pecunia. When a payment was to be made, the owner either told the argentarius personally or he drew a cheque. (Plaut. Cist. iii. 3. 66, &c., iii. 66, iv. 3. 5, &c.) Or the money was deposited on condition of the argentarius paying interest; in this case the money was called creditum, and the argentarius might of course employ the money himself in any lucrative manner. (Suet. Aug. 39.) The argentarius thus did almost the same sort of business as a modern banker. Many persons entrusted all their capital to them (Cic. pro Quinct. 4), and instances in which the argentarii made payments in the name of those whose money they had in hand, are mentioned very frequently. A payment made through a banker was called per mensam, de mensis, or per mensae scriptumam, while a payment made by the debtors for them was a payment ex arca or de domo. (Plaut. Curtul. v. 3. 7, &c., 43, Captiv. ii. 3. 89; Cic. ad Att. i. 9, Top. 3; Schol. ad Horat. Sat. ii. 3. 69; Senec. Epist. 26; Gaius, iii. 131.) An argentarius never paid away any person's money without being either authorised by him in person or receiving a cheque which was called per scriptum, and the payment was then made either in cash, or, if the person who was to receive it, kept an account with the same banker, he had it added in the banker's book to his own deposit. This was likewise called per scriptum or simply scriptum. (Plaut. Asin. ii. 4. 30, &c., Curtul. v. 2. 20; Donat. ad Terent. Phorm. v. 7. 28, &c., ad Adelph. ii. 4. 13; Cic. ad Att. iv. 18, ix. 12, xii. 51, Philip. v. 4, in Verr. v. 19; Horat. Sat. ii. 3. 76.) It also occurs that argentarii made payments for persons who had not deposited any money with them; this was equivalent to lending money, which in fact they often did for a certain per centage of interest. (Plaut. Curt. iv. 1. 19, 2. 23, Truc. i. 1. 51, &c., Epid. i. 2. 40; Tac. Ann. vi. 17.) Of all this business, but free men could become members of such a corporation, they undertook to sell the whole estate of a person, until in the course of the receipts as well as of the expenditure, the argentarii kept accurate accounts in a particular collegium, which was divided into societates or corporations, which alone had the right to admit new members of their guild. (Orelli, Inscrip. n. 913, 905.) It appears that no one but free men could become members of such a corporation, and whenever slaves are mentioned as argentarii, they must be conceived as acting only as servants, and in the name of their masters, who remained the responsible parties even if slaves had transacted business with their own peculium. (Dig. 2. tit. 13. s. 4. § 3, 14. tit. 3. s. 19.) With regard to the legal relation among the members of the corporations, there existed various regulations; one member (socius), for example, was responsible for the other. (Auct. ad Herenn. ii. 13; Dig. 2. tit. 14. ss. 9. 25, 27.) They also enjoyed several privileges in the time of the empire, and Justinian, a particular patron of the argentarii, greatly increased these privileges (Justin. Nov. 136); but dishonest argentarii were always severely punished (Suet. Gall. 10; Auson. Epigr. 15), and in the time of the emperors, they were under the supervision of the praefectus urbi. (Dig. 1. tit. 12. s. 1. § 9.)

As regards the respectability of the argentarii, the passages of the ancients seem to contradict one another, for some writers speak of their occupation as respectable and honourable (Cic. pro Quinct. 4; Aurel. Vict. 72; Suet. Vesp. 1; Acron. ad Horat. Apoph. 15, p. Caec. ii. 3. 76.)
from the East, the Romans do not doubt obtained most of their silver as an article of commerce. But when first Spain and then Greece, Asia Minor, and Syria, were brought beneath the Roman power, they obtained that abundant supply both of silver and gold which formed the instrument of the extravagance and luxury of the later republic and the empire. "The value of the precious metals did not, however, fall in proportion to their increase, as large quantities, wrought for works of art, were taken out of circulation." (Böckh.)

The relative value of gold and silver differed considerably at different periods in Greek and Roman history. Herodotus mentions it (iii. 95) as 13 to 1; Plato (Hipp. c. 6. p. 231), as 12 to 1; Menander (ap. Pollic. v. 76), as 10 to 1; and Livy (xviii. 11), as 10 to 1, about B.C. 189. According to Suetonius (Jul. Cae. 54), Julius Caesar, on one occasion, exchanged silver for gold in the proportion of 9 to 1; but the most usual proportion under the early Roman emperors was about 12 to 1; and from Constantine to Justinian about 14 to 1. After the latter period, down to modern times, since the discovery of the American mines, has varied between 17 to 1 and 14 to 1.

Silver Mines and Ores. — In the earliest times the Greeks obtained their silver chiefly as an article of commerce from the Phocaean and the Samians; but they soon began to work the rich mines of their own country and its islands. The chief mines were in Sipylos, Thessaly, and Attica. In the last-named country, the silver mines of Laurium furnished a most abundant supply, and were generally regarded as the chief source of the wealth of Athens. We learn from Herodotus (vii. 15 to iv. 2), that these mines had been worked in remote antiquity; and Xenophon speaks of them as if he considered them inexhaustible. In the time of Demosthenes, however, the profit arising from them had greatly diminished; and in the second century of the Christian era they were no longer worked. (Paus. i. 1 § 1.) The Romans obtained most of their silver from the very rich mines of Spain, which had been previously worked by the Phoenicians and Carthaginians, and which, though abandoned for those of Mexico are still not exhausted. The ore from which the silver was obtained was called silver earth (άργυρος γη, or simply ἀργυρίς, Xen. V. T. i. 5, iv. 2). The same term (terra) was also applied to the ore by the Romans.

A full account of all that is known respecting the ores of silver known to the ancients, their mining operations, and their processes for the reduction of the ores, is given by Böckh. (Dissertation on the Silver Mines of Laurion, §§ 3, 4, 5.)

Uses of Silver. — By far the most important use of silver among the Greeks was for money. It was originally the universal currency in Greece. Mr. Knight, however, maintains (Proh. Hom.) that gold was coined first because it was the more readily found, and the more easily worked; but there are sufficient reasons for believing that, until some time after the end of the Peloponnesian war, the Athenians had no gold currency. [Aurum.] It may be remarked here that all the words connected with money are derived from ἀργυρός, and not from χρύσος, as καταγρυίς, "to bribe with money"; ἀργυρίς, "a money-changer," &c.; and ἀργυρός is itself not unfrequently used to signify money in general (Soph.
Antig. 295), as aes is in Latin. At Rome, on the contrary, silver was not coined till n. c. 269, before which period Greek silver was in circulation at Rome; and the principal silver coin of the Romans, the denarius, was borrowed from the Greek drachma. For further details respecting silver money, see Nummus, Denarius, Drachma.

From a very early period, silver was used also in works of art. Its employment for ornamenting arms, so often referred to by Homer, belongs to this head. The use of it for mere purposes of luxury and ostentation, as in plate, seems to have become generally prevalent about the close of the Peloponnesian wars (Athcn. vi. p. 229, &); but much more so from the time of Alexander, after which it becomes so common as hardly to need any proof or illustration,—more common indeed than with us. (Cic. in Verr. iv. 21.) The Romans distinguished between plain and chased silver vessels by calling the former para or levia (Plin. Ep. iii. 1; Juv. ix. 141, xiv. 62; Mart. iv. 38), and the latter coelata, apyra, or torumata. [Cas. Lat. ; Torr. Cic.]

The chief ancient authorities respecting silver, as well as gold, are the 3d, 4th, and 5th books of Strabo, the 5th of Diodorus, especially cc. 27 and 36, and the 33d of Pliny, from c. 6. s. 31; of modern works the most important are Böckh's Public Economy of Athens, Bk. i. cc. 1—3, with the supplementary Dissertation on the Silver Mines of Laurion, and Jacob's History of the Precious Metals. [F. S.]

ARGIAS GRAPHE/ (ἀργίας γραφή), that is, an action for idleness. Vagrants and idlers were not tolerated at Athens from very early times, and every person was obliged to be able to state by what means he supported himself. (Hered. ii. 177; Diod. i. 77.) According to some (Plut. Sol. 37, Pollux, viii. 42), even Draco had enacted laws against idleness, while, according to others, Solon, in his legislation, borrowed these laws from the Egyptians, and others again state that Peisistratus was the first who introduced them at Athens. (Plut. Sol. 37.)

In accordance with all this law, which is called ἄργια ὀνήματα, all persons were obliged to signify that they were carrying on some honourable business by which they gained their livelihood (Dem. c. Eubal. p. 1308; Isocrat. Areopog. 17; Dionys. xx. 2); and if a person by his idleness injured his family, an action might be brought against him before the archon eponymus not only by a member of his family, but by any one who chose to do so. (Lexic. Sceur. p. 510.)

At the time when the Areiopagus was still in the full possession of its powers, the archon seems to have laid the charge before the court of the Areiopagus. If the action was brought against a person for the first time, a fine might be inflicted on him, and if he was found guilty a second or third time, he might be punished with ἄργια (Pollux, viii. 42.) Draco had ordained atimia as the penalty even for the first conviction of idleness. (Plut., Poll. ll. oc.) This law was modified by Solon, who inflicted atimia only when a person was convicted a third time, and it is doubtful as to whether in later times the atimia was inflicted at all for idleness. As the Areiopagus was entrusted with the general superintendence of the moral conduct of citizens, it is probable that it might interpose in cases of ἄργια, even when no one came forward to bring an action against a person guilty of it. (Val. Max. ii. 6; Platner, Process. ii. p. 150, &c.; Meier und Schoemann, Att. Proc. pp. 102, 298, &c.; Böckh, Publ. Econ. p. 475, 2d edit.) According to Aelian (V. H. iv. 1), a similar law existed also at Sardes. [L. S.]

ARGU'RIOU DIKE/ (ἀργυρίου δίκη), a civil suit of the class πόσις τινα, and within the jurisdiction of the themothetae, to compel the defendant to pay monies in his possession, or for which he was liable, to the plaintiff. This action is casually alluded to in two speeches of Demosthenes (in Boed. p. 1002, in Olympiodor. p. 1179), and is treated of at large in the speech against Callipus. [J. S. M.]

ARGYRA'SPIDES (ἀργυρασπίδες), a division of the Macedonian army of Alexander the Great, who were so called because they carried shields covered with silver plates. They were picked men, and were commanded by Nicanor, the son of Parmenion, and were held in high honour by Alexander. After the death of Alexander they followed Eumenes, but afterwards they desisted from being Antigonus, and delivered Eumenes up to him. Antigonus, however, soon broke up the corps, finding it too turbulent to manage. (Diod. xvii. 57, 58, 59, xviii. 63, xii. 12, 41, 43, 48; Justin. xii. 7; Curtius, iv. 13 § 27; Plutarch, Eumen. 13, &c.; Droyson, Nécyfyll. Alex. passim.) The Greek kings of Syria seem to have had a corps of the same name in their army: Livy mentions them as the royal cohort in the army of Antiochus the Great. (Liv. xxxvii. 40; Polyb. v. 79.) The Emperor Alexander Severus, among other things in which he imitated Alexander the Great, had in his army bodies of men who were called argyroaspides and chrysoaspides. (Lamprid. Alex. Sec. 50.) [F. S.]

ARGYROCOPEION (ἀργυροκοπείον), the place where money was coined, the mint, at Athens. It appears to have been in or adjoining to the chapel (ἀργήφω) of a hero named Stephanephorus, in which were kept the standard weights for the coins, just as at Rome in the sanctuary of Juno Moneta. [Moneta.] (Pollux, vii. 103; Harpocr. ; Suid. ; Böckh. Corp. Inscr. vol. i. p. 164, and the explanation of that inscription in his Public Economy of Athens, p. 144, 2d edit.; comp. Talentum.) [F. S.]

ARIADNEIA (ἀριάδνεια), festivals solemnized in the island of Naxos in honour of Ariadne, who, according to one tradition, had died here a natural death, and was honoured with sacrifices, accompanied by rejoicing and merriment. (Plut. Thes. 20.) Another festival of the same name was celebrated in honour of Ariadne in Cyprus, which was said to have been instituted by Theseus in commemoration of her death in the mouth of Gorgias. The Amathusians called the grove in which the grave of Ariadne was shown, that of Aphrodite-Ariadne. This is the account given by Plutarch (Thes. 20) from Pacon, an Amathusan writer. (Comp. C. F. Hermann, Lehrb. des Gotteden. 2. Alth. n. 12.) [L. S.]

ARIES (ἀριες), the battering-ram, was used to shake, perforate, and batter down the walls of besieged cities. It consisted of a large beam, made of the trunk of a tree, especially of a fir or an ash. To one end was fastened a mass of bronze or iron (κεφάλη, ἐμπόριον, προμορίον), which resembled in its form the head of a ram. The upper figure in the annexed woodcut is taken from the bas-reliefs on the column of Trajan at Rome. It shows the.
aries in its simplest state, and as it was borne and impelled by human hands, without other assistance. In an improved form, the ram was surrounded with iron bands, to which rings were attached for the purpose of suspending it by ropes or chains from a beam fixed transversely over it. See the lower figure in the woodcut. By this contrivance the soldiers were relieved from the necessity of supporting the weight of the ram, and they could with ease give it a rapid and forcible motion backwards and forwards.

The use of this machine was further aided by placing the frame in which it was suspended upon wheels, and also by constructing over it a wooden roof, so as to form a "testudo" (χελώνη κρυφόφας, Appian, Bell. Mith. 73; testudo arystaria, Vitruv. x. 19), which protected the besieging party from the defensive assaults of the besieged. Josephus, who gives a description of the machine (B. J. iii. 7, § 19), adds, that there was no tower so strong, no wall so thick, as to resist the force of this machine, if its blows were continued long enough. The beam of the aries was often of great length, e.g. 80, 100, or even 120 feet. The design of this was both to act across an intervening ditch, and to enable those who worked the machine to remain in a position of comparative security. A hundred men, or even a greater number, were sometimes employed to strike with the beam.

The aries first became an important military engine in the hands of the Macedonians, at the time of Philip and Alexander the Great, though it was known at a much earlier period. (Comp. Thuc. ii. 76.) Vitruvius speaks (l. c.) of Polydus, a Thessalian, in the time of Philip, who greatly improved the machine, and his improvements were carried out still further by Diades and Chaereas, who served in the campaigns of Alexander the Great. The Romans learnt from the Greeks the art of building these machines, and appear to have employed them for the first time to any considerable extent in the siege of Syracuse in the second Punic war. [HELEPÖLIS.]

ARISTOCRATIA (ἀριστοκρατία), a term in common use among Greek writers on politics, though rarely employed by historians, or otherwise than in connection with political theories. It signifies literally "the government of the best men," and as used by Plato, Aristotle, Polybius, &c., it meant (in reference to a state where political power was not shared by the bulk of the community, but was in the hands of a privileged class, existing along with a class personally free, and possessed of civil rights, but excluded from the exercise of the highest political functions) the government of a class whose supremacy was founded not on wealth merely, but on personal distinction (ὅπου μὴ μόνον πλουτίσθην ἀλλὰ καὶ ἀριστίσθην αἱροῦται τὰς ἀρχὰς, Aristot. Pol. iv. 5, p. 127, ed. Götfl. Ἡ ἀριστοκρατία βοηθεῖ τὴν ἐπιρρόχαν ἀνάψεων τοῖς ἀριστοῖς τῶν πολιτῶν, Ibid. p. 128). That there should be an aristocracy, moreover, it was essential that the administration of affairs should be conducted with a view to the promotion of the general interests, not for the exclusive or predominant advantage of the privileged class. (Aristot. Pol. iii. 5, p. 83, ed. Götfl.; Plat. Polit. p. 301, a.) As soon as the government ceased to be thus conducted, or whenever the only title to political power in the dominant class was the possession of superior wealth, the constitution was termed an oligarchy (διαγραχία), which, in the technical use of the term, was always looked upon as a corruption (παρέκκλησις, Aristot. Pol. iii. 5. p. 84, ed. Götfl.) of an aristocracy. (Comp. Plat. l. c.; Arist. Pol. iv. 8. pp. 117, 118, ed. Götfl.; Arist. Pol. iv. 6, ἀριστοκρατίας γὰρ ἄριστος ἀριστίσθην, ἀριστοκρατίας δὲ πλουτὸς.) In the practical application of the term aristocracy, however, the personal excellence which was held to be a necessary element was not of a higher kind than what, according to the deeply-seated ideas of the Greeks, was commonly hereditary in families of noble birth (Plat. Menex. p. 237, a., Cratyll. p. 394, a.; Aristot. Pol. iv. 6, ἡ γὰρ εὐγενεία ἐστὶν ἀρχαίος πλοῦτος καὶ ἄριστα, v. 1, εὐγενεία γὰρ εἶναι δοκοῦσα δὲ ὑπάρχει προγόνων ἀριστάτων καὶ πλουτῶν), and in early times would be the ordinary accompaniments of noble rank, namely, wealth, military skill, and superior education and intelligence (comp. Aristot. Pol. iv. 6, εἴσωσι καλέων . . . ἀριστοκρατίας διὰ τὸ μάλλον ἀκολουθεῖν πατέσεις καὶ εὐγενεῖας τοῖς εἰπώροτοις). It is to be noted that the word ἀριστοκρατία is never, like the English term aristocracy, the name of a class, but only of a particular political constitution.

On tracing the historical development of aristocratical government, we meet with a condition of things which may almost be called by that name in the state of society depicted in the Homeric poems, where we almost see the power of the kings limited by that of a body of princes or nobles, such as would naturally arise in the infancy of society, especially among tribes in which, from the frequency of wars, martial skill would be a sure and speedy method of acquiring superiority. When the kingly families died out, or were striped of their peculiar privileges, the supreme power naturally passed into the hands of these princes or chieftains, who formed a body of nobles, whose descendants would of course for the most part inherit those natural, and be also alone in a position to secure those acquired advantages, especially warlike skill, which would form their title to political superiority. Some aristocracies thus arose from the natural progress of society: others arose from conquest. The changes consequent on the rise of the Hellenes, and the Thessalian, Bocotian and Dorian conquests in Greece, established pretty generally a state of things in which we find the political power in the hands of a body of nobles consisting chiefly or entirely of the conquerors, beneath whom is a free population not
possessed of political rights, consisting of the older inhabitants of the land, together with, in most instances, a body of serfs attached to the domains of the nobles. These last are described under various names, as ἔσπαρτος in Attica, or Ἐρύμος as in Syracuse and several of the Doric states. From the superior efficiency of the cavalry in early times, we also find the nobles as a class bearing the name ἰππόται, ἰππείς, or ἰπποβόται (as in Chalcis, Herod. v. 77), since, generally speaking, they alone had wealth sufficient to enable them to equip themselves for that kind of service; and in most states the first great advance of the commonalty in power arose from their gaining greater efficiency as heavy-armed foot soldiers; that force, when properly organised and armed, being found more than a match for cavalry. (See especially Arist. Pol. iv. 3, 10; K. F. Hermann, Greek. Staatsalterth., c. iii. §§ 55—59; Wachsmuth, Hel- len. Alterthumsk. vol. i. c. 3. §§ 30, 31; Thirl- wall, Hist. of Greece, vol. i. c. 10. p. 394, &c.) Compare the articles EUPATRIDEAE, GEOMORI, PATRICIL.

ARMA, ARMATURA (ὄπασ, Ηομ. ἔντεας, τείγχα), arms, armour. Homer describes in various passages the entire suit of armour of some of his greatest warriors, viz. of Achilles, Patroclus, Agamemnon, Menelaus and Paris (lli. 329—339, iv. 132—133, xi. 15—43, xvi. 150—142, xix. 364—391); and we observe that it consisted of the same portions which were used by the Greek soldiers ever after. Moreover, the order of putting them on is always the same. The heavy-armed warrior, having already a tunic around his body, and preparing for combat, puts on, first, his greaves (καλυμίδες, οριστεία) ; secondly, his cuirass (Σ𝒟όξα, λοικία), to which belonged the μύρη underneath, and the zone (Σ趺φ, ζωοτήρ, σιγυλατωδένο) above; thirdly, his sword (φίδος, ἐνίσθ, γλαδίας) hung on the left side of his body by means of a belt which passed over the right shoulder; fourthly, the large round shield (σίκας, ἄστις, κλίπες, κόταν) supported in the same manner; fifthly, his helmet (κόρης, κυνής, οἰσίς, γαλέα) ; sixthly and lastly, he took his spear (ἐχθύς, ἄστυ, ηστατά), or, in many cases, two spears (ὑπέρτα, ὅπως). The form and use of these portions are described in separate articles under their Latin names. The annexed woodcut exhibits them all in the form of a Greek warrior attired for battle, as shown in Hope's Costume of the Ancients (i. 70).

Those who were defended in the manner which has now been represented, are called by Homer δάσποραι, from their great shield (άστις); also ἄγγελος, because they fought hard to hand with their adversaries; but much more commonly πόλεμοι because they occupied the front of the army: and it is to be observed that these terms, especially the last, were honourable titles, the expense of a complete suit of armour (παύστας, Herod. 1. 60) being of itself sufficient to prove the wealth and rank of the wearer, while his place on the field was no less indicative of strength and bravery.

In later times, the heavy-armed soldiers were called δαλαται, because the term δάσπα more especially denoted the defensive armour, the shield and thorax. By wearing these they were distinguished from the light-armed, whom Herodotus (ix. 62, 63), for the reason just mentioned, calls ἄνωτας, and who are also denominated Ψάλοι, and γυμνοὶ, γυμνόται, or γυμνητες. Instead of being defended by the shield and thorax, their bodies had a much slighter covering, sometimes consisting of skins, and sometimes of leather or cloth; and instead of the sword and lance, they commonly fought with darts, stones, bows and arrows, or slings.

Besides the heavy and light-armed soldiers, the ἀρισται and Ἠλιος, who in general bore towards one another the intimate relation now explained, another description of men, the πεθαναι, also formed a part of the Greek army, though we do not hear of them in early times. Instead of the large round shield, they carried a smaller one called the πεθαι, and in other respects their armour was much lighter than that of the hoplites. The weapon on which they principally depended was the spear.

The Roman soldiers had different kinds of arms and armour; but an account of the arms of the different kinds of troops cannot be separated from a description of the troops of a Roman army, and the reader is therefore referred to EXERCITUS. We need only give here the figure of a Roman soldier taken from the arch of Septimus Severus at Rome. On comparing it with that of the Greek hoplite in the other cut, we perceive that the several parts of the armour correspond, excepting only that the Roman soldier wears a dagger (μάχαρα, ρυγίο) on his right side instead of a sword on his left, and instead of greaves upon his legs, has femoralia and caliga. All the essential parts of the Roman heavy armour (λοικία, ἐνίσθ, κλίπες, γαλέα, ήστατα) are mentioned together in an epigram of Martial (ix. 57); and all except the spear in a well known passage (Ephe. vi. 14—17) of St. Paul, whose enum-eration exactly coincides with the figures on the arch of Severus, and who makes mention not only of greaves, but of shoes or sandals for the feet.

The soft or flexible parts of the heavy armour were made of cloth or leather. The metal principally used in their formation was that compound of copper and tin which we call bronze, or more
ARMILLA.
properly bell-metal. [Aes.] Hence the names for this metal (χαλικός, aes) are often used to mean armour, and the light reflected from the arms of a warrior is called αὐγὸς χαλικίως by Homer, and λυξ αὐνα by Virgil. (Aen. ii. 470.) Instead of copper, iron afterwards came to be very extensively used in the manufacture of arms, although articles made of it are much more rarely discovered, because iron is by exposure to air and moisture exceedingly liable to corrosion and decay. Gold and silver, and tin unmixed with copper, were also used, more especially to enrich and adorn the armour. [J. Y.]

ARMAŘIUM, originally a place for keeping arms, afterwards a cupboard, set upright in the wall of a room, in which were kept not only arms, but also clothes, books, money, ornaments, small images and pictures, and other articles of value. The armarium was generally placed in the atrium of the house. (Dig. 33. tit. 10. s. 3; Cic. Pro Cluent. 64; Petron. Sat. 29; Plin. H. N. xxix. 5. s. 32, xxxv. 2.) The divisions of a library were called armaria. (Vitruv. vii. Praef.; Vopisc. Tac. 8.) We find armarium distegum mentioned as a kind of sepulchre in an inscription in Gruter (p. 383. No. 4). For other passages see Forcellini, s. v. [P. S.]

ARMILLA (ψάλιον, ψέλιον, or ψέλλιον, χαλικός, ἀμφίδακτος), a bracelet or armlet, worn both by men and women. It was a favourite ornament of the Medes and Persians (Herod. viii. 113, ix. 80; Xen. Anab. i. 2. § 27); and in Europe was also worn by the Gauls and Sabines. (Gell. ix. 13; Liv. i. 11.) Bracelets do not appear to have been worn among the Greeks by the male sex, but Greek ladies had bracelets of various materials, shapes, and styles of ornament. The bracelet was sometimes called σφυχτήρ (from σφυγγώ), in Latin spinther or spinter (Plaut. Menæch. iii. 3), which derived its name from its keeping its place by compressing the arm of the wearer. Bracelets seem to have been frequently made without having their ends joined; they were then curved, so as to require,

Bracelets were likewise worn at Rome by ladies of rank, but it was considered a mark of effeminacy for men in an ordinary way to use such female ornaments. (Suet. Cal. 52, Ner. 30.) They were, however, publicly conferred by a Roman general upon soldiers for deeds of extraordinary merit (Liv. x. 44; Plin. H. N. xxxiii. 2; Festus, s. v.); in which case they were worn as a mark of honour, and probably differed in form from the ordinary ornaments of the kind. See the cut below.

The following cuts exhibit Roman bracelets. The first figure represents a gold bracelet discovered at Rome on the Palatine Mount. (Caylus, Rec. d'Ant. vol. v. pl. 93.) The rosette in the middle is composed of distinct and very delicate leaves. The two starlike flowers on each side of it have been repeated where the holes for securing them are still visible. The second figure represents...
A gold bracelet found in Britain, and preserved in the British Museum. It appears to be made of two cold wires twisted together, and the mode of fastening it upon the arm, by a clasp, is worthy of observation. It has evidently been a lady's ornament. The name nike, figure represents an armilla, which must have been designed for women. The original, of pure gold, is more than twice the length of the figure, and was found in Cheshire.

ARMA.

The term arma, in its general sense of an evidence of agreement, was also used of other occasions, as in the case of betrothment (pignus matrimonio). Sometimes the word arbaa is used as synonymous with pignus (Terent. Heautont. iii. 3. 42), but this is not the legal meaning of the term. (Thibaut, System des Pandekten-Rechts, § 144; Inst. iii. tit. 23; Dig. 18. tit. 1. s. 55; tit. 3. s. 6; 14. tit. 3. s. 5. § 15; 19. tit. 1. s. 11. § 6; Cod. 4. tit. 21. s. 17; Gellius, xvii. 2; compare Bracton, ii. c. 27, De acquirendo Rerum Domicio in causa Emptionis, and what he says on the arbaa, with the passage in Gaius already referred to.)

AARRHEPHORIA (ἀρρηφορία), a festival which, according to the various ways in which the name is written (for we find ἐρρηφορία and ἐρρηφορία) is attributed to different deities. The first form is derived from ἀρρῆψις, and thus would indicate a festival at which mysterious things were carried about. The other name would point to Erse or Heræ, a daughter of Cecrops, and whose worship was intimately connected with that of Athena. And there was in this respect, sufficiently for believing that the festival was solemnized, in a higher sense, in honour of Athena. (Etymol. Mag. s. v. ἀρρηφορία.) It was held at Athens, in the month of Skirophorion. Four girls, of between seven and eleven years (ἀρρηφορίσσαι, ἐρρηφορίσσαι, ἐρρηφορίσσαι: Aristoph. Lysist. 642), were selected every year by the king archon from the most distinguished families, two of whom superintended the weaving of the sacred peplos of Athena, which was burned on the last day of Pyanepsion (Suid. s. v. Χαλκίας); the two others had to carry the mysterious and sacred vessels of the goddess. These latter remained a whole year on the Acropolis, either in the Parthenon or some adjoining building (Har. i. c. iii. 3. 32; v. 2; compare C. F. Hermann, Lehrb. der geschichtl. Alterth., § 61, n. 9.)

ARRHEPHORIA. [ΑΡΡΗΦΟΡΙΑ]

ARRHABO. [ΑΡΡΗΒΟ]
There was an Egyptian measure of the same name, of which there were two sorts, the old and the new araba. (Didymus, c. 19.) The old araba contained 4½ Roman modii = 72 sextarii = 9 gallons nearly, according to most writers; but Galen (c. 5) makes it exactly 5 modii. It was about equal to the Egyptian araba, which was half of the Ptolemaic medimnus, which was to the Attic medimnus as 3 : 2. The later and more common Egyptian araba contained 3½ modii = 53½ sextarii = 64 gallons about, which is so nearly the half of the Persian, that we may fairly suppose that in reality it was the half. It was equal to the Olympic cubic foot. (Rhenn. Fam. Carmen de Pond. et Mens. v. 89, 90 ; Hieron. Ad Euseb. 5 ; Böckh, Metrolog. Untersuch. pp. 242, &c., 285 ; Publ. Econ. of Ath. p. 93, 2nd ed.; Wurm, De Pond. &c. p. 133.)

ARTEMISIA ( khớpευ&stria), one of the great festivals celebrated in honour of Artemis in various parts of Greece, in the spring of the year. We find it mentioned at Syracuse in honour of Artemis Potamia and Soteria. (Pind. Pyth. ii. 12.) It lasted three days, which were principally spent in feasting and amusements. (Liv. xxx. 25 ; Plut. Marcell. 16.) Bread was offered to her under the name of Aorixia. (Hesych. s. v.) But these festivals occur in many other places in Greece, as at Delphi, where, according to the account of the Ephesians (p. 235), they offered to the goddess a mullet on this occasion; because it appeared to hunt and kill the sea-hare, and thus bore some resemblance to Artemis, the goddess of hunting. The same name was given to the festivals of Artemis in Cyrene and Ephesus, though in the latter place the goddess was not the Grecian Artemis, but a deity of Eastern origin. (Dionys. iv. 25 ; Achill. Tat. vi. 4, vii. 12, viii. 17 ; Xenoph. Ephes. i. 2.)

ARUSA (σουρα), a Greek measure of surface, which would appear, from its name, to have been originally the chief land-measure. It was, according to Suidas, the fourth part of the πιναχθον, the πιναχθον as a measure of length, contained 100 Greek feet; its square therefore =10,000 feet, and therefore the arura =2500 Greek square feet, or the square of 50 feet.

Herodotus (ii. 168) mentions a measure of the same name, but apparently of a different size. He says that it is a hundred Egyptian cubits in every direction. Now the Egyptian cubit contained nearly 17½ inches (Hussey, Ancient Weights, &c. p. 237), therefore the square of 100 × 17½ inches, i.e. nearly 148 feet, gives approximately the number of square feet (English) in the arura, viz. 21,904. (Wurm, De Pond. &c. p. 94.)

ARUSPEX. [HARUSPEX.]

ARVALES FRATRES. The frates arvalia formed a college or company of twelve in number, and were so called, according to Varro (De Ling. Lat. v. 85, Müller), from offering public sacrifices for the fertility of the fields. That they were of extreme antiquity is proved by the legend which refers their institution to Romulus, of whom it is said, that when his nurse Acca Laurentia lost one of her twelve sons, he allowed himself to be adopted by her in his place, and called himself and the remaining eleven "Frates Arvalia." (Gell. vi. 7.) We also find a college called the Sodales Titii, and as the latter were confessedly of Sabine origin, and instituted for the purpose of keeping up the Sabine religious rites (Tac. Ann. i. 53), there is some reason for the supposition of Niebuhr (Rom. Hist. vol. i. p. 303), that these colleges corresponded one to the other—the Frates Arvalia being connected with the Latin, and the Sodales Titii with the Sabine, element of the Roman state, just as there were two colleges of the Luperci, namely the Latii and the Quinctii, the founders of whom seem to have belonged to the Sabines.

The office of the frates arvalia was for life, and was not taken away even from an exile or captive. They wore, as a badge of office, a chaplet of ears of corn (spicata corona) fastened on their heads with a white band. (Plin. H. N. xvii. 2.) The number given by inscriptions varies, but it is never more than nine; though, according to the legend and general belief, it amounted to twelve. One of their annual duties was to celebrate a three days' festival in honour of Dea Dia, supposed to be Ceres, sometimes held on the xxxvi., xiv., and xi, sometimes on the vi., iv., and iii. Kal. Junii, i.e. on the 17th, 19th, and 29th, or the 27th, 29th, and 30th of May. Of this the master of the college, appointed annually, gave public notice (indicebat) from the temple of Concord on the capitol. On the first and last of these days, the college met at the house of their president, to make offerings to the Dea Dia; on the second they assembled in the grove of the same goddess, about five miles south of Rome, and there offered sacrifices for the fertility of the earth. An account of the different ceremonies of this festival is preserved in an inscription, which was written in the first year of the Emperor Elagabalus (A. D. 218), who was elected a member of the college under the name of M. Aurelius Antoninus Pius Felix. The same inscription contains a hymn, which appears to have been sung at the festival from the most ancient times. (Marini, Atti e Monumenti degli Arvali, tab. xii. ; Orelli, Corp. Inscript. nr. 2270 ; Klausen, De Carminie Fratum Arvalium.)

Besides this festival of the Dea Dia, the frates arvalia were required on various occasions, under the emperors, to make vows and offer up thanksgivings, an enumeration of which is given in Forcellini. (Lec. s. v.) Strabo, indeed (v. 3), informs us that, in the reign of Tiberius, these priests (ποιμηνιτοι) performed sacrifices called the Ambarvalia at various places on the borders of the ager Romanus, or original territory of Rome; and amongst others, at Festi, a place between five and six miles from the city, in the direction of Alba. There is no boldness in supposing, that this was a custom handed down from time immemorial, and, moreover, that it was a duty of this priesthood to invoke a blessing on the whole territory of Rome. It is proved by inscriptions that this college existed till the reign of the Emperor Gordian, or A. D. 325, and it is probable that it was not abolished till A. D. 400, together with the other colleges of the Pagan priesthoods.

The private ambarvalia were certainly of a different nature from those mentioned by Strabo, and were so called from the victim (κοστια ambarvalia) that was slain on the occasion being led three times round the cornfields, before the sickle was put to the corn. This victim was accompanied by a crowd of merry-makers (chorus et socii), the reapers and farm-servants dancing and singing, as they marched along, the praises of Ceres, and praying for her favour and presence, while they offered her the libations of milk, honey, and wine.
AS.

(Virg. Georg. i. 338.) This ceremony was also called a iustratio (Virg. Ecl. v. 83), or purification; and for a beautiful description of the holiday, and the prayers and vows made on the occasion, the reader is referred to Tibullus (ii. 1). It is, perhaps, worth while to remark that Polybius (iv. 21. § 8) uses language almost applicable to the Roman amnabias of the meeting of the Martians, etc., he says, (executing the ordinance), made a purification, and carried victims round the city, and all the country.

There is, however, a still greater resemblance to the rites we have been describing, in the ceremonies of the rogation or gang week of the Latin church. These consisted of processions through the fields, accompanied with prayers (ropotiones) for a blessing on the fruits of the earth, and were continued during three days in Whitsun-week. The custom was abolished at the Reformation in consequence of its abuse, and the perambulation of the parish boundaries substituted in its place. (Hooker, Eccle. Pol. v. 61. 2; Wheatley, Com. Rer. v. 90.)

ARX (ΑΡΧΟ), signified a height within the walls of a city, but which was never closed by a wall against the city in earlier times, and very seldom in later times. The same city may have had several arces, as was the case at Rome; and hence Virgil says with great propriety (Georg. ii. 535):—

"Septemque una sibi muro circumcident axisce."

As, however, there was generally one principal height in the city, the word arx came to be used as equivalent to acropolis [ACROPOLIS]. (Niebuhr, Hist of Rome, vol. iii. note 411.) At Rome, one of the summits of the Capitoline hill was specially called Arx, but which of them was so called has been a subject of great dispute among Roman topographers. The opinion of the best modern writers is, that the Capitolum was on the northern summit, and the Arx on the southern. The Arx was the regular place at Rome for taking the auspices, and was hence likewise called auguraculum, according to Paulus Diaconus, though it is more probable that the Auguraculum was a place in the Arx. (Liv. i. 18, x. 7; Paul. Diaec. s. v. Auguraculum; Becker, Römisch. Alterth. vol. i. p. 386, &c., vol. ii. part i. p. 313.)

AS, or Libra, a pound, the unit of weight among the Romans. [LIBRA.]

AS, the earliest denomination of money, and the constant unit of value, in the Roman and modern Italian coinages, was made of the mixed metal called AEs. Like other denominations of money, it no doubt originally signified a pound weight of copper uncoined: this is expressly stated by Titus, who ascribes the first coinage of aes to Servius Tullius. (Plin. H. N. xxxiii. 3. s. 13, xviii. 3; Varro, De Re Rust. ii. 1; Ovid. Fast. v. 281.) According to some accounts, it was coined from the commencement of the city (Plin. H. N. xxxiv. 1), or from the time of Numa (Epiph. Mosis. Pol. vii. 10), or of Numa (Epiph. Mosis. Pol. vii. 10); and according to others, the first coinage was attributed to Janus or Saturn. (Macrobi. Saturn. i. 7.) This mythical statement in fact signifies, what we know also on historical evidence, that the old states of Etruria, and of Central Italy, possessed a bronze or copper coinage from the earliest times. On the other hand, those of Southern Italy, and the coast, as far as Campania, made use of silver money. The Roman monetary system was probably derived from Etruria. (Niebuhr, Hist of Rome, vol. i. p. 457, 3d ed.; Abeken, Mittel-Italien, pp. 284, 326.)

The earliest copper coins were not struck, but cast in a mould. [FORMA.] In the collection of coins at the British Museum there are four aeses joined together, as they were taken from the mould in which many were cast at once. In most cases the edge shows where they were severed from each other.

Under the Roman empire, the right of coining silver and gold belonged solely to the emperors; but the copper coinage was left to the aerarium, which was under the jurisdiction of the senate. [Comp. Nummus; Moneta.]

The as was originally of the weight of a pound of twelve ounces, whence it was called as libvuls in contradistinction to the reduced aeses which have now to be spoken of, and which give rise to one of the most perplexing questions in the whole range of archaeology.

Pliny (H. N. xxxiii. 3. s. 13) informs us that in the time of the first Punic war (B.C. 264—241), in order to meet the expenses of the state, the full weight of a pound was diminished, and ases were struck of the same weight as the sextans (that is, two ounces, or one sixth of the ancient weight); and that thus the republic paid off its debts, gaining five parts in six: that afterwards, in the second Punic war, in the dictatorship of Q. Fabius Maximus (about B.C. 217), ases of one ounce were made, and the denarius was decreed to be equal to sixteen ases, the republic thus gaining one half; but that in military pay the denarius was always given for ten ases: and that soon after, by the Papirian law (about B.C. 191), ases of half an ounce were made. Festus also (s. v. Statutarii Ases) mentions the reduction of the as to two ounces at the time of the first Punic war. There seem to have been other reductions besides those mentioned by Pliny, for there exist ases, and parts of ases, which show that this coin was made of every number of ounces from twelve down to one, besides intermediate fractions; and there are copper coins of the Terentian family which show that it was depressed to 2/3 and even 3/4 of its original weight. Though some of these standards may be rejected as accidental, yet on the whole they clearly prove, as Niebuhr observes (Hist. of Rome, vol. i. p. 461), that there must have been several reductions before the first which Pliny mentions. Niebuhr maintains further, that these various standards prove that Pliny's account of the reductions of the coin is entirely incorrect, and that these reductions took place gradually from a very early period, and were caused by a rise in the value of copper in comparison with silver, so that the denarius was in the first Punic war really equal in value to only twenty ounces of copper, and in the second Punic war to sixteen ounces, instead of 120, which was its nominal value. He admits, however, that the times when these reductions were resolved upon were chiefly those when the state was desirous of relieving the revenues, and thinks that we might assign, with tolerable accuracy, the periods when these reductions took place. On the other hand, Böckh argues that there is no proof of any such increase in the value of copper, and on this and many other grounds his conclusion is, that all the reductions of the weight of the as, from a pound down to two ounces, took place during the first Punic war, and that they
were accompanied by a real and corresponding diminution in the value of the as. (Metrologische Untersuchungen, § 28.) It is impossible to give here even a summary of the arguments on both sides; the remarks of Niebuhr and Böckh must themselves be studied. It is by no means improbable that there was some increase in the value of copper during the period before the first Punic war, and also that the fixing of the sextantal standard arose partly out of the relation of value between copper and the silver coinage which had been very lately introduced. On the other hand, it is impossible entirely to reject Pliny's statement that the immediate object of the reductions he mentions was the public gain. Mr. Grote, who sides with Böckh, remarks, that "such a proceeding has been so nearly universal with governments, both ancient and modern, that the contrary may be looked upon as a remarkable exception." (Classical Museum, vol. i. p. 82.)

These variations make it impossible to fix any value for the as, except with reference to some more specific standard; and this we find in the denarius. Taking the value of this coin at about 39 farthings, the as was, at the time of the first coinage of the denarius (B. c. 269), one-tenth of this value, that is, about 3 of a penny or 3 4 farthings; and in the time of the second Punic war, when 16 ases went to the denarius, the as was worth about 2 1 farthings. When the silver coinage got thoroughly established, the reckoning was no longer by ases, but by sestertii. [SESTERTIUS.] Also, during the period or periods of reduction, the term aes grave, which originally signified the old heavy coins, as opposed to the reduced ases, came to mean any quantity of copper coins, of whatever weight or coinage, reckoned not by tale, but by the old standard of a pound weight to the as; and this standard was actually maintained in certain payments, such as military pay, fines, &c. (Liv. iv. 41, 60, v. 2, xxxii. 26; Plin. l.c.; Sen. ad Helv. 12; Niebuhr, Hist. of Rome, vol. i. pp. 466, 467.) This mode of reckoning also supplied a common measure for the money of Rome, and the other states of Italy, which had ases of very various weights, most of them heavier than the Roman. The name of aes grave was also applied to the uncoined metal. (Servius, ad Virg. Aen. vi. 862; Musaeus, aes rude, metallum infectum, Isidor. xvi. 15, 13.)

The oldest form of the as is that which bears the figure of an animal (a bull, ram, boar, or sow); whence the ancient writers derived the word for money, pecunia, from pecus, an etymology on which no opinion need be pronounced; but whether this impress was intended to represent property by that form of it which was then most common, or had some mythological meaning, is doubtful. Niebuhr denies the antiquity of this type, but his sole objection is satisfactorily answered by Böckh. The type seems however to have been much less used in the Roman than in some other old Italian coinages; and most of the pieces which bear it are of a rude oblong shape. The next form, and the common one in the oldest Roman ases, is round, and is that described by Pliny (H. N. xxxiii. 3, s. 13), as having the two-faced head of Janus on one side, and the prow of a ship on the other (whence the expression used by Roman boys in tossing up, capita aut navim, Macrob, Sat. i. 7). The annexed specimen, from the British Museum, weighs 4000 grains: the length of the diameter in this and the two following cuts is half that of the original coins.

The as was divided into parts, which were named according to the number of ounces they contained. They were the denas, decenas, dobro standar.....
The quadrans or teruncius, the fourth part of the as, or piece of three ounces, has three balls to denote its value. An open hand, a strigil, a dolia, grains of corn, a star, heads of Hercules, cersus, occur, are common devices on this coin. Pliny (H. N. xxxiii. 3. a. 13) says that both the triens and quadrans bore the image of a ship. The sextans, the sixth part of the as, or piece of two ounces, bears two balls. In the annexed specimen, from the Etruscan museum, there is a caduceus and strigil one side, and a cockle-shell on the other. Its weight is 779 grains.

The uncia, one ounce piece, or twelfth of the as, is marked by a single ball. There appear on this coin heads of Pallas, of Roma, and of Diana, ships, rogs, and ears of barley. (For other devices, see Locke, Doctr. Num. Vet.)

After the reduction in the weight of the as, coins were struck of the value of 2, 3, 4, and even 10 asses, which were called respectively dussis or autonanus, trissis, quadrussis, and decussis. Other multiples of the as were denoted by words of similar formation, up to centussis, 100 asses; but most of them no longer exist as coins.

It is a very remarkable fact that, while the duodecimal division of the as prevailed among the nations of Italy south of the Apennines, the decimal division was in use to the north of that chain; so that, of the former nations no quinunx has been discovered, of the latter no semis. In Sicily the two systems were mixed. [Pondera.] For further nomenclature respecting the coinage of the other Italian states, see Bockh, Metrol. Untersuch. § 27; Abeken, Mittheil-tnten, and Lepsius, Über die Verbreitung des römischen Nummaysystems von Etrurien aus.

In certain forms of expression, in which aes is used for money without specifying the denomination, we must understand the as. Thus deni aecis, mile aecis, aeces aecis, mean respectively 10, 1000, 10,000, 100,000 aeces.

The word as was used also for any whole which was to be divided into twelve equal parts; and those parts were called uncias. Thus the nomenclature of the duodecimal division of the as was applied not only to weight and money, but to measures or lengths, surface, and capacity, to inheritances, interests, houses, farms, and many other things. Hence, for example, the phrases haeres ex ase, the heir to a whole estate; haeres ex docran, the heir to three-fourths, &c. (Gce. Pro Caecin. 6; Corn. Nep. Attic. 5.) Pliny even uses the phrase seminum Africae (H. N. xviii. 6. a. 7), and dodrantes et seminucias horarum (H. N. ii. 14. a. 11).

The as was also called, in ancient times, assarius (see nummus), and in Greek ἀσπασάμενος. According to Polybius (ii. 15) the assarius was equal to half the obolus. On the coins of Chios we find ἀσπασαμενος, ἀσπασαμεν ημε, ἀσπασαμεν διω, ἀσπασαμεν τίνα. (In addition to the works referred to in this article, and those of Hussey and Wurm, much valuable information will be found in the work entitled, Aes Grave del Museo Kircheriano, &c.)

We also give another instrument in the above cut taken from a coin of the Valerian family, and alluded to in verse. It was chiefly used by masons, whence, in the ancient glossaries, Asclarius is translated λαθόμος, a stone-cutter.

As to the reason why Ascia is represented on sepulchral monuments, see Forcellini, Lexicon, s. v. [J. Y.]

ASCLEPIEIA (άσκληπιεια), the name of festivals which were probably celebrated in all places where temples of Asclepius (Aesculapius) existed. The most celebrated, however, was that of Epidaurus, which took place every five years, and was solemnized with contests of rhapsodists and musicians, and with solemn processions and games. (Schol. Od. Find. Nem. iii. 145; Paus. ii. 26. § 7.) Ασκληπιεία are also mentioned at Lampsacus (Bockh, Corp. Inscr. vol. ii. p. 1131), and at Athens (Aeschin, c. Clisiph. p. 455), which were, probably, like those of Epidaurus, solemnized with musical contests. They took place on the eighth day of the month of Epaphbolion. [L. S.]

ASCOLIASMUS (άσκολιασμός, the leaping upon the leathern bag, ἄσκος) was one of the many kinds of amusements in which the Athenians indulged during the Anthesteria and other festivals in honour of Dionysus. The Athenians sacrificed their nose parts were called arttov. affrapiov tffjuffv, affffdpia Svca, cur<rdpia
ASEBEIAS GRAPHE.

A he-goat to the god, made a bag out of the skin, smeared it with oil, and then tried to dance upon it. The various accidents accompanying this attempt afforded great amusement to the spectators. He who succeeded was victor, and received the skin as a reward. (Schol. ad Aristoph. Plat. 1130; Plat. Symm. p. 190; Virg. Georg. ii. 384; Pollux, ix. 121; HeNCYch. s. a. ΑΣΕΒΕΙΑΣ ΓΡΑΦΗ; Krause, Gymnastik und Astronomie d. Helium, p. 399, which gives a representation of it from an ancient gem, which is copied in the above cut.)

ASEBEIAS GRAPHE (δασθείας γραφῆ), was one of the many forms prescribed by the Attic laws for the imprisonment of impiety. From the various tenor of the accusations still extant, it may be gathered that this crime was as ill-defined at Athens, and therefore as liable to be made the pretext for persecution, as it has been in all other countries in which the civil power has attempted to reach offences so much beyond the natural limits of its jurisdiction. The occasions, however, upon which the Athenian accuser professed to come forward may be classed as, first, breaches of the ceremonial law of public worship; and, secondly, indications of that, which in analogous cases of modern times would be called heterodoxy, or heresy. The former comprehended encroachment upon consecrated grounds, the plunder, or other injury of temples, the violation of asylums, the interruption of sacrifices and festivals, the mutilation of statues of the gods, the introduction of deities not acknowledged by the state, and various other transgressions peculiarly defined by the laws of the Attic sacra, such as a private celebration of the Eleusinian mysteries and their divulgation to the uninitiated, injury to the sacred olive trees, or placing a suppliant bough (ιευρηπία) on a particular altar at an improper time. (Andoc. De Myst. p. 110.)

The heretical delinquencies may be exemplified by the expulsion of Protagoras (Diog. Laërt. ix. 51, 52) for writing "that he could not learn whether the gods existed or not," in the persecution of Anaxagoras (Diog. Laërt. ii. 12), like that of Galileo in after times, for impugning the received opinions about the sun, and the condemnation of Socrates for not holding the objects of the public worship to be gods. (Xen. Apol. Soc.) The variety of these examples will have shown that it is impossible to enumerate all the cases to which this sweeping accusation might be extended; and, as it is not upon record that religious Athens (Xen. Rep. Ath. iii. 8) was scandalised at the profane jests of Aristophanes, or that it forced Epicurus to deny that the gods were indifferent to human actions, it is difficult to ascertain the limit at which jests and scepticism ended, and penal impiety began.

With respect to the trial, any citizen that pleased διακάθαρσιν — which, however, in this as in all other public actions, must be understood of those only who did not labour under an incapacitating disfranchisement (ἀπωθία) — seems to have been a competent accuser; but as the nine archons, and the areopagites, were the proper guardians of the sacred olives (μορια, σπηκο, Lysias, Πειρ του Σπηκο, p. 282), it is not impossible that they had also a power of official prosecution upon casually discovering any injury done to their charge.

The cases of Protagoras, may be adduced to show that citizens, resident aliens, and strangers, were equally liable to this accusation. And if a minor, as represented in the declamation of Antiphon, could be prosecuted for murder (φυστ), a crime considered by the early Greeks more in reference to its ceremonial pollution than in respect of the injury inflicted upon society, it can hardly be concluded that persons under age were incapable of committing, or suffering, for this offence. (Antiph. Tetram. ii. P. 574; Heicych. s. a. ΜΙΝΟΥΔ.)

The magistrate, who conducted the previous examination (ἀνάκρισις) was, according to Meier (Att. Proc. pp. 300, 304, n. 34) invariably the kinsman, but whether the court into which he brought the causes were the areopagus, or the common heliastic court, of both of which there are several instances, is supposed (Meier, Att. Proc. p. 203) to have been determined by the form of action adopted by the prosecutor, or the degree of competency to which the areopagus rose or sat at the different periods of Athenian history. From the Apology of Socrates we learn that the forms or the trial upon this occasion were those usual in all public actions, and that, generally, the amount or the penalty formed a separate question for the actions after the conviction of the defendant. For some kinds of impiety, however, the punishment was fixed by special laws, as in the case of persons injuring the sacred olive trees, and in that mentioned by Andocides (De Myst. p. 110).

If the accuser failed to obtain a fifth of the votes of the diasts, he forfeited a thousand drachmies, and incurred a modified ἀρπία. The other forms of prosecution for this offence were the ἀνακρίν (Dem. c. Andro. p. 601, 26), ἀναγίρσης (Meier, att. Proc. p. 248), ἄρπία (Andoc. De Myst. n. 8), προδοθή (Lianium, Argum. ad Dem. in Miss. 509, 10), and in extraordinary cases εὐγγελία (Andoc. De Myst. p. 43); besides these, Demosthenes mentions (c. Androt. p. 601) two other courses that an accuser might adopt, διακάθαρσις πρὸς Ἑπιμολίας, and φράζειν πρὸς τὸν βασιλέα, of which it is difficult to give a satisfactory explanation. (X. 1. 1. 1)

ASIARCHAE (ασιάρχης), were, in the Roman province of Asia, the chief presidents of the religious rites, whose office it was to exhibit games and theatrical amusements every year, in honour of the gods and the Roman emperor, at their own expense, like the Roman aediles. As the exhibition of these games were attended with great expense, wealthy persons were always chosen to fill this office; for which reason, Strabo says, some of the inhabitants of Tralles, which was one of the most wealthy cities in Asia, were always chosen asiarchs. They were ten in number, selected annually by the different towns of Asia, and approved of by the Roman proconsul; of these, one was the chief asiarch, and frequentiv, but not always, resided at Ephesus. These offices lasted only for a year; but they appear to have enjoyed the title as a mark of courtesy for the rest of their lives. In the other Roman provinces in Asia, we find similar magistrates corresponding to the Asiarchae in proconsular Asia, as for instance the Bithyniarchae, Galatarchae, Lyciarchae, &c. (Strab. xiv. p. 649; Acts, xix. 31, with the notes of Wetstein and Kuinoel; Euseb. H. E. iv. 13; Winer, Biblisches Realwörterbuch, art. Astarchen.)

ASILLA (ἀσιλλα), a wooden pole, or pole, held by a man either on his two shoulders, or more commonly on one shoulder only, and used for
caring burthens. (Aristot. Rhet. i. 7.) It is called ἀδέρπος by Aristophanes (Ran. 8). It deserves mention here chiefly from its frequent occurrence in works of Grecian art, of which some specimens are given in the annexed cut.

The same root as the verb adserere, which, when coupled with the word manus, signifies to lay hold of a thing, to draw it towards one. Hence the phrase adserere in libertatem, or liberali adserere manus, applies to him who lays his hand on a person reputed to be a slave, and asserts, or maintains his freedom. The person who thus maintained the freedom of a reputed slave was called adserter (Gaius, iv. 14), and by the laws of the Twelve Tables it was enacted that the emperor sat there in the character of an assessor properly so called: the remark of Tacitus shows that, though the emperor might have taken his seat under the name of assessor and affected to be such, he could be considered in no other light than as the head of the state. (Compare Sueton. Tib. Nero, 33, Tib. Claudius, 12.)

Under the empire the practice of having assessors continued (Plin. Ep. i. 20, vi. 11, x. 19; Gellius, i. 22). Suetonius (Galba, 14) mentions the case of an assessor being named to the office of praefectus praetorio. The Emperor Alexander Severus gave the assessores a regular salary. (Lamprid. Alex. Sec. 46.) Freedmen might be assessores. In the later writers the assessores are mentioned under the various names of consiliarii, juris studiosi, comites, &c. The juris studiosi, mentioned by Gellius (xii. 13), as assistant to the judices (quos adlibere in consilium judiceturi solent), were the assessores. Sabinus, as it appears from Ulpius, (Dig. 47. tit. 10. s. 5), wrote a book on the duties of assessores. The assessors sat on the tribunal with the magistrate. Their advice, or aid, was given during the proceedings as well as at other times, but they never pronounced a judicial sentence. As the old forms of procedure gradually declined, the assessores, according to the conjecture of Savigny (Geeschichte des Röm. Reichts im Mittelalter, vol. i. p. 79), took the place of the judices. For other matters relating to the assessores, see Holweg, Handbuch des Civilprozesses, p. 152. [G. L.]

The expression adserere in servitutem, to claim a person as a slave, occurs in Livy (iii. 44 ; see also Dig. 40. tit. 12. De liberali Causa.) Sometimes the word adserere alone was used as equivalent to adserere in libertatem. (Cic. Pro Flacco, c. 17.)

The expression assere in servitutem, to claim a person as a slave, occurs in Livy (iii. 44), and is drawn of the same size as the original.

As a Latin word, astragalus is used by Vitruvius, who of course borrowed it from the Greek writers, on architecture, for a certain moulding (the astragal) which seems to have derived its name from its resemblance to a string or chain of tails; and it is in fact always used in positions where it seems intended to bind together the parts to which it is applied. It belongs properly to the more highly decorated forms of the Ionic order, in which it appears as a lower edging to the larger mouldings, especially the echinus (ovolo), particularly in the capital, as shown in the following woodcut, which represents an Ionic capital found in the ruins of the temple of Demeter at Teos, which occur in the capitals of the temples of Erechtheus and Athene Polias, at Athens, where it is seen, too, on the sides of the volutes. It is also often used in the entablature as an edging to the divisions of the cornice, frieze, and architrave. The lower figure in the woodcut represents a portion of the astragal which runs beneath the crowning moulding of the architrave of the temple of Erechtheus. It is taken from a fragment in the British Museum, and is drawn of the same size as the original.

The term is also applied to a plain convex moulding of the same section as the former, but without the division into links, just like a torus on a small scale: in this form it is used
in the Ionic base [Στίβα]. In the orders subsequent to the Ionic,—the Corinthian, Roman Doric, and Composite,—the astragal was very freely used. The rules for the use of the moulding are given by Vitruvius (iii. 5 § 3, iv. 6 §§ 2, 3, Schnied.). Numerous fine examples of it will be found in the plates of Mauch (Die Griechischen und Romischen Bögen-Ordnungen, Potsdam, 1845.) [P.S.]

ASTRATIE AS GRAPEHE (αστρατειας γραφη), was the accusation instituted against persons who failed to appear among the troops after they had been enrolled for the campaign by the generals. (Lys. in Ais. pp. 321, 571.) We may presume that the accuser in this, as in the similar action for leaving the ranks (λεβενταζονος), was any citizen that chose to come forward (δευτομενος, αε ξεστι), and that the court was composed of soldiers who had served in the campaign. The presidency of the court, according to Meier, belonged to the generals. The defendant, if convicted, incurred disfranchisement —ἀτυχία, both in his own person and that of his descendants, and there were very stringent laws to punish them if they appeared at the public sacra, to which even women and slaves were admitted. (Andoc. de Myst. p. 35; Aesch. in Ctes. p. 59; Dem. in Timoc. p. 732; Meier, Att. Process, p. 504, cts.)

ASTROLOGIA. This word is occasionally employed by the best Latin writers (e.g. Cic. de Divin. ii. 42.) to denote astronomy in general, and indeed is found in that sense more frequently than astronomia, which is of rare occurrence. In the present article, however, we confine ourselves to what is strictly termed judicial astrology, and treat of astronomy under ASTRONOMIA.

At a period far beyond the records of authentic history a belief arose which still prevails with certainty by those who were skilled to interpret the language of the stars, and that the result or any undertaking might be foretold from the aspect of the firmament when it was commenced. Hence a numerous and powerful class of men arose who were distinguished by various designations. From the country where astronomy was first studied, and their science was first developed, they were called Chaldæoi or Babylonii; from observing the stars, astronomers, astrologi, planetarii; from employing diagrams such as were used by geometricians, mathematici; from determining the lot of man at his natal hour, genethlidian; from prophesying the consummation of his struggles, αστολογικατικι; while their art was known as αστρολογια, μετεωρολογια, γενεθλιαραγια, αστολογιατρικι, Αρχι Chaldæorum, Mathasis, or, from the tables they consulted, ναυατικα. Their calculations were termed Babylonii numeri, Χαλδαιον μεθοδοι, Χαλ- δαιων ψηφιδες, ΑιΩνες Χαλδαιους; their responses when consulted Chaldæorum monito. Chaldæorum natalicia praedicta, Astrologorum prædicti.

The stars and constellations to which attention was chiefly directed were the planets and the signs of the zodiac, some of which were supposed to exert uniformly a benign influence (αγαπτουσοι αστερες), such as Venus, Jupiter, Luna. Virgo. Libra, Taurus; others to be uniformly malign (κακουσοι αστερες), such as Saturnus, Mars, Scorpio, Capricornus; others to be doubtful (επικουροι αστερες), such as Mercurius. By the combination and conjunction (συνθαινον, constellatio) or opposition, however, of those benign with those malign, the power of the latter might be neutralised or even reversed, and a most happy horoscope be produced, as in the case of Augustus who was born under Capricornus (Suet. Aug. 94). and hence that figure frequently appears on his medals. For the sake of expediting calculations, the risings, settings, movements, and relative positions ortus, occasus, motus, viae, discessiones, coetus, conventus, concursiones, circuitus, transilus, halitus, forma, positorius, positus siderum et spatii were carefully registered in tables (πιεκας, ἐνομισματα). In so far as the planets were concerned, it was of especial importance to note through what sign of the zodiac they happened to be passing, since each planet had a peculiar sign called the domus or house of the planet, during its sojourn in which it possessed superior power. Thus Libra, Capricornus, and Scorpio were respectively the houses of Venus, Saturn, and Mars. The exact period of birth (hora genitalis) being the critical moment, the computations founded upon it were styled γενετος (genitura), δοροθετος (horoscope), or simply δεσμα, and the star or stars in the ascendit sidus natalitum, sidera natatilia.

Astrologers seem to have found their way to Italy even before a free communication was opened up with the East by the Roman conquests in Greece and Asia, since they are mentioned contemptuously by Ennius. (ap. Cic. De Div. i. 58.) About a century later the government seem to have become sensible of the inconvenience and danger likely to arise from the presence of such impostors. For in n. c. 139 an edict was promulgated by C. Cornelius Hispallus, at that time praetor, by which the Chaldaeans were banished from the city, and
ordered to quit Italy within ten days (Val. Max. i. 3. § 2), and they were again banished from the city in b.c. 33, by M. Agrippa, who was then aedile. (Dion Cass. xlix. 1.) Another severe ordinance was levelled by Augustus against this class (Dion Cass. lv. 1, lvii. 25), but the frequent occurrence of such phrases as "expulit et mathematicos" (Suet. Tib. 75), "pulsa Italia mathematicos" (Tac. Hist. ii. 62), in the historians of the empire prove how firm a hold these pretenders must have obtained over the public mind, and how profitable the occupation must have been which could induce them to brave disgrace, and sometimes a cruel death and stringent character of the penal enactments by kept their ground, and although from time to time crushed or terrified into silence, to have revived with fresh vigour in seasons of confusion and anarchy, when all classes of the community hanging in suspense between hope and fear, were predisposed to yield to every superstitious impulse. It must be remembered also, that the most austere princes did not disdain, when agitated by doubts or excited by ambitious longings, to acquire the principles of the art and to consult its professors, as we may perceive, not to multiply examples, from the well-known story of Tiberius and Thrasylus (Tac. Ann. vi. 20, 21). Hence Tacitus, after recounting the high promises by which the "mathematici" stimulated Otho to assume the purple, adds in a tone of sorrowful resignation, "genus hominum potentibus infidum, sperantibus fallax, quod in civitate nostra et vetibus retinuetur." (See Cic. Div. ii. 42, &c.; Gell. xiv. 1; Hor. Carm. ii. 17. 17; Pers. v. 46; Juv. iii. 43, vii. 194, xiv. 248, vi. 553—581; Tac. Ann. ii. 27, 32, iii. 22, iv. 58, vi. 20, xili. 22, 52, 68, xvi. 14, Hist. i. 22, ii. 62; Suet. Tib. 14, 36, Vitell. 14, Nero, 40; Gell. i. 9; Dion Cass. xlix. 43, li. 25, lvii. 15, lv. 1; Zonar. ii. p. 142; Lips. Excer. vii. ad Tac. Ann. ii.; Jani, Excer. ad Hor. Carm. iii. 17. 17; Ruperti, Not. ad Tac. Ann. ii. 27. For the penal enactments, see Rein, Das Criminalrecht der Römer, p. 901, &c. Leipzig, 1844. Those who would acquire a knowledge of the technical details of astrology, as practised by the ancients, must peruse the works of Manilius, Julius Firmicus, and Ptolemy.) [W.R.]

ASTRONOMIA. astronomy. It is not proposed in the present article to give a technical history of the rise and progress of astronomy among the ancients, but to confine ourselves to what may be regarded as the popular portion of the science, the observations, namely, upon the relative position and apparent movements of the celestial bodies, especially the fixed stars, which from the earliest epoch engaged the attention of those classes of men who as shepherds or mariners were wont to pass their nights in the open air. We shall consider:—

I. The different names by which the constellations were distinguished among the Greeks and Romans, and the legends attached to each; but we shall not attempt to investigate at length the origin of these names nor the times and places when and where they were first bestowed. The material for the first section has been carefully collected by Ideler in his essay entitled Untersuchungen über den Ursprung und die Bedeutung der Sternnamen (Berlin, 1809), a work which we now mention specially once for all to avoid the necessity of constant references; in the Historische Untersuchungen über die astronomischen Beobachtungen der Alten, by the same author (Berlin, 1806); in a paper by Buttmann Über die Entstehung der Sternbilder auf der griechischen Sphäre, contained in the Transactions of the Berlin Academy for 1826; and in the Geschlecht der Astronomen, by Schaubach.

II. The risings and settings of the fixed stars considered with reference to the position of the sun in the ecliptic,—a series of phenomena which recur regularly every tropical year, served in the most remote ages as the sole guides for the operations of the husbandman, and which, being in later times frequently appealed to by the poets, are sometimes designated the "Poetical Risings and Settings of the Stars." Here we chiefly depend upon the compilations and dissertations, ancient and modern, brought together in the Uranologium of Petavius; upon the dissertation by J. F. Pfaff entitled Commentatio de Orbibus et Occibus Siderum apud auctores classicos commenratorus (Gottling, 1786); upon a paper by Ideler, Ueber den astronomischen Theil der Festi des Ovid, in the Transactions of the Berlin Academy for 1822—1823, and on the Handbuch der Chronologie by the same author.

III. The division of the year into two, three, or more seasons, according to the risings and settings of particular stars or clusters of stars. The Handbuch der Chronologie contains a full examination of all the most important passages from the Greek and Roman authors which bear upon these points.

The determination of the length of the year and the distribution of time into months, days, hours, and other periods, which in some degree belong to the same subject, are treated of separately under the heads of Calendariurn and Dies, and confining our attention for the present to the fixed stars (errones, stellae erraticae, see Gell. xiv. 1), we shall make a few remarks on the bodies of the solar system under PLANETAE.

I. The History and Names of the Constellations.

To begin with the two earliest among profane writers, Homer and Hesiad, the former notices the Bear or Waggon; Bootes; Orion; the Dog of Orion; the Pleiades, and the Hyades: the latter, Orion; Sirius; the Pleiade; the Hyades; and Arcturus. We are not entitled to conclude from this that they were not acquainted with the names or forms of any other constellations, but it seems certain that neither the Little Bear nor the Dragon were known to Homer, for although these remain always above the horizon in the latitude of Greece and Asia Minor, he speaks of the (Great) Bear as the only constellation which never plunges into Ocean's baths; and we are elsewhere, as will be seen below, distinctly told that the Little Bear was introduced into Greece from the East by Thales.

Pliny (H. N. ii. 6) attributes the invention of the signs of the zodiac to Cleocratus of Tenedos (B. C. 500), and asserts that Ariès and Sagittarius were marked out before the rest. The first distinct information, however, with regard to the Grecian heavens was contained in the Ueber die Entstehung der Sternbilder auf der griechischen Sphäre, contained in the Transactions of the Berlin Academy for 1826; and in the Geschlecht der Astronomen, by Schaubach. Both of these works are, it is true, lost with the exception of a few fragments, but their contents are known to us from the poem of Aratus (B. C. 260),
which, as we are assured in the commentary which bears the name of Hipparchus, does little more than represent in verse, with very few variations, the matter contained in the two treatises named above, especially in the latter. The great popularity enjoyed by the production of Aratus (Cum sole et luna semper Aratus erit) has been depended upon, on the attractions assured by his theme; and certainly not upon the spirit or grace with which that theme was handled. We know the names of thirty-five Greeks who composed commentaries upon it, and we are acquainted with no less than three translations into Latin verse—one by Cicero, of which fragments only remain; another by Caesar Germanicus, of which a considerable portion has been preserved; and a third by Rufus Festus Avienus, which is entire. Virgil borrowed largely from this source in those portions of his Georgics which contain references to the heavenly bodies, and particularly in that section which is devoted to prognostics of the weather. There are also valuable Greek scholia ascribed to the younger Theon, but manifestly compounded of materials derived from many different quarters. The work itself is divided into three parts: 

1. A description of the constellations, extending to line 454.

2. A short account of the Planets, of the Milky Way, of the Tropical Circles, and of the Equator, followed from v. 559 by a full detail of the stars which rise and set as each sign of the zodiac appears in succession (κρεναβωναλ).

3. At line 733 commences what is frequently referred to as a separate poem, and placed apart under the title Αἰσθημα, consisting of a collection of the various appearances which enable an observer of nature to predict the weather. It will be seen below that the constellations described by Aratus still retain, with a few variations, the names by which he distinguishes them.

In a little tract ascribed to Eristochenes (fl. b. c. 230), entitled Καταγραφησιοι, probably an abridgment of a more complete treatise, in which he details the geographical position of the constellations and, together with the number and place of the stars in each, we find the same forms arranged in the same order as in Aratus, who is followed step by step. The Bird, however, is here termed the Swan; the Centaur is individualised into Chiron; and the Hair of Berenice appears for the first time, having been introduced by Conon in honour of the sister-wife of Ptolemy Euergetes.

Scientific astronomy commenced at Alexandria in the early part of the third century before our era; and the first steps were made by Timocharis and Arystylus, who flourished about the 260. They invented the method of determining the places of the fixed stars, by referring them to one of the great circles of the heavens, and for this purpose selected the Equator. By them, as we learn from Ptolemy, the right ascension and declination of many stars were observed, among others of Spica in the Virgin, which they found to be 8° from the equinox of autumn.

Hipparchus, about 150 years later, followed up the track which they had indicated: his observations extended from α. c. 102 to α. c. 127; and, while we regard the originality, the magnitude, or the importance of his labours, he is well entitled to be regarded as the father of the science. (See Plin. H. N. ii. 26.) In addition to many other
of the risings and settings of the fixed stars, with
prognostics of the weather, according to Meton,
Euctemon, Eudoxus, Callippus, and others, the ob-
servations of each being quoted separately.

The Romans adopted the knowledge of the stars
communicated by the Greeks without in the
slightest degree extending it. Only two Latin
writers discourse specially on the subject, Manilius
and Julius Firmius, and their treatises belong
rather to Judicial Astrology. The poets, however,
especially Ovid and Virgil, make frequent allu-
sions to the risings and settings of the fixed stars,
to the most remarkable constellations and to the
legends attached to them. Cicero, Germanicus,
and Avienus, as we have stated above, executed
translations of Aratus, while in Vitruvius, Pliny,
Columella, Martians Capella, the Scholia on
Germanicus, and Hyginus, we find a multitude of
details. Manilius, it is clear, took Aratus for his
guide in so far as the constellations were con-
cerned; for he does not notice the "Hair of Berenice,
the Foal, nor the Southern Crown.

Pliny speaks of the constellations as seventy-two
in number; but he seems to have fixed out the sum
by counting separately portions of figures, such as
the Pleiades, the Hyades, the Urs, and the
Stream of Aquarius, the Thynus of the Centaur,
the Head of Medusa, the Scymetar of Perseus,
the Manger, the Two Asses, Capella, the Kids,
the Hair of Berenice, the Throne of Caesar, and
probably the more conspicuous among the individ-
ual stars, such as Arcturus and Sirius. He sets
down the number of observed stars at 1600, which
far exceeds the catalogue of Ptolemy.

The Scholia on Germanicus do not constitute a
regular commentary like the Scholia on Aratus,
but are translations from Eratosthenes, with some
excerpts, added subsequently perhaps, from the
Sphaera Graeca et Barbara of Nigidius Figulus and
other works on astronomical myths.

The Poeticon Astronomicon, which bears the name
of Hyginus, is written in the style of Erato-
tosthenes, and is in a great measure borrowed from
him. No notice is here taken of the "Apktoi (Arat. 27,
"ApKros, The She Bear, or "Aju.a£a, The
Waggon (U. xviii. 487, Od. v. 275), which the
Romans translated by the equivalent terms Ursa
and Plautum or Currus. At a later period when
the Lesser Bear had been added to the number of
the celestial signs, the epithets megadla and moufрод
were applied to them respectively by way of dis-
tinction, and in like manner Ovid (Trist. iv. 3)
speaks of them as magna minorum forae. The
ancient Italian name for the seven bright stars
which form the most conspicuous portion of the
group was Septem Triones (Cic.), that is, according
to the interpretation of Varro (L. L. vi. 4; Gell.
ii. 21; Festus, s. v. Triones), the Seven Ploughing
Owen, an appellation which as well as that of "Aju.a£a
was extended to the Lesser Bear. Thus Aratus
commences his description

"Aρκτος, The She Bear, or "Aμάζα, The
Waggon (U. xviii. 487, Od. v. 275), which the
Romans translated by the equivalent terms Ursa
and Plusstrum or Currus. At a later period when
the Lesser Bear had been added to the number of
the celestial signs, the epithets megadla and moufрод
were applied to them respectively by way of dis-
tinction, and in like manner Ovid (Trist. iv. 3)
speaks of them as magna minorum forae. The
ancient Italian name for the seven bright stars
which form the most conspicuous portion of the
group was Septem Triones (Cic.), that is, according
to the interpretation of Varro (L. L. vi. 4; Gell.
ii. 21; Festus, s. v. Triones), the Seven Ploughing
Owen, an appellation which as well as that of "Aju.a£a
was extended to the Lesser Bear. Thus Aratus
commences his description

"Aρκτος, The She Bear, or "Αμάζα, The
Waggon (U. xviii. 487, Od. v. 275), which the
Romans translated by the equivalent terms Ursa
and Plusstrum or Currus. At a later period when
the Lesser Bear had been added to the number of
the celestial signs, the epithets megadla and moufрод
were applied to them respectively by way of dis-
tinction, and in like manner Ovid (Trist. iv. 3)
speaks of them as magna minorum forae. The
ancient Italian name for the seven bright stars
which form the most conspicuous portion of the
group was Septem Triones (Cic.), that is, according
to the interpretation of Varro (L. L. vi. 4; Gell.
ii. 21; Festus, s. v. Triones), the Seven Ploughing
Owen, an appellation which as well as that of "Αμάζα
was extended to the Lesser Bear. Thus Aratus
commences his description

"Aρκτος, The She Bear, or "Αμάζα, The
Waggon (U. xviii. 487, Od. v. 275), which the
Romans translated by the equivalent terms Ursa
and Plusstrum or Currus. At a later period when
the Lesser Bear had been added to the number of
the celestial signs, the epithets megadla and moufрод
were applied to them respectively by way of dis-
tinction, and in like manner Ovid (Trist. iv. 3)
speaks of them as magna minorum forae. The
ancient Italian name for the seven bright stars
which form the most conspicuous portion of the
group was Septem Triones (Cic.), that is, according
to the interpretation of Varro (L. L. vi. 4; Gell.
ii. 21; Festus, s. v. Triones), the Seven Ploughing
Owen, an appellation which as well as that of "Αμάζα
was extended to the Lesser Bear. Thus Aratus
commences his description

"Aρκτος, The She Bear, or "Αμάζα, The
Waggon (U. xviii. 487, Od. v. 275), which the
Romans translated by the equivalent terms Ursa
and Plusstrum or Currus. At a later period when
the Lesser Bear had been added to the number of
the celestial signs, the epithets megadla and moufрод
were applied to them respectively by way of dis-
tinction, and in like manner Ovid (Trist. iv. 3)
speaks of them as magna minorum forae. The

ii. 21; Festus, s. v. Triones), the Seven Ploughing
Owen, an appellation which as well as that of "Αμάζα
was extended to the Lesser Bear. Thus Aratus
commences his description
tars in the Little Bear marked the position of the pole, but it is difficult to determine from their words to which they severally refer. According to Hyginus who, however, seems not to have clearly understood Eratotheneus whom he quotes, one of the three stars forming the tail was called Polus and the two others, from circling round it, Xoipuv江山, The Dancers, the same appellation with the Ludentes of the Scholiast on Germanicus.

Those poets who regarded the Great Bear as Callisto represented the Little Bear as her dog; but according to another legend commonly received, the two bears were the two nymphs who acted as nurses in Crete to infant Jove (Arat. 31), and hence the phrase Cretaeae Arcti (German.).

3. The Dragon, Δρακων (Art. 45), translated by the Latins Draco (Cic. German. Vitruv.), Serpens (German. Vitruv. Manil. Ovid.), and Anguis (Virgil. Ovid. Manil.). Servius (ad Virg. Georg. i. 205) remarks that there are three Angues in the sky, one lying between the Bears:

Maximus hic flexa sinuoso elabitur Anguis

Corum perque duas in morem fluminis Arctos : (comp. Vitruv. ix. 3.) the second grasped by Οφιεις: the third, to the south, around the Κρατωρ and Κορώς. The superior richness of the Greek language distinguished these as Δρακων, Ἐφίς, and Τύπειρ. The description of Aratus has been rendered almost very beautifull and with great spirit by Virgil in the lines quoted above. Mythologically, the dragon was regarded as the snake which once guarded the apples of the Hesperides, or as a snake snatched by Minerva from the giants and whirled by her aloft to the pole. (Hygin. P. A. ii. 3, iii. 2; Serv. ad Virg. Georg. i. 244.)

4. Κεφεύς, Κηφεύς (Art. 183), Cepheus (Cic. Vitruv. Manil.), Isides Cepheus (German.). The legends respecting this ill-fated monarch and the other members of his family who beam'd in heavens, Cassiopeia, Perseus, and Andromeda, are detailed at length in the Catasterism of Eratotheneus and in Hyginus.

5. The Bear-Warden, Βοώτης, The Wagoner, Ἀρκετοφόλαξ (Art. 91), Arctophylax (Cic. German. Manil. i. 323), translated by Ovid (Trist. i. 10. 15) Custos Urseae, and by Vitruvius (ix. 3.) Custos Arceti, or simply Custos (l.c.), was denominated also Βωτης (Art. l.c.), Bootes (Cic. German. Manil.), i.e. Bulvulus, the ox-driver, and according to the Scholiast on Aratus (l.c.) Τριγγατης, the vintager. The first name which supposes the constellations to represent a man upon the watch denotes simply the position of the figure with regard to the Great Bear, or when the latter was regarded as Callisto, then Arctophylax became her son Arcas, by whom she was hunted and slain ; the second name, which is found in Homer (Od. v. 272) refers to the άμαξα, the imaginary form of Λυσσια being fancied to occupy the place of the driver of the team; the third name is connected with the period of the heliacal rising of the group which indicated the season of the vintage.

The chief star in the constellation is Αρκτούρος (Art. 95), Arcturus (Cic. German. Vitruv. Manil.), a word of similar import with Arctophylax. It is twice mentioned by Herodotus (v. 10), and as we shall see hereafter occupied a prominent place in the calendars of Greece and Rome. Some late writers, such as the Scholiast on Germanicus, Hyginus and Martianus Capella, use the name Arcturus for the whole constellation, but Aratus, Genius, and Ptolemy consider it as a single star.

The legends with regard to Bootes present many different aspects; by the Greeks he was usually represented as Arcas, the son of Callisto; Ovid in one passage (Fast. vi. 235) calls him Lyceus, the father of the three blessed damsels; by others he was pronounced to be Iacius (or Icarus) to whom Bacchus taught the use of the vine, and then the constellation Virgo was his daughter; Erigone, and either the greater or the lesser hound, was her dog Maera (Canis Iaciius, Ov. Fast. iv. 930). Hence, too, the Septemtriones are styled Βοώτεια Iaciius by Propertius (ii. 24. 24).

Homer (Od. v. 272) calls Boötes ὁ βεβη δών, from his descending below the horizon in an upright position, and therefore very gradually. Compare Ov. Fast. iii. 465; Claud. Rapt. Proserp. ii. 150, and the "pigri surrama Bootae" of Juvenal, v. 23.

6. The Northern Crown, Στρεφας (Art. 71), Corona (Cic. Vitruv. Manil.), Arctides corona, Minoa corona, German.). Ptolemy distinguishes between the Northern and the Southern Crown (Στρ. φασος Βοορες, νότος), and hence the modern name. According to the legend commonly adopted this was the chaplet of Ariadne placed by Bacchus in the firmament to do honour to his mistress, and hence the epithets applied by Germanicus as quoted above. (Comp. Virg. Georg. i. 222; Ov. Fast. iii. 460; Manil. i. 350.)

The name Gemma, now given to the most resplendent star in the circle, was not known to the Romans.

7. Herculeus. The constellation now known by this name is described by Aratus (v. 63) as an unknown or nameless form (εἴδωλον ἑπτών; ἀπευθεῖον εἴδολον), which from its resemblance to a man toiling (нологειν ἀνάρθρο εἴδωλον) on his knees, was usually called Ἐρυξαίνων, which the Romans either expressed in the same letters, Erugiasii (Manil. v. 643, Erugiasina (Cic.), or by the translations Geniculatus, Ingeniculatus (Vitruv. ix. 3), Ingeniculus (Jul. Firm. viii. 17), Nixius ingeniius (Vitruv. ibid.), Nixius genus species (German. Manil. i. 322, v. 645), Doctro genii nixus (German.), or simply Nixus s. Nixus (Cic. German.), Inniux (Avien. 205), or with reference to the labouring attitude Deflectum sidus, Effigies deflecta laborae (German.).

According to Avienus (v. 175), the appellation of Hercules was bestowed by Panyrias, by others it was regarded as Theseus, by others as Ceteus, son of Lycon, by others as Prometheus chained to Caucasus. (Hygin. P. A. ii. 6, iii. 5.)

8. The Lyre, Νυξ, Argo, Λύρα, Lyra (German. Vitruv. Manil. i. 331), Pides (Cic.), Fidis (Col. xi. 2. § 43, &c.), Fidiulia (Plin. H. N. xviii. 64, &c.). Ptolemy (Φ. Α.) designates as δ λαμπρος της λυρας, the peculiarly bright star (a Lyrae), which renders this constellation so conspicuous; but it appears probable that the simple Λυρα among the Greek astronomers, as well as Fidis and Fidiulia among the Latins, was frequently employed to denote this single star, as well as the whole sign. Manilius seems to speak of Fides as a constellation distinct from Lyra, but the passages are very confused (i. 409; comp. 371, 337). The invention of the Lyre being ascribed to Mercury, we naturally find the epithets 'Ερμαιν...
9. The Swa[n], "Ornis, a[ola]s ornis (Art. 273, 275), Alce (Cic.), Volucris, Aves (Vitruv. ix. 4). The Bird is the name given by Aratus and Genius to the constellation termed by Erato-thenes (c. 25), Κόκως, rendered Cygnus by Germanicus and Manilius, for which the synonym Olor is frequently substituted. By mythologists it was regarded as the swan of Leda.

10. Cassiopeia, Cassettes (Art. 189), Cassiopea (Cic. German. Manil. i. 361), Cassiopea (Vitruv.). For the myth regarding her, see Hygin. P. A. ii. 10; comp. Art. 654; Manil. v. 504; Propert. i. 17. 3; Columh. xi. 2, § 78.

11. Persus, Persevs (Art. 248), Persicus (Cic. German. Vitruv. Manil. i. 357, 365), was pictured as bearing in one hand a crooked sword (πόρος, falc), and in the other the head of the Gorgon Medusa, Γγρόφηνον (Gemin. Ptolem.), Gorgonem caput (Vitruv. ix. 3), Gorgoneis ora (Manil. i. 366), Caput Gorgonæ (Hygin. P. A. iii. 11).

12. The Charioteer, Αἵδιαξ (Art. 156), Heniochus (Manil. i. 369), Auriga (Cic. German. Vitruv.), Auriatur (Aratus). was, according to one legend (German.), Eriuchionis.

Quem primus curse volvantem Jupiter alto Quadrigis conspicet equis. MANIL. i. 370.

According to another (German. ιδιολ.) Myrtilus the charioteer of Oenomeus, who betrayed his master to Pelops. (Hygin. iii. 28.)

The brightest star in this constellation (α) was termed Αζξ (Art. 157) by the Greeks, who pictured a goat supported upon the upper part of the left arm of the figure, and by the Romans Capella (Ovid. Manil. Plin.) or Capra (Cic. Vitruv. Hor. German. Columel.). The epithet Αλευτις in Aratus (164), according to the explanation of his Scholiast, was applied because the Αζξ rested επί της Αλευτίς τοῦ Χινύχου, and hence Oleni, Olenium pennis, Olenium astrum. Its helical rising took place soon before the winter solstice, and thus it was termed signum pluviale, while the legends declared that this was the very goat Amaltheia who nursed Jupiter upon Mount Ida. Both of these points are touched upon in the couplet of Ovid: Nasiatur Oleniae signum pluviale Capellae, Illa dati coelum praemia lactis habet. MANIL. i. 370.

The two stars (ζ, η) placed by Aratus (166) and Ptolemy on the wrist of Auriga were the Kids, Ερεβος (Art. 158), Hekli (Cic. Vitruv. Manil. i. 372), and are said to have been first named by Cleostratus of Tenedos about B. C. 500 (Hygin. P. A. ii. 13). They, as well as Capella, are spoken of as heralds of the storm. (Manil. i. 372; Virg. Georg. i. 205, Aen. ix. 663; ior. Carm. iii. 1. 28.) The star which marks the northern horn-tip of the Bull was, according to Vitruvius (ix. 3), called Aurigae Matus, but he was supposed to hold it in his hand.

13. The Serpent Holder, Οπισθόξς (Art. 197), Serpentarius (German. Vitruv.), Aquinticus (Cic. Manil. v. 384), Aquiuer (Columel. xi. 2, § 49.), Serpentarius (Schol. German.), was commonly regarded by mythical writers and poets as Aesculapius (Eratosth. c. 6; Ov. Fast. vi. 735), and by some as Heracles, not to mention other more obscure legends. (Hygin. P. A. ii. 14, iii. 13.)

14. The Snake, grasped by and surrounding the figure, was termed Εφις (Art. 86), Aegus (Cic. German.), or Serpentis (Cic. Vitruv.), Serpentem Graias Ophiuchus nomine dicitus Dividit, &c. MANIL. i. 338.

and is reckoned as a separate constellation.

15. The Arrow, Οιντός (Art. 311), Toix (Eratosth., Sagitta (German. Vitruv.), Clara sagitta, Fulgens sagitta (Cic.), is distinct from the arrow fitted to the bow of Sagittarius, the archer, in the zodiac. Hence Aratus, after describing the latter, adds Ὑστὲ ἐν τὶς πρὸτροπὰς βεκχηνιάν ἄλος ἄδιοτὸς Ἀείτως ἀετῷ τόξω. (Comp. Cic. 325; German. 663; Manil. i. 349.)

16. The Eagle, Ἀετός (Ἀετός, Art. 315), Aquila (Cic. Vitruv.), or, in poetical circumlocution, Τοις armiger (German. Avien.), Τοις ales (German. Manil. i. 330), Armiger unis anguibus ales (German.), Preqes aduncus Tocis (Ov. Fast. vi. 196). The principal star is named especially Ἀετός by Ptolemy; but from the circumstances of his placing it among those of the second magnitude, it has been conjectured that it was less bright in his day than at present.

Antinous. Ptolemy, when noticing the stars around the Eagle not properly included within the limits of the constellation, remarks, έφις δὲ ἢ Ἀετόνος, which corroborates the statement of Dion Cassius, that Hadrian assigned a star to his favourite. Antinous, as a separate constellation, was first introduced by Tycho Brahe.

17. The Dolphin, Δελφύς (Art. 319), Δελφῖν (Cic. German. Vitruv. Manil. i. 353), Delphinus (German.) was regarded by mythologists as the dolphin which bore Arion. It is not noticed by Vitruvius nor by Manilius.

18. The Little Horse, "Πτωσ προτομῆ, literally, the fore quarters of a horse, was unknown to Aratus and Eratosthenes; but appears from the words of Geminius to have been introduced by Hipparchus. It is not noticed by Vitruvius nor by Manilius.

19. Pegasus, "Πτηος (Art. 205), Equus (Cic. Vitruv. Manil. i. 355), Sonipes, Soniues ales (German.). The legends having declared that this was the steed of Bellerophon, the name Pegasus (German. 505) was employed as early as Eratosthenes to distinguish the constellations, but Aratus speaks of it simply as the horse. (Ov. Fast. iii. 450.) The figure was supposed to represent the fore quarters only.

20. Andromeda, "Ανδρομήδη (Art. 197), Andromeda s. Andromolde (Cic. German. Vitruv. Manil. i. 367, 367). Andromeda was the daughter of Cepheus and Cassiopeia, and hence the constellation is termed Cepheus by Manilius and Germanicus, I. 443, while in consequence of her deliverance from the sea monster by Pegasus we find Perse in the scholiast on Germanicus.

21. The Triangle, Δελτατός (Art. 235; Cic.), Delotum (German. Manil. i. 360), the τρίγωνον of Ptolemy, and hence Vitruv. ix. 3, "In super Arietes signum facientes stellae sunt trigonam paribus lateribus."
Helle from the wrath of Ino, and hence the designation in Ovid of Phryganus Ovis, Pocus Athamantidos Helles.

The Bull, Taurus (Arat. 167), Taurus (Cic. German. Vitruv. Manil. i. 264), Bos (German. 181), was by some mythologers regarded as the bull into which Jupiter transformed himself to gain Europa; according to others as the cow into which Io was metamorphosed; in either case an object of jealousy to Juno, and hence the deus Europa; according to others as the cow into which she was changed because of her object of jealousy to Juno, as indicated by Ovid (Fast. iv. 7). In another passage (vi. 712), in reference to the former idea, he speaks of him as Aeponeros, even as Martial (x. 51) applies the epithet Tyrius.

This constellation is chiefly remarkable from including within its limits two small but closely packed clusters of stars, which attracted attention at a very early period, and are distinguished by Homer (II. xviii. 486) and Hesiod ( Erg. 613) as the Hyades and Pleiades, names which they still retain unchanged.

The Hyades, Ψθέδες (Arat. 173), Hyades (German. &c.), situated in the forehead of the figure (ἐν παλαι μετάφρ. Arat.; ἐν το υποκράνιον, Gemin.), derived their name ἀπὸ τοῦ δεόδοι, because the period of their setting in the morning twilight (the end of November) marked the most wet and stormy period of the year. By the Italian peasants they were denominated the sunaude, i. e. the little swine, and hence it has been imagined, but probably erroneously, that "Ψθέδες is etymologically connected with τυς (Plin. H. N. xviii. 26; Gell. xii. 9). They set in the evening twilight at Rome, towards the close of the republic, about the 20th of April, and hence were known as the sidus Pauritium (or Pallitium), the Parilia (or Paliito), the festival which marked the birth-day of the city, being kept upon the 21st. Ancient astronomers were not agreed as to the number of stars included in the Hyades (see Scholiad ad Arat.). Thales reckoned two only (viz. α and ο), the two eyes of the bull; Euripides three; Achaeus four; Hesiod six; Pherecydes seven. The latter made nymphae of them, and the names have been preserved by Hyginus. One of these, Thygone, is put by Ovid (Fast. vii. 111) for the whole group, which elsewhere (v. 734) he terms the Sidus Hyantis, in allusion to a legend which he had previously (v. 169) recounted.

Still more important were the Pleiades, Pleiades, Πελειάδες, Παπλειάδες (Hom. i. c. Arat. 255 regards them as a distinct constellation), Pleiades (German. &c. &c.), a word for which various etymologies have been proposed, the most reasonable being the verb πλείω, their heliacal rising and setting in the first half of May and the beginning of November, having been the signal in the early ages of Greece for the mariner to commence and to discontinue his voyages. The form πελαείδες, i. e. the flock of yegeons, probably originated in a corruption. The Italian name was Vergiliane (Cic.), Sidus Vergiliarum (Vitruv. ix. 2), derived manifestly from their heliacal rising in spring. Aratus notices the circumstance that they are commonly spoken of as the seven stars, although six only are visible, and thus Ovid also

"Quae septem dici sex tamen esse solent."

The fact is that the cluster consists of six stars, which can be distinctly seen by the naked eye, and of several very small ones, which are telescopic. Under very favourable circumstances, however, one of these may have occasionally been discerned, as Hipparchus states, or, possibly, as we know to have been the case with other of these stars, one of them may have lost a portion of the lustre which it at one period possessed, and have become nearly or totally invisible. Be this as it may, the disappearance of the seventh Pleiad gave rise to a multitude of legends. By Hesiod they are styled Ατλαγένεις, Children of Atlas, from whom the Roman poets adopted the expression Atlantides, the name of the damsels (Arat. 262) being Alcyone, Celaeno, Electra, Stheno (or Asterope, German.), Taygeta and Maia. Of these six wedded divinities, the seventh a mortal man, and thus her brilliancy became dimmed by the influence of the deceasing alliance. One or other of the above names is frequently employed to denote the whole, as Taygeto (Virg. Georg. iv. 232; Ov. Met. iii. 594), Maia (Virg. Georg. i. 225), Stheno (Ov. Trist. x. 14), and in like manner Pleiades is often used in the singular.

3. The Twins, Δίδυμοι (Arat. 147), Gemini (Cic. German. Vitruv. Manil. i. 265). The two brightest stars, being supposed to represent Castor and Pollux.

4. The Crab, Καρπόν (Arat. 147), Cancer (Cic. German. Vitruv. Manil. i. 265), called Lernaeus by Columella (x. 313), because, according to the legend, it crawled out of the Lernaean swamp to attack Hercules while he was doing battle with the Hydra. The epithet Littoreus in Ovid (Met. x. 127) and Manilius (iii. 316) probably refers merely to the ordinary habits of the animal, and not, as Ideler supposes, to the same contest.

Two small stars in this constellation (γ, δ) were called *Oro*, *Asini s. Asellae*, the Donkeys, one being distinguished as the northern (Βερσος), the other as the southern (ωρίων), and a nebular brightness between them, *Φίλων*, *Puerescens*, the Stall or Manger. (Arat. 894, &c.; Plin. H. N. xviii. 35; Ptolem.) These seem to form what Manilius calls Jugulae (v. 174, and note of Scalig.), although Jugula is a name sometimes applied to Orion.

5. The Lion, Λιον (Arat. 149), Leo (Cic. German. Vitruv. Manil. i. 260), regarded as the Nemean lion slain by Hercules, and hence constantly termed simply Nemeus (e. g. Manil. i. 409). The bright star now known as Regulus, a name introduced by Copernicus, was anciently, as we learn from the scholiast on Aratus, called βασιλικός, and marked the heart of the animal (ἐν τῷ γάτος καπρίας). In Pliny it is Regia (H. N. xviii. 26, 28), in the scholiast on Germanicus, Tyberone, which is either a corruption, or arose from his mistaking the meaning of the word in Pliny, who says, "Stella Regia appellata Turberoni in pectore Leonis," i. e. The star on the Lion's heart called Regia by Tubero.

6. The Virgin, Παρθένος (Arat. 96, &c.), Virgo (Cic. German. Vitruv. Manil. i. 266), Virgo (Manil. ii. 552, et pass.), was mythically regarded as Διός, Justitia, or Asis, or as Ines, or as Erycine, or as Ceres, or as Isis, or as Fortuna, the last name being given to her, according to the scholiast on Germanicus, "because she is a headless constellation."

The brightest star in the constellation is called by Aratus Στραχύς, Spica (German. Vitruv. 1).
Spicum (Cic.), The Corn Ear, and this the figure is supposed to grasp in her left hand.

The star which marks the right wing (ε) was προτοργηφη (Arat. 138) s. προτοργηφης τηρυγηφη, translated Provodieminitor, Vindemiator s. Vindemitor, and is now known as Vindemiatrix, names which it received in consequence of rising shortly before the period of the vintage. (Arat. 138 and schol.; Columell. xi. 2. s. 24 ; Ov. Fast. iii. 407 ; Plin. H. N. xviii. 26, 31 ; Vitruv. ix. 3, says that the Greek name was προτοργηφης, and the Roman, Provodiemina Major.)

7. The Balance was by the earlier Greek astronomers invariably denominated Χηλα (Arat. 89), Chelae (Cic. German. Manil. ii. 544, et pass.), THE CLAWS, i.e. of the Scorpion, which stands next in the Zodiac. Genius, who flourished, it is believed, about B.C. 60, is, as far as we know, the first Greek writer who distinguishes the seventh sign as Ζερας and sometimes a Ζερας αριστος, the term Libra, for which Cicero in one passage employs Jugum, was first formally adopted by the Romans in the Calendar of Julius Caesar, to whom it was very probably suggested by Sosigenes. The figure, it would seem, was derived from the East, and must be regarded as a symbol of equality introduced into the heavens at the period when the entrance of the sun into that constellation marked the Autumnal Equinox. The scientific Latin writers, such as Vitruv. (Manil. ii. 659), and Pliny, uniformly distinguish this sign by the name Libra alone; the poets use either Libra or Chelae, as may suit their purpose. Manlius combines both into one phrase (Juga Chelaarum, i. 609), while the ingenious conceit by which Virgil represents the Scorpion as drawing in his claws in order to make room for Augustus, is known to every reader of the first Georgic. (Comp. Ov. Met. ii. 195.)

In the commentary of Theon on the Almagest, Libra is frequently represented by Αιρος or Αιρος, a word originally borrowed by the Romans from the Sicilians, transformed into Libra, and then restored to the later Greeks in the new sense of a Balance.

8. The Scorpion, Ξιωρης (Arat. 85, 304), Scorpius (Cic. German.), Scorpions (Manil. i. 268, et pass.), Scorpio (Vitruv.). Cicero, in his translation of Aratus, and Manlius, both make use also of the term Νεπα, a word, according to Festus, of African origin, sometimes employed to denote a Scorpio and sometimes a Βατρ (Plaut. Cist. ii. 8 ; Cic. de Fin. v. 15) ; and thus Cicero, in line 460 of his Aratus, distinctly indicates the fourth sign by the word Νεπα, which elsewhere is put for the Scorpion. Aratus names this constellation μεγα Σωλον and τραχε μεγα (84, 402), because, according to the Grecian arrangement, as explained in the last paragraph, it occupied, together with its claws, the space of two signs. (Ov. Met. ii. 195.)

Artemis, now Antares, the name given to the brightest star, is first found in the works of Ptolemy, and probably refers to its colour and brilliancy, rivaling that of (the planet) Mars.

9. The Archer, τοσενεψης, τοσεφνης, and simply τοσον (Arat. 306, 400, 664, 665), Sagittarius (Vitruv.), Sagittaticus (Cic.), Sagittifer (German.), Arcticiens (Cic.), and simply Arcus (Cic. German.). This bowman was supposed to be in the shape of a centaur (Mictus equus, Manil. i. 270), hence is frequently termed Centaurus, and sometimes indi-
ASTRONOMIA.

Great Fish, sometimes Derecto, sometimes Derco. This power they confounded with another Syrian goddess Astarte, whom again they identified with their own Aphrodite. The story ran that when fleeing in terror from the violence of Typhon, she plunged into the Euphrates, and was transformed into a fish. (Manili. ii. 53, iv. 590.) Avienus tells the same story of the same fish, Bombyce, for which Grotius has rightly proposed to substitute Bambucis, for Atargatis was specially worshipped at Bambuce or Hierapolis in Cyrrhestica. (Strab. xvi. p. 517; Plin. ii. N. v. 23; Selden, de Diis Syriis, i. 3.)

The bright star (α) which is supposed to form the knot of the two bands which connects the fishes by their tails, is by Aratus (245) named Σωδεσµος ὑποραύοις, by his schoolman δεηµος οβραύοις, by Geminus and Germanicus simply Σωδεσµος, terms variously translated Nodus (Cic.), Nodus Piscium (Vitruv.), Nodus coestis (Avien.), Commissura piscium (Plin. xxvii. 31). The bands themselves are called in one passage of Aratus (362) Δεηµος οβραυοί, more commonly Αίων or Αίνα, the Vincla of Cicero and Germanicus, the Alligamentum linealium of the scholiast on the latter.

From Vitruvius (ix. 4) it appears that the sprinkling of indistinct stars between the Fishes and the Whale, was called by the Greeks ἔρεις ὑμηρα, a word explained by Hesychius to mean τῶν ἄνων ἄρχειν χώρας.

Southern Signs.

1. The Whale, Ἀργος (Arat. 353), 'Οφρες (Jul. Astron. xvii. 17), Κέτος (Vitruv. ix. 4; Manili. i. 440), Πρίστης (German. 644; Manili. i. 363), Νερεις Πιστρίας (German. 714), Νευρετίς Πιστρίας (Cic. comp. German. 709). The last three designations are different forms of the Greek Πριστης, which Suidas interprets to signify εἷς κήτως ἀλαστὸν. This was the sea-monster, according to Aratus, sent to devour Oedipus (Manil. i. 440), Πίτρις (Pind. Callim.), Οριων (Cic. German. Vitruv. Manili. i. 389), Οασιος (Catull. lxix. sub fin.), Πρόλος Ηυρίας (Ov. Fast. vii. 719, comp. v. 495). Arpion in Julius Firmicus (vii. 9), is probably a corrupt form of Oarion.

This is one of the oldest constellations, being noticed in Homer (xviii. 486) and Hesiod (Erg. 359, 615, 619), both of whom employ the expression σθενος οὐραυος. The figure was supposed to represent an armed warrior (ὑφες ιδίς περιεβαλλότα, Arat.), grasping a shield in his left hand and a club in his right (μαστον λευκον κλειπευς, clavam altera, Vitruv. ix. 4), with a glittering belt, from which a sword depended (Balteus Orionis, Vagiuna, German.; Ensis, Cic.). The origin of the name is quite unknown, the ordinary derivation from οβραυος, to which a mythical legend was adapted, being altogether unworthy of attention. The morning setting of this remarkable cluster, about the beginning of November, pointed out in ancient times to the husbandman and the mariner the approach of the most stormy period of the year. (Hor. Carm. i. 28. 21, Epod. xv. 7, Carm. iii. 27. 18, Epod. x. 9; Virg. Aen. i. 535, iv. 52.)

An anonymous Greek writer quoted by Scaliger declares that the popular name for Orion was Ἀλεκτροτόνος, which seems a corruption of Αλεκτροτόνδον, i. e. Cock-foot, and Ideler thinks that we can, without any great stretch of fancy, trace a resemblance to a fowl strutting along.

Around the Romans Jugula or Jugulæ seems to have been the indigenous appellation; the former is noticed by Varro and Festus, the latter occurs in Plautus (Amph. i. 1. 119)—

"Nec Jugulæ, neque Vesperugo, neque Vergiliane occidunt!"

but no satisfactory explanation has been proposed. The two bright stars (α, γ) under the head were called Ημερι. (Var. L. L. vi. 3.)

3. The Eridanus, Ποταμός (Arat. 338), Αμνις (Cic. German.). Aratus remarks that it was considered as a remnant of the Eridanus, 

Δεσφανος Ρηδανοῦ πολυκλάδων ποταμῷ, that mythical non-existent (τῶν μυθικῶν γῆς ὑπατ, Strab.) stream which proved a fruitful source of speculation in ancient as it has done in modern times. The Romans identified the Eridanus with the Po; and hence while Cicero employs the former, Germanicus uses Eridanus and Panus indifferently. (Comp. Vitruv. ix. 4.) From Eratosthenes, the Scholiast on Germanicus and Hyginus (P. A. ii. 32), we learn that this constellation was by others called the Nile, that being the only earthly river which flowed from the south towards the north, as this stream of stars appears to do when rising above the horizon.

4. The Hare, Δαργός (Arat. 338), Λαγός, Lepadis Lepus (Vitruv. ix. 4), Leptes Lepus (Cic.), Auritus Lepus (German.), Voleus Lepus (Manili.).

5. The Great Dog, Κύων, Ξίρων (Arat. 326), Canis (Cic.), Canis Sirius (German.). Aratus (342) employs the phrase μεγάλου Κυωνος, but the epithet must be here understood to refer to the magnitude of the principal star and not to the constellation Procyon, which the Greeks never call the Little or Lesser Dog.

The most important star in the Great Dog, perhaps the brightest in the heavens, was frequently specially named Κύων, sometimes emphatically το βασιλευς, and by the Romans Canis or Canica, but is more frequently designated by the appellation Ξίρων, Σιριος, which occurs four times in Hesiod (Erg. 417, 587, 619, Small. 397), although, in the first of these passages, the sun, and not a fixed star, is probably indicated. Indeed the word seems to be properly an adjective, signifying glittering or bright; and Eratosthenes remarks (c. 39), that astronomers were in the habit of denoting other stars Ξιρων δια της ηλιος κλαρεως. Homer twice (Il. v. 5, xxii. 25) alludes to this star without naming it, in one passage with the epithet ὑπερωνιος, which will be discussed hereafter.

About four hundred years before our era, the heliacal rising of Sirius at Athens, corresponding with the entrance of the sun into the sign Leo, marked the hottest season of the year, and this observation being taken on trust by the Romans of a later epoch without considering whether it suited their age and country, the Dies Caniculares became proverbial among them, as the Dog Days are among ourselves, and the poets constantly refer to the Lion and the Dog in connection with the heats of midsummer.

6. The Little Dog, Πορκών (Arat. 450), Procyon (German.), or, literally translated, Antecanem (Cic.), Anteconais (schol. German.), so cause because in Greece the constellation in question rises heliacally before the (Great) Dog. The names Antecanis and Anteconais, however, do not appear
to have been generally adopted, for Pliny (H. N. xviii. 28), when speaking of Procyon, remarks, "quod sedit apud Romanos non habet nomen, nisi Caniculae han velumini intelligi, hoc est, minorem canem ut in astris pingitur," words which do not necessarily imply that Procyon ever was actually termed Canicula by the Roman writers, although this was certainly sometimes the case if we can trust the express assertion of Hyginus, 2 Canem (sc. Icarii) autem sua addaptellatio et specie Caniculae dixerunt, quae a Graecia, quod ante majorem canem exortitur, proximus adpellatetur (P. A. ii. 4). A passage in Pliny (H. N. xviii. 69, § 3), would at first sight appear to be decisive: " IV. Kalendas Maii, Canis occidit, sidus et per se vehemens, et cui praeoccedere Caniculae necesse sit." But since we know that in Northern latitudes the great dog not only rises after, but also sets before the Little Dog, it is evident that, unless we suppose Pliny to be involved in inextricable confusion, Canicula cannot here signify the sign ἄρωγος. The explanation generally adopted, although somewhat forced, is that a reference is made to the practice of offering a dog in sacrifice on the Robigalia. (See Ov. Fast. iv. 936, &c.; Columell. x. 342, and the commentators on this passage.)

While, as on the whole seems probable, Procyon was sometimes termed Canicula by the Romans, so on the other hand, the star Sirius seems to have been called Procyon simply by the Greeks, because he rose before the rest of the constellation to which he belonged. (See Galen. Comment. in Hippocr. Epidem. i.) We cannot, however, attach this meaning to the words of Horace (Carm. iv. 24), jam Procyon furit Et stella vasa Leonis for the appearance of Procyon would to his countrymen be in reality a more sure indication of the northerly season than the rising of the Greater Dog.

We have already intimated that the Greeks designated the two constellations simply as Καρινα and Προκύων, not as the Greater and Lesser Dog, a distinction which prevailed among the Romans, as we perceive clearly from Vitruvius (ix. 4): "cum Canis maior minores Canis sequitur contra Anguis caput: Major item sequitur Minorem."

When Boötes was regarded as Icarus, and virgo, as his daughter Erigone, Procyon became οὐρά, the dog of Icarius. (Hygin. P. A. ii. 4; comp. Ov. Fast. iv. 940."

7. The Ship Argo, Ἀργός (Arat. 342), Argo (Cic. Manil. i. 420), Nauis (Cic.), Argo Navis (i.e., ναῦς quae nominatur Argo (Vitruv.), Argos purpuris (German.), Rottis Navium (Manil. i. 13). Like Pegusa and the Bull, it was supposed to represent only one half of the object (πυθός), the portion namely of the vessel being the mast (ἰσθύν διάφωσα κατ' αὐτόν, Arat. ναυ, τρίππε τρικόλιν, German.). The brightest star was by Eudoxus and Aratus (351, 368) distinguished as πυθός (πυθώνακον, Cic.), the rudder, instead of which Κάτας (stella Canopi quae his regionibus est ignota, Vitruv. iv. 4), a name which appears first in Eutrothene (c. 37), and Hipparchus, became general. According to the πυθός of Germanicus, it was called also Πηλεμανς, or, as Martinian Capella has it, Πηλεμανς, in honour, evidently, of some Egyptian monarch.

This star, as the words of Vitruvius indicate, was not visible in Italian latitudes.

Cicero, in addition to the rudder, distinguishes the mast (μαστος) also, "radiato stipite nupta maiorum.

9. The Cup, Κόρυφος (Arat. 448), Crater (German. Vitr. Manil. i. 424), Fulgens Cratera (Cic.), Ursa (Schol. German.).

The Cup and the Raven were represented as standing upon the back of the Water Snake, and the whole three are grouped together by Ovid (Fast. ii. 243) in the couplet:

Continua loca tria sidera, Corvus et Anguis, Et medius Crater inter utrumque jacet.

10. The Centaur, Κένταυρος (Arat. 431, 436), Ἑπικάρη φήρ (Arat. 664), Χήρων (Eratosth.), Centaurus (Cic. Vitr. German.), Geminus Biformis (German.), Sonipes (German.), Duplci Centaurus insanino (Manil. i. 425), Chiron (German. 418, 624). By Ptolemy he is represented with a thyrso, in his hand, and these stars were, as we are told by Geminus and Ptolemy, combined by Hipparchus into a distinct constellation under the name Θεωρδόγγαλος.

11. The Wolf, Θηριόν (Arat. 444), Bestia (Vitr. iv. 4), Hostia (Hygin. P. A. ii. 38), This, according to Aratus (i. c.) was a wild beast grasped in the hand of the Centaur, but it received no name from the Greeks or Romans.

12. The Altar, Θυσία (Arat. 403), Αἴτημα (Cic. German. Manil. i. 428), Αἴτημα Altaria sacrīs (685), according to Geminus and Ptolemy, translatedTuribulum by Germanicus and Vitruvius (iv. 4). The scholiast on Germanicus furnishes two other names, Sacrum and Pharus. In the legend preserved by Manilius (i. 428), it was the altar erected by Jove when heaven was invaded by the giants.

13. The Southern Crown. Not named by Aratus, who merely remarks (401) that under the fore-feet of Sagittarius are some stars sweeping round in a circle (ὑποστολ κόκλος), but to these Geminus and Ptolemy give the specific name τρίσφατος νύστας. In consequence of no legend being attached to the group, Germanicus (388) describes it as σινὴ honore Corona Ante Sagittiferi multum permicerca curra. (Comp. Hygin. P. A. ii. 28. Manilius takes no notice of it.) Geminus has preserved two other names, Οἰκονικὸς and Κρύπτων; the former Martinian Capella renders by Coelum, the latter, used by Hipparchus, denotes a herald's wand of peace. Others, according to the scholiast on Aratus, regarded it as Ixion's wheel (Ὑδον τροχός).

14. The Southern Fish, Ἰχθύς νύστας (Arat. 387), Pisces Notiās (Manil. i. 445; Hygin. P. A. iii. 40; Pisces Australiæ (Cic.), Pisces Austrini (Vitr. iv. 4; Columell. xi. 2). It appears from Eratosthenes (33), and the scholiast on Germanicus, that it was styled also Ἰχθύς μῆλικας, Pisces magnus.
Before quitting this part of our subject, we must add a few words on

Coma Berenices; Berenices Crinis. Milvus.

1. The Hair of Berenice, Πάλημας ας. Βόστρυχος Βεροκίς (Callim. Schol. ad Arat. 146), Coma Berenices (see Catull. l.iv.) was, as we have seen above, formed by Conon out of certain unapropriated (ἀμορφωτοὶ) stars behind the Lion’s Tail, in honour of Berenice, the wife of Ptolemy Euergetes, and afforded a theme for a complimentary eulogy by Callimachus, of which we possess a translation by Catullus. The constellation being unknown to Aratus, is not alluded to by his translators, Cicero and Germanicus, nor is it noticed by Manilius. When Pliny (H. N. ii. 71) observes "Septentriones non cernit Troglodytica, et comnis Αἰγύπτιον; nec Canopum Italia, et quem vocant Berenices Crinem; item quem sub Divo Augusto cognominavere Caesaris Thronum, insignis ibi stellas," it is much more probable that he committed a positive blunder, than that, as some have supposed, he intended to indicate under the name of Berenices Crinem some southern sign to which no one else makes any allusion.

2. We find in Ovid (Fast. ii. 793) the following couplet in reference to the night of the 17th of March:

Stella Lycaoniam vergit declivis ad Arcton
Milvus. Haece illa nocte videnda venit,

and in Pliny (H. N. xviii. 65. § 1), "Caesar et Idus Martius fames ibi annotavit Scorpionis occasi: XV. vero Kalendas Aprilis Italae Milvum ostendit: duodecimo Kalendas Equum occidere ma-

The practice commenced by Hesiod was followed by subsequent writers upon rural economy, and we accordingly find numerous precepts in Virgil, Columella, and Pliny delivered with reference to the risings and settings of the stars, forming a complete Calendarium Rusticum. Ovid has combined the Fasti of the city with these Rural Almanacs, and has thus gained an opportunity of enlivening his poem by recounting the various myths attached to the constellations. Indeed it would appear that Caesar, when he reconstructed the Fasti of Rome, included the risings and settings of the stars, since Pliny frequently quotes the authority of Caesar for his statements on these points. Thus the Fasti of Ovid may be considered as a commentary upon the almanac in common use.

The early Grecian parapogmata were undoubtedly constructed from actual observation in the countries where they were first exhibited, and must therefore have completely answered the purpose for which they were intended. But this does not by any means hold good of the corresponding compilations of the Romans, who, being little versed in astronomy themselves, copied blindly from others without knowledge or discrimination.

It is necessary to attend to two facts:

1. The time of the risings and settings of the fixed stars varies for the same place at different epochs. Thus the Pleiades which at Rome rose...

as well as the date, but one day later than that fixed by Ovid, we can scarcely doubt that he, as well as the poet, believed Milvus to be a "Stella."
along with the sun on the 16th of April, B.C. 44, rose with the sun at Rome several days earlier in the age of Meton, and do not now rise with the sun at Rome until several days later. This is caused by the precession of the equinoxes.

2. The time of the risings and settings of the fixed stars is different on the same day in places whose latitude is different. Thus, in the year when the Pleiades rose along with the sun at Rome on the 16th of April, they did not rise along with the sun at Athens until the 22nd of April.

Too little attention was paid to these considerations by the Roman writers; and consequently we not unfrequently discover that they combined the observations of astronomers who lived at times and places remote from them and from each other — that calculations made for the latitude of Athens, or of Rhodes, or of Alexandria, 300 years before, were adopted at once and transferred to their calendars without change or modification.

Another source of confusion is a want of precision in specifying the different kinds of risings and settings, which ought always to be most carefully distinguished from each other by appropriate scientific terms.

The risings and settings of the fixed stars, when considered with reference to the sun’s place in his orbit, may be arranged under eight heads:

(1) When a star rises shortly before the sun so as to be just visible in the morning twilight as it ascends above the horizon.
(2) When a star rises shortly after sunset so as to be just visible in the evening twilight as it sinks below the horizon.
(3) When a star sets at sunset.
(4) When a star sets shortly before sunrise so as to be just visible in the morning twilight as it ascends above the horizon.
(5) When a star sets shortly after sunrise so as to be just visible in the evening twilight as it sinks below the horizon.
(6) When a star rises at sunrise.
(7) When a star rises shortly before the sun so as to be just visible in the morning twilight as it ascends above the horizon before its rays are overpowered by the light of the more brilliant luminary.
(8) When a star rises shortly after sunset so as to be just visible in the evening twilight as it ascends above the horizon.

The names by which these, taken in order, are discriminated by the Greek astronomers Geminus (Isagog. cap. xi.) and Ptolemy (Math. Syntax. viii. 4) are the following:

(a) Ἐπορτάσσεται ἐγείρεις ἁλευθέρως, G. — Ἑφαμένας ἁλευθέρως, P. — Ορύτος Ματαιῦνιν Απαρηνς. True morning rising.
(b) Ἐπορτάσσεται ἐγείρεις ἁλευθέρως, G. — Ἑφαμένας συνανατολῆς ἁλευθέρως, P. — Ορύτος Ακρονυχίου Απαρηνς. True evening rising.
(c) Διήσει ἐγείρεις ἁλευθέρως, G. — Ἑφαμένας συγκατάδουσις ἁλευθέρως, P. — Ορύτος Ματαιῦνιν Βερους. True morning setting.
(d) Διήσει ἐγείρεις ἁλευθέρως, G. — Ἑφαμένας συνανατολῆς ἁλευθέρως, P. — Ορύτος Βερους. True evening setting.

The epithet οὐράς, which are quite explicit and are corroborated by Julius Firmicus (ii. 8) but on the
other hand in the Parapregma of Geminius, in the observations ascribed to Eudoxus, δικόσυνον is the general term applied to all evening settings, and might be used whenever we refer to the apparent phenomena. Euctemon again makes use of τιτανίας to express the same meaning. The words Αρέστυος δικόσυνος πρωίς δύνει under Scorpius d. 8. are probably corrupt.

Under these circumstances to prevent all confusion or ambiguity, we have altogether passed over the terms Cosmicus and Acrongenus in our table, but we have retained Halicus, which, like Cosmicus, first occurs in the passage quoted from Servius, but is applied uniformly by subsequent writers to the phenomenon marked (a) and (b), and to no other.

3. Pliny (H. N. xviii. 25) proposes to designate by Emerinus, what we have called the Heliacal Rising (a), because the star then for the first time emerges from the sun's rays, and by Occultatio, what we have called the Heliacal Setting (b), because this is the last appearance of the star, which is forthwith obscured by the sun's rays, but these terms do not appear to have been ever generally received.

4. It is manifest that of the eight phenomena, named above, the first four are purely matters of calculation, since the true risings and settings never can be visible to the naked eye. These then ought always to have been, and for some time always were, excluded from rural calendars intended for the use of practical men. We find, however, from the fragments of Calippus, preserved in the Parapregma of Geminius, when verified by computation, that this astronomer had substituted the true risings and settings for the apparent risings and settings, which were there marked in the tables of Euctemon, Meton and Eudoxus. Hence, great caution would become indispensable in quoting from different authorities, or in advancing an original statement. If the rising of a star was named, it would be necessary not only to specify whether it was the morning or the evening rising, but also whether the true or the apparent rising was indicated, and to proceed in like manner for the setting of a star. Now and then we find in Columella and Pliny some attempt to preserve accuracy in one or other of these essential points, as when the latter observes (xvii. 74): " Pridie Kalendas (Nov.) Caesaris Arcturus occidit et Scyllae exorintur cuius sole; " " XVII. Kal. Octob. Egypto Spica, quam tenet Virgo, exoritur matutino, Elesiaque densam. Hoc idem Caesaris XIV. Kalendas X. Assyriae signifi- cant; " and even in Virgil, as when he defines the morning setting of the Pleiads: " Ante tibi Eoae Atlantides abscondantur; " but for the most part both in prose writers and in poets, everything is vague and unsatisfactory; risings and settings of both kinds, calculated for different epochs and for different latitudes, are thrown together at random. In order to substantiate these charges, we may examine the statements contained in Columella, Ovid, and Pliny with regard to Lyra, a constellation to which considerable importance was attached by the Romans, since the beginning of Autumn in the calendar of Caesar was marked by its (true) morning setting. It will suit our purpose particularly well, because from its limited extent every portion of the constellation became visible, within two or three days after the appearance of the first star; and hence no ambiguity could arise from the heliacal risings of the extreme portions being separated by an interval of some weeks, as was the case with Orion and others stretching over a large space in the heavens, in treating of which it becomes necessary to specify particular portions of the figure, as when we read " Orionis humerus oritur; " " Gladius Orionis oc- cidere incipit; " Orion totus oritur, " and so forth. In the following quotations, the words Fidias and Fidicula seem to be absolutely synonymous, there being no reason to believe that the latter was applied exclusively to the peculiarly bright star which in the catalogues of modern astronomers is a Lyrae, the δ λαυπέρος τῆς λέβας of Ptolemy, although to this in all probability most of the observations were directed. We shall set down in regular order first the settings and then the risings.

**Settings of Lyra.**

(1.) Pridie Id. Aug. (12 August) Fidias occidit mane et Augustus incipit. *Col. xi. 2. § 57.*

According to Pliny (xviii. 59), the setting of Fidicula (Fidicula occlusus) marked the commencement of autumn, and took place on the forty-sixth day after the solstice, that is, on the 8th of August, if we include, according to the Roman method of computation, the 24th of June, the day from which he reckoned. In a subsequent chapter (68, § 2) he states that the phenomenon in question took place, according to the Calendar of Caesar, on the 11th of August, but that more accurate observations had fixed it to the 8th, and this he soon after repeats (69, § 4).

(2.) XIII. Kal. Sept. (i.e. 20 August) Sol in Virginum transitum facit... hoc codem die Fidias occidit. — X. Kal. Sept. (23 August) ex codem sidere tempestas plerumque oritur et pluvia. *Columell. xi. 2. § 58.*

(3.) XI. Kal. Feb. (22nd January) Fidicula Vespera occidit, dies pluvius. *Columell. x. 2. § 5.* Ovid places the setting on 23rd of January.

Fulgbit toto jam Lyra nulla polo. *Fast. i. 653.*

Ovid, without alluding to what he had said before, remarks on the 2nd of February (Fast. ii. 73):

"Illa nocte alius tollens ad sidera vultum,
Diecet, ubi est hodie, quae Lyra fulsit heri?"

Pliny has (xviii. 64) " Et pridie Nonas Februarias (4th February) Fidicula vespéri (sc. occidit)."

**Risings of Lyra.**

(6.) IX. Kal. Mai. (23rd April) prima nocte Fidicula apparet, tempestatem significat. *Columell. xi. 2. § 37.*

(7.) Ovid (Fast. v. 415) names the 5th of May as the day on which Lyra rises.

(8.) III. Id. Mai. (13th May) Fidias mane exoritur, significat tempestatem. *Columell. xi. 2. § 40.*
§ 3.
Id. Mai. (15th May) Fidis mane exortitur. Columell. xi. 2. § 43.
(9.) III. Non. Novemb. (3rd November) Fidicula mane exortur, hiemat et pluitt. Columell. xi. 2. § 84.
(10.) VIII. Id. Novemb. (6th November) idem sidus totum exortitur, Auster vel Favorinit, hiemat.
Columell. Ibid.

Institint Nonae, mis-is tibi nubibus atri,
Signa dabunt imbrex exortient Lyra.
Ovid. Fast. i. 315.

Pridie Nonas Januarii (4th January) Caesari Delphinos matutino exortur et postero die Fidicula. Plin. xvii. 64.

The total disregard of precision in the phraseology employed in describing the above appearances is evident in almost every assertion, but the conclusion may be considered to have reached a climax when we read the words " Fidis (or Fidicula) exortur mane," used without variation or explanation to denote a phenomenon assigned to the 26th of April, the 3d and 15th of May, the 3d and 16th of November. By examining each paragraph separately, we shall be still more fully convinced of the carelessness and ignorance displayed.

(1.) The true morning setting of Lucida Lyrae took place at Rome in the age of Caesar, on the 12th or 13th of August, and therefore the Calendar of Caesar here followed by Columella was more accurate than the authorities quoted by Pliny, unless these referred to a different latitude. Remark, however, that no hint is dropped by either to indicate that the true, and not the apparent morning setting is meant; and it ought to be borne in mind that the latter happened, at the epoch in question, on that very day at Alexandria. In the Para-plega of Geminus also, we find, under 11th of August (17 Leo), EKSTMON LYRA DYT. 
(2.) This must be the apparent morning setting which took place at Rome on 24th of August for winter (aKp&væps) setting of the stars. We begin with the most important; — the Pleiades, Arcturus, and Sirius, which we shall discuss fully, and then add a few words upon others of less note.

THE PLEIADES.

HESIOD. — Hesiod indicates the period of harvest by the rising of the Atlas-born Pleiads (Erg. 384) after they had remained concealed for forty days and forty nights. Now in the age of Hesiod (c. 800), the heliacal rising of the Pleiads took place at Athens, according to the computation of Ideler, on the 19th of May of the Julian Calendar, which is just the season when the wheat crop comes to maturity in that climate. Again (l.c.), he indicates the commencement of the ploughing-season, and the close of the season for navigating, by the morning setting of the Pleiads, which in that age and latitude fell about the third of the Julian November. In these and all other passages where Heide speaks of the risings and settings of the stars, we must unquestionably assume that he refers to the apparent phenomena. Indeed it is by no means improbable that the precepts which
he incubates may be the result of the personal observations of himself and his contemporaries.

VARRO, COLUMELLA, PLINY. — Morning Rising. — (1.) Varro, where he describes the distribution of the year into eight divisions, according to the calendar of Caesar, states that there was a space of forty-six days from the vernal equinox (25th March) to the rising of the Pleiades (Vergiliarum aqueam), which is thus fixed to the 6th or 9th of May. (R. R. i. 28.)

(2.) Pliny (xviii. 66. § 1) names the 10th of May.

Columella has three distinct notices (R. R. xi. 2. §§ 36, 39).

(i.) X. Kal. Mai. (22d April) Vergilius eum sole orientur.

(2.) Nonis Maiis (7th May) Vergiliæ exoictuntur manæ.

(3.) VI. Idus sc. Maii (10th May) Vergiliæ totæ apparent; and this last corresponds with his assertion elsewhere, that the phenomenon takes place forty-eight days after the vernal equinox (ix. 14). (3.)

Now the true morning rising of the Pleiads took place at Rome in the age of the above writers, who are all embraced within the limits of a century, about the 16th of April, the apparent heliacal rising about the 28th of May. Hence, not one of the above statements is accurate. But (1) (2) (4) (5) approach closely to the observation of Euctemon (b.c. 430), according to whom the Pleiads rise on the 15th of Taurus (8th May), and (3), which expressly refers to the true rising, although inapplicable to Rome, will suit the latitude of Athens for the epoch in question.

Morning Setting. — (1.) Varro places the setting of the Pleiades (Vergiliarum occasum) forty-five days after the autumnal equinox (24th Sept.), that is, on the 6th or 7th of November (R. R. i. 28.).

(2.) Pliny names the 11th of November (xviii. 60. 74; the text in c. 59 is corrupt).

Columella, as before, has a succession of notices.

(i.) XIII. et XII. Kal. Nov. (20th and 21st Oct.) Solis exorta Vergiliæ incipient occidere.

(ii.) V. Kal. Nov. (29th Oct.) Vergiliac occidunt.

(iii.) VI. Id. Nov. (8th Nov.) Virgiliæ mane occidunt.

(iv.) IV. Id. Nov. (10th Nov.) hæmis initium.

These are all taken from his calendar in xi. 2.; but in ix. 14. § 11, “Ab aquinoctio . . . ad Vergiliarum occasum diebus XL” i.e. 2d or 3d of November. Compare ii. 8. § 1.

Now the true morning setting of the Pleiads took place for Rome at that epoch on the 29th of October, the apparent morning setting on the 9th of November. Hence, it appears that (5) may be regarded as an accurate determination of the apparent morning setting, and that (1) and (2) approach nearly to the truth, especially when we bear in mind that variations to the extent of two or even three days must be allowed in regard to a phenomenon which depends in some degree on the state of the atmosphere. We perceive also that (4) is correct for the true morning setting, while (3), which is inapplicable to Rome, corresponds to the horizon of Athens in the time of Melon. In the passage from Colum. ix. 14, we ought probably to adopt the conjecture of Ponteder, and read xliv. for xl.

Evening Setting and Evening Rising. — The evening setting of the Pleiades took place, according to Columella, on the 6th of April (VIII. Idus Aprilis Vergiliæ Vespere celantur); according to the calendar of Caesar on the 5th. (Colum. xi. 2. § 34; Plin. H. N. xviii. 66.) These statements are not far from the truth, since the apparent evening setting took place at Rome for the Julian epoch on the 8th of April. The apparent evening rising belonged to the 25th of September.

VIRGIL. — Virgil (Georg. i. 221) enjoins the husbandman not to sow his wheat until after the morning setting of the Pleiades: —

Ante tibi Eose Eoniali abscedantur

Gnosiaque ardens decidat stella Coronae.

Debita quam sulcia committas semen.

Hesiod, as we have seen above, fixes the commencement of the ploughing season, without making any distinction as to the particular crop desired, by the (apparent) morning setting of the Pleiades, that is, for his age, the beginning of November. But it is impossible to tell whether Virgil intended merely to repeat this precept or had in his eye the calendar of Caesar or some similar compilation. Columella (ii. 8. § 1), in commenting upon these lines, understands him to mean the true morning setting, which, he says, takes place thirty-two days after the equinox, that is, on the 25th or 26th of October, a calculation not far from the truth, since we have pointed out above that the 28th was the real day.

There is another passage where both the rising and the setting of the Pleiades are mentioned in connection with the two periods of the honey harvest. (Georg. iv. 231.)

Bia gravidos cognit foenus, duo tempora messis,

Taygete simul os terris ostendit honestum

Pleiae et oceani spretos pede repulit annus.

Aut aedem sidus fugiens ubi Piscis aquosi

Tristior hybernas coelo descendit in undas.

Here, again, there is nothing in the context by which we can ascertain the precise periods which the poet desired to define, we can only make a guess by comparing his injunction with those of others. Columella (x. 2) recommends that the combs should be cut, if full, about the 22nd of April; but, since he adds that if they are not full, the operation ought to be deferred, the matter is left quite indefinite. Now, the words or verses seem clearly to point to the heliacal rising which took place in his time at Rome about the 20th of May, more than five weeks after the day given by Columella. In like manner the last-named writer advises (xi. 2. § 57) that the autumnal collection of honey should be put off until after the 1st of October, although others were in the habit of beginning earlier. The true morning setting was, as already stated, on the 28th of October, the apparent on the 9th of November.

As to the expression “sidus fugiens ubi Piscis aquosi,” it will be sufficient to observe that although the “Piscis” in question has been variously supposed to be — one of the fishes in the zodiac—the Southern Fish—the Hydræ —the Dolphin—or even the Scorpion, no one has yet succeeded in proposing a reasonable or intelligible interpretation, which can be reconciled with any delineation of the heavens with which we are acquainted.

OVID. — We are told in the Fasti (iv. 165)
that at daybreak on the morning which follows the 1st of April:

Pleiades incipit humeros relevare paternos
Quae septem dixi, sex tamen esse solent.

According to the legend, the Pleiades were the daughters of Atlas, who supported the heavens on his shoulders, and hence, when they disappeared from the sky, they might be said to remove a portion of their father’s burden "humeros relevare paternos." The apparent morning setting is therefore clearly denoted. But this took place at Rome, not Athens, on May 16th in the age of Meton. Hence this observation was evidently copied from a Greek calendar computed for the fifth century B.C.

The Pleiades are said to rise visibly in the morning on May 14th, marking the end of spring and the beginning of summer. Now the heliacal rising of the Pleiades did not take place at Rome when Ovid wrote until May 28th; but the phenomenon in question took place at Athens on May 16th in the age of Meton. Hence this observation was evidently copied from a Greek calendar.

Arcturus.

Considerable difficulty arises in the discussion of the passages which refer to Arcturus, from the circumstance that this name is sometimes applied generally to the whole of the wide-spreading constellation of Boötes, and sometimes confined to the bright star in the knee of the figure.

HOMER.—Homer (Od. v. 29) speaks of Arcturus as ὁδὸς θόντας, because the apparent evening or heliacal setting took place late in the year when winter was nigh at hand, and hence the phrase νυκτες εὑρέτηρα for long nights. (See Arat. 585.) Another explanation of the phrase has been given above when discussing the constellation Boötes.

HESIOD.—Hesiod (Erg. 564) dates the commencement of Spring from the evening rising of Arcturus (ἐπ’ ἄρκτων εὐρύκτων) sixty days after the solstice. Now the apparent evening rising for the age and country of Hesiod fell upon the 24th of February, the computation

Again, in the same poem (659) he marks the period of the vintage by the morning (heliacal) rising of Arcturus, which, according to Ideler, fell in that age on the 19th of September.

COLUMELLA, PLINY.—Morning Rising. Columella (ix. 14. § 10) places the rising of Arcturus about fifty days after the rising of Cunica; and since the heliacal rising of the latter fell on the 24th of August at Rome in the Julian era, and of the former on the 21st of September, the computation

Pliny (xvii. 74), Arcturus vero modum pridie Idus (se. Septembr. oritur), i.e. 22d of September, where the middle portion of the whole constellation is indicated, and the observation is very accurate.

(2) VII. Id. Jun. (9th June) Arcturus occidit.

(3) Pliny (xviii. 67. § 3) ascribes the Arcturi occasum matutinis to V. Id. Mai, i.e. 11th May.
(4) Again, in the same section we find that Arcturus matutino occidit on the 8th of June.

Now the true morning setting of Arcturus for Rome at this epoch belongs to 28th of May, the apparent morning setting to 10th of June.

But (1) seems to be copied from the observation of Euctemon in the Parapegma of Geminus; (2) is a close approximation to the apparent morning setting for Rome; (3) is altogether erroneous, and must be a true morning setting extracted from some old Greek calendar; (4) corresponds with (2), and is nearly correct.

Evening Rising.—(1.) IX. Kal. Mart. (21st Feb.) Arcturus prima noce oritur. Col. xi. 2. § 21.
(2.) Ortu Arcturi qui est ab Idibus Februarii (13th Feb.). Col. ix. 14.

Now the apparent evening rising of Arcturus took place for Rome at the Julian epoch on the 27th of February, the true evening rising on the 6th of March. But since it is evident from (2) that Columella here employed Arcturus to denote not merely the star properly so called, but the whole figure of Boötes, a latitude of several days must be allowed in the case of this as of all the larger constellations. See below the remarks on Ov. Fast. ii. 153. We may remark, however, that 21st—23d of February will answer for the apparent evening rising of the star Arcturus at Athens in the age of Mon.

This is taken verbatim from an observation of Euctemon quoted in the Parapegma of Geminus. The heliacal setting for Rome was a few days later, about the 4th of November. But the observation of Euctemon is not accurate for the latitude of Athens in his own age, for the phenomenon of the phenomenon ought to have been placed about five days earlier, which proves, as Paff remarks, that the Greek astronomers are not always to be depended upon in these matters.

We find in Pliny (xvii. 68. § 2), VIII. Id. Aug. (6th August) Arcturus medius occidit. This is so far removed from any setting of the star in question that Harduin pronounces the text corrupt, and substitutes VII. Id. Aug. Aquarini occidit medius, while Paff endeavours to refer the expression to the culmination, an explanation which is both in itself forced and completely at variance with the ordinary usage of Pliny.

Again, Pliny (xviii. § 74), Pridie Kalendas (Nov.) Causari Arcturus occidit, i.e. 31st of October, and a few lines farther on IV. Nonas Arcturis occidit vespers. The latter is not far from the truth; the former, unless it refers to the constellation in general, must have been borrowed from a foreign source.

VIROGIL.—Virgil (Georg. i. 229) instructs the husbandman to sow vetches, kidney beans and lentiles, when Boötes sets, by which he probably intended to indicate the heliacal setting of Arcturus on the 4th of November. In like manner Pliny (xviii. 15. § 24) orders the vetch to be sown about the setting of Arcturus, the kidney bean at the setting of Boötes (xviii. 24), the lentile in the
first, it is placed on 4th or 5th of March, according to occupy three months. The star Arcturus is one to these two. In the first passage he has erroneously more fully below in treating of the ancient divi the age of Homer about the middle of July. here and elsewhere, but in no way could it be made parent morning setting on 10th June; thus the second and third of the above passages will apply substituted the true evening rising, have seen, on the 6th of March. alludes to Sirius as the star of take place in that age about the 20th of September. supposed to denote the sun, has been already noticed. rises his two legs appear above the horizon nearly at the same time. The apparent evening rising of the star Arcturus took place at Rome, on 27th February, the true evening rising on the 6th of March; but the calendar to which Ovid was in debted probably recorded the appearance of the first star in the figure which became visible.

In three passages, the morning setting is clearly described (Fast. iii. 403, v. 733, vi. 235). In the first, it is placed on 4th or 5th of March, according as we adopt the reading quartae or quintae; in the second, on the 20th of May; in the third, on the 7th of June. Now there is no doubt that the setting of Boötes is spread over a considerable pe...
Astronomia.

without the slightest regard to the actual position of the constellation at the time in question. An example still more striking, because it involves an anomaly universally recognised by scientific men, is the practice of denoting the position of the sun at the vernal equinox, as the first point of Aries, although two thousand years have elapsed since the intersection of the ecliptic with the equator corresponded with the commencement of the constellation Aries. A necessity has thus arisen of drawing a distinction, which proves most embarrassing to the unlearned, between the signs of the zodiac and the constellations of the zodiac, and thus the sun is said to be in the sign Aries while he is actually traversing the constellation of Pisces, and enters the sign Taurus long before he quits the constellation Aries. Now something of this sort may to a certain extent explain some of the anomalies which recur so perpetually in the calendar of Columella or Pliny. Certain remarkable appearances fixed upon at a very early period to mark the approach of summer and winter, such as the rising and setting of the Pleiades, may have by custom or tradition become so completely identified in the minds of the people with particular days, that the compilers of calendars intended for general use, while they desired to register accurate observations, were compelled at the same time to include those which, belonging to remote ages and foreign lands, had nevertheless acquired a prescriptive claim to attention. We may thus account for inconsistencies so numerous and glaring, that they could scarcely have been all together overlooked by the writers in whose works they occur, although it is impossible to forgive their carelessness in withholding the necessary explanations, or the gross ignorance which they so often manifest.

The heliacal setting at Rome for the Julian era was on the 1st of May, which proves the above statements to be nearly correct. The expression cui praeoccidere Caniculum necesse sit has been already commented on. See above, p. 153, a.

(2.) III. Kal. Jan. (30 Dec.) Canicula vespere occidit. Ibid. § 44.

(1) is accurate for the apparent morning setting of Sirius as it was on the 7th of May, which proves the above statements to be nearly correct. The expression cui praeoccidere Caniculum necesse sit has been already commented on. See above, p. 153, a.

(2) and (3) are directly at variance with each other, and are both blunders. The apparent evening rising took place at Rome on the 30th of December, not the evening setting as Columella would have it, nor the morning setting as Pliny has remarked.

Virgil.—Virgil instructs the farmer to sow beans, lucerne, and millet: —

Candidus auranis aperit cum cornibus annum
Taurus et adverso cedens Canis occidit astro.

Georg. i. 217.

The sun entered Taurus, according to the Julian calendar, on the 24th of April: the heliacal setting of Sirius was on the 1st of May, six days afterwards. Many interpretations have been proposed for the words "adverso cedens Canis occidit astro;" of these the most plausible is that which explains them with reference to the form and attitude under which the constellation of the Dog was depicted, which made him set backwards facing the signs which follow.

Again, in Georg. iv. 425, we find

Jan rapidus torrens sitienses Sirius Indos
Ardebat coelo et medium solignus orbebem
Haueraet,

carried the radiations of a blinding star. The words which are intended to indicate the hottest portion of the day in the hottest season of the year. Here the separate mention of "Sol" is quite sufficient to confute those who would consider Sirius as equivalent in this passage to the sun. See above, p. 152, a. Comp. Lucan. Phar. x. 209.

Ovid.—In the fourth book of the Fasti (x. 901) the rising of Sirius is assigned to the 25th of April, is made coincident with the disappearance of Aries, and marks the epoch of mid-spring: —

Sex ubi quae restant luces Aprilis habebit
In medio cursu tempora Veris erat;

Et frustra pecudem quaeres Athamantidos Helles
Signaque dant imbres exoriturque Canis.

A notorious blunder has been here committed by the poet. No rising of Sirius, either real or apparent, in the morning or in the evening, corresponds to this season. But this is the very day fixed by Euctemon (ap. Gemini. Parn.) for the heliacal setting (κυρων ηπειρωτας) of the Dog, which fell at Rome for the Julian era on the 1st of May.

Again, in Fast. v. 723, we read —

Nocte sequente diem Canis Erigoneus exit,
that is, on the 22d of May. Now, it is clear from a former passage (iv. 397) that by Canis Erigoneus he means the Great Dog; but the true rising of Sirius took place for Rome at this period on the 19th of July, the apparent on the 2d of August.

Not much will be gained by supposing that Procyon is here alluded to; for the risings of that star precede those of Sirius by about eight days only. Here, again, therefore, we have a gross mistake.

Palladius.—Palladius (vii. 9): "In ortu Caniculae, qui apud Romanos XIV. Kal. Aug. (19th July) die tenetur, explorant (sc. Aegypti) qua semina exortum sidus exurat, quae illas exausti custodiat." Now this is the exact period of the heliacal rising in Egypt for the Julian epoch; hence the words "apud Romanos" must refer to a notice in some Roman Calendar, and not to the real period of the phenomenon.

Orion.

It must be borne in mind that, from the great size of this constellation, its risings and settings are spread over a considerable space; while the brilliant stars which it contains are so numerous that no one can be fixed upon as a representative of the whole, as in the case of Boötes, where the different appearances are usually referred to Arcturus alone. Hence those writers who aim at precision use such phrases as "Orion incipit oriri,"
Orion totus oriatur; "Orion incipit occidere;" and wherever such qualifications are omitted the statements are necessarily vague.

**HESIOD.**—Hesiod (Erg. 598) orders the corn to be thrashed εὐρ’ ἐν πρῶτα φαινόν ἄθεναι Ἰρίωνος. For that age and country the apparent morning or heliacal rising of Orion would be completed about the 8th of July.

The setting of Orion was one of the tokens which gave notice to the farmer that the season for ploughing had arrived, and to the mariner that he must no longer brave the perils of the deep. (Erg. 615.) The apparent morning setting extended over the whole month of November.

The culmination of Orion, which coincided with the vintage (Erg. 609) took place about the 14th of September.

**ARISTOTLE.**—Aristotle (Meteorolog. ii. 5, Problem. xiv. 26) places the rising of Orion at the commencement of Ópóra, and the setting at the beginning of winter, or rather in the transition from summer to winter (ἐν μεταβολῇ τοῦ δύρου καὶ νέυματος). Now the two limits which included the beginning and end of the apparent morning or heliacal rising, which alone can be here indicated, were, for the age and country of the writer, 17th of June—14th July; those which embraced the apparent morning setting were, 8th of November—8th of December; while the true morning setting continued from 27th of October—20th of November.

Upon examining the passages in question a very curious contradiction will be perceived, which has long exercised the ingenuity of the commentators. Aristotle distinctly asserts in one place that the rising of Orion is characterised by unsteady stormy weather, and offers an explanation of the fact: in another place he as distinctly avers that the rising of Orion is characterised by the absence of wind (περὶ Ἰρίωνος ἀνατολὴν μάλιστα γίνεται νεμέων).

**PLINY.**—(1) VIII. Idus (Mart.) Aquilowii păcis exorta, et postero die Orionis. xviii. 63, § 1. (2) Novis (Apr.) Aeggypo et gladius ejus incipiant ascendii. xvii. 66, § 1. (1) The first date, 8th of March, is so far removed from the rising of Orion, whether in the morning or the evening, that Ideler is probably correct when he supposes that either the text is corrupt or that Pliny himself inserted Orion by mistake instead of the name of some other constellation. (2) Here also the date, 5th of April, is wide of the truth. The apparent evening setting of the middle star in the belt fell at Alexandria on the 26th of April, seven days later than at Rome, the true evening setting about the 9th or 10th of May.

**VIRGIL, HORACE.**—Both Virgil and Horace frequently allude to the tempests which accompanied the winter setting of Orion (Saenus ubi Orion hibernis conditur undis, Virg. Aen. viii. 719; see also iv. 52; Hor. Carm. i. 28, 21, iii. 27, 17, Epod. x. 9, xv. 7), just as Hesiod (Erg. 617) eight hundred years before had warned the mariner that when the Pleiades, fleeing from the might of Orion, plunge into the dark main:

Δῆ τότε παντολοι άνήμοι ένώσιν αύται.

The apparent morning setting of Orion, which in the time of Hesiod commenced early in November, soon after the morning setting of the Pleiades, thus became connected in traditional lore with the first gales of the rainy season, and the association continued for centuries, although the phenomenon itself became gradually further and further removed from the beginning of the stormy period. In the Paraphegma of Geminius we find notices by three different astronomers, in which the setting of the Pleiades and of Orion are mentioned as attended by tempests, although each of the three fixes upon a different day. For Rome, at the Julian era, the apparent morning setting commenced about the 12th or 13th of November. In Pliny (xviii. 74) we find, "V. Idus Novemb. (8 Novemb.) gladius Orionis occidere incipit," which is the true morning setting for Alexandria at that epoch.

OVID. —Ovid refers twice in his Fasti to the setting of Orion. In one passage (iv. 387) he places it on the day before the termination of the Megalesia, that is, on the 10th of April; in another (v. 439), where the complete disappearance of the figure is expressly noted, on the 11th of May.

Now the apparent evening setting of Rigel, the bright star which marks the left foot, took place for Rome in the age of the poet on 11th April, while the smaller star, now known as K, set on the previous day, the true evening setting of Betelgeux, which marks the right shoulder, fell on the 11th of May. Hence it is clear that Ovid derived his information from two very accurate calendars, one of which gave the date of the commencement of the apparent evening setting; the other, the date of the termination of the true evening setting.

He refers twice to the rising of Orion also — in the sixth book of the Fasti (717), on the 16th of June:

At pater Heliadum radios ubi tinxerit undis,
Et cinget geminos stella serena polos,
Tolet humo validus proles Hyriea lacertos,
and on the festival of Fortuna Fortis, on the 24th of June:

Zona latei tua nunc, et cras fortasse latebit,
Dehine erit, Orion, adspicienda mihi,
that is, on the 26th of June.

With regard to the first, the date is nearly correct for the true morning (not evening, as the words denote) rising of the two stars (ο ο) at the extremity of the left hand; with regard to the second, the true morning rising of the middle star in the belt fell on the 21st of June, the apparent on the 13th of July. There is a mistake, therefore, here of five days, as far as Rome is concerned.

**HYADES.**

In Hesiod (Erg. 615), the setting of the Pleiades, of the Hyades, and of mighty Orion, warn the husbandman that the season has arrived for ploughing the earth, and the mariner, that navigation must cease. The apparent morning setting of the Hyades took place, according to the calculation of Ideler, for the age and country of Hesiod, on the 7th of the Julian November, four days after that of the Pleiades, and eight before that of Orion.

Virgil (Aen. i. 744, iii. 516) terms this cluster "pluvias Hyadas," and Horace (Carm. i. 3. 14)
"tristes Hyades," in reference to their morning setting at the most rainy and stormy season of the year. The true morning setting for Rome at the Julian era happened on the 3d of November, the apparent on the 14th of November. The apparent evening rising, which fell upon the 25th of October, would likewise suit these epithets.

Ovid, in his Fasti (iv. 677), places the evening setting of the Hyades on the 17th of April, the day fixed in the Calendar of Caesar (Plin. xvii. 66. § 1), while Columella names the 18th (R. R. xi. 2. § 56). These statements are nearly accurate, since the apparent evening, or heliacal setting, took place for Rome at that epoch on the 20th of April.

In the same poem, the morning rising is alluded to five times.

(1.) It is said (v. 163) to take place on the 2nd of May, which was the day fixed in the Calendar of Caesar (Plin. xvii. 66. § 1), and adopted by Columella (xi. 2. § 39), whose words, Sucula cum solo ordir, indicate the true morning rising.

(2.) On the 14th of May (v. 603), while Columella (Ibid. § 43) has, XII. Kal. Jun. (21st May) Suculeae exsoriantur.

(3.) On the 27th of May (v. &c.).

(4.) On the second of June (vi. 107).

(5.) On the 15th of June (vi. 111).

Now the true morning rising of the Hyades for Rome at that epoch was on the 16th of May, the apparent or heliacal rising on the 9th of June, the true evening rising on the 25th of October, would likewise suit these epithets.

The apparent or heliacal setting at the most rainy and stormy season of the year. The true morning setting for Rome at the Julian era; and hence the apparent evening rising, which would fall some days earlier, would indicate the approach of those storms which commonly attend upon the autumnal equinox.

III. DIVISION OF THE YEAR INTO SEASONS.

As early as the age of Hesiod the commencement of different seasons was marked by the risings and settings of certain stars; but before proceeding to determine these limits it will be necessary to ascertain into how many compartments the year was portioned out by the earlier Greeks.

Homer clearly defines three:—1. Spring (chs), at whose return the nightingale trills her notes among the greenwood brakes (Od. xix. 519). 2. Winter (ρέιιον, χιοί), at whose approach, accompanied by deluges of rain (ασβοσαρων θηβρων), the cranes fly screaming away to the streams of ocean (U. iii. 4, comp. Hesiod. Erg. 448). 3. Summer (δης), to which χιος is directly opposed (Od. vii. 110). 4. Three lines occur in the Odyssey (xi. 191. αυτρα πτεννα θηβρων, δης τε θηβαλα τη φωτορ, and also xii. 76, xiv. 384) where the word υπαρα seems to be distinguished from δης, and is in consequence generally translated autumn. Ideler, however, has proved in a satisfactory manner (Handbuch der Chron. i. p. 243) that the term originally indicated not a season separate from and following after summer, but the hottest part of summer itself; and hence Sirius, whose heliacal rising took place in the age of Homer about the middle of July, is designated as αυτρα υπαρα (U. v. 5; see Schol. and Eustath. ad loc.; compare also I. xxii. 26), while Aristotle in one passage (Meteorolog. ii. 5) makes the heliacal rising of Sirius, which he notes as coinciding with the entrance of the sun into Leo, i. e. 24th July of the Julian calendar, the sign of the commencement of υπαρα; and in another passage (Problem. xxv. 26, xxvi. 14) places the rising of Orion at the beginning of υπαρα, and the setting of the same constellation at the beginning of winter—εν μεταβολη του δης και χιοιν —an expression which clearly indicates that υπαρα was included within the more general δης.

Hesiod notices δας (Erg. 462), δης (l. c.), χιος (450), and in his poem we find the trace of a fourfold division, for he employs the adjective μετασωρως (Erg. 415) in reference to the period of the first rains, when the excessive heat had in some degree abated. These rains he elsewhere calls the υπαρων θηβρων, and notices them in connection with the vintage, when he enjoins the mariner to hasten home to port before the serene weather has passed away—ουδε μην τω πεντεων και δις υπαρων θηβρων. Moreover, by making δης proper end fifty days after the solstice (Erg. 663) he leaves a vacant space from the middle of August to the end of October, which he must have intended to fill by a fourth season, which he nowhere specifically names. As late, however, as

Astronómia.
Aeschylus (Prom. 453) and Aristophanes (Ae. 710) the seasons are spoken of as three, χειμών, ἕαρ, θερός by the former; χειμών, ἕαρ, ὀπ鬓άρα by the latter. Nor can we avoid attaching some weight to the fact that the most ancient poets and artists recognised the "Ωραι as three only, bearing, according to the Theogony (901) the symbolic appellation of Order (Eὐρωμία), Justice (Δίκη), and blooming Peace (Eὐφημία), and that the latter term was distinguished as ὀπɷρα, and that the latter term was gradually separated from the former, so that θερός was commonly employed for early summer, and ἕαρ for late summer.

The first direct mention of autumn is contained in the treatise De Diaeta (lib. iii. &c.), commonly ascribed to Hippocrates (b.c. 420), where we are told that the year is usually divided into four parts, Winter, Spring, and Summer, that the general name for the whole of summer being θερός, the hottest portion was distinguished as ὀπɷρα, and that the latter term was merged in it. Indeed Pausanias has preserved a record of a time when the Ωραι were known as two goddesses only—Καρπα, the patroness of fruits, and Θελλα, the guardian of blossoms (ix. 33, § 2). We may hence safely conclude that the Greeks for many ages discriminated three seasons only, Winter, Spring, and Summer.

We find no trace in Homer of any connection having been established between the recurrence of particular astronomical phenomena, and the return of the seasons. But in Hesiod, as remarked above, and in subsequent writers, the limits of the divisions which they adopt are carefully defined by the risings and settings of particular stars or constellations. The following tabular arrangement will afford a view of the most important systems:

**Division of the Seasons according to Hesiod.**

**Seasons according to Euctemon, Eudosius, and other Authors quoted in the Parapegma of Geminus.**

- First breezes of Zephyrus - 16° or 17° of Aquarius.
- Appearance of the swallow - 2° of Pisces.
- Appearance of kite (ἵερων φαυλεταί) - 17° of Pisces (Eud.) — 22° of Pisces (Euctem.).
- Commencement of summer - 13° of Taurus.
- Midwinter - 14° of Capricornus.
ASYLUM

According to the Calendar of Julius Caesar.

Commencement of spring - The breezes of Favonius begin to blow
Vernal equinox -
Commencement of summer - Heliacal rising of the Pleiades (Vergilina)
Summer solstice (solstitialis) -
Commencement of autumn - Morning setting of Fidieula -
Autumnal equinox -
Commencement of winter - Morning setting of the Pleiades -
Winter solstice (bruma) -

Thus assigning to spring, ninety-one days; to summer, ninety-four days; to autumn, ninety-one days; to winter, eighty-four days.

ASTYNOMI (αστυνόμων), public officers in most of the Greek states, who had to preserve order in the streets, to keep them clean, and to see that all buildings, both public and private, were in a safe state, and not likely to cause injury by falling down. (Aristot. Polit. vi. 3, ed. Schneider; Plat. Leg. vi. pp. 758, 763; Dig. 43. tit. 10. s. 1.) At Athens there were ten astynomi, five for the city and five for the Peiraeus, and not twenty, fifteen for the city and five for the Peiraeus, as is stated in some editions of Harpocration. (Harpocrat. Corp. Inscrip. vol. i. p. 337.) A person was obliged to discharge this burdensome office only once in his life. (Dem. Priem. p. 1461.) The extent of the duties of the Athenian astynomi is uncertain. Aristotelian states (op. Harpocr. i. c.) that they had the superintendence of the scavengers (κηρογείτονας), which would naturally belong to them on account of their attention to the cleaning of the streets, and he likewise informs us that they had the superintendence of the female musicians. It is probable, however, that they had only to do with the latter in virtue of their duty of preserving order in the streets, since the regulation of all the public prostitutes belonged to the astynomi. [ΑΓΟΡΑΝΟΜΙ.] It would likewise appear from a circumstance related by Diogenes Laërtius (vi. 90) that they could prevent a person from appearing in the streets in luxurious or indecent apparel. It is mentioned on one occasion that a will was deposited with the astynomi (Iasus, de Ciaonm. Hierol. p. 36, ed. Steph.), a circumstance which does not seem in accordance with the duties of their office. (Meier, Att. Proc. p. 404.)

ASYLUM (ασυλίαν). In the Greek states the temples, altars, sacred groves, and statues of the gods generally possessed the privileges of protecting slaves, debtors, and criminals, who fled to them for refuge. The laws, however, do not appear to have recognised the right of all such sacred places to afford the protection which was claimed; nor was it usual to force a person from these places. Thus it was not uncommon to force a person from an altar or a statue of a god, by the application of personal violence. It would appear, however, that all sacred places were supposed to protect an individual to a certain extent, even if their right to do so was not recognised by the laws of the state, in which they were situated. In such cases, however, as the law gave no protection, it seems to have been considered lawful to use any means in order to compel the individuals who had taken refuge in them to leave the sanctuary, except dragging them out by personal violence. Thus it was not uncommon to force a person from an altar or a statue of a god, by the application of fire. (Eurip. Androm. 256, with Schol.; Plaut. Mostell. v. 1. 65.)

In the time of Tiberius, the number of places possessing the jus asylli in the Greek cities in Greece and Asia Minor became so numerous, as seriously to impede the administration of justice. In consequence of this, the senate, by the command of the emperor, limited the jus asylli to a few cities, but did not entirely abolish it, as Suetonius (Tib. 37) has erroneously stated. (See Tacit. Ann. iii. 60—63, iv. 14; and Ernesti's Excursus to Suet. Tib. 37.)

The asylum which Romulus is said to have opened at Rome on the Capitoline hill, between its two summits, in order to increase the population of the city (Liv. i. 8; Vect. Pat. i. 8; Dionys. ii. 15), was, according to the legend, a place of refuge for the inhabitants of other states, rather than a sanctuary for those who had violated the laws of the city. In the republican and early imperial times, a right of asylum, such as existed in the Greek states, does not appear to have been recognised by the Roman law. Livy seems to speak of the right (xxxv. 51) as peculiar to the Greeks: —Templum est Apollinis Delium — co jure sacro quo sunt templae qua asyla Graecae appellant. By a constitutio of Antoninus Pius, it was decreed that, if a slave in a province fled to the temples of the gods or the statues of the emperors, to avoid the ill-usage of his master, the praeses could compel the master to sell the slave (Gains, i. 53); and the slave was not regarded by the law as a runaway — fugitivus (Dig. 21. tit. 1. s. 17, m 3).
This constitution of Antoninus is quoted in Justinian's Institutes (1. tit. 8. s. 2), with a slight alteration; the words ad aedem sacrum are substituted for ad fana deorum, since the jus asyli was in his time extended to churches. Those slaves who took refuge at the statue of an emperor were considered to inflict disgrace on their master, as it was reasonably supposed that no slave could take such a step unless he had received very bad usage from his master. If it could be proved that any individual had instigated the slave of another to flee to the statue of an emperor, he was liable to an action corrupti servi. (Dig. 47. tit. 11. s. 5.) The right of asylum seems to have been generally, but not entirely, confined to slaves. (Dig. 48. tit. 19. s. 28. § 7. Comp. Osiander, De Aegypt. Gentilium, in Gronov. Thesaur. vol. vi.; Simon, Sur les Aegies, in Mem. de l'Acad. des Inscrip. vol. iii.; Bringer, De Agy- torum Origine, Usu, et Alatu, Legd. Bat. 1828; C. Neu, De Aegypt. Gott. 1837; respecting the right of asylum in the churches under the Christian emperors, see Rein, Das Criminalrecht der Römer, p. 896.)

The term ἀσυλία was also applied to the security from plunder (ἀσυλίαι κατὰ γῆν καὶ κατὰ ἅλκαιος), which was sometimes granted by one state to another, or even to single individuals. (See Böckh, Corp. Inscrip. l. p. 725.)

ATELIA (ateleia), is generally immunity or exemption from some or all the duties which a person has to perform towards the state. Immunities may be granted either as a privilege to the citizens of a state, exempting them from certain duties which would otherwise be incumbent on them, or they are given as honorary distinctions to foreign kings, states, communities or even private individuals. With regard to the latter the ate- leia was usually an exemption from custom duties on the importation or exportation of goods, and was given as a reward for certain good services. Thus Croesus received the ateleia at Delphi (Herod. 1. 54), the Deceleans at Sparta (Herod. ii. 146) and Leuceon, the ruler of Bosporus, at Athens. (Dem. o. Lept. p. 466, &c.) It appears that if a person thus distinguished, or a citizen of a foreign community possessing the ateleia, took up his residence in the state which had granted it, he also enjoyed other privileges, such as the exemption from the protection money, or tax which resident aliens had to pay at Athens. (Harpocrat. s. e. λατελέια) Nay this ateleia might even become equivalent to the full franchise, as, e.g. the Byzantines gave the exemption from liturgies, and the franchise to all Athenians that might go to Byzantium. (Dem. De Corone p. 256.) In many in- stances a partial ateleia, or an exemption from custom duties, was granted for the purpose of encouraging commerce. (Theoph. Char. 23; Schol. ad Aristoph. Plat. 905, with Böckh's remarks, Publ. Econ. p. 87.) With regard to the inhabitants of a state, we must, as in the case of Athens, again dis-tinguish between two classes, viz. the resident aliens and real citizens. At Athens all resident aliens had to pay a tax (μετοικεῖον) which we may term protection-tax, because it was the price for the protection they enjoyed at Athens; but as this tax was less trouble to these latter than for that purpose to attract strangers to settle at Athens, many of them were exempted from this tax, i.e. enjoyed the ἀτέλεια μετοικοῦ (Dem. c. Aristoc. p. 691), and some were even exempted from custom duties, and the property tax or εἰσ- ροπεῖ, from which an Athenian citizen could never be exempted. The ateleia enjoyed by Athenian citizens was either a general immunity (ἀτέλεια ἄνδρων), such as was granted to persons who had done some great service to their country, and even to their descendants, as in the case of Harmodius and Aristogiton, or a partial ateleia, exempting a person from all or certain liturgies, from certain custom duties, or from service in the army. The last of these immunities was legally enjoyed by all members of the council of the Five Hundred (Ly- curg. c. Leocr. 11), and the archons for the time being, by the farmers of the custom duties (Dem. c. Neaer. 1353), and by those who traded by sea, although with them the exemption must have been limited. (Schol. ad Arist. Plat. 905, Achorn. 399; Suid. s. e. ἐξοροφέσ εἰπο.) Most information respecting the ateleia is derived from Demosthenes' speech against Leptines. But compare also Wolf's Prolegom. ad Lep. p. lxxi. &c.; Böckh, Publ. Econ. p. 85, &c.; Westermann, De publicis Atheniensia Honoribus et Praemiosis, p. 6, &c. [L. S.]

ATELLAENAE FABULAE. [COMOERIA]

ATHENAEUM (ἀθηναῖον), a school (τέλος) founded by the Emperor Hadrian at Rome, for the promotion of literary and scientific studies (ingenuarum artium), and called Athenaeum from the town of Athens, which was still regarded as the seat of intellectual refinement. The Athenaeum was situated on the Capitoline hill. It was a kind of university; and a staff of professors, for the various branches of study, was regularly engaged. Under Theodosius II., for example, there were three orators, ten grammarians, five sophists, one philosopher, two lawyers, or jurists. Besides the instruction given by these magistri, poets, orators, and critics were accustomed to recite their compositions there, and these prelections were sometimes honoured with the presence of the emperors themselves. There were other places where such recitations were made, as the Library of Trajan (Bibliotecta Trajaniana), the room of the Emperor Hadrian (Thesaur. p. 691), and some were even exempted from taxation, as was the case in the case of Harmodius and Aristogiton. (Dem. o. Lept. p. 466.) This Athenaeum seems to have continued in high repute till the fifth century. Little is known of the details of study or discipline in the Athenaeum, but in the constitution of the year 370, there are some regulations respecting students in Rome, from which it would appear that it must have been a very extensive and important institution. And this is confirmed by other statements contained in some of the Fathers and other ancient authors, from which we learn that young men from all parts, after finishing their usual school and college studies in their own town or province, used to re- sort to Rome as a sort of higher university, for the purpose of completing their education. (An. Vic. Cos. 14; Dion Cass. Ixxiii. 17; Capitolin. Pertin. 11, Gordian. Sen. 3; Lamprid. Alex. Sever. 35; Cod. Theod. 14. tit. 9. s. 1.) [A. A.]

ATHLETAE (ἀθληται, ἀθλητήρες), were persons who contend in the public games of the Greeks and Romans for the prizes (ἀθλεῖα, whence the name of ἀθληταῖος), which were given to those who conquered in contests of agility and strength. This name was given to the latter sort of athlete, and among the Romans, properly confined to those persons who entirely devoted themselves to a course of training which might fit them to excel
Athletae.

in such contests, and who, in fact, made athletic exercises their profession. The athletae differed, therefore, from the agonistae (ἀγωνισταί), who only pursued gymnastic exercises for the sake of improving their health and bodily strength, and who, though they sometimes contended for the prizes in the public games, did not devote their whole lives, like the athletae, to preparing for these contests. In early times there does not appear to have been any distinction between the athletae and agonistae; since we find that many individuals, who obtained prizes at the great national games of the Greeks, were persons of considerable political importance, who were never considered to pursue athletic exercises as a profession. Thus we read that Phyllus, of Crotone, who had thrice conquered in the Pythian games, commanded a vessel at the battle of Salamis (Herod. viii. 47; Paus. x. 9. § 1); and that Dorieus, of Rhodes, who had obtained the prize in all of the four great festivals, was celebrated in Greece for his opposition to the Athenians. (Paus. vi. 7. § 1, 2.) But as the individuals, who obtained the prizes in these games, received great honours and rewards, not only from their fellow-citizens, but also from foreign states, those persons, who intended to compete for these prizes made extraordinary efforts to prepare themselves for the contest; and it was soon found that, unless they subjected themselves to a severer course of training than was afforded by the ordinary exercises of the gymnasia, they would not have any chance of gaining the victory. Thus arose a class of individuals, to whom the term athletae was appropriated, and who became, in course of time, the only persons who contended in athletic games.

Athletae were first introduced at Rome, B.C. 100, in the games exhibited by M. Fulvius, on the conclusion of the Actolian war. (Liv. xxxix. 22.) Aemilius Paulus, after the conquest of Perseus, B.C. 167, is said to have exhibited games at Amphipolis, at which the Athenians contended. (Liv. xlv. 42.) A certain athletarum (Val. Max. ii. 4. n. 1) was also exhibited by Scaurus, in B.C. 59; and among the various games, which Julius Caesar gratified the people, we read of a contest of athletic games, which lasted for three days, and which was exhibited in a temporary stadium in the Aetolian war. (Paus. x. 119, 120.) Under the Roman emperors, and especially under Nero, who was passionately fond of the Grecian games, the number of athletae increased greatly in Italy, Greece, and Asia Minor; and many inscriptions respecting them have come down to us, which show that professional athletae were very numerous, and that they enjoyed several privileges. They were allowed to keep their pavilions at Rome, to which kind of corporation, and possessed a tabularium, and a common hall—cursus athletarum (Orelli, Inscr. 2589), in which they were accustomed to deliberate on all matters which had a reference to the interests of the body. We are told that they were called Herculanae, and also styxii, because they were accustomed to exercise in winter, in a covered place called xystus (Vitruv. vi. 10); and that they had a president, who was called gynarchus, and also ἄρχεσφος.

Those athletae who conquered in any of the great national festivals of the Greeks were called hieronoiote (ἱερονοιοι), and received, as has been already remarked, the greatest honours and rewards; such a conqueror was considered to confer honour upon the state to which he belonged; he entered his native city in triumph, through a broach made in the walls for his reception, to intimate, says Plutarch, that the state which possessed such a citizen had no occasion for walls. He usually passed through the walls in a chariot drawn by four white horses, and went along the principal street of the city to the temple of the guardian deity of the state, where hymns of victory were sung. Those games, which gave the conquerors the right of such an entrance into the city, were called iselastici (from ἵσελαστικός). This term was originally confined to the four great Grecian festivals, the Olympic, Isthmian, Nemean, and Pythian; but was afterwards applied to other public games, as, for instance, to those instituted in Asia Minor. (Suet. Ner. 25; Dion Cass. xiii. 20; Plut. Symp. ii. 5. § 2; Pint. Ep. x. 119, 120.) In the Greek states the victors in these games not only obtained the greatest glory and respect, but also substantial rewards. They were generally relieved from the payment of taxes, and also enjoyed the first seat (στέφηλια) in all public games and spectacles. Their statues were frequently erected at the cost of the state, in the most frequented part of the city, as in the market-place, the gymnasia, and the neighbourhood of the temples. (Paus. vii. 17. § 3.) At Athens, according to a law of Solon, the conquerors in the Olympic games were rewarded with a prize of 500 drachmae, and the conquerors in the Isthmian, with one of 100 drachmae (Diog. Laërt. i. 55; Plut. Sol. 23); and at Sparta they had the privilege of fighting near the person of the king. (Plut. Ic. 22.) The privileges of the athletae were preserved and increased by Augustus (Suet. Aug. 45); and the following emperors appear to have always treated them with considerable favour. Those who conquered in the games called iselastici received, in the time of Trajan, a sum from the state, termed opasoria. (Plin. Ep. x. 119, 120; compare Vitruv. ix. Proef.) By a rescript of Diocletian and Maximian, those athletae who had obtained the prizes in the sacred games (sacri certaminis, by which is probably meant the iselastici ludi) not less than three crowns, and had not bribed their antagonists to give them the victory, enjoyed immunity from all taxes. (Cod. 10. tit. 53.)

The term athletae, though sometimes applied metaphorically to other combatants, was properly limited to those who contended for the prize in the five following contests:—1. Running (ἵππος, cursus). 2. Wrestling (πάλη, lucta). 3. Boxing (πυγιστα, pugilatus). 4. The pentathlon (πεντάθλον), or, as the Romans called it, quinquertium. 5. The pancratium (πανκρατίον). Of all these an account is given in separate articles. [Stadium; Lucta; Pugilatus; Pentathlon; Pancratium.] These contests were divided into two kinds—the severe (βασιλικά, Basileia), and the light (κόσμικα, kosmiká). Under the former were included wrestling, boxing, and the exercises of the pancratium, which consisted of wrestling and boxing combined, and was also called pammachion; and under the latter, running, and the separate parts of the pentathlon, such as leaping, throwing the discus, &c. (Plut. Leg. viii. p. 833, Euthyd. p. 271.)

Great attention was paid to the training of the athletae. They were generally trained in the palaestrae, which, in the Grecian states, were distinct places from the gymnasia, though they
have been frequently confounded by modern writers. [Palaestra.] Their exercises were superintended by the gymnasiarch (γυμνασιάρχης), and their diet was regulated by the alipites (αλιπητας). [Alipetae.] According to Pausanias (vi. 7 § 3), the athlete did not actually eat meat, but principally lived upon fresh cheese (πυρια υκ των ταλαφων); and Diogenes Laërtius (viii. 12, 13) informs us that their original diet consisted of dried figs (ινοχσια ρηονει), moist or new cheese (πυρια ρηονει), and wheat (πυρια).

The eating of meat by the athlete is said, according to some writers (Paus. l.c.), to have been first introduced by Dromeus of Stymphalus, in Arcadia; and, according to others, by the philosopher Pythagoras, or by an alipites of that name. (Diog. Laërt. l.c.) According to Galen (De Val. Tued. iii. 1), the athlete, who practised the severe exercises (βαρεις αθηνητας) ate pork and a particular kind of bread; and from a remark of Diogenes the Cynic (Diog. Laërt. vi. 49), it would appear that in his time beef and pork formed the ordinary diet of the athlete. Beef is also mentioned by Plato (De Rep. l. p. 380), and by Xenophon, the father of the athlete; and a writer quoted by Athenaeus (ix. p. 402, c. d.) relates that a Thesalian who lived upon goats' flesh became so strong, that he was enabled to overcome all the athletes of his time. At the end of the exercises of each day, the athletes were obliged to take a certain quantity of food, which was usually called ἄναγγελοφαγία and ἄναγγελοφορία, or Βιοντροφή (Arist. Pol. viii. 4); after which, they were accustomed to sleep for a long while. The quantity of animal food which some celebrated athletes, such as Milo, Theagenes, and Astydamas, are said to have eaten, appears to us quite incredible. (Athen. x. pp. 412, 413.) The food which they ate was usually dry, and is called by Juvenal coliphia (ii. 53).

The athletes were anointed with oil by the alipites, previous to entering the palaestra and contending in the public games, and were accustomed to contend naked. In the description of the games given in the twenty-third book of the Iliad (l. 685, 710), the combatants are said to have worn a girdle about their loins; and the same practice, as we learn from Thucydides (l. 6), anciently prevailed at the Olympic games, but was discontinued afterwards.

This subject is one of such extent that nothing but an outline can here be given; further particulars are contained in the articles Istimia, Nemea, Olympia, and Pythia; and the whole subject is treated most elaborately by Krauss, Die Gymnastik und Agonistik der Hellenen, Leipzig, 1841.

ATHLOTHETAE. [AGONOTHETAE.] ATIMIA (ατιμία). A citizen of Athens had the power to exercise all the rights and privileges of a citizen as long as he was not suffering under any kind of atimia, a word which in meaning nearly answers to our outlawry, in as much as a person forfeited by it the protection of the laws of his country, and mostly all the rights of a citizen also. The atimia occurs in Attica as early as the legislation of Solon, without the term itself being in any way defined in the laws (Dem. c. Aristocrat. p. 640), which shows that the idea connected with it must, even at that time, have been familiar to the Athenians, and this idea was probably that of a complete civil death; that is, an individual labouring under atimia, together with all that belonged to him (his children as well as his property), had, in the eyes of the state and the laws, no existence at all. This atimia, undoubtedly the only one in early times, may be termed a total one, and in cases where it was inflicted as a punishment for any particular crime, was generally also perpetual and hereditary; hence Demosthenes, in speaking of a person suffering under it, often uses the expression καθάπαξ άτιμος, or άτιμως άτιμαραι (c. Mid. p. 542, c. Aristot. p. 779, c. Mid. p. 546). A detailed enumeration of the rights of which an atimos was deprived, is given by Aristotle (c. Timarch. pp. 44, 46). He was not allowed to hold any civil or priestly office whatever, either in the city of Athens itself, or in any town within the dominion of Athens; he could not be employed as herald or as ambassador; he could not give his opinion or speak either in the public assembly or in the senate, he was not even allowed to appear within the extent of the agora; he was excluded from visiting the public sanctuaries as well as from taking part in any public sacrifice; he could neither bring an action against a person from whom he had sustained an injury, nor appear as a witness in any of the courts of justice. He could, on the other hand, any one bring an action against him. (Compare Dem. c. Neoc. p. 1353, c. Timocrat. p. 739, De Lib. Rhod. p. 200, Philip. iii. 122, c. Mid. p. 542, Lys. c. Androc. p. 222.) The right which, in point of fact, included most of those which we have here enumerated, was that of taking part in the popular assembly (λέγειν and γραφέιν). Hence, this one right is most frequently the only one which is mentioned as being forfeited by atimia. (Dem. c. Timocrat. pp. 715, 717; Aeschyl. c. Timocrat. p. 54, &c.; Andoc. c. Myst. p. 36; Dem. c. Androc. pp. 692, 694.) The service in the Athenian armies was not only regarded in the light of a duty which a citizen had to perform towards the state, but as a right and a privilege; of which therefore the atimia was likewise deprived. (Dem. c. Timocrat. p. 110.) When we hear that an atimos had no right to claim the protection of the laws, when suffering injuries from others, we must not imagine that it was the intention of the law to expose the atimia to the insults of his former fellow-citizens, or to encourage the people to treat him with impunity, as might be inferred from the expression οί άτιμοι τοις άθλητοις (Istiai. Gorg. p. 508); but all that the law meant to do was, that if any such thing happened, the atimia had no right to claim the protection of the laws. We have above referred to two laws mentioned by Demosthenes, in which the children and the property of an atimos were included in the atimia. As regards the children or heirs, the infamy came to them as an inheritance which they could not avoid. [HERRS.] But when we read of the property of a man being included in the atimia, it can only mean that it shared the lawless character of its owner, that is, it did not enjoy the protection of the law, and could not be mortgaged. The property of an atimos for a positive crime, such as those mentioned below, was probably never confiscated, but only in the case of a public debtor, as we shall see hereafter; and when Andocides (de Myst. p. 36) uses the expression άτιμοι ίσοι τα σωματα τα ά χρηματα εικον, the contrary when he had in view could only have been the case of a public debtor. On the whole, it appears to have been
ATIMIA.

169

The crimes for which total and perpetual atimia was inflicted on a person were as follow:—

1, The giving and accepting of bribes, the embezzlement of public money, manifest proofs of cowardice in the defence of his country, false witness, false accusation, and bad conduct towards parents (Andocid. l. c.) ; moreover, if a person either by deed or by word injured or insulted a magistrate while he was performing the duties of his office (Dem. c. Mid. p. 524, Pro Meagolop. p. 200) ; if as a judge he had been guilty of partiality (c. Mid. p. 543) ; if he squandered away his paternal inheritance, or was guilty of prostitution (Diog. Laërt. i. 2. 7) ; &c.

In the cases we have above called this atimia perpetual; for if a person had once incurred it, he could scarcely ever hope to be lawfully released from it. A law, mentioned by Demosthenes (c. Timocrit. p. 715), ordained that the releasing of any kind of atimio should never be proposed in the public assembly, unless an assembly consisting of at least 6000 citizens had previously, in secret deliberation, agreed that such might be done. And even then the matter could only be discussed in so far as the senate and people thought proper. It was only in times when the republic was threatened by great danger that an atimos might hope to recover his lost rights, and in such circumstances the atimoi were sometimes restored en masse to their former rights. (Xen. Hellen. ii. 2. § 11 ; Andocid. l. c.)

A second kind of atimia, which though in its extent a total one, lasted only until the person subject to it fulfilled those duties for the neglect of which it had been inflicted, was not so much a punishment for any particular crime as a means of compelling a man to submit to the laws. This was the atimia of public debtors. Any citizen of Athens who owed money to the public treasury, whether condemned, or from a part he had taken in any condemnation, or from an injury or insult to a magistrate, or on account of any other reasons, was made the object of atimia; and thus this form of atimia was inflicted only when the person had been put to death by the law (Dem. c. Nicol. p. 1299, c. Nicerat. p. 1347.) If the sum obtained by the sale was sufficient to pay the debt, the atimia appears to have ceased; but if not, the atimia not only continued to the death of the public debtor, but was inherited by his heirs, and lasted until the debt was paid off. (Dem. c. Antist. p. 803, compare Glück, Publ. Econ. of Athens, p. 391, 2d edit.; and Heres.)

This atimia for public debt was sometimes accompanied by imprisonment, as in the case of Alcibiades and Cimon ; but whether in such a case, on the death of the prisoner, his children were likewise imprisoned, is uncertain. If a person living in atimia for public debt petitioned to be released from his debt or his atimia, he became subject to ἔστειλις; and if another person made the attempt for him, he thereby forfeited his own property; if the proedros even ventured to put the question to the vote, he himself became atimos. The only but almost impracticable method of obtaining release was that mentioned above in connection with the total and perpetual atimia.

A third and only partial kind of atimia deprived the person on whom it was inflicted only of a portion of his rights as a citizen. (Andocid. de Myst. p. 17 and 36.) It was called the ἄτιμα κατὰ πρὸστασίαν, because it was specified in every single case what particular right was forfeited by the atimos. The following cases are expressly mentioned:—If a man came forward as a public accuser, and afterwards either dropped the charge or did not obtain a fifth of the votes in favour of his accusation, he was not only liable to a fine of 1000 drachmae, but was subjected to an atimia which deprived him of the right, in future, to appear as accuser in a case of the same nature as that in which he had been defeated or which he had given up. (Dem. c. Aristog. p. 803; Harpocrat. s. v. Διώκως γραφή.) If his accusation had been a γραφή ἀνδρειας, he also lost the right of visiting particular temples. (Andocid. de Myst. p. 17.) Some cases are also mentioned in which an accuser, though he did not obtain a fifth of the votes, was not subjected to any punishment whatever. Such was the case in a charge brought before the first archon respecting the ill-treatment of parents, orphans, or heiresses. (Meier, de Dom. Damn. p. 133.) In other cases the accuser was merely subject to the fine of 1000 drachmae, without incurring any degree of atimia. (Pollux, viii. 53.) But the law does not appear to have always been strictly observed. (Bückh, Publ. Econ. of Athens, p. 381, 2d ed.) Andocides mentions some other kinds of partial atimia, but they seem to have had only a temporary application at the end of the Peloponnesian war ; and the passage (De Myst. p. 36) is so obscure or corrupt, that nothing can be inferred from it with any certainty. (Wachsmuth, Hellen. Altheth. vol. ii. p. 198, 2d ed.) Partial atimia, when once inflicted, lasted during the whole of a man's life.

The children of a man who had been put to death by the law were also atimoi (Dem. c. Aristog. p. 779 ; compare Heres) ; but the nature or duration of this atimia is unknown.

If a person, under whatever kind of atimia he was labouring, continued to exercise any of the rights which he had forfeited, he might immediately be subjected to ἀπαγωγή or ἔστειλις ; and if his transgression was proved, he might, without any further proceedings, be punished immediately.

The offences which were punished at Sparta with atimia are not as well known ; and in many cases it does not seem to have been expressly mentioned by the law, but to have depended entirely upon public opinion, whether a person was to be considered and treated as an atimos or not. In general, it appears that every one who refused to live according to the national institutions lost the rights of a full citizen (δυναμος, Ξενοφ. de Rep. Lacoc. x. 7 ; iii. 3). It was, however, a positive law, that whoever did not give or could not give his contribution towards the sysstiaia, lost his rights as a citizen. (Aristot. Politi. ii. 6. p. 59, ed. Götting.) The highest degree of infamy fell upon the coward (πρετας) who either ran away from the field of battle, or returned home without the rest of the army, as Aristodemus did after the battle of Thermopylae (Herod. vii. 231) ; though in this case the infamy itself, as well as its humi-
ATLANTES.

porting the vault of heaven, the latter fancifully used, like the female to designate those male figures which are sometimes and generally with some adaptation to the character former by the Greeks, the latter by the Romans, strength of the Telamonian Ajax. evidently refers to the fable of Atlas, who sup of columns (Vitruv. vi. 7. § 6, Schneid.). Both transl. ; Hermann, (TfAo/uoiz©es), are terms used in architecture, the § 3.) [L. S.]

ATRAMENTUM, a term applicable to any black colouring substance, for whatever purpose it may be used (Plaut. Mostell. i. 3. 102 ; Cic. de Nat. Deor. ii. 50), like the μελαν of the Greeks. (Dem. de Cor. p. 313.) There were, however, three principal kinds of atryntum, one called librarium, or scriptorium (in Greek, γραφικον μελαν), another called sutorium, the third tevtrium. Atramentum librarium was what we call writing-ink. (Hor. Ep. ii. 1. 236 ; Petron. 102 ; Cic. ad Qu. Fr. ii. 5. § 1. Atramentum sutorium was used by painters for some purposes, apparently as a sort of varnish. (Plin. H. N. xxxvi. 12. s. 32.) This atramentum sutorium contained some poisonous ingredient, such as oil of vitriol; whence a person is said to die of atramentum, that is, of poison, as in Cicero (ad Fam. ii. 21.) Atramentum tevtrium, or pictorium, was used by painters for some purposes, apparently as a sort of varnish. (Plin. H. N. xxxvi. 5. s. 25. &c.) The Scholiast on Aristophanes (Plut. 277) says that the courts of justice, or δικαιστήρια, in Athens were called each after some letter of the alphabet: one alpha, another beta, a third gamma, and so on. The word that against the lines of the building. They were much more treary used in tripods, thrones, and so forth. They were also applied as ornaments to the sides of a vessel, having the appearance of supporting the upper works; as in the ship of Hiero, described by Athenaeus (v. p. 308 b).

A representation of such figures is given in the preceding woodcut, copied from the topidarium in the baths at Pompeii: another example of them is in the temple of Jupiter Olympus at Agrigentum. (Müller, Archit. d. Kunst, § 279 ; Manch, die Grisch. u. Röm. Bau-Ordnungen, p. 80.)

Atramentum.

of the building. They were much more treary used in tripods, thrones, and so forth. They were also applied as ornaments to the sides of a vessel, having the appearance of supporting the upper works; as in the ship of Hiero, described by Athenaeus (v. p. 308 b).

A representation of such figures is given in the preceding woodcut, copied from the topidarium in the baths at Pompeii: another example of them is in the temple of Jupiter Olympus at Agrigentum. (Müller, Archit. d. Kunst, § 279 ; Manch, die Grisch. u. Röm. Bau-Ordnungen, p. 80.)

[1 r. c.]

Atramentum.

The Spartans, who in Sphaetaia had surrendered to the Athenians, were punished with a kind of atimia which deprived them of their claims to public offices (a punishment common to all kinds of atimia), and rendered them incapable of making any lawful purchase or sale. Afterwards, however, they recovered their rights. (Thuc. v. 34.) Unmarried men were also subject to a certain degree of infamy, in so far as they were deprived of the customary honours of old age, were excluded from taking part in the celebration of certain festivals, and occasionally compelled to sing defamatory songs against themselves. No atimos was allowed to marry the daughter of a Spartan citizen, and was thus compelled to endure the ignominy of an old bachelor. (Plut. 195, &c., 2d edit.; Meier, Miiller, Dor. iv. 4. § 3.) Although an atimos at Sparta was subject to a great many painful restrictions, yet his condition cannot be called outlawry; it was rather a state of infamy properly so called. Even the atimia of a coward cannot be considered equivalent to the civil death of an Athenian atimos, for we find him still acting to some extent as a citizen, though always in a manner which made his infamy manifest to every one who saw him. (Lelyveld, De Infamia ex Jure Attico, Amsterdam, 1835 ; Wachsmuth, Hellen. Alldh. &c. vol. ii. p. 101, &c.; Schümann, De Comit. Ath. p. 67, &c. transl.; Hermann, Polit. Ant. of Greece, § 124; Meier und Schümann, Att. Prox. p. 563. On the Spartan atimia in particular, see Wachsmuth, &c., vol. ii. p. 155, &c., 2d ed.; Müller, Dor. iii. 10, § 3.)

ATLANTES (Δλαντες) and TELAMONES (τελαμόνες), are terms used in architecture, the former by the Greeks, the latter by the Romans, to designate those male figures which are sometimes fancifully used, like the female Cargitades, in place of columns (Vitruv. vi. 7, § 6, Schneid.). Both words are derived from ταρασσω, and the former evidently refers to the fable of Atlas, who supported the vault of heaven, the latter perhaps to the strength of the Telamonian Ajax.

The Greek architects used such figures sparingly, and generally with some adaptation to the character of the building. They were much more treary used in tripods, thrones, and so forth. They were also applied as ornaments to the sides of a vessel, having the appearance of supporting the upper works; as in the ship of Hiero, described by Athenaeus (v. p. 308 b).

A representation of such figures is given in the preceding woodcut, copied from the topidarium in the baths at Pompeii: another example of them is in the temple of Jupiter Olympus at Agrigentum.
Perhaps, it may be said that the inks of the ancients were more durable than our own; that they were thicker and more unctuous, in substance and colour more resembling the ink now used by printers. An inkstand was discovered at Herculanum, containing ink as thick as oil, and still round or hexagonal. They had covers to keep the dust from the ink. The annexed cuts represent inkstands found at Pompeii. [Calamus.] (Caneparius, De Atramentis enjusque Generis, Lond. 1660; Beckmann, History of Inventions, vol. i. p. 106, vol. ii. p. 266, London, 1846; Becker, Charikles, vol. ii. p. 222, &c., Gallus, vol. i. p. 166, &c.) [A. A.]

It would appear also that this gummy character of the ink, preventing it from running to the point of the pen, was as much complained of by the ancient Romans as it is by ourselves. Persius (Sat. iii. 12) represents a foppish writer sitting down to compose, but, as the ideas do not run freely,—

"... sine queritur, crassus calamo quad pendet humor; Nigra quod infusa vanescat sepia lympha."

They also added water, as we do sometimes, to

From a phrase used by Demosthenes, it would appear as if the colouring ingredient was obtained by mining from some solid substance (τὸ μελαν νύμφεα, Dem. de Cor. p. 313), perhaps much as we rub Indian ink. It is probable that there were many ways of colouring ink, especially of different colours. Red ink (made of minimum, vermillion) was used for writing the titles and beginnings of books (Ovid, Trist. i. 1. 7), so also was ink made of rubrica, "red ochre" (Sidon. vii. 12); and because the headings of laws were written with rubrica, the word rubric came to be used for the civil law. (Quintil. xii. 3.) So albaom, a white or whitened wax, on which the praetors' edicts were written, was used in a similar way. A person devoting himself to saeum and rubrica, was a person devoting himself to the law. [Album.] There was also a very expensive red-coloured ink with which the emperor used to write his signature, but which any one else was by an edict (Cod. 1. tit. 23. s. 6) forbidden to use, excepting the sons or near relations of the emperor, to whom the privilege was expressly granted. But if the emperor was under age, his guardian used a green ink for writing his signature. (Montuinus, Palaeog. p. 3.) On the banners of Crassus there were purple letters—φωικά γυδικατα. (Dion Cass. xl. 18.) On pillars and monuments letters of gold and silver, or letters covered with gilt and silver, were sometimes used. (Cic. Verr. iv. 27; Suet. Aug. 7.) In writing also words were done at a later period. Suetonius (Nero 14) says, that of the poems which Nero recited at public sacrifices there was a part written in gold (or gilt) letters (auraeis litteris), and consecrated to Jupiter Capito-

Atrium is used in a distinctive as well as collective sense, to designate a particular part in the private houses of the Romans [Domus], and also a class of public buildings, so called from their general resemblance in construction to the atrium of a private house. There is likewise a distinction between atrium and area; the former being an open area surrounded by a colonnade, whilst the latter had no such ornament attached to it. The atrium, moreover, was sometimes a building by itself, resembling in some respects the open basilica [Basilica], but consisting of three sides. Such was the Atrium Publicum in the capitol, which, Livy informs us, was struck with lightning, b.c. 214. (Liv. xxiv. 10.) It was at other times attached to some temple or other edifice, and in such case consisted of an open area and surrounding portico in front of the structure, like that before the church of St. Peter, in the Vatican. Several of these buildings are mentioned by the ancient historians, two of which were dedicated to the same goddess, Libertas; but an account of these buildings belongs to Roman topography, which is treated of in the Dictionary of Geography. [A. R.]

Atticurges (Ἀττικοχρής, in the Attic style), is an architectural term, which only occurs in Vitruvius (iii. 5. 2, iv. 6. §§ 1. 6, Schn.: as a common adjective, the word only occurs in a fragment of Menander, No. 628, Meineke). The word is evidently used not to describe a distinct order of architecture, but any of those variations which the genius of the Athenian architects made upon the established forms. In the former passage, Vitruvius applies it to a sort of base of

a column, which he describes as consisting of two tori divided by a scotia or trochilus, with a fillet.
above and below, and beneath all a plinth; but in several of the best examples the plinth is wanting. (For the exact proportions, see Vitruvius.)

This form of base seems to have been originally an Athenian simplification of the Ionic base; but it was afterwards used in the other orders, especially the Corinthian and the Roman Doric; and it is usually regarded as being, from its simple elegance, the most generally applicable of all the bases [SPIRA].

In the second of the passages above referred to, Vitruvius applies the term Attieurges to a particular form of door-way, but it differed very little from that which he designates as the Doric: in fact, though Vitruvius enumerates three kinds of do-rows to temples, the Doric, Ionic, and Attic, we only find in the existing building two really distinct forms, (Mauch, Die Griech. u. Rom. Bau-Ordnungen, p. 87.) According to Pliny (H. N. xxxvi. 23. s. 56) square pillars were called Attieae columnae.

[AUCTIO] signifies generally "an increasing, an enhancement," and hence the name is applied to a public sale of goods, at which persons bid against one another. The term actuio is general, and comprehends the species actuio, bonorum emtio and sectio. As a species, actuio signifies a public sale of goods by the owner or his agent, or a sale of goods of a deceased person for the purpose of dividing the money among those entitled to it, which was called actuio hereditaria. (Cic. Pro Caecon. 5.)

The sale was sometimes conducted by an argentarius, or by a magister auctionis; and the time, place, and conditions of sale, were announced either by a public notice (tabula, album, &c.), or by a crier (praecoe). The usual phrases to express the giving notice of a sale are auctionem prosumere, practicaroe; and to determine on a sale, auctionem constitutare. The purchasers (entores), when assembled, were sometimes said ad tabulam adesse. The phrases signifying to bid are, liceri, licitari, which was done either by word of mouth, or by such significant hints as are known to all people who have attended an auction. The property was said to be knocked down (addicio) to the purchaser who either entered into an engagement to pay the money to the argentarius or magister, or it was sometimes a condition of sale that there should be no delivery of the thing before payment. (Gaius iv. 126; Acro, pp. 9, 10.) An entry was made in the books of the argentarius of the sale and the money due, and credit was given in the same books to the purchaser when he paid the money (expenae pecuniae data, accepta relata). Thus the book of the argentarius might be used as evidence for the purchaser, both of his having made a purchase, and having paid for the thing purchased. If the money was not paid according to the conditions of sale, the argentarius could sue for it.

The praecoe, or crier, seems to have acted the part of the modern auctioneer, so far as calling out the biddings (Cic. De Offic. ii. 23), and amusing the company. Slaves, when sold by auction, were placed on a stone, or other elevated thing, as is sometimes the case when slaves are sold in the United States of North America; and hence the phrase habere de lapide emtus. It was usual to put up a spear, hastae, in auctions, a symbol derived, it is said, from the ancient practice of selling under a spear the booty acquired in war. Hence the phrase "sub hasta vendere" (Cic. De Off. ii. 8) signified an auction. The expression "asta publica" is now used in Italy to signify an auction: the expression is "vendere all'asta pubblica," or "vendere per subasta." By the auction, the Quiritean ownership in the thing sold was transferred to the purchaser. (Donorum Extio: Sectio.)

[AUTOR] is the word which contains the same element as aug-co, and signifies generally one who enlarges, confirms, or gives to a thing its completeness and efficient form. The numerous technical significations of the word are derivable from this general notion. As he who gives to a thing that which is necessary for its completeness, may in this sense be viewed as the chief actor or doer, the word auction is also used in the sense of one who originates or proposes a thing; but this cannot be viewed as its primary meaning. Accordingly, the auction, when used in connection with lex or senatus consultum, often means him who originates and proposes, as appears from numerous passages. (Livy. vi. 36; Cic. Pro Dom. c. 30.) When a measure was approved by the senate before it was confirmed by the votes of the people, the senate were said actuores fieri, and this preliminary approval was called senatus auctoritas. (Cic. Brutus, c. 14.)

The expressions "patres actuores finit," "patres actuores facti," have given rise to much discussion. In the earlier periods of the Roman state, the word "patres" was equivalent to "patricii," in the later period, when the patricians had lost all importance as a political body, the term patres signified the senate. But the writers of the age of Cicero, when speaking of the early periods, often used the word patres, when they might have used patricii, and thus a confusion arose between the early and the later signification of the word patres.

The expression "patres actuores finit" means that the determinations of the populus in the comitia centuriata were confirmed by the patricians in the comitia curiata. To explain this fully, as to the earliest periods, it is necessary to show what the lex curiata de imperio was.

After the comitia curiata had elected a king (cruceil), the king proposed to the same body a lex curiata de imperio. (Cic. De Leg. Agr. ii. 11) At first it might appear as if there were two elections, for the patricians, that is the populus, first elected the king, and then they voted again upon the imperium. Cicero (De Leg. Agr. ii. 11) explains it thus—that the populus nnaa thus an opportunity to reconsider their vote (reprehendendi juris est). But the chief reason was that the imperium was not conferred by the bare election, and it was necessary that the king should have the imperium: consequently there must be a distinct vote upon it. Now Livy says nothing of the lex curiata in his first book, but he uses the expression "patres actuores finit," "patres actuores facti." (Liv. i. 17, 32.) In this sense the patres were the "actuores comitiorum," an expression analogous to that in which a tutor is said to be an auctor to his pupil. In some passages the expression "patricii actuores" is used, which is an additional proof that in the expression "patres actuores," the patrician body is meant, and not the senate, as some have supposed.

Cicero, in the passages quoted, does not use the
expression "patres auctores sunt," nor does Livy, in the passages quoted, speak of the lex curiata de imperio. But they speak of the same thing, though they use different expressions. This explains why Dionysius sometimes uses an expression equivalent to "patricii auctores sunt," for patricii of course means the curiae, and not the senate. (Antiq. Rom. ii. 60, vi. 90.)

Till the time of Servius Tullius there were only the comitia curiata, which, as already explained, first elected a king, and then by another vote conferred the imperium. The imperium could only be conferred on a determinate person. It was, therefore, necessary to determine first who was to be the person who was capable of receiving the imperium; and thus there were two separate votes of the patres. Servius Tullius established the comitia centuriata, in which the plebs also voted. When his constitution was in full force after the exile of the messalians, the patres had still the privilege of confirming at the comitia curiata the vote of the comitia centuriata, that is, they gave to it the "parum auctorius" (Cic. De Repub. ii. 30); or, in other words, the "patres" were "auctores facti." (Cic. Pro Piancio, c. 3.) That this was the practice under the early Republic, we see from Livy (i. 17). In the fifth century of the city a change was made. By one of the laws of the plebeian dictator Q. Publilius Philo, it was enacted (Liv. viii. 15.), that in the case of legs to be enacted at the comitia centuriata, the patres should be auctores, that is, the curiae should give their assent before the vote of the comitia centuriata. If we take this as literal, the comitia curiata might still reject a proposed law by refusing their previous sanction; and this might be so: but it is probable that the previous sanction became a matter of form. By a lex maenia of uncertain date (Cic. Brutus, c. 14), this same change was made as to elections, which the Publilia lex had made as to the enacting of legs. This explains the passage of Livy (i. 17). Accordingly, after the passing of the lex Maenia, the "parum auctoritas" was distinct from the lex curiata de imperio, while, before the passing of the lex maenia, they were the same thing. Thus the lex maenia made the lex curiata de imperio a mere form, for the imperium could not be refused, and so in the later Republic, in order to keep up a shadow of a substance, thirty lictors exhibited the cere- tulum ; it was a measure, incomplete in itself, which received its completion by some other auctor. (Cic. De Off. i. c. 12; Dirksen, Uberseh. &c. der Zwolf-Tafel-Fragmente, p. 417.) (As to the expression Usus Auctoritas, see Usus-Capio.)

In the imperial time, auctor is often said of the emperor (princeps) who recommended any thing to the senate, and on which recommendation that was then passed a senatus-consultum. (Gaius, i. 30, 50; Sueton. Vespal. 11.)

When the word auctor is applied to him who recommends, but does not originate a legislative measure, it is equivalent to suasor. (Cic. Ad Att. i. 17; Brutus, c. 25, 27.) Sometimes both auctor and suasor are used in the same sentence, and the meaning of each is kept distinct. (Cic. Off. iii. 30.)

With reference to dealings between individuals, auctor has the sense of owner (Cic. Pro Cæcina, 10), and is defined thus (Dig. 50. tit. 17. s. 175) : "Auctor means a quo fuerit usus tertius." In this sense, auctor is the seller (venditor), as opposed to the buyer (emtor) : the person who joined the seller in a warranty, or as security, was called auctor secundus, as opposed to the seller or auctor primus. (Dig. 19. tit. 1. s. 4, 21; tit. 2. s. 4, 51.) The phrase a malo auctore emere (Cic. Verri. 5. c. 22) : auctorem laudare (Gell. ii. 10) will thus be intelligible. The testator, with respect to his heir, might be called auctor. (Ex Corp. Hermogen. Cod. tit. 11.)

Consistently with the meanings of auctor as already explained, the notion of consenting, approving, and giving validity to a measure affecting a person's status clearly appears in the following passage. (Cic. Pro Dom. c. 29.)

Auctor is also used generally to express any person whose authority any legal act is done. In this sense, it means a tutor who is appointed to aid or advise a woman on account of the infirmity of her sex (Liv. xxxiv. 2 ; Cic. Pro Cæcina, c. 23 ; Gaius, i. 130, 156); it is also applied to a tutor whose business it is to approve of certain acts on behalf of a ward (pupillus). (Paulus, Dig. 26. tit. 8. s. 3.)

The term auctores juris is equivalent to juris-patrii (Dig. 1. tit. 2. s. 2, § 13 ; Gellius, ii. 10); and the law writers or leaders of particular schools of law were called scholae auctores. It is unnecessary to trace the other significations of this word. (G.L.)

AUCTORAMENTUM. [GLADIATORES.]

AUCTORITAS. The technical meanings of this word correlate with those of auctor. The auctoritas senatus was not a senatus-consultum; it was a measure, incomplete in itself, which received its completion by some other authority.

Auctoritas, as applied to property, is equivalent to legal ownership, being a correlation of auctor. (Cic. Top. c. 4 ; Pro Cæcina. c. 26.) It was a provision of the laws of the Twelve Tables that there could be no usucapion of a stolen thing (Gaius, ii. 45), which is thus expressed by Gellius in speaking of the Atinian law (xxv. c. 7) : Quod subreptum erit ejus rei aeterna auctoritas esto ; the ownership of the thing stolen was still in the original owner. (Cic. De Off. i. c. 12; Dirksen, Uberseh. &c. der Zwolf-Tafel-Fragmente, p. 417.) (As to the expression Usus Auctoritas, see Usus-Capio.)

Auctoritas sometimes signifies a warranty or collateral security; and thus correlated to auctor secundus. Auctoritas actio means the action of eviction. (Paulus, Sentent. Recept. lib. 2. tit. 17.) The instrumenta auctoritatis are the proofs or evidences of title.

The auctoritas of the praetor is sometimes used to signify the judicial sanction of the praetor, or his order, by which a person, a tutor for instance, might be compelled to do some legal act (Gaius, i. 130 ; Dig. 27. tit. 9. s. 5), or, in other words, "auctor fieri." The tutor, with respect to his wards both male and female (pupillus, pupillæ), was said negonium gerere, and auctoritatem interponere : the former phrase is applicable where the tutor does the act himself; the latter, where he gives his ap-
probation and confirmation to the act of his ward. Though a pupillus had not a capacity to do any act which was prejudicial to him, he had a capacity to do all other acts, or to do any thing which was for his benefit, and in such case the auctoritas of the tutor was not necessary.

The authority of decided cases was called simuliter judicium auctoritas. The other meanings of auctoritas may be easily derived from the primary meaning of the word, and from the explanations here given. [G. L.]

AUDITÓRIUM, as the name implies, is any place for hearing. It was the practice among the Romans for poets and others to read their compositions to their friends, who were sometimes called the auditorium. (Plin. Ep. iv. 7.) But the word was also used to express any place in which anything was heard, and under the empire it was applied to a court of justice. Under the republic the place for all judicial proceedings was the comitium, and the forum. (Ni pagunt in comitio aut in foro ante meridiem causam coniicito quum perant ambo presentes. Dirksen, Uebersicht, c. p. 725.) But for the sake of shelter and convenience, it became the practice to hold courts in the Basilicae, which contained halls, which were also called auditoria. In the dialogue de Oratoribus (c. 39), the writer observes that oratory had lost much by cases being generally heard in “auditoria et tabularia.” It is first under M. Aurelius that the auditorium principis is mentioned, by which the provincial governors also under the authority of the emperor were sometimes called the auditorium. Accordingly, the latest jurists use the term, whether in the regular place for hearing causes, and the people being seated in the auditorium, or in a constitution of Constantine. (Cod. 1. tit. 48. s. 3; Hollweg, Handbuch des Civilrecesses, p. 218.)

AUGUR.

AUGUR, AUGU’RIUM; AUSPEX, AUS’PICIUM. Augur or auspea meant a diviner by birds, but came in course of time, like the Greek oivoros, to be applied in a more extended sense; his art was called auspicium or auspici, Plutarch relates that the augures were originally termed auspices (Quoest. Rom. c. 72), and there seems no reason to doubt this statement as Hartung does (Die Religion der Römer, vol. i. p. 99), on the authority of Servius, (s. auct. i. 402, l. 20). The authority of Plutarch is further supported by the fact, that in Roman marriages the person who represented the diviner of ancient times, was called auspea and not augur. (Cic. de Div. i. 16.)

Rubino (Römisch. Verfassung, p. 45) draws a distinction between the meaning of the words auspea and augur, though he believes that they were used to indicate the same person, the former referring simply to the observation of the signs, and the latter to the interpretation of them. This view is certainly supported by the meaning of the verbs auspiciari and auspiciare, which seem to prevail between the words auspicium and auspicium, when they are used together (Cic. de Div. ii. 48, de Nat. Deor. ii. 3), though they are often applied to the same signs. The word auspea was supplanted by augur, but the scientific term for the observation continued on the contrary to be auspicium and not auspicium. The etymology of auspea is clear enough (from avis, and the root spec or spic), but that of augur is not so certain. The ancient grammarians derived it from avis and gero (Feastus, s. v. augur; Serv. ad Virg. Aen. v. 328), while some modern writers suppose the root to be aug, signifying “to see,” and the same as the Sanscrit aasbi, the Latin oculus, and the German auge, and ur to be a termination; the word would thus correspond to the English seer. Others again believe the word to be of Etruscan origin, which is not incompatible with the supposition, as we shall show below, that the auspices were of Latin or Sabine origin, since the word augur may thus have been introduced along with Etruscan rites, and thus have superseded the original term auspex. There is, however, no certainty on the point; and, although the first mentioned etymology seems improbable, yet from the analogy of au-spec and au-ope, we are inclined to believe that the former part of the word is of the same root as avis, and the latter may be connected with gero, more especially as Priscian (i. 6. § 36) gives auger and augeratus, as the more ancient forms of augur and auguratus. By Greek writers on Roman affairs, the augurs are called ωιωνοσκολον, ωιωνοσκολον, ωιωνοσετα, οι εν οιωνοις λεπις. The augurs formed a collegium at Rome, but their history, functions, and duties will be better explained after we have obtained a clear idea of what the auspices were, and who had the power of taking them.

An acquaintance with this subject is one of primary importance to every student of Roman history and antiquities. In the most ancient times, no transaction took place, either of a private or a public nature, without consulting the auspices, and hence we find the question asked in a well-known passage of Livy (vi. 14), “ Auspicia hanc urbem conditam esse, auspiciis bello ac pace, domo militiace omnia geri, quis est, qui ignorat?” An outline of the most important facts connected with the auspices, which is all that our limits will allow, therefore, claims our attentive consideration.

All the nations of antiquity were impressed with the firm belief, that the will of the gods and future events were revealed to men by certain signs, which were sent by the gods as marks of their favour to their sincere worshippers. Hence, the arguments of the Stoics that if there are gods,
they care for men, and that if they care for men they must send them signs of their will (Cic. de Leg. ii. 13), expressed so completely the popular voice, that whoever questioned it, would have shown to no other light than an atheist. But while nations sought to become acquainted with the will of the gods by various modes, which gave rise to innumerable kinds of divination, there arose in each separate nation a sort of national importance to extraordinary appearances in nature upon astrology and the whole prophetic art of the nations they endeavoured to learn the future, especially the inspired prophets and seers. They had on the contrary learnt from the Etruscans to attach much importance to extraordinary appearances in nature — Prodigia; in common with other neighbouring nations they endeavoured to learn the future, especially in war, by consulting the entrails of victims; they made great stress upon favourable or unfavourable omens, and in times of danger and difficulty were accustomed to consult the Sibylline books, which they had received from the Greeks; but the mode of divination, which was peculiar to them, and essentially national, consisted in those signs included under the name of auspicioa. The observation of the auspices was, according to the unanimous testimony of the ancient writers, more ancient even than Rome itself, which is constantly represented as founded under the sanction of the auspices, and the use of them is therefore associated with the Latins, or the earliest inhabitants of the city. There seems therefore no reason to assign to them an Etruscan origin, as many modern writers are inclined to do, while there are several facts pointing to an opposite conclusion. Cicero, who was himself an augur, in his work De Divinatione, constantly appeals to the striking difference between the auspices and the Etruscan system of divination; and, while he frequently mentions other nations which paid attention to the flight of birds as intimations of the divine will, he never once mentions this practice as in existence among the Etruscans. (Cic. de Div. i. 41, ii. 35, 38; de Nat. Deor. ii. 4.) The belief that the flight of birds gave some intimation of the will of the gods seems to have been prevalent among many nations of antiquity, and was common to the Greeks, as well as the Romans; but it was only among the latter people that it was reduced to a complete system, governed by fixed rules, and handed down from generation to generation. In Greece, the oracles supplanted the birds, and the future was learnt from Apollo and other gods, rarely from Zeus, who possessed very few oracles in Greece. The contrary was the case at Rome: it was from Jupiter that the future was learnt, and the birds were regarded as his messengers. (Aves internumتیس Jovis, Cic. de Divin. ii. 34; Interpretum Jovis uolitin maximii publici auguris, Cic. de Leg. ii. 8.) It must be remarked in general, that the Romans employed auspices both as intimations of a paranormal nature; they gave no information respecting the course of future events, they did not inform men what was to happen, but simply taught them what they were to do, or not to do; they assigned no reason for the decision of Jupiter, — they simply announced, yes or no.

The words augurium and auspicium came to be used in course of time to signify the observation of various kinds of signs. They were divided into five sorts: ex caelo, ex avisbus, ex tripudiiis, ex quadrupedibus, ex diris. Of these, the last three formed no part of the ancient auspices. The observation of signs in the heavens, such as lightning, was naturally connected with observing the heavens in order to watch the birds; and therefore, it must in early times have formed part of the auspices; for in an early stage of society, lightning and similar phenomena have always been looked upon as signs of the gods. A few words must be said on each of these five kinds of augury.

1. Ex caelo. This included the observation of the various kinds of thunder and lightning, and was regarded as the most important, maximum auspiciwm. (Serv. ad Virg. Aen. ii. 693; Cic. de Div. ii. 18, &c.; Festus, s. v. Coelostia.) The interpretation of these phenomena was rather Etruscan than Roman; and the only point connected with them which deserves mention here, is, that whenever it was reported by a person authorised to take the auspices, that Jupiter thundered or lightened, the comitia could not be held. (Cic. de Div. ii. 14, Philipp. ii. 3.)

2. Ex avisbus. It was only a few birds which could give auguries among the Romans. (Cic. de Div. ii. 34.) They were divided into two classes: Oscines, those which gave auguries by singing, or their voice, and Alites, those which gave auguries by their flight. (Festus, s. v. Oscines.) To the former class, belonged the raven (corvus) and the crow (corvina), the first of these giving a favourable omen (auspicium ratum) when it appeared on the right, the latter, on the contrary, when it was seen on the left (Plant. Asin. ii. 1. 12; Cic. de Div. ii. 30); likewise the owl (noctua, Festus, s. v. Oscines), and the hen (gallina, Cic. de Div. ii. 26). To the alae succes belonged first of all the eagle (aquila), who is called pro-eminently the bird of Jupiter (Jovis ales), and next the vulture (vultur), and with these two the avis sanguis, also called ossifraga, and the immusculus or immusculus are probably also to be classed. (Comp. Virg. Aen. i. 394; Liv. ii. 7, 34; Festus, s. v. Sanguis; Plin. H. N. x. 7.) Some birds were included both among the oscines and the alites: such were the Pius Maritius, and Feronius, and the Parrha (Plin. H. N. x. 10. s. 20; Hor. Carm. iii. 27. 15; Festus, s. v. Oscinum tripudium). These were the principal birds consulted in the auspices. Every sound and motion of each bird had a different meaning, according to the different circumstances, or times of the year when it was observed, but the particulars do not deserve further notice here. When the birds favoured an undertaking, they were said addicere, admittere, or adcurarae, and were then called addicitives, admissible, secundae, or propectae: when unfavourable they were said addicere, arroere, refragar, &c., and were then called adversae or allerae. The birds which gave unfavourable omens were termed funebres, inebitine, lugubres, mala, &c., and such auspices were called funebres and clamaturiae.

3. Ex Tripudiiis. These auspices were taken from the feeding of chickens, and were especially employed on military expeditions. It was the doctrine of the augurs that any bird could give a tripudium (Cic. de Div. ii. 34); but it be-
came the practice in later times to employ only chickens (pulli) for the purpose. They were kept in a cage, under care of a person called pullarius; and when the auspices were to be taken, the pullarius opened the cage and threw to the chickens pulse or a kind of soft cake. If they refused to come out or to eat, or uttered a cry (occinenter), or beat their wings, or flew away, the signs were considered unfavourable. (Liv. x. 40; Val. Max. i. 4. § 3.) On the contrary, if they ate greedily, so that something fell from their mouth and struck the earth, it was called tripudium solistinum (tripudium quasi terripavium, solistinum, from solum, according to the ancient writers, Cic. de Div. ii. 34), and was held a favourable sign. Two other kinds of tripudia are mentioned by Festus, the tripudium oecumum, from the cry of birds, and sonivium, from the sound of the pulse falling to the ground: in what respects the latter differed from the tripudium solistinum, we are not informed. (Cic. ad Fam. vi. 6; see also Festus, s. v. puls, tripudium, oecumum tripudium.)

5. Ex quadrupedibus. Auguries could also be taken from four-legged animals; but these formed no part of the original science of the augurs, and were never employed by them in taking auspices on behalf of the state, or in the exercise of their art properly so called. They must be looked upon simply as a mode of private divination, which was naturally brought under the notice of the augurs, and seems by them to have been reduced to a kind of system. Thus, we are told that when a fox, a wolf, a horse, a dog, or any other kind of quadruped ran across a person's path or appeared in an unusual place, it formed an augury. (See e.g. Hor. Cad. iii. 527.) The auge auspiciam belonged to this class of auguries. (Cic. de Div. ii. 36; Fest s. v. iugus auspicium; Serv. ad Virg. Aen. iii. 537.)

The practice of examining the auspices, properly so called (i.e. ex caelo and ex animis), was as follows: The person who was to take them first marked out with a wand (litus) a division in the heavens called templum or tseum, within which he intended to make his observations. The station where he was to take the auspices was also separated by a solemn formula from the rest of the land, and was likewise called templum or tseum. He then proceeded to pitch a tent in it (tabernaculum capere), and this tent again was also called templum, or, more accurately, templum minus. [Templum.] Within the walls of Rome, or, more properly speaking, within the pomerium, there was no occasion to select a spot and pitch a tent on it, as there was a place on the Arx on the summit of the Capitoline hill, called Auguraculum, which had been consecrated once for all for this purpose. (Festus, s. v. Auguraculum; comp. Liv. i. 18, iv. 18; Cic. de Off. iii. 16.) In like manner there was in every Roman camp a place called augurato (Tac. Ann. ii. 13, xv. 30), which answered the same purpose; but on all other occasions a place had to be consecrated, and a tent to be pitched, as, for instance, in the Campus Martius, when the comitia centuriata were to be held. The person who was then taking the auspices waited for the favourable signs to appear; but it was necessary during this time that there should be no interruption of any kind whatsoever (silentiun), and hence the word silentium was used in a more extended sense to signify the absence of every thing that was faulty. Every thing, on the contrary, that rendered the auspices invalid was called vitium (Cic. de Div. ii. 34; Festus, s. v. silentio surgere); and hence we constantly read in Livy and other writers of vitio magistratus creatus. vitio lees latas, &c. The watching for the auspices was called spectio or servare de caelo, the declaration of what was observed nuntiatio, or, if they were unfavourable, obnuntiatio. In the latter case, the person who took the auspices seems usually to have said aitio die, by which the business in hand, whether the holding of the comitia or any thing else, was entirely stopped. (Cic. de Leg. ii. 12.)

Having examined what the signs were, and how they were taken, we have now to determine who had the power of taking them. In the first place it is certain that in ancient times no one but a patrician could take the auspices, and that a plebeian had no power of doing so. The gods or the Roman state were the gods of the patricians alone, and it was consequently regarded as an act of profanation for any plebeian to attempt to interpret the will of these gods. Hence the possession of the auspices (habere auspicia) is one of the most distinguished prerogatives of the patricians: they are said to be pones patrum, and are causa auspicia patrum. (Liv. vi. 41, x. 8; comp. iv. o.) It would further appear that every patrician might take the auspices; but here a distinction is to be observed. It has already been remarked that in the most ancient times no transaction, whether private or public, was performed without consulting the auspices (nisi auspicato, Cic. de Div. i. 16; Val. Max. i. 1. § 1); and hence arose the assumption or auspicia privata et auspicia publica. One of the most frequent occasions on which the auspicia privata were taken, was in case of a marriage (Cic., Val. Max. ii. cc.); and hence after private auspices had become entirely disused, the Romans, in accordance with their usual love of preserving ancient forms, were accustomed in later times to employ auspicio in marriages, who, however, acting only as friends of the bridegroom, to witness the payment of the dowry and to superintend the various rites of the marriage. (Plaut. Cas. prot. 85; Suet. Claud. 26; Tac. Ann. xi. 27.)

The employment of the auspices at marriages was one great argument used by the patricians against connubium between themselves and the plebeians, as it would occasion, they urged, perturbationem auspiciorum publicorum privatorum. (Liv. iv. 2.) The possession of these private auspices is expressed in another passage of Livy by praevaria auspicia laterna. (Liv. vi. 41.) In taking these private auspices, it would appear that any patrician

* There can be no reasonable doubt that by patres in these passages the whole body of the patricians is meant, and not the senators, as Rubino asserts. (Comp. Becker, Röm Alterth. vol. ii. part i. p. 304, &c.)
was employed, who knew how to form tempa and was acquainted with the art of augury, and was therefore called uospec or augur: it does not appear to have been necessary nor usual in such cases to have recourse to the public augurs, the members of the collegium, who are therefore frequently called augures publici, to distinguish them from the private augurs. (Cic. de Leg. ii. 8, ad Fam. vi. 6; Festus, s. v. quinque genera.) The case, however, was very different with respect to the auspicia publica, generally called auspicia simply, or those which concerned the state. The matter could only be taken by the persons who represented the state, and who acted as mediators between the gods and the state; for though all the patricians were eligible for taking the auspices, yet it was only the magistrates who were in actual possession of them. As long as there were any patrician magistrates, the auspices were exclusively in their hands; on their entrance upon office, they received the auspices (accepiebant auspia, Cic. de Div. ii. 36); while their office lasted, they were in possession of them (habebant or erant eorum auspia, Gell. xiii. 15); and at the expiration of their office, they laid them down (ponebant or deponebant auspia, Cic. de Nat. Deor. ii. 5). In case, however, there was no patrician magistrate, the auspices became vested in the whole body of the patricians, which was expressly appointed for the purpose of preserving and dispensing the auspices ad patres reduct. (Cic. Brut. 5.) This happened in the kingly period on the demise of a king, and the patricians then chose an interrex, who was therefore invested by them with the right of taking the auspices, and was thus enabled to mediate between the gods and the state in the election of a new king. In like manner in the republican period, when it was believed that there had been something faulty (vitium) in the auspices at the election of the consuls, and they were obliged in consequence to resign their office, the auspices returned to the whole body of the patricians, who had recourse to an interregnum for the renewal of the auspices, and for handing them over in a perfect state to the new magistrates: hence we find the expressions repetere de integro auspia and renovare per interregnum auspia, (Liv. v. 17, 31, vi. 1.)

It will be seen from what has been said that the Roman state was a species of theocracy, that the gods were its rulers, and that it was by means of the auspices that they intimated their will to the representatives of the people, that is, the magistrates. It follows from this, as has been already remarked, that no public act could be performed without consulting the auspices; no election could be new, no new passed, no new war waged; for a neglect of the auspices would have been equivalent to a declaration that the gods had ceased to rule the state—auspicia, (Cic. de Div. ii. 9.)

There still remain three points in connection with the auspices which require notice:—1. The relation of the magistrates to the augurs in taking the auspices. 2. The manner in which the magistrates received the auspices. 3. The relation of the different magistrates to one another with respect to the auspices. We can only make a few brief remarks upon each of these important matters, and must refer our readers for fuller information to the masterly discussion of Rubino (Rom. Verfassung, p. 48, &c.) to whom we are indebted for a great part of the present article.

1. The distinction between the duties of the magistrates and the augurs in taking the auspices is one of the most difficult points connected with this subject, but perhaps a preliminary solution of these difficulties may be found by taking an historical view of the question. We are told not only that the kings were in possession of the auspices, but that they themselves were acquainted with the art and practised it. Romulus is represented to have been the best of augurs, and from him all succeeding augurs received the chief mark of their office, the litus, with which that king exercised his calling. (Cic. de Div. i. 2, ii. 17; Liv. i. 10.) He is further stated to have appointed three augurs, but only as his assistants in taking the auspices, a fact which is important to bear in mind. (Cic. de Rep. ii. 9.) Their dignity gradually increased in consequence of their being employed at the inauguration of the kings, and also in consequence of their becoming the preservers and depositaries of the science of augury. Formed into a collegium, they handed down to their successors the various rules of the science, while the kings, and subsequently the magistrates of the republic, were liable to change. Their duties thus became twofold, to assist the magistrates in taking the auspices, and to preserve a scientific knowledge of the art. They were not in possession of the auspices themselves, though they understood them better than the magistrates, who were assistants of the augurs; the lightning and the birds were not sent to them but to the magistrates; they discharged no independent functions either political or ecclesiastical, and are therefore described by Cicero as privati. (De Divin. i. 40.) As the augurs were therefore merely the assistants of the magistrates, they could not take the auspices without the latter, though the magistrates on the contrary could dispense with their assistance, as must frequently have happened in the appointment of a dictator by the consul on military expeditions at a distance from the city. At the same time it must be borne in mind, that as the augurs were the interpreters of the science, they possessed the right of declaring whether the auspices were valid or invalid, and that too whether they were present or not at the time of taking them; and whoever questioned their decision was liable to severe punishment. (Cic. de Leg. ii. 8.) They thus possessed in reality a veto upon every important public transaction. It was this power which made the office an object of ambition to the most distinguished men at Rome, and which led Cicero, himself an augur, to describe it as the highest dignity in the state (De Leg. ii. 12). The augurs frequently employed this power as a political engine to vitiate the election of such parties as were unfavourable to the exclusive privileges of the patricians. (Liv. vi. 27, viii. 23.)

But although the augurs could declare that there was some fault in the auspices, yet, on the other hand, they could not, in favour of their office, declare that any unfavourable sign had appeared to them, since it was not to them that the auspices were sent. Thus we are told that the augurs did not possess the spectio, that is, the right of taking the state-auspices. This spectio, of which we have already briefly spoken, was of two kinds, one more extensive and the other more limited. In the one case the person, who exercised it, could put a stop to the proceedings of any other magistrate by his obnuntiation: this was called spectio et
AUGUR.

AUGUR.

muniantio (perhaps also spectio cum muniantione), and belonged only to the highest magistrates, the consuls, dictators, interreges, and, with some modifications, to the praetors. In the other case, the person who took the causes only exercised the spectio in reference to the duties of his own office, and could not interfere with any other magistrate: this was called spectio sine muniantione, and belonged to the other magistrates, the censors, aediles, and quaestors. Now as the augurs did not possess the auspices, they consequently could not possess the spectio (habere spectionem); but as the augurs were constantly employed by the magistrates to take the auspices, they therefore possessed the spectio, though they did not possess it in virtue of their office. When they were employed by the magistrates in taking the auspices, they possessed the right of the muniantio, and thus had the power, by the declaration of unfavourable signs (obmuniantio), to put a stop to all important public transactions (Cic. de Leg. ii. 12). In this way we are able to understand the assertion of Cicero (Philipp. ii. 32), that the augurs possessed the muniantio, the consuls and the other (higher) magistrates both the spectio and muniantio; though it must, at the same time, be borne in mind that this right of muniantio only belonged to them in consequence of their being employed by the magistrates. (Respecting the passage of Festus, s. v. spectio, which seems to teach a different doctrine, see Rubino, p. 56.)

2. As to the manner in which the magistrates received the auspices, there is no reason to suppose, as many modern writers have done, that they were conferred upon them in any special manner. It was the act of their election which made them the recipients of the auspices, since the comitia, in which they were appointed to their office, were held auspiciato, and consequently their appointment was regarded as ratified by the gods. The auspices, therefore, passed immediately into their hands upon the abdication of their predecessors in office. There are two circumstances which have given rise to the opinion that the magistrates received the auspices by some special act. The first is, that the new magistrate, immediately after the midnight on which his office began, was accustomed to observe the heavens in order to obtain a happy sign for the commencement of his duties (Dionysius ii. 6). But he did not do this in order to obtain the auspices; he already possessed them, and it was in virtue of his possession of them, that he was able to observe the heavens. The second circumstance to which we have been alluding, was the inauguratio of the kings on the Arx after their election in the comitia (Liv. i. 18). But this inauguratio had reference simply to the priestly office of the king, and, therefore, did not take place in the case of the republican magistrates, though it continued in use in the appointment of the rex sacrum and the other priests.

3. The auspices belonging to the different magistrates were divided into two classes, called auspicia maxima or majora and minora. The former, which belonged originally to the kings, passed over to the consuls on the institution of the republic, and likewise to the extraordinary magistrates, the dictators, interreges, and consular tribunes. When the consuls were deprived in course of time of part of their duties, and separate magistrates were created to discharge them, they naturally received the auspicia majora also: this was the case with the cen-
The science of the augurs was called *jus augurum* and *jus augurius*, and was preserved in books (*libri augurales*), which are frequently mentioned in the ancient writers. The expression for consulting the augurs was *referre ad augures*, and their answers were called *decreta or responsa augurum*. The science of augury had greatly declined and was preserved in books and was not unfrequently, the annexed coin of Lentulus.

The expression for con to be elected to the office, who was known to be an elder augur always voted before a younger, even at which all the augurs were expected to be present. (Cic. *Brut.* 1.) On such occasion there was always a splendid banquet given, at which all the augurs were expected to be present. (Cic. *ad Fam.* vii. 26, ad Att. xii. 13, 14, 15.) The only distinction in the college was one of age; an elder augur always voted before a younger, even if the latter filled one of the higher offices in the state. (Cic. *de Sen.* 18.) The head of the college was called *magister collegii*. It was expected that all the augurs should live on friendly terms with an elder augur, their appointment by him was not considered contrary to this principle. (*Romulus coop-
AUGUSTALES.

Gruter (316. 2); and in this city there was a magnificent temple to Augustus (Σεβαστόριον, Augustale). We find mention of augustales in numerous other places, as Pergamum, Nicomedia, &c.

AUGUSTALES, the name of two classes of priests, one at Rome and the other in the municipia, frequently mentioned in inscriptions.

I. The Augustales at Rome, properly called sodales Augustales, which is the name they always bear in inscriptions, were an order of priests (Augustalium sacerdotium) instituted by Tiberius to attend to the worship of Augustus and the Julia gens. They were chosen by lot from among the principal persons of Rome, and were twenty-one in number, to which were added Tiberius, Drusus, Claudius, and Germanicus, as members of the imperial family. (Tacit. i. 54.) They were also called sacerdotes Augustales (Tacit. Ann. ii. 83); and sometimes simply Augustales. (Tacit. Hist. ii. 95.)

Similar priests were appointed to attend to the worship of other emperors after their decease; and we accordingly find in inscriptions mention made of the sodales Flavii, Hadrianales, Aeliani, Antonini, &c. It appears that the flamines Augustales ought to be distinguished from the sodales Augustales. We find that flamines and sacerdotes were appointed in the lifetime of Augustus, to attend to his worship; but we have the express statements of Suetonius and Dion Cassius that this worship was confined to the provinces, and was not practised in Rome, or in any part of Italy, during the lifetime of Augustus. (Tacit. Ann. i. 10; Suet. Aug. 52; Dion Cass. li. 20.)

Women even were appointed priestesses of Augustus, as appears from an inscription in Gruter (320. 10): this practice probably took its origin from the appointment of Livia, by a decree of the senate, to be priestess to her deceased husband. (Dion Cass. iv. 46.) It seems probable that the sodales Augustales were entrusted with the management of the worship; but that the flamines Augustales were the persons who actually offered the sacrifices and performed the other sacred rites. A member of the sodales Augustales was sometimes a flamen also (Orelli, Inscript. 2356, 2368); and it is not improbable that the flamines were appointed by the sodales.

II. The Augustales in the municipia are supposed by most modern writers, in consequence of the statement of the scholarist on Horace (Sotii. ii. 3. 281), to have been a class of priests selected by Augustus from the libertin to attend to the religious rites connected with the worship of the Lares, which that emperor was said to have put up in places where two or more ways met. (Orelli, Inscript. vol. ii. p. 197.) But A. W. Zumpt, in an excellent essay on this subject, brings forward good reasons for rejecting this opinion. (Comparer. Compitallia.)

He thinks it much more probable that this order of priests was instituted in the municipia in imitation of the Augustales at Rome, and for the same object, namely, to attend to the worship of Augustus. From the numerous inscriptions in which they are mentioned, we learn the following facts respecting them. They formed a collegium and were appointed by the decuriones, or senate of the municipia. They were generally libertinii, which is easily accounted for by the fact, that none but the freeborn (ingenui), could obtain admission into the curia of the municipia; and as there seem to have been many expences connected with the discharge of the duties of the Augustales, the decuriones would not be anxious to obtain this distinction, while the libertinii on the contrary, who were generally a wealthy class and were not invested with any honour, would naturally covet it. The Augustales ranked next in dignity to the decuriones; and as they were mostly men of property, they came in course of time to form a middle class between the decuriones and plebs, like the equestrian order at Rome. Thus, in the inscriptions of many municipia, we find the decuriones, Augustales, and plebs, mentioned together as the three classes into which the community was divided. The six principal members of the college were called Sestiri, a title which seems to have been imitated from the Sestiri in the equestrian order at Rome. (Eckhel, Lexicon Criticu des Historicu anticaea de la Vie et du Regne d'Auuste, Paris. 1844, Appendix II., treatises of the Augustales; but see especially A. W. Zumpt, De Augustalibus et Sestris Augustalibus Commentatio Epigraphica, Berol. 1846.)

AUGUSTUS, a name bestowed upon Octavius in b.c. 27, by the senate and the Roman people. It was a word used in connection with religion, and designated a person as sacrae aulae worthy of worship; hence the Greek writers translated it by Σεβαστορ, (Dion Cass. liii. 16. 18; Suet. Aug. 7; Vell. Pat. ii. 91; Flor. iv. 12; Oros. vi. 20; Censorin. 22; Ov. Fast. i. 607.) It was not a title indicative of power, but simply a surname; and is hence called by Suetonius (Tib. 26) nomen hereditarium. It was, however, borne not only by Tiberius and the other emperors connected with the family of Augustus, but was likewise adopted by all succeeding emperors, as it descended, either by birth or adoption, from the first emperor of the Roman world (ca quae nomen velut quadam adoptione aut fere hereditario succedere, Lamprid. Alcæ. Senvr. 10). The name of Augusta was frequently bestowed upon remates or the imperial family, the first instance of which occurs in the case of Livia, who received this title upon her adoption into the Julia gens on the death of her husband Octavianus (Tacit. Ann. i. 6); but Augustus belonged exclusively to the reigning emperor till towards the end of the second century of the Christian era, when M. Aurelius and L. Verus both received this surname. (Spartian. Ael. Verus, 5; M. Ant. Phil. 7.) From this time we frequently find two or even a greater number of Augusti; and though in that and in all similar cases the persons honoured with the title were reginae or as participates of the imperial power, still the one who received the title first was looked upon as the head of the empire. When there were two Augusti we find on coins and inscriptions A V G G, and when three A V G G G. From the time of Probus the name became perpetuum Augustus, and from Philippus or Claudius Gothicus semper Augustus, the latter of which titles was borne by the so-called Roman emperors in Germany. (Eckhel, vol. viii. p. 354, &c.)

AUREUS. [Aurum.]

AURIGA. [Circus.]

AURUM (xvora), gold. The remarks made under Argentum apply to a great extent to gold as well as silver, and the sources of information respecting both the precious metals are specified in
the greatest treasures possessed by the state; but no such mention is made of gold. Thucydides (ii. 13) in enumerating the money in the Athenian treasury at the beginning of the Peloponnesian war, does not mention gold; and Xenophon speaks of the money of Athens in a manner which would lead us to suppose that it had no gold coinage in his time (Vesp. iv. 10). The mines of Scaptihyle, in Thrace, were indeed worked some years before this period (Thucyd. iv. 105); but the gold procured from them does not appear to have been coined, but to have been laid up in the treasury in the form of counters (Spratt, Hist. vol. i. pp. 145, 146). Foreign gold coin was often brought into the treasury, as some of the allies paid their tribute in money of Cyzicus. The gold money thus introduced may have been allowed to circulate, while silver remained the current money of the state.

The character of the Attic gold coins now in existence, and their small number (about a dozen), is a strong proof against the existence of a gold currency at Athens at an early period. There are three Attic stater coins in the British Museum, and one in the Hunterian Museum at Glasgow, which there is good reason to believe are genuine; their weights agree exactly with the Attic standard. In the character of the impression they bear a striking resemblance to the old Attic silver; but they differ from it by the absence of the thick bulky form, and the high relief of the impression which is seen in the old silver of Athens, and in the old gold coins of other states. In thickness, volume, and the depth of the die from which they were struck, they closely resemble the Macedonian coinage. Now, at the rise of the Macedonian empire, gold became plentiful in Greece, and was coined in large quantities by the Macedonian kings, it is not improbable that Athens, like other Greek states, may have followed their example, and issued a gold coinage in imitation of her ancient silver. On the whole, it appears most probable that gold money was not coined at Athens in the period between Pericles and Alexander the Great, if we except the solitary issue of debased gold in the year 407.

A question similar to that just discussed arises with respect to other Greek states, which we know to have had ancient silver currency, and which a few gold coins are also found. This is the case with Aegina, Thebes, Argos, Cyparissus in Euboea, Acarnania, and Aetolia. But of these coins all, except two, bear evident marks, in their weight or workmanship, of belonging to a period not earlier than Alexander the Great. There is great reason, therefore, to believe that no gold coinage existed in Greece Proper before the time of that monarch.

But from a very early period the Asiatic nations, and the Greek cities of Asia Minor and the adjacent islands, as well as Sicily and Cyrene, possessed a gold coinage, which was more or less current in Greece. Herodotus (i. 94) says that the Lydians were the first who coined gold, and the stater of Croesus appears to have been the earliest gold coin known to the Greeks. The Daric was a Persian coin. Staters of Cyzicus and Paphlagonia had a considerable currency in Asia Minor. There was a gold coinage in Samos as early as the time of Polycrates. (Herod. iii. 56.) The islands of Siphnos and Thasos, which possessed gold mines, appear to have had a gold coinage at an early period. In most of the coins of the Greek cities of Asia Minor the metal is very base. The Macedonian gold coinage

Almost the only method of purifying gold, known to the ancients, seems to have been that of grinding and then roasting it, and by this process they succeeded in getting it very pure. This is what we are to understand by the phrase χρυσίων ανίρρητον in Thucydides (ii. 13), and by the word orhretrum in Pliny (H. N. xxxii. 3. s. 19), and elsewhere (Pausan. ii. 2. 1). Respecting the use of gold in the fine arts, especially in the chryselephantine statues, see Topius. The art of gilding was known to the Greeks from the earliest times of which we have any information. (Hom. Od. iii. 425, vi. 232; Plin. H. N. xxxii. 3. s. 19, 6. s. 32.)

**Greek Gold Money.** — The time when gold was first coined at Athens is very uncertain. Aristophanes speaks in the *Frogs* (406 n. c.) of ἡ καινὴ χρυσίων, "the new gold money" (v. 719), which he immediately afterwards calls πονηρὰ χρυσία (v. 724). The Scholiast on this passage states that in the preceding year the golden statues of Victory had been coined into money, and he quotes Hellenicus and Philochorus as authorities for this statement. It would appear from the language both of Aristophanes and the Scholiast, and it is probable from the circumstances of Athens at the time (it was the year before the battle of Aegospotami), that this was a greatly debased gold coinage, or perhaps only gilt money, struck to meet a particular exigency. This matter is distinct from the general question respecting the gold coinage, for the Attic money was proverbial for its purity, and the grammarians, who state that Athens had a gold coinage at an early period, speak of it as very pure. There are other passages in Aristophanes in which gold money is spoken of; but in them he is referring to Persian money, which is known to have been imported into Athens before the Athenians had any gold coinage of their own, and even this seems to have been a rarity. (See Aristoph. *Ach. v. 102, 108, Equit. v. 470, Anim. v. 574.) Demosthenes always uses ἀσβέστης for money, except when he is speaking of foreign gold. In the speech against Phormio, where he repeatedly uses the word χρυσίων, we are expressly told what was the money he referred to, namely, 120 staters of Cyzicus (p. 914; compare his speech *πρὸς Λεκτίρ. p. 935). Isocrates, who uses the word in the same way, speaks in one passage of *buying gold money* (χρυσανθένη) in exchange for silver (Trapez. p. 867). In many passages of the orators, gold money is expressly said to have been imported from Persia and Macedon. If we look at the Athenian history, we find that the Greek silver mines at Laurion were regarded as one of the
Pliny adds that afterwards aurei were coined of 40 to the pound, which weight was diminished, till under Nero (the reading of this word is doubtful) they were 45 to the pound. This change is supposed, from an examination of extant specimens, to have been made in the time of Julius Caesar. The estimated full weight of the aurei of 40 to the pound is 130-1 grains, of those of 45 to the pound 115-64 grains. No specimens exist which come up to the 130-1 grains; the heaviest known is one of Pompey, which weighs 128-2 grains. The average of the gold coins of Julius Caesar is fixed by Letronne at 123-66 grains, those of Nero 115-39 grains. Though the weight of the aureus was diminished, its proportion to the weight of the denarius remained about the same, namely, as 2 : 1 (or rather, perhaps, as 2 1/2 : 1). Therefore since the standard weight of the denarius, under the early emperors, was 60 grains, that of the aureus should be 120. The average weight of the aurei of Augustus, in the British Museum, is 121-26 grains; and as the weight was afterwards diminished, we may take the average at 120 grains. There seems to have been no intentional alloy in the Roman gold coins, but they generally contained a small portion of native silver. The average alloy is 1/30. The aureus of the Roman emperors, therefore, contained 100/30 = 4 of a grain of alloy, and therefore 119-6 grains of pure gold. Now a sovereign contains 113-12 grains of pure gold. Therefore the value of the aureus in terms of the sovereign is 119-6 : 113-12 = 1.0564 = 1.0564. Therefore the denarius contains 113-12 grains of pure gold. Therefore the current value in terms of the sovereign is 113-12 : 119-6 = 1.0564 = 1.0564. Therefore the denarius being 8d., it was worth 17s. 8d. The ratio of the value of gold to that of silver is given in the article Argentum. The following cut represents an engraving:

Alexander Severus coined pieces of one-half and one third of the aureus, called Semissis and tremisses (Lamprid. Alex. Siv. c. 39), after which time the aureus was called solidus.

Constantine the Great coined aurei of 72 to the pound; at which standard the coin remained to the end of the empire. (Cod. x. tit. 70. s. 5; Hussey, On Ancient Weights and Money; Wurm. De Pond. &c.)

AURUM CORONARIUM. When a general in a Roman province had obtained a victory, it was the custom for the cities in his own provinces, and for those from the neighbouring states, to send golden crowns to him, which were carried before him in his triumph at Rome. (Liv. xxxviii. 37, xxxix. 7; Festus, s. v. Triumphales Coronae.) This practice appears to have been borrowed from the Greeks; for Chares related, in his history of Alexander (ap. Athen. xii. p. 559. a.), that after the conquest of Persia, crowns were sent to Alexander, which amounted to the weight of 10,500 talents. The number of crowns which were sent to a Roman general was sometimes very great. Cn. Manlius had 200 crowns carried before him in the triumph which he obtained on account of his conquest of the Gauls in Asia. (Liv. xxxix. 7.) In the time of Cicero, it appears to have been usual for the cities of the provinces, instead of sending crowns on occasion of a victory, to pay money, which was called aurum coronarium. (Cic. Leg. Agr. ii. 22; Gell. v. 6; Monum. Ancyr.) This offering, which was at first voluntary, came to be regarded as a regular tribute, and seems to have been sometimes exacted by the governors of the provinces, even when no victory had been gained. By a law of Julius Caesar (Cic. in Pis. 37), it was provided that the aurum coronarium should not be given unless a triumph was decreed; but under the emperors it was presented on many other occasions, as, for instance, on the adoption of Antoninus Pius. (Capitolin. Anton. Pius, c. 4.) It continued to be collected, apparently as a part of the revenue, in the time of Valentinian and Theodosius. (Cod. 10. tit. 74.) Servius says (ad Virg. Aen. viii. 721), that aurum coronarium was a sum of money exacted from conquered nations, in consideration of the lives of the citizens being spared; but this statement does not appear to be correct.

AURUM LUSTRALE was a tax imposed by Constantine, according to Zosimus (ii. 38), upon all merchants and traders, which was payable at every lustrum, or every four years, and not at every five, as might have been expected from the original length of the lustrum. This tax was also called auris et argenti collatio or praestatio, and thus in Greek έ αί των χρυσάργυρους. (Cod. 11. tit. 1; Cod. Theod. 13. tit. 1.)

AURUM VICESIMA-RIUM. [AERARIUM, p. 23, b.]

AUSPEX. [AUGUR.]

AUSPICICUM. [AUGUR.]
AXONES.

AUTHENTICA. [NOVELLAE.]

AUTHEPSA (αιθηψα), which literally means "self-boiling" or "self-cooking," was the name of a vessel, which is supposed to have been used for heating water, or for keeping it hot. Its form is not known for certain; but Böttiger (Sabina, vol. ii. p. 30) conjectures that a vessel, which is engraved in Caylus (Recueil d'Antiquités, vol. ii. tab. 27), is a specimen of an authepsa. Cicero (pro Rosc. Amerin. 46) speaks of authepsae among other costly Corinthian and Delian vessels. In later times they were made of silver. (Lamprid. Heliod. 19; but the reading is doubtful.) The caudula seems to have been a vessel of a similar kind.

AUTOMOLIAS GRAPHE' (αυτομολιας γραφη), the accusation of persons charged with having deserted and gone over to the enemy during the war (Pollux, vi. 363) awards the presidency of the court in which it was tried to the generals; but the circumstance of persons who left the city in times of danger without any intention of going over to the enemy, being tried by the Areopagus as traitors (Lycurg. c. Leonat. p. 177), will make us pause before we conclude that persons not enlisted as soldiers could be indicted of this offence before a military tribunal. [J. S. M.]

AUTONOMI (αυτονομοι), the name given by the Greeks to those states which were governed by their own laws, and were not subject to any foreign power. (Thuc. v. 18, 27; Xen. Hell. v. 1. § 31.) This name was also given to those cities subject to the Romans, which were permitted to enjoy their own laws, and elect their own magistrates (Omnès, suis legisbus et judiciis usae, autonomiæ adeptae, reviverent, Cic. Ad Att. vi. 2). This permission was regarded as a great privilege, and mark of honour; and we accordingly find it recorded on coins and medals, as, for instance, on those of Antioch Antiochae MHTPOHON. ATTONOMOT, on those of Halicarnassus AAIKAP, NACHAEON ATTONOMON, and on those of many other cities (Spanheim, De Proced. et Usu Nov.uti, 789. Schol. p. 1671.)

AYULISIO. [CONFUSIO.]

AUXILIA/RES. [SOCIEL.]

AXAMENTA. [SALIL.]

AXINE (διξίν). [SKCURIS.]

AXIS. [CURRUS.]

AXONES (εξωρες), also called kurbeis (κυψεις), wooden tablets of a square or pyramidal form made to turn on an axis, on which were written the laws of Solon. According to some writers the Axones contained the civil, and the Kurbeis the religious laws; according to others the Kurbeis had four sides and the Axones three sides. But at Athens, at all events, they must have been identical, since such is the statement of Aristotle (ap. Plat. Sol. 25). They were at first preserved in the acropolis, but were afterwards placed, through the advice of Ephialtes, in the agora, in order that all persons might be able to read them. A small portion of them was preserved in the time of Plutarch in the pyrtaneum (Plut. Sol. 25; Schol. ad Aristoph. Av. 1030; Schol. ad Apoll. Rhod. iv. 280; Harpocr. θ κατάθεν νῖμως: Her-}

man, Griech. Staatsalterth. § 107, n. 1; Wachsmuth Hell. Alterthumsk. vol. i. p. 491, 2nd ed.)

B.

BACCHANALIA. [DIONYSIA.]

BARTERIA (βατρησια), a staff borne by the dicasts at Athens. [DICASTES.]

BALATRO, a professional jester, buffoon, or parasite. (Hor. Sat. i. 2. 2.) In Horace (Sat. ii. 8. 21) Balatro is used as a proper name—Servilus Balato. An old Schoolmist, in commenting on this word, derives the common word from the proper names; buffoons being called balatrones, because Servilus Balato was a buffoon: but this is opposed to the natural inference from the former passage, and was said to get rid of a difficulty. Festus derives the word from blatea, and supposes buffoons to have been dirty, and were covered with spots of mud (blateae), with which they got spattered in walking; but this is opposed to sound etymology and common sense. Another writer has derived it from barathrum, and supposes buffoons to have been carried, and their jesting to market, even into the very depth (barathrum) of the shambles (barathrum macellis, Hor. Ep. i. 15. 31). Perhaps balatro may be connected with bala-re (to beat like a sheep, and hence) to speak sillily. It is probably connected with blatero, a busy-body. (Gell. i. 15.) Balatrones were paid for their jests, and the tables of the wealthy were generally open to them for the sake of the amusement they afforded. [A. A.]

BALISTA. [TORMENTUM.]

BALNEAE, Balineae, Balineum, Balineum, Thermae (αθραυσης, βαλανως, λωτας, λωτως). Those words are all commonly translated by our general term bath or baths; but in the writings of the earlier and better authors they are used with discrimination. Balneum or balineum, which is derived from the Greek βαλανεων (Varro, De Ling. Lat. ix. 68, ed. Müller), signifies, in its primary sense, a bath or bathing-vehicle, such as most persons of any consequence amongst the Romans possessed in their own houses (Cic. Ad Att. ii. 9), and hence the chamber which contained the bath (Cic. Ad Fam. xiv. 20), which is also the proper translation of the word balnearium. The diminutive balneolum is adopted by Seneca (Ep. 86) to designate the bath-room of Scipio, in the villa at Liternum, and is expressly used to characterize the modesty of republican manners as compared with the luxury of his own times. But when the baths of private individuals became more sumptuous, and comprised many rooms, instead of the one small chamber described by Seneca, the plural balnea or balineum was adopted, which still, in correct language, had reference only to the baths of private persons. Thus Cicero terms the baths at the villa of his brother Quintus (Ad Q. Frat. iii. 1. § 1) balnearia. Balineae and balineum, which according to Varro (De Ling. Lat. viii. 25, ix. 41, ed. Müller) have no singular number *, were the public baths. Thus Cicero (Pro Cael. 25) speaks of balneas Senas, balneas publicae, and in vestibulo

* Balnea is, however, used in the singular to designate a private bath in an inscription quoted by Reinesius. (Jeser. vi. 115.)
The use of the warm bath was preceded by bathing in cold water (II. x. 576). The later custom of plunging into cold water after the warm bath mentioned by Aristeides (vol. i. Orat. 2. Succ. Serm. p. 515), who wrote in the second century of our era, was no doubt borrowed from the Romans. After bathing, both sexes anointed themselves with oil, in order that the skin might not be left harsh and rough, especially after warm water. (Od. vi. 96; Athen. i.c.; Plin. H. N. xiii. 1; see also H. xiv. 172, xxiii. 186.) The use of precious unguents (μέρα) was unknown at that early period. In the heroic ages, as well as later times, refreshments were usually taken after the bath. (Od. vii. 233.)

The Laeacidaeonomians, who considered warm water as enervating and effeminate, used two kinds of baths; namely, the cold daily bath in the Eurotas (Xen. Hell. v. 4 § 28; Plut. Alc. 23), and a dry sudorific bath in a chamber heated with warm air by means of a stove (Dion Cass. iii. p. 515, ed. Hannov. 1606); and from them the chamber used by the Romans for a similar purpose was termed Lucumnicum (compare Strabo, iii. p. 413, ed. Siebenkees, and Casaub. ad loc.). At Athens, the frequent use of the public baths was regarded in the time of Socrates and Demosthenes as a mark of luxury and effeminacy. (Demosth. c. Polycol. p. 1217.) Accordingly Phocion said that he had never bathed in a public bath (ἐν βαλανείῳ δημοσίων, Plut. Phoc. 4), and Socrates to have made use of it very seldom. (Plato, Symp. p. 174.) It was, however, only the warm baths (βαλανεία, called by Homer διηρή λουτρά) to which objection was made, and which in ancient times were not allowed to be built within the city. (Athen. i. p. 18, b.) The estimation in which such baths were held, is expressed in the following lines of Hermippus (ap. Athen. l.c.):

Μᾶ τὸν Δί, οὐ μέντοι μεθέων τὸν ἀνδρὰ χρῆ τὸν ἄγαθον, οὐδὲ δημοσίωτερον, & οὐ ποιεῖς.

In the Clouds of Aristophanes the δικαῖος λόγος warns the young man to abstain from the baths (βαλανείας ἀπεκέχεσα, I. 978), which passage, compared with i. 1029—1037, shows that warm baths are intended by the word βαλανεία.

The baths (βαλανεία) were either public (δημιοί, δημοσίωτερον) or private (ὕμνα, ἰδιωτικά). The former were the property of the state, but the latter were built by private individuals, and were opened to the public on the payment of a fee (ἐπίλυτον). Such private baths are mentioned by Plutarch (Demetr. 24) and Isaeus (De Dicoeg. her. p. 101), who speaks of one which was sold for 3000 drachmae. (De Philoct. her. p. 140.) Baths of this kind may also have been intended sometimes for the exclusive use of the persons whom they belonged. (Xen. Rep. Ath. ii. 10.) A small fee appears to have been also paid by each person to the keeper of the public baths (βαλανεία), which in the time of Lucian was two oboli. (Lucian, Lexip. 2. vol. ii. p. 320.)

We know very little of the baths of the Athenians during the republican period; for the account of Lucian in his Hippias relates to baths constructed after the Roman model. On ancient vases, on which persons are represented bathing, we never find any thing corresponding to a modern bath in which persons can stand or sit; but there is always
a round or oval basin (λουτρόν or λουτρήμα), resting on a stand (στάστον), by the side of which those who are bathing are represented standing undressed and washing themselves, as is seen in the following woodcut taken from Sir W. Hamilton’s vases. (Tischbein, i. pl. 58.) The word ΔΗΜΟΣΙΑ upon it shows that it belonged to a public bath.

The next woodcut is also taken from the same work (i. pl. 59), and represents two women bathing. The one on the right hand is entirely naked, and holds a looking-glass in her right hand; the one on the left wears only a short kind of χιτώνιον. Eros is represented hovering over the bathing vessel.

Besides the λουτρήμα and λουτρήμα there were also the vessels for bathing, large enough for several persons to sit in, which, as stated above, are called ἄοματα by Homer and πέντε by the later Greeks (Schol. ad Aristoph. Equit. 1055; Heuscher. s. v. Πέντες; Pollux, vii. 166, 168). In the baths there was also a kind of sudorific or vapour bath called πυριτικα or πυριθοριανον, which is mentioned as early as the time of Herodotus (iv. 75). (Compare Pollux, vii. 168; Athen. v. p. 207, f., xii. p. 519, e.; Plut. Chim. i.)

The persons who bathed probably brought with them strigils, oil, and towels. The strigil, which was called by the Greeks στριγής or ἄρτα, was usually made of iron, but sometimes also of other materials. (Plut. Inst. Lac. 32; Aelian, xii. 29.) One of the figures in the preceding woodcut is represented with a strigil in his hand; several strigils are figured below. The Greeks also used different materials for cleansing or washing themselves in the bath, to which the general name of βύσμα was given, and which were supplied by the βαλανεῖς. (Aristoph. Lysistr. 377.) This βύσμα usually consisted of a lye made of lime or wood-ashes (κονία), of nitrum, and of fuller’s earth (γῆ κυμαία, Aristoph. Ran. 710 and Schol.; Plat. Rep. iv. p. 430).

The bath was generally taken shortly before the δείπνον or principal meal of the day. It was the practice to take first a warm or vapour, and afterwards a cold bath (Plut. de primo frig. 10; Paus. ii. 34. § 2), though in the time of Homer the cold bath appears to have been taken first and the warm afterwards. The cold water was usually poured on the back or shoulders of the bathers by the βαλανεῖς or his assistants, who are called παραχύται. (Plat. Rep. i. p. 344; Lucian, Donost. Encom. 16, vol. iii. p. 503; Plut. de Invit. 6, Aporroph. Lac. 49.) The vessel, from which the water was poured, was called ἄρωταια. (Aristoph. Equit. 1087; Theophr. Char. 9.) In the first of the preceding woodcuts παραχύταις is represented with an ἄρωταια in his hands.

Among the Greeks a person was always bathed at birth, marriage, and after death (Funus); whence it is said of the Dardanians, an Illyrian people, that they bathe only thrice in their lives, at birth, marriage, and after death. (Nicol. Damasc. ap. Stob. v. 51. p. 152, Gaisf.) The water in which the bride was bathed (λουτρόν μυσφότον, Aristoph. Lysistr. 378) at Athens, was taken from the fountain of Kallirrhoë, which was called from the time of Peisistratus Ἐσπεδράκουρος. (Thucyd. ii. 15.) Compare Pollux, iii. 43; Harpocrat. s. n. Λουτροφόρος, who says that the water was fetched by a boy, who was the nearest relation, and that this boy was called λουτροφόρος. He also states that water was fetched in the same way to bathe the bodies of those who had died unmarried, and that on the monuments of such a boy was represented holding a water-vessel (Εδριά). Pollux (l. c.), however, states that it was a female who fetched the water on such occasions, and Demosthenes (c. Leochar. p. 1089. 23; compare p. 1086. 14. &c.) speaks of ἡ λουτροφόρος on the monument of a person who had died unmarried. In remains of ancient art we find girls represented as λουτροφόρους, but never boys. (Brünnow, Brief Description of thirty-two antique Greek Vases, pl. 27. The best account of the Greek baths is given by Becker, Charicles, vol. ii. pp. 135–146, pp. 459–462.)

Roman Baths.—The Romans, in the earlier periods of their history, used the bath but seldom, and only for health and cleanliness, not as a luxury. Thus we learn from Seneca (Ep. 86) that the ancient Romans washed their legs and arms daily, and bathed their whole body once a week. (Comp. Cat. de Lib. Edsc. ap. Nom. iii. s. v. Epliapuum; Colum. R. R. i. 6, § 20.) It is not recorded at what precise period the use of the warm bath was first introduced amongst the Romans; but we learn from Seneca (l. c.) that Scipio had a warm bath in his villa at Liternum; which, however, was of the simplest kind, consisting of a single chamber, just sufficient for the necessary purposes, and without any pretensions to luxury. It was “small and dark,” he says, “after the manner of the ancients.” Seneca also
describes the public baths as *obscura et gregali tectorio inducta*, and as so simple in their arrangements that the aedile judged of the proper temperature by his hands. These were baths of warm *water*; but the practice of heating an apartment with warm air by flues placed immediately under it, so as to produce a vapour bath, is stated by Valerius Maximus (ix. i. § 1) and by Pliny (H. N. ix. 54, s. 79) to have been invented by Sergius Orata, who lived in the age of L. Crassus, the orator, before the Maric war. The expression used by Valerius Maximus is *balnea pensilia*, and by Pliny *balnea laticulae*, which is differently explained by different commentators; but a single glance at the plans inserted below will be sufficient in order to comprehend the manner in which the flooring of the chambers was *suspected* over the hollow cells of the hypocaust, called by Vitruvius *suspressura caldarium* (v. 11), so as to leave no doubt as to the precise meaning of the invention, which is more fully exemplified in the following passage of Ausonius (Mosell. 537):

"Quid (memorem) quae sulphurea substructa cre-

Balnea, ferventi cum Muliber haustus operto, 
Voluit anhelatas tectoria per cava flammas, 
Inclusum glomeran aestu exspirante vaporem?"

By the time of Cicero, the use of baths, both public and private, of warm water and hot air, had become general (Epist. ad Q. Frat. iii. 1); and we learn from one of his orations that there were already baths (*balneas Senonis*) at Rome, which were open to the public upon payment of a small sum (Pro Cael. 25, 20).

In the earlier ages of Roman history a much greater delicacy was observed with respect to bathing, even amongst the men, than was usual among the Greeks; for according to Valerius Maximus (ii. 1. § 7) it was deemed indecent for a father to bathe in company with his own son after he had attained the age of puberty, or a son-in-law with his father-in-law. (Comp. Cic. De Off. i. 55, De Orat. ii. 55.) But virtue passed away as wealth increased; and when the thermae came into use, not only did the men bathe together in numbers, but even men and women stripped and bathed promiscuously in the same bath. It is true, however, that the public establishments often contained separate baths for both sexes adjoining to each other (Vitr. v. 10; Varro, De Ling. Lat. ix. 68), as will be seen to have been the case at the baths of Pompeii. Aulus Gellius (x. 3) relates a story of a consul's wife who took a whim to bathe at Teanum (Teano), a small provincial town of Campania in the men's baths (*balnea virilis*); probably, because in a small town, the female department, like that at Pompeii, was more confined and less convenient than that assigned to the men; and an order was consequently given to the Quaes-

Whilst the bath was used for health merely or cleanliness, a single one was considered sufficient
at a time, and that only when requisite. But the
luxuries of the empire knew no such bounds, and
the daily bath was sometimes repeated as many as
seven and eight times in succession — the number
which the Emperor Commodus indulged himself
with. (Lamprid. Com. c. 2.) Gordian bathed seven
times a day in summer, and twice in winter. The
Emperor Gallienus six or seven times in summer,
and twice or thrice in winter. (Capitolin. Gall.
c. 17.) Commodus also took his meals in the bath
(Lamprid. l. c.); a custom which was not confined
to a dissolute Emperor alone. (Comp. Martial,
Epig. xii. 19.)

It was the usual and constant habit of the Ro-
mans to take the bath after exercise, and pre-
viously to their principal meal (co&na); but the
debauchees of the empire bathed after eating as
well as before, in order to promote digestion, so as
to acquire a new appetite for fresh delicacies. Nero
is related to have indulged in this practice. (Suet.
Nero, 27; comp. Juv. Sat. l. 142.)

Upon quitting the bath it was usual for the
Romans as well as the Greeks to be anointed with
oil; but a particular habit of body, or tendency to
some complaints, sometimes required this order
to be reversed; for which reason Augustus, who
suffered from nervous disorders, was accustomed to
anoint himself before bathing (Suet. Aug. 82); and a similar practice was adopted by Alexander
Severus. (Lamprid. Alex. Sev. l. c.) The most
usual practice, however, seems to have been to
take some gentle exercise (exercitatio), in the first
instance, and then, after bathing, to be anointed
either in the sun, or in the tepid or thermal cham-
ber, and finally to take their food. (Galneae, De
Methodo Medendi, x. 10, p. 708, 709, ed.
Kühn); whilst the latter recommends his patients
first to sweat for a short time in the tepid chamber
(tepidarium), without undressing; then to proceed
into the thermal chamber (calidarium), and after
having gone through a regular course of perspira-
tion there, not to descend into the warm bath
(solium), but to pour a quantity of warm water
over the head, then tepid, and finally cold; after-
wards to be scraped with the stigil (perfricari),
and finally rubbed dry and anointed. (Cels. De
Med. i. 4.) Such, in all probability, was the usual
habit of the Romans when the bath was resorted
made use of by the ancient writers in reference to
their bathing establishments.
to as a daily source of pleasure, and not for any particular medical treatment; the more so, as it resembles in many respects the system of bathing still in practice amongst the Orientals, who, as Sir W. Gell remarks, "succeeded by conquest to the luxuries of the enervated Greeks and Romans." (Gell's *Pompeii*, vol. i. p. 86, ed. 1832.)

Having thus detailed from classical authorities the general habits of the Romans in connection with their system of bathing, it now remains to examine and explain the internal arrangements of the structures which contained their baths, which will serve as a practical commentary upon all that has been said. Indeed there are more ample and better materials for acquiring a thorough insight into Roman manners in this one particular, than for any other of the usages connected with their domestic habits. The principal ancient authorities are Vitruvius (v. 10), Lucian (Ἱππίας ὁ Βαλάνεως, a detailed description of a set of baths erected by an architect named Hippias), Pliny the Younger, in the two letters describing his villas (ii. 17, v. 6), Statius (*Balneum Etrusci*, Silv. i. 5), Martial (vi. 42, and other epigrams), Sidonius Apollinaris (Epist. ii. 2), and Seneca (Epist. 51, 56, 86).

But it would be almost hopeless to attempt to arrange the information obtained from these writers, were it not for the help afforded us by the extensive ruins of ancient baths, such as the Thermae of Titus, Caracalla, and Diocletian, but above all the public baths (balneae) at Pompeii, which were excavated in 1824–25, and were found to be a complete set, constructed in all their important parts upon rules very similar to those laid down by Vitruvius, and in such good preservation that many of the chambers were complete, even to the ceilings.

In order to render the subjoined remarks more easily intelligible, the woodcut on the preceding page is inserted, which is taken from a fresco painting upon the walls of the thermae of Titus at Rome.

The annexed woodcut represents the ground plan of the baths of Pompeii, which are nearly surrounded on three sides by houses and shops, thus forming what the Romans termed an *insula*.

The whole building, which comprises a double set of baths, has six different entrances from the street, one of which A, gives admission to the smaller set only, which are supposed to have been appropriated to the women, and five others to the male department; of which two, B and C, communicate directly with the furnaces, and the other three D, E, F, with the bathing apartments, of which F, the nearest to the forum, was the principal one; the other two, D and E, being on different sides of the building, served for the convenience of those who lived on the north and east sides of the city. To have a variety of entrances is one of the qualities enumerated by Lucian as necessary to a well-constructed set of baths. (Hippias, 8.)

Passing through the principal entrance F, which is removed from the street by a narrow footway surrounding the *insula* (the outer curb of which is marked upon the plan by the thin line drawn round it), and after descending three steps, the bather finds upon his left hand a small chamber (1), which contained a convenience (*latrina*), and proceeds into a covered portico (2), which ran round three sides of an open court — *atrium* (3), and these together formed the vestibule of the baths — *vestibulum balnearum* (Cic. *Pro Cael. 26*), in which the servants belonging to the establishment, as well as the attendants of the bathers, waited. There are seats for their accommodation.

---

* Latrina was also used previously to the time of Varro for the bathing-vessel, *quasi losuina*. (Varro, *De Ling Lat.*, ix. 68. ed. Muller; compare Lucill. *ap. Non. c. 3. n. 131.*)
placed underneath the portico (α, α). This compartment answers exactly to the first, which is described by Lucian (l. c. 5). Within this court the keeper of the baths (balneator) who exacted the quadrans paid by each visitor, was also stationed; and the box for holding the money was found in it. The room (4), which runs back from the portico, might have been appropriated to him; or, if not, it might have been an oecus or exedra, for the convenience of the better classes whilst awaiting the return of their acquaintances from the interior, in which case it will correspond with the chambers mentioned by Lucian (l. c. 5), adjoining to the servants' waiting-place (ἐν ὁποιῃ τοις τούτων προερχόμενοι). In this court likewise, as being the most public place, advertisements for the theatre, or other announcements of general interest, were posted up, one of which, announcing a gladiatorial show, still remains. (5) Is the corridor which conducts from the entrance E, into the same vestibule. (6) A small cell of similar use as the corresponding one in the opposite corridor (1). (7) A passage of communication which leads into the chamber (8), the frigidarium, which also served as an apodyterium, or spolliatorium, a room for undressing; and which is also accessible from the street by the door D, through the corridor (9), in which a small niche is observable, which probably served for the station of another balneator, who collected the money from those entering from the north street. In this room all the Visitors have met before entering into the interior of the baths; and its locality, as well as other characteristic features in its fittings up, leave no room to doubt that it served as an undressing room. It does not appear that any general rule of construction was followed by the architects of antiquity, with regard to the locality and temperature best adapted for an apodyterium. The word is not mentioned by Vitruvius, nor expressly by Lucian; but he says enough for us to infer that it belonged to the frigidarium in the baths of Hippias (l. c. 5).

"After quitting the last apartment there are a sufficient number of chambers for the bathers to undress, in the centre of which is an oecus containing three baths of cold water." Pliny the Younger says that the apodyterium at one of his own villas adjoined the frigidarium (Ep. v. 6), and it is plain from a passage already quoted, that the apodyterium was a warm apartment in the baths belonging to the villa of Cicero's brother, Quintus (assa in alterum apodyterii angulam promovit), to which temperature Celsius also assigns it. In the thermæ at Rome the hot and cold departments had probably each a separate apodyterium attached to it; or if not, the ground plan was so arranged that one apodyterium would be contiguous to, and serve for both, or either; but where space and means were circumscribed, as in the little city of Pompeii, it is more reasonable to conclude that the frigidarium served as an apodyterium for those who confined themselves to cold bathing, and the tepidarium for those who commenced their ablutions in the warm apartments. The bathers were expected to take off their garments in the apodyterium, it not being permitted to enter into the interior unless naked. (Cic. Pro Cael. 26.) They were then delivered to a class of slaves, called capsaarii (from capsae, the small case in which children carried their books to school), whose duty it was to take charge of them. These men were notorious for dishonesty, and leagued with all the thieves of the city, so that they connived at the robberies they were placed there to prevent. Hence the expression of Catullus — O furarum opus tum balnearior (Carm. xxxii. 1) and Trachilo in the Rudiens of Plautus (ii. 33. 51), complains bitterly of their roguery, which, in the capital, was carried to such an excess that very severe laws were enactted against them, the crime of stealing in the baths being made a capital offence.

To return into the chamber itself—it is vaulted and spacious, with stone seats along two sides of the room (b, b), and a step for the feet below, slightly raised from the floor (puteus et gradus, Vitruv. v. 10). Holes can still be seen in the walls, which might have served for pegs on which the garments were hung when taken off. It was lighted by a window closed with glass, and ornamented with stucco moldings and painted yellow. A sectional drawing of this interior is given in Sir W. Gell's Pompeii. There are no less than six doors to this chamber; one led to the entrance E, another to the entrance D, a third to the small room (11), a fourth to the furnaces, a fifth to the topid apartment, and the sixth opened upon the cold bath (10), named indifferently by the ancient authors, natatio, natatorium, piscina, baptisterium; puteus, λούτρον. The bath, which is coated with white marble, is 12 feet 10 inches in diameter, and about 3 feet deep, and has two marble steps to facilitate the descent into it, and a seat surrounding it at the depth of 10 inches from the bottom, for the purpose of enabling the bathers to sit down and wash themselves. The ample size of this basin explains to us what Cicero meant when he wrote—Lattorem piscinam voluisse, ubi jactata brachia non offenederantur. It is probable that many persons contented themselves with the cold bath only, instead of going through the severe course of perspiration in the warm apartments; and as the frigidarium alone could have had no effect in baths like these, where it merely served as an apodyterium, the natatio must be referred to when it is said that at one period cold baths were in such request that scarcely any others were used. (Gell's Pompeii, l. c.) There is a platform, or ambulatory (schola, Vitruv. v. 10) round the bath, also of marble, and four niches of the same material disposed at regular intervals round the walls, with pedestals, for statues probably, placed in them.† The ceiling is vaulted, and the chamber lighted by a window in the centre. The annexed woodcut represents a frigidarium with its cold bath (puteus, Plin. Ep. v. 6) at one extremity, supposed to have formed a part of the Formian villa of Cicero, to whose age the style of

* The word baptisterium (Plin. Ep. v. 6) is not a bath sufficiently large to immerse the whole body, but a vessel, or tabernum, containing cold water for pouring over the head. Compare also Plin, Ep. xvii. 2.

† According to Sir W. Gell (l. c.) with seats, which he interprets scholae, for the accommodation of persons waiting an opportunity to bathe—but a passage of Vitruvius (v. 10), hereafter quoted, seems to contradict this use of the term—and seats were placed in the frigidarium adjoining, for the express purpose of accommodating those who were obliged to wait for their turn.
construction, and the use of the simple Doric order, undoubtedly belong. The bath itself, into which the water still continues to flow from a neighbouring spring, is placed under the alcove, and the two doors on each side opened into small chambers, which probably served as apodyteria. It is still to be seen in the gardens of the Villa Caposeli, at Mola di Gaeta, the site of the ancient Formiae.

In the cold bath of Pompeii the water ran into the basin through a spout of bronze, and was carried off again through a conduit on the opposite side. It was also furnished with a waste-pipe under the margin to prevent it from running over. No. 11 is a small chamber on the opposite side of the frigidarium, which might have served for shaving (constra) or for keeping unguents or strigiles; and from the side of the frigidarium, the bather, who intended to go through the process of warm bathing and sudation, entered into (12) the tepidarium.

This chamber did not contain water either at Pompeii or at the baths of Hippias, but was merely heated with warm air of an agreeable temperature in order to prepare the body for the great heat of the vapour and warm baths, and, upon returning, to obviate the danger of a too sudden transition to the open air. In the baths at Pompeii this chamber served likewise as an apodyterium for those who took the warm bath; for which purpose the fittings up are evidently adapted, the walls being divided into a number of separate compartments or recesses for receiving the garments when taken off, by a series of figures of the kind called Atlantes or Telamones, which project from the walls, and support a rich cornice above them. One of these divisions, with the Telamones, is represented in the article Atlantes. Two bronze benches were also found in the room, which was heated as well by its contiguity to the hypocaust of the adjoining chamber, as by a brazier of bronze (foculus), in which the charcoal ashes were still remaining when the excavation was made. A representation of it is given in the annexed woodcut. Its whole length was seven feet, and its breadth two feet six inches.

In addition to this service there can be little doubt that this apartment was used as a depository for unguents and a room for anointing (Alexiphilous, unctarium, elanoeothesium), the proper place for which is represented by Lucian (I. c.) as adjoining to the tepidarium, and by Pliny (Ep. ii. 17) as adjoining to the frigidarium; and for which purpose some of the niches between the Telamones seem to be peculiarly adapted. In the larger establishments a separate chamber was allotted to these purposes, as may be seen by referring to the drawing taken from the Thermae of Titus; but as there is no other spot within the circuit of the Pompeian baths which could be applied in the same manner, we may safely conclude that the inhabitants of this city were anointed in the tepidarium; which service was performed by slaves called unctores and aliptae. [Aliptae.] For this purpose the common people used oil, sometimes scented; but the more wealthy classes indulged in the greatest extravagance with regard to their perfumes and unguents. These they either procured from the elanoeothesium of the baths, or brought with them in small glass bottles amputae olearias; hundreds of which have been discovered in different excavations made in various parts of Italy. [Ampullae.] The fifth book of Athenaeus contains an ample treatise upon the numerous kinds of ointments used by the Romans; which subject is also fully treated by Pliny (H.N. xiii.).

Caligula is mentioned by Suetonius (Cal. 37) as having invented a new luxury in the use of the bath, by perfuming the water, whether hot or cold, by an infusion of precious odours, or as Pliny states (I. c.), by anointing the walls with valuable unguents; a practice, he adds, which was adopted by one of the slaves of Nero, that the luxury might not be confined to royalty (ne principale videntur hoc bonum).

From this apartment, a door, which closed by its own weight, to prevent the admission of the cooler air, opened into No. 13, the thermal chamber or concamerata sudatio of Vitruvius (v. 11); and which, in exact conformity with his directions, contains the warm bath — balneum, or calda lastratio (Vitruv. I. c.), at one of its extremities; and the semicircular vapour-bath, or Laconicum at the other; whilst the centre space between the two ends, termed sudatio by Vitruvius (I. c.), and sudatorium by Seneca, is exactly twice the length of its width, according to the directions of Vitruvius. The object in leaving so much space between the warm bath and the Laconicum was to give room for the gymnastic exercises of the persons within the chamber, who were accustomed to promote a full flow of perspiration by rapid movements of the arms and legs, or by lifting weights. (Juv. Sat. vi. 420.) In larger establishments the conveniences contained in this apartment occupied two separate cells, one of which was appropriated to the warm bath, which apartment was then termed caldarium, cela caldaria, or balneum, and the other comprised the Laconicum and sudatory — Laconicum sudationesque (Vitruv. I. c.), which part alone was then designated under the name of concamerata sudatio.
This distribution is represented in the painting on the walls of the Thermae of Titus; in which there is also another peculiarity to be observed, viz., the passage of communication (intercapedo) between the two chambers, the flooring of which is suspended over the hypocaust. Lucian informs us of the use for which this compartment was intended, where he mentions as one of the characteristic conveniences in the baths of Hippias, that the bathers need not retrace their steps through the whole suite of apartments by which they had entered, but might return from the thermal chamber by a shorter circuit through a room of gentle temperature (σιπφιες ἀναβολή, l.c. 7), which communicated immediately with the frigidarium.

The warm-water bath, which is termed calda lavatio by Vitruvius (l. c.), balincum by Cicero (Ad Att. ii. 3), piscina or calida piscina by Pliny (Ep. ii. 17) and Suetonius (Nero, 27), as well as labrum (Cic. Ad Fam. xiv. 16), and solium by Cicero (in Pison. 27), appears to have been a capacious marble vase, sometimes standing upon the floor, like that in the picture from the Thermae of Titus; and sometimes either partly elevated above the floor, as it was at Pompeii, or entirely sunk into it, as directed by Vitruvius (v. 10). His words are these:—"The bath (labrum) should be placed underneath the window, in such a position that the persons who stand around may not cast their shadows upon it. The platform which surrounds the bath (scutulae laborum) must be sufficiently spacious to admit of the surrounding observers, who are waiting for their turn, to stand there without crowding each other. The width of the passage or channel (alveus), which lies between the parapet (pluteus), and the wall, should not be less than six feet, so that the space occupied by the seat and its step below (pulvinus et gradus inferior) may take off just two feet from the whole width." The subjoined plans given by Marini, will explain his meaning.

---

A, labrum; B, schola; C, plateus; D, atceus, passage between the plateus and wall; F, pulvinus, or seat; and E, the lower step (gradus inferior), which together take up two feet.

The warm bath at Pompeii is a square basin of marble, and is ascended from the outside by two steps raised from the floor, which answered to the parapet or plateus of Vitruvius. Around ran a narrow platform (schola); but which, in consequence of the limited extent of the building, would not admit of a seat (pulvinus) all around it. On the interior another step allowed the bathers to sit down and wash themselves. The annexed section will render this easily intelligible.
balneaes.

hemisphaerii), over the centre of which an orifice is left, from which a bronze shield (clipeus) was suspended. This regulated the temperature of the apartment, being raised or lowered by means of chains to which it was attached. The form of the cell was required to be circular, in order that the warm air from the hypocaust might encircle it with greater facility. (Vitruv. v. 10.) In accordance with these rules is the Laconium at Pompeii, a section of which is given in the previous page, the clipeus only being added in order make the meaning more clear.

A, The suspended pavement, suspensura ; B, the junction of the hemisphaerium with the side walls, tuta curvatura hemisphaerii ; C, the shield, clipeus ; E and F, the chains by which it is raised and lowered ; D, a labrum, or flat marble vase, into which a supply of water was introduced by a single pipe running through the stem. Its use is not exactly ascertained in this place, nor whether the water it contained was hot or cold.

It would not be proper to dismiss this account of the Laconium without alluding to an opinion adopted by some writers, amongst whom are Galiano and Cameron, that the Laconium was merely a small cupola, with a metal shield over it, rising above the flooring (suspensura) of the chamber, in the manner represented by the drawing from the Thermae of Titus, which drawing has, doubtless, given rise to the opinion. But it will be observed that the design in question is little more than a section, and that the artist may have resorted to the expedient in order to show the apparatus belonging to one end of the chamber, as is frequently done in similar plans, where any part which required to be represented upon a larger scale is inserted in full development within the general section; for in none of the numerous baths which have been discovered in Italy or elsewhere, even amongst the ruins of the various baths of antiquity, were made of bone, bronze, iron, and silver; all corresponding in form with the epitaph of Martial, " curvo distinguere ferro" (Epig. xiv. 51). The poorer classes were obliged to scrape themselves, but the more wealthy took their slaves to the baths for the purpose; a fact which is elucidated by a curious story related by Spartianus (Hadrian, c. 17).

The strigil was by no means a blunt instrument, consequently its edge was softened by the application of oil, which was dropped upon it from a small vessel called guttus *, which had a narrow neck, so as to discharge its contents drop by drop, from whence the name is taken. A representation of a guttus is given in the preceding woodcut. Augustus is related to have suffered from an over-violent use of the strigil. (Suet. Aug. 30.) Invalids and persons of a delicate habit made use of sponges, which Pliny says answered for towels as well as strigils. They were finally dried with towels (lintias), and anointed. (Juv. Sat. iii. 262; Apuleius, Met. ii.; Plin. H. N. xxxi. 11. s. 47.)

The common people were supplied with these necessaries in the baths, but the more wealthy carried their own with them (Pers. Sat. v. 126). Lucian (Lexiph. vol. ii. p. 320. ed. Reitz) adds also soap and towels to the list.

After the operation of scraping and rubbing dry, they retired into, or remained in, the tepidarium until they thought it prudent to encounter the open air. But it does not appear to have been customary to bathe in the water, when there was any, which was not the case at Pompeii, nor in the baths of Hippias (Lucian, l. c.), either of the tepidarium or frigidarium; the temperature only of the atmosphere in these two chambers being of consequence to break the sudden change from the extreme of hot to cold.

Returning now back into the frigidarium (8), which, according to the directions of Vitruvius (v. 11), has a passage (14) communicating with the mouth of the furnace (e), which is also seen in the next woodcut under the boilers, called praefurnium, propinieum (Plin. Ep. ii. 17), προπυνεύεσιν (from πρό before, and πυνεύει, a furnace), and passing down that passage, we reach the chamber (15) into which the praefurium projects, and which has also an entrance from the street at B. It was appropriated to the use of those who had charge of the fires (forneutores). There are two staircases in it; one of which leads to the roof of the baths, and the other to the coppers which contained the water. Of these there were three; one of which contained the hot water—caldarium (or vas, or ahenum); the second the tepid—tepidarium; and the last the cold—frigidarium. The warm water was introduced into the warm bath by means of a conduit pipe, marked on the plan, and conducted through the wall. Underneath the caldarium was placed the furnace (furnus, Hor. Ep. i. 11, 12), which served to heat the water, and give out streams of warm air into the hollow cells of the hypocaustum (from ὑπό and καίω). It

* It was also called ampulla, ληθέαγα, μυροθλίκος, ἐλαίωφρον. (Ruperti, Ad Juv. Sat. iii. 262.) [AMPULLA.]
passed from the furnace under the first and last of the caldrons by two flues, which are marked upon the plan. These coppers were constructed in the same manner as is represented in the engraving from the Thermae of Titus; the one containing hot water being placed immediately over the furnace; and, as the water was drawn out from thence, it was supplied from the next, the tepidarium, which was already considerably heated from its contiguity to the furnace and the hypocaust below it, so that it supplied the deficiency of the former without materially diminishing its temperature; and the vacuum in this last was again filled up from the farthest removed, which contained the cold water received directly from the square reservoir seen behind them; a principle which has at length been introduced into the modern bathing establishments, where its efficacy, both in saving time and expense, is fully acknowledged. The boilers themselves no longer remain, but the impressions which they have left in the mortar in which they were embedded are clearly visible, and enable us to ascertain their respective positions and dimensions, the first of which, the caldarium, is represented in the annexed cut.

Behind the coppers there is another corridor (16), leading into the court or atrium (17) appropriated to the servants of the bath, and which has also the convenience of an immediate communication with the street by the door at C.

We now proceed to the adjoining set of baths, which were assigned to the women. The entrance is by the door A, which conducts into a small vestibule (18), and thence into the apodyterium (19), which, like the one in the men's bath, has a seat (pulvinus et gradus) on either side built up against the wall. This opens upon a cold bath (20), answering to the natatio of the other set, but of much smaller dimensions, and probably similar to the one denominated by Pliny (l. c.) pulvis. There are four steps on the inside to descend into it. Opposite to the door of entrance into the apodyterium is another doorway which leads to the tepidarium (21), which also communicates with the thermal chamber (22), on one side of which is a warm bath in a square recess, and at the further extremity the Laconicum with its ladirum. The floor of this chamber is suspended, and its walls perforated for flues, like the corresponding one in these the Abbate Iorio (Plan de Pompeii) ingeniously suggests that they were an old set of baths, to which the larger ones were subsequently added when they became too small for the increasing wealth and population of the city. But the story, already quoted, of the consul's wife who turned the men out of their baths at Ternum for her convenience, seems sufficiently to negative such a supposition; and to prove that the inhabitants of ancient Italy, if not more selfish, were certainly less gallant than their successors. In addition to this, Vitruvius expressly enjoins that the baths of the men and women, though separate, should be contiguous to each other, in order that they might be supplied from the same boilers and hypocaust (v. 10); directions which are here fulfilled to the letter, as a glance at the plan will demonstrate.

It does not come within the scope of this article to investigate the source from whence, or the manner in which, the water was supplied to the baths of Pompeii. But it may be remarked that the suggestion of Mazois, who wrote just after the excavation was commenced, and which has been copied from him by the editor of the volumes on Pompeii published by the Society for the Diffusion of Useful Knowledge, was not confirmed by the excavation; and those who are interested in the matter may consult the fourth appendix to the Plan de Pompeii, by the Abbate Iorio.

Notwithstanding the ample account which has been given of the plans and usages respecting baths in general, something yet remains to be said about that particular class denominated Thermae; of which establishments the baths in fact constituted the smallest part. The thermae, properly speaking, were a Roman adaptation of the Greek gymnasium [GYMNASIUM], or palaestra, as described by Vitruvius (v. 11); both of which contained a system of baths in conjunction with conveniences for athletic games and youthful sports, exedrae in which the rhetoricians declaimed, poets recited, and philosophers lectured—as well as porticoes and vestibules for the idle, and libraries for the learned. They were decorated with the finest objects of art, both in painting and sculpture, covered with precious marbles, and adorned with fountains and shaded walks and plantations, like the groves of the Academy. It may be said that they began and ended with the Empire, for it was not until the time of Augustus that these magnificent structures were commenced. M. Agrippa is the first who afforded these luxuries to his countrymen, by bequeathing these the Abbate Iorio (Plan de Pompeii) ingeniously suggests that they were an old set of baths, to which the larger ones were subsequently added when they became too small for the increasing wealth and population of the city. But the story, already quoted, of the consul's wife who turned the men out of their baths at Ternum for her convenience, seems sufficiently to negative such a supposition; and to prove that the inhabitants of ancient Italy, if not more selfish, were certainly less gallant than their successors. In addition to this, Vitruvius expressly enjoins that the baths of the men and women, though separate, should be contiguous to each other, in order that they might be supplied from the same boilers and hypocaust (v. 10); directions which are here fulfilled to the letter, as a glance at the plan will demonstrate.

ample remains still exist; and even as late as Con-
stantine, besides several which were constructed
by private individuals, P. Victor enumerates six-
has added four more.

Previously to the erection of these establishments
for the use of the population, it was customary for
those who sought the favour of the people to give
them a day's bathing free of expense. Thus, ac-
turning to Dion Cassius (xxxvii. p. 143), Faustus,
the son of Sulla, furnished warm baths and
oil gratis to the people for one day; and Augustus
on one occasion furnished warm baths and barbers
to the people for the same period free of expense
(Id. liv. p. 755), and at another time for a whole
year to the women as well as the men. (Id. xlix.
p. 600.) Hence it is fair to infer that the quadrans
paid for admission into the balneae was not exacted
at the thermae, which, as being the works of the
emperors, would naturally be opened with imperial
generosity to all, and without any charge, other-
wise the whole city would have thronged to the
establishment bequeathed to them by Agrippa;
and in confirmation of this opinion it may be re-
marked that the old establishments, which were
probably erected by private enterprise (comp. Plin.
H. N. ix. 54. s. 79), were termed meritoriae. (Plin.
Ep. ii. 17.) Most, if not all, of the other regula-
tions previously detailed as relating to the economy
of the baths, apply equally to the thermae; but it

is to these establishments especially that the disso-
lute conduct of the emperors, and other luxurious
indulgences of the people in general, detailed in
the compositions of the satirists and later writers,
must be considered to refer.

Although considerable remains of the Roman
thermae are still visible, yet, from the very ruin-
ous state in which they are found, we are far from
being able to arrive at the same accurate know-
ledge of their component parts, and the usages to
which they were applied, as has been done with
respect to the balneae; or indeed to discover a
satisfactory mode of reconciling their constructive
details with the description which Vitruvius has
left of the baths appertaining to a Greek palaestra,
or to the description given by Lucian of the baths
of Hippas. All, indeed, is doubt and guess-work:
the learned men who have pretended to give an
account of their contents differing in almost all the
essential particulars from one another. And yet
the great similarity in the ground-plan of the three
which still remain cannot fail to convince even a
superficial observer that they were all constructed
upon a similar plan. Not, however, to dismiss
the subject without enabling our readers to form
something like a general idea of these enormous
edifices, which, for their extent and magnificence,
have been likened to provinces—(in modum provin-
ciarum exstructae, Amm. Marc. xvi. 6)—a ground-
plan is annexed of the Thermae of Caracalla, which
are the best preserved amongst those remaining, and which were perhaps more splendid than all the rest. Those apartments, of which the use is ascertained with the appearance of probability, are alone marked and explained. The dark parts represent the remains still visible, the open lines are restorations.

A, Portico fronting the street made by Caracalla when he constructed his thermae. — B, Separate lathering-rooms, either for the use of the common people, or perhaps for any persons who did not wish to bathe in public. — C, Apodyteria attached to them. — D, D, and E, the porticoes. (Vitruv. v. 11.) — F, F, Exedrae, in which there were seats for the philosophers to hold their conversations. (Vitruv. l. c.; Cic. De Orat. ii. 5.) — G, Hypraethrae, passages open to the air.— Hypraethrae ambulationes quas Graeci περιπετείας, nostri xystos appellant. (Vitruv. l. c.) — H, H, Stadia in the palaea— quadrata sive oblonga. (Vitruv. l. c.) — I, I, Possibly schools or academies where public lectures were delivered. — J, J, and K, K, Rooms appropriated to the servants of the baths (balneaiores). In the latter are staircases for ascending to the principal reservoir. — L, Space occupied by what was called the theatrium. — M, The arena or stadium in which the youth performed their exercises, with seats for the spectators (Vitruv. l. c.), called the theatridium. — N, N, Reservoirs, with upper stories, sectional elevations of which are given in the two subjoined sections of the plan. (Vitruv. l. c.) — O, Aqueduct which supplied the baths. — P, The cistern or piscina. This external range of buildings occupies one mile in extent.

We now come to the arrangement of the interior, for which it is very difficult to assign satisfactory destinations. — Q, represents the principal entrances, of which there were eight. — R, the walkia, piscinae, or cold-water bath, to which the direct entrance from the portico is by a vestibule on either side marked S, and which is surrounded by a set of chambers which served most probably as rooms for undressing (apodyteria), anointing (uncturaria), and stations for the capsariorum. Those nearest to the nursery were perhaps the conisteria, where the powder was kept which the wrestlers used in order to obtain a firmer grasp upon their adversaries:

"Ille cavis hausto spargit me pulvere palmis, 
Inque vicem fulvae tactu flavescit arenae." (Ovid, Met. ix. 35.)

(See also Salmis. Ad Vert. P. 217, and Mercariais, De Art. Gymn. i. 8.) The inferior quality of the ornaments which these apartments have had, and the staircases in two of them, afford evidence that they were occupied by menials. 

A, is considered to be the tepidarium, with four warm baths (U, U, U, U) taken out of its four angles, and two labra on its two flanks. There are steps for ascending into the baths, in one of which traces of the conduit are still manifest. Thus it would appear that the centre part of this apartment served as a tepidarium, having a balneum or calda turrito in four of its corners. The centre part, like that also of the preceding apartment, is supported by eight immense columns.

The apartments beyond this, which are too much dilapidated to be restored with any degree of certainty, contained of course the laconicum and auditoria, for which the round chamber W, and its appurtenances seem to be adapted, and which are also contiguous to the reservoirs, Z, Z. (Vitruv. v. 11.)

e, e, probably comprised the ephebia, or places where the youth were taught their exercises, with the appurtenances belonging to them, such as the sphaeristernum and corycæum. The first of these takes its name from the game at ball, so much in favour with the Romans, at which Martial's friend was playing when the bell sounded to announce that the water was ready. (Mart. xiv. 163.) The latter is derived from κάρπος, a sack (Hesych. s. v.), which was filled with bran and olive husks for the young, and sand for the more robust, and then suspended at a certain height, and swung backwards and forwards by the players. (Anul. De Gymn. Const. p. 9; Antill. ap. Ordes. Coll. Med. 6.)

The chambers also on the other side, which are not marked, probably served for the exercises of the palaestra in bad weather. (Vitruv. v. 11.)

These baths contained an upper story, of which nothing remains beyond what is just sufficient to indicate the fact. They have been mentioned and eulogized by several of the Latin authors. (Spar- 

tian, Caracall. c. 9 ; Lamp. Heliogab. c. 17, 

Aler. Sever. c. 25; Europ. viii. 11; Olymp. 

It will be observed that there is no part of the bathing department separated from the rest, which could be assigned for the use of the women exclusively. From this it must be inferred either that both sexes always bathed together promiscuously in the thermæ, or that the women were excluded altogether from these establishments, and only admitted to the balnea.

It remains to explain the manner in which the immense body of water required for the supply of a set of baths in the thermæ was heated, which has been performed very satisfactorily by Pirancai and Cameron, as may be seen by a reference to the two subjoined sections of the castellum aquaeductus and piscina belonging to the Thermae of Caracalla.

A, Arches of the aquaeduct which conveyed the water into the piscina B, from whence it flowed into the upper range of cells through the aperture at C, and thence again descended into...
the lower ones by the aperture at D, which were placed immediately over the hypocaust E; the praefurnium of which is seen in the transverse section, at F in the lower cut. There were thirty-two of these cells arranged in two rows over the hypocaust, sixteen on each side, and all communicating with each other; and over these a similar number similarly arranged, which communicated with those below by the aperture at D. The parting walls between these cells were likewise perforated with fissures, which served to disseminate the heat all around the whole body of water. When the water was sufficiently warm, it was turned on to the baths through pipes conducted likewise through fissures in order to prevent the loss of temperature during the passage, and the vacuum was supplied by tepid water from the range above, which was replenished from the piscina; exactly upon the principle represented in the drawing from the Thermae of Titus, ingeniously applied upon a much larger scale. (The most important modern works on the Roman baths are the following: Winckelmann, numerous passages in his works; the descriptions of the Roman baths by Cameron, Lond. 1772, and Palladio and Scamozzi, Vicenza, 1765; Stieglitz, Architektur der Baukunst, vol. ii. p. 287, &c.; Hirt, Lehr der Gebäude, p. 253, &c.; Weinbrenner, Entwürfe und Errichtungen alterer Gebäude, Carlsruhe, 1822, part 1; the editors of Vitruvius, especially Schneider, vol. ii. pp. 375—391; for the baths of Pompeii, Bechi, Mus. Borbon. vol. ii. pp. 49—52; Gell, Pompeiana; Pompeii in the Lib. Ent. Know.; and for the best summary of the whole subject, Becker, Gallus, vol. ii. p. 11, &c.)

**BALTEUS**, or **BALTEA** in the plural (τελαμών), a belt, a shoulder-belt, a baldric, was used to suspend the sword; and, as the sword commonly hung beside the left hip, its belt was supported by the right shoulder, and passed obliquely over the breast, as is seen in the beautiful cameo here introduced from the Florentine Museum. In the Homeric times the Greeks also used a belt to support the shield; and this second belt lay over the other, and was larger and broader than it (Ili. xiv. 401—406); but as this shield-belt was found inconvenient, it was superseded by the invention of the Carian ἕξαυν [CLIPERUS]. The very early disuse of the shield-belt accounts for the fact, that this part of the ancient armour is never exhibited in paintings or sculptures. A third use of the balteus was to suspend the quiver, and sometimes together with it the bow. (Nemes. Cyneget. 91.) The belt was usually made of leather, but was ornamented with gold, silver, and precious stones, and on it subjects of ancient art were frequently embroidered or embossed. (Herod. i. 171; ἰηρότος τελαμών, Od. xi. 610; φαεών, Ili. xii. 401; Virg. Aen. v. 312.) The belts of the Roman emperors were also magnificently adorned, and we learn from inscriptions that there was a distinct officer—the baltearius—who had the charge of them in the imperial palace. (Trebell. Poll. Gallien. 16.)

**BA'LTEUS**, in architecture. Vitruvius applies the term "baltei" to the bands surrounding the volute on each side of an Ionic capital. (De Arch. iii. 5. ed. Schneider; Genelli, Briefe über Vitruv, ii. p. 35.) [COLUMNA.] Other writers apply it to the praecinctio of an amphitheatre. (Calpurn. Ecl. vii. 47; Tertullian, De Spectac. 3; Vitruv. vii. 47; Amm. Aen. 106.) In the amphitheatre at Verona the baltei are found by measurement to be 2½ feet high, the steps which they enclose being one foot two inches high. (J. Y.)

**BAPTISTÉ'Riüm. [BA'LNEUM.]**

**BARATHRON (βαράθρον),** also called ORUGMA (ὀργυμα), was a deep pit at Athens, with hooks on the sides, into which criminals were cast. It was situated in the demus Κειμίδα. It is mentioned as early as the Persian wars, and continued to be employed as a mode of punishment in the time of the orators. The executioner was called άξιον φορτίον τοιναυ, (Schol. in Aristoph. Plat. 431; Harpcrat. s. v.; Herod. vii. 133; Xen. Hell. i. 7. § 21; Lycurg. c. Locrat. p. 221; Deinarch. c. Dem. p. 49; Wachsmuth, Hellen. Alterthümer, vol. ii. p. 204, 2nd edit.) It corresponded to the Spartan Cendas. [CREADAS.]

**BARBA** (πώγων, γένεων, ύπηρη, Aristoph. Lysist. 1072), the beard. The fashions which have prevailed at different times, and in different countries, with respect to the beard, have been very various. The most refined modern nations regard the beard as an encumbrance, without beauty or meaning; but the ancients generally cultivated its growth and form with special attention; and that the Greeks were not behind-hand in this, any more than in other arts, is sufficiently shown by the statues of their philosophers. The phrase πώγωντροφείων, which is applied to letting the beard grow, implies a positive culture. Generally speaking, a thick beard, πώγων βαθος, or δαρος, was considered as a mark of manliness. The Greek philosophers were distinguished by their long beards as a sort of badge, and hence the term which Perius (Sat. iv. 1) applies to Socrates, magister barbatis. The Homeric heroes were bearded men. So Agamemnon, Ajax, Menelaus, Ulysses (Il. xxii. 74, xxiv. 516, Od. xvi. 176). According to Chrissippus, cited by Athenaeus (xiii. p. 565), the Greeks wore the beard till the time of Alexander the Great, and he adds that the first man who was shaven was called ever after κορηνθη, "shaven" (from κείρον). Plutarch (Thes. c. 5) says that the reason for the shaving was that they might not be pulled by the beard in battle. The custom of shaving the beard continued among the Greeks till the time of Justinian, and during that period even the statues of the philosophers...
were without the beard. The philosophers, however, generally continued the old badge of their profession, and their ostentation in so doing gave rise to the saying that a long beard does not make a philosopher. The philosophers, however, generally continued the old badge of their profession, and their ostentation in so doing gave rise to the saying that a long beard does not make a philosopher. The philosophers, however, generally continued the old badge of their profession, and their ostentation in so doing gave rise to the saying that a long beard does not make a philosopher. The philosophers, however, generally continued the old badge of their profession, and their ostentation in so doing gave rise to the saying that a long beard does not make a philosopher. The philosophers, however, generally continued the old badge of their profession, and their ostentation in so doing gave rise to the saying that a long beard does not make a philosopher.
something by them. So Martial, in rallying a fop, vices, by using different kinds of plasters, &c., from which it appears that the person addressed was referred to by Martial.

What will your nails do? How will you get your nails pared? So Thullius says (i. 8, 11), quid (prodest) unges artificialis docta subsecuisse manus; from which it appears that the person addressed was in the habit of employing one of the more fashionable torsors. The instruments used are referred to by Martial. (Epig. xiv. 36, Instrumenta torsor.)

BARBITOS, or BA’RBITON. [LYRA.]

BASANOS (Βασανός). [TORMENTUM.]

BASCA’NA (Βασκανία). [FASCINUM.]

BASCAUDA, a British basket. This term, which remains with very little variation in the Welsh "baggaw," and the English "basket," was conveyed to Rome together with the articles denoted by it. We find it used by Juvenal (xii. 46) and by Martial (xiv. 99) in connections which imply that these articles were held in much esteem at Lebadeia, in Boeotia, in honour of Trophonius, which remains with very little variation in the temple of Augustus. The term is derived, according to the classic writers not unfrequently use the terms basilica, in order that the public might suffer as little as possible from exposure to bad weather, whilst going to, or returning from, their place of business; and sometimes merely as the annexed representation of the basilica Aemilia from a medal of Lepidus, with the style of columns, as the annexed representation of the basilica Aemilia from a medal of Lepidus, with the annexed representation of the basilica Aemilia from a medal of Lepidus, with its original form it may be described as an court of the Hellanodicae, in the old agora of Elis, was exactly of the form of a basilica. [AGORA.]

The name alone would make it highly probable that the Romans were indebted to the Greeks for the idea of the building, which was probably borrowed from the basilileos at Athens. In its original form it may be described as an insulated portico, detached from the agora or forum, for the more convenient transaction of business, which formerly took place in the porticoes of the agora itself; in fact, a sort of agora in miniature. The court of the Heilanoideae, in the old agora of Elis, was exactly of the form of a basilica. [AGORA.]

The first edifice of this description was not erected until B.c. 184 (Liv. xxxix. 44); for it is expressly stated by the historian, that there were no basilicae at the time of the fire, which destroyed so many buildings in the forum, under the consulship of Marcellus and Luævinus, B.c. 210. (Liv. xxvi. 27.) It was situated in the forum adjoining the curia, and was denominated basilica Porcia, in commemoration of its founder, M. Porcius Cato. Besides this, there were twenty others, erected at different periods, within the city of Rome (Pitisci. Lex. Ant. s. v. Basilica), of which the following are the most frequently alluded to by the ancient authors: - 1. Basilica Semproniana, constructed by Titus Sempronius, n. c. 171 (Liv. xiv. 16); and supposed, by Donati and Nardini, to have been between the vicus Tusculus and the Velabrum. 2. Basilica Opimia, which was above the comitum. 3. Basilica Paula Aemilia, or Basilica Amelia, called also Regina Paula by Statius (l.c.). Cicero (Ad Att. iv. 16) mentions two basilicae of this name, of which one was built, and the other only restored, by Paulus Aemilius. Both these edifices were in the forum, and one was celebrated for its open peristylogy of Phrygian columns. A representation of this one is given below from a coin of the Aemilia gens. (Plin. H. N. xxxvi. 24; Appian, B. C. ii. 26; Plut. Cas. 29.) The position of these two basilicae has given rise to much controversy, a brief account of which is given in the Dict. of Biol. Vol. II. p. 766. 4. Basilica Pompeii, called also regia (Suet. Aug. 31), near the theatre of Pompey. 5. Basilica Julia, erected by Julius Caesar, in the forum, and opposite to the basilica Aemilia. (Suet. Cæs. 37.) 6. Basilica C(ai) C(aii) et Lucii, the grandsons of Augustus, by whom it was founded. Basilica Ulpia, or Traiani, in the forum of Trajan. 7. Basilica Constantini, erected by the emperor Constantine, supposed to be the ruin now remaining on the via sacra, near the temple of Rome and Venus, and commonly called the temple of Peace. Of all these magnificent edifices nothing now remains beyond the ground-plan, and the bases and some portion of the columns and superstructure of the two last. The basilica at Pompeii is in better preservation; the external walls, ranges of columns, and tribunal of the judges, being still tolerably perfect on the ground-floor.

The forum, or, where there was more than one, the one which was in the most frequented and central part of the city, was always selected for the site of a basilica; and hence it is that the classic writers not unfrequently use the terms forum and basilica synonymously, as in the passage of Claudian. (De Honor. Cons. vi. 645): - Dessetaque cuimpl Regia avantra foris. Basilica Ulpia lictor, where the forum is not meant, but the basilica which was in it, and which was surrounded by the lictors who stood in the forum. (Pitisci. Lex. Ant. l.c.; Nard. Rom. Ant. v. 9.)

Vitruvius (v. 1) directs that the most sheltered part of the forum should be selected for the site of a basilica, in order that the public might suffer as little as possible from exposure to bad weather, whilst going to, or returning from, their place of business; he might also have added, for their greater convenience whilst engaged within, since many of these edifices, and all of the more ancient ones, were entirely open to the external air, being surrounded and protected solely by an open peristylogy of columns, as the annexed representation of the basilica Aemilia from a medal of Lepidus, with the inscription, clearly shows.

When, however, the Romans became wealthy and refined, and consequently more effeminate, a wall was substituted for the external peristylogy, and
the columns were confined to the interior; or, if used externally, it was only in decorating the
πλαταια, or vestibule of entrance. This was the
only change which took place in the form of these
buildings, from the time of their first institution,
until they were converted into Christian churches.
The ground plan of all of them is rectangular, and
their width not more than half, nor less than one-
third of the length (Vitruv. I. c.); but if the area
on which the edifice was to be raised was not propor-
tionally long, small chambers (chalcidica) were
cut off from one of the ends (Vitruv. I. c.),
which served as offices for the judges or mer-
chants. This area was divided into three parts,
consisting of a central nave (media porticus), and
two side aisles, each separated from the centre by
a single row of columns—a mode of construction
particularly adapted to buildings intended for the
reception of a large concourse of people. At one
end of the centre aisle was the tribunal of the
judge, in form either rectangular or circular, and
sometimes cut off from the length of the grand
nave (as is seen in the annexed plan of the basilica
at Pompeii, which also affords an example of the
chambers of the judices, or chalcidica, above men-
tioned), or otherwise thrown out from the hinder
wall of the building, like the tribune of some of
the most ancient churches in Rome, and then called
the hemicycle—an instance of which is afforded
in the basilica Traiani, of which the plan is given
below. It will be observed that this was a most
sumptuous edifice, possessing a double tribune,
and double row of columns on each side of the centre
aisle, dividing the whole into five aisles.

The internal tribune was probably the original
construction, when the basilica was simply used as
a court of justice; but when those spacious halls
were erected for the convenience of traders as well
as loungers, then the semicircular and external tri-
bune was adopted, in order that the noise and con-
fusion in the basilica might not interrupt the
proceedings of the magistrates. (Vitruv. I. c.) In
the centre of this tribune was placed the curule
chair of the praetor, and seats for the judices, who
sometimes amounted to the number of 180 (Plin.
Ep. vi. 33), and the advocates; and round the
sides of the hemicycle, called the wings (coronae),
were seats for persons of distinction, and for the
parties engaged in the proceedings. It was in the
wing of the tribunal that Tiberius sat to overawe
the judgment at the trial of Granius Marcellus.

From the description which has been given, it
will be evident how much these edifices were
adapted in their general form and construction to
the uses of a Christian church; to which purpose
many of them were, in fact, converted in the time
of Constantine. Hence the later writers of the

(Tacit. Ann. i. 75.) The two side aisles, as has
been said, were separated from the centre one by a
row of columns, behind each of which was placed
a square pier or pilaster (parastata, Vitruv. I. c.),
which supported the flooring of an upper portico,
similar to the gallery of a modern church. The
upper gallery was in like manner decorated with
BASILICA.

About A. D. 876, the Greek emperor Basilus, the Macedonian, commenced this work, which was completed by his son Leo, the philosopher, who reigned from A. D. 886 to 911. Before the reign of Basilus, there had been several Greek translations of the Pandect, the Code, and the Institutes; but there was no authorised Greek version of them. The numerous Constitutions of Justinian’s successors, and the contradictory interpretations of the jurists, were a further reason for publishing a revised Greek text under the imperial authority. This great work was called Ἰνδικαθαρίσεις τῶν παλαιῶν νόμων, τό ἐξηκοντάδεκα, ὁ βασιλικός (νόμος) and τὰ βασιλικὰ. It was revised by the order of Constantinus Porphyrogenneta, about A. D. 945. The Basilica comprised the Institutes, Pandect, Code, the Novellae, and the imperial Constitutions subsequent to the time of Justinian, in sixty books, which are subdivided into titles. For the Institutes the paraphrase of Theophilius was used, for the Digest the σΧδαν of Stephanus, and the commentary of Cyriacus and of an anonymous author, for the Code the κατὰ σδας of Thalaeus and the work of Theodorus, and for the Novellae, except the 168, the Summae of Theodorus, Athanasius, and Philoxenus. The publication of this authorised body of law in the Greek language led to the gradual disuse of the original compilations of Justinian in the East. But the Roman law was thus more firmly established in Eastern Europe and Western Asia, where it has maintained itself among the Greek population to the present day.

The arrangement of the matter in the Basilica is as follows: 1. the titles, 2. the provisions of each title, 3. the constitutions of the Code, and next in order the provisions contained in the Institutes and the Novellae, which confirm or complete the provisions of the Pandect. The Basilica does not contain all that the Corpus Juris contains; but it contains numerous fragments of the opinions of ancient jurists, and of imperial Constitutions, which are not in the Corpus Juris.

The Basilica was first published, with a Latin version, by Fabrot, Paris, 1647, seven vol. folio. Fabrot published only thirty-six books complete, and six others incomplete: the other books were made up from an extract from the Basilica and the Scholiasts. Four of the deficient books were afterwards found in MS., and published by Gerhard Meerman, with a translation by M. Otto Reitz, in the fifth volume of his Thesaurus Juris Civilis et Canonici; and they were also published separately in London, in 1765, folio, as a supplement to Fabrot’s edition. A new critical edition, by C. Guul. E. Heimbach, Leipzig, 1833, &c., 4to., has been commenced. (Bücking, Institutionen, vol. i. p. 105.)

BASTERTA, a kind of litter (lectica) in which women were carried in the time of the Roman emperors. It appears to have resembled the lectica very closely; and the only difference apparently was, that the lectica was carried by slaves, and the basterna by two mules. Several etymologies of the word have been proposed. Salmasius supposes it to be derived from the Greek βαστέρας (Salm. ad Lempred. Heliog. 21). A description of the basterna is given by a poet in the Anth. Lat. iii. 183.

BAXA, or BAXEA, a sandal made of vegetable leaves, twigs, or fibres. According to Isidore (Orig. xix. 33), this kind of sandal was worn on the stage by comic, whilst the cothurnus was appropriate to tragic actors. When, therefore, one of the characters in Plautus (Men. ii. 3. 40) says, "Quis exterp untur baxae?" we may suppose him to point to the sandals on his feet. Philosophers also wore sandals of this description, at least in the time of Tertullian (De Pallio, 4) and Appuleius (Met. ii. and xi.), and probably for the sake of simplicity and cheapness. Isidore adds, that baxae were made of willow (σαλίς), and that they were also called colones; and he thinks that the latter term was derived from the Greek κάλυς, wood. From numerous specimens of them discovered in the catacombs, we perceive that the Egyptians made them of palm-leaves and papyrus. (Wilkinson, Manners and Customs, vol. iii. p. 536.) They are sometimes observable on the feet of Egyptian statues. According to Herodotus, sandals of papyrus (ἀόρηδεμα βάσλα) were a part of the required and characteristic dress of the Egyptian priest. We may presume that he intended his words to include not only sandals made, strictly speaking, of papyrus, but those also in which the leaves of the date-palm were an ingredient, and of which Appuleius makes distinct mention, when he describes a young priest covered with a linen sheet and wearing sandals of palm (Iuteis amiculis intectum, pedesque palmeis baxés inditum, Met. ii.). The accompanying woodcut shows two sandals exactly answering to this description, from the collection in the British Museum. The upper outer sole was worn on the right foot. It had a loop on the right side for fastening the band which went across the instep. This band, together with the ligature connected with it, which was inserted between the great and the second toe, is made of the stem of the papyrus, undivided and unwrought. The lower figure shows a sandal in...
which the portions of the palm-leaf are interlaced with great neatness and regularity, the sewing and binding being effected by fibres of papyrus. The three holes may be observed for the passage of the band and ligature already mentioned. [J. Y.]

BEBAIOSEOS DIKE' (βεβαιόσεως δίκη), an action to compel the vendor to make a good title, had recourse to when the right or possession of the purchaser was impugned or disturbed by a third person. A claimant under these circumstances, unless the present owner were inclined to fight the battle himself (Ἀτομαχίαν), was required to sue the vendor as the proper defendant in the cause (τις ἀτομάχους ἄρχεται). If the vendor were then unwilling to appear, the action in question was the legal remedy against him, and might be resorted to by the purchaser even when the earnest money had been paid. (Harpocrat. s. v. Ἀτομαχίαν, Ἀτομαχίατης.) From the passages in the oration of Applesides against Pantaenetus that bear upon the subject, it is concluded by Heraldis (Animad. in Sal. iv. 3. 6) that the liability to be so called upon was inherent in the character of a vendor, and therefore not the subject of specific warranty or covenants for title. The same critic also concludes, from the glosses of Hesychius and Suidas, that this action might in like manner be brought against a fraudulent mortgagee. (Animad. in Sal. iv. 3. in fin.) If the claimant had established his right, and been by the decision of the dicasia put in regu possession of the property, whether movable or otherwise, as appears from the case in the speech against Pantaenetus, the ejected purchaser was entitled to sue for reimbursement from the vendor by the action in question. (Pollux, viii. v.) The cause is classed by Meier (Ad. Process. p. 520) among the δίκαι πρὸς τινα, or civil actions that fell within the cognizance of the themomar.'

BEBAIOSEOS DIKE'. The word beneficium is equivalent to feudum or fief, in the writers on feudal law, and is an interest in land, or things inseparable from the land, or things immovable. (Font. lib. 2. tit. 1.) The beneficarius is he who has a beneficium. The word beneficarius often occurs in French historical documents from the fifth to the ninth century, and denotes the same condition of landed property, which at the end of the ninth century is denoted by feudum. From the end of the ninth century the word beneficium was frequently used instead of beneficiarius. (Gary, Histoire de la Civilisation en France, vol. iii. p. 247.) The term beneficium is also applied to an ecclesiastical pretenement. (Ducange, Gloss.)

The term beneficium is of frequent occurrence in the Roman law, in the sense of some special privilege or favour granted to a person in respect of age, sex, or condition. But the word was also used in other senses, and the meaning of the term, as it appears in the feudal law, is clearly derivable from the signification of the term among the Romans of the later republican and earlier imperial times. In the time of Cicero it was usual for a general, or a governor of a province, to report to the treasury the names of those under his command who had done good service to the state: those who were included in such report were said in beneficiis ad aerarium deforì. (Cic. Pro Arch. c. 5. Ad Fam. v. 29. and the note of Manutius.) It was required by a Lex Julia that the names should be given in within thirty days after the accounts of the general or governor. In beneficiis in these passages may mean that the persons so reported were considered as persons who had deserved well of the state, and so the word beneficium may have reference to the services of the individuals; but as the object for which their services were reported, was the benefit of the individuals, it seems that the term had reference also to the reward, immediate or remote, obtained for their services. The honours and offices of the Roman state, in the republican period, were called the beneficia of the Populus Romanus. Beneficiarius also signified any promotion conferred on or grant made to soldiers, who were thence called beneficiarii; this practice was common, as we see from inscriptions in Gruter (ii. 4, cxxx. 5), in some of which the word beneficiarius is represented by the two letters B.F. In this sense we must understand the passage of Caesar (De Bell. Civ. ii. 18) where he speaks of the magna beneficia and the magna clientela of Pompeius in Citerior Spain. Beneficiarius is also used by Caesar (De Bell. Civ. i. 75), to express the per-
son who had received a beneficium. It does not, however, appear from these passages, what the beneficium was. It might be at Pinnell of honour, or special exemption from service. (De Bell. Civ. iii. 38; Sueton. Tib. 12; Vegetius, De Re Militari, ii. 7.)

Beneficiarius is opposed by Festus (s. v.) to manuex, in the sense of one who is released from military service, as opposed to one who is bound to do military service.

Grants of land, and other things, made by the Roman emperors, were called beneficia, and were entered in a book called Liber Beneficiorum (Hyginus, De Epistulis Constii. p. 193, Goes.). The secretary or clerk who kept this book was called a commentarius beneficiorum, as appears from an inscription in Gruter (dixviiii. 1.) [G. L.]

BESTIARII (διαμοιχαγόρας), persons who fought with wild beasts in the games of the circus. They were either persons who fought for the sake of pay (aeutoramentum), and who were allowed arms, or they were criminals, who were usually permitted to have no means of defence against the wild beasts. (Cic. pro Sest. 64; Sen. De Benef. ii. 19, Ep. 70; Tertull. Apol. 9.) The bestiarii, who fought with the beasts for the sake of pay, and of whom there were great numbers in the latter days of the republic and under the empire, are always spoken of as distinct from the gladiators, who fought with one another. (Cic. in Vatin. 17; ad Qu. Fr. ii. 6, § 5.) It appears that there were schools in Rome, in which persons were trained to fight with wild beasts (scholae bestiarum or bestiariorum, Tertull. Apol. 35.)

BLAION DIKE' (βιαλων δίκη). This action might be brought whenever rapes of free persons, or the illegal and forcible seizure of property of any kind were the subject of accusation (Harpoecrat.); and we learn from Demosthenes (c. Panteon. p. 978. 11) that it came under the jurisdiction of the Forty. According to Plutarch (Solon 23) the law prescribed that ravishers should pay a fine of 100 drachmae; but other accounts merely state generally that the convict was mulcted in a sum equal to twice at which the damages were laid (διπλή την βλαδίν δείκει γλυκίν, Lys. De Cœde Evatath. p. 33; Dem. c. Med. p. 523. 20; Harpocr.)—and the plaintiff in such case received one half of the fine; and the state, as a party mediately injured, the other. To reconcile these accounts Meier (Att. Proc. p. 545) supposes the rape to have been estimated by law at 100 drachmae, and that the plaintiff fixed the damages in reference to other injuries simultaneous with, or consequent upon, the perpetration of the main offence. With respect to aggressions upon property, the action βιανων is to be distinguished from εξοίκιας, in that the former implies the employment of actual violence, the latter merely such detention of property as amounted to violence in the contemplation of law (Meier, Att. Proc. p. 546), as for instance the nonpayment of damages, and the like, to the successful litigant after an award in his favour by a court of justice. (Dem. c. Med. 540. 24.) It was, however, in the hands of the praetor. (Plut. [S. M.]

BIBLIOPOLAIA. [LIBER.]

BIBLIOTHECA (βιβλιοθηκή, or ἀποθηκή βιβλίων), primarily, the place where a collection of books was kept; secondarily, the collection itself. (Festus, s. v.) Little as the states of antiquity dealt with the instruction of the neœle, public collections of books appear to have been very ancient. The Ptolemies at Alexandria, began under Ptolemy Soter, but increased and re-arranged in an orderly and systematic manner by Ptolemy Philadelphus, who also appointed a fixed librarian and otherwise provided for the usefulness of the institution. The library of the Ptolemies contained, according to A. Gellius (vi. 17), 700,000 volumes; according to Josephus, 500,000; and according to Seneca (De Tranq. An. vii. 400,000. The different reckoning of different authors may be in some measure, perhaps, reconciled by supposing that they give the number of books only in a part of the library; for it consisted of two parts, one in the quarter of the city called Bruchœion, the other in the part called Serapeion. Ptolemy Philadelphus bought Aristotle's collection to add to the library, and Ptolemy Euergetes continued to add to the stock. A great part of this splendid library was consumed by fire in the siege of Alexandria by Julius Caesar; some writers say that the whole was burnt; but the discrepancy in the numbers stated above seems to confirm the opinion that the fire did not extend so far. At any rate, the library was soon restored, and continued in a flourishing condition till it was destroyed by the Arabs A. D. 640. (See Gibbon, c. 51.) Connected with the greater division of the library, in the quarter of Alexandria called Bruchœion, was a sort of college to which the name of Mouseion (or Museum) was given. Here many favoured literati pursued their studies, transcribed books, and so forth; lectures also were offered. The Ptolemies were not long without a rival in zeal. Eumenes, king of Pergamus, became a patron of literature and the sciences, and established a library, which, in spite of the prohibition against exporting paper issued by Ptolemy, jeënsus or his success, became very extensive, and perhaps next in importance to the library of Alexandria. It remained, and probably continued to increase, till Antonius made it a present to Cleopatra. (Plint. Anton. 58.)

The first public library in Rome was that founded by Asinius Pollio (Plin. H. N. vii. 30; Isid. Orig. vi. 5), and was in the atrium Libertatis on Mount Aventine. Julius Caesar had projected a grand Greek and Latin library, and had commissioned Varro to take measures for the establishment of it; but the scheme was prevented by his death. (Suet. Jul. 44.) The library of Pollio was followed by that of Augustus, in the temple of Apollo on the Mount Palatine (Suet. Aug. 29; Dion Cass. liti. 1), and another, bibliotheca Oeotianæ (so called from Augustus's sister Octavia), forming part of the Porticus Octavia. (Dion Cass. xlix. 43; Plut. Marcell. 30.) There were also
BIDENTAL.

BLABES DIKE. 203

libraries on the capitol (Suet. Dom. 20), in the temple of Peace (Gell. xvi. 8), in the palace of Tiberius (Gell. xiii. 18), besides the Ulpian library, which was the most famous, founded by Trajan (Gell. xi. 17; Dion Cass. lxvii. 16), called Ulpian from his own name Ulpius. This library was attached by Dioctetan, as an ornament, to his thermae. (Vopisc. Prob. 2.)

Private collections of books were made at Rome soon after the second Punic war. The zeal of Atticus, and others in increasing their libraries is well known. (Cic. Ad Att. i. 7, 10, iv. 5; Ad Quint. Fr. iii. 4.) The library of Lucullus was very extensive, and he allowed the noble free access to it. (Plut. Lucull. 42.) Towards the end of the republic it became, in fact, a library, and reserved for that purpose. However ignorant or unadvised a person might be, it was not always to appear learned by having a library, though he might never even read the titles of the books. (Seneca (De Tranq. An. 9) condemns the rage for mere book-collating, and rallies those who were more pleased with the outside than the inside. Lucian wrote a separate piece to expose this common folly (πρὸς ἀναδεικνύων καὶ παλλάσσων θεωρητρόν.

A library generally had an eastern aspect. (Vopisc. Hist. 7.) At Heraclea a library fully turned round was discovered. Round the walls it had cases containing the books in rolls (Liber); these cases were numbered. It was a very small room; so small that a person by stretching out his arms could touch both sides of it. The cases were called either armaria (Plin. Ep. ii. 17; Vopisc. Tacit. 8), or localamina (Seneca, De Tranq. An. 9), or forula (Juv. Sat. iii. 219), or nidii (Mart. i. 118, xvii. 17, 5). Asinius Pollio had set the fashion in his public library of adorning the room with the portraits and busts of celebrated men, as well as statues of Minerva and the Muses. This example was soon followed in the private libraries of the rich. (Juv. iii. 219; Plin. Ep. iii. 7, iv. 28; Cic. ad Fam. vii. 23; Plin. H. N. xxv. 2; Suet. Tib. 70; Mart. ix. Ep. ad Tarum; Lipsius, De Bibliothecis Syntagma, in Opera, vol. iii.; Becker, Gallus, vol. i. p. 160, &c.)

BICOS (Bíos), the name of an earthen vessel in common use among the Greeks. (Pollux, vi. 14, vii. 162, x. 73.) Hesychius (s. v.) defines it as a στάψιος with handles. It was used for holding wine (Xen. Anab. i. 9, § 25), and salted meat and fish. (Athen. iii. p. 116, f.) Herodotus (i. 194) speaks of βίκος φωνικών κατεγόρου ὀνόμα πάλανος, which some commentators interpret by "veils made of the wood of the palm tree full of wine." But as Enstatius (in Od. p. 1445) speaks of ὀνόμα φωνικοί βίκοι, we ought probably to read in Herodotus βίκος φωνικοῦ, κ. τ. ἀλ., "veils full of palm wine."

BIDENS. (Rastrum.)

BIDENTAL, the name given to a place where any one had been struck by lightning (Festus, s. v. Fulgorum), or where any one had been killed by lightning and buried. Such a place was considered sacred. Priests, who were called bidentales (i. e. sacerdotes), collected the earth which had been torn up by the lightning, and everything that had been scorched, and burnt it in the ground with a sorrowful murmur. (Lucenn. i. 696.) The officiating priest was said condere fulgar (Juv. Sat. vi. 587; compare Orelli, Inscr. vol. i. p. 431, No. 2482); he further consecrated the spot by sacrificing a two-year-old sheep (bidens), whence the name of the place and of the priest, and also erected an altar, and surrounded it with a wall or fence. It was not allowable to tread on the place (Persius, ii. 27), or to touch it, or even to look at it. (Amm. Marc. xxiii. 5.) Sometimes a bidental which had nearly fallen to decay from length of time was restored and renovated (Orelli, Inscr. No. 2483); but to remove the bounds of one (munere bidental), or in any way to violate its sacred precincts, was considered as sacrilege. (Hor. Art. Poet. 471.) From the passage in Horace, it appears to have been believed that a person who was guilty of profaning a bidental, would be punished by the gods with frenzy; and Seneca (Nat. Quaest. ii. 63) mentions another belief of a similar kind, that wine which had been struck by lightning would produce in any one who drank it death or madness. Persons who had been struck by lightning (fulgurit) were not removed, but were buried on the spot. (Pers. Sat. ii. 27; Plin. H. N. ii. 54; Hartung, Religion der Römer, vol. ii. p. 13.)

BIDIAEI (Bidiaei), called in inscriptions βίς or Βίbios, were magistrates in Sparta, whose business was to inspect the gymnastic exercises. (Vopisc. Hist. vi. 5.) Their house of meeting (βίς) was in the market-place. (Paus. iii. 11, § 2.) They were either five (Paus. l. c.) or six in number (Böckh, Corp. Inscrip. nr. 1271, 1364), and had a president who is called in inscriptions πρόεδρος βίδων. (Böckh, Corp. Inscrip. vol. i. p. 611.) Böckh conjectures that βίς or Βίbios is the Laconian form for βίς or Βίbios, and signifies witnesses and judges among the youth. (Comp. Müller, Dorians, iii. 7, § 8.) Valckenber (ad Herod. vi. 57) supposes that the bidiaei were the same as the νυμφίδαι; but the inscriptions given by Böckh show that the bidiaei and νυμφίδαι were two separate classes of officers.

BIGA or BIGAE. (Curris.)

BIGA'TUS. (Denarius.)

BIPÁLIUM. (Pal. A.)

BIREMIS. (Navi.)

BÍRUS. (Bipnos), a cape or hood, which was worn out of doors over the shoulders, and was sometimes elevated so as to cover the head. On the former account it is clasped by an ancient grammatician with the λατερα, and on the latter with the κώνη, or κώνινα. It had a long nap, which was commonly of sheep's wool, more rarely of beaver's wool. It probably derived its name from the red colour (φύσσος) of the wool of which it was made. It is only mentioned by the later writers. (Vopisc. Carin. 20; Claudian, Epigr. 37.)

BISSELLUM. (Sel.)

BISSEX'TUM. (Calend.)

BLABES DIKE. (Bádēs Díy). This action was available in all cases in which one person had sustained a loss by the conduct of another; and from the instances that are extant, it seems that whether the injury originated in a fault of omission or commission, or impaired the actual fortune of the plaintiff, or his prospective advantage, the action would lie, and might be maintained, against the defendant. It is of course impossible to enumerate all the particular cases upon which it would arise, but the two great classes into which βάδας may
E§Aai|/e ^ue, then came the name of the defendant, in Thessaly. (Thuc. i. 12.) Sixty years after festival derived its name and origin from the cir there occupation of it, was divided into several meis, but afterwards Boeotia. This country, during the taking of Troy they were expelled by the Thes- or (according to Philochorus in Harpocration, the Athenians were attacked by Eumolpus, Xuthus cumstance that when, in the reign of Erechtheus, the Etymol. Magn. and Euripides down to his own time, continued to celebrate the he had offered a sacrifice to Phobos; and, that in against the Amazons, did not give battle till after the Boeotarchs was of a military nature: thus they led upon conviction; the second, all injuries of property the nonfulfilment of a contract to which a penal specified the penalty to be paid by the defendant upon litigation; and when we consider that the damage done by Philocleon to the cake-woman's basket (Aristoph. Vesp.), and suppositional testimony given in the name of another, thereby rendering such person liable to an action, by which Apollo was called in Boeotia and other parts of Greece (Paus. ix. 17. § 1; Callimach. Hymn. Apoll. 69), seems to indicate that by this festival he was honoured as a martial god, who either by his actual presence or by his oracles afforded assistance in the dangers of war. The origin of the festival is, however, traced by different authors to different events in Grecian story. Plutarch (Thes. 27) says that Theseus, in his war against the Amazons, did not give battle till after he had offered a sacrifice to Phobos; and, that in commemoration of the successful battle which took place in the month of Boedromion, the Athenians, down to his own time, continued to celebrate the festival of the Boedromia. According to Suidas, the Etymol. Magn. and Euripides (Ion 59), the festival derived its name and origin from the circumstance that when, in the reign of Erechtheus, the Athenians were assisted by Eumolpus, Xuthus, or (according to Philochorus in Harpocratio, s. e.) his son Ion came to their assistance, and procured them the victory. Respecting the particulars of this festival nothing is known except that sacrifices were offered to Artemis. (Comp. Spanheim, ad Callim. Hymn. in Apoll. 69.)

BOEOTARCHES (Βοιατάρχης, or Βοιατάρχης). It is proposed under this head to give a brief account of the Boeotian constitution as well as of the Boeotarchs.

The Boeotarchs in ancient times occupied Arne in Thessaly. (Thuc. i. 12.) Sixty years after the taking of Troy they were expelled by the Thessalians, and settled in the country then called Cades, but afterwards Boeotia. This country, during their occupation of it, was divided into several states, containing each a principal city, with its ξυστελεις or ξυσμορίοι (inhabitants of the same μούρα, or district) living around it. Of these greater states, with dependent territories, there seem to have been in former times fourteen,—a number which frequently occurs in Boeotian inscriptions. (Paus. ii. 3. § 4.)

Each of the principal towns of Boeotia seems to have had its own Βοιατάρχης. (Xen. Hell. v. 2. § 29.) The Βοιατάρχης was presided over by an archon, who probably had succeeded to the priestly functions of the old kings; but possessed little, if anv. executive authority. The polemarchs, who, in treaties and agreements are mentioned next to the archon, had some executive authority, but did not command forces; e. g. they could imprison (Xen. Hell. l.c.), and they directed the levies of troops. But besides the archon of each separate state, there was an archon of the confederacy—ἀρχων τον Βοιατάρχης, most probably always a Theban. (Bickh. Inscri. 1593.) His name was annexed to all alliances and compacts which concerned the whole confederacy, and he was president of what Thucydides (v. 38) calls the four councils, who directed the affairs of the league (ἐπεν το κύριον ξυσμορίον). On important questions they seem to have been united; for the same author speaks of them as ἰδίως Βοιατάρχης, and informs us that the determinations of the Boeotarchs required the ratification of this body before they were valid. The Boeotarchs themselves were properly the military heads of the confederacy, chosen by the different states; but we also find them discharging the functions of an executive in various matters. For instance, in fact, they are represented by Thucydides (v. 38) as forming an alliance with foreign states; as receiving ambassadors on their return home; as negotiating with envoys from other countries; and acting as the representatives of the whole league. For the Boeotarches refused to sanction the measures they had resolved on in the particular case to which we are now alluding. Another instance in which the Boeotarchs appear as executive is their interference with Agestas, when his embarkment from Aulis for Asia (Xen. Hell. iii. 4. § 4), when they prevented him of offering sacrifice as he wished. (Plut. Ages. 6.)
and when at home, they took whatever measures were requisite to forward the military operations of the league, or of their own state: for example, we read of one of the Theban Boeotarchs ordering the Thesbans to come in arms to the ecleesia for the purpose of being ready to attack Plataea. (Paus. iv. 1. § 3.) Each state of the confederacy elected one Boeotarch, the Thesbans two (Thuc. ii. 2, iv. 91, vii. 30; Diod. xv. 51); although on one occasion, i.e. after the return of the exiles with Pelopidas (Plut. Pelop. 37), we find of there being three at a council. (Plut. Pelop. 13.) The total number from the whole confederacy varied with the number of the independent states. Mention is made of the Boeotarchs by Thucydides (iv. 91), in connection with the battle of Delium (b.c. 424). There is, however, a difference of opinion with respect to his meaning: some understand him to speak of eleven, some of twelve, and others of thirteen Boeotarchs.

Dr. Arnold is disposed to adopt the last number; and we think the context is in favour of the opinion that there were then thirteen Boeotarchs, so that the number of free states was twelve. At the time of the battle of Leuctra (b.c. 371), we find seven Boeotarchs mentioned (Diod. xv. 52, 53; Paus. ix. 13. § 3). On another occasion, when Greece was invaded by the Gauls (b.c. 279), we read of four. Livy (xiii. 43) states that there were twelve, but before the time (b.c. 171) to which his statement refers, Plataea had been reunited to the league. Still the number mentioned in any case is no test of the actual number, inasmuch as we are not sure that all the Boeotarchs were sent out by their respective states on every expedition or to every battle.

The Boeotarchs, when engaged in military service, formed a council of war, the decisions of which were determined by a majority of votes, the president being one of the two Theban Boeotarchs who commanded alternately. (Thuc. iv. 91; Diod. xv. 51.) Their period of service was a year, beginning about the winter solstice; and whoever continued in office longer than his time, was punishable with death both at Thebes and in other cities (Plut. Pelop. 24; Paus. ix. 14. § 8.) Epameinondas and Pelopidas did so on the occasion of Laconica (b.c. 369), but their eminent services saved them; in fact the judges did not even come to a vote respecting the former. At the expiration of the year a Boeotarch was eligible to office a second time, and Pelopidas was repeatedly chosen. From the case of Epameinondas and Pelopidas, who were brought before Theban judges (δικασταὶ), for transgression of the law which limited the time of office, we may conclude that each Boeotarch was responsible to his own state alone, and not to the general body of the four councils.

Mention is made of an election of Boeotarchs by Livy (xxviii. 27, xii. 44). He further informs us that the league (conciliation) was broken up by the Romans b.c. 171. (Compare Polyb. xxviii. 2, § 10 — τὸ Βοιωτῶν ἔθνος κατελήθη.) Still it must have been partially revived, as we are told of a second breaking up by the Romans after the destruction of Corinth b.c. 146. (Paus. vii. 16. § 6.)

BOMBYCINUM. [SERICUM.]

BONA. The word bona is sometimes used to express the whole of a man's property (Paulus, Recpt. Sentent. v. 6, 16; Dig. 37. tit. 1. s. 3; 50. tit. 16. s. 49); and in the phrases bonorum

emtio, cessio, possessio, ususfructus, the word "bona" is equivalent to property. It expresses all that a man has, whether as owner or merely as possessor; and every thing to which he has any right. But it is said (Dig. 50. tit. 16. s. 83): "Propria bona dici non possunt quae plus incommodi quam commodi habent." However, the use of the word in the case of universal succession comprehended both the commodum and incommodum of that which passed to the universal successor. But the word bona is simply the property as an object; it does not express the nature of the relation between it and the person who has the ownership or the enjoyment of it, any more than the words "all that I have," "all that I am worth," "all my property," in English show the legal relation of a man to that which he thus describes. The legal expression in bonis, as opposed to dominium, or Quiritarian ownership, and the nature of the distinction will be easily apprehended by any person who is slightly conversant with English law.

"There is," says Gaius (ii. 40), "among foreigners (peregrini) only one kind of ownership (dominium), so that a man is either the owner of a thing or he is not. And this was formerly the case among the Roman people; for a man was either owner ex jure Quiritium, or he was not. But afterwards the ownership was split, so that now one man may be the owner (dominus) of a thing ex jure Quiritium, and yet another may have it in bonis. For instance, if, in the case of a res mancipi, I do not transfer it to you by mancipatio, nor by the form in jure Quiritium, but merely deliver it to you, the thing indeed becomes your thing (in bonis), but it will remain mine ex jure Quiritium, until by possession you have it by usucapion. For when the usucapion is once complete, from that time it begins to be yours absolutely (plenum jure), that is, it is yours both in bonis and also yours ex jure Quiritium, just as if it had been mancipated to you, or transferred to you by the in jure cessio." In this passage Gaius refers to the three modes of acquiring property which were the peculiar rights of Roman citizens, mancipatio, in jure cessio, and usucapion, which are all now enumerated by him in another passage (ii. 65).

From this passage it appears that the ownership of certain kinds of things among the Romans, called res mancipi [MANCIPIUM], could only be transferred from one person to another with certain formalities, or acquired by usucapion. But if it was clearly the intention of the owner to transfer the ownership, and the necessary forms only were wanting, the purchaser had the thing in bonis, and he had the enjoyment of it, though the original owner was entitled to repossess the thing, usucapion being completed, notwithstanding he had parted with the thing.

It thus appears that Quiritarian ownership of res mancipi originally and properly signified that ownership of a thing which the Roman law recognised as such; it did not express a compound but a simple notion, which was that of absolute ownership. But when it was once established that one man might have the Quiritarian ownership, and another the enjoyment, and the sole right to the enjoyment of the same thing, the complete notion of Quiritarian ownership became the notion compounded of the strict legal notion of ownership, and that of the right to enjoy, as united.
the jus gentium (in the Roman sense of that term). (Gaius, ii. 26, 41, 20; Ulp. Freq. i. 16.)

(Zimmerm. Uber das Wesen des so genannten ‚romanischen Eigentums, Rhenisch. Mus. fur Jurispr. iii. 3.)

[ G. L. ]

BONA CADUCA. 

Caduceus literally signifies that which falls; thus, glans caduca, according to Gaius (Dig. 50. tit. 16. s. 30), is the mast which falls from a tree. Caduca, in its general sense, might be any thing without an owner, or what the person entited to neglected to take (Cic. De Or. ii. 31, Phil. x. 5); but the strict legal sense of caduca and bona caduca, is that stated by Ulpian (Frag. xvii. De Caduca), which is as follows:—

If a thing is left by testament to a person, so that he can take it by the jus civile, but from some cause has not taken it, that thing is called caduca, as if it had fallen from him; for instance, if a legacy was left to an unmarried person, or a Latinus Junior, and the unmarried person was not within a hundred days obey the law, or if within the same time the Latinus did not obtain the Jus Quiritium, or had lost the possessionem rerum, (see Caju. ad Ulpian. Tit. XXIX. vol. i. ed. Neapol. 1758), the legacy was caduca. Or if a heres ex parte, or a legatee, died before the opening of the will, the thing was caduca. The thing which failed to come to a person in consequence of something happening in the life of the testator was said to be in causa caduci; that which failed of taking effect between the death of the testator and the opening of the will, was simply called caduca. (Comp. Dig. 26. tit. 5. s. 62, and Dig. 31. s. 51; Cod. Civil. Art. 1030, &c.)

The law above alluded to is the Lex Julia et Papia Poppea, which is sometimes simply called Julia, or Papia Poppea. This law, which was passed in the time of Augustus (A. D. 9), had the double object of encouraging marriages and enriching the treasury — aerarium (Tacit. Ann. iii. 25), and contained, with reference to these two objects, a great number of provisions. Martial (Ep. 75) alludes to a person who married in order to comply with the law.

That which was caduca came, in the first place, to those among the heredes who had children; and if the heredes had no children, it came among those of the legates who had children. The law gave the jus accrescendi, that is, the right to the caduca as far as the third degree of consanguinity, both ascending and descending (Ulp. Freq. 18), to those who were made heredes by the will. Under the provisions of the law, the caduca, in case there was no prior claimant, belonged to the aerarium; or, as Ulpian (xxviii. 7) expresses it, if no one was entitled to the bona caduca, or if a person was entitled, but did not assert his right, the bona became public property (populare deferuntur), according to the Lex Julia caducaria; but by a constitution of the Emperor Antoninus Caracalla it was appropriated to the fiscus; the jus accrescendi above mentioned was, however, still retained. The lawyers, however (niri prulentissimi), by various devices, such as substitutions, often succeeded in making the law of no effect. A case is mentioned in the Digest (28. tit. 4. 9), in which bona caduca were claimed by the fiscus in the time of Marcus Antoninus, and another in which the fiscus is mentioned even under Hadrian, where one would expect to find the term aerarium used. (Savigny, System, &c. ii. 273, note 94.)
BONA FIDES.

He who took the portion of a heres, which became caducum, took it by universal succession: in the case of a legacy, the caducum was a singular succession. But he who took an hereditas caduca, took it with the bequest of freedom, of legacies, and fidei commissa with which it was burtthened: if the legata and fidei commissa became caduca, all charges with which they were burtthened became caduca also. In the time of Constantine, both the cavecles, and the orbux, or childless person (who was under a limited incapacity), obtained the full legal capacity of taking the inheritance. (Cod. vii. 58.) Justinian (Cod. vi. 51) put an end to the caduca, with all its legal consequences. In this last-mentioned title (De Caducis tollendis) it is stated both that the name and the thing (nomen et materia caduorum) had their origin in the civil wars, that many provisions of the law were evaded, and many had become obsolete. (Juv. Sat. ix. 88; Gaius, i. 150, ii. 207; Ulp. ii. 144, 286; Lipsius, Excer. ad Iact. Ann. iii. 25; Marezoll, Lehrbuch der Institut. des Röm. Rechts.) As to the Dos Caduca, see Dos. [G. L.]

BONA FIDES. This term frequently occurs in the Latin writers, and particularly in the Roman jurists. It can only be defined with reference to things opposed to it, namely, mala fides, and dolus malus, both of which terms, and especially the latter, are frequently used in a technical sense. [DOLUS MALUS.]

Generally speaking, bona fides implies the absence of all fraud and unfair dealing or acting. In this sense, bona fides, that is, the absence of all fraud, whether the fraud consists in simulation or dissimulation, is a necessary ingredient in all contracts.

Bona fide possidere applies to him who has acquired the possession of a thing under a good title, as he supposes. He who possessed a thing bona fide, had a capacity of acquiring the ownership by usucapon, and had the protection of the actio Publiciana. Thus a person who received a thing either municipi, or nec municipi, not from the owner, but from a person whom he believed to be the owner, and owned the ownership by usucapon, (Gaius ii. 43; Ulp. Frag. xix. 8.) A thing which was furtiva or vi possessa, or the res mancipi of a female who was in the tutela of her agnati, unless it was delivered by her under the auctoritas of her tutor, was not subject to usucapon, and therefore in these cases the presence or absence of bona fides was immaterial. (Gaius, i. 192, ii. 43, &c.; Cic. Ad Att. i. 5, Pro Flacco, c. 54.) A person who bought from a pupillus without the auctoritas of his tutor, or with the auctoritas of a person whom he knew not to be the tutor, did not purchase bona fide; that is, he was guilty of a legal fraud. A sole tutor could not purchase a thing bona fide from his pupillus; and if he purchased it from another to whom a non bona fide sale had been made, the transaction was null. (Dig. 26. tit. 8. a. 5.)

In various actions arising out of mutual dealings, such as buying and selling, lending and hiring, partnership, and others, bona fides is equivalent to aequum et justum; and such actions were sometimes called bonae fidei actions. The formula of the praetor, which was the authority of the lex, empowered him in such cases to inquire and determine ex bona fide, that is according to the real merits of the case: sometimes aequus melius was used instead of ex bona fide. (Gaius, iv. 62; Cic. Off. iii. 17, Topic. c. 17; Brissounius, De Formulis, &c. lib. v.)

BONA RAPTA. [FURTUM.]

BONA VACANTIA were originally the property which a person left at his death without having disposed of it by will, and without leaving any heres. Such property was open to occupancy, and so long as the strict laws of inheritance existed, such an event must not have been uncommon. A remedy was, however, found for this by the bonorum possessio of the praetor.

It does not appear that the state originally claimed the property of a person who died intestate and without heredes legitimi. The claim of the state to such property seems to have been first established by the Lex Julia et Papia Poppaea. [BONA CADUCA.] The state, that is, in the earlier periods the emperor, in the case of a soldier dying without heredes, the legion to which he belonged had a claim before the fiscus; and various corporate bodies had a like preference in the case of a member of the corporation dying without heredes. (Marezoll, Lehrbuch der Institut. des Röm. Rechts; Savigny, System, &c. vol. ii. p. 300.) [G. L.]

BONO/RUM CE/S/SIO. There were two kinds of bonorum cession in jure and extra jure. The In jure cession is treated under its proper head.

The bonorum cession extra jure was introduced by a Julian law, passed either in the time of Julius Caesar or Augustus, which allowed an insolvent debtor to give up his property to his creditors. The debtor might declare his willingness to give up his property by letter or by a verbal message. The debtor thus avoided the infamia consequent on the bonorum emtio, which was involuntary, and he was free from all personal execution. He was also allowed to retain a small portion of his property for his support. An old gloss describes the bonorum cession thus: Cedere bonis est ab universitate rerum suarum recedere.

The property thus given up was sold, and the proceeds distributed among the creditors. The purchaser did not obtain the Quiritarian ownership of the property by the act of purchase. If the debtor subsequently acquired property, this also was liable to the payment of his old debts, with some limitations, if they were not already fully satisfied. A constitution of Alexander Severus (Cod. 7. tit. 71. s. 1) declares that those who made a bonorum cession were not released, unless the creditors were fully paid; but they had the privilege of not being imprisoned, if judgment was given against them in an action by one of their old creditors.

The benefit of the lex Julia was extended by imperial constitutions to the provinces.

The history of the bonorum cessio does not seem quite clear. The Julian law, however, was not the oldest enactment which relieved the person of the debtor from being taken in execution. The lex Poetelia Papiria (b. c. 327) exempted the person of the debtor nisi qui noxam meruisse, and only made his property (bona) liable for his debts. It does not appear from the passage in Livy (viii. 28) whether this was a bonorum cession in the sense of the bonorum cessio of the Julian law, or only a bonorum emtio with the privilege of freedom.
BONORUM EMTO.

from arrest. The Tablet of Heraclea (Mazochi,
p. 423) speaks of these qui in jure bonum copiam jurabant; a phrase which appears to be equivalent to the bonorum cessio, and was a declaration on oath in jure, that is, before the praetor, by the debtor that his property was sufficient to pay his debts. But this was still accompanied with infamy. So far as we can learn from Livy, no such declaration of solvency was required from the debtor by the Poetelia lex. The Julian law rendered the process of the cessio bonorum more simple, by making it a procedure extra jus, and giving further privileges to the insolvent. Like several other Julian laws, it appears to have consolidated and extended the provisions of previous enactments. The term bonorum cessio is used in the Scotch law, and the early practice was derived from the Roman system. (Gaius, iii. 28; Dig. 42.
tit. 3; Cod. vii. tit. 71.) [G. L.]

BONO RUM COLLATIO. By the strict rules of the civil law an emancipated son had no right to the inheritance of his father, whether he died intestate or intestatem. But, in course of time, the praetor granted to emancipated children the privilege of equal succession with those who remained in the power of the father at the time of his death; and this grant might be either contra tabulas or ab intestato. But this favour was granted to emancipated children only on condition that they should bring into one common stock with their father's property, and for the purpose of an equal division among all the father's children, whatever property they had at the time of the father's death, and which would have been acquired for the father in case they had still remained in his power. This was called bonorum collatio. It resembles the old English hotchpot, upon the principle of which is framed the provision in the statute 22 and 23 Charles II. c. 10, as to the distribution of an intestate's estate. (Dig. 37. tit. 6; Cod. vi. tit. 20; Thibaut, System des Pandekten Rechts, § 901, &c., 9th ed., where the rules applicable to the bonorum collatio are more particularly stated.) [G. L.]

BONO RUM EMTO ET EMTOR. The expression bonorum emto applies to a sale of the property either of a living or of a dead person. It was in effect, as to a living debtor, an execution. In the case of a living person, his goods were liable to be sold if he concealed himself for the purpose of defrauding his creditors, and was not defended in his absence; or if he made a bonorum cessio according to the Julian law; or if he did not pay any sum of money which he was by judicial sentence ordered to pay, within the time fixed by the laws of the Twelve Tables (Aul. Gall. xv. 13, xx. 1) or by the praetor's edict. In the case of a dead person, his property was sold when it was ascertained that there was neither heirs nor bonorum possessor, nor any other person entitled to succeed to it. In this case the property belonged to the state after the passing of the Lex Julia et Papia Poppaeae. If a person died in debt, the praetor ordered a sale of his property on the application of the creditors. (Gaius, ii. 154, 167.) In the case of the property of a living person being sold, the praetor, on the application of the creditors, ordered it to be possessed (possideri) by the creditors for thirty successive days, and notice to be given of the sale. This explains the expression in Livy (ii. 24): "ne quis militis, domine in castria esset, bona possideret aut venderet." The creditors were said in possessionem rerum debitoris usit: sometimes a single creditor obtained the possession. When several creditors obtained the possession, it was usual to entrust the management of the business to one of them, who was chosen by a majority of the creditors. The creditors then met and chose a magister, that is, a person to sell the property (Cie. Ad Att. i. 9, vi. 1; Pro P. Quintio, c. 151; 2) or a curator bonorum if no immediate sale was intended. The purchaser, emtor, obtained by the sale only the bonorum possession: the property was his in bonis, until he acquired the Quirinarian ownership by usucapio. The foundation of this rule seems to be, that the consent of the owner was considered necessary in order to transfer the ownership. Both the bonorum possessores and the emtories had no legal rights (directae actiones) against the debtors of the person whose property was possessed or purchased, nor could they be legally sued by them; but the praetor allowed utiles actions both in their favour and against them (Gaius, ii. 77; iur. 85, 96, 110; Dig. 12. tit. 4, 5; Savigny, Das Recht des Besitzes, p. 410 5th ed.) [G. L.]

BONO RUM POSSESSIO is defined by Ulpian (Dig. 37, tit. 1. s. 3) to be "the right of suing for or retaining a patrimony or thing which belonged to another at the time of his death." The strict laws of the Twelve Tables as to inheritance were gradually relaxed by the praetor's edict, and a new kind of succession was introduced, by which a person might have a bonorum possession who could have no hereditas or legal inheritance.

The bonorum possession was given by the edict both contra tabulas, secundum tabulas, and intestati.

An emancipated son had no legal claim on the inheritance of his father; but if he was omitted in his father's will, or not expressly exhereditated, the praetor's edict gave him the bonorum possession contra tabulas, on condition that he would bring into hotchpot (bonorum collatio) with his brethren who continued in the parent's power, whatever property he had at the time of the parent's death. The bonorum possession was given both to children of the blood (naturalves) and to adopted children, provided the former were not adopted into any other family, and the latter were in the adoptive parent's power at the time of his death. If a freedman made a will without leaving his patron as much as one half of his property, the patron obtained the bonorum possession of one half, unless the freedman appointed a son of his own blood as his successor.

The bonorum possession secundum tabulas was that possession which the praetor gave, conformably to the words of the will, to those named in it as heredes, when there was no person intitled to make a claim against the will, or note who chose to make such a claim. It was also given secundum tabulas in cases where all the requisite legal formalities had not been observed, provided there were seven proper witnesses to the will. (Gaius, ii. 147, "si modo defunctus," &c.)

In the case of intestacy (intestatil there were seven degrees of persons who might claim the bonorum possession, each in his order, upon there being no claim of a prior degree. The three first class were children, legitimi heredes and proximi cognati. Emancipated children could claim as well
as those who were not emancipated, and adoptive
as well as children of the blood; but not children
who had been adopted into another family. If a
freeman died intestate, leaving only a wife (in
married) or an adoptive son, the property was
entitled to the bonorum possessio of one half of his property.

The bonorum possessio was given either cum re
or sine re. It was given cum re, when the person
to whom it was given thereby obtained the prop-
erty or inheritance. It was given sine re, when
another person could assert his claim to the in-
heritance by the jus civile; as if a man died intesta-
tate leaving a suus heres, the grant of the bonorum
possessio would have no effect; for the heres could
maintain his legal right to the inheritance. Or if a
person who was named heses in a valid will was
satisfied with his title according to the jus civile,
and did not choose to ask for the bonorum possessio
(which he was entitled to if he chose to have it),
those who would have been heredes in case of an in-
testacy might claim the bonorum possessio, which,
however, would be unavailing against the legal title
of the testamentary heres, and therefore sine re.

Parents and children might claim the bonorum possessio within a year from the time of their being
able to make the claim; others were required to
make the claim within a hundred days. On the failure
of such a person to make his claim within the
shorter time, the right to claim the bonorum pos-
sessio devolved on those next in order, through
the seven degrees of succession.

He who received the bonorum possessio was not
thereby made heres, but he was placed hereditis loco;
for the praetor could not make a heres. The prop-
erty of which the possessio was thus given was
only In bonis, until by usucapion the possession
converted into Quiritarian ownership (domini-
num). All the claims and obligations of the de-
ceded person were transferred with the bonorum
possessio to the possessor or praetorian heres;
and he was protected in his possession by the in-
terdictum Quorum bonorum. The benefit of this
interdict was limited to cases of bonorum possessio,
and this was the reason why a person who could
claim the inheritance in case of intestacy by the
civil law sometimes chose to ask for the bonorum
possessio also. The praetorian heres could only
actio; but in order to give him this capacity, he
was by a fiction of law supposed to be what he
was not, heres; and he was said ficto se herede
agere, or intendere. The actions which he could
sustain or defend were
directa
actio; but if the praetor did not make a heres. The prop-
erty of which the possessio was thus given was
only In boonis, until by usucapion the possession
was converted into Quiritarian ownership (domini-
num). All the claims and obligations of the de-
ceded person were transferred with the bonorum
possessio to the possessor or praetorian heres;
and he was protected in his possession by the in-
terdictum Quorum bonorum. The benefit of this
interdict was limited to cases of bonorum possessio,
and this was the reason why a person who could
claim the inheritance in case of intestacy by the
civil law sometimes chose to ask for the bonorum
possessio also. The praetorian heres could only
actio; but in order to give him this capacity, he
was by a fiction of law supposed to be what he
was not, heres; and he was said ficto se herede
agere, or intendere. The actions which he could
sustain or defend were

BOOLE. (BooSafe), a deliberate assembly or
council. In the heroic ages, represented to us by
Homer, the Bou&

BOONAE (Boo&éas), persons in Athens who
purchased oxen for the public sacrifices and feasts.
They are spoken of by Demosthenes (c. Mid. p.
570) in conjunction with the ieporrol&i and those
who presided over the mysteries, and are ranked
by Libanius (Declam. viii.) with the sithae, gene-
raus, and ambassadors. Their office is spoken of as
honourable by Harpocrates (c.e.); but Pollux
(viii. 114) includes them among the inferior offices
or offices of service (yporrol&i, Böckh, Publ. Econ.
of Athens, p. 216, 2d ed.)

BOREASMI or BOREASMUS (Boporregol
or Boporaegol) was a festival celebrated by the Athe-
nians in honour of Boreas (Hesych. s.t.), which,
as Herodotus (vii. 189) seems to think, was insti-
tuted during the Persian war, when the Athenians,
being commanded by an oracle to invoke their
pracemá x&i,thk, prorou Boreas. The fleet of
Xerxes was soon afterwards destroyed by north
wind, near Cape Sepias, and the grateful
Athenians erected to his honour a temple on the
banks of the Ilissas. But considering that Boreas
was intimately connected with the early history of
Attica, since he is said to have carried off and
married Oreithya, daughter of Erechtheus (Herod.
L. c.; Pass. i. 19. § 6), and that he was familiar to
them under the name of brother-in-law, we have
reason to suppose that even previous to the Persian
wars certain honours were paid to him, which were
perhaps only revived and increased after the event
recorded by Herodotus. The festival, however,
does not seem ever to have had any great celebrity;
for Plato (Phaedr. p. 229) represents Phaedrus as
unacquainted even with the site of the temple of
Boreas. Particulars of this festival are not known,
except that it was connected with bountiful and
lavish sacrifices to Boreas. Pausanias (viii. 36. § 4) mentions a festival celebrated
with annual sacrifices at Megalopolis in
honour of Boreas, which was thought to have been their deliverer from the Lacedaemonians. (Comp.
Aelian, V. H. xii. 61.)

Aelian (l.c.) says that the Thurians also offered
an annual sacrifice to Boreas, because he had
destroyed the fleet with which Dionysius of Syra-
cusae attacked them; and adds the curious remark,
that a decree was made which bestowed upon him
the right of citizenship, and assigned to him a
house and a piece of land. This, however, is per-
haps merely another way of expressing the fact,
that the Thurians adopted the worship of Boreas,
and dedicated to him a temple, with a piece of
land.

[L.S.]

BOULE' (Boo&á), a deliberate assembly or
council. In the heroic ages, represented to us by
Homer, the Boo&á is simply an aristocratical
council of the nobles, sitting under their king as
president, who, however, did not possess any greater
authority than the other members, except what that
position gave him. The nobles, thus assembled,
decided on public business and judicial matters,
frequently in connection with, but apparently not
subject to, nor of necessity controlled by, an ayang
or meeting of the freemen of the state. (H. ii. 58,
143, xviii. 503, Od. ii. 239.) This form of govern-
ment, though it existed for some time in the Ionian,
Aeolian, and Achaean states, was at last wholly abo-
lished. Amongst the Dorians, however, especially
with the Spartans, this was not the case; for it is
well known that they retained the kingly power of
the Heracleidae, in conjunction with the yeporrol&i
(Gerousia), or assembly of elders, of which the
kings were members. At Athens, there were two
councils, one usually called the Areiopagus from
its meeting on the hill of Ares (y&i &a&é&í wpyg
bou&á), which was more of an aristocratical
character, and is spoken of under Areiopagus,
and the other called The Council or Senate of the Five
Hundred (y&i wpygos &os Bou&á), or simply
The Council or Senate (y&i Bou&á), which was a
BOULE.

representative, and in most respects a popular body (δημοτικήν). It is of the latter council that the following article treats.

As it is generally attributed to Solon. There are, however, strong reasons for supposing that, as in the case of the areopagus, he merely modified the constitution of a body which he found already existing. In the first place it is improbable, and in fact almost inconsistent with the existence of any government, except an absolute monarchy, to suppose that there was no such council. Besides this, Herodotus (v. 71) tells us that in the time of Cylon (B.C. 620), Athens was under the direction of the presidents of the Naucraries (ναὐκρατίας), the number of which was forty-eight, twelve out of each of the four tribes. Moreover, we read of the case of the Alcmeneidae being referred to an aristocratical tribunal of 300 persons, and that Isagoras, the leader of the aristocratic party at Athens, endeavoured to suppress the council, or Βουλή, which Cleisthenes had raised to 600 in number, and to vest the government in the hands of 300 of his own party. (Herod. v. 72; Plut. Sol. 12.) This, as Thirlwall (Hist. of Greece, vol. ii. p. 41) remarks, can hardly have been a chance coincidence; and he also suggests that there may have been two councils, one a smaller body, like the Spartan σεκουρία, and the other a general assembly of the Eupatrids; thus corresponding, one to the senate, the other to the comitia curiata, or assembly of the burghe rs at Rome. But be this as it may, it is admitted that Solon made the number of his Βουλή 400, taking the members from the three first classes, 100 from each of the four tribes. On the tribes being remodelled by Cleisthenes (B.C. 510), and raised to ten in number, the council also was increased to 500, fifty being taken from each of the ten tribes. It is doubtful whether the Βουλή (ιδιωτική), or counsellors, were at first appointed by lot, as they were afterwards; but as it is stated to have been Solon’s wish to make the Βουλή a restraint upon the people, and as he is, moreover, said to have chosen (ἐπιλεξόμενος, Plut. Sol. 19) 100 members from each of the tribes, it seems reasonable to suppose that they were elected, more especially when there is no evidence to the contrary. (Thirlwall, vol. ii. p. 42.) It is at any rate certain that an election, where the ephors might have used influence, would have been more favourable to Solon’s views, than an appointment by lot. But whatever was the practice originally, it is well known that the appointment was in after times made by lot, as is indicated by the title (οἱ ἄνω τοῦ κυρίου Βουληστάρχου), suggested by the use of beans in drawing the lots. (Thuc. viii. 63.) The individuals thus appointed were required to submit to a scrutiny, or δοκιμασία, in which they gave evidence of being genuine citizens (γρηγοροὶ καὶ ἀμοιβοί), of never having lost their civic rights by ἀτομία, and also of being above 30 years of age. They remained in office for a year, receiving a stipend for their attendance, and during their day of office they kept the public records and seal.

The Prytanes had the right of convening the council and the assembly (ἐκκοινωνία). The duty of the proedri and their president was to propose subjects for discussion, and to take the votes both of the counsellors and the people; for neglect of their duty they were liable to a fine. (Dem. c. Timocr. p. 765—767.) Moreover, whenever a meeting, either of the council or the assembly, was convened, the chairman of the proeari selected by lot nine others, one from each of the non-presiding tribes; these also were called proedri and possessed a chair of their own, likewise appointed by lot from among themselves. On their functions, and the probable object of their appointment, some remarks are made in the latter part of this article.

We now proceed to speak of the duties of the senate as a body. It is observed under the Areopagus that the chief object of Solon in forming the senate and the areopagus was to control the democratical powers of the state; for this purpose Solon ordained that the senate should discuss and vote upon all matters before they were submitted to the assembly, so that nothing could be laid before the people on which the senate had not come to a previous decision. This decision, or bill, was called Probothélema (προβοθέλεμα), and if the assembly had been obliged either to acquiesce in any such proposition, or to gain the consent of the senate to their modification of it, the assembly and the senate would then have had almost equal powers in the state, and nearly related to each other, as our two houses of parliament. But besides the option of adopting or rejecting a προβοθέλεμα, of ψήφομαι as it was sometimes called, the people possessed and exercised the power of coming to a decision completely different from the will of the senate, as expressed in the προβοθέλεμα. Thus in matters relating to peace and war, and confederacies, it was the duty of the senators to watch over the interests of the state, and they could initiate whatever measures, and come to whatever resolutions they might think necessary; but on a discussion in the senate it was one of the most important powers of an individual to move a different or even contrary proposition. To take an example:—In the Euboean war (B.C. 350), in which the Thebans were opposed to the Athenians, the senate voted that all the cavalry in the city should be sent out to assist the forces besieged at Tamynae; a προβοθέλεμα
to this effect was proposed to the people, but they decided that the cavalry were not wanted, and the expedition was not undertaken. Other instances of this kind occur in Xenophon. (Hell. i. 7. § 9, vii. § 2.)

In addition to the bills which it was the duty of the senate to propose of their own accord, there were others of a different character, viz., such as any private individual might wish to have submitted to the people. To accomplish this it was first necessary for the party to obtain, by petition, the privilege of access to the senate (προσόδουν γράφασθαι), and leave to propose his motion; and if the measure met with their approbation, he could then submit it to the assembly. (Dem. c. Timocr. p. 713.)

Proposals of this kind, which had the sanction of the senate, were also called προσωπικά ματα, and frequently related to the conferring of some particular honour or privilege upon an individual. Thus the proposal of Ctesiphon for crowning Demosthenes is so styled, as also that of Aristocrates for conferring extraordinary privileges on Charidemus, an Athenian commander in Thrace. Any measure of this sort, which was thus approved of by the senate, was then submitted to the people, and by them simply adopted or rejected; and it is in these and similar cases, that the statement of the grammarians is true, that no law or measure could be presented for ratification by the people, without the previous approbation of the senate, by which it assumed the form of a decree passed by that body.” (Schömann, De Comitiiis, p. 103, transl.)

In the assembly the bill of the senate was first read, perhaps by the crier, after the introductory ceremonies were over; and then the proedri put the question to the people, whether they approved of it, or wished to give the subject further deliberation. (Aristoph. Thes. 290.) The people declared their will by a show of hands (προσχειρονία). Sometimes, however, the bill was not proposed and explained by one of the proedri, but by a private individual—either the original applicant for leave to bring forward the measure, or a senator distinguished for oratorical power. Examples of this are given by Schömann (De Com. p. 106, transl.) If the προσωπικά ματα of the senate were rejected by the people, it was of course null and void. If it happened that it was neither confirmed nor rejected, it was επέτειον, that is, only remained in force during the year the senate was in office. (Dem. c. Aris. p. 651.)

If it was confirmed it became a ψφάμα, or decree of the people, binding upon all classes. The form for drawing up such decrees varied in different ages. Before the archonship of Euclides (b.c. 403), they were generally headed by the formula—"Εδόθη τῇ βουλῇ καὶ στὶς δῆμοι: then the tribe was mentioned in whose prytany the decree was passed; then the names of the γραμματεύς or scribe, and chairman; and lastly that of the author of the resolution. Examples of this form occur in Andocides (De Myst. p. 13): thus—"Εδόθη τῇ βουλῇ καὶ στὶς δῆμοι, Αιαντίς ἐπράτευεν, Κλεογένης γραμματεύτης, Βοιόθος ἔπεστάτη, τάδε Αμφιπόλεως στεφανόρρους. (Comp. Thuc. iv. 118.)

From the archonship of Euclides till about b.c. 325, the decrees commence with the name of the archon; then come the day of the month, the tribe in office, and lastly the name of the proposer. The motive for passing the decree is next stated; and then follows the decree itself, prefixed with the formula δεδόχθαι τῇ βουλῇ καὶ στὶς δῆμοι. The reader is referred to Demosthenes, De Corona, for examples. After b. c. 325, another form was used, which continued unaltered till the latest times. (Schömann, p. 136, transl.)

Mention has just been made of the γραμματεύς, whose name was affixed to the ψφάμα, as in the example given above. He was a clerk chosen by lot by the senate, in every prytany, for the purpose of keeping the records, and resolutions passed during that period; he was called the clerk according to the prytany (δ κατὰ πρυτανείαν), and the name of the clerk of the first prytany was sometimes used to designate the year. (Pollux, viii. 95; Böckh, Publ. Econ. of Athens, p. 166, 2nd ed.)

With respect to the power of the senate, it must be clearly understood that, except in cases of small importance, they had only the right of originating, not of finally deciding on public questions. Since, however, the senators were convened by the prytanes every day, except on festivals or ἀφετέρα, (Pollux, viii. 95), it is obvious that they would be fit recipients of any intelligence affecting the interests of the state, and it is admitted that they had the right of proposing any measure to meet the emergency; for example, we find that Demosthenes gives them an account of the conduct of Aeschines against himself, which put our ambassadors to Philip, in consequence of which they propose a bill to the people. Again, when Philip seized on Elateia (b. c. 336), the senate was immediately called together by the prytanes to determine what was best to be done. (Dem. De Post. Leg. p. 346, De Cor. p. 264.) But, besides possessing the initiatory power of which we have spoken, the senate was sometimes delegated by the people to determine absolutely about particular matters, without reference to the assembly. Thus we are told (Dem. De Post. Leg. p. 369) that the people gave the senate power to decide about sending ambassadors to Philip; and Andocides (Περὶ Μυστηρίων) informs us that the senate was invested with absolute authority (ὑπὸ γὰρ αὐτοκράτωρ), to investigate the outrages committed upon the statues of Hermes, previously to the sailing of the Sicilian expedition.

Sometimes also the senate was empowered to act in conjunction with the nomothetae (νομοθετεία), as on the revision of the laws after the expulsion of the Thirty by Thrasybulus and his party, b. c. 403. (Andoc. De Myst. p. 12, Dem. c. Timocr. p. 705.) Moreover, it was the province of the senate to receive εἰσαγγελίαι, or informations of extraordinary crimes committed against the state, and for which there was no special law provided. The senate in such cases either decided themselves, or referred the case to one of the courts of the heliaea, especially if they thought it required a higher penalty than it was competent for them to impose, viz., 500 drachmae. It was also their duty to decide on the qualification of magistrates, and the character of members of their own body; and besides the duties we have enumerated, the senate discharged important functions in cases of finance. All legislative authority, indeed, in such matters rested with the people, the amount of expenditure and the sources of revenue being determined by the decrees which they passed; but the administration was entrusted to the senate, as the executive power of the state,
and responsible (πρεσβύτερος) to the people. Thus Xenophon (De REP. Ath. iii. 2) tells us that the senate was occupied with providing money, with receiving the tributes, with the management of naval affairs and the temples; and Lysias (c. Nicon. p. 185) makes the following remark:—

“When the senate has sufficient money for the administration of affairs, it does nothing wrong; but when it is in want of funds, it receives informations, and confiscates the property of the citizens.”

The letting of the duties (τέλωναι) was also under its superintendence, and those who were in possession of any sacred or public moneys (ὕπατα καὶ δύκαι) were bound to pay them into the treasury; and in default of payment, the senate had the power of enforcing it, in conformity with the laws for the farming of the duties (οἱ τέλωνικοί νόμοι).

The accounts of the moneys that had been received, and of those still remaining due, were delivered to the senate by the apodectae, or public treasurers. (ἈΠΟΔΕΚΤΑΙ.)

“The senate arranged also the application of the public money, even in trifling matters, such as the salary of the poets; the superintendence of the cavalry maintained by the state, and the examination of the inferiors (δοναί) supported by the state, are particularly mentioned among its duties; the public debts were also paid under its direction. From this enumeration we are justified in inferring that all questions of finance were confided to its supreme regulation.” (Böckh, Publ. Econ. of Athens, p. 154, 2nd ed.) Another very important duty of the senators was to take care that a certain number of triremes was built every year, for which purpose they were supplied with money by the state; in default of so doing, they were not allowed to claim the honour of wearing a crown, or chaplet (στέφανος), at the expiration of their year of office. (Arg. Orat. c. Androt.)

It has been already stated that there were two classes or sets of proedri in the senate, one of which, amounting to ten in number, belonged to the presiding tribe; the other consisted of nine, which, amounting to ten in number, belonged to the non-presiding tribe; and that we cannot, from the practice of these days, arrive at any conclusions relative to the customs of former ages.

If it is asked what, then, were the duties of these proedri in earlier times, the answer must be in a great measure conjectural; but the opinion or Schömann on this point seems very plausible. He observes that the prytanes had extensive and important duties entrusted to them; that they were all of one tribe, and therefore closely connected; that they officiated for 35 days as presidents of the representatives of the other tribes; and that they had ample opportunities of combining for the benefit of their own tribe at the expense of the community. To prevent this, and watch their conduct whenever any business was brought before the senate and assembly, may have been the reason for appointing, by lot, nine other quasi-presidents, representatives of the non-presiding tribes, who would protest and interfere, or approve and sanction as they might think fit. Supposing this to have been the object of their appointment in the first instance, it is easy to see how they might at last have been united with the proper proedri, in the performance of duties originally appropriated to the latter.

In connection with the proedri we meet with the expressions προσήχον ἐνέχρησαν. Our information on this subject is derived from the speech of Aeschines against Timarchus, who informs us, that in consequence of the unseemly conduct of Timarchus, on one occasion, before the assembly, a new law was passed, in virtue of which, a tribe was chosen by lot to keep order, and sit as presidents under the θύμα, or platform on which the orators stood. No remark is made on the subject to warrant us in supposing that senators only were elected to this office; it seems more probable that a certain number of persons was chosen from the tribe on which the lot had fallen, and commissioned to sit along with the prytanes and the proedri, and that they assisted in keeping order. We may here remark that if any of the speakers (ὑπόρεες) misconducted themselves either in the senate or the assembly, or were guilty of any act of violence to the ἐπιστάτης, after the breaking up of either, the proedri had the power to inflict a summary fine, or bring the matter before the senate and assembly at the next meeting, if they thought the case required it.

The meetings of the senate were, as we learn from various passages of the Attic orators, open to strangers; thus Demosthenes (De Fal. Leg. p. 346) says that the senate-house was, on a particular occasion, full of strangers (μετώπο τῆς θιεροῦ); in Aeschines (c. Cles. p. 71. 20) we read of a motion “that strangers do withdraw” (μετασταθέντως τοῦ θιερᾶς, Dobre, Advers. vol. i. p. 542). Nay, private individuals were sometimes, by a special decree, authorised to come forward and give advice to the senate. The senate-house was called ἀθέτω βουλαία, and contained two chapels, one of Zeus βουλαία, another of Ἀθηναίων, in which it was customary for the senators to offer up certain prayers before proceeding to business. (Antiph. De Chor. p. 187.)

The prytanes also had a building to hold their meetings in, where they were entertained at the public expense during their prytany. This was called the πρυτανεῖον, and was used for a variety of purposes. [ΠΡΥΤΑΝΕΙΟΝ.] Thucydides (i. 15), indeed, tells us that before the time of Themæs every city of Attica had its βουλαία and
The number of tribes at Athens was not always ten; an alteration took place in B.C. 306, when Demetrius Poliorcetes had liberated the city from the usurpation of Cassander. Two were then added, and called Demetrias, and Antigonis, in honour of Demetrius and his father. It is evident that this change, and the consequent addition of 100 members to the senate, must have varied the order and length of the Prytanes. The tribes just mentioned were afterwards called Ptolemais and Bracae, signifying that those who wore trowsers were in general armed with the bow.

Trousers were principally woollen; but Agathias states (Hist. ii. 5) that in Europe they were also made of linen and of leather; probably in the Asiatics they were striped. The Greeks seem never to have worn them. They were also unknown at Rome during the Republican period; and in A.D. 69 Caecina gave great offence on his march into Italy, because he wore braccae, which were regarded as tegmen barbarum. (Tac. Hist. ii. 20.) In the next century, however, they gradually came into use at Rome; but they would appear never to have been generally worn. It is recorded of Alexander Severus that he wore white braccae, and not crimson ones.

Trowsers were principally woollen; but Agathias states (Hist. ii. 5) that in Europe they were also made of linen and of leather; probably in the Asiatics they were striped. The Greeks seem never to have worn them. They were also unknown at Rome during the Republican period; and in A.D. 69 Caecina gave great offence on his march into Italy, because he wore braccae, which were regarded as tegmen barbarum. (Tac. Hist. ii. 20.) In the next century, however, they gradually came into use at Rome; but they would appear never to have been generally worn. It is recorded of Alexander Severus that he wore white braccae, and not crimson ones (coccineae), as had been the custom with preceding emperors. The use of them in the city was forbidden by Honorius.

BOULEUTERION. [Boule, p. 212, 6.]

BRACAE or BRACCÆ (άνακατίστες), trowsers, pantaloons. These, as well as various other articles of armour and of dress (Acinaces, Arcus, Armilla), were common to all the nations which encircled the Greek and Roman population, extending from the Indian to the Atlantic ocean. Hence Aristagoras, king of Miletus, in his interview with Cleomenes, king of Sparta, described the attire of a large portion of them in these terms: "They carry bows and a short spear, and go to battle in trowsers and with hats upon their heads." (Herod. v. 49.) Hence also the phrase Braccati militis arcus, signifying that those who wore trowsers were in general armed with the bow. (Propert. iii. 3. 17.) In particular, we are informed of the use of trowsers or pantaloons among the following nations:—the Medes and Persians; the Parthians; the Phrygians; the Saccæ; the Sarmatae; the Dacians and Getæ; the Teutones; the Belgae; the Britons; and the Gauls.

The Latin word braccae is the same as the Scottish "breeks" and the English "breeches." Corresponding terms are used in all the northern languages. Also the Cossack and Persian trowsers of the present day differ in no material respect from those which were anciently worn in the same countries. In ancient monuments we find the above-mentioned people constantly exhibited in trowsers, thus clearly distinguishing them from Greeks and Romans. An example is seen in the annexed group of Sarmatians, taken from the column of Trajan.
BRAUROIA.

at Sparta in honour of their great general Brasidas, who, after his death, in B.C. 422, received the honours of a hero. (Paus. iii. 14. § 1; Aristot. Eth. Nic. v. 7.) It was held every year with sacrifices and contests, in which none but Spartans were allowed to partake.

Brasidaea were also celebrated at Amphipolis, which, though a colony of Athens, transferred the honour of Κτίστης from Hagnon to Brasidaea, who was buried there, and paid him heroic honours by an annual festival with sacrifices and contests. (Thucyd. v. 11.) [L. S.]

BRAURO'NIA (Bravurónía), a festival celebrated in honour of Artemis Brauronia, in the Attic town of Brauron (Herod. vi. 138), where, according to Pausanias (i. 23. § 9, 38. § 1, iii. 15. § 6, viii. 46. § 2), Orestes and Iphigeneia, on their return from Tauris, were supposed by the Athenians to have landed, and left the statue of the Taurian goddess. (See Müller, Dor. i. 9. § 5 and 6.) It was held every fifth year, under the superintendence of ten ἱεροτοι (Pollux, viii. 9, 31); and the chief solemnity consisted in the circumstance that the Attic girls between the ages of five and ten years, dressed in crocus-coloured garments, went in solemn procession to the sanctuary (Suidas, s. v. Ἀρκτος; Schol. on Aristoph. Legistr. 646), where they were consecrated to the goddess. During this act the ἱεροτοι sacrificed a goat and had the girls performed a propitiatory rite in which they imitated bears. This rite may have arisen simply from the circumstance that the bear was sacred to Artemis, especially in Arcadia (Miiller, Der ffottesdienstl. Alterth. § 62. note 9.) [L. S.]

BREVIA'RIUM, or BREVIA'RIUM ALAR'ICIA'NUM. Alaric the Second, king of the Visigoths, who reigned from A.D. 484 to A.D. 507, in the twenty second year of his reign (A.D. 500) commissioned a body of jurists, probably Romans, to make a selection from the Roman laws and the Roman law writers, which should form a code for the use of his Roman subjects. The code, when made, was confirmed by the bishops and nobility at Aduris (Airè in Gascony); and a copy, signed by Anianus, the referendarius of Alaric, was sent to each comes, with an order to use no other law or legal form in his court (ut in foro tuo nulla alia lex neque juris formula proferi vel recipi praesumatur).

The signature of Anianus was for the purpose of giving authenticity to the official copies of the code; a circumstance which has been so far misinterpreted that he has sometimes been considered as the compiler of the code, and it has been called Breviarium Anianianum. This code has no peculiar name, so far as we know: it was called Lex Romana Visigothorum, and at a later period, frequently Lex Theodosii, from the title of the first and most important part of its contents. The name Breviarium, or Breviarium Alaricianum, does not appear before the sixteenth century.

The following are the contents of the Breviarium, with their order in the code:—1. Codex Theodosianus, xvi books. 2. Novellae of Theodosius ii, Valentinian iii, Marcian, Majorian, Severus. 3. The Institutions of Gaius, ii books. 4. Pauli Receptae Sententiae, v books. 5. Codex Gregorianus, v books. 6. Codex Hermogenianus, i book. 7. Papinianus, lib. i. Responsorum.

The code was thus composed of two kinds of materials, imperial constitutions, which, both in the code itself and the commitorium or notice prefixed to it, are called Lexes; and the writings of Roman jurists, which are called Jus. Both the Codex Gregorianus and Hermogenianus, being compilations made without any legal authority, are included under the head of Jus. The selections are extracts, which are accompanied with an interpretation, except in the case of the Institutions of Gaius; as a general rule, the text, so far as it was adopted, was not altered. The Institutions of Gaius, however, are abridged or epitomised, and such alterations as were considered necessary for the time are introduced into the text: this part of the work required no interpretation, and accordingly it has none. There are passages in the epitome which are not taken from Gaius. (Gaius, iii. 127, ed. Goeschen.)

This code is of considerable value for the history of Roman law, as it contains several sources of the Roman law which have been lost, e. g. the Institutes of Dionysus, known especially by Paulus and the five first books of the Theodosian code. Since the discovery of the Institutions of Gaius, that part of this code is of less value.

The author of the Epitome of Gaius in the Breviarium paid little attention to retaining the
BUCCINA.

words of the original, and a comparison of the Epitome and the MS. of Gaius is therefore of little advantage in this point of view. The Epitome is, however, still useful in showing what subjects were discussed in Gaius, and thus filling up (so far as the material contents are concerned) some of the lacunae of the Verona MS.

A complete edition of this code was published by Sichard, in his Codex Theodosianus, Basileae, 1528, small folio. (Schulting, Jurisprudentia Vetus Ante-Justiniana, Lugd. Bat. 1717; Jus Civile Antejustinianeum, Berlin, 1815; J. Pauli Recepta Sentent. Lib. v. ed. Arndts, Bonn, 1833; Savigny, Geschichte des Röm. Rechts im Mittelalter, ii. c. 8; Böcking, Institutionen, i. 90, &c.; Gaius, Profectio Primae Editionis Pruscinus.) [G. L.]

BRUTTIA©NI, slaves whose duty it was to wait upon the Roman magistrates. They are said to have been originally taken from among the Bruttians, because this people continued from first to last faithful to Hannibal (Festus, s. v. Bruttiani; Gell. x. 3); but Niebuhr (Hist. of Rome, vol. iii. note 944) is disposed to think that these servants bore this name long before, since both Strabo (vi. p. 255) and Diodorus (xvi. 15) state that this word signified revolted slaves.

BU©CCINA (/βυκκινα/), a kind of horn-trumpet, anciently made out of a shell. It is thus happily described by Ovid (Met. i. 335): "Cava buccina sumitur illi Tortilis, in latum quae turbine crescit ab imo: Buccina, quae in medio concepit ut aëra ponto, Littora voce replet sub utroque jucutia Phoebu."

The musical instrument buccina nearly resembled in shape the shell buccinum, and, like it, might almost be described from the above lines (in the language of conchologists), as spiral and gibbous. The two drawings in the annexed woodcut agree with this account. In the first, taken from a frieze (Burney’s History of Music, vol. i. pl. 6), the buccina is curved for the convenience of the performer, with a very wide mouth, to diffuse and increase the sound. In the next, a copy of an ancient sculpture taken from Blanchini’s work (De Musicis Instrum. Veterum, p. 15. pl. 2, 18), it still retains the original form of the shell.

The inscriptions quoted by Bartholini (De Tibiis, p. 226) seem to prove that the buccina was distinct from the corus; but it is often (as in Aen. vii. 510) confounded with it. The buccina seems to have been chiefly distinguished by the twisted form of the shell, from which it was originally made. In later times it was carved from horn, and perhaps from wood or metal, so as to imitate the shell. The buccina was chiefly used to proclaim the watches of the day (Senec. Thyest. 798) and of the night, hence called buccina prima, secunda, &c. (Polyb. xiv. 3; Liv. xxvi. 15; Sil. Ital. vii. 154; Propert. iv. 4. 63; Cic. Pro Mur. 9). It was also blown at funerals, and at festive entertainments both before sitting down to table and after. (Tacit. Ann. xv. 30.) Macrobius (i. 8) tells us that tritons holding buccinae were fixed on the roof of the temple of Saturn.

The musician who played the buccina was called buccinator.

BULLA.

The inscriptions quoted by Bartholini (De Tibiis, p. 226) seem to prove that the buccina was distinct from the corus; but it is often (as in Aen. vii. 510) confounded with it. The buccina seems to have been chiefly distinguished by the twisted form of the shell, from which it was originally made. In later times it was carved from horn, and perhaps from wood or metal, so as to imitate the shell. The buccina was chiefly used to proclaim the watches of the day (Senec. Thyest. 798) and of the night, hence called buccina prima, se-

Bulla, a circular plate or boss of metal, so called from its resemblance in form to a bubble floating upon water. Bright studs of this description were used to adorn the sword-belt (auræ bullis cingula, Virg. Aen. ix. 359; bullis asper baltæus, Sid. Apoll. Carm. 2). Another use of them was in doors, the parts of which were fastened together by brass-headed, or even by gold-headed nails. (Plaut. Asin. ii. 4, 20; Cic. Verr. iv. 56.) The magnificent bronze doors of the Pantheon at Rome are enriched with highly ornamented bosses, some of which are here shown.

We most frequently read, however, of bullae as ornaments worn by children suspended from the neck, and especially by the sons of the noble and wealthy. Such a one is called heres bullatus by Juvenal (Sat. xiv. 4). His bulla was made of thin plates of gold. Its usual form is shown in the annexed woodcut, which represents a fine bulla preserved in the British Museum, and is of the size of the original.

The use of the bulla, like that of the praetexta, was derived from the Etruscans, whence it is called by Juvenal (v. 164) aurum Etruscam. It was originally worn only by the children of the patricians, but subsequently by all of free birth (Cic. p 4
BYSSUS.

Verr. i. 58); while children of the libertini were only permitted to wear an ornament of the same kind made of leather (νοτίς ταῦτας καὶ σήγμαν de papesere loro, Juv. v. 165; libertini soortei, Ascon. ad Cic. l. c.). The bulla was laid aside, together with the praetexta, and was consecrated on this occasion to the Lares. (Pers. v. 31.) Examples of boys represented with the bulla are not unfrequent in statues, on tombs, and in other works of art. (Spon, Misc. p. 299; Middleton, Ant. Mon. tab. 3.)

BURIS. [Aρατρόμιοι.] BUSTUARIS. [Ψυκείοι.] BUSTUM. [Ψυκοί.] BUXUM (πυξος), properly means the wood of the box tree, but was given as a name to many things made of this wood. The tablets used for writing on, and covered with wax (tabulæ ceratae), were usually made of this wood. Hence we read in Pausanias (iii. 22. 8), "Vulgari buxo sordido cera fuit." These tabellae were sometimes called cerata buxa. In the same way the Greek πυξος, formed from πυξη, "box-wood," came to be applied to any tablets, whether they were made of this wood or any other substance; in which sense the word occurs in the Septuagint (τα πυξη τα λίθους, Exod. xxiv. 12; compare Is. xxx. 8; Hab. ii. 2).

Tops were made of box-wood (volubile buxum, Virg. Aen. vii. 392; Pers. iii. 51); and also wind instruments, especially the flute, as is the case in the present day (Ov. Fast. i. 45; Met. xii. 158, Fast. vi. 697; Virg. Aen. ix. 619). Combs also were made of the same wood; whence Juvenal (xiv. 194) speaks of eapsut tatactum buxo.

BYSSUS (Βοσσός). It has been a subject of some dispute whether the byssus of the ancients was cotton or linen. Herodotus (ii. 86) says that the mummies were wrapped up in byssine sidenton (σιδέντως θυσίων τελαμωνί), which Rosellini and many modern writers maintain to be cotton. The only decisive test, however, as to the material of mummy cloth is the microscope; and from the numerous examinations which have been made, it is quite certain that the mummy cloth was made of flax and not of cotton, and therefore whenever the ancient writers apply the term byssus to the mummy cloth, we must understand it to mean linen.

The word byssus appears to come from the Hebrew בוחש, and the Greeks probably got it through the Phoenicians. (See Gesenius's Thesaurus.) Pausanias (vi. 26. § 4) says that the district of Elis was well adapted for growing byssus, and remarks that all the people, whose land is adapted for it, sow hemp, flax, and byssus. In another passage (v. 5. § 2) he says that Elis is the only place in Greece in which byssus grows, and remarks that the byssus of Elis is not inferior to that of the Hebrews in fineness, but not so yellow (καλεσθενησ). The women in Patrae gained their living by making head-dresses (σκεφθομάλα), and weaving cloth from the byssus grown in Elis. (Paus. vii. 21. § 7.)

Among later writers, the word byssus may perhaps be used to indicate either cotton or linen cloth. Böttiger (Sabina, vol. ii. p 105) supposes that the byssus was a kind of muslin, which was employed in making the celebrated Coan garments. It is mentioned in the Gospel of St. Luke (xvi. 9) as part of the dress of a rich man. (Compare Rev. xviii. 12.) It was sometimes dyed of a purple or crimson colour (Βοσσινας παράφυσις, Hevych.). Pliny (xix. 4) speaks of it as a species of flax (λινον), and says that it served mulderum maxime deliciis. (Yates, Textrum Antiquorum, p. 267, &c.)

CABEIRIA (καβειρία), mysteries, festivals, and orgies solemnised in all places in which the Pelasgian Cabeiri, the most mysterious and perplexing deities of Grecian mythology, were worshipped, but especially in Samothrace, Imbrus, Lemnos, Thebes, Anthedon, Pergamus, and Berytos. (Paus. ix. 25. § 3, iv. 1. § 5, ix. 22. § 5, i. 4. § 6; Euseb. Praep. Evang. p. 31.) Little is known respecting the rites observed in these mysteries, as no one was allowed to divulge them. (Strabo, x. p. 470, &c.; Apollon. Rhod. i. 917; Orph. Argon. 469; Valer. Flacc. ii. 435.) Diagonis is said to have provoked the highest indignation of the Athenians by his having made these and other mysteries public. (Athenag. Leg. ii. 5.) The most celebrated were those of the island of Samothrace, which, if we may judge from those of Lemnos, were solemnised every year, and lasted for nine days. The admission was not confined to men, for we find instances of women and boys being initiated. (Schol. ad Eurip. Phoen. 7; Plut. Alex. 2; Donatus ad Tevent. Phorm. i. 15.) Persons on their admission seem to have undergone a sort of examination respecting the life they had led hitherto (Plut. Laced. Apol. Apoll. Anthedon. Antalcid. p. 141. ed. Tauchnitz), and were then purified of all their crimes, even if they had committed murder. (Livy. xiv. 5; Schol. ad Theocrit. ii. 12; Hevych. s. v. Κόλπος.) The priest who undertook the purification of murderers bore the name of κόλπος. The persons who were initiated received a purple ribbon, which was worn around their bodies as an amulet to preserve them against all dangers and storms of the sea. (Schol. ad Apollon. l. c; Diodor. v. 49.)

Respecting the Lemnian Cabeiria we know that their annual celebration took place at night (Cic. De Nat. Deor. i. 42), and lasted for nine days, during which all fires of the island, which were thought to be impure, were extinguished, sacrifices were offered to the dead, and a sacred vessel was sent out to fetch new fire from Delos. During these sacrifices the Cabeiri were thought to be absent with the sacred vessel; after the return of which, the pure fire was distributed, and a new life began, probably with banquets. (Schol. ad Apollon. Rhod. i. 603.)

The great celebrity of the Samothracian mysteries seem to have obscured and thrown into oblivion those of Lemnos, from which Pythagoras is said to have derived a part of his wisdom. (Iamblich. Vit. Pyth. c. 151; compare Müller's Prolegomena, p. 150.) Concerning the celebration of the Cabeiria in other places nothing is known, and they seem to have fallen into decay at a very early period. (Comp. Guthbertet, De Mysteriis Deorum Cabiriorum, Francofornae, 1704, 4to.; Welcker, Die Aeschyli Tril. p. 160, &c.; E. G. Haupt, De Religione Cabiriaca, 1834, 4to.; Lobec, Apollonius, 1281, &c.; Kenrick, The Egypt of Herod, p. 264, &c.)

C. K.

CACABUS. [Αυθέφασα.]
KAKOSIS.

KAKEGOGRIAS DIKE' (κακεγογρίας δίκη), was an action for abusive language in the Attic courts. It was likewise called κακεγογρία δική (ἱμερ. c. Μιδ., p. 544), κακεγογρίας δική (δικών κακεγογριῶν, Aristoph. Vesp. 1207), and κακεγογρίας δική. This action could be brought against an individual who applied to another certain abusive epithets, such as ἄνδροφον, πατρολαίος, &c., which were included under the general name of ἀνάρθρητα. [Ἀφόρητα.] It was no justification that these words were spoken in anger. (Lys. c. Theogn. pp. 372, 373.) By a law of Solon it was also forbidden to speak evil of the dead; and if a person did so, he was liable to this action, which could be brought against him by the nearest relation of the deceased. (Dem. c. Leukin. p. 488, c. Bessot. p. 1022; Plut. Sol. c. 51.) If an individual abused any one who was engaged in any public office, the offender not only suffered the ordinary punishment, but incurred the loss of his rights as a citizen (ἀμφίμα), since the state was considered to have been insulted. (Dem. c. Mid. p. 524.)

If the defendant was convicted, he had to pay a fine of 500 drachmae to the plaintiff. (Isoc. c. Lod. p. 386 ; Lys. c. Theogn. p. 534.) Plutarch, however, mentions that, according to one of Solon's laws, whoever spoke evil of a person in the temples, courts of justice, public offices, or public festivals, had to pay five drachmae; but as Platner, Volley, and Mnes. c. Pantaen. p. 385; and if Plato's authority with respect to the terms of Attic law can be considered conclusive, other cases of conspiracy and contrivance may have borne this title. (Plut. Sol. 20, Erot. 23.) In the comedy of Cratinus, called the "Wine Flask" (Πνευμάτως), Comedy was represented as the wife of Cratinus, who brought an action against him because he neglected her and devoted all his attention to the wine flask. (Schol. ad Aristoph. Equit. 399.)

3. Κάκωτις τῶν ἐπίκλησιμον was committed by the nearest relatives of poor heiresses, who neither married them themselves, nor gave them a dowry in order to marry them to persons of their own rank in life (Dem. c. Macart. p. 1076 ; Harpocr. s. s. Κακωτις, οὐκ ἔμειλετο τῶν χρήματι καὶ τῶν ὀφανῶν, Ulpian, ad Demosth. c. Timoc.) The speech of Isaeus on the Inheritance of Hagniasis, is a defence against an οἰσαγγελία κακώσεως of this kind.

All these cases of κάκωσις belonged to the jurisdiction of the chief archon (ἄρχουσι εὐνύμονες). If a person wronged in any way either orphans or widows, both of whom were considered to be in an especial manner under the protection of the chief archon. (Dem. c. Macart. p. 1076 ; ὄρχους, διότι ἐμείλετο τῶν χρήματι καὶ τῶν ὀφανῶν, Ulpi. ad Demosth. c. Timoc.) The speech of Isaeus on the Inheritance of Hagniasis, is a defence against an οἰσαγγελία κακώσεως of this kind.

The punishment does not appear to have been fixed for the different cases of κάκωσις, but it was generally severe. Those found guilty of κάκωσις γονέων lost their civil rights (ἀμφίμα), but were allowed to retain their property (ὀνόμα ἄρσεν ἄρσεν, τὰ μέλλωντα, τὰ ἐχθράμματα, ἀπὸ τῶν ἐχθράμματα, ἀπὸ τῶν ἐχθράμματα, ἀπὸ τῶν ἐχθράμματα). The speech of Isaeus on the Inheritance of Hagniasis, is a defence against an οἰσαγγελία κακώσεως of this kind.

KAKOTECHNION DIKE. [ΚΑΚΟΤΕΧΝΙΟΝ ΔΙΚΗ]

KAKOSIS (κάκωσις), in the language of the Attic law, does not signify every kind of ill-treatment, but was properly the ill-treatment of parents by their children (κάκωσις γονέων). 2. Of women by their husbands (κάκωσις γυναικῶν). 3. Of heiresses (κάκωσις τῶν ἐπίκλησιμῶν). 4. Of orphans and widows by their guardians or any other persons (κάκωσις τῶν ὀφανῶν καὶ χρηστουσίων γυναικῶν).

1. Κάκωσις γονέων was committed by those who struck their parents, or applied abusive epithets to them, or refused them the means of support when they were able to afford it, or did not bury them after their death and pay them proper honours. (Aristoph. Αε. 757, 1356 ; Suidas, s. v. Φιλανρήμα δόμα.) It was no justification for children that their parents had treated them badly. If, however, they were illegitimate, or had not received a proper education from their parents, they could not be prosecuted for κάκωσις. (Meier, Att. Process, p. 260.)

2. Κάκωσις γυναικῶν was committed by husbands who ill-treated their wives in any manner or had intercourse with other women (Diog. Laërt. iv. 17 ; compare Plut. Acliib. 8), or denied their wives the marriage duties; for by a law of Solon, the husband was bound to visit his wife three times every month, at least if she was an heiress. (Plut. Sol. 20, Erot. 23.) In the comedy of Cratinus, called the "Wine Flask" (Πνευμάτως), Comedy was represented as the wife of Cratinus, who brought an action against him because he neglected her and devoted all his attention to the wine flask. (Schol. ad Aristoph. Equit. 399.)

KAKOTECHNION DIKE (κακοτεχνίων δίκη), corresponds in some degree with an action for subornation of perjury. It might be instituted against a party to a previous suit, whose witnesses had already been convicted of falsehood in an action (πειρωμάτωρ). (Harpocr. s. v.; Dem. c. Eur. and Men. p. 1139, 11.) It has been also surmised that this proceeding was available against the same party, when persons had subscribed themselves falsely as summoners in the declaration or indictment in a previous suit (Meier, Att. Proc. p. 385); and if Plato's authority with respect to the terms of Attic law can be considered conclusive, other cases of conspiracy and contrivance may have borne this title. (Plut. Leg. xi. p. 936, c.) With respect to the court into which these causes
were brought, and the advantages obtained by the successful party, we have no information. (Meier, Att. Proc. pp. 45, 386.) [J. S. M.]

CADUS.

CADUS (κάδος), a large vessel usually made of earthen-ware, which was used for several purposes among the ancients. Wine was frequently kept in it; and we learn from an author quoted by Pollux that the amphora was also called cadus (Pollux, x. 70, 71; Suidas, s. v. Kados). The vessel used in drawing water from wells was called cadus (Aristoph. Eccles. 1003; Pollux. x. 31), or γαύλος. (Suidas, s. v. Gaulós.) The name of cadus was sometimes given to the vessel or urn in which the counters or pebbles of the diceasts were put, when they gave their vote on a trial, but the diminutive καθίκος was more commonly used in this signification. [Psephus.]

CAELATURA (τοιούτως), a branch or the fine arts, under which all sorts of ornamental work in metal, except actual statues, appear to be included. The principal processes, which these words were used to designate, seem to have been of three kinds: hammering metal plates into moulds or dies, so as to bring out a raised pattern; engraving the surface of metals with a sharp tool; and working a pattern of one metal upon or into a surface of another: in short, the various processes which we describe by the words chasim, damascening, &c. Millingen, who is one of the best authorities on such subjects, says that the art of working the precious metals either separately, or uniting them with other substances, was called toreutica. It was known at a very early epoch, as may be inferred from the shield of Achilles, the ark of Cypselus, and other productions of the kind.” There is, however, some doubt whether, in their original meaning, the words toreutica and cælatura described the first or the second of the above processes; but both etymology and usage are in favour of the latter view. The word τοιούτως means originally to bore, to pierce by cutting, and the cognate substantives τοιούς and τοιος are applied to any pointed instrument, such as the tool of the engraver (τοιούτως: see Seicer u. Jacobitz, Handwörterbuch d. Griech. Sprache, s. v. Toioútous). So in Latin, caelo (to chase), and caelum (the chasing tool), are undoubtedly connected with caelo (to cut). It may also be observed that for working metals by hammering other words are used, ἀλατειν, σφυρατείν, ἐκποιεῖν, χαλκεῖν, excudere, and that works in metal made by hammering plates into a raised pattern are called ἀλατοῦσα, and ἐκτυφα [Anaglypha]. With regard to the usage of the terms, it is enough to remark, that a very large proportion of the ornamental works in metal, alluded to by the ancient writers, from Homer downwards, must have been executed by the process of engraving, and not of hammering. But, whichever process the terms may have been originally intended to designate, in practice both processes were frequently united. For all vessels made out of thin plates of metal, the process seems to have been first to beat out the plate into the raised pattern, and then to chase it with the graving tool. There is an example of this kind of work in the British Museum, noticed by Millingen.

Another question has been raised, whether toreutica and cælatura are precisely equivalent: but it is the opinion of the best writers on art that they are so, though Quatremère de Quincy and others suppose toreutica to refer to any work in relief, and even to chryselephantine statues. (See Garatoni, in Cic. Verr. iv. 23; Salmas. Exerc. ad Solin. p. 736, foll.; Heyne, Antiquar. Aufsätze, ii. p. 127.) Quintilian (i. 21) expressly distinguishes cælatura and sculptura by saying that the former includes works in gold, silver, bronze, and iron, while the latter embraces, besides these materials, also wood, ivory, marble, glass, and gems. It must therefore be understood as an accommodated use of the term when Pliny says of glass, “argentī modo cælatur.” (H. N. xxxvi. 26. s. 66.)

The fact which is implied in the words just quoted, that silver was the chief material on which the caelator worked, is expressly stated by...
viny, at the commencement of the passage which forms one of our chief authorities on the subject (ii. N. xxxii. 12. s. 53); where he mentions it as a remarkable fact that many had gained renown for chasing in silver, but none for chasing in gold: it is not however to be inferred that gold was not chased, for works in gold are frequently mentioned by other authors. From the same section, and from other authorities, we learn that

"Two examples of chasing in iron deserve especial notice, the one for its antiquity, the other for its beauty: the former is the iron base of the vase dedicated by Cyaneus, king of Lydia, at Delphi, which was the work of Glauco of Chios, and was chased with small figures of animals, insects, and plants (Herod. i. 25; Paus. x. 16. § 1; Ath. v. p. 241. b. c.; Dict. of Biog. s. v. Glauco): the latter is the iron helmet of Alexander, the work of Theophilus, which glittered like silver (Plut. Alex. s. 2); Strabo, moreover, mentions the people of Cibyra, in Asia Minor, as noted for their skill in chasing iron (Strab. xiii. p. 631).

The objects on which the caelator exercised his art were chiefly weapons and armour — especially shields, chariots, tripods, and other votive offerings, vases, candelabra, thrones, curule chairs, mirrors, candelabra, thrones, curule chairs, mirrors, goblets, dishes, and all kinds of gold and silver plate. Arms were often ornamented with patterns in gold (παντα ἐν ἡλείω προφύσει ἑνῶν (Corps. inscr. vol. i. No. 124; scutum chryseographatum, Treb. Claud. 14)). Chased bronze helmets and creases have been found at Pompeii and elsewhere. (Din. Bor. iii. 60, iv. 13, v. 29; Brünsted, die bronze von Siris.) Chariots, especially those used in the chariot-races and triumphal process, were often made of bronze richly chased (Curros): under the Roman emperors private carriages (currucce) were often covered with plates of chased bronze, silver, and even gold (Plin. H. N. xxxii. 11. s. 49; Suet. Claud. 16; Martial. iii. 72; Lamp. Pict. Sen. 43; Vopisc. Aurel. 46; Carruca). In candelabra, mirrors, and so forth, the remains of Etruscan art are very rich. An elaborate account of ancient tripods is given in Tailer's essay, "Ueber die Tripoden," in the "Annalen," vols. i. and ii. Respecting vessels of gold and silver plate, and other ornaments, among the numerous references of the ancient authors, those of Cicero (in Ferr. iv.), and Pliny (H. N. xxxii. 11. 12. s. 50—54) are among the most important and interesting.

The ornamental work with which the chaser decorated such objects consisted: either of simple running patterns, chiefly in imitation of plants and noers, or of animals, or of mythological subjects, and, for armour, of battles. To the first class belong the vases filicatae, pampinatae, petinae federatae, and disci corymbiati (Cic. l. c.; Treb. Claud. 17): ornaments of the second class were common on the bronze and gold vases of Corinth (Ath. v. p. 192, C.) and on tripods (Amolth. vol. iii. p. 29); and the mythological subjects, which were generally taken from the Homer, were reserved for the works of the greatest masters of the art: they were generally executed in very high relief (amphipha). In the lower works, the ornamental pattern was frequently distinct from the vessel, to which it was either fastened permanently, or so that it could be removed at pleasure, the vessel being of silver, and the ornaments of gold, crustae aut emblemata. (Cic. in Vers. iv. 23; Juv. i. 76; Martial. viii. 51; Ovid. Met. v. 81; Ath. v. p. 199; Paull. Sent. iii. 6, 8; Senec. Ep. 6; comp. Chryselephant.)

The art of ornamental metal-work was in an advanced stage of progress among the Greeks of the heroic period, as we see from numerous passages of Homer. In Italy, also, the Etruscans, as above stated, had early attained to great proficiency in it. In the time of the last dynasty of Lydian kings, a great impulse was given to the art, especially by their magnificent presents to the Delphian temple; and belonging to this period, we have the names of Glauco, as already mentioned, and of Theodorus of Samos, who made a great silver vessel for Croesus, the ring of Polyxenes, and afterwards adorned the palace of the Persian kings. But its perfection would of course depend on that of the arts of design in general, especially of sculpture; and thus we can readily accept the statement of Pliny that its origin, in the high artistic sense, is to be ascribed to Pheidias, and its complete development to Polykleitus. (Plin. H. N. xxxiv. 8. s. 19. § 81, primusque [Pheidias] arte toreuticon operasse aliaque demonstrasse merito judicatur: ibid. § 2, He (Polykleitus)...judicatur toreuticon sic erudisse, ut Phidias aperuisse). There can, indeed, be no doubt that the toreutic art was an important accessory to the arts of statuary and sculpture, especially in works of a golden vessel in which the parts executed in bronze and in ivory and gold. In fact, in the latter class of works, the parts executed in gold belonged properly to the department of the caelator: and hence has arisen the error of several modern writers who have made the chryselephantine statues a branch of the toreutic art. The intimate connection of this art with statuary and sculpture is further shown by the fact that several of the great artists in these departments were also renowned as silver-chasers, such as Myron and Paseileas. In the age of Pheidias, the most distinguished name is that of Mya, who engraved the battle of the Lapithae with the Centaurs on the shield of Pheidias' colossal bronze statue of Athena Promachus in the Acropolis, and who is said to have worked from designs drawn by the hand of Paristius; but the latter point involves a chronological difficulty. (See Dict. of Biog. s. v. Mya, Paeuleas.) In the period from the time of Pheidias to that of the Roman conquest of Greece, the following names are preserved: Acragas, Boethus, and Mentor, the most distinguished of all the artists in this department; the sculptor Myron and his son Lycius; after them, Calamin, Antipater; and the maker of a work mentioned with admiration by Pliny, Stratonicus; a little later, Taurincus of Cyzicus, Ariston and Eunicus of Mytilene, and Hecateus. The Greek kings of Syria, especially Antiochus Epiphanes, were great patrons of the art. (Ath. v. p. 293, d.) In the last age of the Roman Republic, the prevailing wealth and luxury, and the presence of Greek artists at Rome, combined to bring the art more than ever into requisition. Silver-chasers seem to have been regularly employed in the establishments of the great men of Rome; and Pliny mentions, as belonging to the age of Pompey the Great, Paseileas, Positionis of Ephesus, Leostatides, Zopyrus, Pythes, and lastly Teucer. After this period, the art suddenly fell into disuse, so that, in the time of Pliny, chased vessels were valued only for their age, though the chasing was so worn down by use that even the figures could not be distinguished. (H. N. xxxiii. 11.)
CAELATUS. [AER SUM ; LEX JULIA ET PAPIA POPPARE.] CAERITUM TA BULAE. [AERARI.] CAESAR, a title of the Roman emperors, was originally a family name of the Julia gens; it was assumed by Octavius as the adopted son of the great dictator, C. Julius Caesar, and was by him handed down to his adopted son Tiberius. It continued to be used by Caligula, Claudius, and Nero, as members either by adoption or female descent of Caesar's family; but though the family became extinct with Nero, succeeding emperors still retained the name as part of their titles, and it was the practice to prefix it to their own names, as for instance, Emporer Caesar Domitianus Augustus. When Hadrian adopted Aelius Varus, he allowed the latter to take the title of Caesar; and from this time, though the title of Augustus continued to be confined to the reigning emperor, that of Caesar was also granted the second person in the state and the heir presumptive to the throne. (Eckhel, vol. viii. p. 367, &c.) [AUGUSTUS.]

CALAMISTRUM, an instrument made of iron, and hollow like a reed (calamus), used for curling the hair. For this purpose it was heated, the person who performed the office of heating it in woodashes (cinnis) being called cinifilo, or cinerarius. (Hor. Sat. i. 2. 96; Heindorf, ad loc.) This use of heated iron was adopted very early among the Romans (Piat. Asin. iii. 3. 37), and became as common among them as it has been in modern times. (Virg. Aen. xxii. 100.) In the age of Cicero, who frequently alludes to it, the Roman youths, as well as the matrons, often appeared with their hair curled in this manner (calamistrato). We see the result in many antique statues and busts. [J. Y.]

CALAMUS (calamos, Pollux, x. 15), a sort of reed which the ancients used as a pen for writing. (Cic. ad Att. vi. 8; Hor. De Art. Poet. 447.) The best sorts were got from Aegypt and Cnidus. (Plin. N. H. xvi. 36, 64.) So Martial (xiv. 30), "Dat chartis habiles calamos Memphitica tellus." When the reed became blunt, it was sharpened with a knife, scalprum librarium (Tac. Ann. v. 8; Suet. Vitell. 2); and to a reed so sharpened the epithet temperatus, used by Cicero, probably refers (Cic. ad Qu. F. ii. 15, "calamo et atramento temperato res ageret"). One of the inkstands given under the article atramentum has a calamus upon it. The calamus was split like our pens, and hence Ausonius (vii. 49) calls it fissipes or clovenfooted. [A. A.]

CALANTICA. [COMA.]

CALATHUS, dim. CALATHISCUS (καλαθίσκος, also called τάλαρος usually signified the basket in which women placed their work, and especially the materials for spinning. Thus, Pollux (x. 125) speaks of both τάλαρος and κάλαμος as τῆς γυναικείητος σκηνής; and in another passage (vii. 29), he names them in connection with spinning, and says that the τάλαρος and καλαθίσκος were the same. These baskets were made of osiers or reeds; whence we read in Pollux (vii. 173) πλακεῖν τάλαρον καὶ καλαθίσκον, and in Catullus (xiv. 319) —

"Ante pedes autem cendantis mollia lanae
Vella virgati custodiebant calathici." They appear, however, to have been made in earlier times of more valuable materials, since we read in Homer (Od. iv. 125) of a silver τάλαρος. They frequently occur in paintings on vases, and often indicate, as Böttiger (Vasen. ii. 44) has remarked, that the scene represented takes place in the gynaeconitis, or women's apartments. In the following woodcut, taken from a painting on a vase (Millin, Peintures de Vases Antiques, vol. i. pl. 4.), a slave, belonging to the class called quasiitterae, is presenting her mistress with the calathus, in which the wool was kept for embroidery, &c.

Baskets of this kind were also used for other purposes (Böttiger, Schrift. vol. ii. pp. 252, 258), such as for carrying fruits, flowers, &c. (Ovid. Am. ii. 264.) The name of calathus was also given to cups for holding wine (Virg. Ecl. v. 71).

Calatus was properly a Greek word, though used by the Latin writers. The Latin word corresponding to it was quastus (Hor. Carm. iii. 12, 4), or quassus (Postus s. Calathus; Cic. Philo. iii. 4; Prop. iv. 3, 7). From quassus came quasiittera, the name of the slave who spun, and who was considered the meanest of the female slaves. (Petron. 132; Tibull. iv. 10. 3.) [FUSUS; TELA.]

CALCAR (μύθης, ἐγκεφηρίς, Pollux, x. 12), a spur. The Greek name for spurs was taken from the flies, which infest horses with their stings: hence the verb μυθίων, to spur. (Xen. de Rha Ép. viii. 5. x. 1, 2; Heliodor. ix. p. 452, ed. Commelin.) The Athenian gentry sometimes showed their conceit by walking about the Agora in spurs after riding (Theophrast. Char. xxii.). Spurs were early used by the Romans, as appears from the mention of them in Plautus (Asin. iii. 3. 118) and Lucretius (v. 1074). They are likewise often alluded to by Cicero (De Orat. iii. 9, ad Att. vi. 1), Ovid (De Posto, ii. 9. 38; iv. 2. 33), Virgil (ferrata calce, Aen. xi. 714), and subsequent Roman authors. [J. Y.]

CALCEUS, CALCEAMEN, CALCEAMENTUM (στούθιμα, πέδιλος), a shoe or boot.
any thing adapted to cover and preserve the feet in walking. The use of shoes was by no means universal among the Greeks and Romans. The heroic heroes are represented without shoes when armed for battle. According to the institutions of Lycurgus, the young Spartans were brought up without wearing shoes (ανυστολορ, Xen. Rep. Lac. 2), in order that they might have the full use of their feet in running, leaping, and climbing. Menocrates, Phoeon, and Cato frequently went bare-footed (αυστολορ, Aristoph. Noc. 108, 302; Xen. Stoc. i. 6. § 2; pede nudo, Hor. Ep. i. 19. 12). The Roman slaves had no shoes (nudo tolo, Juv. vii. 16), their naked feet being marked with chalk or gypsum. The covering of the feet was removed before reclining at meals. (Coena.) To go bare-foot also indicated haste, grief, distraction of mind, or any violent emotion, as when Venus goes in quest of Adonis (οδοιαδαλος, Bion. i. 21), and when the Vestals flee from Rome with the apparatus of sacred utensils. (Flor. i. 13.) For similar reasons sorceresses go with naked feet, when intent upon the exercise of magical arts (Sen. Medus. iv. 2. 14; nuda pedem, Ovid. Met. vii. 183; pedibus nudis, Hor. Sat. i. 8. 24), although sometimes one foot only was unshod (unum exuta pedem vincolis, Virg. Aen. iv. 518), and is so painted on fictile vases. It was a very rare thing at Rome to see a respectable female out of doors without shoes, is clear from the astonishment experienced by Ovid (Fast. vi. 397), until he was informed of the reason of it, in a particular instance.

"Hec pede matronam vidi descendere nudo: Obstupui tacitus, sustinuique gradum."

The feet were sometimes bare in attendance on funerals. Thus the remains of Augustus were collected from the pyra by noblemen of the first rank with naked feet. (Suet. Aug. 100.) A picture round at Herculanenum exhibits persons with naked feet engaged in the worship of Isis (Ant. d'Ercolano, n. 520); and this practice was observed at Rome in honour of Cybele (Prudent. Peris. 154). In case of drought, a procession and ceremonies, called νυστερεσαιμα, were performed with a view to propitiate the gods by the same token of grief and humiliation. (Tertull. Apol. 40.)

The idea of the defilement arising from contact with any thing that had died, led to the entire disuse of skin or leather by the priests of Egypt. Their shoes were made of vegetable materials (σανδαλακεια, Mart. Cap. 2.) (Baxa.)

Those of the Greeks and Romans who wore shoes, including generally all persons except youths, slaves, and ascetics, consulted their convenience, and indulged their fancy, by inventing the greatest possible variety in the forms, colours, and materials of their shoes. Hence we find a multitude of names, the exact meaning of which it is impossible to ascertain; but which were often derived either from the persons who were supposed to have brought certain kinds of shoes into fashion, or from the places where they were procured. We read, for example, of "shoes of Alcibiades"; of "Sicyonian," and "Persian," which were ladies' shoes (Cic. De Orat. i. 54; Hesych.); of "Laconian," which were men's shoes (Aristoph. Thes. 145); and of "Cretan," "Miletian," and " Athenian" shoes.

The distinctions depending upon form may be generally divided into those in which the mere sole of a shoe was attached to the sole of the foot by ties or bands, or by a covering for the toes or the instep (SOLEA; CREPIDA; SANDALIUM; SOCCEBUS); and those which ascended higher and higher, according as they covered the ankles, the calf, or the whole of the leg. To calceamenta of the latter kind, i.e. to shoes and boots as distinguished from sandals and slippers, the term "calceus" was applied in its proper and restricted sense.

Besides the difference in the intervals to which the calceus extended from the sole upwards to the knee, other varieties arose from its adaptation to particular professions or modes of life. Thus the caliga was principally worn by soldiers; the pereo, by labourers and rustics; and the cothurnus, by tragedians, hunters, and horsemen.

Understanding "calceus" in its more confined application, it included all those more complete coverings for the feet which were used in walking out of doors or in travelling. As most commonly worn, these probably did not much differ from our shoes, and are exemplified in a painting at Herculanenum (Ant. d'Ercolano, i. Tac. 21), which represents a female wearing bracelets, a wreath of ivy, and a panther's skin, while she is in the attitude of dancing and playing on the cymbals.
The form and colour of the calculus were also among the insignia of rank and office. Those who were elevated to the senate wore high shoes like buskins, fastened in front with four black thongs (nigris pellibus, Hor. Sat. i. 6, 27) and adorned with a small crescent. (Mart. ii. 29; Juv. vii. 192.) Hence Cicero (Phil. xiii. 13), speaking of the assumption of the senatorial dignity by Asinius, says mutavit calceos. Among the calcei worn by senators, those called calcei, from their resemblance to the scales of the red mullet (Isid. Or. xix. 14), were particularly admired; as well as others called aludae, because the leather was softened by the use of alum. (Mart. Juv. II. oc.; Lydus, de Mag. t. 32; Ovid, de Art. Am. iii. 271.) [J. Y.]

CALCULATOR (λογιστής) signifies a keeper of accounts in general, but was also used in the signification of a teacher of arithmetic; whence the name of calculator was given to such a book. (Cic. De Oral. i. 32; Ovid, Met. i. 2, vii. 10.) The word was also used in reckoning in general. [ABACUS.]

Among the Greeks the λογιστής and γραμματιστής appear to have been usually the same person. The name was derived from calculate, which were commonly used in teaching arithmetic, and also in reckoning in general. 

In Roman families of importance there was a calculator or writing-master. The name was derived from calculum subducere. (Cic. Trist. ii. 477; Mart. Epig. xiv. 17. 2, xiv. 20.) Calculi were also used in reckoning, and hence the phrases calculum poneræ (Colum. iii. 3), calculum subducere. (Cic. De Fin. ii. 13, &c.)

CALCULI were little stones or pebbles, used for various purposes; such, for example, as the Athenians used in voting, or such as Demosthenes put in his mouth when declaring, in order to mend his pronunciation. (Cic. De Orat. i. 61.)

The months themselves, which in the time of Hesiod (Op. et Dies, 770) had been reckoned at 30 days, afterwards alternately contained 30 days (full months, πνέματις) and 29 days (hollow months, κόλον). According to this arrangement, one year of the cycle contained 354, and the other 384 days. The error contained in this calculation could not long remain unobserved, and attempts were made to correct it. The principal one was that of creating a cycle of two years, called πτερατίς, or annus magnus, and containing 25 months, one of the two years, consisting of 12 and the other of 13 months. The months themselves, which in the time of Hesiod (Op. et Dies, 770) had been reckoned at 30 days, afterwards alternately contained 30 days (full months, πνέματις) and 29 days (hollow months, κόλον). According to this arrangement, one year of the cycle contained 354, and the other 384 days. The two together were about 7 days more than two tropical or solar years.

CALCULIUM (CALDA) was the account-book, in which creditors entered the names of their debtors and the sums which they owed. As the interest on borrowed money was due on the Calendae of each month, the name of Calendarium was given to such a book. (Senee. De Benef. i. 2, vii. 10.) The word was subsequently used to indicate a register of the days, weeks, and months, thus corresponding to a modern almanac or calendar.

1. GREEK CALENDAR. — In the earliest times the division of the year into its various seasons appears to have been very simple and rude, and it would seem that there was no other division except that of summer (Σέροος) and winter (Χειμώος). To these strongly marked periods there were afterwards added the periods of transition, viz. spring (Επαρ) and autumn (Επαρέα), with certain subdivisions according to the different agricultural pursuits peculiar to each of them. As, however, the seasons of the year were of great importance in regard to agriculture, it became necessary to fix their beginning and end by connecting them with the rising or setting of certain stars. Thus Hesiod (Op. et Dies, 381) describes the time of the rising of the Pleiades as the time for harvesting (κανύτος), and that of their setting as the time for ploughing (κανόρος); the time at which Arcturus rose in the morning twilight as the proper season for the vintage (L. c. 607), and other phenomena in nature, such as the arrival of birds of passage, the blossoming of certain plants, and the like, indicated the proper seasons for other agricultural occupations; but although they may have continued to be observed for centuries by some rustic, they never acquired any importance in the scientific division of the year. [ASTRONOMIA.]

The moon being that heavenly body whose phases are most easily observed, formed the basis of the Greek calendar, and all the religious festivals were dependent on it. The Greek year was a lunar year of twelve months, but at the same time the course of the sun also was taken into consideration, and the combination of the two (Gemin. I. s. 6; comp. Censorin. De Die Nat. 18; Cic. in Verr. ii. 52) involved the Greeks in great difficulties which could not be resolved without causing them to place their chronology on a sure foundation. It seems that in the early times it was believed that 12 revolutions of the moon took place within one of the sun; a calculation which was tolerably correct, and with which people were satisfied. The time during which the moon revolved around her axis, was calculated at an average or round number of 30 days, which period was called a month (Gemin. l. c.) but even as early as the time of Solon, it was well known that a lunar month did not contain 30 days, but only 294. The error contained in this calculation could not long remain unobserved, and attempts were made to correct it. The principal one was that of creating a cycle of two years, called πτερατίς, or annus magnus, and containing 25 months, one of the two years, consisting of 12 and the other of 13 months. The months themselves, which in the time of Hesiod (Op. et Dies, 770) had been reckoned at 30 days, afterwards alternately contained 30 days (full months, πνέματις) and 29 days (hollow months, κόλον). According to this arrangement, one year of the cycle contained 354, and the other 384 days. The two together were about 7 days more than two tropical or solar years. (Gemin. 6 : Censorin. 18.) When this mode of reckoning was introduced, it is unknown; but as Herodotus (i. 32) mentions it, it is clear that it must have been before his time. The 75 days, in the course of 4 years, made up a month of 30 days, and such a month was accordingly inserted in every fourth year, and the cycle of four years was called a πνέματις. (Censorin. l. c.) But a far more important cycle was the ενεαετής, or the cycle of 8 years, for it was practically applied by the Greeks to the affairs of ordinary life. The calculation was this: as the solar year is reckoned at 365\frac{1}{4} days, 8 such years contain 2922 days, and eight lunar years 2832 days; that is, 90 days less than 8 solar years. Now these 90 days were constituted as three months, and inserted as three intercalary months into three different years of the ενεαετής. that is, into the third, fifth, and eighth. (Censorin.: Gemin. lii. oc.) It should, however, be observed that Macrobeus (Sat. i. 13) and Solinus (Physist. iii.) state that the three intercalary months were all added to the last year of the emenaeums, when...
The month in which the year began, as well as the names of the months, differed in the different countries of Greece, and in some parts even no names existed for the months, they being distinguished only numerically, as the first, second, third, fourth month, &c. In order, therefore, to acquire any satisfactory knowledge of the Greek calendar, the different states must be considered separately.

The Attic year began with the summer solstice, and each month was divided into three decades, from the 1st to the 10th, from the 10th to the 20th, and from the 20th to the 30th. The first day of a month, or the day after the conjunction, was *μιδία*; and as the first decade was designated as *δεύτερα*, *τρίτα*, *τετάρτα*, &c., *μηνός* *ισταμένου*. The days of the second decade were distinguished as *έπι δέκα*, or *μεσάνων*, and were counted to 20 regularly, as *πρώτη*, *δεύτερα*, *τρίτα*, *τετάρτα*, &c., *έπι δέκα*. The 20th itself was called *εἴκοσι*, and the days from the 20th to the 30th were counted in two different ways, viz. either onwards, as *πρώτη*, *δεύτερα*, *τρίτα*, &c., *έπι εἰκοσι*, or backwards from the last day of the month with the addition of *φιλιστοὶ*, *πανομένων*, *λήμνοι*, or *πλατανός*, as *εἴκαντα*, *δικάντα*, &c., *φιλιστοί*, which, of course, are different dates in hollow and in full months. But this mode of counting backwards seems to have been more commonly used than the other. With regard to the hollow months, it must be observed, that the Athenians, generally speaking, counted 29 days, but in the month of Boedromion they counted 30, leaving out the second, because on that day Athena and Poseidon were believed to have disputed about the possession of Attica. (Plut. De Frat. Am. p. 499, Sympos. ix. 7.) The following table shows the succession of the Attic months, the number of days they contained, and the corresponding months of our year.

At the time when the Julian Calendar was adopted by the Athenians, probably about the time of the Emperor Hadrian, the lunar year appears to have been changed into the solar year; and it has further been conjectured, that the beginning of the year was transferred from the summer solstice to the autumn equinox.

The year of the Lacedaemonians, which is believed to have begun at the time of the autumn equinox, contained the following months:

It should be observed that the order of most of these months is merely conjectural, and of some it is not even certain as to whether they really were Lacedaemonian months. But here, as in the other lists, we follow Hermann’s view, which he has fully explained in the work referred to at the end of this article.

1. Bucatius (Βουκάτιος), nearly corresponds to our January.
2. Hermæus (Ἡρμαῖος) — February.
4. Unknown.
5. Theluthius (Θελούθιος) — May.
6. Unknown.
7. Unknown.
8. Hippodromius (Ἱπποδρόμιος) — August.
10. Unknown.
11. Damatrius (Δαμάτριος) — November.
12. Alcumenius (Ἀλκομένιος) — December.

The months of the year at Delphi were —

1. Bucatius (Βουκάτιος), nearly answers to our September.
2. Hermæus (Ἡρμαῖος) — October.
3. Apellaes (Ἀπελλαές) — November.
4. Unknown.
5. Dadaphorius (Δαδαφριός) — January.
6. Poetropius (Ποιητρόπιος) — February.
7. Rysius (Ῥυσίος) — March.
8. Artemisius (Ἀρτέμισιος) — April.
11. Ilaeus (Ἰλαῖος) — July.
12. Theoxenius (Θεόξενιος) — August.

The names of the months at Cyzicus are given founded only on a conjecture, and the last may be in the following order, though the first of them is either the 10th, 11th, or 12th:

1. Boedromion (Βοηδρομίον), nearly answers to our October.
2. Cyanepion (Κυανεψίων) — November.
3. Apaturion (Ἀπαταρίων) — December.
5. Leneon (Λενείων) — February.
6. Anthesterion (Ἀνθεστηρίων) — March.
7. Artemision (Ἀρτεμίσιων) — April.
8. Calameon (Καλαμέων) — May.
10. Taureon (Ταυρεών) — July.
11 and 12. are unknown.

Among the Sicilian months the following are known:

1. Thesmophorius (Θεσμοφόριος), probably answers to our October.
2. Dalius (Δάλιος) — November.
3. Unknown.
5. Unknown.
6. Themis (Θημήσιος) — March.
7. Artamitius (Ἀρταμίτιος) — April.
8. Unknown.
11. Carnius (Κάρνιος) — August.
12. Panamus (Πάναμος) — September.

We further know the names of several isolated months of other Greek states; but as it is as yet impossible to determine where they occupied in the calendar, and with which of our months they correspond, their enumeration here would be of little or no use. We shall therefore confine ourselves to giving some account of the Macedonian months, and of some of the Asiatic cities and islands, which are better known.

On the whole it appears that the Macedonian year agreed with that of the Greeks, and that accordingly it was a lunar year of twelve months, since we find that Macedonian months are described as coincident with those of the Athenians. (See a letter of King Philip in Demosth. De Coron. p. 280; Plut. Camil. 19, Alex. 3, 16.) All chronologers agree as to the order and succession of the Macedonian months; but we are altogether ignorant as to the name and place of the intercalary month, which must have existed in the Macedonian year as well as in that of the Greek states. The order is as follows: — 1. Dias (Δίας), 2. Apellaes
CALENDARIUM.

('Απελλαίων), 3. Audynaeus (Αὐδύναιος), 4. Peritius (Περίτιος), 5. Dystrus (Δύστρος), 6. Xanthicus (Χανθικός), 7. Artemiusius (Ἀρτέμιος), 8. Daesius (Δαίσιος), 9. Panemus (Πανέμος), 10. Louis (Λούς), 11. Gorpiaeus (Γορπιαῖος), 12. Hyperberetaeus (Ὑπερβερεαῖος). The difficulty is to identify the Macedonian months with those of the Athenians. From Plutarch (Camil. 19, comp. with Alex. 16) we learn that the Macedonian Daesius was identical with the Athenian Thargelion; but while, according to Philip, the Macedonian Louis was the same as the Athenian Boedromion, Plutarch (Alex. 3) identifies the Louis with the Attic Hecatombaeon. This discrepancy has given rise to various conjectures, some supposing that between the time of Philip and Plutarch a transposition of the names of the months had taken place, and others that Plutarch made a mistake in identifying the Louis with the Hecatombaeon. But no satisfactory solution of the difficulty has yet been offered. We know that the Macedonian year began with the month of Dius, commencing with the autumnal equinox. When Alexander conquered Asia, the Macedonian calendar was spread over many parts of Asia, though it underwent various modifications in the different countries in which it was adopted. When subsequently the Asians adopted the Julian Calendar, those modifications also exercised their influence and produced differences in the names of the months, although, generally speaking, the solar year of the Asians began with the autumnal equinox. During the time of the Roman emperors, the following calendars occur in the province of Asia:

1. Caesarius (Καισάριος) had 30 days, and began on the 24th of September.
2. Tiberius (Τιβέριος) 31 — — 24th of October.
3. Apaturius (Ἀπάτουριος) 31 — — 24th of November.
5. Lenaues (Λήναοις) 29 — — 24th of January.
7. Artemisius (Ἀρτέμιος) 31 — — 24th of March.
8. Evangelius (Ἐυαγγελίος) 30 — — 24th of April.
9. Stratoniues (Στρατόνιος) 31 — — 24th of May.
12. Laodicius (Λαοδίκιος) 30 — — 25th of August.

Among the Ephesians we find the following months:

1—4. Unknown.
5. Apatureon (Ἀπατουρέων), nearly answers to our November.
6. Poseideon (Ποσειδείων) — — December.
7. Lenaee (Lambdaíος) — — January.
8. Unknown.
10. Calamaeaeon (Καλαμαίαοι) — — April.

At a later time the Ephesians adopted the same names as the Macedonians, and began their year with the month of Dius on the 24th of September.

The following is a list of the Bithynian months:

1. Heraeus (Ἡραίος), contained 31 days, and began on the 23rd of September.
3. Metrous (Μετρός) 31 — — 23rd of November.
4. Dionyssius (Διονύσιος) 31 — — 24th of December.
8. Strateius (Στράτειος) — 31 — 23rd of April.
10. Arcius (Ἀρκίος) — 31 — 23rd of June.
11. Aphrodisius (Αφροδίσιος) — 30 — 24th of July.
12. Demetries (Δημήτριος) — 31 — 23rd of August.

The following system was adopted by the Cyprians:

1. Aphrodisius (Αφροδίσιος), contained 31 days, and began on the 23rd of September.
3. Ameius (Αμείος) — 31 — 23rd of November.
7. Autocratorius (Αὐτοκρατόριος) — 31 — 23rd of March.
8. Demarchexusius (Δημαρχεξιος) — 31 — 23rd of April.
10. Archierius (Ἀρχιερεύς) — 31 — 23rd of June.
11. Eusthus (Εὐσθεύς) — 30 — 24th of July.
12. Romaeus (Ῥωμαίος) — 31 — 23rd of August.
It should be observed that several of the Eastern nations, for the purpose of preventing confusion in their calculations with other nations, dropped the names of their months, and merely counted the months, as the first, second, third, &c. month. For further information see Corsini, Fast. Att., which however is very imperfect; Ideler, Handbuch der Mathem. u. technischen Chronol. vol. i. p. 227, &c.; Clinton, Fast. Helion, vol. ii. Append. xix; and more especially K. F. Hermann, Ueber Griechische Monatskunde, Göttingen, 1844, 4to, and Th. Bergk, Beiträge zur Griechischen Monatskunde, Giessen, 1845, 8vo.

It was previously observed, that the names of their months, and merely counted the months, as the first, second, third, &c. month. For further information see Corsini, Fast. Att., which however is very imperfect; Ideler, Handbuch der Mathem. u. technischen Chronol. vol. i. p. 227, &c.; Clinton, Fast. Helion, vol. ii. Append. xix; and more especially K. F. Hermann, Ueber Griechische Monatskunde, Göttingen, 1844, 4to, and Th. Bergk, Beiträge zur Griechischen Monatskunde, Giessen, 1845, 8vo.

2. Roman Calendar.—The Year of Romulus.

The name of Romulus is commonly attached to the year which is said to have prevailed in the earliest times of Rome; but tradition is not consistent with regard to the form of it. The historians Licinius Macer and Fenestella maintained that the oldest year consisted of twelve months, and that it was already in those days an annus vertens, that is, a year which coincided with the period of the sun’s course. Censorinus, however, in whose work this statement occurs (De Die Natali, c. 20; compare also the beginning of c. 19), goes on to say that more credit is due to Gracanxus, Fulvius (Nobilior), Varro, and others, according to whom the Romans in the earliest times, like the people of Alba from whom they sprang, allotted to the year ten months. This opinion is supported by Ovid in several passages of his Fasti (i. 27, 42, ii. 99, 119, 151); by Gallius (Noct. Att. iii. 16), Macrobius (Saturn. i. 12), Solinus (Polyh. i.), and Servius (ad Georg. i. 43). Lastly, an old Latin year of ten months is implied in the fact, that at Laurentum (Macrobi. i. 15) a sacrifice was offered to Juno Kalendaris on the 23rd of August, when Censorinus wrote (A.D. 238), the Alban calendar gave 36 days to March, 22 to May, 18 to Sextilis, and 16 to September; while at Tusculum Quinctilia had 36 days, October 32; and again at Aricia the same month, October, had no less than 38. (Censorinus, c. 22.) The Romilian year, if we follow the majority of authors, contained but 304 days; a period differing so widely from the real length of the sun’s course, that the months would rapidly revolve through all the seasons of the year. This inconvenience was remedied, says Macrobius (i. 13), by the addition of the proper number of days required to complete the year; but these days, he goes on to say, did not receive any name as a month. Servius speaks of the intercalated period as consisting of two months, which at first had no name, but were eventually called after Janus and Februns. That some system of intercalation was employed in the Romilian year, was also the opinion of Licinius Macer. (Macrobi. i. 18.) This appears to be all that is handed down with regard to the earliest year of the Romans.

As a year of ten months and 304 days, at once falls greatly short of the solar year, and contains no exact number of lunations, some have gone so far as to dispute the truth of the tradition in whole or part, while others have taxed their ingenuity to account for the adoption of so anomalous a year. Puteanus (De Nundinis, in Graevius’ Thesaurus, vol. viii.), calling to mind that the old Roman or Etruscan week contained eight days*, every eighth day was marked by a suspension of the normal activities, which was called a “day of rest” or “sabbath” (sabbatum). These days, called “sabbaths” (sabbata), were observed in the context of agriculture and harvest, and were likely derived from the religious practices of the Etruscans, who were known for their agricultural cycles and religious festivals. As such, these days would have been a time of rest and reflection for the farmers and their families, allowing them to tend to their fields or engage in other less strenuous activities. The tradition of observing these days of rest likely persisted in rural areas for centuries, even as the calendar itself evolved to better align with the solar year and the natural cycles of the seasons.

* Hence there are found attached to the successive days in the old calendars the recurring series of letters A, B, C, D, E, F, G, H, no doubt for the purpose of fixing the nundines in the week of eight days; precisely in the same way in which the first seven letters are still employed in ecclesiastical calendars, to mark the days of the Christian week.
day being specially devoted to religious and other public purposes, under the name of nonae or nundinæ, was the first to point out that the number 304 is a precise multiple of eight. To this observation, in itself of little moment, Niebuhr has given some weight, by further noticing that the 36 nun-
dines in a year of 304 days tally exactly with the number of dies fasti afterwards retained in the Julian calendar. Another writer, Pontedera, ob-
served that 304 bore to 365 nearly the ratio of 5 to 6, six of the Romulan years containing 1825, five of the longer periods 1825 days; and Niebuhr (I. 9. c. 271) who is a warm advocate of the ten-month year, has made much use of this consideration. He thus explains the origin of the well-known quinquennial period called the lustrum, which Censorinus (c. 18) expressly calls an annum magnum, that is, in the modern language of chronology, a cycle. Moreover, the year of ten months, says the same writer (p. 279), was the term for mourning, for paying portions left by will, for credit on the sale of yearly profits; most pro-
ably for all loans; and it was the measure for the most ancient rate of interest. [FENtrs.]

Whether the whole month contained 31 or 29 days. These ingenious and perhaps satisfactory specu-
lations of the German critic of course imply that the decemtrial year still survived long after the regal government had ceased; and in fact he be-
thinks that this year, and the lunar year, as deter-
mied by Scaliger's proposed cycle of 22 years, co-
existed from the earliest times down to a late

In antiquarian subjects it will generally be found probable, to that superstitious feeling, according to which an odd number was accounted full (plenus) and more fortunate. Be this as it may, to the year which had previously been in use (that of Romulus) one-and-fifty days were now added; but as these were not sufficient to constitute two months, a day was taken from each of the before-mentioned hollow months, which added thereto, made up 57 days, out of which two months were formed, Janu-

ary and Februarius, with 28 days. Thus all the months henceforth were full, and contained an odd number of days, save Februarius, which alone was of a greater length than the rest. In this passage it is fitting to ob-
serve that the terms pleni and cursum mensae are ap-
plied in a sense precisely opposite to the practice of the Greek language in the phrases μήνες πληρεις and κοιλοί. The mysterious power ascribed to an odd number is familiar from the Numero deus impare gaudet of Virgil. Pliny also (H. N. xxvii. 5) observes,—Impares numeros ad omnia vehemen-
tiores credivimus. It was of course impossible to give an odd number of days at the same time to the year on the one hand, and to each of the twelve months on the other; and yet the object was in some measure effected by a division of February itself into 23 days, and a supernumerary period of five days. (See the mode of intercalation below.)

The year of Numa then, according to Censorinus, contained 355 days. Plutarch tells us that Numa estimated the anomaly of the sun and moon, by which he means the difference between twelve lunations and the sun's annual course at eleven days, i.e. the difference between 365 and 354 days. Macrobius, too, says that the year of Numa had at first 354, afterwards 355 days. Compare herewith Liv. i. 19; Ovid. Fasti, i. 43, iii. 151; Aurel. Vict. c. 3; Florus, i. 2; Solinus, c. 1.

Twelve lunations amount to 354 days, 8th. 48' 36", so that the so-called year of Numa was a tolerably correct lunar year; though the months would have coincided more accurately with the single lunations, if they had been limited to 30 and 29 days, instead of 31, 29, and 28 days. Thus it was in fact adapted to the moon's course, not to the current assertion of ancient writers, more particu-
larly of Livy, who says: (Numa) omnium prinum ad cursum lunae in duodecim mensis discretam annum. Unfortunately however, many of the same writers unfortu-
nate to the same period the introduction of such a system of intercalation as must at once have dis-
located the coincidence between the civil month and the lunar period. At the end of two years the year of Numa would have been about 22 days in arrear of the solar period, and accordingly it is said an intercalary month of that duration, or else of 23 days, was inserted at or near the end of Feb-
ruary, to bring the civil year into agreement with the regular return of the seasons. Of this system of intercalation a more accurate account shall pre-
ently be given. But there is strong reason for believing that this particular mode of intercalation was not contemporary in origin with the year of Numa.

In antiquarian subjects it will generally be found that the assistance of etymology is essential; be-
cause the original names that belong to an institu-
tion often continue to exist, even after such changes have been introduced, that they are no longer adapted to the new order of things; thus they survive as useful memorials of the past. In this

The Year of Numa.—Having described the Romulan year, Censorinus (c. 20) proceeds thus:—Afterwards, either by Numa, as Pulvius has it, or according to Junius by Tarquin, there was instituted a year of twelve months and 355 days, although the moon in twelve lunations appears to complete but 354 days. The excess of a day was owing, either to error, or what I consider more

The mysterious power ascribed to an odd number is familiar from the Numero deus im-
pare gaudet of Virgil. Pliny also (H. N. xxvii. 5) observes,—Impares numeros ad omnia vehemen-
tiores credivimus. It was of course impossible to give an odd number of days at the same time to the year on the one hand, and to each of the twelve months on the other; and yet the object was in some measure effected by a division of February itself into 23 days, and a supernumerary period of five days. (See the mode of intercalation below.)

The year of Numa then, according to Censorinus, contained 355 days. Plutarch tells us that Numa estimated the anomaly of the sun and moon, by which he means the difference between twelve lunations and the sun's annual course at eleven days, i.e. the difference between 365 and 354 days. Macrobius, too, says that the year of Numa had at first 354, afterwards 355 days. Compare herewith Liv. i. 19; Ovid. Fasti, i. 43, iii. 151; Aurel. Vict. c. 3; Florus, i. 2; Solinus, c. 1.

Twelve lunations amount to 354 days, 8th. 48' 36", so that the so-called year of Numa was a tolerably correct lunar year; though the months would have coincided more accurately with the single lunations, if they had been limited to 30 and 29 days, instead of 31, 29, and 28 days. Thus it was in fact adapted to the moon's course, not to the current assertion of ancient writers, more particu-
larly of Livy, who says: (Numa) omnium prinum ad cursum lunae in duodecim mensis discretam annum. Unfortunately however, many of the same writers unfortu-
nate to the same period the introduction of such a system of intercalation as must at once have dis-
located the coincidence between the civil month and the lunar period. At the end of two years the year of Numa would have been about 22 days in arrear of the solar period, and accordingly it is said an intercalary month of that duration, or else of 23 days, was inserted at or near the end of Feb-
ruary, to bring the civil year into agreement with the regular return of the seasons. Of this system of intercalation a more accurate account shall pre-
ently be given. But there is strong reason for believing that this particular mode of intercalation was not contemporary in origin with the year of Numa.

In antiquarian subjects it will generally be found that the assistance of etymology is essential; be-
cause the original names that belong to an institu-
tion often continue to exist, even after such changes have been introduced, that they are no longer adapted to the new order of things; thus they survive as useful memorials of the past. In this

The Year of Numa.—Having described the Romulan year, Censorinus (c. 20) proceeds thus:—Afterwards, either by Numa, as Pulvius has it, or according to Junius by Tarquin, there was instituted a year of twelve months and 355 days, although the moon in twelve lunations appears to complete but 354 days. The excess of a day was owing, either to error, or what I consider more
way we are enabled by the original meaning of words, aided by a few fragments of a traditional character, to state that the Romans in early times possessed a year which altogether depended upon the phases of the moon. The Latin word mensis (Varro, De Ling. Lat. vi. or in the old editions, v. 54), like the Greek ἀρχή or μήση, and the English month, or German monath, or Roman mensis, is evidently connected with the word moon. Again, while in the Greek language the name οὐνυπρια (new-moon), or Ἔνη καὶ νέα, given to the first day of a month, betrays its lunar origin, the same result is deduced from the explanation of the word kalendae, as found in Macrobius (i. 15). “In ancient times,” says that writer, “before Cn. Flavius the scribe, against the pleasure of the patricians, made the fasti known to the whole people (the end of the 4th century B.C.), it was the duty of one of the pontifices minores to look for the first appearance of the new moon; and as soon as he described it, to carry word to the rex sacrificulus. Then a sacrifice was offered by these priests, after which the same pontifex having summoned the plebs (calata piebe) to a place in the capitol, near the Curia Calabra, with the word Casa Romuli, there announced the number of days which still remained to the nones, whether five or seven, by so often repeating the word κακάω.” There was no necessity to write this last word in Greek character, as it belonged to the old Latin. In fact, in this very passage, it occurs in both calata and calabra; and again, it remained to the latest times in the word nomenclator. In regard to the passage here quoted from Macrobius, it must be recollected that while the moon is in the immediate vicinity of the sun, it is impossible to see it with the naked eye, so that the day on which it is first seen is of necessity the day of the actual conjunction. We learn elsewhere that as soon as the pontifex discovered the thin disc, a hymn was sung, beginning Jāna novaelfa, the word Jāna (Macrob. Sat. i. 9; Varro, De Re Rust. i. 37) being only a dialectic variety of Diana, just as Diespiter or Diüperis corresponds to Jupiter; and other examples might readily be given, for the change occurs in almost every word which has the syllables de or di before a vowel. Again, the consecration of the kalends is to Juno (Ovid. Fasti. i. 55; vi. 39; Macrobr. Sat. i. 9. 15) is referred by the latter writer to the fact that the months originally began with the moon, and that Juno and Luna are the same goddess; and the poet likewise points at the same connection in his explanation of Juno’s epithet Lucina. Moreover, at Laurentum Juno was worshipped as Juna Kalendaria. Even so late as 448 B.C. strictly lunar months were still in use; for Dionysius (Antiq. x. 59) says that Appius, in that year, received the consular authority on the ides of March being the day of full moon, for at that time, he adds, the Romans regulated their months by the moon. In fact, so completely was the day of the month, which they called the ides, associated with the idea of the full moon, that some derived the word ἄρχε τῶν ἑβδομάδων, quod eo die pleunam speciem luna demonstrat (Macrobr. vi. 16.) Quietly to insert the idea of pleunam, when the Greek word signifies merely species, is in accordance with those loose notions which prevailed in all ancient attempts at etymology. But though the derivation is of course groundless, it is of historical value, as showing the notion connected with the term ides.

For the same reason probably the ides of March were selected for the sacrifice to the goddess Anna Perenna, in whose name we have nothing more than the feminine form of the word annus, which, whether written with one n or two, whether in its simple form annus, or diminutive annulus, still always signifies a circle. Hence, as the masculine form was easily adopted to denote the period of the sun’s course, so the feminine in like manner might well be employed to signify, first the moon’s revolution, and then the moon herself. The tendency among the Romans to have the same word repeated, first as a male and then as a female deity, has been noticed by Niebuhr; and there occurs a complete parallel in the name Diana, afterwards Junus, for the god of dies, or light, the sun; Diana, afterwards Juna, for the goddess of light, the moon; to say nothing of the words Jupiter and Juno. That the month of March should have been selected from its being the first of the year, and a sacrifice to the moon might well take place on the day when her power is fully displayed to man. The epithet Perenna itself means no more than ever-circulating, just as Diespiter or Diüperis connects the two words with annus, when he states the object of the sacrifice to be—ut annare perennareque commune bivocat.

Another argument in favour of the lunar origin of the Roman month, is deducible from the practice of counting the days backward from the Kalends, Nones, and Ides; for the phrases will then amount to saying—“It wants so many days to the new moon, to the first quarter, to full moon.” It would be difficult, on any other hypothesis, to account for the adoption of a mode of calculation, which, to our notions at least, is so inconvenient; and indeed it is expressly recorded that this practice was derived from Greece, under which term the Athenians probably are meant; and by these we know that a strictly lunar year was employed down to a late period. (Macrobr. i. 16.)

But perhaps the most decisive proof of all lies in the simple statement of Livy (i. 19), that Numa so regulated his lunar year of twelve months by the insertion of intercalary months, that at the end of every nineteenth year it again coincided with the same point in the sun’s course from which it started. His words are—Quem (annum) intercalibus mensibus interponendis ita dispensevit ut vicensimo anno ad metum eandem solis unde orsi sunt, plenis annorum omnium spatiiis, dies congruent. We quote the text; because editors, in support of a theory, have taken the liberty of altering it by the insertion of the word quarto, forgetting too that the words quarto et vicensimo anno signify, not every twenty-fourth year, which their theory requires, but every twenty-third, according to that peculiar view of the Romans which led them to count both the extremes in defining the interval from one point to another; and which still survives in the medical phrases tertian and quartan ague, as well as in the French expressions huit jours for a week, and quinze jours for a fortnight. Accordingly, it is not doing violence to words, but giving the strict and necessary meaning to them, when, in our own translation of the passage in Livy, we express vicensimo anno by every nineteenth year.

Now 19 years, it is well known, constitute a most convenient cycle for the conjunction of a lunar and solar year. A mean lunation, or synodic month, as—
The moon's course. The length of the several observations a nicety which could pretend to deal with seconds; yet even in the regal period of Rome, the Greek towns in the south of Italy must already have possessed astronomers, from whom the inhabitants of Latio could have borrowed such a rough practical knowledge of both the moon and sun's period, as was sufficient to show that at the end of 19 solar years the moon's age would be nearly what it was at the commencement; and it should be recollected that the name of Numa is often connected by tradition with the learning of Aiagna Graecia. At any rate a cycle of 19 years was introduced by Meton at Athens, in the year 432 B.C.; and the knowledge of it among the learned may probably have preceded by a long period its introduction into popular use, the more so as religious festivals are generally connected with the various divisions of time, and superstition therefore would be most certainly opposed to innovations of the almanack. How the Romans may have intercalated in their 19 lunar years the seven additional months which are requisite to make up the whole number of 235 (= 12 x 19 + 7) lunations, is a subject upon which it would be useless to speculate. From a union of these various considerations, it must be deemed highly probable that the Romans at one period possessed a division of time dependent upon the moon's course, as called by Ideler. — The motives which induced the Romans to abandon the lunar year are no where recorded; nor indeed the date of the change. We have seen, however, that even in the year 448 B.C., the year was still regulated by the moon's course. To this must be added that, according to Tuditanus and Cassius Hemina, a bill on the subject of intercalation was brought before the people by those decemviri, who, for he reaches Cercyra a.d. V. Ida. Nov., and on the XV. Kal. Dec. complains — Septemum jam diem tenebamur. The seven days in question would be IV. Ida., III. Ida., Prid. Ida., Id. Nov., XVII. Kal. Dec., XVI. Kal. Dec., XV. Kal. Dec. That the place of the nones and ides was in each month the same before the Julian correction as afterwards, is asserted by Macrobius.

The main difficulty is with regard to the mode of intercalation. Plutarch, we have already observed, speaks of an intercalation, by him referred to Numa, of 22 days in alternate years (so called by Ideler). — the festivals shall be set down in the calendars. We have the authority of Varro indeed, that a system of intercalation already existed at an earlier date; but he says that there was a very ancient law engraved on a bronze pillar by L. Pinarius and Furius in their consulate cui mentio intercalaris ascribitur. We add the last words in Latin from the text of Macrobius (c.e. 13), because their import is doubtful. If we are right in interpreting them thus — the date upon which is expressed by a month called intercalary, all that is meant may be one of the intercalary lunations, which must have existed even in the old lunar year. At the period of the decemviral legislation there was probably instituted that form of the year of 354 days, which was corrected by the short intercalary month, called Mercidionus, or Mercedinos; but so corrected as to deprive the year and months of all connection with the moon's course. The length of the several ordinary months was probably that which Censorinus has erroneously allotted to the months of Numa's lunar year, viz.:—

Such, at any rate, was the number of days in each month immediately prior to the Julian correction; for both Censorinus and Macrobius say that Caesar added 10 days at the end of December, and one to Aprilis, Junius, September, and November. Hence Niebuhr appears to have made an error when he asserts (vol. ii. note 1179) that July acquired two more days at the reformulation of the calendar, and founds thereon a charge of carelessness against Livy. Moreover that November had but 29 days prior to the correction, in other words, that the XVII. Kal. Dec. immediately followed the Idus Nov., appears from a comparison of Cicero's letters to Tiro (Ad fam. xvi. i. 7); for he reaches Cercyra a.d. V. Ida. Nov., and on the next 29th of February. Censorinus, with more precision, says that the number of days in each intercalation was either 22 or 23, and Macrobius agrees with him in substance. Of the point at which the supernumerary month was inserted, the accounts are these: — Varro (De Ling. Lat. vi. 55) says, the twelfth month was February; and when intercalations take place, the five last days of this month are removed. Censorinus agrees herewith, when he places the intercalation generally potestatem in the month of February, between the Terminalia and the Regifugium, that is immediately after the day called by the Romans a.d. VI. Kal. Mart. or by us the 24th of February. This, again, is confirmed by Macrobius. The setting aside of the last five days agrees with the practice which Herodotus ascribes to the Egyptians of considering the five days over the 360 as scarcely belonging to the year, and not placing them in any month. So completely were these five days considered by the Romans to be some thing extraneous, that the soldier appears to have received pay only for 360 days. For in the time of Augustus the soldier received deni asses per day, i.e. ½ of a denarius; but Domitian (Suet. Dom. 7) addidit quartum suspendium aureos terminos. Thus, as 25 denarii made an aureus, the annual pay prior to Domitian was (360 x 10) + 16 denarii = (360 x 10) + (16 x 25) aurei = 9 aurei; and thus the addition of three aurei was precisely a fourth more. Lastly, the festival Terminatorius, as its name implies, marked the end of the year, and thus by the way again proves that March was originally the first month.

The intercalary month was called Mercidionus, or Mercidionus. (Plutarch, Numa, 19; Cass. 59.)
CALENDARIUM.

We give it in Greek characters, because it happens somewhat strangely that no Latin author has mentioned the name, the term meaning intercalarum or intercalarius supposing its place. Thus, in the year of intercalation, the day after the ide of February was called, not as usual a. d. XVI. Kalendas Martias, but a. d. XI. Kalendas intercalares. So also there were the Nonae intercalares, and Idus intercalares, and after this last came either a. d. XV. or XVI. Kal. Mart., according as the month had 22 or 23 days, or rather, if we add the five remaining days struck off from February, 27 or 28 days. In either case the Regifugium retained its ordinary designation a. d. VI. Kal. Mart. (See Asconius, Ad Orat. pro Melone, and the Fasti Triumphales, 493, a. u. c.) When Cicero writes to Atticus (vi. 1), Acoepit tuaa litteras a.d. Y. Terminalia (i. e. Feb. 19); he uses this strange mode of defining a date, because, being then in Cilicia, he was not aware whether any intercalation had been inserted that year. Indeed, he says, in another part of the same letter, Ea sive observabo, quasi intercalatum non sit.

Besides the intercalary month, mention is occasionally made of an intercalary day. The object of this was solely to prevent the first day of the year, and perhaps also the nones, from coinciding with the nundinae, of which mention has been already made. (Macrobi. i. 13.) Hence in Livy (xlv. 44), Intercalatum eo anno; postridie Terminalia intercalares fuerunt. This would not have been said had the day of intercalation been invariably the same; and again Livy (xiii. 11), Hoc anno intercalatum est. Tertio die post Terminalia Calen-
dae intercalares fuere, i.e. two days after the Terminalia, so that the dies intercalaris was on this occasion disposed of with the customary regularity. Nay, even after the reformation of the calendar, the same superstitious practice remained. Thus, in the year 40 a. c., a day was inserted for this purpose, and afterwards an omission of a day took place, that the calendar might not be disturbed. (Dion Cass. xlvii. 33.)

The system of intercalating in alternate years 22 or 23 days, that is ninety days in eight years, would, in substance, have amounted to the addition of $\frac{9}{8}$ days to each year, so that the Romans would virtually have possessed the Julian calendar. As it was, they added the intercalation to a year of 355 days; and consequently, on an average, every year exceeded its proper length by a day, if we neglect the inaccuracies of the Julian calendar. Accordingly we find that the civil and solar years were greatly at variance in the year 564 a. u. c. On the 11th of Quinctilis, in that year, a remarkable eclipse of the sun occurred. (Liv. xxxvii. 4.) This eclipse, says Ideler, can have been no other than the one which occurred on the 14th of March, 190 a. c. of the Julian calendar, and which at Rome was nearly total. Again, the same historian (xiv. 187) mentions an eclipse of the moon which occurred in the night between the 3rd and 4th of September, in the year of the city 586. This must have been the total eclipse in the night between the 21st and 22nd of June, 168 a. c.

That attempts at legislation for the purpose of correcting so serious an error were actually made, appears from Macrobius, who, aware of himself of the cause of the error, says that, by way of correction, in every third octoennial period, instead of 90 inter calary days, only 66 were inserted. Again it appears that in the time of Acilius Glabrio, in his consulship 169 a. c., that is, the very year before that in which the above-mentioned lunar eclipse occurred, introduced some legislative measure upon the subject of intercalation. (Macrobi. i. 13.) According to the above statement of Macrobius, a cycle of 24 years was adopted, and it is this very passage which has induced the editors of Livy to insert the word quarto in the text already quoted.

As the festivals of the Romans were for the most part dependent upon the calendar, the regulation of the latter was intrusted to the college of pontifices, who in early times were chosen exclusively from the body of patricians. It was therefore in the power of the college to add to their other means of oppressing the plebeians, by keeping to themselves the knowledge of the days on which justice could be administered, and assemblies of the people could be held. In the year 304 a. c., one Cn. Flavius, a secretary (secretus) of Appius Claudius, is said fraudulently to have made the Fasti public. (Livy. vi. 43.) He was accordingly deprived by the pontificates of the other privilege of regulating the year by the insertion of intercalary days, only 66 were inserted. Again it appears however from the last passage that Atticus doubted the truth of the story. In either case, the other privilege of regulating the year by the insertion of the intercalary month gave them great political power, which they were not backward to employ. Every thing connected with the matter of intercalation was left, says Censorinus (c. 20), to the unrestrained pleasure of the pontifices; and the majority of these, on personal grounds, added to or took from the year by capricious intercalations, so as to lengthen or shorten the period during which a magistrate remained in office, and seriously to benefit or injure the farmer of the public revenue. Similar to this is the language employed by Macrobius (i. 4), Ammianus (xxvi. 1), Solinus (c. i.), Plutarch (Caes. c. 59), and their assertions are confirmed by the letters of Cicero, written during his proconsulate in Cilicia, the constant burden of which is a request that the pontifices will not add to his year of government by intercalation regulations.

In consequence of this licence, says Suetonius (Caes. 40), neither the festivals of the harvest coincided with the summer, nor those of the vintage with the autumn. But we cannot desire a better proof of the confusion than a comparison of three short passages in the third book of Caesar's Bell. Civ. (c. 6), Frudie nonas Januarius nonis solvit—(c. 9) iamque hiemis adpropinquabat—(c. 25) multi jam menses transierunt et hiemis jam praecipitaverat.

Year of Julius Caesar.—In the year 46 a. c. Caesar, now master of the Roman world, crowned
his other great services to his country by employing his authority, as pontifex maximus, in the correction of this serious evil. For this purpose he availed himself of the services of Sosigenes, the peripatetic, and a scriba named M. Flavius, though he himself too, we are told, was well acquainted with astronomy, and indeed was the author of a work of some merit upon the subject, which was still extant in the time of Pliny. The chief authorities upon the subject of the Julian reformation are Plutarch (Caes. c. 39), Dion Cassius (xiii. 26), Appian (De Bell. Civ. ii. ad extr.), Ovid (Fasti, iii. 155), Suetonius (Caes. c. 40), Pliny (H. N. xviii. 57), Censorinus (c. 20), Macrobius (Sat. i. 14), Ammianus Marcellinus (xxvi. i), Solinus (i. 45). Of these Censorinus is the most precise:—"The confusion was at last," says he, "carried so far that C. Caesar, the pontifex maximus, in his third consulate, with Lepidus for his colleague, inserted between November and December two intercalary months of 67 days, the month of February having already received an intercalation of 26 days, and thus made the whole year to consist of 445 days. At the same time he provided against a repetition of similar errors by casting aside the intercalary month, and adapting the year to the sun's course. Accordingly, to the 355 days of the previously existing year, he added ten days, which he so distributed between the seven months having 29 days, that January, Sextilis, and December received each two, the others but one; and these additional days he placed at the end of the several months, no doubt with the wish not to remove the various festivals from those positions in the several months which they had so long occupied. Hence in the present calendar, although there are seven months of 31 days, yet the four months, which from the first possessed that number, are still distinguishable by having their nones on the seventh, the rest having them on the fifth of the month. Lastly, in consideration of the quarter of a day, which he considered as completing the true year, he established the rule that, at the end of every four years, a single day should be intercalated, where the month had been hitherto inserted, that is, immediately after the Terminalia; which day is now called the Bissextum."

This year of 445 days is commonly called by chronologists the year of confusion; but by Macrobius, more fitly, the last year of confusion. The kalends of January, of the year 708 A. u. c., fell on the 13th of October, 47 B. C., of the Julian calendar; the kalends of March, 708 A. u. c., on the 1st of January, 46 B. C.; and lastly, the kalends of January, 709 A. u. c., on the 1st of January, 45 B. C. Of the second of the two intercalary months inserted in this year after November, mention is made in Cicero's letters (Ad Fam. vi. 14). It was probably the original intention of Caesar to commence the year with the shortest day. The winter solstice at Rome, in the year 46 B. C., occurred on the 24th of December of the Julian calendar. His motive for delaying the commencement for seven days longer, instead of taking the following day, was probably the desire to gratify the superstition of the Romans, by causing the first year of the reformed calendar to fall on the day of the new moon. Accordingly, it is found that the mean new moon occurred at Rome on the 1st of January, 45 B. C., at 6h 16' p. M. In this way alone can be explained the phrase used by Macrobius: Annum civilem Caesar, habitis ad lanam dimensionibus constitutum, edicto palam proposito publicevis. This edict is also mentioned by Plutarch where he gives the anecdote of Cicero, who, on being told by some one that the constellation Lyra would rise the next morning, observed, "Yes, no doubt, in obedience to the edict." The mode of denoting the days of the month will cause no difficulty, if it be recollected, that the kalends always denote the first of the month, that the nones occur on the seventh of the four months March, May, Quintilis or July, and October, and on the fifth of the other months; that the ides always fall eight days later than the nones; and lastly, that the intermediate days are in all cases reckoned backwards upon the Roman principle already explained of counting both extremes.

For the month of January the notation will be as follows:—

<table>

The letters a d are often, through error, written together, and so confounded with the preposition ad, which would have a different meaning, for ad kalendas would signify by, i.e. on or before the kalends. The letters are in fact an abridgment of ante diem, and the full phrase for "on the second of January" would be ante diem quattuor nonas Januarii. The word ante in this expression seems really to belong in Latin to the cause why nonas is an accusative. Hence occur such phrases as (Cic. Phil. iii. 8), in ante diem quattuor Kal. Decemberis dictavit, "he put it off to the fourth day before the kalenda of December," (Caes. Bell. Gall. i. 6) Is dies erat ante diem V. Kal. Apr., and (Caes. Bell. Civ. i. 11) ante quem diem iterum sit, for quo die. The same confusion exists in the phrase post pasco dies, which means "a few days after," and is equivalent to paucis post diebus. Whether the phrase Kalendas Januarii was ever used by the best writers is doubtful. The words are commonly abbreviated; and three passages where Aprilis, Decemberis, &c. occur, are of no avail, as they are probably accusatives. The ante may be omitted, in which case the phrase will be die quarto nonarum. In the leap year (to use a modern phrase), the last days of February were called —

In which the words prior and posterior are used in
reference to the retrograde direction of the reckoning. Such at least is the opinion of Ideler, who refers to Celsus in the Digest (50. tit. 16. s. 98).

From the fact that the intercalated year has two days called ante diem sextum, the name of bissextile has been applied to it. The term annus bissextilis, however, does not occur in any writer prior to Beda, but in place of it the phrase annus bissextilis.

It was the intention of Caesar that the bissextum should be inserted per eocto quadrennii circuitu, as Censorinus says, or quinto quoque incipienti anno, to use the words of Macrobius. The phrase, however, which Caesar used seems to have been quarto quoque anno, which was interpreted by the priests to mean every third year. The consequence was, that in the year 8 B.C. the Emperor Augustus, finding that three more intercalations had been made than was the intention of the law, gave directions that for the next twelve years there should be no bissextile.

The services which Caesar and Augustus had conferred upon their country by the reformation of the year, seem to have been the immediate causes of the compliments paid to them by the insertion of their names in the calendar. Julius was substituted for Quinctilis, the month in which Caesar was born, in the second Julian year, that is, the year of the dictator's death (Censorinus, c. 22); for the first Julian year was the first year of the corrected Julian calendar, that is, 45 B.C. The name Augustus, in place of Sextilis, was introduced by the emperor himself, at the time when he rectified the error in the mode of intercalating (Suet. Aug. c. 31), anno Augustano xx. The first year of the Augustan era was 27 B.C., viz., that in which he first took the name of Augustus, se vii. et M. Vipsanio Agrippa cos. He was born in September; but gave the preference to the preceding month, for reasons stated in the senatus-consultum, preserved by Macrobius (i. 12). "Whereas the Emperor Augustus Caesar, in the month of Sextilis, was first admitted to the consulate, and thrice entered the city in triumph, and in the same month the legions, from the Janiculum, placed themselves under his auspices, and in the same month Egypt was brought under the authority of the Roman people, and in the same month an end was put to the civil wars; and whereas for these reasons the said month is, and has been, most fortunate to this empire, it is hereby decreed by the senate that the said month shall be called Augustus." "A plebiscitum, to the same effect, was passed on the motion of Sextus Pacuvius, tribune of the plebs."

The month of September in like manner received the name of Germanicus from the general so called, and the appellation appears to have existed even in the time of Macrobius. Domitian, too, conferred his name upon October; but the old word was restored upon the death of the tyrant.

The Fasti of Caesar have not come down to us in their entire form. Such fragments as exist may be seen in Gruter's *Inscriptiones*, or more completely in Foggini's work, *Fastorum Anni Romani Reliquiae*. See also some papers by Ideler in the *Berliner Transactioen* for 1822 and 1823.

**The Gregorian Year.** — The Julian calendar supposes the mean tropical year to be 365d. 6h.; but this, as we have already seen, exceeds the real amount by 11' 12", the accumulation of which, year after year, caused at last considerable inconvenience. Accordingly, in the year 1582, Pope Gregory XIII. assisted by Aloysius, Lilius, Christoph. Clavius, Petrus Ciaconius, and others, again reformed the calendar. The ten days by which the year had been unduly retarded were struck out by a regulation that the day after the fourth of October in that year should be called the fifteenth; and it was ordered that, whereas hitherto an intercalary day had been inserted every four years, for the future three such intercalations in the course of four hundred years should be omitted, viz., in those years which are divisible without remainder by 100, but not by 400. Thus, according to the Julian calendar, the years 1600, 1700, 1800, and 1900 were to be leap years; but, by the regulation of Gregory, the years 1700, 1800, and 1900, were to receive no intercalation, while the years 1600 and 2000 were to be bissextile, as before. The bull which effected this change, was issued Feb. 24, 1582. The fullest account of this correction is to be found in the work of Clavius, entitled *Romani Calendarii a Gregorio XIII. P. M. restituti Explicatio*. As the Gregorian calendar has only 97 leap-years in a period of 400 years, the mean Gregorian year is (303 x 365 + 97 x 366) 400, that is 365d. 5h. 49' 12", or only 24" more than the mean tropical year. This difference in 60 years would amount to 24', and in 60 times 60, or 3600 years, to 24 hours, or a day. Hence the French astronomer, Delambre, has proposed that the years 3600, 7200, 10,800, and all multiples of 3600 should not be leap years. The Gregorian calendar was introduced in the greater part of Italy, as well as in Spain and Portugal, on the day named in the bull. In France, two months after, by an edict of Henry III., the third of December was followed by the 20th. The Catholic parts of Switzerland, Germany, and the Low Countries, adopted the correction in 1583, Poland in 1586, Hungary in 1587. The Protestant parts of Europe resisted what they called a Papistical invention for more than a century. At last, in 1700, Protestant Germany, as well as Denmark and Holland, allowed reason to prevail over prejudice; and the Protestant cantons of Switzerland copied their example the following year.

In England the Gregorian calendar was first adopted in 1752, and in Sweden in 1753. In Russia, and those countries which belong to the Greek church, the Julian year, or old style as it is called, still prevails.

In this article free use has been made of Ideler's work *Lichtbublich der Chronologie*. For other information connected with the Roman measurement of time, see *Astronomia*; *Diis*; *Horologium*; and *Thomae Thesauri*. See also some papers by T. H. K.

**CALIGA.**

A strong and heavy shoe worn by the Roman soldiers. Although the use of this species of calceamentum extended to the centu-
rions, it was not worn by the superior officers. Hence the common soldiers, including centurions, were distinguished by the name of caligati (Suet. Aug. 25, Vitell. 7); when Cicero therefore says of Pompey "mihi caligae ejus non placebant" (Ad Att. ii. 3), he merely uses the words to indicate his military power. Service in the ranks was also designated after this article of attire. Thus Marius is said to have risen to the consulship a caliga, i.e. from the ranks (Sen. De Benef. v. 16), and Ventidius Juventum inopem in caligae militari tolerasse (Plin. H. N. vii. 44). The Emperor Caligula received that title from the name of his father, in consequence of wearing the caliga, which his father Germanicus put on his son in order to please the soldiers. (Tacit. Ann. i. 41; Suet. Calig. 9.) The triumphal monuments of Rome show most distinctly the difference between the caliga of the soldier, property of the Roman state; and as they were of aquaeducts attached to the extremity of each pipe, a vessel used in cooking (Varr. iii. 19; Juv. Sat. iii. 232, xvi. 23). The caliga speculatoria (Suet. Calig. 52), made for the use of spies (speculatores), was probably much lighter than the ordinary shoe worn by the soldiers. [J. Y.]

CALIX (κείλικιον, comp. Macrob. Sat. v. 21). 1. A small drinking-cup, constantly used at symposia and on similar occasions. It is frequently seen in paintings on ancient vases which represent drinking-scenes, and when empty is usually held in a slight upon the consuls on one occasion they endeavoured to assign to them as their provinces, definite the difference between the caliga of the common soldier (arma) and the calceus worn by men of higher rank. (Abolla; Ara.) The sole of the caliga was thickly studded with hobnails (clavii caligarii, Plin. H. N. xxxiv. 41, i. 18; Juv. Sat. iii. 232, xvi. 23). The caliga speculatoria (Suet. Calig. 52), made for the use of spies (speculatores), was probably much lighter than the ordinary shoe worn by the soldiers.

CALIX, a beaten path or track made by the feet of cattle. (Serv. ad Virg. Aen. iv. 405; Isidor. Orig. xv. 16. § 20.) The sheep-walks in the mountainous parts of Campania and Apulia were the property of the Roman state; and as they were of considerable value, one of the quaestors usually had these calixes assigned to him as his province, when we read of the Calissiaci, his principal duties were to receive the scriptura, or tax paid for the pasturage of the cattle, and to protect life and property in these wild and mountainous districts. When the senate wished to put a slight upon the consuls on one occasion they endeavoured to assign to them as their provinces, the care of the woods (silvae) and sheep-walks (calixes). (Tac. Ann. iv. 27; Suet. Caes. 19, Claud. 29; in the last passage the reading is doubtfully)

CALLISTEIA (καλλιστεία), a festival, or perhaps merely a part of one, held by the women of Lesbos; at which they assembled in the sanctuary of Hera, and the fairest received the prize of beauty. (Schol. ad H. ii. 128; Suidas, s. v.; Antholog. Pal. ix. 189; Athen. xiii. p. 610.)

A similar contest of beauty, instituted by Cypselus, formed a part of a festival celebrated by the Parrhasians in Arcadia, in honour of the Eleusinian Demeter. The women taking part in it were called Xρωσεφοροι. (Athen. xiii. p. 609.)

A third contest of the same kind, in which, however, men only partook, is mentioned by Athenaeus (i. c.; compare Etymol. Magn. v. 58) as occurring among the Eleans in honour of Athena. The fairest man received as prize a suit of armour which he dedicated to Athena, and was adorned by his friends with ribbons and a myrtle wreath, and accompanied to the temple. From the words of Athenaeus (xiii. p. 610), who, in speaking of these contests of beauty, mentions Tenedos alone with Lesbos, we must infer that in the former island also Callisteia were celebrated. [L. S.]

CALO'NES, the servants of the Roman soldiers, said to have been so called from carrying wood (καλῶνες) for their use. (Petus, s. v.; Serv. ad Virg. Aen. vi. 1.) They are generally supposed to have been slaves, and they almost formed a part of the army, as we may learn from many passages in Caesar: in fact, we are told by Josephus that, from always living with the soldiers and being present at their exercises, they were inferior to them alone in skill and valour. The word calo, however, was not confined to this significance, but was also applied to farm-servants, instances of which usage are found in Horace (Epist. i. 14. 42; Sat. i. 6. 103, 105).

In Caesar this term is generally found by itself; in Tacitus it is coupled and made almost identical with lixa. Still the calones and lixae were not the same: the latter, in fact, were freemen, who merely followed the camp for the purposes of gain and merchandise, and were so far from being indispensable to an army, that they were sometimes forbidden to follow it (ne lixae sequerentur exercitum, Sall. Bell. Aug. 45). Thus again we read of the lixae mercatoresque, qui placuit sermo populi Romani prostatant (Hirtius, De Bell. Afr. 75), words which plainly show that the lixae were traders and dealers. Livy also (v. 8) speaks of them as carrying on business. The term itself is supposed to be connected with lixa, an old word signifying water, inasmuch as the lixae supplied this article to the soldiers: since, however, they probably furnished ready-cooked provisions (elixos cibos), it seems not unlikely that their appellation may have some allusion to this circumstance. (See Sall. l. c.)

[R. W.]

CALU'MNIA. Calumniari is defined by Martian (Dig. 48. tit. 16. s. 1), False crimina intendera; a definition which, as generally given, was only intended to apply to criminal matters. The definition of Paulus (Sentent. Recpt. i. tit. 5) applies to matters both criminal and civil: Calumniatus est qui scientem praeda per fraudem noctium alicui comparat. Cicero (de Off. i. 10) speaks of "calumni," and of the nimiis callida et multitos juris interpretatio, as things related. Gaius says, Calumniam in adfecta est, sicut furti crimen; the criminality was to be determined by the intention. When an accuser failed in his proof, and the res was acquitted, there might be an inquiry into the conduct and motives of the accuser. If the person who made this judicial inquiry (qu& ognim), found that the accuser had merely acted from error of judgment, he acquitted him in the form non probo; if he convicted him of evil intention, he declared his sentence in the words calumniius es, which sentence was followed by the legal punishment.

According to Marciun, the punishment for calumnia was fixed by the lex Remnia, or, as it is sometimes, perhaps incorrectly, named, the lex Menenia. (Val. Max. iii. 7, § 6.) But it is not
known when this lex was passed, nor what were its penalties. It appears from Cicero (Pro Sent. Rose. Amerin. c. 29), that the false accuser might be branded on the forehead with the letter K, the initial of calumnia; and it has been conjectured, though it is a mere conjecture, that this punishment was inflicted by the lex Remnia.

The punishment for calumnia was also exilium, relegatio in insulam, or loss of rank (ordinis amissio); but probably only in criminal cases, or in matters relating to a man's civil condition. (Paulus, Sentent. Recept. v. 1. 5, v. 4. 11.)

In the case of actions, the calumnia of the actor was checked by the caluminiae judicium, the judicium contrarium, the jusjurandum calumniae, and the restipulatio; which are particularly described by Gaius (iv. 174—181). The defendant might in all cases avail himself of the caluminiae judicium, by which the plaintiff, if he was found to be guilty of calumnia, was mulcted to the defendant in the tenth part of the value of the object-matter of the suit. But the actor was not mulcted in this action, unless it was shown that he brought his suit without foundation, knowingly and designedly. In the contrarium judicium, of which the defendant could only avail himself in certain cases, the rectitude of the plaintiff's purpose did not save him from the penalty. Instead of adopting either of these modes of proceeding, the defendant might require the plaintiff to take the oath of calumny, which was to the effect, Se non calumniae causa aeger. In some cases the defendant also was required by the praeceptor to swear that he did not dispute the plaintiff's claim, calumniae causa. Generally speaking, if the plaintiff put the defendant to his oath (jusjurandum ex deferebat), the defendant might not the plaintiff to his oath of calumny. (Dig. 12. tit. 2. s. 37.) In some actions, the oath of calumny on the part of the plaintiff was a necessary preliminary to the action. In all judicia publica, it seems that the oath of calumny was required

If the restitupationis poena was required from the actor, the defendant could not have the benefit of the caluminiae judicium, or of the oath of calumny; and the judgement contrarium was not applicable to

The edict De Calumnioribus (Dig. 3. tit. 6.) applied generally to those who received money, calumniae causa, for doing an act or abstaining from doing an act. The edict applied as well to publica crimina as to pecuniariae causae; for in the case of actiones, the calumnia of the actor was checked by the caluminiae judicium, or of the oath of calumny; and the judicium contrarium was not applicable to

The edict applied to him who for calumnia received money, which were not within the cases provided for by the edict, Quod metus causa (Dig. 4. i. 11. 2.)

CAMARA (kou̱dpai), or CAMERA, properly signifies any arched or vaulted covering, and any thing with such a covering: Herodotus, for instance, calls a covered carriage kou̱dpai (i. 199). It is chiefly used in the two following senses:—

1. An arched or vaulted ceiling formed by semi-circular bands or beams of wood, over the intervals of which a coating of lath and plaster was spread, resembling in construction the hooped awnings in use amongst us. (Vitr. vii. 3; Sull. Cat. 38; Cic. ad Q. Fr. iii. 1. § 1; comp. Plin. H. N. xvi. 36. a. 64.) Under the emperors camarae were formed with plates of glass (Plin. H. N. xxxvi. 25. a. 64); sometimes also the beams were gilt, and the ceiling, between them was made of ivory. (Propert. ii. 2. 10.)

2. Small boats used in early times by the people who inhabited the shores of the Euxine and the Bosporus, and called καυδαπα, from their having a broad arched deck. They were made with both ends alike so as to work in either direction without turning; and were put together without iron. They continued in use until the age of Tacitus, by whom their construction and uses are described. (Strab. xi. p. 495; Eustath. ad Dionys. Perieg. 709; Aul. Gell. x. 25; Tac. Hist. iii. 47. Respecting the other uses of the word see Seiler and Jacobitz, Handwörterbuch d. Griech. Sprach.) [P. S.]

CAMILLI, CAMILLAE, boys and girls, employed in the religious rites and ceremonies of the Romans. They were required to be perfect in form, and sound in health, free born, and with both their parents alive; or, in other words, according to the expression of the Romans, pueri seu puellae ingenii, felicissimi, patrimi matrinigine. The origin of these words gave rise to various opinions among the ancients. Dionysius supposed them to correspond to the ἄβανδος among the Curetes and Corybantes; others connected them with Cadmus or Casilus, one of the Samothracian Cabeiri; but we know nothing certain on the matter. Respecting the employment of the Camilius at Roman marriages, see MATRIMONIUM. (Dionys. ii. 21, 22; Varr. L. L. vii. 34, ed. Müller; Macrobr. Sat. iii. 8; Serv. ad Virg. Aen. xi. 543; Festus, s. v. Camillus, Camera, Flaminius Camillus; Hartung, Die Religion der Römer, vol. i. p. 157, vol. ii. p. 71.)

CAMILUS, CAMILLUS, a kind of shoe worn by the later Roman emperors. (Trebell. Poll. Gallic. 16, with the note of Salmatius.)

CAMI'NUS. [DOMUS]

CAMPESTRE (sc. subīgur) was a kind of girdle or apron, which the Roman youths wore around their loins, when they exercised naked in the Campus Martius (Augustin. De Civ. Dei, xiv. 17). The campestrae was sometimes worn in warm weather in place of the tunic under the toga (campestri sub toga cinctus, Ascon. ad Cit. pro Scauro, p. 30. ed. Orelli. ; Hor. Ep. i. 11. 18.)

CAMIDOCTORS were persons who taught soldiers their exercises. (Veget. i. 13.) In the times of the republic this duty was discharged by a centurion, or veteran soldier of merit and distinction. (Comp. Plin. Pan. 13.)

CA'NABUS (kaw'sos), was a figure of wood in the form of a skeleton, round which the clay or plaster was laid in forming models. Figures of a similar kind, formed to display the muscles and veins, were studied by painters in order to acquire some knowledge of anatomy. (Arist. Hist. Anim. iii. 5, De Gen. Anim. ii. 6; Polluca, vii. 164, x. 189; Suid. and Hesych. s. v.; Müller, Archäol. der Kunst, § 305. n. 7.)

CAN'A/LIS, and the diminutive CANATLUS, which signify a water-pipe or gutter, are used also in architecture for any channel, such as the flutings of a column, and the channel between the volutes of an Ionic capital (Vitr. x. 14, iii. 3). [P. S.]

CANATHRON (kawd请选择正确的词汇填入空白处，使句子完整。
the carriage. (Xen. Ages. viii. 7; Plut. Ages. c. 19.) Homer calls this kind of basket υδροτος. (H. xxiv. 100, 267; and Eustath. ad loc. Compare Sturtz, Lex. Xenoph. s. v. Κανάριαος; Schellet, De Re Vetric. p. 68.)

CANCELLARIUS. [CANCELI.]

CANCELLI, lattice-work, placed before a window, a door-way, the tribunal of a judge, or any other place. (See e. g. Cic. pro Sest. 58; Varr. R. R. iii. 5; Ov. Am. iii. 2. 64; Dig. 30. tit. 41. s. 10; 33. tit. 7. s. 10.) Hence was derived the word Cancellarius, which originally signified a porter, who stood at the lattice or grated door of the emperor's palace. The emperor Carinus gave great dissatisfaction by promoting one of his Cancellarii to be Prefectus urbi. (Vopisc. Carin. 16.) The cancellarius also signified a legal scribe or secretary, who sat within the cancelli or lattice-work, by which the crowd was kept off from the tribunals of the judges. (Cassiod. Var. xi. 6.) The chief scribe or secretary was called Cancellarius κατ' ἐγγίνη, and was eventually invested with judicial power at Constantinople; but an account of his duties and the history of this office do not fall within the scope of the present work. From this word has come the modern Chancellor.

CANDELA, a candle, made either of wax (cerea) or tallow (sebacea), was used universally by the Romans before the invention of oil lamps (lucernae). (Varr. De Ling. Lat. v. 119, ed. Müller; Martial, xiv. 43; Athen. xv. p. 700.) They used for a wick the pith of a kind of rush called scirpus (Plin. H. N. xvi. 70). In later times can- delae were only used by the poorer classes; the houses of the more wealthy were always lighted by lucernae (Juv. Sat. iii. 287; Becker, Gallus, vol. ii. p. 201).

CANDELABRUM, was originally a candle-stick, but was afterwards used to support lamps (λαμπνόχαιρος), in which signification it most commonly occurs. The candelabra of this kind were usually made to stand upon the ground, and were of a considerable height. The most common kind were made of wood (Cic. ad Qu. Fr. iii. 7; Martial, xiv. 44; Petron. 95; Athen. xv. p. 700); but those which have been found in Herculanum and Pompeii are mostly of bronze. Sometimes they were made of the more precious metals and even of jewels, as was the one which Antiochus intended to dedicate to Jupiter Capitolinus. (Cic. Verr. iv. 28.) In the temples of the gods and palaces there were frequently large candelabra made of marble, and fastened to the ground. (Museo Pio-Clem. iv. 1. 5, v. 1. 3.)

There is a great resemblance in the general plan and appearance of most of the candelabra which have been found. They usually consist of three parts:—1. the foot (βάσις); 2. the shaft or stem (στραμός); 3. the plinth or tray (βάσις), large enough for a lamp to stand on, or with a socket to receive a wax candle. The foot usually consists of three lions' or griffins' feet, ornamented with leaves; and the shaft, which is either plain or fluted, generally ends in a kind of capital, on which the tray rests for supporting the lamp. Sometimes we find a figure between the capital and the tray, as is seen in the candelabrum on the right hand in the annexed woodcut, which is taken from the Museo Borbonico (iv. pl. 57), and represents a candelabrum found in Pompeii. The one on the left hand is also a representation of a candelabrum found in the same city (Museo Borbonico vi. pl. 61), and is made with a sliding shaft, by which the light might be raised or lowered at pleasure.
CANDYS, A gown worn by the Medes and Persians over their trowsers and other garments. (Xen. Cyr. i. 3. § 2, Anab. i. 5. § 8; Diod. Sic. xvii. 77.) It had wide sleeves, and was made of woollen cloth, which was either purple or of some other splendid colour. In the Persepolitan sculptures, nearly all the principal personages are clothed in it. The three here shown are taken from Sir R. K. Porter's Travels (vol. i. pi. 4.)

CANDIDA'TUS. [AMBITUS.]

CANDYS (*κάνδυς*), a gown worn by the Medes and Persians over their trowsers and other garments. (Xen. Cyr. i. 3. § 2, Anab. i. 5. § 8; Diod. Sic. xvii. 77.) It had wide sleeves, and was made of woollen cloth, which was either purple or of some other splendid colour. In the Persepolitan sculptures, nearly all the principal personages are clothed in it. The three here shown are taken from Sir R. K. Porter's Travels (vol. i. pi. 4.)

CANTABRUM, a standard used at the time of the Roman empire, and carried in festive processions. (Tertull. Apol. 16; Minuc. Felix, 29.)

CANEPHOROS (κανεφόρος). When a sacrifice was to be offered, the round cake (*τροχία φέος, πόλεαρι, δήλε, mola salis*), the chaplet of flowers, the knife used to slay the victim, and sometimes the frankincense, were deposited in a flat circular basket (*κάδωρ, canistrum*), and this was frequently carried by a virgin on her head to the altar. The practice was observed more especially at Athens. When a private man sacrificed, either his daughter, or some unmarried female of his family, officiated as his canephoros (Aristoph. Acharn. 241—252); but in the Panathenaea, the Dionysia, and other public festivals, two virgins of the first Athenian families were appointed for the purpose. Their function is described by Ovid (Met. ii. 713—715). That the office was accounted highly honourable appears from the fact, that the resentment of Harmodius, which instigated him to kill Hipparchus, arose from the insult offered by the latter in forbidding the sister of Harmodius to walk as canephoros in the Panathenaic procession. (Thucyd. vi. 56; Aelian, V. H. xi. 8.) An antefixa in the British Museum (see woodcut) represents the two canephoros approaching a candelabrum. Each of them elevates one arm to support the basket, while she slightly raises her tunic with the other. This attitude was much admired by ancient artists. Pliny (H. N. xxxvi. 4. s. 7) mentions a marble canephoros by Scopas, and Cicero (Verr. iv. 3) describes a pair in bronze, which were the exquisite work of Polyclitus. (CARYATIS.)

CANISTRUM. [CANEPHOROS.]

CANTABRUM, a standard used at the time of the Roman empire, and carried in festive processions. (Tertull. Apol. 16; Minuc. Felix, 29.)

CANCERII is used by Vitruvius (iv. 2) for the rafters of the roof, extending from the ridge to the eaves. (P. S.)

CANTHARUS (κάνθαρος) was a kind of drinking-cup, furnished with handles (cantharus gous, Virg. Aen. vi. 17; Hor. Carm. i. 20). It is said by some writers to have derived its name from one Cantharus, who first made cups of this type.
CAPISTRUM. The term φορήδα was also applied to a contrivance used by pipers (αὐλησταῖς) and trumpeters to compress their mouths and cheeks, and thus to nau them in blowing. It is often seen in works or ancient art [Chiridota], and was said to be the invention of Marsyas. (Simonides, Brunch. An. i. 122; Sophocles, ap. Cle. ad Att. ii. 16; Aristoph. Av. 862, Vesp. 580, Eq. 1147; Schol. ad ill.)

CAPITALLIS. [CAPUT.]

CAPPITE CENSI. [CAPUT.]

CAPITIS DEMINUTIO. [CAPUT.]

CAPITIUM, a portion of a woman's dress, said by Varro to be so called, because it covers (capit) the breast. (Varr. L. L. v. 131, ed. Muller. and De Vita P. R. iv. ap. Nonium, s. v. capita; comp. Gall. xvi. 7; Dig. 34. tit. 2. s. 24.) But the word itself would rather lead us to suppose that it was originally a covering for the head (caput).

CAPITOLINI LUDI. [LUDI.]

CAPITULUM. [COLUMN.]

CAPSA (dim. CAPSULA), or SCRINIIUM, the box for holding books among the Romans. These boxes were usually made of beech-wood (Plin. H. N. xvi. 43. s. 84), and were of a cylindricl form. There is no doubt respecting their form, since they are often placed by the side of statues dressed in the toga. The following woodcut, which represents an open capsa with six rows of books in it, is from a painting at Pompeii.
The slaves who had the charge of these book-chests were called capsarii, and also custodes scribiorum; and the slaves who carried in a capsae behind their young masters the books, &c. of the sons of respectable Romans, when they went to school, were also called capsarii. (Juv. x. 117.) We accordingly find them mentioned together with the paedagogi. (Suet. Ner. 36.)

When the capsae contained books of importance, it was sealed or kept under lock and key (Mart. i. 20. 3) says to his work, Oditi claves, et gratia aegyptiu prudico. (Becker, Gallus, vol. i. p. 194; Böttiger, Sabina, vol. i. c. xiv.)

CAPSA/RII, the name of three different classes of slaves: — 1. Of those who took care of the clothes of persons while bathing in the public baths. [DALNNEAR, p. 189.] In later times they were subject to the jurisdiction of the praefectus vigilium. (Dig. i. tit. 15. s. 3.) 2. Of those who had the care of the capsae, in which books and letters were kept. [CAPSA.] 3. Of those who carried the books, &c. of boys to school. [CAPSA.]

CA'PSAULA. [CAPSA.]

CA'PULUS (καποός, λαός). 1. The hilt of a sword, which was frequently much ornamented. [ULADUS.] The handles of knives were also much ornamented; and of the beautiful workmanship sometimes bestowed on them, a judgment may be formed from the three specimens here introduced. (Montfaucon, Ant. Expliquée, iii. 122.

2. A bier or coffin. [FUNUS.]

CAPUT, the head. The term "head" is often used by the Roman writers as equivalent to "person," or "human being." (Cat, Bell. Gall. iv. 15.) by an easy transition, it was used to signify "life:" thus, capitae damnari, plecti, &c. are equivalent to "kill." Caput is also used to express a man’s civil condition; and the persons who were registered in the statues of the censor are spoken of as capita, sometimes with the addition of the word civium, and sometimes not. (Liv. iii. 24, 47.) Thus to be registered in the census was the same thing as capitae habere: and a slave and a filius familiae, in this sense of the word, were said to have no capitae. The lowest century of Servius Tullius comprised the proletarini and the capite consi, of whom the latter, having little or no property, were barely rated as so many head of citizens. (Gell. vi. 10; Cic. De Rep. 2. 13.)

He who changed his condition for an inferior one was said to be capitae minutae, dominus, or capitae minor. (Hor. Carm. iii. 5. 42.) The phrase se capitae deminuere was also applicable in case of a voluntary change of condition. (Cic. Top. c. 4.)

The definition of Festus (s. v. deminutus) is, “Deminutus capite appellatur qui civitate mutatus est; et ex aliis familia in aliam adoptatus, et qui liber alteri mancipio datus est: et qui in hostium potestatem venit: et cui aqua et igni interdictum est.” There has been some discussion whether we should use capita diminutio or diminuto, but it is indifferent which we write.

There were three divisions of Capitae deminutio: — Maxima, Media, sometimes called Minor, and Minima. The maxima capita diminutio consisted in the loss of libertas (freedom), in the change of the condition of a free man (whether ingenuus or libertinus) into that of a slave. The media consisted in the change of the condition of a civis into that of a peregrinus, as, for instance, in the case of deportatio under the empire; or the change of the condition of a civis into that of a Latinus. The minima consisted in the change of the condition of a pater familiae into that of a filius familiae, as by adrogation, and, in the later law, by legitimation; and in a wife in manu, or a filius familiae coming into mancipii causa; consequently, when a filius familiae was emancipated or adopted, there was a capita diminutio, for both these ceremonies were inseparably connected with the mancipii causa (sum emancipari nemo possit nisi in imaginaria servilem causam deductus). (Gains, i. 154, 162.) This explains how a filius familiae, who by emancipation becomes sui juris, and thus improves his social condition, is still said to have undergone a capita diminutio; which expression, as observed, applies to the form by which the emancipation is effected.

Capitae diminutio, which is the same as deminutio, is defined by Gaius (Dig. 4. tit. 5. s. 1) to be status permutatio; but this definition is not sufficiently exact. That capita diminutio which had the most consequence was the maxima, of which the media or minor was a milder form. The minima, as already explained, was of a technical character. The maxima capita diminutio was sustained by those who refused to be registered at the census, or neglected the registration, and were thence called incensae. The incensae was liable to be sold, and so to lose his liberty; but this being a matter which concerned citizenship and freedom, such penalty could not be inflicted directly, and the object was only effected by the fiction of the citizen having himself abjured his freedom. Those who refused to perform military service might also be sold. (Cic. Pro Cæcina, 34; Ulp. Frag. xi. 11.) A Roman citizen who was taken prisoner by the enemy, lost his civil rights, together with his liberty, but he might recover them on returning to his country. [POSTLIMINIUM.] Persons condemned to ignominious punishments, as to the mines, sustained the maxima capita diminutio. A free woman who cohabited with a slave, after notice given to her by the owner of the slave, became an ancilla, by a senatus-consultum, passed in the time of Claudius. (Ulp. Frag. xi. 11; compare Tacit, Ann. xii. 53, and Suet. Vesp. 11.)
A CARCER.

Captus. [FRNUS.]

CAPUT EXTORUM. The Roman soothsayers (haruspices) pretended to a knowledge of coming events from the inspection of the entrails of victims slain for that purpose. The part to which they especially directed their attention was the liver, the convex upper portion of which seems to have been called the caput extorum. (Plin. H.N. x. 37, s. 73.) Any disease or deficiency in this organ was considered an unfavourable omen; whereas, if healthy and perfect, it was believed to indicate good fortune. The haruspices divided it into two parts, one called familiaris, the other hostilia: from the former, they foretold the fate of friends; from the latter, that of enemies. Thus we read (Liv. viii. 9), that the head of the liver was mutilated by the knife of the operator on the "familiar" part (caput jecinoris a familiaris parte cessen), which was always a bad sign. But the word "caput" here seems of doubtful application; for it may designate either the convex upper part of the liver, or one of the prominences of the various lobes which form its lower and irregularly concave part. It is, however, more obvious and natural to understand it by the upper part, which is formed of two prominences, called the great and small, or right and left lobes. If no caput was found, it was a bad sign (nihil tristius accidere potuit); if well defined or double, it was a lucky omen. (Cic. De Nat. ii. 12, 13; Liv. xxvii. 26.) [R.W.]

CARACALLA. This was an outer garment used in Gaul, and not unlike the Roman lacerna. [LA- Cerna.] It was first introduced at Rome by the emperor Aurelius Antoninus Bassianus, who compelled all the people who came to court to wear it, whence he obtained the surname of Caracallus. (Aurel. Vict. Epit. 21.) This garment, as worn in Gaul, does not appear to have reached lower than the knee, but Caracalla lengthened it so as to reach the ankle. It afterwards became common among the Romans, and garments of this kind were called caracallae Antonianae, to distinguish them from those worn by Caracalla. (Aurel. Vict. De Cas. 21; Spartan, Sen. 21, Anton, Car. 9.) It usually had a hood to it, and came to be worn by the clergy. Jerome (Ep. 128) speaks of pallium mirae pulchritudinis in modum caracallarum sed absque cucullis.

CARDIATINA. [PERG.]

CARCER (kerker, German;  γυρνία, Greek), a prison. This word is connected with ἔφρας and ἐφρα, the guttural being interchanged with the aspirate.

1. GREEK. — Imprisonment was seldom used among the Greeks as a legal punishment for offences; they preferred banishment to the expense of keeping prisoners in confinement. We do, indeed, find some cases in which it was sanctioned by law; but these are not altogether instances of its being used as a punishment. Thus the farmers of the duties, and their bondsmen, were liable to imprisonment if the duties were not paid by a specified time; but the object of this was to prevent the escape of defaulters, and to insure regularity of payment. (Böckh, Publ. Econ. of Athens, p. 339, &c.) Again, persons who had been mulcted in penalties might be confined till they had paid them. (Dem. c. Med. p. 529, 26.) The στρατεύοντα, also, if they exercised the right of citizenship, were subject to the same consequences. (Dem. c. Timocr. p. 752, 17.) Moreover, we read of a δεσμὸς for theft; but this was a πρωτοτρίμμα, or additional penalty, the infliction of which was at the option of the court which tried the case; and the δεσμὸς itself was not an imprisonment, but a public exposure in the ὑσώδονως, or stocks, for five days and nights — the τὸ ἐν ἡμέραν δεσμῶς. Still the idea of imprisonment — a sort of penal settlement away from the city.

The prisons in different countries were called by different names: thus there was the ἁρακναίων, in Boeotia; the Κέραμος, at Cyprus; the Κάς, at Corinth; and, amongst the Ionians, the χρυσόφωρος, as at Samos. (Herod. iii. 145; Pollux, ix. 45.) The prison at Athens was in former times called οἰκοτρήσυναίων, and was, at the time of Socrates, a sort of euphemism, ókevma. It was chiefly used as a guard-house, or place of execution, and was under the charge of the public officers called the eleven, αἱ ἑυδέκα. One gate in the prison, through which the condemned were led to execution, was called τὸ Χαράκην. (Pollux, viii. 103; Wachsmuth, Hild. Alterthumsk. vol. ii. pp. 141, 201, 2d ed.) The Attic expression for imprisonment was δείνων. Thus in the oath of the μανθητή, or senators, occurs the phrase ὅπλα δείνων ἀρχαῖρα ὀδήνα. Hence we have the phrase ἄθλος φύλακτης (Thuc. iii. 34), the "libera custodia" of the Romans, signifying that a party was under strict surveillance and guard, though not confined within a prison.

2. ROMAN. — A career, or prison, was first built at Rome by Ancus Martius, overhanging the forum. (Liv. i. 33.) This was enlarged by Servius Tullius, who added to it a souterrain, or dungeon, called from him the Tullianum. Sallust (Cat. 55) describes this as being twelve feet under ground, walled on each side, and arched over with stone work. For a long time this was the only prison at Rome (Juv. Sat. iii. 312), being, in fact, the "Tower," or the "Tower of the State," which was sometimes doubly guarded in times of alarm, and was the chief object of attack in many conspiracies. (Liv. xxvi. 27, xxvii. 26.) Varro (L. L. v. 151, ed. Müller) tells us that the Tullianum was also named "Lautumiae," from some quarries in the neighbourhood; or, as others think in allusion to the "Lautumiae" of Syracuse, a prison cut out of the solid rock. In later times the whole building was called the "Mamertine." Close to it were the Scalae Gemoniae, or steps, down which the bodies of those who had been executed were thrown into the Forum, to be exposed to the gaze of the Roman populace. (Cramer, Ancient Italy, vol. i. p. 430.) There were, however, other prisons besides this, though, as we might expect, the words of Roman historians generally refer to this alone. One of these was built by Appius Claudius, the decemvir, and in it he was himself put to death. (Liv. lii. 57; Plin. H. N. vii. 36.)

The career of which we are treating, was chiefly used as a place of confinement for persons under
CARDO.

accusation, till the time of trial; and also as a place of execution, to which purpose the Tullianum was specially devoted. Thus, Sallust (l. c.) tells us that Lentulus, an accomplice of Catiline, was hanged there. Livy also (xxix. 22) speaks of a conspirator being delegatus in Tullianum, which in another passage (xxxiv. 44), is otherwise expressed by the words in inferiorem donissus car-

The same part of the prison was also called "robur," if we may judge from the words of esus: — Robur in carcere dictatur is locus, quo praeceivitatur malificorum genus. This identity is surmier shown by the use made of it; for it is spoken of as a place of execution in the following passages: — In robore et tendris espirare (Liv. xxxviii. 59; Sallust, l. c.). Robur et saxum (sc. Tarpeium) minitari (Tacit. Ann. iv. 29). So also we read of the catenas — et Italum robur. (Hor. •• • •; [R.W.]

CA'RCERES. [Cmcus.]

CARCHE'SIUM (Kapx^ 10")— A beaker or drinking-cup, which was used by the Greeks in very early times, so that one is said to have been given by Jupiter to Alcmena on the night of his visit to her. (Pherecydes, p. 97—100, ed. Sturtz.) It was slightly contracted in the middle, and its two handles extended from the top to the bottom. (Tainen. xi. p. 474; Macrobr. Sat. v. 21.) It was much employed in libations of blood, wine, milk, and honey. (Sappho, Frug. 70, ed. Neue; Virg. tweorg. iv. 330, Aen. v. 77; Ovid, Met. vii. 246; Stat. Achill. ii. 6.) The annexed woodcut represents a magnificent carche'sium, which was presented by Charles the Simple to the Abbey of St. Denis. It was cut out of a single agate, and richly engraved with representations of bacchana-

rich Subjects. It held considerably more than a pint, and its handles were so large as easily to 2. The upper part of the mast of a ship.

CARDO (σαφρίς, στροφείς, στροφίς, γίγγλα-

The form of the door above delineated makes it manifest why the principal line laid down in surveying land was called "cardo" (Festus, s. v. Decumanus; Isid. Orig. xv. 14); and it further explains the application of the same term to the North Pole, the supposed pivot on which the heavens revolved. (Varr. De Re Rust. i. 2; Ovid, Ex Ponto, ii. 10. 45.) The lower extremity of the universe was conceived to turn upon another pivot, corresponding to that at the bottom of the door (Cic. De Nat. Deor. ii. 41; Vitruv. vii. 1, ix. 1); and the conception of these two principal points in geography and astronomy led to the application of the same term to the East and West also. (Lucan. v. 71.) Hence our "four points of the compass" are called by ancient writers quatuor cardines orbis terrarum, and the four principal winds, N. S. E. and W., are the cardinales venti. (Serv. ad Aen. i. 85.) CARINA. [NAVIS.]

CARMENTALIA, an old Roman festival cele-

CARMEN'TALIA, an old Roman festival cele-

Gell. xvi. 16; Serv. ad Virg. Aen. vili. 339; Har-
Carneia, which, according to Sosibius (ap. Athen. xiv. p. 635), was instituted Olymp. xxvi.; although Apollo, under the name of Carneius, was worshipped in various places of Peloponnesus, particularly at Amymela, at a very early period, and even before the Dorian migration. (Müller, Dor. i. 3. § 8. and ii. 8. § 15.) Wachsmuth (Hellen. Alterthumsk. ii. p. 582, 2d ed.), referring to the passage of Athenaeus, above quoted, thinks that the Carneia had long before been celebrated; and that when, in Olymp. xxvii., Themistocles gained the victory, musical contests were only added to the martial solemnities of the festival. But the words of Athenaeus, who is the only authority to which Wachsmuth refers, do not allow of such an interpretation, for no distinction is there made between earlier and later solemnities of the festival, and Athenaeus simply says, the institution of the Carneia took place Olymp. xxvi. ("Εγείρετο δὲ θεῖος τῶν Καρνιῶν κατὰ τὴν ἑτέραν καὶ εἰκότητι Ὀλυμπίας, δὲ Σαμίων δικάς, ἐν τῷ περὶ χειρών.) The festival began on the seventh day of the month of Carneios = Metageitnion of the Athenians, and lasted for nine days. (Athen. iv. p. 141 ; Enstahl. ad ii. xxiv. ad fin.; Plut. Symp. viii. 1.) It was, as far as we know, a warlike festival, similar to the Attic Boedromia. During the time of its celebration nine tents were pitched near the city, in each of which nine men lived in the manner of a military camp, obeying in everything the commands of a herald. Müller also supposes that a boat was carried round, and upon it a statue of the Carneian Apollo (Ἀυξόλων στεγαστάς), both adorned with lustratory garlands, called δικέφαλοι στεγαστάς, in allusion to the passage of the Dorians from Naupactus into Peloponnesus. (Dorius, i. 3. § 8. note s.) The priest conducting the sacrifices at the Carneia, was called Ἀγαλής, whence the festival was sometimes designated by the name Ἀγαλήσιον, or Ἀγαλῆριος (Hesych. s. v. Ἀγαλῆριος); and from each of the Spartan tribes five unmarried men (Καρναῖες) were chosen as his ministers, whose office lasted four years, during which period they were not allowed to marry. (Hesych. s. v. Καρναῖες.) Some of them bore the name of Carneius (Carniens), (Hesych. s. v.; compare Becker, Anecd. p. 205.) Themistocles was the first who gained the prize in the musical contests of the Carneia, and the musicians of his school were long distinguished competitors for the prize at this festival (Müller, Dor. iv. 6. § 3), and the last of this school who engaged in the contest was Pericleidas. (Plut. De Mus. 6.) When we read in Herodotus (vi. 106, vii. 206) and Thucydides (v. 54, and in other places) that the Spartans during the celebration of this festival were not allowed to take the field against an enemy, we must remember that this restriction was not peculiar to the Carneia, but common to all the great festivals of the Greeks; traces of it are found even in Homer. (Od. xxi. 258, &c.) Carneia were also celebrated at Cyrene (Callimach. Hymn. in Apollo, 72. seq.), in Thera (Callimach. l. c.; Pindar, Pyth. v. 99. seq.), in Gythion, Messene, Sieyon, and Sybaris (Paus. iii. 21. § 7, and 24. § 5, iv. 33. § 8, ii. 10. § 2; Theocrit. v. 83; compare Müller's Orel. p. 327.). [L. S.]

CARNIFEX, the public executioner at Rome, who put slaves and foreigners to death (Plaut. Bacch. iv. 4. 37; Copt. v. 4. 22), but no citizens, who were punished in a manner different from slaves. It was also his business to administer the torture. This office was considered so disgraceful, that he was not allowed to reside within the city (Cic. Pro Rabir. 5), but he lived without the Porta Metia or Esquiline (Plaut. Pseud. i. 3. 90), near the place destined for the punishment of slaves (Plant. Cos. ii. 6. 2; Tacit. Ann. xv. 69; Hor. Epod. v. 99), called Sestertium under the emperors. (Plut. Gaiu. 20.)

It is thought by some writers, from a passage in Plautus (Rod. iii. 6. 19), that the carnis was also celebrated at Cyrene (Callimach. Hymn. in Apollo, 72. seq.), in Thera (Callimach. l. c.; Pindar, Pyth. v. 99. seq.), in Gythion, Messene, Sicyon, and Sybaris (Paus. iii. 21. § 7, and 24. § 5, iv. 33. § 8, ii. 10. § 2; Theocrit. v. 83; compare Müller's Orel. p. 327.). [L. S.]

CARPENTUM, is one of the earnest kinds of Roman carriages, of which we find mention. (Liv. i. 34.) It was the carriage in which Roman matrons were allowed to be conveyed in the public festal processions (Liv. v. 25; Isid. Orig. xx. 12); and that this was a considerable privilege is evident from the fact, that the use of carriages in the city was entirely forbidden during the whole of the republic. The privilege of riding in a carnis in the public festivals, was sometimes granted as a special privilege to females of the imperial family. (Dion Cass. lx. 22, 33; Tacit. Ann. xii. 42.) The form of this carnis is seen in the following medall struck in honour of the elder Agrippina after her death.

The carnis was also used by private persons for journeys; and it was likewise a kind of state carriage, richly adorned and ornamented. (Prop. iv. 8. 23; Juv. viii. 147, ix. 132.) This carnis contained seats for two, and sometimes for three persons, besides the coachman. (Liv. i. 34; Modals.) It was commonly drawn by a pair of mules (carnis mulare, Lampria. 1600. 3:); but more rarely by oxen or horses, and sometimes by four horses like a quadriga. For grand occasions it was very richly adorned. Agrippina's carriage, as above represented, shows painting or carving on the panels, and the head is supported by Caryatides at the four corners. When Caligula instituted games and other solemnities in honour of his deceased mother Agrippina, her carnis went in the procession. (Suet. Calig. 15.) This practice, so similar to ours of sending carriages to a funeral, is evidentially alluded to in the alto-rilievo here represented, which is preserved in the British Museum. It has been taken from a sarcophagus, and exhibits a close carnis drawn by four horses. Mercury, the conductor of ghosts to Hades, appears on the iron, and Castor and Pollux with their horses on the side panel.

Carpenta, or covered carts, were much used by
the Britons, the Gauls, the Cimbri, the Allobrogcs, and other northern nations. (Florus, i. 16, iii. 2, 3, and 10.) These, together with the carts of the more common form, including baggage-waggons, appear to have been comprehended under the term *carru*, or *carro*, which is the Celtic name with a Latin termination. The Gauls and Helvetia took a great multitude of them on their military expeditions; and, when they were encamped, arranged them in close order, so as to form extensive lines of circumvallation. (Cass. Bell. Gall. i. 24.)

**CARYA or CARYATIS (καρύα, καρυάτις)**, a festival celebrated at Caryae, in Laconia, in honour of Artemis Caryatis. (Hesych. s.v. *Καρύα*.) It was celebrated every year by Laconian maidens (*καρυάτιδες*) with national dances of a very lively kind (Paus. iii. 10. § 6; iv. 16. § 3; Polyb. iv. 104.), and with solemn hymns. [L. S.]

**CARYATIS (καρυάτις)**, pl. CARYATIDES. From the notices and testimonies of ancient authors, we may gather the following account:—That Caryae was a city in Arcadia, near the Laconian border; that its inhabitants joined the Persians after the battle of Thermopylae (Herod. viii. 26; Vitruv. i. 1. § 5); that on the defeat of the Persians the allied Greeks destroyed the town, slew the men, and led the women into captivity; and that, as male figures representing Persians were afterwards employed with an historical reference instead of columns in architecture [*Atlantes*; *Persae*], so Praxiteles and other Athenian artists employed female figures for the same purpose, intending them to express the garb, and to commemorate the disgrace of the Caryatides, or women of Caryae. (Vitruv. l. c.; Plin. H. N. xxxvi. 45 and 11.) Figures of Caryatides are exceedingly common in the remains of ancient architecture. The following specimen is taken from Müller’s *Denkmäler der alten Kunst.*

After the subjugation of the Caryatae, their territory became part of Laconia. The fortress (καρυάτικας, Steph. Byz.) had been consecrated to Artemis and Diana Caryatis, whose image was in the open air, and at whose annual festival (καρυάτις θερινή, Hesych.) the Laconian virgins continued, as before, to perform a dance of a peculiar kind, the execution of which was called *καρυάτικες*. (Paus. iii. 10. § 8; iv. 16. § 5; Lucian, De Salt.)
CASTRA.

CASSIS. [GALEA; RETE.]

CASTELLUM AQUAE. [AQUARDUCTUS.]

CASTRA. It is well known that Roman armies never halted for a single night without forming a regular entrenchment, termed castra, capable of receiving within its limits the whole body of fighting men, their beasts of burden, and the baggage. So essential was this operation considered, that even when preparing for an immediate engagement, or when actually assailed by a hostile force, it was never omitted, but a portion of the soldiers were employed in constructing the necessary works, while the remainder were standing to their arms or resisting the enemy: and so completely was it recognised as a part of the ordinary duties of each march, that perceptivae ad locum tertius... quartis... septagesimis castria are the established phrases for expressing the number of days occupied in passing from one point to another. Whenever circumstances rendered it expedient for a force to occupy the same ground for any length of time, then the encampment was distinguished as castra stativa. (Liv. xxvii. 15; Caes. B. G. viii. 15, B. C. i. 42; Hirt. B. Af. 51, B. Af. 74.)

When the protracted and distant wars in which the republic became involved, as its sway was gradually extended first over the whole of Italy, and subsequently over Greece, Asia, and Africa, rendered it impossible for the legions to return home in winter, they usually retired during the months when active military operations were suspended, into some city where they could be protected from the inclemency of the season, and where the comforts of the men could be readily secured; or they were dispersed up and down in detachments among friendly villages (in hiberna concedere; exercitum in hiberna divitire; exercitum per civitates in hiberna dividere). It is true that extraordinary emergencies, such as a protracted blockade, or the necessity of maintaining a constant watch upon the movements of a neighbouring and vigorous foe, might compel a commander to keep the field for a whole year or even longer, but to order an army, except in case of necessity, to winter under canvass (hiemare sub pellibus; hiemem sub tentoribus) was long regarded as a severe punishment, inflicted only in consequence of grievous misconduct. (B. G. vi. 1, § 24.) As the boundaries of the empire were gradually pushed forward into wild and barbarian lands, where there were no large towns and no tribes on whose faith reliance could be placed, such arrangements became impracticable, and armies, whether of invasion or occupation, were forced to remain constantly in camps. They usually, however, occupied different ground in summer and in winter, whence arose the distinction between castra aestiva and castra hiberna, both alike being statia. Such posts were frequently, if situated advantageously, garrisoned permanently; and the peaceful natives who sought to enrich themselves by trading with their conquerors, settled for security in the immediate vicinity. (Caes. B. G. vi. 37.) Thus in the distant provinces, these forts formed a centre round which a numerous population gradually clustered; and many important towns, still existing in our own country, indicate their origin by the termination Chester.

But whether a camp was temporary or permanent, whether tenanted in summer or in winter, the main features of the work were always the same for the same epoch. In hiberna, nuts or turf or stone would be substituted for the open tents of the aestiva (hence adificiare hiberna), and in stativa held for long periods the defences would present a more substantial and finished aspect, but the general outline and disposition of the parts were invariably: a camp was laid down, arranged and fortified according to a fixed and well-known plan, modified only by the numbers for whom it was required to provide accommodation, but altogether independent of the nature of the ground or of the fancy of the general, so that each battalion, each company, and each individual, had a place assigned to which they could repair without order, question, delay, or confusion.

At what period the practice of throwing up elaborate field-works for the protection of an army engaged in active service was first commenced by the Romans, it is impossible to determine; but we may safely conclude that, like all other parts of their military tactics, it was matured by a slow and gradual process. Livy and Dionysius, indeed, would lead us to suppose that regular camps existed from the most remote epoch to which their annals extend; but the language of these historians is in general so loose upon military matters, so much in the habit of transferring to the earliest ages the usages of their own contemporaries, that no safe inference regarding points of this nature can be drawn from their words. Frontinus, on the other hand, declares that the idea of a fortified enclosure, calculated to contain a whole army, was first suggested to the Romans by the camp of Pyrrhus, which they captured near Beneventum; but the statements of this author have never been deemed to possess much weight, and in this particular instance many considerations preclude us from admitting his testimony as credible. It is evident, however, from the facts detailed in the article EXERCITUS that a camp, such as the earliest of those of which we possess any detailed account, could not have assumed that shape until the tactics of the phalanx were superseded by the manipular divisions; and it may be held as certain that each of the great wars in which the Common-wealth was successively engaged for more than a century—with the Samnites, with Pyrrhus, with the Cisalpine Gauls, and with the Carthaginians, must have led to a series of improvements. The system was probably brought to perfection in the campaigns against Hannibal, and underwent no material alteration until the organic changes in the constitution of the army, which took place not long before the downfall of the constitution, during the civil broils, and under the earlier emperors, rendered a corresponding change in the internal economy of the camp unavoidable. Hence, although it would be at once vain and unprofitable to attempt an investigation of the various changes through which a Roman camp passed before it assumed what may be called its normal shape, it is evidently absolutely necessary for all who desire to obtain even a slight knowledge of the Roman art of war, to make themselves acquainted with this important feature in their system during the best days of the republic and the empire. And fortunately the records of antiquity enable us to supply such information with considerable minutness. Polybius, the friend and companion of the younger Scipio, has transmitted to us a description of a Roman camp, such as he must have often seen with his own eyes, and a cer-
tain Hyginus, a gromaticus or land surveyor, who flourished under Trajan and Hadrian, has left us a technical memoir on the art of castrametation as practised in his own day. To these some might feel inclined to add the remarks of Vegetius, who lived during the reign of Valentinian, but for reasons which are stated elsewhere [Exercitus] it will be more safe to neglect him altogether.

We shall proceed to describe these two camps in succession, it being understood that the leading statements with regard to the first are taken directly from Polybius, and those with regard to the second, from Hyginus, unless when the contrary is distinctly indicated. But while we endeavour to explain clearly all the parts of the camps themselves, we must refer to the article Exercitus for everything that concerns the different kinds of troops, their divisions, their discipline, and their officers.

I. Camp of Polybius.

The camp described by Polybius is such as would be formed at the close of an ordinary day's
march by a regular consular army consisting of two
Roman legions with the full contingents of Socii. Each
legion is calculated at 4200 infantry and 300
 cavalry, the Socii furnished an equal number of
infantry and twice as many cavalry, so that the
whole force would amount to 16,800 foot and 1800
horse.

Choice of the Ground. — Although, as stated
above, the general outline, the defences, and the
internal economy of a camp were altogether inde
pendent of the nature of the ground, yet great
importance was attached to the choice of a fitting
situation which should admit of being readily laid
out in the required form, which should afford no
facilities for attack or annoyance, which should be
convenient for procuring wood, water, and forage,
and which the army might enter and quit without
danger of surprise. Skill in the selection of such
a spot (espérœ locum ustrœ) was ever considered as
a high quality in a general, and we find it recorded
among the praises of the most renowned com
manders that they were wont in person to perform
this duty. (e.g. Liv. ix. 17; xxxv. 14; 28; Tacit.
Hist. ii. 5; Agric. 20; comp. Quintil. I. O. xii. 3,
§ 5). Under ordinary circumstances, however, the
task was devolved upon one of the military tribunes,
and a certain number of centurions appointed from
time to time for the purpose. These having gone
forward in advance of the army until they reached
the place near which it was intended to halt, and
having taken a general survey of the ground, se
lected a spot from whence a good view of the whole
area, containing a space of 10,000 square feet,
was allotted to one túnna or troop of 30 dragoons,
with their horses and baggage.

Construction. — The spot answering these con
ditions and which we shall call A (fig. 1) was
marked by a small white flag. The next object
was to ascertain in what direction water and fodder
might be most easily and securely provided —
this direction we indicate by the arrow in the sub
joined figure. Upon the position of A and the
direction of the arrow depended the disposition of
all the other parts of the work; for these two pre
liminary points being decided, the business of mea
suring out the ground (metatur um ustrœ) commenced,
and was executed, as we learn from various sources,
with graduated rods (decem pedae)
and was executed, as we learn from various sources,
with graduated rods (decem pedae)
and was executed, as we learn from various sources,
with graduated rods

Through A draw a straight line A A1, parallel
to the direction of the arrow, a straight line B0 B1,
at right angles to A A1. These two straight lines
A A1, and B0 B1, served as the bases by which the
position of all the different divisions of the
camp were determined.

Along A A0 set off A A0 = 100 feet; A0 A1 =
50 feet; A1 A2; A2 A3; A3 A4; A4 A5; A5 A6;
A6 A7; A7 A8 each = 100 feet; A8 A9 = 200 feet;
A9 A10 = 167 feet; A10 A11 = 200 feet.

Through A1 A1; A1 A2; A2 A3; A3 A4; A4 A5;
A5 A6; A6 A7; A7 A8, straight lines parallel to
B0 B1, and in like manner draw through A7 A8;

Along A7 A8 set off A8 P = 25 feet; P Q =
100 feet; Q R = 50 feet; R S = 50 feet; S T =
100 feet; T V = 100 feet; V W = 50 feet; W X =
133 feet; X Y = 200 feet; Y Z = 200 feet.

Along A1, set off A1 P'; P' Q'; Q' R';

Y' Z'; equal respectively to A6 P; P Q; Q R;

... Y Z.

Through Z Z' draw straight lines parallel to
A0 A1, cutting G0, G1 in z and z', and cutting
L0, L1 in o and o'. The square area O O' z' z thus
determined was the camp.

Again, through P; Q; R ... Y, and through
P'; Q'; R' ... Y' draw straight lines parallel to
A0 A1, cutting the parallels to B0, B1 in the points
marked in the figure.

Finally, on H0 H1 lay off A1 H2, and A1 H2,
each = 25 feet, and through H2; H1; J1 draw
straight lines parallel to A0 A1, cutting K0 K1,
K3 and K4.

This construction being completed we now pro
ceed to explain the arrangement of the different
parts referring to figure 2, in which the lines no
longer necessary are obliterated, the spaces occu
pied by the troops or officers enclosed by dark
lines, and the streets (viae) distinctly laid down.
In practice the most important points were marked
by white poles, some of which bore flags of various
colours, so that the different battalions on reaching
the ground could at once discover the place as
signed to them.

The white flag A, which served as the starting
point of the whole construction, marked the position
of the consul's tent, or praetorium, so called because
praetor was the ancient term for any one invested
with supreme command. The square area C0 C1,
was left open extending, as we have seen, a hun
dred feet each way from the praetorium. That
portion of the camp which lay in the direction of
the arrow (πρὸς τὴν έκδοσιν ἐστὶν) from the
line E0 E1 (fig. 1) was termed the front or fore
part of the camp (πάντος σχήματος κατὰ πρόσωπον).

The number of legions being two and the num
ber of tribunes in each being six, their tents were
arranged six and six at equal distances along the
line E0 E1 (fig. 1) exactly opposite to and looking
looking towards the legions to which they belonged. Hence,
in what follows, they did not extend beyond the points E0 and E4, but whether
they were distributed at equal distances along the
whole of the line E0 E4, or whether the space
in front of the praetorium was left vacant, as in our
figure, as seems most probable, may admit of doubt.

The space of fifty feet included between the
parallels C0 C1 and B0 B1 (fig. 1), immediately
behind the tent of the praetor, was appropriated
to their horses, beasts of burden and baggage.

The ten areas marked 1 were set apart for the
cavalry of one legion, and the corresponding ten
areas marked 1' for the cavalry of the other legion.
These all faced towards the street P P', and each
area, containing a space of 10,000 square feet,
was allotted to one turma or troop of 30 dragoons,
with their horses and baggage.
Back to back with the cavalry, and looking out upon the streets R S, R' S', the Triarii of the two legions were quartered in the areas 2 and 2'. Each area contained 5000 square feet, and was allotted to a maniple of 60 men; hence, according to the calculation here followed, a dragoon and his horse were allowed as much space as 4 foot soldiers.

In the areas marked 3 and 3' facing the Triarii were quartered the principes of the two legions; each of these areas contained 10,000 square feet, and was allotted to a maniple of two centuries, that is, 120 men.

In the areas marked 4 and 4', back to back with the principes, and looking out upon the streets V W, V' W', were quartered the Hastati of the two legions, the number of men being the same as in the Principes, and an equal space being assigned to them.

Facing the legionary Hastati, in the areas marked 5 and 5', were the cavalry of the allies.

The total number was 600 to each legion, but of these \( \frac{1}{3} \) or 200 were separated under the name of extraordinarii, and quartered in a different part of the camp. Consequently, each of the spaces 5 and 5' was calculated to accommodate 40 dragoons with their horses; and allowing them the same space as the legionary cavalry, each of these areas must have contained somewhat more than 13,333 square feet.

Back to back with the cavalry of the allies, and looking towards the rampart which enclosed the camp, the infantry of the allies were quartered in the areas marked 6 and 6'. The total number was 3000 for each legion, but of these \( \frac{1}{3} \) or 600 were separated as extraordinarii and quartered in a different part of the camp. Hence there would remain 2400, or 240 for each of the spaces 6 and 6', and these accordingly contained 20,000 square feet.

The open space immediately behind the tents and baggage of the tribunes, extending to the right
CASTRA.

and left of the space allotted to the general, was assigned on one side to a forum, and on the other, to the quaestor and his department (τῆς τε τιμίας, καὶ ταῖς ἀμα τοιχῆς χρησίαις). These are marked 7 and 8, but we are not told on which side they respectively stood.

Still further to the right and left of the praetorium 9, 10, and 9', 10', looking respectively towards the forum and the quaestorium, were a body of cavalry, selected from the extraordinarii equites (οἱ τῶν ἐπιλέκτων ἐπειπέων ἄλεκτρον), and a body of cavalry serving as volunteers out of compliment to the general (καὶ τινὰς τῶν ἐκελευθημένων στρατευμάτων τῇ τῶν ἰππάτων χάρην), analogous, probably, to the Ecocii of later times. Back to back with these, looking towards the rampart, in right angles, will be understood at once by inspection of the plan of a Roman camp after Polybius, assigns to them a compartment next to the praetorium on the side opposite to that where the quaestorium stood; but this is merely a conjecture.

The principal street, stretching right across in front of the tents of the tribesmen, was 100 feet wide and was named Principia. It will be observed that the lengthened lines of the ten turmae and manipuli in each division is intersected at the termination of the first five by a road fifty feet wide, called the Via Quintana. The position of the remaining five viæ in the fore-part of the camp, all of which intersect the Via Quintana at right angles, will be understood at once by inspecting the plan, the width of each being 50 feet.

When two consular armies encamped together within the same rampart, two ordinary camps were, it may be said, applied to each other at the ends nearest to their respective praetorium. The two praetoria faced in opposite directions, and the legions of the two consuls stretched their lines in front of each praetorium, so that the figure of the camp was now no longer a square, but a rectangle, whose length was twice that of an ordinary camp, the breadth being the same.

Although the words of Polybius are, as a whole, so full and clear that we can have little difficulty in forming a distinct conception of the camp which he describes and in delineating the different parts, it must not be concealed that he has altogether passed over many important points on which we should desire information, and that occasionally his language is not entirely free from ambiguity.

Under the head of omissions, we must note —

1. The absence of all information with regard to the manner in which the Velites were distributed. These, at the time when Polybius wrote, amounted to 1200, or, at the lowest, 1000 for each legion; and taking the same number for the contingent of the Socii, we shall thus have a body of at least 4000 men unprovided for. It is true that he subsequently states, in a passage which we quote below, that the Velites kept guard by night and by day along the whole extent of the line of battle, and that they were stationed in bodies of ten to watch the gates. Hence some have supposed that the light-armed troops always bivouacked outside the camp; others, that they occupied the intervallum; others, that just as in the line of battle they divided the legions into distinct corps, but were distributed among the hastati, principes, and triarii, according to a given ratio, so in like manner they were, in the camp, quartered along with those divisions to which they were attached in the field. The Velites ceased to form a portion of the legion about the time of Marcus Aemilius Lepidus; and consequently the later Roman writers throw no light upon the question. It is remarkable, also, that while Polybius passes them over completely in the internal arrangements of his camp, so also he takes no notice whatsoever of them when describing the aemena or the order of march in which an army usually advanced.

2. No mention is made of the legati. Lipsius, in his plan of a Roman camp after Polybius, assigns to them a compartment next to the praetorium on the side opposite to that where the quaestorium stood; but this is merely a conjecture.

3. The praefecti sociorum likewise are passed over. Since they corresponded among the troops of the allies to the tribuni in the legions, it seems highly probable that their tents were ranged along a prolongation of the line on which the latter stood, and thus also they would be placed immediately opposite to and looking towards the soldiers under their immediate command.

4. The number of tents allowed to each maniple or century is nowhere stated, and consequently the number of men in each tent is unknown, nor are we very distinctly told how the centurions and other officers of the infantry and cavalry inferior to the tribunes were provided for; it is merely said that the taigaioi in each maniple took the first tents on each side, that is, probably, at each end of the row which held one maniple.

5. With regard to the fortifications of the camp it is stated that the digging of the ditch (ταφεία) and the formation of the rampart (χαρακτοσοῖα) upon two sides of the camp was assigned to the socii, each division taking that side along which it was quartered; while the two remaining sides were in like manner completed by the legiones, one by each legion. The work upon each side was portioned out among the maniples, the centurions acted as inspectors of the tasks performed by their respective companies, and the general superintendence was undertaken by two of the tribunes. The nature and the dimensions of the defences are not, however, specified. These consisted of a ditch (fossa), the earth from which was thrown inwards, and formed, along with turf and
stones, into a mound (ager), on the summit of which a strong palisade of wooden stakes (sudes, volii) was fixed forming the rampart (Vallum s. Vallus—χάρακτ). We can scarcely doubt that the depth of the ditch, together with the height and breadth of the vallum, under ordinary circumstances, fixed; but the measurements incidentally mentioned in isolated passages do not perfectly accord with each other. Among the works at Dyrrchium (Caes. B. G. iii. 63) we read of a ditch 15 feet deep, and a vallum 10 feet high and 10 feet broad; in the war against the Bellovaci and other Gaulish tribes we find Caesar (B. G. viii. 9) fortifying his camp with a double ditch, 15 feet deep, with perpendicular sides (directis lateribus), and a vallum 12 feet high, on the top of which was a breast-work (loricula) and numerous towers three stories high connected with each other by bridges, the sides of these bridges next to the enemy being protected by a breastwork of fascines (eiminea loricula). Both of these, however, as well as several others which we might quote, must be regarded as special cases. The practice of a later period is, as we shall see below, more clearly defined by Hyginus and others.

6. Neither the number nor the names of the openings in the vallum are given. We have abundant evidence to prove that there were four: (1) Porta Praetoria destra, and (2) Porta Principalis sinistra at the two extremities of the wide street called Principia; (3) Porta Praetoria s. Extraordinaria, so called from being situated on that side of the camp nearest to the praetorium and in the immediate vicinity of the quarters of the extraordinarii; (4) Porta Decumana, so called from being situated on that end where the tenth turmae and tenth maniples in each division were quartered. This gate was also called Porta Quaestoria, in consequence, it would seem, of the quaestoria and the forum having been at one time placed in its vicinity, and here unquestionably stood the quaestorium in the camp of Hyginus, as we shall see below. Festus likewise has the gloss "Quintana appellatur porta in castris post praetorium, ubi rerum utensilium forum sit," and from Quintana in the sense of forum comes the modern Canteen. The perplexity caused by these statements has induced some critics to reverse the positions of the Porta Praetoria and the Porta Decumana as marked in our plan; but this alteration will give rise to difficulties still more serious, as may be seen from consulting Polybius and the authorities referred to at the end of this paragraph; for we find it expressly stated that the Porta Decumana was on that side of the camp most remote from the enemy (abs tergo castrorum; averse castrorum; decumana maxima pelotatur aversa hosti et fugientibus tutor), leading out, as will be seen from the construction, in the direction from which wood, water, and other necessary supplies would be most easily and securely provided. (Liv. xl. 27, iii. 5, x. 32, xxxiv. 47; Tacit. Ann. i. 66, iv. 30; Festus, s. v. Praetorium, Porta, Principalis, Quintana; Sueton. Ner. 26.)

We can scarcely doubt that the Portae must have been always defended by barriers of some kind; but when special precautions were required they were closed by regular gates defended by towers (portis fores altioresque turres imposuit, Caes. B. G. viii. 9).

7. In which direction did the Praetorium face?
generally speaks of one tribune only as acting, or of two when reference is made to both legions.

Officers parade. — Every morning at day-break the centurions and the equites presented themselves before the tents of the tribunes, and the tribunes in like manner, attended perhaps by the centurions and equites, presented themselves at the praetorium. The orders for the day were then issued by the consul to the tribunes, communicated by the tribunes to the centurions and equites, and through the centurions and equites reached the soldiers at the proper time.

Guards, Sentinels, &c. — Out of the twenty maniples of Principes and Triarii in each legion, two were appointed to take charge of the broad passage or street called Principia, extending right across the camp in front of the tents of the tribunes. This being the place of general resort during the day, and, as we know from various sources, the part of the camp in which the altars and the eagles stood, great pains were taken that it should be kept perfectly clean and regularly watered, a labour which would fall very light when portioned out among four maniples.

Of the remaining eighteen maniples of Principes and Hastati in each legion, three were assigned by lot to each of the six tribunes, and of these three maniples one in turn rendered each day certain services to the tribune to whom it was assigned by lot. These three maniples were divided. The sentinels to whom it fell to go upon duty in the first watch, were conducted in the afternoon to the tent of the tribune by lieutenants of the maniples to which they belonged. Each of these men received from the tribune four small tokens (σχήματα), numbered from one to four for the four watches, and bearing also marks indicating the legion, and maniple or century from which the guard was taken. The individual who received these tokens retained the one which answered to his own watch, and distributed the rest among his three comrades. The duty of going the hounds (vigilias circumire, s. circumire, comp. Fest. s. v. fraxare) was committed to the Equites, and for this purpose each legion supplied daily four, picked out from each turma in rotation by the commander of the troop. The eight persons thus selected decided by lot in which watch they should make their rounds, two being assigned to each watch. They then repaired to the tribune, and each individual received a written order specifying the posts which he was to visit, every post being visited in each watch by one or other of the two to whom the watch belonged. Then they repaired in a body to the first maniple of the Triarii, and there took up their quarters, because it was the duty of one of the centurions of this maniple to give notice of the commencement of each watch by a trumpet blast. At the appointed time each eques, accompanied by some friends, who acted as witnesses, visited all the posts named in his written order, from each sentinel whom he found on the alert he received one of the tokens described above, but if the sentinel was asleep or absent, then the eques of the rounds called upon his companions to witness the fact, and departed. The same process was followed by all the others, and on the following morning the officers of the rounds repaired to the tent of the tribune and delivered up the tokens. If the number of these was found to be complete, then all was well, but if any one was wanting, then it could be at once ascertained to what guard and to what watch the missing token belonged. The centurion of the company was ordered to bring forward the men implicated, and they were confronted with the officer of the rounds. If the latter could prove by means of his witnesses, that he had actually visited the post in question, and found the sentinel asleep or absent, then the guilty soldier was brought before the court martial. Sometimes we find centurions, tribunes, and even the general in chief represented
as going the rounds, but under ordinary circumstances, the duty was performed as we have described. (Liv. xxii. 1, xxviii. 24; Sall. Jug. 45.;

Watchword.—The watchword for the night was not communicated verbally, but by means of a small rectangular tablet of wood (τεσσεραίον ἐπιγραφαὶ—tessera) — to be carefully distinguished from the (νόμος τῶν τεσσεραίων) of the last paragraph), upon which it was written. One man was chosen out of each of these maniples and turmae which were quartered at that extremity of the lines most remote from the Praetorium. Each of these individuals (tesseraeis) repaired towards sunset to the tent of the tribune, and received from him a tessera, on which the password and also a certain number or mark were inscribed. With this he returned to the manipule or turma which he belonged, and taking witnesses, delivered it to the officer of the next adjoining manipule or turma, and he to the next until it had passed along the whole line, when it was returned by the person who received it last to the tribune. The regulation was that the whole of the tesserae should be restored before it was dark, and if any one was found wanting at the appointed time, the row to which it belonged could be at once discovered by means of the number or mark noticed above, an investigation took place at once into the cause of the delay, and punishment was inflicted upon the parties found to be in fault.

Not only mere passwords were circulated in this manner, but also, occasionally, general orders, as when we read in Livy, xxvi. 46, "Tessera per castra ab Livio console data erat, ut tribunum triumviris, centurio centurionem, eques equitem, pedes ex castra ab Livio consule data erat, ut tribunum triumviris, centurio centurionem, eques equitem, pedes"

Although the tesseraeis received the tessera from the tribune, it proceeded in the first instance from the commander-in-chief, as we may perceive from the passage just quoted, and many others. Under the empire it was considered the peculiar function of the prince to give the watchword to his guards. (tacit. Ann. i. 7; comp. Suet. Claud. 42. Nor. 9.)

Breaking up a Camp.—On the first signal being given by the trumpet, the tents were all struck and the baggage packed, the tents of the general and the tribunes being disposed of before the others were touched. Each of these signals the baggage was placed upon the beasts of burden; at the third, the whole army began to move.

II. Camp of Hyginus.

Passing over a space of about 250 years, we may ourselves amidst an order of things altogether new. The name Legiones still remains, but all the ancient divisions, with the exception of the Centuriae, have disappeared. The distribution of the soldiers into Velites, Hastati, Principes, and Triarii can not endure more than half a century after the era of Polybius; the organization by maniples was about the same period in a great measure superseded by the cohorts, and the cavalry were detached from the infantry and formed independent corps. In like manner the Socii, after the admission of the Italian states to the Roman franchise, ceased to form a separate class, and their place is now occupied by a motley crew of foreigners and Barracians serving in bands, designated by strange titles. We are reminded also that the republican form of government had given way to the dominion of a single individual by the appearance of a multitude of household troops and imperial bodyguards, distinguished by various apppellations, and invested with peculiar privileges. A complete Roman army did not now consist of Romanae Legiones cum Sociis, or of Legiones cum Sociis et Auxiliiis, but of Legiones cum Supplementis, the term Supplementa including the whole of the various denominations alluded to above. In what follows, we shall attempt to delineate a summer camp (castra aestiva), intended to contain three legions, with their supplements, a force, which in the time of Hyginus corresponded to the regular consular army of the sixth and seventh centuries of the city. It is but right, however, to call attention to the fact, that we do not here tread upon ground so firm as when Polybius was our guide. The text of Hyginus presents many difficulties and many corruptions; and there are not a few passages in which we are thrown too much upon conjecture. This, however, be it understood, applies almost exclusively to the minute details, for the general outline of the whole is clear and well ascertained. The plan sketched below, is taken almost entirely from Schelius, and the proportions of the different parts are carefully preserved. endeavouring in this case the geometrical construction, we proceed at once to explain the figure.

The point from which the whole of the measurements proceeded is marked with a small cross, and was called Groma, that being the name of an instrument employed by surveyors, analogous, in its uses at least, to the modern cross staff, plane table and level.

The general form of the inclosure was an oblong, the two longer sides being at equal distances from the Groma, rounded off at the angles (angulos cirronum circinat.e orporta), 2220 feet in length by 1620 feet in breadth, the general rule being that the length should exceed the breadth by one third (castra in quantum fieri poterat tertia esse debet); when larger it was called Castra Classicum, because, says Hyginus, the ordinary Buccinum or bugle could not be heard distinctly from one extremity to the other.

The Groma stood in the middle of the principal street (Via Principalis), which was sixty feet wide, extending right across the camp, with the two Portae Principales at its extremities. The two remaining gates, which, like the former, retained their ancient names, were the Porta Praetoria, which was nearest to the enemy (porta praetoria semper hostem spectare debet), and the Porta Decumana, and these were placed in the centre of the two shorter sides of the oblong. Immediately behind the Groma, a rectangular space, 720 feet long by 180 broad, was set apart for the emperor or commander-in-chief, and, as in the consular camp, termed the Praetorium. Immediately behind the Praetorium, that is to say, at the extremity most distant from the Groma, a street called the Via Quintana, 40 feet wide, extended across the camp parallel to the Via Principalis. When the camp exceeded the ordinary dimensions, then two additional gates were formed at the extremities of the Via Quintana, the breadth of which was in that case increased to 50 feet.

It will be seen at a glance that the camp was divided into three segments by the Via Principalis and the Via Quintana. Each of these segments had a name. The whole of the middle segment, lying to the right and the left of the Praetorium,
formed the *Latae Praetorii*. The segment included between the Via Principalis and that side of the camp in which the Porta Praetoria stood formed the *Prætentura*. The segment included between the Via Quintana and that side of the camp in which the *Porta Decumana* stood formed the *Retentura*. The legiones being the most trustworthy of the troops in the provinces, were quartered by cohorts next to the rampart all round the camp, encircling completely with their lines the masses of foreigners, who, together with the imperial guard, formed the supplementa.
A clear space of 60 feet (intervalum) was left between the tents of the legionaries and the ramparts, and they were separated from the quarters of the other troops, whom they surrounded, by a street called the Via Sagularis, which ran completely round the camp, so that the whole of the legionaries, with the exception of the first cohort in each legion, and three ordinary cohorts for whom there is not room in the outer ring, were bounded on one side by the intervalum and on the other by the Via Sagularis. The remaining streets not particularly specified were comprehended under the general name Viae Vicinariae s. Vicinales, and their breadth was 20 feet.

The defences of a camp might be fourfold:— 1. fossa. 2. Vallum. 3. Cervoli. 4. Armo.

1. The Fossa might be of two kinds, a. The Fossa fastigata, with both sides sloping, so as to form a wedge; or, b. the Fossa Punica, of which the outer side was perpendicular, the inner side sloping, as in the fossa fastigata. The breadth in either case was to be at least 5 feet, the depth 8 feet. Outside of each gate a ditch was dug extending beyond the gates. This, on account of its shortness, was called Titulus, and in front of the titulus was a small semicircular...

2. The Vallum was formed of earth and turf, or of stone, 6 feet in height, 8 feet broad.

3. When the nature of the ground did not admit of the construction of a sufficient vallum, then a chevaux de frise (cervoli) was substituted.

4. When neither a Vallum nor Cervoli could be employed, then the camp was surrounded by a ring of armed men four deep, numerous sentries in turn in every direction.

We can now proceed to point out in what manner the three segments were occupied, referring to the numbers on the figure, it being understood that, as before, we shall not enter here into any discussions regarding the origin and character of the different battalions named, all information upon such matters being given in the article Exercitus.

### A. Praetorium et Latera Praetorii.

1. Praetorium. 2. Aerae, on which public sacrifice was offered. The position assigned to them is conjectural; but they were, at all events, in the immediate vicinity of this spot. 3. Auguratorium, in which the emperor took the auspices—the altars were perhaps erected in front of this place, at least such was the case sometimes. (See Tacit. Ann. xv. 30, where the form Augurale is employed.) 4. Tribunal, the elevated platform from which addresses were delivered to the troops. Close to the praetorium was a guardhouse (stationi auri operet secundum praetorium pedes viginti).

5. Comes imperatoris, the personal staff of the emperor, among whom the chief place, next to the vices principis, was assigned to the Prefectus praetorio. 6. Equites singulares Imperatoris et Equites praetoriani; the number of these was variable; but Hyginus gives as an average 450 of the former and 400 of the latter. 7. Cohortes praetoriae quatuor. Primipilares. Ereciali. Officiales. The praetorians were allowed twice as much space as the troops of the line. 8. Alaegingenariae quatuor. 9. In each of the spaces marked 9, on the extreme right and left of the Praetorium, bordering on the Via Sagularis (per rigorem viae sagularis) was placed the first cohort and the vexillarii of one legion. The first cohort and the vexillarii of the remaining legion will be found in the Praetentura. The first cohort of a legion contained 960 men, being twice as numerous as the others; the vexillarii of a legion amounted to about 500.

### B. Praetentura.

10. Scamnum Legatorum. The quarters of the legati. 11. Scamnum Tribunorum. Immediately behind the legati, were the legionary tribunes and the tribunes of the praetorian cohorts.

In the language of surveyors, scamnum was a rectangular figure, whose breadth exceeded its length, string a rectangular figure, whose length exceeded its breadth. So, Saga and Tabulium are the terms used with reference to the direction of the length and breadth respectively; thus, "Cohors prima causa signorum et aquilae intra viam sagulariam, et quoniam duplum numerum habet, duplum pedaturam accipiet, ut, puta, signis pedes centum viginti, tabulino pedes trecentos sexaginta, vel signis centum octoginta tabulino pedes ducentos quadraginta." It is the more necessary to call attention to this, because these significations have been passed over by the best lexicographers, and we find that some modern exponents of Hyginus imagine Tabulium to have been an office where the books and accounts of the legion were kept. Another example of the use of these words will be given below. 12. Alet militariae quatuor, one in each of these four compartments. 13. Valetudinarium, the hospital for the sick soldiers. 14. Veterinarium, the hospital for the sick horses. 15, 16. Classici, marines employed as pioneers. Mauri equites sexcenti. Pannonii Veredarii octingenti. These two bodies of light cavalry were quartered near the classici, because, when the latter were sent in advance to clear the way, they were guarded by the former. 17. Exploratores. General Roy in his plan places them in these two small compartments, but it appears more probable from the words of Hyginus, that they were quartered all together on the side next to 19, 18 and 19. The first cohort of the remaining legion and its Vexillarii.

On the opposite side of the Via Praetoria, three legionary cohorts, for whom there was not sufficient space outside of the Via Sagularis.

In the Praetentura stood also the Fabrilia or workshop of the carpenters and armourers, erected at a distance from the Valetudinarium, so that the noise might not disturb the patients.

Within the scamnum of the legati were the Scholae of the first cohorts, the places apparently where the superior officers of the legions assembled in order to receive the general orders of the day.

### C. Retentura.

20. Quaestorium. This space corresponded in name only with the Quaestorium of the Polybian camp, for it was no longer assigned to a quaestor (Quaestorium dicitur quod aliquando ibi quaestores pedatvem accoperint). It was occupied partly by prisoners of rank, hostages, and plunder, and hero
perhaps the Praefectus Castrorum may have been quartered, unless we are to look for him among the Comites Imperatoris.

21. Statorum centuriae duae, who guarded the rear of the praetorium, and always kept close to the person of the Emperor. These, like the praetorians, had double space assigned to them.

Among these we find enumerated Sumactares, a word which no one has succeeded in explaining, but it is in all probability a corrupt form.

Camels with their riders (cameli cum suis epi-
lude) were frequently included among the con-
situents of an army, being used both in offensive operations, and also in carrying plunder.

Two points strike us forcibly when we compare the camp of Hyginus with that of Polybius; first, the flimsy character of the fortifications, which must be attributed to the disinclination felt by the soldiers to perform regularly and steadily the same amount of labour which was cheerfully executed by soldiers of the republic; and, secondly, the desire everywhere visible to economise space, and compress every thing within the narrowest possible limits. Although the numbers of an army, such as we have been considering above, cannot be determined with absolute precision, they must, on the lowest computation, have exceeded 40,000 men, and these were crowded together into less than one half the space which they would have occupied according to the ancient system, the proportion of cavalry, moreover, being much larger in the imperial force. The camp of Polybius, calculated for less than 20,000, contains upwards of four millions of square feet, while the camp of Hyginus embraces little more than three millions and seven hundred thousand.

We may conclude with a few words upon a topic entirely passed over by Polybius, but on which Hyginus affords ample information in so far as the usages of his own day are concerned — the number and arrangement of the tents.

A double row of tents (papiliones) facing each other, with a space between for piling the arms of the soldiers, and for receiving the beasts of burden and the baggage, was termed Striga; a single row, with a corresponding space in front, Hemistrigium. The normal breadth of a Striga was 60 feet, of a Hemistrigium 30 feet, made up as follows: — 10 feet were allowed for the depth of each tent, 6 feet for a passage behind the tent, 5 feet for the arms piled in front of the tent, 9 feet for the juminta and baggage; total 30 feet for the hemi-

If the striga was equal to one century in length, then the cohort would occupy three strigae in breadth, that is, a space 120 feet long by 180 broad = 21,600 square feet. See fig. (6.)

Since a striga 120 feet in length and 60 feet in breadth, containing 7200 square feet, was allotted to 2 centuries, and since an ordinary legionary cohort contained 6 centuries, it follows that the space required for each cohort (pedurator colorit) of 480 men was 21,600 square feet.

The troops were usually quartered in cohorts, and these might be variously disposed, it being always desirable that a whole century should always be ranged in an unbroken line.

If the striga was equal to two centuries, then the cohort would occupy one whole striga in breadth, that is, a space 120 feet long, by 180 broad = 21,600 square feet. See fig. (5.)
If the striga was equal in length to three centuries, then the cohort would occupy one striga = 21,600 square feet. See fig. (8.)

It is to be observed that in the plan of the camp given above, the legionary cohorts on the longer sides are in strigae of 240 feet in length, those on the shorter sides in strigae of 360 feet in length.

When the number of legions in an army was greater in proportion to the supplementa than in the array which we have reviewed, then in order that they might still be ranged outside of the Via Sagularis, the strigae presented their breadth to the vallum instead of their length, or to use the technical phrase, the length which in the former case had been assigned to the Signa, was now given to the Tubulinum (Quod si leytones plures uceperimus et supplementa pandora ut necessarium sit cohortes circa valum ererius ponere convertimus pedaturam, quod fuerat signis tabulino dabimus). If A B be the line of the vallum, C will represent the position of the cohort in the one case, D in the other.

Josephus, in his account of the Jewish war, takes special notice of the Roman encampments, and, although he does not enter into minute details, his observations, with which we shall conclude this article, form a useful supplement to Hyginus. It is evident from the numerous artisans for whom workshops are provided, from the towers with which the vallum was strengthened, and from the precaution of setting fire to every thing left behind, that the words of the historian refer chiefly to Castra Statira. He begins by remarking (B. J. iii. 5) that the Romans when invading an enemy's country never hazard an engagement until they have fortified a camp (ον πριν ἀποτευται μάχης ή τεχίσας στρατόπεδου), which, in form, is a square (διαμετρεῖται δὲ παρεμβολῆ τετράγωνος), with four gates, one on each side. The rampart by which it is surrounded exhibits the appearance of a wall furnished with towers at equal distances, and in the spaces between the towers is placed the artillery ready for immediate service (τοίς τε οξυελείς, καὶ καταπόλται, καὶ λεβόδια, καὶ πάν ἀετήριον ὄργανον τίθεσαι, ἄπαντα πρὸς τὰς βολὰς ἐτοιμα). The camp is divided conveniently by streets, in the middle are the tents of the officers, and in the very centre of all the praetorium (τὸ στρατήγιον); there is also a forum (ἀγορὰ τις ἀποθέκαιαν), and a place for artisans (χειροτέχναις χωρίον), of whom a great number follow the army with building tools, and seats for the tribunes and centurions (ὡς καὶ τε λογαρίσμοι καὶ τοξικάρχαι), where they decide any disputes which may arise. When necessary (εὶ δὲ ἐπείγοι) a ditch is dug all round, four cubits deep and four cubits broad.

At day dawn (ὑπὸ δὲ τὴν ἑω) all the soldiers repair to the tents of their respective centurions (ἐπὶ τοὺς ἐκατοντάρχας) and salute them; the centurions repair to the tribunes (πρὸς τοὺς χιλιάρχας), along with whom all the centurions...
(ταξιαρχαῖς) repair to the commander-in-chief, from whom they receive the watchword (σημείον) and the general orders of the day, to be conveyed by them to their respective divisions.

When a camp is broken up, at the first blast of the trumpet the soldiers strike the tents, and pack up the utensils; at the second they load the mules and other beasts of burden, set fire to everything which could prove serviceable to an enemy, and stand like couriers ready to start forward on a race; the third gives the last warning that all things being now prepared every man must be in his place. Then the herald, standing at the right hand of the general, demands thrice if they are ready for war, to which they all respond with loud and repeated cheers that they are ready, and for the most part, being filled with martial ardour, anticipate the question, and raise their right hands on high with a shout. (B. J. iii. 5 § 4) [W. R.]

CATAGO'GIA (καταγωγία). [Ἀναγωγία.]

CATAGRAPHA. [Πίντυρα.]

CATAL'OGUS (κατάλογος), the catalogue of those persons in Athens who were liable to regular military service. At Athens, those persons alone who possessed a certain amount of property, were allowed to serve in the regular infantry, whilst the lower class, the thetes, had not this privilege. Thus the former are called εἰς κατάλογον στρατευόμενοι, and the latter εἰς ξώ τοῦ κατάλογον. (Xen. Hell. ii. 3. § 20.)

Those who were exempted by their age from military service, are called by Demosthenes (De Synt. p. 167.) οἱ ὑπὲρ τῶν κατάλογων. It appears to have been the duty of the generals (στρατηγοὶ) to make out the list of persons liable to service [Ἀστράτειας Γραφή], in which duty they were probably assisted by the demarchi, and sometimes by the Bouleutai. (Dem. c. Polycl. p. 1208.)

CATALUS/SEOS TOU DEMOU GRAPHE' (καταλύσεως τοῦ χήμου γραφῆ), was an action brought against those persons who had altered, or attempted to alter, the democratical form of government at Athens. A person was also liable to this action who held any public office in the state after the democracy had been subverted. (Andoc. de Myst. p. 48.)

This action is closely connected with the προσοδία γραφῆ (ἐπὶ προσοδία τῆς πολέως, ή ἐπὶ κατάλυσι τοῦ χήμου, Demosth. c. Timoc. p. 749), with which it appears in some cases to have been almost identical. The form of proceeding was the same in both cases, namely, by εἰκαγγελία. In the case of καταλύσεως τοῦ χήμου, the punishment was death; the property of the offender was confiscated to the state, and a tenth part dedicated to Athena. (Andoc. De Myst. p. 48.)

CATAPHRA'CTI (κατάφρακτοι). 1. Heavy-armed cavalry, the horses of which were also covered with defensive armour (Serv. ad Virg. Aen. xi. 771), whence they are called by Pollux (i. 140) περίμυγγραχωμένοι. The armour of the horses consisted either of scale armour, or of plates of metal, which had different names according to the parts of the body which they protected. Pollux (i. 140) speaks of the προκειμένων, παράπτων, παράδων, προστερτίων, παραπλευρίων, παραρθρίων, παρακοπίων. Among many of the Eastern nations, who placed their chief dependence upon their cavalry, we find horses protected in this manner; but among the Romans we do not read of any troops of this description till the later times of the empire, when the discipline of the legions was destroyed, and the chief dependence began to be placed on the cavalry.

This species of troops was common among the Persians from the earliest times, from whom it was adopted by their Macedonian conquerors. (Liv. xxxv. 48; xxxvii. 40.) In the army of the elder Cyrus, Xenophon (Erg. vi. 4. § 1) says that the horses were protected by coverings for the forehead and chest (προκειμένων καὶ προστερτίων); and the same was the case with the army of Artaxerxes, when he fought with his younger brother. ( Xen. Anab. i. 8. § 7.) Troops of this description were called ciliánarii by the Persians (cataphracti equeites, quos ciliánarioris dixit Pseph. Amm. Marc. xvi. 10; compare Lamprid. Alex. Sce. 56.)

We first read of cataphracti in the Roman army in the time of Constantine. (Amm. Marc. i. 2.)

2. The word was also applied to ships which had decks, in opposition to Aphracti. [Ναυĩς.]

CATAPIRAT'ER (καταπιράτης, θόλος), the lead used in sounding (ἐν τῷ βόλείῳ), or fathoming the depth of water in navigation. The mode of employing this instrument appears to have undergone no change for more than two thousand years, and is described with exactness in the account of St. Paul's voyage and shipwreck at Mela. (Acts, xxvii. 28.) A cylindrical piece of lead was attached to a long line, so as to admit of being thrown into the water in advance of the vessel, and to sink rapidly to the bottom, the line being marked with a knot at each fathom, to measure the depth. (Isid. Orig. xix. 4; Eustath. in ll. v. 396.) By sounding the bottom of the lead with tallow (υκτείνω, Lucilius, ap. Isid. l. c.), specimens of the ground were brought up, showing whether it was clay (Herod. ii. 5), gravel, or hard rock. [J. Y.]

CATAPULTA. [TORMENTUM.]

CATARACTA (καταράκτας), a portcullis, so called because it fell with great force and a loud noise. According to Vegetius (De Re Mil. iv. 4), it was an additional defence, suspended by iron
rings and ropes, before the gates of a city, in such a manner that, when the enemy had come up to the gates, the portcullis might be let down so as to shut them in, and to enable the besieged to assail them from above. In the accompanying plan of the principal entrance to Pompeii, there are two sideways for foot passengers, and a road between them, fourteen feet wide, for carriages. The gates were placed at A, A, turning on pivots [Cardo], as is proved by the holes in the pavement, which still remain. This end of the road was nearest to the town; in the opposite direction, the road led into the country. The portcullis was at B, B, and was made to slide in grooves cut in the walls. The sideways, secured with smaller gates, were roofed in, whereas the portion of the main road between the gates (A, A) and the portcullis (B, B) was open to the sky. When, therefore, an attack was made, the assailants were either excluded by the portcullis; or, if they forced their way into the barbican and attempted to break down the gates, the citizens, surrounding and attacking them from above, had the greatest possible facilities for impeding and destroying them. Vegetius speaks of the "catastaca" as an ancient contrivance; and it appears to have been employed by the Jews at Jerusalem as early as the time of David. (Psalm. xxiv. 7, 9; comp. Jer. xx. 2. Sept.) [J. Y.]

KATASKOPES GRAPHE' (kataaskopois graphi), an action brought against spies at Athens. If a spy was discovered, he was placed on the rack, in order to obtain information from him, and afterwards put to death. (Antiphanes, ep. Athen. ii. p. 66, d.; Dem. De Cor. p. 272; Aeschin. c. Cleon. p. 616; Plut. Vit. dec. Oral. p. 648, a.) It appears that foreigners only were liable to this action; since citizens, who were guilty of this crime, were accused of προδοσία.

CATASTA. [Servius.]

CATEIA, a missile used in war by the Germans, Gauls, and some of the Italian nations (Virgil. Aen. vii. 741; Val. Flacc. vi. 83; Aul. Gell. x. 25), supposed to resemble the acis. (Serv. in Aen. l. c.; Isid. Orig. xviii. 7.) It probably had its name from cutting; and, if so, the Welsh terms cattai, a weapon, cattia, to cut, or mangle, and cattan, to fight, are nearly allied to it. [J. Y.]

CATELLA. [Catena.]

CATELLA, dim. of CATELLA (κατελλα, κατελλαε), a chain. The chains which were of superior value, either on account of the material or the workmanship, are commonly called catellae (κατελλαε), the diminutive expressing their fineness and delicacy as well as their minuteness. The specimens of ancient chains which we have in bronze lamps, in scales (libra) and ornaments for the person, especially necklaces (monile), show a great variety of elegant and ingenious patterns. Besides a plain circle or oval, the separate link is often shaped like the figure 8, or is a bar with a circle at each end, or assumes other forms, some of platted wire or thread, like the gold chains now manufactured at Venice. This is represented in the lowest figure of the woodcut. These valuable chains were sometimes given as rewards to the soldiers (Liv. xxxiv. 31); but they were commonly worn by women (Hor. Ep. i. 17. 55), either on the neck (περί την τράχηλον ἀλάτων, Menander, p. 92, ed. Mein.), or round the waist (Plin. H. N. xxxii. 12); and were used to suspend pearls, or jewels set in gold, keys, lockets, and other trinkets. [J. Y.]

CATERVARI. [Gladiatores.]

CATHERA, a seat; but the term was more particularly applied to the soft seats used by women, whereas selloa signified a seat common to both sexes (inter feminos cathedras, Mart. iii. 63, iv. 79; Hor. Sat. i. 10. 91; Prop. iv. 5. 37). The cathedrae were, no doubt, of various forms and sizes; but they usually appear to have had backs to them, as is the case in the one represented in the annexed woodcut, which is taken from Sir William Hamilton's work on Greek vases. On the cathedra is seated a bride, who is being fanned by a female slave with a fan made of peacock's feathers.

Women were also accustomed to be carried abroad in these cathedrae instead of in lecticae, which practice was sometimes adopted by effeminate persons of the other sex (sexta service servit cathedra, Juv. Sat. i. 65; compare ix. 51). The word cathedra was also applied to the chair or pulpit from which lectures were read. (Juv. Sat. vii. 203; Mart. i. 77.) Compare Büttger, Sabine, vol. i. p. 35; Scheffer, De Re Vehicul. ii. 4.

CATILLUS. [Catinus.]

CATINUS, or CATINUM, a large dish, on which fish and meat were served up at table. Hence Horace speaks of an angustus patinus as an indication of niggardliness on the part of the host. (Hor. Ep. ii. 4. 77; Pers. iii. 11.) From this word come the diminutive catillus or catilium, a small dish.

CAYAVE DIUM. [Domus.]

CAVEA. [Theatrum.]

CAUPO. The nature of the business of a caupo is explained by Gaia (Ad Edict. Provinc. Dig. 4. tit. 9. s. 5): "caupo . . . mercedem accipit..."
non pro custodia, sed...ut viatores manere m...tenetur." The caupo lodged travellers in his house, and, though his house was not opened for honoraria actio he was liable even if there was receperint, nisi restituent, in eos judicium. If there were an avoidable calamity, as robbery, fire, or the like, the praetor's edict was in this form: "Nautae...quod cujusque salvum fore sive mercem receperint." But if the goods of the caupo were not answerable for culpa, except in the actio depositi, against the caupo; but in the actio depositi he would be answerable for dolus, whereas in this honoraria actio he was liable even if there was no culpa, except in the excepted cases. The English law as to liability of an innkeeper is the same. (Kent v. Shuckard, 2 B. & Ad. 503.)

CAUPONA, signified, 1. An inn, where travellers obtained food and lodging; in which sense it answered to the Greek words πανδοκείων, καταγώγων, and κατάλωσις. 2. A shop, where wine and ready-dressed meat were sold, and thus corresponded to the Greek κατάλωσις. The person who kept a caupona was called caupo. It has been maintained by many writers that the Greeks and Romans had no inns for the accommodation of persons of any respectability, and that their cauponae and πανδοκέια were mere houses of shelter for the lower classes. Such, however, was not the case, an attentive perusal of the classical authors will sufficiently show; though it is, at the same time, very evident that their houses of public entertainment did not correspond, either in size or convenience, to similar places in modern times.

Greek Inns.—The hospitality of the earliest times of Greece rendered inns unnecessary; but in later times they appear to have been very numerous. The public ambassadors of Athens were sometimes obliged to avail themselves of the accommodation of such houses (Aeschin. De Fals. Leg. p. 279), as well as private persons. (Cic. De Div. i. 27, Inv. ii. 4.) In addition to which, it may be remarked, that the great number of festivals which were celebrated in the different towns of Greece, besides the four great national festivals, to which persons flocked from all parts of the Hellenic world, must have required a considerable number of inns to accommodate strangers, not only in the places where the festivals were celebrated, but also on the roads leading to those places. (Becker, Charti, vol. i. p. 134.)

The word κατηγεῖον signified, as has been already remarked, a place where wine and ready-dressed provisions were sold. Κάτηγος signified in general a retail trader, who sold goods in small quantities, whence he is sometimes called παλιγκάτος, and his business παλιγκατχελέων (Dem. c. Dionys. p. 1285; Aristoph. Plat. 1156; Pollux, vii. 12); but the term is more particularly applied to a person who sold ready-dressed provisions, and especially wine in small quantities. (Plut. Gory. p. 518.) When a retail dealer in other commodities is spoken of, the name of his trade is usually prefixed; thus we read of προδόκατηγος (Plut. Peric. 24), δίλαν κάτηγος (Aristoph. Pae, 1175), ἀστίφων κάτηγος (Id. 439), βιβλιοκάτηγος, &c. In these κατηγεῖα only persons of the very lowest class were accustomed to eat and drink. (Isocr. Areod. c. 18; Becker, Charti, vol. i. p. 259, &c.)

CAUPO'NA, signified, 1. An inn, where travellers obtained food and lodging; in which sense it answered to the Greek words πανδοκείων, καταγώγων, and κατάλωσις. 2. A shop, where wine and ready-dressed provisions were sold, and which appear to have been numerous in all parts of the city. The houses where persons were allowed to eat and drink were usually called Popinae and not cauponae; and the keepers of them, Popae. They were principally frequented by slaves and the lower classes (Cic. Pro Mil. 24), and were consequently only furnished with stools to sit upon instead of couches, whence Martial (v. 70) calls these places sellariolidos popinas. This circumstance is illustrated by a painting found at Pompeii in a wine-shop, representing a drinking-scene. There are four persons sitting on stools round a tripod table. The dress of two of the figures is remarkable for the hoods, which resemble those of the capotes, worn by the Italian sailors and fishermen of the present day. They use cups made of horn instead of glasses, and from their whole appearance evidently belong to the lower orders. Above them are different sorts of eatables hung upon a row of pegs.

The Thermopolia, which are spoken of in the article CAUPONA, appear to have been the same as the popinae. Many of these popinae were little better than the Lupanaria or brothels; whence
Horace (Sat. ii. 4. 62) calls them immundas popinas. The wine-shop at Pompeii, where the painting described above was found, seems to have been a house of this description; for behind the shop there is an inner chamber containing paintings of every species of indecency. (Gell's Pompeiana, vol. ii. p. 10.) The Ganace, which are sometimes mentioned in connection with the popinae (Suet. Div. i. 2; Cic. Hort. v. 11, 10), but apparently with little success. Ti I. many attempts were made to regulate the shops (Suet. Div. i. 10); and Claudius commanded them to be shut up altogether. (Dion Cass. Ixii. 6.) They appear, however, to have been soon opened again, if they were ever closed; for Nero commanded that nothing should be sold in them but different kinds of cooked pulse or vegetables (Suet. Ner. 16; Dion Cass. Ixii. 14); and an edict to the same effect was also published by Vespasian. (Dion Cass. Ixvi. 10.)

Persons who kept inns or houses of public entertainment of any kind, were sold in low estimation both among the Greeks and Romans (Theophr. Char. 6; Plat. Leg. xi. pp. 918, 919); and though the epithets of perfidi and maliigni, which Horace gives to them (Sat. i. 1. 29, i. 5. 4), may refer only to particular innkeepers, yet they seem to express the common opinion entertained respecting the whole class. (Zell, Die Wirthshausen d. Alten; Stockmann, De Popinis; Becker, Gallus, vol. i. pp. 227—236.)

CAUSIO. [ASCERTOR.]

CAUSIO PROBATIO. [CIVITAS.]

The following examples will explain the passage of Ulpius. In many cases a heres could not safely pay legacies, unless the legatee gave security (cautio) to refund in case the will under which he claimed should turn out to be bad. (Dig. 5. tit. 3. s. 17.) The Muciana cautio applied to the case of testamentary conditions, which consisted in not doing some act, which, if done, would deprive the heres or legatarius of the hereditas or the legacy. In order that the person who could take the hereditas or the legacy in the event of the condition being broken, might have the property secured, he was entitled to have the Muciana cautio. (Dig. 35. tit. 1. a. 7, 18, 73.) The heres was also in some cases bound to give security for the payment of legacies, or the legatee was entitled to the Bonorum Possessio. Tutores and curatores were required to give security (satisfacere) for the due administration of the property intrusted to them, unless the tutor was appointed by testament, or unless the curator was a curator legitimum. (Gaius, i. 192.) A procurator who sued in the name of an absent party, might be required to give security that the absent party would consent to be concluded by the act of his procurator (Id. iv. 99); this security was a species satisfacitionis, included under the genus cautio. (Dig. 46. tit. 8. s. 3, 13, 18, 26.) In the case of damnum infectum, the owner of the land or property threatened with the mischief, might claim security from the person who was threatening the mischief. (Cic. Top. 4; Gaius, iv. 31; Dig. 43. tit. 6. s. 5.)

If a vendor sold a thing, it was usual for him to declare that he had a good title to it, and that...
if any person recovered it from the purchaser by a better title, he would make it good to the purchaser; and, in some cases, the cautio was for double the value of the thing. (Dig. 21. tit. 2. s. 60.) This was, in fact, a warranty.

The word cautio was also applied to the release which a debtor obtained from his creditor on satisfying his demand: in this sense cautio is equivalent to a modern receipt; it is the debtor's security for double the value of the thing. (Dig. 21. tit. 2. s. 69, 93.) Thus cavere ab aliquo signifies to obtain this kind of security. A person by whom the usus fructus of a thing was given, might be required to give security that he would enjoy and use it properly, and not waste it. (Dig. 7. tit. 9.)

Cavere is also applied to express the professional advice and assistance of a lawyer to his client for his conduct in any legal matter. (Cic. Ad Fam. iii. 1, viii. 6. Pro Munera, c. 10.)

The word cavere and its derivatives are also used to express the provisions of a law, by which any thing is forbidden or ordered, as in the phrase, Cautio est legis, priuatoed bat constitutionis, &c. It is also used to express the words in a will, by which a testator declares his wish that certain things should be done after his death. The preparation of the instruments of cautio was, of course, the business of a lawyer. [G. L.]

CEADAS (KEdsas) or CAEADAS (KaiEdsas), was a deep cavern or chasm, like the Barathron at Athens, into which the Spartans were accustomed to thrust persons condemned to death. (Thuc. i. 134; Strab. viii. p. 67; Plut. iv. 18. § 4; Suidas, s. v. Bpadthys, KaiEdsas, KEdsas.)

CEDIT DIES. [LEGATUM.]

CETELAES are said to have been three hundred horsemen, who formed the body-guard of Romulus both in peace and war (Liv. i. 15; Dionys. ii. 13; Plut. Rom. 26). There can, however, be little doubt that these Celeres were not simply the body-guard of the king, but were the same as the equites, or horsemen, a fact which is expressly stated by some writers (Plin. H. N. xxxiii. 2. s. 9), and implied by others (Dionys. l. c.). [EQUITES.]

The etymology of Celeres is variously given. Some writers derived it from their leader Celer, who was said to have slain Remus, but most writers connected it with the Greek Celer, in reference to the quickness of their service. (Serv. ad Virg. Aen. xi. 693.) Neither supposes celeres to be identical with patriici, and maintains that the former word was the name of the whole class as distinguished from the rest of the nation (Hist. of Rome, vol. i. p. 331); but although the equites were at first undoubtedly chosen from the patricians, there seems no reason for believing that the word celeres was synonymous with patriici.

The Celeres were under the command of a Tribunus Celorum, who stood in the same relation to the king, as the magister equitum did in a subsequent period to the dictator. He occupied the second place in the state, and in the absence of the king held the right of convoking the comitia. Whether he was appointed by the king, or elected by the comitia, has been questioned, but the former is the more probable. (Lyd. De Mag. i. 14; Pompon. de Orig. Jur. in Dig. 1. tit. 2. s. 2. §§ 15, 19; Dionys. iv. 71; comp. Becker, Handbuch der Römisch. Alterth. vol. ii. part i. pp. 239, 338.)

CELLA, in its primary sense, means a store-room of any kind. (Varr. De Ling. Lat. v. 162, ed. Müller.) Of these there were various descriptions, which took their distinguishing denominations from the articles they contained, as, for instance, the cella penauria or penaria, the cella olearia and cella vinaria. The slave to whom the charge of these stores was intrusted, was called cellarius (Plaut. Capt. iv. 2. 115; Seneq. Ep. 122), or promus (Colum. xiii. 3), or conus, "qua promit quod conditum est" (compare Hor. Carm. i. 9, 7, iii. 21, 8), and sometimes promus condus and procurator peni. (Plaut. Pseud. ii. 2. 14.) This answers to our butler and housekeeper.

Any number of small rooms clustered together like the cella of a honeycomb (Virg. Georg. iv. 164) were also termed cellae; hence the dormitories of slaves and menials are called cellae (Cic. Phil. ii. 27; Columella, i. 6), and cellas familiariae (Vitruv. vi. 10. p. 182) in distinction to a bedroom, which was cubiculum. Thus a sleeping-room at a public house is also termed cella. (Petron. 55.) For the same reason the dens in a brothel are cellae. (Petron. 8; Juv. Sat. vi. 128.) Each female occupied one to herself (Ibid. 122), over which her name and the name of her favours were inscribed (Seneq. Condr. 1. 2); and hence cella inscripta means a brothel. (Murt. xi. 45.) Cella ostiaria (Vitruv. vi. 10; Petron. 39), or janitoria (Suet. Vitell. 16), is the porter's lodge.

In the baths the cella coldaria, tepidaria, and frigidaria, were those which contained respectively the warm, tepid, and cold bath. [BALNEAE.]

The interior of a temple, that is the part included within the outside shell, σηχνός (see the lower woodcut in ANTÆ), was also called cella. There was sometimes more than one cella within the same peristyle or under the same roof; in which case they were either turned back to back, as in the temple of Jupiter Optimus Maximus in the Capitol. In such instances each cella took the name of the deity whose statue it contained, as cella Jovis, cella Junonis, cella Minervae. [A. R.]

CELLARIUS. [CELLA.]

CENOTA PHIUM, a cenoph, or νέφος was an empty or honorary tomb, erected as a memorial of a person whose body was buried elsewhere, or not found for burial at all. (Comp. Thuc. ii. 84; Virg. Aen. iii. 303.)

Cenotaphia were considered as religiosa, and therefore divini juris, till a rescript of the emperors Antoninus and Verus pronounced them not to be so. (Heinec. Ant. Rom. ii. 1.) [R. W.]

CENSOR. [CENSOR.]

CENSUALES. [CENSOR.]

CENSOR (Censur), the name of two magistrates of high rank in the Roman republic. Their office was called Censura (Censuria or tymphia). The Censura, which was a register of Roman citizens and of their property, was first established by Servius Tullius, the fifth king of Rome. After the expulsion of the kings it was taken by the consuls; and special magistrates were not appointed for the purpose of taking it till the year B. C. 443. The reason of this alteration was owing to the appointment in the preceding year of tribuni militum with consular power in place of the consuls; and as these tribunes might be plebeians, the patricians deprived the consuls,
and consequently their representatives, the tribunes, of the right of taking the census, and entrusted it to two magistrates, called Censors, who were to be chosen exclusively from the patricians. The magistracy continued to be a patrician one till B. C. 339, when C. Marcius Rutilus was the first plebeian censor (Liv. viii. 22). Twelve years afterwards, B. C. 351, it was provided by one of the Punician laws, that one of the censors must necessarily be a plebeian (Liv. viii. 12), but it was not till B. C. 280 that a plebeian censor performed the solemn purification of the people (lustrum conditum, Liv. Epit. 13). In B. C. 131 the two censors were for the first time plebeians.

There were always two censors, because the two consuls had previously taken the census together. If one of the censors died during the time of his office, another had at first to be chosen in his stead, as in the case of the consuls. This, however, happened only once, namely, in B. C. 393; because the capture of Rome by the Gauls in this lustrum excited religious fears against the practice (Liv. v. 31). From this time, if one of the censors died, his colleague resigned, and two new censors were chosen. (Liv. vi. 27, ix. 34, xxiv. 43, xxvii. 6.)

The censors were elected in the comitia centuriata during the presidency of a consul (Gell. xiii. 15; Liv. iv. 45). Niebuhr supposes that they were at first elected by the comitia curiata, and that their election was confirmed by the centuries; but there is no authority for this supposition, and the truth of it depends entirely upon the correctness of his views respecting the election of the consuls. (Consul.) It was necessary that both censors should be elected on the same day; and accordingly if the voting for the second was not finished, the election of the first went for nothing, and new comitia had to be held. (Liv. ix. 34.) The comitia for the election of the censors were held under different auspices from those at the election of the consuls and praetors; and the censors were accordingly not regarded as their colleagues, although they likewise possessed the maxima auspicia (Gell. xiii. 15). The comitia were held by the consuls of the year very soon after they had entered upon their office (Liv. xxiv. 10, xxxix. 41); and the censors, as soon as they were elected and the censorial power had been granted to them by a lex conturriata, were fully installed in their office. (Cic. de Leg. Agr. ii. 11; Liv. xl. 45.) As a general principle the only persons eligible to the office were those who had previously been consuls; but a few exceptions occur. At first there was no law to prevent a person being censor a second time; but the only person, who was twice elected to the office, was C. Marcus Rutilus in B. C. 263; and he brought forward a law in this year, enacting that no one should be chosen censor a second time, and received in consequence the surname of Censorinus. (Plut. Coriol. 1; Val. Max. iv. 1. § 3.)

The censorship is distinguished from all other Roman magistracies by the length of time during which it was held. The censors were originally chosen for a whole lustrum, that is, a period of five years; but their office was limited to eighteen months, as early as ten years after its institution (B. C. 433), by a law of the dictator Mam. Aemilius Mamercius (Liv. iv. 24, ix. 33). The censors also held a very peculiar position with respect to rank and dignity. No imperium was bestowed upon them, and accordingly they had no lictors. (Zonar. vii. 19.) The jus censuræ was granted to them by a lex conturriata, and not by the curiae, and in that respect they were inferior in power to the consuls and praetors. (Cic. de Leg. Agr. ii. 11.) But notwithstanding this, the censorship was regarded as the highest dignity in the state, with the exception of the dictatorship: it was an ἱππος ἄρης, a sanctus magistratus, to which the deepest reverence was due. (Plut. Cat. Maj. 16, Flamin. 18, Camill. 2, 14, Aemil. Paul. 38; Cic. ad Fam. iii. 10.) The high rank and dignity which the censorship obtained, was owing to the various important duties gradually entrusted to it, and especially to its possessing the regimen morum, or general control over the conduct and morals of the citizens; in the exercise of which power they were regulated solely by their own views of duty, and were not responsible to any other power in the state. (Dionys. in Mai, Nova Col. vol. ii. p. 516; Liv. iv. 24, xxix. 37; Val. Max. vii. 2. § 6.) The censors possessed of course the sella curulis (Liv. xl. 45), but with respect to their official dress there is some doubt. From a well-known passage of Polybius (vi. 53), describing the use of the imagines at funerals, we may conclude that a consul or praetor wore the praetexta, one who triumphed the toga picta, and the censor a purple toga peculiar to him; but other writers speak of their official dress as the same as that of the other higher magistrates. (Zonar. vii. 19; Athen. xiv. p. 660, c.) The funeral of a censor was always conducted with great pomp and splendour, and hence a funus censorium was voted even to the emperors. (Tae. Ann. iv. 15, xiii. 2.)

The censorship continued in existence for 421 years, namely, from B. C. 443 to B. C. 222; but during this period many lustra passed by without any censor being chosen at all. According to one statement the office was abolished by Sulla (Schol. Gronov. ad Cic. Div. in Cæcul. 3, p. 384, ed. Orelli), and although the authority, on which this statement rests, is not of much weight, the fact itself is probable; for there was no census during the two lustra which elapsed from Sulla’s dictatorship to the first consulship of Pompey (B. C. 62—70), and any strict regimen morum would have been found very inconvenient to the aristocracy in whose favour Sulla legislated. If the censorship was done away with by Sulla, it was at any rate restored in the consulship of Pompey and Crassus. Its power was limited by one of the laws of the tribune Clodius (B. C. 58), which prescribed certain regular forms of proceeding before the censors in expelling a person from the senate, and the concurrence of both censors in inflicting this degradation. (Dion Cass. xxxviii. 13; Cic. pro Scaur. 25, de Proc. Cons. 15.) This law, however, was repealed in the third consulship of Pompey (B. C. 52), on the proposition of his colleague Cæcilius Metellus Scipio (Dion Cass. xl. 57), but the censorship never recovered its former power and influence. During the civil wars which followed soon afterwards no censors were elected; and it was only after a long interval that they were again appointed, namely in B. C. 22, when Augustus caused L. Munatius Plancus and Paulus Aemilius Lepidus to fill the office. (Suet. Aug. 37, Claud. 16; Dion Cass. liv. 2.) This was the last time that such magistrates were appointed;
CENSOR.

the emperors in future discharged the duties of their office under the name of Praefectura Morum. Some of the emperors who bore the name of censor when they actually held a census of the Roman people, as was the case with Claudius, who appointed the elder Vitellius as his colleague (Suet. Claud. 16; Tac. Ann. xii. 4, Hist. i. 9), and with Vespasian, who likewise had a colleague in his son Titus. (Suet. Vesp. 8, Tit. 6.) Domitian assumed the title of censor perpetuus ( Dion Cass. liii. 18), but this example was not imitated by succeeding emperors. In the reign of Decius we find the elder Valerian nominated to the censorship without a colleague (Trebell. Pollio, Valer. 1, 2); and towards the end of the fourth century it was proposed to revive the censorship (Symmach. Ep. iv. 29, v. 9), but this design was never carried into effect.

The duties of the censors may be divided into three classes, all of which were however closely connected with one another: I. The Census, or register of the citizens and of their property, in which were included the lectio sensus, and the recovmito equitum; II. The Regimen Morum; and III. The administration of the finances of the state, under which were classed the superintendence of the public buildings and the erection of all new public works. The original business of the censorship was at first of a much more limited kind; and was restricted almost entirely to taking the census (Liv. iv. 8); but the possession of this power gradually brought with it fresh power and new duties, as is shown below. A general view of these duties is briefly expressed in the following passage of Cicero (de Leg. iii. 3): — "Censores populi aevitates, soboles, familias pecuniasque cen- sentio: urbis templi, vias, aquas, aerarium, vecti-galia tuento: populique partes in tribus distribu- bunto: exin pecunias, aevitates, ordinis partituo: equitum, peditumque prodeum describunto: caelibus esse prohibento: mores populi regunto: probrum et titulorum spectato."

I. THE CENSUS, the first and principal duty of the censors, for which the proper expression is census agere (Liv. iii. 3, 22, iv. 8), was always held in the Campus Martius, and from the year B. C. 435 in a special building called Villa Publica, which was erected for that purpose by the second pair of censors, C. Furius Pacilus and M. Geminus Macerinus. (Liv. iv. 22; Varr. R. R. iii. 2.) An account of the formalities with which the census was opened is given in a fragment of the Tabulae Censoriae, preserved by Varro (L. L. vi. 86, 87, ed. Müller). After the auspicia had been taken, the citizens were summoned by a public cryer (praeco) to appear before the censors. Each tribe was called up separately (Dionys. v. 75); and the names in each tribe were probably taken according to the lists previously made out by the tribunes of the tribes. Every paterfamilias had to appear in person before the censors, who were seated in their eurule chairs; and those names were taken first which were considered to be of good omen, such as Valerius, Salvinus, Statius, &c. ( Festus, s. v. Locus; Schol. Bob. ad Cic. pro Sever. p. 974, ed. Orelli.) The census was conducted ad arbitrum censiorum; but the censors laid down certain rules ( Liv. iv. 8, xxxix. 15), sometimes called leges census censendo ( Liv. xiii. 14), in which mention was made of the different kinds of property subject to the census, and in what way their value was to be estimated. According to these laws each citizen had to give an account of himself, of his family, and of his property upon oath, ex animi sententia. (Dionys. iv. 15; Liv. xiii. 14.) First he had to give his full name (praenomen, nomen, and cognomen) and that of his father, or if he were a freedman that of his patron, and he was likewise obliged to state his age. He was then asked, Tu, ex animi tuo sen-tentia, quaram habes? and if married he had to give the name of his wife, and likewise the number, names, and ages of his children, if any. (Gell. iv. 20; Cic. de Orat. ii. 54; Tab. Hercl. 142 (68); Dig. 50. tit. 15. s. 3.) Single women (viduæ) and orphans or wards were represented by their tutores; their names were entered in separate lists, and they were not included in the sum total of capita. (Comp. Liv. iii. 3, Epit. 59.) After a citizen had stated his name, age, family, &c., he then had to give an account of all his property, so far as it was subject to the census. In making this statement he was said censere or censari, as a deponent, "to value or estimate himself," or as a passive "to be valued or estimated;" the censor, who received the statement, was also said censere, as well as aceipere, census. (Comp. Cic. pro Flacc. 32; Liv. xxxix. 15.) Only such things were liable to the census (censui censendo) as were property ex jure Quiritium. At first each citizen appears to have merely given the value of his whole property in general without entering into details (Dionys. iv. 15; Cic. de Leg. iii. 3; Festus, s. v. Censores); but it soon became the practice to give a minute specification of each article, as well as the general value of the whole. (Comp. Cic. pro Flacc. 32; Gell. vii. 11; Plut. Cat. Maj. 18.) Land formed the most important article in the census; but public land, the possessio of which only belonged to a citizen, was excluded as not being Quiritarian property. If we may judge from the practice of the imperial period, it was the custom to give a most minute specification of all such land as a citizen held ex jure Quiritium. He had to state the name and situation of the land, and to specify what portion of it was arable, what meadow, what vineyard, and what olive-ground; and to the land thus minutely described he had to affix his own valuation. (Dig. 50. tit. 15. s. 4.) Slaves and cattle formed the next most important item. The censors also possessed the right of calling for a return of such objects as had not usually been given in, such as clothing, jewels, and carriages. (Liv. xxxix. 44; Plut. Cat. Maj. 18.) It has been doubted by some modern writers whether the censors possessed the power of setting a higher valuation on the property than the citizens themselves had put; but when we recollect the discretionary nature of the censors' powers, and the necessity almost that existed, in order to prevent fraud, that the right of making a surcharge should be vested in somebody's hands, we can hardly doubt that the censors had this power. It is moreover expressly stated that on one occasion they made an extravagant surcharge on articles of luxury (Liv. xxxix. 44; Plut. Cat. Maj. 18); and even if they did not enter in their books the property of a person at a higher value than he returned it, they accomplished the same end by compelling him to pay down the tax upon the property at a higher rate than others. The tax (tributum) was usually one per thousand upon the property entered in the books.
of the censors; but on one occasion the censors, as a punishment, compelled a person to pay eight per thousand (octuplato censu, Liv. iv. 24).

A person, who voluntarily absent himself from the census, and thus became incapable of voting, was subject to the severest punishment. Servius Tullius is said to have threatened the incensum with imprisonment and death (Liv. i. 44); and in the republican period he might be sold by the state as a slave. (Cic. pro Cael. 34.) In the later times of the republic a person who was absent from the census, might be represented by another, and thus be registered by the censors. (Varr. L. L. vi. 86.) Whether the soldiers who were absent on service had to appoint a representative, may be questioned. In ancient times the sudden breaking out of a war prevented the census from being taken (Liv. vi. 31), because a large number of the citizens would necessarily be absent. It is supposed from a passage in Livy (xxix. 37), that in later times a publican period he might be sold by the state as a slave.

registered in the census was the same thing as caput habere. [CoMiTIA. CENTURIATA.] These lists formed a most important part of the Tabulae Censuriae, under which name were included all the documents connected in any way with the discharge of the censors' duties. (Cic. de Leg. iii. 5; Liv. xxiv. 18; Plut. Cat. Maj. 18; Cic. de Leg. Agr. i. 2.) These lists, as far as least as they were connected with the finances of the state, were deposited in the aerarium, which was the temple of Saturn (Liv. xxix. 37); but the regular depository for all the archives of the censors was in earlier times the Atrium Libertatis, near the Villa publica (Liv. xliii. 16, xlvi. 15), and in later times the temple of the Nymphs. (Cic. pro Mil. 27.)

Besides the arrangement of the citizens into tribes, centuries, and classes, the censors had also to make out the lists of the senators for the ensuing lustrum, or till new censors were appointed; striking out the names of such as they considered unworthy, and making additions to the body from those who were qualified. This important part of their duties is explained under SENATUS. In the same manner they held a review of the equites eqüo publico, and added and removed names as they judged proper. [Equites.]

After the lists had been completed, the number of citizens was counted, and the sum total announced; and accordingly we find that, in the account of a census, the number of citizens is likewise given. There are in some cases spoken of as capita, sometimes with the addition of the word civium, and sometimes not; and hence to be registered in the census was the same thing as caput habere. [Caput.]

II. REGIMEN MORUM. This was the most important branch of the censors' duties, and the one which caused their office to be the most revered and the most dreaded in the Roman state. It naturally grew out of the right which they possessed of excluding unworthy persons from the list of citizens; for, as has been well remarked, "they would not be the first place, in the examination of many questions of fact, such as whether a citizen had the qualifications required by law or custom for the rank which he claimed, or whether he had ever incurred any judicial sentence, which rendered him infamous: but from thence the transition was easy, according to Roman notions, to the decision of questions of right; such as whether a citizen was really worthy of retaining his rank, whether he had not committed some act as justly degrading as those which incurred the sentence of the law." In this manner the censors gradually became possessed of a complete superintendence over the whole public and private life of every citizen. They were constituted the conservators of public and private virtue and morality; they were not simply to prevent crime or particular acts of immorality, but their great object was to maintain the old Roman character and habits, the mos majorum. The proper expression for this branch of their power was regimen morum (Cic. de Leg. iii. 5; Liv. iv. 8, xxiv. 18, xl. 46, xlii. 27, xlii. 3; Suet. Aug. 27), which was called in the times of the empire causa or praefectura morum. The punishment inflicted by the censors in the exercise of this branch of their duties was called Nota or Notitia, or Animadversio Censoria. In inflicting it they were guided only by their conscientious convictions of duty; they had to take an oath that they would act neither through partiality nor favour; and, in addition to this, they were bound in every case to state in their lists, opposite the name of the guilty citizen, the cause of the punishment inflicted on him. — Subscriptio censoria. (Liv. xxxix. 42; Cic. pro Cluent. 42—49; Gell. iv. 29.)

This part of the censors' office invested them with a peculiar kind of jurisdiction, which in many respects resembled the exercise of public opinion in modern times; for there are innumerable actions which, though acknowledged by everyone to be prejudicial and immoral, still do not come within the reach of the positive laws of a country. Even in cases of real crimes, the positive laws frequently punish only the particular offence, while in public opinion the offender, even after he has undergone punishment, is still incapacitated for certain honours and distinctions which are granted only to persons of unblemished character. Hence the Roman censors might brand a man with their nota censoria in case he had been convicted of a crime in an ordinary court of justice, and had already suffered punishment for it. The consequence of such a nota was only ignominia and not infamia (Cic. de Rep. iv. 6) [INFAMIA], and the censorial verdict was not a judicium or res judicata (Cic. pro Cluent. 42), for its effects were not lasting, but might be removed by the following censors, or by a lex. A nota censoria was moreover not valid, unless both censors agreed. The ignominia was thus only to persons of unblemished character. Hence the Roman censors would have deprived a magistrate of his office (Liv. xxiv. 18), and certainly did not disfranchise persons labouring under it for obtaining a magistracy, for being appointed as judges by the praetor, or for serving in the Roman armies. Mem. Aemilius was thus, notwithstanding...
ing the animadversio censoria, made dictator. (Liv. iv. 31.)

A person might be branded with a censorial nota in a variety of cases, which would be impossible to specify, as in a great many instances it depended upon the discretion of the censors and the view they took of a case; and sometimes even one set of censors would overlook an offence which was severely chastised by their successors. (Cic. de Senect. 12.) But the offences which are recorded to have been punished by the censors are of a threefold nature.

1. Such as occurred in the private life of individuals, e.g. (a) Living in celibacy at a time when he might be married to provide the state with citizens. (Val. Max. ii. 9, § 1.) The obligation of marrying was frequently impressed upon the citizens by the censors, and the refusal to fulfil it was punished with a fine [Aes Uxorium]. (b) The dissolution of matrimony or betrothment in an improper way, or for insufficient reasons. (Val. Max. ii. 9, § 2.) (c) Improper conduct towards one's wife or children, as well as harshness or too great indulgence towards children, and disobedience of the latter towards their parents. (Plut. Cat. Maj. 17; compare Cic. de Rep. iv. 6; Dionys. xx. 3.) For example, the refusal of a husband to provide for his wife or children, or for an extravagant expenditure of money. A great many instances of this kind are recorded. (Liv. Epit. 14, xxxix. 44; Plut. Cat. Maj. 18; Gallius, iv. 8; Val. Max. ii. 9, § 4.) At a later time the leges sumptuariae were made to check the growing love of luxuries. (d) Neglect and carelessness in cultivating one's fields. (Gell. iv. 12; Plin. H. N. xviii. 3.) (f) Cruelty towards slaves or clients. (Dionys. xx. 3.) (g) The carrying on of a disreputable trade or occupation (Dionys. l.c.), such as acting in theatres. (Livy. vii. 2.) (b) Legacy-hunting, defrauding orphans, &c.

2. Offences committed in public life, either in the capacity of a public officer or against magistrates. (a) If a magistrate acted in a manner not befitting his dignity as an officer, if he was accessible to bribes, or forged auspices. (Cic. de Senect. 12; Liv. xxxix. 44; Val. Max. ii. 9, § 3; Plut. Cat. Maj. 17; Cic. de Divin. i. 16.) (b) Improper conduct towards a magistrate, or the attempt to limit his power or to abrogate a law which the censors thought necessary. (Liv. iv. 24; Cic. de Orat. ii. 64; Val. Max. ii. 9, § 5; Gallius, xx. 26.) (c) Perjury. (Cic. de Off. i. 13; Liv. xxiv. 19; Gall. vii. 18.) (d) Neglect, disobedience, and cowardice of soldiers in the army. (Val. Max. ii. 9, § 7; Liv. xxxvii. 18, xxxix. 7.) (e) The keeping of the equus publicus in bad condition. [EQUITES.]

3. A variety of actions or pursuits which were thought to be injurious to public morality, might be forbidden by the censors by an edict (Gellius, xv. 11), and those who acted contrary to such edicts were branded with the nota and degraded. For an enumeration of the offences that might be punished by the censors with ignomina, see Niebuhr, Hist. of Rome, vol. ii. p. 339, &c.

The punishments inflicted by the censors generally differed according to the station which a man occupied, though sometimes a person of the highest rank might suffer all the punishments at once, by being degraded to the lowest class of citizens. But they are generally divided into four classes:—

1. Mutilo vel ejectum e senatu, or the exclusion of a man from the number of senators. This punish-

2. The ademptio equi, or the taking away the equus publicus from an eques. This punishment might likewise be simple, or combined with the exclusion from the tribes and the degradation to the rank of an aerarian. (Liv. xxxiv. 18, 45; xxvii. 11, xxiix. 37, xiiii. 16.) [EQUITES.]

3. The motio e tribu, or the exclusion of a person from his tribe. This punishment and the degradation to the rank of an aerarian were originally the same; but when in the course of time a distinction was made between the tribus rusticae and the tribus urbanea, the motio e tribu transferred a person from the rustic tribes to the less respectable city tribes, and if the further degradation to the rank of an aerarian was combined with the motio e tribu, it was always expressly stated. (Liv. xiv. 15; Plin. H. N. xviii. 3.)

4. The fourth punishment was called reforere in aerarios (Liv. xxv. 18; Cic. pro Cluent. 43) or facere aliquem aerarium (Liv. xxiv. 43), and might be inflicted on any person who was thought by the censors to deserve it. [AERRARI.] This degradation, properly speaking, included all the other punishments, for an equus could not be made an aerarius unless he was previously deprived of his horse, nor could a member of a rustic tribe be made an aerarian unless he was previously excluded from it. (Liv. iv. 24, xxiv. 18, &c.)

A person who had been branded with a nota censoria, might, if he considered himself wronged, endeavour to prove his innocence to the censors (causa agere apud censores, Varr. de Re Rust. i. 7), and if he did not succeed, he might try to gain the protection of one of the censors, that he might intercede on his behalf.

III. The Administration of the Finances of the State, was another part of the censors' office. In the first place the tributum, or property-tax, had to be paid by each citizen according to the amount of his property registered in the census, and, accordingly, the regulation of this tax naturally fell under the jurisdiction of the censors. (Comp. Liv. xxxix. 44) [TRIBUTUM.]

They also had the superintendence of all the other revenues of the state, the vectigalia, such as the tithes paid for the public lands, the salt works, the mines, the customs, &c. [VECTIGALLIA.] All these branches of the revenue the censors were accustomed to let out
to the highest bidder for the space of a lustrum or five years. The act of letting was called conditio or locatio, and seems to have taken place in the month of March. (Cic. de leg. agr. i. 5, ii. 21.) The terms on which they were let, together with the rights and duties of the purchasers, were all specified in the leges censoriae, which the censors published in every case before the bidding commenced. (Cic. ad Qu. Fr. i. 1. § 12, Verr. iii. 7, de Nat. Deor. iii. 19, Varr. de Re Rust. ii. 1.) For further particulars see Publicani. The censors also possessed the right, though probably not without the concurrence of the senate, of imposing new vectigalia (Liv. xxix. 37, xl. 51), and even of selling the lands belonging to the state (Liv. xxxii. 7). It would thus appear that it was the duty of the censors to bring forward a budget for a lustrum, and to take care that the income of the state was sufficient for its expenditure during that time. So far their duties resembled those of a modern minister of finance. The censors, however, did not receive the revenues of the state. All the public money was paid into the aerarium, which was entirely under the jurisdiction of the senate; and all disbursements were made by order of this body, which employed the quaestors as its officers. (Aerarium; Senatus.)

In one important department the censors were entrusted with the expenditure of the public money; though the actual payments were no doubt made by the quaestors. The censors had the general superintendence of all the public buildings and works (opus publicum); and to meet the expenses connected with this part of their duties, the senate voted them a certain sum of money or certain revenues, to which they were restricted, but which they might at the same time employ according to their discretion. (Polyb. vi. 13; Liv. xl. 46, xlv. 16.) They had to see that the temples and all other public buildings were in a good state of repair (aedes sacras tueri, &c.) and to take care that the income of the state was sufficient for its expenditure during that time.

The repairs of the public works and the keeping of them in proper condition were let out by the censors by public auction to the lowest bidder, just as the vectigalia were let out to contractors, either for ornament or utility, both in Rome and in other parts of Italy, such as temples, basilicas, theatres, porticoes, fora, walls of towns, aqueducts, harbours, bridges, cloacae, roads, &c. These works were either performed by them jointly, or they divided between them the money, which had been granted to them by the senate. (Liv. xl. 51, xlv. 16.) They were let out to contractors, like the other works mentioned above, and when they were completed, the censors had to see that the work was performed in accordance with the contract: this was called opus probare or in acceptum referre. (Cic. Verr. i. 57; Liv. iv. 22, xlv. 15; Lex Puteol. p. 73, Spanq.)

The aediles had likewise a superintendence over the public buildings; and it is not easy to define with accuracy the respective duties of the censors and aediles: but it may be remarked in general that the superintendence of the aediles had more of a police character, while that of the censors referred more particularly to financial events.

After the censors had performed their various duties and taken the census, the lustrum or solemn purification of the people followed. When the censors entered upon their office, they drew lots to see which of them should perform this purification (lustrum ficere or condere, Varr. L. L. vi. 86; Liv. xxix. 37, xxxv. 9, xxxviii. 36, xlix. 10); but both censors were obliged of course to be present at the ceremony. (Lustrum.)

In the Roman and Latin colonies and in the municipia there were censors, who likewise bore the name of quinquennales. They are spoken of under Coloniae.

A census was sometimes taken in the provinces, even under the republic (Cic. Verr. ii. 58, 59); but there seems to have been no general census taken in the provinces till the time of Augustus. This emperor caused an accurate account to be taken of all persons in the Roman dominion, together with the amount of their property (Ev. Lucce, ii. 1, 2; Joseph, Ant. Jud. xvii. 3. § 5, xviii. 1. § 1, 2. § 1), and a similar census was taken from time to time by succeeding emperors, at first every ten, and subsequently every fifteen years. (Sévigné, Rév. de la Steuerverfassung, in Zeitschrift, vol. vi. pp. 375—383.) The emperor sent into the provinces especial officers to take the census, who were called Censitores (Dig. 50. tit. 15. s. 4. § 1; Cassiod. Var. ix. 11; Orelli, Inscr. No. 3652); but the duty was sometimes discharged by the imperial legati. (Tac. Ann. i. 31, ii. 6.) The Censitores were assisted by subordinate officers, called Censuales, who made out the lists, &c. (Capitol. Gorgias, 12; Symmach. Ep. x. 43; Cod. Theod. 8. tit. 2.) At Rome the census still continued to be taken under the empire, but the old ceremonies connected with it were no longer continued, and the ceremony of the lustration was not performed after the time of Vespasian. The two great jurists, Paulus and Ulpian, each wrote works on the census. (Paulus and Ulpian, each wrote works on the census. (Paulus and Ulpian, each wrote works on the census.)

The word census, besides the meaning of "valuation" of a person's estate, has other significations, which must be briefly mentioned: 1. It signified the amount of a person's property, and hence we read of census senatusorum, the estate of a senator; census equestrius, the estate of an eques. 2. The lists of the census. 3. The tax which depended upon the valuation in the census. The Lexicons will supply examples of these meanings.

(A considerable portion of the preceding article has been taken from Becker's excellent account...
CENSUS. — 1. GREEK. — The Greek term for a man's property as ascertained by the census, as well as for the act of ascertaining it, is tย'กย'яяаа. The only Greek state concerning whose arrangement of the census we have any satisfactory information, is Athens; for we know of the other states only of a fragmentary nature, and do not enable us to form an accurate notion of their census. Previous to the time of Solon no census had been instituted at Athens, as a citizen's rights were always determined by birth; but, as Solon substituted property for birth, and made a citizen's rights and duties dependent upon his property, it became a matter of necessity to ascertain by a general census the amount of the property of the Athenian citizens. According to his census, all citizens were divided into four classes: 1. ἀνθρώπου, or persons possessing landed property which yielded an annual income of at least 500 medimni of dry or liquid produce. 2. ἁγία, i.e., knights or persons able to keep a war-horse, were those whose lands yielded an annual produce of at least 300 medimni, whom they are also called τιμίας ἡμείας. 3. Ζευγάρια, i.e., persons able to keep a yoke of oxen (ζεύγα), were those whose annual income consisted of at least 150 medimni. 4. The Θύρες contained all the rest of the free population, whose income was below that of the Zeugitae. (Plut. Sol. 10, and the Lexicographers, s. v.) These classes themselves were called τίμια ἡμεία; and the constitution of Athens, so long as it was based upon these classes, was a Timocracy, which also had to pay a tax only of |, and persons of the third class only of | of their property. Lists of this taxable property (ἀπογραφά) were kept at first by the naucrari, then by the demarchi (Harpocr. s. v. δημαρχος), and afterwards by the demarchi (Harpocr. s. v. δημαρχος). As property is a fluctuating thing, the census was repeated from time to time, but the periods differed in the various parts of Greece, for in some a census was held every year, and in others every two or four years. (Aristot. Pol. v. 8.) Every person had conscientiously to state the amount of his property, and if there was any doubt about his honesty, it seems that a counterfeit valuation (ἀπογραφή) might be made. Now, supposing that all the taxable capital of the Athenian citizens was found to be 3000 talents, and that the state wanted 60 talents, or 1 part of it, each citizen had to pay away 3/10 part of his taxable property; that is, a person of the first class paid 120 drachmae (the 50th part of 6000), a person of the second, 60 drachmae (the 50th part of 3000), and a person of the third class, 20 drachmae (the 50th part of 1000). It is, however, not improbable that persons belonging to the same class had to pay a different amount of taxes according as their property was equal to the minimum or above it; and Böckh, in his Public Economy of Athens, has made out a table, in which each class is subdivided into three sections.

This system of taxation according to classes, and based upon the possession of productive estates, underwent a considerable change in the time of the

CENSUS.

CENTUMVIRI.

In the Peloponnesian war, though the divisions into classes themselves continued to be observed for a considerable time after. As the wants of the republic increased, and as many citizens were possessed of large property without being landed proprietors, the original land-tax was changed into a property-tax. In this manner we must explain the proposal of Euripides, shortly before B. c. 393, to raise 500 talents by imposing a tax of one fortieth part. (Aristoph. Eccles. 823, &c.) For the taxable capital, viz. 20,000 talents, far exceeds the amount of all the landed property in Attica. This property-tax, which was substituted for the land-tax, was called εισφορα, concerning which see EISPHORA. Compare LETURGIAE; and for the taxes paid by resident aliens, MARTORUM. (Böckh, Publ. Econ. of Athens, p. 495, &c., 2d edit.)

2. ROMAN. [CENSOR.]

CENTE'SIMA, namely pars, or the hundredth part, also called vectigal rerum venalium, or centesima rerum venalium, was a tax of one per cent. levied at Rome and in Italy upon all goods that were exposed for public sale at auctions. It was collected by persons called coactores. (Cic. ad Brut. 10, pro Rubr. Post. 11; Dig. l. tit. 16. c. 17. § 2.) This tax, as Tacitus (Ann. i. 70) says, was introduced after the civil wars, though its origin is mentioned by Cicero, who quotes, that the civil wars cannot have been those between Octavian and Antony, but must be an earlier civil war, perhaps that between Marius and Sulla. Its produce was assigned by Augustus to the aerarium militare. Tiberius reduced the tax to one half per cent. (ducentesima), after he had changed Capua into a province, and had thereby increased the revenue of the empire. (Tac. Ann. ii. 42.) Caligula in the beginning of his reign abolished the tax altogether for Italy, as is attested by Suetonius (Calig. 18) and also by an ancient medal of Caligula on which we find C. C. R. (s. Centumviralia Judicia), whose authority on this point cannot outweigh that of Suetonius and Tacitus, states that Tiberius increased the ducentesima to a centesima, and in another passage he agrees with Suetonius in stating that Caligula abolished it altogether (lx. 9; comp. Journ. de l'École de Langues orientales, l. c.).

Dion Cassius (liv. 19), whose authority on this point cannot outweigh that of Suetonius and Tacitus, states that Tiberius increased the ducentesima to a centesima, and in another passage he agrees with Suetonius in stating that Caligula abolished it altogether (lx. 9; comp. Journ. de l'École de Langues orientales, l. c.). But Dion Cassius (liv. 19), whose authority on this point cannot outweigh that of Suetonius and Tacitus, states that Tiberius increased the ducentesima to a centesima, and in another passage he agrees with Suetonius in stating that Caligula abolished it altogether (lx. 9; comp. Journ. de l'École de Langues orientales, l. c.).

The centumviri were judices, who resembled other judges in this respect, that they decided cases under the authority of a magistratus; but they were neither from other judges in being a definite body or collegium. This collegium seems to have been divided into four parts, each of which sometimes sat by itself. The origin of the court is unknown; but it is certainly prior to the Lex Aelia, which put an end to the legis actiones, except in the matter of Damnum Infectum, and in the cause centumvirales. (Gaius, iv. 31; Gell. xvi. 16.) According to Festus (s. Centumviralit judicia), three were chosen out of each tribe, and consequently the whole number out of the 35 tribes would be 105. As the number would be the hundred men; and as there were not 35 tribes till B. c. 241, it has been sometimes inferred that to this time we must assign the origin of the centumviri. But, as it has been remarked by Hollweg, we cannot altogether rely on the authority of Festus, and the conclusion so drawn from his statement is by no means necessary. If the centumviri were chosen from the tribes, this seems a strong presumption in favour of the high antiquity of the court.

The proceedings of this court, in civil matters, were per legem standing, and by the sacramentum. The process here, as in the other judicia privata, consisted of two parts, in jure, or before the praetor, and in iudicium, or before the centumviri. The praetor, however, did not instruct the centumviri by the formula, as in other cases, which is further explained by the fact that the praetor presided in the judicia centumvirales. (Plin. Ep. v. 21.)

It seems pretty clear that the powers of the centumviri were limited to Rome, or at any rate to Italy. Hollweg maintains that their powers were also confined to civil matters; but it is impossible to reconcile this opinion with some passages (Ovid, Trist. ii. 91; Plin. Ep. v. 33, &c.), from which it appears that criminia came under their cognizance. The substitution of aut for ut in the passage of Quintilian (Inst. Orat. iv. 1. § 57), even if supported by good MSS. as Hollweg affirms, can hardly be defended.

The civil matters which came under the cognizance of this court are not completely ascertained. Many of them (though we have no reason for saying all of them) are enumerated by Cicero in a well-known passage (De Orat. i. 30). Hollweg mentions that certain matters only came under their cognizance, and that other matters were not within their cognizance; and further, that such matters as were within their cognizance, were also within the cognizance of a single judge. Hollweg maintains that actions in rem or vindicationes of the old civil law (with the exception, however, of actions prejudiciales or status questiones) could alone be brought before the centumviri; and that neither a personal action, one arising from contract or delict, nor a status questionis, is ever mentioned as a cause centumviralis. It was the practice to set up a spear in the place where the centumviri were sitting, and accordingly the word hasta, or hasta centumviralis, is sometimes used as equivalent to the words judicium centumvirale. (Suet. Octavian. 36; Quintil. Inst. Orat. v. 2. § 1.) The spear was a symbol of quiritarian ownership; for “a man was considered to have the best title to that which he took in war, and accordingly a spear is set up in the centumviralia judicium.” (Gaius, iv. 16.) Such was the explanation of the Roman jurists of the origin of an ancient custom, from which it is argued, that it may at least be inferred, the centumviri had properly to decide matters relating to quiritarian ownership, and questions connected therewith.

It has been already said that the matters which belonged to the cognizance of the centumviri might also be brought before a judex; but it is conjectured by Hollweg that this was not the case till after the passing of the Aelia lex. He considers that the court of the centumviri was established.
in early times, for the special purpose of deciding questions of quiritarian ownership; and the importance of such questions is apparent, when we consider that the Roman citizens were rated according to their quiritarian property, that on their rating depended their class and century, and consequently their share of power in the public assemblies. No private judge could decide on a right which might thus indirectly affect the caput of a Roman citizen, but only a tribunal selected out of all the tribes. Consistently with this hypothesis we find not only the rei vindicatio within the jurisdiction of the centumviri, but also the hereditatis petitio and actio confessoria. Hollweg is of judgment. Thus two modes of procedure in the case of a centurial lawsuit; his opinions on some points, however, were introduced, excepting, however, as to the actiones were abolished, and the formula [Actio] tit. 2. s. 13, 17) and perhaps elsewhere; one excerpt is from C. Scaevola and the other from C. Asinius. The foregoing notice is founded on Hollweg's hypothesis that the twofold process was introduced: — 1. per legis actionem apud centumviro, 2. per formulam or per sponsionem before a judex. Thus two modes of procedure in the case of actions in rem were established, and such actions were no longer exclusively within the jurisdiction of the centumviri.

Under Augustus, according to Hollweg, the functions of the centumviri were so far modified that the more important vindicationes were put under the cognizance of the centumviri, and the less important were determined per sponsonem and before a judex. Under this emperor the court also resumed its former dignity and importance. (Dial. de Cans. Corrupt. Eloq. c. 38.) The younger Pliny, who practised in this court, in his head of this article. [G. L.]

CERTI. CERTI, INCERTI ACTIO, is a name which has been given by some modern writers to those actions in which a determinate or indeterminate sum, as the case may be, is mentioned in the formula (condemnatio certae pecuniae vel incertae). Gaius, iv. 54, &c.]

CERERE HEREDITATEM. [HEREDATS.

CEROMA (χερομα) was the oil mixed with wax (κερφός) with which wrestlers were anointed. After they had been anointed with this oil, they were covered with dust or a soft sand; whence Seneca (Ep. 57) says — A ceromate nos haphe (φόλω) except in crypto Neapolitana.

Ceroma also signified the place where wrestlers were anointed (the elseotheium, Vitruv. v. i.). And also, in later times, the place where the wrestling took place. This word is often used in connection with palaestra (Plan. H. N. xxxv. 2), but we do not know in what respect these places differed. Seneca (De Brev. Vit. 12) speaks of the ceroma as a place which the idle were accustomed to frequent, in order to see the gymnastic sports of boys. Arnobius (Adv. Gent. iii. 23) informs us that the ceroma was under the protection of Mercury. (Krause, Gymnastik und Agonistik der Hellenen, vol. i. p. 106, &c.)

CERTA'mina. [Athletea.

CEREA/LIA, a festival celebrated at Rome in honour of Ceres, whose wanderings in search of her lost daughter Proserpine were represented by women clothed in white, running about with lighted torches. (Ov. Fast. iv. 494.) During its continuance, games were celebrated in the Circus Maximus (Tacit. Ann. xv. 53), the spectators of which appeared in white (Ov. Fast. iv. 629); but on any occasion of public mourning the games and festivals were not celebrated at all, as the matrons could not appear at them except in white. (Liv. xxii. 56, xxxiv. 6.) The day of the Cerialia is doubtful; some think it was the 15th of April, others the 7th of the same month. (Ov. Fast. iv. 389.) [R. W.]

CEREVISIA, CEREVISIA (κεριός), ale or beer, was almost or altogether unknown to the ancient Greeks and Romans. But it was used very generally by the surrounding nations, whose soil and climate were less favourable to the growth of vines (in Gallia, alisque provinciis, Plin. H. N. xxii. 82 : Theophrast. De Causis Plant. vii. 11 ; Diad. Sic. iv. 2, 4, 16 ; Strab. viii. 2, 5 ; Tacit. Germ. 29.) According to the Hypnerotomachia (G. L.), the Egyptians commonly drank "barley-wine," to which custom Aeschylus alludes (εις κρασναν μεθυ, Suppl. 954 - Peleusiai pocuiya zylla, Colum. x. 116). Diodorus Siculus (i. 20, 34) says, that the Egyptian beer was almost equal to wine in strength and flavour. The Iberians, the Thracians, and the people in the north of Asia Minor, instead of drinking their ale or beer out of cups, placed it before them in a large bowl or vase (κρασπεδιον), which was sometimes of gold or silver. This being full to the brim with barley, as well as the fermented liquor, the guests, when they pledged one another, drank together out of the same bowl by stooping down to it, although, when this token of friendship was not intended, they adopted the more refined method of sucking up the fluid through tubes of cane. (Archil. Freg. p. 67, ed. Lieblein ; Xen. Anab. iv. § 5, 26 ; Athen. i. 24 ; Virg. Georg. iii. 380 ; Serv. ad loc.) The Suevi, and other northern nations, offered to their gods libations of beer, and expected that to drink it in the presence or Odin would be among the delights of Valhalla. (Keysler, Antiq. Septentr. p. 150—156.) Böhröw, one of the names for beer (Archil. i. c. ; Hellen. p. 91, ed. Sturtz ; Athen. x. 67), seems to be an ancient phrase participle, from the verb to brew. [J. Y.]

CERI, INCERTI ACTIO, is a name which has been given by some modern writers to those actions in which a determinate or indeterminate sum, as the case may be, is mentioned in the formula (condemnatio certae pecuniae vel incertae). Gaius, iv. 54, &c.)

The expression incerta formula, which occurs in Gaius (iv. 54), implies a certa formula. With respect to the intentio, it may be called certa when the demand of the actor is determinate.
whether it be a certain thing that he demands, or a certain sum of money (Gaius, iv. 45, 47). The intentio is incerta when the claim is not of a definite thing or something, but is expressed by the words quidquid, &c. (Gaius, iv. 47, 136, 137.) If the intentio is incerta, the condemnatio must be incerta. If the intentio was certa, the condemnatio might be either certa or incerta (Gaius, iv. 56, 51). In the compilations of Justinian, where the expressions incerti actio, incerta actio, incertum judicium occur, they specially apply to the actio praescriptis verbis, which contained an incerta intentio and condamnation. (Actio; Savigny, System, &c. vol. v. p. 74.)

CESTUS.

The cestus was used by boxers from the earliest times. When Epeius and Euryalus, in the Iliad (xxiii. 684), prepare themselves for boxing, they put on their hands thongs made of ox-hide (μαυτες πιπτηκοι, in Greek, were called ἄθρακα, ῥιμπροδί, or "limb-breakers." Figures with the cestus frequently occur in ancient monuments. They were of various forms, as appears from the following specimens, taken from ancient monuments, of which drawings are given by Fabretti (De Column. Traj. p. 261).

2. CESTUS also signified a band or tie of any kind (Varr. De Re Rust. i. 8); but the term was more particularly applied to the zone or girdle of Venus, on which was represented every thing that could awaken love. (I. xiv. 214; Val. Flacc. vi. 470.) When Juno wished to win the affections of Jupiter, she borrowed this cestus from Venus (I. l. c.) and Venus herself employed it to captivate Mars. (Mart. vi. 13, xiv. 205, 206.)

CETRA. 269

“Ingentia septem

Terga boam plumbo inuto ferroque rigebant.”

Statius (Theb. vi. 732) also speaks of migrantia plumbo tegmine. Such weapons in the hands of a trained boxer, must have frequently occasioned death. The μυραρκες were, in fact, sometimes called γυιατορία, or "limb-breakers." Figures with the cestus frequently occur in ancient monuments. They were of various forms, as appears from the following specimens, taken from ancient monuments, of which drawings are given by Fabretti (De Column. Traj. p. 261).
small light shield (cetratus, quos peltastas vocant, xxxi. 36). (Pelita.) [J. Y.]

CHALCEIA (χαλκεία), a very ancient festival celebrated at Athens, which at different times seems to have had a different character, for at first it was solemnised in honour of Athena, surnamed Ergane, and by the whole people of Athens, whence it was called Ἀθηναία or Πάσημος. (Suidas, s. v.; Elmol. Magn.; Eustath. ad Il. ii. p. 294, 305.) At a later period, however, it was celebrated only by artisans, especially smiths, and in honour of Hephaestus, whence its name was changed into Χαλκεία. (Pollux, vii. 105.) It was kept on the 30th day of the month of Pyanepsion. (Suidas, Harpocrat. Eustath. l. c.) Menander had written a comedy called Χαλκεία, a fragment of which is preserved in Athen. xi. p. 502. (Comp. Weleker, Die Aeschyli Trilog. p. 290.) [L. S.]

CHALCIDICUM is merely defined by Festus (s. v.) as a sort of building (genus aedificii), so called from the city of Chalcis, but what sort is not explained; neither do the inscriptions or the following attempts at identification have been suggested: — 1. A mint attached to the basilica, from χαλκεύς and δίπτω, which, though an ingenious conjecture, is not supported by sufficient classical authority. 2. That part of a basilica which lies directly in front of the tribe, corresponding to the nave in a modern church, of which it was the original, where the lawyers stood, and thence the name was transferred. 3. An apartment thrown out at the back of a basilica, either on the ground or at the extremity of the upper gallery, in the form of a balcony. 4. Internal chambers on each side of the tribune for the convenience of the judges, as in the basilica of Pompeii. 5. The vestibule of a basilica, either in front or rear; which interpretation is founded upon an inscription discovered at Pompeii, in the building appropriated to the fullers of cloth (fullonica): —

EUMACHIA. L.F. SACERD. PUB. ** * * * CHALCIDICUM. CRYPTAM PORTICUS ** * * * SULA, PFEQUINIA, FECIT. RADEMQUE, DEDICAVIT.

By comparing the plan of the building with this inscription, it is clear that the chalcidicum mentioned can only be referred to the vestibule. Its decorations likewise correspond in richness and character with the vestibule of a basilica described by Procopius (De Aedific. Justin. i. 10), which is twice designated by the term χαλκεύς. The vestibule of the basilica at Pompeii is shown upon the plan on page 199, a.

In another sense the word is used as a synonyme with coenaculum. "Scribuntur Dil vestri in triclinii coelestibus atque in chalcidicis aures coeintare" (Ambrosius, p. 149). These words, compared with Hom. Od. xxiii. 1,

"...eis ὑπέρρη ἰδιοθετήρα καρχισμάσα, and the translation of ὑπέρρην by Ansonius (Perioch, xiii. Odys.,)

Finally, the word seems also to have been used in the same sense as μονημιαν, a balcony. (Iaid. De Orig.; Reineius, Var. Lact. iii. S.) [A.R.]

CHALCIOGRIA (χαλκιογρία), an annual festival, with sacrifices, celebrated at Sestia, in honour of Athena, surnamed Χαλκίαους, i.e. the goddess of the brazen-horse. (Paus. iii. 17. § 3, v. 5. § 5; and Goeller ad Tischy. i. 128, &c.) Young men marched on the occasion in full armour to the temple of the goddess; and the ephors, although not entering the temple, but remaining within its sacred precincts, were obliged to take part in the sacrifice. (Polyb. iv. 35. § 2.) [L. S.]

CHALCUS (χαλκός), a denomination of Greek copper-money.

Bronze or copper (χαλκός) was very little used by the Greeks for money in early times. Silver was originally the universal currency, and copper appears to have been seldom coined till after the time of Alexander the Great. The χαλκος νομιδα at Athens issued in b. c. 406 (Schol. ad Aristoph. Ran. 737) were a peculiar exception; and they were soon afterwards called in, and the silver currency restored. (Aristoph. Ecclesiaz. 815—822; Auk.) It is not improbable, however, that the copper coin called χαλκος was in circulation in Athens still earlier. The smallest silver coin at Athens was the quarter obol, and the value was somewhat more than 3-4ths of a farthing. Its time of Alexander the Great. The χαλκια νομιδα at Athens issued in b. c. 406 (Schol. ad Aristoph. Ran. 737) were a peculiar exception; and they were soon afterwards called in, and the silver currency restored. (Aristoph. Ecclesiaz. 815—822; Auk.) It is not improbable, however, that the copper coin called χαλκος was in circulation in Athens still earlier. The smallest silver coin at Athens was the quarter obol, and the value was somewhat more than 3-4ths of a farthing. Its time of Alexander the Great.
which had arisen amongst them might be made up, and a reconciliation effected. It was celebrated every year on the 19th of February. (Ov. Pun. ii. 617; Ael. Max. 10. 20. 7; Mart. i. 55.) [K.W.]

CHARTA. [Lit.]

CHEIRONOMIA (χειρωνομία), a mimetic movement of the hands, which formed a part of the art of dancing among the Greeks and Romans. The word is also used in a wider sense, both for the art of dancing in general, and for any signs made with the hands in order to convey ideas. In gymnastics it was applied to the movements of the art of dancing in general, and for any signs made with the hands in pugilistic combat; and it is used in connection with the term σχιμασείων. (Athen. xiv. p. 629 b.; Hesych. vol. ii. p. 1547. Alb.; Herod. vi. p. 129; Aelian. V. H. xiv. 22; Dion Cass. xxxvi. 13; Paus. vi. 10. § 1; Heliod. Anthrop. iv. p. 73; Krause, Gymnastik und Agonistik, vol. i. c. 6 § 33, vol. ii. c. 3 § 1.) [P. S.]

CHEIROTONIA (χειροτονία). In the Athenian assemblies two modes of voting were practised, the one by pebbles [ΠΣΕΦΟΣ], the other by a show of hands. (χειροτονία). The latter was employed in the election of those magistrates who were chosen in the public assemblies (ἀρχηγεία), and who hence were called χειροτονοῦσα, and in some other cases of trials on matters which concerned the people, as upon ἀναγρόφους [meat]. We frequently find, however, the word φυλακτεία used where the votes were really given by show of hands. (Lys. c. Eratosth. p. 124, 16. and p. 127, 8. ed. Steph.; Dem. Olynth. i. p. 9.)

The manner of voting by a show of hands is said by Suidas (s. v. Κατεχειρότονος) to have been as follows:—The herald said: “Whoever thinks that Meidias is guilty, let him lift up his hand.” Then those who thought so stretched forth their hands. Then the herald said again: “Whoever thinks that Meidias is not guilty, let him lift up his hand;” and those who were of this opinion stretched forth their hands. The number of hands was counted each time by the herald; and the president, upon the herald’s report, declared on which side the majority voted (ἀναγροφόφους τάς χειροτονίας, Aesch. c. Cleopha. § 2).

It is important to understand clearly the compounds of this word. A vote condemning an accused person was καταχειρότονος; one acquitting him, ἀντίχειρότονος. (Dem. De Coron. pp. 235, 261); ἐπιχειρότονος to confirm by a majority of votes (Dem. De Coron. pp. 235, 261); ἐπιχειρότονος τῶν νομῶν was a revision of the laws, which took place at the beginning of every year; ἐπιχειρότονος τῶν ἀρχῶν was a vote taken in the first assembly of each Prytany on the conduct of the magistrates; in these cases, those who voted for the confirmation of the law, or for the continuance in office of the magistrate, were said ἐπιχειρότονος, those on the other side ἀντίχειρότονος. (Dem. c. Timoc. p. 706; Harpocrat. and Suidas s. v. Κοινα ἑκακελαρδοί; Dem. c. Theoearn. p. 1330): διαχειρότονος is a vote for one of two alternatives (Dem. c. Androp. p. 596; c. Timoc. p. 707; c. Newt. p. 1346); ἀντίχειροτονοῦς, to vote against a proposition. The compounds of χειροτονία have similar meanings. (Schömann, De Comitiis Atheniensium, pp. 120, 125, 231, 251, 330.) [P. S.]

CHELIDONIA (χελίδονια), a custom observed in the island of Rhodes, in the month of Bödromion, the time when the swallows returned. During that season boys, called χαληδωνισταλ, went from house to house collecting little gifts, ostensibly for the returning swallows (χελιδόνια), and singing a song which is still extant. (Athen. viii. p. 360; compare Igen, Opusc. Phil. i. p. 164, and Eustath. ad Odys. xxii. sub fin.) It is said to have been introduced by Cleobulus of Lindus, at the same period when the town was in great distress. The chelidonia, which have sometimes been called a festival, seem to have been nothing but a peculiar mode of begging, which on the occasion of the return of the swallows was carried on by boys in the manner stated above. Many analogies may still be observed in various countries at the various seasons of the year. [L. S.]

CHELYS (χέλυς). [Lyra.]

CHEME (χημή), a Greek liquid measure, the capacity of which (as is the case with most of the smaller measures) is differently stated by different authorities. There was a small cheme, which contained two choliaria, or two drachmas, and was the seventy-second part of the cotyle, = 0'068 of a pint English. (Rhém. Fann. v. 77.) The large cheme was to the small as 3 to 2. Other sizes of the cheme are mentioned, but they differ so much that we cannot tell with certainty what they really were. (Hussey, Ancient Weights, &c.; Wurm, De Pond. &c.) [P. S.]

CHENISCUS. [NAVIS.]

CHERNIPS (χερνίς). [Lustratio.]

CHEIROSIA (χειροσία). [HERES.]

CHILIARCHUS. [EXERCITUS.]

CHIRAMAXIUM (from χηρός and μακα), a sort of easy chair or “go-cart,” used for invalids and children. (Petron. 28.)

CHIRIDEPTRA. [TUNICA.]

CHIROGRAPHUM (χειρογράφος). In the simple sense, χειρός in Greek and manus in Latin are often substituted for it. Like similar words in all languages, it acquired several technical senses. From its first meaning was easily derived that of a signature to a will or other instrument, especially a note of hand given by a debtor to his creditor. In this latter case, it did not constitute the legal obligation (for the debt might be proved in some other way); it was only a proof of an obligation. According to Asconius (in Ferr. iii. 36) chirographum, in the sense of a note-of-hand, was distinguished from syngrapha; the former was always given for money actually lent, the latter might be a mere sham agreement (something like a bill of accommodation, though with a different object), to pay a debt which had never been actually incurred. The chirographum was kept by the creditor, and had only the debtor’s signature; the syngrapha, on the contrary, was signed and kept by both parties.

In the Latin of the middle ages (see Du Fresne, s. v.) chirographum was used to signify tribute collected under the sign-manual of a person in authority, similar to the briefs and benevolences of former times in our own country. It was also used (see Blackstone, b. ii. c. 20), till very lately, in the English law for an indenture. Duplicates of deeds were written on one piece of parchment, with the word chirographum between them, which was cut in two in a straight or wavy line, and the parts

which were sent to the creditor were each signed by the debts and the creditor’s servitor.
The republics of Greece, and even until the time of the Peloponnesian war, are to be found in the Iliad and Odyssey. There it appears that surgery and mythological personages, Apollo, Aesculapius, Chiron, &c., the only certain traditions respecting those of Hippocrates, who was born B.C. 460, and died B.C. 357. Among his reputed works there are ten treatises on this subject, only one of which is Celsus, who lived at the beginning of the first century B.c., is said to have been the first person who proposed the operation of bronchotomy, though he himself never performed it (Cael. Aurel. De Morb. Acut. l. 14, iii. 4); and Ammonius of Alexandria, surnamed Αὐστρίας, who is supposed to have lived rather later, is celebrated in the annals of surgery for having been the first to propose and to perform the operation of Lithotrity, or breaking a calculus in the bladder, when found to be too large for safe extraction. Celsus has minutely described his mode of operating (De Med. vii. 26. § 3. p. 436), which very much resembles that lately introduced by Civiale and Heurteloup, and which proves, that however much credit they may deserve for bringing it again out of oblivion into public notice, the praise of having originally thought of it belongs to the ancients. "A hook," says Celsus, "is to be so insinuated behind the stone as to resist and prevent its recol ling into the bladder, even when struck; then an iron instrument is used, of moderate thickness, flattened towards the end, thin, but blunt; which being placed against the stone, and struck on the further end, cleaves it; great care being taken, at the same time, that neither the bladder itself be injured by the instrument, nor the fragments of the stone fall back into it." The next surgical writer after Hippocrates, whose works are still extant, is Celsus, who lived at the beginning of the first century B.C., and who apparently was the first surgeon to have attempted to reduce dislocations by violent means, as he describes the operation of Capitis Vulneribus. The word chirurgia is derived from χείρ, the hand, and εἰρύνω, to work, and is explained by Celsus (De Med. lib. vii. Praefat.) to mean that part of medicine quae manu curat, "which cures diseases by means of the hand;" in Diogenes Laërtius (iii. 85) it is said to cure διὰ τού τέµεων καὶ καλείν, "by cutting and burning;" nor (as far as the writer is aware) is it ever used by ancient authors in any other sense. Omitting the fabulous and mythological personages, Apollo, Asclepius, Chiron, &c., the only certain traditions respecting the state of surgery before the establishment of the republics of Greece, and even until the time of the Peloponnesian war, are to be found in the Iliad and Odyssey. There it appears that surgery was almost entirely confined to the treatment of wounds; and the imaginary power of enchantment was joined with the use of topical applications. (II. ii. 218, xi. 515, 828, 843, &c. &c.) The Greeks received surgery, together with the other branches of medicine, from the Egyptians; and from some observations made by the men of science who accompanied the French expedition to Egypt in 1798, it appears, that there are documents fully proving that in very remote times this extraordinary people had made a degree of progress of which few of the moderns have any conception; upon the ceilings and walls of the temples at Tentyre, Karnack, Luxor, &c., baso-relieves are seen, representing limbs that have been cut off with instruments very analogous to those which are employed at the present day for amputations. The same instruments are again observed in the hieroglyphics, and vestiges of other surgical operations may be traced, which afford convincing proofs of the skill of the ancient Egyptians in this branch of medical science. (Larrey, quoted in Cooper's Surpr. Dict.)

The earliest remaining surgical writings are those of Hippocrates, who was born B.C. 460, and died B.C. 357. Among his reputed works there are ten treatises on this subject, only one of which however is considered undoubtedly genuine. Hippocrates far surpassed all his predecessors (and indeed most of his successors) in the boldness and success of his operations; and though the scanty knowledge of anatomy possessed in those times prevented his attaining any very great perfection, still, we should rather admire his genius, which enabled him to do so much, than blame him because, with his deficient information, he was able to do no more. The scientific skill in reducing fractures and luxations displayed in his works, De Fracturis, De Articulis, excites the admiration of Haller (Biblioth. Chirurg.); and he was probably the inventor of the aube, an old chirurgical machine for dislocations of the shoulder, which, though now fallen into disuse, for a long time enjoyed a great reputation. In his work De Capitis Vulneribus he gives minute directions about the time and mode of using the trephine, and warns the operator against the probability of his being deceived by the sutures of the cranium, as he confesses happened to himself. (De Morb. Vulgar. lib. v. p. 561, ed. Kühn.) The author of the Oath, commonly attributed to Hippocrates, binds his pupils not to perform the operation of lithotomy, but to leave it to persons accustomed to it (ἐγράφησα ἀνθρώπῳ πρήξις τύμπανος; from which it would appear as if certain persons confined themselves to particular operations. The names of several persons are preserved who practised surgery as well as medicine, in the times immediately succeeding those of Hippocrates; but, with the exception of some fragments, inserted in the writings of Galen, Oribasius, Aëtius, &c., all their writings have perished. Archagathus deserves to be mentioned, as he is said to have been the first foreign surgeon that settled at Rome B.C. 219. (Cassius Hemia, apud Plin. H. N. xxix. 6.) He was at first very well received, the jas Quiritium was conferred upon him, a shop was bought for him at the public expense, and he received the honourable title of Pul terorius. This, however, on account of his frequent use of the knife and cautery, was soon changed by the Romans (who were unused to such a mode of practice) into that of Cornifex. Asclepiades, who lived at the beginning of the first century B.C., is said to have been the first person who proposed the operation of lithotomy, though he himself never performed it (Cael. Aurel. De Morb. Acut. l. 14, iii. 4); and Ammonius of Alexandria, surnamed Αὐστρίας, who is supposed to have lived rather later, is celebrated in the annals of surgery for having been the first to propose and to perform the operation of Lithotrity, or breaking a calculus in the bladder, when found to be too large for safe extraction. Celsus has minutely described his mode of operating (De Med. vii. 26. § 3. p. 436), which very much resembles that lately introduced by Civiale and Heurteloup, and which proves, that however much credit they may deserve for bringing it again out of oblivion into public notice, the praise of having originally thought of it belongs to the ancients. "A hook," says Celsus, "is to be so insinuated behind the stone as to resist and prevent its recolling into the bladder, even when struck; then an iron instrument is used, of moderate thickness, flattened towards the end, thin, but blunt; which being placed against the stone, and struck on the further end, cleaves it; great care being taken, at the same time, that neither the bladder itself be injured by the instrument, nor the fragments of the stone fall back into it." The next surgical writer after Hippocrates, whose works are still extant, is Celsus, who lived at the beginning of the first century B.C.
surgery at Fergamus; but, upon his removal to
his country and physician. He appears to have practised
in whose works there is a good deal relating to
Aurelianus, who is supposed to have lived about
three quarters of the time of Hippocrates surgery, had made very
great progress; and had, indeed, reached a high
degree of perfection. He is the first author who
gives directions for the operation of lithotomy (De
Med. vii. 26. § 2. p. 452), and the method
described by him (called the apparatus minor, or
Celsus’s method,) continued to be practised till the
commencement of the sixteenth century. It was
performed at Paris, Bordeaux, and other places in
France, upon patients of all ages, even as late as a
hundred and fifty years ago; and a modern author
(Allan On Lithotomy, p. 12) recommends it always
to be preferred on boys under fourteen. (Cooper's
Dict. of Prac. Surgi., art. Lithotomy.) He
describes (vii. 25. § 3. p. 428) the operation of In-
fusion, which was so commonly performed by the
ancients upon singers, &c., and is often alluded to
in classical authors. (See Juv. vii. 73, 379; Senec.
apud Lactant. Diet. Inv. i. 16; Mart. Epigr.
vii. 82. 1, ix. 28. 12, viv. 215. 1; Tertull. De
Corona Mil. 11.) He also describes (vii. 25. § 1.
p. 427) the operation alluded to by St. Paul (1 Cor.
vii. 10) τραπεζευματος υπο εκθεσει; η γα επι τω
σαρκων. Compare Paulus Aegineta (De Re
Med. vi. 53), who transcribes from Antyllus a se-
cond method of performing the operation.
The following description, given by Celsus, of the
necessary qualifications of a surgeon, deserves
to be quoted:—“A surgeon,” says he (lib. vii.
Præcat.) “ought to be young, or, at any rate, not
very old; his hand should be firm and steady, and
never shake; he should be able to use his left
hand with as much dexterity as his right; his
eye-sight should be acute and clear; his mind in-
trepid, and so far subject to pity as to make him
fearful, he may first divide the skin, extended by
fear of this way of cutting, by observing (when
he was, I suppose, cut by chance) that the air
rushed through it with great violence, and that
the voice was interrupted. When the danger of suffo-
cation is over, the lips of the wound must be united
by suture, that is, by sewing the skin, and not the
cartilage; for to cut quite through would be
dangerous. This place is the most commodious,
because it is not covered with any flesh, and
because it has no vessels near it. Therefore, bend-
ing the head of the patient backward, so that the
windpipe may come more forward to the view, we
make a transverse section between two of the
rings, so that in this case not the cartilage, but the
membrane which incloses and unites the cartilages
together, is divided. If the operator be a little
fearful, he may first divide the skin, extended by
a hook; then, proceeding to the windpipe, and
separating the vessels, if any are in the way, he
must make the incision.” Thus far Antyllus, who
thought of this way of cutting, by observing (when
he was, I suppose, cut by chance) that the air
rushed through it with great violence, and that
the voice was interrupted. When the danger of suffo-
cation is over, the lips of the wound must be united
by suture, that is, by sewing the skin, and not the
cartilage; then proper vulnerary medicines are to
be applied. If these do not aggutinate, an incar-
nunt must be used. The same method must be
pursued with those who cut their throat with a
design of committing suicide.”

Orbaisius, physician to the Emperor Julian (A.D.
361), professes to be merely a compiler; and
though there is in his great work, entitled Συνα-
gγαφα Ιατρικα, Collecta Medicinalia, much
surgical matter, there is nothing original. The
same may be said of Aëtius and Alexander Trallians,
both of whom lived towards the end of the sixth
century A.D., and are not famous for any surgical
inventions. Paula Aegineta has given up the
fifth and sixth books of his work, De Re Medico,

* This operation appears to have been very
seldom, if ever, performed by the ancients upon a
human being. Avenzoar (p. 15) tried it upon
a goat, and found it might be done without much
danger or difficulty; but he says he should not
like to be the first person to try it upon a man,
entirely to surgery, and has inserted in them much useful matter, the fruits chiefly of his own observation and experience. He was particularly celebrated for his skill in midwifery, and female diseases, and was called on that account, by the Arabians, Al-Kawabeli, "the Accoucheur," (Abulpharaj, Hist. Dynast., p. 181, ed. Pococke). Two pamphlets were published in 1768 at Gottingen, 4to. by Rud. Aug. Vogel, entitled De Pauli Aeginetae Meritis in Medicinam, imprinisque Chirurgiam. Paulus Aegineta lived probably towards the end of the seventh century, a. d., and is the last of the ancient Greek and Latin medical writers whose surgical works remain. The names of several others are recorded, but they are not of sufficient eminence to require any notice here. For further information on the subject both of medicine and surgery, see Medicina; and for the legal qualifications, social rank, &c., both of physicians and surgeons, among the ancient Greeks and Romans, see Medicus.

The surgical instruments, from which the accompanying engravings are made, were found by a physician of Petersburg, Dr. Savenko, in 1819, at Pompeii, in Via Consularis (Strada Consulare), in a house which is supposed to have belonged to a surgeon. They are now preserved in the museum at Portici. The engravings, with an account of them by Dr. Savenko, were originally published in the Revue Médicale for 1821, vol. iii. p. 427, &c. They were afterwards inserted in Froriep's Notizen aus dem Gebiete der Natur-und-Heilkunde, for 1822, vol. ii. p. 57, &c. The plate containing these instruments is wanting in the copy of the Revue Médicale in the library of the College of Surgeons, so that the accompanying figures are copied from the German work, in which some of them appear to be drawn very badly. Their authenticity was at first doubted by Kühn (De Instrum. Chirurg., Veterinæ cognitis, et nuper effossis, Lips. 1823, 4to.), who thought they were the same that had been described by Bayardi in his Catal. Antiq. Monument. Herculanî effoss., Nap. 1754, fol. n. 236—294; when, however, his dissertation was afterwards republished (Opusc. Academ. Med. et Philol., Lips. 1827, 1828, 8vo. vol. ii. p. 309) he acknowledged himself to be completely satisfied on this point, and has given in the tract referred to, a learned and ingenious de-

1. 2. Two probes (specillum, μηνή) made of iron: the larger six inches long, the smaller four and a half. 3. A cautery (καυτηρίς) made of iron, rather more than four inches long. 4. 5. Two lancets (scapeillum, σπαλη), made of copper, the former two inches and a half long, the other three inches. It seems doubtful whether they were used for blood-letting, or for opening abscesses, &c. 5. A knife, apparently made of copper, the blade of which is two inches and a half long, and in the broadest part one inch in breadth; the back is straight and thick, and the edge much curved; the handle is so short that Savenko thinks it must have been broken. It is uncertain for what particular purpose it was used: Kühn conjectures that (if it be a surgical instrument at all) it may have been made with such a curved edge, and such a straight thick back, that it might be struck with a hammer, and so amputate fingers, toes, &c. 7. Another knife, apparently made of copper, the blade of which is of a triangular shape, two inches long, and in the broadest part eight lines in breadth; the back is straight and one line broad, and this breadth continues all the way to the point, which, therefore, is not sharp, but guarded by a sort of button. Kühn thinks it may have been used for enlarging wounds, &c., for which it would be particularly fitted by its blunt point and broad back. 8. A needle, about three inches long, made of iron. 9. An elevator (or instrument for raising depressed portions of the skull), made of iron, five inches long, and very much resembling those made use of in the present day. 10—14. Different kinds of forceps (vulsella). No. 10 has the two sides separated from each other, and is five inches long. No. 11 is also five inches long. No. 12 is three inches and a half long. The sides are narrow at
the point of union, and become broader by degrees towards the other end, where, when closed, they form a kind of arch. It should be noticed that it is furnished with a moveable ring, exactly like the tenaculum forceps employed at the present day. No. 13 was used for pulling out hairs by the roots (греческій). No. 14 is six inches long, and is bent in the middle. It was probably used for extracting foreign bodies that had stuck in the oesophagus (or gullet), or in the bottom of a wound.

15. A male catheter (анаева fistula), nine inches in length. The shape is remarkable from its having the double curve like the letter S, which is the form that was re-invented in the last century by the celebrated French surgeon, J. L. Petit.

"The surgeon should have three male catheters (анаева fistulas), of which the longest should be fifteen, the next twelve, and the shortest nine inches in length; and he should have two female catheters, the one nine inches long, the other six. Both sorts should be a little curved, but especially the male; they should be perfectly smooth, and neither too thick nor too thin."

17. Supposed by Frocris to be an instrument for extracting teeth (δοντώταιρα, Pollux, iv. § 181); but Kühn, with much more probability, conjectures it to be an instrument used in amputating part of an enlarged uvula, and quotes Celsus (De Med. vili. 12. § 3. p. 404), who says, that "no method of operating is more convenient than to take hold of the uvula with the forceps, and then to cut off below it as much as is necessary." 18, 19. Probably two spatulæ.

**CHITON** (χίτων). [TUNICA.]

**CHITO'NIA** (χιτώνια), a festival celebrated in the Attic town of Chitone in honour of Artemis, surnamed Chitona or Chitonia. (Schol. ad Callimach. Hymn. in Artem. 70.) The Symmecians also celebrated a festival of the same name, and in honour of the same deity, which was distinguished by a peculiar kind of dance, and a playing on the flute. (Athen. xiv. p. 629; Steph. Byz. v. i. Χι-τώνια.)

**CHLAIMYS** (χλαίμης). [LAENA; PALLIUM.]

This term, being Greek, denoted an article of the amictus, or outer raiment, which was in general characteristic of the Greeks, and of the Oriental races with which they were connected, although both in its form and in its application it approached very much to the lacerna and paludamentum of the Romans, and was itself to some extent adopted by the Romans under the emperors. It was for the most part woolen; and it differed from the χιμάς, the usual amicitus of the male sex, in these respects, that it was much smaller; also finer, thinner, more variegated in colour, and more susceptible of ornament. It moreover differed in being oblong instead of square, its length being generally about twice its breadth. To the regular oblong a, b, c, d (see woodcut), goars were added, either in the form of a right-angled triangle a, c, b producing the modification a, c, b, d, which is exemplified in the annexed figure of Mercury; or of an obtuse-angled triangle a, c, b, d, producing the modification a, c, b, d, g, which is exemplified in the figure of a youth from the Panathenican frieze in the British Museum. These goars were called τρήφης, wings, and the scarf with these additions was distinguished by the epithet of Thessalian or Macedonian (Ελυμ. Μακ.), and also by the name of Αλικέα or Αλικόνα. [ΑΛΙΚΟΧΤΗ.] Hence the ancient geographers compared the form of the inhabited earth (θεωρία) to that of a chlamys.

(Strombo, ii. 5; Macrobius, De Somn. Scip. ii.)

The scarf does not appear to have been much worn by children, although one was given with its brooch to Tiberius Caesar in his infancy. (Suet. Tib. 6.) It was generally assumed on reaching adolescence, and was worn by the ephori from about seventeen to twenty years of age. (Philemon, p. 367, ed. Meineke; εφαρμικά παλίματα, Apuleius, Met. x; Pollux, x. 164.) It was also worn by the military, especially of high rank, over their body-armour (Aelian, P. R. xiv. 10; Plaut. Pseud. ii. 4, 45, Epid. iii. 3, 53), and by hunters and travellers, more particularly on horseback. (Plaut. Poes. iii. 3, 6, 31.)

The scarfs worn by youths, by soldiers, and by hunters, differed in colour and fineness, according to their destination, and the age and rank of the wearer. The χλαίμιοι ἐφαρμικοί was probably yellow or saffron-coloured; and the χλαίμιοι στρατιωτικοί, scarlet. On the other hand, the hunter commonly went out in a scarf of a dull un conspicuous colour, as best adapted to escape the notice of wild animals. (Pollux, v. 18.) The more ornamental scarfs, being designed for females, were tastefully decorated with a border (limbus, Virg. Aen. iv. 137; maecander, v. 251); and those worn by Phoenicians, Trojans, Phrygians, and other Asiatics, were also embroidered, or interwoven with gold. (Verg. Aen. iii. 483, 484, xi. 775; Ovid, Met. v. 51; Val. Flaccus, vi. 228.) Actors had their chlamys ornamented with gold. (Pollux, iv. 116.)

The usual mode of wearing the scarf was to pass one of its shorter sides (a, d) round the neck, and to fasten it by means of a brooch (fibula), either over the breast, in which case it hung down the back, reaching to the calves of the legs; or over the right shoulder, so as to cover the left arm, as is seen in the cut on p. 259, and in the well-known example of the Belvidere Apollo. In other instances it was made to depend gracefully from the left shoulder, of which the bronze Apollo in the British Museum (see the annexed woodcut) presents an example; or it was thrown lightly behind the back, and passed over either one arm or shoulder, or over both (see the second figure in the last woodcut, taken from Hamilton’s Vases, i. 2); or, lastly, it was laid upon the throat, carried behind the neck, and crossed so as to hang down the back, as in the figure of Achilles (p. 196), and sometimes its extremities were again brought forward over the arms or shoulders. In short, the
remains of ancient art of every description, show in how high a degree the scarf contributed, by its endless diversity of arrangement, to the display of the human form in its greatest beauty; and Ovid has told us how sensible the ephelai were of its advantages in the account of the care bestowed upon this part of his attire by Mercury. (Met. ii. 735.) The aptitude of the scarf to be turned in every possible form around the body, made it useful even for defence. The hunter used to wrap his chlamys about his left arm when pursuing wild animals, and preparing to fight with them. (Pol.i.v. 23; Suidas, Cleopatra, and the fragments of Galen (c. 7, 9) make it equal to three cotylae, or nearly 1\(\frac{1}{2}\) pints English; another fragment of Galen (c. 5) and other authorities (Pauc-}

A celebrated at Athens in honour of Demeter Chloë, or simply Chloë, whose temple stood near the Acropolis. (Hist. s. v. χλωώ; Athen. xiv. p. 618; Sophoc. Oed. Col. 1600, with the Scho-}

When Diana goes to the chase, as she does not require her scarf for purposes of defence, she draws it from behind over her shoulders, and twists it round her waist, so that the belt of her quiver passes across it, as shown in the statues of this goddess in the Vatican (see woodcut).

It appears from the bas-reliefs on marble vases that dancers took hold of one another by the chlamys, as the modern Greeks still do by their scarfs or handkerchiefs, instead of taking one another's hands.

Among the Romans the scarf came more into use under the emperors. Caligula wore one enriched with gold. (Suet. Calig. 19.) Alexander Severus, when he was in the country or on an expedition, wore a scarf dyed with the coccus (chlamys coccinea, Lamp. Al. Sen. 40; compare Matt. xxvii. 28, 31.)

CHLAMYS.

CHORÉGUS.

CHLOÉIA or CHLOIA (χλώεια or χλώα), a festival celebrated at Athens in honour of Demeter Chloë, or simply Chloë, whose temple stood near the Acropolis. (Hist. s. v. χλωώ; Athen. xiv. p. 618; Sophoc. Oed. Col. 1600, with the Scho-

CHOENIX (χοινίξ), a Greek measure of ca-
CHORUS.

trainer, but the choreutae themselves, and maintain them while they were in training, providing that what was adapted to strengthen the voice; and to provide a suitable training place (χορευτήριον) if he had no place in his own house adapted for the purpose. (Antiph. τ. c. ; Athen. xiv. p. 617, b.; Schol. ad Arist. Nub. 338, Acharn. 1154 ; Plut. de Glor. Ath. p. 349, a; Xen. de Republ. Ath. i. 13; Poll. iv. 106, ix. 41.) He had also to provide the chorus with the requisite dresses, crowns, and masks. (Dem. c. Medid. p. 519; Athen. iii. p. 103, f.) It is not to be supposed, however, that the choregus defrayed the whole expense of the play to be represented. The choregus who was judged to have performed his duty in the best manner received a tripod as a prize, the expense of which, however, he had to defray himself; and this expense frequently included the building of a cell or chapel in which to dedicate it. A street at Athens was called the Street of the Tripods, from being lined with these. The tribe to which the choregus belonged shared the honours of the victory with him, and the names of both were inscribed upon the tripod or monument. (Paus. i. 20. § 1; Plat. Gorg. p. 472; Plut. Nic. 3.) The sums expended by choregi were doubtless in cases larger than was absolutely necessary. Aristophanes (Lys. pro Arist. Ion. pp. 408, 404) spent 5000 drachmae upon two tragic choruses. From the same orator we learn that another person spent 3000 drachmae upon a single tragic chorus; 2000 for a chorus of men; 5000 for a chorus of men on another occasion, when, having gained the prize, he had to defray the expense of the tripod; 800 drachmae for a chorus of pyrrhicists; 300 drachmae for a cyclic chorus. (Lys. ἀπολ. διορε. pp. 698, ed. Reiske.)

A chorus of flute-players cost more than a tragic chorus. (Dem. c. Medid. p. 565.) In times of public distress, the requisite number of choregi could not always be procured. Thus the tribe Pandionis had furnished no choregus for three years, till Democthenes voluntarily undertook the office. (Dem. c. Medid. pp. 578, 579; comp. Böckh. Pabld. Econ. of Athens, book iii. c. 22.) [C. P. M.]

CHOROBATES, an instrument for determining the slope of an aqueduct and the levels of the country through which it was to pass. From the description given of it by Vitruvius, it appears to have differed but very slightly from a common carpenter's level, which consists of a straight rule supporting a perpendicular piece, against which hangs a plumb-line. The chorobates had two perpendiculars and plumb lines, one at each end, instead of a single one in the middle. The derivation of the word is from χώρα and βαίνω, from its use in surveying land minutely. [P. S.]

CHORUS (χορός), a word, the original meaning and derivation of which are somewhat uncertain. According to Hesychius the word is equivalent to κύκλος or στέφανος. If so, the word probably signified originally a company of dancers dancing in a ring. Those who adopt that view of the origin of the word connect it with χρηστός, χορεωτής, κορωνι. Others suppose that the earliest signification of the word was that of a level, open space, such as would be suited for dancing and could connect it with χώρα and χώρας, so that the later and ordinary signification of the word would be derived from such places being employed for dancing. This seems a less likely account of the word than the other. If the name χορός was given to such places with reference to their use for dancing, we should still have to look to this latter idea for the origin of the name of the place; if the name was a general one, like χώρας, it seems very unlikely that a body of dancers should derive their name from what is so very little distinctive of them, namely their meeting in an open space. On the other hypothesis it is easy to understand how a word signifying a body of dancers should come to signify the place where they danced, and then, more generally, any place suited for the purpose. As regards the usage of the word, in Homer it commonly means a troop of dancers; in the Odyssey (viii. 260, 264, xii. 4) passages are found where it means a place for dancing; εἰρήκροις is found both in Homer and in later writers as an epithet of cities having large open squares or places suited for choral performances. A comparison with the corresponding word καλλίχροις shows that the notion of dancing must not be lost sight of. At Sparta the agora was called χορός (Paus. iii. 11. § 9).

In later times, a choric performance always implies the singing or musical recitation of a poetical composition, accompanied by appropriate dancing and gesticulation, or at least by a measured march. The choreus that we read of in Homer are merely companies of dancers, who move to the music of a song sung by the minstrel, who accompanies himself on the eithara or phorminx. In the palace of Alcmeon the dancers perform their evolutions, while Demodocus, to the music of the phorminx, sings the loves of Ares and Aphrodite (Od. viii. 256, &c.). In the chorus represented on the shield of Achilles (II. xviii. 590, &c.) a band of youths and maidens dance, holding each other by the hand, sometimes in a ring, sometimes in parallel lines opposite to each other. In the midst of the dancers are two κυκλιστήριες, or tumblers, who, apparently, by their gesticulations direct and lead off (ἐξερχόμενοι) the measured movements (μολύθη) of the dancers. So in the Homeric hymn to the Pythian Apollo (10, &c.) a company of goddesses dance, while the Muses sing, and Apollo plays the cithara. The part of the κυκλιστήριες is performed by Ares and Hermes, who gesticulate (τραχύοις) in the midst of the dancers. In the description of the nuptial procession in Hesiod (Shield of Her. 272, &c.) it is not quite clear whether the chorus of youths are singing and dancing to the sound of the pipe, or playing the pipe themselves. The band of revellers (κωμοί) who follow both dance and sing. That the chorus, in the earliest times, consisted of the whole population of a city assembled for dances and hymns in honour of their guardian-god, might be true if the whole population joined in the dance, by not otherwise, for the term chorus never included the spectators.

Whether the Dorians were the first who had choruses at festive or religious celebrations, or whether Apollo was the deity in connection with whose worship choruses first made their appearance, are points which, in the absence of all evi-
dence, are best left undecided. The war-dances of the Cretans in Crete in honour of Zeus, seem to be quite as ancient as any that we know of in honour of Apollo. However dances may have originated, it was natural that, like music and poetry, they should at a very early period be connected with the worship of the gods; and in that connection it is certainly true that it was among the Dorians, and connected with the worship of Apollo, that the chorus received its earliest development, though there does not appear sufficient evidence to support the conclusion that the worship of Apollo existed nowhere without having been introduced.

The imperfect type of the later chorus appears in the earliest period in the paean, as sung by a company either sitting still (H. i. 473), or moving along with a measured step (H. xxii. 391). In the Homeric hymn to the Pythonian Apollo we have the god himself as leader of the chorus, playing the phorminx, while the chorus of Cretans follow him at a measured pace, and sing the Paean. [PAEAN]. This exhibits the Paean in a somewhat later stage of development. In Homer it appears as a less formal and systematic performance. Dancing was very early connected with the worship of Apollo in Delos (Hymn. Apollo. Del. I. 149, &c.), and in Crete. (Hesiod. Fr. 94. Güttl.) It was in Crete that the mimetic dance, called Hyporchema, took its origin [HYPORCHEMA; SALTATIO], and it was thence also that the subsequent innovations upon the staid gravity of the Paean were derived, traces of the origin of which were preserved in the name of the rhythms and dances. (Müller, Dorians, i. 8. § 14.) To Thaletas are attributed the most important improvements. He cultivated the art of dancing no less than that of music, and adapted the evolutions of the chorus to the more spirited movements of the Phrygian style of music. He is said to have composed both paecans and hyporchemes, the latter of which he adapted for the Pyrrhic or war-dance; and from having given them a more artistic form, he came to be regarded as some of the inventor of them. (Müller, History of the Literature of Ancient Greece, p. 160, &c.) Paecans began to be sung with an orchestic accompaniment on the part of the chorus, especially at the festival of the Gymnopædia [GYMNOPAEID], and by degrees became scarcely distinguishable from the hyporchemes. (Müller, l. c. p. 160; Bode, Gesch. der Hellen. Dichtk., vol. ii. part i. p. 46.) That combination of singing and dancing which we find in the choruses of later times, to which the remark of Lucian applies (de Salt. 30), πᾶλα μὲν γὰρ ἐν ἄνδροι καὶ γυναι πάλαι στηρίχρω, was probably introduced by degrees. It had taken place before the time of Alcman, who introduced into his chorals compositions an antistrophic character. A large number of these he composed for choruses of virgins; in some there was a dialogue between the chorus and the poet. (Müller, l. c. p. 194, &c.) In his compositions strophes and antistrophes of the same measure usually succeeded each other in indefinite number. Steischirch introduced the improvement of adding an epope, during which the chorus were to stand still, to the strophe and antistrope. (Suidas, s. v. τρία ΣΤΗΡΙΧΡΟΙ; Müller, l. c. p. 198.) In the arrangement of his choruses he seems to have had a great partiality for the octagonal form, or for certain combinations of eight, whereas arose the proverb πάλα στηρίχρω. At Catana there was erected to him an octagonal monument with 8 columns and 8 steps. (Suidas, s. v. πάλα στηρίχρω καὶ ΣΤΗΡΙΧΡΟΙ.)

In all the Dorian states, especially among the Spartans, these chorals performances were cultivated with great asiduity. Various causes contributed to this, as for example, their universal employment in the worship of Apollo, the fact that they were not confined to the men, but that women also took part in them, and that many of the dances had a gymnastic character given them, and were employed as a mode of training to martial exercises. (SALTATIO. Hence it arose that the Dorian lyric poets directed their labours almost entirely to supply the demand for songs and hymns to be sung as accompaniments to the dances, and that Doric lyric poetry became almost exclusively choral, which was not the case with the other great school of Greek lyric poetry, the Aeolian; so that the Doric dialect came to be looked upon as the appropriate dialect for chorals compositions, and Doric forms were retained by the Athenians even in the chorals compositions which were interwoven with their dramas. (Müller, Dorians, iv. 7. § 8.) Still it is not to be supposed that there was no choral poetry which was not Doric. Several Lesbian lyric poems appear to have had a choral character. (Müller, Hist. of Lit. of Greece, p. 165.)

The Spartans had various kinds of dances (Müller, Dor. iv. 6. § 8, &c.); but the three principal styles were the Pyrrhic, the Gymnopæid, and the Hyporchemic (Athenaeus, xiv. p. 631, xv. p. 678), in all of which something of a mimetic character was to be found, but more especially in the last. Müller (Lit. of Gr. p. 161) expresses an opinion that the gymnopæidic style, to which the ἐμφάνεια of tragedy corresponded, is not to be confounded with the dances of the gymnopæidic festival. The Pyrrhic or war dance (πράξις) was made subservient to gymnastic and martial training. Hence the analogy that may be traced between the construction and evolution of the chorus and of the lochus. (Müller, Dor. iii. 12. § 10; Lucian, de Saltat. 7.) At the Gymnopæidia large choruses of men and boys appeared, in which great numbers of the citizens would have to take part. (Müller, Dor. iv. 6. § 4.) At several of the festivals there were distinct choruses of boys, men, and old men. (Plut. Lycurg. 21.; Pollux, iv. 107; Müller, Dor. iv. 6. § 8, Hist. of the Lit. of Gr. p. 194.) Dances in which youths and maidens were intermingled were called ἀρμοι. (Lucian, de Salt. 12.) It was in the hyporchemic dance especially that the chorus both sang and danced. (Athen. xiv. p. 631.)

The instrument commonly used in connection with the Doric choral poetry was the cithara. In the Pyrrhic dance, however, the flute was employed. (Müller, Dor. iv. 6. § 7, Hist. Gr. Lit. p. 161.) In the hyporchemic performances at Delos, described by Lucian (de Salt. 6), both the cithara and the flute were used. Archilochus speaks of the flute as an accompaniment to the Lesbian paean (ap. Athen. v. p. 180). It is not, therefore, quite correct to say that wherever we find the flute employed, we have not a proper chorus but a conus. (Comp. Bode, vol. ii. part i. pp. 47, 208.) Thalctas, who introduced the Phrygian style, probably made use of the flute as well as the cithara. It was in connection with the hy-
porchence that flute music was first introduced into the worship of Apollo. (Bode, vol. ii. part ii. pp. 13, 16, 17, 33, 34, 244.) For the κώμον, however, which was a mirthful and irregular procession, in which those who took part in it both sang and danced (as in the κώμος part of the marriage procession described by Hesiod, Shield of Her. 281, &c.), the flute was the regular instrument.

A great impetus was given to choral poetry by its application to the dithyramb. This ancient Bacchanalian performance, the origin of which is at any rate earlier than Archilochus, who in one of the fragments of his poetry, says that he knows how to lead off the dithyramb, the beautiful song of Dionysus, when his mind is inflamed with wine. (Athen. xiv. p. 620 b.) It seems to have been a hymn sung by one or more of a κώμον, or irregular band of revellers, to the music of the flute. Arion was the first who gave a regular choral, or anti-strophic form to the dithyramb. This improvement was introduced at Corinth. (Herod. i. 24 ; Pindar, Ol. xiii. 18 or 25, with the notes of the commentators.) The choruses, which ordinarily consisted of fifty men or youths (Simonides, Epigr. 50, Br.; Teetzes, proleg. ad Iapogr. vol. i. p. 251, ed. Müller), danced in a ring round the altar of Dionysus. Hence they were termed the circular choruses (εἰκελχίων κώμων), and dithyrambic poets were understood by the term κυκλοθαλακελος. This also explains the name Cycleus, given to the father of Arion (Müller, Hist. Gr. Lit. p. 204). With the introduction of a regular choral character, Arion also substituted the cicithara for the flute. The statement that he was the inventor of the tragic style (τραγικός τρόπος), means probably that he introduced dithyrambs of a gloomy character, having for their subject the sorrows of Dionysus, as well as the more gay and joyous song (Müller, i.e. pp. 204, 290). Arion is also said to have been the first to introduce into these choruses satyrs speaking in verse. Lasus, of Hermione, gave a freer form to the dithyramb, by divesting it of its anti-strophic character, and set the example of introducing the dithyrambic style into compositions not immediately connected with the worship of Dionysus. He also united with the representation of the dithyramb taunting jests. It was through him that dithyrambic contests were introduced at Athens, at which the prize for the successful poet was a tripod, and for the chorus a bull. For the number of the chorus in a tragedy was 15. (Schol. ad Aristoph. Equit. 586, Av. 293 ; Pollux, iv. 108.) The account given by Suidas (s. v. Σωφοκλης), that Sophocles raised the number from 12 to 15 is deserving of attention, though there are great difficulties connected with it. Pollux (iv. 110) has an absurd story that the number of the chorus was 50 before the representation of the Eumenides of Aeschylus, and that the number was then reduced by a law on account of the terror produced by the appearance of the 50 Eumenides. It seems scarcely possible to arrive at any definite conclusion with regard to the number of the chorus in the early dramas of Aeschylus. The fact that the number of the dithyrambic chorus was 50, and that the mythological number of the Oceanides and Danaides was the same, tempts one to suppose that the chorus in the Prometheus and the Supplices consisted of 50. Most writers, however, agree in thinking that such a number was too large to have been employed (Welcker, Aeschy. Trilogie, p. 27, &c.; Hermann, Dissert. de Choro Eumenen. i. and ii. Opusc. vol. ii.) Müller (Dissertations on the Eumenides of Aeschylus, I. ; Hist. Gr. Lit. p. 300) propounds the theory that the dithyrambic chorus of 50, when transferred to tragedy, was reduced to 48, and that a chorus of that number was assigned to the poet for four plays, the trilogy and the satyrical drama, and was subdivided into sections of 12, each of which was the chorus for one play. In support of this he endeavours to point out instances of choruses of this number being found in Aeschylus, as that in the Agamemnon, which re-appears as the Areopagites in the Eumenides, and that in the Persae. But the insufficiency of the evidence brought forward to establish this has been satisfactorily pointed out by Hermann in his review of Müller's edition of the Eumenides (Opusc. vol. vii.). The idea that the chorus of the Eumenides consisted of three (Blomfield, Prof. ad Aesch. Pers.), has met with very little favour among German scholars, though the arguments brought against it are not all of the most convincing kind, and it is to be borne in mind that the introduction of the Areopagites, &c. into the play, would render the fewness of such a chorus less striking than it would otherwise have been the case. The later chorus of 15 was the only one that the grammarians knew anything about. It was arranged in a quadrangular form (τετραγώνως), Etym. Magn. s. v. Τ -
CHORUS.

When a poet intended to bring forward a play, he had to apply for a chorus (χορὸς αὐτῶν) to the archons, to the king archon if the play was to be brought forward at the Lenaia, to the archon eponymous if at the great Dionysia. If the play were thought to deserve it, he received a chorus (χορὸν λαμβάνειν), the expenses of which were borne by a chorusegus [CHOREGUS]. The poet then either trained (διδάσκει) the chorus himself, which Aeschylus often did (Athen. i. 21), or entrusted that business to a professed chorus trainer (χοροδιδασκάλος), who usually had an assistant (υποδιδασκάλος, Polux, iv. 106). For training the chorus in its evolutions there was also an ἄρχοντοδίδασκαλος. The chorus in comedies at first consisted of amateurs (ἑθελοτατί, Arist. Poet. 5).

CHOREUS (χορεύς, χορός), a Greek liquid measure which is stated by all the authorities to be equal to the Roman congrius, and to contain six ἕσταται or sextarii, nearly 6 pints English. Suidas alone makes a distinction between the χορός and the χορεύς, making the former equal to two sextarii, and the latter equal to six. Now when we remember that the χορός was commonly used as a drinking vessel at Athenian entertainments (Aristoph. Acharn. v. 1066), that on the day of the χόρες [DIONYSIA], a prize was given to the person who first drank his χορός at his χορός, and that Milo of Croton is said to have drunk three χοροί of wine at a draught, it is incredible that in these cases the large χορός mentioned above could be meant. It seems, therefore, probable that there was also a smaller measure of the same name, containing, as Suidas states, two sextarii, or nearly 2 pints English. At first it was most likely the common name for a drinking vessel. According to Crates (Ap. Athen. xi. p. 496), the χοροὺς had originally a similar form to the Panathenaic amphorae, and was also called πελίκην. (Pollux. x. 73; Wurn, De Pond. Mens. &c., pp. 127, 136, 141, 138; Hussey, Ancient Weights, &c. p. 211—213.) [P.S.]

CHREOUS DIKE (χρέους δίκη), a simple action for debt, was, like most of the other cases arising upon an alleged breach of contract, referred to the jurisdiction of thethesmothetae, when the sum in question amounted to more than ten drachmae. If otherwise, it fell under the cognizance of those itinerant magistrates, who were originally thirty in number, and styled accordingly οἱ τρίκακτοι; but afterwards, in consequence of the odium attaching to this name, which had also served to designate the oligarchic tyrants, received an accession of ten colleagues and a corresponding change of title. (Pollux, viii. 100.) If the cause could be classed among the ζωμονοὶ δίκαι, as, for instance, when the debt arose upon a mercantile transaction, the thesmothetae would still have jurisdiction in it, though one of the parties to the suit were an alien, otherwise it seems that when such a person was the defendant, it was brought into the court of the polemarch. (Meier, Att. Proc. p. 55.) If the cause were treated as a δίκη ἑπομένως, as above mentioned, the plaintiff would forfeit a sixth part of the sum contested, upon failing to obtain the votes of one-fifth of the dicasts (Suid. s. v. ἄργυρελαία); but we are not informed whether this regulation was applicable, under similar circumstances, in all prosecutions for debt. The speech of Demosthenes against Timotheus was made in a cause of this kind. [J. S. M.]

CHRONOLOGIA (χρονολογία), is the science
by which time is measured according to the courses of the stars, and more especially of the sun and moon; but in the more limited sense in which we have to treat of chronology here, it is a method of history, and teaches us to assign each historical event to the date to which it belongs. The reduction of any given date in antiquity to the corresponding year, month, or day, in our modern computation of time, is sometimes a matter of great difficulty, and often of absolute impossibility; for nearly all the nations of antiquity began their year at a different time, some used solar and other lunar years, and others again a combination of the two; nearly all, moreover, had different eras, that is, points of time from which subsequent and preceding years are counted; and in addition to all these there occur a great many changes and fluctuations in one and the same nation, and the historians whose works have come down to us, are not always very precise in marking the time to which the events belong, so that we must have recourse to all manner of combinations, or are left to conjectures.

For the manner in which the Greeks and Romans calculated their years and months we refer to the article CALENDARIUM, and we shall here confine ourselves to an account of the manner in which those nations calculated and exacted the events from their history. The Greeks reckoned their years generally according to their magistrates, in the early times according to the years of the reign of their kings, and afterwards according to their annual magistrates. At Athens the year was called by the name of one of the nine archons, who from this circumstance was called ἄρχων ἔπαινου or the archon par excellence; and at Sparta the years were called after one of the five ephors, who for this reason was likewise termed ἐπαινούς. (Thucyd. ii. 2; Xenoph. Anab. ii. 3. § 10; Polyb. xii. 12; Paus. iii. 11. § 2.) But the years of the Athenian archons and the Spartan ephors, coinciding with the civil year in those states, did not coincide with each other, for the ephors entered upon their office in the Attic month of Boedromion, while the archons originally entered upon theirs in the beginning of Gamelion, and even since the year B.C. 490, at the beginning of Hecatombaeon. In Argos time was counted according to the years of the high priestess of Hera, who held her office for life (ἥρωις; Thucyd. ii. 2; Smith. s. e. ἡραίοις); and the inhabitants of Elis probably reckoned according to the Olympic games, which were celebrated every fifth year during the first full moon which followed after the summer solstice. In this manner every Greek state or city calculated time according to its own peculiar or local era, and there was no era which was used by all the Greeks in common for the ordinary purposes of life. Historians, therefore, down to the middle of the third century B.C., frequently made use of the average age attained by men, in order to fix the time in a manner intelligible to all Greeks. The average age attained by man (γενέα, ætas), is calculated by Herodotus (vi. 98) at 33 years. 3. a. 3ma, who flourished about B.C. 260, was the first historian who counted the years by Olympiads, each of which contained four years. The beginning of the Olympiads is commonly fixed in the year 3938 of the Julian period, or in B.C. 776. If we want to reduce any given Olympiad to years before Christ, e. g. Ol. 87, we take the number of the Olympiads actually elapsed, that is, 86, multiply it by 4, and deduct the number obtained from 776, so that the year of the 87th Ol. will be the same as the year 432 B.C. If the number of Olympiads amounts to more than 776 years, that is, if the Olympiad falls after the birth of Christ, the process is the same as before, but from the sun obtained by multiplying the Olympiads by 4, we must deduct the number 776, and what remains is the number of the years after Christ. This calculation according to Olympiads, however, does not seem to have been ever applied to the ordinary business of life, but to have been confined to literature, and more especially to history. Some writers also adopted the Trojan era, the fall of Troy being placed by Eratosthenes and those who adopted this era, in the year B.C. 1184. After the time of Alexander the Great, several other eras were introduced in the kingdoms that arose out of his empire. The first was the Philipian era, sometimes also called the era of Alexander or the era of Edessa; it began on the 12th of November B.C. 324, the date of the accession of Philip Arrhidaeus. The second was the era of the Seleucidae, beginning on the 1st of October B.C. 312, the date of the victory of Seleucus Nicator at Gaza, and of his re-conquest of Babylonia. This era was used very extensively in the East. The Chaldaean era differed from it only by six months, beginning in the spring of B.C. 311. Lastly, the era of Antioch, of which there were three, but the one most commonly used began in November B.C. 49. In Europe none was so generally adopted, at least in literature, as the era of the Olympiads; and as the Olympic games were celebrated 293 times, we have 293 Olympic cycles, that is, 1172 years, 776 of which fall before, and 396 after Christ. But when the Greeks adopted Christianity, they probably ceased to reckon by Olympiads, and adopted the Julian year. (Corsoni, Fasti Attici, Florence, 1744—56, 4 vols 4to.; Ideler, Handbuch der mathem. und technisch. Chronol. Berlin, 1825, 2 vols. 8vo.; Clinton, Fasti Hel- lenici, Oxford, 1830—1834, 3 vols. 8vo.)

The Romans in the earliest times counted their years by their highest magistrates, and from the time of the republic according to their consuls, whose names were registered in the Fasti. This era, which may be termed the aera consularis, however did not begin at all times at the same point, for in the earliest times of the republic, the consuls entered upon their office on the 1st of January. This constant shifting was undoubtedly one of the causes that produced the confusion in the consular era, of which Livy (ii. 18, 21, &c.) complains. The consular era was the one commonly used by the Romans for all practical purposes, the date of an event being marked by the names of the consuls, in whose year of office it had happened. But along with this era there existed another, which as it was never introduced into the affairs of common life, and was used only by the historians, may be termed the historical era. It reckoned the years from the foundation of the city (ab urbe condita); but the year of the foundation of the city was a question of uncertainty among the Romans.
the Varroonian era, the most celebrated was that of M. Porcius Cato, who placed the foundation of Rome in the first year of the 7th Olympiad, or in the spring of B.C. 753. (Dionys. i. 74; Synecell. Chronog. p. 194, a.) The date fixed upon in the puer билетi (so called from the Fasti Capitolini), by Polybius (Dionys. l. c.; Cic. De Rep. ii. 10) and Cornelius Nepos, was one year later; Q. Fabius Pictor placed the foundation in the first year of the 6th Olympiad, i. c. 747 (l. c.), and Cincius Alimentus even placed it in the fourth year of the 12th Olympiad, i.e. B.C. 729. Ennius, on the other hand, placed the building of Rome about 100 or 110 years earlier than most other writers (Varro, De Re Rust. iii. 1); and Timaeus went so far as to regard the foundation of Rome contemporaneous with that of Carthage, placing it 38 years before the first Olympiad. But no reliance can be placed on any of these statements; as however it is necessary to have one point to start from, the Varroonian era has been most commonly adopted by modern writers. (Comp. Chronog. Romisdie Zeittafeln, i. c.)

Ennius, whose kinsmen had settled in Messenia (Paus. iii. 14. § 5); hence we may infer that they celebrated either the same festival as that of the Hermioneans, or one similar to it.

THERA.

The place of religious worship on the island of Thera before the use of the Greek alphabet, is unknown. (Cl. Best, Dialectology of Greeks, 47.)

CHTHONIA. [CHTHONIA.]

CIPPUS.

CIPPUS.

1. A low column, sometimes round, but more frequently rectangular, used as a sepulchral monument. (Pers. Sat. i. 36.) Several of such cippi are in the Townly collection in the British Museum, one of which is given in the woodcut annexed. The inscription is to the memory of VIRIA Primitiva, the wife of Lucius Virius Helius, who died at the age of eighteen years, one month, and twenty-four days. Below the tablet, a feast of fruits and flowers is suspended from two rams' heads at the corners; and at the lower corners are two sphinxes, with a head of Pan in the area between them. On several cippi we find the letters S. T. L., that is, Sit tibi terra levis, whence Persius, in the passage already referred to, says, Non levior cippus nunc imprimis ossa. It was also usual to place on the cippus the extent of the burying-ground both along the road (in fregate), and backwards to the field (in agrum), strings an untamed heifer just taken from the herd, and drag it into the temple, where four old women perform the sacrifice, one of them cutting the animal's throat with a scythe. The doors of the temple, which during this sacrifice had been shut, are thrown open, and persons especially appointed for the purpose, lead in a second heifer, then a third and a fourth, all of which are sacrificed by the priests of Demeter.

The Lacedaemonians adopted the worship of Demeter Cthonia from the Hermioneans, some of whose kinsmen had settled in Messenia (Paus. iii. 14. § 5); hence we may infer that they celebrated either the same festival as that of the Hermioneans, or one similar to it.
and likewise the inscription hoc monumentum nereaes non sequitur; in order that it might not pass over to the heredes and be sold by them at any time. (Hor. Sat. i. 8, 12, 13; Orelli, Inscript. No. 4379, 4357, &c.)

2. A boundary-stone set up by the Agrimensores to mark the divisions of lands. (Scriptores Rei Agr. p. 88, ed. Goesius.)

3. A military entrenchment made of the trunks of trees and palisades. (Caes. B. G. vii. 73.)

CIRCENSES LUDI. [Circus.]

CIRCINUS (παράγωγος), a compass. The compass used by statuaries, architects, masons, and carpenters, is often represented on the tombs of such artificers, together with the other instruments of their profession or trade. The annexed woodcut is copied from a tomb found at Rome. (Gruter, Corp. Inscript. t. i. part ii. p. 644.) It exhibits two kinds of compasses: viz. the common kind used for drawing circles and measuring distances, and one with curved legs, probably intended to measure the thickness of columns, cylindrical pieces of wood, or similar objects. The common kind is described by the scholiast on Aristophanes (Nub. 178), who compares its form to that of the letter A. (See cut under Norma.) The mythologists supposed this instrument to have been invented by Perdix, who was the nephew of Daedalus, and through envy thrown by him over the precipice of the Athenian acropolis. (Ovid, Met. viii. 241—251.) Compasses of various forms were discovered in a statuary's house at Pompeii. (J. Y.)

CIRCITO′RES. [Castr.]

CIRCUMLITIO. [Pictura.]

CIRCULMU′VIO. [Alluvio.]

CIRCUITO′RES. [Castr.]

CIRCUS (παράγωγος), a place for chariot-races and horse-races, and in which the Roman races (Circenses Ludi) took place. When Tarquinius Priscus had taken the town of Apiolae from the Latins, as related in the early Roman legends, he commemorated his success by an exhibition of races and pugilistic contests in the Murcian valley, between the Palatine and Aventine hills; around which a number of temporary platforms were erected by the patres and equites, called spectacula, fori, or foruli, from their resemblance to the deck of a ship; each one raising a stage for himself, upon which he stood to view the games. (Liv. i. 35; Festus. s. v. Forum; Dionys. iii. p. 192, &c.) This course, with its surrounding scaffolding, was termed circus; either because the spectators stood round to see the shows, or because the procession and races went round in a circuit. (Varr. De Ling. Lat. v. 153, 154, ed. Miller.)

Previously, however, to the death of Tarquin, a permanent building was constructed for the purpose, with regular tiers of seats in the form of a theatre. (Compare Liv. and Dionys. l.c.) To this the name of Circus Maximus was subsequently given, as a distinction from the Flaminian and other similar buildings, which it surpassed in extent and splendour; and hence, like the Campus Martius, it is often spoken of as the Circus, without any distinguishing epithet.

Of the Circus Maximus scarcely a vestige now remains, beyond the palpable evidence of the site it occupied, and a few masses of rubble-work in a circular form, which may be seen under the walls of some houses in the Via del Circum, and which retain traces of having supported the stone seats (Dionys. l.c.) for the spectators. This loss is for tunefully supplied by the remains of a small circus on the Via Appia, commonly called the Circus of Caracalla, the ground-plan of which, together with much of the superstructure, remains in a state of considerable preservation. The ground-plan of the circus in question is represented in the annexed woodcut; and may be safely taken as a model of all others, since it agrees in every main feature, both of general outline and individual parts, with the description of the Circus Maximus given by Dionysius (iii. p. 192).

Around the double lines (A, A) were arranged the seats (gradus, sedilia, subsellia), as in a theatre, termed collectively the cavea; the lowest of which were separated from the ground by a podium, and the whole divided longitudinally by praecinctiones, and diagonally into cunei, with their vomitoria attached to each. Towards the extremity of the upper branch of the cavea, the general outline is broken by an outwork (B), which was probably the palatinar, or station for the emperor, as it is placed in the best situation for seeing both the commencement and end of the course, and in the most prominent part of the circus. (Suet. Claud. 4.)

In the opposite branch, is observed another in-
terruption to the uniform line of seats (C), be
tokening also, from its construction, a place of
distinction; which might have been assigned to
the person at whose expense the games were given
(editor spectaculorum).

In the centre of the area was a low wall (D)
running lengthways down the course, which,
from its resemblance to the position of the dorsus
bone in the human frame, was termed spina. (Cas-
siodor. Var. Ep. iii. 51.) It is represented in the
wood-cut subjoined, taken from an ancient bas-
relief.

At each extremity of the spina were placed,
on a base (E, E), three wooden cylinders, of a
conical shape, like cypress trees (metasque similita
cupressus, Ovid, Met. x. 106; compare Pîn. II. N.
xvi. 69), which were called metae — the goals.
Their situation is distinctly seen in the preceding
woodcut, but their form is more fully developed in
the one annexed, copied from a marble in the
British Museum.

The most remarkable object upon the spina were
two columns (F) supporting seven conical balls,
which, from their resemblance to eggs, were called
ova. (Varr. De Re Rust. i. 2. § 11; Liv. xli. 27.)
These are seen in the woodcut representing the
spina. Their use was to enable the spectators to
count the number of rounds which had been run;
for which purpose they are said to have been first
introduced by Agrippa (Dion Cass. xlï. p. 600),
though Livy (xli. 27) speaks of them long before.
They are, therefore, seven in number, such being
the number of the circuits made in each race; and
as each round was run, one of the ova was put up
(Cassiodor. Var. Ep. iii. 51) or taken down, ac-
cording to Varro (De Re Rust. i. 2. § 11). An egg
was adopted for this purpose, in honour of Castor
and Pollux. (Tertull. De Spectac. c. 8.) At the
other extremity of the spina were two similar
columns (G), represented also in the woodcut,
over the second chariot, sustaining seven dolphins,
termed delphinae, or delphinarum columnae
(Juv. Sat. vi. 550), which do not appear to have been
intended to be removed, but only placed there as
corresponding ornaments to the ova *; and the
figure of the dolphin was selected in honour of
Neptune. (Tertull. l.c.) Some writers suppose
the columns which supported the ova and delphinae
to be the phalae or fulae, which Juvenal men-
tions (l.c.). But the phalae were not columns,
but towers, erected as circumstances required, be-
tween the metae and crucips, or extreme circuit ot
the area, when sham-fights were represented in the
circus. (Compare Festus, s. v. Phalae; Serv. ad
Virg. Aen. ix. 705.) Besides these, the spina was
decorated with many other objects, such as obe-

* In the Lyons mosaic, subsequently noticed in
the text, the delphinae are represented as fountains
spouting water; but in a bas-relief of the Palazzo
Barberini (Fabretti, Syntagm. de Column. Trajani,
p. 144), a ladder is placed against the columns
which support the dolphins, apparently for the pur-
pose of ascending to take them up and down.
isk, statues, altars, and temples, which do not appear to have had any fixed locality.

It will be observed in the ground-plan that there is a passage between the metae and spina, the extreme ends of the latter of which are hollowed out into a circular recess; and several of the ancient sculptures afford similar examples. This might have been for performing the sacrifice, or other offices of religious worship, with which the games commenced; particularly as small chapels can still be seen under the metae, in which the statues of some divinities must have been placed. It was probably under the first of these spaces that the altar of the god Consus was concealed (Tertull. De Spectac. c. 5), which was excavated upon each occasion of these games. (Dionys. ii. p. 97.)

At the extremity of the circus in which the two norns of the areas terminate, were placed the stalls for the horses and chariots (H, H), commonly called carceres at, and subsequently to, the age of Varro: but more anciently the whole line of buildings which confined this end of the circus was termed oppidum: because, with its gates and towers, it resembled the walls of a town (Festus, s. t.; Varro, De Ling. Lat. v. 153) ; which is forcibly illustrated by the circus under consideration, where the two towers (I, I) at each end of the carceres are still standing. The number of carceres is supposed to have been usually twelve (Cassiodor. Var. Ep. iii. 51), as they are in this plan; but in the mosaic discovered at Lyons, and published by Artaud (Description d'un Mosaïque, &c. Lyon, 1796), there are only eight. These were vaults, chosen in front by gates of open wood-work (cancelli), which were opened simultaneously upon the signal being given (Dionys. iii. p. 192; Cassiodor. i. c.; compare Sil. Ital. xvi. 316), by removing a rope (sveitnix, Dionys. i. c.; compare scnol. as au neecor. Idyl. viii. 57) attached to plaster of the kind called Hermes, placed for that purpose between each stall; upon which the gates were immediately thrown open by a number of men, more by the clementorii, who were located in the annexed woodcut, taken from a very curious marble in the Museo Borgiano, at Velletri; which also represents most of the other peculiarities above-mentioned as appertaining to the carceres.

The carceres were divided into two sets of six each, accurately described by Cassiodorus (i. c.) as bissena ostia, by an entrance in the centre (L), called porta pompae; because it was the one through which the Circensian procession entered, and which, it is inferred from a passage in Ausonius (Epist. xviii. 12), was always open, forming a thoroughfare through the circus. Besides this entrance, there were four others, two at the termination of the seats between the curae and the oppidum (M, M), another at (N), and the fourth at (O), under the vault of which the fresco decorations are still visible. This is supposed to be the Porta Triumphalis, to which its situation seems adapted. One of the others was the porta Libitinae (Lamprid. Commod. 16), so called because it was the one through which the dead bodies of those killed in the games were carried out. (Dion Cass. lxii. p. 1222.)

Such were the general features of a circus, as far as regards the interior of the fabric. The area had also its divisions appropriated to particular purposes, with a nomenclature of its own attached to each. The space immediately before the oppidum was termed circus primus; that near the meta prima, circus interior or intimus (Varr. De Ling. Lat. v. 154), which latter spot, in the Circus Maximus, was also termed ad Murceim, or ad
• the turnings of the course, the

• (Epist. p. 192; Suet.)

racing, the course was termed

meniana

the circus was used for the exhibition of athletic
games, for which the locality seems best adapted;

but in Silius Italicus (xvi. 415) it is put for the part
down the spina. When the circus was used for

racing, the course was termed spatium (Juv. Sot. vi. 582) or spottia, because the match included more

than one circuit. (Verg. Aen. v. 316, 323, 327,

Georg. i. 513; Stat. Theb. vi. 594; Hor. Epist. i. 14. 9; compare Sil. Ital. xvi. 336.) It is also called
campus (Sil. xvi. 391), and poetically aequor (Id. 414).

At the entrance of the course, exactly in the
direction of the line (J, K), were two small pe-
destals (hermuli) on each side of the podi-um, to

which was attached a chalked rope (alba linea,

Cassiodor. i.e.), for the purpose of making the
start fair, precisely as is practised at Rome for the
horse-races during Carneval. Thus, when the
doors of the carceres were thrown open, if any of
the horses rushed out before the others, they were
brought up by this rope until the whole were fairly
abreast, when it was loosened from one side, and

all poured into the course at once. In the Lyons
mosaic the alba linea is distinctly traced at the

spot just mentioned, and one of the chariots is

observed to be upset at the very place, whilst the

others pursue their course. The writer has often
seen the same accident happen at Rome, when an
over-cager horse rushes against the rope and gets
thrown down. This line, for an obvious reason
(Plin. H. N. xxxv. 58), was also called calx, and
crux (Cic. de Am. 27; Senec. Epist. 108), from whence comes the allusion of Persius (Sat. v. 177),
cruxa ambitio. The metus served only to regulate
the turnings of the course, the alba linea answered to
the starting and winning post of modern days —

"nervato legitimo cursu et cruxa certere." (Plin. H. N. viii. 63; and compare xxxv. 58.) Hence the

metaphor of Cicero (Senect. 23), "quasi ducarum spatio ad carceres a calx revocari;"* and of Horace

(Epist. i. 16. 79), "mos ultima linea rerum." (Comp. Lucret. vi. 92.)

From this description the Circus Maximus dif-
f ered little, except in size and magnificence of em-
bellishment. But as it was used for hunting wild
beasts, Julius Caesar drew a canal called Erupias,
ten feet wide, around the bottom of the podi-um, to

protect the spectators who sat there (Dionys. iii. p. 192; Suet. Cal. 39), which was removed by
Nero (Plin. H. N. viii. 7), but subsequently re-

stored by other princes. (Lamprid. Helio. 23.)
It possessed also another variety in three open
galleries, or balconies, at the circular end, called
meniana or macina. (Suet. Cal. 18.) The num-
bers which the Circus Maximus was capable of
containing, are computed at 150,000 by Dionysius
(iii. p. 192), 260,000 by Pliny (H. N. xxxvi. 24.
§ 1), and 353,000 by P. Victor (Regio xi.), all of which are probably correct, but have reference to
different periods of its history. Its very great ex-
tent is indicated by Juvenal (Sat. xi. 195). Its
length, in the time of Julius Caesar, was three
stadia, the width one, and the depth of the build-
ings occupied half a stadium (Plin. i. c.), which is

included in the measurements given by Dionysius
(iii. p. 192), and thus exactly accounts for the
variation in his computation.

When the Circus Maximus was permanently
formed by Tarquinius Priscus, each of the thirty
curiae had a particular place assigned to it (Dionys.
iii. p. 192); but as the plebeians had no right to a
seat in this circus, the Circus Flaminius was after-
wards built for their games. (Comp. Niebuhr, Hist. of Rome, vol. i. p. 285, vol. ii. p. 360.) Of course,
in the latter days of the republic, when the distinction
between patricians and plebeians had practically
ceased to exist, the plebeians sat in the Circus
Maximus. (Suet. Aug. 44.) The seats were then
marked off at intervals by a line or grove drawn
across them (linea), so that the space included be-
 tween two lines afforded sitting room for a certain
number of spectators. Hence the allusion of Celia
(Anon. iii. 2. 19): —

Quid frustra refugia? cognit nos linea jungi.

(Compare Ovid. Art. Amat. i. 141.) As the seats
were hard and high, the women made use of a
cushion (pulvinus), and a footstool (scamnum, sca-
bullum, Ovid. Art. Amat. i. 160, 162), for which

purpose the railing which ran along the upper edge of
each praeclasio was used by those who sat im-
mediately above it. (Ovid. Amor. iii. 2. 64.) But
under the emperors, when it became necessary to
give an adventitious rank to the upper classes by
privileges and distinctions, Augustus first, then
Claudius, and finally Nero and Domitian, separated
the senators and equites from the common people.
(Suet. Aug. 44, Claud. 21, Nero, 11, Domit. 8.)

The seat of the emperor — pulvinar (Suet. Aug. 44.
Claud. 4), cubicularium (Id. Nero, 12), was most
likely in the same situation in the Circus Maximus.
as in the one above described. It was generally
upon the podi-um, unless when he presided at
masses, which was not always the case (Suet. Nero. i. c.): but then he occupied the elevated tribunal of
the president (suggestus), over the porta pompea. 1 no
consuls and other dignitaries sat above the carceres
(Suet. Aug. 44. 21), unless when the emperor — the
seat of the emperor — was seen in the woodcut on page 293a. The rest of the oppidum was probably occupied
by the musicians and persons who formed part of the
pompa.

The exterior of the Circus Maximus was sur-
rrounded by a portico one story high, above

which were shops for those who sold refreshments.
(Dionys. iii. p. 192.) Within the portico were
ranges of dark vaults, which supported the seats of
the arena. These were let out to women or the
town. (Juv. Sat. iii. 65; Lamprid. Helio. 28.)
The Circenian games (Ludi Circenses) were first
instituted by Romulus, according to the legends,
when he wished to attract the Sabine population to
Rome, for the purpose of furnishing his own people
with wives (Val. Max. ii. 4. § 3), and were cele-
brated in honour of the god Conus, or Neptunus
Equestris, from whom they were styled Consualos.
(Liv. i. 9.) But after the construction of the
Circus Maximus, they were called indiscriminately
Circenses (Servius, ad Virg. Georg. iii. 16), Romani,
or Magni. (Liv. i. 35.) They enunrected six kinds
of games: — I. CURSUS; II. LUDUS TROJAR: III. PUGNA EQUESTRI; IV. CERTAMEN GYM-
nicum; V. VENATIO; VI. NAUMACHIA. The
two last were not peculiar to the circus, but were
exhibited also in the amphitheatre, or in buildings
appropriated for them.
The games commenced with a grand procession (Pompa Circensis), in which all those who were about to exhibit in the circus, as well as persons of distinction, bore a part. The statues of the gods formed the most conspicuous feature in the show, which were paraded upon wooden platforms, called fercula and thensa. (Suet. Jul. 76.) The former were borne upon the shoulders, as the statues of saints are carried in modern processions (Cic. de Off. i. 36); the latter drawn along upon wheels, and hence the thensa which bore the statue of Jupiter is termed Jovis planastrum by Tertullian (De Spectac. 7), and Δῶς ὑπόθεν, by Dion Cassius (p. 608). The former were for painted images, or those of light material; the latter for the heavy statues. The whole procession is minutely described by Dionysius (vii. pp. 457, 458; comp. Ov. Amor. iii. 2. 43, &c.).

I. CURSUS, the races. The carriage usually employed in the circus was drawn by two or four horses (biya, quadriga). [CIRCUS.] The usual number of chariots which started for each race was four. The drivers (aurigae, agitatores) were also divided into four companies, each distinguished by a different colour, to represent the four seasons of the year, and called a factio (Festus, s. v.): thus factio praesina, the green, represented the spring, when (Juv. Sat. xii. 196) "Eventum viridis quo colgo parturit;" factio rassuta, red, the summer; factio veneta, azure, the autumn; and factio alba or albatia, while, the winter. (Tertull. de Spectac. 9; compare the authorities quoted by Ruperti, ad Juv. vii. 112.) Originally there were but two factions, albatia and rassata (Tertull. l. c.), and consequently only two chariots started at each race. Domitian subsequently increased the whole number to six, by the addition of two new factions, aurata and purpurea (Suet. Dom. 7); but this appears to have been an exception to the usual practice, and not in general use. The driver stood in his car within the reins, which went round his back. This enabled him to throw all his weight against the horses, by leaning backwards; but it greatly enhanced his danger in case of an upset, and caused the death of Hippolytus. (Eur. Hipp. 1230, ed. Monk; compare Ovid, Met. xx. 524.) To avoid this peril a sort of knife or bill-hook was carried at the waist, for the purpose of cutting the reins in case of emergency, as is seen in some of the ancient reliefs, and is more clearly illustrated in the annexed woodcut, copied from a fragment formerly belonging to the Villa Negroni, which also affords a specimen of the dress of an auriga, in the Villa Albani.

When all was ready, the doors of the carceres were flung open, and the chariots were formed abreast of the alba linea by men called moratores from their duty; the signal for the start was then given by the person who presided at the games, sometimes by sound of trumpet (Ovid, Met. x. 652; Suiden. Corn. xviii. 841), or more usually by letting fall a napkin (mappa, Suet. Nero, 22; Mart. Ep. xii. 29. 9), whence the Circenian games are called spectacula mappaee. (Juv. Sat. xi. 191.) The origin of this custom is founded on a story that Nero, while at dinner, hearing the shouts of the people who were clamorous for the course to begin, threw down his napkin as the signal. (Casiodor. Var. Ep. iii. 51.) The alba linea was then cast off, and the race commenced, the extent of which was seven times round the spina (Varro, ap. Gell. iii. 10), keeping it always on the left. (Ovid. Amor. iii. 2. 72; Sil. Ital. xvi. 362.) A course of seven circuits was termed saus missus, and twenty-five was the number of races ran in each day, the last of which was called missus acerarius, because in early times the expense of it was defrayed by a collection of money (aes) made amongst the people. (Serv. ad Virg. Georg. iii. 18; compare Dion Cass. lix. p. 908.) Upon one occasion Domitian reduced the number of circuits from seven to five, in order to exhibit 100 missus in one day. (Suet. Dom. 4.) The victor descended from his car at the conclusion of the race, and ascended the spina, where he received his reward (bravium, from the Greek βραβευων, Paul. 1 Corinthis. ix. 24), which consisted in a considerable sum of money (Juv. Sat. vii. 113, 114, 243; Suet. Claud. 21), which accounts for the great wealth of the charioteers to which Juvenal alludes, and the truth of which is testified by many sepulchral inscriptions.

A single horseman, anawering to the τέχνης of the Greeks, attended each chariot, the object of which seems to have been twofold; to assist his companion by urging on the horses, when his hands were occupied in managing the reins, and, if necessary, to ride forward and clear the course, as seen in the cut from the British Museum representing the metoe, which duty Cassiodorus (Var. Ep. iii. 51) assigns to him, with the title of equus desultorius. Other writers apply that term to those who practised feats of horsemanship in the circus, leaping from one to another when at their speed. (Compare Suet. Jul. 39; Cic. Pro Muren. 27; Dionys. p. 462; Panvin. De Lud. Circena. i. 9.) In other respects, the horse-racing followed the same rules as the chariots. The enthusiasm of the Romans for these races exceeded all bounds. Lists of the horses (libelli), with their names and colours, and those of the drivers, were handed about, and heavy bets made upon each faction (Ovid, Art. Amat. i. 167, 168; Juv. Sat. xi. 200; Mart. Ep. xi. 1. 15); and some-
times the contests between two parties broke out into open violence and bloody quarrels, until at last the disputes which originated in the circus, had nearly lost the Emperor Justinian his crown.

II. Ludus Trojan, a sort of sham-fight, said to have been invented by Aeneas, performed by young men of rank on horseback (Tacit. Ann. xi. 11), often exhibited by Augustus and succeeding emperors (Suet. Aug. 45, Nero, 7), which is described by Virgil (Aen. v. 553, &c.).

III. Pugna Equesris et Pedaestris, a representation of a battle, upon which occasions a camp was formed in the circus. (Suet. Jul. 33, Dom. 4.)

IV. Certamina Gymnicum. See Athletae, and the references to the articles there given.

V. [Venatio.] VI. [Naumachia.]

The pompa circensis was abolished by Constantine, upon his conversion to Christianity; and the other games of the circus by the Goths (A. D. 410); but the chariot races continued at Constantinople until that city was besieged by the Venetians (A. D. 1204). [A. R.]

CIRRHUS. [Coma.]

CISTIUM, a gig, i.e. a light open carriage with two wheels, adapted to carry two persons rapidly from place to place. Its form is sculptured on the monumental column at Igel, near Treves (see woodcut). It had a box or case, probably under the seat. (Festus, s. v. Plo- sinum.) The cisia were quickly drawn by mules (cisia volantis, Virg. Catal. viii. 3; Cic. Phil. ii. 31). Cicero mentions the case of a messenger who travelled 56 miles in 10 hours in such vehicles, which were kept for hire at the stations along the great roads; a proof that the ancients considered six Roman miles per hour as an extraordinary speed.

The conductors of these hired gigs were called cistarii, and were subject to penalties for careless or dangerous driving. (Dig. 19. tit. 2. s. 13.) [J. Y.]

CISTA (κίστρα), a small box or basket, commonly made of wicker-work, in which any thing might be placed. (Cic. Verr. iii. 85; Hor. Ep. i. 17, 54.) In the Roman comitia the cista was the ballot-box into which the voters cast their tabellae (Plin. H. N. xxxiii. 2. s. 7; Auctor, ad Herenn. i. 12; Pseudo-Ascon. ad Cic. Dein. 7. p. 100, ed. Orelli). The form of the cista is preserved on a coin of the Cassia gens, which is represented in the annexed cut, and which is evidently made of wicker or similar work. The material of which it was made is alluded to by Tibullus in the line (i. 7. 48) "et lesiv occultis conscia cista sacris." The cista has been frequently confounded with the sitella, but the latter was the urn from which the names of the tribes or centuries were drawn out by lot. [Sitella.]

The name of cista was also given to the small boxes which were carried in procession in the Greek festivals of Demeter and Dionysus. These boxes, which were always kept closed in the public processions, contained sacred things connected with the worship of these deities. (Ovid, De Art. Amat. ii. 609; Catull. lxiv. 260; Tibull. i. 7. 48.)

CISTOPHORUS (κιστοφόρος), a silver coin, which belonged to the kingdom of Pergamus, and which was in general circulation in Asia Minor at the time of the conquest of that country by the Romans. (Livy. xxxvii. 46, 58, xxxix. 7; Cic. ad Att. ii. 6, xi. 1.) Its value is extremely uncertain, as the only information we possess on the subject is in two passages of Festus, which are at variance with each other, and of which certainly one, and probably the other, is corrupt. (Festus. s. v. Euboeicum Talen tum, and Talentorum non. &c.; see Müller's notes): and, with respect to the existing specimens, it is doubtful whether they are double or single cistophori. Böckh supposes them to have been originally didrachms of the Aeginetan standard: others take them for tetradrachms. Mr. Hussey (pp. 74, 75), from existing coins, which he takes for cistophori, determines it to be about 5 of the later Attic drachma, or Roman denarius of the republic, and worth in our money about 7¼d. The existing specimens are extremely scarce. The general device is, on the one side, the sacred cista (cista, whence the name) of Dionysus, half open, with a serpent creeping out of it, surrounded by an ivy wreath, and on the reverse, the car of Deme ter, drawn by serpents. The period during which cistophori were struck, is supposed to have been from about B.C. 200, down to the battle of Actium. (Panel, de Cistophoros, Lugd. 1754; Eckhel, vol. iv. pp. 352—368; Böckh, Metrod. Untersuch. pp. 101, 107.) [P. S.]

CITHARÁ. [Lyra.]

CIVILE JUS. [Jus Civile.]

CIVILIS ACTIO. [Actio.]

CIVIS. [Civitas.]

CIVITAS (πολιτεία), citizenship. 1. Greek.
In the third book of the Politics, Aristotle commences his inquiry into the nature of states with the question, "What constitutes a citizen?" (ποιος ἐστιν οὗτος). He defines a citizen to be one who is a partner in the legislative and judicial power (μέτοχος ἐκ τῆς νόμος καὶ δικαιοσύνης). This definition will equally apply to all the different states of Greece, or to any single state at different times; the above seems to comprehend more or less properly all those whom the common use of language entitled to the name.

A state in the heroic ages was the government of a prince; the citizens were his subjects, and derived all their privileges, civil as well as religious, from their nobles and princes. Nothing could have been further from the notions of those times, than the ideas respecting the natural equality of freemen which were considered self-evident axioms in the democracies of an after-period. In the early governments there were no formal stipulations; the kings were amenable to the gods alone. The shadows of a council and assembly were already in existence, but their business was to obey. Community of language, of religion, and of legal rights, as far as they then existed, was the bond of union; and their privileges, such as they were, were readily granted to naturalised strangers. Upon the whole, as Wachsmuth has well observed, the notion of citizenship in the heroic age only existed so far as the condition of aliens or of domestic slaves was its negative.

The rise of a dominant class gradually overthrew the monarchies of ancient Greece. Of such a class, the chief characteristics were good birth and the hereditary transmission of privileges, the possession of land, and the performance of military service. To these characters the names γαμόμοι, ἔπτεις, εὐπατρίδαι, &c., severally correspond. Strictly speaking, these were the only citizens; yet the lower class was quite distinct from bondmen or slaves. It commonly happened that the nobility occupied the fortified towns, while the δῆμος lived in the country and followed agricultural pursuits; whenever the latter were gathered within the walls and became acmeen or handicraftsmen, the difference of rank was soon lost, and wealth made the only standard. The quarrels of the nobility among themselves, and the admixture of population arising from immigrations, all tended to raise the lower orders from their political subjection. It must be remembered, too, that the possession of domestic slaves, if it placed them in no new relation to the governing body, at any rate gave them leisure to attend to the higher duties of a citizen, and thus served to increase their political efficiency.

During the convulsions which followed the heroic ages, naturalisation was readily granted to all who desired it; as the value of citizenship increased, it was, of course, more sparingly bestowed. The ties of hospitality descended from the prince to the state, and the friendly relations of the Homeric heroes were exchanged for the προσφορά of a later period. In political intercourse, the importance of these last soon began to be felt, and the πρόσφορα at Athens, in after times, obtained rights only inferior to actual citizenship. [HOSPITIUM.] The isopoll relation existed, however, on a much more extended scale. Sometimes particular privileges were granted: as ἐπίγαυλα, the right of inter-marriage; ἔγκυρης, the right of acquiring landed property; ἀνέλεια, immunity from taxation, especially ἀνέλεια metoikou, from the tax imposed on resident aliens. All these privileges were included under the general term ἅγιος, or ἁγιορεία. If the right of citizenship was conferred for services done to the state, the rank termed προσφορά οἰκείων might be added. Naturalised citizens even of the highest grade were not precisely in the same condition with the citizen by birth, although it is not agreed in what the difference consisted. Some think that they were excluded from the assembly (Niebuhr, l. c.), others that they were only ineligible to offices, or at any rate to the archonship.

The candidate on whom the citizenship was to be conferred was proposed in two successive assemblies, at the second of which at least six thousand citizens voted for him by ballot: even if he succeeded, his admission, like every other decree, was liable during a whole year to a γραφή παραφόρων. He was registered in a phyle and a deme, but not enrolled in the phratria and genos; and hence it has been argued that he was ineligible to the office of archon or priest, because unable to participate in the sacred rites of Ἀφρόδιτας Παρθένους ή Ζεὺς Ἐρείπιος.

The object of the phratriae (which were retained in the constitution of Cleisthenes, when their number no longer corresponded to that of the tribes) was to preserve purity and legitimacy of descent among the citizens. Aristotle says (Pol. iii. 2) that for practical purposes it was sufficient to define a citizen as the son or grandson of a citizen, and the register of the phratriae was kept chiefly as a record of the citizenship of the parents. If any one's claim was disputed, this register was at hand, and gave an answer to all doubts about the rights of his parents or his own identity. Every newly married woman, herself a citizen, was enrolled in the phratria of her husband, and every infant registered in the phratria and genos of its father. All who were thus registered must have been born in lawful wedlock, of parents who were themselves citizens; indeed, so far was this carried, that the omission of any of the requisite formalities in the marriage of the parents, if it did not wholly take away the rights of citizenship, might place the offspring under serious disabilities. This, however, was only carried out in its utmost rigour at the time when Athenian citizenship was most valuable. In Solon's time, it is not certain that the offspring of a citizen and of a foreign woman incurred any civil disadvantage; and even the law of Pericles (Plat. Peric. 57), which exacted citizenship on the mother's side, appears to have become obsolete very soon afterwards, as we find it re-enacted by Aristophon in the archonship of Euclides, b. c. 408. ( Athen. xxii. p. 577.)

It is evident then, from the very object of the phratria, why the newly-admitted citizen was not enrolled in them. As the same reason did not apply to the children, these, if born of women who were citizens, were enrolled in the phratria of their
maternal grandfather. (Isaeus, De Apol. Herod. c. 15.) Still an additional safeguard was provided by the registry of the deme. At the age of sixteen, the son of a citizen was required to devote two years to the exercises of the gymnasia, at the expiration of which term he was enrolled in his deme; and, after taking the oath of a citizen, was armed in the presence of the assembly. He was then of age, and might marry; but was required to spend two years more as a *περιφράτας* in frontier service, before he was admitted to take part in the assembly of the people. The admission into the phratra and deme were alike attended with oaths and other solemn formalities: whatever a *δωσιναί* or general scrutiny of the claims of citizens took place, it was entrusted to both of them; indeed the registry of the deme was the only check upon the naturalised citizen.

These privileges, however, were only enjoyed while the citizen was *στίτος*; in other words, did not incur any sort of *ἄτιμα*, which was of two sorts, either partial or total, and is spoken of at length elsewhere. [Atimia.]

Recurring then to Aristotle's definition, we find the essential properties of Athenian citizenship to have consisted in the share possessed by every citizen in the legislature, in the election of magistrates, in the *δωσιναί*, and in the courts of justice.

The lowest unity under which the citizen was contained, was the *γένος* or clan; its members were termed *γεννύται* or *δημογάλακτες*. Thirty *γένη* formed a *φρατρία*, which latter division, as was observed above, continued to subsist long after the four tribes, to which the twelve phratries anciently corresponded, had been done away by the constitution of Cleisthenes. There is no reason to suppose that these divisions originated in the common descent of the persons who were included in them, as they certainly did not imply any such idea in later times. Rather they are to be considered as mere political unions, yet formed in imitation of the natural ties of the patriarchal system.

If we would picture to ourselves the true notion which the Greeks embodied in the word *πόλις*, we must lay aside all modern ideas respecting the nature and object of a state. With us practically, if not in theory, the object of a state hardly embraces more than the protection of life and property. The Greeks, on the other hand, had the most vivid conception of the state as a whole, every part of which was to co-operate to some extent towards this end. Thus the aim of democracy was said to be liberty; wealth, of oligarchy; and education, of aristocracy. In all governments the endeavour was to draw the social union as close as possible, and it seems to have been with this view that Aristotle laid down a principle which answered well enough to the accidental circumstances of the Grecian states, that a *πόλις* must be of a certain size. (*Pol. vii. 4*, *Nic. Eth. ix. 10, 11, ὁ γὰρ ἐκ δίκα μνημόνων πόλις ἐν ἑτέριν.*)

This unity of purpose was nowhere so fully carried out as in the government of Sparta; and, if Sparta is to be looked upon as the model of a Dorian state, we may add, in the other Dorian governments. Whether Spartan institutions in their essential parts were the creation of a single master-mind, or the result of circumstances modified only by the genius of Lycurgus, their design was evidently to unite the governing body among themselves against the superior numbers of the subject population. The division of lands, the syssitia, the education of their youth, all tended to this great object. The most important thing next to union among themselves, was to divide the subject class, and accordingly we find the government conferring some of the rights of citizenship on the helots. Properly speaking, the helots cannot be said to have had any political rights; yet being serfs of the soil, they were not absolutely under the control of their masters, and were never sold out of the country. They were therefore entitled to some of the rights of citizenship: that condition was not one of hopeless servitude; a legal way was open to them, by which, through many intermediate stages, they might attain to liberty and citizenship. (Müller, Dorians, iii. § 5.) Those who followed their masters to war were deemed worthy of special confidence; indeed, when they served among the heavy-armed, it seems to have been usual to give them their liberty. The *δεσποινοκατά*, by whom the Spartan fleet was almost entirely manned, were freedmen, who were allowed to dwell where they pleased, and probably had a portion of land allotted them by the state. After they had been in possession of their liberty for some time, they appear to have been called *νεοδαμαδεῖς* (Thuc. vii. 58.), the number of whom soon came near to that of the citizens. The *μοβανεις* or *μοβακες* (as their name implies) were also emancipated helots; their descendants, too, must have received the rights of citizenship as Callicratidas, Lysander, and Gyllippus were of Mothacic origin. (Müller, Dorians, i. 3. § 6.) We cannot suppose that they passed necessarily and of course into the full Spartan franchise; it is much more probable that at Sparta, as at Athens, intermarriage with citizens might at last entirely obliterate the badge of former servitude.

The perioeci are not to be considered as a subject class, but rather as a distinct people, separated by their customs as well as by their origin from the genuine Spartans. It seems unlikely that they were admitted to vote in the Spartan assembly; yet they undoubtedly possessed civil rights in the communities to which they belonged (Müller, Dorians, ii. 2. § 4), and which would hardly have been called *πόλια* unless they had been in some sense independent bodies. In the army they commonly served as hoplites, and we find the command at sea intrusted to one of this class. (Thuc. viii. 22.) In respect of political rights, the perioeci were in the same condition with the plebeians in the early history of Rome, although in every other respect far better off, as they participated in the division of lands, and enjoyed the exclusive privilege of engaging in trade and commerce. What confirms the view here taken, is the fact, that, as far as we know, no individual of this class was ever raised to participate in Spartan privileges. Nothing, however, can be more erroneous than to look upon them as an oppressed race. Even their exclusion from the assembly cannot be viewed in this light; for, had they possessed the privilege, their residence in the country would have been barred them from its exercise. It only remains to consider in what the superiority of the genuine Spartan may have consisted. In the first place, besides the right of voting in the assembly and
becoming a candidate for the magistracies, he was possessed of lands and slaves, and was thus exempt from all care about the necessaries of life; secondly, on the field of battle he always served amongst the hoplites; thirdly, he participated in the state administration, and in all other Dorian institutions, both civil and religious. The reluctance which Sparta showed to admit foreigners was proportioned to the value of these privileges: indeed Herodotus (ix. 35) says that Sparta had only conferred the full franchise in two instances. In legal rights all Spartans were equal; but there were yet several gradations, which, when once formed, retained their hold on the aristocratic feelings of the people. (Müller, Dorian, iii. 5. § 7.) First, as we should naturally expect, there was the dignity of the Heraclid families; and, connected with this, a certain pre-eminence of the Hyblean tribe. Another distinction was that between the δοµοι and βροικευοντες, which, in later times, appears to have been considerable. The latter term probably comprehended those citizens who, from degeneracy of manners or other causes, had undergone some kind of civil degradation. To these the δοµοι were opposed, although it is not certain in what the precise difference consisted. It need hardly be added, that at Sparta, as elsewhere, the union of wealth with birth always gave a sort of adventitious rank to its possessor.

The Spartan education, and in all other Dorian times, appears to have been considerable. The essential notion of a citizen, is a question which, following Aristotle's example (Pol. iii. 5), we may be content to leave undecided. He who, being personally free, enjoyed the fullest political privileges, participated in the assembly and courts of judicature, was eligible to the highest offices, and received all this by inheritance from his ancestors, most entirely satisfied the idea which the Greeks expressed in the word πολιτής. [B.J.]

2. ROMAN. Civitas means the whole body of citizens, or members, of any given state. Citizens are defined by Cicero (Somn. Scip. c. 3) to be "concilium coetusque hominum jus societatis." A citizen is, therefore, properly a political community, sovereign and independent. The word civitas is frequently used by the Roman writers to express the condition of a Roman citizen, as distinguished from that of other persons not Roman citizens, as in the phrases dare civitatem, donare civitate, usufrue civitatem.

If we attempt to distinguish the members of any given civitas from all other people in the world, we can only do it by enumerating all the rights and duties of a member of this civitas, which are not rights and duties of a person who is not a member of this civitas. If any rights and duties which belong to a member of this civitas, and do not belong to any person not a member of this civitas, are omitted in the enumeration, it is an incomplete enumeration; for the rights and duties not expressly included must be assumed as common to the members of this civitas and to all the world, or, to use a Roman expression, they exist jure gentium. Having enumerated all the characteristics of the members of any given civitas, we have then to show how a man acquires them, and how he loses them, and the notion of a member of such civitas is then complete.

Some members of a political community (civitas) may have more political rights than others; a principle by the aid of which Savigny (Geschichte des Rom. Rechts im Mittelalter, c. ii. p. 22) has expressed briefly and clearly the distinction between the two great classes of Roman citizens under the republic:—"In the free republic there were two classes of Roman citizens, one that had, and another that had not, a share in the sovereign power (optimo jure, non optimo jure civis). That which peculiarly distinguished the higher class was the right to vote in a tribe, and the capacity of enjoying magistracies (suffragium et honores)." According to this view, the jus civitatis comprehended part of that which the Romans called jus publicum, and also, and most particularly, that which they called jus privatum. The jus privatum comprehended the jus communi and jus commercii, and those who had not these had no citizenship. Those who had the jus suffragiorum and jus honorum had the complete citizenship, or, in other words, they were optimo jure civis. Those who had the privatum, but not the publicum, were citizens, though citizens of an inferior class. The jus privatum seems to be equivalent to the jus Quiritium, and the civitas Romana to the jus publicum. Accordingly, we sometimes find the jus Quiritium contrasted with the Romana civitas. (Plin. Ep. x. 4. 22 ; Ulp. Frug. tit. 3. § 2.) Livy (xxxviii. 30) says that until c. 180, the Formiani, Fundani, and Arpinates, had the civitas without the jus Quiritium, and the civitas Romana to the jus publicum. Accordingly, we sometimes find the jus Quiritium contrasted with the Romana civitas. (Plin. Ep. x. 4. 22 ; Ulp. Frug. tit. 3. § 2.)

We can only do it by enumerating all the rights of citizenship, and in the phrases dare civitatem, donare civitate, usufrue civitatem. [J.]

3. JURISPRUDENCE. Some members of a political community (civitas) may have more political rights than others; a principle by the aid of which Savigny (Geschichte des Rom. Rechts im Mittelalter, c. ii. p. 22) has expressed briefly and clearly the distinction between the two great classes of Roman citizens under the republic:—"In the free republic there were two classes of Roman citizens, one that had, and another that had not, a share in the sovereign power (optimo jure, non optimo jure civis). That which peculiarly distinguished the higher class was the right to vote in a tribe, and the capacity of enjoying magistracies (suffragium et honores)." According to this view, the jus civitatis comprehended part of that which the Romans called jus publicum, and also, and most particularly, that which they called jus privatum. The jus privatum comprehended the jus communi and jus commercii, and those who had not these had no citizenship. Those who had the jus suffragiorum and jus honorum had the complete citizenship, or, in other words, they were optimo jure civis. Those who had the privatum, but not the publicum, were citizens, though citizens of an inferior class. The jus privatum seems to be equivalent to the jus Quiritium, and the civitas Romana to the jus publicum. Accordingly, we sometimes find the jus Quiritium contrasted with the Romana civitas. (Plin. Ep. x. 4. 22 ; Ulp. Frug. tit. 3. § 2.)

Some members of a political community (civitas) may have more political rights than others; a principle by the aid of which Savigny (Geschichte des Rom. Rechts im Mittelalter, c. ii. p. 22) has expressed briefly and clearly the distinction between the two great classes of Roman citizens under the republic:—"In the free republic there were two classes of Roman citizens, one that had, and another that had not, a share in the sovereign power (optimo jure, non optimo jure civis). That which peculiarly distinguished the higher class was the right to vote in a tribe, and the capacity of enjoying magistracies (suffragium et honores)." According to this view, the jus civitatis comprehended part of that which the Romans called jus publicum, and also, and most particularly, that which they called jus privatum. The jus privatum comprehended the jus communi and jus commercii, and those who had not these had no citizenship. Those who had the jus suffragiorum and jus honorum had the complete citizenship, or, in other words, they were optimo jure civis. Those who had the privatum, but not the publicum, were citizens, though citizens of an inferior class. The jus privatum seems to be equivalent to the jus Quiritium, and the civitas Romana to the jus publicum. Accordingly, we sometimes find the jus Quiritium contrasted with the Romana civitas. (Plin. Ep. x. 4. 22 ; Ulp. Frug. tit. 3. § 2.)

Livy (xxxviii. 30) says that until c. 180, the Formiani, Fundani, and Arpinates, had the civitas without the jus Quiritium; and, at an earlier time, the people of Anagnia received the "Civitas sine suffragio libertatis." (Liv. ix. 43.)

Ulpian (Frag. tit. 5. § 4 ; 19. § 4 ; 20. § 8 ; 11. § 6) has stated a distinction, as existing in his time among the free persons who were within the political limits of the Roman state, which it is of great importance to apprehend clearly. There were three classes of free persons, Cives, Latini, and Peregrini. Guisa (i. 12) points to the same division, where he says that a slave, when made free, might become a Civis Romanus, or a Latinus, or might be in the number of the peregrini dediticii, according to circumstances. Cicero, as speaking to Ulpin, is he who possess the complete rights of a Roman citizen. The Peregrinus had not commercium and communi, which were the characteristic rights of a Roman citizen, not viewed in his political capacity; but the Peregrinus had a capacity for making all kinds of contracts which were allowable by the jus gentium. The Latinus was in an intermediate state; he had not the commercium, and consequently he had not the patria potestas nor rights of agnatio; but he had the commercium or the right of acquiring quiritarian ownership, and he had also a capacity for all acts incident to quiritian ownership. The last comprises the power of making a will in Roman.
form, of becoming heres or legatee under a will, and of being a witness to a will; also he could contract many obligations which a Peregrinus could not. These were the general capacities of a Latinus and peregrinus; but a Latinus or a peregrinus might obtain by special favour certain rights which he had not by virtue of his condition only. The legita hereditas was not included in the testamenti facio; for the legita hereditas presupposed agnatio, and agnatio presupposed connubium, or the capacity to contract a Roman marriage.

According to Savigny, the notion of civis and civitas had its origin in the union of the patricii and the plebes as one estate. The peregrinitas, in the sense above stated, originated in the conquest and of being a witness to a will; also he could contract many obligationes which a Peregrinus could not. His right to the juridical dominion of all Italy, and the state did not obtain the civitas; and he conjectures of a state by the Romans, when the conquered state did not obtain the civitas; and he conjectures of a state by the Romans, when the conquered state did not obtain the civitas; and he conjectures of a state by the Romans, when the conquered state did not obtain the civitas; and he conjectures of a state by the Romans, when the conquered state did not obtain the civitas.

The later division of persons was this — Cives, Latini, and Peregrini. The condition of cives and Peregrini was unchanged; but a third class, that of Latini was established, which did not, as formerly, denote a people, but an artificial class of persons with a particular legal capacity. This legal capacity or half citizenship, as already explained, consisted in the possession of the Commercium without the Connubium. One object of forming this new class was apparent— to prepare a gradual transition to the full civitas for such peregrini as the state might wish to favour. The condition of the class of Latini was expressed by the term Latinitas or Jus Latii. From this time there existed the three classes, described by Gaius and Ulpian—Cives, Latini, and Peregrini: cives with commercium and connubium, Latini with commercium only, and peregrini without either. Only the cives had the political rights, the suffragium and honores. The names of the three classes existed to the time of Justinian's legislation.

The rights of a Roman citizen were acquired in several ways, but most commonly by a person being born of parents who were Roman citizens. A Roman pater familias, filius familias, mater familias, and filia familias were all cives, though the first only was sui juris and the rest were not. If a Roman citizen married a Latina or a peregrina, believing her to be a Roman citizen, and begot a child, this child was not in the power of his father, because he was not a Roman citizen, but the child was either a Latina or a peregrina according to the condition of his mother; and no child followed the condition of his mother without there was connubium between his father and mother. By a senatus-consulturn, the parents were allowed to prove their mistake (causam erroris probato); and, on this being done, both the mother and the child became Roman citizens, and, as a consequence, the son was in the power of the father. Other cases relating to the matter called causae probatio are stated by Gaius (i. 29, &c.; i. 66, &c.), from which it appears that the facilities for obtaining the Roman civitas were gradually extended. (See also Ulp. Frag. tit. 3. De Latinitas.)

A slave might obtain the civitas by manumission (vindicata), by the census, and by a testamentum, if there was no legal impediment; but it depended on circumstances, as already stated, whether he became a Civis Romanus, a Latinus, or in the number of the peregrini dediticii.

Under the republic and before the Social war, the civitas could, of course, be conferred by a lex, and
CIVITAS.

upon such terms as the lex declared. (Liv. vi. 4; and in the case of the Ferentiniæ, Liv. xxxiv. 42; Cicero, pro Balbo, 13.) The Julia lex, b. c. 90, was a comprehensive measure. Cicero, however (pro Balbo, c. 8), remarks that many of the people of Heraclea and Neapólia made some opposition to accepting the terms offered by the lex, and would have preferred their former relation to Rome as civitates foederatae (foederis sui libertatem) to the Roman civitas. The lex gave the Roman civitas not only to the natives of the Italian towns, but also to natives of towns out of Italy, who had become citizens of Italian towns before the lex was enacted. Thus L. Manlius Cæs. ad Pom. xii. 30, a native of Catina, in Sicily, obtained the Roman civitas by virtue of having been enrolled as a citizen of Neapólia (erat enim in id municipium adscriptus) before the passing of the lex. The lex Plautia Papiria, which was proposed by the tribunes M. Plautius Silvanus and C. Papirius Carbo, b. c. 89, contained a provision that persons, who had been enrolled as citizens of the foederatae civitates, and who had a domicile in Italy at the time when the law was passed, should have the Roman civitas, if they gave their names to the praetor within sixty days (apud praetorem essent professi, Cic. pro Archia, c. 4). Archias claimed the benefit of this lex as having been enrolled a citizen of Heraclea, and having in the other respects complied with the lex. The case of L. Manlius appears to show that the lex Julia applied to persons not natives of an Italian town if they had become citizens of such town before the passing of the lex; and it is not clear what was the precise object of the lex Plautia Papiria, whether merely to explain or to limit the operation of the Julia lex. If the Julia lex merely declared that the Roman civitas, if they gave their names to the praetor within sixty days; the political rights of Roman citizens became in the Italian towns, and the only division of persons was into subjects of the Caesar and slaves.

With the establishment of the imperial power, the political rights of Roman citizens became insignificant, and the commercium and the connubium were the only parts of the civitas that were valuable. The constitution of Antoninus Caracalla, merely to explain or to limit the operation of the Julia lex. If the Julia lex merely declared that the Roman civitas, if they gave their names to the praetor within sixty days; the political rights of Roman citizens became in the Italian towns, and the only division of persons was into subjects of the Caesar and slaves.

The word civitas is often used by the Roman writers to express any political community, as Civitas Antiochensis, &c. (Savigny, Zeitschrift, &c. vol. v., Uber die Entstehung, &c., der Latinität; vol. ix., Der Römische Volkschluss der Tafel von Heraklea; vol. xi., Nachträge zu früheren Arbeiten; and Savigny, System des heutigen Römischen Rechts, vol. ii. p. 23, &c. [G. L.])

CLAVUS LATUS.

CLAVUS ANGUSTR.

CLAVUS ANGUSTR.

CLAVUS ANGUSTR.

CLAVUS ANGUSTR.
and Abednego, from the tomb of Pope Callisto on the Via Appia.

The latus clavus was a distinctive badge of the senatorial order (latum demisit pectore clavum, Hor. Sat. i. 6. 28; Ovid, Trist. iv. 10. 35); and hence it is used to signify the senatorial dignity (Suet. Tib. 35, Vesp. 2. 4); and latellarius, for the person who enjoys it. (Suet. Aug. 39.) In distinction to the angustus clavus, it is termed purpura major (Juven. Sat. i. 106), purpura laticlavia (Plin. H. N. xxxiii. 7); and the garment it decorated, tunica potcns (Stat. Silv. v. 2. 29). The tunica laticlavia was not fastened round the waist like the common tunic, but left loose, in order that the clavus might lie flat and conspicuously over the chest. (Quinctil. xi. 3. § 138.)

The angustus clavus was the decoration of the equestrian order; but the right of wearing the latus clavus was also given to the children of equestrians (Ovid, Trist. iv. 10. 29), at least in the time of Augustus, as a prelude to entering the senatorial order. (Plin. H. N. i. 7.) This, however, was a matter of personal indulgence, and not of individual right; for it was relinquished and the angustus clavus resumed, if a disinclination on his part, or any other circumstances, prevented him from entering the senate, as was the case with Ovid (compare Trist. iv. 10. 27, with 35). But it seems that the latus clavus could be again resumed if the same individual subsequently wished to become a senator (Hor. Sat. i. 6. 25), and hence a fickle character is designated as one who is always changing his clavus (Hor. Sat. ii. 7. 10).

The latus clavus is said to have been introduced at Rome by Tullus Hostilius, and to have been adopted by him after his conquest of the Etruscans (Plin. H. N. ix. 63); nor does it appear to have been confined to any particular class during the earlier periods, but to have been worn by all ranks promiscuously. (Plin. H. N. xxxiii. 7.) It was laid aside in public mourning. (Liv. ix. 7. [A. R.]

CIREPSYDRA. [HOROGIUM.]

CLERU'CHI (κληροδέχων). [COLOLIA.]

CLERUS (κλῆσ). [HERES.]

CLETE'RES or CLETORES (κλητήρες or κλήτορες), summoners. The Athenian summoners were not official persons, but merely witnesses to the prosecutor that he had served the defendant with a notice of the action brought against him, and the day upon which it would be requisite for him to appear before the proper magistrate, in order that the first examination of the case might commence. (Harpocrat.) In Aristophanes (Nub. 1246, Vesp. 1408) we read of one summoner only being employed, but two are generally mentioned by the orators as the usual number. (Dem. c. Nicost. p. 1251. 5, pro Corom. 244. 4, c. Boost. p. 1017. 6.) The names of the summoners were subscribed to the declaration or bill of the prosecutor, and were, of course, essential to the validity of all proceedings founded upon it. What has been hitherto stated applies in general to all causes, whether civic or grafa: but in some which commenced with an information laid before magistrates, and an arrest of the accused in consequence (as in the case of an έπεδεικτική εἰς αὐτίγγελία), there would be no occasion for a summons, nor, of course, witnesses to its service. In the εἴσυναι and δοκιμασίαι also, when held at the regular times, no summons was issued, as the persons whose character might be affected by an accusation were necessarily present, or presumed to be so; but if the prosecutor had let the proper day pass, and proposed to hold a special εἴσυνη at any other time during the year in which the defendant was liable to be called to account for his conduct in office (εἴσυνη), the agency of summoners was as requisite as in any other case. Of the δοκιμασίαι that of the orators alone had no fixed time; but the first step in the case was not the usual legal summons (πρόςαλλησιν), but an announcement from the prosecutor to the accused in the assembly of the people. (Meier, Att. Proces. pp. 212, 575.) In the event of persons subscribing themselves falsely as summoners, they exposed themselves to an action (ψευδοδικασία) at the suit of the party aggrieved. (J. S. M.)

CILIBANA'RII. [VATAPRAXTI.] CILEBS is supposed to contain the same element as the verb to hear, to "hear" or "obey," and is accordingly compared by Niebuhr with the German word hoeriger, "a dependant."

In the time of Cicero, we find patronus in the sense of adviser, advocate, or defender, opposed to clients in the sense of the person defended, or the consultant; and this use of the word must be referred, as we shall see, to the original character of the patronus. (Ovid, Art. Am. i. 98; Hor. Sat. i. 10. Ep. i. 5. 31, ii. 1. 104.) The relation of a
master to his liberated slave (libertus) was also expressed by the word patronus, and the libertus was the client of his patronus. Any Roman citizen who wanted a protector, might attach himself to a patronus, and would thenceforward be a client. Strangers who came into exile at Rome might do the same (jus applicationis, Cic. de Or. i. 39). Distinguished Romans were also sometimes the patroni of states and cities, which were in a certain relation of subjection or friendship to Rome (Sueton. Octavius, Caesar, 17); and in this respect they may be compared to colonial agents, or persons among us, who are employed to look after the interests of the colony in the mother country; except that among the Romans such services were never remunerated directly, though there might be an indirect remuneration. (Cic. Div. 20, Pro Sulla, c. 21; Tacit. Or. 36.) This relationship between patronus and clientela (Cic. ad Att. xiv, 12), which also expressed the whole body of a man's clients, (Tact. Ann. xiv, 61.) In the Greek writers on Rome, the patronus (or patron) is represented by the word patron, and client, by πελεκτής. (Plut. Tit. Gracch. 13, Marius, 5.) The clientela, but in a different form, existed as far back as the records or traditions of Roman history extend; and the following is a brief notice of its origin and character, as stated by Dionysius (Antiq. Rom. ii. 9), in which the writer's terms are kept:—

Romulus gave to the πατριάδα the care of religion, the honores (ἀρχῶν), the administration of justice, and the administration of the state. The δημοτικό (whom in the preceding chapter he has explained to be the πατριάδα) had none of these privileges, and they were also poor; husbandry and the necessary arts of life were their occupation. Romulus thus entrusted the δημοτικὸ to the safe keeping of the πατριάς (who are the εὐστροφικα), and permitted each of them to choose his patron. This relationship between the patron and the client was called, says Dionysius, patronia. (Compare Cic. Rep. ii. 9.)

The relative rights and duties of the patrons and the clients were, according to Dionysius, as follow (ibid. i. 10, and other passages):—

The patron was the legal adviser of the client; he was the client's guardian and protector, as he was the guardian and protector of his own children; he maintained the client's suit when he was wronged, and defended him when another complained of being wronged by him; in a word, the patron was the guardian of the client's interests, both private and public. The client contributed to the marriage portion of the patron's daughter, if the patron was poor; and to his ransom, or that of his children, if they were taken prisoners; he paid the costs and damages of a suit which the patron lost, and of any penalty in which he was condemned; he bore a part of the patron's expenses incurred by his discharging public duties, or filling the honourable places in the state. Neither party could accuse the other, or bear testimony against the other, or give his vote against the other. The clients accompanied their patroni to war as vassals. (Dionys. x. 43.) This relationship between patron and client subsisted for many generations, and resembled in all respects the relationship by blood. It was a connection that was hereditary; the clients bore the gentile name of the patronus, and he and his de-
It is stated by Niebuhr, that "if a client died without heirs, his patron inherited; and this law extended to the case of freedmen; the power of the patron over whom must certainly have been founded originally on the general patronal right." This statement, if it be correct, would be consistent with the quasi patria potestas of the patron.

But if a client died with heirs, could he make a will? and if he died without heirs, could he not dispose of his property by will? and if he could not make, or did not make a will, and had heirs, who must they be? must they be sui heredes? had he a familia, and consequently agnati? had he, in fact, that connubium, by virtue of which he could acquire the patria potestas? He might have all this consistently with the statement of Dionysius, and yet be a citizen sui jure; for he had not the honores and the other distinguishing privileges of the patricians; and consistently with the statement of Dionysius he could not vote in the comitia curiata. It is not possible to prove that a client had all this, and it seems equally impossible, from existing evidence, to show what his rights really were. So far as our extant ancient authorities show, the origin of the clientela, and its true character, were unknown to them. There was a body in the Roman state, at an early period of its existence, which was neither patron nor client, and a body which once did not, but ultimately did, participate in the sovereign power: this was the plebs. The clientes also existed in the earliest period of the Roman state, but our knowledge of the true condition of this body must remain inexact, for the want of sufficient evidence in amount, and sufficiently trustworthy.

It is stated by Livy (ii. 56) that the clientes had votes in the comitia of the centuries: they were therefore registered in the censors' books, and could have quiritarian ownership. [Centumviri.] They had therefore the commercium, possibly the connubium, and certainly the suffragium. It may be doubted whether Dionysius understood them to have the suffragium at the comitia centuriata; but if such was the legal condition of the clientes, it is impossible to explain their relation to the patricians, as given by some modern writers, can be altogether correct.

It would appear, from what has been stated, that patronus and patricius were originally convertible terms, at least until the plebs obtained the honoræ. From that time, many of the reasons for a person being a cliens of a patricius would cease; for the plebeians had acquired political importance, had become acquainted with the law and the legal forms, and were fully competent to advise their clients. This change must have contributed to the destruction of the strict old clientela, and was the transition to the clientela of the later ages of the republic. (Hugo, Lehrbuch, &c. vol. i. p. 458.)

It has been conjectured (Becker, Handbuch der Römischen Alterthümer, vol. ii. p. 125) that the clientela was an old Italian institution, which existed among some of those people, out of which the Romans Populus arose. When Tatius and his Sabines settled in Rome, their clients settled there with them (Dionys. ii. 40); and Attius Clausus brought to Rome a large body of clients. (Liv. ii. 16; Dionys. x. 40). It is further conjectured, and it is not improbable, that the clientes were Italians, who had been conquered and reduced to a state of subjection.

Admitting a distinction between the plebs and the old clientes to be fully established, there is still room for careful investigation as to the real condition of the clientes, and of the composition of the Roman state before the estate of the plebs was made equal to that of the patricians. [G. L.]

CLIENTE LA. [CLIENTS.]

CLIMA (κλίμα), literally a slope or inclination, was used in the mathematical geography of the Greeks* with reference to the inclination of various parts of the earth's surface to the plane of the equator. Before the globular figure of the earth was known, it was supposed that there was a general slope of its surface from south to north, and this was called κλίμα. But as the science of mathematical geography advanced, the word was applied to different belts of the earth's surface, which were determined by the different lengths of the longest day at their lines of demarcation. This division into climates was applied only to the northern hemisphere, as the geographers had no practical knowledge of the earth south of the equator.

Hipparchus (about B. C. 160) seems to have been the first who made use of this division; his system is explained at length by Strabo (ii. p. 132). Assuming the circumference of a great circle of the earth to be 252,000 stadia, Hipparchus divided this into 360 degrees, of 700 stadia each; and then, beginning at the parallel of Merœs, and proceeding northwards, he undertook to describe the astronomical phenomena observed at each degree of latitude, or every 700 stadia; among these phenomena, he observed that the length of the longest day at Merœs was 18 hours, and at Syene 13½. The observations of later astronomers and geographers, such as Geminus, Strabo, Pliny, and Ptolemy, are described in the works cited below. The following table, from Ucrt, shows the climates, as given by Ptolemy (Geogr. i. 23).

It will be observed that there are nineteen climates, the beginning and middle of which are marked by lines called parallels, of which the first marks the equator, and the thirty-third the arctic circle. Up to this point, there are sixteen climates, of which twelve are determined by the increase of half-an-hour in the length of the longest day, the 13th and 14th 1 hour, and the 15th and 16th 2 hours. In the remaining climates, within the arctic circle, the days no longer increase by hours but by months. Elsewhere (Almag. ii. 6) he makes ten climates north of the equator, beginning at the parallel of Taprobane in lat. 4° 15', and ending at that of Thule, in lat. 65°; and one to the south, beginning at the equator, or the parallel of Cape Rappaham, and ending at the parallel of Antimeroë in lat. 10° 25'.

The term κλίμα was afterwards applied to the average temperature of each of these regions, and hence our modern use of the word. (Strab. i. c.; Dion. Hal. i. 9; Plut. Mar. 11, Aem. Paul. 5, Moral. p. 891; Polyb. vii. 6, § 1, x. 1, § 3; Ath. xii. p. 523; C. Gemin. Elen. Astron. 5; Plin. H. N. ii. 70—75, s. 73—77; Agathem. i. 3; Celler. Geogr. i. 6; Ucrt, Geogr. vol. i. pt. 2, pp. 182, &c.)

* The corresponding Latin word is inclinatio (Vitruv. i. 1), also declinatio, divergentia (comp. Aul. Gall. xiv. 1; Colum. iii. 19). CLIMA was only used at a late period.

</table>

CLIPEUS (ἀστρίς), the large shield worn by the Greeks and Romans, which was originally of a circular form, and is said to have been first used by Proetus and Acrisius of Argos (Paus. ii. 25. § 6), and therefore is called clipeus Argolicus (Virg. Aen. iii. 637), and likened to the sun. (Compare also ἀστρίδα πάντως ἑτέραν, Hom. Il. iii. 347, v. 458, ἀστρίδας εὐκύκλους, xiv. 428; Varr. De Ling. Lat. v. 19, ed. Müller; Festus, s. c.) According to other accounts, however, the Greeks obtained the shield, as well as the helmet, from the Egyptians (Herod. iv. 180; Plat. Tim. p. 24, b.)

The shield used by the Homeric heroes was large enough to cover the whole man. It was sometimes made of osiers twisted together, called ἵξα, or of wood: the wood or wicker was then covered over with ox hides of several folds deep, and finally bound round the edge with metal. (Hom. Il. xii. 295.) The outer rim is termed ἄντες (H. xviii. 479), ους (Eur. Troad. 1265),
In the centre was a projection called ὑφάλος or ῥεσομφάλιον, which served as a sort of weapon by itself, or caused the missiles of the enemy to glance off from the shield. It is seen in the next woodcut, from the column of Trajan. A spike, or some other prominent excrescence, was sometimes placed upon the ὑφάλος, which was called ἐπομφάλιον.

In the Homeric times, the Greeks used a belt to support the shield; but this custom was subsequently discontinued in consequence of its great inconvenience [BALTUS], and the following method was adopted in its stead:—A band of metal, wood, or leather, termed ἱάους, was placed across the inside from rim to rim, like the diameter of a circle, to which were affixed a number of small iron bars, crossing each other somewhat in the form of the letter X, which met the arm below the inner bend of the elbow joint, and served to steady the orb. This apparatus, which is said to have been invented by the Carians (Hierod. i. 171), was termed ἰχανος or ἰχανη. Around the inner edge ran a leather thong (πόρτακα), fixed by nails at certain distances, so that it formed a succession of loops all round, which the soldier grasped with his hand (ἐμβαλλον πόρτακα γεναλων χειρ, Eur. Hec. 1396). The preceding woodcut, which shows the whole apparatus, will render this account intelligible. It is taken from one of the terra cotta vases published by Tischbein (vol. iv. tab. 20).

At the close of a war it was customary for the Greeks to suspend their shields in the temples when the πόρτακα were taken off, in order to render them unserviceable in case of any sudden or popular outbreak; which custom accounts for the alarm of Demosthenes in the Knights of Aristophanes (859), when he saw them hanging up with their handles on.

The ἄσπις was carried by the heavy-armed men (διπλίται) during the historical times of Greece, and is opposed to the lighter πέκτη and γέφυρα: hence we find the word ἄσπις used to signify a body of διπλίται (Xen. Anab. i. 7 § 10).

According to Livy (i. 43), when the census was instituted by Servius Tullius, the first class only used the clipeus, and the second were armed with the scutum [SCUTUM]; but after the Roman soldier received pay, the clipeus was discontinued altogether for the Sabine scutum. (Liv. viii. 8: compare ix. 13; Plut. Rom. 21; Diod. Ecol. xxiii. 3, who asserts that the original form of the Roman shield was square, and that it was subsequently changed for that of the Tyrrhenians, when it was round.)

The practice of emblazoning shields with various devices, the origin of armorial bearings, is of considerable antiquity. It is mentioned as early as the time of Aeschylus, who represents the seven chiefs who marched against Thebes with such shields (Aeschyl. Sept. c. Theb. 387, &c.; comp. Virg. Aen. viii. 658; Sil. Ital. viii. 396). This
custom is illustrated by the preceding beautiful
dem from the antique, in which the figure of Vic-
tory is represented inscribing upon a clipeus the
name or merits of some deceased hero.
Each Roman soldier had also his own name ins-
scribed upon his shield, in order that he might
readily find his own when the order was given to
impile arms (Veget. ii. 17) ; and sometimes the
name of the commander under whom he fought.
(Hirt. Bell. Alex. 56.)
The clipeus was also used to regulate the
temperature of the vapour bath. [Balneae, p.

CLITELLAE, a pair of panniers, and there-
tore only used in the plural number. (Hor. Sat. i.
5. 47 ; Plaut. Most. iii. 2. 91.) In Italy they
were commonly used with mules or asses, but in
other countries they were also applied to horses,
of which an instance is given in the annexed wood-
cut from the column of Trajan ; and Plautus (II.
94) figuratively describes a man upon whose
shoulders a load of any kind, either moral or phy-
sical, is charged, as homo clitellarius. [A.R.]

CLOACA, a common sewer. The term cloaca
is generally used in reference only to those spacious
subterraneous vaults, either of stone or brick,
through which the foul waters of the city, as well
as all the streams brought to Rome by the aque-
ducts, finally discharged themselves into the
Tiber ; but it also includes within its meaning
any smaller drain, either wooden pipes or clay
pipes (Ulpian, Dig. 43. tit. 23. a. 1), with which
almost every house in the city was furnished to
carry off its impurities into the main conduit.
The whole city was thus intersected by subter-
raneous passages, and is therefore called urbs
pensilis, in Pliny's enthusiastic description of the
cloacae. (H. N. xxxvi. 15. s. 24.)
The most celebrated of these drains was the
cloaca maxima, the construction of which is as-
scribed to Tarquinius Priscus (Liv. i. 38 ; Plin.
l. c.), and which was formed to carry off the
waters brought down from the adjacent hills into
the Velabrum and valley of the Forum. The
stone of which it is built is a mark of the great
antiquity of the work ; it is not the peperino of
Gabii and the Alban hills, which was the common
building-stone in the time of the commonwealth ;
but it is the "tufa litoide" of Brocchi, one of the
volcanic formations which is found in many places
in Rome, and which was afterwards supplanted in
public buildings by the finer quality of the peperino.
(Arnold, Hist. Rom. vol. i. p. 52.) This cloaca
was formed by three arches, one within the other,
the innermost of which is a semicircular vault of
18 Roman palms, about 14 feet in diameter, each
of the hewn blocks being 7½ palms long and 4½
high, and joined together without cement. The
manner of construction is shown in the annexed
woodcut, taken on the spot, where a part of it is
uncovered near the arch of Janus Quadrifrons.

The mouth where it reaches the Tiber, nearly
opposite to one extremity of the insula Tiberina,
still remains in the state referred to by Pliny (l. c.)
It is represented in the annexed woodcut, with the
adjacent buildings as they still exist, the modern
fabrics only which encumber the site, being left
out.

The passages in Strabo and Pliny which state
that a cart (avata, vehes) loaded with hay, could
pass down the cloaca maxima, will no longer ap-
pear incredible from the dimensions given of this
stupendous work ; but it must still be borne in
mind that the vehicles of the Romans were much
smaller than our own. Dion Cassius also states
(xlix. 43) that Agrippa, when he cleansed the
sewers, passed through them in a boat, to which
Pliny probably alludes in the expression urbs
subter navigata ; and their extraordinary dimen-
sions, as well as that of the embouchures through
which the waters poured into them, is still further
testified by the exploits of Nero, who threw down
the sewers the unfortunate victims of his nightly
riots. (Suet. Nero, 26 ; compare Dionys. x. 53 ;
Cic. Pro Sext. 33.)
The cloaca maxima, formed by Tarquin, ex-
tended only from the forum to the river, but was
subsequently continued as far up as the Subura, of
which branch some vestiges were discovered in the
KLOPES DIKE.

The expense of cleansing and repairing these cloaca was, of course, very great, and was defrayed partly by the treasury, and partly by an assessment called cloacaum. (Ulpian, Dig. 7. tit. 1. s. 27. § 3.) Under the republic, the administration of the sewers was entrusted to the consuls; but under the empire, particular officers were appointed for that purpose, cloacum curatores, mention of whom is found in inscriptions (cic. Suet. Aug. 48, 5. c. xixii. 2, 3, 4, 5 ; ed. I.; Ulpian, Dig. 43. art. 23. § 2). The emperors employed condemned criminals in the task. (Plin. Epist. x. 41.)

Rome was not the only city celebrated for works of this kind. Diodorus (vi. 25) makes special mention of the sewers (δόχαμα) of Agrippa, which were constructed about B.C. 480, by an architect named Phaeax, after whom they were called φαεακες. [A. R.]

KLOPES DIKE’ (κλοπης δίκης), the action for theft was brought in the usual manner before a diacetes or a court, the latter of which Meier (Att. Process, p. 67) infers to have been under the presidency of the thesmothetae, whether the prosecutor preferred his accusation by way of γραφή or δίκη. We learn from the law quoted by Demosthenes (c. TImocr. p. 739), that the criminal upon conviction was obliged to pay twice the value of the theft to the plaintiff if the latter recovered the specific thing stolen; that failing of this, he was bound to reimburse him tenfold, that is, according to an additional penalty, and that the criminal might be confined in the stocks (ποιδοκέκκυς) five days and as many nights.

In some cases, a person that had been robbed was permitted by the Attic law to enter the house in which he suspected his property was concealed, and institute a search for it. (Plin. Epist. x. 41.) Moreover, the servants of the money-changers were so called, from collecting their debts for them. (Cic. Pro Cluent. iv. 64.) [R. W.]

COCHELEA (κοχλεα), which properly means a snail, was also used to signify other things of a spiral form.

1. A screw. The woodcut annexed represents a clothes-press, from a painting on the wall of the Chalcideum of Eumachia, at Pompeii, which is worked by two upright screws (coclcoi) precisely in the same manner as our own linen presses. (Mus. Borbonico, iv. 50.)
3. A peculiar kind of door, through which the wild beasts passed from their dens into the arena of the amphitheatre. (Varr. De Re Rust. iii. 5.) It consisted of a circular cage, open on one side like a lantern, which worked upon a pivot and within a shell, like the machines used in the convents and foundling hospitals of Italy, termed codex, so that any particular beast could be removed from its den into the arena merely by turning it round, and without the possibility of more than one escaping at the same time; and therefore it is recommended by Varro (L. c.) as peculiarly adapted for an aviary, so that the person could go in and out without affording the birds an opportunity of flying away. Schneider (in Ind. Script. R. R. s. v. Codex), however, maintains that the cochlea in question was nothing more than a portcullis (cata- scleractis) raised by a screw, which interpretation does not appear so probable as the one given above. [A. R.]

COCHLEAR (κοχλιαριον) was a kind of spoon, which appears to have terminated with a point at one end, and at the other was broad and hollow like our own spoons. The pointed end was used for drawing snails (cociles) out of their shells, and eating them, whence it derived its name; and the broader part for eating eggs, &c. Martial (xiv. 121) mentions both these uses of the cochlear,—

"Sum cochleis Chilicius utilissima ovis." (Compare Plin. H. N. xxxviii. 4; Petron. 32.)

Cochlear was also the name given to a small measure like our spoonful. According to Rhemnius Fannius, it was 1/4 of the cyathus.

COCLILIS, which is properly a diminutive of cochlea, is used as an adjective with columna, to describe such columns as the Trajan and Antonine; but whether the term was used with reference to the spiral staircase within the column, or to the spiral bas-relief on the outside, or to both, cannot be said with certainty. (P. Victor. de Region. Urb. Rom. 8, 9.)

Pliny applies the word also to a species of gem found in Arabia. (H. N. xxxvii. 12. a. 74.) [P. S.]

CODEX. dim. CODICILLUS, is identical with caulax, as Claudius and Claudius, clausum and clam, and caulax. Cato (ap. Front. Epist. ad M. Anton. i. 2) still used the form caulax in the same sense in which afterwards codex was used, except that it is more awkward. Cic. Phil. viii. 10, 92, (Compare Plin. H. N. xxviii. 4; Petron. 32.)

The word originally signified the trunk or stem of a tree (Virg. Georg. ii. 30; Columella, xii. 19; Plin. H. N. xvi. 30), and was also applied to designate anything composed of large pieces of wood, whence the small fishing or ferry boats on the Tiber, which may originally have been like the Indian canoes, or were constructed of several roughly hewn planks nailed together in a rude and simple manner, were called naves caulaciam, or caulaciam, or caulaciam. (Fest. and Varr. ap. Nonium, xii. 12; Gellius, x. 23.) The surname of Caudex given to Appius Claudius must be traced to this signification. But the name codex was especially applied to wooden tablets bound together and lined with a coat of wax, for the purpose of writing upon them, and when, at a later age, parchment or paper, or other materials were substituted for wood, and put together in the shape of a book, the name of codex was still applied to them. (Cic. Turr. ii. 1, 56; Dig. 32. tit. 1. a. 52; Sueton. Aug. 101.) In the time of Cicero we find it also applied to the tablet on which a bill was written; and the tribune, Cornelius, when one of his colleagues forbade his bill to be read by the herald or scribe, read it himself (legit codicem suum; see Cic. in Vat. 2, and Ascon. Ped. in Argum. ad Cornel. p. 58. ed. Orelli). At a still later period, during the time of the emperors, the word was used to express any collection of laws or constitutions of the emperors, whether made by private individuals or by public authority. See the following articles.

The diminutive codicillus, or rather codicilli, was used much in the same way as codex. It originally signified tablets of the kind described above, and was subsequently employed to indicate any small book or document, made either of parchement or paper. (Cic. Phil. viii. 10, ad Fam. vi. 18; Suet. Claud. 29.) Respecting its meaning in connexion with a person's testament, see Testamentum.

CODEX GREGORINUS and HERMOGENIANUS. It does not appear quite certain if this title denotes one collection or two collections. The general opinion, however, is, that there were two codices compiled respectively by Gregorianus and Hermogenianus, who are sometimes, though incorrectly, called Gregorius and Hermogenes. The codex of Gregorianus was divided into books (the number of which is not known), and the books were divided into tituli. The fragments of this codex begin with constitutions of Septimius Severus, A. D. 196, and end with those of Dioecletian and Maximian, A. D. 285-305. The codex of Hermogenianus, so far as we know it, is only quoted by titles, and it only contains constitutions of Dioecletian and Maximian, with the exception of one by Antoninus Caracalla; it may perhaps have consisted of one book only, and it may have been a kind of supplement to the other. The name Hermogenianus is always placed after that of Gregorius, when this code is quoted. According to the Consultationes, the codex of Hermogenianus also contained constitutions of Valens and Valentinian II, which, if true, would bring down the compiler to a time some years later than the reign of Constantine the Great, under whom it is generally assumed that he lived. These codices were not made by imperial authority; they were the work of private individuals, but apparently soon came to be considered of such authority in courts of justice, as is shown indirectly by the fact of the Theodosian and Justianus codes being formed on the model of the Codex Gregorianus and Hermogenianus. (Zimmern, Geschichte des Römischen Privatrechts, Heidel. 1826; Hugo, Lehrbuch der Geschichte des Röm. Rechts, Berlin, 1832; Frag. Cod. Greg. et Herm. in Schulting's Jurisprudentia Vet. &c., and in the Jus Civile Antiqu. Berol. 1815; Böcking, Institutionen.)

CODEX JUSTIANIANUS. In February of the year A. D. 528, Justinian appointed a commission, consisting of ten persons, to make a new collection of imperial constitutions. Among these ten were Tribonianus, who was afterwards employed on the Digesta and the Institutiones, and Theophilus, a teacher of law at Constantinople. The commission was directed to compile one code from those of Gregorianus, Hermogenianus, and Theodosius, and also from the constitutions of Theodosius made subsequently to his code, from those of his successors, and from the constitutions of

and three others. The new code was promulgated

distinguished teacher of law at Berytus in Phoenicia,

of the second book of the Code. The

constitutions, as they appear in this code,

are divided into titles, and the titles are sub

the judicial decisions, the new constitutiones,

and also by arranging them under their several

titles in the order of time. The collection was to

include rescripts and edicts, as well as constitu-

tions properly so called. Fourteen months after

the date of the commission, the code was completed

and declared to be law (16th April, 529) under

the title of the Justinianus Codex ; and it was de-

clared that the sources from which this code was

derived were no longer to have any binding force,

and that the new code alone should be referred to

as of legal authority. (Constit. de Justin. Cod.

Conferenda.)

The Digesta or Pandectae, and the Institutiones,

were compiled after the publication of this code,

subsequently to which fifty decisions and some

new constitutions also were promulgated by the

emperor. This rendered a revision of the code

necessary ; and accordingly a commission for that

purpose was given to Tribonianus, to Dorotheus,

a distinguished teacher of law at Berytus in Phoenicia,

and three others. The new code was promulgated

at Constantinople, on the 16th November 534, and

the use of the decisions, the new constitutions,

and of the first edition of the Justinianus Codex,

was forbidden. The second edition (secunda editio,

repetita praelectio, Codex repetitae praelectionis) is

the code that we now possess, in twelve books,
each of which is divided into titles; it is not known

how many books the first edition contained. The

constitutions are arranged under their several titles,
in the order of time and with the names of the em-

perors by whom they were respectively made, and

their dates.

The constitutions in this code do not go further

back than those of Hadrian, and those of the im-

mediate successors of Hadrian are few in number;
a circumstance owing in part to the use made of

the earlier codes in the compilation of the Justinian

code, and also to the fact of many of the earlier

constitutions being incorporated in the writings of

the jurists, from which alone any knowledge of

many of them could be derived. (Constiti. De

Emendatione Cod. Dom. Justin.)

The constitutions, as they appear in this code,
have been in many cases altered by the compilers,
and consequently, in an historical point of view,
the code is not always trustworthy. This fact
appears from a comparison of this code with the
Theodosian code and the Novellae. The order of
the subject-matter in this code corresponds, in a
certain manner, to that in the Digest. Thus the
seven parts into which the fifty books of the
Digest are distributed, correspond to the first nine
books of the Code. The matter of the three last
books of the Code is hardly treated of in the
Digest. The matter of the first book of the Digest
is placed in the first book of the Code, after the
law relating to ecclesiastical matters, which, of
course, is not contained in the Digest; and the
three following books of the first part of the Digest
 correspond to the second book of the Code. The
following books of the Code, the ninth included,
correspond respectively, in a general way, to the
following parts of the Digest. Some of the con-
stitutions which were in the first edition of the
Code, and are referred to in the Institutiones, have
been omitted in the second edition. (Instit. 2. tit.
20. a. 27 ; 4. tit. 6. a. 24.) Several constitutions,
which have also been lost in the course of time,
have been restored by Charondas, Cujacius, and
Contina, from the Greek version of the Codex
Gregorianus and Hermogenianus (adi similitudinem
Gregoriani et Hermogenianii). In 435, the
instructions were renewed or repeated; but the
commissioners were now sixteen in number. Anti-
chus was at the head of both commissions. It
seems, however, to have been originally the design
of the emperor not only to make a code which
should be supplementary to, and a continuation of,
the Codex Gregorianus and Hermogenianus; but
also to compile a work on Roman law from the
classical jurists, and the constitutions prior to those
of Constantine. However this may be, the first
commission did not accomplish this, and what we
now have is the code which was compiled by the
second commission. This code was completed,
and promulgated as law in the Eastern empire in 438,
and declared to be the substitute for all the constit-
utions made since the time of Constantine.
In the same year (438) the code was forwarded to
Valeantinian III., the son-in-law of Theodosius, by
whom it was laid before the Roman Senate, and
confirmed as law in the Western empire. Nine
years later Theodosius forwarded to Valentinian
his new constitutions (novellae constitutiones),
which had been made since the publication of the code;
and those also were in the next year (448) pro-
mulgated as law in the Western empire. So long
as a connection existed between the Eastern and
Western empires, that is, till the overthrow of the
latter, the name Novellae was given to the con-
stitutions subsequent to the code of Theodosius.
The latest of these Novellae that have come down
to us are three of the time of Leo and Anthimus,
a. d. 468.

The Codex Theodosianus consists of sixteen
books, the greater part of which, as well as his
Novellae, exist in their genuine state. The books
are divided into titles, and the titles are sub-
divided into constitutions or laws. The valuable
edition of J. Gothofredus (6 vols. fol. Lugd. 1665,
re-edited by Ritter, Lips. 1736—1745, 6 vols. fol.)
contains the code in its complete form, except the
first five books, for which it was necessary to use
the epitome contained in the Breviarium [Breviari-
rium]. This is also the case with the edition of
this code contained in the Jus Civilis Antejustinian-
neum of Berlin, 1815. But the recent discovery
of a MS. of the Breviarium, at Milan, by Clossius,
and of a Palimpsest of the Theodosian code at
Turin by Peyron, has contributed largely both to
the critical knowledge of the other parts of this
code, and has added numerous genuine constitu-
tions to the first five books, particularly to the
first. Hanei's discoveries also have added to our knowledge of the later books, and his edition of the Theodosian Code, Bonn, 1837, 4to, is the latest.

The extract or epitome of the first five books in the Jireviarium is very scanty; 262 laws, or fragments of laws, were omitted, which the discoveries of Theodosius and Peyron reduced to 200. More recent discoveries by Carlo Baudoi a Vesme at Turin will add to the 6th, 8th, 9th, 10th, and 16th books.

The Novellae Constitutiones anterior to the time of Justinian are collected in six books in the Jus Catholic Antejustinianum, Berlin, 1815, and in Hanei's more recent edition.

The commission of Theodosius was empowered to arrange the constitutiones according to their subject, and under each subject according to the order of time; to separate those which contained different matters, and to omit what was not essential or superfluous. The arrangement of the Theodosian code differs in the main from that of the code of Justinian, which treats of jus ecclesiasticum in the beginning, while that of Theodosius in the first book treats chiefly of offices; and the second, third, fourth, and beginning of the fifth book treat of jus privatum. The order here observed, as well as in the code which it professed to follow, as a model, was the order of the writers on the theodium edict. The eighth book contains the laws relating to the jus liberorum. The ninth book begins with crimes. The laws relating to the Christian church are contained in the sixteenth and last book. It is obvious from the circumstances under which the Theodosian and Justinian codes were compiled, and from a comparison of them, that the Justinian code was greatly indebted to the Theodosian. The Theodosian code was also the basis of the edict of Theodoric king of the Ostrogoths; it was epitomised, with an interpretation, in the Theodosian Lex Romana, commonly called Papiani. The responsorum, was founded upon it. [G. L.]

CODICILLUS. [Codex.]
CODON (κόδος), a bell. [Tintinnabulum.]
COEPTIO. [Matrimonium.]
COENA (δείπνον), the principal meal of the Greeks and Romans, corresponding to our dinner, rather than supper. As the meals are not always clearly distinguished, it will be convenient to give a brief account of all of them under the present.

1. GREEK.—The materials for an account of the Greek meals, during the classical period of Athens and Sparta, are almost confined to incidental allusions of Plato and the comic writers. Several ancient authors, termed δείπνοδοι, are mentioned by Athenaeus; but, unfortunately, their writings only survive in the fragments quoted by him. His great work, the Deipnosophists, is an inexhaustible treasury of this kind of knowledge, but it is arranged, and with little attempt to distinguish the customs of different periods.

The poems of Homer contain a real picture of early manners, in every way worthy of the antiquarian's attention. As they stand apart from all other writings, it will be convenient to exhibit in one view the state of things which they describe. It is not to be expected that the Homeric meals at all agree with the customs of a later period; in deed it would be a mere waste of time to attempt adapting the one to the other. Athenaeus (p. 8) who has entered fully into the subject, remarks on the singular simplicity of the Homeric banquets, in which kings and private men all partake of the same food. It was common even for royal personages to prepare their own meals (II. ix. 206—218; compare Gen. xxvii. 31), and Ulysses (Od. xv. 322) declares himself no mean proficient in the culinary art—

Πώ τε εύ κοιτάζει, διὰ δέ ήλθ' Βασίλεις κείσαται
Δείπνοιαν τε καί οίνον καί οίνοχώσας.

Three names of meals occur in the Iliad and Odyssey —δείπνον, δείπνοι, δόρυν. This division of the meals is ascribed, in a fragment of Aeschylus quoted by Athenaeus (p. 11), to Palamedes. The word δείπνον uniformly means the early (δύ-νοι, Od. xvi. 2) as δόρυν does the late meal; but δείπνον, on the other hand, is used for either (II. ii. 381, Od. xvii. 170), apparently without any reference to time. We should be careful, however, how we argue from the unsettled habits of a camp to the regular customs of ordinary life.

From numerous passages in the Iliad and Odyssey it appears to have been usual to sit during meals. In the palace of Telemachus, before eating a servant brings Minerva, who is habited as a stranger, the χύρως or lustral water "in a golden pitcher, pouring it over a silver vessel." (Od. i. 136.) Beef, mutton, and goat's flesh were the ordinary meats, usually eaten roasted; yet from the lines (II. xii. 363)

'Ος δὲ λέβης εἰς ένδον, σπηγόμυς πυρὶ πολλός,
Κλασθείσον ευπρομένον ἁπαλοτρέπον σίδησιν,

we learn that boiled meats were held to be far from unsavoury. Cheese, flour, and occasionally fruits, also formed part of the Homeric meals. Bread, brought on in baskets (II. ix. 217), and salt (Δάλ., to which Homer gives the epithet θεῖος), are mentioned; from Od. xvii. 455, the latter appears, even at this early period, to have been a sign of hospitality; in Od. xi. 122, it is the mark of a strange people not to know its use.

Each guest appears to have had his own table, and he who was first in rank presided over the rest. Menelaus, at the marriage feast of Hermione, begins the banquet by taking in his hands the side of a roasted ox and placing it before his friends. (Od. iv. 63.) At the same entertainment music and dancing are introduced; — "The divine minstrel hymned to the sound of the lyre, and two tumblers (κυνωστρήμοι) began the festive strain, wheeled round in the midst." It was not beneath the notions of those early days to stimulate the heroes to battle (II. xii. 311),

"Εδρη τε, κράσιν τε, ἵδε πλαίσιον δείπνωσιν,

And Ajax on his return from the contest with Hector is presented by Agamemnon with the νάτα δινείκεαι.

The names of several articles of the festive board occur in the Iliad and Odyssey. Knives, spits, cups of various shapes and sizes, bottles made of goat-skin, casks, &c., are all mentioned. Many sorts of wine were in use among the heroes; some of Nestor's is remarked on as being eleven years old. The Maronean wine, so called from Maron, to which Homer gives the epithet θεῖος, is mentioned; from Od. xvii. 456, the latter appears, even at this early period, to have been a sign of hospitality; in Od. xi. 122, it is the mark of a strange people not to know its use.

Each guest appears to have had his own table, and he who was first in rank presided over the rest. Menelaus, at the marriage feast of Hermione, begins the banquet by taking in his hands the side of a roasted ox and placing it before his friends. (Od. iv. 63.) At the same entertainment music and dancing are introduced; — "The divine minstrel hymned to the sound of the lyre, and two tumblers (κυνωστρήμοι) began the festive strain, wheeled round in the midst." It was not beneath the notions of those early days to stimulate the heroes to battle (II. xii. 311),

"Εδρη τε, κράσιν τε, ἵδε πλαίσιον δείπνωσιν,

And Ajax on his return from the contest with Hector is presented by Agamemnon with the νάτα δινείκεαι.

The names of several articles of the festive board occur in the Iliad and Odyssey. Knives, spits, cups of various shapes and sizes, bottles made of goat-skin, casks, &c., are all mentioned. Many sorts of wine were in use among the heroes; some of Nestor's is remarked on as being eleven years old. The Maronean wine, so called from Maron, a hero, was especially celebrated, and would bear m mingling with twenty times its own quantity of water. It may be observed that wine was seldom, if ever, drunk pure. When Nestor and Machaon
sit down together, "a woman," like unto a goddess, sets before them a polished table, with a brazen tray, εν δὲ κρύσταλλο τόμην ὄψιν. Then she mingles a cup of Prunian wine in Nestor's own goblet, and cuts the cheese of goat's milk with a steel knife, scatting white flour over it. The guests drink to one another; thus the gods (II. iv. 4) διδυκτηρία ἄλλαξαν, and Ulysses pledged Achilles, saying, χαίρε, Αχιλλής. (II. ii. 225). Wine was drawn from a larger vessel [CRATER] into the cups from which it was drunk, and before drinking, libations were made to the gods by pouring some of the contents on the ground. (II. vii. 430.)

The interesting scene between Ulysses and the swineherd (Od. xiv. 420) gives a parallel view of early manners in a lower grade of life. After a welcome has been given to the stranger, "The swineherd clears the wood, and they place the swine of five years old on the hearth. In the goodness of his heart, Eumaeus forgets not the immortal gods, and dedicates the firstling lock with a prayer for Ulysses's return. He next anoints the animal with a piece of cleft oak, and the attendants sing off the hair. He then cuts the raw meat all round from the limbs, and laying it in the rich fat, and sprinkling flour upon it, throws it on the fire as an offering (ἁπαρχής) to the gods, the rest the attendants cut up and pierce with spits, and having cooked it with cunning skill, draw off all, and lay the mess on the tables. Then the swineherd stands up to divide the portions, seven portions in all, five for himself and the guests, and one apiece to Mercury and the nymphs."

There is nothing more worthy of remark in the Homeric manners than the hospitality shown to strangers. Before it is known who they are, or whence they come, it is the custom of the times to give them a welcome reception. (Od. i. 125, &c.) When Nestor and his sons saw the strangers, "They all came in a crowd and saluted them with the hand, and made them sit down at the feast on the soft fleeces by the sea shore."

The Greeks of a later age usually partook of three meals, called ἁρπαγμα, ἀρπαστὸς, and δείπνοιοι. The last, which corresponds to the ἄρπαστος of the Homeric poems, was the evening meal or dinner; the ἀρπαστὸς was the luncheon; and the ἁρπαγμα, which answers to the ἄρπαστος of Homer, was the early meal or breakfast.

The ἁρπαγμα was taken immediately after rising in the morning (ἐκ εὐνυχίαν, ἐσθίων, Aristoph. Aves, 1286). It usually consisted of bread, dipped in unmixed wine (ἀρπατος), whence it derived its name. (Plut. Symp. viii. 6, § 4; Schol. ad Themistoc. i. 51; Athenaeus, i. p. 11.)

Next followed the ἀρπαστὸς or luncheon; but the time at which it was taken is uncertain. It is frequently mentioned in Xenophon's Analasis, and appears to have been taken at different times, as would naturally be the case with soldiers in active service. Suidas (s. v. Δείπνοι) says that it was taken about the third hour, that is about nine o'clock in the morning; but this account does not agree with the statements of other ancient writers. We may conclude from many circumstances that this meal was taken about the middle of the day, and that it answered to the Roman prandium, as Plutarch (Symp. viii. 6, § 5) asserts. Besides which the time of the ἀρπαγμα ἁρπατος, at which provisions seem to have been bought for the δρυτος, was from nine o'clock till noon. This agrees with the account of Aristophanes (Vesp. 605-612), who introduces Phileolaon describing the pleasure of returning home after attending the courts, and partaking of a good ἄρπαστος. The courts of justice could scarcely have finished their sittings by nine o'clock. Timeaus also defines δείπνο πρωδία, which we know to have been the early part of the afternoon [DIES], as the time before the ἄρπαστος. The ἄρπαστος was usually a simple meal, but of course varied according to the habits of individuals. Thus Iseomachus, in describing his mode of life to Socrates, who scantly approves of it, says, ἀρπαστὸν δὲ μητὶ κεκλήμης μητὶ ἄρπαστον πλὴρων διημερεῖον. (Xen. Oecon. xi. 18.)

The principal meal, however, was the δείπνος. It was usually taken rather late in the day, frequently not before sunset. (Lysias, c. Eratosth. p. 26.) Aristophanes (Ecol. 652) says,

Zen de melēsais, ἄταν ν ἄρπαστον τοῖς σταυχίοις ἀπεδομαὶ χαρις ἐπὶ δείπνοις.

But in order to ascertain the time meant by δείπνο τοῖς σταυχίοις, the reader is referred to the article ἈΡΕΩΛΟΓΙΟΝ.

The Athenians were a social people, and were very fond of dining in company. Entertainments were usually given, both in the heroic ages and latter times, when sacrifices were offered to the gods, either on public or private occasions; and also on the anniversary of the birthdays of members of the family, or of illustrious persons, whether living or dead. Plutarch (Symp. viii. 8) speaks of an entertainment being given on the anniversary of the birthdays both of Socrates and Plato.

When young men wished to dine together they frequently contributed each a certain sum of money, called συμβολή, or brought their own provisions with them. When the first plan was adopted, they were said ἄνω συμβολῶν δείπνων, and one individual was usually entrusted with the money to procure the provisions, and make all the necessary preparations. Thus we read in Terence (Eunuch, iii. 4) —

This kind of entertainment in which each guest contributed to the expense, is mentioned in Homer (Od. i. 226) under the name of ἄρπαστος.

An entertainment in which each person brought his own provisions with him, or at least contributed something to the general stock, was called δείπνοι ἄνω συμβολῶν, because the provisions were brought in baskets. (Athen. viii. p. 365.) This kind of entertainment is also spoken of by Xenophon (Mem. iii. 14, § 1).

The most usual kind of entertainments, however, were those in which a person invited his friends to his own house. It was expected that they should come dressed with more than ordinary care, and also have bathed shortly before; hence, when Socrates was going to an entertainment at Agathon's, we are told that he both washed and put on his shoes — things which he seldom did. (Plato, Symp. c. 2. p. 174.) As soon as the guests arrived
at the house of their host, their shoes or sandals were taken off by the slaves, and their feet washed (ὑποτίθενται καὶ ἀποφύγονται.) In ancient works of art we frequently see a slave or other person represented in the act of taking off the shoes of the guests, of which an example is given, from a terra cotta in the British Museum, in p. 308. After their feet had been washed, the guests reclined on the κλίναι οἱ κούχα (Kai ἐὰν μὲν ἐφ᾽ ἄποφύγεται τῶν παδόν, ἢ κατάκοιτον, Plato, Symp. c. 3. p. 175).

It has already been remarked that Homer never describes persons as reclining, but always as sitting at their meals; but at what time the change was introduced is uncertain. Müller (Dorians, iv. 3. §1) concludes from a fragment of Alcman, quoted by Plutarch (v. 315, n. 117), that the Spartans were accustomed to recline at their meals as early as the time of Alcman. The Dorians of Crete always sat; but the Athenians, like the Spartans, were accustomed to recline. The Greek women and children, however, like the Roman, continued to sit at their meals, as we find them represented in ancient works of art.

It was usual for only two persons to recline on each couch. Thus Agathon says to Aristodemus, ἐν τῷ ἀριστοτόιμῳ, τοῖς ῥοεῦσιν κατακόλυσον; and Xenophon (Symm. vi. 3. §2) has said that each hospitable guest was assigned two couches. (Plato, Symp. c. 3. §4, p. 175.) Also at a banquet given by Attaginus of Thebes to fifty Persians and fifty Greeks, we are told that one Persian and one Greek reclined on each couch. In ancient works of art we usually see the guests represented in this way; but sometimes there is a larger number on one long κλίνιον; see the cut under the article SYMPOSIUM. The manner in which they reclined, the στῆμα τῶν κατακλάλων, as Plutarch (Symm. v. 6) calls it, will be understood by referring to the woodcut already mentioned, where the guests are represented reclining with their left arms on striped pillows (ὑπαγόναι), and having their right free; whence Lucian (Lexiph. c. 6) speaks of ἐνεκένων δευτεριόν.

After the guests had placed themselves on the κλίναι, the slaves brought in water to wash their hands (δύω κατὰ αὐτὸς ἑδόθη.) The subsequent proceedings of the dinner are briefly described in two lines of Aristophanes (Vesp. 1216), "Τὸ ἀνακάθιστον τὰς τράπεζας εἰσφέρετεν· Δευτεριόν ἀποφύγοντες· ὅλη σπένδωμεν.

The dinner was then served up; whence we read in Aristophanes, and elsewhere, of τὰς τράπεζας εἰσφέρουσιν, by which expression we are to understand not merely the dishes, but the tables themselves. (Philozen. op. Athen. iv. p. 146, f.) It appears that a table, with provisions upon it, was placed before each κλίνη; and we thus find in all ancient works of art, which represent banquets or symposia, that a list of stuck pins placed before the κλίνη, and which are more than two persons on the κλίνη, several of such tables. These tables are evidently small enough to be moved with ease.

In eating, the Greeks had no knives or forks, but made use of their fingers only, except in eating soups or other liquids, which they partook of by means of a spoon, called μοστηλία, μουστρακός, or μουστρός. Sometimes they used instead of a spoon, a hollowed piece of bread, called μοστηλία. (Pollux, vi. 87, x. 89; Aristoph. Equit. 1164; Suidas, s. μοστηλία.) After eating they wiped their fingers on pieces of bread, called ἄνωμαγάλαι, (Pollux, vi. 93.) They did not use any cloths or napkins; the χειρομαντεία and ἑκμαγία, which are sometimes mentioned (Pollux, l. c.), were towels, which were only used when they washed their hands.

It appears that the arrangement of the dinner was entrusted to certain slaves. (Plato, Symp. c. 3. p. 175.) The one who had the chief management of it was called τραπεζοφόρος or τραπεζοκόμος (Athen. iv. p. 170, e.; Pollux, iii. 41, vi. 13.)

It would exceed the limits of this work to give an account of the different dishes which were introduced at a Greek dinner, though their number is far below those which were usually partaken of at a Roman entertainment. The most common food among the Greeks was the μᾶς (Dor. μᾶσσα), a kind of frumenty or soft cake, which was prepared in different ways, as appears by the various names which were given to it. (Pollux, vi. 76.)

The μᾶς is frequently mentioned by Aristophanes. The φυτή μᾶς, of which Philocleon partakes on returning home from the courts (Aristoph. Vesp. 610), is said by the Scholiast to have been made of barley and wine. The μᾶς continued to the latest times to be the common food of the lower classes. Wheaten or barley bread was the second most usual species of food; it was sometimes made at home, but more usually bought at the market of the ἀρτοφυλακίων or ἀρτοφυλάδες. The vegetables ordinarily eaten were mallows (μαλάκης), lettuces (φραντα), cabbages (φραντατική), lentils (φακῖα), &c. Pork was the most favourite animal food, as was the case among the Romans; Plutarch (Symm. v. 6, §1) calls it τὸ δικαιότατον κρέας. Sausages also were very commonly eaten. It is a curious fact, which Plato (De Reb. iii. c. 13. p. 404) has remarked, that we never read in Homer of the heroes partaking of fish. In later times, however, fish was one of the most favourite foods of the Greeks, insomuch that the name of δύων was applied to it κατ᾽ ἐξοχήν. (Athen. vii. p. 276, e.) A minute account of the fishes which the Greeks were accustomed to eat, is given at the end of the seventh book of Athenaeus, arranged in alphabetical order.

The ordinary meal for the family was cooked by the mistress of the house, or by the female slaves under her direction; but for special occasions professional cooks (μάγκεφοι) were hired, of whom there appear to have been a great number. (Diog. Lært. ii. 72.) They are frequently mentioned in the fragments of the comic poets; and those who were acquainted with all the refinements of their art were in great demand in other parts of Greece besides their own country. The Sicilian cooks, however, had the greatest reputation (Plato, De Rep. iii. c. 13. p. 404), and a Sicilian book on cookery by one Mæcænus is mentioned in the Gorgias of Plato (c. 156, p. 518. Compare Maxim. Tyr. Diss. iv. 5; but the most celebrated work on the subject was the Γαστρολογία of Archestratus. (Athen. iii. p. 104. b.)

A dinner given by an opulent Athenian usually consisted of two courses, called respectively πρῶτον τράπεζαν and δεύτερα τράπεζαν. (Pollux, vi. 83.) Indeed, speaks of three courses, which was the number at a Roman dinner; and in the same way we find other writers under the Roman empire speaking of three courses at Greek dinners; but before the Roman conquests of Greece
and the introduction of Roman customs, we only read of two courses. The first course embraced the whole of what we consider the dinner, namely, fish, poultry, meat, &c.; the second, which corresponds to our dessert and the Roman bellaria, consisted of different kinds of fruit, sweetmeats, confections, &c.

When the first course was finished the tables were taken away (αρην, ἀπαίρε τι, ἀπαίρετο δώρον, ἀφαιρείς, ἑσσηρίας, ἡπαθίας τὰς τραπέτας), and water was given to the guests for the purpose of washing their hands. Crowns made of garlands of flowers were also given them to wear, as well as various retabla pastimes. (Phyll. ap. Athen. ix. p. 408, e.) Wine was not drunk till the first course was finished; but as soon as the guests had washed their hands, unmixed wine was introduced in a large goblet, called μετάνυστρον or μετανυπτήρις, of which each drank a little, after pouring out a small quantity as a libation. This libation was said to be made to the "good spirit" (ἀγαθόν δαίμονος), and was usually accompanied with the singing of the psalm and the playing of flutes. After this libation mixed wine was brought in, and with their first cup the guests drank to Δίος Σάφιτρος. (Xen. Symp. ii. 1; Plato, Symp. c. 4. p. 176; Diod. Sic. iv. 3; Suidas, s. v. 'Αγαθόν Δαίμονος.) With the σπορδαί, the δεῖνων closed; and at the introduction of the dessert (δεῖνων τραπέτας) the πῦτος, συμπόσιον, or κῶμοι commenced, of which an account is given in the article SYMPOSIUM. (Becker, Charicles, vol. i. pp. 411—450.)

2. ROMAN. In the following account of Roman meals, we take the ordinary life of the middle ranks of society in the Augustan age, noticing incidentally the most remarkable deviations, either on the side of primitive simplicity or of late refinement.

The meal with which the Roman sometimes began the day was the jentaculum, a word derived, as Isidore would have us believe, a jenunio solveno, and answering to the Greek ἁρκάτισμα. Festus tells us that it was also called prandicula or siltum. Though by no means uncommon, it does not appear to have been usual, except in the case of children, or sick persons, or the luxurious, or, as Nonius adds (De Re Cib. i. 4), of labouring men. An irregular meal (if we may so express it) was not likely to have any very regular time: two epigrams of Martial, however, seem to fix the hour at about three or four o'clock in the morning. (Mart. Ep. xiv. 233, viii. 67, 9.) Bread, as we learn from the epigram just quoted, formed the substantial part of this early breakfast, to which cheese answered (Apol. Met. i. p. 110, ed. Francof. 1621), or dried fruit, as dates and raisins (Suet. Aug. 76) were sometimes added. The jentaculum of Vitellius (Suet. Vit. c. 7. c. 13) was doubtless of a more solid character; but this was a case of monstrous luxury.

Next followed the prandium or luncheon, with persons of simple habits a frugal meal—

"Quantum interpellat inani
Ventre diem durare."

Hor. Sat. i. 6. 127, 128.

As Horace himself describes it in another place (Sat. ii. 2. 17).

"Cum sole panis
Latrantein stomachum bene leniet,
agreeably with Seneca's account (Ep. 84), Panis deinde siceus et sine mensa prandium, post quos non sunt lavandae manus. From the latter passage we learn incidentally that it was a hasty meal, such as sailors (Juv. Sat. vi. 101) and soldiers (Liv. xxi. 14) partook of when on duty, without sitting down. The prandium seems to have originated in these military meals, and a doubt has been entertained whether in their ordinary life the Romans took food more than once in the day. Pliny (Ep. iii. 5) speaks of Aufidius Bassus as following the ancient custom in taking luncheon; but again (Ep. iii. 1), in describing the manners of an old-fashioned Roman, he mentions no other meal but the coena. The following references (Sen. Ep. 87; Cic. ad Att. v. 1; Mart. vi. 64) seem to prove that luncheon was a usual meal, although it cannot be supposed that there were many who, like Vitellius, could avail themselves of all the various times which the different fashions of the day allowed (Suet. Vit. 13). It would evidently be absurd, however, to lay down uniform rules for matters of individual caprice, or of fashion at best.

The prandium, called by Suetonius (Aug. 76) cibus meridianus, was usually taken about twelve or one o'clock. (Suet. Cal. 58, Claud. 54.) For the luxurious palate, as we gather incidentally from Horace's satires, very different provision was made from what was described above as his own simple repast. Fish was a requisite of the table (Sat. ii. 2. 16) —

"Foris est promus, et atrum
Defendens pisces hymen mare,"

which latter practice is condemned by the learned gastronomer (Sat. ii. 4. 29), who recommends a weaker mixture —

"Leni prae cordia mulso
Prolerius melius,"

and gravely advises to finish with mulberries fresh gathered in the morning (Ibid. 21—23; see Tate's Horace, 2nd ed. pp. 97—106). The words of Festus, coena opud antiquus diebatar good mesa prandium, have given much trouble to the critics, perhaps needlessly, when we remember the change of hours in our own country. If we translate coena, as according to our notions we ought to do, by "dinner," they describe exactly the alteration of our own manners during the last century. The analogy of the Greek word δείνων, which, according to Athenaeus, was used in a similar way for διστατος, also affords assistance. Another meal, termed merenda, is mentioned by Isidore and Festus, for which several refined distinctions are proposed; but it is not certain that it really differed from the prandium.

The table, which was made of citron, maple-wood, or even of ivory (Juv. Sat. xi.), was covered with a montele, and each of the different courses, sometimes amounting to seven (Juv. Sat. i. 98), was served upon a ferculum or waiter. In the "munda supellex" of Horace, great care was taken —

"Ne turpe toral, ne sordida mappa
Corruget nare; ne non et cantharus et lani
Ostendat tibi te."

Ep. i. 5. 22—24.
And on the same occasion, the whole dinner, which consisted of vegetables, was served up on a single platter (v. 2).

To return to our description, the dinner usually consisted of three courses: first, the _promules_ or antecena (Petron. Sat. 31), made up of all sorts of stimulants to the appetite, such as those described by Horace (Sat. ii. 8. 9).

"Rapula, lactucae, radices, qualia lassum
Perrellunt stomachum, sisor, aec, facula Coa."

Eggs also (Cic. ad Fam. ix. 20; Hor. Sat. i. 3. 6) were so indispensable to the first course that they almost gave a name to it (ab ovo Usque ad mala). In the _promules_ of Trimalchio's supper (Petron. 31) — probably designed as a satire on the emperor Nero — an ass of Corinthian brass is introduced, bearing two panners, one of white, the other of black olives, covered with two large dishes inscribed with Trimalchio's name. Next come dormice (glires) on small bridges sprinkled with poppy-seed and honey, and hot sausages (tomacula) on a silver gridiron (creticula), with Syrian prunes and pomegranate berries underneath. These, however, were imperial luxuries; the frugality of Martial only allowed of lettuce and Sicenian olives; indeed he himself tells us that the _promules_ was a refinement of modern luxury (Ep. xii. 14. 1).

Macrobius (Sat. ii. 9) has left an authentic record of a _coena pontificum_ (see Hor. Carm. ii. 14. 28), given by Lentulus on his election to the office of flamen, in which the first course alone was made up of the following dishes: — Several kinds of shell-fish (echani, ostreee cruade, pelorides, sponyfli, glycomarides, muries purpurae, balani alii et nigri), thrushes, asparagus, a fattened hen (gallina allilis), beccacaceae (fisculatae), nettles (articae), the haunches of a goat and wild boar (lunula capragnia, aprygia), rich meats made into pasties (alitilla o farina involuta), many of which are twice repeated in the inventory.

It would far exceed the limits of this work even to mention all the dishes which formed the second course of a Roman dinner, which, whoever likes, may find minutely described in Bulengerus. (De Conviviis, ii. and iii.) Of birds, the Guinea hen (Afro, avis), the pheasant (phasiana, so called from Phasis, a river of Colchis), and the thrush, were most in repute; the liver of a capon steeped in wine (Pervellunt stomachus, siser, alec, faecula Coa.).

It would far exceed the limits of this work even to mention all the dishes which formed the second course of a Roman dinner, which, whoever likes, may find minutely described in Bulengerus. (De Conviviis, ii. and iii.) Of birds, the Guinea hen (Afro, avis), the pheasant (phasiana, so called from Phasis, a river of Colchis), and the thrush, were most in repute; the liver of a capon steeped in wine (Pervellunt stomachus, siser, alec, faecula Coa.).

"Nee minimo sane discrimine refert
Quo vultu lepores et quo gallina secetur."

In the supper of Petronius, a large round tray (ferculum, repostorium) is brought in, with the signs of the zodiac figured all round it, upon each of which the _artiste_ (structor) had placed some appropriate viand, a goose on Aquarius, a pair of scales with tartar (serrilatae) and cheesecakes (placentae) in each scale on Libra, &c. In the middle was placed a hive supported by delicate herbage. Presently four slaves come forward dancing to the sound of music, and take away the upper part of the dish; beneath appear all kinds of dressed meats; a hare with wings, to imitate Pegasus, in the middle; and four figures of Marsyas at the corners, pouring hot sauce (garum piperation) over the fish, that they were swimming in the Euripus below. So entirely had the Romans lost all shame of luxury, since the days when Cincius, in supporting the Fannian law, charged his own age with ing the Fannian law, charged his own age with

The bellaria or dessert, to which Horace alludes when he says of Tigellius ab ovo Usque ad mala citaret, consisted of fruits (which the Romans usually ate uncooked), such as almonds (amygdalae), dried grapes (vveae passae), dates (palmaeae, lartooe, doctyi); of sweetmeats and confections, called edulix melitta, dulacaria, such as cheesecakes (cupetilae, crusiula, liba, placentae, artiolagani), almond cakes (copte), tarts (serrillatae), whence the maker of them was called pistor dulcarius, placetarius, libarius, &c.

We will now suppose the table spread and the guests assembled, each with his _mappa_ or napkin (Mart. xii. 29), and variegated with flowers. First they took off their shoes for fear of soiling the couch (Mart. iii. 90), which was often inlaid with

![](image.png)
COENA.

Ivory or tortoiseshell, and covered with cloth of gold. Next they laid down to eat (Hor. Sat. i. 4. 39), the head resting on the left elbow and supported by cushions. (Mart. iii. 8.) There were usually, but not always, three on the same couch (Hor. Sat. i. 4. 86), the middle place being esteemed the most honourable. Around the tables stood the servants (ministri) clothed in a tunic (Hor. Sat. ii. 6. 107), and girt with napkins (Suet. Cal. 26): some removed the dishes and wiped the tables with a rough cloth (gausape, Hor. Sat. ii. 8. 11), others gave the guests water for their hands, or cooled the room with fans. (Mart. iii. 82.) Here stood an Eastern youth (Juv. Sat. v. 55) behind his master's couch, ready to answer the noise of the fingers (digitis crepitatibus, Mart. vi. 89), while others bore a large platter (deoxonomos) of different kinds of meat to the guests. (Hor. Sat. ii. 8. 86.)

Whatever changes of fashion had taken place since primitive times, the coena in Ciceron's day (ad Att. ix. 7) was at all events an evening meal. It was usual to bathe about two o'clock and dine at three, hours which seem to have been observed, at least by the higher classes, long after the Augustan age. (Mart. iv. 8. 6, xi. 53. 3; Cic. ad Fam. ix. 26; Plin. Ep. iii. 1.) When Juvenal mentions two o'clock as a dinner hour, he evidently means a censure on the luxury of the person named (Sat. i. 49, 50),

"Exul ab octavo Marius bibt."

In the banquet of Nasidienus, about the same hour is intended when Horace says to Fundanius,

"Nam mihi quaerenti convivam dictus here illic De medio potare die."

Horace and Maecenas used to dine at a late hour about sunset. (Hor. Sat. ii. 7. 33, Ep. i. 5. 3.) Perhaps the various statements of classical authors upon this subject can only be reconciled by supposing that with the Romans, as with ourselves, there was a great variety of hours in the different ranks of society.

Dinner was set out in a room called coenatio or diaeta (which two words perhaps conveyed to a Roman ear nearly the same distinction as our dining-room and parlour). The coenatio, in rich men's houses, was fitted up with great magnificence. (Sen. Ep. 90.) Suetonius (Nero, 31) mentions a supper-room in the golden palace of Nero, constructed like a theatre, with shifting scenes to change with every course. In the midst of the coenatio were set three couches (triclinia), answering in shape to the square, as the long semicircular couches (sigmata) did to the oval tables. An account of the disposition of the couches, and of the place which each guest occupied, is given in the article TRICLINIUM.

The Greeks and Romans were accustomed, in later times, to recline at their meals; though this practice could not have been of great antiquity in Greece, since Homer never describes persons as reclining, but always as sitting, at their meals. Isidore of Seville (Orig. xx. 11) also attributes the same practice to the ancient Romans. Even in the time of the early Roman emperors, children in families of the highest rank used to sit together at an inferior table, while their fathers and elders reclined on couches at the upper part of the room. (Tacit. Ann. xiii. 10; Suet. Aug. 65, Claud. 92.)

Roman ladies continued the practice of sitting at table, even after the recumbent position had become common with the other sex. (Varro, de Isid. Orig. xx. 11; Val. Max. ii. 1, § 3.) It appears to have been considered more decent, and more agreeable to the severity and purity of ancient manners, for women to sit, more especially if many persons were present. But, on the other hand, we find cases of women reclining, where there was conceived to be nothing bold or indecent in their posture. In some of the bas-reliefs, representing the visit of Bacchus to Icarus, Erigone, instead of sitting on the couch, reclines upon it in the bosom of her father. In Juvenal (Sat. ii. 120) a bride reclines at the marriage supper on the bosom of her husband; which is illustrated by the following woodcut, taken from Montfaucon (Ant. Eep. Suppl. iii. 66).
COGNATI.

We observe a faun performing for Bacchus this favourite subject of the visit of Bacchus to Icarus. The preceding woodcut, taken from a terra cotta in the British Museum, representing this subject, both shows the naked feet of Icarus, who was partly raised himself from his couch to welcome the guest, and also that Bacchus has one of his feet already naked, whilst the faun is in the act of removing the shoe from the other. COENA'CULUM. [DOMUS.]

COENA'TIO. [COENA, p. 308, a.]

COENATÓRIA. [COENA, p. 307, b.; SYN-THESIS.]

COGNATI. The following passage of Ulpian (Frag. tit. 26. § 1) will explain the meaning of this term: —

"The hereditates of intestate ingenui belong in the first place to their sui heredes, that is, children who are in the power of the parent, and those who are in the place of children (as grandchildren for instance); if there are no sui heredes, it belongs to the consanguinei, that is, brothers and sisters by the same father (it was not necessary that they should be by the same mother); if there are no consanguinei, it belongs to the remaining nearest agnati, that is, to the cognati of the male sex, who trace their descent through males, and are of the same familia. And this is provided by a law of the Twelve Tables: —

Suus heres nee cscit, agnatus proximus familia

Habeito."

Cognati are all those who, according to the Jus Gentium or Jus Naturale, are sprung from one person, whether male or female (cognati ... quasi ex uno nati, Dig. 38. tit. 8. s. 1 § 1.). Pure Naturalis Cognatio exists between a woman, who is not in the power of the parent, and her children, whether born in marriage or not; and among all persons who are akin merely with reference to the natural relation; for agnatio, which rests on descent, as the jus civile in patria potestas, or into the manus viri, which would in any way sustained a deminutio capitis. On his death, the common bond of the parent passed was dissolved, and his sons became respectively heads of families; that is, of persons who were in their power, or, with respect to one another, were agnati. But all these persons continued to be members of the same familia; that is, they were still agnati, and consequently the agnatio subsisted among persons so long as they could trace back their descent through males to one common paterfamilias.

Agnati, then, may be briefly explained to be those " who would be in the patria potestas, or in jus ... quasi ex uno nati, Dig. 38. tit. 8. s. 1. § 1.). Pure Naturalis Cognatio exists between a woman, who is not in the power of the parent, and her children, whether born in marriage or not; and among all persons who are akin merely with reference to the natural relation; for agnatio, which rests on descent, as the jus civile in patria potestas, or into the manus viri, which would in any way sustained a deminutio capitis. This table shows all the degrees of cognatio. The degree of relationship of any given person in this stemma, to the person with respect to whom the relationship is inquired after (is eave, &c.), is indicated by the figures attached to the several words. The Roman numerals denote the degree of cognatio in the canon law; and the Arabic numerals, the degrees in the Roman or Civil law. The latter mode of reckoning is adopted in England, in ascertaining the persons who are entitled next of kin to the personal estate of an intestate. In the canon law, the number which expresses the collateral degree is always the greater of the two numbers (when they are different) which express the distance of the two parties from the common ancestor; but in the civil law, the degree of relationship is ascertained by counting from either of the two persons to the other through the common ancestor. All those words on which the same Roman, or the same Arabic, numerals occur, represent persons who are in the same degree of cognatio, according to these respective laws, to the person is eave, &c. (Hugo, Lehrhuch, &c.; Mare-zoll, Lehrhuch, &c.; Dig. 38. tit. 10, De Gradibus, &c.; Ulpianus, Frag. ed. Böcking; Böcking, Institutionen.)

**COGNITOR. [AcTio.]**

**COGNO' MEN. [NOMEN.]**

**COHERES. [HERES.]**

**COHORS. [ExERcitus.]**

**COLA'CRETAE (καλακρήται, also called κωλακρήται), the name of very ancient magistrates at Athens, who had the management of all financial matters in the time of the kings. They are said to have derived their name from collecting certain parts of the victims at sacrifices (ἐν τοι θεοίς κατά λαύς). The legislature of Solon left the Colacretae untouched; but Cleisthenes deprived them of the charge of the finances, which he transferred to the Apodectae, who were established in their stead. [APODECTAE.] From this time the Colacretae had only to provide for the meals in the Prytaneium, and subsequently had likewise to pay the fees to the dicasts, when the practice of paying the dicasts was introduced by Pericles. (Aristoph, Vesp. 693, 724, with Schol.; Etym. M. Phot. Ἀθηναῖος Tim.; Ruhn. ad Tim. Plat. Lex. p. 171; Böckh, Publ. Econ. of Athens, p. 173, &c., 2nd ed.)

**COLLA'TIO BONORUM. [BONORUM COL-LATIo.]**

**COLEGATA'RIUS. [LEGATUM.]**

**COLEG'Gium.** The persons who formed a collegium, were called collegae or sodales. The word collegium properly expressed the notion of several persons being united in any office or for any common purpose (Liv. x. 13, 22; Tacit. Ann. iii. 31); it afterwards came to signify a body of persons, and the union which bound them together. The collegium was the ἐκταίς of the Greeks. The notion of a collegium was as follows: —

- A collegium or corpus, as it was also called, must consist of three persons at least. (Dig. 50. tit. 16. a. 85.) Persons who legally formed such an association were said corpus habere, which is equivalent to our phrase of being incorporated; and in later times they were said to be corporati, and the body was called a corporatio. Those who formed the public revenues, mines, or salt works (saltane) might have a corpus. The power of forming such a collegium or societas (for this term also was used), was limited by various leges, senatusconsulta, and imperial constitutions. (Dig. 3. tit. 4.) Associations of individuals, who were entitled to have a corpus, could hold property in common; they could hold it, as the Roman jurists remark, just as the state held property (res communes). These collegia had a common chest, and could sue and be sued by their syndicus or actor. That which was due to the collegium or universitas (for this was a still more general term), was not due to the individuals of it; and that which the collegium owed, was not the debt of the individuals. The property of the collegium was liable to be seized and sold for its debts. The collegium or universitas was governed by its own regulations,
which might be any regulations that the members agreed upon, provided they were not contrary to law: this provision, as Gaius conjectures (Dig. 47. tit. 22), was derived from a law of Solon, which he quotes. The collegium still subsisted, though all the original members were changed. Collegia of individuals were viewed under two aspects,—as having some object of administration either public or not public, which object is often the main purpose for which they exist, or as being capable of holding property and contracting and owing obligations. As having some object of administration, they are viewed as units (magistratus municipales cum unum magistratrum administrent, etiam unius hominis vicem sustinent (Dig. 50. tit. 1 s. 25). As having a capacity to hold property, they are purely fictitious or artificial personages, and, consequently, thus conceived, it is not all the members who are supposed to compose this artificial person, but the members are the living persons by whose agency this artificial person does the acts which are necessary for the acquisition and administration of its property. It is only with reference to the purposes of ownership and contracts, that an artificial person has an existence as a person. There are some further remarks under Universitas.

A lawfully constituted collegium was legitimate. Associations of individuals, which affected government and administration; as tribunorum, of the pontificum, augurum, fratrum arvalium and Ulpian. In the same way the Roman state might make the municipices their heredes. The gods could not be made heredes, except such deities as possessed this capacity by special senatusconsulta or imperial constitutions, such as Jupiter Tarpeius, &c. (Ulp. Fr. tit. 22. s. 6.) By a constitution of Leo (Cod. vi. tit. 24. s. 12) civitates obtained the capacity to take property as heredes. As early as the time of Nerva and Hadrian, civitates could take legacies. Though many provinces within the Roman empire could not originally receive gifts by will, yet independent states could receive gifts in that way (Tacit. Ann. iv. 43), a case which furnishes no objections to the statement above made by Pliny and Ulpian. In the same way the Roman state accepted the inheritance of Attalus, king of Pergamus, a gift which came to them from a foreigner. The Roman lawyers considered such a gift to be accepted by the jus gentium. (Dig. 3. tit. 4. s. 1.) Other collegia were probably formed by voluntary associations of individuals under the provisions of some general legal authority. This supposition would account for the fact of a great number of collegia being formed in the course of time, and many of them being occasionally suppressed as not legitima.

Some of these corporate bodies resembled our companies or guilds; such were the fabrorum, pistorum, &c. collegia. (Lampridius, Aec. Severus, 33.) Others were of a religious character; such as the pontificum, augurum, fratrum arvalium collegia. Others were bodies concerned about government and administration; as tribunorum plebis (Liv. xliii. 32), quaestorium, decurionum collegia. The titles of numerous other collegia may be collected from the Roman writers, and from inscriptions.

According to the definition of a collegium, the consuls being only two in number were not a collegium, though each was called collega with respect to the other, and their union in office was called collegium. The Romans never called the individual who, for the time, filled an office of perpetual continuance, a universitas or collegium, though each was called collega with respect to the other. The old members might be any regulations that the members agreed upon, provided they were not contrary to law: this provision, as Gaius conjectures (Dig. 47. tit. 22), was derived from a law of Solon, which he quotes. The collegium still subsisted, though all the original members were changed. Collegia of individuals were viewed under two aspects,—as having some object of administration either public or not public, which object is often the main purpose for which they exist, or as being capable of holding property and contracting and owing obligations. As having some object of administration, they are viewed as units (magistratus municipales cum unum magistratrum administrent, etiam unius hominis vicem sustinent (Dig. 50. tit. 1 s. 25). As having a capacity to hold property, they are purely fictitious or artificial personages, and, consequently, thus conceived, it is not all the members who are supposed to compose this artificial person, but the members are the living persons by whose agency this artificial person does the acts which are necessary for the acquisition and administration of its property. It is only with reference to the purposes of ownership and contracts, that an artificial person has an existence as a person. There are some further remarks under Universitas.

The titles of numerous other collegia may be collected from the Roman writers, and from inscriptions.

According to the definition of a collegium, the consuls being only two in number were not a collegium, though each was called collega with respect to the other, and their union in office was called collegium. The Romans never called the individual who, for the time, filled an office of perpetual continuance, a universitas or collegium, for that would have been a contradiction in terms, which it has been reserved for modern times to introduce, under the name of a corporation sole. But the notion of one person succeeding to all the rights of a predecessor was familiar to the Romans in the case of a single heres, and the same notion must have been extended to the individuals who held any office in perpetual succession. According to Ulpian, a universitas, though reduced to a single member, was still considered a universitas; for the individual possessed all the rights of the universitas, and used the name by which it was distinguished. (Dig. 3. tit. 4. s. 7.)
should go to the owner of the mother. If a man lived for thirty years as a Colonus, he became the Colonus of the owner of the land on which he lived; and though he was still free, he could not leave the land; and a man who had possessed for thirty years a colonus belonging to another, could defend himself against the claims of the former owner by the Praescriptio triginta annorum. A constitution of Valentinian III. declared how free persons might become Coloni by agreement; and though there is neither this nor any similar regulation in the Code of Justinian, there is a passage which apparently recognizes that persons might become Coloni by such agreement. (Cod. xi. tit. 47. s. 22.)

The Coloni were not slaves, though their condition in certain respects was assimilated to that of slaves; a circumstance which will explain their being called servi termes, and sometimes being contrasted with liberi. They had, however, connubium, which alone is a characteristic that distinguished them clearly from slaves. (Cod. xi. tit. 47. s. 24.) But, like slaves, they were liable to corporal punishment, and they had no right of action against their master, whose relation to them was expressed by the term Patronus. (Cod. Theod. v. tit. 11.) The colonus was attached to the soil, and he could not be permanently separated from it by his own act, or by that of his patronus, or by the consent of the two. The patronus could sell the estate with the coloni, but neither of them without the other. (Cod. xi. tit. 47. s. 7.) The patronus could sell, transfer superabundant coloni from one to another of his estate. When an estate held in common was divided, married persons and relations were not to be separated. The ground of there being no legal power of separating the coloni and the estate was the opinion that such an arrangement was favourable to agriculture, and there were also financial reasons for this rule of law, as will presently appear. The only case in which the colonus could be separated from the land was that of his becoming a soldier, which must be considered to be done with the patron's consent, as the burden of recruiting the army was imposed on him, and in this instance the state dispensed with a general rule for reasons of public convenience.

The coloni paid a certain yearly rent for the land on which he lived; the amount was fixed by custom and could not be raised; but as the landowner might attempt to raise it, the colonus had in such a case for his protection a right of action against him, which was an exception to the general rule above stated. (Cod. xi. tit. 47. s. 5.) There were, however, cases in which the rent was fixed by agreement.

A further analogy between the condition of Servi and Coloni appears from the fact of the property of Coloni being called their Peculum. It is however, distinctly stated that they could hold property (Cod. Theod. v. tit. 11); and the expressions which declare that they could have nothing ' proprio' (Cod. xi. tit. 49. s. 2) seem merely to declare that it was not proprio in the sense of their having power to alienate it, at least without the consent of their patroni. It appears that a colonus could make a will, and that if he made none, his property went to his next of kin; for if a bishop, presbyter, deacon, &c., died intestate and without kin, his property went to the church or convent to which he belonged, except such as he had as a colonus, which went to his patronus, who with respect to his ownership of the land is called Dominus possessionis. (Cod. Theod. v. tit. 3.) Some classes of Coloni had a power of alienating their property. (Cod. xi. tit. 47. s. 23.)

The land-tax due in respect of the land occupied by the colonus was paid by the dominus; but the colonus were liable to the payment of the poll-tax, though it was paid in the first instance by the dominus who recovered it from the colonus. The liability of the colonus to a poll-tax explains why this class of persons was so important to the state, and why their condition could not be changed without the consent of the state. It was only when the colonus had lived as a free man for thirty years that he could maintain his freedom by a praescriptio, but Justinian abolished this praescriptio, and thus empowered the dominus to assert his right after any lapse of time. (Cod. xi. tit. 47. s. 23.) With respect to their liability to the poll-tax, the coloni were called tributarii, consulii or consilii obdictionis, abscliptitiae conditionis, and consulii subscripsit. This term subscripsit appears to have no reference to their being attached to the land, but it refers to their liability to the poll-tax as being rated in the tax-books, and accordingly we find that the Greek term for Adscriptitius is ἔσπυραντος.

As the Coloni were not servi, and as the class of Latinis and peregrini hardly existed in the later ages of the Empire, we must consider the Coloni to have had the Civitas, such as it then was; and it is a consequence of this that they had connubium generally. A Constitution of Justinian, however (Nov. 22. c. 17), declared the marriage of a colonus, who belonged to another person, and a free woman to be void. The Constitution does not seem to mean any thing else than that in this case the Emperor took away the Connubium, whether for the reasons stated by Savigny, or for other reasons, is immaterial. This special exception, however, proves the general rule as to Connubium.

The original connexion between the Coloni and the Latinis and peregrini is apparent in one passage of the Digest (Dig. 30. s. 112), under the name of Inquilinus, a term which certainly was sometimes applied to the whole class of Coloni. The passage states, that if a man bequeaths, as a legacy, the inquilini without the praedia to which they adhere (sine praedulis quibus adhaerent), it is a void legacy. Savigny conceives that this passage may be explained without considering it to refer to the Coloni of whom we are speaking; but the explanation that he suggests, seems a very forced one, and the same remark applies to his explanation of another passage in the Digest (50. tit. 15. s. 4). The condition of the old Clients seems to bear some relation to that of the Coloni, but all historical traces of one class growing out of the other are entirely wanting.

Savigny observes that he does not perceive any historical connection between the villeins (villani) of modern Europe and the Coloni, though there is a strong resemblance between their respective conditions. There were, however, many important distinctions; for instance, the villein services due to the lord had nothing corresponding to them in the case of the Coloni, so far as we know. Some modern writers would hastily infer an historical connection of institutions which happen to have
resemblances. Littleton's Tenures, section 172, &c., and Bracton's vol. 6; 24, may be consulted as to the incidents of Villeineage. This view of the condition of the Coloni is from Savigny's Essay on the subject, which is translated in the Philological Museum, vol. ii.

The question of the origin of these Coloni is examined at great length by A. W. Zumpt, Über die Entstehung und historische Entwicklung des Colonats (Rheinische Museum für Philologie, Neue Folge, 1845). The author is of opinion that the origin of the institution is to be traced to the settlement of Germanic people by the Roman emperors within the limits of the empire. The earliest mention of Coloni, in the sense in which his essay treats of them, is, as he states, a constitution of Constantine A.D. 321 (Cod. Theod. 9. tit. 21. s. 1, 2), which, however, gives no information about their condition. But a later constitution of Constantine, A.D. 332 (Cod. Theod. 5. tit. 9. de fugitivis colonis) does give some information. The condition of these foreign settlers being once established, the author supposes that poor Roman citizens might enter into this condition, being once established, the author supposes that poor Roman citizens might enter into this condition, partly induced by the advantage of getting land, and partly, as he states, though it is not clearly explained, by legal compulsion. A constitution of Theodosius the Younger (Cod. Theod. 5. tit. 4, de bonis militum, s. 3, ed. Wencel), contains some valuable information on the colonization or settlement of the barbarians, and declares them to belong to the condition expressed by the term Colonatus. The term colonus often occurs in the writers who are excerpted in the Digest (41. tit. 2. s. 30. § 5; 15. tit. 2. s. 5, 9, § 3; 19. tit. 1. s. 13, § 30. and elsewhere); but these Colonati are supposed to be merely a kind of tenants. The passage in the Digest (30. s. 112) which cites a constitution of Marcus Aurelius and Commodus, is supposed, by Zumpt, to mean ordinary tenants (miether, pächter); but it must be admitted, that it is rather difficult to accept this explanation, as already observed. The word Colonatus, it is stated, does not occur in the Digest; but that negative fact proves little. The most probable solution of the question is, that the condition of the Coloni mentioned in the Digest was the model of the condition of the barbarians who were settled in the Roman empire; and it is no objection to this, that the condition of the barbarians might be made more burdensome and less free than that of the Colonati, who already existed. Nor is it against this supposition, if the condition of the barbarian Colonati gradually became the condition of all the Coloni. The reasons for fixing the barbarian settlers to the soil are obvious enough. The policy of the emperors was to people the country, and to appease many of the tribes whose union would have been dangerous. If the results of Zumpt's inquiry cannot be admitted to their full extent, it must be allowed, that he has thrown great light on the subject, and probably approached as near as possible to the solution of the difficulty, with the exception of his hypothesis, that the colonatus originated entirely in the settlement of these barbarians. It seems much more probable that the Romans modelled the barbarian settlements upon some institution that already existed, though this existing institution might not be precisely the same as that subsequent institution to which the term Colonatus was peculiarly applied. [G. L.]

COLO'NIA, a colony. 1. GREEK. The common Greek word for a colony is ἱππασία and for a colonist ἱππασος. We also find, but not commonly, ἱππασία and ἱππασος. (Thuc. ii. 27; Aristoph. A. 1307.) The former words have reference to their being wanderers from their own home; the latter words to their settling in a new home. The term ΚΛΑΝΜΟΣ indicates a division of conquered lands among Athenian citizens, and those who occupied such lands were called ΚΛΑΝΜΟΣ; but as they were thus colonists, we sometimes find the general term of ἱππασος applied to them. (Thuc. v. 116.) (Vömel, De Dichotomia Voculorum ΚΛΑΝΜΟΣ, ἱππασος, ἱππασος, Frankfurt, 1839.)

The earlier Greek colonies were usually composed of mere bands of adventurers, who left their native country, with their families and property, to seek a new home for themselves. Some of the colonies, which arose in consequence of foreign invasion or civil wars, were undertaken without any formal consent from the rest of the community; but usually a colony was sent out with the approbation of the mother country, and under the management of a leader (οἰκοτής) appointed by it. But whatever may have been the origin of the colony, it was always considered in a political point of view independent of the mother country (called by the Greeks μητρόπολις), and entirely emancipated from its control. At the same time, though a colony was in no political subjection to its parent state, it was united to it by the ties of filial affection; and, according to the generally received opinions of the Greeks, its duties to the parent state corresponded to those of a daughter to her mother. (Dionys. iii. 7; Polyb. xii. 10. § 8.) Hence, in all matters of common interest, the colony gave precedence to the mother state; and the founder of the colony (οἰκοτής), who might be considered as the representative of the parent state, was usually worshipped, after his death, as a hero. (Herod. vi. 38; Thuc. vi. 11; Dio. xii. 66, xx. 102.) Also, when the colony became in its turn a parent, it usually sent a leader for the colony which it intended to found from the original mother country (Thuc. i. 24); and the same feeling of respect was manifested by embassies which were sent to honour the principal festivals of the parent state (Dio. xii. 30; Wesseling, ad loc.), and also by bestowing places of honour and other marks of respect upon the ambassadors and other members of the parent state, when they visited the colony at festivals and similar occasions. (Thuc. i. 25.)

The colonists also worshipped in their new settlement the same deities as they had been accustomed to honour in their native country; the sacred fire, which was constantly kept burning on their public hearth, was taken from the Prytaneum of the parent city; and, according to one account, the priests who ministered to the gods in the colony, were brought from the parent state. (Schol. ad Thuc. i. 25; compare Tacit. Ann. ii. 54.) In the same spirit, it was considered a violation of sacred ties for a mother country and a colony to make war upon one another. (Herod. viii. 22; Thuc. i. 38.)

The preceding account of the relations between the Greek colonies and the mother country is elucidated by the history which Thucydides gives us of the quarrel between Corcyra and Corinth. Corcyra was a colony of Corinth, and Epidamnus
a colony of Corcyra; but the leader (οἰκευσθεὶς) of the colony of Epidamnus was a Corinthian who was invited from the metropolis Corinth. In course of time, in consequence of civil dissensions and attacks from the neighbouring barbarians, the Epidamnians applied for aid to Corcyra, but their request was rejected. They next applied to the Corinthians, who took Epidamnus under their protection, thinking, says Thucydides, that the colony was no less theirs than the Corinthians: and also induced to do so through hatred of the Corcyreans, because they neglected them though they were colonists; for they did not give to the Corinthians equal honours and deference in the public solemnities and sacrifices as the other colonies were wont to pay to the mother country. The Corcyreans who had become very powerful by sea, took offence at the Corinthians receiving Epidamnus under their protection, and the result was a war between Corcyra and Corinth. The Corcyreans sent ambassadors to Athens to ask assistance; and in reply to the objection that they were a colony of Corinth, they said "that every colony, as long as it is treated kindly, respects the mother country: but when it is injured, is alienated from it; for colonists are not sent out as subjects, but that they may have equal rights with those that remain at home." (Thuc. i. 34.)

It is true that ambitious states, such as Athens, sometimes claimed dominion over other states on the ground of relationship; but, as a general rule, colonies may be regarded as independent states, attached to their metropolis by ties of sympathy and common descent, but no farther. The case of Potidaea, to which the Corinthians sent annually the chief magistrates (δημοταρχοί), appears to have been an exception to the general rule. (Thuc. i. 36.)

The κληρονομία, of which mention was made above, were colonies of an entirely different kind from the ἀττουκεία, of which we have hitherto been speaking. They belonged exclusively to the Athenians; and the earliest example to which the term, in its strict sense, is applicable, is the occupation of the domains of the Chalcidian knights (ἵπποδρομεί) by four thousand Athenian citizens, &c. 506. (Herod. v. 77; comp. vi. 100.)

In assigning a date to the commencement of this system of colonization, we must remember that the principle of a division of conquered lands had existed from time immemorial in the Grecian states. Nature herself seemed to intend that the Greek should rule and the barbarian obey; and hence, in the case of the barbarian, it wore no appearance of harshness. Such a system, however, was more rare between Greek and Greek. Yet the Dorians in their conquest of the Peloponnesse, and still more remarkably in the subjugation of Messenia, had set an example. In what then did the Athenian κληρονομία differ from this division of territory, or from the ancient colonies? In the first place the name, in its technical sense, was of later date, and the Greek would not have spoken of the κληρονομία of Lycurgus, any more than the Roman of the "Agrarian laws" of Romulus or Ancus. Secondly, we should remember that the term was always used with a reference to the original allotment: as the lands were devised or transferred, and the idea of the first division lost sight of, it would gradually cease to be applied. The distinction, however, between κληρονομία and διακωτία was not merely one of words but of things. The earlier colonies usually originated in private enterprise, and became independent of, and lost their interest in, the parent state. On the other hand, it was essential to the very notion of a κληρονομία that it should be a public enterprise, and should always retain a connection more or less intimate with Athens herself. The word κληρονομία conveys the notion of property to be expected and formally appropriated: whereas the διακωτία of ancient times went out to conquer lands for themselves, not to divide those which were already conquered.

The connection with the parent state subsisted, as has been just hinted, in all degrees. Sometimes, as in the case of Lesbos, the holders of land did not reside upon their estates, but let them to the original inhabitants, while themselves remained at Athens. (Böckh, Public Econ. of Athens, p. 431, 2nd ed.) The condition of these κληρονομία did not differ from that of Athenian citizens who had estates in Attica. All their political rights they not only retained, but exercised as Athenians; in the capacity of landholders of Lesbos they could scarcely have been recognised by the state, or have borne any corporate relation to it. Another case was where the κληρονομία resided on their estates, and either with or without the old inhabitants, formed a new community. These still retained the rights of Athenian citizens, which distance only precluded them from exercising; they used the Athenian courts; and if they or their children wished to return to Athens, naturally and of course they regained the exercise of their former privileges. Of this we have the most positive proof (Böckh, Ibid. p. 429): as the object of these κληρονομία was to form outposts for the defence of Athenian commerce, it was the interest of the parent state to unite them by a tie as kindly as possible: and it cannot be supposed that individuals would have been found to risk, in a doubtful enterprise, the rights of Athenian citizens.

Sometimes, however, the connection might gradually dissolve, and the κληρονομία sink into the condition of mere allies, or separate wholly from the mother country. In Aegina, Scione, Potidaea, and other places, where the original community was done away, the colonists were most completely and entirely dependent on the mother state. It seems improbable that the state would unnecessarily forego the tribute which it had previously received, where the lands had formerly belonged to tributary allies.

It was to Pericles Athens was chiefly indebted
for the extension and permanence of her colonial settlements. His principal object was to provide for the redundancies of population, and raise the notion contained in this word more nearly which is derived from the Latin, perhaps expresses a “tiller of the earth.” The English word colony, which probably originally signified “to cultivate,” and as early as the Annals of Nennius, x. 21, is thus used, and the notion contained in this word more nearly than is generally the case in such adopted terms.

A kind of colonisation seems to have existed among the oldest Italian nations, who, on certain occasions, sent out their superfluous male population, with arms in their hands (on plow), to seek for a new home. (Dionys. Antiq. Rom. i. 16.) But these were apparently mere bands of adventurers, and such colonies rather resembled the old Greek colonies, than those by which Rome extended her dominion and her name.

Colonies were established by the Romans as far back as the annals or traditions of the city extend, and the practice was continued during the republic and under the empire. Sigonius (De Antiquo Jure Italic. p. 215. &c.) enumerates six main causes or reasons which, from time to time, induced the Romans to send out colonies; and these causes are connected with many memorable events in Roman history. Colonies were intended to keep in check a conquered people, and also to repress hostile incursions, as in the case of the colony of Narnia (Liv. x. 10), which was founded to check the Umbri; and Minturnae and Sinuessa (x. 21), Cremona and Placentia (xxvii. 46), which were founded for similar purposes. Cicero (De Leg. Agr. ii. 27) calls the old Italian colonies the "propugnacula imperii;" and in another passage (Pro Font. c. 1) he calls Narbo Martius (Narbonne), which was in the province Gallia, "Colonia nostrorum civium, specta populi Romani et propugnaculum." Another object was to increase the power of Rome by increasing the population. (Liv. xxvii. 9.) Sometimes the immediate object of a colony was to carry off a number of turbulent and discontented people. Colonies were also established for the purpose of providing for veteran soldiers, a practice which was begun under the republic (Liv. xxxi. 4), and continued under the emperors; these colonies were called militares.

It is remarked by Strabo (p. 216. ed. Casaub.), when speaking of the Roman colonies in the north of Italy, that the ancient names of the places were retained, and that though the people in his time were all Roman, they were called by the names of the previous occupiers of the soil. This fact is in accordance with the character of the old Roman colonies, which were in the nature of garrisons planted in conquered towns, and the colonists had a portion of the conquered territory (usually a third part) assigned to them. The inhabitants retained the rest of their lands, and lived together with the new settlers, who, alone composed the proper colony. (Dionys. Antiq. Rom. ii. 53.) The conquered people must at first have been quite a distinct class from, and inferior to, the colonists. The definition of a colony is given by Pliny (Hist. Nat. ii. 53) and others; it will appear, from what has been said, to be sufficiently exact: — "Ex civitate quasi propagatae — populi Romani quasi effigies parvae simulacrae." No colony was established without a lex, plebiscitum, or senatusconsultum; a fact which shows that a Roman colony was never a mere body of adventurers, but had a regular organisation by the parent state. According to an ancient definition quoted by Niebuhr (Serv. ad Virg. Aen. i. 12), a colony is a body of citizens, or socii, sent out to possess a commonwealth, with the approbation of their own state, or by a public act of that people to whom they belonged; and it is added, those are colonies which are founded by public act, not by any secession. Many of the laws which relate to the establishment of colonies were leges agrariae, or laws for the division and assignment of public lands, of which Sigonius has given a list in his work already referred to.

When a law was passed for founding a colony, persons were appointed to superintend its formation (coloniae deducunt). These persons varied in number, but three was a common number ( triumviri ad colonos deducendos, Liv. xxxvii. 46, vi. 21). We also read of duumviri, quinqueviri, quintinii, or vigintiviri for the same purpose. The law fixed the quantity of land that was to be distributed, and how much was to be assigned to each person. No Roman could be sent out as a colonist without his free consent, and when the colony was not an inviting one, it was difficult to fill up the number of volunteers. (Liv. vi. 21, x. 21.)

Roman citizens who were willing to go out as members of a colony gave in their names at Rome (nomina dedurent, Liv. i. 11, the first time that he has occasion to use the expression). Cicero (Pro Dom. c. 30) says that Roman citizens who chose to become members of a Latin colony must go voluntarily (avtores facti), for this was a capitis deminutio; and in another passage (Pro Cael. 42) he alleges the fact of a colony at Gallia (Liv. vii. 13) was put out in Latin colonies as a proof that loss of citizen must be a voluntary act. It is true that a member of a Roman colony would sustain no capitis deminutio, but in this case also there seems no reason
for supposing that he ever joined such a colony, without his consent.

The colonia proceeded to its place of destination in the form of an army (saepe exercitum), which is indicated on the coin of some colonia. An urbs, if one did not already exist, was a necessary part of a new colony, and its limits were marked out by a plough, which is also indicated on ancient coins. The colonia had also a territory, which, whether marked out by the plough or not (Cic. Phil. ii. 40), was at least marked out by metes and bounds. Thus the urbs and territory of the colonia respectively corresponded to the urbs Roma and its territory. Religious ceremonies always accompanied the foundation of the colony, and the anniversary was afterwards observed. (Plutarch, C. Gracchus, 11; Servius, ad Aen. v. 755; Cic. ad Attic. iv. 1). It is stated that a colony could not be sent out to the same place to which a colony had already been sent in due form (auspiciato dotulae). This merely means that so long as the colony maintained its existence, there could be no new colony in the same place; a doctrine that would hardly need proof, for a new colony implied a new assignment of lands; but new settlers (novi adscripti) could not establish a new local authority, unless it was at least marked out by metes and bounds.

The colonia had also a territory, which, whether not already assigned. (Liv. vi. 30; Cic. Phil. ii. 40.) Indeed it was not unusual for a colony to receive a supplementum, as in the case of Venusia (Liv. xxxi. 49), and in other cases (Tacit. Ann. xiv. 27); and a colony might be re-established, if it seemed necessary, from any cause; and under the emperors such re-establishment might be entirely arbitrary, and done to gratify personal vanity, or from any other motive. (Tacit. Ann. xxii. 32; Puteoli; and the note in Oberlin'sTacitus.)

The commissioners appointed to conduct the colony had apparently a profitable office, and the establishment of a new settlement gave employment to numerous functionaries, among whom Cicer enumerates — apparitores, scribae, librarii, praecones, architecti. The foundation of a colony might then, in many cases, not only be a mere party measure, carried for the purpose of gaining popularity, but it would give those in power an opportunity of providing places for many of their friends.

A colonia was a part of the Roman state, and it had a re publica; but its relation to the parent state might vary. In Livy (xxxix. 55) the question was whether Aquilia should be a colonia civium Romanorum, or a Latina colonia; a question that had no reference to the persons who should form the colony, but to their political rights with respect to Rome as members of the colony. The members of a Roman colony (colonia civium Romanorum) must, as the term itself implies, have always had the same rights, which, as citizens, they would have at Rome. (Civitas.) They were, as Niebuhr remarks, in the old Roman colonies, "the populus; the old inhabitants, the commonalty." These two bodies may, in course of time, have frequently formed one; but there could be no political union between them till the old inhabitants obtained the commercium and connubium, in other words, the civitas; and it is probable to occupy colonia lands causes which weakened the old colonies, and rendered new supplies of colonists necessary, we should enumerate the want of Roman women; for unless his wife was a Roman, or unless she belonged to a people with which there was connubium.

It is somewhat more difficult to state what was the condition of those conquered people among whom the Romans sent their colonists. They were not Roman citizens, nor yet were they socii; still they were in a sense a part of the Roman state, and in a sense they were subject to Roman law, and had the same rights, which, as citizens, they would have at Rome. (Civitas.) They were, as Niebuhr remarks, in the old Roman colonies, "the populus; the old inhabitants, the commonalty." These two bodies may, in course of time, have frequently formed one; but there could be no political union between them till the old inhabitants obtained the commercium and connubium, in other words, the civitas; and it is probable to occupy colonia lands causes which weakened the old colonies, and rendered new supplies of colonists necessary, we should enumerate the want of Roman women; for unless his wife was a Roman, or unless she belonged to a people with which there was connubium.

It is important to form a precise notion of the relation of an ancient Roman colony to Rome. That the colony was a kind of observation, till after the passing of the Julia lex. Such an opinion is inconsistent with the notion of Roman citizenship (Civitas), which was a personal, not a local right; and it is also inconsistent with the very principle of Roman polity apparent in the establishment of Roman colonies. Further, the loss of the suffragium and honors would have been a species of capitius deminutio, and it is clear, from what Cicer says of the consequences of a Roman voluntarily joining a Latin colony, that no such consequences resulted from becoming a member of a Roman colony. If a Roman ever became a member of a Roman colony without his consent, it must have been in the early ages of the state, when the colonies still retained their garrison character, and had such a duty to protect the state, instead of implying any loss of privilege, justifies quite a different conclusion.

Puteoli, Salernum, Buxentum were coloniae civium Romanorum (Liv. xxxiv. 45); the Ferentinates made a claim, that Latini who should give in their names for a colony could not be sent out to the same place to which a colony had already been sent in due form (auspiciato dotulae). This merely means that so long as the colony maintained its existence, there could be no new colony in the same place; a doctrine that would hardly need proof, for a new colony implied a new assignment of lands; but new settlers (novi adscripti) could not establish a new local authority, unless it was at least marked out by metes and bounds.

That the colonia had been kind of observation, till after the passing of the Julia lex. Such an opinion is inconsistent with the notion of Roman citizenship (Civitas), which was a personal, not a local right; and it is also inconsistent with the very principle of Roman polity apparent in the establishment of Roman colonies. Further, the loss of the suffragium and honors would have been a species of capitius deminutio, and it is clear, from what Cicer says of the consequences of a Roman voluntarily joining a Latin colony, that no such consequences resulted from becoming a member of a Roman colony. If a Roman ever became a member of a Roman colony without his consent, it must have been in the early ages of the state, when the colonies still retained their garrison character, and had such a duty to protect the state, instead of implying any loss of privilege, justifies quite a different conclusion.

It is somewhat more difficult to state what was the condition of those conquered people among whom the Romans sent their colonists. They were not Roman citizens, nor yet were they socii; still they were in a sense a part of the Roman state, and in a sense they were subject to Roman law, and had the same rights, which, as citizens, they would have at Rome. (Civitas.) They were, as Niebuhr remarks, in the old Roman colonies, "the populus; the old inhabitants, the commonalty." These two bodies may, in course of time, have frequently formed one; but there could be no political union between them till the old inhabitants obtained the commercium and connubium, in other words, the civitas; and it is probable to occupy colonia lands causes which weakened the old colonies, and rendered new supplies of colonists necessary, we should enumerate the want of Roman women; for unless his wife was a Roman, or unless she belonged to a people with which there was connubium.

It is important to form a precise notion of the relation of an ancient Roman colony to Rome. That the colony was a kind of observation, till after the passing of the Julia lex. Such an opinion is inconsistent with the notion of Roman citizenship (Civitas), which was a personal, not a local right; and it is also inconsistent with the very principle of Roman polity apparent in the establishment of Roman colonies. Further, the loss of the suffragium and honors would have been a species of capitius deminutio, and it is clear, from what Cicer says of the consequences of a Roman voluntarily joining a Latin colony, that no such consequences resulted from becoming a member of a Roman colony. If a Roman ever became a member of a Roman colony without his consent, it must have been in the early ages of the state, when the colonies still retained their garrison character, and had such a duty to protect the state, instead of implying any loss of privilege, justifies quite a different conclusion.
The nature of a Latin colony will appear sufficiently from what is said here, and in the articles Civitas and Latinitas.

Besides these coloniae, there were coloniae Italici juris, as some writers term them; but which in fact are municipal towns which possessed the jus Italicum, and with the hand raised, which was the peculiar symbol of municipal liberty. (Olenus Alpaeus, Horat. Sat. i. 6, 120.) Pliny (iii. 3 and 21) has mentioned several towns that had the jus italicum; and Lugdunum, Vienna (in Dauphine), and colonia Agrrippinensis had this privilege. It follows from the nature of this privilege, that towns which had the Latinitas or the Civitas, which was a personal privilege, might not have the jus Italicum; but the towns which had the jus italicum could hardly be any other than those which had the civitas or Latinitas, and we cannot conceive that it was ever given to a town of Peregrini.

The colonial system of Rome, which originated in the earliest ages, was well adapted to strengthen and extend her power. By the colonies the empire was consolidated, the decay of population checked, the unity of the nation and of the language diffused. (Machiavelli, quoted by Niebuhr.)

The colonies were sometimes established under the late republic and the empire with circumstances of great oppression, and lands were assigned to the veterans without regard to existing rights. Under the emperors, all legislative authority was Carthago (Vell. ii. 15); Narbo Martius was the next. Nemausus (Nimes) was made a colony by Augustus, an event which is commemorated by medals (Rasche, Lexicon Rei Numariae), and an extant inscription at Nimes.
strangers to one another, without any head, without any bond of union, were suddenly brought together on one spot, "numerous magis quam colonia" (Tacit. Ann. xiv. 27). And on the occasion of the mutiny of the legions in Pannonia, upon the accession of Tiberius, it was one ground of complaint, that the soldiers, after serving thirty or forty years, were separated, and dispersed in remote parts; where they received, under the name of a grant of lands (per nonem agrorum), swampy tracts and barren mountains. (Tacit. Ann. i. 17.)

It remains briefly to state what was the internal constitution of a colony.

In the later times of the republic, the Roman state consisted of two distinct organised parts, Italy and the Provinces. "Italy consisted of a great number of republics (in the Roman sense of the term), whose citizens, after the Italian war, became members of the sovereign people. The communities of these citizens were subjects of the Roman people, yet the internal administration of the communities belonged to themselves. This free municipal constitution was the fundamental characteristic of Italy; and the same remark will apply to both principal classes of such constitutions, municipia, and coloniae. That distinction which made a place into a praefectura, is mentioned afterwards; and fora, conciliabula, castella, are merely smaller communities, with an incomplete organisation." (Savigny.) As in Rome, so in the colonies, the popular assembly had originally the sovereign power; they chose the magistrates, and could even make laws. (Cic. De Leg. iii. 16.) When the popular assemblies became a mere form in Rome, and the elections were transferred by Tiberius to the senate, the same thing happened in the colonies, whose senate then acquired whatever power had once belonged to the community.

The common name of this senate was ordo decurionum; in later times, simply ordo curia; the members of it were decuriones or curiales. (Dig. 50. tit. 2. &c.) Thus, in the later ages, curia is opposed to senatus, the former being the senate of a colony, and the latter the senate of Rome. But the term senatus and senator were also applied to the senate and members of the senate of a colony, both by historians, in inscriptions, and in public records; as, for instance, in the Heraceolitic Tablet, which contained the most general name for all persons who filled similar offices. The name duumvir, sometimes quattuorviri, but they are always carefully distinguished from the duumviri and quaestor. (Cic. de Fam. xiii. 11; Festus, s. v. Praefectura; and Cicero, a native of this place, obtained the highest honours that Rome could confer.

The censor, curator, or quinquennalis, all which names denote the same functionary, was also a municipal magistrate, and corresponded to the censor at Rome, and in some cases, perhaps, to the quaestor also. Censors are mentioned in Livy (xxix. 15) as magistrates of the twelve Latin colonies. The quinquennales were sometimes duumviri, sometimes quaestor, and the quaestor also. Censors were appointed annually in Rome (Livy, xxvi. 16), and sent to the town called a praefectura, which might be either a municipium or a colonia, for it was only in the matter of the praefectus that a town called a praefectura differed from other Italian towns. Capua, which was taken by the Romans in the second Punic war, was made a praefectura. (Vell. ii. 44, and the note of Reimarus on Dion Cassius, xxxviii. 7.) Arpinum is called both a municipium and a praefectura, (Cic. ad Fam. xiii. 11; Festus, s. v. Praefectura; and Cicero, a native of this place, obtained the highest honours that Rome could confer.

For a more complete account of the organisation of these municipalities, and of their fate under the empire, the reader is referred to an admirable chapter in Savigny (Geschichte des Röm. Rechts, &c. vol. i. p. 16, &c.).

The terms municipium and municipes require explanation in connection with the present subject, and the explanation of them will render the nature of a praefectura still clearer. One kind of municipium was a body of persons who were not (Festus, s. v. Municipium) Roman citizens, but possessed all the rights of Roman citizens except the suffragium and the honors. But the communities enumerated as examples of this kind of municipality are the Fundani, Formiani, Cumani, Acerrani, Lanuvini,
and Tusculanum, which were conquered states (Liv. viii. 14), and received the civitas without the suffragium; and all these places received the complete civitas before the social war, or, as Festus expresses it, "Post aliquot annos cives Romani effecti sunt." It is singular that another ancient definition of this class of municipia says, that the persons who had the rights of Roman citizens, except the honores, were civi; and among such communities are enumerated the Cumani, Acerinani, and Atellani. This discrepancy merely shows that the later Roman writers used the word civis in a very loose sense, which we cannot be surprised at, as they wrote at a time when these distinctions had ceased. Another kind of municipium was, when a civitas was completely incorporated with the Roman state; as in the case of the Anagnini (Liv. ix. 23), Caeretans, and Aricini, who completely lost all internal administration of their cities; while the Tusculani and Lanuvini retained their internal constitution, and their magistrate called a dictator. A third class of municipia which originally had the meanings already given, possessed the full privileges of Roman citizens, and also the internal administration of their own cities, as the Tiburtines, Praenestini, Pisani, Urbinates, Nolani, Bononienses, Placentini, Nepesini, Sutramii, and Lucenses, (Lucenses?) The first five of these were civitates sociorum; and the second five, coloniae Latinae: they all became municipia, but only by the effect of the Julia Lex, B.c. 90.

It has also been already said that a praefectura was so called from the circumstance of a praefectus J. D. being sent there from Rome. Those towns in Italy which were so-called praefecturae, says Festus, "in quibus et jus diecibatur et nundinae agebantur, et erat quaedam earum respublica, neque tamen magistratus suos habebant; in quas legibus et nundinae agebatur, et praefectus suus tenetur." Thus a praefectura had a respublica, but no magistrate. Festus then makes two divisions of praefecturae. To the first division were sent four praefecti chosen at Rome (populi suffragiis); and he enumerates ten places in Campania to which these praefecti were sent, and among them Cumae and Acerra, which were municipia; and Volturnum, Liternum, and Puteoli, which were Roman colonies. The second division of praefecturae comprised those places to which the praetor urbanus sent a praefectus every year, namely, Fundi, Formiae, Caere, Venafrum, Allia, Privenum, Anagnia, Frusina, Reate, Saturnia, Nursia, Arpinum, aliaquem plura. Only one of them, Saturnia, was a colony of Roman citizens (Liv. xxxix. 53); the rest are municipia. It is the conclusion of Zumpt that all the municipia of the older period, that is, up to the time when the complete civitas was given to the Latin and the socii, were praefecturae, and that some of the colonies of Roman citizens were also praefecturae. Now as the praefectus was appointed for the purpose of administering justice (juri dicendo), and was annually sent from Rome, it appears that this was one among the many admirable parts of the Roman polity for maintaining harmony in the whole political system by a uniformity of law and procedure. The name praefectura continued after the year B.c. 90; but it seems that in some places at Rome the praefectus ceased to be sent from Rome, and various praefecturae acquired the privilege of having magistrates of their own choosing, as in the case of Puteoli, n. c. 63. (Cic. De Leg. Agr. ii. 31.) The first class or kind of praefecti, the quattuorviri, who were sent into Campania, was abolished by Augustus, in conformity with the general tenor of his policy, n. c. 13. After the passing of the Julia Lex de Civitate, the cities of the socii which received the Roman civitas, still retained their internal constitution; but, with respect to Rome, were all included under the name of municipia: thus Tibur and Praeneste, which were Latin civitates, then became Roman municipia. On the other hand, Bononia and Luca which were originally Latinae coloniae, also became Roman municipia in consequence of receiving the Roman civitas, though they retained their old colonial constitution and the name of colony. Thus Cicero (in Pis. c. 28) could with propriety call Placentia a municipium, though in its origin it was a Latin colony; and in the oration Pro Sext. (c. 14) he enumerates municipia, coloniae, and praefecturae, as the three kinds of towns or communities under which comprehended all the towns of Italy. The testimony of the Herculean tablet is to the like effect; for it speaks of municipia, coloniae, and praefecturae as the three kinds of places which had a magistratus of some kind, to which enumeration it adds fora and conciliabula, as comprehending all the kinds of places in which bodies of Roman citizens dwelt.

It thus appears that the name municipium, which originally had the meanings already given, acquired a narrower import after n. c. 90, and in this narrower import signified the civitates sociorum and coloniae Latinae; but subsequently was extended to any, which then became complete members of the Roman state. Thus there was then really no difference between these municipia and the coloniae, except in their historical origin, and in their original internal constitution. The Roman law prevailed in both.

The following recapitulation may be useful: —
The Old Roman colonies (civium Romanorum) were placed in conquered towns; and the colonists continued to be Roman citizens. These colonies were near Rome (Liv. i. 11, 27, 56, ii. 21, 30), and few in number. The chief motive of the old Roman colonies was to extend and preserve the Roman empire in Italy. After the passing of the Julia Lex, n. c. 90, the number of Roman colonies rapidly increased, and they were established by the Romans in conjunction with other Latin states (Antium). After the conquest of Latium, Latinae coloniae were established by the Romans in various parts of Italy. These colonies should be distinguished from the colonies civium Romanorum, inasmuch as they are sometimes called coloniae populi Romani, though they were not coloniae civium Romanorum. (Liv. xxvii. 9, xxix. 15.) Roman citizens who chose to join such colonies, gave up their civic rights for the more solid advantage of a grant of land.

When Latin colonies began to be established, few Roman colonies were founded until after the close of the second Punic war (n. c. 201), and these few were chiefly maritime colonies (Aensur, &c.). These Latin colonies were subject to and part of the Roman state; but they had not the civitas: they had no political bond among themselves; but they had the administration of their internal affairs. The colonies of the Graeci were Roman colonies; but their object, like that of subsequent Agrarian laws, was merely to provide for the poorer classes of Roman lands, and the Latin colonies had for their object the extension and conservation of the Roman empire in Italy.
the passing of the Lex Julia, which gave the civitas to the socii and the Latin colonies, the object of establishing Roman and Latin colonies ceased; and military colonies were thenceforward settled in Italy, and, under the emperors, in the provinces. (Plin. Nat. Hist. iii. 4.) These military colonies had the civitas, such as it then was; but their internal organisation might be various.

COLORES. The Greeks and Romans had a very extensive acquaintance with colours as pigments. Book vii. of Vitruvius and several chapters of books xxxiii. xxxiv. and xxxv. of Pliny's Natural History, contain much interesting matter upon their nature and composition; and these works, together with what is contained in paintings in the baths of Titus and of Livia, and immortalia ilia opera fecere, ex albis Melino, ex silaceis Attico, ex nibris Sinopide Pontica, ex facta." This mistake, as Sir H. Davy has sup

Romani, at in Echione, Nicomacho, Protogene, Apelle jam perfecta sunt omnia." Here Cicerio extols the design and drawing of Polygnotus, Zeuxis, and Timanthes, and those who used but four colours; and observes in contradistinction, that in Echion, Nicomachus, Protogenes, and Apelles, all things were perfect. But the remark of Pliny, that Apelles, Echion, Melanthius, and Nicomachus used but four colours, including both black and white to the exclusion of all blue (unless we understand by "ex nigris atramento" black and indigo) is evidently an error, independent of its contradiction to Cicerio; and the conclusion drawn by some from it and the remark of Cicerio, that the early Greek painters were acquainted with but four pigments is equally without foundation. Pliny himself speaks of two other colours, besides the four in question, which were used by the earliest painters— the testa-trinita (xxxv. 3) and cinnabarina or vermillion which he calls also minium (xxxiii. 36). He mentions also (xxxv. 21) the Etruscan earth used by Nicomachus, and the rubrum or red, and the olivaceum, or ivory-black, used by Apelles (xxxv. 25), thus contradicting himself when he asserted that Apelles and Nicomachus used but four colours. The above tradition, and the simplex color of Quintilian (Orat. Inst. xii. 10), are our only authorities for defining any limits to the use of colours by the early Greeks as applied to painting, but we have no authority whatever for supposing that they were limited in any remarkable way in their acquaintance with them. That the painters of the earliest period had not such abundant resources in this department of art as those of the later, is quite consistent with experience, and does not require demonstration; but to suppose that they were confined to four pigments is quite a gratuitous supposition, and is opposed to both reason and evidence.

[PICTURA.] Sir H. Davy also analysed the colours of the so-called "Aldobrandini marriage," all the reds and yellows of which he discovered to be ochres; the blues and greens, to be oxides of copper; the blacks all carbonaceous; the browns, mixtures of ochres and black, and some containing oxide of manganese; the whites were all carbonates of lime.

The reds discovered in an earthen vase containing a variety of colours, were, red oxide of lead (minium), and two iron ochres of different tints, a dull red, and a purplish red nearly of the same tint as prussiate of copper; they were all mixed with chalk or carbonate of lime. The yellows were pure ochres with carbonate of lime, and ochre mixed with lime and carbonate of oxides of copper with carbonate of lime.

Sir H. Davy discovered a frit made by means of soda and coloured with oxide of copper, approaching ultramarine in tint, which he supposed to be the frit of Alexandria; its composition, he says, was perfect —"that of embodying the colour in a composition resembling stone, so as to prevent the escape of elastic matter from it, or the decomposing action of the elements; this is a species of artificial lapis lazuli, the colouring matter of which is naturally inherent in a hard siliceous stone."

Of greens there were many shades, all, however, either carbonate or oxide of copper, mixed with carbonate of lime. The greens consisted of ochres calcined, and oxides of iron and of manganese, and compounds of ochres and blacks. Sir H. Davy could not ascertain whether the lake which he discovered was of animal or of vegetable origin; if of animal, he supposed that it was very probably the Tyrian or marine purple. He discovered also a colour which he supposed to be black wad, or hydrated binoxide of manganese; also a black colour composed of chalk, mixed with the ink of the sepia officinalis or cuttle-fish. The transparent
African rubrica called accidental calcination of some pigment by Nicias of Athens, about 330 B.C. Various significations, and it is evidently used by the Romans and, according to Dioscorides (v. 122), a mixture of the pale or minium; it apparently by a fire in the Peiraeeus, and was first used as a pigment by the Greeks Sicyon, from Sinope in Paphlagonia, and Vitruvius, the pale or massicot (yellow oxide of lead), and a preparation in Egypt; this was distinguished by the name of ebon. There was also a washed caeruleum called luteum, and an inferior description of this called trimm. It appears that ultramarine (lapis lazuli) was known to the ancients under the name of Arme-nium, 'Aρμενίων, from Armenia, whence it was procured. Sulphuret of sodium is the colouring principle of lapis lazuli, according to M. Gmelin of Tubingen.

Indigo, Indicum, 'Ινδικόν, was well known to the ancients.

Cobalt. The ancient name for this mineral is not known, but it has been supposed to be the χαλκός of Theophrastus, which he mentions was used for staining glass. No cobalt, however, has been discovered in any of the remains of ancient painting.

Purple. The ancients had also several kinds of purple, purpurarum, ostrum, hyacinum, and various compound colours. The most valuable of these was the purpurarum, prepared by mixing the creta argenteria with the purple secretion of the murex (μορφύρα).

Hysginum, Ὕσγινον (ἄγγυς, woody), according to Vitruvius, is a colour between scarlet and purple. The Roman ostrum was a compound of red ochre and blue oxide of copper.

Pliny speaks of a dark ochre from the island of Syros, which he calls Syricum; but he says also that it was made by mixing sandyx with rubrica Sinopica.

Yellow. Yellow ochre, hydrated peroxide of iron, the oil of the Romans, the ξύρα of the Greeks, formed the base of many other yellows mixed with various colours and carbonate of lime. Ochre was procured from different parts; the Attic was considered the best; it was first used in painting, according to Pliny, by Polycrates and Micon, at Athens, about 460 B.C.

'Αργυρίου, aurigium, orpiment (yellow sulphuret of arsenic), was also an important yellow; but it has not been discovered in any of the ancient paintings. The sandaracha has been already mentioned.

Green. Cerussa, χρυσόσκολλα, which appears to have been green carbonate of copper or malachite (green verditer), was the green most ap-
Among the colossal statues of Greece, the most celebrated, according to Pliny, was the bronze colossus at Rhodes by Chares of Lindus. (See Dict. of G. and R. Biog. art. Chares.) Pliny mentions another Greek colossus of Apollo, the work of Calamis, which cost 500 talents, and was twenty cubits high, in the city of Apollonia, whence it was transferred to the capital by M. Lucullus; and also those of Jupiter and Hercules, at Tarentum, by Lysippus. (Dict. of G. and R. Biog. art. Lysippus.) To the list of Pliny must be added the more important colossal statues of Pheidias, the most beautiful of which were his chryselephantine statues of Zeus, at Olympia, and of Athena, in the Parthenon at Athens; the largest was his bronze statue of Athena Promachus, on the Acropolis.

Amongst the works of this description made expressly by or for the Romans, those most frequently alluded to are the following:—1. A statue of Jupiter upon the capitol, made by order of Sp. Carvillus, from the armour of the Samnites, which was so large that it could be seen from the Alban mount. (Plin. l. c.) 2. A bronze statue of Apollo at the Palatine library (Plin. l. c.), to which the bronze head now preserved in the capitol probably belonged. 3. A bronze statue of Augustus, in the forum, which bore his name. (Mart. Ep. viii. 44.) 4. The colossus of Nero, which was executed by Zenodorus in marble, and therefore quoted by Pliny in proof that the art of casting metal was then lost. Its height was 110 or 120 feet. (Plin. l. c.; Suet. Ner. 51.) It was originally placed in the vestibule of the domus aurea (Mart. Spect. ii. 1. Ep. i. 71. 7; Dion Cass. lxv. 15) at the bottom of the Via Sacra, where the basement upon which it stood is still to be seen, and from it the contiguous amphitheatre is supposed to have gained the name of “Colosseum.” Having suffered in the fire which destroyed the golden house, it was repaired by Vespasian, and by him converted into a statue of the sun. (Hieronym. in Hab. c. 3; Suet. Vesp. 18; Plin. l. c.; compare Lamprid. Comm. 12; Dion Cass. lxv. 15.) Twenty-four elephants were employed by Hadrian to remove it, when he was about to build the temple of Rome. (Sparr. Iudr. 19.) 5. An equestrian statue of Domitian, of bronze gilt, which was placed in the centre of the forum. (Stat. Syph. i. 1.1; Mart. Ep. i. 71. 6.)

COLOSSEUS. (κολοσσεὺς). The origin of this word is not known, the suggestions of the grammarians being either ridiculous, or imperfect in point of etymology. (Etym. Mag. p. 526. 16; Festus, s. v.) It is, however, very ancient, probably of Ionic extraction, and rarely occurs in the Attic writers. (Bllomf. Gloss. ad Aene. Agam. 406.) It is used both by the Greeks and Romans to signify a statue larger than life (Hesych. s. v.; Aeschin. Agam. 406; Schol. ad Jun. Sat. viii. 230), and thence a person of extraordinary stature is termed colossos (Suet. Calig. 35); and the architectural ornaments in the upper members of lofty buildings, which require to be of large dimensions in consequence of their remoteness, are termed colossiocotera (κολοσσιοκότερα, Vitruv. iii. 8, compare Id. x. 4). Statues of this kind, simply colossal, but not enormously large, were too common amongst the Greeks to excite observation merely from their size, and are, therefore, rarely referred to as such; the word being more frequently applied to designate those figures of gigantic dimensions (molos statuarum, terrulins paras, Plin. ii. N. xxxiv. 7. s. 18) which were first executed in Egypt, and afterwards in Greece and Italy.
COLUMNA.

323

Thus we find it employed in the making of olive-oil to receive the juice of the berry when pressed out by the prelum. Such cola were made of hard, broom or rushes (Virg. Georg. ii. 343; Colum. R. R. xii. 19). Those that were used as articles of luxury for straining wine were frequently made of some metal, such as bronze or silver (Athen. p. 470, d.). Various specimens of cola have been found at Pompeii. The preceding woodcut shows the plan and profile of one which is of silver (Mus. Borh. vol. viii. 14. fig. 4, 5).

The Romans filled the strainer with ice or snow (cola nituraria) in order to cool and dilute the wine at the same time that it was cleansed. [Nix.] [J. Y.]

COLUMBARIUM, literally a dove-cote or pigeon-house, is used to express a variety of objects, all of which however derive their name from their resemblance to a dove-cote.

1. A sepulchral chamber. [FUNUS.]
2. In a machine used to raise water for the purpose of irrigation, as described by Vitruvius (x. 9), the vents through which the water was conveyed into the receiving trough, were termed Columbaria. This will be understood by referring to the woodcut a p. 100. [ANTILLA.] The difference between that representation and the machine now under consideration, consisted in the following points:—

The wheel of the latter is a solid one (tympa-num), instead of radiated (rota); and was worked as a treadmill, by men who stood upon platforms projecting from the flat sides, instead of being turned by a stream. Between the intervals of each platform a series of grooves or channels (co-lumbaria) were formed in the sides of the tympanum, through which the water taken up by a number of scoops placed on the outer margin of the wheel, like the jars in the cut referred to, was conducted into a wooden trough below (labrum ligneum suppositum, Vitruv. l. c.).

3. The cavities which receive the extreme ends of the beams upon which a roof is supported (ti-gnorum cubilia), and which are represented by triglyphs in the Doric order, were termed Colum-baria by the Roman architects; that is, whilst they remained empty, and until filled up by the head of the beam. The corresponding Greek term was brad (from δρῆ a hole), and hence the space between two such cavities, that is, in the complete building, between two triglyphs, was called μετάτρη, a metope. (Vitruv. iv. 2; Marquez, Dell’ Ordine Dorico, vii. 37.) [A. R.]

COLUMEN, which is the same word as cul-men, is used in architecture, either generally for the roof of a building, or particularly for a beam in the highest part of the slope of a roof. By this description Vitruvius seems to mean either the col-lar-beam, or the king-post, but more probably the latter, as he derives column from column (Vitruv. iv. 2 § 1. Schn.; Festus). [P. S.]

COLUMNA (κολύμνη, dim. κολύνη, κολύνω, κολυνσίς; στηλή, dim. στυλείς, στυλείοις), a pillar or column.

The use of the trunks of trees placed upright for supporting buildings unquestionably led to the adoption of similar supports wrought in stone. Among the agricultural Greeks of Asia Minor, whose modes of life appear to have suffered little change for more than two thousand years, Sir G. Fellowes observed an exact conformity of style and arrangement between the wooden huts now occupied by the penanu, of one of which he has given a sketch (Journal, p. 234; see woodcut), and the splendid tombs and temples, which were hewn out of the rock, and constructed at the expense of the most wealthy of the ancient inhabitants. We have also direct testimonies to prove that the ancients made use of wooden columns in their edifices. Pausanias (vi. 24. § 7) describes a very ancient monument in the market-place at Elis, consisting of a roof supported by pillars of oak. A temple of Juno at Metapontum was supported by pillars made from the trunks of vines. (Plin. H. N. xxi. 1.) In the Egyptian architecture, many of the greatest stone columns are manifest imitations of the trunk of the palm. (Hered. ii. 169.)

As the tree required to be based upon a flat square stone, and to have a stone or tile of similar form fixed on its summit to preserve it from decay, so the column was made with a square base, and was covered with an obelus. [ABACUS.] Hence the principal parts of which every column consists are three, the base, the shaft, and the capital.

In the Doric, which is the oldest style of Greek architecture, we must consider all the columns in the same row as having one common base (podium), whereas in the Ionic and Corinthian each column has a separate base, called στηλή. [SPIRA.] The capitals of these two latter orders show, on comparison with the Doric, a greater degree of complexity and a much richer style of ornament; and the character of lightness and elegance is further obtained in them by their more slender shaft, its height being much greater in proportion to its thickness. Of all these circumstances some idea may be formed by the inspection of the three accompanying specimens of pillars selected from...
each of the principal orders of ancient architecture. The first is from a column of the Parthenon at Athens, the capital of which is shown on a larger scale at p. 1. The second is from the temple of Baechus at Teos, the capital of which is introduced at p. 144. The third is from the remains of the temple of Jupiter at Labranda.

In all the orders the shaft (scapus) tapers from the bottom towards the top, thus imitating the natural form of the trunk of a tree, and at the same time conforming to a general law in regard to the attainment of strength and solidarity in all upright bodies. The shaft was, however, made with a slight swelling in the middle, which was called the entasis. It was, moreover, almost universally, and from the earliest times, channelled or fluted, i.e. the outside was striped with incisions parallel to the axis. (Vitruv. iv. 4.) These incisions, called striae, were always worked with extreme regularity. The section of them by a plane parallel to the base was, in the Ionic and Corinthian orders, a semicircle; in the Doric, it was an arc much less than a semicircle. Their number was 20 in the columns of the Parthenon, above represented; in other instances, 24, 28, or 32.

The capital was commonly wrought out of one block of stone, the shaft consisting of several cylindrical pieces fitted to one another. When the column was erected, its component parts were firmly joined together, not by mortar or cement, but by iron cramps fixed in the direction of the axis. The annexed woodcut is copied from an engraving in Swinburne's Tour in the Two Sicilies (vol. ii. p. 301), and represents a Doric column, which has been thrown prostrate in such a manner as to show the capital lying separate, and the five drums of the shaft, each four feet long, with the holes for the iron cramps by which they were united together.

Columns of an astonishing size were nevertheless erected, in which the shaft was one piece of stone. For this purpose it was hewn in the quarry into the requisite form (Verg. Aen. i. 428), and was then rolled over the ground, or moved by the aid of various mechanical contrivances, and by immense labour, to the spot where it was to be set up. The mausoleum of the Emperor Hadrian, a circular building of such dimensions that it serves as the fortress of modern Rome, was surrounded by forty-eight lofty and most beautiful Corinthian pillars, the shaft of each pillar being a single piece of marble. About the time of Constantine, some of these were taken to support the interior of a church dedicated to St. Paul, which a few years ago was destroyed by fire. The interest attached to the working and erection of these noble columns, the undivided shafts of which consisted of the most valuable and splendid materials, led many individuals to employ their wealth in presenting them to public structures. Thus Croesus contributed the greater part of the pillars to the temple at Ephesus. (Herod. i. 92.) In the ruins of Labranda, now called Julita, in Caria, tablets in front of the columns record the names of the donors, as is shown in the specimen of them above exhibited.

Columns were used in the interior of buildings to sustain the beams which supported the ceiling. As both the beams and the entire ceiling were often of stone or marble, which could not be obtained in pieces of so great a length as wood, the columns were in such circumstances frequent in proportion, not being more than about ten or twelve feet apart. The epistadia of the Parthenon at Athens, as appears from traces in the remaining ruins, had four columns to support the ceiling. A common arrangement, especially in buildings of an oblong form, was to have two rows of columns parallel to the two sides, the distance from each side to the next row of columns being less than the distance between the rows themselves. This construction was adopted not only in temples, but in palaces (palaioi). The great hall of the palace of Ulysses in Ithaca, that of the king of the Phaenicians, and that of the palace of Hercules at Thbes (Eurip. Hec. iii. 1013) are supposed to have been thus constructed, the seats of honour both for the master and mistress, and for the more distinguished of their guests, being at the foot of certain pillars. (Od. vi. 307, viii. 473, xxiii. 90.) In these regal halls of the Homeric era, we are also led to imagine the pillars decorated with arms. When Telemaechus enters his father's hall, he places his spear against a column, and, within the polished spear-holder," by which we must understand part of the stipes or channels of the shaft. (Od. xi. 127—128, xvi. 29; Verg. Aen. xii. 92.) Around the base of the columns, near the entrance, all the warriors of the family were accustomed to incline their spears; and from the upper part of the same they suspended their bows and quivers on nails or hooks. (Hom. Hymn. in Ap. 8.) The minstrel's lyre hung upon its peg from another column nearer the top of the room. (Od. viii. 67; Pind. Ol. i. 17.) The columns of the hall were also made subservient to less agreeable uses. Criminals were tied to them in order to be scourged, or otherwise tormented. (Soph. Ajaios, 108; Labeck ad loc.; Diod. Lait. viii. 21; Hesiod, Theog. 521.) According to the description in the Odyssey, the beams of the hall of Ulysses were of silver-fir; in such a case, the apartment might be very spacious without being overcrowded with columns. (Od. xix. 33, xxii. 176, 193.)

Rows of columns were often employed within a building, to enclose a space open to the sky. Beams supporting ceilings passed from above the columns to the adjoining walls, so as to form covered passages or ambulatories (σταθερα). Such a circuit of columns was called a peristyle (περίστυλον), and the Roman atrium was built upon this plan. The largest and most splendid temples enclosed an open space like an atrium, which was accomplished by placing one peristyle upon another. In such cases, the lower rows of columns being Doric, the upper were sometimes Ionic or Corinthian, the lighter being properly based upon the heavier. (Paus. viii. 45. § 4.) A temple so con-
together by another continuous piece, parallel to the first; and above this, if the columns were at the ends of the cross-beams, what were originally the ends of the cross-beams: which would be tied together by another continuous piece, parallel to the first; and above this, if the columns were at one end of the building, would rise the pitch of the roof. Now in the actual parts of an architectural arrangement, this object was still kept in view. The natural arrangement in such a case is obvious. A continuous beam (or series of beams) would be laid on the tops of a row of columns. On this beam would rest the epistylium: 

I. The Doric Order is characterized by the absence of a base, the thickness and rapid diminution of the shaft, and the simplicity of the capital, which consists of a deep flat oval moulding, called abacus, beneath which are from three to five steps or channels (annuli). Instead of the hypotrachelium (a sort of neck which unites the shaft to the portion of the shaft cut off by one or more narrow channels). In the entablature, the architrave is in one surface, and quite plain: the frieze is ornamented by figures in relief, whence its Greek name. Above the frieze projects the cornice (coronis, corona), forming a handsome finish to the entablature (for so these three members taken together are called), and also, on the sides of the building, serving to unite the ends of the rafters of the roof. The triangular gable-end of the roof, above the entablature, is called the pediment. 

The Roman architects made considerable variations in the order, the details of which are shown in the engraving on the following page, from an example at Albano near Rome. In the later examples of the Roman Doric, a base is given to the column.

II. The Ionic Order is characterized by the absence of a base, the height of the columns is only 7 3 modules (i.e. semi-diameters), and in the great temple at Paestum only 8 modules; but greater lightness was afterwards given to the order, so that, in the Parthenon, which is the best example, the height of the columns is 12 modules. The following profile is from the temple of Apollo Epikurius at Phigaleia, built by the same architect as the Parthenon. For a comparison of the other chief examples, see the work of Mauch.
and sometimes, as in the Erechtheum, adorned with leaf-work (ακώλημα). The capital itself consists of, first, an astragal moulding, above which is an echinus, sculptured into eggs and serpents' tongues, and above this (sometimes with a torus intervening) the canalis, from which spring the spiral volutes, which are the chief characteristics of the order. There is generally an ornamented abacus between the capital and the entablature. The architrave is in three faces, the one slightly projecting beyond the other; there is a small cornice between the architrave and the frieze, and all three members of the entablature are more or less ornamented with mouldings. The finest specimens of the order in its most simple form are those in the temple of the Ilissus, and the temple of Athena Polias at Priene; the latter is usually considered the best example of all. The portico of the temple of Athena Polias, adjoining to the Erechtheum, at Athens, displays a greater profusion of ornament, but is equally pure in its outlines. It is shown in the preceding engraving.

The use of the Ionic Order presented one important difficulty. In the side view of the capital, the volutes did not show their beautiful spiral curl, but only a roll, bound together by astragals; so that, where the order had to be carried round a corner, it was necessary that the capital of the corner column should present two faces. This was accomplished by giving the outer volute an inclination of 45° to the surfaces, and sculpturing the spiral on each of its sides, as shown in the following engraving; in which the upper figure shows an elevation, viewed from the inner side, and the lower figure a plan, of a corner capital of the Ionic Order.

The Romans, with the usual infelicity of imitators, frequently made all the capitals with corner volutes. Their volutes also are usually stiff and meagre, and the order, as a whole, remarkably inferior to the Grecian examples. For a collection of specimens of the order, see the plates of Mauch.

III. The Corinthian Order is still more slender than the Ionic, and is especially characterised by its beautiful capital, which is said to have been suggested to the mind of the celebrated sculptor Callimachus by the sight of a basket, covered by a tile, and overgrown by the leaves of an aonitlus, on which it had accidentally been placed. The lowest member of the capital, answering to the hypotrichelium, is a sort of calyx (calathus), from
which spring generally two rows of acanthus leaves, surmounted at each corner by a small volute, the spaces between the volutes being occupied by flowers, masks, or arabesques, or by another pair of volutes intertwining with each other. In the earlier examples, however, there is frequently only one row of acanthus leaves; and in the so-called Tower of the Winds the volutes are wanting, and the capital consists only of an astragal, a single row of acanthus leaves, and a row of tongue-shaped leaves. In all the examples, except the last-mentioned, the abacus, instead of being square, as in the other orders, is hollowed at the edges, and the middle of each edge is ornamented with a flower. The ornaments of the capital were sometimes cast in bronze. The order seems to have been invented about the time of the Peloponnesian War; but it did not come into general use till some time afterwards. The earliest known example of its use throughout a building is in the choric monument of Lysicrates, which was built in B.C. 335 (see Dict. of Biog. art. Lysicrates), and from which the following engraving is taken.

For further details respecting the orders and their supposed history, see the 3d and 4th books of Vitruvius, the work of Mauch, and Stieglitz's Archäologie der Baukunst.

It only remains to mention some other uses of columns, besides their ordinary employment for supporting buildings either within or without. Columns in long rows were used to convey water in aqueducts (Crates, ap. Athen. vi. 94); and single pillars were fixed in harbours for mooring ships. (Od. xxii. 466.) Some of these are found yet standing.

Single columns were also erected to commemorate persons or events. Among these, some of the most remarkable were the columnae rostratae, called by that name because three ship-beaks proceeded from each side of them, and designed to record successful engagements at sea (Verg. Georg. iii. 29; Servius, ad loc.). The most important and celebrated of those which yet remain, is one erected in honour of the consul C. Duilius, on occasion of his victory over the Carthaginian fleet, B.C. 261 (see the annexed woodcut). It was originally placed in the forum (Plin. H. N. xxxiv. 11), and is now preserved in the museum of the
COLUMNARIUM.  

posed by the lex sumptuaria of Julius Caesar, and was intended to check the passion for the building of palaces, which then prevailed at Rome. The Ostiariwm was a similar tax. [OSTIARIUM.]

The columnarium levied by Metellus Scipio in Syria in B.C. 40–48, was a tax of a similar kind, but had nothing to do with the tax to which Cicero alludes in the passage quoted above. This columnarium was simply an illegal means of extracting money from the provincials. (Caes. B. C. iii. 32.)

COLUS, a distaff. [FUSUS.]

COMA (κομή, κούφη), the hair. 1. GREEK. In the earliest times the Greeks wore their hair long, and thus they are constantly called in Homer καρπομοῦντες ἄχαιοι. This ancient practice was preserved by the Spartans for many centuries. The Spartan boys always had their hair cut quite short (ἐν χρόνῳ κεφαλῆς, Plat. Lyc. 16); but as soon as they reached the age of puberty (έφη-βος), they let it grow long. They prided themselves upon their hair, calling it the cheapest of ornaments (τῶν κομίων ἄλλατανεταντος), and before going to battle they combed and dressed it with especial care, in which act Leonidas and his followers were discovered by the Persian spy before the battle of Thermopylae (Herod. vii. 208, 209). It seems that both Spartan men and women tied their hair in a knot over the crown of the head (comp. Aristoph. Lyc. 1316, κομίων παρα-αυτοκηδεστα), with Hor. Carm. ii. 11, in columnum Lacenas more comas religiata nodum: Müller, Dor. iv. 3, § 1). At a later time the Spartans abandoned this ancient custom, and wore their hair short, and hence some writers erroneously attribute this practice to an earlier period. (Paus. vii. 14, § 2; Philostr. Vit. Apoll. iii. 15, p. 106, ed. Olear.; Plut. Ale. 23.)

The custom of the Athenians was different. They wore their hair long in childhood, and cut it off when they reached the age of puberty. The cutting off of the hair, which was always done when a boy became an έφη-βος, was a solemn act, attended with religious ceremonies. A libation was first offered to Hercules, which was called οἰνωστήρα or οἰνωστήρια (Hesych. and Phot. s. v.); and the hair after being cut off was dedicated to some deity, usually a river-god. (Aeschyl. Choep. 6; Paus. i. 37, § 2.) It was a very ancient practice to repair to Delphi to perform this ceremony, and Theseus is said to have done so. (Plut. These. 5; Theophr. Char. 21.) The ephelai are always represented on works of art with their hair quite short, in which manner it was also worn by the Athletae (Lucian, Dial. Mer. 5). But when the Athenians passed into the age of manhood, they again let their hair grow. In ancient times at Athens the hair was rolled up into a kind of knot on the crown of the head; and fastened with golden clamps in the shape of grass-hoppers. This fashion of wearing the hair, which was called κρωθόδος, had gone out just before the time of Thucydides (i. 6); and what succeeded it in the male sex we do not know for certain. The Athenian females also wore their hair in the same fashion, which was in their case called κομίωδος, and an example of which is given in the following figure of a female taken from Millingen (Peintures Antiques, plate 40). The word CORYN- bium is used in a similar sense by Petronius (c. 110).
On vases, however, we most frequently find the heads of females covered with a kind of band or a coif of net-work. Of these coiffures one was called σφενδίων, which was a broad band across the forehead, sometimes made of metal, and sometimes of leather, adorned with gold; to this the name of στελεγύς was also given, and it appears to have been much the same as the ἡμύς (Pollux, vii. 179; Bottiger, Vasengemälde, iii. p. 225; AMPYX). But the most common kind of head-dress for females was called by the general name of κεκρύφαλος, (καλατία, and this was divided into the three species of κεκρύφαλος, κάλατια, and μίτρα. The κεκρύφαλος, in its narrower sense, was a caul or coif of net-work, corresponding to the Latin reticulum. It was worn during the day as well as the night, and has continued in use from the most ancient times to the present day. It is mentioned by Homer (II. xxii. 469), and is still worn in Italy and Spain. These hair-nets were frequently made of gold-threads (Juv. ii. 96; Petron. 67), sometimes of silk (Salmas. Exerc. ad Solin. p. 392), or the Elean byssus (Paus. vii. 21. § 7), and probably of other materials, which are not mentioned by ancient writers. The persons who made these nets were called κεκρύφαλωτάκοι (Pollux, vii. 179). Females with this kind of head-dress frequently occur in paintings found at Pompeii, from one of which the preceding cut is taken, representing a woman wearing a Coa Vestis. [Coa Vestis. ] (Museo Borbon. vol. viii. p. 5.) The σάκκος and the μίτρα were, on the contrary, made of close materials. The σάκκος covered the head entirely like a sack or bag; it was made of various materials, such as silk, byssus, and wool. (Comp. Aristoph. Thesm. 257.) Sometimes, at least among the Romans, a bladder was used to answer the same purpose. (Mart. viii. 33. 13.) The μίτρα was a broad band of cloth of different colours, which was wound round the hair, and was worn in various ways. It was originally an Eastern head-dress, and may, therefore, be compared to the modern turban. It is sometimes spoken of as characteristic of the Phrygians. (Herod. i. 185, vii. 62; Virg. Aen. ix. 616, 617; Juv. iii. 66.) It was, however, also worn by the Greeks, and Polygnotus is said to have been the first who painted Greek women with mitrae (Plin. H. N. xxxv. 9. s. 39). The Roman calatina or calvatica is said by Servius (ad Virg. Aen. ix. 616) to have been the same as the mitra, but in a passage in the Digest (34. tit. 2. s. 25. § 10) they are mentioned as if they were distinct. In the annexed cut, taken from Millin (Peintures de Vases Antiques, vol. ii. pl. 43), the female on the right hand wears a σάκκος and that on the left a μίτρα.

With respect to the colour of the hair, black was the most frequent, but blonde (γαλήνη κόμη) was the most prized. In Homer, Achilles, Ulysses, and other heroes are represented with blonde hair (II. 1.197; Od. xiii. 399, &c.) At a later time it seems to have been not uncommon to dye hair, so as to make it either black or blonde, and this was done by men as well as by women, especially when the hair was growing grey. (Pollux, ii. 35; Aelian, V. H. vii. 20; Athen. xii. p. 512, d; Lucian, Amor. 40.)

ROMAN. Besides the generic coma we also find the following words signifying the hair: ca-
pillus, caesanes, crines, cincinnus, and carrus, the two last words being used to signify curled hair. In early times the Romans wore their hair long, as was represented in the oldest statues in the age of Varro (De Re Rust. ii. 11. § 10), and hence the Romans of the Augustan age designated their hairdressors, capillas (Ov. Fast. iii. 30) and capillatus (Ju. vi. 30). But after the introduction of barbarians into Italy about B.C. 300, it became the practice to wear their hair short. The women too originally dressed their hair with great simplicity, but in the Augustan period a variety of different head-dresses came into fashion, many of which are described by Ovid (de Art. Am. iii. 136, &c.). Sometimes these head-dresses were raised to a great height by rows of false curls (Juv. Sat. vi. 592). The dressing of the hair of a Roman lady at this period was a most important affair. So much attention did the Roman ladies devote to it, only confining it by a band encircling the head. Plin. //. .V. xxviii. 12. § 51). The dressing of the hair of a Roman lady was represented in the oldest statues in the age of Varro (De Re Rust. ii. 11. § 10), and hence the Roman ladies was allowing it to fall down in tresses behind, and at this period was a most important affair. So much attention did the Roman ladies devote to it, only confining it by a band encircling the head. This practice was also continued by the Africans, who dressed their hair in the same manner. But after the introduction of barbarians into Italy about B.C. 300, it became the practice to wear their hair short. In Horace's time (Sat. ii. 239, &c.) and in Horace's time (Sat. ii. 239, &c.), the hair was cut close in mourning [FUNUS] and among both the slaves had their hair cut close as a mark of servitude. (Aristoph. Aves, 911; Plaut. Amph. i. l. 306; Becker, Charicles, vol. ii. p. 300, &c.; Böttiger, Sabina, vol. i. p. 138, &c.).

COMITES. This word is formed from com, cum, and con, and the substantive comitatus a "revel" or a "debauchee." Hence Cicero (Ad Att. i. 16) calls the supporters of Catiline's conspiracy comitatus conjurationis. (Becker, Guille, vol. ii. p. 235.)

COMITIA. This word is formed from com, cum, or con, and the substantive comitatus a "revel" or a "debauchee." Hence Cicero (Ad Att. i. 16) calls the supporters of Catiline's conspiracy comitatus conjurationis. (Becker, Guille, vol. ii. p. 235.)
act, unless they were authorised by the senate and people. The sovereign people or populus, however, was not the same at all times. In the earliest times of Rome the populus consisted of the patriarchs (or patres) only, the plebs and the clients forming no part of the populus, but being without the pale of the state. The original populus was divided into thirty curiae, and the assembly of these curiae, or the comitia curiata, therefore, were the only assembly in which the populus was represented. A kind of amalgamation of the patriarchs and the plebs afterwards appeared in the comitia of the centuries, instituted by king Servius Tullius, and henceforth the term populus was applied to the united patriarchs and plebeians assembled in the comitia centuriata. But Servius had also made a local division of the whole Roman territory into thirty tribes, which held their meetings in assemblies called comitia tributa, which, in the course of time, acquired the character of national assemblies, so that the people thus assembled were likewise designated by the term populus. We shall examine in order the nature, power, and business of each of these different comitia.

I. COMITIA CALATA. These and the comitia curiata were the only assemblies that met and were recognized at Rome previous to the time of Servius Tullius, and inasmuch as the people of which they consisted was the same as the populus in the comitia curiata, they might also be called comitia curiata, but they differed in their objects, in the persons presiding at them, and in the place of meeting. The comitia calata were held under the presidency of the college of pontiffs (Gellius, xv. 27), who also convened them. They derived their name calata from the circumstance that the attendants or servants of the pontiffs, who were probably employed in calling them together, were termed calatores. Their place of meeting was probably always on the Capitol in front of the building of the pontiffs, and to have been destined for this purpose. (Paul. Diac. p. 49, ed. Müller; Varro, De Ling. Lat. v. i. p. 24.) With regard to the functions of the comitia calata, all writers are agreed that the people assembled acted merely as the attendants or servants of the pontiffs, which, in the course of time, acquired the character of national assemblies, so that the people thus assembled were likewise designated by the term populus. We shall examine in order the nature, power, and business of each of these different comitia.

II. COMITIA CURIATA (ἐκκλησία φαρακτική or φατριακή) were of far greater importance than the comitia calata, inasmuch as the populus here was not present in a mere passive capacity, but had to decide by its votes as to whether a measure brought before it was to be adopted or rejected. As the populus was at first only the body of real citizens, that is, the patriarchs, or those contained in the curiae, none but members of the curiae, that is, patriarcch, had a right to take part in these assemblies. It is a disputed point, as to whether the clients of the patriarchs had a right to vote in the comitia curiata; but it is highly probable that, when they appeared in them, they could not act any other part than that of listeners and spectators. They were convened, in the kingly period, by the king himself, or by his tribunes of war, and in the king's absence by the praefectus urbi. (Liv. i. 58.) After the death of a king the comitia were held by the interrex. In the republican period, the president was always one of the high patriarchs, viz. a consul, praetor, or dictator. (Cic. De Leg. Agr. ii. 11, 12; Liv. ix. 38.) They were called together by lictors or heralds. (Gellius, xv. 27; Dionys. ii. 7.) The votes were given by curiae, each curia having one collective vote; but within a curia each citizen belonging to it had an independent vote, and the majority of the members of a curia determined the vote of the whole curia (Gell. l. c.; Liv. i. 43; Dionys. ii. 14, iv. 20, 84, v. 6.) Now as the curiae were thirty in number, it was impossible to obtain a simple majority, which must always have consisted of 16 curiae. How matters were decided in case of 15 curiae voting for and 15 against a measure, is quite un-
COMITIA.

accounted for only by the fact that the number 30 was chosen or retained for the assembly can be accounted for only by the fact that the number three and its multiples had a certain sacred import in all matters connected with the constitution. The order in which the curiae voted, was not fixed by any regulation, but it appears that the one which gave its vote first, and was called principium, was determined by lot. (Liv. ix. 38.) Further particulars regarding the method of voting, however, are not known. The president in the comitia curiata was always the person that had convoked them, that is, in the kingly period, either the king himself, or the person that acted as his viceregent, and in the republic it was always the curiata. As regards the powers and functions of the comitia curiata, it must first of all be borne in mind, that in the early times no comitia, of whatever kind they were, had the right to originate any measure, to introduce amendments, or to discuss the merits and demerits of any subject that was brought before them. All they could do was to accept or reject any measure which was brought before them, so that all proposals were in fact nothing but rogations (populus rogatur), which the people passed by the formula uti rogass, or rejected by the formula antiqute. Whatever was thus decreed became law for the king and senate no less than for the people. The main points upon which the populace had to decide, were the election of the magistrates, including the king himself, the passing of laws, peace and war, the capital punishment of Roman citizens ( Dionys. ii. 14, iv. 20, ix. 41), and, lastly, upon certain affairs of the curiae and gentes. In the kingly period, the only magistrate in whose person all the powers of the republican officers were concentrated, was the king himself. All the other officers were appointed by him, with the exception of the quaestores, who were elected by the people (Ulpian, Dig. ii. 13; but comp. Tac. Ann. xi. 22; Quaestor.) With regard to the election of the king, the assembly, as in all other matters, was limited to the persons proposed by the senate through the president in the assembly, that is, when the senate had passed a decree respecting the election, the interreges determined upon the candidates, from among whom he was to be chosen, and then proposed them to the curiae. (Dionys. ii. 40; v. 80, li. 140; Dion. ii. 12; Cic. De Re Publ. ii. 13; comp. Interrex and Rex.) The priestly officers, such as the Curiones, Flamines Curiales, were likewise either elected by the curiae, or at least inaugurated by them (Dionys. ii. 22; Gell. l. c.), until in later times, b. c. 104, the Domitian law transferred the whole appointment of the priestly colleges to the comitia of the tribes. Legislative proposals were laid before the curiae by the king or the senate, and they might either pass them as laws or reject them. Such laws belonging to the kingly period were the so-called leges regiae; their number cannot have been great, as custom and religion had allowed and firmly established the principal rules of conduct without there being any necessity for formal legal enactments. The right of finally deciding upon the life of Roman citizens (judicia de capite civis Romani) is said to have been given to the populace by king Tullus Hostilius (Liv. i. 26, viii. 33; Dionys. iii. 22); and previous to the constitution of Servius Tullius this privilege was of course confined to the patricians, for whom it was nothing else but the right of appealing from the sentence of the king or judge to the assembly of their peers. When Valerius Publicola remedied this law, it must have been extended to the plebeians also. The fourth right of the assembly of the populace was that of deciding upon war and peace, but this decision again could only be made when it was proposed by the king. With regard to the declaration of war there is no doubt (Liv. i. 32; Gellius, xvi. 4; Dionys. viii. 91, ix. 69); but there is no instance on record of the populace ever having had any thing to do with the conclusion of treaties of peace; no trace of it occurs till long after the establishment of the republic, so that we may fairly presume that in early times the conclusion of peace was left to the king (or the consuls) and the senate, and that Dionysius, as in many other instances, transferred a later custom to the early times. Besides these great functions the curiae had unquestionably many others relating to their own internal administration; and among them we may mention, that no new members could be admitted into a curia, either by the cooptatio of strangers or by the adlectio of plebeians, without the consent of the assembly of the curiae; and that no arroges were allowed to be written into the comitia curiata without the concurrence of the assembled curiae under the presidency of the pontiffs. The consent of the curiae in such cases is expressed by the term lex curiata. (Gellius, v. 19; Tac. Hist. i. 15.) It must further be remarked, that when a magistrate (such as the king) proposed to the assembly to have been elected, the populace held a second meeting, in which he was formally inducted in his new office. This formality was called lex curiata de imperio, where-by the magistrate received his imperium, together with the right of holding the comitia. (Liv. vi. 31; Dion Cass. xxxix. 19, xli. 43; Cic. De Leg. Agr. ii. 12.) It was not till a magistrate had thus been solemnly installed, that he was a magistratus optima lege or optimo jure, that is, in the full possession of all the rights and privileges of his office.

Down to the time of Servius Tullius, the comitia curiata were the only popular assemblies of Rome, and remained of course in the undiminished possession of the rights above described; but the constitution of that king brought about a great change, by his transferring the principal rights which had hitherto been enjoyed by the curiae to this new national assembly or the comitia centuriata. The power of electing the magistrates, the decision upon war, the passing of laws and jurisdiction in cases of appeal to the body of the Roman people, were thus transferred to the comitia of the centuries. But while the patricians were obliged to share their rights with the plebeians, they reserved for themselves the very important right of sanctioning or rejecting any measure which had been passed by the centuries. Even independent of their right finally to decide upon these questions, they seem, for a time at least, to have exercised a considerable power in several departments of the government: thus, the abolition of royalty and the establishment of the republic are said to have been decreed by the curiae (Dionys. iv. 75, 84); in like manner they decided upon the property of the last king (Dionys. v. 6), and upon the rewards to be given to those who had given information respecting the conspiracy (v. 87). The sanction of decrees passed by the centuries is often expressed by patres auctores fiant, and down to the time of the
Publilian law no decree of the centuries or tribes could become law without this sanction. It need hardly be remarked that the curiae, as long as they existed, retained the exercise of such rights as affected the welfare of their own corporations and the religions rites connected with them. We subjoin a list of the powers and functions which the curiae continued to exercise down to the end of the republic.

1. They conferred the imperium and the right of taking the auspices upon magistrates after their election; this was done by the lex curiata de imperio. This right however must, in the course of time, have become a mere matter of form, and in the time of Cicero (ad Att. iv. 18, ad Fam. xiii. 1), persons even might form the plan of gaining over three augurs to declare that they had been present in the comitia of the curiae, at which the imperium had been conferred, although in reality no such comitia had taken place at all. This fact warrants the conclusion that at that time few persons, if any, noticed such comitia or the granting of the imperium in them. (Comp. Cic. ad Fam. i. 9, ad Q. Fratr. iii. 2.)

2. The inauguration of certain priests, such as the Flamines and the Rex Sacrorum, though this took place in those comitia of the curiae, which were called calata. The curia maximus was in all probability consecrated, if not elected, in the comitia curiata. (Liv. xxvii. 8.)

3. The internal affairs of the curiae themselves and of the families connected with them; but most of them came only before the comitia calata. (See above.) The real comitia curiata began to be a mere formality as early as the time of the Punic wars, and the ancient division into curiae, as it gradually lost its importance, fell into oblivion: the place of the patricians was filled by the nobles or optimates, and the comitia of the former became a mere empty show (Cic. De Leg. Agr. ii. 12), and, instead of the thirty curiae themselves giving their votes, the ceremony was performed by thirty lictors. The patrician comitia calata were continued much longer, especially for the purpose of arrogationes, which under the empire again became a matter of some consequence. [ADOPTIO.]

The object of the legislation of Servius Tullius was to unite the different elements of which the Roman people consisted, into one great political body, in which power and influence were to be determined by property and age. For this purpose, he divided, in his census, the whole body of Roman citizens into six property classes, and 193 curiae (Adyxen or votes, from which the assemblies in which the people gave their votes were called comitia centuriata.

[CENSUS.] By this means, Servius brought about an amalgamation of timocracy and aristocracy; and the poor citizens, though they met their wealthier brethren on a footing of equality, yet were unable to exercise any great influence upon public affairs, for the wealthier classes voted first, and if they agreed among themselves, they formed a majority before the poorer classes would be called upon to vote at all. In order to render these general observations more intelligible, it is necessary to give some account of the census which Servius instituted, and of the manner in which the votes were distributed among the several divisions of the people. The whole people was conceived as an army (exercitus, or, according to the more ancient term, classis), and was therefore divided into two parts: the cavalry (equites), and infantry (peiles), though it is not by any means necessary to suppose that the people assembled in arms. The infantry was divided into five classes; or, as Dionysius has it, into six classes, for he regards the whole body of people, whose property did not come up to the census of the fifth class, as a sixth. The class to which a citizen belonged, determined the tributum, or war tax, he had to pay, as well as the kind of service he had to perform in the army and the armour in which he had to serve. But for the purpose of voting in the comitia, each class was subdivided into a number of centuries (centuriae, probably because each was conceived to contain 100 men, though centuries may have greatly differed in the number of men they contained), one half of which consisted of the seniors, and the other of the juniors. Each century, further, was counted as one vote, so that a class had as many votes as it contained centuries. In like manner, the equites were divided into a number of centuries or votes. The two principal authorities on these subdivisions are, Livy (i. 43), and Dionysius (iv. 16, &c., vii. 59), and the annexed table will show the census as well as the number of centuries or votes assigned to each class, and the order in which they voted.

---

**According to Livy.**

**CLASSIS.**

I. **CLASSIS.** Census: 100,000 asses.
   40 centuriae seniorum.
   40 centuriae juniorum.
   2 centuriae fabrum.

II. **CLASSIS.** Census: 75,000 asses.
   10 centuriae seniorum.
   10 centuriae juniorum.

III. **CLASSIS.** Census: 50,000 asses.
   10 centuriae seniorum.
   10 centuriae juniorum.

IV. **CLASSIS.** Census: 25,000 asses.
   10 centuriae seniorum.
   10 centuriae juniorum.

**According to Dionysius.**

I. **CLASSIS.** Census: 100 minae.
   40 centuriae seniorum.
   40 centuriae juniorum.

II. **CLASSIS.** Census: 75 minae.
   10 centuriae seniorum.
   10 centuriae juniorum.
   2 centuriae fabrum (one voting with the seniors and the other with the juniors).

III. **CLASSIS.** Census: 50 minae.
   10 centuriae seniorum.
   10 centuriae juniorum.

IV. **CLASSIS.** Census: 25 minae.
   10 centuriae seniorum.
   10 centuriae juniorum.
   2 centuriae cornicium and tubicinium (one voting with the seniors, and the other with the juniors).
According to Livy.

V. CLASSIS. Census: 11,000 asses.
15 centuriae seniorum.
15 centuriae juniorum.
3 centuriae accensorum, cornicinum, tubicinum.
1 centuria capite censorum.

According to Dionysius.

V. CLASSIS. Census: 12½ minae.
15 centuriae seniorum.
15 centuriae juniorum.
VI. CLASSIS. Census: below 12½ minae.
1 centuria capite censorum.

According to both Dionysius and Livy, the equites voted in eighteen centuries before the seniores of the first class; and hence, there were according to Livy, altogether 194, and, according to Dionysius, 195 centuries or votes. Livy's even number of 194 centuries would have rendered it impossible to obtain an absolute majority in the comitia; and it has been assumed, that he made a mistake in the three centuriae accensorum, cornicinum, tubicinum, which he adds to the fifth class. Dionysius seems to have represented the matter in its right light, and is also born out by Cicero (De Re Publ. i. 22), who describes ninety-six as the minority; but in other respects, Cicero is irreconcilable, both with Livy and Dionysius: a difficulty which will probably never be solved satisfactorily, as the text is corrupt. The other discrepancies between Livy and Dionysius are not of great importance. They consist in the places assigned to the two centuriae fabrum, the two of the cornicines and tubicines, and in the census of the fifth class. With regard to the last point, Dionysius is at any rate more consistent in his gradation, and in so far deserves to be preferred to Livy. As for the places assigned to the four centuries, it is impossible to determine whether Livy or Dionysius is right; and we can only say, that Cicero agrees with neither of them, assigning, as he does, only one century of the fabriginal to the first class.

In this manner all Roman citizens, whether patricians or plebeians, who had property to a certain amount, were privileged to take part and vote in the centuriata comitia, and none were excluded except slaves, peregrini, women and the aerarii. The election of magistrates.

After the passage of a measure which was brought before them as resolutorum, the people were entitled to vote only on the ground of a senatus consultum, likewise belonged to the centuries and is often mentioned. It is generally believed that they had also to decide upon the conclusion of peace and treaties, but it has been satisfactorily proved by Rubino (Vebor Röm. Staatsverf. p. 259, &c.) that in the early part of the republic, and perhaps down to the peace of Caudium, this was not the case, but that peace was concluded by a mere senatus consultum, and without any cooperation of the people.

The highest judicial power. The comitia centuriata were in the first place the highest court of appeal (Dion Cass. xxxix. 27, &c.; comp. Appellatio), and in the second, they had to try all offences committed against the state; hence, all cases of perduellio and mijeestas, and no case involving the life of a Roman citizen could be decided by any other court. (Cic. p. Sent. 30, 34, De Re Publ. ii. 30, De Leg. iii. 4; Polyb. vi. 4, 14.) This last right was revived or introduced by the Valerian law (Plut. Publ. 11), and Spurius Cassius was condemned by the comitia of the centuries. There is no reason for believing that the laws of the twelve tables increased the power of the centuries in this respect; and Servius Tullius seems, in consistency with his principles, to have been obliged to constitute his national assembly at the same time as the high court of justice.

All the powers which we have here mentioned as possessed by the centuries, had to be sanctioned, when exercised, by the curiae, and through this sanction alone they became valid and binding. The election of a magistrate, or the passing of a law, though it was made on the ground of a senatus consultum, yet required the sanction of the curiae. But, in the course of time, the assembly shook off this power of the curiae, which became merely a formality, and, in the end, the curiae were obliged to give their sanction beforehand to whatever the centuries might determine. This was effected by the Publilian law, in B.C. 337. (Liv. viii. 12.) As thus the centuries gradually became powerful enough to dispense with the sanction of the curiae, so they also acquired the right of discussing and deciding upon matters which were not brought be-
fore them in the form of a senatus consultum; that is, they acquired the power of originating measures. In reference to the election of magistrates, the comitia originally were not allowed to elect any other except those who were proposed by the president, who himself was entirely guided by the resolution of the senate; but in the course of time, the people asserted their right so far as to oblige the president to propose any candidate that might offer himself, without the previous sanction of the senate. This change took place about B.C. 482. In B.C. 287 the Hortensian law ordained that the nundinae should be regarded as dies fasti. In such a case on record.

The comitia centuriata could be held only on dies comitiales or fasti, on which it was lawful to transact business with people, and the number of such days in every year was about 190 (Varro, De L. L. vi. 29; Fest. s. v. Comitiales dies; Macrob. Sat. i. 16); but on dies nefasti (that is, dies festi, foriati; comp. Dies), and, at first, also on the nundines, no comitia could be held, until in B.C. 287 the Hortensian law ordained that the nundinae should be regarded as dies fasti (Macrob. Sat. i. 16), so that henceforth comitia might be held on the nundines, though it was done rarely. (Cic. De Att. i. 14.) Comitia for the purpose of passing laws could not even be held on all dies fasti. (Cic. De proo. Cons. 19.) The comitia for elections took place every year at a certain period, though it depended upon the senate and the consul, as to whether they wished the elections to take place earlier or later than usual. (Cic. p. Mil. 9, ad Fam. viii. 4, p. Muren. 23.)

The place where the centuries met, was the Campus Martius (Cic. ad Q. Frat. ii. 2; Dionys. iv. 94, viii. 59), which contained the septa for the voters, a tabernaculum for the president, and the villa publica for the augurs. (Cic. p. Rob. Perd. 4; Gellius, xiv. 7; Varro, De Ling. Lat. vi. 87.) The president at the comitia was the same magistrate who convoked them, and this right was a privilege of the consuls, and, in their absence, of the praetors. (Cic. ad Fam. x. 12.) An interrex and dictator also, or his representative, the magister equum, might likewise convene and preside at the comitia. (Liv. viii. 23, xxv. 2; Cic. De Leg. ii. 4.) At the beginning of the republic, the praefectus urbi held the comitia for the election of the first consuls (Liv. i. 60); and after this it was only on account of the census and the lustrum. (Varro, De L. L. vi. 86.) In cases when the assembly was constituted as a court of justice, inferior magistrates, after having obtained the permission of the consuls, might likewise preside. (Liv. xxvi. 3.) One of the main duties devolving upon the president, and which he had to perform before holding the comitia, was to consult the auspices. (Auspicii.) For this purpose, the magistrate accompanied by an augur went out of the city early in the morning, and chose a tabernaculum or templum. There the augur began his observations, and gave his opinion either that the comitia might be held, or that they must be deferred till another day. This declaration was given to the magistrate; and when the auspices were favourable, the people were called together, which was done by three successive and distinct acts: the first was quite a general invitation to come to the assembly (inlicium, Varro, De L. L. vi. 94, comp. 86, 88). At the same time when this invitation was proclaimed circum moeros et de moeris, a horn was blown, which being the more audible signal, is mentioned by some writers alone, and without the inlicium. (Gellius, xv. 27; Varro, De L. L. vi. 91.) When upon this signal, the people assembled in irregular masses, there followed the second call by the accensus, or the call ad concionem or concessionem; that is, to a regular assembly, and the crowd then separated, grouping themselves according to their classes and ages. (Varro, De L. L. vi. 88.) Hereupon the consul appeared, ordering the people to come ad comitia centuriata; and led the whole exercitum — for, in these comitia, the Roman people are always conceived as an exercitus — out of the city, to the Campus Martius. (Varro, l. c.; Liv. xxxix. 15.) It was customary from the earliest times for an armed force to occupy the Janiculum, when the people were assembled in the Campus Martius, for the purpose of protecting the city against any sudden attack of the neighbouring people; and on the Janiculum, a vexillum was hoisted during the whole time that the assembly lasted. This custom continued to be observed even at the time when Rome had no longer any thing to fear from the neighbouring tribes. (Liv. i. c.; Gell. xv. 27; Macrob. Sat. i. 16; Dion Cass. xxxvii. 27, &c.; Serv. ad Aen. viii. 1.) When the people were thus regularly assembled, the business was commenced with a solemn sacrifice, and a prayer of the president, who then took his seat on his tribunal. (Dionys. vii. 59, x. 32; Liv. xxxi. 7, xxxix. 15; Cic. p. Muren. 1; Liv. xxvi. 2.) The president then opened the business by laying before the people the subject for the decision, upon which they had been convened, and concluded his exposition with the words: velitis, iubeatis Quirites, e.g. velutum indici, or ut M. Tulio aqua igni interdictum sit, or ut M. Tullio aqua igni interdictum sit. But this formula was the standing one in all comitia. (Cic. De leg. ii. 16, xxxvii. 27, &c.; Serv. ad Aen. viii. 1.) The whole exposition of the president was called rogatio (Liv. iv. 5, vi. 40, xxi. 17, xxxii. 10, xxxv. 43; Cic. De Fin. ii. 16, in Pison. 29, p. Dom. 17, 30; Gell. v. 19.) When the comitia were assembled for the purpose of an election, the presiding magistrate had to read out the names of the candidates, and might exercise his influence by recommending the one whom he thought most fit for the office in question. (Liv. x. 22, xxxii. 35.) He was, however, not obliged to announce the names of all the candidates that offered themselves; as, for example, if a candidate had not attained the legitimate age, or when he stood for one office without having been invested with those through which he had to pass previously, or if there was any other legal obstacle; nay, the president might declare, that if a person, to whom he had any such objection, should yet be elected, he would not recognise his election as valid. (Liv. iii. 21, xxiv. 7; Val. Max. iii. 8, § 3.) If the assembly had been convened for the purpose of passing a legislative measure, the president usually recommended the proposal, or
he might grant to others, if they desired it, permission to speak about the measure, either in its favour or against it. (Conciones darse, Liv. iii. 71, xxxi. 6, &c., xlii. 34; Appian, De B. C. i. 11; Dion Cass. xxxviii. 4; Quintil. ii. 4 § 3.) In this case, however, it was customary for private persons to speak before any magistrate, and the orators, until the time of Gracchus, while speaking turned their face towards the comitium and the senate house. (Dion Cass. xxxix. 35; Cic. Lael. 23; Plut. C. Gracch. 3, Tib. Gracch. 14.) When the comitia acted as a court of justice, the president stated the crime, proposed the punishment to be inflicted upon the offender, and then allowed others to speak either in defence of the accused or against him.

When the subject brought before the assembly was sufficiently discussed, the president called upon the people to prepare for voting by the words: *in suffragium, bene juvantibus diis.* (Liv. xxxi. 7.) He then passed the stream Petronia, and went to the septa. If the number of citizens present at the assembly was thought too small, the decision might be deferred till another day, but this was rarely done, and a question was usually put to the vote, if each century was but represented by a few citizens. (Liv. vii. 18; Cic. p. Sest. 51, de Leg. Agr. ii. 9; Plut. Tib. Gracch. 16; Dion Cass. xxxix. 30.) Respecting the manner in which the votes were given in the earliest times, opinions are divided: some think that they were given viva voce, and others by means of calculi, or in both ways, though it seems to be more probable that calculi were used. The legis tabellariae introduced a change in this respect, ordaining that the votes should be given in writing. [LEGES TABELLARIAE.] But previous to the legis tabellariae, the rogatores, who subsequently collected the written votes, stood at the entrance of the septa, and asked every citizen for his vote, which was taken down, and used to determine the vote of each century. (Dionys. vii. 64.) In legislative assemblies, the voter, probably from the earliest times, signified his disapproval by the word *antequus,* and his approval by *ante rogus.* (Liv. vii. 38, x. 8, xxxi. 45, xxxi. 6, xxxiii. 23; Cic. de Leg. ii. 16.) At elections, the name of the successful candidate was mentioned to the rogator, who had to mark the favourite votes by dots which he made by the side of the name; hence *puncta ferre,* to be successful. (Liv. x. 13, 22, xxix. 22.) The custom of voting at elections by tablets with the name of the candidates written on them, was introduced in b. c. 159, by the lex Gabiniae tabellariae (Cic. De Leg. iii. 16); two years later L. Cassius introduced the same custom, in cases of the comitia acting as a court of justice (Cic. Brut. 27), and, afterwards, it was established also in legislative assemblies, and in cases where the comitia tried persons for perduellio. [LEGES TABELLARIAE.] The two tablets which were given to each person for the purpose of voting on legislative measures, were marked the one with U and the other with A (*ante rogus* and *antequus.* Cic. ad Att. i. 14.) At elections, the citizens obtained blank tablets, that they might write upon them the name of the candidate for whom they voted. (Cic. Phil. x. 8; Plut. C. Gracch. 5, Cat. Min. 46; Plin. Epist. iv. 25.) In judicial assemblies, every citizen received two tablets marked A (*absolvo*) and C (*condemno*), and there was, perhaps, a third tablet containing the letters N. L. (*non liquet*), but this is an uncertain point. There were in the Campus Martius septa or enclosures (whether they existed from the earliest times is unknown), into which one class of citizens was admitted after another for the purpose of voting. The first that entered, were the eighteen centuries of the equites, then followed the first class and so on. It very rarely happened that the lowest class was called upon to vote, as there was no necessity for it, unless the first class did not agree with the equites. (Dionys. iv. 20, viii. 59, viii. 2, x. 17; Liv. i. 43.) After the time when the comitia of the centuries became amalgamated with those of the tribes, previous to each assembly, a large space near the villa publica was surrounded with an enclosure, and divided into compartments for the several tribes. The whole of this enclosure was called *ovile, septa, carceres, or cancele;* and in later times a stone building, containing the whole people, was erected; it was divided into compartments for the classes as well as the tribes and centuries; the compartments were formed by narrow passages called *pontes* or *ponticuli.* On entering, the citizens received their tablets (Cic. ad Att. i. 14, de Leg. iii. 17, in Pis. 15, p. Plane. 6); and when they had consulted within the enclosures, they passed out of them again by a *pons* or *ponticulus,* at which they threw their vote into a chest (*cista*) which was watched by *rogatores.* Hereupon the *rogatores* collected the tablets, and gave them to the *diribitores,* who classified and counted the votes, and then handed them over to the custodes, who again checked them off by points marked on a tablet. (Comp. Cic. in Pis. 15—"vos rogatores, vos diribitores, vos custodes tabellaram.") The order in which the centuries voted, was determined in the Servian constitution, in the manner described above; but after the union of the centuries and tribes, the order was determined by lot; and this was a matter of no slight importance, since it frequently happened that the vote of the first determined the manner in which subsequent ones voted. The voting, of course, was continued, until the majority was ascertained. In the case of elections, the successful candidate was proclaimed twice, —first, by the praeco, and then by the president, and without this *renuntiatio* the election was not valid. After all the business was done, the president pronounced a prayer (Cic. p. Plane. 6, p. Mur. 1), and dismissed the assembly with the word *dicete.*

Cases are frequently mentioned in which the proceedings of the assembly were disturbed, so that it was necessary to defer the business till another day. This occurred—1. when it was discovered that the auspices had been unfavourable, or when the gods manifested their displeasure by rain, thunder, or lightning; 2. when a tribune interceded (Liv. xlv. 21; Dionys. vi. 89; Cic. in Vat. 2); 3. when the sun set before the business was over, for it was a principle that the auspices were valid only for one day from sunrise to sunset (Varro, De L. L. vii. 51; Dion Cass. xxxix. 65; Liv. x. 22, xli. 17; Dionys. ix. 41); 4. when a *morbus comitialis* occurred, i. e. when one of the assembled citizens was seized with an epileptic fit (Dion Cass. xlv. 33; Gellius, xix. 2; Macrobi. Sat. ii. 8); 5. when the vexillum was taken away from the Janiculum, this being a signal which all
citizens had to obey (Liv. xxxix. 15; Dion Cass. xxxvii. 27; Macrobi. Sat. i. 16); 6, when any tumult or insurrection broke out in the city, as happened now and then during the latter period of the republic (Cic. De Leg. Agr. i. 30). In all these cases, the assembly had to continue its business on some other day, sometimes on the next. The only exception seems to have been the case of the election of the censors, for if both could not be elected on the same day, it was necessary to begin the election afresh, and if one had been elected, his election was not valid (Liv. ix. 34).

IV. COMITIA TRIBUTA (ἐκκλησία φολετική).

These assemblies likewise were called into existence by the constitution of Servius Tullius, who divided the Roman territory into thirty local tribes. As these divisions were originally a purely topographical arrangement, they were of little or no importance to the state; but in the course of time, these local divisions were formed into a political union, and the assemblies of the tribes became most formidable rivals of those of the centuries. The decision upon the question as to what portion of the Roman population had the right to take part in the comitia tributa, depends upon the question, as to whether the tribes were instituted as a local organisation of the whole people (patricians and plebeians), or whether they were intended for the plebeians only. Most modern writers have adopted the opinion of Niebuhr, that the patricians were not considered as members of the tribes, and that accordingly, they had no right to take part in their assemblies, until the time of the decemviral legislation. The question is not one that can be proved with satisfactory evidence; but at any rate no sufficient argument has yet been brought forward to upset Niebuhr's view, for the fact of patricians and their clients being present at the place of meeting (Liv. ii. 56), for the purpose of disturbing the comitia tributa and preventing their coming to a decision, does not prove that they possessed the right of voting. After the time of the decemvirs, the patricians had the right of voting in the assemblies of the tribes, which were then also convened by the higher magistrates. (Liv. iii. 71; comp. TRIBUS.)

The assemblies of the tribes had originally only a local power; they were intended to collect the tributum, and to furnish the contingents for the army (Dionys. iv. 14, &c.); they may further have discussed the internal affairs of each tribe, such as the making or keeping up of roads, wells, and the like. But their influence gradually increased, for the commonalty being more numerous than the patricians, and being in a state of growth and development, and guided by active and energetic tribunes, the patricians had the right of originating measures, until in B. c. 449 this right was recognised and sanctioned by a law of L. Valerius Publicola and M. Horatius Barbatus. (Liv. iii. 55, 67; Dionys. x. 43.) At first the tribes acted with considerable moderation and modesty, discussing only those subjects which affected their own order or individual plebeians, such as the amnesty after the succession, plebeian magistrates, war and the like. In B. c. 339, the Publilian law enacted of plebiscita omnes Quirites tenerent. (Liv. vi. 12.) This law gave to the decrees passed by the tribes the power of a real lex, binding upon the whole people, provided they obtained the sanction of the senate. The census law (Gaius, i. 3) ; but it may also be, that the Hortensian law made the plebiscita independent of the sanction of the senate, so that henceforth the comitia tributa were quite independent in their
COMITIA.

COMITIA.

legislative character. Senatus consulta preceding a plebisictum, it is true, occur after this time in many instances, but it does not follow that for this reason a senatus consultum was necessary for every plebisictum (Dionys. ix. 41), for we must distinguish the comitia centuriata from the comitia tributa. In the former, the rights of the people, and those which touched upon the administration of the republic; the former of these are constantly mentioned without a senatus consultum, but the latter never.

PLEBISCITUM.

3. The judicial power of the comitia tributa was much more limited than that of the comitia centuriata, inasmuch as they could take cognizance only of offences against the majesty of the people, while all crimes committed against the state were brought before the centuries. Even patricians, when they had offended against the commonalty or its members, were tried and fined by the tribes. This again constitutes a difference between the judicial power of the centuries and that of the tribes, for the former could inflict capital punishment, but the latter only fines. There are, indeed, cases in which the tribes might appear to have sentenced persons to exile; but such exile is not the result of a real verdict, but only a measure taken against those who during the trial went into voluntary exile, which might then be made a necessary exile, by the interdictio aequae et tymae being added. (Liv. xxxv. 3, xxxvi. 3; Cic. Orat. p. Dom. 16, &c.)

When the tribes acquired this right, it is uncertain, for that it was not originally possessed by them, is clear from the expressions used by our authorities. The offences for which persons were summoned before the tribes, were bad conduct of a magistrate in the performance of his duties, neglect of duty, ill management of a war, embezzlement of the public money, and a variety of offences of private individuals, such as disturbance of the public peace, usury, adultery, and the like. The comitia tributa also acted as courts of appeal, e. g. when a person protested against a fine imposed by a magistrate. (Dionys. vii. 17; Cic. De Leg. iii. 3; Liv. xl. 42; Zonar. vii. 17.) The persons who acted as accusers in the comitia tributa were the tribunes and aediles.

With regard to the time at which these comitia were or could be convened, the same regulations were observed as at the comitia centuriata. They might assemble either within or without the city, but not further from it than 1000 paces, because the power of the tribes did not extend further. For elections the Campus Martius was usually chosen (Cic. ad Att. iv. 3, ad Fam. vii. 50; Plut. C. Gracch. 3), but sometimes also the forum, the Capitol, or the Circus Flaminius. (Cic. ad Att. i. 16; Liv. xxxiii. 10, xxvii. 21.) The presidents were commonly the tribes who were supported by the aediles, and no matter could be brought before the tribes without the knowledge and consent of the tribes (Liv. xxvii. 22, xxx. 41; Cic. de Leg. Agr. ii. 8); even the aediles could not bring a proposal before them without the permission of the tribes. (Cic. Leg. Agr. 39.) One of them was chosen either by lot or by common agreement to act as president (Liv. ii. 56, iii. 64, iv. 57, v. 17); but his colleagues usually had to sign the proposal which he brought before the comity. (Cic. p. Sext. 33, de Leg. Agr. ii. 9.)

As the comitia tributa, however, more and more assumed the character of national assemblies, the

higher magistrates also sometimes acted as presidents, though perhaps not without previously obtaining the permission of the tribunes. There are only a few instances of higher magistrates presiding in the comitia tributa when assembled for purposes of legislation which affected the rights of the people, and those which touched upon the administration of the republic; but the consuls and praetors often appear as presidents at the elections of tribunes, aediles, and quaestors (Liv. iii. 55, 64; Dionys. ix. 41, 43, 49; Appian, De Bell. Civ. i. 14; Cic. p. Planc. 20, ad Att. iv. 3, in Vat. 5, ad Fam. vii. 50); as well as when the comitia tributa were assembled as a court of justice. (Liv. xxv. 4; Appian, De Bell. Civ. i. 31; Dion Cass. xxviii. 17.)

The preparations for the comitia tributa were less formal and solemn than for those of the centuries. In the case of elections, the candidates had to give in their names, and the president communicated them to the people. (Liv. iii. 64; Appian, De Bell. Civ. i. 14.) When a legislative measure was to be brought before the assembly, a tribune (the proposer of the bill was called rogator, and the others adscriptores) made the people acquainted with it in oonciones, and that on the three preceding nundines. The same was the case when the people were to meet as a court of justice. The auspicia were not consulted for the comitia of the tribus, but the spectio alone was sufficient, and the tribunes had the right of obviantia. The convening of these assemblies was likewise less solemn than that of the centuries, for the tribune who had been chosen to preside either at an election or brought forward a rogation, simply invited the citizens by his viatores, who were also sent into different parts of the country to invite the people living at a distance. (Appian, De Bell. Civ. 1. 29.) At the meeting itself, he sat on the tribunal supported by his colleagues (Liv. xxxv. 3; Dion Cass. xxxix. 65), and laid before the people his bill, the name of the candidate, or made them acquainted with the nature of the offence on which they had to pass sentence, concluding with the words velitis, jubeatis Quirites. The bill was never read by the tribune himself, but by a prece, and then began the debates, in which persons might either oppose or recommend the measure, though private persons had to ask the tribunes for permission to speak. When the discussion was over the president called upon the people ite in suffragium, as at the comitia centuriata. They then formed themselves into their tribes, which, like the centuries, ascertainment their own votes in endorses (septa). Which of the 35 tribes was to give its vote first, was determined by lot, and that tribe was called praeprogativa or prineipium (the others were termed jure vocates). The vote of the first tribe was given by some person of distinction whose name was mentioned in the plebisictum, if it was of a legislatice nature. The manner of collecting the votes was, on the whole, the same as in the comitia centuriata. The announcing of the result of the votes was the remniant. If it so happened that two candidates had the same number of votes, the question was decided by drawing lots. The circumstances which might cause the meeting to break up and defer its business till another day, are the same as those which put an end to the comitia centuriata. It, however, the people were assembled as a court, the breaking up of the assembly was to the accused equivalent to an acquittal (Cic. p. Dom. 17).
after the comitia the augurs declared that some
formality had been neglected, the decree of the
assembly thereby became void, and persons who
had been elected to an office were obliged to with-
draw.
V. The comitia centuriata mixed with the comitia
tributa.—The Servian constitution was retained
unaltered so long as no great change took place in
the republic, but when the coinage and the standard
of property had become altered, when the constitu-
tion of the army had been placed on a different
footing, and above all, when the plebeians began
to be recognized as a great and essential element
in the Roman state, it must have been found in
convenient to leave to the equites and the first
class so great a preponderance in the comitia of the
centuries, and it became necessary to secure more
power and influence to the democratic element
which had grown in strength and was still growing.
It may have been the intention to combine the
comitia centuriata and tributa in such a manner
as to make only one assembly of them, but this
was not done. A change however did take place,
though no writer mentions either the time when it
was made nor in what it consisted, so that we are
left to form our opinion from incidental allusions.
First, as to the time of the change. From Livy
(i. 43) and Dionysius (iv. 21) it would appear that
the change did not take place till after the com-
pletion of the 35 tribes, i. e. a. c. 241. Some
modern writers, therefore, refer the change to the
censorship of C. Flaminius, a. c. 220, who is said
to have made the constitution more democratic;
while Niebuhr and others date the change from the
censorship of Q. Fabius and P. Decius, a. c. 304.
But there is evidence that it must be assigned
even to an earlier date than this, for the (tribus)
praerogativa is mentioned as early as a. c. 396 in
the election of the consular tribunes (Liv. v. 18),
where the pure comitia tributa cannot be meant,
and a centuria praerogativa is a thing unknown.
The question about the manner in which the
combination of the two kinds of comitia was ef-
forced, has been the subject of much much more
discussion and doubt than that about the time
when it was brought about. The most probable of
the numerous opinions which have been advanced
on this subject is that of O. Pantagathus (Fulv.
Ursinus, ad Liv. i. 43), which has been very elab-
orately worked out by Götting. (Gesch. d. Rom.
Staatserf. pp. 380, &c. 506, &c.) Pantagathus
believes that the citizens of each tribe were divided
into five property classes, each consisting of seniores
and juniors, so that each of the 35 tribes con-
tained ten centuries, and all the tribes together
350 centuries, a number which corresponds with
that of the days of a Roman lunar year. Accord-
ing to this new arrangement, the five ancient
centuries, divided into seniors and juniors, con-
tinued to exist as before (Liv. xliii. 16; Cic.
Phil. ii. 33, p. Place. 7, de Re Publ. iv. 2, Academ.
i. 33; Sull. Jug. 86), but henceforth they were
most closely united with the tribes, whereas before
the tribes had been mere local divisions and en-
tirely independent of property. The union now
effectuated was that the classes became subdivisions
of the tribes, and that accordingly centuries occur
both in the classes and in the tribes. (Cic. p.
Planc. 20, de Leg. Agr. ii. 2.) Each tribe con-
tained ten centuries, two of the first class (one of
the seniors and one of the juniors), two of the
second (likewise seniors and juniors), two of the
third, two of the fourth, and two of the fifth class.
The equites were likewise divided according to
tribes and centuries (Dionys. vi. 13, vii. 72), and
they seem to have voted with the first class, and
to have been in fact included in it, so as to be
called centuries of the first class. (Cic. Phil. ii.
33, Liv. xliii. 16; Aurel. Vict. de Vir. Illustr. 51;
Val. Max. vi. 8. § 5.) The centuries of the cor-
mishes, tubices and fabri, which are no longer
mentioned, probably ceased to exist as distinct cen-
turies. (Comp. Cic. de Re Publ. ii. 22.) Respec-
ting the manner in which the votes were given,
there are two opinions: according to the first, a
whole tribe was chosen by lot to give its vote (10
centuries) first, and according to the second, one
century of the first class, having been determined
by lot. If we adopt the former opinion, the votes
of the ten centuries contained in a tribe would have
been given one after another, and the majority, six,
would have constituted the result or vote of the
tribe. Now as 18 out of the 35 tribes constituted
a majority, it is evident that 180 centuries might
have constituted a majority against the remaining
212. This is an absurdity of which we cannot
conceive the Romans to have been guilty. The
voting by tribes, therefore, cannot be conceived as
rational, except in those cases in which the ten
centuries of every tribe were unanimous; this may
have been the case very often, and when it was so,
the tribus praerogativa was certainly the tribe
chosen by lot to give its unanimous vote first. But
if there was any difference of opinion among the
centuries making up a tribe, the true majority could
then be ascertained by choosing by lot one of the
70 centuries of the first class to give its vote first,
or rather it was decided by lot from which tribe
the two centuries of the first class were to be taken
to give their vote first. (Hence the plural prae-
rogativae, Pseud. Ascon. ad Cic. in Verr. p. 139;
Liv. x. 20.) The tribe, moreover, to which those
centuries belonged which voted first, was itself like-
wise called tribus praerogativa. Of the two cen-
turies, again, that of seniors gave its vote before
the juniors, and in the documents both were called
by the name of their tribe, as Galeria juniorum
(Liv. xxvii. 6, i. e. the juniors of the first class in
the tribus Galeria), Anonimus juniorum (Liv. xxiv.
7), Veturia juniorum (Liv. xxvi. 22; comp. Cic.
p. Planc. 20, Phil. ii. 33, De Div. ii. 35). As soon
as the praerogativa had voted, the renuntiatio took
place, and the remaining centuries then deliberated
whether they should vote the same way or not.
When this was done all the centuries of the first
tribe proceeded to vote at once (Dionys. iv. 21), for
there would not have been time for the 350 cen-
turies to vote one after another, as was done by
the 193 centuries in the comitia centuriata. (Cic.
p. Planc. 20, in Verr. v. 15, p. Red. in Senat. 11,
ad Quir. 7; Liv. x. 9, 22, xxiv. 7, xxvi. 22,
xxvi. 24; Suet. Caes. 19.)

These comitia of the centuries combined with
the tribes, were far more democratical than the
comitia of the centuries; they continued to be
held, and preserved their power along with the
comitia tributa, even after the latter had acquired
their supreme importance in the republic. During
the time of the moral and political corruption of
the Romans, the latter appear to have been chiefly
attended by the populace, which was guided by
the tribunes, and the wealthier and more respect-
able citizens had little influence in them. When the libertini and all the Italians were incorporated in the old thirty-five tribes, and when the political corruption had reached its height, no trace of the sodate and moderate character was left by which the comitia tributa had been distinguished in former times. (Sall. Cat. 57; Suet. Cns. 41; Cic. Del Att. i. 16.) Violence and bribery became the order of the day, and the needy multitude lent willing ears to any instigations coming from wealthy bribers and tribunes who were mere demagogues. Sulla for a time did away with these odious proceedings; since, according to some, he abolished the comitia tributa altogether, or, according to others, deprived them of the right of electing the sacerdotes, and of all their legislative and judicial powers. (Cic. in Verr. i. 13, 15, de Legg. iii. 9; Liv. Epit. 89; Appian, de Bell. Civ. i. 59, 90; comp. Tribunus.) But the constitution, such as it had existed before Sulla, was restored soon after his death by Pompey and others, with the exception of the jurisdiction, which was for ever taken from the people by the legislation of Sulla. The people suffered another loss in the dictatorship of J. Caesar, who decided upon peace and war himself in connection with the senate. (Dion Cass. xlii. 20.) He had also the whole of the legislation in his hands, through his influence with the magistrates and the tribunes. The people thus retained nothing but the election of magistrates; but even this power was much limited, as Caesar had the right to appoint half of the magistrates himself, with the exception of the consuls (Suet. Caes. xlvi. 2), and, as in addition to this, he recommended to the people those candidates whom he wished to be elected: and who would have opposed his wish? (Dion Cass. xlii. 47; Appian, de Bell. Civ. i. 18.) After the death of Caesar the comitia continued to be held, but were always more or less the obedient instruments of the legislation in his hands, through his influence with the magistrates and the tribunes. The legislation was taken away from the comitia entirely, and was completely in the hands of the senate and the emperor. Caligula placed the comitia again upon the same footing on which they had been in the time of Augustus (Dion Cass. lix. 9; Suet. Cal. 16); but this regulation was soon abandoned, and every thing was left as it had been arranged by Tiberius. (Dion Cass. lix. 20.) From this time the comitia may be said to have ceased to exist, as all the sovereign power formerly possessed by them was conferred upon the emperor by the lex regia. [Lex Regia.] The people only assemled in the Campus Martius for the purpose of receiving information as to whom they had been elected or appointed as its magistrates, until at last even this announcement (renuntiatio) appears to have ceased.

COMITIA'LiS Dies. [Dies.]

COMITIUM. [Forum.]

COMMEs'TUS, a furlough, or leave of absence from the army for a certain time. (Tacit. Ann. xv. 10; Liv. iii. 46.)

COMMENTARIENSIS. [Commentariorum.]

COMMENTARIUS, or COMMENTArio. [CIVITAS.]

COMMERCIUM. [Commentarii.]

COMMISSORIARIA Lex. [Commentarii augurum, pontificum.]
COMMINUS. One sense of this word is that of "forfeited," which apparently is derived from that of "to cast, to pitch," which also "to cast it as a crime," or "to do something wrong." Asconius says, that those things are commissum which are either done or omitted to be done by a heres against the will of a testator, and make him subject to a penalty or forfeiture; thus, commissa hereditas would be an inheritance forfeited for some act of commission or omission. Cicero (Ad Fam. xiii. 56) speaks of an hypothecated thing becoming commissum; that is, becoming the absolute property of the creditor for default of payment. A thing so forfeited was said in commissum in fiscoa et codere. Committum was also applied to a thing in respect of which the vectigal was not paid, or a proper return made to the publican. A thing thus forfeited (rectudiantum nomine) ceased to be the property of the owner, and was forfeited, under the empire, to the fiscus. (Dig. 39. tit. 4; Suet. Calig. c. 41.) [G. L.]

COMMIXTIO. [Confusio.]

COMMODA/TUM is one of those obligations which are contracted re. He who lends to another a thing, for a definite time, to be used for a definite purpose, without any pay or reward, is called by modern writers commodatarius; the person who receives the thing is called commodator; and the contract is called commodatum. The genuine Roman name for the lender is commodator (Dig. 13. tit. 6. s. 7), and the borrower (commodatarius) is "qui rem commodatum accept." It is distinguished from mutuum in this, that the thing lent is not one of those things quae pandere, numero, mensurare constant, as wine, corn, &c.; and the thing commoda does not become the property of the receiver, who is therefore bound to restore the same thing. The lender retains both the ownership of the thing and the possession. It differs from locatio et condicio in that, the use of the thing is gratuitous. The commodatarius is liable to the actio commodati, if he does not restore the thing; and he is bound to make good all injury which befalls the thing while it is in his possession, provided it be such injury as a careful person could have prevented, or provided it be an injury which the thing has sustained in being used contrary to the conditions or purpose of the lending. If a thing was lent to two persons, each was severally liable for the whole (in solidum). In some cases the commodatarl had an actio contraria against the commodator, who was liable for any injury sustained by the commodatarius through his dolus, or culpa; as, for instance, if he knowingly lent him bad vessels, and the wine or oil of the commodatarius was thereby lost or injured. The actio commodati was one of those in which there were two formulae, in jus and in factum. (Gaius, iv. 47; Dig. 13. tit. 6; Instit. iii. 14. § 2; Thibaut, System, &c. § 477, &c. 9th ed. [G. L.]

COMMUNI DIVIDUNDO, ACTIO.

COMMUNI DIVIDUNDO, ACTIO, is one of those actions which have been called mixtae, from the circumstance of their being partly in rem and partly in personam; and duplicia judicia, from the circumstance of both plaintiff and defendant being equally interested in the matter of the suit (Gaius, iv. 160), though the person who instituted the legal proceedings was properly the actor. It is said in the institutions of Justinian, of the three actions for a division, "mixtam causam obtinere videntum, tum in rem quam in personam" (Inst. 4. tit. 6. § 20). They were, however, properly personal actions (Dig. 10. tit. 1. a. 1), but distinguished from other personal actions by this, that in these actions disputed ownership could also be determined. (Savigny, System, &c. vol. v. p. 36.) This action was maintainable between those who were owners in common of a corporeal thing, which accordingly was called res communis; and it was maintainable whether they were owners (domini), or had merely a right to the publicana actio in rem; and whether they were socii, as in some cases of a joint purchase, or not socii, as in the case of a thing bequeathed to them (legato) by a testament; but the action could not be maintained for the division of an hereditas. In this action an account might be taken of any injury done to the corporeal property, or anything expended on it, or any profit received from it, by any of the joint owners. Any corporeal thing, as a piece of land, or a slave, might be the subject of this action.

It seems that division was not generally effected by a sale; but if there were several things, the jurid would adjudicate (adjudicare) them severally (Gaius, iv. 42) to the several persons, and order (condemnare) the party who had the more valuable thing or things to pay a sum of money to the other by way of equality of partition. It follows from this that the thing had not been valued; and it appears that a sale might be made for the jurid was bound to make partition in the way that was most to the advantage of the joint owners, and in the way in which they agreed that partition should be made; and it appears that the joint owners might bid for the thing, which was common property, before the jurid.

If the thing was and indivisible, it was adjudicated to one of the parties, and he was ordered to pay a fixed sum of money to the other or others of the parties. This action, so far as it applies to land, and that of familiar escusculenda, bear some resemblance to the now abolished English writ of partition, and to the bill in equity for partition. (Dig. 10. tit. 3; Cod. 3. tit. 37; Cic. Ad Fam. vii. 12; Bracton, fol. 443.) [G. L.]

COMMOEDIA (κωμῳδία), comedy. 1. Greek. The early stages of the history of comedy are involved in great indistinctness, as they never formed the subject of much inquiry even when information was extant. This was the case even among the Athenians, and to a still larger extent among the Dorians. The ancient Greeks seldom showed much aptitude for antiquarian research, and for a long time comedy was scarcely thought deserving of attention (Aristot. Poet. 5), for, though springing out of the Dionysiac festivals, it had not that predominantly religious character which tragedy had.

That comedy took its rise at the vintage festivals of Dionysius is certain. It originated, as Aristotle says (Poet. 4), with those who led off the phallic songs (ὑπὸ τῶν θαραμάτων τὰ φαλακρά) of the band of revellers (κάινοι), who at the vintage festivals of Dionysus gave expression to the feelings of exuberant joy and merriment which were regarded as appropriate to the occasion, by parading about, partly on foot, partly in wagons, with the symbol of the productive powers of nature, singing a wild, jovial song in honour of Dionysus and his companions. These songs were commonly interspersed with, or followed by petulant, extemporal (ἀντωνεχειατικῆ, Arist. Poet. 4 z 3)
COMOEDIA.

witticisms with which the revellers assailed the bystanders (see the description of the phallophori at Sicyon in Athen. xiv. p. 622), just as the chorus in the Frogs of Aristophanes, after their song to Iacchus, begin ridiculing Archedemus (417, &c.). This origin of comedy is indicated by the name κωμῳδία, which undoubtedly means "the song of the κώμος." This appears both from the testimony of Aristotle that it arose out of the phallic songs and from Demosthenes (c. Med. p. 517), where it is found mentioned either κωμῳδίον καὶ οἱ κωμῳδοὶ ἔστιν. (Comp. Müller, Hist. of Gr. Lit. vol. ii. p. 4, Dor. iv. 7. § 1 ; Bode, Gesch. der Hellen. Dichtk. vol. ii. part 2. p. 4, &c. ; Krenninger, die alte Komische Bühne zu Athen, p. 32.) Other derivations of the name were however given even in antiquity. The Megarians, conceiving it to be connected with the word κώμα, and to mean "village-song," appealed to the name as an evidence of the superiority of their claim to be considered as the originators of comedy over that of the Athenians (Arist. Poet. 9). This derivation was also adopted by several of the old grammarians (see Tzetzes, in Cramer's Grundriss d. Griech. Lit. vol. vii. p. 211, &c.; Muller, Corpus Inscription. No. 1384, note ; and Müller, Hist. of the Lit. of Greece, vol. ii. p. 5), to distinguish them from the comedy proper. Lobeck and Hermann however stoutly deny that there was any such thing as lyrical tragedy or comedy distinct from dramatrical tragedy and comedy, and yet not the same with dithyrambs or phallic songs, and affirm that the tragedies and comedies which we hear of before the rise of the regular drama were only a species of dithyramb and phallic song. (Hermann, de Tragoeidia Comedicis Lyrica, in Opusc. vol. vii. p. 211, &c.) The dispute is more about names than about things; and there seems no great objection to applying the term "tragedy or comedy" to pieces intended to be performed by choruses, without any actors distinct from the chorus, and having a more dramatic cast than other purely lyrical songs. This, apparently, was the point to which comedy attained among the Megarians before Susarion introduced it into Attica. It arose out of the union of the iambic lampoon with the phallic songs of the comus, just as tragedy arose out of the union of rhapsodical recitations with the dithyramb.

Among the Athenians the first attempts at comedy, according to the almost unanimous accounts of antiquity, were made at Icaria by Susarion, a native of Tripodiscus in Megara. (Schol. ad Dionys. Thrac. in Bekker's Anecd. Gr. p. 748 ; Aspasius, Ad Aristot. Eth. Nic. iv. 20. fol. 53, B.) Icaria was the oldest seat of the worship of Dionysus in Attica (Athen. ii. p. 40), and comus processions must undoubtedly have been known there long before the time of Susarion. Iambic recitation was also an amusement already known in the festivals of Bacchus and Demeter (Müller, Hist. of Lit. of Greece, vol. i. p. 132 ; Ηέακυθιος, s. v. Τερευσθαί ; Suidas, s. v. γεφυρισσωρ ; Schol. Arist. Acharn. 708). From the jests and banterings directed by the Bacchic comus, as it paraded about, against the bystanders, or any others whom they selected, arose the proverb τά εἰς διαβοῦς (Schol. Arist. Equit. 544, Nub. 296 ; Suidas, s. v. ; Ulpius ad Demosth. de Cor. p. 263, ed. Reiske ; Bode, l. c. p. 22 ; Photius, Lex. s. v. τά τάκ τῶν διαβούς). This amusement continued customary not only at the rural Dionysia, but at the Anthesteria, on the second day of the festival [Dionysia]. It was in the third year of the 50th Olympiad (a. c. 578), that Susarion introduced at Icaria comedy in that stage of development to which it had attained among the Megarians (Mar. Par. ep. 40, in Böckh's Corpus Inscription. vol. ii. p. 301). It is not however easy to decide in what his improvements consisted. Of course there were no actors beside the chorus or comus; whatever there was of drama must have been performed by the latter. The introduction of an actor separate from the chorus, was an improvement not yet made in the drama. According to one grammarian, Susarion was
the first to give to the iambistic performances of the chorus and its leader premeditated compositions, though still of the same general kind; for, as Aristotle says (Poet. c. 5), Crates was the first who ἀρχέει, καθισμὸν τῆς ιαμβικῆς ἱδίας καθόλου ποιῶν λόγων ἢ μέγων. There would seem also to have been some kind of poetical contest, for we learn that the prize for the successful poet was a basket of wine (Marn. Par. l. e.; Bentley, Dissert. on the Ep. of Phal. vol. i. p. 259, ed. Dye). It was also the practice of those who took part in the comus to smear their faces with wine-lees, either to prevent their features from being recognised, or to give themselves a more grotesque appearance. Hence comedy came to be called τρυγωδία, or leec-song. Others connected the name with the circumstance of a jar of new wine (τρυγός) being the prize for the successful poet. (Athen. ii. p. 40; Anon, ap. Meineke, l. c. p. 535; Aristoph. Acharn. l. 475, &c.; Frgm. ad Athen. xii. p. 551; Acharn, 851, 603, Resp. 650, 1534; Schol. ad Arist. Acharn. 397, 496; Schol. ad Plut. de Rep. iii. p. 928, ed. Buit. et Orcu.; Bentley, Dissert. on the Ep. of Phal. vol. i. p. 341, &c. ed. Dye; Bode, l. c. p. 922.) There can be but little question that Susarion's pieces were merely intended for the amusement of the hour, and were not committed to writing (Bentley, l. c. p. 250, &c.; Anonym. de Com. ap. Meineke, l. c. p. 540; Bode, l. c.). The comedy of Susarion doubtless partook of that petulant, coarse, and unrestrained personality for which the Megarian comedy was noted. For entertainments of such a character the Athenians were not yet prepared. They required the freedom of a democracy. Accordingly, comedy was discouraged, and for eighty years after the time of Susarion we hear nothing of it in Attica.

It was, however, in Sicily, that comedy was earliest brought to something like perfection. The Greeks in Sicily always exhibited a lively temperament, and the gift of working up any occurrence into a spirited, fluent dialogue. (Cic. Verr. iv. 43, Divin. in Cael. 9, Orat. ii. 54; Quintil. vi. 3, § 41.) This faculty finding its stimulus in the excitement produced by the political contests, which were so frequent in the different cities, and the opportunity for its exercise in the numerous agrarian festivals connected with the worship of Demeter and Bacchus, it was natural that comedy should early take its rise among them. Yet before the time of the Persian wars, we only hear of iambic compositions, and of a single poet, Aristotleus. The performers were called ἀυτοκαθαδός, i.e. improvisatores (Athen. xiv. p. 622; Etym. Magn. s. v. ἀυτοκαθαδής, Eustath. ad ll. xi. p. 884. 45; Hezych. s. e.; Aristot. Rhet. iii. 7, § 1; Bode, l. c. p. 8, &c.), and, subsequently, θημίος. Their entertainments being of a choral character were, doubtless, accompanied by music and dancing. (Athen. xiv. p. 629) mentions that which the moved with the κορυθής and ἴσκηνα. Afterwards, the comic element was developed partly into travesties of religious legends, partly into delineations of character and manners; the latter in the comedy of Ephicharmus, Phormis, and Doimachus; the latter in the mimés of Sophron and Xenarchus. Ephicharmus is very commonly called the inventor of comedy by the grammarians and others (Theoc. Epit. l. vii.; Suidas s. v. ἑφιχαρμος; Plut. de Com. 1393), though the true only of that more artistical shape which he gave to it. (Bernhardy, l. c. p. 900.) In his efforts he appears to have been associated with Phormis, a somewhat older contemporary. The Megarians in Sicily claimed the honour of the invention of comedy, on account of his having lived in Megara before he went to Syracuse. (Dictionary of Bioq. and Myth. art. Ephicharmus.) According to Aristotle (Poet. 5) Ephicharmus and Phormis were the first who began μαθέων ποιῶν; which Bernhardy (l. c. p. 800) understands to mean that they were the first to introduce regular plots. The subjects of his plays were mostly mythological, i.e. were parodies or travesties of mythological stories. (Müller, Dorians, book iv. c. 7.) Whether in the representation there was a chorus as well as actors is not clear, though it has been assumed (Grysar, de Dor. Com. p. 200, &c.) that he and Phormis were the earliest comic poets whose works reached posterity in a written form. (Bentley, l. c. p. 451.) But the comedy of Ephicharmus was of brief duration. We hear of no successors to him except his son or disciple Deinolochus. In Attica, the first comic poet of any importance whom we hear of after Susarion is Chionides, who is said to have brought out plays in B. c. 488 (Suidas s. v. Χιώνηδης). Euctes, Euxenides, and Myllus were probably contemporaries of Chionides; he was followed by Magnes and Ephantides. Their compositions, however, seem to have been little but the reproduction of the old Megaric farce of Susarion, differing, no doubt, in form, by the introduction of an actor or actors, separate from the chorus, in imitation of the improvements that had been made in tragedy. (Bode, l. c. p. 29—36.) That branch of the Attic drama which was called the old comedy, begins properly with Cratinus, who was to comedy very much what Aeschylus was to tragedy. Under the vigorous and liberal administration of Pericles comedy found free scope, and rapidly reached its perfection. Cratinus is said to have been the first who introduced three actors in a comedy. (Anonym. de Com. ap. Meineke, p. 540.) But Crates is spoken of as the first who began καθόλου ποιῶν λόγων ἢ μέγων (Arist. Poet. 5), i.e. raised comedy from being a mere lampooning of individuals, and gave it a character of universality, in which subjects drawn from reality, or stories of his own invention received a free, poetical treatment, the characters introduced being rather generalisations than particular individuals. (See Aristotle's distinction between τὰ καθ᾽ ἐκάστων καὶ τὰ καθόλου, Poet. 9.) In what is known of his pieces no traces appear of anything of a personal or political kind. He was the first who introduced into his pieces the character of a drunken man. (Anonym. de Com. ap. Meineke, p. 536.) Though Crates was a younger contemporary of Cratinus, and at first an actor in his pieces, yet, except perhaps his earlier plays, the comedies of Cratinus, Aristophanes, and of the latter the pungent personal satire and earnest political purpose which characterised the old comedy (Bernhardy, l. c. pp. 942, 946.) Crates and his imitator Pherecrates seem in the character of their pieces to have had more affinity with the middle
than with the old comedy. The latter has been described as the comedy in caricature; and such indeed it was, but was not a mere ideal more. As it appeared in the hands of its great masters Cratinus, Hermippus, Eupolis, and especially Aristophanes, its main characteristic was that it was throughout political. Everything that bore upon the political or social interests of the Athenians furnished materials for it. It assailed everything that threatened liberty, religion, and the old established principles of social morality and taste, and tended to detract from the true nobleness of the Greek character. It performed the functions of a public censorship. (Plut. de Glos. Ath. p. 348.) Some (e.g. Clinton, F. H. s. a.) understand the law to have been a prohibition of comedy altogether, others (Meineke, l. c. p. 40; Bernhardy, p. 943) a prohibition against bringing forward individuals in their proper historical personality and under their own name, in order to ridicule them (μη κωμῳδεῖν δυναστεῖ). To the same period probably belongs the law that no Arcopagite should write comedies. (Plut. de Clar. Ath. p. 348, c.) About b.c. 413, apparently at the instigation of Alkibiades, the law of 440, or at all events a law μη κωμῳδεῖν δυναστεῖ, was again passed on the motion of one Syracosius (Schol. Arist. Acharn. 553). But the law: did not remain in force at that time (Meineke, p. 41). The nature of the political events in the ensuing period would of itself act as a check upon the licence of the comic poets. A man named Antimachus got a law like that of Syracosius passed, but the date of it is not known. (Schol. Arist. Acharn. 1149.) With the overthrow of the democracy in 411, comedy would of course be silenced, but on the restoration of the democracy, comedy again revived. It was doubleless again restrained by the thirty tyrants. During the latter part of the Peloponnesian war also it became a matter of difficulty to get chorijs, and hindrances were sometimes thrown in the way of the comic poets by those who had been attacked by them. (Schol. Arist. Ran. 153.) Agyrihus, though when is not known, got the pay of the poets lessened. (Schol. Arist. Ecol. 102.) The old Attic comedy lasted from Ol. 80 to Ol. 94 (a. c. 458—404). From Cratinus to Theopompos there were forty-one poets, fourteen of whom preceded Aristophanes. The number of pieces attributed to them amounted altogether to 365. (Anon. de Com. ap. Meineke, p. 535; Bode, l. c. p. 108.) An excellent and comprehensive account of these poets is given by Bernhardy. (Grundris der Griech. Lit. vol. ii. p. 945—954.) A more extended account will be found in Meineke (Hist. Crit. Comic. Graec. forming vol. i. of his Fragm. Com. Graec.), and in Bode (Gesch. der Hellen. Diethk. vol. iii. pt. ii. p. 108, &c. &c.). The reader is also referred to the articles Cratinus, Cratinus, Pherocrates, Hermippus, Eupolis and Aristophanes in the Dictionary of Greek and Roman Biography and Mythology. (Comp. Ritscher, Aristophanes und sein Zeitalter; and Schlegel's Lectures on Dramatic Art and Literature.) The later pieces of Aristophanes prolonged the Middle rather than to the Old Comedy. The old Megaric comedy, which was improved by Mneson, by the introduction of standing characters (Athen, xiv. p. 659, a.) continued for some time to subsist by the side of the more artistically developed Attic comedy, as did the ancient Iambistic entertainments both in Syracuse and in the Dorian states of Greece. (Arist. Poet. 4; Bode, l. c. p. 28.) It was not usual for comic poets to bring forward more than one or two comedies at a time; and there was a regulation according to which a poet could not bring forward comedies before he was of a certain age, which is variously stated at thirty or forty years. (Aristoph. Nab. 530, with the scholar.) To decide on the merits of the comedies exhibited, five judges were appointed, which was half the number of those who adjudged the prize for tragedy. (Schol. ad Arist. Ae. 445; Hesych. s. v. πίντε χρισταί.) The choral parts were attired in the most indecent manner. (Schol. ad Arist. Nab. 537.) Aristophanes, however, and probably other comic poets also, frequently dispensed with the κόρδας. (Arist. Nab. 537, &c. 553, &c.; Schneider, das Attische Theaterwesen, p. 229, &c.) Comedies have choric songs, or a short refrain, as a chord between acts. The most important of the choral parts was the Parabasis, when the actors having left the stage, the chorus, which was ordinarily divided into four rows, containing six each (Pollux, iv. 108; Schol. ad Arist. Poc. 733), and was turned towards the stage, turned round, and advancing towards the spectators delivered an address to them in the name of the poet, either on public topics of general interest, or on matters which concerned the poet personally, criticising his rivals and calling attention to his merits; the address having nothing whatever to do with the action of the play. (Schol. ad Arist. Nab. 518, Poc. 733, Equit. 505.) The grammarians speak of it as being divided into the following portions:—1. A short introduction (the κομβότρον); 2. The παράδεισος in the narrower sense of the word, or ἀνώπαιος, which was the principal part; and usually consisted of a system of anaestastic or trochaic tetrameters, in which case it was the practice for it to close with what was called the μακρόν or πτύχος, a number of short
verses, which the speaker had to utter in a breath, and by which he was to appear to be choked; 3. The στροφή; 4. The ἐπίθημα; 5. The ἀντιστροφή, answering to the στροφή; 6. The ἀντιἐπίθημα, answering to the ἐπίθημα. The strophe and antistrophe were sung by half choruses, and were probably restricted by rules being the only parts of the parabasis that were so accompanied. (Bode l. c. p. 273.) The rhema and epirrhema were uttered by single chorœtae. The parabasis, however, did not always contain all these parts complete. The origin of the parabasis is not quite clear. Possibly in the earlier stages of comedy, the poet went with the comus procession, and in the course of its performance addressed a speech in his own person to the spectators. (Etym. Magn. p. 529; Pollux, iv. 111; Schol. ad Arist. Pol. 518, 1113, Paus. 733; Hypoth. ad Arist. Nub. l. Hermann, Elem. Doct. Métr. ill. 21, p. 720, &c.; Kummesson, Alte Kom. Bühne, p. 336, &c.; Kolster, de Parabasi.) The parabasis was not universally introduced: three plays of Aristophanes, the Ecclesiazusae, Lysistrata, and Plutus have none.

As the old Attic comedy was the offspring of the political and social vigour and freedom of the age during which it flourished, it naturally declined and ceased with the decline and overthrow of the political and social vigour and freedom of the age. As regards the absence of the chorus was occasioned, partly by the change in the spirit of comedy itself, partly by the increasing difficulty of finding persons capable of undertaking the duties of choregus. As the change in comedy itself was gradual, so it is most likely that the alterations in form were brought about by degrees. At first showing the want of proper musical and orchestic training, the chorus was at last dropped altogether. Some of the fragments of pieces of the middle comedy which have reached us are of a lyrical kind, indicating the presence of a chorus. The poets of this school of comedy seem to have been extraordinarily prolific. Athenaeus (viii. p. 336, d.) says, that he had read above 800 dramas of the middle comedy. Only a few fragments are now extant. Meineke (Hist. Crit. Com. Gr. p. 303) gives a list of thirty-nine poets of the middle comedy. The most celebrated were Antiphanes and Alexis. (Bode, l. c. p. 393, &c.; Bernhardy, p. 1000, &c.)

The new comedy was a further development of the last mentioned kind. It answered as nearly as may be to the modern comedy of manners or character. Dropping for the most part personal allusions, caricatured and parody, which found a place in most plays of the old comedy, the poets of the new comedy made it their business to reproduce in a generalized form a picture of the every-day life of those by whom they were surrounded. Hence the grammarians Aristophanes asked: ἔσεσθαι καὶ βίοι, πότερον ἢ πολλοί σπουδαιότατοι (Meineke, prof. Mem. p. 30). The new comedy might be described in the words of Cicero (de Rep. iv. 11), as "imitationem vitae, speculum consuetudinis, imaginem veritatis." The frequent introduction of sententious maxims was a point of resemblance with the later tragic poets. There were various standing characters which found a place in most plays, such as those in the plays of Plautus and Terence, the levis perjuris, amator fervidus, servulus callidus, amicus ludens, sodalis opitulator, miles proelator, parasitus elas, parents tenaces, meretrices proceres. (Appul. Flor. 16; Ovid, Amor. l. 13, 17.) In the new comedy there was no chorus, and the drums were commonly introduced by prologues, spoken by allegorical personages, such as Σείριας, Φιδίτης, Ἀδρί. The new comedy flourished from about B. c. 340 to B. c. 260. The poets of the new comedy amounted to 64 in number. The most distinguished was Menander. Next to him in merit came Philostratus, Philidippeis, Posidippus, and Apollodorus of Carystus. (Bernhardy, p. 1008, &c.; Meineke, l. c. p. 435, &c.)

Respecting the masks used in comedy the reader is referred to the article PERSONA. The ordinary costume was the ζύγαλος, which for old men was unfurled. Peasants carried a knapsack, a cudgel, and a skin of some kind (δρήματα). Young men had a purple tunic; parasites a black or grey one, with a comb and a box of ointment. Courtezans had a coloured tunic, and a variegated cloak over it, with a wand in their hand. Slaves wore a small variegated cloak over their tunic; cooks an unfurled double mantle; old women a yellow or blue dress; priestesses and maidens a white one; heiresses a white dress with a fringe; bawds and the mothers of hetaerae had a purple band round the head; panderers a dyed tunic, with a variegated cloak and a straight staff, called ἀρχηγός. The new comedy was introduced from Etruria, where it would seem they were a familiar amusement. Tuscan players (laudiones), who were fetched from Etruria, exhibited a sort of pantomimic dance to the music of a flute, without any song accompanying their dance, and without regular dramatic
gesticulation. The amusement became popular, and was imitated by the young Romans, who (though how soon is not stated) improved upon the original entertainment by uniting with it extemporaneous mutual raillery, composed in a rude irregular measure, a species of which had long been known among the Romans at their agrarian festivals under the name of Fescennina [FESCEN-
NINA]. They regulated their dances so as to express the sense of the words. Those who had an aptitude for this sort of representation set themselves to improve its form, supplementing the old Fescennine verses by more regular compositions, which however had not as yet anything like dramatic unity or a regular plot, but from the miscellaneous nature of the subjects introduced were called satura [SATURA]. Those who took part in these exhibitions were called histriiones, his-

ter being the Etruscan word which answered to the Latin ludus [HISTRIO]. It was 123 years after the first introduction of these scenic performances before the improvement was introduced of having a regular plot. This advance was made by Livius Andronicus, a native of Magna Graecia, in B. C. 240. His pieces, which were both tragedies and comedies, were merely adaptations of Greek dramas. His popularity increasing, a building on the Aven-
tine hill was assigned to him for his use, which served partly as a theatre, partly as a residence for a troop of players, for whom Livius wrote his pieces. The representation of regular plays of this sort was now left to those who were histriiones by profession, and who were very commonly either foreigners or slaves; the free-born youth of Rome confined their own scenic performances to the older, irregular farces, which long maintained their ground, and were subsequently called exodia, being, as Livy says, conserta fabelis potissimum Atellanae. [EXODIA; SATURA.] Livius, as was common at that time, was himself an actor in his own pieces. His Latin adaptations of Greek plays, though they had no chorus, were interspersed with monodies, which were more lyrical in their metrical form, and more impassioned in their tone than the ordinary dialogue parts. In the musical recitation of these Livius seems to have been very successful, and was frequently encored. The exertion being too much for his voice, he introduced the practice of placing a slave beside the flute player to recite or chant the words, which were more lyrical in their metrical form, and were interspersed in various parts of the representation. This became the usual practice from that time, so that in the cantica the histriiones did nothing but gesticulate, the only parts where they used their voice being the dialogues (diverbia). Livy's account has been absurdly misunderstood as implying that the introduction of this slave to chant the cantica led to the use of dialogue in the Roman dramas, as though there had been no dialogue before; in which case, as there was certainly no chorus, Livius must have adapted Greek dramas so as to admit of being represented in a series of monologues, a supposition which is confuted by its own absurdity. It is perfectly clear that the plays of Livius were an improvement on the old scenic saturae, which consisted of dialogue, and that the improvement was simply that of adapting the dialogue to a regular plot. Hermann (Dissert. de Cant. in Fab. scenic. Opusc. vol. i. p. 290, &c.) has sufficiently shown that the cantica were not mere musical interludes accompanied by dancing or ges-
ticulation, introduced between the acts, but the monodial parts of the plays themselves; though (as is clear from Plautus, Pseud. 1. 5. 160) there were cases in which the flute-player filled up the intervals between acts with music, as in the Saty-
Agor in the Greek theatre. But there is nothing to show that such musical interludes were accom-
pained with gesticulation by any actor; and it is not merely without but against all authority to call such interludes cantica. Hermann has also shown that it is quite a mistake to suppose that the leading actors only gesticulated in the cantica, and took no part in the ordinary dialogue. The cantica were only monodies put into the mouth of one or other of the dramatis personae. There is a useful treatise on this subject by G. A. B. Wolff (de Cantica in Roma usorum Fabulis scenicis), in which the author has endeavoured to point out the errors in the cantica in the remaining plays of Plautus and Terence.

The first imitator of the dramatic works of Livius Andronicus was Cn. Naevius, a native of Cam-
pania. He composed both tragedies and comedies, which were either translations or imitations of those of Greek writers. In comedy his models seem to have been the writers of the old comedy, (Dict. of Gr. and Rom. Biog. and Myth. art. Nae-
vius.) The comedy of the Romans was through-
out but an imitation of that of the Greeks, and chiefly of the new comedy. Where the characters were ostensibly Greek, and the scene laid in Athens or some other Greek town, the comedies were termed palliatae. All the comedies of Terence and Plautus belong to this class. When the story and characters were Roman, the plays were called togatae. But the fabulæ togatae were in fact little else than Greek comedies clothed in a Latin dress, (As Horace says: “dictur Afrani toga convenissine Menandro.” Epist. ii. 1. 57.) They took their name because the costume was the toga. The togatae were divided into two classes, the trobaeae and tabernariae, according as the subject was taken from high or from low life (Euanius, de Fabula). In the comedies of the old comedy the costume of the ordinary actor was the Greek pallium. The plays which bore the name of priestitetae, were not so much tragedies as historical plays. It is a mistake to represent them as comedies. There was a species of tragi-comedy, named from the poet who introduced that style Rhinthonici. A tragedy the argument of which was Greek was tamed crepudata. The mimes are sometimes classed with the Latin comedies, (Hermann, de Fabulae togata. Opusc. vol. v. p. 254, &c.) Re-

pecting them, the reader is referred to the article MIMUS. The mimes differed from the comedies in little more than the predominance of the mimic representation over the dialogue, which was only interspersed in various parts of the representation.

Latin comedies had no chorus, any more than the dramas of the new comedy, of which they were for the most part imitations. Like them, too, they were introduced by a prologue, which answered some of the purposes of the parabasis of the old comedy, so far as bespeaking the good will of the spectators, and defending the poet against
his rivals and enemies. It also communicated so much information as was necessary to understand the story of the play. The proselogue was commonly spoken by one of the players, or, perhaps, by the manager of the troop. Occasionally the speaker of it assumed a separate mask and costume, for the occasion (Plaut. Poen. prol. 126; Terent. Prog. ii. 1). Sometimes the proselogue is spoken by one of the dramatic personae (Plaut. Amph.; Mil. Gloc.; Merc.), or by some supernatural or personified being, as the Lar familiaris in the Aulularia of Plautus, Alecto in the Radua, Auxilium in the Captivi. When they were first introduced, is a disputed point (Wolff. de Cantici, p. 22, &c.; Holscher, de Personarum Usu in Ludis, ap. Rom.; Stieve, de Rei scenaec ap. Rom. Origine.) The characters introduced were much the same as in the new comedy, and their costume was not very different. Donatus gives the following account of it: "Comices senibus candidus vestis inductor, quod est antiquissimum fuisse memoratum, adolescentibus discolor attribuitur. Servi comici amicitia exiguam conteguntur paupertatis antiquae adicuntur, quae est antiquissima fuisse memoratur, cum sunt, ut Borgesius datur. Militi chlamys purpurea, puerps, coloris utitur, meretrici ob avaritiam luteum datur." A word remains to be said on the Atellanae fabulae. These were not of Roman, but of Italian origin, and were not introduced among the Romans till the latter came into contact with the Campanians. These pieces took their name from the town of Atella in Campania. From being always rude, improvisatory farces, without dramatic connection, but full of raillery and satire. So far they resembled the earlier scenic entertainments of the Romans. These pieces took their name from the part of the latter, and those who took part in them personated characters representing various classes of the country people, like the Mascere of the modern Italians. They were offered at the places where two or more ways met (compita, Varro, De Ling. Lat. vi. 25, ed. Muller; Porph. s. c.). This festival is said by some writers to have been instituted by Tarquinus Priscus in consequence of the miracle attending the birth of Servius Tullius, who was supposed to be the son of a lar familiaris. (Plin. H. N. xxxvi. 70.) Dionysius (iv. 14) ascribes its origin to Servius Tullius, and describes the festival as it was celebrated in his time. He relates that the sacrifices consisted of honey-cakes (m¿haçoi), which were presented by the inhabitants of each house, and that the persons, who assisted as ministers, were not free-men, but slaves, because the lares took pleasure in the ser-
vice of slaves: he further adds that the compitalia were celebrated a few days after the Saturnalia, with great splendour, and that the slaves on this occasion had full liberty given to them to do what they pleased. We further learn from Macrobius (Saturn. i. 7) that the celebration of the compitalia was restored by Tarquinius Superbus, who sacrificed boys to Mania, the mother of the lares; but this practice was changed after the expulsion of the Tarquins, and garlic and poppies offered in their stead.

The persons, who presided over the festival were the Magistri vici, who were on that occasion allowed to wear the praetexta (Ascon. ad Cic. in Pis. p. 7, ed. Orelli). But that the festival itself still continued to be observed, though the games were abolished, is evident from Cicero (ad Att. iii. 3). During the civil wars the festival fell into disuse, and was accordingly restored, at some time during the republican period to this festival, but they were suppressed by command of the senate in b.c. 68; and it was one of the charges brought forward by Cicero against L. Piso that he allowed them to be celebrated in his consulship, b.c. 58 (Cic. in Pis. 4.; Ascon. l. c.)

The exact day on which this festival was announced, are preserved by Macrobius and Aulus Gellius (x. 24). The Scholiast on Horace (Saturn. ii. 3. 281), tells us that Augustus set up lares or penates at places where two or more ways met, and instituted for the purpose of attending to their worship an order of priests, who were taken from the Libertini, and were called Augustales. These Augustales are entirely different from the Augustales, who were appointed to attend to the worship of Augustus after his decease, as has been well shown by A. W. Zumpt in his essay on the subject.

The compitalia belonged to the feriae conceptioniae, that is, festivals which were celebrated on days appointed annually by the magistrates or priests. The exact day on which this festival was celebrated, appears to have varied, though it was always in the winter. Dionysius relates (iv. 14), as we have already said, that it was celebrated a few days after the Saturnalia, and Cicero (in Pis. 4.) states that it fell on the Kalends of January; but in one of his letters to Atticus (vii. 7) he speaks of it as falling on the fourth before the nones of January. The exact words, with which the festival was announced, are preserved by Macrobius (Saturn. i. 4) and Aulus Gellius (x. 24).

Assembly of a portion of the people (Gell. xv. 27), as distinct from the general assemblies or comitia. (Cic. De Leg. ii. 1, p. Red. in Soc. 5.) Accordingly, as the comitia tributa embraced only a portion of the Roman people, viz. the plebeians, these comitia are often designated by the term concilia plebis. (Liv. vii. 5, xxviii. 53, xxxix. 15.)

Concilia, however, has the meaning of an assembly in general, we cannot wonder that sometimes it is used in a loose way to designate the comitia of the centuries (Liv. ii. 28) or any concilia.

We must here notice a peculiar sense in which concilia is used by Latin writers to denote the assemblies or meetings of confederate towns or nations, at which either their deputies alone or any of the citizens met who had time and inclination, and thus formed a representative assembly. (Liv. i. 50.) Such an assembly or diet is commonly designated as commune concilium or tūnae, e. g. Achaearum, Aetoliarum, Boeotiarum, Macedoniarum, and the like. (Liv. xxxvi. 34, xlii. 43, xlv. 18; Gell. l. i. 6.) Of the same kind were the diets of the Latins in the grove of Ferentina (Liv. i. 51, vii. 33, vii. 25, viii. 3), the meetings of the Etruscans near the temple of Volturna (Liv. iv. 23, 25, 61, v. 17, vi. 2), of the Hernicans in the circus of Annagia (ix. 42), of the Aequians and Samnites (iii. 2, iv. 25, x. 12).

CO'NCTO or CO'NTIO, a contraction for conventio, that is, a meeting, or a conventus. (Festus, p. 68, ed. Müller.) In the technical sense, however, a conventio never looked upon themselves as a mere part of Rome convened by a magistrate for the purpose of making the people acquainted with measures which were to be brought before the next comitia, and of working upon them either to support or oppose the measure. But no question of any kind could be decided by a concio, and this constitutes the difference between conciones and comitia. (Gell. xiii. 14; Cic. p. Sart. 50, 53; Liv. xxxix. 15.) Still conciones were also convened for other purposes, e. g. of persuading the people to take part in a war (Dions. vi. 29), or of bringing complaints against a party in the republic. (Dions. ix. 25; Plut. C. Gracch. 3.) Meetings of this kind naturally were of very frequent occurrence at Rome. The earliest that is mentioned, is one held immediately after the death of Romulus by Julius Procules in the Campus Martius (Liv. i. 16; Plut. Rom. 27); the first, after the expulsion of the kings, was held by Brutus. (Liv. ii. 2; Dions. v. 10, &c.) Every magistrate had the right to convene conciones, but it was most frequently exercised by the consuls and tribunes, and the latter more especially ex-
A magistrate who was higher in rank than the one who had convened a concio, had the right to order the people to disperse, if he disapproved of the object (avocare, Gell. xii. 14); and such a command and the obedience of the haranguing tribunes rendered conciones often very tumultuous and riotous, especially during the latter period of the republic. The convening magistrate either addressed the people himself, or he introduced other persons to whom he gave permission to speak, for no private person and the people had nothing to do but to listen. (Dionys. v. 11; Liv. ii. 71, xlii. 34; Cic. ad Att. iv. 2.)

The place where such meetings were held, does not seem to have been fixed, for we find them in the forum, the Capitol, the Campus Martius, and the Circus Flaminius. (Cic. p. Scar. 14, ad Att. i. 1.) It should be remarked that the term concio is also used to designate the speeches and harangues addressed to the people in an assembly (Livy. xxiv. 22, xxvii. 13; Cic. in Vat. 1.), and that in a loose mode of speaking, concio denotes any assembly of the people. (Cic. p. Facc. 7; comp. the Lexica.)

CONCUBINA.  

1. GREEK.—The παλλάκη, or παλλάκις, occupied at Athens a kind of middle rank between the wife and the harlot (ėtaiρή). The distinction between the ētaiρή, παλλάκη, and legal wife, is accurately described by Demosthenes (c. Noeær. p. 1380), τάς ων γαρ ἓταιρας κοινώς ἕνεκ’ ἑκείνης τάς όποιας μελλόντα κατὰ τῶν ἐνδον φύλακα πιστὴν ἔχειν. Thus Antiphon speaks of the παλλάκη of Philemones as following him to the sacrifice, and also waiting upon him and his guest at table. (Antiph. Acc. de Venere, pp. 613, 614; comp. Becker, Charicles, vol. ii. p. 438.) If her person were violated by forces, the same penalty was exigible from the ravisher as if the offence had been committed upon an Attic matron; and a man surprised by the quasi-husband in the act of criminal intercourse with his other concubine, might be slain by him on the spot, as in the parallel case (Lys. De Cade Eratostu, p. 93). [ADULTERIUM.] It does not, however, appear very clearly from what political classes concubines were chiefly selected, as cohabitation with a foreign (ētη) woman was strictly forbidden by law (Demosth. c. Noeær. p. 1350), and the provisions made by the state for virgins of Attic families must in most cases have prevented their sinking to this condition. Sometimes certainly, where there were several destitute female orphans, this might take place, as the next of kin was not obliged to provide for more than one; and we may also conceive the same to have taken place with respect to the daughters of families so poor as to be unable to supply a dowry. (Demosth. c. Noeær. p. 1384; Plaut. Trinummus, iii. 2. 63.)

The dowry, in fact, seems to have been a decisive criterion as to whether the connection between a male and female Athenian, in a state of cohabitation, amounted to a marriage: if no dowry had been given, the child of such union would be illegitimate; if, on the contrary, a dowry had been given, or a proper instrument executed in acknowledgment of its receipt, the female was fully entitled to all conjugal rights. (Petit. Leg. Att. p. 548, and authors there quoted.) It does not appear that the slave that was taken to her master's bed acquired any political rights in consequence; the concubine mentioned by Antiphon is treated as a slave by her master, and after his death undergoes a servile punishment (Idd. p. 615). [ΗΕΤΑΙΡΗ.] [J. S. M.]

2. ROMAN. According to an old definition, an unmarried woman who cohabited with a man was originally called pellex, but afterwards by the more decent appellation of concubina. (Massinias, op. Paul. Dig. 30. tit. 16. 544.) This remark has apparently reference to the Lex Julia et Pavia Popaca, by which the concubinatus received a legal character. This legal concubinatus consisted in the permanent cohabitation of an unmarried man with an unmarried woman. It therefore differed from adulterium, stuprum, and incestus, which were legal offences; and from contubernium, which was the cohabitation of a free man with a slave, or the cohabitation of a male and female slave, between whom there could be no Roman marriage. Before the passing of the Lex Jul. et P. P., the name of concubina would have applied to a woman who cohabited with a married man, who had not divorced his first wife (Cic. De Orat. i. 40); but this was not the state of legal concubinage which was afterwards established. The offence of stuprum was avoided in the case of the cohabitation of a free man and an ingenua by this permissive concubinage; but it would seem to be a necessary inference that there should be some formal declaration of the intention of the parties, in order that there might be no stuprum. (Dig. 48. tit. 5. 34.) Heineccius (Synops. Ap. lib. i. 39) declares that an ingenua could be a concubina, and asserts that those only could be concubinae who could not be uxores; but this appears to be a mistake (Dig. 25. tit. 7. s. 3), or perhaps it may be said that there was a legal doubt on this subject (Id. s. 1); Aurelian prohibited the taking of ingenuae as concubinae. (Vopiscus, Aurelian. 48.) A constitution of Constantine (Cod. v. tit. 27. s. 5) treats of ingenuae concubinae.

This concubinage was not a marriage, nor were the children of such marriage, who were sometimes called liberis, if this liberis might be slavered over their father, and consequently they followed the condition of the mother. There is an inscription in Fabretii (p. 337) to the memory of Faullianus by Aemilia Prima, concubina ejus et heres, which seems to show that the term concubina was not a name that a woman was ashamed of. Under the Christian emperors concubinage was not favoured, but it still existed, as we see from the legislation of Justinian.

This legal concubinage resembled the morganatic marriage (ad morganaticum), in which neither the wife enjoys the rank of the husband, nor the children the rights of children by a legal marriage. (Lib. Fœd. ii. 29.) Among the Romans, widowers who had already children, and did not wish to contract another legal marriage, took a concubina, as we see in the case of Vespasian (Suet. Vesp. 3), Antoninus Pius, and M. Aurelius (Jul. Cap. Vit. Ant. c. 8; Aurel. c. 29; Dig. 25. tit. 7; Cod. v. tit. 26; Paula, Recept. Sestentin. ii. tit. 19, 20; Nov. 10, c. 5; 99. c. 12.). [G. L.]

CONFARREATIO.  

CONDEMNTIO. [ACTIO; JUDEX.]  

CONDICTIO. [ACTIO.]  

CONDITO'RIUM. [FUNUS.]  

CONDU'CTIO. [LOCATIO.]  

CONFARRE'ATIO. [MATRIMONIUM.]
CONFUSIO.

CONFESSORIA ACTIO. If a man has a servitus [SERVITUS], and the exercise of his right is impeded by any person, he can maintain it by an actio in rem, which is a servitutis vindicatio. Accordingly, when a man claims a jus utendi, fruendi, eundi, agendi, &c., the actio is called confession de usufructu, &c. If the owner of a thing was interrupted in his exclusive enjoyment of it by a person claiming or attempting to exercise a servitus in it, his claim or ground of action was negative, "jus illi non esse iure, agere," &c., whence the action was called negativa or negotiaria in rem actio.

In the negotiaria in rem, which must be distinguished from the negative actio founded on a servitus, the plaintiff claimed restitution of the thing, as, for instance, when the defendant had usurped the usus fructus, &c., or removed the cause of complaint; also damages for injury done, and security (cautio) against future acts of the like kind. (Gaiss, iv. 3; Dig. 8. tit. 5; Briasonius, De Formulis; Puchta, Cursus, &c., vol. ii. pp. 563, 771.) [G.L.]

CONFUSIO properly signifies the mixing of liquids, or the fusing of metals into one mass. If things of the same or of different kind were confused, either by the consent of both owners or by accident, the compound was the property of both. If the confusion was caused by one, without the consent of the other, the compound was only joint property in case the things were of the same kind; but if the things were different, so that the compound was a new thing, this was a case of what, by modern writers, is called specification, which the Roman writers expressed by the term novam speciem facere, as if a man made mulsum out of his own wine and his neighbour's honey. In such a case the person who caused the confusion became the owner of the compound, but he was bound to make good to the other the value of his property.

Commixtio is used by modern writers to signify the mixture of solid things which belonged to different owners; but Commixtio and Confusio are used by the Roman writers to express the union of things either solid or fluid (Dig. 41. tit. 1. s. 7. § 8; 6. tit. 1. s. 3. § 2. s. 5.). Still, Commixtio is most generally applied to mixture of solids. If the mixture takes place with mutual consent, the compound is common property; if by chance, or by the act of one, each retains his former property, and may separate it from the mass. If separation is impossible, as if two heaps of corn are mixed, each owner is entitled to a part, according to the proportion of his separate property. If he who has pledged a thing becomes the heir of the pledgee, the rights and duties of two persons are united (confunduntur) in one. If a piece of land was torn away by a stream (avulsio) from one man's land and attached to another's, it became the property of the latter when it was firmly attached to it. This is a different case from that of ALLUVIO. But in all these cases the losing party was entitled to compensation, with some exceptions as to cases of mala fides.

Confusio occurs in the case of rights also. If the right and the duty of an obligatio become united in one person, there is a confusion by which the obligatio is being confounded (Dig. 46. tit. 3. s. 75). If he who has pledged a thing becomes the heir of the pledgee, the rights and duties of two persons are united (confunduntur) in one. If a man who has a praedial servitus in another man's land, becomes the owner of the servient land, the servitus ceases: servitutes praeclarii confunduntur, si idem utriusque praelii dominus esse coeperit. (Dig. 8. tit. 6. s. 1.)

CONGIARIUM (seil. vas, from congius), a vessel containing a congius. [CONGIUS.]

In the early times of the Roman republic, the congius was the usual measure of oil or wine which was, on certain occasions, distributed among the people (Liv. xxx. 2); and thus congiarium, as Quintilian (vi. 3. § 52) says, became a name for liberal donations to the people, in general, whether consisting of oil, wine, corn, or money, or other things (Plin. H. N. xiv. 14, 17, xxxi. 7, 41; Sue. Aug. 41, Tib. 20, Ner. 7; Plin. Paneg. 29; Tacit. Ann. xii. 41, xiii. 31; Liv. xxxvii. 57), while donations made to the soldiers were called donativa, though they were sometimes also termed congiaria.
CONSTITUTIONES.

(Cic. ad Att. xvi. 8; Curt. vi. 2). Congiarium was, moreover, occasionally used simply to designate a present or a pension given by a person of high rank, or a prince, to his friends; and Fabius Maximus called the presents which Augustus made to his friends, on account of their smallness, renovaria, instead of congiaria, because renovus was only the twelfth part of a congius. (Quintil. l. c.; compare Cic. ad Fam. viii. 1; Seneca, De brevit. Vit., De Ben. ii. 16; Suet. Vesu. 18, Cæs. 27.) [L. S.]

CO'NGIUS, a Roman liquid measure, which contained six sextarii (Rhem. Fam. v. 72), or the eighth part of the amphora, that is, not quite six pints. It was equal to the larger chous of the Greeks. [CHOUS.]

There is a congius in existence, called the congius of Vespasian, or the Farnese congius, bearing an inscription, which states that it was made in the year 75 a. n., according to the standard measure in the capitol, and that it contained, by weight, ten pounds. (Imp. Cæs. vi. T. Cæs. Aug. F. iii. Cos. Meusurus exacte in Capitolio, P. x.; see also Festus, s. v. Publica Pondera.) This congius is one of the means by which the attempt has been made to fix the weight of the Roman pound. [LIBRA.]

Cato tells us that he was wont to give each of his slaves a congius of wine at the Saturnalia and other examples of hard drinking (Plin. Ep. x. 2.) The epistola, as the name implies, was in the form of a letter: subscriptiones and annotationes were short answers to questions propounded to the emperor, and written at the foot or margin of the paper which contained the questions. In the time of Tiberius, the word rescriptum had hardly obtained the legal signification of the time of Gaius. (Tacit. Ann. vi. 9.) It is evident that decreta and rescripta could not from their nature have the force of leges, but inasmuch as these determinations in particular cases might be of general application, they might gradually obtain the force of law.

Under the early emperors, at least in the time of Augustus, many leges were enacted, and in his time, and that of his successors, to about the time of Hadrian, we find mention of numerous senatus-consulta. In fact the emperor, in whom the supreme power was vested from the time of Augustus, exercised his power through the medium of a senatus-consultum, which he introduced by an oratio or libel, and the senatus-consultum was said to be made "imperatore auctore." Probably, about the time of Hadrian, senatus-consulta became less common, and finally imperial constitutions became the common form in which a law was made.

At a later period, in the Institutes, it is declared that whatever the imperator determined (constituit) by epistola, or decided judicially (cognoscens decrevit), or declared by edict, was law; with this limitation, that those constitutions were not laws which in their nature were limited to special cases.

Under the general head of constitutions we also read of mandata, or instructions by the Caesar to his officers. Many of these constitutions are preserved in their original form in the extant codes. [Codex Theodosianus &c.] [G. L.]

CON'VARI, a festival, with games, celebrated by the Romans, according to Festus, Ovid (Fast. iii. 199), and others, in honour of Consus, the god of secret deliberations, or, according to Livy, (i. 9), of Neptunus Equestris. Plutarch (Quaest. Rom. 45), Dionysius of Halicarnassus (ii. 31), and the Pseudo Asconius, however (ad Cic. in Verr. p. 142. ed. Orelli), say that Neptunus Equestris and Consus were only different names for one and the same deity. It was solemnised every year in the circus, by the symbolical ceremony of uncovering an altar dedicated to the god, which was buried in the earth. For Romulus, who was considered as
the founder of the festival, was said to have dis-
covered an altar in the earth on that spot. (Com-
pare Niebuhr, Hist. Rom. vol. i. notes 629 and
630.) The solemnity took place on the 21st of
August with horse and chariot races, and libations
were poured into the flames which consumed the
sacrifices. During these festive games, horses and
mules were not allowed to do any work, and were
adorned with garlands of flowers. It was at their
first celebration that, according to the ancient
legend, the Sabine maidens were carried off.
(Varro, De Ling. Lat. vi. 20 ; Dionys. i. 2 ; Cic.
De Rep. ii. 7.) Virgil (Aen. viii. 630), in speaking
of the rape of the Sabines, describes it as having
occurred during the celebration of the Circensian
games, which can only be accounted for by sup-
posing that the great Circensian games, in sub-
sequent times, superseded the ancient Consualia;
and that thus the poet substituted games of his own
time for ancient ones—a favourite practice with
Virgil ; or that he only meant to say the rape took
place at the well-known festival in the circus (the
Consualia), without thinking of the ludi Circenses,
properly so called. 

L. S.

CONSUL (Utraros), the highest republican
magistrate at Rome. The name is probably com-
posed of coae and sul which contains the same root
as sulis ; so that consulis are those who "go to-
gether," just as cur is "one who goes out," and
præsul, is "one who goes before."

There was a tradition that King Servius, after
regulating the constitution of the state, intended to
abolish the kingly power, and substitute for it the
annual magistracy of the consulship ; and what-
ever we may think of the tradition, the person who
devised it must have had a deep insight into the
nature of the Roman state and its institutions ; and
the fact that on the abolition of royalty, it was in-
stituted forthwith, seems, at any rate, to show that
it had been thought of before. Thus much is also
by the dictatorship, a magistracy invested with the
publican magistracy at Rome immediately after
only for a time.

The consuls died in the year of his office, or abdicated
before its expiration, the other was obliged to con-

Bull. Cíc. ii. 23, 25.) Nay, in those troubled
times, it even came to pass that Cinna and Marius,
without any election at all, usurped the power of
the consulship.

In the earliest times, the title of the chief magis-
trates was not consules but praetores; characterising
them as the commanders of the armies of the re-
public, or as the officers who stood at the head of
the state. Traces of this title occur in ancient
legal and ecclesiastical documents (Liv. vii. 3 ;
Plin. H. N. viii. 3 ; Fest. p. 161), and also in the
names praetorium (the consul's tent), and porta
praetoria in the Roman camp. (Paul. Diac. p. 123;
Pseudo-Ascon. ad Cíc. in Verr. i. 14.) Some-
times also they are designated by the title judices,
though it perhaps never was their official title, but
was given them only in their capacity of judges.
(Varro, De L. L. vi. 9 ; Liv. iii. 55.) The name
consules was introduced for the highest magistrates
in u. c. 305 (Zonar. vii. 19), and henceforth re-
mained the established title until the final over-
throw of the Roman empire. Upon the establish-
ment of the republic, after the banishment of Tar-
quinius, all the powers which had belonged to the
king, were transferred to the consuls, except that
which had constituted the king high priest of the
state; for this was kept distinct and transferred to
a priestly dignity, called the rex sacrorum, or rex
sacrificus.

As regards the election of the consuls, it in-
vitably took place in the comitia centuriata, under
the presidency of a consul or a dictator; and in
their absence, by an interrex. The consuls thus
elected at the beginning of a year, were styled
consules ordinarii, to distinguish them from the
suffecti, or such as were elected in the place of
those who had died or abdicated, though the privi-
leges and powers of the latter were in no way in-
ferior to those of the former. (Liv, xxiv. 7, &c.
comp. xli. 18.) At the time when the consulship
was superseded by the institution of the tribunal
militares consularis potestate, the latter, of course,
was held at elections, as the consuls did before and
after, and must in general be regarded as the repre-
sentatives of the consuls in every respect. It was,
however, a rule that the magistrate presiding at an
election should not be elected himself, though a
few exceptions to this rule are recorded. (Liv. iii.
35, vii. 24, xxiv. 9, xxv. 6.) The day of the
election which was made known by an edict, three
mundines beforehand (Liv. iii. 35, iv. 6, xliii. 20).

The consuls were elected for one year ; and if before the close of that year the magis-
trates was not

Bull. Cíc. ii. 23, 25.) Nay, in those troubled
times, it even came to pass that Cinna and Marius,
without any election at all, usurped the power of
the consulship.

In the earliest times, the title of the chief magis-
trates was not consules but praetores; characterising
them as the commanders of the armies of the re-
public, or as the officers who stood at the head of
the state. Traces of this title occur in ancient
legal and ecclesiastical documents (Liv. vii. 3 ;
Plin. H. N. viii. 3 ; Fest. p. 161), and also in the
names praetorium (the consul's tent), and porta
praetoria in the Roman camp. (Paul. Diac. p. 123;
Pseudo-Ascon. ad Cíc. in Verr. i. 14.) Some-
times also they are designated by the title judices,
though it perhaps never was their official title, but
was given them only in their capacity of judges.
(Varro, De L. L. vi. 9 ; Liv. iii. 55.) The name
consules was introduced for the highest magistrates
in u. c. 305 (Zonar. vii. 19), and henceforth re-
mained the established title until the final over-
throw of the Roman empire. Upon the establish-
ment of the republic, after the banishment of Tar-
quinius, all the powers which had belonged to the
king, were transferred to the consuls, except that
which had constituted the king high priest of the
state; for this was kept distinct and transferred to
a priestly dignity, called the rex sacrorum, or rex
sacrificus.

As regards the election of the consuls, it in-
vitably took place in the comitia centuriata, under
the presidency of a consul or a dictator; and in
their absence, by an interrex. The consuls thus
elected at the beginning of a year, were styled
consules ordinarii, to distinguish them from the
suffecti, or such as were elected in the place of
those who had died or abdicated, though the privi-
leges and powers of the latter were in no way in-
ferior to those of the former. (Liv, xxiv. 7, &c.
comp. xli. 18.) At the time when the consulship
was superseded by the institution of the tribunal
militares consularis potestate, the latter, of course,
was held at elections, as the consuls did before and
after, and must in general be regarded as the repre-
sentatives of the consuls in every respect. It was,
however, a rule that the magistrate presiding at an
election should not be elected himself, though a
few exceptions to this rule are recorded. (Liv. iii.
35, vii. 24, xxiv. 9, xxv. 6.) The day of the
election which was made known by an edict, three
mundines beforehand (Liv. iii. 35, iv. 6, xliii. 20),
naturally depended upon the day on which the
magistrates entered upon their office. The latter,
however, was not the same at all times, but was
often changed. In general it was observed as a
rule, that the magistrates should enter upon their
office on the kalendae or idus, unless particular
circumstances rendered it impossible ; but the
months themselves varied at different times, and
there are no less than eight or nine months in
which the consuls are known to have entered upon
their functions, and in many of these cases we
know the reasons for which the change was made.
The real cause appears to have been that the con-
suls, like other magistrates, were elected for a whole
year ; and if before the close of that year the magis-
trace became vacant either by death or abdication,
their successors, of course, undertook their office on
an irregular day, which then remained the dies so-
loninis, until another event of a similar kind rendered
another change necessary. The first consuls, as
far as we know, entered upon their office on the
ides of September. (Dionys. v. 1; Liv. vii. 3.)
The first change seems to have brought about
by thecession of the plebs, b. c. 493, when the
consuls entered on the kalends of September.
(Dionys. vi. 49.) In b. c. 479, the day was thrown
a whole month backward; for of the consuls of the
preceding year one had fallen in battle, and the
other abdicated. (Liv. iv. 7; Dionys. xi. 62.)

The day on which the consuls entered on their
office determined the day of the election, though
there was no fixed rule, and in the earliest times
the elections probably took place very shortly be-
fore the close of the official year, and the same was
occasionally the case during the latter period of
the republic. (Liv. xxxviii. 42, xlii. 28, xliii. 11.)
But when the first of January was fixed upon as
the day for entering upon the office, the consular
comitia were usually held in July or even earlier,
at least before the Kalends of Sextilis. (Cic. ad
Att. i. 16; ad Fam. viii. 4.) But even during that
period the day of election depended on a great
measure upon the discretion of the senate and con-
suls, who often delayed it. (Cic. ad Att. ii. 29, iv.
16, p. Leg. Man. 1.)

Down to the year b. c. 366, the consulship was
accessile to none but patricians, but in that year
L. Sextius was the first plebeian consul in conse-
quence of the law of C. Licinius. (Liv. vi. 42,
vii. 1.) The patricians however, notwithstanding
the law, repeatedly contrived to keep the plebeians
out (Liv. vii. 17; 18, 19, 22, 24, 26), until in
b. c. 343 the insurrection of the army of Capua
was followed, among other important consequences,
by the firm establishment of the plebeian consul-
ship; and it is even said that at that time a ple-
biscitum was passed, enacting that both consuls
might be plebeians. (Liv. vii. 42.) Attempts on
the part of the patricians to exclude the plebeians,
occurred as late as the year b. c. 297 (Liv. x. 15;
Cic. Brut. 14) but they did not succeed, and it
remained a principle of the Roman constitution
that both consuls should not be patricians. (Liv.
xxvii. 84, xxxix. 42.) The candidates usually were
divided into two acts, the one desirous to obtain
the patrician, and the other to obtain the plebeian
place in the consulship (in unum locum peditant,
Liv. xxxv. 10). But as in the course of time the
patricians were thrown into the shade by the rising
power of the nobles, it came to pass that both con-
suls were plebeians. In b. c. 215, the augurs in-
deed opposed the election of two plebeians (Liv.
xxiii. 31); but not long after, in b. c. 172, the fact
of both consuls being plebeians actually occurred,
and after this it was often repeated, the ancient
distinction between patricians and plebeians falling
completely into oblivion.

The consulship was throughout the republic
regarded as the highest office and the greatest
honour that could be conferred upon a man (Cic.
p. Plan. 25; Paul. Diaec. p. 136; Dionys. iv. 76),
for the dictatorship, though it had a majus imperium,
was not a regular magistracy; and the censorship,
though conferred only upon consuls, was yet far
inferior to the consulship in power and influence.
It was not till the end of the republic, and especially
in the time of J. Caesar, that the consulship lost its
former dignity; for in order to honour his friends,
he caused them to be elected, sometimes for a few
months, and sometimes even for a few hours. (Sueton.
Caes. 76, 80, Nero, 15; Dion Cass. xiii. 48; Macrob.
Sat. ii. 3.)

The power of the consul was at first equal to
that of the kings into whose place they stepped, with
the exception of the priestly power of the rex sacro-
rum, which was detached from it. Even after the
Valerian laws and the institution of the tribuneship,
the consuls who alone were invested with the
executive, retained the most extensive powers in all
departments of the government. But in the gradual
development of the constitution, some important
functions were detached from the consulship and
assigned to new officers. This was the case first
with the census, in B.C. 443, an office which at first was confined to holding the census and registering the citizens according to their different classes, but afterwards acquired very extensive powers. [Censor.] The second function that was in this manner taken from the consuls, was their judicial power, which was transferred in B.C. 366, to a distinct magistracy under the title of the praetorship [praetor]; and henceforth the consuls appeared as judges only in extraordinary cases of a criminal nature, when they were called upon by a senator consulium. (Cic. Brut. 92; Liv. xxxix. 17, &c., xli. 9.) But, notwithstanding these curtailing, the consuls still continued to be regarded as the representative of regal power. (Polyb. vi. 11; Cic. De Leg. iii. 3.)

In regard to the nature of the power of the consuls, we must in the outset divide it into two parts, inasmuch as they were the highest civil authority, and at the same time the supreme commanders of the armies. So long as they were in the city of Rome, they were at the head of the government and the administration, and all the other magistrates, with the exception of the tribunes of the people, were subordinate to them. They convened the senate, and as presidents conducted the business; they had to carry into effect the decrees of the senate, and sometimes on urgent emergencies they might even act on their own authority and responsibility. They were the medium through which foreign affairs were brought before the senate; all despatches and reports were placed in their hands, before they were laid before the senate; by them foreign ambassadors were introduced into the senate, and they alone carried on the negotiations between the senate and foreign states. They also determined the contingent to be furnished by the allies; and in the province assigned to them they had the unlimited administration, not only of all military affairs, but of every thing else, even over life and death, excepting only the conclusion of peace and treaties. (Polyb. vi. 12; compare exercitus.) The treasury was, indeed, under the control of the senate; but in regard to the expenses for war, the consuls do not appear to have been bound down to the sums granted by that body, but to have availed themselves of the public money as circumstances required; the quaestors, however, kept a strict account of the expenditure. (Polyb. vi. 12, 13, 15; Liv. xlv. 16.) But when in times of need money was to be taken from the aequarium samcitius, of which the keys seem to have been in the exclusive possession of the consuls, they had to be authorised by a senatus consultum. (Liv. xxvii. 10.) In the early times, the consuls had the power to dispose of the booty in any way they pleased; sometimes they distributed the whole or a part of it among the soldiers, and sometimes they sold it, and deposited the produce in the public treasury, which in later times became the usual practice.

Abuse of the consular power was prevented, first of all, by each of the consuls being dependent on his colleague who was invested with equal rights; for, if we except the provinces abroad where each was permitted to act with unlimited power, the two consuls could do nothing unless both were unanimous (Dionys. x. 17; Appian, De Bell. Cic. ii. 11), and against the sentence of one consul an appeal might be brought before his colleague; nay, on certain occasions the consul put his veto on the proceedings of the other. (Liv. ii. 18, 27, iii. 34; Dionys. v. 9; Cic. De Leg. iii. 4.) But in order to avoid every unnecessary dispute or rivalry, arrangements were made from the first, that the real functions of the office should be performed only by one of them every alternate month (Dionys. iv. 43); and the one who was in the actual exercise of the consular power for the month, was preceded by the twelve lieutenants, whose imperial was commonly described by the words popes quem fasces orant. (Liv. vii. 12, 8.) In the early times, his colleague was then not accompanied by the quaestors at all, or he was preceded by an aedile, and the quaestors followed after him. (Cic. De Re Publ. iii. 31; Liv. ii. 1, iii. 33; comp. Dionys. v. 2, x. 24.) As regards the later times, it is certain that the consul, when he did not perform the functions of the office, was followed by the twelve lieutenants (Suet. Cæs. 20); when this custom arose is uncertain, and we only know that, in the time of Polybius, the dictator had twenty-four lieutenants. It is commonly believed, that the consul who for the month being performed the functions of the office, was designated as the consul maius; but the un-
clents themselves were doubtful as to whether the term applied to the one who had the fasces, or to the one who had been elected first (Fest. p. 161); and there seems to be good reason for believing that the word major had reference not to the age of the consuls, so that the order of the two was called consul major. (Liv. xxxvii. 47; Cic. De Re Publ. ii. 31; Val. Max. iv. 1. § 1; Plut. Publ. 12; Dionys. vi. 57.) Owing to the respect paid to the elder, he presided at the meeting of the senate which was held immediately after the election. (Liv. ix. 8; Gellius, ii. 15.) Another point which acted as a check upon the exercise of the consular power, was the certainty that after the expiration of their office they might be called to account for the manner in which they had conducted themselves in their official capacity. Many cases are on record, in which after their abdication they were accused and condemned not only for illegal or unconstitutional acts, but also for misfortunes in war, which were ascribed either to their carelessness or want of ability. (Liv. iii. 52, 54, 61, iii. 31, xxii. 40, 49, xxvi. 2, 3, xxvii. 34; Cic. De Nat. Deor. ii. 3; Val. Max. viii. 1. § 4.) The ever increasing arrogance and power of the tribunes did not stop here, and we not infrequently find that consuls, even during the time of their office, were not only threatened with punishment and imprisonment, but were actually subjected to them. (Liv. iv. 26, v. 9, xii. 21, Epit. 48, 55; Cic. De Leg. iii. 9, in Vat. 9; Val. Max. ix. 5. § 2; Dion Cass. xxxvii. 50, xxxviii. 6, xxxix. 39.) Sometimes the people themselves opposed the consuls in the exercise of their power. (Liv. ii. 55, 59.) Lastly, the consuls were dependent upon the senate. [Senatus.] There occurred, however, times when the power of the consuls thus limited by republican institutions was thought inadequate to save the republic from perils into which she was thrown by circumstances; and on such occasions a senatus consultum videre for or daret operam consultus, ne quid respublica detrimenti caperet, conferred upon them full dictatorial power not restrained either by the senate, the people, or the tribunes. In the early times, such senatus consulta are rarely mentioned, as it was customary to appoint a dictator on such emergencies; but when the dictatorship had fallen into disuse, the senate by the above mentioned formula invested the consuls, for a time, with dictatorial power. [Dicitore.] On entering upon their office, the consuls, and afterwards the praetors also, agreed among one another as to the business which each had to look after, so that every one had his distinct sphere of action, which was termed his provincia. The ordinary way in which the provinces were assigned to each, was by lot (sortis provinciarum), unless the colleagues agreed among themselves, without any such means of decision (comparare inter se provincias, Liv. xxiv. 10, xxx. 1, xxviii. 8; Cic. ad Fam. i. 9). The decision by lot was resorted to for no other reason than because the two consuls had equal rights, and not, as some believe, because it was thereby intended to leave the decision to the gods. If it was thought that one of the consuls was eminently qualified for a particular province, either on account of his experience or personal character, it frequently happened, that a commission was given to him extra sortem or extra ordinem, i.e. by the senate and without any drawing of lots. (Liv. iii. 2, viii. 16, xxxvi. 1; Cic. ad Att. i. 19; comp. Liv. xxxv. 20, xii. 8.) In the earliest times, it seems to have been the custom for only one of the consuls to march out at the head of the army, and for the other to remain at Rome for the protection of the city. The two consuls, therefore, divided the administration of the civic affairs, unless, indeed, wars were carried on in two different quarters which rendered it necessary for both consuls to take the field. (Dionys. vi. 24, 91; comp. Liv. iii. 4, 22, vii. 38.) Nay, we find that even when Rome had to contend with one formidable enemy, the two consuls marched out together (Liv. ii. 44, iii. 8, 66, vii. 6, &c.); but the forces were equally divided between them, in such a manner that each had the command of two legions, and held the supreme command on every alternate day. (Polyb. iii. 107, 110, vi. 26; Liv. iv. 46, xxii. 27, 41, xxviii. 9; comp. iii. 70.) When the Roman dominion extended beyond the natural boundaries of Italy, the two consuls were not enough to undertake the administration of the provinces, and praetors were appointed to undertake the command in some, while the more important ones were reserved for the consuls. Hence a distinction was made between provinciae consularis and praetoriae. (Liv. xii. 6.) [Provinciae.] It remained with the senate to determine into which provinces consuls were to be sent, and into which praetors, and this was done either before the magistrates actually entered upon their office (Liv. xxi. 17), or after it, and on the proposal of the consuls. (Liv. xxv. 1, xxvin. 28, xxvii. 7, &c.) Upon this, the magistrates either agreed among themselves as to which province each was to undertake, or they drew lots, first, of course, the consuls, and after them the praetors. One of the laws of C. Gracchus, however, introduced the regulation, that every year the senate, previous to the consular elections, should determine upon the two consular provinces, in order to avoid partiality, it being yet unknown who were to be the consuls. It had been customary from the earliest times for the consuls to enter their province in the year of their consulsiphere, either at the very beginning or afterwards; but in the latter period of the republic, the ordinary practice of the consuls was to remain at Rome during the year of their office, and to go into their province in the year following as provincial consuls, until and unless the senate sent them an ultimum, and the year after a law of Pompey enacted that a consul or praetor should not go into any province till five years after the expiration of their office. (Dion Cass. xl. 46, 56.) When a consul was once in his province, his imperium was limited to it, and to exercise the same in any other province was, at all times, considered illegal. (Liv. x. 37, xxix. 19, xxx. 48, xlix. 1.) In some few cases, this rule was overlooked for the good of the republic. (Liv. xxvii. 43, xxix. 7.) On the other hand, a consul was not allowed to carry his province before he had accomplished the purpose for which he had been sent into it, or before the arrival of his successor, unless, indeed, he obtained the special permission of the senate. (Liv. xxxvii. 47.) Other functions also were sometimes divided between the consuls by lot, if they could not agree, for example, which of them was to preside at the consular elections or those of the censors (Liv. xxiv. 10, xxxv. 6, 20, xxxix. 32, xlii. 6), which of them was to dedicate a temple (Liv. ii. 8, 27), or
nominate a dictator. (Liv. iv. 26.) So long as the consuls had to hold the census, they, undoubtedly, drew lots, which of them should exercise the functions of dictator, and even when they went out on a common expedition, they seem to have determined by lot in what direction each should exert his activity. (Liv. xii. 18.)

The entering of a consul upon his office was connected with great solemnities: before daybreak each consulted the auspices for himself, which in the early times was, undoubtedly, a matter of great importance, though, at a later period, we know it to have been a mere formality. (Dionys. li. 4, 6.) It must, however, be observed, that whatever the nature of the auspices were, the entering upon the office was never either rendered impossible or delayed thereby, whence we must suppose that the object merely was to obtain favourable signs from the gods, and as it were to place under the protection of the gods the office on which the magistrate entered. After the auspices were consulted, the consul returned home, put on the toga praetexta (Liv. xxi. 63; Ov. ex Pont. iv. 4. 25, Fast. i. 61), and received the salutatio of his friends and the senators. (Dion Cass. liii. 5; Ov. ex Pont. iv. 4. 27, &c.) Accompanied by these and a host of curious spectators, the consul clad in his official robes, proceeded to the temple of Jupiter in the Capitol, where a solemn sacrifice of white bulls was offered to the god. The consul clad in his official robes, proceeded to the temple of Jupiter in the Capitol, where a solemn sacrifice of white bulls was offered to the god. It seems that in this procession, the sella curulis, as an emblem of his office, was carried before the consul. (Ov. L. c. iv. 4. 29, &c., 9, 17, &c.; Liv. xxi. 63; Cic. De Leg. Agr. ii. 34.) After this, a meeting of the senate took place, at which the elder of the two consuls made his report concerning the republic, beginning with matters referring to religion, and then passing on to other affairs. (refere ad senatum de rebus divinis et humanis, Liv. vi. 1, ix. 8, xxxvii. 1; Cic. ad Quir. post Red. iv. 5.) One of the first among the religious things which the consuls had to attend to, was the fixing of the feriae Latinae, and it was not till they had put on the toga praetexta, which the consuls had to attend to, the members of the senate had reference to the distribution of the consulate, to the people assembled in what was called comitia. (Dion Cass. liii. 20; Plin. Paneg. 77; Tac. Ann. iv. 68.) In the last centuries of the empire, it was customary to create honorary consuls (consules honorarii) who were chosen by the senate and sanctioned by the emperor (Cassiod. i. 10; Justin. Nov. ixx. 80. c. 1), and consules suffecti were then scarcely heard of at all, for Constantine restored the old custom of appointing only two consuls, one for Constantine, and the other for Rome, who were to act as supreme judges (under the emperor) for a whole year, and besides these two there were no others except honorary consuls and consulares. Although the dignity of these honorary consuls as well as of the consules ordinarii and suffecti was merely nominal, still it was regarded as the highest in the empire, and was sought after by noble and wealthy persons with the greatest eagerness, notwithstanding the great expenses connected with the office on account of the public entertainments which a newly appointed consul had to give to his friends and the people. (Lydus, De Magistr. ii. 8; Liban. Orat. 8; Symmach. ep. 1, Suet. Apoll. Epist. ii. 8; Cassiod. ii. 2, vi. 1; Procop. De Bell. Pers. i. 25.) Sometimes the emperors themselves assumed the consulsip or conferred it upon imperial princes. The last consul of Rome was Decimus Theodorus Paulinus, A. D. 536, and at Constantinople Flavius Basilus Junior, in A. D. 541. After that time, the emperors of the East took the title of consul for themselves, until in the end it fell quite into oblivion. The official functions of the consuls under the empire were as follows: — 1. They presided in the senate, though, of course, never without the sanction of the emperor; 2. They administered justice, partly extra ordinem (Tac. Ann. iv. 19, xiii. 4; Gell. xiii. 24), and partly in ordinary cases, such as manumissions or the appointment of guardians (Ammian. Marcell. xxi. 7; Cassiod. vi. 1; Sueton. Claud. 23; Plin. H. N. ix. 13); 3. The letting of public concessions, a duty which had formerly been performed by the censors (Ov. ex Pont. iv. 5. 19); 4. The conducting of the games in the Circus and of public solemnities in honour of the emperors,
for which they had to defray the expenses out of their own means. (Sueton. Nero, 4; Juven. xi. 193, &c.; Cassiod. l. c., and iii. 39, v. 42, vi. 10.) Some emperors indeed granted the money necessary for such purposes and endeavoured to check the growing extravagance of the consuls, but these regulations were all of a transitory nature. (Lamprid. Al. Sever. 43; Vopisc. Aurel. 12; Justin. Nov. Noe. 105.) Compare besides the various works on Roman history, K. D. Hüllmann, Röm. Grundverfassung, p. 125, &c.; K. W. Güttling, Gesch. der Röm. Staatsverfassung, p. 280, &c., and above all, Becker, Handbuch der Röm. Alterth. vol. ii. part ii. pp. 87—126. [L. S.]

CONSULARIS, throughout the time of the Roman republic signifies a person who has been invested with the consulsip; but under the empire it became a mere title for the higher class of officers, who thereby obtained permission to have the insignia of a consul, without ever having actually been consuls. Hence the title was almost equivalent to that of an "honorary consul" (consul honorarius; Cod. Theod. vii. tit. 13, s. 1, vi. tit. 2. 2.) The title was given—to newly elected senators and formerly persons after their consularip had usually undertaken the command of an army in the provinces, and in many instances they were the same as the legati principis or the magistri militum. (Veget. ii. 9; Dig. 3. tit. 2. s. 2.) It was further a custom established even by the first emperors to give to governors of imperial provinces the title of consularis, irrespective of their ever having been consuls. (Suet. Aug. 33, Tib. 33, Domit. 6; Tac. Agric. 8, 14, 40.) Consularis thus gradually became the established title for those entrusted with the administration of imperial provinces. The emperor Hadrian divided Italy into four regions, and over each he placed an officer who likewise bore the title of consularis, and was entrusted with the administration of justice in his district, whence he is frequently called Juridicus (Spartian. Hadr. 22, with the note of Salmas.). At Constantinople the title was given to the superintendents of the aqueducts (consulares aquarum), who had to see that all public and private places were properly supplied with water, and who seem to have been analogous to the curatores aquarum of Rome. They are frequently mentioned in inscriptions, and also in the Codex of Justinian and Theodosius. [L. S.]

CONTRACTUS. [Obligationes.]

CONTRAVERSIA. [JUDEX.]

CONTEMPERNALES (συγγείον). This word, in its original meaning, signifies men who served in the same army and lived in the same tent. It is derived from taberna (afterwards tabernaculum), which, according to Festus, was the original name for a military tent, and it was made of boards (tabulae). Each tent was occupied by ten soldiers (contubernales), with a subordinate officer at their head, who was called decanus, and in later times capit contubernii. (Veget. De Re Milit. ii. 8. 13; compare Cic. Pro Ligar. 7; Hirt. Bell. Alex. 16; Drakenborn, Ad Liv. v. 2.)

Young Romans of illustrious families used to accompany a distinguished general on his expedition, or to his province, for the purpose of gaining under his superintendence a practical training in the art of war, or in the administration of public affairs, and were, like soldiers living in the same tent, called his contubernales. (Cic. Pro Procl. 30, Pro Planc. 11; Suet. Cæs. 42; Tacit. Agr. 5; Frontin. Strateg. iv. 1. 11; Plutarch. Pomp. 3.)

In a still wider sense, the name contubernales was applied to persons connected by ties of intimate friendship and living under the same roof (Cic. Ad Fam. ix. 2; Plin. Epist. ii. 13); and hence when a free man and a slave, or two slaves, who were not allowed to contract a legal marriage, lived together as husband and wife, they were called contubernales; and their connection, as well as their place of residence, contubernium. (Colum. xii. 1. 3, i. 8; Petron. Sat. 96; Tacit. Hist. i. 43, iii. 74.) Cicero (Ad Att. xiii. 28) calls Caesar the contubernalis of Quirinus, thereby alluding to the fact that Caesar had allowed his own stature to be erected in the temple of Quirinus (comp. Ad Att. xii. 45, and Suet. Cæs. 76). [L. S.]

CONTEMPERNAE. [Contubernales; Concubina.]

CONTUS (κοτσις, from κρύπτει, I prick or pierce), was, as Nonius (xviii. 24) expresses it, a long and strong wooden pole or stake, with a pointed iron at the one end. (Vig. Aen. v. 208.)

It was used for various purposes, but chiefly as a punt-pole by sailors, who, in shallow water, thrust it into the ground, and thus pushed on the boat. (Horn. Od. ii. 287; Vitr. l. c. and vi. 302.) It also served as a means to sound the depth of the water. (Festus, s. v. Periconctatio, p. 214, ed. Müller; Donat. ad Territ. Hec. i. 2. 2.) At a later period, when the Romans became acquainted with the huge lances or pikes of some of the northern barbarians, the word contus was applied to that kind of weapon (Vig. Aen. ix. 510; Tacit. Hist. i. 44, iii. 27; Lamprid. Commod. 13); and the long pikes peculiar to the Sarmatians were always designated by this name. (Tacit. Hist. i. 79, Annal. vi. 35; Stat. Achil. ii. 416; Valer. Flac. vi. 162, and others.) [L. S.]

CONVENIT'ERE IN MANUM. [Matri-monium.]

CONVENTIO'NES. [Obligationes.]

CONVENTUS (συνέντευξις, συνωρία, or συνωρία) is properly a name which may be given to any assembly of men who meet for a certain purpose. (Paul. Diaec. p. 42, ed. Müller.) But when the Romans had made the foreign countries into the form of provinces, the word conventus assumed a more definite meaning, and was applied to the meetings of the provincials in certain places appointed by the praetor or proconsul for the purpose of administering justice. (Cic. in Ferr. ii. 20, 24, 30, iv. 29, 48; Cic. ad Fam. xv. 4; Hort. Sat. i. 7. 22; Caes. Bell. Civ. ii. 21; Hirt. Bell. Afr. 97.) In order to facilitate the administration of justice, a province was divided into a number of districts or circuits, each of which was likewise called conventus, forum, or provinciatio. (Cic. in Ferr. ii. 8, 66; Plin. Ep. x. 5; Plin. H. N. iii. 1, iv. 22, v. 29.) Roman citizens living in a province were likewise under the jurisdiction of the proconsul, and accordingly all that had to settle any business at a conventus had to make their appearance there. The towns which had the Jus Italicum, had magistrates of their own with a jurisdiction there. The towns which had the Jus Italicum, had magistrates of their own with a jurisdiction there. The towns which had the Jus Italicum, had magistrates of their own with a jurisdiction there. The towns which had the Jus Italicum, had magistrates of their own with a jurisdiction there. The towns which had the Jus Italicum, had magistrates of their own with a jurisdiction there. The towns which had the Jus Italicum, had magistrates of their own with a jurisdiction there.
CORBIS.

(Caes. Bell. Gall. i. 54, v. 1, viii. 46; Act. Apost. xix. 38.) At such a convenus litigant parties applied to the proconsul, who selected a number of judges from the convenus, generally from among the Romans residing in the province, to try their causes. (Cic. in Verr. ii. 13, &c.; Niebuhr, Hist. Rom. vol. iii. p. 732.) The proconsul himself presided at the trials, and pronounced the sentence according to the views of the judges, who were his assessors (consilium or consiliarii). As the proconsul had to carry on all official proceedings in the Latin language (Val. Max. ii. 2, 2), he was always attended by an interpreter. (Cic. in Verr. iii. 37, ad Fam. xiii. 54.) These convenus appear to have been generally held after the proconsul had settled the military affairs of the province; at least when Caesar was proconsul of Gaul he made it a regular practice to hold the convenus after his armies had retired to their winter-quarters. In the time of the emperors certain towns in each province were appointed as the seats of standing courts, so that the convenus were superseded. (Cod. Just. i. tit. 40. s. 6.) The term convenus is lastly applied to certain bodies of Roman citizens living in a province, forming a sort of corporation, and representing the Roman people in their district or town; and it was from among these that proconsuls generally took their assistants. Such corporations are repeatedly mentioned, as, for example, at Syracuse (Cic. in Verr. ii. 13, 29, iii. 18, iv. 25, 51, v. 36, &c.), Capua (Caes. De Bell. Civ. i. 14; C. p. Scut. 4), Salona (Caes. De Bell. Civ. iii. 9), Puteoli (Cic. in Vat. i. 3), and Corduba (Caes. De Bell. Civ. ii. 19; comp. Provincia.)

CONVIVIUM. [SYMPOSIUM.]

COOPTARE. [COLLEGIUM.]

CO'PHINUS (cophinos, Engl. coffin), a large kind of wicker basket, made of willow branches. (Moer. Att. and Hesych. s. v. "Abhivs"). From Aristophanes (Ae. 1223) it would seem that it was used by the Greeks as a basket or cage for birds. The Romans used it for agricultural purposes. (Columella (xi. 3. p. 469, ed. Bip.) in describing a method of procuring early cucumbers, says, that they should be sown in well manured soil, kept in a cophinus, so that in this case we have to consider it as a kind of portable hot-bed. (Moer. Att. and Hesych. PKOVINCIA.) [L. S.]

CO'RBULA, CORBICULA, CORBIS, CORBITAE, merchantmen of the larger class, so called because they hung out a corbis at the mast-head for a sign. (Festus; Nonius, s. v.) They were also termed onercariae; and hence Plautus, in order to designate the voracious appetites of some women, says, "Corbitum cibi comese possunt" (Cas. iv. 1. 20). They were noted for their heavy build and sluggish sailing (Lucil. ap. Non. s. v. Corbitae; Plaut. Poen. iii. 1. 4), and carried passengers as well as merchandise, answering to the large "fucuca" of the present day. Cicero proposed to take a passage in one of those vessels, which he opposes to the smarter class of packets (actuarids, ad Att. xvi. 6). [A. R.]

CORDAX (kópaž). [CHORUS, 280, a.]

CORNICINES. [AENATAORES.]

CORNICULA'RII. [EXERCITUS.]

CORNU. [EXERCITUS.]

CORNU, a wind instrument, anciently made of horn, but afterwards of brass. (Varr. L. L. v. 117, ed. Müller.) According to Athenaeus (iv. p. 184, a.) it was an invention of the Etruscans. Like the tuba, it differed from the tibia in being a larger and more powerful instrument, and from the tuba itself, in being curved nearly in the shape of a C, with a cross-piece to steady the instrument for the convenience of the performer. In Greek it is called στρυγγόων αλκυνίζω. It had no stopples or plugs to adjust the scale to any particular mode (Burney's Hist. of Music, vol. i. p. 518); the entire series of notes was produced without keys or holes, by the modification of the breath and the lips at the mouthpiece. Probably, from the description given of it in the poets, it was, like our own horn, an octave lower than the trumpet. The classium, which originally meant a signal, rather than the musical instrument which gave the signal, was usually sounded with the cornu.

"Sonuit reflexo classicum cornu,
Litusque aduno stridulos cantus
Eliat aere."

(Seh. Oed. 734.)
From which lines we learn the distinction between the cornu and lituus, as from Ovid (Metam. i. 98) we learn that between the tuba and cornus—

"Non tuba directi, non aeris cornua flexi."

The following woodcut, taken from Bartholini (De Tibris, p. 403), illustrates the above account. [B.J.]

CORONLA. [CORONA.]

CORONA (στέφανος), a crown, that is, a circular ornament of metal, leaves, or flowers, worn by the ancients round the head or neck, and used as a festive as well as funeral decoration, and as a reward of talent, military, or naval prowess, and civil worth. It includes the synonyms of the species, for which it is often used absolutely, στέφανος, στέφαμα, corolla, serlum, a garland or wreath.

Judging from Homer's silence, it does not appear to have been adopted amongst the Greeks of the heroic ages as a reward of merit, nor as a festive decoration; for it is not mentioned amongst the luxuries of the delicate Phaeacians, nor of the suitors. But a golden crown decorates the head of Venus in the hymn to that goddess (1 and 7).

Its first introduction as an honorary reward is attributable to the athletic games, in some of which it was bestowed as a prize upon the victor (Plin. H. N. xv. 39; Pindar. Olymp. iv. 36), from whence it was adopted in the Roman circus. It was the only one contended for by the Spartans in their gymnastic contests, and was worn by them when going to battle.

The Romans refined upon the practice of the Greeks, and invented a great variety of crowns formed of different materials, each with a separate appellation and appropriated to a particular purpose. We proceed to enumerate these and their properties, including in the same detail an account of the corresponding ones, where any, in Greece.

I. CORONA OBsidionalis. Among the honorary crowns bestowed by the Romans for military achievements, the most difficult of attainment, and the one which conferred the highest honour, was the corona obsidionalis, presented by a beleaguered army after its liberation to the general who broke up the siege. It was made of grass, or weeds and wild flowers (Plin. H. N. xxii. 7), thence called corona graminea (Plin. H. N. xxii. 4), and graminea obсидionalis (Liv. vii. 37), gathered from the spot on which the beleaguered army had been enclosed (Plin. l. c.; Aul. Gell. v. 6; Festus, s. v. Obsidionalis); in allusion to a custom of the early ages, in which the vanquished party in a contest of strength or agility plucked a handful of grass from the meadow where the struggle took place, and gave it to his opponent as a token of victory.

As the possession of this crown was so high an honour, its attainment was restricted by very severe regulations (Plin. H. N. xvi. 5), so that the following combinations must have been satisfied before a claim was allowed: — To have preserved the life of a Roman citizen in battle (Aul. Gell. v. 6), and therefore accompanied with the inscription Ob. c.rn. servat. (Senec. Clem. i. 26). It was originally made of the ilex, afterwards of the aesculus, and finally of the quercus (Plin. H. N. xvi. 5), three different sorts of oak, the reason for which choice is explained by Plutarch (Quaes. Rom. p. 151, ed. Reisch.). It is represented in the next woodcut.
him that deference which he would be compelled to pay to his preserver if the claim were established. (Cic. Pro Planc. 30.) Originally, therefore, the corona civica was presented by the rescued soldier (Aul. Gell. v. 6; Polyb. vi. 57), after the claim had been thoroughly investigated by the tribune who compelled a reluctant party to come forward and give his evidence (Polyb. l. c.); but under the empire, when the prince was the fountain from whence all honours emanated, the civic crown was no longer received from the hands of the person whose preservation it rewarded, but from the prince himself, or his delegate. (Tacit. Ann. xv. 12; compare iii. 2.)

The preservation of the life of an ally, even though he were a king, would not confer a sufficient title for the civic crown. When once obtained, it might always be worn. The soldier who had acquired it, had a place reserved next to the senate at all the public spectacles; and they, as well as the rest of the company, rose up upon his entrance. He was freed from all public burthens, as were also his father, and his paternal grandfather; and the person who owed his life to him was bound, ever after, to cherish his preserver as a parent, and afford him all such offices as were due from a son to his father. (Polyb. vi. 37; Cic. Pro Planc. 30; Plin. H. N. xvi. 5; Aul. Gell. v. 6.)

A few of the principal persons who gained this reward, are enumerated in the following passages:—Plin. H. N. vii. 29, xvi. 5; Liv. vi. 20; x. 46. L. Gellius Publicola proposed to confer it upon Cicero for having detected and crushed the conspiracy of Catiline (Aul. Gell. v. 6); and among the honours bestowed upon Augustus by the senate, it was decreed that a civic crown should be suspended from the top of his house (Dion Cass. liii. 16; Val. Max. ii. 8. fn. i; Ovid. Fast. iv. 853, Trist. iii. 1. 6; Senec. Clem. i. 26; Suet. Calig. 19, compare Claud. 17, Tib. 26); hence a crown of oak leaves, with the inscription o bives servatos, is frequently seen on the reverse of the Augustan medals, as also on those of Galba, Vitellius, Vespasian, Trajan, &c., showing that they likewise assumed to themselves a similar honour.

III. CORONA NAVALIS or ROSTRATA, called also CLASSICA. (Vell. Pat. ii. 81.) It is difficult to determine whether these were two distinct crowns, or only two denominations for the same one. Virgil (Aen. viii. 684) unites both terms in one sentence, "Tempora navalis fulgent rostrata corona." But it seems probable that the former, besides being a generic term, was inferior in dignity to the latter, and given to the sailor who first boarded an enemy's ship (Plin. H. N. xvi. 3); whereas the latter was given to a commander who destroyed the whole fleet, or gained any very signal victory. M. Agrippa is said to have been the first person who received the honour of a naval crown, which was conferred upon him on his conquest of Sex. Pompeius in B.C. 36; though, according to other authorities, M. Varro was the first who obtained it from Pompeius Magnus. (Comp. Vell. Pat. l. c.; Liv. Epit. 129; Dion Cass. xlix. 14; Aul. Gell. v. 6; Senec. De Ben. iii. 32; Festus, s. v. Navalis Corona; Plin. H. N. viii. 31, xvi. 4; Suet. Claud. 17.) At all events, they were both made of gold; and one at least (rostrata) decorated with the beaks of ships like the rostra in the forum (Plin. xvi. 4), as seen in a medal of Agrippa; the other (navalis), with a representation of the entire bow, as shown in the subjoined wood-cut. (Guichard, De Antiq. Triumph, p. 267.)

The Athenians likewise bestowed golden crowns for naval services; sometimes upon the person who got his trireme first equipped, and at others upon the captain who had his vessel in the best order. (Dem. De Coron. Praef. Nav, pp. 278, 279. ed. Schaeffer.)

IV. CORONA MURALIS. The first man who scaled the wall of a besieged city was presented by his commander with a mural crown. (Aul. Gell. v. 6. 4; Liv. xxvi. 48.) It was made of gold, and decorated with turrets (muri pinnatis, Aul. Gell. l. c.), as represented in the next woodcut (Guichard, De Antiq. Triumph, p. 265); and being one of the highest orders of military decorations, was not awarded to a claimant until after a strict investigation. (Liv. l. c.; compare Suet. Aug. 25.)

Cybele is always represented with this crown upon her head (Lucret. ii. 607, 610; Ovid. Fast. iv. 219; compare Virg. Aen. x. 253, vi. 786); but in the woodcut annexed (Caylus, Recueil d'Antiq. vol. v. pl. 3) the form of the crown is very remarkable, for it includes the whole tower as well as the turrets, thus affording a curious specimen of the ancient style of fortification.

V. CORONA CASTRENIS or VALLARIS. The first soldier who surmounted the vallum, and forced an entrance into the enemy's camp, was, in like manner, presented with a golden crown, called corona castrensis or vallaris (Aul. Gell. v. 6; compare Val. Max. i. 8. § 6), which was oma-
VI. CORONA TRIUMPHALIS. There were three sorts of triumphal crowns, the first of which was worn round the head of the commander during his triumph. It was made with laurel or bay leaves (Aul. Gell. v. 6; Ovid. Pont. ii. 2. 81; Tibull. i. 7. 7), which plant is frequently met with on the ancient coins, both with the berries and without them. It was the latter kind, according to Pliny (H. N. xv. 39), which was used in the triumph, as is shown in the annexed woodcut, from a medal which commemorates the Parthian triumph of Ventidius, the lieutenant of Antony. Being the most honourable of the three, it was termed laura insignis (Liv. vii. 13) and insignis corona triumphalis.

The second one was of gold, often enriched with jewels, which being too large and massive to be worn, was held over the head of the general during his triumph, by a public officer (servus publicus, Juv. Sat. x. 41). This crown, as well as the former one, was presented to the victorious general by his army.

The third kind, likewise of gold and great value, was sent as presents from the provinces to the commander, as soon as a triumph had been decreed to him (Plut. Aemil. Paul. 34), and therefore they were also termed provinciales. (Tertull. De Coron. Mil. c. 13.) In the early ages of the republic, these were gratuitous presents, but subsequently they were exacted as a tribute under the name of aurum coronarium, to which none were entitled but those to whom a triumph had been decreed. The custom of presenting golden crowns from the provinces to victorious generals was likewise in use among the Greeks, for they were profusely lavished upon Alexander after his conquest of Dareius (Athen. xii. p. 539, a); and the Romans probably borrowed the custom from the Greeks. [AUREM CORONARIUM.]

VII. CORONA OVALIS was another crown of less estimation, appropriated solely to commanders. It was given to those who merely deserved an ovation, which happened when the war was not duly declared, or was carried on against a very inferior force, or with persons not considered by the laws of nations as lawful enemies, such as slaves and pirates; or when the victory was obtained without danger, difficulty, or bloodshed (Aul. Gell. v. 6; Festus, s. v. Ovals Corona); or on which account it was made of myrtle, the shrub sacred to Venus, "Quod non Martius, sed quasi Veneris quidam triumphus foret." (Aul. Gell. l.c.; Plut. Marcell. 22; compare Plin. H. N. xv. 39; Dionys. v. 47.) The myrtle crown is shown in the woodcut annexed, from a medal of Augustus Caesar.

VIII. CORONA OLEAGINA. This was likewise an honorary wreath, made of the olive leaf, and conferred upon the soldiers as well as their commanders. According to Gellius (v. 6), it was given to any person or persons through whose instrumentality a triumph had been obtained, but when they were not personally present in the action. It is represented in the next woodcut, from a medal of Lepidus, and was conferred both by Augustus and the senate upon the soldiery on several occasions. (Dion Cass. xlix. 14, xliv. 40.)

Golden crowns, without any particular designation, were frequently presented out of compliment by one individual to another, and by a general to a soldier who had in any way distinguished himself. (Liv. vii. 10, 37, x. 44, xxx. 15.)

The Greeks in general made but little use of crowns as rewards of valour in the earlier and better periods of their history, except as prizes in the athletic contests; but previous to the time of Alexander, crowns of gold were profusely distributed among the Athenians at least, for every tripling feat, whether civil, naval, or military (Aesch. c. Ctesiph. Dem. De Coron. passim), which, though lavished without much discrimination as far as regards the character of the receiving...
parties, were still subjected to certain legal restrictions in respect of the time, place, and mode in which they were conferred. They could not be presented but in the public assemblies, and with the consent, that is, by suffrage, of the people, or by the senators in their council, or by the tribes to their own members, or by the pontiffs to members of their own tribe. According to the statement of Aeschines, the people could not lawfully present crowns in any place except in their assembly, nor the senators except in the senate-house; nor, according to the same authority, in the theatre, which is, however, denied by Demosthenes; nor at the public games, and if any crier there proclaimed the crowns he was subject to aetia. Neither could any person holding an office receive a crown whilst he was όνείδων, that is, before he had passed his accounts. But crowns were sometimes presented by foreign cities to particular citizens, which were termed στρέφανον κυσκάκω, corona hospitales. This, however, could not be done until the ambassadors from those cities had obtained permission from the people, and the party for whom the honour was intended had undergone a public investigation, in which the whole course of his life was submitted to a strict inquiry. (Aesch. Dem. ii. 22.)

We now proceed to the second class of crowns, which were emblematical and not honorary, at least to the person who wore them, and the adoption of which was not regulated by law, but custom. Of these there were also several kinds.

I. CORONA SACERDOTALIS, so called by Ammianus Marcellinus (xxix. 5. § 6). It was worn by the priests (sacerdotes), with the exception of the pontifex Maximus and his minister (camillus), as well as the bystanders, when officiating at the sacrifice. It does not appear to have been confined to any one material, but was sometimes made of olive (see the preceding woodcut; Stat. Pseudo-Apulei, xxvi. § 6). It was likewise regarded as an emblem of the Twelve Tables, that any person who had acquired a crown might have it placed upon his head when carried out in the funeral procession. (Cic. De Leg. ii. 24; Plin. H. N. xxii. 5.) Garlands of flowers were also placed upon the bier, or scattered from the windows under which the procession passed (Plin. H. N. xxii. 7; Dionys. i. 39), or enwined about the cinerary urn (Plut. Marcell. 30, De mort. 53), or as a decoration to the tomb (Plin. H. N. xxii. 8; Ovid. Trist. iii. 2. 92; Tibull. ii. 4. 48). In Greece these crowns were commonly made of parsley (σφιτανος). (Suidas, s. v.; Plut. Timol. 26.)

III. CORONA CONVIVIALIS. The use of chaplets at festive entertainments sprung likewise from Greece, and owe their origin to the practice of tying a woolen fillet tight round the head, for the purpose of mitigating the effects of intoxication. (Comp. Plut. Amph. iii. 4. 16.) But as luxury increased they were made of various flowers or shrubs, such as were supposed to prevent intoxication; of roses (which were the choicest), violets, myrtle, ivy, philopsis, and even paralea. (Hor. Carm. ii. 7. 24, et alibi.) The Romans were not allowed to wear these crowns in public, "in usu promiscuo," which was contrary to the practice of the Greeks, and those who attempted to do so were punished with imprisonment. (Plin. H. N. xxii. 6; compare Hor. Sat. ii. 3. 256; Val. Max. vi. 9, ext. 1.)

IV. CORONA NUPUTALIS. The bridal wreath (στρέφανον γαμικόν) was also of Greek origin, among whom it was made of flowers plucked by the bride herself, and not bought, which was of ill omen. Among the Romans it was made of verona, also gathered by the bride herself, and worn under the flammus (Festus, s. v. Cordia) with which the bride was always enveloped. (Catull. lxx. 6. 8; Cic. De Orat. ili. 58.) The bridegroom also wore a chaplet. (Plaut. Cas. iv. 1. 9.) The doors of his house were likewise decorated with garlands (Catull. lxxiv. 294; Juv. Sat. vi. 51, 227), and also the bridal couch.

V. CORONA NATALITIA, the chaplet suspended over the door of the vestibule, both in the houses of Athens and Rome, in which a child was born. (Juv. Sat. ix. 85; Meursius, Attic. Lect. iv. 10.) At Athens, when the infant was male, the crown was made of olive; when female, of wool (Heusc. s. v. Στρέφανος); at Rome it was of laurel, ivy, or parsley (Bartholin. De Puerp. p. 127).

Besides the crowns enumerated, there were a few others of specific denominations, which received their names either from the materials of which, or the manner in which, they were composed. These were —

I. CORONA LONGA (Cic. De Leg. 24; Ovid. Fast. iv. 738), commonly thought to resemble what we call festoons, and as such seem to have been chiefly used to decorate tombs, curule chairs, triumphant cars, houses, &c. But the word must have had a more precise meaning, and was probably called longa from its greater size, and meant a circular string of anything, like the "rosary" used by the lower orders in Catholic countries to reckon up their prayers, which in Italy is still called la corona, doubtless tracing its origin to the corona longa of their heathen ancestors, to which description it answers exactly.

II. CORONA ETRUSCA, a golden crown made to imitate the crown of oak leaves, studded with gems, and decorated with ribbons (lemniscet) or
ties of gold. (Plin. H. N. xxi. 4, xxxii. 4.) Any crown fastened with these ribbons, whether real or artificially represented, was also termed corona tenniscata, a specimen of which is given by Caylus (Recueil d'Antiq. vol. v. pl. 57. No. 3).

III. CORONA PACTILIS (Plin. H. N. xxi. 8), probably the same as the corona pictilis of Plautus (Bacch. i. 1. 37), corona torta (Propert. iii. 20, 10, ed. Kuinoel), placa (Aul. Gell. xviii. 2), and as the στρεφόνα στερεά and κουλάριος στρεφάνει of the Greeks. It was made of flowers, shrubs, grass, ivy, wool, or any flexible material twisted together.

IV. CORONA SUMILIS, the crown used by the Salii at their festival. It was made in the first instance of any kind of flowers sowed together, instead of being wreathed with their leaves and stalks; but subsequently it was confined to the rose only, the choicest leaves of which were selected from the whole flower, and sowed together by a skilful hand, so as to form an elegant chaplet.

(Plin. H. N. xxii. 8.)

V. CORONA TONS or TONSILIS (Virg. Aen. v. 556) was made of leaves only, of the olive or laurel tor instance (Serv. i. 1. 37), and so called in distinction to nexilis in which the whole branch was inserted.

VI. CORONA RADIATA (Stat. Theb. i. 28) was the one given to the gods and deified heroes, and assumed by some of the emperors, as a token of their divinity. It may be seen on the coins of Trajan, Caligula, M. Aurelius, Valerius Probus, Theodosius, &c., and is given in the woodcut annexed, from a medal of M. Antonius.

VII. The crown of vine leaves (pampinea) was appropriated to Bacchus (Hor. Carm. iii. 25. 20, iv. 8. 33), and considered a symbol of ripeness approaching to decay; whence the Roman knight, when he saw Claudius with such a crown upon his head, augured that he would not survive the autumn. (Tacit. Ann. xi. 4; compare Artemid. i. 79.)

CORONIS (κορώνις), the cornice of an entablature, is properly a Greek word signifying anything curved (Schol. ad Aristoph. Plut. 253; He sch. s. v.). It is also used by Latin writers, but the genuine Latin word for cornice is corona or coroinex. (Virtn. v. 2. 3.)

CORPORATI. CORPORATIO. [COLLEGIUM.]

CORPORUS. [COLLEGIUM.]

CORPUS JURIS CIVILIS. The three great compilations of Justinian, the Institutes, the Pandect or Digest, and the Code, together with the Novellae, form one body of law, and were considered as such by the glossators, who divided it into five volumina. The Digest was distributed into three volumina, under the respective names of Digestum Vetus, Infortiatus, and Digestum Novum. The fourth volume contained the first nine books of the Code Repetitae Pnelectionis. The fifth volume contained the Institutes, the Liber Authenticorum or Novellae, and the three last books of the Code. The division into five volumina appears in the oldest editions; but the usual arrangement now is, the Institutes, Digest, the Code, and Novellae. The name Corpus Juris Civilis was not given to this collection by Justinian, nor by any of the glossators. Savieny asserts that the name was used in the twelfth century: at any rate, it became common from the date of the edition of D. Gothofredus, 1604.

Most editions of the Corpus also contain the following matter:—Thirteen edicts of Justinian, five constitutions of Justin the younger, several constitutions of Tiberius the younger, a series of constitutions of Justinian, Justin, and Tiberius; 113 Novellae of Leo, a constitution of Zeno, and a number of constitutions of different emperors, under the name of Basiliacae Constitutae or Imperialia Constitutio; the Canones Sanctorum et venerate-rum Apostolorum, Libri Feudorum, a constitution of the emperor Henry VII. called Extravagantes, and a Liber de pace Constantiae. Some editions also contain the fragments of the Twelve Tables, of the praetorian edict, &c.

The Roman law, as received in Europe, consists only of the Corpus Juris, that is, the three compilations of Justinian and the Novellae which were issued after these compilations; and further, this Corpus Juris is only received within the limits and in the form which was given to it in the school of Bologna. Accordingly, all the Ante-Justinian law is now excluded from all practical application; also, the Greek texts in the Digest, in the place of which the translations received at Bologna are substituted; and further, the few unimportant restorations in the Digest, and the more important restorations in the Codex. Of the three collections of Novellae, that only is received which is called Authenticum, and in the abbreviated form which was given to it at Bologna, called the Vulgata.

But, on the other hand, there are received the additions made to the Codex in Bologna by the reception of the Authentica of the Emperors Frederick I. and II., and the still more numerous Authentica of Imerius. The application of the matter comprised within these limits of the Corpus Juris has now been determined by the school of Bologna, but by the operation of other principles, such as the customary law of different European countries and the development of law. Various titles of the Corpus Juris have little or no application in modern times; for instance, that part of the Roman law which concerns constitutional forms and administration. (Savieny, System des Heutigen Romischen Rechts, vol. i. p. 66.)

Some editions of the Corpus Juris are published with the glossaes, and some without. The latest edition with the glossaes is that of J. Fehlau, Lugd. 1627, six vols. folio. Of the editions without the glossaes, the most important are—that of Russardus, Lugd. 1560—61, folio, which was several times reprinted; Contius, Lugd. 1571 and 1581, 15 vols. 12mo; Lud. Charondae, Antw. ap. Christ. Plantin, 1575, folio; Dionys. Gothofredus, Lugd. 1588, 4to.

CORPUS JURIS CIVILIS. 363
of which there are various editions, one of the best by Sim. Van Leeuwen, Amst. 1663, folio; G. Chr. Gebauer, cura G. Ang. Spangenberg, Goettling. 1776—1797, 2 vols. 4to; Schrader, 1 vol. 4to, Berlin, 1832, of which only the Institutes are yet published.

For further information on the editions of the Corpus Juris and its several portions, see Böcking, Institutionen, p. 78, &c., and Mackeldy, Lehrbuch, &c.

Correus. [OBLIGATIONES.]

Cortina. 1. In its primary sense, a large circular vessel for containing liquids, and used in dyeing wool (Plin. H. N. ix. 62), and receiving oil when it first flows from the press. (Cat. De Re Rust. 66.) 2. A vase in which water was carried round the circus during the games (Plaut. Poem. v. s. 12), for the use of the horses, drivers, or attendants. See the cut on p. 284, in which two of the children thrown down by the horses are furnished with a vessel of this kind. 3. The table or hollow slab, supported by a tripod, upon which the priestesses at Delphi sat to deliver her responses; and hence the word is used for the oracle itself. (Virg. Aen. vi. 347.) The Romans made tables of marble or bronze after the pattern of the Delphian tripod, which they used as we do our sideboards, for the purpose of displaying their plate at an entertainment, or the valuables contained in their temples, as is still done in Catholic countries upon the altars. These were termed cornua Delphicae, or Delphicae simply. (Plin. H. N. xxxiv. 6; Schol. ad Hor. Sat. i. 6. 116; Mart. xii. 66. 7; Suet. Aug. 52.) 4. From the conical form of the vessel which contains the first notion of the word, it came also to signify the vaulted part of a theatre over the stage (magni cortinæ theatri, Sever. in Aetn. 294), such as in the Odeum of Pericles, the shape of which we are expressly told was made to imitate the tent of Xerxes (Paus. i. 20. § 3; Plut. Peric. 13); and thence metaphorically, for anything which bore the appearance of a dome, as the vault of heaven (Ennius, ap. Var. De Ling. Lat. viii. 46, 49. ed. Muller); or of a circle, as a great heap of earth thrown up by any one of the three engines of attraction. (Tactil. De Orat. 19.) [A. R.]

Corybantes (κορυβάντες). The history and explanation of the deities bearing this name, in the early mythology of Greece, cannot be given in this place, as it would lead us to enter into historical and mythological questions beyond the limits of this Dictionary. The Corybantes, of whom we have to speak here, were the ministers or priests of Rhea or Cybele, the great mother of the gods, whose origin is uncertain, although the first, which was current in Crete itself, seems to be best entitled to the honour. All we know of the Corybantes is, that the person to be initiated was seated on a throne, and that those who initiated him formed a circle and danced around him. This part of the solemnity was called Σφυνόις or Σφαῖραι, (Plato, Euthyd. p. 277, d.; Dion Chrys. Orat. xii. p. 387; Proclus, Theol. Plat. vi. 13.) [L. S.]

Corymbus. Corymбium. [Coma.]

Corvus, a sort of crane, used by C. Duilius against the Carthaginian fleet in the battle fought off Mylæ, in Sicily (b.c. 260). The Romans, we are told, being unused to the sea, saw that their only chance of victory was by bringing a set-fight to resemble one on land. For this purpose they invented a machine, of which Polybius (i. 22) has left a minute, although not very perspicuous, description. In the fore part of the ship a round pole was fixed perpendicularly, twenty-four feet in height and about nine inches in diameter; at the top of this was a pivot, upon which a ladder was set, thirty-six feet in length and four in breadth. The ladder was guarded by cross-beams, fastened to the upright pole by a ring of wood, which turned with the pivot above. Along the ladder a rope was passed, one end of which took hold of the corveus by means of a ring. The corveus itself was a strong piece of iron, with a spike at the end, which was raised or lowered by drawing in or letting out the rope. When an enemy's ship drew near, the machine was turned outwards, by means of the pivot, in the direction of the assailant. Another part of the machine which Polybius has not clearly described is a breastwork, let down (as it would seem) from the ladder, and serving as a bridge, on which to board the enemy's vessel. (Compare Curtius, iv. 2. 4.) By means of these cranes the Carthaginian ships were either broken or closely lamed, and the Roman, and Duilius gained a complete victory.

The word corveus is also applied to various kinds of grappling-hooks, such as the corveus demolitor, mentioned by Vitruvius (x. 19) for pulling down walls, or the terrible engine spoken of by Tacitus (Hist. iv. 30), which being fixed on the walls of a fortified place, and suddenly let down, carried on one of the besieging party, and then by a turn of the machine put him down within the walls. The word is used by Celsus for a scalpel. It is hardly necessary to remark that all these meanings have their origin in the supposed resemblance of the various instruments to the beak of a raven. [B. J.]

Corytus. [Arcus, p. 126, a.]

Cosmetai, a class of slaves among the Romans, whose duty it was to dress and adorn ladies. (Juv. Sat. vii. 476.) Some writers on antiquities, and among them Böttiger in his Sabina (i. 22) have supposed that the cosmetai were female slaves, but the passage of Juvenal is alone sufficient to refute this opinion; for it was not customary for female slaves to take off their tunics when a punishment was to be inflicted upon them. There was, indeed, a class of female slaves who were employed for the same purposes as the cosmetai; but they were called cosmetariorum, a name which Naevius chose as the title for one of his
comedies. (See Heindorf, ad Horat. Sat. i. 2. 56.)

COSMÆTİTES (κοσμητῆς), an officer in the Athenian Gymnasia in the time of the Romans.

[CYMNASIUM.]

COSMI (κόσμος), the chief magistrates of Crete. It is proposed under this head to give a brief account of the Cretan constitution.

The social and political institutions of Crete were so completely Dorian in character, and so similar to the Spartan, that it was a disputed point amongst the ancients whether the Spartan constitution had its origin there, or the Cretan was transferred from Laconia to Crete. The historian Ephorus (ap. Strab. x. p. 482) expressly states that the Spartan institutions had their origin in Crete, but were perfected and completed in Sparta; so that there is good reason for the assertion of Müller (Dorians, iii. 1. § 8), “that the constitution founded on the principles of the Doric race, was there first moulded into a consistent shape, but even in a more simple and antiquated form than in Sparta at a subsequent period.” Thus much, at any rate, we are far from saying that these were the various Dorian cities in the island, the political arrangements of which so closely resembled each other, that one form of government was ascribed to all. (Thirlwall, Hist. Greece, vol. i. p. 284.) In the earliest ages of which we have historical information, this was an aristocracy consisting of three component bodies, the Cosmi, the Gerusia (γερουσία), and the Ecclesia (ἐκκλησία). The cosmi were ten in number, and are by Aristotle (Pol. ii. 7), Ephorus (ap. Strab. l. c.), and Cicero (de Rep. ii. 53) compared to the ephors of Sparta. Müller, however (iii. 8. § 1) compares them with the Spartan kings, and supposes them to have succeeded to the functions of the kingly office; which Aristotle (probably alluding to the age of Minos) tells us was at one time established in Crete. These cosmi were ten in number, and chosen not from the body of the people, but from certain γένεσις or houses, which were probably of more pure Doric or Achaian descent than their neighbours. The first of them in rank was called Protocosmus, and gave his name to the year. They commanded in war, and also conducted the business of the state with the representation of ambassadors of other cities. With respect to the domestic government of the state, they appear to have exercised a joint authority with the members of the gerusia, as they are said to have consulted with them on the most important matters. (Ephor. l. c.) In the times subsequent to the age of Alexander, they also performed certain duties which bore a resemblance to the introduction of the lawsuits into courts, by the Athenian magistrates. (Müller, l. c.) Their period of office was a year; but any of them during that time might resign, and was also liable to deposition by his colleagues. In some cases, too, they might be indicted for neglect of their duties. On the whole, we may conclude that they formed the executive and chief power in most of the cities of Crete.

The Gerusia, or council of elders, called by the Cretans Boules, consisted, according to Aristotle (Polit. ii. 7), of thirty members who had formerly been cosmi, and were in other respects approved of (τὰ ἄλλα δόκει κρινομένα, Ephor. l. c.). They retained their office for life, and are said to have decided in all matters that came before them, according to their own judgment, and not agreeably to any fixed code of laws. They are also said to have been irresponsible, which, however, hardly implies that they were independent of the “ unwritten law” of custom and usage, or uninfluenced by any fixed principles. (Thirlwall, Hist. Greece, vol. i. p. 186.) On important occasions, as we have before remarked, they were ἐξουσιοῦν, or councilors of the cosmi.

The democratic element of the Ecclesia was almost powerless in the constitution; its privileges, too, seem to have been merely a matter of form; for, as Aristotle observes, it exercised no function of government, except ratifying the decrees of the γερουσία and the κόσμοι. It is, indeed, not improbable that it was only summoned to give its sanction to these decrees; and though this may appear to imply the power of withholding assent, the force of habit and custom would prevent such an alternative being attempted, or, perhaps, even thought of. (Thirlwall, vol. i. p. 286; Götting, Excursus ad Aristot. ii. 7.)

From these observations, it is clear that the Cretan constitution was formerly a Dorian aristocracy, which, in the time of Polybius, had degenerated to what he calls a δυναστεία, i.e. a government vested in a few privileged families. These quarrelled one amongst the other, and raised factions or parties, in which the demus joined, so that the constitution was frequently broken up, and a temporary monarchy, or rather anarchy, established on its ruins. The cosmi were, in fact, often deposed by the most powerful citizens, when the latter wished to impede the course of justice against themselves (μὴ δοῦναι δίκαιον), and an ἀνακύος then ensued, without any legal magistrates at the head of the state.

In the time of Polybius, the power of the aristocracy had been completely overthrown; for he tells us that the election of the magistrates was annual, and determined by democratical principles. (Polyb. vi. 44.) In other respects also, he points out a difference between the institutions of Crete and those of Lycurgus at Sparta, to which they had been compared by other writers.

Müller observes that the cosmi were, so far as we know, the chief magistrates in all the cities of Crete, and that the constitution of these cities was in all essential points the same—a proof that their political institutions were determined by the principles of the governing, i.e. the Doric race.

The social relations of the Cretans seem to have been almost identical with those of the Spartans.

The inhabitants of the Dorian part of the island were divided into three classes, the freemen, the perioeci or ἐπίτοκοι, and the slaves. The second class was as old as the time of Minos, and was undoubtedly composed of the descendants of the conquered population; they lived in the rural districts, round the πάλατος of the conquerors; and, though personally free, yet exercised none of the privileges or influence of citizens, either in the administration and enactment of the laws, or the use of heavy arms. They occupied certain lands, for which they paid a yearly tribute or rent, supposed, from a statement in Athenaeus (iv. p. 143), to have been an Aeginetic stater.*

* The expression of Dosiadas, τῶν δοῦλων ἐκαστος, probably refers to the perioeci, δοῦλοι being used as a generic term for those who were not full and free citizens.
The actors in Athenian tragedy, who assumed the

ming upon it. Into these the young men, one after
consisting either of simple cakes, sweet-meats, or
consisted partly of the slaves of the conquered
proprietors. The word μοιοί, as Thirlwall has
remarked, is more probably connected with δυῶς
than Minoa.
The origin of the class called μουία, and the
κλαραίταν, was probably twofold; for the analogy of other cases would lead us to suppose that they
consisted partly of the slaves of the conquered
freemen of the country, and partly of such freemen
as rose against the conquerors, and were by these
reduced to bondage. But besides these, there was
also a class of household servants employed in
menial labours, and called χρυσοφωντοί: they were,
as their name denotes, purchased, and imported
from foreign countries. [R. W.]
CO'THURNUS (κόθυρνος), a boot. Its essential
distinction was its height; it rose above the middle of the leg, so as to surround the calf (alte surus 
vincere cothurnus, Virg. Am. i. 337), and
sometimes it reached as high as the knees. (Millin,
Vases Ant. vol. i. pl. 20 and 72.) It: was worn
principally by horsemen, hunters, and by men of
rank and authority. The ancient marbles, represent-
ing these different characters, show that the
cothurnus was often ornamented in a very tasteful
and elaborate manner. The boots of the ancients
were laced in front, and it was the object in so
doing to make them fit the leg as closely as pos-
sible. It is evident from the various representations
of the cothurnus in ancient statues, that its
sole was commonly of the ordinary thickness. But
it was sometimes made much thicker than usual,
probably by the insertion of slices of cork. (Serv.
in Virg. Ed. ii. cc.) The object was to add to the
apparent stature of the wearer; and this was done
either in the case of women who were not so tall
as they wished to appear (Juv. Sat. vi. 507), or
of the actors in Athenian tragedy, who assumed the
cothurnus as a grand and dignified species of cal-
cementum, and had the soles made unusually
thick, as one of the methods adopted in order to
magnify their whole appearance. (Virq. Ed. viii.
10; Hor. Sat. i. 5. 64; Ars Poet. 280.) Hence
tragedy in general was called cothurnus. (Or.
Trist. ii. 1. 333; Juv. vi. 633, xv. 29.)
As the cothurnus was commonly worn in hunt-
ing, it is represented both by poets and statues
as part of the costume of Diana. It was also
attributed to Bacchus (Vell. Pat. ii. 82), and to
Mercury (Hamilton's Vases, vol. iii. pl. 8). The
preceding woodcut shows two cothurni from sta-
tues in the Museo Pio-Clementino (vol. ii. pl. 15,
and vol. iii. pl. 38). [J. Y.]
CO'TTABOS (Ionic, κότταβος or κοττάβος), a
social game which was introduced from Sicily into
Greece (Athen. xv. p. 665), where it became one
of the favourite amusements of young people after
their repasts. The simplest way in which it origi-
ally was played was this:— One of the company
threw out of a goblet a certain quantity of
pure wine, at a certain distance, into a metal basin,
eavouring to throw it with so much skill and ex-
pertise in such a manner as not to spill any of the wine. While he
was doing this, he either thought of or pronounced
the name of his mistress (Etymol. Mag. s. v.
Κοτταβίς), and from the more or less full and
pure sound with which the wine struck against the
metal basin, the lover drew his conclusions respec-
ting the attachment of the object of his love. The
sound, as well as the wine by which it was pro-
duced, were called λάτας or κότταβος; the metal
basin had various names, either κοττάδιον, or κό-
tάδιον, or λαταγιόν, or χάλκιον, or λεκάνη, or σκάφη.
(Pollux, vi. 109; Etymol. Mag. l. c.;
Athen. xv. p. 657, sub fin.) The action of throw-
ing the wine, and sometimes the goblet itself, was
called ἀγκυέλη, because the persons engaged in the
game turned round the right hand with great
dexterity, on which they prided themselves. Hence
Aeschylus spoke of κότταδιον ἀγκυλητι. (Athen.
xv. p. 667.) Thus the cottabus, in its simplest
form, was nothing but one of the many methods
by which lovers tried to discover whether their
love was returned or not. But this simple amuse-
ment gradually assumed a variety of different cha-
racters, and became, in some instances, a regular
contest, with prizes for the victor. One of the
most celebrated modes in which it was carried on
is described by Athenaeus (l. c.) and in the Etymol.
Mag., and was called δί ἀβδάδων. A basin was
filled with water, with small empty bowls swim-
ning upon it. Into these the young men, one after
another, threw the remnant of the wine from their
goblets, and he who had the good fortune to drown
most of the bowls obtained the prize (κοττάδιον),
consisting either of simple cakes, sweet-meats, or
sesame-cakes.
A third and more complicated form of the cot-
tabus is thus described by Suidas (s. v. Κοτταβίς).
—A long piece of wood being erected on the
ground, another was placed upon it in an hori-
izontal direction, with two dishes hanging down
from each end; underneath each dish a vessel full
of water was placed, in each of which stood a gilt
brazen statue, called μάνης. Every one who took
part in the game stood at a distance, holding a cup
full of wine, which he endeavoured to throw into
one of the dishes in order that, by the weight of
the water, it might knock against the head of the
statue which was concealed under the water. He
who spilled least of the wine gained the victory, and thereby knew that he was loved by his mistress. (See Schol. ad Lucian. Lexip. 3. vol. ii. p. 325.)

A fourth kind of cottabus, which was called κόταδος κατακάθ (από τον κατάθε μίν τόν κόταδος), is described by Pollux (vi. 109), the Scholiast on Aristophanes (Pax, 1173), and Athenaeus (xv. p. 667). The so-called μάρσις was placed upon a pillar similar to a candelabrum, and the dish hanging over it must, by means of wine projected from the goblet, be thrown upon it, and thence fall into a basin filled with water, which from this fall gave forth a sound; and he who produced the strongest was the victor, and received prizes, consisting of eggs, cakes, and sweetmeats.

This brief description of various forms of the cottabus may be sufficient to show the general character of this game; and it is only necessary to add, that the chief object to be accomplished in all the various modifications of the cottabus was to throw the wine out of the goblet in such a manner that it should remain together and nothing be spilled, and that it should produce the purest and strongest possible sound in the place where it was thrown. In Sicily, the popularity of this game was so great, that houses were built for the especial purpose of playing the cottabus in them. Those readers who wish to become fully acquainted with all the various forms of this game, may consult Becker, Ueber den Kottabus der Griechen, in his Antiquarische Versuche, i. Sammlung, 1800, pp. 169—238, who has collected and described nine different forms in which it was played. Becker (Charikles, i. p. 476, &c.) is of opinion that all of them were but modifications of two principal forms. (Compare also Fr. Jacobs, Ueber den Kottabus in Wieland's Attisches Museum, iii. 1. pp. 475—496.)

COTYLA (κοτύλα) was a measure of capacity among the Romans and Greeks: by the former it was also called hemina; by the latter, τρυπελον and ημίνα or ημίνοα. It was the half of the sextarius or γράμμα, and contained 6 cyathi, or nearly half a pint English.

This measure was used by physicians with a graduated scale marked on it, like our own chemical measures, for measuring out given weights of fluids, especially oil. A vessel of horn, of a cubic or cylindrical shape, of the capacity of a cotyla, was divided into twelve equal parts by lines cut on its side. The whole vessel was called litra, and each of the parts an ounce (unca). This measure held nine ounces (by weight) of oil, so that the ratio of the weight of the oil to the volume of water, which it contained, in the measure would be 9 : 12 or 3 : 4. (Galenus, De Compos. Medicam, per Genera, iii. 3, i. 16, 17, iv. 14, v. 3, 6, vi. 6, 8; Wurn, De Pond. Mens. &c.; Hussey, On Ancient Weights, &c.)

COTYTIA or COTYTYES (κοτύττια, κοτύτται), a festival which was originally celebrated by the Edonians of Thrace, in honour of a goddess called Cotys or Cotytos. (Strab. x. 26, 27; Eupoli, apud Hesych. s. v.; Suidas.) It was held at night, and, according to Strabo, resembled the festivals of the Cabeiri and the Phrygian Cybele. But the worship of Cotys, together with the festival of the Cotytia, was adopted by several Greek states, chiefly those which were induced by their commercial interest to maintain friendly relations with Thrace. Among these Corinth is expressly mentioned by Suidas, and Strabo (x. p. 471) seems to suggest that the worship of Cotys was adopted by the Athenians, who, as he observes, were as hospitable to foreign gods as they were to foreigners in general. (Compare Juven. Sat. ii. 92.) The priests of the goddess were formerly supposed to have borne the name of baptae; but Buttmann has shown that this opinion is utterly groundless. Her festivals were notorious among the ancients for the dissolute manner and the debaucheries with which they were celebrated. (Suidas, s. v. KoaTos. Horst. Epod. xvii. 56; Theocrit. vi. 40.) Another festival of the same name was celebrated in Sicily (Plut. Procris), where boughs hung with cakes and fruit were carried about, which any person had a right to pluck off if he chose; but we have no mention that this festival was polluted with any of the licentious practices which disgraced those of Thrace and Greece, unless we refer the allusion made by Theocritus to the Cotytia, to the Sicilian festival. (Compare Buttmann's essay, Ueber die Kotyttia und die Baptae, in his Mythologie, vol. ii. p. 159; Lobek, Aglaph. pp. 627, 630, &c.)

COVINA/RII. [COVINUS.]

COVINUS (Celtic, coceanas), a kind of car, the spokes of which were armed with long sickles, and which was used as a scythe-chariot chiefly by the ancient Belgians and Britons. (Mela, iii. 6; Lucan, i. 420; Silias, xvii. 422.) The Romans designated, by the name of covinus, a kind of travelling carriage, which seems to have been covered on all sides with the exception of the front. It had no seat for a driver, but was conducted by the traveller himself, who sat inside. (Mert. Epig. ii. 24.)

There must have been a great similarity between the Belgian acythe-car and the Roman travelling carriage, as the name of the one was transferred to the other, and we may justly conclude that the Belgian car was likewise covered on all sides, except the front, and that it was occupied by one man, the covinarius only, who was, by the structure of his car, sufficiently protected. The covinarius (the word occurs only in Tacitus) seems to have constituted a regular and distinct part of a British army. (Tacit. Agr. 35 and 36, with M. J. H. Becker's note; Bütticher's Lexicon Tacit. s. v.; Becker, Gallus, vol. i. p. 222; compare the article Essedum.)

CRATER (κρατήρ: Ionic, κρητήρ: Lat. crater or cratere; from κρατώμενα, I mix), a vessel in which the wine, according to the custom of the ancients, who very seldom drank it pure, was mixed with water, and from which the cups were filled. In the Homeric age the mixture was always made in the dining-room by heralds or young men (κοσιάοι: see II. iii. p. 269, Od. vii. 182, xxi. 271). The use of the vessel is sufficiently clear from the expressions so frequent in the poems of Homer: κρητήρα κρατώμενα, i. e. οἰνον καὶ βάταν εἰς κρητήρα μίλουμεν; πίνειν κρητήρα (to empty the crater); κρητήρα στησάμενα (cratere stasure, to place the filled crater near the table); κρητήρας ἐπιστρέφον τοῦτο (to fill the craters to the brim, see Buttmann, Lexi. i. 15). The craters in the Homeric age were generally of silver (Od. ix. 203, x. 356), sometimes with a gold edge (Od. iv. 616), and sometimes all gold or gilt. (I. xxiii. 219.) It stood upon a tripod, and its ordinary
place in the μέγαρον was in the most honourable part of the room, at the farthest end from the entrance, and near the seat of the most distinguished among the guests. (Od. xxi. 145, xxii. 333, compared with 341.) The size of the crater seems to have varied according to the number of guests; for where their number is increased, a larger crater is asked for. (Il. ix. 202.) It would seem, at least at a later period (for in the Homeric poems we find no traces of the custom), that three craters were filled at every feast after the tables were removed. They must, of course, have varied in size according to the number of guests. According to Suidas (s. v. Κρατήρ) the first was dedicated to Hermes, the second to Charisius, and the third to Zeus Soter; but others called them by different names; thus the first, or, according to others, the last, was also designated the κρατήρ ἀγαθόν δαίμονος, the crater of the good genius (Suidas s. v. ἄγαθον Δαίμωνος; compare Athen. x. p. 692, &c.; Aristoph. Vesp. 501, Pax, 300), κρατήρ θυείας and μετάνεως or μετάντετρον, because it was the crater from which the cups were filled after the washing of the hands. (Athen. x. p. 629, f. &c.)

Craters were among the first things on the embellishment of which the ancient artists exercised their skill. Homer (Il. xxiii. 741, &c.) mentions, among the prizes proposed by Achilles, a beautifully wrought silver crater, the work of the ingenious Sidonian, which, by the elegance of its workmanship, excelled all others on the whole earth. In the reign of Croesus, king of Lydia, the Laconians, who sent to that king a huge crater, the border of which was all over ornamented with figures (Σεβια), and which was of such an enormous size that it contained 300 amphorae. (Herod. i. 70.) Croesus himself dedicated to the Delphic god two huge craters, which the Delphians believed to be the work of Theodorus of Samos, and Herodotus (i. 51) was induced by the beauty of their workmanship to think the same. It was about the time of Ol. 55, that the Samians dedicated six talents (the tenth of the profits made by Colaeus on his voyage to Tartessus) to Hera, in the shape of an immense brazen crater, the border of which was adorned with projecting heads of griffins. This crater, which Herodotus (iv. 152) calls Argive (from which we must infer that the Argive artists were celebrated for their craters), was supported by three colossal brazen statues, seven cubits long, with their knees closed together.

The number of craters dedicated in temples seems everywhere to have been very great. Livius Andronicus, in his Equus Trojanus, represented Agamemnon returning from Troy with no less than 300 craters (ad Fam. vii. 1), and Cicero (in Ver. iv. 58) says that Verres carried away from Syracuse the most beautiful brazen craters, which most probably belonged to the various temples of that city. But craters were not only dedicated to the gods as anathemas, but were used on various solemn occasions in their service. Thus we read in Theocritus (v. 53, compare Virgil, Eclog. v. 67): "I shall offer to the Muses a crater full of fresh milk and sweet olive-oil." In sacrifice the libation was always taken from a crater (Demosth. De Fals. Legat. p. 81, c. Legat. p. 50; Eud. Fam. vii. 107; Macart. p. 88; Mommsen Bckk. Anecd. p. 274, 4), and sailors before they set out on their journey used to take the libation with cups from a crater, and pour it into the sea. (Thucyd. vi. 32; Diodor. iii. 5; Arrian, Anab. vi. 3; Virg. Aen. v. 765.) The name crater was also sometimes used as synonymous with στίλιον, silyu, a pail in which water was fetched. (Naev. apud Non. xvi. 36; Herod. vii. s. v. Κρατήρ.)

The Romans used their crater or cratera for the same purposes for which it was used in Greece; but the most elegant craters worn like most other works of art, made by Greeks. (Virg. Aen. i. 727, iii. 525; Ovid, Fast. v. 522; Hor. Carm. iii. 18. 7.)

CRATES (τάρασος), a hurdle, used by the ancients for several purposes. First, in war, especially in assaulting a city or camp, they were placed before or over the head of the soldier to shield off the enemy's missiles. (Appian. Marc. xxi. 12.) From the platei, which were employed in the same way, they differed only in being without the covering of raw hides. A lighter kind was thrown down to make a bridge over fosses, for examples of which see Caesar, B. G. vii. 81, 86. By the besieged (Veget. iv. 6) they were used joined together so as to form what Vegetius calls a metaella, and filled with stones: these were then poised between two of the battlements; and as the storming party approached upon the ladders, overturned on their heads.

A capital punishment was called by this name, whence the phrase sub crato necari. The criminal was thrown into a pit or well, and hurdles laid upon him, over which stones were afterwards heaped. (Liv. i. 51, iv. 50; Tacit. Germ. 13.)

Crates called ficariae were used by the country people upon which to dry figs, grapes, &c., in the rays of the sun. (Colum. xii. 15, 16.) These, as Columella informs us, were made of sedge or straw, and also employed as a sort of matting to screen the fruit from the weather. Virgil (Georg. i. 94) recommends the use of hurdles in agriculture to level the ground after it has been turned up with the heavy rake (rastrum). Any texture of rods or twigs seems to have been called by the general name ficariae.

CREPITĀ'CLUM. [SISTRUM.]

CREMEN. Though this word occurs so frequently, it is not easy to fix its meaning. Crimen is often equivalent to accusatio (κατηγορία); but it frequently means an act which is legally punishable. In this latter sense there seems to be no exact definition of it by the Roman jurists. According to some modern writers, criminals are either public or private; but we have still to determine the notions of public and private. There was a want of precise terminology as to what, in common
language, are called criminal offences among the Romans; and this defect appears in other systems of jurisprudence. Crime has been also defined by modern writers to be that which is capital, as murder, &c.; delictum, that which is a private injury (privata noxa); a distinction founded apparently on Dig. 21. tit. 1. s. 17. § 15. Much has been said of wrongfull acts (Dig. 47. tit. 1. s. 3), and the foundation of one class of obligations: these delicta, as enumerated by Gaius (iii. 182), are furtum, rapina, damnum, injuriae; they gave a right of action to the individual injured, and intitled him to compensation. These delicts were sometimes called crimina (crim- men furti, Gaius, iii. 197). Crimen therefore is occasionally applied to that class of delicta called privata (Dig. 47. tit. 1. s. 3). What expression is coupled with the expression omnia crimina in such a way that the inference of crimes containing delictum is, so far as concerns this passage, necessary; for the omnia crimina comprehend (in this passage) more than the delicta majora. But crimena and delicta are sometimes used as synonymous. (Dig. 48. tit. 1. s. 1.) In one passage (Dig. 48. tit. 19. s. 5) we read of majora delicta (a term implying that these are minora delicta), which expression is coupled with the expression omnia crimina in such a way that the inference of crimes containing delictum is, so far as concerns this passage, necessary; for the omnia crimina comprehend (in this passage) more than the delicta majora.

Some judicia publica were capitalia, and some were not. (Dig. 48. tit. 1. s. 2.) Judicia, which concerned crimina, were not, for that reason only, publica. There were, therefore, crimina which were not tried in judicia publica. This is consistent with what is stated above as to those crimina (delicta) which were the subject of actions. Those crimina only were the subject of judicia publica, which were made so by special laws; such as the Julia de adulteris, Cornelia de sicariis et veneficis, Pompeia de parricidiis, Julia peculatus, Julia de vi publica, Julia de ambitu, Julia repetundarum, Julia de annona, (Dig. 48. tit 1. s. 1.) So far as Cicero (De Orat. ii. 25) enumerates causes crimini, they were causes publici judicii; but he adds (ii. 31), "criminem est multitudo infinita." Again, infamia was not the consequence of every crime, but only of those crimina which were "publici judicii." A condemnation, therefore, for a crime, not publici judicii, was not followed by infamia, unless the crime laid the foundation of an actio, in which, even in the case of a privatum judicium, the condemnation was followed by infamia; as furtum, rapina, injuriae. (Dig. 48. tit. 1. s. 7.)

Most modern writers on Roman law have considered delicta as the general term, which they have subdivided into delicta publica and privata. The division of delicta into publica and privata had partly its origin in the opinion generally entertained of the nature of the delict; but the legal distinction must be derived from a consideration of the form of obtaining redress for, or punishing, the wrong. These delicta which were punishable according to special leges, senatus-consulta, and constitutions, and were prosecuted in judicia publica by an accusatio publica, were more especially called crimina; and the penalties, in case of conviction, were loss of life, of freedom, of civitas, and the consequent infamia, and sometimes pecuniary penalties also. Those delicta not provided for as above mentioned, were prosecuted by action, and were the subjects of judicia privata, in which pecuniary compensation was awarded to the injured party. At a later period we find a class of crimina extraordinaria (Dig. 47. tit. 11), which are somewhat vaguely defined. They are offences which in the earlier law would have been the foundation of actions, but were assimilated, as to their punishment, to crimina publici judicii. This new class of crimina (new as to the form of judicial proceedings) must have arisen from a growing opinion of the propriety of not limiting punishment, in certain cases, to compensation to the party injured. The person who inquired judicially extra ordinem, might affix what punishment he pleased, within reasonable limits. (Dig. 48. tit. 19. s. 13.) Thus, if a person intended to prosecute his action, which was founded on maleficium (delict), for pecuniary compensation, he followed the jus ordinarium but if he wished to punish the offender otherwise (extra ordinem ejus rei poenam exercere (c?) velit), then he took criminal proceedings, "subscripsit in crimine." (Dig. 47. tit. i. s. 3.) The forty-seventh book of the Digest treats first of delicta privata properly so called (Tit. 1—10), and then of extraordinaria crimina. The forty-eighth book treats of crimina, and the first title is De Publicis Judiciis. Compensation might be demanded by the heredes of the injured person, and of the heredes of the wrong-doer; but the heredes of the wrong-doer were not liable to a penal action (poenalis actio, Dig. 47. tit. 1. s. 1). Compensation could be sued for by the party injured: a penalty, which was not a direct benefit to the injured party, was sued for by the state, or by those to whom the power of prosecution was given, as in the case of the lex Julia de adulteriis, &c. In the case of delicta publica, the intention of the doer was the main thing to be considered: the act, if done, was not for that reason only punished; nor if it remained incomplete, was it for that reason only unpunished. In the case of delicta privata, the injury, if done, was always compensated, even if it was merely culpa. [G. L.]

CRINIS. [COMA.]
CRISTA. [GALEA.]
CRITAE (κριταί), judges. This name was applied by the Greeks to any person who did not judge of a thing like a δικαστής, according to positive laws, but according to his own sense of justice and equity. (Herod. iii. 109; Demosth. Olynth. i. p. 17, c. Mid. p. 520.) But at Athens a number of κριταί was chosen by ballot from a number of selected candidates at every celebration of the Dionysia, and were called οἱ κριταί, κατ' ἐξοντὶ. Their office was to judge of the merit of the different choruses and dramatic poems, and to award the prizes to the victors. (Isocr. Trag. p. 365, c. with Coreas' note.) Their number is stated by Suidas (s. v. 'Εν πίνει κριτῶν γονίας) to have been five for comedies, and G. Hermann has supposed, with great probability, that there were on the whole ten at Athens, five for comedy, and the same number for tragedy, one being taken from every tribe. The expression in Aristophanes (Av. 421), μικράν πάσι τοῖς κριταῖς, signifies to gain the victory by the unanimous consent of the five judges. For the complete literature of this subject, see K. F. Herrmann's Manual of the Pol. Ant. of Greece, § 145. n. 13. [L. S.]

CROBYLUS. [COMA.]
CROCOTA (sc. resitis; κροκωτυν sc. ἱμᾶτων B B
of κροταλέως, a kind of gala dress, chiefly worn by women on solemn occasions, and in Greece especially, at the festival of the Dionysia. (Aristoph. Ran. 46, with the Schol. Lygistr. 44; Pollux, iv. 18. 117.) It was also worn by the priest of Cybele (Apul. Met. 8 and 11; Virg. Aen. ix. 614), and sometimes by men of effeminate character. (Aristoph. Thesmoph. 253; Suidas, s. v.; Plaut. and Naevius, ap. Nonium, xiv. 8, and xvi. 4; Cic. Harusp. Resp. 21.) It is evident from the passage of Virgil, that its name was derived from crocus, one of the favourite colours of the Greek ladies, as we still see in the pictures discovered at Herculaneum and Pompeii. The circumstance that dresses of this colour were in Latin commonly called vestes croceae or croceae, has induced some writers on antiquities to suppose that crocota was derived from κροκή (woof or weft), or κροκός (a flake of wool or cotton on the surface of the cloth), so that it would be a soft and woolly kind of dress. (Salmas. Pall. s. v. ; Plutarch, s. v.; Cicero, De Offic. 1. 13, 18, 19.)

The word κριταλαῖον is often applied, by an easy metaphor, to a noisy talkative person. (Aristoph. Nub. 448; Eurip. Cypel. 104.)

CRUSTA. [Cælatura; Chr ys en deta; Emblemata.]

CRUX (σταυρός, σκόλοψ), an instrument of capital punishment, used by several ancient nations, especially the Romans and Carthaginians. The words σταυρός and σκολοπίς are also applied to Persian and Egyptian punishments, but Casaubon (Exer. Hist. Rom. xvi. 77) doubts whether they describe the Roman method of crucifixion. From Seneca (Cons. ad Marc. xx., Epist. xiv. 1) we learn that the latter to have been of two kinds, the less usual sort being rather impalement than what we should describe by the word crucifixion, as the criminal was transfixed by a pole, which passed through the back and spine and came out at the mouth. The cross was of several kinds; one in the shape of an Χ, called χρις Ανδρέας, because tradition reports St. Andrew to have suffered upon it; another was formed like a T, as we learn from Lucian (Judic. Vocat. xii.), who makes it the subject of a charge against the letter.

The third, and most common sort, was made of two pieces of wood crossed, so as to make four right angles. It was on this, according to the unanimous testimony of the fathers who sought to confirm it by Scripture itself (Lips. De Cruc. i. 9), that our Saviour suffered. The punishment, as is well known, was chiefly inflicted on slaves, and the worst kind of malefactors. (Juv. vi. 219; Hor. Sat. i. 5. 82.) The manner of it was as follows:—The criminal, after sentence pronounced, carried his cross to the place of execution; a custom mentioned by Plutarch (De Tard. Dei Vind. έκάστος τῶν κακοφαγῶν ἔφερε τὸν αὐτῷ σταυρόν), and Artemidorus (Oestr. ii. 61), as well as in the Gospels. From Livi (xxxii. 36) and Valerius Maximus (i. 7), scourging appears to have formed a part of this, as of other capital punishments among the Romans. The scourging of our Saviour, however, is not to be regarded in this light, for, as Grotius and Hammond have observed, it was inflicted before sentence was pronounced. (St. Luke, xxii. 16; St. John, xix. 1. 6.) The criminal was next stripped of his clothes and nailed or bound to the cross. The latter was the more painful method, as the sufferer was left to die of hunger. Instances are recorded of persons who survived nine days. It was usual to leave the body on the cross after death. The breaking of the legs of the thieves, mentioned in the Gospels,
CRIPTEA.

was accidental; because by the Jewish law, it is expressly remarked, the bodies could not remain on the cross during the Sabbath-day. (Lipsius, De Crucis; Caabon, Exerc. Antaborn. xvi. 77.)

CRIPTA (from κρύπτης, to conceal), a crypt. Amongst the Romans, any long narrow vault, with vaulted roof, and usually built under the level of the earth, is expressed by this term; such as a sewer (crypta Suburce, Juv. Sat. v. 106) [Cloaca]; the caroeræ of the circus [Circus, p. 285]; or a magazine for the reception of agricultural produce. (Viruvi. vi. 8; comp. Varro, R. R. i. 57.)

The specific senses of the word are:—
1. A covered portico or arcade; called more definitely crypto-porticus, because it was not supported by open columns like the ordinary portico, but closed at the sides, with windows only for the admission of light and air. (Plin. Epist. ii. 15, v. 6, vii. 21; Sido. Epist. ii. 2.) These were frequent during summer for their coolness. A portico of this kind, almost entire, is still remaining in the suburban villa of Arrius Diomedes at Pompeii. [Porticus.]

Some theatres, if not all, had a similar portico attached to them for the convenience of the performers, who then rehearsed their parts. (Suet. Cal. 58; compare Dion Cass. lix. 20; Joseph. Antiq. xix. 1 § 14.) One of these is mentioned by P. Victor (Reigio ix.) as the crypta Balbi, attached to the theatre built by Cornelius Balbus at the instigation of Augustus (Suet. Aug. 29; Dion Cass. liv. 25), which is supposed to be the ruin now seen in the Via di S. Maria di Cacaberis, between the church of that name and the S. Maria di Pianto.

2. A grotto, particularly one open at both extremities, forming what in modern language is denominated a "tunnel," like the grotto of Pausilippo, well known to every visitant of Naples. This is a tunnel excavated in the tufo rock, about 20 feet high, and 1800 long, forming the direct communication between Naples and Pozzuoli (Por Teen). called by the Romans crypta Neapolitana, and described by Seneca (Epist. 57.) and Strabo who calls it διόρφως κρυπτή (v. p. 246; compare Petron. Frug. xiii.).

A subterranean vault used for any secret worship, but more particularly for the licentious rites consecrated to Priapus, was also called crypta. (Petron. Sat. xvi. 3; compare xvi. 5.)

3. When the practice of consuming the body by fire was relinquished [PONTUS], and a number of bodies were collected in one place of burial, as the catacombs for instance, this common tomb was called crypta. (Salmas. Exercit. Plinian. p. 560; Aring. Rom. Salberr. i. 1 § 9; Prudent. Pell. Χεφ. xi. 153.) One of these, the crypta Nepo- tiana, which was in the vicus Patricius, under the Esquiline (Festus, s. v. Septimontium), was used by the early Christians, during the times of their persecution, as a place of secret worship, as well as of interment, and contains many interesting inscriptions. (Narrinis, Rom. Antiq. iv. 3; Maitland, The Church in the Catacombs.) [A. R.]

CRYPTEIA (κρυπτέια, also called κρυπτη or κρυπτή), was, according to Aristotle (ap. Plut. Lyco. 28), an institution introduced at Sparta by the legislation of Lycurgus. Its character was so cruel and atrocious, that Plutarch only with great reluctance submitted to the authority of Aristotle in ascribing its introduction to the Spartan law-giver. The description which he gives of it is this: — The ephors, at intervals, selected from among the young Spartans, those who appeared to be best qualified for the task, and sent them in various directions all over the country, provided with daggers and their necessary food. During the daytime they continued to travel, but at night they broke forth into the high-roads, and massacred those of the helots whom they met, or whom they thought proper. Sometimes also they ranged over the fields (in the daytime) and despatched the strongest and best of the helots. This account agrees with that of Heracleides of Pontus (c. 2), who speaks of the practice as one that was still carried on in his own time, though he describes its introduction by Lycurgus only as a report.

The crypteia has generally been considered either as a kind of military training of the Spartan youths, in which, as in other cases, the lives of the helots were unscrupulously sacrificed; or as a means of lessening the numbers and weakening the power of the slaves. But Müller (Durians, iii. 3. § 4), who is anxious to soften the notions generally current respecting the relations between the helots and their masters, supposes that Plutarch and Heracleides represent the institution of the crypteia "as a war which the ephors themselves, on entering upon their yearly office, proclaimed against the helots." Heracleides, however, does not mention this proclamation at all; and Plutarch, who mentions it on the authority of Aristotle, does not represent it as identical with the crypteia. Müller also supposes that, according to the received opinion, this chase of the slaves took place regularly every year; and showing at once the absurdity of such an annual proclamation of war and massacre among the slaves, he rejects what he calls the common opinion altogether as involved in inextricable difficulties, and has recourse to Plato to solve the problem. But Thirlwall (Hist. Greeks, vol. i. p. 311) very prudently objeced that this proclamation of war is not altogether groundless, but only a misrepresentation of something else, and that its real character was most probably connected with the crypteia. Now, if we suppose that the thing here misrepresented and exaggerated into a proclamation of war, was some promise which the ephors on entering upon their office were obliged to make, for instance, to protect the state against any danger that might arise from too great an increase of the numbers and power of the helots — a promise which might very easily be distorted into a proclamation of war — there is nothing contrary to the spirit of the legislation of Lycurgus; and such an institution, by no means surprising in a slave-holding state like Sparta, where the number of free citizens was comparatively very small, would have conferred upon the ephors the legal authority occasionally to send out a number of young Spartans in chase of the helots. (Isor. Panath. p. 271, b.) That on certain occasions, when the state had reason to fear the overwhelming number of slaves, thousands were massacred with the sanction of the public authorities, is a well-known fact. (Thucyd. iv. 80.) It is, however, probable enough that such a system may at first have been carried on with some degree of moderation; but after attempts had been made by the slaves to emancipate themselves and put
their masters to death, as was the case during and after the earthquake in Laconia, it assumed the barbarous and atrocious character which we have described above. (Compare Plut. Lec. 28, sub fin.) If the crypteia had taken place annually, as is alleged, indeed, it must have involved in every year, the loss of a very large number of the population of Laconia ; but Plutarch, the only authority on which this supposition can rest, does not say that the crypteia took place every year, but did ἁρπάζων, i.e. "at intervals," or occasionally. (Hermann, ad Viger. p. 856.) The difficulties which Müller finds in what he calls the common account of the crypteia, are thus, in our opinion, removed, and it is no longer necessary to seek their solution in the description given by Plato (De Leg. i. p. 633, vi. p. 763), who proposed for his Cretan colony a similar institution under the name of crypteia. From the known partiality of Plato for Spartan institutions, and his inclination to represent them in a favourable light, it is no longer necessary to establish ; and it is sufficiently clear, from his own words, that his attention was more particularly directed to the advantages which young soldiers might derive from such hardships as the κουρτοί had to undergo. But even Plato's colony would not have been of a very humane character, as his κουρτοί were to go out in arms and make free use of the slaves.

CRYSTOPORTICUS. [CRYPTA.]

CUBICULARII, were slaves who had the care of the sleeping and dwelling rooms. Faithful slaves were always selected for this office, as they had, to a certain extent, the care of their master's person. When Julius Caesar was taken by the pirates, he dismissed all his other slaves and attendants, only retaining with him a physician and two cubicularii. (Suet. Caes. 4.) It was the duty of the cubicularii to introduce visitors to their master (Cic. ad Att. vi. 2, § 5, in Verr. iii. 4) for which purpose they appear to have usually remained in an ante-room (Suet. Tib. 51, Dom. 16). Under the later emperors, the cubicularii belonging to the palace were called praepositi sacro cubiculo, and were persons of high rank. (Cod. 12, tit. 5.)

CUBICULUM, usually means a sleeping and dwelling room in a Roman house [Domus], but is also applied to the pavilion or tent in which the Roman emperors were accustomed to witness the public games. (Suet. Ner. 12 ; Plin. Paneg. 51.) It appears to have been so called, because the emperors were accustomed to recline in the cubicula, instead of sitting, as was anciently the practice, in a sella curulis. (Ernesti, ad Suet. l. c.)

CUBITUS (περισθήμα), a measure of length used by the Greeks, Romans, and other nations, was originally the length of the human arm from the elbow to a wrist, or to the tip of the forefinger; the latter was its signification among the Greeks and Romans. It was equal to a foot and a half; and therefore the Roman cubit was a little less, and the Greek cubit a little more, than a foot and a half English. The cubit was divided by the Greeks into 2 spanes (ευθύκνα), 6 hand-breathths (μαλακτρα), and 24 finger-breathths (δάκτυλοι), and by the Romans into 1½ feet, 6 breathths (palma), and 24 thumb-breathths (pollices). (Wurm, De Pond. Mens. &c ; Hussey, On Ancient Weights, &c., see the Tables.) Respecting the Egyptian and other cubits, see Böckh, Metrol. Untersuch. p. 211. [P. S.]

CUBUS, a vessel, the sides of which were formed by six equal squares (including the top), each square having each of its sides a foot long. The solid contents of the cube were equal to the amphora. (Theo. Fann. De Pont. &c. v. 59—62 ; Metreter.) In Greek κύβος is the equivalent of the Latin TESNERA. [P. S.]

CUCULLUS, a cowl. As the cowl was intended to be used in the open air, and to be drawn over the head to protect it from the injuries of the weather, instead of a hat or cap, it was attached only to garments of the coarsest kind. Its form is seen attached to the dress of the shepherd in the annexed woodcut, which is taken from a gem in the Florentine cabinet, and represents a Roman shepherd looking at the she-wolf with Romulus and Remus. The cucullus was also used by persons in the higher circles of society, when they wished to go abroad without being known. (Juv. vi. 330.) The use of the cowl, and also of the cape [Birrus], which served the same purpose, was allowed to slaves by a law in the Codex Theodosianus. (Vossius, Efigm. Ling. Lat. s. v. Birrus.) Cowls were imported into Italy from Saintes in France (Santonic cucullo, Juv. viii. 145 ; Schol. in loc.), and from the country of the Bardaei in Illyria. (Jul. Cap. Pertinax, 8.) Those from the latter locality were probably of a peculiar fashion, which gave origin to the term Bardocoeullus. Ldaurenici cuculli are mentioned by Martial (xiv. 139.) [J. Y.]

CUDO or CUDON, a skull-cap, made of leather or of the rough shaggy fur of any wild animal (Sil. Ital. vili. 495, xvi. 59), such as were worn by the velites of the Roman armies (Polyb. vii. 20), and apparently synonymous with galerus (Virg. Aen. vii. 668) or galerulaeae. (Frontin. Strategou, iv. 7. §23.) In the sculptures on the Column of Trajan, some of the Roman soldiers are represented with the skin of a wild beast drawn over the head, in such a manner that the face appears between the upper and lower jaws of the animal, while the rest of the skin falls down behind over the back and shoulders, as described by Virgil (Aen. vii. 666). This, however, was an extra defence (Polyb. l. c.), and must not be taken for the cudo, which was the cap itself; that is, a particular
CULPA.

kind of galea. [Galea.] The following representation of a cuia is taken from Choul's Castramen. des Anciens Romains, 1581. [A. R.]

CULCITA. [Lectus.]

CU'LEUS, or CU'LLEUS, a Roman measure, which was used for estimating the produce of vineyards. It was the largest liquid measure used by the Romans, containing 20 amphorae, or 160 congis, that is, almost 119 gallons. (Rhem. Fam. De Pond. &c. v. 86, 87; Plin. H. N. xiv. 4; Varro, R. R. i. 2 § 7; Colum. iii. s.)

CU'LLEUS, or CU'LEUS, a sack used in the punishment of parricides. [Lex Cornelia de Sigariis.]

CULP'NA. [Domus.]

CULPA. The general notion of dolus malus may be conveniently explained under this head.

Culpa in its most general juristical sense of any illegal act of commission or omission comprehends dolus malus. But the special meaning of culpa is distinct from that of dolus malus. Dolus malus is thus defined by Labeo (Dig. 4. tit. 3. s. 1): — "Dolus malus est omnis calliditas, fallacia, machi-"

Culpa then being characterised by an act of omission (negligentia), or omission diligentiae, the person charged with it has done all that the most careful person could do to prevent loss or damage. Levissima culpa came within the meaning of the term culpa in the lex Aquilia; that is, any injury that happened to one man's property through the conduct of another, for want of such care as the most careful person would take, was a culpa, and therefore punishable. But the expression levissima culpa is said to occur only once in the Digest (Dig. 1. tit. 2. § 54). In the passage of Horace (Sat. ii. 2. 123.)

"Post hoc ludus erat culpa potare magistras,"

Bentley has the absurd emendation of "cupra." The general meaning of culpa in the Roman writers is well explained by Hasse (p. 8). There is great difficulty in stating the Roman doctrine of dolus and culpa, and modern jurists are by no means agreed on this matter. The chief essay on this subject is the classical work of Hasse "Die Culpa des Römisohen Rechts, second edition by Bethmann — Hollweg, 1838. Hasse's view is briefly explained in a note by Rosshirst, to his edition of Mackeldy's Lehrbuch, § 342 (12th ed.); but it requires a careful study of his work to comprehend Hasse's doctrine fully, and to appreciate the great merits of this excellent essay. What is stated in this short article is necessarily incomplete, and may be in some respects incorrect. [G. L.]

CULTER. (probably from cello, percello; dim cultellus, Engl. couller; in southern Germany, das koller; French, couteau; Greek, μαχαίρα, κοφίς, or σφαῖρας; Latin, a knife with only one edge, which formed a straight line. The blade was pointed and its back curved. It was used for a variety of purposes; but chiefly for killing animals either in the slaughter-house, or in hunting, or at the altars of the gods. (Liv. iii. 48; Scribonius, Compos. Med. 13; Suet. Aug. 9; Plant. Rud. i. 2. 45; Virg. Georg. iii. 492; Ovid. Fast. i. 321.) Hence the expressions —loven ad cultrum emere, "to buy an ox for the purpose of slaughtering it" (Varro, De Re Rust. ii. 5); me sub cultro linquit, "he leaves me in a state like that of a victim dragged to the altar" (Hor. Sat. i. 9. 74); ad cultrum locare, "to become a bestiarius" (Senec. Ep. 87). From some of the passages above referred to, it would appear that the cuia was carried in a kind of sheath. The priest who conducted a sacrifice never killed the victim himself; but one of his ministri, appointed for that purpose, who was called either by the general name minister, or the more specific popa or culturarius. (Suet. Calig. 32.)

A tomb-stone of a cultarius is still extant, and upon it two cultri are represented (Gruner, Inscrip. vol, 373

H H 3
The name culter was also applied to razors (Cic. De Off. ii. 7; Plin. vii. 59; Petron. Sat. 108), and kitchen knives (Varro, ap. Non. iii. 82). That in these cases the culter was different from those above represented, and most probably smaller, is certain; since whenever it was used for shaving or domestic purposes, it was always distinguished from the common culter by some epithet, as culter tonsorius, culter coquinaris. Fruit knives were also called cultri; but they were of a smaller kind (cultelli), and the handle was called culter on account of its similarity to a straight line. This culter according to him was used when a branch was to be cut off which required a hard pressure of the hand on the knife. The name culter, which was also applied to the sharp and pointed iron of the plough (Plin. xiv. 44, 45; Plin. xii. 25; Scribon. c. 83). Columella, who gives (iv. 25) a very minute description of a falsa vinitoria, a knife for pruning vines, says that the part of the blade nearest to the handle was called culter on account of its similarity to an ordinary culter, the edge of that part forming a straight line. This culter according to him was used when a branch was to be cut off which required a hard pressure of the hand on the knife. The name culter, which was also applied to the sharp and pointed iron of the plough, is still extant in English, in the form of coater, to designate the same thing. [Atrium.]

The expression in culturum or in cultro collocatus (Vitruv. x. 10, 14) signifies placed in a perpendicular position.

CURATOR. CUPA, a wine-vat, a vessel very much like the dolium, and used for the same purpose, namely, to receive the fresh must, and to contain it during the process of fermentation. The inferior wines were drawn for drinking from the cupa, without being bottled in amphorae, and hence the term vinum de cupa (Varr. ap. Non. ii. 113; Dig. 18. tit. 6. s. 1. § 4). The phrase in Horace (Sat. ii. 2.123), cupa potare magistra, if correct, would mean, to make the wine vessel the sole magister bijenit; Bentley adopts cupa in this passage, as another form of cupa, a hostess, a word connected with cupae; this word occurs in Suetonius (Ner. 27), and one of Virgil's minor poems was entitled Cupa or Cupa. (Charis. i. p. 47, Putsch.) In the passage of Horace, however, the reading cupa is only conjectural: the MSS. give culpa, out of which a good sense can be made. (See the notes of Heindorf, Orelli, and Düntzer.)

The cupa was either made of earthenware, like the dolium, or of wood, and covered with pitch. In the latter case, pine-wood was preferred (Plin. H. N. xvi. 10. s. 18). It was used for other purposes, such as preserved fruits and corn, forming rafis, and containing combustibles in war, and even for a sarcophagus. (See the passages cited by Forcellini, s. v.) [Comp. Dolium; Vi-num.]

With the attainment of the age of puberty by a Roman youth, every legal capacity was acquired which depended on age only, with the exception of the capacity for public offices, and there was no rule about age, even as to public offices, before the passing of the law Vilia. [Aediles.] It was, however, a matter of necessity to give some legal protection to young persons who, owing to their tender age, were liable to be overreached; and consistently with the development of Roman jurisprudence, this object was effected without interfering with the old principle of full legal capacity being attained with the age of puberty. This was accomplished by the lex Plautoria (the true name of the lex, as Savigny has shown), the date of which is not known, though it is certain that the law existed when Plautus wrote (Pseudolus, i. 3. 69). This law established a distinction of age, which was of great practical importance, by forming the citizens into two classes, those above and those below twenty-five years of age (minores viginti quinque annis), whence a person under the last-mentioned age was sometimes simply called minor. The object of the lex was to protect persons under
twenty-five years of age against all fraud (dolus). The person who was guilty of such a fraud was liable to a judicium publicum (Cic. De Nat. Deor. iii. 30), though the offence was such as in the case of a person of full age would only have been matter of action. The punishment fixed by the lex Plactoria was probably a pecuniary penalty, and the consequential punishment of infamia or loss of political rights. The minor who had been fraudulently led to make a disadvantageous contract, might protect himself against an action by a plea of the lex Plactoria (exceptio legis Plactorae). The lex also appears to have further provided that any person who dealt with a minor might avoid all risk of the consequences of the Plactorian lex, if the minor was aided and assisted in such dealing by a curator named or chosen for the occasion. But the curator did not act like a tutor: it can hardly be supposed that his consent was even necessary to the contract; for the minor had full legal capacity to act, and the business of the curator was merely to prevent his being defrauded or surprised.

The praetor's edict carried still further the principle of the lex Plactoria. The minors generally against positive acts of their own, in all cases in which the consequences might be injurious to them. This was done by the "in integrum restitutio:" the praetor set aside transactions of this description, not only on the ground of fraud, but on a consideration of all the circumstances of the case. But it was necessary for the minor to make application to the praetor, either during his minority, or within one year after attaining his majority, if he claimed the restitutio; a limitation probably founded on the lex Plactoria. The provisions of this lex were thus superseded or rendered unnecessary by the jurisdiction of the praetor, and accordingly we find very few traces of the Plactorian law in the Roman jurists.

Ulpian and his contemporaries speak of adolescents, under twenty-five years of age, being under the general direction and advice of curatores, as a notorious principle of law at that time. (Dig. 4. tit. 4; De Minoribus xxv Anmns.) The establishment of this general rule is attributed by Capitoline (M. Anton. c. 10) to the emperor M. Aurelius in a passage which has given rise to much discussion. But it was possible, according to Savigny's explanation, which is as follows:—Up to the time of Marcus Aurelius there were only three cases or kinds of curatela: 1. That which was founded on the lex Plactoria, by which a minor who wished to enter into a contract with another, asked the praetor for a curator, stating the ground or occasion of the petition (reddita causa). One object of the application was, to save the other contracting party from all risk of judicial proceedings in consequence of dealing with a minor. Another object was, the benefit of the applicant (the minor); for no prudent person would deal with him, except with the legal security of the curator. (Plaut. Pseudolus, i. 3. 69. "Lex me perdit quinavincencia: metuunt credere omnes.") 2. The curatela, which was given in the case of a man wasting his substance, who was called "prodigus." 3. And that in the case of a man being of unsound mind, "demens," "furiosus." In both the last-mentioned cases provision was made either by the law or by the praetor. Curatores who were determined by the law of the Twelve Tables, were called legati; those who were named by the praetor, were called honorarii. A furiosus and prodigus, whatever might be their age, were placed under the cura of their agnati by the law of the Twelve Tables. When there was no legal provision for the appointment of a curator, the praetor named one. Curatores appointed by a consul, praetor, or governor of a province (processe), were not generally required to give security for their proper conduct, having been chosen as fit persons for the office. The lex Plactoria required for particular transactions, the emperor Aurelius made a general rule, and all minors, without exception, and without any special grounds or reasons (non redditis causis), were required to have curatores.

The following is the result of Savigny's investigations into the curatela of minors after the constitution of M. Aurelius. The subject is one of considerable difficulty, but it is treated with the most consummate skill, the result of complete knowledge, and unrivalled critical sagacity. The minor only received a general curator when he made application to the praetor for that purpose: he had the right of proposing a person as curator, but the praetor might reject the person proposed. The apparent contradiction between the rule prohibiting all minors to have a curator, and the fact that the minor received a general curator only when he applied for one, is explained by Savigny in his essay (p. 272, &c.). The curator, on being appointed, had, without the concurrence of the minor, as complete power over the minor's property as the tutor had up to the age of puberty. He could sue in respect of the minor's property, get in debts, and dispose of property like a tutor. But it was only the property which the praetor intrusted to him that he managed, and not the acquisitions of the minor subsequent to his appointment; and herein he differed from a tutor who had the care of all the property of the pupillus. If it was intended that the curator should have the care of that which the minor acquired, after the curator's appointment, by will or otherwise, a special application for this purpose was necessary. Thus, as to the property which was placed under the care of the curator, both as regards alienation and the getting in of debts, the minor was on the same footing as the prodigus: his acts in relation to such matters, without the curator's consent, were void. But the legal capacity of the minor to contract debts was not affected by the appointment of a curator; and he might be sued on his contract either during his minority or after. Nor was there any inconsistency in this: the minor could not spend his actual property, for the preservation of his property during minority was the object of the curator's appointment. But the minor would have been deprived of all legal capacity for doing any act if he could not have become liable on his contract. The contract was not in its nature immediately injurious, and when the time came for enforcing it against the minor, he had the general protection of the restitutio. If the minor wished to be adrogated (anorrito), it was necessary to have the consent of the curator. It is not stated in the extant authorities what was the form of proceeding when it was necessary to dispose of any property of the minor by the mandatario or in jure cessio; but it may be safely assumed that the minor acted (for he alone could act on such an occasion) and the curator gave his consent, which, in the case supposed, would be analogous to the auctoritas of the tutor. But it would differ from the auctoritas.
in not being, like the auctoritas, necessary to the completion of the legal act, but merely necessary to remove all legal objections to it when completed.

The cura of spendthrifts and persons of unsound mind, as already observed, owed its origin to the laws of the Twelve Tables. The technical word for a person of unsound mind in the Twelve Tables is furiosus, which is equivalent to demens; and both words are distinguished from insanus. Though furor implies violence in conduct, and dementia only mental imbecility, there was no legal difference between the two terms, so far as concerned the cura. Insania is merely weakness of understanding (stultitia constantia, id est, sanitate vacans, Cic. Tusc. Quest. iii. 5), and it was not provided for by the laws of the Twelve Tables. In later times, the praetor appointed a curator for all persons whose infirmities required it. This law of the Twelve Tables did not apply to a pupillus or pupilla. If, therefore, a pupillus was of unsound mind, the tutor was his curator. If an agnatus was the curator of a furiosus, he had the power of alienating the property of the furious. (Gaius, ii. 64.)

The prodigus only received a curator upon application being made to a magistratus, and a sentence of interdict being pronounced against him (ei bonis interdictum est. Compare Cic. De Sene. c. 7). The form of the interdictio was thus: — "Quando tibi bona paterna avitque nequitia tua dispersis, liberaeque tuos ad egestatem perducis, ob earn rem tibi ea re commercio interido." The cura of the prodigus continued till the interdict was dissolved. It might be inferred from the form of the interdict, that it was limited to the case of persons who had children; but perhaps this was not so. (Dig. 27. tit. 10; Cod. 5. tit. 70; Inst. i. tit. 23.)

It will appear from what has been said, that, whatever similarity there may be between a tutor and a curator, an essential distinction lies in this, that the curator was specially the guardian of property, though in the case of a furious he must as to who is the heres of a person, when his supposed child is under age. 4. In the case of property of an absent person who had sons who had children; but perhaps this was not so. (Dig. 27. tit. 10; Cod. 5. tit. 70; Inst. i. tit. 23.)

The word cura has also other legal applications: —
1. Curator bonorum, in the case of the goods of a debtor, which are secured for the benefit of his creditors. 2. Curator bonorum et ventris, in the case of a woman being pregnant at the death of her husband. 3. Curator hereditatis, in case of a dispute as to who is the heres of a person, when no supposed child is under age. 4. Curator hereditatis juvenis, in the case of a property, when the heres had not yet declared whether or not he would accept the inheritance. 5. Curator bonorum absentis, in the case of property of an absent person who had appointed no manager of it.

This view of the curatela of minors is from an essay by Savigny, who has handled the whole matter in a way equally admirable, both for the scientific precision of the method and the force and perspicuity of the language. (Von dem Schutz der Minderaöglichten, Zehntoehr, vol. ii. p. 303; Savigny, i. 197; Ulp. Frag. xii. ; Ditte's, Über Altert. u. Takt. v. Frag. 7; Mac-keldy, Lehrbuch des heutigen Römischen Rechts, § 508, &c. (12th ed.) ; Thibaut, System des Par-doxen-Rechts, § 786, &c. 9th ed. &c.) [G. L.]

CURATORES, were public officers of various kinds under the Roman empire, several of whom were first established by Augustus. (Suet. Aug. 37.) The most important of them were as follows: —

1. Curatores Alvei et Riparum, who had the charge of the navigation of the Tiber. The duties of their office may be gathered from Ulpian (Dig. 43. tit. 15). It was reckoned very honourable, and the persons who filled it received afterwards the title of comites.
