2. Curatores Annonae, who purchased corn and oil for the state, and sold it again at a small price among the poorer citizens. They were also called curatores emendi frumenti et olei, and σωτήρων and ἀλαφών. (Dig. 50. tit. 5. s. 18. § 5.) Their office belonged to the personalia munera; that is, it did not require any expenditure of a person's private property: but the curatores received from the state a sufficient sum of money to purchase the required amount. (Dig. 50. tit. 8. s. 9. § 5.)

3. Curatores Aquarum. [Aqae Ductus.]

4. Curatores Kalendaril, who had the care in municipal towns of the calendario; that is, the books which contained the names of the persons to whom public money, which was not wanted for the ordinary expenses of the town, was lent on interest. The office belonged to the personalia munera. (Dig. 50. tit. 4. s. 13. § 5; tit. 8. s. 9. § 7; Heinecc. Antig. Rom. iii. 15. § 4.) These offices are mentioned in inscriptions found in municipal towns. (Orelli, Inscrip. No. 3940, 4491.)

5. Curatores Ludorum, who had the care of the public games. Persons of rank appear to have been usually appointed to this office. (Tait. Ann. xi. 33, xii. 22; Suet. Cal. 27.) In inscriptions, they are usually called curatores munerae gladiatorialis, &c.

6. Curatores Operum Publicorum, who had the care of all public buildings, such as the theatres, baths, aqueducts, &c., and agreed with the contractors for all necessary repairs to them. Their duties under the republic were discharged by the aediles and censors. [Censorii.] They are frequently mentioned in inscriptions. (Orelli, Inscrip. No. 24, 1506, 2273.)

7. Curatores Regionum, who had the care of the fourteen districts into which Rome was divided, and whose duty it was to prevent all disorder and extortion in their respective districts. This office was first instituted by Augustus. (Suet. Aug. 33.) They were usually two officers of this kind for each district; Alexander Severus, however, appears to have appointed only one for each; but these were persons of consular rank, who were to have jurisdiction in conjunction with the praefectus urbi. (Lamprid. Alex. Sec. 33.) We are told that M. Antoninus, among other regulations, gave special directions that the curatores regionum should either punish, or bring before the praefectus urbi for punishment, all persons who exacted from the inhabitants more than the legal taxes. (Jul. Capitol. M. Anton. 12.)

8. Curatores Republici, also called Logi-tar, who administered the landed property of municipia. (Dig. 50. tit. 8. s. 9. § 2; 2. tit. 14.
CURIA.

s. 37.) Upian wrote a separate work, De Officio Curatoris Rerum Publicarum.

CURIA, signifies both a division of the Roman people and the place of assembly for such a division. Various etymologies of the word have been proposed, but none seems to be so plausible as that which connects it with the Sabine word quiris or curis (whence the surname of Juno Curitis among the Sabines).

Each of the three ancient Romilian tribes, the Ramnes, Titises, and Laceres, was subdivided into 10 curiae, so that the whole body of the populace of the curiae was divided into 30 curiae. (Liv. i. 12; Dionys. ii. 7, 23; Plut. Rom. 19.) The plebeians had no connection whatever with the curiae, and the clients of the patricians were members of the curiae only in a passive sense. (Fest. p. 283, ed. Müller; comp. Patricii, Gens.) All the members of the different gentes belonging to one curia were called, in respect of one another, curiales. The division into curiae was of great political importance in the earliest times of Rome, for the curiae alone contained those that were real citizens, and their assembly alone was the legitimate representative of the whole people [Comitia curiata], from whom all other powers emanated. The senators and equites were of course chosen from among them; but their importance was especially manifest in the religious affairs of the state. Each curia as a corporation had its peculiar sacra (Fest. pp. 174, 245; Paul. Diac. p. 49, ed. Muller), and besides the gods of the state, they worshipped other divinities and with peculiar rites and ceremonies. For such religious purposes each curia had its own place of worship, which the senate held its meetings in, such as curia Hostilia, curia Julia, and the Pompeiana, see Dict. of Gr. and Rom. Geog. art. Roma. (Vitr. v. 2; Stiegelt, Archäol. d. Badezust. vol. iii. p. 21; Hirt, Lehre d. Gébäude, pp. 186—188.)

CURIATA COMITIA. [Comitia.]

CURIUS, the person who stood at the head of a curia, and had to manage its affairs, especially those of a religious nature (Dionys. ii. 7, 65; Varro, De L. L. v. 18, 32, vi. 6): in their administration he was assisted by another priest, called flamen curialis. (Paul. Disc. p. 64; Dionys. ii. 21, 64.) As there were thirty curiae, the number of curiones was likewise thirty and they formed a college of priests, which was headed by one of them bearing the title of curio maximus. (Paul. Disc. p. 126; Liv. xxvii. 8.) He was elected in the comitia curiata, and had authority over the curiae as well as over the curiones. It need hardly be observed, that the office of curio could not be held by any one except a patrician; at a comparatively late time we indeed find now and then a plebeian invested with the office of curio maximus (Liv. xxvii. 6, xxviii. 49), but this only shows how much the ancient institution of the curiae had lost of its original meaning and importance; and at the time when the plebeians had gained access to priestly dignities, the office of curio seems to have been looked upon in the light of any other priestly dignity, and to have been conferred upon plebeians no less than upon patricians. [L. S.]

CURIUS (εὐεργής), signifies generally the person that was responsible for the welfare of such members of a family as the law presumed to be incapable of protecting themselves; as, for instance, minors and slaves, and women of all ages. Fathers, therefore, and guardians, husbands, the nearest male relatives of women, and masters of families, would all bear this title in respect of the vicarious functions exercised by them in behalf of the respective objects of their care. The qualifications of all these, in respect of which they can be combined in one class, designated by the term curius, were the male sex, years of discretion, freedom, and when citizens a sufficient share of the franchise (εὐνοία) to enable them to appear in the law courts as plaintiffs or defendants in behalf of their several charges; in the case of the curius being a legitimate representative of the whole people.
resident alien, the deficiency of franchise would be supplied by his Athenian patron (προστάτης). The duties to be performed, and in default of their performance, the penalties incurred by guardians, and the proceedings as to their appointment, are mentioned under their more usual title [ΕΠΙΤΡΟΠΟΣ].

The business of those who were more especially designated currii in the Attic laws, was to protect the interests of women, whether spinsters or widows, or persons separated from their husbands. If a citizen died intestate, leaving an orphan daughter, the husband made a proper settlement in return for what his bride brought him in the way of dower (ἀντικρύση). In the event of the death of the husband or of a divorce, it became the duty of the currus that had betrothed her, to receive her back and recover the dowry, or at all events alimony from the husband or his representatives. If the father of the woman had died intestate, without leaving such relations as above-mentioned surviving, these duties devolved upon the next of kin, who had also the option of marrying her himself, and taking her fortune with her, whether it were great or small. (Bunsen, De J. H. Ath. p. 46.)

If the fortune was small, and he was unwilling to marry her, he was obliged to make up its deficiencies according to a regulation of Solon (Dem. c. Macart. p. 1068); if it were large he might, it appears, sometimes even take her away from a husband to whom she had been married, in the lifetime and with the consent of her father.

There were various laws for the protection of female orphans against the neglect or cruelty of their kinsmen; as one of Solon’s (Diod. xii. p. 298), whereby they could compel their kinsmen to endow or marry them; and another which after the marriage enabled any Athenian to bring an action to protect them against the cruelty of their husbands (Petit. Leg. Att. p. 543). and the archon was specially entrusted with official power to interfere in their behalf upon all occasions. (Dem. c. Macart. p. 1076) [ΚΑΡΚΟΝΗΣ] [J.S.M.]

CURRUS (CURRIE), a chariot, a car. These terms appear to have denoted those two-wheeled vehicles for the carriage of persons, which were open overhead, thus differing from the carpentum, and closed in front, in which they differed from the cisium. The most essential articles in the construction of the currus were: —

1. The antex (Ἀντὰξ), or rim; and it is accordingly seen in all the chariots which are represented either in this article or at pp. 101, 238. [ἈΝΤΥΧ.] 2. The aule, made of oak (φιγωσ Α&omicr;ω, hom. II. v. 383, imitated by Virgil, fagiinus axius, Georg. iii. 172), and sometimes also of ilex, ash, or elm. (Plin. H. N. xvi. 84.) The axle was firmly fixed under the body of the chariot, which, in reference to this circumstance, was called ἀρχερία, and which was often made of wicker-work, inclosed by the ἄντυξ (Hom. Il. xxiii. 335, 436; Hes. Scut. 306).

3. The wheels (κύκλος, τροχός, rotae) revolved upon the axle as in modern carriages; and they were prevented from coming off by the insertion of pins (περοναί, ἄμβολοι) into the extremities of the axle (ἄκραφωλα). The parts of the wheel were as follows: — (a) The nave, called πλάταμον (Hom. Il. v. 726, xxii. 339; Hes. Scut. 309), ἀκωίως, modiolus (Plin. H. N. i. 8). The two last terms are founded on the resemblance of the nave to a modius or bushel. (b) The spokes, κυήμα (literally, the legs), radii. The number of spokes of course differed in different wheels. On one occasion we read of eight (δέκαμυμα, Il. v. 723). (c) The felly, ἄμως (Hom. Il. v. 724). This was commonly made of some flexible and elastic wood, such as poplar (Il. iv. 462—486), or the wild fig, which was also used for the rim of the chariot; heat was applied to assist in producing the requisite curvature. (JL xxi. 37, 38, compared with Theocrit. xxv. 247—251.) The felly was, however, composed of separate pieces, called arcas (ἄμβολος, Hes. Op. et Dies, 426). Hesiod (i. c.) evidently intended to recommend that a wheel should consist of four pieces. (d) The tire, κυριότης, canthus. Homer (II. v. 723) describes the chariot of Hera as having a tire of bronze upon a golden felly, thus placing the harder metal in a position to resist friction, and to protect the softer.

4. The pole (φῶς, temo). It was firmly fixed at its lower extremity to the axle; and at the other end (ἀκραφώλιον) the pole was attached to the yoke either by a pin (ἐμβολος), as shown in the chariot engraved below, or by the use of ropes and bands [ΙΟΓΟΥΣ].

All the parts now enumerated are seen in an ancient chariot preserved in the Vatican, a representation of which is given in the annexed wood-cut.

Carriages with two or even three poles were used by the Lydians. (Aeschyl. Pers. 47.) The Greeks and Romans, on the other hand, appear never to have used more than one pole and one yoke, and the currus thus constructed was commonly drawn by two horses, which were attached to it by their necks, and therefore called ἰδιόεις ῥῶου (Hom. II. v. 195, x. 473), συνώπις (Xen. Hell. i. 2 § 1), "gemini jugales" (Vig. Aen. vii. 289), "equi bijuges" (Georg. iii. 91). If a third horse was added, as was not unfrequently the case, it was fastened by traces. It may have been intended to take the place of either of the yoke horses (ὑπόγαι ῥῶου), which might happen to be disabled. The horse so attached was called παρθόλος. Gimpel (Wägen und Fahrwerke, vol. i. p. 342) has pub
CURRUS.

listed two drawings of chariots with three horses, from Etruscan vases in the collection at Vienna. The ἱππος παράφορος is placed on the right of the two yoke horses. (See woodcut.) We also observe traces passing between the two ἄντυγες, and proceeding from the front of the chariot on each side of the middle horse. These probably assisted in attaching the third, or extra horse.

The Latin name for a chariot and pair was bigae. When a third horse was added, it was called triqua; and by the same analogy a chariot and four was called quadrigae; in Greek, τετραπόρα οἱ τεθρικῶν.

The horses were commonly harnessed in a quadriga after the manner already represented, the two strongest horses being placed under the yoke, and the two others fastened on each side by means of ropes. This is implied in the use of the epithets συραίως οἱ σευραφόρος, and funalis οἱ furarius, for a horse so attached. (Ibid. Orig. xviii. 35.) The two exterior horses were further distinguished from one another as the right and the left trace-horse. In the splendid triumph of Augustus after the battle of Actium, the trace-horses of his car were ridden by two of his young relations. Tibetrius rode, as Suetonius relates (Tib. 6.) sinisteriore funali equo, and Marcellus dexteriore funali equo. As the works of ancient art, especially fictile vases, abound in representations of quadrigae, numerous instances may be observed, in which the two middle horses (δὲ μέσος δεξίος καὶ δὲ μέσος ἀριστερός, Schol. in Aristoph. Nub. 122) are yoked together as in the bigae; and, as the two lateral ones have collars (Αεταίνα) equally with the yoke-horses, we may presume that from the top of these

proceeded the ropes which were tied to the rim of the car, and by which the trace-horses assisted to draw it. The first figure in the annexed woodcut is the chariot of Aurora, as painted on a vase found at Canosa. (Gerhard, über Lichtgöttlichkeiten, pl. iii. fig. 1.) The reins of the two middle horses pass through rings at the extremities of the yoke. All the particulars which have been mentioned are still more distinctly seen in the second figure, taken from a terra-cotta at Vienna. (Ginzrot, vol. ii. pp. 107, 108.) It represents a chariot overthrown in passing the goal at the circus. The charioteer having fallen backwards, the pole and yoke are thrown upwards into the air; the two trace-horses have fallen on their knees, and the two yoke-horses are prancing on their hind legs.

If we may rely on the evidence of numerous works of art, the currus was sometimes drawn by four horses without either yoke or pole; for we see two of them diverging to the right hand and two to the left, as in the cameo in the royal collection of Berlin, which exhibits Apollo surrounded by the signs of the zodiac. If the ancients really drove the quadrigae thus harnessed, we can only suppose the charioteer to have checked its speed by pulling up the horses, and leaning with his whole body backwards, so as to make the bottom of the car at its hindmost border scrape the ground, an act and an attitude which seem not unfrequently to be intended in antique representations.

The currus, like the cisium, was adapted to carry two persons, and on this account was called in Greek ἔφθορος. One of the two was of course the driver. He was called ἄντυγος, because he held the reins, and his companion παραμάτης, from going by his side or near him. Though in all respects superior, the παραμάτης was often obliged to place himself behind the ἄντυγος. He is so represented in the bigae at p. 101, and in the Iliad (xix. 397) Achilles himself stands behind his charioteer, Automedon. On the other hand, a personage of the highest rank may drive his own carriage, and then an inferior may be his παραμάτης, as when Nestor conveys Machaon (ταύτ' ἔμπλη Μαχαών βίασε, Ι. xi. 512, 517), and Hera, holding the reins and whip, conveys Athena, who is in full armour (v. 720—775). In such cases a kindness, or even a compliment, was conferred by the driver upon him whom he conveyed, as when Dionysius, tyrant of Sicily, "himself holding the reins made Plato his παραμάτης." (Aelian, V. H. iv. 18.)

Chariots were frequently employed on the field of battle not only by the Asiatic nations, but also by the Greeks in the heroic age. The ἄρωται, i. e. the nobility, or men of rank, who were com-
Chariots executed in terra cotta (quadrigae fictiles, Plin. H. N. xxviii. 4), in bronze, or in marble, an example of which last is shown in the preceding woodcut from an ancient chariot in the Vatican, were among the most beautiful ornaments of temples and other public edifices. No pains were spared in their decoration; and Pliny informs us (H. N. xxxiv. 19) that some of the most eminent artists were employed upon them. In numerous instances they were designed to perpetuate the fame of those who had conquered in the chariot-race. (Paus. vi. 10.) As the emblem of victory, the quadriga was sometimes adopted by the Romans to grace the triumphal arch by being placed on its summit; and even in the private houses of great families, chariots were displayed as the indications of rank, or the memorials of conquest and of triumph. (Juv. viii. 3.) [J. Y.]

CURSOR'ES, slaves, whose duty it was to run before the carriage of their masters, for the same purpose as our outriders. They were not used during the times of the republic, but appear to have first come into fashion in the middle of the first century of the Christian era. The slaves employed for this purpose appear to have frequently been Numidians. (Senec. Ep. 87, 126 ; Marc. iii. 47, xii. 24 ; Petron. 28.) The word cursores was also applied to all slaves, whom their masters employed in carrying letters, messages, &c. (Suet. Ner. 49, Tit. 9 ; Tacit. Agric. 43.)

CURSUS. [CIRCUS.]
CUR'ULIS SELL.A. [SELLA CURULIS.]
CUSTO'DES. [COMitia, p. 636, b.]
CUSTO'DES, CUSTO'DIAE. [CAstra, p. 250, b.]
CUSTOS URBIS. [PRAEFECTUS URBIS.]
CY'ATHUS (κύαθος), is one of the numerous words, containing the element κυ, and signifying something hollow: it is applied, for example, to the hollow of the hand. Its general meaning is a cup of any kind; and it constantly occurs as the name of a sort of drinking vessel used by the Romans, who borrowed it from the Greeks (Varro, De Ling. Lat. v. 124, ed. Müller); but whether it designates the cup out of which the wine was drunk, or the small ladle by means of which it was transferred from the mixing-bowl (σχηρρη) into the drinking-cup, is a disputed point. Orelli asserts that it is never used in the latter sense, and that the ladle was called ἐνικοράσις, or trulla vinaria (Ad Horat. Carm. iii. 8. 13). But the passages in which the word occurs bear out the opinion of Becker, that the ladle was called cy-
The κρύμβαλα mentioned in the Homeric hymn to Apollo (161—164), were of this kind, played on by a chorus of Delians. The σκοβίλλα or κρωπίσσα were also on the same principle, only played with the foot, and inserted in the shoe of the performer; they were used by flute-players, perhaps to beat time to their music. (Pollux, x. 33.) Other kinds of cymbals were, the πυραγόν, an invention of Archytas, mentioned by Aristotle (Pol. viii. 6), and its diminutive πυραγόνων, which, from the description of Julius Pollux and Hesychius (s. v.), appears to have been a child's rattle; the two parts of which Suidas tells us (s. v.) were made of different materials for the sake of variety of sound: κορόκαλα, mentioned in the fragments of Aeschylius, with several others, noted by Lamp in his work De Cymbalibus, but perhaps without sufficient authority. The cymbal was usually made in the form of two half globes, either running off towards a point so as to be grasped by the whole hand, or with a handle. It was commonly of bronze, but sometimes of baser material, to which Aristophanes alludes (Rut. 1305). The preceding woodcut
of a cymbalistria is taken from an ancient marble, and given on the authority of Lampe.

The cymbal was a very ancient instrument, being used in the worship of Cybele, Bacchus, Juno, and all the earlier deities of the Grecian and Roman mythology. It probably came from the East, from whence, through the Phoenicians, it was conveyed to Spain (compare Martial's  

Among the Jews it appears (from 2 Chron. v. 12, 13; Nehem. xii. 27) to have been an instrument in common use. At Rome we first hear of it in Livy's account of the Bacchic orgies, which were introduced from Etruria. (xxxix. 9.) For sistrum, which some have referred to the class of cymbala, see SISTRUM.  [B. J.]

CYREBEIS (σύρβεις). [AXONES.]

CYZICE/NUS OECUS. [DOMUS.]

CYZICE NUS NUMMUS. [STATER.]

D.

DAC'TYL'IOTIE/CA (δακτυλιότηκα), a case or box where rings were kept. (Mart. xi. 59.) The name was also applied to a cabinet or collection of jewels. We learn from Pliny (H. N. xxxvii. 5), that Scæurus, the step-son of Sulla, was the first person at Rome who had a collection of this kind, and that he was the only one till Pompey brought to Rome the collection of Mithridates, which he placed in the Capitol.

DAC'TYLUS (δακτυλος), a Greek measure, answering to the Roman digitus, each signifying a finger-breadth, and being the sixtieth part of a foot. (P. S.)

P. S.] DADUCCHUS. [ELEUSINIA.]

DAE'DALA or DAE'DALEIA (Δαιδάληα, δαι-

dálexia), were names used by the Greeks to signify those early works of art which were ascribed to the age of Daedalus, and especially the ancient wooden statues, ornamented with gilding and after the mere blocks of wood or stone, which were described above, and distributed by lot among the towns of Plateææ, Coroneia, Tanagra, Chaeroneia, Orchomenus, Lebadeia, and Thebes; the smaller towns took one statue in common. The Boeotians assembled on the banks of the Asopus; here a statue of Hera was adorned and raised on a chariot, and a young bride led the procession. The Boeotians then decided by lot in what order they were to form the procession, and drove their chariots away from the river and up Mount Cithaeron, on the summit of which an altar was erected of square pieces of wood, fitted together like stones. This altar was covered with a quantity of dry wood, and the towns, persons of rank, and other wealthy individuals, offered each a heifer to Hera, and a bull to Zeus, with plenty of wine and incense, and at the same time placed the daedala upon the altar. For those who did not possess sufficient means, it was customary to offer small sheep, but all their offerings were burnt in the same manner as those of the wealthier persons. The fire consumed both offerings and altar, and the immense flame thus kindled was seen far and wide.

The account of the origin of the daedala given by Pausanias agrees in the main points with the story related by Plutarch (apud Euseb. De Præparat. Evang. iii. p. 83, and Fragm. p. 759, &c. ed. Wytenb.), who wrote a work on the Platean daedala; the only difference is that Plutarch represents Zeus as receiving his advice to deceive Hera from Alalcomenes; and that he calls the wooden statue by which the goddess was deceived Daedala, instead of Platea. Plutarch also adds some remarks respecting the meaning of the festival, and thinks that the dispute between Zeus and Hera had reference to the physical revolutions to which Boetia, at a very remote period, had been subject, and their reconciliation to the restoration of order in the elements. (See Creuzer, Symbol. und Mythol. ii. p. 580, and Müller's Orchom. p. 216, &c. 2d edit.)  [L. S.]

DAMARE'TION (Δαμαρέτιον χρύσιον), a Sicilian coin, respecting which there is much dispute. Diodorus tells us (xi. 26) that after Gelon's great victory over the Carthaginians at Himera, his wife Damarete prevailed upon him to grant them moderate terms of peace; and that the Carthaginians, as a token of their gratitude, presented Damarete with a golden crown of one hundred
talents' weight; upon receiving which, she struck the coin, which was called, after her, 
δαμαρτείων, and which contained ten Attic drachmae, and was called by the Sicilians 
πευκηκονότηστον, from its weight. (Comp. Schol. ad Pind. Ol. ii. 1.)

The story is told somewhat differently by other writers, namely, that Damarete and the ladies of the court gave up their ornaments to be coined into talents' weight; upon receiving which, she struck a coin called by the Sicilians 
δαμαρτείων. (Comp. Schol. ad Pind. Pyth. i. 155; Anth. Pal. vi. 214; No. 196, Schneidewin), it is said that Gela and his brothers dedicated to the Python Apollo, after their victory over the barbarians, a tripod 
Δαμαρτον χρυσοῦ, where there can be no doubt that Bentley is right in reading 
Δαμαρτηνο, but it is not equally certain whether the last two lines of the epigram are not altogether spurious. (Comp. Schneidewin, ad loc., and Böckh, Metrolog. Untersuch. p. 304.) At all events, the passage is an indication of the uniform tradition respecting this "Damaretian gold," and the exact history of which is of very little consequence compared with the identification of the coinage to which the statement refers. From all the discussion of this point by Eckhel, Müller, Hussey, Böckh, and others, the most probable conclusion seems to be that the coin was of gold and not of silver (although coins of equal value were at some time or other struck in silver also), and that the statements which give its weight as fifty Sicilian litras, or ten Attic drachmae, are to be understood, not literally of its weight, but of its value, as estimated by those who liked, pack up the materials and carry them off. (Cic. Top. 4, In Verr. 1. 56; Inst. 4. tit. 5; Thibaut, System, &c. § 274, &c. 9th ed.) (G. L.)

If the building of one man threatened damage to another in consequence of its dilapidated state, the owner of the dilapidated property might be required to repair it or to give security against any damage that might be caused by the state of his building. The security (cautio) was demanded by an actio in factum, in all cases where the security could be required. Every person who was in possession of the property that was threatened, whether as owner or in any other right (but not as a bonae fidei possessor), could claim this cautio. (Dig. 39. tit. 2. s. 5. § 2; 13. § 5, 10; 13. § 4, 9.) The owner of the ruinous property or any person who had a right therein, and a bonae fidei possessor, might be required to give this cautio, which might be given by a simple promise or by giving sureties. The complainant had to swear that he did not require the cautio calumniæ causa (Dig. 39. tit. 2. s. 7; id. et. NON. K.K. SE. FACERE. IVRATVR. Tab. Vel. c. xx.)

If the defendant wrongfully refused to give the security, the complainant was empowered to enter upon the property which threatened the damage, and apparently for the purpose of protecting himself against it; if this produced no result, the defendant was ejected, and the complainant was allowed to take possession of the property, and the defendant lost all his rights to it.

If a ruinous house (aedes ruinoæ) fell and damaged a neighbour before any cautio had been given, all the right that the damaged person had was to retain the materials that had fallen on his land (Dig. 39. tit. 2. ss. 6, 7. §§ 8, 8) but it seems that the owner of the ruinous house could, if he liked, pack up the materials and carry them off. (Cic. Top. 4, In Verr. 1. 56; Inst. 4. tit. 5; Thibaut, System, &c. § 274, &c. 9th ed.) (G. L.)

DAMNUM INFECTUM.

If the defendant wrongfully refused to give the security, the complainant was empowered to enter upon the property which threatened the damage, and apparently for the purpose of protecting himself against it; if this produced no result, the defendant was ejected, and the complainant was allowed to take possession of the property, and the defendant lost all his rights to it.

If a ruinous house (aedes ruinoæ) fell and damaged a neighbour before any cautio had been given, all the right that the damaged person had was to retain the materials that had fallen on his land (Dig. 39. tit. 2. ss. 6, 7. §§ 8, 8) but it seems that the owner of the ruinous house could, if he liked, pack up the materials and carry them off. (Cic. Top. 4, In Verr. 1. 56; Inst. 4. tit. 5; Thibaut, System, &c. § 274, &c. 9th ed.) (G. L.)
another man's slave who was bound and so gave him the opportunity of escaping. A man who was not owner, might have an actio utilis legis Aquilae or in factum, if he had an interest in the thing, as a fructarius, usuarius, a bonae fideli possessor, or a person who had received a thing as a pledge.

If a man's slave was killed, the owner might sue for damages under the Lex Aquilia, and prosecute for a capital offence.

Pro Rasco Commodo, c. 11; Gaius, iii. 210, &c.; Inst. 4. tit. 3; Thibaut, System, &c., 9th ed. § 551, &c.; Reim, Das Römische Privatrecht.

[D.L.]

DAMOSIA (δαμοσία), the escort or suite of the Spartan kings in times of war. It consisted of his tent-comrades (σύνεχνοι), to whom the polemarchs, Pythians, and three of the equals (διαμοι) also belonged (Xen. Rep. Loc. xii. 1); of the prophets, surgeons, flute-players, volunteers in the army (Xen. Rep. Loc. xii. 7), Olympic conquerors (Plut. Lyco. 22), public servants, &c. The two ephors, who attended the king on military expeditions, also formed part of the damosia. (Müller, Dorians, iii. 12. § 5.)

DANACE (δανάκη), the name of a foreign coin, according to Hesychius (s. e.) worth a little more than an obolos. According to some writers, it was a Persian coin. (Pollux, ix. 82, and Hemster, ad loc.) This name was also given to the obolos, which was placed in the mouth of the dead to pay a Persian coin. (Pollux, ix. 82, and Hemster, ad loc.) This name was also given to the obolos, which was placed in the mouth of the dead to pay the ferryman in Hades (Hesych. c. 11; Gaius, iii. 210, &c.; Inst. 4. tit. 3; Thibaut, System, &c., 9th ed. § 551, &c.; Reim, Das Römische Privatrecht.)

[D.L.]

DAPHNEPHORIA (δαφνεφορία), a festival celebrated every ninth year at Thebes in honour of Apollo, surnamed Isemnis or Galaxius. Its name was derived from the laurel branches (δαφνία), to which the poles-marchs, Pythians, and three of the equals (διαμοι) also belonged (Xen. Rep. Loc. xii. 1); of the prophets, surgeons, flute-players, volunteers in the army (Xen. Rep. Loc. xii. 7), Olympic conquerors (Plut. Lyco. 22), public servants, &c. The two ephors, who attended the king on military expeditions, also formed part of the damosia. (Müller, Dorians, iii. 12. § 5.)

The Athenians seem likewise to have celebrated a festival of the same nature, but the only mention we have of it is in Proclus (ap. Photium, p. 987), who says that the Athenians honoured the seventh day as sacred to Apollo, that they carried laurel-boughs and thanked the Pythia at the altar in Tempe, whether he had fled after killing the Python, and was held in the month of Thargelion (probably on the seventh day). It is a very probable conjecture of Müller (Dor. ii. 8. § 4) that the Boeotian daphnephoria took place in the same month and on the same day on which the Delphian boy broke the purifying laurel-boughs in Tempe.

The Athenians seem likewise to have celebrated a festival of the same nature, but the only mention we have of it is in Proclus (ap. Photium, p. 987), who says that the Athenians honoured the seventh day as sacred to Apollo, that they carried laurel-boughs and adorned the basket (δάφνε, see Campingalia) with garlands, and sang hymns to the god. Respecting the astronomical character of the daphnephoria see Müller, Orchem. p. 215, 2d edit.; and Creuzer, Symbol. und Mythol. ii. p. 160.

[D.L.

DARIUS (δαρείος), or, to give the name in full, στατυρ δαρείος, the stauro of Darieus (Thuc. viii. 28), was a gold coin of Persia, stamped on one side with the figure of an archer crowned and kneeling upon one knee, and on the other with a
sort of quadrata incisa or deep cleft. We know from Herodotus (iv. 166) that Dareius, the son of Hystaspes, reformed the Persian currency, and stamped gold of the purest standard; and it is generally believed that the daricus was so called from him. Harpocration, however, says (s. v.) that the name was older than this Dareius, and taken from an earlier king. Gesenius (Hebr. Lexicon) supposes the name to be derived from an ancient Persian word signifying king, or royal palace, or the bow of the king, in allusion to the figure stamped upon it. The best authors, however, think that there is no sufficient ground for supposing either the name or the coin to be older than Dareius, the son of Hystaspes. (Döckh, Metrol. Untersuch. p. 129; Grove, History of Greece, vol. iv. p. 320.)

This coin had a very extensive circulation, not only in the Persian empire, but also in Greece. The pay given by Cyrus to the soldiers of Clearchus was a daricus a month (Xen. Anab. i. 3. § 21); and the same pay was offered to the same troops by Thimbrion, a Lacedaemonian general (Ibid. vii. 6. § 1). In the later books of the Old Testament, the daricus is supposed to be mentioned under the names of adarkon (שדוק) and daricmon (דריקון). (See 1 Chron. xxix. 7; Ezra, viii. 27, ii. 69; Nehem. vii. 70, 72.) All ancient authorities agree in stating that the daricus was the precise equivalent of the Lydian and Attic stater; that is, it was equal in weight to two Attic drachmae. (Harpocr.; Lex. Seg.; Suid.; Schol. ad Aristoph. Ecol. 596.) This, according to the ordinary ratio of gold to silver, 10:1; would make its value equal to twenty silver drachmae; which agrees with the statement of X. nophon (Anab. i. 7. § 18; comp. Arrian. Anab. iv. 18).

Five darics made a mina of silver, and 300 darics a talent. Xenophon also mentions half darics (ἡμιδαρίκειος, Anab. i. 3. § 21.)

The value of the daricus in our money, computed from the drachma, is 16s. 9d.; but if reckoned by comparison with our gold money, it is worth much more. The darics in the British Museum weigh 1294 grains and 1296 grains respectively; Huxley (Ancient Weights, &c. vi. 3) calculates the daricus as containing on an average about 123.7 grains of pure gold, and therefore equal in value to 123.7, of a sovereign, or about 1l. 1s. 10d. 1'76 farthings.

Very few darics have come down to us; their scarcity may be accounted for by the fact, that after the conquest of Persia, they were melted down and recoined under the type of Alexander.

There were also silver darics, bearing the same device as the gold, namely, the figure of an archer. (Plut. Cim. 10; Aelian. V. H. i. 22.) Their weights vary from 224 to 220 grains; those of the latter weight must have been struck, as was not very unusual in old coinages, somewhat above the true weight; they seem to have been dinaechms of the Babylonian or Egyptian standard.

In allusion to the device of an archer, the darics were often called τάξιστα, and it is related of Agesilus, that, when recalled to Greece, he said that the Persian king had driven him out of Asia by means of 30,000 bowmen, referring to the sum which was entrusted to Timocrates the Rhodian to bribe the demagogues of Thebes and Athens to make his presence necessary at home. (Plut. Ages. 15, Artos. 20, Lacon. Apolplt. p. 181.) Arandas, who was appointed governor of Egypt by Cambyses, is supposed to have been the first who struck these silver coins, in imitation of the gold coinage of Dareius Hystaspis. (Herod. iv. 166.)

GOLD DARIC. BRITISH MUSEUM. ACTUAL SIZE.

DEBITOR. [OBLIGATIONES.]
DECADU'CHI (δεκαδουχοί), the members of a council of Ten, who succeeded the Thirty in the supreme power at Athens, B. c. 403. (Harpocrat. s. v.) They were chosen from the ten tribes, one from each (Xen. Heli. ii. 4. §§ 23, 74); but, though opposed to the Thirty, they sent ambassadors to Sparta to ask for assistance against Thrasylus and the exiles. They remained masters of Athens till the party of Thrasylus obtained possession of the city and the democracy was restored. (Lys. c. Eratosth. p. 420; Wachsmuth, Hellen. Alterthumsk. vol. i. p. 646, 2d ed.)

DECA'CHIA or DECADA'CHIA (δεκα-χία, δεκαδάρχια), was a supreme council established in many of the Grecian cities by the Lacedaemonians, who intrusted to it the whole government of the state under the direction of a Spartan harmost. It always consisted of the leading members of the aristocratical party. (Harpocr., s. v.; Schneider, ad Aristot. Pol. ii. 146, 147.) This form of government appears to have been first established by Lysander at Ephesus. (Plut. Lys. 5; Wachsmuth, Hellen. Alterthumsk. vol. i. p. 517, 2d ed.)

DECASMUS (δεκασμός), bribery. There were two actions for bribery at Athens: one, called δεκασμός γραφή, lay against the person who gave the bribe; and the other, called δέκασμος or δεκασμόν γραφή, against the person who received it. (Pollux, viii. 42.) These actions applied to the bribery of citizens in the public assemblies of the people (συνέδρια των εθνελεγμένων, Aesch. c. Timarch. p. 12), of the Heliaca or any of the courts of justice, of the Boule, and of the public advocates (συνεσθήσεως, Dem. c. Steph. ii. p. 1137, 1). Demosthenes (De Falsa Leg. p. 343), indeed, says that orators were forbidden by the law, not merely to abstain from receiving gifts for the injury of the state, but even to receive any present at all.
According to Aristotle (apud Harpocrat. s.v. ἔκταρα), Anytus was the first person at Athens who bribed the judges; and we learn from Plutarch was charged of having been guilty of treachery at Pylos, at the end of the Peloponnesian war. Other writers say that Miltiades was the first person who bribed the judges. (Petit. Leg. Att. p. 427, and Ducker’s note.)

Actions for bribery were under the jurisdiction of the thesmothetae. (Dem. c. Steph. l.c.) The punishment on conviction of the defendant was death, or payment of ten times the value of the gift received, to which the court might add an additional punishment (σπείρα κακίας). This occurred to a fine of 50 talents by an action for bribery, and also thrown into prison. (Böckh, Pblh. Econ. of Athens, p. 384, 2d ed.; Meier, Att. Process, p. 352.)

DECASTYLOS. [TEMPLUM.]
DECAE [BECYRRA]. [DECUMAE.]
DECEMPEDA, a pole ten feet long, used by the agrimensores in measuring land. (Cic. Pro Mil. 27; Hor. Carm. ii. 15. 14; Cic. Philipp. xiv. 4.) Thus we find that the agrimensores were sometimes called decempedatores (Cic. Philipp. xiii. 18). The decempeda was in fact the standard land-measure. (Ait. Proc.)

DECEMVIRI PRIMI [SENATUS.]
DECEMVIRI, the Ten Men, the name of various magistrates and functionaries at Rome.

1. DECEMVIRI LEGIBUS SCRIBENDIS, were ten persons, who were appointed to draw up a code of laws, and to whom the whole government of the state was entrusted. As early as B. c. 462, a law was proposed by C. Terentilius Arsa, that commissioners should be appointed for drawing up a body of laws; but this was violently opposed by the patricians (Liv. iii. 9); and it was not till after a struggle of nine years that the patricians consented to send three persons to Greece, to collect such information respecting the laws and constitutions of the Greek states as might be useful to the Romans. (Liv. iii. 31.) They were absent a year; and on their return, after considerable dispute between the patricians and plebeians, ten commissioners of the patrician order were appointed with the title of “decemviri legis scribendi,” to whom the revision of the laws was committed. All the other magistrates were abolished, and no exception was made even in favour of the tribunes; for there is no reason to suppose, as Niebuhr has done, that the tribuneship was not given up till the second decemvirate (Cic. de Rep. ii. 36; Liv. iii. 32; Dionys. x. 56). They were thus entrusted with supreme power in the state.

The decemviri entered upon their office at the beginning of B. c. 451. They consisted of App. Claudius and T. Geminus Aunurinus, the new consuls, of the praeefectus urbi, and of the two quaestores parriediti as Niebuhr conjectures, and of five others chosen by the centuries. They discharged the duties of their office with diligence, and dispensed justice with impartiality. Each administered the government day by day in succession as during an interregnum; and the fasces were only carried before the one who presided for the day. (Liv. iii. 33.) They drew up a body of laws, distributed into ten sections; which, after being approved of by the senate and the comitia, were engraved on tables of metal, and set up in the comitium.

On the expiration of their year of office, all parties were so well satisfied with the manner in which they had discharged their duties, that it was resolved to continue the same form of government for another year; more especially as some of the decemvirs said that their work was not finished. Ten new decemvirs were accordingly elected, of whom Appius Claudius alone belonged to the former body (Liv. iii. 35; Dionys. x. 53); and of his nine new colleagues, Niebuhr thinks that five were plebeians. These magistrates framed several new laws, which were approved of by the centuries, and engraved on two additional tables. They acted, however, in a most tyrannical manner. Each was attended by twelve lictors, who carried not the rods only, but the axe, the emblem of sovereignty. They made common cause with the patrician party, and committed all kinds of outrages upon the persons and property of the plebeians and their families. When their year of office expired they refused to resign or to appoint successors. Niebuhr, however, considers it certain that they were appointed for a longer period than a year; since otherwise they would not have been required to resign their office, but interreges would at the expiration of the year have stepped into their place.

This, however, does not seem conclusive; since the decemvirs were at the time in possession of the whole power of the state, and would have prevented any attempt of the kind. At length, the unjust decision of App. Claudius, in the case of Virginia, who led her father to kill her with his own hands to save her from prostitution, occasioned an insurrection of the people. The decemvirs were in consequence obliged to resign their office, B. c. 449; after which the usual magistracies were re-established. (Niebuhr, Hist. of Rome, vol. ii. pp. 309—356; Arnold, Hist. of Rome, vol. i. pp. 250—313; Becker, Römisch. Alterthüm, vol. ii. part ii. pp. 126—136.)

The ten tables of the former, and the two tables of the latter decemvirs, together form the laws of the Twelve Tables, of which an account is given in a separate article. [LEX DUODECIM TAB.]

2. DECEMVIRI LITIBUS OR SITIBUS JUDICANDIS, were magistrates forming a court of justice, which took cognizance of civil cases. From Pompeius (de Orig. Jur. Dig. i. 12. § 22) it would appear that they were not instituted till the year B. c. 292, the time when the triumviri capite tab. would appear that they were not instituted till the year B. c. 292, the time when the triumviri capite tab.
the centumviri. (Suet. Aug. 36 ; Dion Cass. liv. 26.) During the empire, this court had jurisdiction in capital matters, which is expressly stated in regard to the decemvirs.

3. Decemviri Sacrorum, sometimes called simply Decemviri Sacrorum, were the members of an ecclesiastical collegium, and were elected for life. Their chief duty was to take care of the Sibylline books, and to inspect them on all important occasions, by command of the senate. (Liv. vii. 27, xxi. 62, xxxi. 12.) Virgil (Aen. vi. 73) alludes to them in his address to the Sibyl— "Lectos sacrabo viros."

Under the kings the care of the Sibylline books was committed to two men (duumviri) of high rank (Diony. iv. 62), one of whom, called Attilus or Tullius, was punished by Tarquinius, for being unfaithful to his trust, by being sewed up in a sack and cast into the sea. (Dionys. l. c.; Val. Max. i. 1. § 13.) On the expulsion of the kings, the care of these books was entrusted to the noblest of the patricians, who were exempted from all military and civil duties. Their number was increased about the year 367 B.C. to ten, of whom five were chosen from the patricians and five from the plebeians. (Liv. vii. 37, 42.) Subsequently their number was still further increased to fifteen (quindecemviri); but at what time is uncertain. As, however, there were decemviri in B.C. 497, when the capital was burnt (Dionys. l. c.), and we read of quindecemviri in the time of Cicero (ad Phil. viii. 4), it appears probable that their number was increased from ten to fifteen by Sulla, especially as we know that he increased the numbers of several of the other ecclesiastical corporations. Julius Caesar added one more to their number (Dion Cass. xiii. 51); but this precedent was not followed, as the collegium appears to have consisted afterwards of only fifteen.

It was also the duty of the decemviri and quinqueviri to celebrate the games of Apollo (Liv. x. 37, 42), and the secular games. (Tac. Ann. xii. 70.) They were, in fact, considered priests of Apollo, whence each of them had in his house a bronze tripod dedicated to that deity. (Serv. ad Virg. Aen. iii. 332.)

4. Decemviri Agris Dividendis, were sometimes appointed for distributing the public land among the citizens. (Liv. xxxvi. 4, xlii. 4.)

Decennalia or Decennia, a festival celebrated with games every ten years by the Roman emperors. This festival owed its origin to the fact that Augustus refused the supreme power when offered to him for his life, and would only consent to accept it for ten years, and when these expired, for another period of ten years, and so on to the end of his life. The memory of this comedy, as Gibbon has happily called it, was preserved to the last ages of the empire by the festival of the Decennalia, which was solemnized by subsequent emperors every tenth year of their reign, although they had received the imperium for life, and not for the limited period of ten years. (Dion Cass. lxi. 16, liv. 12, lxi. 24, lxxvi. 1 ; Trebell. Pol. Sacr. iii. 3, Gallien. 7.)

Decemviri were the selection, by lot, of every tenth man for punishment, when any number of soldiers in the Roman army had been guilty of any crime. This punishment usually had barley allowed to them instead of wheat. (Polyb. vi. 38; Cic. Client. 46.) This punishment does not appear to have been often inflicted in the early times of the republic; but is frequently mentioned in the civil wars, and under the empire. It is said to have been revived by Crassus, after being discontinued for a long time. (Plut. Crass. 10.) For instances of this punishment, see Liv. ii. 59; Suet. Aug. 24, Galba, 12; Tacit. Hist. i. 37; Dion Cass. xii. 33, xlix. 27, 38.

Sometimes only the twentieth man was punished (riscinatio), or the hundredth (centesinatio). (Cic. Q. Marc. 12.)

Decemvirs. [Quinqueviri.] Decretum, seems to mean that which is determined in a particular case after examination or consideration. It is sometimes applied to a determination of the consuls, and sometimes to a determination of the senate. A decretum of the senate would seem to differ from a senatus-consultum, in the way above indicated; it was limited to the special occasion and circumstances, and this would be true whether the decretum was of a judicial or a legislative character. But this distinction in the use of the two words, as applied to an act of the senate, was perhaps not always observed. Cicero (ad Fam. xiii. 56) opposes edictum to decretum; between which there is, in this passage, apparently the same analogy as between a consultum and decretum of the senate. A decretum, as one of the parts or kinds of constitutio, was, as a judicial decision in a case before the sovereign, when it was carried to the auditorium principis by way of appeal. Paulus wrote a work in six books on these Imperiales Sententiae.

Decemviri Agris Dividendis, sometimes appointed for distributing the public land among the citizens. (Liv. xxxvi. 4, xlii. 4.)

Decennalia or Decennia, a festival celebrated with games every ten years by the Roman emperors. This festival owed its origin to the fact that Augustus refused the supreme power when offered to him for his life, and would only consent to accept it for ten years, and when these expired, for another period of ten years, and so on to the end of his life. The memory of this comedy, as Gibbon has happily called it, was preserved to the last ages of the empire by the festival of the Decennalia, which was solemnized by subsequent emperors every tenth year of their reign, although they had received the imperium for life, and not for the limited period of ten years. (Dion Cass. lxi. 16, liv. 12, lxi. 24, lxxvi. 1 ; Trebell. Pol. Sacr. iii. 3, Gallien. 7.)

Decemviri Agris Dividendis was the selection, by lot, of every tenth man for punishment, when any number of soldiers in the Roman army had been guilty of any crime. This punishment usually had barley allowed to them instead of wheat. (Polyb. vi. 38; Cic. Client. 46.) This punishment does not appear to have been often inflicted in the early times of the republic; but is frequently mentioned in the civil wars, and under the empire. It is said to have been revived by Crassus, after being discontinued for a long time. (Plut. Crass. 10.) For instances of this punishment, see Liv. ii. 59; Suet. Aug. 24, Galba, 12; Tacit. Sometimes only the twentieth man was punished (riscinatio), or the hundredth (centesinatio). (Cic. Q. Marc. 12.)

Decemvirs. [Quinqueviri.] Decretum, seems to mean that which is determined in a particular case after examination or consideration. It is sometimes applied to a determination of the consuls, and sometimes to a determination of the senate. A decretum of the senate would seem to differ from a senatus-consultum, in the way above indicated; it was limited to the special occasion and circumstances, and this would be true whether the decretum was of a judicial or a legislative character. But this distinction in the use of the two words, as applied to an act of the senate, was perhaps not always observed. Cicero (ad Fam. xiii. 56) opposes edictum to decretum; between which there is, in this passage, apparently the same analogy as between a consultum and decretum of the senate. A decretum, as one of the parts or kinds of constitutio, was, as a judicial decision in a case before the sovereign, when it was carried to the auditorium principis by way of appeal. Paulus wrote a work in six books on these Imperiales Sententiae.
united in the same person. The title δεκατευταί is applied to both. A δεκάτη or tenth of a different kind was the arbitrary exaction imposed by it by the battle of Aegospotami (B. c. 405) ; but it was re-established by Thrasybulus about B. c. 391. This tithe was also let out to farm. (Demosth. c. Lep. p. 475 ; Xen. Hell. iv. 8, § 27, 31.) The tithe-house for the receipt of this duty was called δεκατευτήριον: to sail by necessity to it, παραγωγαίον. (Böckh, Publ. Econ. of Athens, p. 525, &c., 2nd ed.) [R. W.]

DECU'MA'NI. [DECUMAE.]

DECUNCIS, another name for the dextans. [As, p. 140, b.]

DECUR'IAE JUDICUM. [JUDEX.]

DECUR'IO'NES. [COLONIA ; EXEHCITUS.]

DECUR'RERE. [FUNUS.]

DECUS'IS. [As, p. 140, b.]

DEDI'CA'TIO. [INAUGURATIO.]

DEDI'TICHI, are one of the three classes of libertini. The lex Aelia Sentia provided that, if a slave was put in bonds by his master as a punishment, or branded, or put to the torture for an offence and convicted, or delivered up to fight with wild beasts, or sent into a ludus (gladiatorius), and then manumitted either by his then owner, or by another owner, he merely acquired the status of a peregrinus dediticus, and had not even the privileges of a Latinus. The peregrini dediticii were those who, in former times, had taken up arms against the Roman people, and being conquered, had surrendered themselves. They were, in fact, a people who were absolutely subdued, and yielded unconditionally to the conquerors, and, of course, had no other relation to Rome than that of subjects. The form of deditio occurs in Livy (i. 37).

The dediticii existed as a class of persons who were neither slaves, nor cives, nor Latini, at least as late as the time of Ulpius. Their civil condition, as it is stated above, was formed by analogy to the condition of a conquered people, who did not individually lose their freedom, but as a community lost all political existence. In the case of the Volsci, Livy inclines to the opinion that the four thousand who were sold, were slaves, and not dediti. (Guins, i. 13, &c.; Ulpius, Frug. tit. 1. s. 11.) [G. L.]

DEDI'TIO. [DEDITICIL.]

DEDUCTO'RES. [AMBITUS.]

DEFENSO'RES. [PROVINCIA.]

DEFRUTUM. [VINUM.]

DEICELISTAE (δεικλασται). [COMEDIA.]

DEIGMA (δείγμα), a particular place in the Peineus, as well as in the harbours of other states, where merchants exposed samples of their goods for sale. (Harppocrat. s. v.; Pollux, ix. 34.; Aristoph. Equit. 974 ; Dem. c. Locr. p. 932. 29.; Theophr. Char. 23.) The samples themselves were also called deigmatæ. (Plut. Demosth. 23; Böckh, Publ. Econ. of Athens, p. 56, 2nd ed.)

DEJECTUM EFFUSU'M. [DEJECTI EFFUSIVE ACTIO.]

DEJECT EFFUSIVE ACTIO. If any person threw or poured out anything from a place or upper chamber (caenaculum) upon a road which was frequented by passengers, or on a place where people used to stand, and thereby caused any damage, the practor's edict gave the injured person an actio in duplum. The action was against the occupier. If several persons inhabited a caenaculum, and any injury was done to another by a thing thrown or poured out of it, he had a right of action against any of them, if the doer was uncertain. The damages recoverable were to double the amount of the damage, except in the case of a fiber, when they were fifty aurei, if he was killed; and any person might sue for the money within a year, but the right of action was given in preference to a person "cujus interest," or to affines or cognati. If a man was only injured in his person, the damages were "quantum ob eum rem acuem judicet videbitur eum cum quo agatur condemnavit," which included the expenses of a medical attendant, loss of time, and loss of a man's earnings during the time of his cure, or loss of future earnings by reason of his having been rendered incapable of making such earnings. If injury was caused by a thing being thrown from a ship, there was an actio utilis; for the words of the edict are, "unde eum locum quo volgo iter fiat vel in quo consistatur, dejectum," &c.

The edict applied to things which were suspended over a public place and which by their fall might injure people. It allowed any person to bring an action for the recovery of ten aurei against any person who disregarded this rule of the edict. If a thing so suspended, fell down and injured any person, there was an actio against him who placed it there.

As many of the houses in Rome were lofty, and inhabited to the top by the poor (Cic. Agr. ii. 35; Hor. Ep. i. 1. 91; Juv. Sat. x. 17), and probably as there were very imperfect means for carrying off rubbish and other accumulations, it was necessary to provide against accidents which might happen by such things being thrown through the window. According to Labeo's opinion, the edict only applied to the daytime, and not to the night, which, however, was the more dangerous time for a passer-by. (Dig. 9. tit. 3; Dig. 44. tit. 7. s. 5. § 5; Inst. 4. tit. 5; Juv. Sat. iii. 326, &c.; Thibaut, System, &c., §§ 566, 9th ed.) [G. L.]

DELLIAS GRAPHE' (διελλας γραφή), the name of a suit instituted against soldiers who had been guilty of cowardice. (Aesch. c. Ctesiph. p. 566; Lys. c. Alcib. pp. 520, 528.) The presidency of the court belonged to the strategi, and the court was composed of soldiers who had served in the campaign. (Lys. c. Alcib. p. 521.) The punishment on conviction appears to have been ātūla. Compare ASTRATHEIAS GRAPHIK.

DEINPON (δεινον). [CORN.]

DELAT'OH, an informer. The delatores, under the emperors, were a class of men who gained their livelihood by informing against their fellow-citizens. (Suet. Titi. 61, Dom. 12; Tacit. Ann. iv. 30, vi. 47.) They constantly brought forward false charges to gratify the avarice or jealousy of the different emperors, and were consequently paid according to the importance of the information which they gave. In some cases, however, the law specified the sums which were to be given by the state or by other emperors. The act of a murderer had been committed in a family, and any of the slaves belonging to it had run away before the quasistio, whoever apprehended such slaves received, for each slave whom he apprehended, a reward of five aurei from the property of the deceased, or else from the state, if the sum could
not be raised from the property of the deceased. (Dig. 29, tit. 5, s. 25.) In the senatus consultum quod triumphans, the informer received half of the penalty in which the person was fined who transgressed the decree of the senate. There seems also to have been a fixed sum given to informers by the lex Papia, since we are told that Nero reduced it to a fourth. (Suet. Nerus 10.)

The number of informers, however, increased so rapidly under the early emperors, and occasioned so much mischief in society, that many of them were frequently banished, and punished in other ways, by various emperors. (Suet. Tit. 9, Dom. 9; Marc. 4; Plin. Paneg. 94; Brissonius, Ant. Stat. ii. 17.)

DELECTUS. [Exercitus.]

DE'elia (δήλα), the name of festivals and games celebrated at the great panegyris in the island of Delos, the centre of an amphictyony, to which the Cyclades and the neighbouring Ionians on the coasts belonged. (Hom. Hymn. in Apoll. 147, &c.) This amphictyony seems originally to have been instituted simply for the purpose of religious worship in the common sanctuary of Apollo, the δήδα σειρίφος of the Ionians, who was believed to have been born at Delos. The Delia, as appears from the Hymn on Apollo (compare Thucyd. iii. 104; Pollux, ix. 61), had existed from very early times, and were celebrated every fifth year (Pollux, vii. 104), and as Böckh supposes, with great probability, on the sixth and seventh days of Thargelion, the birthdays of Apollo and Artemis. The members of the amphictyony assembled on these occasions (δεσθαλαφων) in Delos, in long garments, with their wives and children, to worship the god with gymnastic and musical contests, choruses, and dances. That the Athenians took part in these solemnities at a very early period, is evident from the Deliastaei (afterwards called δεσθαποι) mentioned in the laws of Solon (Athen. vi. p. 254); the sacred vessel (δεσθαπης), moreover, which they sent to Delos every year, was said to be the same which Theseus had sent after his return from Crete. (See the commentators on Plato, Crises, p. 43, c.) The Delians, during the celebration of these solemnities, performed the office of cooks for those who visited their island, whence they were called δασεδιήται (Athen. iv. p. 173). After the course of time the celebration of this ancient panegyris in Delos had ceased, and it was not revived until Ol. 88. 3, when the Athenians, after having purified the island in the winter of that year, restored the ancient solemnities, and added horse-races which had never before taken place at the Delia. (Thucyd. l. c.) After this restoration, Athens being at the head of the Ionian confederacy took the most prominent part in the celebration of the Delia; and though the islanders, in common with Athens, provided the choruses and victima, the leader (ἀρχιδιήτης), who conducted the whole solemnity, was an Athenian (Plut. Nic. 3; Wolf. Introd. ad Demosth. Lept. p. xc), and the Athenians had the superintendence of the common sanctuary. [Amphictyons.]

From these solemnities, belonging to the great Delian panegyris, we must distinguish the lesser Delia, which were celebrated every year, probably on the 6th of Thargelion. The Athenians on this occasion sent the sacred vessel (δεσθαπης), which the priest of Apollo adorned with laurel branches, to Delos. The embassy was called δεσθαπης; and those who sailed to the island, δεσθαπωλ; and before they set sail a solemn sacrifice was offered in the Delion, at Marathon, in order to obtain a happy voyage. (Müller, Dor. ii. 2. § 14.) During the absence of the vessel, which on one occasion lasted 30 days (Plat. Phaedon, p. 58; Xen. Memorab. iv. 8. § 2), the city of Athens was purified, and no criminal was allowed to be executed. The lesser Delia were said to have been instituted by Theseus, though in some legends they are mentioned at a much earlier period, and Plutarch (Thea. 23) relates that the ancient vessel used by the founder himself, though often repaired, was preserved and used by the Athenians down to the time of Demetrius Philerus. (Böckh, Publ. Econ. of Ath. p. 214, &c. 2d edit.; Thirlwall, Hist. of Greece, vol. iii. p. 217.) [L. S.]

DELCICTUM. [Crimen.]

Delphi'nia (δήφινινα), a festival of the same expiatory character as the Apollonia, which was celebrated in various towns of Greece, in honour of Apollo, surnamed Delphinus, who was considered by the Ionians as their δεσθα σειρίφος. The name of the god, as well as that of his festival, must be derived from the belief of the ancients that in the beginning of the month of Munychion (probably identical with the Aeginetan Delphinus) Apollo came through the defile of Parmassus to Delphi, and began the battle with Phrygane. As he thus assumed the character of a wrathful god, it was thought necessary to appease him, and the Delphina, accordingly, were celebrated at Athens, as well as at other places where his worship had been adopted, on the 6th of Munychion. At Athens seven boys and girls carried olive-branches, bound with white wool (called the ἱερημα), into the Delphinium. (Plut. Thes. 18.)

The Delphina of Aegina are mentioned by the scholiast on Pindar (Pyth. viii. 88), and from his remark on another passage (Olymp. vii. 151), it is clear that they were celebrated with contests. (Compare Diog. Laërt. Vit. Tial. c. 7; Müller, Dor. ii. 8. § 4.) Concerning the celebration of the Delphina in other places nothing is known; but we have reason to suppose that the rites observed at Athens and in Aegina were common to all festivals of the same name. See Müller, Aeginet. p. 152.

Delphilis (δεσθαφίς), an instrument of naval warfares. It consisted of a large mass of iron or lead suspended on a beam, which projected from the mast of the ship like a yard-arm. It was used to sink, or make a hole in, an enemy's vessel, by being dropped upon it when alongside. (Aristoph. Equit. 759; Thuc. vii. 41; Schol. ad loc.; Hesych. s. v.) There seems no necessity for supposing that it was made in the shape of a dolphin. Bars of iron used for ballast are at the present day called "pigs," though they bear no resemblance to that animal. Probably the delphines were hoisted aloft only when going into action. We may also conjecture that they were fitted, not so much to the swift (ταχείων) triremes, as to the military transports (πτεριστώτεις, δηλιτάξαγωγοι), for the sailing of the former would be much impeded by so large a weight of metal. At any rate, those that Thucydides speaks of were not on the triremes, but on the δηλιδάκες.

DELBUM. [Templum.]

Demarchi (δήμαρχοι), the chief magistrates of the demi (δημοι) in Attica, and said to have
DEMIOPRATA. DEMOCRATIA.

been first appointed by Cleisthenes. Their duties were various and important. Thus, they convened meetings of the demus, and took the votes upon all questions under consideration; they had the custody of the κατατάξεως γραμματίων, or book in which the members of the demus were enrolled; and they made and kept a register of the landed estates (χρώμα) in their districts, whether belonging to individuals or the body corporate; so that whenever an εἰσορθοδοξία, or extraordinary property-tax was imposed, they must have been of great service in assessing and collecting the quota of each estate. Money due to the demus for rent, &c., were required in preserving peace and order, and were required to bury, or cause to be buried, any dead bodies found in their district: for neglect of this duty they were liable to a fine of 1000 drachmae. (Dem. c. Maecr. 1069, 22.) Lastly, they seem to have furnished to the proper authorities a list of the members of the township who were fit to serve in war (κατατάξεως ἑπτάς), Demosth. c. Polyg. p. 1208 ; Harpocr. s. v.; Poll. vii. 118; K. F. Hermann, Griech. Staatsalterth., § 111; Böckh, Public Econ. of Athens, pp. 157, 512; Schömann, De Comitiis, p. 376, &c.). Democles was the name given by Greek writers to the Romans and to the plebs. [R. W.]

DEMIURGOS. [CURATOR.]

DEMIUS (δημόσιος). [TORRENTUM.]

DEMOCRATIA (δημοκρατία), that form of constitution in which the sovereign political power is in the hands of the demus, or commonalty. In the article ARISTOCRATIA the reader will find notice of the rise and nature of the distinction between the politically privileged class of nobles and the commonalty, a class personally free, though without any constitutionally recognized political power. It was this commonalty which was properly termed the demus (δημός). The natural and inevitable effect of the progress of society being to diminish, and finally do away with, those distinctions between the two classes, on which the original difference in point of political power was founded, was the change on which the festival was held, was changed into Demetria and Demetrians. A priest ministered at their altars, and conducted the solemn procession, and the sacrifices and games with which the festival was celebrated. (Diodor. Sic. xx. 46; Plut. Demetr. 10, 46.) To honour the new god still more, the Athenians at the same time changed the name of the festival of the Dionysia into that of Demetria, as the young prince was fond of hearing himself compared to Dionysus. The demetria mentioned by Athenaeus (xii. p. 536) are probably the Dionysia. Respecting the other extra-vagant festivities which the Athenians heaped upon Demetria and Antigonus, see Athen. vi. p. 252; Herm. Polit. Ant. of Greece, § 175. n. 6, 7, and 8; and Thirlwall, Hist. of Greece, vol. vii. p. 331. [L. S.]

DEMINUTIO CAPITIS. DEMIOPRATA (δημόσιον ιτία, sc. πράγματα or κτήματα), was property confiscated at Athens and sold by public auction. The confiscation of property was one of the most common sources of revenue in many of the Grecian states; and Aris-
the wealthy and noble still remained citizens of the commonwealth, the supreme power was to all intents and purposes in the hands of the class formerly constituting the demos, by virtue of their being the more numerous. (Aristot. Pol. iv. 4, p. 122, ed. Götting.) When the two classes were thus equalised, the term demos itself was frequently used to denote the entire body of free citizens —"the many," in contrast with "the few."

It is obvious that, consistently with the maintenance of the fundamental principle of the supreme power being in the hands of the demos, various modifications of the constitution in detail might exist, and different views might as to what was the perfect type of a democracy, and what was an imperfect, or a diseased form of it. Aristotle (Pol. iv. 3) points out that a democracy cannot be defined by the mere consideration of numbers. For if the wealthy were the more numerous and possessed the supreme power, this would not be a democracy. A democracy is rather, when every free citizen is a member of the sovereign body (δῆμος, μὲν ἐστίν δικαιοῦσαν ἐν συμφονίαν τοὺς ἄνθρωπους τῇ ἁρετῇ δικαιοῦσαν). This definition he expresses in a more accurate form thus: ἐστὶ δημοκρατία μὲν δικαιοῦσαν καὶ ἄνθρωποι πλεοῦσα ἐχθραὶ τῇ ἁρετῇ δικαιοῦσαν. It would still be a democracy if a certain amount of property were requisite for filling the public offices, provided the amount were not large. (Pol. iv. 4. p. 122, ed. Götting.) A Politeia itself is one species of democracy (Pol. iv. 3. p. 117), democracy, in the full sense of the word, being a sort of παράκτια of it. But for a perfect and pure democracy it was necessary that no free citizen should be debarred on account of his inferiority in rank or wealth from aspiring to any office, or exercising any political function, and that each citizen should be allowed to follow that mode of life which he chose. (Arist. Pol. iv. 4, vi. 1.) In a passage of Herodotus (iii. 80), where we probably have the ideas of the writer himself, the characteristics of a democracy are specified to be — 1. equality of legal rights (ἴσονόμία); 2. the appointment of magistrates by lot; 3. the accountability of all magistrates and officers; 4. the reference of all public matters to the decision of the community at large. Aristotle also (Rhet. i. 8, § 4) says: ἐστὶ δὲ δημοκρατία μὲν πολιτεία ἐν ἡ ἑλλήν ἀνεξαρτήτως τὰς ἁρετές, ἀλλαγής ἐν ἡ ὑπὸ τιμάσσων. In another passage (Pol. vi. 1), after mentioning the essential principles on which a democracy is based, he goes on to say: "The following points are characteristic of a democracy; that all magistrates should be chosen out of the whole body of citizens; that all should rule each, and each in turn rule all; that either all magistrates, or those not requiring experience and professional knowledge, should be assigned by lot; that there should be no property qualification, or but a very small one, for filling any magistracy; that the same man should not fill the same office twice, or should fill offices but few times, and few offices, except in the case of military commands; that all, or as many as possible of the magistrates, should be of brief duration; that all citizens should be qualified to serve as dícaсты; that the supreme power in everything should reside in the public assembly, and that no magistrate should be entrusted with irresponsible power except in very small matters. (Comp. Plat. Resp. viii. pp. 558, 562, 563, Leg. iii. p. 690, c. vi. p. 757, et.) Aristotle (Pol. iv. 3, 4, 5, vi. 1, 2) describes the various modifications which a democracy may assume. It is somewhat curious that neither in practice nor in theory did the representative system attract any attention among the Greeks.

That diseased form of a democracy, in which from the practice of giving pay to the poorer citizens for their attendance in the public assembly, and from other causes, the predominant party in the state came to be in fact the lowest class of the citizens (a state of things in which the democracy in many respects resembled a tyranny; see Arist. Pol. iv. 4) was by later writers (Polyb. vi. 4, 57; Plut. de Mor. v. 5, De Magn. Eth. p. 200, Oeconom. (δήμοιστα — the dominium of the mob: but the term is not found in Aristotle. (Wachsmuth, Hellenische Alterthumsk. c. 7, 8; K. F. Hermann, Lehrbuch der Griech. Staatsalterthümer, §§ 52, 66—72; Thrivil, History of Greece, vol. i. c. 10.) [C. P. M.]

DEMONSTRATIO. [Aucto.]

DEMOPOIETOS (δημοποιήτως), the name given to a foreigner who was admitted to the rights of citizenship at Athens by a decree of the people, on account of services rendered to the state. Such citizens were, however, excluded from the phratries, and could not hold the offices of either archon or priest (Dem. c. Neuter. p. 1376), but were registered in a phyle and dème. (Civitas, Greek, p. 288, b.)

DEMO'SI (δῆμοσιος), public slaves at Athens, who were purchased by the state. Some of them filled subordinate places in the assembly and courts of justice, and were also employed as heralds, checking clerks, &c. They were usually called δημοσιοὶ ὀικεῖοι, and, as we learn from Ulpian (ad Dem. Olynth. ii. p. 15), were taught at the expense of the state to qualify them for the discharge of such duties as have been mentioned. (Hemsterh. ad Polluc. ix. 10; Maussac. ad Harpocrat. s. v. δῆμοσιος; Petius, Leg. Att. p. 342.) As these public slaves did not belong to any one individual, they appear to have possessed certain legal rights which private slaves had not. (Meier, Att. Process, pp. 401, 560; Aeschin. c. Timarch. pp. 79, 85.)

Another class of public slaves formed the city guard; it was their duty to preserve order in the public assembly, and to remove any person whom the Prytaneis might order. (Schneider, Ad Xen. Mem. iii. 6, § 1; Plato, Protag. p. 319, and Heindorf's note; Aristoph. Acharn. 54, with the commentators.) They are generally called bowmen (τοξοταῖοι); or from the native country of the majority, Scythians (Σκύθαι); and also Speusinians, from the name of the person who first established the force. (Pollux, viii. 131, 132; Photius, s. v. τοξοταῖοι.) There were also among them many Thracians and other barbarians. They originally lived in tents in the market-place, and afterwards upon the Areopagus. Their officers had the name of toxarch (τοξοχαρχη). Their number was at first 300, purchased soon after the battle of Salamis, but was afterwards increased to 1200. (Aeschin. Περὶ Ἀρχαλαθίας, p. 335; Andoc. De Pac. p. 93; Böckh, Publ. Econ. of Athens, pp. 207, 208, 2d edit.)

DEUS. The word δῆμος originally indicated a district or tract of land, and is by some derived from δῆος, as if it signified an "enclosure marked..."
off from the waste," just as our word town comes, according to Horne Tooke, from the Saxon verb "tyran." to enclose. (Arnold, ed Thuc. vol. i. Appendix, iii.) It seems, however, more simple to connect it with the Doric δα for γά. In this meaning of a country district, inhabited and under cultivation, δήμος is contrasted with πόλις: thus we have ἄνδρων δήμων τε πόλιων τε (His. Op. et Dies, 527); but the transition from a locality to its occupants is easy and natural, and hence in the earlier Greek poets we find δήμος applied to the outlying country population, who tilled the lands of the chieftains or inhabitants of the city; so that δήμος and πόλις came to be opposed to each other, the former denoting the subject peasantry, the latter, the nobles in the chief towns.

The Demi (ὁ δήμος) in Attica were subdivisions of the tribes, corresponding to our townships or hundreds. Their institution is ascribed to Theseus; but we know nothing about them before the age of Cleisthenes, who broke up the four tribes of the old constitution, and substituted in their place ten local tribes (φυλαι τοικαλη), each named after some Attic hero. (Herod. iv. 66, 69.) These were subdivided each into ten demi or country parishes, possessing each its principal town; and in some one of these demi were enrolled all the Athenian citizens resident in Attica, with the exception, perhaps, of those who were natives of Athens itself. (Thirlwall, Hist. of Greece, vol. ii. p. 74.) These subdivisions corresponded in some degree to the ναυπαραι of the old tribes, and were, according to Herodotus, one hundred in number; but as the Attic demi amounted in the time of Strabo (ix. p. 396, c.) to 174, doubts have been raised about this statement. Niebuhr has inferred from it that the tribes of Cleisthenes did not originally include the whole population of Attica, and * that some of the additional 74 must have been cantons, which had previously been left in a state of dependence; by far the chief part, however, were houses (γένοις) of the old aristocracy, which were included in the four Ionian tribes, but, according to Niebuhr, were not incorporated in the ten tribes of the "rural commonality," till after the time of Cleisthenes. This inference, however, seems very questionable; for the number of the demi might increase from a variety of causes, such as the growth of the population, the creation of new tribes, the division of the larger into smaller demi; to say nothing of the improbability of the co-existence of two different orders of tribes. "Another fact, more difficult to account for, is the transposition by which demes of the same tribe were found at opposite extremities of the country." (Thirlwall, l.c., and app. i. vol. ii.) The names of the different demes were taken, some from the chief towns in them, as Marathon, Eleusis, and Acharnae; some from the names of houses or clans, such as the Daedaleis, Boutadae, &c. The largest of all was the demus of Acharnae, which in the time of the Peloponnesian war, was so extensive as to supply a force of no less than three thousand heavy-armed men. (Comp. Thuc. ii. 191.)

In explanation of their constitution and relation to the state in general, we may observe, that they formed independent corporations, and had each their several magistrates, landed and other property, with a common treasury. They had likewise their respective convocations convened by the Demarchs (δημαρχοι), in which was transacted the public business of the demus, such as the leasing of its estates, the elections of officers, the revision of the registers or lists of Demotae (δημαται), and the admission of new members. [DEMARCHE.] Moreover, each demus appears to have kept what was called a πίνακες έκκλησιστικοί, or list of those Demotae who were entitled to vote at the general assemblies of the whole people. In a financial point of view, they supplanted the old "maecenaries" of the four tribes, each demus being required to furnish to the state a certain quota of money, and contingent of troops, whenever necessary. Independent of these bonds of union, each demus seems to have had its peculiar temples, and religious worship (δηματικα λειψι, Paus. i. 31; Pollux, viii. 108), the officiating priests in which were chosen by the Demotae (Dem. e. Eubul. p. 1313); so that both in a civil and religious point of view, the demi appear as minor communities, whose magistrates, moreover, were obliged to submit to a δουλουρία, in the same way as the public officers of the whole state. But besides the magistrates, such as demarchs and treasurers (ταμιάμια), elected by each parish, we also read of judges, who were called δημαρχοι κατά δήμους; the number of these officers, originally thirty, was afterwards increased to forty, and it appears that they made circuits through the different districts, to administer justice in all cases where the matter in dispute was not more than ten drachmae in value, more important questions being reserved for the διαυτήρας. (Hdt. c. 37.)

On the first institution of the demi, Cleisthenes increased the strength of the δήμος, or commonality, by making many new citizens, amongst whom are said to have been included not only strangers and resident foreigners, but also slaves. (Arist. Pol. iii. 1.) Now admission into a demus was necessary, before any individual could enter upon his full rights and privileges as an Attic citizen; and though in the first instance, every one was enrolled in the register of the demus in which his property and residence lay, this relation did not continue to hold with all the Demotae; for since a son was registered in the demus of his real or adoptive father, and the former might change his residence, it would often happen that the members of a demus did not all reside in it. Still this would not cause any inconvenience, since the meetings of each demus were not held within its limits, but at Athens. (Dem. e. Eubul. p. 1392.) No one, however, could purchase property situate within a demus to which he did not himself belong, without paying to the demarch a fee for the privilege of doing so (ἐγκυπτηρίαν), which would, of course, go to the treasury of the demus. (Böckh, Publ. Econ. of Athens, p. 297, 2nd ed.)

Two of the most important functions of the general assemblies of the demi, were, the admission of new members and the revision of the names of members already admitted. The register of enrolment was called αναγραφοι γραμματεία, because any person whose name was inscribed in it could enter upon an inheritance and enjoy a

* Πολλοις ἀφουλέτευσε ἐξένοι καὶ δούλους μετοίκους. This passage has given rise to much dispute, and has been considered by many critics to afford no sense; but no emendation which has been proposed is better than the received text. See Grote, History of Greece, vol. iv. p. 170.
patrimony, the expression for which in Attic Greek was 

τῆς λήξεως ἱκέων: λαγχάνεις κληρον,

being equivalent to the Roman phrase ordine hereditatis. These registers were kept by the demarchs, who, with the approbation of the members of the demus assembled in general meeting, inserted or erased names according to circumstances.

Thus, when a youth was proposed for enrolment, it was competent for any demote to object to his admission on the ground of illegitimacy, or non-citizenship, by the side of either parent. The Demotae decided on the validity of these objections by a majority of votes. (Demosth. c. Eud. p. 1318.) The same process was observed when a citizen changed his demus in consequence of adoption. (Isaeus, De Apoll. Herod. p. 66, 17.) Sometimes, however, a demarch was bribed to place, or assist in placing, on the register of a demus, persons who had no claim to citizenship. (Demosth. c. Leoch. p. 1091.) To remedy this admission of spurious citizens (παρεγγυηται) the διαψεύδητος was instituted. (Διαψευδήσις.) Lastly, crowns and other honorary distinctions could be awarded by the deme in the same way as by the tribes. (K. F. Hermann, Griech. Staats ueralterth. § 111, &c.; Wachsmuth, Hellen. Alterthums, vol. ii. p. 544, &c., 2nd ed.; Leake, The Demes of Attica, London, 1841, 2nd ed.; Roes, Die Demen von Attika.)

DENARIUS, the principal silver coin among the Romans, was so called because it was originally equal to ten asses; but on the reduction of the weight of the as [As], it was made equal to sixteen asses, except in military pay, in which it was still reckoned as equal to ten asses. (Plin. H. N. xxxiii. 13.) The denarius was first coined five years before the first Punic war, B.C. 269. [Aa.

Mr. Hussey calculates the average weight of the denarii coined at the end of the commonwealth at 60 grains, and those under the empire at 52.5 grains. If we deduct, as the average, 5, of the weight for alloy, from the denarius of the commonwealth, there will remain 58 grains of pure silver; and since the shilling contains 807 grains of pure silver, the value of the best denarius will be 58

60.6 grains of a shilling, or 8.6245 pence; which may be reckoned in round numbers 8 d. If the same method of reckoning be applied to the later denarius, its value will be about 7.5 pence, or 7 1/4d. (Hussey, pp. 141, 142.)

The Roman coins of silver went at one time as low down as the fortieth part of the denarius, the teruncius. They were, the quinarius or half denarius, the sestertius or quarter denarius [Sester
tius], the libella or tenth of the denarius (equal to the as), the semella or half libella, and the terun

cius or quarter libella.

The quinarius was also called victoriatus (Cic. Pro Font. 5), from the impression of a figure of Victory which it bore. Pliny (H. N. xxxiii. 13) says that victoriati were first coined at Rome in pursuance of the lex Clodia; and that previous to that time, they were imported as an article of trade from Illyria. The Clodius, who proposed this law, is supposed to have been the person who obtained a triumph for his victories in Istria, whence he brought home a large sum of money (Liv. xii. 13); which would fix the first coinage of the victoriati at Rome, B.C. 177; that is, 92 years after the first silver coinage.

If the denarius weighed 60 grains, the teruncius would only have weighed 1 1/2 gr.; which would have been so small a coin, that some have doubted whether it was ever coined in silver; for, we know that it was coined in copper. [As.] But Varro (De Ling. Lat. v. 174, ed. Müller) names it among the silver coins with the libella and semella. It is, however, improbable that the teruncius continued to be coined in silver after the as had been reduced to 1/12th of the denarius; for then the teruncius would have been 1/24th of the denarius, whereas Varro only describes it as a subdivision of libella, when the latter was 1/12th of the denarius. In the time of Cicero, the libella appears to have been the smallest silver coin in use (Cic. Pro Rosc. Com. c. 4); and it is frequently used, not merely to express a silver coin equal to the as, but any very small sum. (Plaut. Cas. ii. 5, 7, Copt. v. 1. 27.) Gronovius (De Sestertiis, ii. 2), however, maintains that there was no such coin as the libella when Varro wrote; but that the word was used to signify the tenth part of a sestertius. No specimens of the libella are now found.

If the denarius be reckoned in value 8 d., the other coins which have been mentioned, will be of the following value:

It has been frequently stated that the denarius
is equal in value to the drachma; but this is not quite correct. The Attic drachma was almost equal to 8.4., whereas we have seen that the denarius was but little above 8.2. The later drachmae, however, appear to have fallen off in weight; and there can be no doubt that they were at one time nearly enough equal to pass for equal. Gronovius has given all the authorities upon the subject in his De Sestertii (iii. 2).

The earliest denarii have usually, on the reverse, the head of Rome with a helmet, the Dioscuri, or the head of Jupiter. Many have, on the reverse, chariots drawn by two or four horses (bigae, quadrigae), whence they are called respectively bigati and quadrigati, sc. nummi. [BIGATUS.] Some denarii were called servati (Tacit. Germ. 5), because their edges were notched like a saw, which appears to have been done to prove that they were solid silver, and not plated. Many of the gentle denarii, as those of the Aelian, Calpurnian, Papinian, Tullian, and numerous other gentes, are marked with the numeral X, in order to show their value.

Pliny (H. N. xxxii. 13) speaks of the denarius aureus. Gronovius (De Sest. iii. 15) says, that this coin was never struck at Rome; but there is one of Augustus in the British Museum, weighing 60 grains, and others of less weight. The average weight of the denarius of Trajan was 120 grains. [AURUM.] In later times, a copper coin was called denarius. (Ducange, s. v. Denarius.)

DENICA'LES FE'RIAE. [FERIAE.]

DENTIFRI'CIIUM (δοντιστήριον), denticrife or tooth-powder, appears to have been skillfully prepared and generally used among the Romans. A variety of substances, such as the bones, hoofs, and horns of certain animals, crabs, egg-shells, and the shells of the oyster and the murex, constituted the basis of the preparation. Having been previously burnt, and sometimes mixed with honey, they were reduced to a fine powder. Though fancy and superstition often directed the choice of these ingredients, the addition of astrigents, such as myrrh, or of nitre and of hartshorn ground in a raw state, indicates science which was the result of experience, the intention being not only to clean the teeth and to assuage tooth-ache, but also to fix them when loose, to strengthen the gums, and to make them more durable. (Pline. H. N. xxviii. 49, xxxi. 46, xxxii. 21, 26.) Poundum pumice was a more dubious article, though Pline (xxxvi. 42) says, "Utilissima fiunt ex his dentifricia." [J. Y.]

DEPENSI ACTIO. [INTERCESSIO.]

DEPORTA'TIO. [EXSILIUM.]

DEPOSITUM. The notion of depositum is this: a moveable thing is given by one man to another, amidst a crowd of admiring spectators, to one to another, amongst a crowd of admiring spectators. (H. N. xvi. 679—684.) In the games of the Roman circus this sport was also very popular. The Roman desultor generally rode only two horses at the same time, sitting on them without a saddle, and vaulting upon either of them at his pleasure. (Suet. De Milit. Rom. iv. 4.)

DESERTOR, is defined by Modestinus to be one "qui per prolixum tempus vagatus, reductur," and differs from an emansor, "qui diu vagatus ad castra egressur." (Dig. 49. tit. 16. s. 3.) Those who deserted in time of peace, were punished by loss of rank, corporal chastisement, fines, ignominious dismissal from the service, &c. Those who left the standards in time of war were usually punished with death. The transfigur, or deserters to the enemy, when taken, were sometimes deprived of their hands or feet (Liv. xxvi. 12), but generally were put to death. (Lipsius, De Milit. Rom. iv. 4.)

DESIGNATOR. [FUNUS.]

DESNO'TER'ION (δησμοτηρίον). [CARCER.]

POS'ONAUTAE (βεσπονωνατα). [CIVITAS.]

DEPOSITIONS (seoyiioctjpioi). [CARCER.]
DIADEMA. 

applied to the purposes of war. Livy mentions a troop of horse in the Numidian army, in which each soldier was supplied with a couple of horses, and in the heat of battle, and when clad in armour, would leap with the greatest ease and celerity from that which was wearied or disabled upon the back of the horse which was still sound and fresh. (xxii. 29). The Scythians, Armenians, and some of the Indians, were skilled in the same art.

The annexed woodcut shows three figures of desultores, one from a bronze lamp, published by Bartoli (Antiche Lucerne Sepolcrali, i. 24), the others from coins. In all these the rider wears a pileus, or cap of felt, and his horse is without a saddle; but these examples prove that he had the use both of the whip and the rein. On the coins we also observe the wreath and palm-branch as ensigns of victory. [J. Y.]

DIADICTASIA (διαδίκταια), in its most extended sense is a mere synonym of δίκη; technically, it denotes the proceedings in a contest for preference between two or more rival parties; as, for instance, in the case of several claiming to succeed as heirs or legatees to the estate of a deceased person. Upon an occasion of this kind, it will be observed that, as all the claimants are similarly situated with respect to the subject of dispute, the ordinary classification of the litigants as plaintiffs and defendants becomes no longer applicable. This, in fact, is the essential distinction between the proceedings in question and all other suits in which the parties appear as immediately opposed to each other; but as far as forms are concerned, we are not told that they were peculiarly characterised. Besides the case above mentioned, there are several others to be classed with it in respect of the object of proceedings being an absolute acquisition of property. Among these are to be reckoned the claims of private creditors upon a confiscated estate, and the contests between informers claiming rewards proposed by the state for the discovery of crimes, &c., as upon the occasion of the mutilation of the Hermae (Andoc. 14) and the like. The other class of causes included under the general term consists of cases like the antidosis of the trierarchs [ANTIDOSIS], contests as to who was to be held responsible to the state for public property alleged to have been transferred on one hand and denied on the other (as in Dem. c. Everg. et Mnose.), and questions as to who should undertake a choregia, and many others, in which exemptions from personal or pecuniary liabilities to the state were the subject of claim by rival parties. In a diadica, as in an ordinary θιαρα, the proper court, the presiding magistrate, and the expenses of the trial, mainly depended upon the peculiar object of the proceedings, and present no leading characteristics for discussion under the general term. (Platner, Process und Klagen, ii. p. 17. a. 9.) [DIKE].

DIADOSES (διαδοσεῖς). [DIANOAE].

DIETA. [DOMUS].

DIAETETICA, or DIAETETICE (διαέτης), one of the principal branches into which the ancients divided the art and science of medicine. [MEDICINA.] The word is derived from διαέτης, which meant much the same as our word diet. It is defined by Celsus (De Medici, Praefat. in lib. i.) to signify that part of medicine quo vieta medetur, "which cures diseases by means of regimen and diet;" and a similar explanation is given by Plato (ap. Diog. Laerc. iii. 1. § 85.) Taken strictly in this sense, it would correspond very nearly with the modern dietetics, and this is
the meaning which it always bears in the earlier medical writers, and that which will be adhered
to in the present article; in some of the later au-
thors, however, as Colebrooke, it is considered as the second grand
division, Pharmaceutica, and is used by Scribonius Largus (De Compos.
Medicam. § 200) simply in opposition to chirurgia, so as to answer exactly to
the province of our physicin.
No attention seems to have been paid to this
branch of medicine before the date of Hippo-
cratean. Homer represents Machaon, who had been
wounded in the shoulder by an arrow (H. i. 507) and
forced to quit the field, as taking a draught
composed of wine, goat's-milk cheese, and flour
(ibid. 638), which certainly no modern surgeon
would prescribe in such a case. (See Plat. De
Repulul. iii. pp. 405, 406; Max. Tyr. Serm. 29;
Athen. i. p. 10.) Hippocrates seems to claim for
himself the credit of being the first person who
had studied this subject, and says that "the an-
cients had written nothing on it worth mention-
ing" (De Rat. Vcit. in Morb. Acut. vol. ii. p. 26,
ed. Kühn). Among the works commonly ac-
scribed to Hippocrates, there are four that bear upon this
subject. It would be out of place here to attempt
any thing like a complete account of the opinions
of the ancients on this point; those who wish for
more detailed information, must be referred to the
different works on medical antiquities, while in
this article mention is made of only such parti-
culars as may be supposed to have some interest
for the general reader.
In the works of Hippocrates and his successors
almost all the articles of food used by the ancients
are mentioned, and their real or supposed pro-
erties discussed, sometimes quite as fancifully as
by Burton in his Anatomy of Melancholy. In
some respects they appear to have been much less
delicate in their tastes than the moderns, as we
find the flesh of the fox, the dog, the horse, and
the ass spoken of as common articles of food.
679, 680.) With regard to the quantity of wine
drank by the ancients, we may arrive at some-
thing like certainty from the fact that Caecilius
Aureliianus mentions it as something extraordinary
that the famous Asclepiades at Rome in the first
century B.C., sometimes ordered his patients to
double and treble the quantity of wine, till at last
they drank half wine and half water (De Morb.
Chron. lib. iii. c. 7. p. 306), from which it appears
that wine was commonly diluted with five or six
times its quantity of water. Hippocrates recom-

DIAETETAE.

DIAETETAE (διαετηται), arbitrators, umpires. The diaetetae mentioned by the Athenian

ling, are also much insisted upon by the writers on
diet and regimen; but for further particulars on
these subjects the articles BALNEAE and GYMNA-
SIA must be consulted. It may, however, be
added that the bath could not have been very
common, at least in private families, in the time of
Hippocrates, as he says (De Rat. Vicit. in Morb.
Acut. p. 62) that "there are few houses in which
the necessary conveniences are to be found."
Another very favourite practice with the an-
cients, both as a preventive of sickness and as a
remedy, was the taking of an emetic from time to
time. The author of the treatise De Vicit Ratu-
tone, falsely attributed to Hippocrates, recom-

orators, were of two kinds; the one public and appointed by lot (καρπωτοί), the other private and chosen (αὑριστοί) by the parties who referred to them the decision of a disputed point, instead of trying it before a court of justice; the judgments of both, according to Aristotle, being founded on equity rather than law (δὸ γὰρ διαιτήσις τὸ ἐπείκεια ὡρᾶ, δὲ δὲ δικαίως τῶν νόμων, Rhétor. i. 13). We shall, in the first place, treat of the public Diætetae, following as closely as possible the order and statements of Hudtwalcker in his treatise "Über die öffentlichen und Privat-Schiedsrichter Diäteten in Athen, und den Procestvorgang." According to Suidas (s. v.), the public Diætetae were required to be not less than 50 years of age; according to Pollux (viii. 126) and Hesychius, not less than 60. With respect to their number there is some difficulty, in consequence of a statement of Ulpian (Demosth. c. Meid. p. 542. 15), according to which it was 440, i. e. 44 for each tribe, ἵνα δὲ τέσσαρες καὶ τεσσαράκοντα, καθ' ἐκάστην φυλήν. This number, however, appears so unnecessarily large, more especially when it is considered that the Attic orators frequently speak of only one arbitrator in each case, that some writers have, with good reason, supposed the reading should be — ἵνα δὲ τεσσαράκοντα, τέσσαρες κ. ἑ. Φ. At any rate, litigious as the Athenians were, it seems that 40 must have been enough for all purposes. The words καθ' ἐκάστην φυλήν, imply that each tribe had its own arbitrator; an inference which is supported by Demosthenes (c. Euphr. p. 1142. 23), where he speaks of the arbitrators of the Oeneid and Erechteid tribes: as well as by Lyssias (c. Funed. p. 731), who, in the words προσκλησθένων αὐτῶν πρὸς τοὺς τῇ ἑποδωματίᾳ δικαίων, is thought to allude to the Diætetae of the Hippothoontid tribe. With regard to the election of these officers, it is doubtful whether they were chosen by the members of the tribe for which they adjudicated, or in a general assembly of the people. Hudtwalcker inclines to the latter supposition, as being more probable; we do not think so; for it seems just as likely, if not more so, that the four arbitrators of each tribe were chosen in an assembly of the tribe itself. Again, whether they were appointed for life, or only for a definite period, is not expressly mentioned by the orators; but as none of the Athenian magistrates, with the exception of the Areopagites, remained permanently in office, and Demosthenes (c. Meid. p. 542. 15) speaks of the last day of the 11th month of the year as being the last day of the Diætetae (ἡ τελευταία ἡμέρα τῶν διαίτησιν), it seems almost certain that they were elected for a year only. The only objection to this conclusion arises from a statement in a fragment of Isaeus (p. 361, ed. Reiske), where an arbitrator is spoken of as being engaged on a suit for two years (δῶ ἢ την τοῦ διαιτήσιν τῶν δικαιών ἢ εἰσαγών); if, however, we admit the conjectural reading ἡ διαιτήσις τῶν δικαιών, the meaning would be in accordance with what we infer from other authorities, and would only imply that the same cause came before the arbitrators of two different years, a case which might not infrequently happen; if, on the contrary, the reading of the text is correct, we must suppose that it was sometimes necessary or convenient to re-elect an arbitrator for the decision of a particular case. It is doubtful whether the public Diætetae took any general oath before entering upon their duties. Such a guarantee would seem to be unnecessary; for we read of their taking oaths previous to giving judgment in the particular cases which came before them. (Isaeus, De Diosc. Hered. p. 54; Dem. c. Callip. p. 1244.) From this circumstance we should infer that no oath was exacted from them before they entered upon office; Hudtwalcker is of a contrary opinion, and suggests that the purport of their oath of office was the same as that of the Heliastic oath given by Demosthenes (c. Timoec. p. 747). The Diætetae of the different tribes appear to have sat in different places; as temples, halls, and courts of justice, if not wanted for other purposes. Those of the Oeneid and Erechteid tribes met in the heilaeca (Dem. c. Euphr. p. 1142. 25); we read of others holding a court in the delphiun (c. Boeot. ii. p. 1011), and also in the στάδια τοίχων (c. Steph. i. p. 1106). Again, we are told of slaves being examined by the Diætetae sitting for that purpose, under the appellation of βασικωσταί [Tortmentum], in the hephaistion, or temple of Poseidon. (Isocr. Trag. p. 361. 21, ed. Bekker.) Moreover, we are told of private arbitrators meeting in the temple of Athena on the Areopoli; and, if the amended reading of Pollux (viii. 126) is correct, we are informed by him, in general terms, that the arbitrators formerly held their courts in the temples (Διατήσις ἐν ἵσοι παλαι). Harpocratie also (s. v.) contrasts the diacts with the arbitrators, observing that the former had regularly appointed courts of justice (ἀποδειγμένα). Another point of difference was the mode of payment, inasmuch as the diacts received an allowance from the state, whereas the only remuneration of the Diætetae was a drachma deposited as a παράπτωσις by the complainant, on the commencement of the suit, the same sum being also paid for the ἄντωμος, and every ἄντωμος sworn during the proceedings. (Pollux, viii. 39, 127; Harpocr. s. v.) This παράπτωσις is the same as the δραχμή τοῦ λειτουργίου mentioned by Demosthenes (c. Timola. p. 1190). The defendant in this case had failed to give evidence as he ought to have done, and therefore the plaintiff commenced proceedings against him for this neglect, before the arbitrators in the principal suit, the first step of which was the payment of the παράπτωσις. The public arbitrators were ὑπηκόουμενοι, i. e. every one who had, or fancied he had, a cause of complaint against them for their decisions, might proceed against them by εἰσαγγελία, or information laid before the senate. For this purpose, says Ulpian, whose statement is confirmed by Demosthenes (c. Meid.) in the case of Straton, the public Diætetae were towards the close of their year of office, and during the latter days of the month Thargelion, required to present themselves in some fixed place, probably near the senate-house, that they might be ready to answer any charge brought against them, of which they received a previous notice. The punishment, in case of condemnation, was atitnia, or the loss of civic rights. Harpocratie (s. v.), however, informs us that the εἰσαγγελία against the arbitrators was brought before the diacts or judges of the regular courts, but this probably happened only on appeal, or in cases of
great importance, inasmuch as the υπόθησιν could not
inflict a greater penalty than a fine of 500
drachmae with atimia.

As to the extent of the jurisdiction of the
Diaetetae, Pollux (viii. 126) states, that in former
times no suit was brought into a court before it
had been investigated by the Diaetetae (πάλαι
οὖν δεμα δίκη πρὶν ἔπει διακήται ἔλθειν εἰσήγεται).
There can be but little doubt that the word πάλαι
here refers to a time which was ancient with re-
ference to the age of the Athenian orators, and
therefore that this previous investigation was no
longer requisite in the days of Demosthenes and his
counterparts. Still there were cases of the Diaetetae
mentioned by them in many cases of civil
actions, and it is not unlikely that the magistrates,
whose duty it was to bring actions into court
(εἰσάγεται), encouraged the process before the ar-
bitrators, as a means of saving the state the pay-
ment which would otherwise have been due to the
dicasts. Hudtwalcker is accordingly of opinion
that the Diaetetae were competent to act in all
cases of civil actions for restitution or compensa-
tion, but not of penal or criminal indictments
(γραφαι), and, moreover, that it rested with the
complainant whether his cause was brought before
them in the first instance, or sent at once to a
higher court of judicature. (Dem. c. André.
p. 601. 18.)

But besides hearing cases of this sort the
Diaetetae sat as commissioners of inquiry on mat-
ters of fact which could not be conveniently ex-
amined in a court of justice (Dem. c. Steph.
p. 1106), just as what is called an "issue" is sometimes
directed by our own Court of Chancery to an in-
ferior court, for the purpose of trying a question of
fact, to be determined by a jury. Either party in
a suit could demand or challenge (προκαλέωθαι)
an inquiry of this sort before an arbitrator, the
award was final, and no appeal could be brought
before another court, though the unsuccessful party
might, in some instances, move for a new trial
Except in this point, of non-appeal, an arbitrator
who was selected from the public Diaetetae by
litigant parties, seems to have been subject to the
same liabilities, and to have stood in the same re-
lation to those parties as an arbitrator appointed by
lot: the course of proceeding also appears to have
been the same before both (Dem. c. Medid. p. 541),
an account of which is given below. It must, how-
ever, be first stated, that there are strong reasons
in support of Hudtwalcker's opinion, that when-
ever a suitor wished to bring an action before one
or more of the public Diaetetae, he applied to one
of the many officers called εἰσαγωγείς (Dem. c.
Lacrit. p. 940. 5, c. Pantaen. p. 976. 10 ; Pollux,
viii. 93), whose duty it was to bring the cause
(εἰσάγει) into a proper court. By some such
officer, at any rate, a requisite number of arbitra-
tors was allotted to the complainant, care being
taken that they were of the same tribe as the de-
defendant. (Harpoocr. s. v. εἰσαγωγή;) Pollux (viii.
126) informs us that if a Diaetetes refused to
hear a cause, he might be punished with atimia:
but it appears that under extraordinary circum-
stances, and after hearing the case, a Diaetetes
sometimes refused to decide himself, and referred
the parties to a court of justice. (Dem. c. Phorm.
p. 913.)

The process before the public Diaetetae was
conducted in the following manner. After com-
plaint made, and payment of the παράστασις, the
plaintiff supported his averment by an oath, to the
effect that his accusation was true, which the de-
defendant met by a like oath as to the matter of his
defence. When the oath (ὁμοθύμα) had been
been thus taken by the parties, the arbitrators entered
upon the inquiry, heard witnesses, examined docu-
ments, and held as many conferences (συνοδοι)
with the parties, as might be necessary for the set-
tlement of the question. (See authorities, Hud-
twalcker, p. 80.) The day of pronouncing judgment
(ἡ ἀπόφασις τῆς δίκης, Dem. c. Ecery. p. 1153)
was probably fixed by law, if we may judge from

DIAETETAE.

DIAETETAE.
the name (ἡ κυρία σειλ. ἡμέρα) by which it is called in the orators; it might, however, with consent of both parties, be postponed. The verdict given was countersigned by the proper authorities, perhaps by the ἑσαγγεῖοι, and thereby acquired its validity. The archons, mentioned by Demosthenes (c. Meid. p. 542) as having signed a judgment, were probably thesmotheteis, as the action was a δίκη κακουγορία, which is, moreover, called an ἀπίμμενος δίκαι μιν δίκαι, i.e. an action where the plaintiff was not required to assess the damages (ανεπίμετα λημένοι), the penalty, in case of a verdict for him, being determined by law: this alone is sufficient to prove that the Diacetae sometimes decided in cases where the plaintiff sued for damages, as distinguished from those in which he sought restitution of rights or property; nor, indeed, does there seem any reason for supposing that their jurisdiction was not extended to the ἁγιεῖσι τιμησό, or actions where the plaintiff was required to assess or lay his damages, provided the assessment did not exceed some fixed amount. In support of this opinion we may adduce the authority of Pollux (VIII. 60), who expressly states that the plaintiff might assess his damages before the arbitrators, when the law did not do so for him.

If the defendant were not present on the proper day to make his last defence, judgment went against him by default (ἐρήμων ἀπελευθέρωσε), the arbitrator being obliged to wait till the evening (ἐβδόμη ἡμέρα, D. c. Meid. p. 541, c. Timoth. p. 1190). Sometimes, however, the time of pronouncing sentence was deferred in consequence of a deposition (ὑπωμοσχῶ, Pollex, VIII. 60; Harpoc. s. e.) alleging a satisfactory cause for postponement, such as sickness, absence from the town, military service, or other reasons. To substantiate these, the applicant, when possible, appeared personally; but if a party was prevented from appearing on the day of trial, by any unexpected event, the ὑπωμοσχῶ might be made on oath by authorised friends. (Dem. c. Olym. p. 1174. 4; Pollex, VIII. 56.) The ὑπωμοσχῶ might be met by a counter-statement (ἀνθυμοσχῶν) from the opposite party affirning his belief that the reasons alleged were fictitious or colourable. In connection with this point, we may observe that, according to Pollex (VIII. 60), the motion for a new trial could only be sustained in cases where the applicant had made a ὑπωμοσχῶ, and demurred either personally or by proxy against the passing of judgment on the regular day. Moreover, it was incumbent on the party who wished for a new trial to move for it within ten days after judgment had been pronounced, and even then he was obliged to take a kind of ὑπωμοσχῶ, to the effect that his absence on the proper day was involuntary. (Pollex, VIII. 60.) In default of compliance with these conditions, the previous sentence was confirmed. (Dem. c. Meid. p. 542.) We are told also by Photius (Lex. s. v., μή ἐκαίναι δίκαιον), that it was competent for plaintiff as well as defendant to move for a new trial on the grounds we have mentioned. When it was granted, the former verdict was set aside (ὦ ἐρήμων ἀπελευθέρωσε), and the parties went again before an arbitrator, probably through the instrumentality of the ἑσαγγεῖοι, to whom application had been made in the first instance. The process itself is called ἀνακατακαθήθηκας in Greek, and does not seem to have been confined to trials before the Diacetae; the corresponding term in Roman law is restauratio evenedici.

This, however, was not the only means of setting aside a judgment, inasmuch as it might also be affected by an ἔφεσις, or appeal to the higher courts (Ἀπελλαττὸν [GREEK]), and if false evidence had been tendered, by a δική κακουγορία (Harpoc. s. v.; Dem. c. Timoth. p. 1201. 5).

It remains to speak of the strictly private arbitrators, chosen by mutual agreement between contending parties, and therefore generally distinguished by the title ἀπερίολος, of whom it must be understood that they were not selected from the διακριτοί of the tribes. The powers with which they were invested, were, as we might suppose, not always the same; sometimes they were merely διαλακτάς, or chosen to effect a compromise or reconciliation: thus Isaeus (De Diacoeg. Hered. p. 54, ed. Bckk.) speaks of arbitrators offering either to bring about a reconciliation if they could, without taking an oath, or to make an award (ἀπορράφασθαι) upon oath. Sometimes, on the other hand, they were purely referees, and then their powers depended upon the terms of the agreement of reference; if these powers were limited to the arbitration of a δικαίου ἐπιτροπής (Isocr. c. Call. p. 373, ed. Bckk.). The judgment was not merely a verbal contract (stipulation), but drawn up in writing (ἐπιμετρία κατὰ συμβάσεις, Dem. c. Phor. p. 912), and signed by the parties; it fixed the number of referees (generally three), determined how many unanimous votes were necessary for a valid decision, and probably reserved or prohibited, as the case might be, a right of appeal to other authorities. (Isocr. c. Call. p. 375, ed. Bckk.; Dem. c. Apat. p. 897.)

If there were no limitations, these Dicetae were then, so to speak, arbitrators proper, according to Diagoras (Meid. c. Callip. p. 15, ed. Müller) — "Arbitrator dicitur iudex, quod totius rei decisionem habetur arbitrarium et potestatem." Moreover, no appeal could be brought against their judgment (Dem. c. Meid. p. 545); though we read of an instance of a party having persuaded his opponent to leave a matter to the arbitration of three persons; and afterwards, when he found they were likely to decide against himself, going before one of the public arbitrators. (Dem. c. Arphob. p. 862.) We should, however, suppose that in this case there was no written συμβάσις. The award was frequently given under the sanction of an oath, and had the same force as the judgment which proceeded from a court of law, so that it might be followed by a δίκη ἔξολας. (Dem. c. Callip. p. 1249. 22.) We may add, that these private Dicetae are spoken of as sitting ἐν τῷ ἱερῷ, ἐν τῷ Ἡραῖον, and that in some cases it was customary to give notice of their appointment to the proper archon or magistrate (ἀποφείνει τὸν τὴν ἁριάν), who, as Hudtwalcker suggests, may have acted as an ἑσαγγεῖος in the case. (Dem. c. Callip. p. 1244. 14, c. Meid. p. 542. 14.)

DIAGRAPHEIS (Ἐγγράφων). [EISPHORA.]

DIAMARTYRIA (Διαμαρτυρία). [ANA-CRISIS.]

DIAMASTIGOSIS (Διαμαστίγωσις), was a solemnity performed at Sparta at the festival of Artemis Orthia, whose temple was called Limnæon, from its situation in a marshy part of the town. (Paus. iii. 16. § 6.) The solemnity was this: — Spartan youths (Ἐφθανοὶ) were scourged on the occasion at the altar of Artemis, by persons appointed for the purpose, until their blood gushed
forth and covered the altar. The scourging itself was preceded by a preparation, by which those who intended to undergo the diamastigosis tried to harden themselves against its pains. Pausanias describes the origin of the worship of Artemis Orthia, and of the diamastigosis, in the following manner:—A wooden statue of Artemis, which Orestes had brought from Tauris, was found in a bush by Astrabacus and Alopecus, the sons of Iteus. The two men were immediately struck mad at the sight of it. The Limnaeans and the inhabitants of other neighbouring places then offered sacrifices to the goddess; but a quarrel ensued among them, in which several individuals were killed at the altar of Artemis, who now demanded atonement for the pollution of her sanctuary. From henceforth human victims were selected by lot and offered to Artemis, until Lycurgus introduced the scourging of young men at her altar as a substitute for human sacrifices.

The diamastigosis, according to this account, was a substitute for human sacrifice, and Lycurgus made it also serve his purposes of education, in so far as a part of the system of hardening the Spartan youths against bodily sufferings. (Plut. Lyg. 18, Instit. Laced. p. 254; Cle. Teucul. v. 27.) According to another far less probable account, the diamastigosis originated in a circumstance, recorded by Plutarch (Aristid. 17), which happened before the battle of Plataeae.

The worship of Artemis Orthia was unquestionably very ancient, and the diamastigosis only a step from barbarism towards civilisation. Many anecdotes are related of the courage and intrepidity demonstrated by the Spartan youth at the altar of Artemis. (5id56ffeis) The revenues from the scourging of young men at her altar were turned into a substitute for human sacrifice, and Lycurgus far as he made it a part of the system of hardening themselves against its pains. Pausanias describes the origin of the worship of Artemis Orthia, and of the diamastigosis, in the following manner:

Orestes had brought from Tauris, was found in a bush by Astrabacus and Alopecus, the sons of Iteus. The two men were immediately struck mad at the sight of it. The Limnaeans and the inhabitants of other neighbouring places then offered sacrifices to the goddess; but a quarrel ensued among them, in which several individuals were killed at the altar of Artemis, who now demanded atonement for the pollution of her sanctuary. From henceforth human victims were selected by lot and offered to Artemis, until Lycurgus introduced the scourging of young men at her altar as a substitute for human sacrifices.

The diamastigosis, according to this account, was a substitute for human sacrifice, and Lycurgus made it also serve his purposes of education, in so far as a part of the system of hardening the Spartan youths against bodily sufferings. (Plut. Lyg. 18, Instit. Laced. p. 254; Cle. Teucul. v. 27.) According to another far less probable account, the diamastigosis originated in a circumstance, recorded by Plutarch (Aristid. 17), which happened before the battle of Plataeae.

The worship of Artemis Orthia was unquestionably very ancient, and the diamastigosis only a step from barbarism towards civilisation. Many anecdotes are related of the courage and intrepidity demonstrated by the Spartan youth at the altar of Artemis. (5id56ffeis) The revenues from the scourging of young men at her altar were turned into a substitute for human sacrifice, and Lycurgus far as he made it a part of the system of hardening themselves against its pains. Pausanias describes the origin of the worship of Artemis Orthia, and of the diamastigosis, in the following manner:

Orestes had brought from Tauris, was found in a bush by Astrabacus and Alopecus, the sons of Iteus. The two men were immediately struck mad at the sight of it. The Limnaeans and the inhabitants of other neighbouring places then offered sacrifices to the goddess; but a quarrel ensued among them, in which several individuals were killed at the altar of Artemis, who now demanded atonement for the pollution of her sanctuary. From henceforth human victims were selected by lot and offered to Artemis, until Lycurgus introduced the scourging of young men at her altar as a substitute for human sacrifices.

The diamastigosis, according to this account, was a substitute for human sacrifice, and Lycurgus made it also serve his purposes of education, in so far as a part of the system of hardening the Spartan youths against bodily sufferings. (Plut. Lyg. 18, Instit. Laced. p. 254; Cle. Teucul. v. 27.) According to another far less probable account, the diamastigosis originated in a circumstance, recorded by Plutarch (Aristid. 17), which happened before the battle of Plataeae.

DICASTERION (δικαστηριόν). indicates both
the aggregate judges that sat in court, and the
place itself in which they held their sittings. For
the account of the former, the reader is referred to
the article DICASTER: with respect to the latter,
our information is very imperfect. In the earlier
ages there were five celebrated places at Athens set
apart for the sittings of the judges, who had cog
nizance of the graver causes in which the loss of
human life was involved, and not only in cases of
the areopagites and the ophetes. These places were
the Areopagus [Areopagus], and the είπε Παλλαδίων,
είπε Διδυμίων, είπε Πωλεμίων, and είπε Φραστοί.
The antiquity of these four last is sufficiently
vouched for by the archaic character of the divi
sion of the causes that were appropriated to each;
in the first we are told that accidental deaths were
discussed; in the second homicides confessed, but
justified; in the third there were quasi trials of
manifest things, which, by falling and the like,
had occasioned a loss of human life; in the fourth
homicides who had returned from exile, and com
mitted a fresh manslaughter, were appointed to be
tried. With respect to these ancient institutions,
of which little more than the name remained when
the historical age commenced, it will be sufficient
to observe that, in accordance with the ancient
Greek feeling respecting murder, viz., that it pur
took more of the nature of a ceremonial pollu
tion than a political offence, the presiding judge was
invariably the king archon, the Athenian rex sa
croenum; and that the places in which the trials were
held were open to the sky, to avoid the contami
nation which the judges might incur by being under
the same roof with a murderer. (Matthiae, De Jud.
Ath. p. 157.) The places, however, re
mained after the office of the judges who originally
sat there, was abolished; and they appear from
Demosthenes (c. Neer, p. 1348.21) to have been
occasionally used by the ordinary Helicasts when
trying a cause of a kind to which they were originally appropriated. The most important
court in later ages was the Heliaea, in which, we
are told by the grammarians, the weightiest
causes were decided; and if so, we may conclude
the thesmothetae were the presiding magistrates.
Besides this, ordinary Helicasts sate in the
Odeum, in the courts Trigonon, the Greater
(Megas), the Middle (Mesos), the Green, the Red,
that of Metiochus, and the Parabyston: but of
these we are unable to fix the localities, or to
what magistrates it was usual to apportion them.
They were all painted with their distinctive co
ours; and, it appears, had a letter of the alphabet
inscribed over the doorway. With the exception
of the Heliaea, and those in which causes of mur
der were tried, they were probably protected from
the weather. The dicasts sat upon wooden benches, which were covered with rags or matting
(yasicia), and there were elevations or tribunes
(βήματα), upon which the antagonist advocates
stood during their address to the court. The space
occupied by the persons engaged in the trial was
protected by a railing (βρυφάκτος) from the intru
sion of the bystanders; but in causes which bore
upon the violation of the mysteries, a further space
of fifty feet all round was enclosed by a rope, and
the security of this barrier guaranteed by the presence of the public slaves. (Meier, Att. Proc.
P. 1141.)

DICASTERES (δικαστήρια), in its broadest accep
tation a judge, more particularly denotes the Attic
functionary of the democratic period, who, with his
colleagues, was constitutionally empowered to try
and pass judgment upon all cases and questions
that the laws and customs of his country pronounced
susceptible of judicial investigation. In the circum
stance of a plurality of persons being selected from
the mass of private citizens, and associated tempo
rarily as representatives of the whole body of the
people, adjudicating between its individual mem
bers, and of such delegates swearing an oath that
they would well and truly discharge the duties
entrusted to them, there appears some resemblance
between the constitution of the Attic dicasternion
and an English jury, but in nearly all other respects
the distinctions between the two are as great as the
intervals of space and time which separate their
several nations. At Athens the conditions of his eligibi
lity were, that the dicast should be a free
citizen, in the enjoyment of his full franchise
(πτωτομαχία), and not less than thirty years of age,
and of persons so qualified six thousand were se
lected by lot for the service of every year. Of
the precise method of their appointment our notices are
somewhat obscure: but we may gather from them
that it took place every year under the conduct of
the nine archons and their official scribe; that each
of these ten personages drew by lot the names of
six hundred persons of the tribe assigned to him;
that the whole number so selected was again divided
by lot into ten sections of 500 each, together with
a supernumerary one, consisting of a thousand per
sons, from among whom the occasional deficiencies
in the sections of 500 might be supplied. To each
of the ten sections one of the ten first letters of the
alphabet was appropriated as a distinguishing mark,
and a small tablet (πενθέοιοι), inscribed with the
letter of the section and the name of the individual,
was delivered as a certificate of his appointment to
each dicast. Three bronze plates found in the
Peiraeus, and described by Dodwell (Travels, vol. i.
pp. 433—434), and supposed to have served this
purpose; the inscriptions upon them consist of the
following letters:—Δ, ΔΙΟΔΡΟΜΟΣ, ΦΡΕΑ,
Ε, ΔΕΙΝΙΑΣ, ΑΛΛΙΤΟΣ, and Β, ΑΝΤΙΧΑΡΜΟΣ
ΛΑΜΠ, and bear besides representations of owls and
Gorgon heads, and other devices symbolic of
the Attic people. The thousand supernumeraries
had in all probability some different token, but of
this we have no certain knowledge.

Before proceeding to the exercise of his func
tions the dicast was obliged to swear the official
oath; which was done in the earlier ages at a place
called Ardeuthos, without the city, on the banks

the Ilissus, but in after times at some other spot, of which we are not informed. In the time of Demosthenes the oath (which is given at full length in Dem. c. Timoc. p. 746) asserted the qualification of the dicast, and a solemn engagement by him to discharge his office faithfully and incorruptibly in general, as well as in certain specified cases which bore reference to the appointment of magistrates, a matter in no small degree under the control of the dicast, inasmuch as few could enter upon any office without having had their election submitted to a court for its approbation [Docimasia]; and besides these, it contained a general promise to support the existing constitution, which the dicast would of course be powerless to enable to stand, when persons were accused before him of attempting its subversion. This oath being taken, and the divisions made as above mentioned, it remained to assign the courts to the several sections of dicasts in which they were to sit. This was not, like the first, an appointment intended to last during the year, but took place under the conduct of the thesmothetae, de novo, every time that it was necessary to impanel a number of dicasts. In ordinary cases, when one, two, or more sections of 500 made up the complement of judges appropriate to the trial of the particular kind of cause in hand, the process was extremely simple. Two urns or caskets (ανεμώρθηρια) were produced, one containing tickets inscribed with the distinctive letters of the sections; the other furnished, in like manner, with similar tickets to indicate the courts in which the sittings were to be held. If the cause was to be tried by a single section, a ticket would be drawn simultaneously from each urn, and the result announced, that section, for instance, to sit in court Τ; if a thousand dicasts were requisite, two tablets would, in like manner, be drawn from the urn that represented the sections, while one was drawn from the other as above mentioned, and the announcement might run that sections A and B were to sit in court Γ, and the like. A more complicated system must have been adopted when fractional parts of the section sat by themselves, or were added to other whole sections: but what this might have been we can only conjecture, and it is obvious that some provision was to be made for the particular cases which bore reference to the allotment of the dicasts in which they were, or should have been at the time when the offence was alleged to have been committed. The oath was generally supposed from Aristophanes (Νυμ. 840), who makes Strepsiades say that for the first obolus he ever received as a dicast, he bought a toy for his son, that it was at first only one obolus. According to the Scholiast on Aristophanes (Run. 140) the pay was subsequently increased to two oboli, but this seems to be merely an erroneous inference from the passage of his author. Three oboli or the triobolon (τριαβόλον) were paid to each as b. c. 425 in the comedies of Aristophanes, and is afterwards mentioned frequently. (Aristoph. Eq. 51, 255, Vesp. 584, 654, 660, Run. 1540, &c.) Böckh has inferred from these passages that the triobolon was introduced by Cleon about b. c. 421; but G. Hermann (Præf. ad Aristoph. Nub. p. 1, &c. 2nd edit.) has disputed this opinion, at least so far as it is founded upon Aristophanes, and thinks that the pay of three oboli for the dicasts existed before that time. However this may be, thus much is certain, that the pay of the dicasts was the same at all times, although it is improbable that it should ever have been two oboli. (Aristot. ap. Schol. ad Aristoph. Vesp. 682; Hesych. s. v. δικαστικός; Suid. s. v. ἡλιασταῖ.) The payment was made after every assembly of a court of heliaste by the Colacretae (Lucan, Bis accusat. 12, 15) in the following manner. After a citizen had been appointed by lot to act as judge in a particular court, he received on entering the court together with the ticket (στημέδαρα) a ticket (σημαδιον): after the business of the court was over, the dicast, on going out, delivered his ticket to the prytaneis, and received his fee in return. (Schol. ad Aristoph. Plut. 277; Suid. s. v. βακτρία; Etymol. M. s. v. σημαδον; Pollux, viii. 16.) Those who had come too late had no claim to the triobolon. (Aristoph. Vesp. 660.) The annual amount of these fees is reckoned by Aristophanes (Vesp. 560, &c. with the Schol.) at 150 talents, a sum which is very high and can perhaps only be applied to the richest times of Athens. (Böckh, Publ. Econ. of Athens, p. 227, 2nd ed.; Meier, Att. Proc. p. 125, &c.; J. S. M.)

DICASTICON (Σικαστικών). [DICASTERS.]

DIKE (δίκη), signifies generally any proceedings at law by one party directly or mediatly against others. (Harpocrat. s. v.; Pollux, viii. 40, 41.) The object of all such actions is to protect the body politic, or one or more of its individual members, from injury and aggression: a distinction which has in most countries suggested the division of all causes into two great classes, the public and the private, and assigned to each its peculiar form and treatment. At Athens the first of these was implied by the terms public δίκαιον, or ἀγώνες, or still more peculiarly by γραφαί: causes of the other class were termed private δίκαιον or ἀγώνες, or simply δίκαι in its limited sense. There is a still further subdivision of γραφαί into δημωδός and δικαίος, of which the former is somewhat analogous to impeachments for offences directly against the state; the latter, to criminal proceedings, in which the state appears as a party mediatly injured in the violence or other wrong done to indi-
individual citizens. It will be observed that cases frequently arise, which, with reference to the two great classes above mentioned, before proceeding to bring his civil action for trespass on the person, it will be observed that cases of the wrong complained of, may with equal propriety be brought before a court in the form of the 

... last mentioned, or in that of an ordinary SIKT, and brought before a court in the form of the wrong complained of, may with equal propriety be to act, any free citizen, and sometimes, when the alleged to be affected, or the legal protector an action as plaintiff; in public causes, with the or his family were peculiarly bound and interested an action as plaintiff; in public causes, with the

...ings (Dem. process, p. 163.) The proceedings in the SIKT were commenced by a summons to the defendant (προσκλησις) to appear on a certain day before the proper magistrate (εἰσαγωγέας), and there answer the charges preferred against him. (Arist. Nub. 1221, At. 1046.) This summons was often served by the plaintiff in person, accompanied by one or two witnesses (κλητερες), whose names were endorsed upon the declaration (Ἀξιοι ο ἢ έγκλημα). If there were an insufficient service of the summons, the law was styled ἀπαγγέλτης, and dismissed by the magistrate. (Hecacth.) From the circumstance of the same officer that conducted the anacrisis being also necessarily present at the trial, and as there were besides dies nefasti (ἀναφοράς) and festivals, during which none, or only some special causes could be commenced, the power of the plaintiff in selecting his time was, of course, in some degree limited; and of several causes, we know that the time for their institution was fixed by lot (Aristoph. Nub. 1190.) There were also occasions upon which a personal arrest of the party proceeded against took the place of, or at all events was simultaneous with, the service of the summons; as for instance, when the plaintiff doubted whether such party would not leave the country to avoid answering the action; and accordingly we find that in such cases (Dem. c. Zenoth. p. 890, c. Arising. p. 778) an Athenian plaintiff might compel a foreigner to accompany him to the polemarch's office, and there produce bail for his appearance, or failing to do so, submit to remain in custody till the trial. The word κατεγγυσθης is peculiarly used of this proceeding. Between the service of the summons and appearance of the parties before the magistrate, it is very probable that the law prescribed the intervention of a period of five days. (Meier, Att. Process, p. 560.) If both parties appeared, the proceedings commenced by the plaintiff in his declaration, and at the same time depositing his share of the court fees (προτμασία), the non-payment of which was a fatal objection to the further progress of a cause. (Matth. De Jud. Ath. p. 261.) These were very trifling in amount. If the subject of litigation was rated at less than 100 drachmae, nothing was paid; if at more than 100 drachmae and less than 1000 drachmae, 3 drachmae was a sufficient deposit, and so on in proportion. If the defendant's deposit above referred to made his payment, it is natural to conclude that he undertook the penalties consequent upon non-appearance; in all cases the successful party was reimbursed his pyrtaneia by the other. (Meier, Att. Process, p. 613.) The παρακατατάξας was another deposit in some cases, but paid by the plaintiff only. This was not in the nature nor of the usual amount of the court fees, but a kind of penalty, as it was forfeited by the suitor in case he failed in establishing his cause. In a suit against the treasury, it was fixed at a fifth; in that of a claim to the property of a deceased person by an alleged heir or devisee, at a tenth of the value sought to be recovered. (Matth. De Jud. Ath. p. 260.) If the action was not intended to be brought before an heliastic court, but merely submitted to the arbitration of a diaetetes (ΔΙΑΕΤΗΤΗΣ), a course which was competent to the plaintiff to adopt in all private actions (Hult- waleker, De Diaetet. p. 35), the drachma paid in the place of the deposit above mentioned bore the name of παράδοταις. The deposits being made, it became the duty of the magistrate, if no manifest objection appeared on the face of the declaration, to cause it to be written out on a tablet, and exposed for the inspection of the public on the wall or other place that served as the cause list of his court. (Meier, Att. Process, p. 605.) The magistrate then appointed a day for the further proceedings of the anacrisis (ΑΝΑΚΡΙΣΙΣ), which was done by drawing lots for the priority in case there was a plurality of causes instituted at the same time; and to this proceeding the phrase λαγχάρων δίκης, which generally denotes to bring an action, is to be primarily attributed. If the plaintiff failed to appear at the anacrisis, the suit, of course, fell to the ground; if the defendant made default, judgment passed against him. (Meier, Att. Process, p. 623.) Both parties, however, received an official summons before their non-appearance was made the ground of either result. An affidavit might be taken at this, as well as at other periods of the action, be made in behalf of a person unable to attend upon the given day, and this would, if allowed, have the effect of postponing further proceedings (ἐπαυγομαίοια); it might, however, be combated by a counter affidavit to the effect, that the alleged reason was unfounded or otherwise insufficient (ἐπαυγομαίοια); and a question would arise upon this point, the decision of which, when adverse to the defendant, would n n 2
render him liable to the penalty of contumacy. (Dem. c. Olymp. p. 1174.) The plaintiff was in this case said ἐφεύπη ἔλεις: the defendant, ἐφεύπη ὄψινες, δικήν being the word omitted in both phrases. If the cause were primarily brought before an umpire (διατρήσεις), the anacrisis was conducted by him; in cases of appeal it was dispensed with as unnecessary. The anacrisis began with the affidavit of the plaintiff (προμονία), then followed the answer of the defendant (ἀντιμονία or ἀντιγράφα [ἈΝΤΙΓΡΑΦΗ]), then the parties produced their respective witnesses, and reduced their evidence to writing, and put in originals, or authenticated copies, of all the records, deeds, and contracts that might be useful in establishing their case, as well as memoranda of offers and requisitions then made by either side (προλήψεις).

The whole of the documents were then, if the cause took a straightforward course (ἐπιθέσεις), enclosed on the last day of the anacrisis in a casket (ἐξώροι), which was sealed and entrusted to the custody of the presiding magistrate, till it was produced and opened at the trial. During the interval no alteration in its contents was permitted, and accordingly evidence that had been discovered after the anacrisis was not producible at the trial. (Dem. c. Biot. i. p. 999.) In some causes, the trial before the dicasts was by law appointed to come on within a given time; in such cases, the anacrisis began with the reading of the documents and other evidence, the dicasts proceeded to give their judgment by ballot ΠΣΕΦΩ.).

When the principal point at issue was decided in favour of the plaintiff, there followed a further discussion as to the amount of damages, or penalty, which the defendant should pay. [ΤΙΜΕΝΑ.] The method of voting upon this question seems to have varied, in that the dicasts used a small tablet instead of a ballot-ball, upon which those that approved of the heavier penalty drew a long line, the others a short one. (Aristoph. Βεσπ. 167.) Upon judgment being given in a private suit, the Athenian law left its execution very much in the hands of the successful party, who was empowered to seize the movables of his antagonist as a pledge for the payment of the money, or institute an action of ejectment (ἐξώροις) against the refractory debtor. The judgment of a court of dicasts was in general decisive (δίκη αὐτοτελής); but upon certain occasions, as, for instance, when a gross case of perjury or conspiracy could be proved by the unsuccessful party to have operated to his disadvantage, the cause, upon the conviction of such conspirators or witnesses, might be commenced de novo. [ἈΨΕΦΛΑΤΙΟ (ΩΕΙΚΕΙ.)] In addition to which, the party against whom judgment had passed by default, had the power to revive the cause, upon proving that his non-appearance in court was inevitable (τὴν ἐφεύπη ἀντιλακῶν), Platner, Process usd Klagen, vol. i. p. 396); this, however, was to be exercised within two months after the original judgment. If the parties were willing to refer the matter to an umpire (slideDown), it was in the power of the magistrate to transfer the proceedings as they stood to that officer; and in the same way, if the dicastes considered the matter in hand too high for him, he might refer it to the eisourouses, to be brought before him by him before an heliastic court. The whole of the proceedings before the dicastes were analogous to those before the dicasts, and bore equally the name of δίκη: but it seems that the phrase ἀντιλακῶν τῷ μη οὔσαι is peculiarly applied to the revival of a cause before the umpire in which judgment had passed by default.

The following are the principal actions, both public and private, which we read of in the Greek writers, and which are briefly discussed under their several heads:

find it in Lanuvium even in very late times (Cic. pro Mil. 10). At Rome this magistrate was originally called *magister populi* and not *dictator*, and in the sacred books he was always designated by the former name down to the latest times. (Cic. de Rep. i. 40, de Leg. iii. 3, de Fin. iii. 22; Var. L. L. v. 82, ed. Müller; Festus, s. v. *optima lex*, p. 198, ed. Müller.)

On the establishment of the Roman republic the government of the state was entrusted to *duo* consuls, that the citizens might be the better protected against the tyrannical exercise of the supreme power. But it was soon felt that circumstances might arise in which it was of importance for the safety of the state that the government should be vested in the hands of a single person, who should possess for a season absolute power, and from whose decision there should be no appeal to any other body. Thus it came to pass that in B.C. 501, nine years after the expulsion of the Tarquins, the dictatorship (*dictatorius*) was instituted. The name of the first dictator and the immediate reason of his appointment were differently stated in the annalists. The oldest authorities mention T. Larticius, one of the consuls of the year, as the first dictator, but others ascribed this honour to M. Valerius. (Livy. ii. 18.) Livy states (l.c.) that a formidable war with the Latins led to the appointment; and he also found mentioned in the annals that the consuls of this year were suspected of belonging to the party of the Tarquins; but in the latter case T. Larticius could not have been one of the consuls. Dionysius relates at length (v. 63—70) that the plebs, who were oppressed by the weight of their debts, took advantage of the danger of the republic to obtain some mitigation of their sufferings, and refused to serve in the army, and that thereupon recourse was had to a dictator to bring them to their duty. But as Livy makes no mention of any internal disturbances in this year, and does not speak of any commotions on account of debts till four years subsequently, we may conclude that Dionysius has subsequently, we may conclude that Dionysius has

By the original law respecting the appointment of a dictator (*lex de dictatore creando*) no one was eligible for this office, unless he had previously been consul (Livy. ii. 18). We find, however, a few instances in which this law was not observed. (See e.g. Liv. iv. 26, 48, vii. 24.) When a dictator was considered necessary, the senate passed a *senatus consultum* that one of the consuls should nominate (*dicere*) a dictator; and without a previous decree of the senate the consuls had not the power of naming a dictator, although the contrary used to be asserted in most works on Roman antiquities. In almost all cases we find mention of a previous decree of the senate (see e.g. ii. 30, iv. 17, 21, 23, 26, 57, vi. 2, vii. 21, viii. 17, ix. 29, x. 11, xxii. 57); and in the few instances, in which the appointment by the consul is alone spoken of, the senatus consultus is probably not mentioned, simply because it was a matter of course. Niebuhr indeed supposes (Hist. of Rome, vol. i. p. 567) that the dictator was originally created by the curiae, like the kings. According to his view the senatus proposed a person as dictator, whom the curiae elected and the consul then proclaimed (*divit*); and after this proclamation the newly elected magistrate received the imperium from the curiae. Niebuhr further supposes that the right of conferring the imperium may have led the curiae to dispense with voting on the preliminary nomination of the senate. But this election of the dictator by the curiae is only supported by two passages, one of Dionysius and the other in Festus, neither of which is conclusive in favour of Niebuhr's view. Dionysius simply says (v. 70) that the dictator should be one "whom the senate should nominate and the people approve of" (*ἐνθεῖον ἴστησιν*), but this may merely refer to the granting of the imperium by the curiae. In Festus (p. 198) we read "M. Valerius — qui primus magister *populi* creatus est;" but even if there were no corruption in this passage, we need only understand that a dictator was appointed in virtue of a *senatus consultum*, and certainly need not suppose that by *populus* the curiae are intended: there can however be hardly any doubt that the passage is corrupt, and that the true reading is "qui primus *magister populi* creatus est." We may therefore safely reject the election by the curiae.

The nomination or proclamation of the dictator by the consul was, however, necessary in all cases. It was always made by the consul, probably without any witnesses, between midnight and morning, and with the observance of the auspices (*surgens or orienst noce silentio* *dictatorum diebus*, Liv. viii. 29, ix. 30, xiiii. 22; Dionys. x. 11). The technical word for this nomination or proclamation was *dicere* (*sedecrum or facere*). So essential was the nomination of the consul, that we find the senate on one occasion having recourse to the tribunes of the people to compel the consuls to nominate a dictator, when they had refused to do so (Liv. iv. 26); and after the battle at the lake Trasimenus, when all communication with the surviving consul was cut off, the senate provided for the emergency by causing the people to elect a *prodictator*, because, says Livy, the people could not elect (*creare*) a dictator, having never up to that time exercised such a power (Liv. xxii. 8).

* Respecting the meaning of *silentium* in relation to the auspices, see *August*, p. 176, b. D D 3
In the same spirit it became a question, whether the tribuni militum with consular power could nominate a dictator, and they did not venture to do so till the aures had been consulted and declared it allowable (Livy. iv. 21). The nomination of Sulla by an interrex was contrary to all precedent and altogether illegal. (Comp. Cic. ad Att. ix. 15.) The senate seems to have usually mentioned in their decree the name of the person whom the consul was to nominate (Livy. iv. 17, 21, 23, 46, vi. 2, vii. 12, viii. 17, ix. 29, x. 11, xxii. 57) ; but that the consul was not absolutely bound to nominate the person whom the senate had named, is evident from the cases in which the consuls appointed persons in opposition to the wishes of the senate (Livy. xii. 12, Epit. 19; Suet. Tib. 2.) It is doubtful what rule was adopted, or whether any existed, for the purpose of determining which of the two consuls should nominate the dictator. In one case we read that the nomination was made by the consul who had declared it allowable (Liv. iv. 21). The nomination of Sulla by an interrex and of Caesar by a praetor was contrary to all precedent and altogether illegal. (Liv. iv. 21, 23, 46, vi. 2, vii. 12, viii. 17, ix. 29, x. 11, xxii. 57) ; but that the consul was not absolutely bound to nominate the person whom the senate had named, is evident from the cases in which the consuls appointed persons in opposition to the wishes of the senate (Livy. xii. 12, Epit. 19; Suet. Tib. 2.) It is doubtful what rule was adopted, or whether any existed, for the purpose of determining which of the two consuls should nominate the dictator. In one case we read that the nomination was made by the consul who had the fasces (Livy. viii. 12), in another that it was decided by lot (iv. 26), and in a third that it was matter of agreement among themselves (iv. 21). In later times the senate usually entrusted the office to the consul who was nearest at hand. The nomination took place at Rome, as a general rule; and if the consuls were absent, one of them was recalled to the city, whenever it was practicable (Livy. vii. 10, xxii. 29) ; but if this could not be done, a senatus consultum authorising the appointment was sent to the consul, who thereupon made the nomination in the camp. (Livy. vii. 21, viii. 23, ix. 38, xxv. 2, xxvii. 5.) Nevertheless, the rule was maintained that the nomination could not take place outside of the Ager Romanus, though the meaning of this expression was extended so as to include the whole of Italia. Thus we find the senate in the second Punic war opposing the nomination of a dictator in Sicily, because it was outside of the ager Romanus (extra agrum Romanum—eum autem Italia terminarii, Liv. xxvii. 5). Originally the dictator was of course a patrician. The first plebeian dictator was C. Marcus Rutilius, nominated in B.C. 356 by the plebeian consul M. Popilius Laenas. (Livy. vii. 17.)

The reasons, which led to the appointment of a dictator, required that there should be only one at a time. The only exception to this rule occurred in B.C. 216 after the battle of Cannae, when M. Fabius Buteo was nominated dictator for the purpose of filling up the vacancies in the senate, although M. Junius Pera was discharging the regular duties of the dictator; but Fabius resigned on the day of his nomination on the ground that there could not be two dictators at the same time. (Livy. xxiii. 22, 23; Plut. Fab. 9.) The dictators that were appointed for carrying on the business of the state were said to be nominated rei gerundae causa, or sometimes seditionis sedandae causa; and upon them, as well as upon the other magistrates, the imperium was conferred by a Lex Curiata. (Livy. ix. 38, 39; Dionys. v. 70.) Dictators were also frequently appointed for some special purpose, and frequently one of small importance, of whom further mention will be made below. At present we confine our remarks to the duties and powers of the dictator rei gerundae causa.

The dictatorship was limited to six months (Cic. de Leg. iii. 3; Liv. iii. 29, ix. 34, xxiii. 23; Dionys. v. 70, x. 25; Dion Cass. xxxvi. 17, xlii. 21; Zonar. vii. 13), and no instances occur in which a person held this office for a longer time, for the dictatorships of Sulla and Caesar are of course not to be taken into account. On the contrary, though a dictator was appointed for six months, he often resigned his office long previous to the expiration of his tenure. After he had despatched the business for which he had been appointed. (Liv. iii. 29, iv. 46, vi. 29.) As soon as the dictator was nominated, a kind of suspension took place with respect to the consuls and all the other magistrates, with the exception of the tribuni plebis. It is frequently stated that the duties and functions of all the ordinary magistrates entirely ceased, and some writers have even gone so far as to say that the consuls abdicated (Polyb. iii. 67; Cic. de Leg. iii. 3; Dionys. v. 70, 72); but this is not a correct way of stating the facts of the case. The regular magistrates continued to discharge the duties of their various offices under the dictator, but they were no longer independent officers, but were subject to the higher imperium of the dictator, and obliged to obey his orders in every thing. We often find the dictator and the consuls at the head of separate armies at the same time, and carrying on war independent of one another (Liv. ii. 30, viii. 29); we see that the soldiers levied by the dictator took the oath of allegiance to the consul (Liv. ii. 32), and that the consuls could hold the consular comitia during a dictatorship (Livy. xxiii. 23). All this shows that the consuls did not resign their functions, although they were subject to the imperium of the dictator; and accordingly, as soon as the dictator abdicated, they again entered forthwith into the full possession of the consular power.

The superiority of the dictator's power to that of the consuls consisted chiefly in the three following points—greater independence of the senate, more extensive power of punishment without any appeal (prorogatio) from their sentence to the people, and irresponsibility. To these three points, must of course be added that he was not fettered by a colleague. We may naturally suppose that the dictator would usually act in unison with the senate; but it is expressly stated that in many cases where the consuls required the co-operation of the senate, the dictator could act on his own responsibility. (Polyb. iii. 87.) For how long a time the dictatorship was a magistratus sine provocacione, is uncertain. That there was originally no appeal from the sentence of the dictator is certain, and accordingly the lictors bore the axes in the fasces before them even in the city, as a symbol of their absolute power over the lives of the citizens, although by the Valerian law the axes had disappeared from the fasces of the consuls. (Liv. ii. 18, 29, iii. 20; Zonar. vii. 13; Dionys. v. 70, 75; Pompon. de Orig. Juv. § 18.) That an appeal afterwards lay from their sentence to the people, is expressly stated by Festus (s. v. optima lex), and it has been supposed that this privilege was granted by the lex Valeria Hornia, passed after the abolition of the decemvirate in B.C. 449, which enacts "ne quis ulterius magistratum sine provocacione crearet." (Livy. iii. 15.) But even ten years afterwards the dictatorship is spoken of as a magistratus sine provocacione; and the only instance in Livy (viii. 33—34) in which the dictator is threatened with provocatio, certainly does not prove that this was a legal right; for L. Papirius, who was then dictator, treated the provo-
but could only make use of the money which was granted him by the senate. (Zonar. vii. 13.) 3. He had not power over the treasury, independent magistrates during a dictatorship, while all the other magistrates became simply the officers of the dictator, to be explained in a different manner, as Becker has shown. That the tribunes continued in office as responsible power possessed by the dictatorship, is to be explained by the fact, that the lex de dictator creando was passed before the institution of the tribuneship of the plebs, and consequently made no mention of it, and that as a dictator was appointed in virtue of a senatus consultum, the senate had no power over the tribunes of the plebs, though they could suspend the other magistrates.

It has been already stated that the dictator was irresponsible, that is, he was not liable after his abdication to be called to account for any of his official acts. This explicitly is stated by ancient writers (Zonar. vii. 13; Dionys. v. 70; Cic. de Leg. v. 56; Plut. Fab. 3; Appian, B. C. ii. 23), and, even if it had not been stated, it would follow from the very nature of the dictatorship. We find moreover no instance recorded in which a dictator after his resignation was made answerable for the misuse of his power, with the exception of Camillus, whose case however was a very peculiar one. (Compare Becker, Römisch. Alterth., vol. ii. part ii. p. 172.)

It was in consequence of the great and irresponsible power possessed by the dictatorship, that we find it frequently compared with the regal dignity, from which it only differed in being held for a limited time. (Cic. de Rep. ii. 32; Zonar. vii. 13; Dionys. v. 70, 73; Appian, B. C. 499; Tac. Ann. i. 1.) There were however a few limits to the power of the dictator. 1. The most important was that which we have often mentioned, that the period of his office was only six months. 2. He had not power over the treasury, but could only make use of the money which was granted him by the senate. (Zonar. vii. 13.) 3. He was not allowed to leave Italy, since he might in that case easily become dangerous to the republic (Dion Cass. xxvi. 17); though the case of Attilius Calatinus in the first Punic war forms an exception to this rule. (Liv. Epit. 10.) 4. He was not allowed to ride on horseback at Rome, without previously obtaining the permission of the people (Liv. xxiii. 14; Zonar. vii. 13); a regulation apparently capricious, but perhaps adopted that he might not bear too great a resemblance to the kings, who were accustomed to ride.

The insignia of the consuls were nearly the same as those of the kings in earlier times; and of the consuls subsequently. Instead however of having only twelve lictors, as was the case with the consuls, he was preceded by twenty-four bearing the fasces as well as the lictors. The sella curulis and toga praetexta also belonged to the dictator. (Polyb. iii. 87; Dionys. x. 24; Plut. Fab. 4; Appian, B. C. i. 100; Dion Cass. liv. 1.)

The preceding account of the dictatorship applies more particularly to the dictator rei gerundae causa; but dictators were also frequently appointed, especially when the consuls were absent from the city, to perform certain duties, which could not be discharged by any inferior magistrate. These dictators had little more than the name; and as they were only appointed to discharge a particular duty, they had no reason to believe that they had any control over a dictator, or could hamper his proceedings by their intercession or auxilium, as they could in the case of the consuls. The few instances, which appear to prove the contrary, are to be explained in a different manner, as Becker asserts (vol. ii. p. 390) "no one ever supposed that his office was a curule one;" and if he is right in supposing that the consul tribunate was not a curule office, his view is supported by the account in Livy, that the imperium of the dictator was appointed to discharge a particular duty, that there were then virtually two dictators, but this is expressly mentioned as an anomaly, which had never occurred before (Polyb. iii. 103, 106). The rank which the magister equum held among the other Roman magistrates is doubtful. Niebuhr asserts (vol. ii. p. 390) "no one ever supposed that his office was a curule one;" and if he is right in supposing that the consul tribunate was not a curule office, his view is supported by the account in Livy, that the imperium of the magister equum was not regarded as superior to that of a consul tribune (vi. 30). Cicero on the contrary places the magister equum on a par with the praetor (de Leg. iii. 3); and after the establishment of the praetorship, it seems to have been considered necessary that the person who was to be nominated magister equum should previously have been praetor, just as the dictator, according to the old law, had to be chosen from the consuls (Dion Cass. xlii. 21). Accordingly, we...
find at a later time that the magister equum had the insignia of a praetor (Dion Cass. xiii. 27). The magister equum was originally, as his name imports, the commander of the cavalry, while the dictator was at the head of the legions, the infantry (Liv. iii. 27). The relation between them was in this respect similar to that which subsisted between the king and the tribunos celerum.

Dictators were only appointed so long as the Romans had to carry on wars in Italy. A solitary instance occurs in the first Punic war of the nomination of a dictator for the purpose of carrying on war out of Italy (Liv. Epit. 19); but this was never repeated, because, as has been already remarked, it was feared that so great a power might become dangerous at a distance from Rome. But after the battle of Trasimene in B.C. 216, when Rome itself was threatened by Hannibal, recourse was again had to a dictator, and Q. Fabius Maximus was appointed to the office. In the next year, B.C. 215, after the battle of Cannae, M. Junius Perenna was also nominated dictator, but this was the last time of the appointment of a dictator rei gerundae causa. From that time dictators were frequently appointed for holding the elections down to B.C. 202, but from that year the dictatorship disappears altogether. After a lapse of 120 years, Sulla caused himself to be appointed dictator in B.C. 82, repudiating constitutione causa (Vell. Pat. ii. 26), but as Niebuhr remarks, "the title was a mere name, without any ground for such a use in the ancient constitution." Neither the magistrate (interrex) who nominated him, nor the time for which he was appointed, nor the extent or exercise of his power, was in accordance with the ancient laws and precedents; and the same was the case with the dictatorship of Caesar. Soon after Caesar's death the dictatorship was abolished for ever by a lex proposed by the consul Antonius (Cic. Phil. i. 1; Liv. Epit. 116; Dion Cass. xiv. 51). The title indeed was offered to Augustus, but he resolutely refused it in consequence of the odium attached to it from the tyranny of Sulla when dictator (Suet. Aug. 52).

During the time, however, that the dictatorship was in abeyance, a substitute was invented for it, whenever the circumstances of the republic required the adoption of extraordinary measures, by the senate investing the consul with dictatorial power. This was done by the well-known formula, Videant or dent operam consules, ne quid respublica detrimenti capit. (Comp. Sull. Catal. 29.)

DICTRY'NNIA (Σικτρόνια), a festival with sacrifices, celebrated at Cydonia in Crete, in honour of Artemis, surnamed Δικτυρα or Δικτυώνα, from Σικτονα, a hunter's net. (Diodor. Sic. v. 76; compare Strabo x. p. 479; Pausan. ii. 30. § 3.)

Particularly respecting its celebration are not known. Artemis Δικτυώνα was also worshipped at Sparta (Paus. iii. 12. § 7), and at Amybria in Phocias. (Paus. x. 36. § 3; compare the Schol. ad Aristoph. Ran. 1284, Vesp. 357; and Meursius, Cret. c. 3.)

[DIES (of the same root as δίας and deus, Buttmann, Mythol. ii. p. 74). The name dies was applied, like our word day, to the time during which, according to the notions of the ancients, the sun performed his course round the earth, and this time they called the civil day (dies civilis, in Greek νεκτήμαρα, because it included both night and day). See Cic. de Nat. Deor. ii. 77, 79; Varro, De Rer. Rust. i. 28; Macrob. Sat. i. 3). The natural day (dies naturalis), or the time from the rising to the setting of the sun, was likewise designated by the name dies. The civil day began with the Greeks at the setting of the sun, and with the Romans at midnight; with the Babylonians at the rising of the sun, and with the Umbrians at midday. (Macrob. l. c.; Gallius, iii. 2.) We have here only to consider the natural day, and as its subdivisions were different at different times, and not always the same among the Greeks as among the Romans, we shall endeavour to give a brief account of the various parts into which it was divided by the Greeks at the different periods of their history, and then proceed to consider its divisions among the Romans, to which will be subjoined a short list of remarkable days.

At the time of the Homeric poems, the natural day was divided into three parts (Il. xxi. 111). The first, called δαίμων, began with sunrise, and comprehended the whole space of time during which light seemed to be increasing, i.e. till midday. (Il. vii. 66; ix. 94, Om. ix. 56.) Some ancient grammarians have supposed that in some instances Homer used the word δαίμων for the whole day, but Nitzsch (Anmerkungen zur Odyssee, i. 125) has shown the incorrectness of this opinion. The second part was called μεσον ημαρ or midday, during which the sun was thought to stand still. (Herms, ad Plut. Phaedr. p. 342.) The third part bore the name of δειλα or δειλων ημαρ (Od. xvii. 606; compare Buttmann's Lexio. ii. n. 95), which derived its name from the increased warmth of the atmosphere. The last part of the δειλα was sometimes designated by the words πριν ημαρον or ουμερος (Od. xviii. 191, Il. xvi. 770). Besides these three great divisions no others seem to have been known at the time when the Homeric poems were composed. The chief information respecting the divisions of the day in the period after Homer, and more especially the divisions made by the Athenians, is to be derived from Pollux (Onom. i. 68). The first and last of the divisions made at the time of Homer were afterwards subdivided into two parts. The earlier part of the morning was termed πρωτοι or πρω της ημερας; the later, πληθυνε της ημερας, or περι πληθυνες ημεραν (Herod. iv. 181; Xen. Memorab. i. 1. § 10, Hellan. i. 1. § 30; Dion Chrysost. Orat. lvii). The μεσον ημαρ of Homer was afterwards expressed by μεσημβρια, μεσον ημερας, or μεσος ημερας, and comprehended, as before, the middle of the day, when the sun seemed neither to rise nor to decline. The two parts of the afternoon were called δειλα πρωτοι or πρωτα, and δειλα δευτερα or δευτερα (Herod. vii. 167, viii. 6; Thucyd. iii. 74, viii. 26; compare Likanias, Epit. 1084). This division continued to be observed down to the latest period of Greek history, but with an interesting inaccuracy in division, and more adapted to the purposes of common life, was introduced at an early period; for Anaximander, or according to others, his disciple Anaximenes, is said to have made the Greeks acquainted with the use of the Babylonian chronometer or sun-dial (called παλαιον or φωλαγάον,
sometimes with the epithet σκυθοφώνος or ἰδαν-μάδδος) by means of which the natural day was divided into twelve equal spaces of time. (Herod. ii. 109; Dion. Laërt. ii. 1. 3; Plin. H. N. ii. 6. 78; Suidas, s. v. Ἀναξάμισσος.) These spaces were, of course, longer or shorter according to the various seasons of the year. The name hours (ὥρα), however, did not come into general use till a very late period, and the difference between natural and equinoctial hours was first observed by the Alexandrine astronomers.

During the early ages of the history of Rome, when artificial means of dividing time were yet unknown, the natural phenomena of increasing light and darkness formed with the Greeks, the standard of division, as we see from the vague expressions in Censorinus (De Dies Nat. 24). Pliny states (H. N. vii. 60) that in the Twelve Tables only the rising and the setting of the sun were mentioned as the two parts of the day; the day was then divided, but from Censorinus (l. c.) and Gallus (xxvii. 2) we learn that midday (meridies) was also mentioned. Varro (De Ling. Lat. vi. 4, 5, ed. Müller; and Isidor. Orig. v. 80 and 31) likewise distinguished three parts of the day, viz., mane, meridies, and suprema, or tempestas, after which no assembly could be held in the forum. The lex Plautoriana prescribed that a herald should proclaim the suprema, in the forum, that the people might know that their business should be adjourned. But the division of the day most generally observed by the Romans, was that into tempus antemeridianum and pomeridianum, the meridies itself being only considered as a point at which the one ended and the other commenced. But as it was of importance that this moment should be known, an especial officer (aequumsus) was appointed, who proclaimed the time of midday, when from the curia he saw the sun standing between the rostra and the graecostasis. The division of the day into twelve equal spaces, which the day in Greece, were shorter in winter than in summer, was adopted at the time when artificial means of measuring time were introduced among the Romans from Greece. This was about the year B. C. 291, when L. Papirius Cursor, before the war with Pyrrhus, brought to Rome an instrument called solarium horologium, or simply solarium. (Plaut. ap. Galliussa, iii. 3. § 5; Plin. H. N. vii. 60.) But as the solarium was soon made for a different latitude, it showed the time at Rome very incorrectly. (Plin. l. c.)

Censorinus, after the erection of a clepsydra, it was customary for one of the subordinate officers of the praetor to proclaim the third, sixth, and ninth hours; which shows that the day was, like the night, divided into four parts, each consisting of three hours. See Dacier's treatise, De Partibus noctis et Dies de Dominibus Veterum, in his Inst. Phys. (1816) and Deutsche Schriften, pp. 150, 160. Compare the article HORLOGIUM.

All the days of the year were, according to different points of view, divided by the Romans into different classes. For the purpose of the administration of justice, and holding assemblies of the people, all the days were divided into dies fasti

DIES FASTI were the days on which the praetor was allowed to administer justice in the public courts; they derived their name from fari (fari tria verbis : da, dico, addico, Ovid, Fast. i. 45, &c.; Varro, De Ling. Lat. vi. 29, 30. ed. Müller; Macrobr. Sat. i. 16). On some of the dies fasti comitia could be held, but not on all. (Cicero, pro Som. 15, with the note of Manutius.) Dies might be fasti in three different ways: 1. dies fasti proprius et toti or simply dies fasti, were days on which the praetor used to hold his courts, and which could do so at all hours. They were marked in the Roman calendar by the letter F, and their number in the course of the year was 38 (Niebuhr, Hist. of Rome, iii. p. 314); 2. dies proprius sed non toti fasti, or dies intercisi, days on which the praetor might hold his courts, but not at all hours, so that sometimes one half of such a day was fastus, while the other half was nefastus. Their number was 65 in the year, and they were marked in the calendar by the signs Fp = fastus primo, Np = nefastus primo. En enn. dolereolcum = intercisi, Q. Rex C. F = quando Rex comitio fuggit, or quando Rex comitio fugit, Q. St. Df = quando stercus defertur; 3. dies non proprius sed casu fasti, or days which were not fasti properly speaking, but became fasti accidentally; a dies comitialis, for instance, might become fastus, if either during its whole course, or during a part of it, no comitia were held, so that it accordingly became either a dies fastus totus, or fastus ex parte. (Macrobr. Sat. i. 16; Varro, De Ling. Lat. vii. 60.)

DIES NEFASTI were days on which neither courts of justice nor comitia were allowed to be held, and which were dedicated to other purposes. (Varro, l. c.) According to the ancient legends they were said to have been fixed by Numa Pompius. (Liv. i. 19.) From the remarks made above it will be understood that one part of a day might be fastus while another was nefastus. (Ovid, Fast. i. 50.) The nundinae, which had originally been dies fasti for the plebeians, had been made nefasti at the time when the twelvemonth-year was introduced; but in B. C. 286 they were again made fasti by a law of Q. Hortensius. (Macrobr. Sat. i. 16.) The term dies nefasti, which originally had nothing to do with religion, but simply indicated days on which no courts were to be held, was in subsequent times applied to religious days in general, as dies nefasti were mostly dedicated to the worship of the gods. (Gellius, iv. 9, v. 17.)

In a religious point of view all days of the year were either dies festi, or dies profesti, or dies intercisi. According to the definition given by Macrobius, dies festi were dedicated to the gods, and spent with sacrifices, repasts, games, and other solemnities; dies profesti belonged to men for the administration of their private and public affairs. They were either dies fasti, or comitiales, or comperendiae, or stiti, or proeliales. Dies intercisi were common between gods and men, that is, partly devoted to the worship of the gods, partly to the transaction of ordinary business. We have already had occasion to add a few remarks on some of the subdivisions of the dies profesti, which are likewise defined by Macrobius. Dies comitiales were days on which comitia were held; their number was 184 in a year. Dies comperendini were days to which any action was allowed to be transferred (quibus vadimonium licet dicere, Gaius, iv. § 13). Dies statti were days set apart for causes between Roman citizens and foreigners (qui judicati

DIES. 409
the ordinary horse-soldiers, and lighter than that required. Their armour was heavier than that of the regular heavy-armed foot. A servant accompanying each soldier in order to take care of his horse when he alighted to fight on foot. This species of troops is said to have been first introduced by Alexander the Great. (Pollux, i. 192 ; Curtius, v. 123.)

DIMACHERI. [GLADIATORES.]

DIMENSUM. [SERVUS.]

DIMINUITIO CA'PITIS. [CAPUT.]

DIO'BOLOS. [DRACMA.]

DIOCLEIA (διόκλεια), a festival celebrated by the Megarians in honour of an ancient Athenian hero, Diocles, around whose grave young men assembled on the occasion, and amused themselves with gymnastic and other contests. We read that he who gave the sweetest kiss obtained the prize, consisting of a garland of flowers. (Theoret. Hist. xii. 27, &c.) The Scholiast on Theocritus (i. 17) relates the origin of this festival as follows:—Diocles, an Athenian exile, fled to Megara, where he found a youth with whom he fell in love. In some battle, while protecting the object of his love with his shield, he was slain. The Megarians honoured the gallant lover with a tomb, raised him to the rank of a hero, and in commemoration of his faithful attachment, instituted the festival of the Dioclia. See Böckh, ad Pind. Olymp. vii. 157. p. 176, and the Scholiast. ad Aristoph. Acharn. 730, where a Megarian swears by Diocles, from which we may infer that he was in great honour by the Megarians. (Compare Welcker’s Suppilo, p. 53, and ad Theogn. p. 79.)

DIONYSIA (dıōνyσία), festivals celebrated in various parts of Greece in honour of Dionysus. We have to consider under this head several ancient festivals, although some of them bore different names: for here, in other cases, the name of the festival was sometimes derived from that of the god, sometimes from the place where it was celebrated, and sometimes from some particular circumstance connected with its celebration. We shall, however, direct our attention chiefly to the Attic festivals of Dionysus, as, on account of their intimate connection with the origin and the development of dramatic literature, they are of greater importance to us than any other ancient festival.

The general character of the festivals of Dionysus was extravagant merriment and enthusiastic joy, which manifested themselves in various ways. The import of some of the apparently unmeaning and absurd practices in which the Greeks indulged during the celebration of the Dionysia, has been well explained by Müller (Hist. of the Lit. of Ant. Greece, i p. 289) :—“The intense desire felt by the worshipper of Dionysus to fight, to conquer, and to suffer in common with him, made them regard the subordinate beings (satyrs, panes, and nymphs, by whom the god himself was surrounded, and through whom life seemed to pass from him into vegetation, and branch off into a variety of beautiful or grotesque forms), who were ever present to the fancy of the Greeks, as a convenient stock by which they could approach more nearly to the presence of their divinity. The customs so prevalent at the festivals of Dionysus, of taking the disguise of satyrs, doubtless originated in this feeling, and not in the mere desire of concealing excesses under the disguise of a mask, otherwise so serious and pathetic a spectacle as tragedy could never have originated in the choruses of these satyrs. The desire of escaping from self into something new and strange, of living in an imaginary world, breaks forth in a thousand instances in these festivals of Dionysus. It is seen in the colouring of the body with plaster, soot, vermilion, and different sorts of green and red juices of plants, wear-
ing goats and deer skins round the loins, covering the face with large leaves of different plants; and, lastly, in the wearing of masks of wood, bark, and other materials, and of a complete costume belonging to the character. "Drunkenness, and the boisterous music of flutes, cymbals, and drums, were likewise common to all Dionysiac festivals. In the processions called Ιάσων (from Σέλαγος), with which they were celebrated, women also took part in the disguise of Baccae, Lenea, Thyades, Niaades, Nympheis, &c., adorned with garlands of ivy, and bearing the thyrsus in their hands (hence the god was sometimes called Θυλίμωρφος), so that the whole train represented a population inspired, and actuated by the powerful presence of the god. The choruses sung on the occasion were called dithyrambs, and were hymns addressed to the god in the freest metres and with the boldest imagery, in which his exploits and achievements were extolled. [CHORUS.] The phallus, the symbol of the fertility of nature, was also carried in these processions (Plut. De Cupid. Delph. p. 937, d; Aristoph. Acharn. 229, with the Schol.; Herod. ii. 49), and men disguised as women, called ἰδαιμαλιαῖοι (Heasch. s. v.; Athen. xiv. p. 622), followed the phallus. A woman called λικναψωρος carried the λίκνων, a long basket containing the image of the god. Maidens of noble birth (κασιντήριοι) used to carry figs in baskets, which were sometimes of gold, and to wear garlands of figs round their necks. (Aristoph. Acharn. s. v.; Lysistr. 847; Natal. Com. v. 15.) The indulgence in drinking was considered by the Greeks as a duty of gratitude which they owed to the god. The choruses sung on the occasion were extolled. [CHORUS.] The phallus, the giver of the vine; hence in some places it was used to carry figs in baskets, (Aristoph. Acharn. s. v.; Sol. c. 29, 30; Diog. Laert. Sol. c. 11.) That in other places, also, the introduction of the worship of Dionysus met with great opposition, must be inferred from the legends of Orchomenos, Thesbes, Argos, Ephesus, and other places. Something similar seems to be implied in the account of the restoration of tragic choruses to Dionysus at Sicyon. (Herod. v. 67.) The second festival, the Lenaea (from ληφός, the wine-press, from which also the month of Gemelion was called by the Ionians Lenaea), was celebrated in the month of Gemelion; the place of its celebration was the ancient temple of Lenaea at Orchomenos, Thebes, Argos, Ephesus, and other places. Something similar seems to be implied in the account of the restoration of tragic choruses to Dionysus at Sicyon. (Herod. v. 67.) The second festival, the Lenaea, the wine-press, from which also the month of Gemelion was called by the Ionians Lenaea), was celebrated in the month of Gemelion; the place of its celebration was the ancient temple of Lenaea at Orchomenos, as the district was originally a swamp, whence the god was also called λιμανεϊντής. This temple, the Lenaea, was situated south of the theatre of Dionysus, and close by it. (Schol. ad Aristoph. Ran. 480.) The Lenaeae were celebrated with a procession and scenic contests in tragedy and comedy. (Demosth. c. Mid. p. 517.) The procession probably went to the Lenaeae, where a goat (πρυγγός), hence the chorus and tragedy which arose out of it were called πρυγγάκια χόρος, and πρυγγάκια was sacrificed, and a chorus standing around the altar sang the dithyrambic ode to the god. As the dithyramb was the element out of which, by the introduction of an actor, tragedy arose [CHORUS], it is natural that, in the scenic contests of this festival, tragedy should have preceded comedy, as we see from the important documents in Demosthenes. (I.c.) The poet who wished his play to be brought out at the Lenaeae applied to the second archon, who had the superintendence of this festival as well as the Anthestheria, and who gave him the chorus if the piece was thought to deserve it. The third Dionysiac festival, the Anthestheria, was celebrated on the 12th of the month of Anthesterion (Thncyd. ii. 15); that is to say, the second day fell on the 12th, for it lasted three
days, and the first fell on the 11th (Suidas, s. v. Χόες), and the third on the 13th (Philoch. op. Suidas, s. v. Χύρτροι). The second archon superintended the celebration of the Anthesteria, and distributed the prizes among the victors in the various games which were carried on during the season. (Aristoph. Acharn. 1143, with the Schol.) The first day was called πεδοτρια: the second, χόες; and the third, χύρτροι. (Harpocrat. and Suidas, s. v.; Schol. ad Aristoph. Ran. 219; Athen. x. p. 437, vii. p. 276, and iv. 129.) The first day derived its name from the opening of the casks to taste the wine of the preceding year; the second from χόες, the cup, and seems to have been the day devoted to drinking. The ascolia seem to have been played on this day. [ASCOLIA.] We read in Suidas (s. v. Ασκόσ) of another similar amusement peculiar to this day. The drinker placed himself upon a bag filled with air, trumpets were sounded, and he who emptied his cup quickest, or drank most, received as his prize a leather bag filled with wine, and a garland, or, according to Aelian (V. H. li. 41), a golden crown. (Aristoph. Acharn. 1143, with the Schol.) The κάδος εύς άμαλων also took place on this day, and the jests and abuse which persons poured forth on this occasion were doubtless an imitation of the amusements customary at the rural Dionysia. Athenaeus (x. p. 437) says that it was customary on this day of the Choe's to send to the sophists their salaries and presents, that they too might enjoy themselves with their friends. The third day had its name from χύρτροι, a pot, as on this day persons offered pots with flowers, seeds, or cooked vegetables, as a sacrifice to Dionysus and Hermes Chthonius. (Schol. ad Aristoph. Acharn. 1009 ; Suidas, s. v. Χύρτροι.) With this sacrifice were connected the άγάνες χύρτρων mentioned by the Scholiast on Aristophanes (Ran. 220), in which the second archon distributed the prizes. Slaves were permitted to take part in the general rejoicings of the Anthesteria; but at the close of the day, they were sent home with the words έρως, κάρπας, ούκ εύς άνθεντρα. (Hesych. s. v. Ερώς; Proclus, ad Hermod. Op. et Dies.)

It is uncertain whether the preceding year, or the following year, was celebrated. (Nic. Hist. iv. 11 ; compare Becker, Ceramiik, ii. p. 237, &c.) The initiated persons wore branches, and were dressed in white clothes. (Demosth. De Coron. p. 267.) Strangers were permitted to take part in the choruses of boys. During this and some other of the great Attic festivals, prisoners were set free, and nobody was allowed to seize the goods of a debtor; but a war was not interrupted by its celebration. (Demosth. de Bocul. de Nom. p. 999.) As the great Dionysia were celebrated at the beginning of spring, when the navigation was re-opened, Athens was not only visited by numbers of country people, but also by strangers from other parts of Greece, and the various amusements and exhibitions at this occasion were not unlike those of a modern fair. (Isocr. Arap. p. 293, ed. Bekker; Xen. Hiero, i. 11; compare Becker, Charikles, ii. p. 237, &c.)

Respecting the scrupulous regularity, and the enormous sums spent by the Athenians on the celebration of these and other festivals, see Demosthenes (Philip. i. p. 50). As many circumstances connected with the celebration of the Dionysia cannot be made clear without entering into minute details, we must refer the reader to Böckh's essay.

The worship of Dionysus was almost universal among the Greeks in Asia as well as in Europe, and the character of his festivals was the same.
DIONYSIA.

DIONYSIA. 413

everywhere, only modified by the national differ-
ences of the various tribes of the Greeks. It is
expressly stated that the Spartans did not indulge
so much in drinking during the celebration of the
Dionysia as other Greeks. (Athen. iv. p. 156 ;
Plato, De Leg. i. p. 637.) The worship of Di-
nysus was in general, with the exception of Co-
rinth, Sicyon, and the Doric colonies in southern
Italy, less popular among the Doric states than in
other parts of Greece. (Müller, Dorian, ii. 10.
§ 6 ; Böttiger, Ideen z. Archäol. der Malerei,
p. 609.) It was most restlessly wild in Boeotia;
in the orgies on Mount Cithaeron, as is well
known from allusions and descriptions in several
Roman poets. That the extravagant merriment,
and the unrestrained conduct with which all fes-
tivalS of this class were celebrated, did in the
course of time lead to the grossest excesses, cannot
be denied; but we must at the same time acknow-
ledge, that such excesses did not occur until a
comparatively late period. At a very early period
of Grecian history, Bacchic festivals were so
common with human sacrifices, and traces of this
custom are discernible even until very late. In
Chios this custom was superseded by another,
according to which the Bacchae were obliged to
eat the raw pieces of flesh of the victim which
were distributed among them. This act was called
ςωματαγεία, and Dionysus derived from it the name
of ύμαθιος and ύματστής. There was a report that
even Themistocles, after the battle of Salamis, sacri-
ficed three noble Persians to this divinity. (Plat.
Themist. 16, Pelop. 21; compare Thrivyall,
Hist. of Greece, ii. p. 310.) But Plutarch's account of
this very instance, if true, shows that at this time
such savage rites were looked upon with horror.
The worship of Dionysus, whom the Romans
called Bacchus, or rather the Bacchic mysteries
and orgies (Bacchanalia), are said to have been
introduced from southern Italy into Etruria, and
from thence to Rome (Liv. xxxix. 8), where for a
time they were carried on in secret, and, during
the latter period of their existence, at night. The
initiated, according to Livy, did not only indulge
in feasting and drinking at their meetings, but when
their minds were heated with wine, they indulged
in the coarsest excesses and the most
unnatural vices. Young girls and youths were
seduced, and all modesty was set aside; every
kind of vice found here; its full satisfaction. But
the crimes did not remain confined to these meet-
ings: their consequences were manifest in all direc-
tions; for false witnesses, forgeries, false wills,
and denunciations proceeded from this focus of
crime. Poison and assassination were drowned by
the shouts of the Bac-
chae, and the deafening sounds of drums and
cymbals.
The time of initiation lasted ten days, during
which a person was obliged to abstain from all
sexual intercourse; on the tenth he took a solemn
meal, underwent a purification by water, and was
led into the sanctuary (Bacchanal). At first only
women were initiated, and the orgies were cele-
brated every year during three days. Matrons
alternately performed the functions of priests. But
Paenula Annia, a Campanian matron, pretending
to act under the direct influence of Bacchus,
changed the whole method of celebration; she
admitted men to the initiation, and transferred
the solemnisation which had hitherto taken place
during the daytime to the night. Instead of three
days in the year, she ordered that the Bacchana-
lians should be held during five days in every month.
It was from the time that these orgies were car-
ried on after this new plan that, according to the
statement of an eye-witness (Liv. xxxix. 13),
licentiousness and crimes of every description were
committed. Men as well as women indulged in the
most unnatural appetites, and those who at
attempted to stop or to oppose such odious pro-
ceedings fell as victims. It was, as Livy says, a
principle of the society to hold every ordinance of
god and nature in contempt. Men, as if seized
by fits of madness, and under great convulsions,
gave oracles; and the matrons, dressed as Bac-
choa, with dishevelled hair and burning torches in
their hands, ran down to the Tiber and plunged
their torches into the water; the torches, how-
ever, containing sulphur and chalk, were not ex-
tinguished. Men who refused to take part in the
crimes of these orgies, were frequently thrown into
dark caverns and despatched, while the perpe-
trators declared that they had been carried off by
the gods. Among the number of the members of
these mysteries, were, at the time when they were
suppressed, persons of all classes; and during the
last two years, nobody had been initiated who
was above the age of twenty years, as this age
was thought most fit for seduction and sensual
pleasure.

In the year B.C. 186, the consuls Spurius Pos-
tunius Albinus and Q. Marcus Philippus were
informed of the existence of these meetings; and
after having ascertained the facts mentioned above,
they made a report to the senate. (Liv. xxxix.
14.) The senate, alarmed by this singular dis-
covery, and although dreading lest members of
their own families might be involved, invested the
consuls with extraordinary power, to inquire into
the nature of these nocturnal meetings, to exert all
their energy to secure the priests and priestesses,
to issue a proclamation throughout Rome and
Italy, forbidding any one to be initiated in the
Bacchic mysteries, or to meet for the purpose of
celebrating them; but above all things, to submit
those individuals who had already been secured to
a rigid trial. The consuls, after having given to
the subordinate magistrates all the necessary
instructions, held an assembly of the people, in
which the facts just discovered were explained to
the public, in order that the objects of the pro-
ceedings which were to take place might be known
to every citizen. A reward was at the same time
offered to any one who might be able to give
further information, or to name any one that be-
longed to the conspiracy, as it was called. Mea-
ures were also taken to prevent any one from
leaving Italy. During the night following, a great
number of persons were apprehended; many of
them put an end to their own lives. The whole
number of the initiated was said to be 7000. The
trial of all those who were apprehended lasted
thirty days. Rome was almost deserted, for the
innocent as well as the guilty had reason to fear.
The punishment inflicted on those who were con-
icted, varied according to the degree of their
guilt; some were thrown into prison, others were
put to death. The women were surrendered to
their parents or husbands, that they might receive their punishment in private. The consuls then were ordered by the senate to destroy all Bacchania throughout Rome and Italy, with the exception of such altars or statues of the god as had existed there from ancient times. In order to prevent a restoration of the Bacchic orgies, the celebrated decree of the senate (Senatus auctoritas de Bacchanalibus) was issued, commanding that no Bacchania should be held either in Rome or Italy; that if any one should think such ceremonies necessary, or if he could not neglect them without scruples or making atonements, he should apply to the protector urbanus, who might then consult the senate. If the permission should be granted to him in an assembly of the senate, consisting of not less than one hundred members, he might solemnise the Bacchic sacra; but no more than five persons were to be present at the celebration; there should be no common fund, and no master of the sacra or priest. (Liv. xxxix. 18.)

This decree is given in Drakenborch's edition of Livy (vol. v. 55, ed. Bipont). Priests and aged priestesses, (foculus), derived from Bacchus, (from bacchor, bacchans, bacchus, bacchato, bacchicuas, and others. But the most surprising circumstance in the account of Livy is, that the Bacchania should have been celebrated for several years in the boisterous manner described by him, and by thousands of persons, without any of the magistrates appearing to have been aware of it.

While the Bacchania were thus suppressed, another more simple and innocent festival of Bacchus, the Liberales (from Liber, or Liber Pater, a name of Bacchus), continued to be celebrated at Rome every year on the 16th of March. (Ovid. Fast. iii. 713.) A description of the ceremonies customary at this festival is given by Ovid (l. c.), with which may be compared Varro (De Ling. Lat. v. 55, ed. Bipont). Priests and aged priestesses, adorned with garlands of ivy, carried through the city wine, honey, cakes, and sweet-meats, together with an altar with a handle (amanta oris), in the middle of which there was a small fire-pan (foculus), in which from time to time sacrifices were burnt. On this day Roman youths who had attained their sixteenth year received the toga virilis. (Cic. ad Att. vi. 1.) That the Liberalia were celebrated with various amusements and great merriment, might be inferred from the general character of Dionysiac festivals; but we may also see it from the name Ludi Liberales, which is sometimes used instead of Liberalia; and Naevius (ap. Fest.) expressly says that persons expressed themselves very freely at the Liberalia. St. Augustine (De Civ. Dei, vii. 21) even speaks of a high degree of licentiousness carried on at this festival.

[DIOSCURIA (διοσκούρα),] festivals celebrated in various parts of Greece in honour of the Dioscuri. The Spartan dioscuria mentioned by Pausanias (iv. 27, § 1 ; compare with iii. 16, § 5) and Spanheim (ad Collin. Hymn. in Pall. 24), were celebrated with sacrifices, rejoicings, and drinking. At Cyrene the dioscuri were likewise honoured with a great festival. (Schol. ad Pind. Pyth. v. 629.) The Athenian festival of the dioscuri has been described under Anacreia. Their worship was very generally adopted in Greece, especially in the Doric and Achaean states, as we conclude from the great number of temples dedicated to the dioscuri; and in any thing is known respecting the manner in which their festivals were celebrated.

DIO TA. [AMPHORA.]

DIPHTHERA (διφθέρα), a kind of cloak made of the skins of animals and worn by herdsmen and country people in general. It is frequently mentioned by Greek writers. (Aristoph. Nub. 72, and Schol. Vesp. 444 ; Plato, Crit. p. 53 ; Lucian, Tim. c. 12.) Pollux (vii. 70) says that it had a covering for the head (ἐπικαπέδυσιν, in which respect it would correspond to the Roman cumulus. [CICICULUS.] (Becker, Chariblis, vol. ii. p. 359.)

DIPHIROS (διπhqos). [CURRUS ; THRONUS.]

DIPLOX (διπλάξ). [PALLIUM.]

DIPLOIS (διπλός). [PALLIUM.]

DIPLOMA, a writ or public document, which conferred upon a person any right or privilege. During the republic, it was granted by the consuls and senate; and under the empire by the emperor and the magistrates whom he authorised. (Cic. ad Fam. vi. 12, ad Att. x. 17, c. Pis. 37 ; Sen. Ben. vii. 10 ; Suet. Cal. 38, Ner. 12, Oth. 7 ; Dig. 48. tit. 10. s. 27.) The diploma was sealed by the emperor (Suet. Aug. 50); it consisted of two leaves, whence it derived its name. These writs were especially given to public couriers, or to those who wished to procure the use of the public horses or carriages. (Plin. Ep. x. 14, 121, compare x. 54, 55.) The tabellarii of the emperor would naturally always have a diploma; whence we read in an inscription (Orelli, No. 2917) of a diplomarius tabellarius. [DIP'TYCHA. [TABULAE.]

DIRECTA ACTI0. [ACTI0.]

DIRIBITORES, are said by most modern writers to have been the persons who gave to the citizens the tabella with which they voted in the comitia; but Wunder has most distinctly proved, in the preface to his Codex Erfurtensis (pp. cxxxvi.—civili.), that it was the office of the diribitores to divide the votes when taken out of the cicetus, so as to determine which had the majority. He remarks that the etymology of diribere would lead us to assign to it the meaning of "separation" or "division," as it is compounded of dis and habere,
When Cicero says (in Pison. 15), "vos rogatores, vos diribitores, vos custodes tabellarum," we may presume that he mentions these officers in the order in which they discharged their duties in the comitia. It was the office of the rogatores to collect the tabellae which each century gave, as they used, before the ballot was introduced, to ask (pro care) each century for its votes, and report them to the magistrate who presided over the comitia. The diribitores, as has been already remarked, divided the votes when taken out of the cista, and handed them over to the custodes, who sneaked them off by points marked on a tablet.

**DISCUS.**

In the same manner as dirimere is of dis and emere; the n disappears as in præbere and dèbere, which come respectively from præ and habere, and de and habere. In several passages the word cannot have any other signification than that given by Wunder. (Cic. Pro Planctio, 20, ad Qu. Fratr. iii. 4. § 1; varro, De Re Rust. iii. 2. § 1, iii. 5.)

The discus was ten or twelve inches in diameter, the space on which the discobolus, or thrower of the discus, stood, was called βαλέις, and was indicated by being a little higher than the ground surrounding it. As each man took his station, with his body entirely naked, on the βαλέις, he raised his right foot forward, bending his knee, and resting principally on this foot. The discus being held, ready to be thrown, in his right hand, he stooped, turning his body towards it, and his left hand was naturally turned in the same direction. (Philostr. Imag. i. 24; Welecker, ad loc.)

This attitude was represented by the sculptor Myron in one of his works, and is adduced by Quintilian (Inst. Or. ii. 13. § 10) to show how much greater skill is displayed by the artist, and how much more powerful an effect is produced on the spectator, when a person is represented in action, than when he is at rest or standing erect. We fortunately possess several copies, more or less entire, of this celebrated statue; and one of the best of them is in the British Museum (see the preceding woodcut). It represents the player just ready to swing round his outstretched arm, so as to describe with it a semicircle in the air, and thus, with his collected force, to project the discus at an angle of forty-five degrees, at the same time springing forward so as to give to it the impetus of his whole body. Discum "vasto contorquet turbinem, et ipse prosequitur." (Statius, l. c.)

Sometimes a heavy mass of a spherical form (σφάλαξ) was used instead of a discus, as when the Greeks at the funeral games contended for a lump of iron, which was to be given to him who could throw it furthest. (Phil. xxiii. 826—846.) The σφάλαξ was perforated in the centre, so that a rope or thong might be passed through and used in throwing it. (Eratosth. ed. Bernhardy, p. 251.) In this form the discobolia is still practised by the mountaineers of the canton of Appenzell, in Switzerland. They meet twice a year to throw round stones of great weight and size. This they do by a sudden leap and forcible swinging of the whole body. The same stone is taken by all, as in the case of the ancient discus and σφάλαξ: he who sends it to the greatest distance receives a public prize. The stone is lifted as high as the right shoulder (see woodcut; κατωμαθαιον, II. xxiii. 431) before being projected. (Ebel, Bilderhalle der Gebirgsvölker der Schweiz, p. 174.)

**DISPENSATOR.**

**DITHYRAMBUS.**

**DIVIDICULUM.**

**DIVINATIO** is, according to Cicero (De Divinat. i. 1), a preension and a knowledge of future things; or, according to Chrysippus (Cic. De Divinat. ii. 63), a power in man which foresees the future; or, according to Chrysippus (Cic. De Divinat. ii. 63), a power in man which is the passive medium through which the deity reveals the future; and in the other, man discovers it by his own skill or experience, without any pretension to inspiration. As, however, the seer or vates was also frequently called divinus, we shall treat, under this head, of seers as well as of other
The belief that the decrees of the divine will were occasionally revealed by the deity himself, or could be discovered by certain individuals, is one which the classical nations of antiquity had, in common with many other nations, before the attainment of a certain degree of intellectual cultivation. In early ages such a belief was natural, and perhaps founded on the feeling of a very close connection between man, God, and nature. But in the course of time, when men became more acquainted with the laws of locality; one of them is Calchas in the Homeric poems. Apollo, the god of prophecy, was generally the source from which the seers, as well as other diviners, derived their knowledge. In many families of seers the inspired knowledge of the future was considered to be hereditary, and to be transmitted from father to son. To these families belonged the lamids (Paus. iii. 11. § 5, &c.; Böckh, ad Pind. O. vi. p. 152), who from Olympia spread over a considerable part of Greece; the Branchiades, near Melitus (Coton, 38); the Eumorphides, at Athens and Eleusis; the Clytiaed (Paus. vi. 17. § 4), the Telliads (Horod. viii. 27; Paus. x. 1. § 4, &c.; Herod. ix. 37), the Acarnanian seers, and others. Some of these families retained their celebrity till a very late period of Grecian history. The mantæis made their revelations either when requested to do so on important emergencies, or they made them spontaneously whenever they thought it necessary, either to prevent some calamity or to stimulate their countrymen to something beneficial. The civil government of Athens not only tolerated, but protected this belief; and Cicero (De Divinat. i. 43) says, that the mantæa were present in all the public assemblies of the Athenians. (Compare Aristoph. Pax, 1023, with the Schol.; Nab. 325, &c. and the Schol.; Lycurg. c. Leocrat. p. 196.) Along with the seers we may also mention the Bacides and the Sibylae. Both existed from a very remote period every town in Greece had its prophecies by some Bacis or Sibylla. (Paus. l. c.) They seem to have retained their celebrity down to the time of Antiochus and Demetrius. (See Niebuhr, Hist. of Rome, i. p. 503, &c.) Besides these more respectable prophets and prophetesses, there were numbers of diviners of an inferior order (χαρτομάρτυρια), who made it their business to explain all sorts of signs, and to foretell fortunes. They were, however, more particularly popular with the lower orders, who are everywhere most ready to believe what is most marvellous and least entitled to belief. This class of diviners, however, does not seem to have existed until a comparatively late period (Thucyd. ii. 21), Aristoph. Ares, 987, Pax, 986, 1034, &c.), and to have been looked upon, even by the Greeks themselves, as nuisances to the public. These soothsayers lead us naturally to the mode of divination, of which such frequent use was made by the ancients in all the affairs of public and private life, and which chiefly consisted in the interpretation of numberless signs and phenomena. No public undertaking of any consequence was ever entered upon by the Greeks and Romans without consulting the will of the gods, by observing the signs which they sent, especially those in the sacrifices offered for the purpose, and by which they were thought to indicate the success or the failure of the undertaking. For this kind of divination no divine inspiration was thought necessary, but merely experience and a certain knowledge acquired by routine; and although in some cases priests were appointed for the purpose of observing and explaining signs (AUGUR; HARIUSPIX), yet on any sudden emergency, especially in private affairs, any one who met with something extraordinary, might act as his own interpreter. The principal signs by which the gods were thought to declare their will, were things connected with the offering of sacrifices, the flight and voice of birds.
all kinds of natural phenomena, ordinary as well as extraordinary, and dreams.

The interpretation of signs of the first class (ἰερομάντεια or ἱεροσοκία, ἱαροσκία or ἀρατοπρίσκεια), was, according to Aeschylus (Prometh. 493, &c.), the invention of Prometheus. It seems to have been most cultivated by the Etruscans, among whom it was raised into a complete science, and from whom it passed to the Romans. Sacri haruspices were either offered for the special purpose of consulted the gods, or in the ordinary way; but in both cases the signs were observed, and when they were propitious, the sacrifice was said καλλιεργεῖται. The principal points that were generally observed were, 1. The manner in which the victim approached to the altar, whether uttering a sound or not; the former was considered a favourable omen in the sacrifice at the Pantheon. (Strab. viii. p. 384; compare Paus. iv. 32. § 3.) 2. The nature of the intestines with respect to their colour and smoothness (Aeschyl. Prometh. 493, &c.; Eurip. Elect. 833); the liver and bile were of particular importance. [CAPUT EXTORUM.] 3. The nature of the flame which consumed the sacrifice (see Valckenier, ad Eurip. Phoen. 1261); hence the words, νυερομάντεια, ἱερομάντεια, φλωγομάντεια. That the smoke rising from the altar, the libation, and various other things offered to the gods, were likewise considered as a means through which the will of the gods might be learned, is clear from the names, κατανοματεία, λαβανομάντεια, κριδομάντεια, and others. Special care was also taken during a sacrifice, that no inauspicious or frivolous words were uttered by any of the bystanders; hence the admonitions of the priests, εὐφημίασεν καὶ εὐφημία, or σιγάτε, σισωτε, φαυτον, linguis, and others; for improper expressions were not only thought to pollute and profane the sacred act, but to be unlucky omens (διατροφία, καθλόν, φάμα, φωνή or ἀμφιβαίνω, Pind. Od. vi. 112; Hom. II. ii. 41).

The art of interpreting signs of the second class was called οἰωνιστική, άρισταμύνη, or auspiciam. It was, like the former, common to Greeks and Romans, but was never developed into so complete a system by the former as by the latter; nor did it ever attain the same degree of importance in Greece as it did at Rome. [AUGUR.] The Greeks, when observing the flight of birds, turned their face towards the north, and then a bird appearing to the right (east), especially an eagle, a heron, or a falcon, was a favourable sign (Hom. ii. 274, xxiv. 310, Od. xv. 524); while birds appearing to the left (west) were considered as unlucky signs. (Hom. ii. xii. 201, 230; Festus, s. v. Σίνιστρα αερος.) Sometimes the mere appearance of a bird was thought sufficient; thus the Athenians always considered the appearance of an owl as a lucky sign; hence the proverb, γάλαξ ἱερομάντιος, "the owl is out," i.e. we have good luck. Other animals appearing unexpectedly, especially to travellers on their road (ὥδη καμπάλα), were also thought ominous; and at Athens it was considered a very unlucky omen, when a wensel appeared during the assembly of the people. (Aristoph. Eccles. 793.)

Superstitions of this kind are still met with in several European countries. Various other means were used to ascertain the will of the gods, such as the σηδρομάντεια, or divination by placing straws on red hot iron; the μαλαθρομάντεια, by observing the figures which melted lead formed; the θοντομάντεια, or divination by writing one's own name on herbs and leaves, which were then exposed to the wind, &c.

Of greater importance than the appearance of animals, at least to the Greeks, were the phenomena in the heavens. The Spartan ephors, as we learn from Plutarch (Agesil. 11), made regular observations in the heavens every ninth year during the night; and the family of the Pythiaste, of Athens, made similar observations every year before the theoria set sail for Delos. (Müller, Dorians, ii. 2. § 14.) Among the unlucky phenomena in the heavens (διανομή, σήμα, or ψήφος) were thunder and lightning (Aristoph. Eccles. 793; Eustath. ad Hom. Od. xx. 194), an eclipse of the sun or moon (Thucyd. vii. 50), earthquakes (Xen. Hellen. iv. 7. § 4), rain of blood, stones, milk, &c. (Hom. II. xi. 53, &c.; Cic. De Divinat. i. 43). Any one of these signs was sufficient at Athens, as well as at Rome, to break up the assembly of the people. (Schömann, De Comit. Ath. p. 146. &c. transl.) In common life, things apparently of no importance, when occurring at a critical moment, were thought by the ancients to be signs sent by the gods, from which conclusions might be drawn respecting the future. Among these common occurrences we may mention sneezing (Hom. Od. xvii. 561, with the note of Eustath.; Xen. Anab. iii. 2. § 9; Plut. Theanist. 13; Ovid. Heroid. 10, 151; Propirt. ii. 2. 33), twinkling of the eyes (Theocrit. iii. 37; Plut. Pseudep. i. 2. 105; compare Wüstemann, ad Theocrit. l. c.), ticking of the ears, and numberless other things which we cannot here enumerate. Some of them have retained their significance with the superstitions multitude down to the present day.

The art of interpreting dreams (ὑπνομάντεια), which had probably been introduced into Europe from Asia, where it is still a universal practice, seems in the Homeric age to have been held in high esteem; for dreams were said to be sent by Zeus. (Hom. II. i. 63, ii. init., Od. iv. 841, xix. 457.) In subsequent times, that class of diviners who occupied themselves with the interpretation of dreams, seems to have been very numerous and popular; but they never enjoyed any protection from the state, and were only resorted to by private individuals. Some persons are said to have gained their livelihood by this profession. (Plut. Aristid. 27.) Respecting the oracles which were obtained by passing a night and dreaming in a temple, see ORACULUM.

For further information concerning the art of divination in general, see Cicero's work, De Divinatione. The μαστιχ of the Greeks is treated of at some length by Wachsmuth (Hellen. Alterth. ii. 2. p. 259, &c., vol. ii. p. 585, 2d edit.). Compare Thirlwall's Hist. of Greece, i. p. 206, &c.

The word divinatio was used in a particular manner by the Romans as a law-term, which requires some explanation. If in any case two or more accusers came forward against one and the same individual, it was, as the phrase run, decided by divinatio, who should be the chief or real accuser, whom the others then joined as subscribers; i.e. by putting their names to the charge brought against the offender. This transaction, by which one of several accusers was selected to con-
The statement of Plutarch (Romul. 22) that the husband alone had originally the power of effecting a divorce may be true; but we cannot rely altogether on such an authority. In the cases of divorce in manum, one might suppose that a woman could not effect a divorce without the consent of her husband, but a passage of Gaius (i. 157) seems to say, that the conventio in manum did not limit the wife’s freedom of divorce at the time when Gaius wrote (Böcking, Inst. i. 229. n. 9). The passage of Dionysius (Antiq. Rom. ii. 25), in which he treats of marriage by confarreatio, declares that the marriage could not be dissolved.

As the essential part of a marriage was the consent and affection of the parties, it was considered that this affection was necessary to its continuance, and accordingly either party might declare his or her intention to dissolve the connection. No judicial decree, and no interference of any public authority, was requisite to dissolve a marriage. Filifamilias, of course, required the consent of those in whose power they were. The first instance of divorce at Rome is said to have occurred about b.c. 234, when Sp. Carvilius Ruga put away his wife (A. Gel. iv. 3, xvii. 21; Val. Max. ii. 1, § 4) on the ground of barrenness; it is added that his conduct was generally condemned. The real meaning of the story is explained by Saviugy with his usual acuteness (Zeitschrifl, &c. vol. v. p. 259).

Towards the latter part of the republic, and under the empire, divorces became very common; and in the case of marriages, where we assume that there was no conventio in manum, there was no particular form required. Cn. Pompeius divorced his wife Mucia for alleged adultery, and his conduct was approved (Cic. ad Att. i. 19, 18); and Cicero speaks of Paula Valeria (ad Fam. viii. 7) as being ready to serve her husband, on his return from his province, with notice of divorce. (Compare Juv. vi. 224, &c.; Mart. vi. 7.) Cicero himself divorced his wife Terentia, after living with her thirty years, and married a young woman whom he also divorced (Plut. Cic. 41). Cato the younger divorced his wife Marcia, that his friend Hortensius might marry her and have children by her; for this is the true meaning of the story. (Plut. Cato. Min. 25.) If a husband divorced his wife, the wife’s dos was restored; and if the dos was retained, the wife’s dos was retained. (Dos) and the same was the case when the divorce took place by mutual consent. As divorce became more common, attempts were made to check it indirectly, by affixing pecuniary penalties or pecuniary loss on the party whose conduct rendered the divorce necessary. This was part of the object of the lex Papia Poppaea, and of the rules as to the retentio dotis, and judicium morum. There was the retentio dotis proper to liberos, when the divorce was caused by the fault of the wife, or of her father, in whose power she was: three-sixths of the dos was the limit of what could be so retained. On account of matters morum graviorum, such as adultery, a sixth part might be retained; in the case of matters morum leviorum, one eighth. The husband, when in fault, was punished by being required to return the dos earlier than it was otherwise returnable. After the divorce, either party might marry again. (Sueton. Aug. 94.)

By the lex Papia Poppaea, a freedwoman who had married her patronus could not divorce herself; there appears to have been no other class of
persons subjected to this incapacity. (Dig. 24. tit. 2. s. 11.)

Corresponding to the forms of marriage by con-
faratio and coematio, there were the forms of
divorce by diifaratio and remanicipatio. According
to Festus (s. v. Diffaratio), diifaratio was a
kind of religious ceremony so called, "quia fictah
farceo libo adhibito," by which a marriage was dis-
solved; and Plutarch (Quaest. Rom. 50) has been
supposed to allude to this ceremony in the case of
a divorce between the flamen dialis and his wife.

It is said that originally marriages contracted by
confaratio were indissoluble; and in a later age,
this was the case with the marriage of the flamen
dialis (Gell. x. 15), who was married by confar-
atio. In the case referred to by Plutarch, the
emperor authorised the divorce. A marriage by
coematio was dissolved by remanicipatio (Festus,
s. e. Remanicipatum). In other cases, less cere-
nony was used; but still some distinct notice or
declaration of intention was necessary to constitute
a divorce: the simple fact of either party con-
tacting another marriage was not a legal divorce.

(Cic. Orat. i. 40.) The ceremony of breaking the
nuptiales tabulae (Tacit. Ann. x. 30), or of taking
the keys of the house from the woman and turning
her out of doors, were probably considered to be
acts of themselves significant enough, though it
may be presumed that they were generally accom-
panied with declarations that could not be mis-
understood. The general practice was apparently
to deliver a written notice, and perhaps to assign a
reason. In the case of Paula Valeria, mentioned
by Cicero, no reason was assigned. By the Lex
Julia de Adulteris, it was provided that there
should be seven witnesses to a divorce, Roman
citizens of full age (puberes), and a freedman of
the party who made the divorce. (Dig. 24. tit. 2.
s. 9.)

Under the early Christian emperors, the power
divorce remained, as before, subject to the ob-
servation of certain forms. Justinian restricted the
power of divorce, both on the part of the husband
and the wife, to certain cases, and he did not allow
a divorce even by the consent of both parties, unless
the object of the parties was to live a life of cha-
sity; a concession made to the opinions of his
Christian subjects.

The term repudium, it is said, properly applies to
a marriage only contracted [MATRIMONIUM], and
divortium to an actual marriage (Dig. 50. tit. 16.
s. 101. 191); but sometimes divorce and repu-
dium appear to be used indifferently. The
phrases to express divorce are, nuncium remit-
ter, divortium facere; and the form of words
might be as follow,—"Tuas res tibi habeto, tuas
res tibi agito." (Cic. Phil. ii. 28; Plaut. Amphi.
tii. 2. 47, Trinum. ii. 1. 43.) The phrases used to
express the renunciation of a marriage contract were,
remuntiaria repudium, repudium remittere, dis-
cere, and repudiare; and the form of words
might be, "Conditione tua non utor." (Dig. 24.
tit. 2; Ulp. Frag. vi; Heinecc. Syntagmata; Cod.
5. tit. 17, and 24; Rein, Das Römisiche Privatrecht;
and as to the latter, to the modern Roman Law, Thibaut,
&c. 9th ed.) [G. L.]

DO'CANA (τὰ δόκαςα, from ὀδός, a beam) was an ancient symbolical representation of the
Dioscuri (Castor and Polydeuces), at Sparta. It
consisted of two upright beams with others laid
1. p. 36.) This rude symbol of fraternal unity
evidently points to a very remote age, in which
scarcely any attempts in sculpture can have been
made. At a later time, when works of art were
introduced into all the spheres of ordinary life,
this rude and ancient object of worship, like many
others of its kind, was not superseded by a more
appropriate symbol. The Dioscuri were worshipped
as gods of war, and we know that their images
accompanied the Spartan kings whenever they
took the field against an enemy. But when in the
year 504 B.C. the two kings, during their inva-
sion of Attica, failed in their undertaking on ac-
count of their secret enmity towards each other,
it was decreed at Sparta, that in future only one
king should command the army, and in conse-
quence should only be accompanied by one of the
images of the Dioscuri. (Herod. v. 75.) It is not
improbable that these images, accompanying the
kings into the field, were the ancient δόκαςα, which
were now disjointed, so that one half of the sym-
bol remained at Sparta, while the other was taken
into the field by one of the kings. Suidas and the
Etymologicum Magnum (s. v.) state that δόκαςα
was the name of the graves of the Dioscuri at
Sparta, and derived from the verb δέχομαι. (Müller,
Dorian, i. 5. § 12, note m, ii. 10. § 8; Zoega,
De Obelisci, p. 228.)

DOCIMA'IA (δοκιμασία). When any citi-
zan of Athens was either appointed by lot, or
chosen by suffrage (ἐλπισσον καλ ἀμετάκτος), to hold
a public office, he was obliged, before entering on
its duties, to submit to a docimasia, or scrutiny
into his previous life and conduct, in which any
person could object to him as unfit. This was the
case with the archons, the senators, the strategi,
and other magistrates. The examination, or ana-
crisis, for the archonship was conducted by the
senators, or in the courts of the heliaea. The docima-
sia, however, was not confined to persons appointed
to public offices; for we read of the denouncement
of a scrutiny (ἐπαγγέλλα δοκιμασία) against or-
ators who spoke in the assembly while leading
profligate lives, or after having committed flagi-
tious crimes. This denouncement might be made
in public by any one πρὸς δοκιμασιαν τοῦ βιοῦ,
i. e. to compel the party complained of to appear
before a court of justice, and give an account of his
life and conduct. If found guilty, he was punished
with atimia, and prohibited from the assemblies.

(Asch. Timarch. p. 5.) The phrase ἥθη εἶναι δοκι-
μασθῆται needs a few words of explanation. At the age of eighteen,
every Athenian became an ephebus, and after two
years was enrolled amongst the men, so that he
could be present and vote at the assemblies. (Poll.
viii. 105.) In the case of wards who were heirs
to property, this enrolment might take place before
the expiration of the two years, on it being estab-
lished by a docimasia that the youth was physi-
ocally qualified to discharge any duties the state
might impose upon him. If so, he was released
from guardianship, and became a man (ἀνήρ
γενέσθαι, or δοκιμασθῆναι), being thereby empowered
to enter upon his inheritance, and enjoy other
privileges, just as if he were of the full age of
twenty. (Harpoc. s. v. Ἑπιδίκειται δοκιμασία; Dem.
We may add that the statements of the grammarians
and orators are at variance on this point; but the
explanation we have given seems the best way of
reconciling them, and it agrees in substance with the supposition of Schömann, "that among the Athenians, no one period was appointed for enrolment, provided that it was not done before the attainment of the 18th, nor after the completion of the 20th year." (Schömann, *De Cornibus*, pp. 73, 241, &c.)

[R. W.]

DODRANS. [As.]

DOLABRA, *dim. DOLABELLA* (σμήλη, *dim. σμήλον*), a chisel, a celt, was used for a variety of purposes in ancient as in modern times. They were frequently employed in making entrenchments and in destroying fortifications (Liv. ix. 37, xxi. 11; Curt. ix. 5; Tacit. *Hist.* iii. 20); and hence they are often found in ancient earth-works and encampments. They abound in our public museums, being known under the equivalent name of "celts" to antiquaries, who, however, generally use the word without understanding its true sense. (See Jamieson's *Etym. Dict.* s. v. *Cell.*)

Celtes is an old Latin word for a chisel, probably derived from *celo*, to engrave. Thus the phrase *celte sculptantur in silice* occurs in the vulgate version of Job (xix. 24), and *malleolo et celte literatus silix* in an inscription found at Pola. (Gruter, p. 329.)

These articles are for the most part of bronze, more rarely of hard stone. The sizes and forms which they present, are as various as the uses to which they were applied. The annexed woodcut is designed to show a few of the most remarkable varieties. Fig. 1 is from a celt found, with several others, at Karnbre in Cornwall. (Borlase, *Ant. of Cornwall*, iii. 13.) Its length was six inches without the haft, which was no doubt of wood, and fixed directly into the socket at the top. It must have been a very effective implement for removing the stones in the wall of a city or fortification, after they had been first shattered and loosened in some degree by the battering-ram. The ear, or loop, which is seen in this and many other celts, would be useful to suspend them from the soldier's girdle, and may also have had a cord or chain attached to it to assist in drawing back the celt whenever it became too firmly wedged between the stones of the wall which it was intended to destroy. Figs 2 and 3 are from Sir W. Hamilton's collection in the British Museum. These chisels seem best adapted for the use of the carpenter. The celt (fig. 4) which was found in Furness, co. Lancaster (*Archaeologia*, v. p. 108), instead of being shaped to receive, or to be inserted into a handle, like the three preceding, is made thick, smooth, and round in the middle, so as to be conveniently manipulated without a handle. It is 9 inches long, and weighs 2 lb. 5 oz. Its sharp edge is like that of a common hatchet, and may have been used for polishing timber. On the other hand, figs. 5, 6, 7, exactly resemble the knife now used by leather-cutters, and there-
fortunarum suarum Romae collocavit; and this indirect definition agrees, in part, with one in the Corpus Juris. One of these (Dig. 50. tit. 1. s. 27. § 1) determines that a person must be considered to have his domicilium in a municipium, if he buys and sells there, attends the public spectacles, keeps the festival days there, and, in fine, enjoys all the advantages of the municipium, and none of the colonia, or the place where he is merely a resident. None of the colonia, or the place where he is merely a resident, would make him an incola. Domicilium is then defined in the following terms: "in co loco singulari habet domicilium non ambiguitur ubi quis larem rerumque ac fortunarum summam constituit, unde rursus non discersum si nihil avocet, unde cum profectus est peregrinavi videtur, quod (quo?) si relict, peregrinari jam destitit." In a passage in the Digest (50. tit. 1. s. 5.), "incolam esse" and "domicilium habere" are used as equivalent terms.

It was important, for many purposes, to determine where a man had his permanent abode. An incola was bound to obey the magistrates of the place where he was an incola, and also the magistrates of the place where he was a civis; and he was not only subject to the municipal jurisdiction in both municipia, but he was bound to perform all public functions (publica munera). If a man was bound (obligatus), to pay a sum of money in Italy, and had his domicilium in a provincia, he might be sued either in Italy or in the provincia (Dig. 5. tit. 1. s. 19, § 4). A son followed the civitas which was the naturalis origo of his father, and did not follow his father's domicilium. If a man had no legal father (justus pater), he followed the origo of his mother. In the Præscripitione longi temporis decem vel viginti annorum, it was enacted by Justian, that the ten years' prescription should apply, if both parties (tam petens quam possidens) had their domicilium in the same provincia; if the two parties had not their domicilium in the same provincia, the prescription of twenty years applied. (Cod. 7. tit. 33. s. 12.)

The modern law of Domicile is a branch of what is sometimes called international law; and many of the principles which are admitted in modern times are founded on the Roman rules. (The Law of Domicile by Robert Phillimore, 1847; Burge, Commentaries on Colonial and Foreign Laws, vol. 1.) [G. L.]

DOMINIUM. Dominium signifies quiritarian ownership of a thing; and dominus, or dominus legitimus, is the owner. Possessor is often used by Roman writers as equivalent to owner; but this is not a strictly correct use of the word. In like manner, "to have ownership" is sometimes expressed by "possidere," and the thing in which there is property is sometimes called "possession." (Savigny, Das Recht des Besitzes, p. 65, 5th ed.)

The complete notion of property or ownership comprehends the determination of the things which may be the objects of ownership; the power which a man may have over such objects, both as to duration of time and extent of enjoyment; the modes in which ownership may be acquired and lost; the persons who are capable of acquiring, transferring, or losing ownership.

Res is the general name for anything which is the object of a legal act. The chief division of res is into res divini juris, and res humani juris. Res divini juris are those which are appropriated to religious purposes, namely, res sacræ, sanctæ, religiosæ; and so long as they have this character, they cannot be objects of property. Res humani juris are all other things that can be the objects of property; and they are either res publicae or res privatae. Res publicae belong to the state, and can only become private property by being deprived of this public character. Res privatae are the property of an individual, and are not the property of any individual. The phrase res nullius is ambiguous; it sometimes means that the thing cannot be the property of any individual, which is affirmed of things divini juris; when applied to things humani juris, it sometimes means that they are not the property of an individual but of a universitas; yet such things may become the property of an individual; res hereditariae are res nullius until there is a heres. Res communes are those which cannot be the objects of property, and therefore are res nullius, as the sea.

Res corporales are defined to be those "quae tangebunt;" incorporales are those "quae tangi non possunt, sed in jure consistunt," as HERE- DITAS, USUFRUCTUS, OBLIGATIONES; and they are consequently incapable of tradition, or delivery. The distinction of things into corporeal and incorporeal did not exist in the older Roman law; and it is a useless distinction. An incorporeal thing is merely a right, and so it is explained in the Institutiones (tit. 1. s. 2, ed. Schrader).

Corporal things are divided into immobiles, or solum et res soli, and mobiles. The ground (solum), and that which is so attached to the ground as to be inseparable from it without being destroyed, as a building for instance, are res immobiles. Mobiles are all such as can be removed from one place to another without the destruction of their character. The class of res mobiles "quae ponderæ, numero, mensura constat," are such things as wine, oil, corn, silver, gold, which are of such a nature that any the same number, weight, or measure, may be considered the same thing. (Digesta.) There is another class of res, consisting of those "quae usu consumuntur, minuuntur," and those "quae non, &c." The term singularis res comprehends either one thing or several things, separately considered as ones. Such things are either simple, as an animal, a stone; or compounded of parts, as a carriage, or a ship. Any number of things, not mechanically connected, may in a legal sense be viewed as one, or as a universitas. (Dig. 41. tit. 3. s. 30; 6. tit. 1. s. 25, § 5.)

Some things are appurtenant to others, that is, as subordinate parts they go with that which forms the principal thing. (Dig. 18. tit. 1. s. 49.) If a thing, as a house or a ship, was purchased, the buyer got every thing that was a part of the house or ship. (Dig. 21. tit. 2. s. 44.)

Fructus are what is produced out of a thing by its own productive power; as the grass in a field, the fruit on a tree.

The division of things into res mancipi and res nec mancipi, was one of ancient origin; and it continued to a late period in the empire. Res mancipi
acquires them not as individual things, but he ac-
in a number of things of different kinds at once.
The latter kind of acquisition is either successio inter-
be a legal mode of acquisition.

Ownership may be acquired in single things
be the object of such ownership, and there must
acts on or to his property, and for the benefit of
include others from meddling with it. The do-
may have rights in or to a thing which,
exclude all others from the use or enjoyment of it,
set the ususfructus from the owner
minus has the right to possess, and is distinguished
pleases ; this, of course, implies the right to ex-
the usufruit of a thing, is never considered as owner;
proprietas is the name for that which remains
in its nature single, can only be conceived
as complete as the law allows any ownership to be,
and the usufruit of a thing, may have rights in or to a thing which,
as far as they extend, limit the owner's power over
or ownership united with the
beneficial interest, is explained in another place.

A person who has no ownership of a
as belonging to one person ; consequently there
cannot be several owners of one thing, but several
persons may own undivided shares or parts of a thing.

As a man's right to deal with a thing and to
exclude others from the use or enjoyment of it,
may be limited, this may arise either from his being
bound to allow to another person a certain use or
enjoyment of the thing of which he is dominus, or
from his being bound to abstain from doing certain
acts on or to his property, and for the benefit of
some other person.

This limitation of a man's enjoyment of his own
is explained under servitutes.

In order to acquire ownership, a person must
have a legal capacity to acquire; and ownership
may be acquired by such a person, or by another
for him. There must also be a thing which can
be the object of such ownership, and there must
be a legal mode of acquisition (acquisitio civilis).
Ownership may be acquired in single things (ac-
quissitio rerum singularum), or it may be acquired
in a number of things of different kinds at once
(acquisitio per universitatem), in which case a person
acquires them not as individual things, but he ac-
quires the parts by virtue of acquiring the whole.
The latter kind of acquisition is either successio inter-
vives, as in the case where a man adjudicates another,
and so becomes the owner of all the adrogated per-
son's property (Gaius, iii. 21); or it is successio
mortis causa, as in the case of a testamentary heres,
or a heres ab intestato.

The latter kind of acquisition is either successio inter-
be a legal mode of acquisition.

Ownership may be acquired in single things
be the object of such ownership, and there must
acts on or to his property, and for the benefit of
include others from meddling with it. The do-
may have rights in or to a thing which,
exclude all others from the use or enjoyment of it,
set the ususfructus from the owner
minus has the right to possess, and is distinguished
pleases ; this, of course, implies the right to ex-
the usufruit of a thing, is never considered as owner;
proprietas is the name for that which remains
in its nature single, can only be conceived
as complete as the law allows any ownership to be,
and the usufruit of a thing, may have rights in or to a thing which,
as far as they extend, limit the owner's power over
or ownership united with the
beneficial interest, is explained in another place.

A person who has no ownership of a
as belonging to one person ; consequently there
cannot be several owners of one thing, but several
persons may own undivided shares or parts of a thing.

As a man's right to deal with a thing and to
exclude others from the use or enjoyment of it,
may be limited, this may arise either from his being
bound to allow to another person a certain use or
enjoyment of the thing of which he is dominus, or
from his being bound to abstain from doing certain
acts on or to his property, and for the benefit of
some other person.

This limitation of a man's enjoyment of his own
is explained under servitutes.

In order to acquire ownership, a person must
have a legal capacity to acquire; and ownership
may be acquired by such a person, or by another
for him. There must also be a thing which can
be the object of such ownership, and there must
be a legal mode of acquisition (acquisitio civilis).
Ownership may be acquired in single things (ac-
quissitio rerum singularum), or it may be acquired
in a number of things of different kinds at once
(acquisitio per universitatem), in which case a person
acquires them not as individual things, but he ac-
quires the parts by virtue of acquiring the whole.
The latter kind of acquisition is either successio inter-
vives, as in the case where a man adjudicates another,
minium), nor was it the same as in bonis. The two things are distinguished by Ulpian (Frag. xix. 20, 21). A bonae fidei possessor had a capacity for acquiring by usucapion the ownership of the thing which he possessed. He had a kind of right than himself, in which latter respect he differed from him who had a thing in bonis, for his claim was good against the person who had the bare ownership. (Dig. 6. tit. 2.)

As to fundi provinciales, it was an old principle of Roman law that there could be no dominium in them, that is, no quiritarian ownership; nor were they said to be in bonis, but the occupier had possessio and ususfructus. In fact the terms dominium and in bonis were not applicable to provincial lands, nor were the fictions that were applicable to things in bonis applicable to provincial lands; but it is an ingenious conjecture of Unterholzer, that the formula actionis was adapted to the case of provincial lands by a fiction of their being Italic lands, combined with a fiction of their being acquired by usucapion. In the case of the ager publicus in Italy, the dominium was in the Roman people, and the terms possessio and possessor were appropriate to the enjoyment and the person by whom the land was enjoyed. Still the property in provincial land was like the property in bonis in Rome and Italy, and it consequently became dominium after the distinction between quiritarian and bonitarian ownership was destroyed.

Ownership was also acquired in the case of occupatio, accession, &c. [Accessio; Alluvio; Confusio.]

A man, who had a legal capacity, could acquire property either himself or by those who were in potestate, manu, mancipiove. He could even acquire thus per universitatem, as in the case of an hereditas; and he could also thus acquire a legacy. If a slave was a man's in bonis, every thing that the slave acquired belonged to the owner in bonis, and not to him who had the bare quiritarian ownership. If a man was the bonae fidei possessor of another person, whether that person happened to be a freeman supposed to be his possessor, or a slave, or was the property of another, the possessor only acquired the ownership of that which the person so possessed acquired "ex re possessidinis" and "ex operis suis." The same rule applied to a slave in which a man had only the usufructus; and the rule was consistent with the rule just laid down, for usufructus was not property. Sons who were in the power of a father, and slaves, of course, could not acquire property for themselves. [Peculium.]

Ownership was lost either with the consent of the owner or against it. With the consent, when he transferred it to another, which was the general mode of acquiring and losing property; without the consent, when the thing perished, when it became the property of another by accession or usucapion, when it was judicially declared to be the property of another, or forfeited by being pledged. Ownership was not lost by death, for the heres was considered to be the same person as the defunct.

As certain persons had not a capacity to acquire, so some persons had not the same liability to lose that others had. Thus the property of a pupillus who was in tutela legitima, could not become the property of another by usucapion; a fundamental principle of law which Cicero was surprised that his friend Atticus did not know (Ad Att. i. 5).

Ownership might be lost by the Maxima capitis diminutio; when it was the consequence of a conviction for a capital crime, the property was forfeited to the state. [Sectio Bonusum.] The media capitis diminutio only effected an incapacity for quiritarian ownership; the person could still retain or acquire property by the jus gentium; still if the media capitis diminutio was the consequence of conviction for a capital crime, the same result followed as in the same cases as the Maxima. (Mackeldy, Lehrbuch, &c. 12th ed.; Ueb. die Verschiedenen Arten des Eigenthumb, &c. von Unterholzer, Rhein. Mus. Erster Jahryr.; Gaii, ii. 1, &c.; Ulp. Frag. tit. xix.; Thibaut, System, &c. § 146. &c.; § 242, &c., 9th ed.)

DOMINUS means master, owner [Dominium]. Dominus is opposed to Servus, as master to slave. Plinius, in his letters, always addresses Trajanus as Dominus; but this must be viewed rather as a mode of showing his respect than any acknowledgment of a title. (C. Plinii Caecilii Secundi Ep. G. H. Schaefer, p. 500, note.)

Domitianus claimed the titles of Dominus and Deus. (Dion Cass. lviii. 13, and the note of Reimarus; also Martialis, Ep. v. 8, and x. 72, when Dominianus was dead.) It is said, that Aurelius first adopted the title Dominus on his medals. (Eckhel, Doct. Num. Vel. vii. p. 482.)

DOMUS [oikos, oidea, and in old Greek ðòmos], a house. 1. GREEK. — The arrangement of the several parts of the dwellings of the Greeks forms some of the most difficult subjects in their antiquities. The only regular description of the Greek house, that of Vitruvius, is in many respects inconsistent with the allusions found in the Greek writers; while those allusions themselves are far too scanty and obscure, to be woven into a clear description. It is manifest, also, that the arrangement of the parts differed much at different periods. To say nothing of the early period when, according to tradition, rude huts of clay, or wood, or stone, began to be used instead of the hollow trees, and caves, and clefts in the rocks, in which the savage aborigines found shelter (Dio. v. 68, Paus. x. 17), we have to distinguish between the houses, or rather palaces, of the heroic age, to which Homer's allusions apply, the houses of the historical period down to the time of Alexander the Great, and those after his time.

There were also considerable differences between the arrangements of a town and a country house. All of these had two principal features in common. Firstly, in Greece, as in all warm climates, the general arrangement of a house of the better sort was that of one or more open courts, surrounded by the various rooms. Secondly, in a Greek family the women lived in private apartments allotted to their exclusive use. Hence the house was always divided into two distinct portions, namely, the Andrōnitis, or men's apartments (ἀνδρώνιτις, and the Gymneconitis, or women's apartments (γυμνεκονιτις). In the earliest times, as in the houses referred to by Homer, the women's apartments were in the upper story (ὑπεραυλώ). The same arrangement is found at the time of the Peloponnesian war in the house spoken of

B E 4
by Lysias (De Cons. Erotot. pp. 12, 13; comp. Aristoph. Eccles. 961, Theam. 482). But it does not follow that that was the usual custom at this period. On the contrary, we have the express testimony of several writers, and of Lysias himself among the rest, that the Gynaeconitis was on the same story with the Andronitis, and behind it (Lysias, c. Simon. p. 139; Demosth. c. Euryg. p. 1155; Xen. Mem. xxiv. ix. 5; Antiph. de Venif. p. 611); and even the tragic poets transfer to the heroic ages the practice of their own, and describe both sets of apartments on the same floor. (Soph. Onk. Trig. 1241—1262.)

The scanty notices of the domestic, or rather the palatial architecture of the early Greeks, which we find in Homer, are insufficient to give an accurate notion of the names, uses, and arrangement of the apartments; besides which, an allowance must not doubt be made for poetical exaggeration. The various passages and words, in Homer, which throw any light upon the subject, are collected and discussed by Schneider (Epist. ad Xenoph. Mem. iii. 6, §§ 8), by Krause (in Pauly's Real-Encyclop. d. Class. Alterth. s. v. Domus), and by Hirt, who gives a ground-plan of the Homeric house (Geschichte der Baukunst, vol. i. pp. 206—216, and Plate VI. fig. 1). The general plan was not very different from that of the later houses. The chief points of difference appear to have been, the position of the women's apartments in the upper story, and the great court in front of the house, which was wanting at least in the ordinary town dwellings of later times.

We first gain precise information on the subject about the time of the Peloponnesian war; and from the allusions made by Greek writers to the houses of this and the immediately subsequent periods, till the time of Alexander, we may conclude that their general arrangement corresponded with that described by Vitruvius (vi. 7, Schneider). In this description, however, there is one considerable difficulty, among others of less importance. Vitruvius seems to describe the Gynaeconitis as lying before the Andronitis, an arrangement alike inconsistent with the careful state of seclusion in which the Greek women were kept, and also with the allusions in the writers of the period, who, as above stated, almost uniformly refer to the two sets of apartments as being on the same floor, the Gynaeconitis behind the Andronitis. Becker (Charikles, vol. i. pp. 184, 185) notices the different explanations which have been given of the inconsistency between the statements and the description of Vitruvius, the most plausible of which is that of Galliani, namely, that in the time of Vitruvius a slight change had taken place in the disposition of the apartments, by which the Andronitis and Gynaeconitis were placed side by side, each of them having its own front towards the street, and its own entrance. It is also very likely that Vitruvius to some extent misunderstood the descriptions given by his Greek authorities.

The front of the house towards the street was not large, as the apartments extended rather in the direction of its depth than of its width. In towns the houses were often built side by side, with party walls between. (Thucyd. ii. 3.) The exterior wall was plain, being composed generally of stone, brick, and timber (Xen. Mem. iii. 1, § 7; Demosth. Olymp. xxv. 175), and often covered with stucco. (Plutarch. Comp. Arist. et Cat. 4.)

Plutarch speaks of Phocion's house as being ornamented with plates of iron. (Plut. Phoc. 18.)

The general character of the ordinary houses in towns was very plain, even at the time of the Peloponnesian war; the Greeks preferring to expend their wealth on temples and other public buildings. The ease with which the Plataeans broke through the party walls of their houses, to communicate with one another, in the instance just quoted, shows how indifferently they were constructed; and even at Athens, in the time of Pericles, foreign was was struck by the contrast between the splendour of the public buildings and the mean dwellings of the common people. (Thuc. ii. 14, 65; Dicasearch. Stat. Grac. p. 8.)

Xenophon (Mem. iii. 8, §§ 9, 10) represents Socrates as stating briefly the chief requisites of a good house; that it should be cool in summer and warm in winter, and that the apartments should furnish convenient abodes for the family, and safe receptacles for their property: for the former purpose, the chief apartments should face the south, and should be lofty, so as to receive the full rays of the sun in winter; and to be shaded by their projecting roofs in summer; and that those facing the north should be lower, for the sake of shelter. Paintings and elaborate decorations, he says, destroy more pleasures than they furnish.

The advance of luxury, after the time of Alexander the Great, caused a corresponding improvement in the dwelling-houses of the principal Greek cities, which had already begun to receive more attention, in proportion as the public buildings were neglected. (Demosth. in Aristocr. p. 639, Olynth. iii. p. 36.) It is probable that the larger and more splendid houses of this period that the description of Vitruvius applies; but there is no reason to suppose that the general arrangements of the previous period were much altered. The following description, therefore, which is derived from a comparison of Vitruvius with the allusions in the Greek writers, will serve for the probable arrangements (for further we cannot go) of the Greek house, at the time of the Peloponnesian war and onwards.

That there was no open space between the street and the house-door, like the Roman vestibulum, is plain from the law of Hippias, which laid a tax on house-doors opening outwards, because they encroached upon the street. (Aristoph. Oecon. ii. 6, p. 1347. Beka.) The πρὸθνερον, which is sometimes mentioned (Herod. vi. 35), seems to be merely the space in front of the house. We learn, however, from the same law of Hippias, that houses sometimes stood back from the street, with in enclosures of their own (προαριστηκτάνα δέσποταν, Herod. Pont. ix. 51); and the front door of the house was generally a temple of Apollo Agnires, or a rude obelisk emblematical of the god. Sometimes there was a laurel tree in the same position, and sometimes a terminal butt of the god Hermes. (Thucyd. vi. 27; Aristoph. Plut. 1153.)

A few steps (ἀνωθαμαλον) led up to the house-door, which generally bore some inscription, for the sake of a good omen, or as a charm, such as Στίχους Κρατιτης Αγαθός Δαμων. (Plutarch. Frag. Vit. Crot. 49. Diog. Laer. vi. 50.) The form and fastenings of the door are described under ΤΡΟΥΣ. This door, as we have seen, sometimes opened outwards; but the opposite was the general rule, as is proved by the expressions used for opening,

DOMUS.

Portions of the upper story sometimes projected beyond the walls of the lower part, forming balconies or verandahs (προδωμα, γειτονιόβιαμα, Pollux, i. 81).

The following plan of the ground-floor of a Greek house of the larger size is taken from Bekker's Charicles. It is of course conjectural, as there are no Greek houses in existence. Other plans, differing very much from this and from one another, are given by Hirt, Stieglitz, and the commentators on Vitruvius.

The roofs were generally flat, and it was customary to walk about upon them. (Lysias, adv. Simon. p. 142; Plaut. Mil. ii. 2. 3.) But pointed roofs were also used. (Pollux, i. 81.)

In the interior of the house the place of doors was sometimes supplied by curtains (παρασταταμα), which were either plain, or dyed, or embroidered. (Pollux, x. 32; Theophrast. 5.)

The principal openings for the admission of light and air were in the roofs of the peristyles; but it is incorrect to suppose that the houses had no windows (συνώθης), or at least none overlooking the street. They were not at all uncommon. (Aristoph. Thesm. 797; Eccles. 961; Plutarch. de Curtio, 13, Dion. 56.)

Artificial warmth was procured partly by means of fire-places. It is supposed that chimneys were altogether unknown, and that the smoke escaped through an opening in the roof (καταπόθηκη, Herod. viii. 137). It is not easy to understand how this could be the case when there was an upper story.

Little portable stoves (ἐγχύδαι, ἐγχυάπιζες) or chafing dishes (ἀνάβλεκσια) were frequently used. (Plutarch. Apophth. i. p. 717; Aristoph. Vesp. 811; Pollux, vi. 89, x. 101.) [Focus.]
The house of P. Clodius, whom Milo rented, which persons in poor circumstances usually such magnificence, that when it was burnt by his slaves, he lost 100,000 sestertia (about 131,000 L.) for the rent of his house. (Cic. pro Clod. iv. 6.)

Houses were originally only one story high; but as the value of ground increased in the city they were built several stories in height. In many houses each story was let out to separate tenants, and bore traces of the haste and confusion with which they were built before it had been burnt by the Gauls; but after the great fire in the time of that emperor, by which two-thirds of Rome was burnt to the ground, the height of the houses was restricted.

Our information respecting the form and arrangement of a Roman house is principally derived from the description of Vitruvius, and the remains of the houses which have been found at Pompeii. Many points, however, are still doubtful; but without entering into architectural details, we shall confine ourselves to those topics which serve to illustrate the classical writers. The chief rooms in the house of a respectable Roman, though differing of course in size and splendour according to the circumstances of the master.

1. Vestibulum. The vestibulum did not properly form part of the house, but was a vacant space before the door, forming a court, which was surrounded on three sides by the house, and was open on the fourth to the street. The two sides of the house joined the street, but the middle part of it, where the door was placed, was at some distance from the street. (Gell. xvi. 5.; Macrob. Sat. vi. 8.) Hence Plautus (Mostell. iii. 2. 132) says, "Videm vestibulum ante nedes hoc et ambulacrum quoismodi?"

2. Ostium. The ostium, which is also called janua and fores, was the entrance to the house. The street-door admitted into a hall, to which the name of ostium was also given, and in which there was frequently a small room (cella) for the porter (janitor or ostiarius), and also for a dog, which was usually kept in the hall to guard the house. A full account of this part of the house is given under Janua. Another door (janua interior) opposite the street door led into the atrium.

3. Atrium or Cavum Aedium, as it is written by Varro and Vitruvius; Pliny writes it Caveum. Hirt, Müller (Etrusk. vol. i. p. 253), Marini, and most modern writers, consider the Atrium and Cavum Aedium to be the same; but Newton, Stratton, and more recently Becker (Gallus, vol. i. p. 77, &c.), maintain that they were distinct rooms. It is impossible to give a decisive opinion on the subject; but from the statements of Varro (De Ling. Lat. v. 161), Müller and Vitruvius (vi. 3, 4, Bipont), taken in connection with the fact that no houses in Pompeii have been yet discovered which contain both an Atrium and Cavum Aedium, it is most probable that they were the same. The Atrium or Cavum Aedium was a large apartment roofed over with the exception of an opening in the centre, called compluvium, towards which the roof sloped so as to throw the rain-water into a cistern in the floor, termed impluvium (Varro, l. c.; Festus, s. v. Impluvium), which was frequently ornamented with statues, columns, and other works of art. (Cic. c. Verr. ii. 23, 56.) The word impluvium, however, is also employed to denote the aperture in the roof. (Ter. Ena. iii. 5, 41.) Schneider, in his commentary on Vitruvius, supposes cavum aedum to mean the whole of this apartment including the impluvium; while atrium signified only the covered part exclusive of the impluvium. Mazois, on the contrary, maintains that atrium is applied to the whole apartment, and cavum aedum only to the uncovered part. The breadth of the impluvium, according to Vitruvius (vi. 4), was not less than a quarter nor greater than a third of the breadth of the atrium; its length was in the same proportion according to the length of the atrium.

Vitruvius (vi. 3) distinguishes five kinds of atra or cava aedum, which were called by the following names:

(1.) Tuscanicum. This in the roof was supported by four beams, crossing each other at right angles, the included space forming the compluvium. This kind of atrium was probably the most ancient of all, as it is more simple than the others, and is not adapted for a very large building.

(2.) Tetrastylum. This was of the same form as the preceding, except that the main beams of the roof were supported by pillars, placed at the four angles of the impluvium.

(3.) Corinthisum was on the same principle as the tetrasyle, only that there were a greater number of pillars around the impluvium, on which the beams of the roof rested.

(4.) Displuvium, which had its roof sloping the contrary way to the impluvium, so that the water fell outside the house instead of being carried into the impluvium.

(5.) Tectudinatum was roofed all over and had no compluvium. The atrium was the most important room in the house, and among the wealthy was fitted up with much splendour and magnificence. (Compare Hor...
DOMUS.

Curt. iii. 1. 46.) The marble columns of Scaurus already spoken of were placed in the atrium. The atrium appears originally to have been the only sitting-room in the house, and to have served also as a kitchen (Serv. ad Virg. Aen. i. 726, iii. 353); and it probably continued to do so among the lower and middle classes. In the houses of the wealthy, however, it was distinct from the private apartments, and was used as a reception room, where the patron received his clients, and the great and noble the numerous visitors who were accustomed to call every morning to pay their respects or solicit favours. (Hor. Ep. i. 5. 30; Juv. vii. 7. 91.) Ciceró frequently complains that he was not exempt from this annoyance, when he retired to his country-houses. (Ad Att. i. 14, v. 2, &c.) But though the atrium does not appear to have been used by the wealthy as a sitting-room for the family, it still continued to be employed for many purposes which it had originally served. Thus the nuptial ceremony was placed in the atrium opposite the door (in aula, Hor. Ep. i. 1. 87; Ascon. in Cic. pro Mil. p. 43, Orelli), and also the instruments and materials for spinning and weaving, which were formerly carried on by the women of the family in this room. (Ascon. l. e.) Here also the images of their ancestors were placed (Juv. viii. 19; Mart. ii. 90, and the focus or fire-place, which possessed a sacred character, being dedicated to the Larves of each family. [FOCUS.]

4. ALAE, wings, were small apartments or recesses on the left and right sides of the atrium. (Vitruv. vi. 4.)

5. TABLINUM was in all probability a recess or room at the further end of the atrium opposite the door leading into the hall, and was regarded as part of the atrium. It contained the family records and archives. (Vitruv. vi. 4; Festus, s. v.; Plin. H. N. xxxv. 2.)

With the tablinum, the Roman house appears to have originally ceased; and the sleeping rooms were probably arranged on each side of the atrium. But when the atrium and its surrounding rooms were used for the reception of clients and other public visitors, it became necessary to increase the size of the house; and the following rooms were accordingly added:

6. FAUCES appear to have been passages, which passed from the atrium to the peristylium or interior of the house. (Vitruv. vi. 3.)

7. PERISTYLIUM was in its general form like the atrium, but it was one-third greater in breadth, measured transversely, than in length. (Vitruv. vi. 4.) It was a court open to the sky in the middle; the open part, which was surrounded by columns, was larger than the impluvium in the atrium, and was frequently decorated with flowers and shrubs.

The arrangement of the rooms, which are next to be noticed, varied, as has been remarked, according to the taste and circumstances of the owner. It is therefore impossible to assign to them any regular place in the house.

1. CUBICULA, bed-chambers, appear to have been usually small. There were separate cubicula for the day and night (cubitula diurna et nocturna, Plin. Ep. i. 3); the latter were also called domitoria. (Id. v. 6; Plin. H. N. xxx. 17.) Vitruvius (vi. 7) recommends that they should face the east for the benefit of the rising sun. They some-

2. TRICLINIA, dining-rooms, are treated of in a separate article. [TRICLINIUM.]

3. OECI, from the Greek οίκος, were spacious halls or saloons borrowed from the Greeks, and were frequently used as triclinia. They were to have the same proportions as triclinia, but were to be more spacious on account of having columns, which triclinia had not. (Vitruv. vi. 5.) Vitruvius mentions four kinds of oeci:—

(1.) The Tetrastyle, which needs no further description. Four columns supported the roof.

(2.) The Corinthian, which possessed only one row of columns, supporting the architrave (epistyle), cornice (corona), and a vaulted roof.

(3.) The Egyptian, which was more spacious and more like a basilica than a Corinthian triclinium. In the Egyptian oecus, the pillars supported a gallery with paved floor, which formed a walk round the apartment; and upon these pillars others were placed, a fourth part less in height than the lower, which surrounded the roof. Between the upper columns windows were inserted.

(4.) The Ceciocene (Καισιόνοι) appears in the time of Vitruvius to have been seldom used in Italy. These oeci were meant for summer use. Looking to the north, and, if possible, facing gardens, to which they opened by folding-doors. Pliny had oeci of this kind in his villa.

4. EXEDRAE, which appear to have been in form much the same as the oeci, for Vitruvius (vi. 5) speaks of the exedra in connection with oeci quadrati, were rooms for conversation and the other purposes of society. (Cic. de Nat. Deor. i. 6. De Orat. iii. 5.) They served the same purposes as the exedrae in the Thermae and Gymnasia which were semicircular rooms with seats for philosophers and others to converse in. (Vitruv. v. 11. vii. 9; BALNEAE.)

5. 6. PIACOCTHECA, BIBLIOTHECA, and BALINEUM [see BALNEAE], are treated of in separate articles.

6. CULINA, the kitchen. The food was originally cooked in the atrium, as has been already stated; but the progress of refinement afterwards led to the use of another part of the house for this purpose. In the kitchen of Panas's house, or which a ground-plan is given below, a stove for stews and similar preparations was found, very much like the charcoal stoves used in the present day. (See woodcut.) Before it lie a knife, a strainer, and a kind of frying-pan with four spherical cavities, as if it were meant to cook eggs.
In this kitchen, as well as in many others at Pompeii, there are paintings of the Lares or domestic gods, under whose care the provisions and all the cooking utensils were placed.

9. COENACULA properly signified rooms to dine in; but after it became the fashion to dine in the upper part of the house, the whole of the rooms above the ground-floor were called coenacula (Varr. de Ling. Lat. v. 195, Müller), and hence Festus says, "Coenacula dicitur, ad quae scala ascendi-tur." (Compare Dig. 9. tit. 3. s. 1.) As the rooms on the ground-floor were of different heights and sometimes reached to the roof, all the rooms on the upper story could not be united with one another, and consequently different sets of stairs would be needed to connect them with the lower part of the house, as we find to be the case in houses at Pompeii. Sometimes the stairs had no connection with the lower part of the house, but ascended at once from the street. (Liv. xxxix. 14.)

10. DIAETA was an apartment used for dining in and for the other purposes of life. (Plin. Ep. ii. 17; Suet. Claud. 10.) It appears to have been smaller than the triclinium. Diaeta is also the name given by Pliny (Ep. vi. 5) to rooms containing three or four bed-chambers (cubicula). Pleasure-houses or summer-houses are also called diaetae. (Dig. 30. tit. 1. s. 43; 7. tit. 1. s. 13. § 8.)

11. SOLARIA, properly places for basking in the sun, were terraces on the tops of houses. (Plaut. Mil. ii. 3, 65, ii. 4. 25; Suet. Ner. 16.) In the time of Seneca the Romans formed artificial gardens on the tops of their houses, which contained even fruit-trees and fish-ponds. (Sen. Ep. 122, Contr. Esc. v. 5; Suet. Claud. 10.)

The two woodcuts annexed represent two atria of houses at Pompeii. The first is the atrium of what is usually called the house of the Quaestor. The view is taken near the entrance-hall facing the tablinum, through which the columns of the peristyle and the garden are seen. This atrium, which is a specimen of what Vitruvius calls the Corinthian, is surrounded by various rooms, and is beautifully painted with arabesque designs upon red and yellow grounds.

The next woodcut represents the atrium of what is usually called the house of Ceres. In the centre is the impluvium, and the passage at the further end is the ostium or entrance-hall. As there are no pillars around the impluvium, this atrium must belong to the kind called by Vitruvius the Tuscan.

The preceding account of the different rooms, and especially of the arrangement of the atrium, tablinum, peristyle, &c., is best illustrated by the houses which have been disinterred at Pompeii. The ground-plan of two is accordingly subjoined. The first is the plan of a house, usually called the house of the tragic poet. Like most of the other houses at Pompeii, it had no vestibulum according to the meaning which we have attached to the word. 1. The ostium or entrance-hall, which is six feet wide and nearly thirty long. Near the street door there is a figure of a large fierce dog worked in mosaic on the pavement, and beneath it is written Cave Canem. The two large rooms on each side of the vestibule appear from the large openings in front of them to have been shops; they communicate with the entrance-hall, and were therefore probably occupied by the master of the house. 2. The atrium, which is about twenty-eight feet in length and twenty in breadth; its impluvium is near the centre of the room, and its floor is paved with white tesserae, spotted with black. 3. Chambers for the use of:
the family, or intended for the reception of guests, who were entitled to claim hospitality. When
a house did not possess an hospitium, or rooms expressly for the reception of guests, they
appear to have been lodged in rooms attached to the atrium. [HOSPITIUM.] 4. A small room with
a stair-case leading up to the upper rooms. 5. Alae. 6. The tablinum. 7. The fauces. 8. Peri-
style, with Doric columns and garden in the centre. The large room on the right of the peristyle is the
triclinium; beside it is the kitchen; and the smaller apartments are cubicula and other rooms
for the use of the family.

The next woodcut contains the ground-plan of an insula, which was properly a house not joined
to the neighbouring houses by a common wall. (Festus, s. v.) An insula, however, generally
contained several separate houses, or at least separate apartments or shops, which were let to
different families; and hence the term domus under the emperors appears to be applied to the
house where one family lived, whether it were an insula or not, and insula to any hired lodgings.

This insula contains a house, surrounded by shops, which belonged to the owner and were let out by
him. The house itself, which is usually called the house of Pansa, evidently belonged to one of the
principal men of Pompeii. Including the garden, which is a third of the whole length, it is about
300 feet long and 100 wide.

A. Ostium, or entrance-hall, paved with mosaic. B. Tuscan atrium. I. Impluvium. C. Chambers
on each side of the atrium, probably for the reception of guests. D. Ala. E. Tablinum, which is
open to the peristyle, so that the whole length of the house could be seen at once; but as there is a
passage (fauces), F, beside it, the tablinum might probably be closed at the pleasure of the owner.
C. Chambers by the fauces and tablinum, of which the use is uncertain. G. Peristyle. D. Ala to
the peristyle. C. Cubicula by the side of the peristyle. K. Triclinium. L. Oecus, and by its
side there is a passage leading from the peristyle to the garden. M. Back door (posticum ostium) to
the street. N. Culina. H. Servants' hall, with a back door to the street. P. Portico of two stories,
which proves that the house had an upper floor. The site of the staircase, however, is unknown,
though it is thought there is some indication of one in the passage. M. Q. The garden. R. Reser-
voir for supplying a tank, S.

The preceding rooms belonged exclusively to Pansa's house; but there were a good many apart-
ments besides in the insula, which were not in his occupation. a. Six shops let out to tenants. Those
on the right and left hand corners were bakers' shops, which contained mills, ovens, &c. at b. The
one on the right appears to have been a large establishment, as it contains many rooms. a. Two
houses of a very mean class, having formerly an upper story. On the other side are two houses
much larger, d.

Having given a general description of the rooms of a Roman house, it remains to speak of the
(1) floors, (2) walls, (3) ceilings, (4) windows, and (5) the mode of warming the rooms. For the doors
see JANUS.

(1.) The floor (solum) of a room was seldom boarded, though this appears to have been some-
times done (strata solo tabulate, Stat. Silv. i. 5. 57). It was generally covered with stone or marble, or
mosaics. The common floors were paved with
pieces of bricks, tiles, stones, &c., forming a kind of composition called ruderalia. (Vitruv. vii. 1.)

Another kind of pavement was that called opus Signinum, which was a kind of plaster made of tiles beaten to powder and tempered with mortar, it received its name from Signia, a town of Italy, celebrated for its tiles. (Plin. H. N. xxxv. 46.) Sometimes pieces of marble were imbedded in a composition ground, which appear to have formed the floors called by Pliny barbaricae or subtegulae, and which probably gave the idea of mosaics. As these floors were beaten down (pavita) with rammers (fistucae), the word partimentum became the generic name for a floor. The kind of pavement called scalpturatnm was first introduced in the temple of Jupiter Capitolinus after the beginning of the third Punic war, but became quite common in Rome before the beginning of the Cimbric war. (Id. xxxvi. 61.)

Mosaics, called by Pliny litho-strota (λίθοστρωτά), though this word has a more extensive meaning, first came into use in Sulla's time, who made one in the temple of Fortune at Trastevere. (Id. xxxvi. 64.)

Mosaic pavements, however, have been discovered at Pompeii, which represent figures and scenes of actual life, and are in reality pictures in mosaic. One of the most beautiful of these is given in its original colours in Gell's Pompeiana, 2nd series, plate xlv. It is composed of very fine pieces of glass, and represents the choragus, or master of the chorus, instructing the actors in their parts. A still more extraordinary mosaic painting was discovered in Pompeii in 1831; it is supposed to represent the battle of Issus. (Museo Borbonico, viii. t. 38—45.)

(2.) The inner walls (paritec) of private rooms were frequently lined with slabs of marble (Plin. H. N. xxxvi. 7), but were more usually covered by paintings, which in the time of Augustus were made upon the walls themselves. The prevalence of this practice is attested not only by Pliny (H. N. xxxv. 37), but also by the circumstance that even the small houses in Pompeii have paintings upon their walls. The following woodcut, which represents the side of a wall at Pompeii, is one of the simplest but most common kind. The compartments are usually filled with figures.

The general appearance of the walls may be seen from the woodcuts given above. Subjects of all kinds were chosen for painting on the walls, as may be seen by a reference to the Museo Borbonico, Gell, Mazois, &c. (Compare Vitruv. vii. 5.) The colours seem usually to have been laid upon a dry ground, but were sometimes placed upon it wet, as in the modern fresco painting (colores udo tectore inducere, Vitruv. vii. 3). The walls also appear to have been sometimes ornamented with raised figures, or a species of bas-relief (typos in tectorio atridi includere, Cic. ad Att. l. 10), and sometimes with mosaics. (Plin. H. N. xxxvi. 64.)
DOMUS.

(3.) The ceilings seem originally to have been left uncovered, the beams which supported the roof or the upper story being visible. Afterwards planks were placed across these beams at certain intervals, leaving hollow spaces, called laxacaria or lacudacaria, which were frequently covered with gold and ivory, and sometimes with paintings. (Hor. Carm. ii. 10; Plin. H. N. xxxiii. 18; Sen. Ep. 90; Suet. Ner. 31.) There was an arched ceiling in common use, called CAMARA, which is described in a separate article.

(4.) The Roman houses had few windows (fenestrae). The principal apartments, the atrium, peristyle, &c., were lighted, as we have seen, from above, and the cubicula and other small rooms generally derived their light from them, and not from windows looking into the street. The rooms only on the upper story seem to have been usually lighted by windows. (Juv. iii. 270.) Very few houses in Pompeii have windows on the ground-floor opening into the street, though there is an exception to this in the house of the tragic poet, which has six windows on the ground-floor. Even in this case, however, the windows are not near the ground as in a modern house, but are six feet six inches above the foot-pavement, which is raised one foot seven inches above the centre of the street. The windows are small, being hardly three feet by two, and at the sides there is a wooden frame, in which the window or shutter might be moved backwards or forwards. The lower part of the wall is occupied by a row of red panels four feet and a half high. The following woodcut represents part of the wall, with apertures for windows above it, as it appears from the street. The tiling upon the wall is modern, and is only placed there to preserve it from the weather.

The windows appear originally to have been merely openings in the wall, closed by means of shutters, which frequently had two leaves (liares fenestrae). Ovid, Pont. iii. 3, 5), whence Ovid (Amor. i. 5. 3) says,

"Pars adaperta fuit, pars altera clausa fenestrae."

They are for this reason said to be joined, when they are shut. (Hor. Carm. ii. 2.) Windows were also sometimes covered by a kind of lattice or trellis work (clathri), and sometimes by netting to prevent serpents and other noxious reptiles from getting in. (Plant. Mill. ii. 4. 25; Varro, Re Rust. iii. 7.)

Afterwards, however, windows were made of a transparent stone, called lapis specularis (mica), which was first found in Hispania Citerior, and afterwards in Cyprus, Cappadocia, Sicily, and Africa; but the best came from Spain and Cappadocia. It was easily split into the thinnest laminae, but no pieces had been discovered, says Pliny, above five feet long. (Plin. H. N. xxxvi. 45.) Windows made of this stone were called specularia. (Sen. Ep. 80; Plin. Ep. ii. 17; Mart. viii. 14.) Windows made of glass (vitrum) are first mentioned by Suetonius (De Opif. Dei. 8), but the discoveries at Pompeii prove that glass was used for windows under the early emperors, as frames of glass and glass windows have been found in several of the houses.

(5.) The rooms were heated in winter in different ways; but the Romans had no stoves like ours. The cubicula, triclinia, and other rooms, which were intended for winter use, were built in that part of the house upon which the sun shone most; and in the mild climate of Italy this frequently enabled them to dispense with any artificial means of warming the rooms. Rooms exposed to the sun in this way were sometimes called heliocamini. (Plin. Ep. ii. 17; Dig. 8. tit. 2. s. 17.) The rooms were sometimes heated by hot air, which was introduced by means of pipes from a furnace below (Plin. Ep. ii. 17; Sen. Ep. 90), but more frequently by portable furnaces or braziers (focii), in which coal or charcoal was burnt. (See woodcut, p. 150.) The caminius was also a kind of stove, in which wood appears to have been usually burnt, and probably only differed from the focus in being larger and fixed in one place. (Suet. Vitell. 8; Hor. Sat. i. 5. 81.) It has been a subject of much dispute among modern writers, whether the Romans had chimneys for carrying off the smoke. From many passages in ancient writers, it certainly appears that rooms usually had no chimneys, but that the smoke escaped through the windows, doors, and openings in the roof (Vitruv. vii. 3; Hor. l. e. Voss, ad Verg. Georg. ii. 242); but chimneys do not appear to have been entirely unknown to the ancients, as some are said to have been found in the ruins of ancient buildings. (Becker, Gallus, vol. i. p. 102.)

Winkelmann, Schriften über die Herkuläischen Entdeckungen; Hirt, Geschichte der Baukunst; Mazois, Les Restes de Pompeii, part ii., Le Palais de Scarrus; Gall, Pompeiana; Pompeii, Lond. 12mo. 1832; Becker, Gallus; Schneider, ad Vitren.

DONARIA (ἀναθήματα ορ ἀνακελμεῖα), are names by which the ancients designated presents made to the gods, either by individuals or communities. Sometimes they are also called dona or δῶνα. The belief that the gods were pleased with costly presents was as natural to the ancients as the belief that they could be influenced in their conduct towards men by the offering of sacrifices; and, indeed, both sprang from the same feeling. Presents were mostly given as tokens of gratitude for some favour which a god had bestowed on man; but in many cases they were intended to induce the deity to grant some special favour. At Athens, every one of the six themothetae, or, according to Plato (Phaedr. p. 235, d), all the nine archons, on entering upon their office, had to take an oath, that if they violated any of the laws, they would dedicate in the temple of Delphi a gilt statue of the size of the man who dedicated it (ἀναθήματα χρυσῶν ἐμφύτησαν, see Plut. Sol. 25; Pollux viii. 85; Suidas, s. v. Χρυσῆ Εἰκόν; Heraclid. Pont. c. 1.) In this last case the anathema was a kind of punishment, in which the statue was regarded as a substitute for the person...
forfeited to the gods. Almost all presents of this kind were dedicated in temples, to which in some places an especial building was added, in which these treasures were preserved. Such buildings were called δωματία (treasuries); and in the most frequented temples of Greece many states had their separate treasuries. (Böckh, Pub. Econ. of At., p. 441, &c. 2d edit.) The act of dedication was called ἀναφέρειν, donare, dedicare, or sacrare.

The custom of making donations to the gods is found among the ancients from the earliest times of which we have any record, down to the introduction of Christianity; and even after that period it was, with some modifications, observed by the Christians during the middle ages. In the heroic ages of Grecian history the anathemata were of a simple description, and consisted of chaplets and garlands of flowers. A very common donation to the gods seems to have been that of locks of hair (κοινής ἄρχαξι), which youths and maidens, especially young brides, cut off from their heads and consecrated to some deity. (Horn. //. xxiii. 37. § 2.) This custom in some places and circumstances was especially to Athena and Hera. (Horn. //. vi. 104.) The great adventures of ancient heroes were worked in Athena, in which the great anathemata were generally works of art of exquisite workmanship, such as high tripods and statues, and various other things. The materials of which they were made differed according to circumstances; some were of bronze, others of silver or gold (Athen. vi. p. 231, &c.), and their number is to us almost inconceivable. (Demosth. Equit. 792, and Schol.) The Athenians always dedicated to Athena the tenth part of the spoil and of confiscated goods; and to all the other gods collectively, the fiftieth part. (Demosth. c. Timocr. p. 738, &c.) After a sea-fight, a ship, placed upon some eminence, was sometimes dedicated to Neptune. (Thucyd. ii. 84; Herod. vii. 121.) It is not improbable that trophies which were always erected on the field of battle, as well as the statues of the victors in Olympia and other places, were originally intended as tokens of gratitude to the god who was supposed to be the cause of the success which the victorious party had gained. We also find that on some occasions the tenth part of the profit of some commercial undertaking was dedicated to a god in the shape of a work of art. Respecting the large and beautiful crater dedicated by the Samnians to Hera, see the article CRATER.

Individuals who had escaped from some danger were no less anxious to show their gratitude to the gods by anathemata than communities. The instances which occur most frequently, are those of persons who had recovered from an illness, especially by spending one or more nights in a temple of Asclepius (incubatio). The most celebrated temples of this divinity were those of Epidaurus, Cos, Tricca, and at a later period, that of Rome. (Plin. H. N. xxix. 1; compare F. A. Wolf, Vermischte Schriften und Aufsätze, p. 411, &c.) Cures were also effected in the grotto of Pluto and Proserpina, in the neighbourhood of Nisa. (Strab. ix. p. 437, xiv. p. 443.) In all cases in which a cure was effected presents were made to the temple, and little tablets (tabulae votivae) were suspended on its walls, containing an account of the danger from which the patient had escaped, and of the manner in which he had been restored to health. Some tablets of this kind, with their inscriptions, are still extant. (Wolf, l. c. p. 424, &c.) From some relics of ancient art we must infer, that in some cases, when a particular part of the body was attacked by disease, the person, after his recovery, dedicated an imitation of that part in gold or silver to the god to whom he owed his recovery. Persons who had escaped from shipwreck usually dedicated to Neptune the dress which they wore at the time of their danger (Ior. Carm. i. 5.13; Virg. Aen. xii. 768) but if they had escaped naked, they dedicated some locks of their hair. (Lucian, de Merc. Cond. c. 1. vol. i. p. 652, ed. Reitz.) Shipwrecked persons also suspended votive tablets in the temple of Neptune, on which their accident was described or painted. Individuals who gave up the profession or occupation by which they gained their livelihood, frequently dedicated in a temple the instruments which they had used, as a grateful acknowledgment of the favour of the gods. The soldier thus dedicated his arms, the fisherman his net, the shepherd his flute, the poet his lyre, cithara, or harp, &c.

It would be impossible to attempt to enumerate all the occasions on which individuals, as well as communities, showed their gratefulness towards the gods by anathemata. Descriptions of the most remarkable presents in the various temples of Greece may be read in the works of Herodotus, Strabo, Pausanias, Athenaeus, and others.

The custom of making presents to the gods was common to Greeks and Romans, but among the latter the donaria were neither as numerous nor
as magnificent as in Greece; and it was more frequent among the Romans to show their gratitude towards a god, by building him a temple, by public prayers and thanksgivings (supplicatio), or by celebrating festive games in honour of him, than to adorn his sanctuary with beautiful and costly works of art. Hence the word donaria was used by the Romans to designate a temple or an altar, as well as statutes and other things dedicated in a temple. (Virg. Georg. iii. 533; Ovid, Fast. iii. 335.) The occasions on which the Romans made donaria to their gods, are, on the whole, the same as those we have described above; amongst them the important events, as will be seen from a comparison of the following passages:— Liv. x. 36, xxix. 36, xxxii. 30, xl. 40, 37; Plin H. N. vii. 48; Suet. Claud. 25; Tacit. Ann. iii. 71; Plaut. Amphitrit. iii. 2. 65, Curcul. i. 1. 61, ii. 2. 10; Aurel. Vict. Caes. 35; Galliis. ii. 10; Lucan. ix. 515; Cie. De Nat. Deor. iii. 37; Tibull. ii. 5. 29; Horat. Epist. i. 1. 4; Stat. Silv. iv. 92. [L. S.]

DONATIO. Donatio or gift is an agreement between two persons by which one gives without remuneration and without any legal obligation (nullo jure cogente), and the other accepts something that has a pecuniary value. (Dig. 24. tit. 1. s. 5. §8, 16; 39. tit. 5. s. 19. §2, 29.) It is properly called an agreement, because it is not sufficient that there be a person to give: there must also be a person who consents to receive. He who is incapacitated to dispose of his property or to make a contract is consequently incapable of giving: every person who has a capacity to acquire, is capable of receiving a gift. The exceptions to these rules occurred in the case of persons who were in certain relations to one another, as pater and filiusfamilias; yet this exception itself is subject to exceptions in the matter of peculium. It is essential to the notion of gift that the giver gives in order that the property of the receiver may be increased by the gift: there must be the animus donandi. The object of gift may be any property after the donor’s debts are deducted. Such a gift is not a case of universal dominium, and consequently the donee is not immediately liable for the debts of the donor. By the old Roman law a mere agreement (pactum) to give did not confer a right of action on the intended donee. In order that a gift should be valid, it was required to be either in the form of a stipulatio, or to be made complete at once by the delivery of the thing. Gifts also were limited in amount by the lex Cincia.

DONATIO MORTIS CAUSA. There were, according to Julianus (Dig. 39. tit. 6. s. 2), three kinds of donatio mortis causa:—1. When a man under no apprehension of present danger, but moved solely by a consideration of mortality, makes a gift to another. 2. When a man, being in immediate danger, makes a gift to another in such manner that the thing immediately becomes the property of the donee. 3. When a man, moved by the consideration of danger, gives a thing in such manner that it shall become the property of the donee only in case the giver dies. Every person could receive such a gift who was capable of receiving a legacy.

It appears, then, that there were several forms of gift called donatio mortis causa; but the third is the only proper one; for it was a rule of law that a donation of this kind was not perfected unless death followed, and it was revocable by the donor. A thing given absolutely could hardly be a donatio mortis causa, for this donation had an condition attached to it, namely, the death of the donor and the survivorship of the donee. (Compare Dig. 39. tit. 6. s. 1 and 35.) Accordingly, a donatio mortis causa has been defined to be “a gift which a man makes with reference to the event of his death, and so makes that the right of the donee either commences with the death of the donor or is in suspense until the death.” It resembles in some respects a proper donation or gift: in others, it resembles a legacy. It was necessary that the donee should be accepted by the donor, and consequently there must be tradition or delivery, or a proffer or offer, which is assented to. Yet the donation might be maintained as a fideicom-
DONATIO PROPTER NUPTIAS.

The term of this expression is explained in the Institutes (2. tit. 7. § 3). It was originally called Donatio ante nuptias, because it could not take place after the marriage; but when it was made legal to increase the donatio after marriage, and even to constitute it altogether after marriage, the more comprehensive term donatio propter nuptias was used. If a donatio had been given by the wife, or on the part of the wife, and the husband by the terms of the contract was entitled to it, or to a part of it in case of the wife’s death, it was necessary that the husband, or some person on the part of the husband, should give or secure something to the wife which she should have in the event of the husband’s death; this was a donatio propter nuptias. Justinian’s legislation required that the donatio must be a gift made in contemplation of death, and it is revocable. (Dig. 39. tit. 6 ; Cod. 8. tit. 57 ; Inst. 2. tit. 7 ; Savigny. System, &c. iv. 276 ; Zeitschrift für Gesch. Rechtswissenschaft, xii. p. 400, Ueber L. Seita, 42. pr. ; De mor. ca. don. ; Thibaut, System, &c. § 495, &c. 9th ed.) [G. L.]

DONATIO PROPTER NUPTIAS. The meaning of this term is explained in the Institutions (2. tit. 7. § 3). It was originally called Donatio ante nuptias, because it could not take place after the marriage; but when it was made legal to increase the donatio after marriage, and even to constitute it altogether after marriage, the more comprehensive term donatio propter nuptias was used. If a donatio had been given by the wife, or on the part of the wife, and the husband by the terms of the contract was entitled to it, or to a part of it in case of the wife’s death, it was necessary that the husband, or some person on the part of the husband, should give or secure something to the wife which she should have in the event of the husband’s death; this was a donatio propter nuptias. Justinian’s legislation required that the donatio must be a gift made in contemplation of death, and it is revocable. (Dig. 39. tit. 6 ; Cod. 8. tit. 57 ; Inst. 2. tit. 7 ; Savigny. System, &c. iv. 276 ; Zeitschrift für Gesch. Rechtswissenschaft, xii. p. 400, Ueber L. Seita, 42. pr. ; De mor. ca. don. ; Thibaut, System, &c. § 495, &c. 9th ed.) [G. L.]

DONATIO/NE/S INTER VIRUM ET UXO/REM. During marriage neither husband nor wife could, as a general rule, make a gift of anything to one another. The reason for this rule was said to be the preservation of the marriage relation in its purity, as an agreement subsisting by affection, and not maintained by purchase or by gift from one party to the other. Donations of this kind were, however, valid when there were certain considerations, as mortis causa, divortii causa, servi manumittendi gratia. By certain imperial constitutions, a woman could make gifts to her husband in order to qualify him for certain honours. This was a gift propter nuptias. (Dig. 24. tit. 1. s. 41 ; Juv. Sat. i. s. 39 ; and the note of Heinrich). The wife had the means of doing this, because when there was no conventio in manum (Gauius, ii. 98), a wife retained all her rights of property which she did not surrender on her marriage [Dos], and she might during the marriage hold property quite distinct from her husband. It was a consequence of this rule as to gifts between husband and wife, that every legal form by which the gift was affected to be transferred, as mancipatio, cessio, and traditio, conveyed no ownership; stipulations were not binding, and acceptationes were no release. A difficulty might remain as to usucapion; but the law provided for this also. If a woman received from a third person the property of her husband, and neither the third person nor she nor her husband knew that it was the husband’s property, she might acquire the ownership by usucapion. If both the giver and the husband knew at the time of the gift that it was the husband’s property, and the wife did not know, it might also become her property by usucapion; but not if she knew, for in that case the bona fide which was essential to the commencement of possession was wanting. If, before the ownership was acquired by usucapion, the husband and wife discovered that it was the husband’s, though the husband did not choose to claim it, there was no usucapion; for this would have been a mere evasion of the law. If, before the ownership was acquired by usucapion, the husband and wife discovered that it was the husband’s, though the husband did not choose to claim it, there was no usucapion; for this would have been a mere evasion of the law. If, before the ownership was acquired by usucapion, the wife alone discovered that it was the husband’s property, this would not destroy her right to acquire the property by usucapion. This, at least, is Savigny’s ingenious explanation of the passage in Digest 24. tit. 1. s. 44. The strictness of the law as to these donations was relaxed in the time of Septimius Severus, and they were made valid if the donor died first, and did not revoke his gift before death. There were also some exceptions as to the general rule. (Dig. 24. tit. 1 ; Cod. 5. tit. 16 ; Savigny, Zeitschrift, &c. i. p. 270 ; Mackeldy, Lehrbuch, &c. § 531, 12th ed.) [G. L.]

DONATIVUM. [CONGIARIUM.]

DOS (προῖθ, φερόν), dowry. 1. GREEK. Euripides (Med. 236) makes Medea complain that, independent of other misfortunes to which women were subject, they were obliged to buy their husbands by great sums of money (χρυσίων υπερθόλυ). On this the Scholiast remarks, that the poet wrote as if Medea had been his contemporary, and not a character of the heroic ages, in which it was customary for the husband to purchase his wife from her relations, by gifts called ἀναμινήσεως. The same practice prevailed in the East during the patriarchal ages (Genes, xxxiv. 2), and Tacitus ( Germ. c. 18) says of the ancient Germans, "Dotem non uxor marito, sed uxori maritus offerit." The custom of the heroic times is illustrated by many passages in Homer. Thus, we read of the ἀντερείσια, and μωρία έσων, or many gifts by which wives were purchased. (Il. xvi. 178, 190.) In another place (Il. xi. 243) we are told of a hundred ozen, and a thousand sheep and goats, having been given by a Thracian hero to his maternal grandfather, whose daughter he was about to marry. Moreover, the poetical epithet, ἀδρεθησίων (Huyne, ad Il. xvi. 593), applied to females, is supposed to have had its origin in the presents of this sort, which were made to a woman's relatives on her marriage. These nuptial gifts, however, or equivalents for them were returned to the husband in the event of the commission of adultery by the wife, and perhaps in other cases. (Od. viii. 318.)

We must not infer from the above facts that it was not usual in those times for relations to give a portion or dowry when they married. On the contrary, mention is made (Il. ix. 147) of the μελία or marriage gifts which men gave with their daughters (ἐνίδικαιοι), and we are told by Aeschines (Περι Παραβερον, 33), of one of the sons of Thesen having received a territory near Amphipolis as a φερόν or dowry with his wife. Moreover, both Andromache and Penelope are spoken of as ἀλόχοι πολιάδωροι (Il. vi. 594, Od. xxiv. 294), or wives who brought to their husbands many gifts, which probably would have been returned to their relations, in case of a capricious dismissal. (Od. i. 132.)

The Doric term for a portion was δώρις, and Müller (Dor. iiii, 10) observes, that we know for certainty that daughters in Sparta had originally no dowry, but were married with a gift of clothes only; afterwards they were at least provided with money, and other personal property (Plint. Lys. 39); but in the time of Aristotle (Polit. ii. 6, § 10), so great were the dowers given (δία τοῦ προῖχας διόνοσι μεγάλας), and so large the number of ἐνιδικαίοι, or female representatives of families (οἰκοί), that nearly two fifth of the whole territory of Sparta had come into the possession of females. The regulations of Solon were, according to Plutarch, somewhat similar in respect of dowry to the old regulations at Sparta: for the Athenian legislator, as he tells us, did not allow a woman, unless she were an ἐπίκαιης, to have any φερόν or dowry, except a few clothes and articles of household furniture. It is plain, however, that such an interference with private rights could not be permanent; and, accordingly, we find that in after times the dowers of women formed, according to the account in Boeck (Pub. Econ. of Athens, p. 514, 2nd ed.), a considerable part of the moveable property of the state: "even with poor people it was common to give to a hundred and twenty minae. The daughter of Hippocrates received ten talents at her marriage, and ten others were promised her." This, however, was a very large portion, for Demostenes (c. Steph. p. 1112, 19, and p. 1124. 2) informs us that even five talents was more than was usually given; and Lucian (Dial. Meret. 7. p. 296, ed. Reitz) also speaks of the same sum as a large dowry. The daughters of Aristides received from the state, as a portion, only thirty minae each. (Plut. Arist. 27; Aesch. c. Chae. p. 90.) We may observe too, that one of the chief distinctions between a wife and a παλλακή, consisted in the former having a portion, whereas the latter had not; hence, persons who married wives without portions appear to have given them or their guardians an ἀλοχή προῖχης (Isaeus, De Pyr. Herod. p. 41), or acknowledgment in writing by which the receipt of a portion was admitted. (CONCUBINA.) Moreover, poor heiresses (τῶν ἐνιδικαίων θεροῦσαν σφιγματεύων) were either married or portioned by their next of kin [ΑΡΣΗΝΟΙ], according to a law which fixed the amount of portion to be given at five minae by a Pentacosiomedimnus, three by a Horseman, and one a half by a Zengites. (Dem. c. Macar. p. 1068.) In illustration of this law, and the amount of portion, the reader is referred to Terence, who says (Phorm. ii. 1. 75),

"Lex est ut orlae, qui sint generi proximi Is nulaut;"

and again (ii. 2. 63),

"Itidem ut cognata si sit, id quod lex jubet, Doten dare, abduce hanc; minas quinque acipe."

It remains to state some of the conditions and obligations attached to the receipt of a portion, or προῖθ, in the time of the Athenian orators. The most important of these was the obligation under which the husband lay to give a security for it, either by way of settlement on the wife, or as a provision for repayment in case circumstances should arise to require it. With regard to this, we are told that whenever relatives or guardians gave a woman a portion on her marriage, they took from the husband, by way of security, something equivalent to it, as a house or piece of land. The person who gave this equivalent (τοῦ ἀποτίμημα) was said ἀποτιμῶν: the person who received it ἀποτιμωθείσα. (Harpocrates. s. v.; Dem. c. Onet. p. 866.) The word ἀποτίμημα is also used generally for a security. (Pollux, viii. 142.) The necessity for this security will appear from the fact that the portion was not considered the property of the husband himself, but rather his wife and children. Thus, if a husband died, and
the wife left the family (ἀπέλυσε τὸν ὄχλον), she might claim her portion, even though children had been born (Dem. Boest. de Dot. p. 1010); and in the event of a wife dying without issue, her portion reverted to the relatives who had given her in marriage (οἱ κόρων) and portioned her. (Isaeus, De Circeon. Hered. p. 69, De Pyr. Hered. p. 41.) The portion was also returned, if a husband put away his wife, and in some cases, probably settled by law, when a woman left her husband. (De Pyr. Hered. p. 45.) That after the death of the wife, her portion belonged to her children, if she had left any, may be inferred from Demosthenes (c. Boest. de Dot. pp. 1023, 1026); if they were minors, the interest was set apart for their education and maintenance. When the husband died before the wife, and she remained in the family (μενονήσις ἐν τῷ ὀχλῷ), the law appears to have given her portion to her sons, if of age, subject, however, to an allowance for her maintenance. (Id. c. Phacen. p. 1047.) If the representatives of the deceased husband (οἱ τῶν κληρῶν ἔχοντες) wrongfully withheld her portion from his widow, her guardians could bring an action against them, as well as for alimony (δική προμήκης καὶ σίτων). (Isaeus, De Pyr. Hered. p. 45; Hudtwalcker, Diæt. note 84.) Moreover, if she had refused to return her portion, he might be sued for interest upon it as well as the principal: the former would, of course, be reckoned from the day of dismissal, and the rate was fixed by law at nine oboli for every mina, or about 18 per cent. The guardians were further authorised by the same law to bring an action for alimony in the οἴκειον. (Dem. c. Necar. p. 1362.) We may add that a δική προμήκης was one of the ἐμμενον ὄχλοι or suits that might be tried every month. (Pollux, viii. 68, 101.)

2. ROMAN. Dos (res uxorii) is every thing which on the occasion of a woman's marriage was transferred by her, or by another person, to the husband, or to the husband's father (if the husband was in his father's power), for the purpose of enabling the husband to sustain the charges of the marriage state (onera matrimoni). All the property of the wife which was not made dos, or was not a donatio propter nuptias, continued to be her own, and was comprised under the name of Parapherna. The dos upon its delivery became the husband's property, and continued to be his so long as the marriage relation existed. All things that could be objects of property, and in fact anything by which the substance of the husband could be increased, might be the objects of dos. All a woman's property might be made a dos; but the whole property was only what remained after deducting the debts. There was no universal succession in such a case, and consequently the husband was not personally answerable for the wife's debts. Any person who had a legal power to dispose of his property could give the dos; but the dos was divided into two kinds, dos profectitia and dos adventitia, a division which had reference to the demand of the dos after the purposes were satisfied for which it was given. That dos is profectitia which was given by the father or father's father of the bride; and it is profectitia, even if the daughter was emancipated, provided the father gave it as such (ut parentis). All other dos is adventitia. The dos receptitia was a species of dos adventitia, and was that which was given by some other person than the father or father's father, on the consideration of marriage, but on the condition that it should be restored on the death of the wife. The giving of the dos depended on the will of the giver; but certain persons, such as a father and father's father, were bound to give a dos with a woman when she married, and in proportion to their means. The dos might be either given at the time of the marriage, or there might be an agreement to give. The technical words applicable to the dos were dare, dicere, promittere. Any person, who was competent to dispose of his property, was competent dare, promittere. The word dicere was applied to the woman who was going to marry, who could promise her property as dos, but the promise was not binding unless certain legal forms were observed (non debes evo detem, quam nullo autore dixisset, Cic. Pro Caecin. c. 25, compare Pro Fluoco, c. 34, 35, and Ulp. Frag. xi. 20). An example of a promissio dosis occurs in Plantus (Trinum. v. 2). The husband had a right to the sole management of the dos, and to the fruits of it; in fact, he exercised over it all the rights of ownership, with the exception hereafter mentioned. He could dispose of such parts of the dos as consisted of things movable; but the Julia lex (de adulteriis) prevented him from alienating such part of the dos as was land (fundus dotatis, dotatio praeda, Cic. ad Att. xv. 20; dotales agri, Hor. Ep. i. 1. 21) without his wife's consent, or pledging it with her consent. (Gaius, ii. 63; Inst. ii. 8.) The legislation of Justinian prevented him from selling it also even with the wife's consent, and it extended the law to provincial lands. Still there were some cases in which the land given as dos could be alienated.

The husband's right to the dos ceased with the marriage. If the marriage was dissolved by the death of the wife, her father or father's father (as the case might be) was intitled to recover the dos profectitia, unless it had been agreed that in such case the dos should belong to the husband. The dos adventitia became the property of the wife's heirs (Cod. 5. tit. 13. § 6), unless the person who gave it had stipulated that it should be returned to him (dos receptitia): as to the older law, see Ulpian, Frag. vi. 5.

In the case of divorce, the woman, if she was sui juris, could bring an action for the restitution of the dos; if she was in the power of her father, he brought the action jointly with his daughter. The dos could be claimed immediately upon the dissolution of the marriage, except it consisted of things quae numero, &c., for which time was allowed. (Ulp. Frag. vi. 8: but compare Cod. 7. tit. 13. § 7; [DIVORTIUM.])

The dos could not be restored during the marriage, but in the case of the husband's insolvency, the wife could demand back her dos during the marriage. In certain cases, also, the husband was permitted to restore the dos during the marriage, and such restoration was a good legal acquittance to him: these excepted cases were either cases of necessity, as the payment of the wife's debts, or the sustentation of near kinsfolks. (Zeitschrift, &c. v. p. 311, essay by Hase.)

What should be returned as dos, depended on the fact of what was given as dos. If the things given were ready money (dos numerata, Cic. Pro Caecin. c. 4), or things estimated by quantity, &c.,
the husband must return the like sum or the like quantity. If the things, whether movable or immovable, were valued when they were given to the husband (dos aestimata), this was a species of sale, and at the end of the marriage the husband must restore the things or their value. If the things were not valued, he must restore the specific things, and he must make good all loss or deterioration which had happened to them except by accident. But the husband was intitled to be reimbursed for all necessary expenses (impensa necessariae) as, for instance, necessary repairs of houses incurred by him in respect of his wife’s property, and also for all outlays by which he had improved the property (impensa utilia).

The husband’s heirs, if he were dead, were bound to restore the dos. The wife’s father, or the surviving wife, might demand it by an actio ex stipulatu de dote reddenda, which was an actio stricti juris, if there was any agreement on the subject; and by an actio rei uxoriae or dotis, which was an actio bonae fidelis, when there was no agreement. A third person who had given the dos must always demand it ex stipulatu, when he had bargained for its restoration. Justinian enacted, that the action should always be ex stipulatu, even when there was no contract, and should be an actio bonae fidelis.

The wife had no security for her dos, except in the case of the fundus dotalis, unless she had by contract a special security; but she had some privileges as compared with the husband’s creditors. Justinian enacted that on the dissolution of the marriage, the wife’s ownership should revive, with all the legal remedies for recovering such parts of the dos as still existed; that all her property should be considered legally pledged (tacita hypotheca) as a security for the dos; and that the wife, but she alone, should have a priority of claim on such property over all other creditors to whom the same might be pledged.

The dos was a matter of great importance in Roman law, both because it was an ingredient in almost every marriage, and was sometimes of a large amount. The frequency of divorces also gave rise to many legal questions as to dos. A woman whose dos was large (dotata usor) had some influence over her husband, inasmuch as she had the power of divorcing herself, and thus of depriving him of the enjoyment of her property. The allusions to the dos and its restitution are numerous in the Roman writers. (Cic. ad Att. xiv. 13)

It is a disputed point whether there could be dos, properly so called, in the case of a marriage with conventio in manum. [Matrimonium.] (Hasse, Rhein. Mus. ii. 75.)

The name by which the Greek writers designate the Roman dos is ψηφή (Plutarch, Caesar, c. 1, Marius, c. 38, Cicero, c. 8). (Ulp. Frag. vi.; Dig. 23. tit. 3; Cod. 5. tit. 12; Thibaut, System, &c., § 728 &c., 9th ed., § 747, &c.; Mackelvey, Lochabach, &c., § 517, &c., 12th ed.)

DOULOS (δοῦλος). [Servus.]

DRACHMA (δραχμή), the principal silver coin among the Greeks. Like all other denominations of money, the word δραχμή (sometimes written δραχη) no doubt signified originally a weight; and it continued to be used in this sense, as one of the subdivisions of the talent, of which it was the 6000th part. [Talentum.] The original meaning of the word is a handful. The two chief standards in the currencies of the Greek states were the Attic and Aeginetan. We shall therefore first speak of the Attic drachma, and afterwards of the Aeginetan. The average weight of the Attic drachma from the time of Solon to that of Alexander was 66-5 grains. It contained about $\frac{1}{29}$ of the weight alloy; and hence there remain 65-4 grains to be valued. Each of our shillings contains 80-7 grains of pure silver. The drachma is therefore worth $\frac{5}{4}$ of a shilling, or 972 pence, which may be called $\frac{1}{2}$ d.

(Hussey, Ancient Weights and Money, pp. 47, 48.) After Alexander’s time, there was a slight decrease in the weight of the drachma; till in course of time it only weighed 63 grains. The drachma contained six obols (δόλοι); and the Athenians had separate silver coins, from four drachmæ to a quarter of an obol. Among those now preserved, the tetradrachm is commonly found; but we possess no specimens of the tri-drachm, and only a few of the didrachm. Specimens of the tetrobolus, triobolus, diobolus, three-quarter-obol, half-obol, and quarter-obol, are still found. For the respective values of these coins, see the Tables.

The tetradrachm in later times was called stater (Phot. s. v. Στατέρ; Hussey, s. v. Στατερίκες Διπτοι), Math. xxvii. 27); but it has been doubted whether it bore that name in the flourishing times of the republic. (Hussey, Ibid. p. 49.) We know that stater, in writers of that age, usually signifies a gold coin, equal in value to twenty drachmæ (Stater); but there appear strong reasons for believing that the tetradrachm, even in the age of Thucydides and Xenophon, was sometimes called by this name. (Thucyd. iii. 70, with Arnold’s note; Xen. Hell. v. 2. § 22.) The obolus, in later times, was of bronze (Lucian, Contempl. 11. vol. i. p. 504, ed. Reitz); but in the best times of Athens we only read of silver obols. The χαλκοῦς was a copper coin, and the eighth part of an obol. [Chalcus.]
contains about $\frac{2}{3}$ of the weight alloy. Hence its value is 93 grains of pure silver, or, as before, $\frac{93}{60}$ of a shilling; that is, 1s. 1d. 3\text{1/2} farthings. The largest coin of the Aeginetan standard appears to have been the didrachma, and the values of the different coins of this standard will be found in the Tables.

The proportion of the Aeginetan drachma to the Attic, according to the value given above, is as 93 to 654, or as 4:18 to 3 nearly. According to Pollux, however, the proportion was 5 to 3; for he states (ix. 76, 86) that the Aeginetan drachma was equal to 10 Attic obols, and that the Aeginetan talent contained 10,000 Attic drachmae. For a full discussion of this question, which is one of the most interesting in ancient numismatics, and of the respective values of the other standards which were used by the Greeks, see Nummus and Talentum.

AEGINETAN DRACHMA. BRITISH MUSEUM.

**Actual Size.**

As the Romans reckoned in sesterces, so the Greeks generally reckoned by drachmae; and when a sum is mentioned in the Attic writers, without any specification of the unit, drachmae are usually meant. (Bückh, Pol. Econ. of Athens, i. p. 25.)

DRA'CO. [Signa Militaria.]

DUCENA'RII, the name of various officers and magistrates, in the imperial period, of whom the principal were as follow:—

1. The imperial procuratores, who received a salary of 200 sestertia. Dion Cassius (iii. 15) says that the procuratores first received a salary in the time of Augustus, and that they derived their title from the amount of their salary. We thus read of centenarii, &c., as well as of duce

2. A class or decuria of judices, first established in rebus, or ushers. (Cod. 1. tit. 31; 12. tit. 20.)

3. Officers who commanded two centuries, and who held the same rank as the primi hastati in the ancient legion. (Veget. ii. 6; Orealli, Inscrip. No. 3444.)

4. The imperial household troops, who were under the authority of the magister officiorum. They are frequently mentioned among the agentes in rebus, or ushers. (Cod. 1. tit. 31; 12. tit. 20.)

DUCENTE'SIMA. [Centesima.]

DUELLA. [Uncia.]

DULCIA'RII. [Pistor.]

DUODECIM SCRIPTA. [Latrunculi.]

DUODECIM TABULARUM LEX. [Lex.]

DUPLA'RII or DUPLICA'RII, were soldiers who received on account of their good conduct double allowance (duplicia cibaria), and perhaps in some cases double pay likewise. (Varro, De Ling. Lat. v. 90, Müller; Liv. ii. 59, xxiv. 47; Orealli, Inscrip. No. 3535.) They are frequently mentioned in inscriptions (Orelli, Nos. 3533, 4994), but more commonly under the name of duplarii. (Orelli, Nos. 3531, 3535, 3476, 3461, &c.) In one inscription the form duplicarius occurs. (Orelli, No. 3534.) Vegetius (ii. 7) calls them duplarii milites.

DUPLICAT'TIO. [Actio.]

DUPONDIUS. [As. p. 141, a; Pres.]

DUSIS. [As. p. 141, a.]

DUUMVIRI, or the two men, the name of various magistrates and functionaries at Rome, and in the colonie and municipia. In inscriptions we also meet with the form duumviris (Orelli, Inscrip. No. 3808), and duumvir (Orelli, No. 3886).

1. DUUMVIRI JURI DICUNDO, the highest magistrates in the municipal towns. (Colonia, p. 318.)

2. DUUMVIRI NAVALES, extraordinary magistrates, who were elected, whenever occasion required, for the purpose of equipping and repairing the fleet. They appear to have been originally appointed by the consuls and dictators, but were first elected by the people, b. c. 311. (Liv. ix. 30, xl. 18, 26, xli. 1.)

3. DUUMVIRI PERDUELLIONIS. (Perduel-lio.)

4. DUUMVIRI QUINQUENNALIS, the censors in the municipal towns, who must not be confounded with the duumviri juri dicundo. (Colonia, p. 318.)

5. DUUMVIRI SACRIS, extraordinary magistrates, like the duumviri Navales, appointed for the purpose of building or dedicating a temple. (Liv. vii. 28, xxii. 33, xxxv. 41.)

6. DUUMVIRI SACRORUM, originally had the charge of the Sibylline books. Their duties were afterwards discharged by the decemviri sacris faciundis. (Decemviri, No. 3.)

7. DUUMVIRI VIS EXTRA URBEM PURGANDIS, were officers under the aediles, who had the charge of the streets of the suburbs of Rome, outside the city gates. (Tabul. Heracl. i. 50, ed. Götting.) Their office appears to have been abolished by Augustus, and their duties devolved upon the Quattuorviri. (Comp. Dion Cass. liv. 26; Pompon. De Orig. Jur. § 39; Becker, Römisch. Alterth. vol. ii. part ii. p. 366.)

DUX. [Provincia.]
being to call from the country into the city. The ordinary assemblies were called \textit{νόμιμος or κώρια}, according to the Scholion on Aristophanes (\textit{Acharn.} 19), who, moreover, informs us that there were three such in every month. But according to the best-informed grammarians who followed Aristotle, the name \textit{kupia} was appropriated to the first only of the regular assemblies of each prytany. Such, at least, is the account given by Pollux (viii. 96) and Harpocrate, the former of whom asserts that the third of the regular assemblies in each prytany was partly devoted to the reception of ambassadors from foreign states.

Aristophanes, however, in the \textit{Acharnians} (61), represented the prytanes as having just returned from Persia and Thrace, as giving an account of their embassy in a \textit{kupia ἐκκλησία}, which, according to Pollux, would be not the third but the first of the regular assemblies. With a view of reconciling these discrepancies, Schömann (\textit{De Comit. c. i.}) supposes, that Solon originally appointed one \textit{regular} assembly, called \textit{kupia}, to be held on a certain day of every prytany, and that afterwards additional assemblies were instituted, appropriated respectively to particular purposes, though the term \textit{kupia} was still reserved for the assembly formerly so called. If, however, the representation of Aristophanes is in agreement with the practice of his age, we must further suppose, what is very probable, that the arrangements for business, as described by Pollux, were not always observed even in the time of the poet; and since a few years after Aristotle's time many changes took place in the constitution of Athens, it may have happened that the name of \textit{kupia} was then given to all the regular assemblies, in which case the Scholion on Aristophanes (\textit{Acharn.} 19) seems to show, that \textit{kupia} was appropriated respectively to particular purposes, and in some particular cases it was specially determined by law that the people should assemble there. (Dem. c. Meid. 517.)"
assemblies were called 

Toi, because the it by a public proclamation; for as Ulpian (ad Demosth. de Fals. Leg. p. 100, a) observes, these assemblies were called συνήκτητοι, because the people were summoned to them by officers sent round for that purpose (τοιούχοι τροποί τοιν προέρχονται). But independent of the right which we have said the strategi possessed of convening an extraordinary meeting, it would seem from the case of Pericles (Thucyd. ii. 22) that a strategus had the power of preventing any assembly being called. It is, however, important to observe, that such an exercise of power would perhaps not have been tolerated except during wars and commotions, or in the person of a distinguished character like Pericles; and that under different circumstances, at any rate after the time of Solon, the assemblies were always called by the prytanes. All persons who did not obey the call were subject to a fine, and six magistrates called lexarchs (λεξιάρχοι) were appointed, whose duty it was to take care that the people attended the meetings, and to levy fines on those who refused to do so. (Pollux, vii. 104.) With a view to this, whenever an assembly was to be held, certain public slaves (Σκιδάς or τοφτάς) were sent round to sweep the agora, and other places of public resort, with a rope coloured with vermilion. The different persons whom these ropemen met, were driven by them towards the ecclesia, and those who refused to go were marked by the rope and fined. (Schol. ad Arist. Achar. 22.) Aristophanes (l. c.) alludes to this subject in the lines

οι δὲ ἀγγιὰ λαλοῦσιν, κῶσοι καὶ κάτω τὸ σχοινὸν φεύγουσι τὸ μελιτσάμον.

Besides this, all the roads except those which led to the meeting were blocked up with hurdles (γέφθα), which were also used to fence in the place of assembly against the intrusion of persons who had no right to be present: their removal in the latter case seems to have served as a signal for the admission of strangers who might wish to appeal to the people. (Dem. c. Neoxer. p. 1375.) An additional inducement to attend, with the poorer classes, was the μανῦ ἐκκλησιαστικό, or pay which they received for it. The originator of this practise seems to have been a person named Callistratus, who introduced it “long after the beginning of the influence of Pericles.” The payment itself, originally an obolus, was afterwards raised to three by a popular favourite called Agyrrhius, of Collytus. The increase took place but a short time before the Ecclesiazusae of Aristophanes came out, or about B. C. 392. A ticket (συνεδρολό) appears to have been given to those who attended, on producing which, at the close of the proceedings, they received the money from one of the thesmothetae. (Aristoph. Eccles. 295, 380.) This payment, however, was not made to the richer classes, who attended the assemblies gratis, and are therefore called οἰκοστοὶ ἐκκλησιασταί by the poet Antiphanes in a fragment preserved by Athenaeus (vii. p. 247, f). The same word οἰκοστα is applied generally to a person who receives no pay for his services. With respect to the right of attending, we may observe that it was enjoyed by all legitimate citizens who were of the proper age (generally supposed to be twenty, certainly not less than eighteen), and not labouring under any atimia or loss of civil rights. All were considered citizens, whose parents were both such, or who had been presented with the freedom of the state, and enrolled in the register of some demus or parish. (Dem. c. Neoxer. p. 1386.) Adopted citizens, however (συνστέλοντες, were not qualified to hold the offices of archon or any other board. (Id. p. 1376.) Deceit old men (γέφτοντες οἵ ἀρειμνού, perhaps those above sixty) seem not to have been admitted, although it is not expressly so stated. (Aristot. Poli. iii. 1.) Slaves and foreigners also were certainly excluded (Aristoph. Thesm. 294) : though occasions would of course occur when it would be necessary or desirable to admit them; and from Demosthenes (c. Neoxer. p. 1375) we may infer that it was not unusual to allow foreigners to enter towards the close of the proceedings, when the most important business of the day had been concluded; otherwise they stood outside. (Aesch. c. Cleo. p. 86.) The isotelēis, or foreigners, who enjoyed nearly equal privileges with the citizens, are by some thought to have had the same rights as adopted citizens, with respect to voting in the assembly. (Wolf, ad Dem. Lecpt. p. 70.) This, however, seems very doubtful; at any rate the etymology of the word isotelēis does not justify such an opinion. In the article BOULE it is explained who the prytanes and the proedri were; and we may here remark, that it was not unusual for a foreigner of the same tribe, under the presidency of their chairman (ὁ ἐστιστάτης), to lay before the people the subjects to be discussed; to read, or cause to be read, the previous bill (τὸ προθεδελεμένα) of the senate; and to give permission (γράμμα προτιθέμενα) to the speakers to address the people. They most probably sat on the steps near the bema, to which they were on some occasions called by the people. In later times they were assisted in keeping order (ἐκδοσιας) by the members of the presiding tribe (ἡ πρῳθεδελεμένα φυλή, Aesch. c. Cesiph. p. 53, and Boule); and the officers who acted under them, the “serjeants-at-arms” were the crier (ὁ κήρυς), and the Scythian bowmen. Thus, in Aristophanes (Acharn. 24), the crier says to a speaker, who was out of order, κάθσα σέγα, and in another passage the τοφταί are represented as dragging a drunken man out of the assembly. (Eccles. 143.) When the discussion upon any subject had terminated, the chairman of the proedri, if he thought proper, put the question to the vote: we read in some instances of his refusing to do so. (Xen. Mem. i. 1. § 18; Thuc. vi. 14.) Previous, however, to the commencement of any business, it was usual to make a lustration or purification of the place where the assembly was held. This was performed by an officiating priest called the Peristiarhachus (περιστιαρχος), a name given to him because he went before the lustral victims (τὰ περιστία) as they were carried round the boundary of the place. The favourite victims were sucking pigs (χοίρια): the blood of which was sprinkled about the seniors, and their bodies afterwards thrown into the sea. (Seelot. ad Aristoph. l. c., ad Aesch. c. Timar. p. 65.) After the peristiarhach, the chairmen followed, burning incense in a censer. When these ceremonies were concluded, the crier proclaimed silence, and then offered up a prayer, in which the gods were implored to bless the proceedings of the meeting, and bring down destruction on all those who were hostilely disposed towards the state, or who
ECCLESIA.

traitorously plotted its overthrow, or received bribes for misleading and deceiving the people. (Aristoph. Thesm. 330.) On the conclusion of this prayer business, the cry of the existing object proposed was said to be brought forward, πρωταν μετα τα Ισρ. (Dem. c. Timoc. p. 706.) We must, however, understand that it was intended to propose to the ecclesia any particular measure unless it had previously received the sanction of the senate, or been formally referred by that body to the people, under the title of a προβολέων. The assembly, nevertheless, had the power of altering a previous decree of the senate as might seem fit. Further information on this point will be found under Boule, to which we may add, according to Schömann (De Comit., c. 9), that the object of the law, mentioned by the grammarians (Ἀριστοπρόμαχος μετά πυσίσμα εισείναι ἐν τῷ δήμῳ), seems to have been, not to provide that no motion should be proposed in the assembly unless previously approved of by the senate, but rather that no subject should be presented for discussion to the people, about which a bill of the senate had not been drawn up and read in the assembly.

The privilege of addressing the assembly was not confined to any class or age amongst those who had the right to be present: all, without any distinction, were invited to do so by the proclamation (Τόν ἀγοροστοὺς) which was made by the crier after the proedri had gone through the necessary preliminaries, and laid the subject of discussion before the meeting; for though, according to the institutions of Solon, those persons who were above fifty years of age ought to have been called upon to speak first (Aesch. c. Ctesiph. p. 54), this regulation had in the days of Aristophanes become quite obsolete. (Dem. De Cor. p. 265; Aristoph. Acharn. 43.) The speakers are sometimes simply called οἱ παρώνες, and appear to have worn a crown of myrtle on their heads while addressing the assembly, to intimate, perhaps, that they were then representatives of the people, and like the archons when crowned, inviolable. (Aristoph. Eccles. 130, 147.) They were by an old law required to confine themselves to the subject before the meeting, and keep themselves to the discussion of one thing at a time, and forbidden to indulge in scurrilous or abusive language: the law, however, had in the time of Aristophanes become neglected and almost forgotten. (Aesch. c. Timar. p. 5; Aristoph. Eccles. 142.) The most influential and practised speakers of the assembly were generally distinguished by the name of ἡµεραποιητά.

After the speakers had concluded, any one was at liberty to propose a decree, whether drawn up beforehand or framed in the meeting (Ἐν τῷ δήμῳ συγγράφαται, Plat. Gorg. p. 451), which, however, it was necessary to present to the proedri, that they might see, in conjunction with the νομοθέται, whether there was contained in it anything injurious to the state, or contrary to the existing laws. (Polinx. viii. 94.) If not, it was read by the crier; though, even after the reading, the chairman could prevent it being put to the vote, unless his opposition was overborne by threats and clamours. (Aesch. De Vuls. Leg. p. 39.) Private individuals also could do the same, by engaging upon oath (ὑποσωμα) to bring against the author of any measure they might object to, an accusation called a γραφή παρανόμων. If, however, the chairman refused to submit any question to the decision of the people, he might be proceeded against by endezias (Plat. Apol. p. 32); and if he allowed the people to vote upon a proposal which was contrary to existing laws, he was in some cases liable to atimia. (Dem. c. Timoc. p. 716.) If, on the contrary, no opposition of this sort was offered to a proposed decree, the votes of the people were taken, by the permission of the chairman and with the consent of the rest of the proedri: whence the permission is said to have been given sometimes by the proedri and sometimes by the chairman, who is also simply called δοπρόδος, just as the proedri are sometimes styled pryntes. (Aesch. c. Ctesiph. p. 64; Dem. c. Moid. p. 517.)

The decision of the people was given either by show of hands, or by ballot. e. by casting pebbles into urns (καλλικάρια); the former was expressed by the word χειροτονεῖν, the latter by ψηφίζειν, although the two terms are frequently confounded. The more usual method of voting was by show of hands, as being more expeditious and convenient (χειροτονία). The process was as follows:—the crier first proclaimed that all those who were in favour of a proposed measure should hold up their hands (ὑπὲρ δοκεῖ, κ.τ.λ., ἀράτσα τὴν χείρα); then he proclaimed that all those who were opposed to it should do the same (ὑπὲρ μὴ δοκεῖ κ.τ.λ.); they did so, and the crier then formed as accurate an idea as possible of the numbers for and against (ὑπολογεῖ τὰς χειρὰς), and the chairman of the meeting pronounced the opinion of the majority. (Suidas, s. e. Κατεχειροτονήσεως.) In this way most matters of public interest were determined. Vote by ballot (κρόβεσθαι), on the other hand, was only used in a few special cases determined by law; as, for instance, when a proposition was made for allowing those who had suffered atimia to appeal to the people for restitution of their former rights; or for inflicting extraordinary punishments on atrocious offenders, and generally, upon any matter which affected private persons. (Dem. c. Timoc. pp. 715, 719.) In cases of this sort it was settled by law, that a decree should not be valid unless six thousand citizens at least voted in favour of it. This was by far the majority of those citizens who were in the habit of attending; for, in time of war the number never amounted to five thousand, and in time of peace seldom to ten thousand. (Thuc. vii. 72.)

With respect to the actual mode of voting by ballot in the ecclesia we have no certain information, but it was probably the same as in the courts of law, namely, by means of black and white pebbles, or shells, put into urns (καλλικάρια); the white for adoption, the black for rejection of any given measure. (Schol. ad Arist. Vesp. 981.)

The determination or decree of the people was called a Psaphisma (ψφήσμα), which properly signifies a law proposed to an assembly, and approved of by the people. The form for drawing up the Psaphisma varied in different places. (Boule.)

We now come to the dismissal of the assembly; the order for which, when business was over, was given by the pryntes (ἀκομή τῆς έκκλησίας) through the proclamation of the crier (Aristoph. Acharn. 173); and as it was not customary to continue meetings which usually began early in the morning (Id. 20) till after sunset, if one day were not sufficient for the completion of any business, it was adjourned to the next. But an assembly was sometimes broken up if any one,
whether a magistrate or private individual, declared that he saw an unfavourable omen, or perceived thunder and lightning. The sudden appearance of rain also, or the shock of an earthquake, or any natural phenomenon of the kind called τὸ κακὸν κόσμον, was a sufficient reason for the hasty adjournment of an assembly. (Aristoph. νab. 579 ; Thuc. v. 29.)

We have already stated in general terms, that all matters of public and national interest, whether foreign or domestic, were determined upon by the people in their assemblies, and we shall conclude this article by stating in detail what some of these matters were. On this point Julius Pollux (vii. 215) informs us, that in the first assembly of every ἐπανόρθωσις, which was called τὸ κακὸν κόσμον, the ἔστιν ἄριστον of the magistrates was held ; i.e. an inquisition into their conduct, which, if it proved unavailing, was followed by their deposition. In the same assembly, moreover, the ἐσπαγγελία or extraordinary informations were laid before the people, as well as all matters relating to the watch and ward of the country of Attica ; the regular officers also read over the lists of confiscated property, and the names of those who had entered upon inheritances. The second was devoted to the hearing of those who appeared before the people as suppliants for some favour, or for the privilege of admission into an assembly, or even into a court of law, to which they otherwise would have been liable, or for indemnity previous to giving information about any crime in which they were accomplices. In all these cases it was necessary to obtain an αἰσχος, i.e. a special permission or immunity. In the third assembly, ambassadors from foreign states were received. In the fourth, religious and other public matters of the state were discussed.

From this statement, compared with what is said under Εἰσαγγελία, it appears that in cases which required an extraordinary trial, the people sometimes acted in a judicial capacity, although they usually referred such matters to the court of the Ἐκκλησία. There were, however, other cases in which they exercised a judicial power: thus, for instance, the proedri could ex officio prosecute an individual before the people for misconduct in the ecclesia. (Aesch. c. Timarch. p. 6.) Again, on some occasions information (μνημονεῖα) was simply laid before the people in assembly, without the informant making a regular impeachment; and although the final determination in cases of this sort was generally referred to a court of law, still there seems no reason to doubt that the people might have taken cognizance of them in assembly, and decided upon them as judges; just as they did in some instances of heinous and notorious crimes, even when no one came forward with an accusation. Moreover, in turbulent and excited times, if any one had incurred the displeasure of the people, they not unfrequently passed summary sentence upon him, without any regard to the regular and established forms of proceeding; as examples of which we may mention the cases of Demosthenes and Phocian. The proceedings called προδολαξία and ἐπετρεπτικα were also instituted before the people; further information with respect to them is given under the name of the Athenian constitution, be either repealed or enacted, except by the court of the Νομοθέται: it might, however, doubtless happen that Ἰησοῦς was called by the people in assembly, without the intervention of the court of the nomothetae. (Dem. c. Timarch. p. 744 ; Aristot. Polit. iv. 4.)

The foreign policy of the state, and all matters connected with it, and the regulation and appropriation of the taxes and revenues, were, as we might expect, determined upon by the people in assembly. The domestic economy of the state was under the same superstition; a fact which Pollux briefly expresses by informing us that the people decided in the fourth assembly ἐργα τούτων καὶ νομοθεσίων, i.e. on all matters, whether spiritual or secular, in which the citizens collectively had an interest. Such, for example, says Schömann (p. 298), “are the priesthoods, the temples of the gods, and all other sacred things; the treasury, the public land, and public property in general; the magistracy, the courts, the laws and institutions of the state, and, in fine, everything which we may observe, that the meetings for the election of magistrates were called ἐπετρεπτικα. Lastly, as Schömann remarks, “the people likewise determined in assembly upon the propriety of conferring rewards and honours on such citizens or strangers, or even foreign states, as had in any manner signally benefitted the commonwealth.”

It is hardly necessary to add, that the signification of a religious assembly or church, which ecclesia bore in later times, sprang from its earlier meaning of an assembly in general, whether of the constituency of a whole state, or of its sub-divisions, such as tribes and cantons. See Τριβος and Νομοθες.

ΕΚΚΛΗΣΙΑ. 443

ΕΚΚΛΗΣΙΑ. 443

The legislative powers of the people in assembly, so far as they were defined by the enactments of Κρόνος, were very limited; in fact, strictly speaking, no laws could, without violating the spirit of the Athenian constitution, be either repealed or enacted, except by the court of the Νομοθέται: it might, however, doubtless happen that Ψηφιστοματα passed by the assemblies had reference to general and permanent objects, and were therefore virtuously of laws [Νομοθεσίς]; moreover, if we may judge by the complaints of Demosthenes, it appears that, in his days, the institutions of Solon had, in this respect, fallen into disuse; and that new laws were made by the people collectively in assembly, without the intervention of the court of the nomothetae. (Dem. c. Timarch. p. 744 ; Aristot. Polit. iv. 4.)

The foreign policy of the state, and all matters connected with it, and the regulation and appropriation of the taxes and revenues, were, as we might expect, determined upon by the people in assembly. The domestic economy of the state was under the same superstition; a fact which Pollux briefly expresses by informing us that the people decided in the fourth assembly ἐργα τούτων καὶ νομοθεσίων, i.e. on all matters, whether spiritual or secular, in which the citizens collectively had an interest. Such, for example, says Schömann (p. 298), “are the priesthoods, the temples of the gods, and all other sacred things; the treasury, the public land, and public property in general; the magistracy, the courts, the laws and institutions of the state, and, in fine, everything which we may observe, that the meetings for the election of magistrates were called ἐπετρεπτικα. Lastly, as Schömann remarks, “the people likewise determined in assembly upon the propriety of conferring rewards and honours on such citizens or strangers, or even foreign states, as had in any manner signally benefitted the commonwealth.”

It is hardly necessary to add, that the signification of a religious assembly or church, which ecclesia bore in later times, sprang from its earlier meaning of an assembly in general, whether of the constituency of a whole state, or of its sub-divisions, such as tribes and cantons. See Τριβος and Νομοθες.

ΕΚΚΛΗΣΙΑ. 443

ΕΚΚΛΗΣΙΑ. 443

The legislative powers of the people in assembly, so far as they were defined by the enactments of Κρόνος, were very limited; in fact, strictly speaking, no laws could, without violating the spirit of
of this assembly is not mentioned, it existed long before the Persian wars, and that in many cases in which the magistrates (τέχνος, δικαστήρες or ἄρχων) are said to have been made decree of, it is mentioned instead of the ἐκκλησία, of whom they were the chief members. This last supposition is rejected by Müller (Dor. iii. 5. § 10), who observes that the magistrates were often said to have decreed a measure (especially in foreign affairs), though it had been discussed before the whole assembly and approved by it; for the magistrates were the representatives and the organs of the assembly, and acted in its name. Müller is also of opinion that ἐκκλησία and ἐκκλησία are identical, and distinct from the lesser assembly, which he considers to have been a kind of select assembly, but his arguments on this point are not convincing.

The ἐκκλησία and the lesser assembly are mentioned about the same time in Grecian history, and previous to that time we hear of no assembly, except the regular ε/κκαταστημα of all the Spartans, (See Xen. Hell. v. ii. § 33, vi. 3. § 3) [L.S.]

ECDICUS (ἐκδίκος), the name of an officer in many of the towns of Asia Minor during the Roman dominion, whose principal duty was the care of the public money, and the prosecution of all parties who owed money to the state. The word is translated in the ancient glossaries by κουμπιδιάριος, an attorney. (Cic. ad Fam. xiii. 56; Plin. Ep. x. 111 ; Gronovius, de Sestert. iv. 3. p. 277.)

ECDOSIS (ἐκδοσις). [Fenius.]

ECHINOS (ἐχῖνος). [Dike.]

ECHOGEIS (ἐχογεῖς). [Isiophora.]

ECMARTYRIA (ἐκμαρτυρία), signifies the deposition of a witness, who, by reason of absence abroad, or illness, was unable to attend in court. His statement was taken down in writing, in the presence of persons expressly appointed to receive it, and afterwards, upon their swearing to its identity, was read as evidence in the cause. They were said martrypen την ἐκμαρτυρίαν: the absent witness, ἐκμαρτυρεῖν: the party who procured the evidence, ἐκμαρτυρεῖν παραστάτη. It was considered as the testimony of the deponent himself, not that of the certifying witnesses, and therefore did not come within the description of hearsay evidence, which (except the declaration of a deceased person) was not admissible at Athens. The law was, ἐκάρων εἰςαὶ μαρτυρεῖν τεθεῖται, ἐκμαρτυριν δὲ ἑτεροραί καὶ ἀδύνατον. The deponent (like any other witness) was liable to an action for false testimony if the contents of the deposition were untrue, unless he could show that it was incorrectly taken down or forged, in which case the certifying witnesses would be liable. Therefore (Isaeus tells us) it was usual to select persons of good character to receive such evidence, and to have as many of them as possible (Isaeus, De Pyrr. Hered. 23, 24, ed. Bekk.; Dem. c. Steph. pp. 1130, 1131) [Martyrion.] [C. R. K.]

ECPHORA (ἐκφόρα). [Fenius.]

ECPHORA (ἐκφόρα), the name of an officer who used to introduce them into his own Edict, and hence such adopted rules were called edictum tralatitum (Cic. ad Att. iii. 23, v. 21; ad Fam. iii. 8; in Verr. i. 45), or vetus, as opposed to edictum novum. A repetitum edictum was that rule which was made (prout res incidit) for the occasion. (In Verr. iii. 14.)

A perpetuum edictum was that rule which was made by the magistrates on entering upon office, and which was intended to apply to all cases to which it was applicable, during the year of his office: hence it was sometimes called also annul. It was not called perpetuum because the rules were fixed, but because each praetor published his edict upon entering on his office, and thus there was a perpetuum (continuous) edictum. Until it became the practice for magistrates to adopt the edicta of their predecessors, the edicta could not form a body of permanent binding rules: but when this practice became common, the edicta (edictum tralatitum) soon constituted a large body of law, which was practically of as much importance as any other part of the law. The several edicta, when thus established, were designated by the names of their promulgators, as the Edictum Carbonianum; or they were named with reference to the formula, and the actio which they established, as Aquiliana, Publiciana, Rutiliana.

The origin of the edictal power cannot be historically shown; but as the praetor was a magistrate established for the administration of justice on account of the occupations of the consuls, and the consular power was the representative of the Kinelv power, it seems that the jus edicendi may have been a remnant of the kingly prerogative. However this may be, the edictal power was early exercised, and so far established, that the jus praetorium was a recognised division of law in and before the time of Cicero (in Verr. i. 44), in whose age the study of the Edict formed a part of the regular study of the law. (de Leg. i. 5, ii. 23.)

The edict of the aediles about the buying and also made many edicts, and their jurisdiction was exercised (under the empire at least) in the provinces populi Romani by the quaestors. (Cic. i. 6.) There were other edicts promulgated in the provinces Caesaris. The tribunes of the people also promulgated edicts relating to the matters of their respective jurisdictions. The edicta are enumerated by Gaius among the sources of Roman law, and this part of the Roman law is sometimes called in the Pandect, Jus Honorarium (Dig. 44. tit. 7. s. 52), apparently because the edictal power belonged to those magistrates only who had the honores, and not so much ad honorem praetorium. (Dig. 1. tit. i. 8. 7.) As the edict of the praetors were the most important, the jus honorarium was sometimes called jus praetorium: but, properly, the jus honorarium was the term under which was comprehended all the edictal law.

Edictum signifies, generally, any public notice made by a competent authority (Tacit. Ann. i. 7; Liv. xxxi. 6, ii. 50). But it specially signifies, under the republic, a rule promulgated by a magistrate, which was done by writing it on an album, and placing it in a conspicuous place, “Unde do piano recte legi potest.” From this circumstance, the Edict was considered to be a part of the jus scriptum. As the office of a magistrate was annual, the rules promulgated by a predecessor were not binding on a successor, but the magistrates might confirm or adopt the rules of his predecessor, and introduce them into his own Edict, and hence such adopted rules were called edictum tralatitum (Cic. ad Att. iii. 23, v. 21; ad Fam. iii. 8; in Verr. i. 45), or vetus, as opposed to edictum novum. A repetitum edictum was that rule which was made (prout res incidit) for the occasion. (In Verr. iii. 14.) A perpetuum edictum was that rule which was made by the magistrates on entering upon office, and which was intended to apply to all cases to which it was applicable, during the year of his office; hence it was sometimes called also annul. It was not called perpetuum because the rules were fixed, but because each praetor published his edict upon entering on his office, and thus there was a perpetuum (continuous) edictum. Until it became the practice for magistrates to adopt the edicta of their predecessors, the edicta could not form a body of permanent binding rules: but when this practice became common, the edicta (edictum tralatitum) soon constituted a large body of law, which was practically of as much importance as any other part of the law. The several edicta, when thus established, were designated by the names of their promulgators, as the Edictum Carbonianum; or they were named with reference to the formula, and the actio which they established, as Aquiliana, Publiciana, Rutiliana.

The origin of the edictal power cannot be historically shown; but as the praetor was a magistrate established for the administration of justice on account of the occupations of the consuls, and the consular power was the representative of the Kinelv power, it seems that the jus edicendi may have been a remnant of the kingly prerogative. However this may be, the edictal power was early exercised, and so far established, that the jus praetorium was a recognised division of law in and before the time of Cicero (in Verr. i. 44), in whose age the study of the Edict formed a part of the regular study of the law. (de Leg. i. 5, ii. 23.)

The edict of the aediles about the buying and
serving of slaves is mentioned by Cicero (de Off. iii. 11); the auctiones Aedilitiae are alluded to by Plautus (Capt. iv. 2, v. 43); and an edict of the praetor Peregrinus is mentioned in the Lex Galliae Clusana, which probably belongs to the beginning of the eighth century of the city. The Lex Cornelia, B.C. 67, provided against abuses of the edictal power, by declaring that the praetors should declare in particular cases, conformably to their peremptual edict. The edicts made in the provinces are often mentioned by Cicero. They were founded on the edictum urbana, though they likewise comprehended rules of procedure only to the administration of justice in the provinces, and so far they were properly edictum provinciale. Thus Cicero (ad Att. vi. 1) says, that he promulgated in his province two edicta; one provinciale, which, among other matters, contained every thing that related to the publicani, and another, to which he gives no name, relating to matters of which he says, "ex edicto et postulari et fieri solent." As to all the rest, he made no edict, but declared that he would frame all his decrees (decreta) upon the edicta urbana. It appears, then, that in the time of Cicero the edicta already formed a large body of law, which is confirmed by the fact, that, in his time, an attempt had been already made to reduce it into order, and to comment on it. Servius Sulpicius, the great jurist and orator, the most and contemporary of Cicero, addressed to Tertius two very short books on the Edict, which was followed by the work of Ollius (Pomponius, Dig. 1. tit. 2. s. 2); though we do not know whether the work of Ollius was an attempt to collect and arrange the various edicta like the subsequent compilation of Julian, or a commentary like those of many subsequent jurists (Ollius edictum praetoris primus diligenter composuit).

The object of the Edict, according to the Roman jurists, was the following (Pappinius, Dig. 1. tit. 1. s. 7):—"Adjuvandi vel supplendi vel corrigendi juris civilis gratia propter utilitatem publicam: " the Edict is also described as "viva vox juris civilis." It was, in effect, an indirect method of legislating, and it was the means by which numerous rules of law became established. It was found to be a more effectual, because an easier and more practical way of gradually enlarging and altering the existing law, and keeping the whole system in harmony, than the method of direct legislation; and it is undeniable that the most valuable part of the Roman law is derived from the edicts. If a praetor established any rule which was found to be inconvenient or injurious, it fell into disuse, if not adopted by his successor. The publicity of the Edict must also have been a greater security against any arbitrary changes, for a magistratus would hardly venture to promulgate a rule to which opinion had not by anticipation already given its sanction. Many of the rules promulgated by the Edict were merely in conformity to existing custom, more particularly in cases of contracts, and thus the edict would have the effect of converting custom into law. This is what Cicero seems to mean (de Invent. ii. 22), when he says that the Edict depends in a great degree on custom. As to the matter of the Edict, it must be supposed that the defects of the existing law must generally have been acknowledged and felt before any magistratus ventured to supply them; and in doing this, he must have conformed to the so-called natural equity (Jus Naturale or Gentium). Under the emperors, also, it may be presumed, that the opinions of legal writers would act on public opinion, and on those who had the jus edicendi. Hence, a large part of the edictal rules were founded on the so-called jus gentium; and the necessity of some modifications of the strict rules of the civil law, and of additional rules of law, would become the more apparent with the extension of the Roman power and their intercourse with other nations. But the method in which the praetor introduced new rules of law was altogether conformable to the edictal institutions. The process was slow and gradual; it was not effected by the destruction of that which existed, but by adapting it to circumstances. Accordingly, when a right existed, or was recognised, the praetor would give an action, if there was none; he would interfere by way of protecting possession, but he could not make possession into ownership, and, accordingly, that was effected by the law [USUCAPIO]: he aided plaintiffs by fictitious, as, for instance, in the Publiciana actio, where the fiction was, that the possessor had obtained the ownership by usucapion, and so was quasi ex jure Quiritium dominus (Gaius, iv. 36); and he also aided parties by exceptions, and in integrum restitution. [Jut.] The old forms of procedure were few in number, and they were often inconvenient and failed to do justice. Accordingly, the praetor extended the remedies by action, as already intimated in the case of the Publiciana actio. This change probably commenced after many of the leges actions were abolished by the Aebutia lex, and the necessity of new forms of actions arose. These were introduced by the praetors, and it is hardly a matter of doubt that in establishing the formulæ they followed the analogy of the legis actions. It is the conclusion of an ingenious writer (Rhein. Mus. für Juris. i. p. 51, Die Oeconomie des Edictes, von Heffer), "that the edict of the praetor urbana was in the main part relating to actions arranged after the model of the old leges actions, and that the system is apparent in the Code of Justinian, and still more in the Digest." Under the emperors, there were many commentators on the Edict. Thus we find that Labeo wrote four books on the Edict, and a work of his in thirty books, Ad Edictum Praetoris Peregrini, is cited by Ulpian. (Dig. 4. tit. 3 s. 9.) Salvius Julianus, a distinguished jurist, who lived in the time of Hadrian, and filled the office of praetor, made a compilation of Edictal law by order of the emperor; the work was arranged in titles, according to subjects (Bücking, Instd. i. 30. n. 11). It was called Edictum Perpetuum; and it seems, that from this date of this treatise the name Perpetuum was more particularly applied to this edict than to that which was originally and properly called the Edictum Perpetuum. Julian appears to have collected and arranged the old edicts, and he probably both omitted what had fallen into disuse, and abridged many parts, thus giving to the whole a systematic character. The work of Julian must have had great influence on the study of the law, and on subsequent juridical writings. It does not seem probable, that the edicts of the two Roman praetors, together with the Edictum Provinciale, and the edicta of the curule aediles, were blended into one in this compilation. If the work of Julian comprehended all these edicts,
they must have been kept distinct, as the subject-matter of them was different. We know that the edicts of the curule aediles were the subject of distinct treatises by Gaius, Ulpian, and Paulus, and the Edictum Provinciale would, from its nature, be of necessity kept separate from all the rest. But some writers are of opinion, that the Edictum Perpetuum of Julianus made one body of law out of the edicta of the praetor urbanus and peregrinus, that there was also incorporated into it much of the Edictum Provinciale, and a large part of the Edictum Aedilitium, as an appendage at least. The Edict thus arranged and systematised was, it is further supposed, promulgated in the provinces, and thus became, as far as its provisions extended, a body of law for the empire. This view of the edictum of Julianus is confirmed by the fact of Italy being divided by Hadrian into the city of Rome with its appurtenant part, and four districts. The magistratus remained as before, but the jurisdiction of the praetor was limited to Rome and its territory; and magistrates, called consulares, and subsequently, in the time of Aurelius, juridici, were appointed to administer justice in the districts. As the edictal power of the praetor was thus limited, the necessity for a comprehensive Edict (such as the Edictum Perpetuum of Julian) is the more apparent.

There were numerous writings on the Edict besides those above enumerated. They were sometimes simply entitled Ad Edictum, according to the citations in the Digest; and there were also other juridical writings, not so entitled, which followed the order of the Edict, as, for instance, the epitome of Hermogenianus. (Dig. 1. tit. 5. s. 2.) Ultimately, the writings on the Edict, and those which followed the arrangement of the Edict, obtained more authority than the Edict itself, and became the basis of instruction.

Some few fragments of the older edicts are found in the Roman writers, but it is chiefly from the writings of the jurists, as excerpted in the Digest, that we know anything of the Edict in its later form. It seems pretty clear that the order of Justinian's Digest, and more particularly that of his Codification of edicts, followed that of the Edict. The writings on the Edict, as well as the Edict itself, were divided into tituli or rubrica, and these into capita; some special or detached rules were named clausulae; and some parts were simply named edictum, as Edictum Carbonianum, &c.

The Edicta or Edictales Leges of the emperors are mentioned under Constitutio.

The Digest, as already observed, contains numerous fragments of the Edicts. The most complete collection of the fragments of the Edicts is by Wieling, in his "Fragmenta Edicti Perpetui," Franck, 1733. The latest essay on the subject is by G. L. de Weyhe, "Libri Tres Edicti sive Constitutiones," 1816. There is a collection of the fragments of the Edicts by G. F. Rhon, Halle, 1816, 4to.

The opinion of modern writers as to the design and object of the Edictum of Theodoric is by no means uniform. There is an edition of this Edictum by G. F. Rhon, Halle, 1816, 4to. (Savigny, Geschicht der R. R. &c.; Böcking, Instit. i. 89.)

EIDNA (eídna). [Dos.]

EICOSTE (eícostē), a tax or duty of one twentieth (five per cent.) upon all commodities exported or imported by sea in the states of the allies subject to Athens. This tax was first imposed in B. C. 415, in the place of the direct tribute which had up to this time been paid by the subject allies; and the change was made with the hope of raising a greater revenue. (Thuc. vii. 26.) This tax, like all others, was farmed, and the farmers of it were called eicostologi (eícostológoi).

It continued to be collected in B. C. 405, as Aristophanes mentions an eicostologus in that year (Ran. 346). It was of course terminated by the issue of the Peloponnesian war, but the tribute was afterwards revived on more equitable principles under the name of Synutaxis (synutaxi). (Köchel, Pudl. Econ. of Athens, pp. 325, 401, 2nd ed.)

We also read of an eicostē levied by the sons of Peisistratus. This tax was a twentieth of the produce of the lands in Attica, and was only half of what had been levied by Peisistratus himself. (Thuc. vi. 54.)

EI REN (εἰρήν) or IREN (εἰρήν), the name given to the Spartan youth when he attained the age of twenty. At the age of eighteen he emerged from childhood, and was called Meliteia (μελιτεία), Plut. Ages. 17. When he had attained his twentieth year, he began to exercise a direct influence over his juniors, and was entrusted with the command of troops in battle. The word appears to have originally signified a commander. Hesychius explains ἑιρήνεια (ἐιρήνεια), διδακτής: and εἰρήναειει (ἐιρήναειει) of Herodotus (ix. 85) were certainly not youths, but commanders. (Müller, Dorian, vol. ii. p. 315.)

EISAGOGEIS (eiVoywyeTs), at Athens, were enrolments (etKofían) of the Roman power in Italy. It was promulgated by Theodoric, king of the Ostrogoths, at Rome, in the year A.D. 500. It consists of 154 chapters, in which we recognise parts taken from the Codex and Novellae of Theodosius, from the Codices Gregoriani and Hermogenianus, and the Sententiae of Paulus. The Edict was, doubtless, drawn up by Roman writers, but the original sources are more disfigured and altered than in any other compilation. This collection of law was intended to apply both to the Goths (Buchau) and the Romans, so far as its provisions went; but when it made no alteration in the Gothic law, that law was still to be in force for the Barbari; and the Roman law was still to prevail for the Romans in those cases to which the Edictum was not applicable. Athens, the grandson of Theodoric, or rather Amalasuntha, the mother of Athalarich, who was a minor, completed this Edictum by a new one; but after Narses had again united Italy to the dominion of Justinian, the legislation of Justinian was established in Italy (A. D. 534), and the Edictum of Theodoric was no longer authoritative. (Zimmern, Geschichte des R. R. &c.)
bringing a cause (εἰσθένους) into a proper court, [Διακεκτέας; Δίκη.]
The cause itself was tried, as is explained under Δίκη, by dicasts chosen by lot; but all the preliminary proceedings, such as receiving the accusation, drawing up the indictment, introducing the cause into court, &c., were conducted by the regular magistrate, who attended in his own department to all that was understood in Athenian law by the γέμονια τοῦ δικαστηρίου. Thus we find the strategi, the logistae, the ἐπιστάται τῶν δημοσίων ἔργων, the ἐπικεφαλῆς τοῦ ἐμπορίου, &c., possessing this γέμονια; but it was not the chief business of any of the public magistrates, except of the archons and perhaps of the eleven. The chief part of the duties of the former, and especially of the thesemothenae, consisted in receiving accusations and bringing causes to trial (εἰσδέχεται) in the proper courts. [Ἀρχηγόν.]

ΕΙΣΑΝΓΕΛΙΑ (εἰσαγγελία), signifies, in its primary and most general sense, a denunciation of any kind (Schömann, De Comitiis, p. 181), but, much more usually, an information laid before the council or the assembly of the people, and the consequent impeachment and trial of state criminals at Athens under novel or extraordinary circumstances. Among these were the occasions upon which manifest crimes were alleged to have been committed, and yet of such a nature as the existing laws had failed to anticipate or at least describe specifically (ἐγκαίνησις), the result of which omission would have been, but for the enactment by which the accusations in question might be preferred (νόμος εἰσαγγελικός), that a prosecutor would not have known to what magistrate to apply; that a magistrate, if applied to, could not with safety have accepted the indictment or brought it into court; and that, in short, there would have been a total failure of justice. (Harpocrat. s. v.) The process in question was peculiarly adapted to supply these deficiencies; it pointed out, as the authority competent to determine the criminality of the alleged act, the assembly of the people, to which applications for this purpose might be made on the first business-day of each prytany (καλεῖται, Harpocrat.), or the council, which was at all times capable of undertaking such investigations; and occasionally the accusation was submitted to the cognizance of both these bodies. After the offence had been declared penal, the forms of the trial and amount of the punishment were prescribed by the same authority; and, as upon the conviction of the offenders a precedent would be established for the future, the whole of the proceedings, although extraordinary, and not originating in any specific law, may be considered as virtually establishing a penal statute, retrospective in its first application. (Lycurg. c. Leocrat. p. 140, ed Steph.)

The speech of Euryptolemus (Xen. Hell. i. 7. sub fin.) clearly shows that the crime charged against the ten generals who fought at Arginusae was one of these unspecified offences. The decree of the senate against Antiphon and his colleagues (Plut. Vit. Dec. Orator, p. 533, e), directing that they should be tried, and, if found guilty, punished as traitors, seems to warrant the inference, that their delinquency (viz. having undertaken an embassy to Sparta by order of the Four Hundred, a government declared illegal upon the reinstatement of the democracy), did not amount to treason in the usual sense of the term, but required a special declaration by the senate to render it cognizable as such by the Heliastic court. Another instance of treason by implication, prosecuted as an extraordinary and unspecified crime, appears in the case of Leocrates, who, in the speech already cited, accused of having absent himself from his country, and dropped the character of an Athenian citizen at a time when the state was in imminent danger. Offences, however, of this nature were by no means the only ones, nor indeed the most numerous class of those to which extraordinary denunciations were applicable. They might be adopted when the charge embraced a combination of crimes, as that of treason and impiety in the famous case of Alcibiades, for each of which a common indictment (γραφῆς) was admissible, when the accused were persons of great influence in the state, when the imputed crime, though punishable by the ordinary laws, was peculiarly heinous, or when a more speedy trial than was permitted by the usual course of business was requisite to accomplish the ends of justice. (Schömann, De Com. p. 190; Harpocrat. s. v.) The courts of the people, and, indeed, the council, on which the accused would, of course, be very often pretend by an informer to excite the greater odium against the accused, and the adoption of the process in question must have been much more frequent than was absolutely necessary.

The first step taken by the informer was to reduce his denunciation to writing, and submit it immediately to the cognizance of the council, which had a discretionary power to accept or reject it. (Lyros. c. Neom. p. 183.) Schömann maintains that a reference to this body was also necessary when it was intended to bring the matter before the assembly of the people, but that its agency was in such cases limited to permitting the impeachment to be announced for discussion, and directing the proedri to obtain a hearing for the informer. The thesemothenae are also mentioned by Pollux (viii. 87) as taking part in bringing the matter before the assembly, but upon what occasion they were so employed we can only conjecture.

In causes intended for the cognizance of the council only, after the reception of the denunciation, three courses with respect to it might be adopted by that body. If the alleged offence were punishable by a fine of no greater amount than five hundred drachmae, the council itself formed a court competent for its trial; if it was of a graver character they might pass a decree, such as that in the case of Antiphon already mentioned, directing the proper officers to introduce the cause to a Heliastic court, and prescribing the time and forms of the trial, and the penalty to be inflicted upon the conviction of the criminals; lastly, if the matter were highly important, and from doubts or other reasons they required the sanction of the assembly, they might submit the cause as it stood to the consideration of that body. In the first case, the trial was conducted before the council with all the forms of an ordinary court, and if, upon the assessment of penalties, the offence seemed to deserve a heavier punishment than fell within its competency, the trial was transferred to a Heliastic court, by the delivery of the sentence of the council (κατὰ θωματοτοίρος) to the thesemothenae by the scribe of the prytanes, and upon these officers it then devolved to bring the criminals to justice.
The court would have the power of fixing the amount of the penalty upon conviction. The third kind of eisangelia was available against one of these consists of cases of alleged Petraaon, we know from the instance mentioned by Demos-

ciTTA (eiswprpa), scil. lepat, sacrifices which were offered at Athens by the senate before the session began, in honour of the Oed Bou-

Suidas (c. v.) calls the eiswrpa a festive day—the first of every year—on which all the Athenian magistrates entered upon their office, and on which the senate offered up sacrifices for the purpose of obtaining the goodwill of the gods for the new magistrates. But this statement, as well as the further remarks he adds, seem to have arisen from a gross misunderstanding of the passage of Demostenes (De Fals. Leg. p. 400, 24; compared with c. Mid. p. 552, 2, where eiswprpa are said to be offered for the senate, οντ<φ της Βούλης).

ElISPORA (eiswprpa), literally a contribution or tribute, was an extraordinary tax on property, raised at Athens, whenever the means of the state were not sufficient to carry on a war. The money thus raised was sometimes called 4αναθαλματα. (Demosth. c. Timocr. p. 51.) We must carefully distinguish between this tax and the various liturgies which consisted in personal or direct services which citizens had to perform, whereas the eiswprpa consisted in paying a certain contribution towards defraying the expenses of a war. Some ancient writers do not always clearly distinguish between the two, and Ulpian on Demosthenes (Olynth. ii. p. 33, 4) entirely confounds them; and it is partly owing to these inaccuracies that this subject is involved in great difficulties. At the time when armies consisted only of Athenian citizens, who equipped themselves and served without pay, the military service was indeed nothing but a species of extraordinary liturgy; but when mercenaries were hired to perform the duties of the citizens, when wars became more expensive and frequent, the state was obliged to levy contributions on the citizens in order to be able to carry them on, and the citizens then paid money for services which previously they had performed in person.

It is not quite certain when this property-tax was introduced; for, although it is commonly in-

Diod. c. Timocr. p. 51.) such a contribution could never be raised without a decree of the people, who also fixed upon the amount required (Demosth. c. Polyd. p. 1200; Aristoph. Eccles. 818); the generals superintended its collection, and presided in the courts where disputes connected with, or arising from, the levy of the tax were settled. (Wolf, Proleg. in Luptin. p. 94; Demosth. c. Bœot. p. 1002.) Such disputes seem to have occurred rather frequently; personal enmity not seldom induced the officers to tax persons higher than was lawful, according to the amount of their property. (Aristoph. i. c.; Demosth. c. Aphob. p. 615.) The usual expressions for paying this property-tax are:  

eisaphros η σύμμοριαν εἰς τὴν ταλανταίαν ἑδύφρωσεν εἰς ἑδύφρωσεν, and those who paid it were called eisaphrōntes. On the occasion mentioned by Thucydides, the amount which was raised was, as we have seen, 200 talents, which, if we suppose the taxable property to have been 20,000 talents, was a tax of one per cent. (Böckh, Publ. Econ. p. 520, 2d edit.) On other occasions, the rates were higher or lower, according to the wants of the republic at the time; we have accounts of rates of a twelfth, a fiftieth, a hundredth, and a five hundredth part of the tax.

The census of Solon was during the first period the standard according to which the eisaphros was raised, until in 377 B.C., in the archonship of Anaximenes, a new census was instituted, in which the people, for the purpose of fixing the rates of the property-tax, were divided into a number of symmoriae (συμμορίαι) or classes, similar to those which were afterwards made for the tricrarchy. (Thucyd. c. Androt. p. 606; Ulpian, ad Demosth. Olynth. ii. p. 93, c.) The nature of this new census, notwithstanding the minute investigation of Böckh (Publ. Econ. book iv), is still involved in great obscurity. Each of the ten phylae, according to Ulpian, appointed 120 of its wealthier citizens, who were divided into two parts, according to their property, called symmoriae, each consisting of sixty persons; and the members of the wealthier of the two symmoriae were obliged, in cases of urgent necessity, to advance to the less wealthy the sum which they had advanced it. The whole number of persons included in the symmoriae was 1200, who were considered as the representatives of the whole republic; it would, however, as Böckh justly observes, be absurd to suppose with Ulpian that all the rest were exempt from it. The whole census of 6000 (Demosth. De Symmor., or more accurately of 5750 talents (Polyb. ii. 62 § 7), was surely not the property of 1200 citizens, but the taxable property of the whole republic. Many others, therefore, though their property was smaller than that of the 1200, must have contributed to the eisaphros, and their property must be considered as included in the census of 5750 talents of tax-

The body of 1200 was, according to Ulpian, also divided into four classes, each consisting of 300. The first class, or the richest, were the leaders of the symmoriae (τῆς synthēs συμμορίων), and are often called the three hundred καὶ ἐξορϕάχων. They probably conducted the proceedings of the symmoriae, and they, or which is more likely, the demarchs, had to value the taxable property. Other officers were appointed to make out the lists of the rates, and were called ἐπογραφεῖς, διαγραφεῖς, or ἔκλογεῖς. When the wants of the state were pressing, the 300 leaders, perhaps in connection with the 500 included in the second class — for Ulpian, in the front portion of his remark, states that the richer symmoria of every phyle had to perform this duty — advanced the money to the others on the above-mentioned terms (Demosth. c. Pharnip. p. 146), which, however, was never done unless it was decreed by the people. (Demosth. c. Polyd. p. 1209.) The rates of taxation for the four classes have been made out with great probability by Böckh (Publ. Econ. p. 519, 2d edit.), from whose work the following table is taken:

**First Class, from twelve talents upwards.**

<table>

Every one had to pay his tax in the phyle where his landed property lay, as appears from the oration of Demosthenes against Polycles; and if any one refused to pay, the state had a right to confiscate his estate, but not to punish the individual with atinia. (Demosth. c. Androt. p. 609, c. Timoerat. p. 752.) But if any one thought that his property was taxed higher than that of another man on whom juster claims could be made, he had the right to call upon this person to take the office in his stead, or to submit to a complete exchange of property. [Avrônolns.] No Athenian, on the other hand, if belonging to the tax-paying classes, could be exempt from the eisaphros, not even the descendants of Harmodius and Aristogiton.
ELECTRUM.

(Demosth. c. Leptin. p. 462, &c.) Orphans, though exempt from liturgies, were obliged to pay the property-tax, as we see in the instance of Demosthenes, who was one of the leaders of the symmoria for ten years (c. Mid. p. 565; compare Isaeus, ap. Dionys. Isaeus, p. 108; or Orat. Graec. vol. vii. p. 331, ed. Reiske). Even triarchers were not exempt from paying the "eisphoros" themselves, although they could not be compelled to pay the "prosphoros." (Demosth. c. Polyol. p. 1209, c. Phaenipp. p. 1046.) It seems that aliens were likewise subject to it, for the only instance we have of any exception being made is one of aliens. (Marrn. Onox. ii. xxiv.; Böckh, Publ. Econ. p. 536.) But the further information of uncertain value; the subject of the "eisphoros," see the fourth book of Böckh's Public Economy of Athens: Wolf, Prologomena in Leptin.; Wachsmuth, Hellen. Alterth. vol. ii. p. 98, 2d edit.; Hermann, Pol. Ant. of Greece, § 162. [L. S.]

ELAEBOTTUS. [Baleae, p. 190.]

ELAPHEBO'LIA (ἐλαφεβόλεια), the greatest festival in the town of Hyampolis, in Phocis, which was celebrated in honour of Artemis, in commemoration, it is said, of a victory which its inhabitants had gained over the Thessalians, who had ravaged the country and reduced the Phocians in the neighbourhood of the town nearly to the last extremity. (Plut. De Mul. Virt. p. 267; Paus. x. 35. § 4.) The only particular which we know of its celebration is, that a peculiar kind of cake (ἐλαφρός) was made on the occasion. (Athen. xv. p. 646.) These cakes were, as their name indicates, probably made in the shape of a stag or deer, and offered to the goddess. The festival of the elaphesolia was also celebrated in many other parts of Greece, but no particulars are known. (Etymol. Magn. s. v. Ἐλαφεβόλεια.) [L. S.]

ELAPHEBO'LION. [Calendarium.]

ELECTRUM (ἄερτρον and ἐλεκτρον), is used by the ancient writers in two different senses, either for amber or for a mixture of metals composed of gold and silver. In the former sense, it does not come within the scope of this work, except as a substance used in the arts, and also on account of the difficulty of deciding, with respect to several of the passages in which the word occurs, in which of the two senses it is used. If we could determine which was first known to the Greeks, the mineral or the metal, the subject would be simplified; but the only means we have of determining this question is the slight internal evidence of a few passages in Homer. If, as we shall endeavour to show, those passages refer to amber, a simple explanation of the twofold use of the word suggests itself; namely, that the word originally meant amber, and that it was afterwards applied to the mixed metal, because its pale yellow colour resembled that of amber. Etymologically, the word is probably connected with ἐλαετρον, the sun, the root-meaning being brilliant. (Pott, Etyn. Forsch. p. 237; this derivation was known to Pliny, H. N. xxxvii. 2. s. 11; Buttmann's derivation from ἐλαετρον, to draw, is objectionable both on philological and historical grounds: the attractive power of amber, when rubbed, is said, and no doubt correctly, to have been discovered long after the mineral was first known.)

The word occurs three times in Homer; in two cases where mention is made of a necklace of gold, bound, or held together, ἔλακτροναια, where the plural is almost alone sufficient to prove that the meaning is, with amber beads. (Od. xv. 460, xviii. 295.) In the former passage the necklace is brought by a Phoenician merchant. The other passage is in the description of the palace of Menelaus, which is said to be ornamented with the brilliancy of copper (or bronze) and gold, and electrum, and silver, and ivory. (Od. iv. 73.) Now, since the metallic electrum was a mixture of gold with a small portion of silver, the enumeration of it, as distinct from gold and silver would seem almost superfluous; also, the supposition that it means amber agrees very well with the subsequent mention of ivory: moreover, the order of the words suggests this view; for, replying to them the principle of parallelism, which is so common in early poets, and among the rest in Homer,—and remembering that the Homeric line is really a distich divided at the caesura, we have gold and amber very aptly contrasted with silver and ivory:

Χρυσός τ' ἐλακτρονοι τε και ἄργυρος ἡς ἀλακτρωτος.

In this last passage, Pliny understood the word to mean the metallic electrum (H. N. xxxiii. 4. s. 23); but his authority on the meaning of a passage of Homer is worthless: and indeed the Latin writers seem generally to have understood the word in the sense of the metal, rather than of amber, for which they have another word, sue cium. In Hesiod's description of the shield of Hercules (v. 141), the word again occurs, and we have γυμνος, and white ivory, and electrum, connected with shining gold and cyanus, where amber is the more natural interpretation; although here again the Roman imitator Virgil evidently understood it by the metal. (Aen. viii. 402.) For the discussion of other passages, in which the meaning is more doubtful, see the Lexicons of Liddell and Scott, and Seiler and Jacobitz, and especially Buttmann's Mythologus, Supp. i. Ueber das Electron, vol. ii. pp. 337, foll.

The earliest passage of any Greek writer, in which the word is certainly used for the metal, is in the Antigone of Sophocles (1038), where mention is made of Indian gold and the "electron," as objects of the highest value. There can be little doubt that what is here meant is the pale gold deposited by certain rivers of Asia Minor, especially the Pactolus, which contained a considerable alloy of silver. We have here an example of native electron; but the compound was also made artificially. Pliny states that when gold contains a fifth part of silver, it is called electron; that it is found in veins of gold; and that it is also made by art: if, he adds, it contains more than a fifth part of silver, it is called electrum; if less, it is malleable. Among its properties are, according to the same author, the reflecting the light of a lamp more brightly than silver, and that a cup of native electrum detects the presence of poison by certain signs. One cannot but suspect that the last statement is copied from some Greek writer, who made it respecting amber, on account of the similar property that used to be attributed to opal. (Plin. H. N. xxxiii. 4. s. 23, with Harduin's note: comp. ix. 50. s. 65; Paus. v. 12. § 6.) Isidorus also distinguishes the three kinds of electron, namely, (1) amber; (2) the metal, found in its natural state; (3) the metal artificially composed of ___
parts of gold and one of silver, proportions differing from those mentioned by Pliny. (Isid. xvi. 23.)

Electrum was used for plate, and the other similar purposes for which gold and silver were employed. It was also used as a material for making. Lamprias tells us that Alexander Severus struck coins of it; and coins are in existence, of this metal, struck by the kings of Bosporus, by Symcuses, and by other Greek states. (Eckhel, Doct. Num. Vet. vol. i. pp. xxiv. xxv.)

ELEPHAS. As we have to speak of ivory chiefly in connection with Greek art, we place what we have to say of it under its Greek name, in preference to the proper Latin word Ebor. (Elephantus is also used in poetry for ivory; Virg. Georg. iii, 26, Aen. iii, 464, vi, 896.) In the early writers, such as Homer, Herodotus, and Pindar, the word invariably means ivory, never the elephant; just because the Greeks obtained ivory by commerce long before they ever saw, or had occasion to speak of, the animal from which it was obtained. But, on the other hand, there can be no doubt that the word etymologically signifies the animal, being identical with the Hebrew and Arabic, Aleph, and Eleph, which means an ox or other large graminivorous animal; that is to say, the Greeks received the substance ivory, together with the name of the animal which produces it, and naturally applied the latter to the former. (Respecting the name see further Liddell and Scott's Lexicon, and Pott's Etym. Forsch. pt. i. p. lxxxi.) Herodotus, as might be expected from his researches in Asia and Africa, knew that ivory came from the teeth of the elephant. (iv. 191; Plin. H. N. viii. 3. s. 4); while on the other hand writers as late as Juba (Plin. l. c.) and Pausanias (v. 12. s. 1.) fell into the mistake of regarding the tusks as horns.

The earliest mention of ivory in a Greek writer is in a passage of the Iliad (v. 583), where it appears as an ornament for harness (ηρα λειον ἐλέφαντα). In the Odyssey its use as an article of luxury is so often referred to, that it is needless to enumerate the passages, which prove how extensively the Phoenician traders had introduced it into the Greek cities of Asia Minor, and no doubt also into Greece Proper. It appears among the ornaments of houses, furniture, vessels, armour, harness, and so forth. Neither is there any occasion to trace its continued use among the Greeks and Romans, down to the luxurious and extravagant period of the empire, when the supply furnished by increased commerce was greatly enlarged by the prodigious quantity of elephants, which were provided for the slaughter of the amphitheatre. It was used, not only as an ornament for, but as the entire material of chairs, beds, footstools, and other furniture, statues, flutes, and the frames of lyres, besides many other objects.

The most important application of ivory was to works of art, and especially to those statues which, being composed of gold and ivory, were called chryselephantine (χρυσελεφαντικα). The art of chryselephantine statuary must be regarded as a distinct subdivision, different from casting in bronze, and sculpturing in marble, and indeed more nearly connected with carving in wood, as is even indicated by the application of the name ζύλα to the master works in this art (Strab. viii. p. 372). While the sculptor wrought at once upon a material, which had been comparatively neglected in the early stages of art, on account of the difficulty of working it, while the statuary reproduced in a more durable substance those forms which had been first moulded in a plastic material, it was the artist's duty to improve the capabilities of the other original branch of sculpture, carving in wood, which, on account of its facility, had been the most extensively practised in early times, especially for the statues of the gods. (Comp. Statuaria, and Dict. of Biog. art. Daedalus.) The rude wooden images were not only improved in form, but elaborately decorated, at first with colours and real drapery, and afterwards with more costly materials. The first great step in their improvement was to make the parts which were not covered by drapery, namely the face, hands, and feet, of white marble; such statues were called acrolitha. The next was to substitute plates of ivory for the marble; and the further improvement, the use of beaten gold in place of real drapery, constituted the chryselephantine statues. This art was one of those which have attained to their perfection almost as soon as they have received their first development. There were some works of this description before the time of Pheidias*; but the art, properly regarded, was at once created and perfected by him; and the reason for its immediate perfection was, that the artist was prepared for his work, not only by his genius, but also by a perfect knowledge of the artistic laws, and the technical processes, of all the other departments of his art.

Chryselephantine statuary, as practised by Pheidias, combined, in addition to that perfection of form which characterised all the great works of the age, the elements of colossal grandeur, exquisite beauty and delicacy of material, and the most rich and elaborate subsidiary decorations. The general effect of his Zeus or Athena was that of the most imposing grandeur and the most perfect illusion to which art can attain. In a bronze or marble statue the material at once dispels the illusion of reality; but the impression produced upon a spectator by the soft tints of the ivory, the coloured eyes and the golden robe of the Olympian Zeus, to say nothing of the expression of the features and the figure, was almost that of looking upon the praesens numen. These statues were the highest efforts ever made, and probably that ever can be made, to invest a religion of idolatry with an external appearance of reality; and for the sake of this immediate effect the artist was willing to forego the lasting fame which he would have obtained if he had executed his greatest works in a more durable material.

The most celebrated chryselephantine statues in Greece and the Greek states were those of Athena in the Acropolis of Athens, of Zeus at Olympia, of Asclepius at Epidaurus, all three by Pheidias; the Hera near Argos by Polycleitus (whose works in this department are esteemed by some the most beautiful in existence, though others considered them far inferior to those of Pheidias; comp. Strab. viii. p. 372; Quintil. xii. 10); the Olympian Zeus,

* Mention is made of chryselephantine statues by Dorycleides, Theocles, Medon, Canachus, Menæchmus, and Suidas. (See the articles in the Dict. of Biog.)
set up at Daphne by Antiochus IV., in imitation of that of Pheidias; certain statues, in the temple of Zeus Olympus at Athens, which are praised, but not specified, by Pausanias: and even some of the Greek kings of the conquered state of Asia arranged to possess the highest honour that the piety of earlier times could pay to the gods; for Pausanias saw, in the temple of Zeus at Olympia, an ivory statue of king Nicomedes (v. 12. § 5). The chief of the above works are fully described in the Dictionary of Biography, arts. Pheidias, Polyoleus.

The question respecting the mechanical execution of chryselephantine statues involves certain difficulties, which have been very elaborately and ingeniously examined by Quatremere de Quincy, in his splendid work entitled "Le Jupiter Olympien, ou, l'Art de la Sculpture Antique, considéré sous un nouveau point de vue:" &c. Paris, 1815. A very slight consideration of the material employed will show the nature of the difficulties. From a log of wood or a block of marble the required figure can be elaborated by cutting away certain portions; clay can be moulded, and bronze or plaster cast, in the form previously determined on: but the material for an ivory statue is presented in pieces which must be made to assume an entirely new form before the work can be commenced. Now De Quincey supposed that the ancients possessed the art, now lost, of cutting the curved parts of the elephant's tusk into thin plates, varying in breadth up to 12 or even 20 inches, and bending them into the exact curves required by the various parts of the figure to be covered. These plates, having been brought to their proper forms by comparison with a model, on which each of them was marked, were placed upon the core of the statue, which was of wood, strengthened with metal rods, and were fastened to it and to each other chiefly by isinglass; and of course the whole surface was polished. (An excellent account of the process, according to De Quincey's views, is given in the work entitled Menageries, vol. ii. c. 13.) The ivory was used for the flesh parts, that is, in the colossal statues of the deities, the face, neck, breast, arms, hands, and feet. The other parts of the wooden core were covered with thin beaten gold, to represent the hair and drapery, which was affixed to the core of the statue, which was of wood, and feet. The other parts of the wooden core were covered with thin beaten gold, to represent the hair and drapery, which was affixed to the core of the statue, which was of wood, and when the latter were defeated, they acknowledged the supremacy of Athens in every thing except the pompa Circensia, missions, and are divided into two classes, Consularia and Ecclesiastica, which are distinguished by the carvings on their covers; those on the former being figures of consuls at the pompa Circensia, missions, and so forth, those on the latter representing biblical subjects (Müller, l. c. n. 3). The teeth of the hippopotamus were sometimes used as a substitute for ivory in works of art. (Paus. vii. 46. § 2.)

ELEUSINIA (Ελευσίνη), a festival and mysteries, originally celebrated only at Eleusis in Attica, in honour of Demeter and Persephone. (Andoc. De Myst. 15.) All the ancients who have occasion to mention the Eleusinian mysteries, or the mysteries, as they were sometimes called, agree that they were the holiest and most venerable of all that were celebrated in Greece. (Aristot. Rhet. ii. 24; Cic. De Nat. Deor. i. 42.) Various traditions were current among the Greeks respecting the author of these mysteries; for, while some considered Eumolpus or Museous to be their founder, others stated that they had been introduced from Egypt by Bion, who, while provided his country with corn from Egypt, and imported from the same quarter the sacred rites and mysteries of Eleusis. A third tradition attributed the institution to Demeter herself, who, when wandering about in search of her daughter, Persephone, was believed to have come to Attica, in the reign of Erechtheus, to have supplied its inhabitants with corn, and to have instituted the σερατοί and mysteries as Eleusis. (Diod. Sic. i. 29; Isocr. Panegyr. p. 46, ed. Steph.) This last opinion seems to have been the most common among the ancients, and in subsequent times a stone, called δείλαστος πέτρα (triste saxum), was shown near the well Callichoros at Eleusis, on which the goddess, overwhelmed with grief and fatigue, was believed to have rested on her arrival in Attica. (Apollod. Biblioth. i. 5; Ovid. Fast. iv. 502, &c.) Around the well Callichoros, the Eleusinian women were said to have first performed their chorus, and to have sung hymns to the goddess. (Paus. i. 38. § 6.) All the accounts and allusions in ancient writers seem to warrant the conclusion that the legends concerning the introduction of the Eleusinia are descriptions of a period when the inhabitants of Attica were becoming acquainted with the benefits of agriculture, and of a regularly constituted form of society. (Cic. De Leg. ii. 14, in verr. v. 14.) In the reign of Erechtheus a war is said to have broken out between the Athenians and Eleusinians (Hermann, Polit. Antiq. of Greece, § 91. note 9), and when the latter were defeated, they acknowledged the supremacy of Athens in every thing except the σερατοί, which they wished to conduct and regulate for themselves. (Thucyd. ii. 15; Paus. i. 38. § 3.) Thus the superintendence remained with the descendants of Eumolpus (Ευμόλφιδαι), the daughters of the Eleusinian king Celeus, and a third class of priests, the Keryces, who seem likewise to have been connected with the family of Eumolpus, though they themselves traced their origin to Hermes and Aglauros.
At the time when the local governments of the several townships of Attica were concentrated at Athens, the capital became also the centre of religion, and several deities who had hitherto only enjoyed a local worship were raised to the rank of national gods. This seems also to have been the case with the Eleusinian goddess, for in the reign of Theseus we find mention of a temple at Athens, called Eleusinion (Thucyd. ii. 17), probably the new and national sanctuary of Demeter. Her priests and priestesses now became naturally attached to the national temple of the capital, though her original place of worship at Eleusis, with which so many sacred associations were connected, still retained its importance and its special share in the celebration of the national solemnities; and though, as we shall see hereafter, the great Eleusinian festival was commenced at Athens, yet a numerous procession always went, on a certain day, to Eleusis: it was here that the most solemn part of the sacred rites was performed.

We must distinguish between the greater Eleusinia which were celebrated at Athens and Eleusis, and the lesser which were held at Aegae on the Ilissus. (Steph. Byz. s. v. "Agra."

From the tradition respecting the institution of the lesser Eleusinian mysteries, it seems to be clear, that the initiation into the Eleusinian Mysteries was originally confined to Atticans only; for it is said that Heracles, before descending into the lower world, wished to be initiated, but as the law did not admit strangers, the lesser Eleusinia were instituted in order to evade the law, and not to disappoint the great benefactor of Attica. (Schol. ad Aristoph. Plut. 846.) Other legends concerning the initiation of Heracles do not mention the lesser Eleusinia, but merely state that he was adopted into the family of one Pylius, in order to become lawfully entitled to the initiation. But both traditions in reality express the same thing, if we suppose that the initiation of Heracles was only the first stage in the real initiation; for the lesser Eleusinia were in reality only a preparation (προκαθάρισμα, or προφήτευσις) for the real mysteries. (Schol. ad Aristoph. Plut. 846.) After the time when the lesser Eleusinia are said to have been instituted, we no longer hear of the exclusion of any one from the mysteries, except barbarians; and Herodotus (viii. 65) expressly states, that any Greek who wished it, might be initiated. The lesser Eleusinia were held every year in the month of Anthesterion (Plut. Demet. 26), and, according to some accounts, in honour of Persephone alone. Those who were initiated in them bore the name of mystai (μύσται), Suidas, s. v. 'Επόντης, and had to wait at least another year before they could be admitted to the great mysteries. The principal rites of this first stage of initiation consisted in the sacrifice of a sow, which the mystai seem to have first washed in the Cantharus (Aristoph. Acharn. 703, with the Schol. 720, and Paus. 306; Varro, De Re Rust. ii. 4; Plut. Ploc. 28.), and in the purification by a priest, who bore the name of Hydranos. (Hesych. s. v. 'Τρωάς; Polyaen. v. 17.) The mystai had also to take an oath of secrecy, which was administered to them by the mystagogus, also called λειτοφαντις or προφήτης; they received some kind of preparatory instruction, which enabled them afterwards to understand the mysteries which were revealed to them in the great Eleusinian Mysteries; they were not admitted into the sanctuary of Demeter, but remained during the solemnities in the vestibule. (Seneca, Quaes. Nat. vii. 31.)

The great mysteries were celebrated every year in the month of Boedromion during nine days, from the 15th to the 23d (Plut. Demet. 26; Meursius, Eleus. c. 21), both at Athens and Eleusis. The initiated were called ἐπόνται or ἑφύροι. (Suidas, s. v.) On the first day, those who had been initiated in the lesser Eleusinia, assembled at Athens, whence its name was ἀγρομός (Hesych. s. v.); but strangers who wished to witness the celebration of these national solemnities likewise visited Athens in great numbers at this season, and we find it expressly stated that Athens was crowded with visitors on the occasion. (Maxim. Tyr. Dissert. 33. sub fin.; Philostrat. Vit. Apoll. iv. 6.) On the second day the mystae went in solemn procession to the coast, where they underwent a purification. Hence the day was called Αὐλᾶς μύσται, probably the conventional phrase by which the mystae were invited to assemble for the purpose. (Hesych. s. v.; Polyaen. iii. 11.) Suidas (s. v. 'Ερστόι: compare Paus. i. 38. § 2.) mentions two rivulets, called βεστοι, as the place to which the mystae went in order to be purified. Of the third day scarcely anything is known with certainty; we only learn from Clemens of Alexandria (Πρατερπατ. p. 18, ed. Potter) that it was a day of fasting, and that in the evening a frugal meal was taken, which consisted of cakes made of sesame and honey. Whether sacrifices were offered on this day, as Meursius supposes, is uncertain; but that which he assigns to it consisted of two kinds of sea-fish (τρίχης and μαυρίς, Athen. vii. 325), and of cakes of barley grown in the Rharian plain. (Paus. i. 38. § 6.) It may be, however, that this sacrifice belonged to the fourth day, on which also the καλλάδις κάθας seems to have taken place. This was a procession with a basket containing pomegranates and poppy-seeds; it was carried on a wagon drawn by oxen, and women followed with small mystic cases in their hands. (Callim. Hymn. in Cer.; Virg. Georg. i. 166; Meursius, l. c. c. 25.) On the fifth day, which appears to have been called the torch day (ἡ τῶν λαμπαδῶν ἡμέρα), the mystai, led by the δηδούχος, went in the evening with torches to the temple of Demeter at Eleusis, where they seem to have remained during the following night. This rite was probably a symbolic representation of Demeter wandering about in search of Persephone. The sixth day, called Iakchos (Hesych. s. v. "Ιαξχος"), was the most solemn of all. The statue of Iakchos, son of Demeter, adorned with a garland of myrtle and bearing a torch in his hand, was carried along the sacred road (Plut. Alcib. 34; Etymol. Magn., and Suidas, s. v. Ιηρά 'Οβότ) amid joyful shouts (Ιαξχεῖν) and songs, from the Ceraunheus to Eleusis. (Aristoph. Ran. 315, &c.; Plut. Phoc. 28, and Valckon. ad Herod. viii. 65.) This solemn procession was accompanied by great numbers of followers and spectators, and the story related by Herodotus is founded on the supposition that 30,000 persons walking along the sacred road on this occasion was nothing uncommon. During the night from the sixth to the seventh day the mystai remained at Eleusis, and were initiated into the last mysteries (ἐπόντεια). Those who were neither ἐπόνται nor μύσται were sent away by a herald. The
mystae now repeated the oath of secrecy which had been administered to them at the lesser Eleusinia, underwent a new purification, and then were led by the mystagogus in the darkness of night into the lighted interior of the sanctuary (φωταγωγία), and were allowed to see (απτώτης) what none except the epoptae ever beheld. The awful and horrible manner in which the initiation is described by later, especially Christian writers, seems partly to proceed from their ignorance of its real character, partly from their horror and aversion to these pagan rites. The more ancient writers always abstained from entering upon any description of the subject. Each individual, after his initiation, is said to have been dismissed by the words (αφετερον ἐξῆλθεν) (Hesych. s. v.), in order to make room for other mystae.

On the seventh day the initiated returned to Athens amid various kinds of raillery and jests, especially at the bridge over the Cephissus, where they sat down to rest, and poured forth their ridicule on those who passed by. Hence the words γεφυρίζειν and γεφυρισμός (Strabo, ix. p. 395; Suidas, s. v. Γεφυρίζων: Hesych. s. v. Γεφυροστάτης: Aelian, Hist. Animal. iv. 45; Müller, Hist. of the Lit. of Greece, p. 132). These σκώμματα seem, like the procession with torches to Eleusis, to have been dramatical symbolical representations of the jests by which, according to the ancient legend, Tambo or Baubo had dispelled the grief of the goddess and made her smile. We may here observe, that probably the whole history of Demeter and Persephone was in some way or other symbolically represented at the Eleusinia. Hence Clemens of Alexandria (Protrept. p. 12, ed. Potter) calls the Eleusinian mysteries a "mythical drama." (See Müller, Hist. of the Lit. of Greece, p. 297, &c.)

The eighth day, called Ἠριστάρα, was a kind of common day for those who by some accident had come too late, or had been prevented from being initiated on the sixth day. It was said to have been added to the original number of days, when Asclepius, coming over from Epidaurus to be initiated, arrived too late, and the Athenians, not to disappointment the god, added an eighth day. (Philos. Vit. Apoll. iv. 6; Paus. ii. 26. § 7.) The ninth and last day bore the name of πάνταμωνας (Pollux, x. 74; Athen. xi. p. 496), from a peculiar kind of vessel called πάνταμων, which is described as a small kind of καύταρος. Two of these vessels were filled on this day with water or wine, and the contents of the one thrown to the east, and those of the other to the west, while those who performed this rite uttered some mystical words.

Besides the various rites and ceremonies described above, several others are mentioned, but it is not known to which day they belonged. Among them we shall mention only the Eleusinian games and contests, which Meursius assigns to the seventh day. They are mentioned by Gellius (xv. 18), and are said to have been the most ancient in Greece. The prize of the victors consisted in καύταρα, which was a kind of vessel called λυκοτρύπα, and was described as a small kind of κάπνος. Two of these vessels were filled on this day with water or wine, and the contents of the one thrown to the east, and those of the other to the west, while those who performed this rite uttered some mystical words.

While celebrating the festival, could be seized or arrested for any offence. (Demosth. c. Mid. p. 571.) Lycurgus made it a law that any woman using a vessel for carrying in the procession to Eleusis should be fined one thousand drachmae. (Plut. De Cup. Div. ix. p. 348; Aelian, V. H. xii. 24.) The custom against which this law was directed seems to have been very common before. (Demosth. c. Mid. p. 565.)

The Eleusinian mysteries long survived the independence of Greece. Attempts to suppress them were made by the emperor Valentinian, but he met with strong opposition, and they seem to have continued down to the time of the elder Theodosius. Respecting the secret doctrines which were revealed in them to the initiated, nothing certain is known. The general belief of the ancients was that they opened to man a comforting prospect of a future state. (Pind. Thren. p. 8, ed. Böckh.)

But this feature does not seem to have been originally connected with these mysteries, and was probably added to them at the period which followed the opening of a regular intercourse between Greece and Egypt, when some of the speculative doctrines of the latter country, and of the East, may have been introduced into the mysteries, and hallowed by the name of the very ancient symbols of the mythological age. This supposition would also account for some measure, for the legend of their introduction from Egypt. In modern times many attempts have been made to discover the nature of the mysteries revealed to the initiated, but the results have been as various and as fanciful as might be expected. The most sober and probable view is that, according to which, "they were the remains of a worship which preceded the rise of the Hellenic mythology and its attendant rites, grounded on a view of nature, less fanciful, more earnest, and better fitted to awaken both philosophical thought and religious feeling." (Thirlwall, Hist. of Greece, ii. p. 140, &c.) Respecting the Attic Eleusinia see Meursius, Eleusinia, Lugd. Bat. 1619; St. Croix, Recherches Hist. et Critiq. sur les Mystères du Paganisme (a second edition was published in 1817, by Sylvester de Sacy, in 2 vols. Paris); Ouwaroff, Essai sur les Mystères d'Eleusis, 3d edit., Paris, 1816; Wachsmuth, Hell. Alter. vol. ii. p. 575, &c. 2d edit. p. 243, &c.; Creuzer, Symbol. u. Mythol. iv. p. 534, &c.; Nitschke, De Eleusin. Rationes, Kiel, 1842.

Eleusinia were also celebrated in other parts of Greece. At Ephesus they had been introduced from Athens. (Strabo, xiv. p. 633.) In Laconia they were, as far as we know, only celebrated by the inhabitants of the ancient town of Helos, who on certain days, carried a wooden statue of Persephone to the Eleusinion, in the heights of Taygetus. (Paus. iii. 20. § 5, &c.) Crete had likewise its Eleusinia. (See Meurs. Eleus. c. 38.) [L. S.]

ELEUTHERIA (ἐλευθερία), the feast of liberty, a festival which the Greeks, after the battle of Plataea (479, B.C.), instituted in honour of Zeus Eleutherios (the deliverer). It was intended not merely to be a token of their gratitude to the god to whom they believed themselves to be indebted for their victory over the barbarians, but also as a bond of union among themselves; for, in an assembly of all the Greeks, Aristides carried a decree that delegates (πρεσβούλοι καὶ Στροφοί) from all the Greek states should assemble every year at Platea for the celebration of the Eleutheria. The
power, or to be three times in order to be released from the paternal form of a sale and it was so called because it was in the father transferred the son by the form of a sale to and inviolable, as long as its citizens offered the an procession, led by a trumpeter, who blew the signal of Greece. Every fifth year these solemnities were celebrated with contests (χοίρος προφαινών). On the sixteenth of the month of Maimacterion, a procession, led by a trumpeter, who blew the signal for battle, marched at daybreak through the middle of the town. It was followed by waggons loaded with myrtle boughs and chaplets, by a black bull, and by free youths who carried the vessels containing the libations for the dead. No slave was permitted to minister on this occasion. At the end of this procession followed the archon of Plataea, who was not allowed at any other time, during his office, to touch a weapon, or to wear any other but white garments, now wearing a purple tunic, and with a sword in his hand, and also bearing an urn, kept for this solemnity in the public archive (γραμματαδέα). When the procession came to the place where the Greeks, who had fallen at Plataeae, were buried, the archon first washed and anointed the tombstones, and then led the bull to a pyre and sacrificed it, praying to Zeus and Hermes Chthonios, and inviting the brave men who had fallen in the defence of their country, to take part in the banquet prepared for them. This account of Plutarch (Arist. 19 and 21) agrees with that of Thucydides (iii. 50). The latter, however, expressly states that dresses formed a part of the offerings, which were probably consumed on the pyre with the victim. This part of the ceremony seems to have no longer existed in the days of Plutarch, who does not mention it, and if so, the Plataeans had probably been compelled by poverty to drop it. (See Thirlwall's Hist. of Greece, ii. p. 359, &c.; Böckh, Epod. Pind. p. 208, and ad Corp. Inscrip. l. p. 504.)

Eleutheria was also a name of a festival celebrated in Samos, in honour of Eros. (Athen. xiii. p. 562.)

ELLIMENION (ἐλλιμένιον). [Pente-conste.]

ELLO'TIA or HELLO'TIA (ἐλλωτία or ἐλ- λωτία), a festival with a torch race celebrated at Corinth in honour of Athena as a goddess of fire. (Schol. Pind. Ol. xii. 56; Athen. xv. p. 678; Etymol. s. a. Ἐλλωτίας.) A festival of the same name was celebrated in Crete, in honour of Europe. The word ἐλλωτίς, from which the festival derived its name, was, according to Seleucus (op. Athen. l. c.), a myrtle garland twenty yards in circumference, which was carried about in the procession at the festival of the Ellitia. (Compare Hesych. and Etymol. Magn. s. a. Ἐλλωτίας.)

ELLYCVHNIUM [Lucerna.]

EMANCIPATIO was an act by which the patria potestas was dissolved in the lifetime of the parent, and it was so called because it was in the form of a sale (mancipatio). By the Twelve Tables it was necessary that a son should be sold three times in order to be released from the paternal power, or to be sui juris. In the case of daughters and grandchildren, one sale was sufficient. The father transferred the son by the form of a sale to another person who manumitted him, upon which he returned into the power of the father. This was repeated, and with the like result. After a third sale, the paternal power was extinguished, but the son was resold to the parent, who then manumitted him, and so acquired the rights of a patron over his emancipated son, which would otherwise have belonged to the purchaser who gave him his final manumission.

The following view of emancipatio is given by a German writer: "The patria potestas could not be dissolved immediately by manumissio, because the patria potestas must be viewed as an imperium, and not as a right of property like the power of a master over his slave. Now it was a fundamental principle that the patria potestas was extinguished by exercising once or thrice (as the case might be) the right which the pater familias possessed of selling or rather pleading his child. Conformably to this fundamental principle, the release of a child from the patria potestas was clothed with the form of a mancipatio, effected once or three times. The patria potestas was indeed thus dissolved, though the child was not yet free, but came into the condition of a nexus. Consequently a manumissio was necessarily connected with the mancipatio, in order that the proper object of the emancipatio might be attained. This manumissio must take place once or thrice, according to circumstances. In the case when the manumissio was not followed by a return into the patria potestas, the manumissio was attended with important consequences to the man- missor, which consequences ought to apply to the emancipatio party. Accordingly, it was necessary to provide that the decisive manumission should be made by the emancipatio party; and for that reason a remancipatio, which preceded the final manumissio, was a part of the form of emancipatio." (Unterholzer, Zeitschrift, vol. ii. p. 139 ; Von den Formen der Manumissio per Vindictam und der Emancipatio.)

The legal effect of emancipatio was to make the emancipated person become sui juris; and all the previously existing relations of agnatio between the parent's familia and the emancipated child ceased at once. But a relation analogous to that of patron and freedman was formed between the person who gave the final emancipation and the child, so that if the child died without children or legal heirs, or if he required a tutor or curator, the rights which would have belonged to the father, if he had not emancipated the child, were secured to him as a kind of patrilocal right, in case he had taken the precaution to secure to himself the final manumission of the child. Accordingly, the father would always stipulate for a remancipatio from the purchaser: this stipulation was the pactum fiduciae.

The emancipated child could not take any part of his parent's property as heres, in case the parent died intestate. This rigor of the civil law (juris inquitatis, Guian, lit. 23) was modified by the praeceptor's edict, which placed emancipated children, and those who were in the parent's power at the time of his death, on the same footing as to succeeding to the intestate parent's property.

The emperor Anastasius introduced the practice of effecting emancipation by an imperial rescript, when the parties were not present. (Cod. 8. tit. 49. s. 5.) Justinian enacted that emancipation could be effected before a magistrate. But he still allowed, what was probably the old law, a father to...
emancipate a grandson, without emancipating the son, and to emancipate the son without emancipating the grandson, or to emancipate them all. Justinian also (Nov. 89, c. 11) did not allow a parent to emancipate a child against his will, though it seems that this might be done by the old law, and that the parent might so destroy all the son's rights of succession. But a man might emancipate an adopted child against the will of the child (Inst. 1. tit. 11. s. 3). As a general rule the father could not be compelled to emancipate a child; but there were some cases in which he might be compelled.

The emperor Anastasius allowed an emancipated child (under certain restrictions) to succeed to the property of an intestate brother or sister, which the praeor had not allowed; and Justinian put an emancipated child in all respects on the same footing as one not emancipated, with respect to such succession.

An emancipatio effected a capitis diminutio minima, in consequence of the servile character (servilla causa) into which the child was brought by such act. (Gaius, i. 132, &c.; Dig. i. tit. 7; Cod. 6. tit. 57, s. 15; 8. tit. 49; Inst. 1. tit. 12; 3. tit. 5; Dirksen, Uberescht, &c. p. 278; Thibaut, System, &c. § 783, &c., 9th ed.) [G. L.]

EMANSOR. [DESERTOR.]

EMBAS (ἐμάσ), a shoe worn by men (Suidas, s. v.), frequently mentioned by Aristophanes (Equil. 321, 869, 872, Esc. 314, 850) and other Greek writers. This appears to have been the most common kind of shoe worn at Athens (ἐκτέλεις ἀμβατα, Pollux, vii. 85; compare Isaæus, de Dicaeoff. Hered. 94. Pollux (l. c.) says that it was invented by the Thracians, and that it was like the low cothurnus. The embas was also worn by the Boeotians (Herod. i. 195), and probably in other parts of Greece. (Becker, Charidies, vol. ii. p. 372.)

EMBATEIA. In Attic law this word (like the corresponding English one, entry), was used to denote a formal taking possession of real property. Thus, when a son was entered upon the land left him by his father, he was said ἐμβαταιεῖτο, or βαδίζετο εἰς τὰ πατρία, and thereupon he became seised, or possessed of his inheritance. If any one disturbed him in the enjoyment of this property, with an intention to dispute the title, he might maintain an action of ejectment, έξουσιαί διέναι. Before entry he could not maintain such action. Έξουσια is from έξιναι, an old word signifying to eject. The supposed ejectment, for which the action was brought, was a mere formality. The defendant, after the plaintiff’s entry, came and turned him off, εξιγένεν ἐκ τῆς γῆς. This proceeding (called εξιγωγή) took place quietly, and in the presence of witnesses; the defendant then became a wrong-doer, and the plaintiff was in a condition to try the right.

All this was a relic of ancient times, when before writs and pleadings and other regular processes were invented, parties adopted a ruder method and took the law into their own hands. There was then an actual ouster, accompanied often with violence and breach of the peace, for which the person in the wrong was not only responsible to the party injured, but was also punishable as a public offender. Afterwards, in the course of civilization, violent remedies became useless and were discontinued; yet the ceremony of ejecting was still kept up as a form of law, being deemed by lawyers a necessary foundation of the subsequent legal process. Thus at Rome, in the earlier times, one party used to summon the other by the words “ex jure te manum consortium voco,” to go with him to the land in dispute, and in the presence of the praeor and others) turn him out by force. Afterwards this was changed into the symbolical act of breaking a clod of earth upon the land, by which the person who broke intimated that he claimed a right to deal with the land as he pleased. We may observe also, that the English action of ejectment in this respect resembles the Athenian, that, although an entry by the plaintiff and an ouster of him by the defendant are supposed to have taken place, and are considered necessary to support the action, yet both entry and ouster are mere fictions of law.

These proceedings by entry, ouster, &c., took place also at Athens in case of resistance to an execution; when the defendant, refusing to give up the land or the chattel adjudged, or to pay the damages awarded to the plaintiff, by the appointed time, and thus being ἐπερῆμορος, i.e. the time having expired by which he was bound to satisfy the judgment, the plaintiff proceeded to satisfy himself by seizure of the defendant’s lands. This he certainly might do, if there were no goods to levy upon; though, whether it was lawful in all cases, does not appear. The Athenian laws had made no provision for putting the party, who succeeded, in possession of his rights; he was therefore obliged to levy execution himself, without the aid of a ministerial officer, or any other person. If, in doing so, he encountered opposition, he had no other remedy than the έξουσια δίεναι, which (if the subject-matter was land) must have been grounded upon his own previous entry. The action could be brought against any one who impeded him in his endeavour to get possession, as well as against the party to the former suit. The cause of Demosthenes against Onetor was this: — Demosthenes having recovered a judgment against Aphobus, proceeded to take his lands in execution. Onetor claimed them as mortgagee, and turned him out (έξιγνην), whereupon Demosthenes, contending that the mortgage was collusive and fraudulent, brought the έξουσια δίεναι, which is called δίεναι πρὸς Ὀργῆρας, because the proceeding is in rem, and collateral to another object, rather than a direct controversy between the parties in the cause. The consequence to the defendant, if he failed in the action of ejectment, was, that (besides his liability to the plaintiff) he was, as a public offender, condemned to pay to the treasury a sum equal to the damages, or to the value of the property recovered in the first action. While this remained unpaid (and we may presume it could not be paid without also satisfying the plaintiff), he became, as a state debtor, subject to the disabilities of αὐτία. (Meier, Art. Proc. pp. 372, 460, 748.) [C. R. K.]

EMBATES. [MODULUS.]

EMBLEMA. έμβλημα, έμβλαιμα), an inlaid ornament. The art of inlaying (ἡ τέχνη έμβλαιματο- τεχνία), Ath. xi. p. 480) was employed in producing beautiful works of two descriptions, viz.: — 1st, Those which resembled our marquetry, buhl, and Florentine mosaics; and 2dly, those in which crusts (crustae), exquisitely wrought in relief and of precious metals, such as gold, silver, and amber, were fastened upon the surface of vessels or other
EMISSARIUM.

457

To productions of the former class we may refer all attempts to adorn the walls and floors of houses with the figures of flowers and animals, or with any other devices expressed upon a common ground by the insertion of variously coloured woods or marbles, all of which were polished so as to be brought to a plain surface. To such mosaics Lucilius alludes (ap. Cic. de Orat. iii. 43), when he compares the well-connected words of a skilful orator to the small pieces (tesserae) which compose the "emblemata vermiculata" of an ornamental pavement. In the time of Pliny these decorations for the walls of apartments had become very fashionable. (H. N. xxxv. 1.) Respecting emblemata in metal work, see Caelatura and Chrysendeta. It may here be added that Athenaeus, in describing two Corinthian vases (v. p. 159), distinguishes between the emblems in bas-relief (σκεπτόρυστα) which adorned the body and neck of each vessel, and the figures in high relief (περιφάνη τετραγωνικά) which were placed upon its trim. An artist, whose business it was to make works ornamented with emblems, was called crustarius. (Plin. H. N. xxxiii. 12. s. 55; Cic. Verr. iv. 23; Martial. viii. 51; Juv. i. 76, v. 38; Dig. 24. tit. 2. s. 23. § 1; Heyne, Antiq. Aufs. vol. i. p. 147.) [J. Y.]

EMISSARIUM (στόματα), a channel, natural or artificial, by which an outlet is formed to carry off any stagnant body of water. (Plin. H. N. xxxviii. 4. s. 21; Cic. ad Fam. xvi. 18.) Such channels may be either open or underground; but the most remarkable works of the kind are of the latter description, as they carry off the waters of lakes surrounded by hills. In Greece, the most remarkable example is presented by the subterraneous channels which carry off the waters of the lake Copais into the Cephisia, which were partly natural and partly artificial. (Strab. ix. p. 406; Thiersch, L'état actuel de la Grèce, vol. ii. p. 23; Müller, Oedipus, pp. 49, &c., 2nd ed.)

Another specimen of such works among the Greeks at an early period is presented by the subterraneous channels constructed by Phæax at Agrigentum in Sicily, to drain the city, about B.C. 480; which were admired for their magnitude, although the workmanship was very rude. (Diod. Sic. xi. 25.)

Some works of this kind are among the most remarkable efforts of Roman ingenuity. Remains still exist to show that the lakes Trasimene, Albano, Nemi, and Fucino, were all drained by means of emissaria, the last of which is still nearly perfect, and open to inspection, having been partially cleared by the present king of Naples. Julius Caesar is said to have first conceived the idea of this stupendous undertaking (Suet. Jul. 44), which was carried into effect by the Emperor Claudius. (Tacit. Ann. xii. 57.)

The following account of the works, from observations on the spot, will give some idea of their extent and difficulties. The circumference of the lake, including the bays and promontories, is about thirty miles in extent. The length of the emissary, which lies nearly in a direct line from the lake to the river Liris (Garigliano), is something more than thirty miles. The number of workmen employed was 30,000, and the time occupied in the work eleven years. (Suet. Claud. 20; compare operations at the same time, without incommoding one another. The immediate mouth of the tunnel is some distance from the present margin of the lake, which space is occupied by two ample reservoirs, intended to break the rush of water before it entered the emissary, connected by a narrow passage, in which were placed the sluices (epistomai). The mouth of the tunnel itself consists of a splendid archway of the Doric order, nineteen feet high and nine wide, formed out of large blocks of stone, resembling in construction the works of the Claudian aqueduct. That through which the waters discharged themselves into the Liris was more simple, and is represented in the preceding woodcut. The river lies in a ravine between the arch and foreground, at a depth of 60 feet below, and consequently cannot be seen in the cut. The small aperture above the embouchure is one of the cuniculi above mentioned. It appears that the actual drainage was relinquished soon after the death of Claudius, either from the perversity of Nero, as the
words of Pliny (l.c.) seem to imply, or by neglect; for it was reopened by Hadrian. (Spart. Hadr. 22.) For further information see Hirt, who gives a series of plans and sections of the works connected with the Lacus Fucinus (Gebäude d. Griech. u. Röm. pp. 371—375, Pl. XXXI. figs. 14—21). [A. R.]

EMBOLUM. [VIAS.]

EMERITI. [EXERCITUS.]

EME'NITI. [DIKAE (EMUROI DIKAI), suits in the Athenian courts, which were not allowed to be pending above a month. This regulation was not introduced till after the date of Xenophon's treatise on the revenue, in which it was proposed that a more rapid progress should be allowed to commercial suits (Xen. de Vetig. 3), and it appears to have been first established in the time of Philip. (Or. de Halon. p. 73. 23.) It was confined to those subjects which required a speedy decision; and of these the most important were disputes respecting commerce (EMETPOLAI DIKAI, Pollux, viii. 63, 101; Harpocrat. and Suid. s. e. "EMUROI DIKAI"); which were heard during the six winter months from Boëdromion to Munychion, so that the merchants might quickly obtain their rights and sail away (Dem. c. Apot. p. 900. 3); by which we are not to understand, as some have done, that a suit could be protracted through this whole time, but it was necessary that it should be decided within a month. (Böckh, Publ. Econ. of Athens, p. 54, 2nd ed.)

All causes relating to mines (METALLAIKAI DIKAI) were also EMUROI DIKAI (Dem. c. Pontian, p. 966. 17); the object, as Böckh remarks (On the Silver Mines of Laurion, Publ. Econ. of Athens, p. 667) being no doubt that the mine proprietor might not be detained too long from his business. The same was the case with causes relating to ffujwv (Pollux, viii. 101; Harpocrat. and Suid. l. c.) [ERAI]; and Pollux (l. c.) includes in the list, suits respecting dowry, which are omitted by Suid. and Harpocrat. (I. c.)

EMPHE'RUI (EMPFROUROI), from ffrouw, the name given to the Spartan citizens during the period in which they were liable to military service. (Xen. Rep. Lac. v. 7.) This period lasted to the fortieth year from manhood (afv fmu), that is to say, to the sixtieth year from birth; and during this time a man could not go out of the country without permission from the authorities. (Iscor. Buseir. p. 225, where µaçumos, according to Müller, Dor. iii. 12. § 1, is evidently put for EMPFROUROI.)

EMPHRUS'US (EMPHROUS), literally an "in-planting") is a perpetual right in a piece of land that is the property of another; the right consists in the legal power to cultivate it, and treat it as our own, on condition of cultivating it properly, and paying a fixed sum (canon, pensio, redditus) to the owner (dominus) at fixed times. The right is founded on contract between the owner (dominus emphyteuces) and the lessee (emphyteuta), and the land is called ager vectigalis or emphyteuticus. It was long doubted whether this was a contract of buying and selling, or of letting and hiring, till the emperor Zeno gave it a definite character, and the distinctive name of contractus emphyteuticus.

The Ager Vectigalis is first distinctly mentioned about the time of Hadrian, and the term is applied to lands which were leased by the Roman state, by towns, by ecclesiastical corporations, and by the Vestal virgins. In the Digest mention only is made of lands of towns so let, with a distinction of them into agri vectigales and non vectigales, according as the lease was perpetual or not; but in either case the lessee had a real action (utilis in rem actio) for the protection of his rights, even against the owner.

The term Emphyteusa first occurs in the Digest. The Praedia Emphyteuta are also frequently mentioned in the Theodosian and Justinian Codes, but they are distinguished from the agri vectigales. Justinian, however, put the emphyteusis and the aeger vectigalis on the same footing; and in the case of an emphyteusis (whether the lessor was a community or an individual), the law was declared to be the same as in the case of leases of town property. This emphyteusis was not ownership: it was a jus in re only, and the lessee is constantly distinguished from the owner (dominus). Yet the occupier of the aeger vectigalis and the emphyteuta had a juristical possessio; a kind of inconsistency, which is explained by Savigny, by showing that the aeger vectigalis was formed on the analogy of the aeger publicus, and though there were many differences between them, there was nothing inconsistent in the notion of possession, as applied to the public land, being transferred to the aeger vectigalis as a modified form of the aeger publicus.

Though the emphyteuta had not the ownership of the land, he had an almost unlimited right to the enjoyment of it, unless there were special agreements limiting his right. The fruits belonged to him as soon as they were separated from the soil. (Dig. 22. tit. 1. § 25. § 1.) He could sell his interest in the land, after giving notice to the owner, who had the power of choosing whether he would buy the land at the price which the purchaser was willing to give. But the lessee could not sell his interest to a person who was unable to maintain the property in good condition. The lessee was bound to pay all the public charges and burdens which might fall on the land, to improve the property, or at least not to deteriorate it, and to pay the rent regularly. In case of the lessee's interest being transferred to another, a fiftieth part of the price, or of the value of the property, when the nature of the transfer did not require a price to be fixed, was payable to the owner on the admission of the new emphyteuta, and which, as a general rule, was payable by him. Under these limitations the dominus was bound to admit the new emphyteuta (in possessionem suæperc.) If the dominus refused to admit him, the seller, after certain formalities, could transfer all his right without the consent of the dominus. The heredes of the emphyteuta were not liable to such payment. The emphyteuta could dispose of his right by testament: in case of intestacy it devolved on his heredes.

The origin of the emphyteusis, as already stated, was by contract with the owner and by tradition; or the owner might make an emphyteusis by his last will. It might also in certain cases be founded on prescription.

The right of the emphyteuta might cease in several ways; by surrender to the dominus, or by dying without heirs, in which case the emphyteusis reverted to the owner. He might also lose his right by injuring the property, by non-payment of his rent or the public burdens to which the land was liable, by alienation without notice to the dominus, &c. In such cases the dominus could...
to take legal measures for recovering the possession.  
(Dig. 6. tit. 3, and 39. tit. 4; Cod. 4. tit. 66;  
Inst. 3. tit. 24 (22); Mühlenbruch, Doctrina Pan-  
decuriae; Sale trade in commodities carried by sea. The  
it properly signifies only a particular place in such  
§ 384, 12th ed.) [G. L.]  
EMPORIUM (τὸ ἐμποροσ), a place for whole-  
sale trade in commodities carried by sea. The  
name is sometimes applied to a sea-port town, but  
it properly signifies only a particular place in such  
a town. Thus Amphitryo says (Plaut. Amph. iv.  
1. 4) that he looked for a person.  

"Apud emporium, atque in macello, in palaestra  
atque in foro,  

In medicinis, in tonstiniis, apud omnia aedis  
sacras."

(Compare Liv. xxxx. 10, xli. 27.) The word is  
derived from ἐμπορος, which signifies in Homer  
a person who sails as a passenger in a ship belonging  
to another person (Od. ii. 319, xxxiv. 300); but in  
later writers it signifies the merchant who carries  
on commerce with foreign countries, and differs  
favorably from κατάνυκς, the retail dealer, who purchases his  
goods from the ἐμπορος and retails them in the  
market-place. (Plat. De Rep. ii. p. 371.)  

At Athens, it is said (Lex. Syg. p. 208) that  
there were two kinds of emporia, one for foreigners  
and the other for natives (ἐμπορος ἐπιροπος  
and retails them in the  
market-place. (Plat. De Rep. ii. p. 371.)  

EMPTIO ET VENDITIO ACTIO. The seller  
has an actio venditi, and the buyer has an actio  
empti, upon the contract of sale and purchase. Both  
of them are actions directae, and their object is to  
obtain the fulfillment of the obligations resulting  
from the contract. (Dig. 19. tit. 1.) [G. L.]  

EMPTIO ET VENDITIO. The contract of  
buying and selling is one of those which the Ro  

munication. (Law, in addition to the usual action arising from  
the contract, the buyer had against the seller, ac  
cording to the circumstances, an actio ex stipulatu,  
Satires (ii. 3. 286), and in the beginning of the  
second epistle of the second book, alludes to the  
purchases. Besides these, however, the same form of  
action was available against the chairman of the  
the votes of the people in the assembly (Plat.  
the course pursued when the time for an apagoge had  
been suffered to elapse) ; traitors, ambassadors  
and persons who furnished supplies to the enemy  
might be the archon or king archon, or one of the  
thesmothetae, according to the subject-matter of  
the information; but in the case of a malefactor  
called ἐνδίκεισις, (Böckh, Corp. Inscript. vol. i. p. 725.)  

ENDEIXIS. properly denotes a prose-  
cution instituted against such persons as were al-  
leged to have exercised rights or held offices while  
in the assembly (Plat. Apol. p. 52) ; against malefactors, especially mur-  
derers (which Schömann thinks was probably the  
course pursued when the time for an apagoge had  
been suffered to elapse); traitors, ambassadors  
accused of mulciberation (Isocr. c. Callim. 11),  
and persons who furnished supplies to the enemy  
during war. (Aristoph. Equit. 278; Andoc. De  
Reditu, 82.) The first step taken by the prose-  
cutor was to lay his information in writing, also  
called endeixis, before the proper magistrate, who  
might be the archon or king archon, or one of the  
themathete, according to the subject-matter of the  
information; but in the case of a malefactor  
(παυκοφυγος) being the accused person, the Eleven  
were the officers applied to. It then became the  
duty of the magistrate to arrest, or hold to bail,  
the person criminated, and take the usual steps for  
bringing him to trial. There is great obscurity as  
to the result of condemnation in a prosecution of
this kind. Heraldua (Animad. in Salm. iv. 9. §10) ridicules the idea that it was invariably a capital punishment. The accuser, if unsuccessful, was responsible for bringing a malicious charge (περίφρασις ἐπέφησα) (Schömann, De Dem. p. 175, Att. Proc. p. 239, &c.)

The endeisus, apagogē (ἐπαγωγή) and ephegesis (ἐφηγεσία) must be carefully distinguished. Pollux says (viii. 49) that the endeisus was adopted when the accused was absent; the apagogē when he was present; and we know that the apagogē was a summary process, in which the defendant was allowed to apprehend a culprit caught in ipso facto and lead him before a magistrate. In case the charge was ill-founded, the complainant ran the risk of forfeiting 1000 drachmae. If he did not like to expose himself to this risk, he might have recourse to the ephegesis (ἐφηγεσία), in which he made an application to the proper magistrate, as, for instance, to one of the Eleven, if it were a case of burglary or robbery attended with murder, and conducted him and his officers to the spot where the capture was to be effected. (Comp. Dem. c. Androt. p. 601."

The cases in which the apagogē and ephegesis were most generally allowed, were those of theft, murder, ill-usage of parents, &c. The punishment in these cases was generally fixed by law; and if the accused confessed, or was proved guilty, the magistrate could execute the sentence at once, without appealing to any of the jury-courts; otherwise, it was necessary that the case should be referred to a higher tribunal. (Aesch. c. Timarch. c. 57; Dem. De Fals. Legat. p. 431.) The magistrates who presided over the apagogē were generally the Eleven (οἱ ἐρεξα, Dem. c. Timoc. p. 736; Lysias, c. Apograt. p. 85); sometimes the chief archon (Aesch. c. Timarch. c. 64), or the themotheae (Dem. c. Arioroc. p. 630). The most important passage with regard to the apagogē (Lysias, c. Apograt. §85, 86) is unfortunately corrupt and unintelligible. (See Sluiter, Lect. Androcid. p. 254, &c.) The complainant was said αἴναξ ἡν ἐπαγωγή: the magistrates, when they allowed it, παρεδέχετο τὴν ἐπαγωγὴν.

[J. S. M.] EN' DROMIS (ἐνδρόμης), a thick coarse blanket, manufactured in Gaul, and called "endromis" because those who had been exercising in the stadium (ἐν δρόμῳ) threw it over them to obviate the effects of sudden exposure when they were heated. Notwithstanding its coarse and shaggy appearance, it was worn on other occasions as a protection from effects of sudden exposure when they were heated. Its use called for a slave to be present to assist in, or perhaps to be a witness of, a seizure; but this was in a case where public interests were concerned, and consequent upon a decision of the Boule. (1d. c. Etyy. 1149.) The same origin gives an amusing account of what Englishmen would consider a case of "assault and trespass," committed by some plaintiffs in a defendant's house, though the amount of damages which had been given (ἡ καταδίκη) was, according to agreement, lying at the bank (ἐν τῇ παρεξέχει), and there awaiting their receipt.

It seems probable, though we are not aware of it being expressedly so stated, that goods thus seized were publicly sold, and that the party from whom they were taken could sue his opponent, perhaps by a διήν ἀνάθες, for any surplus which might remain after all legal demands were satisfied. No seizure of this sort could take place during several of the religious festivals of the Athenians, such as the Dionysia, the Lenaea, &c. They were, in fact, dyes non in Athenian law. (Dem. c. Meid. p. 518; Hudtwalcker, Diet. p. 132.)

ENGYE (ἐγγύη), bail or sureties, were in very frequent requisition, both in the private and public affairs of the Athenians. Private agreements, as, for instance, to abide by the decision of arbitrators (Dem. c. Apator. pp. 892—899), or that the evidence resulting from the application of torture to a slave should be conclusive (Dem. c. Pantum. p. 978. 11), were corroborated by the parties reciprocally giving each other such sureties; and the same took place generally in all money lending or mercantile transactions, and was invariably necessary when persons undertook to farm tolls, taxes, or other public property.

In judicial matters bail or sureties were provided upon two occasions; first, when it was requisite that it should be guaranteed that the accused should be forthcoming at the trial; and secondly, when security was demanded for the satisfaction of the award of the court. In the first case, bail was very generally required when the accused was other than an Athenian citizen, whether the action was public or private; but if of that privileged class, upon no other occasion, except when proceeded against by way of Apagoge, Endeixis, Ephegesis, or Eisangelia. Upon the last-mentioned form being adopted in a case of high treason bail was not accepted. The technical word for requiring bail of an accused person is καταγγεῖον, that for becoming surety in such case ἐγγύουσαί. Surety of the other kind was demanded at the beginning of a suit upon two occasions only; first, when a citizen asserted the freedom of a person detained in slavery by another; and secondly, when a litigant, who had suffered judgment to go by default before the arbitrator (διαμητήσης), had recommended his action within the given time (μὴ ὁδὸν διεν). After the judgment, security of this kind was re-
ENAIKIOU DIKE.

required in all mercantile and some other private causes; and state debtors, who had been sentenced to remain in prison till they had acquitted themselves of their liabilities, were, like a law of Timocrates (Dem. c. Timocr. pp. 712—716), allowed to go at large if they could provide three sureties that the money should be paid within a limited period. If the principal in a contract made default the surety was bound to make it good, or if he refused to do so, might be attacked by an ἐγγίσεις δική, if such action were brought within a twelvemonth after the obligation was undertaken. (Dem. c. Ἀπατώρ. pp. 901, 910.) If, however, a person accused in a public action by one of the forms above mentioned failed to appear to take his trial, his bail became liable to any punishment that such person had incurred by contempt of court; and, consistently with this, it appears, from a passage in Xenophon (Hell. i. 7. § 39), that the law allowed the bail to secure the person of the accused by private confinement. (Meier, Att. Proc. p. 515.)

ENUSEIS (ἐγγίσεις). [MARMONIUM.]

ΕΝΝΑΤΑ (ἐννατα). [FUNUS.]

ENAIKIOU DIKE (ἐναικίου δική), action brought (like our trespass for mesne profits after a successful action of ejectment) to recover the rents withheld from the owner during the period of his being kept out of possession. If the property recovered were not a house, but land (in the more confined sense of the word), the action for the rents and profits was called καρποῦ δικη. It seems from the language of the grammarians, that these actions could be brought to try the title to the estate, as well as for the above-mentioned purpose. Perhaps both the tenement and the intermediate profits might be recovered by one suit, but the proceeding would be more hazardous, because a failure in one part of the demand would involve the loss of the whole cause. Thus, the title of a party to the land itself might have expired, as for instance where he held under a lease for a term; yet he would be entitled to recover certain bygone profits from one who had dispossessed him. It is not improbable that the δικαιο ἐν. and καρπ. might in practice be confined to those cases where the rents and profits only were the subject of claim. We are told that, if the defendant, after a judgment in one of these actions, still refused to give satisfaction, an οὐσίας δικη might be commenced against him, of which the effect was, that the plaintiff obtained a right to indemnify himself out of the whole property of the defendant. Schömann observes, that this was a circuitous proceeding, when the plaintiff might take immediate steps to execution by means of entry and ejectment. His conjecture, however, that the οὐσίας δικη was in ancient times an important advantage, when real property could not in the first instance be taken in execution, is probably not far from the truth, and is supported by analogy to the laws of other nations, which, being (in the infancy of civilization) framed by the landowners only, bear marks of a watchful jealousy of any encroachment upon their rights. He remarks also, that the giving to the party the choice between a milder and a more stringent remedy, accords with the general tenor and spirit of the Athenian laws. We may add, that our own law furnishes an illustration of this, viz., where the plaintiff has obtained a judgment, he has the option of proceeding at once to execution, or bringing an action on the judgment; though with us the latter measure is considered the more vexatious, as it increases the costs, and is rendered less necessary by the facility with which executions can be levied. At Athens the ἐυδόκης δικη, as it was the ultimate and most efficacious remedy, drew with it also more penal consequences, as is explained under ΕΜΒΑΣΤΕΙΑ. (Meier, Att. Proc. p. 749.)

ΕΝΟΜΟΤΙΑ (ἐνωμοτία). [EXERCITUS.]

ΕΝΣΗΣ. [GLADIUS.]

ΕΝΤΑΣΙΣ (ἐντάσις). The most ancient columns now existing are remarkable for the extreme diminution of the shaft between its lower and upper extremity, the sides of which, like those of a cone, converge immediately and regularly from the base to the neck, so that the edge forms a straight line—a mode of construction which is wanting in grace and apparent solidity. To correct this, a swelling outline, called entasis (Vitruv. iii. 2, iv. 3), was given to the shaft, which seems to have been the first step towards combining grace and grandeur in the Doric column.

The original form is represented by the figure on the left in the annexed woodcut, which is taken from the great temple at Posidonia (Paestum), which is one of the most ancient temples now remaining; that on the right shows the entasis, and is from a building of rather later construction in the same city. Two other examples of the same style are still to be seen in Italy, one belonging to an ancient temple at Alba Fucinensis (Piranesi, Magnif. de Rom. tav. 31. fig. 6), and the other at Rome, on the sepulchre of C. Publicius. (ib. fig. 7.)

In the example at Paestum the greatest deviation which the curved edge of the column makes from the straight line of the cone of which the pillar may be considered as a part, is at about the middle of the height, but it still keeps within the line of a perpendicular drawn from the circumference of the base; or, in other words, the column is thickest at the base: both these properties are clearly shown by the dotted lines in the woodcut. (Comp. Stieglitz, Archäol. d. Baukunst, vol. i. p. 161.)
EPEUNACTAE.

EPEUNACTAE. [AEON.] EPANGELIA (épangelía). If a citizen of Athens had incurred ékia, the privilege of taking part or speaking in the public assembly was forfeited (épantias). But as it sometimes might happen that a person, though not formally declared átimos, had committed such crimes as would, on accusation, draw upon him this punishment, it was of course desirable that such individuals, like real átimos, should be excluded from the exercise of the rights of citizens. Whenever, therefore, such a person ventured to speak in the assembly, any Athenian citizen had the right to come forward in the assembly itself (Aeschin. c. Timarch. p. 104), and demand of him to establish his right to speak by a trial or examination of his conduct (bòuxota svó bòux), and this demand, denouncement, or threat, was called épangelía, or épangelía bòuxota svó bòux. The impeached individual was then compelled to desist from speaking, and to submit to a scrutiny into his conduct (Pollux, viii. 43; Suidas, s. v. épangelía), and if he was convicted, a formal declaration of átimia followed.

Some writers have confounded the épangelía with bòuxota svó bòux, and considered the two words as synonyms; but from the statements made above, it is evident that the bòuxota svó bòux is the actual trial, while the épangelía is only the threat or object of the demand to have a bòuxota svó bòux. Harpocration’s word bòuxota svó bòux is the expression épangelía bòuxota svó bòux. (Schömann, De Comit. p. 232, note 8, transl.) Other writers, such as Harpocration and Suidas, do not sufficiently distinguish between épangelía and énèkias: the latter is an accusation against persons who, though they had been declared átimos, nevertheless ventured to assume the rights of citizens in the public assembly; whereas épangelía applied only to those who had not yet been convicted of the crime laid to their charge, but were only threatened with an accusation for the first time. (Meier, Att. Proc. p. 210; Schömann, De Comit. p. 232, note 7, transl.) Wachsmuth (Hellen. Alterthumsk. vol. ii. p. 236, 2d edit.) seems to be inclined to consider the gényma grafh to be connected or identical with the épangelía, but the former, according to the definitions of Photius and Suidas, was in reality quite a different thing, inasmuch as it was intended to prevent orators from saying or doing unlawful things in the assembly where they had a right to come forward; whereas the épangelía was a demnunciation, or a promise to prove that the orator had no right at all to speak in the assembly. [L.S.]

EPARITI (éparitai), the name of the standing army in Arcadia, which was formed to preserve the independence of the Arcadian towns, when they became united as one state after the defeat of the Spartans at Leuctra. They were 5000 in number, and were paid by the state. (Xen. Hell. vii. 4. § 34, vii. 5. § 3; Dio. lv. 62, 67; Hezych. s. v. éparitai; Beot, in Mém. de l’Acad. des Inscrip. xxxi. p. 234; Kellermann, De Re Militari Arcadum, p. 44; Wachsmuth, Hellen. Alterthumsk. vol. i. p. 293, 2d ed.)

EPARITI. [PARTHENIAE.]

EPARITII. [MATRIMONIUM.]

EPEUNACTAE (épennaktai), a class of citizens at Sparta who are said to have been the offspring of slaves and the widows of Spartan citizens. Theopompus tells us (Athen. vii. p. 271), that in the Messenian war, in consequence of the great losses which the Spartans sustained, they married the widows of those who were slain to helots, and that these helots were admitted to the citizenship under the name of átounaktai. Diodorus (Mai. Inc. Vat. p. 10) also calls the partisans of Phanteus átounaktai. [PARTHENIAE.] (Thirlwall, Hist. of Greece, vol. i. p. 355; Müller. Dor. iii. § 3, § 5.)

EPHEBUS. [GYMNASIIUM.]

EPHEBUS (éphèsos), the name of an Athenian youth after he had attained the age of 18. (Pollux, viii. 105; Harpocrat. s. v. Épibéteres 'Néstou). The state of éphèsia lasted for two years, till the young men had attained the age of 20, when they became men, and were admitted to share all the rights and duties of a citizen, for which the law did not prescribe a more advanced age. That the young men, when they became éphèsai, did not receive all the privileges of full citizens, is admitted on all hands; but from the assertion of Pollux and Harpocration, who state that their names were not entered in the lexia of the registers until they had completed their 20th year, that is to say, until they had gone through the period of éphèsia, it would seem that they were not looked upon as citizensas long as they were éphèsai, and that consequently they enjoyed none of the privileges of full citizens. But we have sufficient ground for believing, that the names of young men at the time they became éphèsai, were not entered in the lexia of the registers, for Lycurgus (c. Locr. p. 189) uses the expressions éphèsion énérása (as Synonym I. c. 266, 267). The statement of Harpocration and Photius is therefore probably nothing but a false inference from the fact, that young men before the completion of their 20th year were not allowed to take an active part in the public assembly; or it may be, that it arose out of the law which, as Schömann (De Comit. p. 71, transl.) interprets it, prescribed that no Athenian should be enrolled in the lexia of the registers before the attainment of the 18th, or after the completion of the 20th year (DSCII. MIA.) From the oration of Demosthenes against Aphobus (b. 814, &c.; compare c. Onetor. p. 868), we see that some of the privileges of citizens were conferred upon young men on becoming éphèsai: Demosthenes himself, at the age of 18, entered upon his patrimony, and brought an action against his guardians; one Mantineus (Demosth. c. Boed. De Dote, p. 1009) relates that he married at the age of 18; and these facts are stated in such a manner that we must infer that their occurrence had nothing extraordinary, but were in accordance with the usual custom.

Before a youth was enrolled among the ephebi, he had to undergo a bòuxota svó bòux, the object of which was partly to ascertain whether he was the son of Athenian citizens, or adopted by a citizen, and partly whether his body was sufficiently developed and strong to undertake the duties which now devolved upon him. (Aristoph. Vesp. 533, with the Schol.; Demosth. c. Onetor. p. 868; Xen. De Rep. Ath. c. 3. § 4; Plato, Crit. p. 51, with Stallbaum’s note p. 174. Eng. transl.) Schömann (c. 13) believes that this bòuxota svó bòux only applied to orphans, but Aristophanes and Plato mention it in such a general way, that there seems to be no ground for such a supposition. After the bòuxota svó bòux the young men received in the assembly a shield and a lance (Aristot. op. Harpocrat. s. v. Bóuxota svó bòux); but those whose fathers had fallen in the defence of their country, received a complete suit of armour.
in the theatre. (Aeschin. c. Ceas. p. 75, ed. Steph.; Plato, Menex. p. 249, with Stallbaum's note.) It seems to have been on this occasion that the Ephetae took an oath in the temple of Artemis Aglauros (Demosth. De Fals. Leg. p. 438; Pollux, vi. 106), by which they pledged themselves never to disgrace their arms or to desert their comrades; to fight to the last in the defence of their country, its altars and hearths; to leave their country not in a worse but in a better state than they found it; to obey the magistrates and the laws; to resist all attempts to subvert the institutions of Attica, and finally to respect the religion of their forefathers. This solemnity took place towards the close of the year (περίπολος), and the festive season bore the name of ἐφεσία. (Isaeus, De Apollod. c. 26; Demosth. c. Leocadr. p. 1092.) The external distinction of the ἐφησαὶ consisted in the χαλκός and the πίτασος. (Hemsterhuis, ad Polluc. x. 164.)

During the two years of the ἐφεσία, which may be considered as a kind of apprenticeship in arms, and in which the young men prepared themselves for the higher duties of full citizens, they were generally sent into the country, under the name of ἱπποστρώχις, to keep watch in the towns and fortresses, on the coast and frontier, and to perform the protection of Attica. (Pollux, vi. 106; Photius, s. n.) The Ephetae, (Plato, De Leg. vi. p. 760, c.) [L. S.]

ΕΠΗΓΕΣΙΣ (ἐφηγήσεις). [ΕΝΔΕΙΧΣΩΝ.

ΕΠΗΕΣΙΑ (ἐφεσία), a great panegyric of the Ionians at Ephesus, the ancient capital of the Ionians in Asia. It was held every year, and had, like all panegyrics, a twofold character, that of a bond of political union among the Greeks of the Ionian race, and that of a common worship of the Ephesian Artemis. (Dion. Hal. Antiq. Rom. iv. p. 229, ed. Syllburg; Strabo, xiv. p. 639.) The Ephesia continued to be held in the time of Thucydides and Strabo, and the former compares it (iii. 104) to the ancient panegyric of Delos [DELIA], where a great number of the Ionians assembled with their wives and children. Respecting the particulars of its celebration, we only know that it was accompanied with much mirth and feasting, and that mystical sacrifices were offered to the Ephesian goddess. (Strabo, c. 28; Pollux, xii. 9.) It became a question, why and when was this...
able homicide, whether from the similarity of the latter (as regards the guilt of the perpetrator) to acts of accidental homicide, or as requiring a like expiation. (Plut. Leg. ix. pp. 864, 875.) For acts of willful murder, on the other hand, the punishment was either death or ἀκμηφορία, and therefore no expiation (ἀκμηφορία) was connected with the administration of justice in such cases, so that there could be no objection against their being tried by the court of the Areopagus, though its members did not of necessity belong to the old aristocracy.

Such briefly are the reasons which Müller alleges in support of this hypothesis, and if they are valid there can be little doubt that the separation alluded to was effected when the Athenian nobility lost their supremacy in the state, and a timocracy or aristocracy of wealth was substituted for an aristocracy of birth. This, as is well known, happened in the time of Solon.

Lastly, we may remark, that the comparatively unimportant and antiquated duties of the Ephete sufficiently explain the statement in Pollux (i. c.), that their court gradually lost all respect, and became at last an object of ridicule. [R. W.]

ΕΠΗΠΠΙΟΝ (ἀστράθης, φίππιον, φίππιον), a saddle. Although the Greeks occasionally rode without any saddle (ἐπὶ ψιλῶν Τ叕νου, Xenoph. De Re Eques. vii. 5), yet they commonly used one, and from them the name, together with the thing, was borrowed by the Romans. (Varr. De Re Rust. ii. 7; Caes. B. G. iv. 2; Hor. Epist. i. 14. 43; Gellius, v. 5.) It has indeed been asserted, that the use of saddles was unknown until the fourth century of our era. But Ginazot, in his valuable work on the history of carriages (vol. ii. c. 26), has shown, both from the general practice of the Egyptians and other Oriental nations, from the pictures preserved on the walls of houses at Herculanenum, and from the expressions employed by J. Caesar and other authors, that the term “ephippium” denoted not a mere horse-cloth, a skin, or a flexible covering of any kind, but a saddle-tree, or frame of wood, which, after being filled with a stuffing of wool or cloth, was covered with softer materials, and fastened by means of a girth (cingulum, zona) upon the back of the animal. The ancient saddles appear, indeed, to have been thus far different from ours, that the cover stretched upon the hard frame was probably of stuffed or padded cloth rather than leather, and that the saddle was, as it were, a cushion fitted to the horse’s back. Pendent cloths (στεφανα, strato) were always attached to it so as to cover the sides of the animal; but it was not provided with stirrups. As a substitute for the use of stirrups the horses, more particularly in Spain, were taught to kneel at the word of command, when their riders wished to mount them. See the preceding figure from an antique lamp found at Herculanenum, and compare Strabo, i. 1. p. 436, ed. Sieb.; and Silius Italicus, x. 465.

The saddle with the pendent cloths is also exhibited in the annexed coin of Q. Labienus.

The term “Ephippium” was in later times in part supplanted by the word “sellæ,” and the more specific expression “sella equestris.” (J. Y.)

ΕΦΗΡΟΙ (Εφόροι), Magistrates called Ephori or “Overseers” were common to many Dorian constitutions in times of remote antiquity. Cyrene and the mother state of Thera may be mentioned as examples: the latter colonized from Laconia in early ages, and where, as we are told, the ephors were ἐπώνυμος, i. e. gave their name to their year of office. (Herod. Pont. 4.) The ephorality at Sparta is classed by Herodotus (i. 65) among the institutions of Lycurgus. Since, however, the ephors are not mentioned in the oracle which contains a general outline of the constitution ascribed to him (Plut. Lycurg. 6), we may infer that no new powers were given to them by that legislator, or in the age of which he may be considered the representative. Another account refers the institution of the Spartan ephorality to Theopompus (n.c. 770—720), who is said to have founded this office with a view of limiting the authority of the kings, and to have justified the innovation by remarking that “he handed down the royal power to his descendants more durable, because he had diminished it.” (Aristot. Politi. 9.) The inconsistency of these accounts is still further complicated by a speech of Cleomenes III., who is represented to have stated (Plut. Cleom. 10) that the ephors were originally appointed by the kings, to act for them in a judicial capacity (πρὸς τὸ κρίνειν) during their absence from Sparta in the first Messenian war, and that it was only by gradual usurpations that these new magistrates had made themselves paramount even over the kings themselves. Now, according to some authorities (Thirlwall, Hist. of Greece, vol. i. p. 833), Polydorus, the colleague of Theopompus, and one of the kings under whom the first Messenian war (n.c. 743—723) was completed, appropriated a part of the
conquered Messenian territory to the augmentation of the number of portions of land possessed by the Spartans—an augmentation which implies an increase in the number of Spartan citizens. But the ephors, as we shall see hereafter, were the representatives of the whole nation, and therefore, if in the reign of Theopompus the franchise at Sparta was extended to a new class of citizens who nevertheless were not placed on an equality with the old ones (i.τρεπομενοι), the ephors would henceforth stand in a new position with respect to the kings, and the councillors (οι γραφημενες) who were elected from the higher class. Moreover, it is not improbable, due to the absence of kings, the ephors usurped, or had conferred upon them, powers which did not originally belong to them; so that, from both these causes, their authority may have been so far altered as to lead to the opinion that the creation of the office, and not merely an extension of its powers, took place during the reign of Theopompus. Again, as Thirlwall observes, "if the extension of the ephory was connected with the admission of an inferior class of citizens to the franchise, the comparison which Cicero (De Leg. iii. 7, De Rep. ii. 39) draws between the ephory and the Roman tribunate would be more applicable than he himself suspected, and would throw a light on the seeming contradiction of the ephors being all-powerful, though the class which they more especially represented enjoyed only a limited franchise." (Hist. of Greece, vol. i. p. 356.) But after all, the various accounts which we have been considering merely show how different were the opinions, and how little historical the statements, about the origin of the ephory. (Mueller, Dorians, iii. 6; ; and see Clinton, F. H. vol. i. Appendix 6.)

We therefore proceed to investigate the functions and authority of the ephors in historical times, after first observing that their office, considered as a counterpart to the kings and council, and in that respect peculiar to Sparta alone of the Dorian states, would have been altogether inconsistent with the constitution of Lycurgus, and that the gradual usurpations and encroachments were facilitated by the vague and indefinite nature of their duties. Their number, five, appears to have been always the same, and probably connected with the five divisions of the town of Sparta, namely, the four κώμαι, Limnae, Mesoa, Pitana, Cycomura, and the Πόλις or city properly so called, around which the κώμαι lay. (Philolog. Museum, vol. ii. p. 53.) They were elected from and by the people (ευκρατεόν), without any qualification of age or property, and without undergoing any scrutiny (οι τυχόνες); so that, as Aristotle remarks (Pol. ii. 7), the δημος enjoyed through them a participation in the highest magistracy of the state. The precise mode of their election is not known, but Aristotle (L.c.) speaks of it as being very peculiar; and Plato (Leg. iii. p. 692) describes their office as γίγνεται τῆς κληρονομιᾶς δικαίωμα, words which may apply to a want of a directing and discriminating principle in the electors, without of necessity implying an election by lot. They entered upon office at the autumnal solstice, and the first in rank of the five gave his name to the year, which was called after him in all civil transactions. (Muller, Dor. iii. 7. § 7.) Their meetings were held in the public building called ἄρχειον, which in some respects resembled the Prytanæum at Athens, as being the place where foreigners and ambassadors were entertained, and when necessary, the ephors took their meals together. (Pausan. iii. 11. § 2.)

The ephors also possessed judicial authority, on which subject Aristotle (Pol. iii. 1) remarks that they decided in civil suits (δικαίωσεις), and generally in actions of great importance (κρίσεως μεγάλων κρίσεως, Polit. ii. 6): whereas the council presided over capital crimes (δικαίωσεις φυλαλίων). In this arrangement we see an exemplification of a practice common to many of the ancient Greek states, according to which a judicial jurisdiction was given to courts of aristocratic composition, while civil actions were decided by popular tribunals. [Compare ΕΡΗΜΕΤΑΡ and ΑΡΧΕΟΠΑΓΟΣ.] But with this civil jurisdiction was a senatorial authority, such as was possessed by the ephors at Cyrene: for example, the ephors punished a man for having brought money into the state (Plut. Lycur. 19), and others for indolence. (Schol. ad Thucyd. i. 84.) We are told also, that they inspected the clothing and the bedding of the young men. (Ath. xii. p. 530.) Moreover, something like a superintendence over the laws and their execution is implied in the language of the edict, which they published on entering upon their office, ordering the citizens "to shave the upper lip (μυστον), i.e. to be submissive, and to obey the laws." Now the symbolical and archaic character of this expression seems to prove that the ephors exercised such a general superintendence from very early times, and there can be no doubt that in the hands of able men, it would alone prove an instrument of unlimited power." (Thirlwall, Hist of Greece, vol. i. p. 355.)

Their jurisdiction and power were still further increased by the privilege of instituting scrutinies (ἐθνφαι) into the conduct of all the magistrates, on which Aristotle (Polit. ii. 6. § 17) observes that it was a very great gift to the ephory (τοῦτο δὲ τῆς ἐφορείας μεγά λίαν τὸ δορυν). Nor were they obliged to wait till a magistrate had completed his term of office, since, even before its termination, they might exercise the privilege of deposition (Xen. De Re. Lac. viii. 4). Even the kings themselves could be brought before their tribunal (as Cleomenes was for bribery, διαφορκία, Herod. vi. 82), though they were not obliged to answer a summons to appear, but might have repeatedly been repeated three times. (Phut. Cleom. 10.) In extreme cases, the ephors were also competent to lay an accusation against the kings as well as the other magistrates, and bring them to a capital trial before the great court of justice. (Xen. l. c.; Herod. vi. 85.) If they sat as judges themselves, they were only able, according to Müller, to impose a fine, and compel immediate payment; but they were not in any case, great as was their judicial authority, bound by a written code of laws. (Aristot. Polit. ii. 6.)

In later times the power of the ephors was greatly increased; and this increase appears to have been principally owing to the fact, that they put themselves in connection with the assembly of the people, convened its meetings, laid measures before it, and were constituted its agents and representatives. When this connection arose is matter of conjecture; some refer the origin of it to Asteropus, one of the first ephors to whom the extension of the powers of the ephory was ascribed,
and who is said to have lived many years after the
time of Theopompus; probably about B.C. 560.
That it was not known in early times appears from
the circumstance that the two ordinances of the
oracle at Delphi, which regulated the assembly of
the people, made no mention of the functions of the
ephors. (Thirlwall, vol. i. p. 356.) It is clear,
however, that the power which such a connection
gave, would, more than anything else, enable
them to encroach on the royal authority, and make
themselves virtually supreme in the state.
Accordingly, we find that they transacted business
with foreign ambassadors (Herod. ix. 8); dis
missed them from the state (Xen. Hell. ii. 13, § 19);
decided upon the government of dependent cities
(Xen. Hell. iii. 4, § 2); subscribed in the presence
of other persons to treaties of peace (Thucyd. v. 19),
and in the time of war sent out troops when they
thought necessary. (Herod. ix. 7.) In all these
capacities the ephors acted as the representatives
of the nation, and the agents of the public assembly,
being in fact the executive of the state. Their au
thority in this respect is further illustrated by the
fact, that after a declaration of war, "they entrusted
the army to the kings; and some other general, who
received from them instructions how to act; sent
back to them for fresh instructions, were restrained
by them through the attendance of extraordinary
pleni potentiaries, were recalled by means of the
scytale, summoned before a judicial tribunal, and
their first duty after return was to visit the office
of the ephors." (Müller, Dor. vol. ii. p. 127.)
Another striking proof of this representative cha
racter is given by Xenophon (De Rep. Loc. 13),
who informs us, that the ephors, acting on behalf
of the state (σύνεδρον τῶν τάξεων), received from
the kings every month an oath, by which the latter
were bound to the ephors, to rule according to law;
and that, in return for this, the state engaged, through
the ephors, to maintain unshaken the authority of
the kings, if they adhered to their oath.
It has been said that the ephors encroached upon
the royal authority; in course of time the kings
became completely under their control. For ex
ample, they fined Agesilaus (Plut. Ages. 2, 5) on
the vague charge of trying to make himself popular,
and interfered even with the domestic arrangements
of the kings (Herod. ix. 30); dismissed them from
the scytale, summoned before a judicial tribunal,
and imprisoned the kings (Xen. Hell. iii. 95), as we are
told, was contrary to the spirit of the constitution; and we may remark
that it was one of the ephors, Epitadeius, who first
carried through the law permitting a free inherit
ance of property in contravention of the regulation
of Lycurgus, by which an equal share in the common
territory was secured to all the citizens.
The change, indeed, to which Aristocles alludes,
might have been described as a transition from an
aristocracy to an oligarchy; for we find that in
later times, the ephors, instead of being dema
gogues, invariably supported oligarchical principles
and privileges. The case of Oenomaus, B.C. 390, is
an instance of this; and the fact is apparently so
inconsistent with their being representatives of the
whole community, and as much so of the lower
ephors. (Sicuri, and Hesych. s. v.)class of citizens, that Wachsmuth supposes the
Überonos, from and by whom the ephors were chosen, to mean
the whole body of privileged or patrician citizens only,
the most eminent (καλοὶ κάγαδοι) of whom were
elected to serve as θυσίατες. This supposition is
not itself improbable, and would go far to explain
a great difficulty; but any analysis of the argu
ments that may be urged for and against it is pre
cluded by our limits. (See Thirlwall, vol. iv.
p. 377.) We only add that the ephors became at
last thoroughly identified with all opposition to the
extension of popular privileges.
For this and other reasons, when Agis and
Cleomenes undertook to restore the old constitu
tion, it was necessary for them to overthrow the
ephoralty and accordingly Cleomenes murdered
the ephors for the time being, and abolished the office
(b.c. 225); it was, however, restored under the
Romans. [II. W.]

EPIBATAE (επιβάται), soldiers or marines
appointed to defend the vessels in the Athenian
navy, were entirely distinct from the rowers,
and also from the land soldiers, such as hoplite,
pel
tasts, and cavalry. (Xen. Hell. i. 2, § 7, v. 1.
§ 11; Harpocrat. and Hesych. s. v.) It appears
that the ordinary number of epibatae on board a
tripreme was ten. Dr. Arnold (ad Thuc. iii. 95)
remarks that by comparing Thuc. iii. 95 with cc. 91,
94, we find three hundred epibatae as the comple
ment of thirty ships, and also by comparing ii. 92
with c. 102, we find four hundred as the comple
ment that may be urged for and against it is pre
cluded by our limits. (See Thirlwall, vol. iv.
p. 377.) We only add that the ephors became at
last thoroughly identified with all opposition to the
extension of popular privileges.
For this and other reasons, when Agis and
Cleomenes undertook to restore the old constitu
tion, it was necessary for them to overthrow the
ephoralty and accordingly Cleomenes murdered
the ephors for the time being, and abolished the office
(b.c. 225); it was, however, restored under the
Romans. [II. W.]

EPIBATAE (επιβάται), soldiers or marines
appointed to defend the vessels in the Athenian
navy, were entirely distinct from the rowers,
and also from the land soldiers, such as hoplite,
pel
tasts, and cavalry. (Xen. Hell. i. 2, § 7, v. 1.
§ 11; Harpocrat. and Hesych. s. v.) It appears

the ephors for the time being, and abolished the office
(b.c. 225); it was, however, restored under the
Romans. [II. W.]

EPIBATAE (επιβάται), soldiers or marines
appointed to defend the vessels in the Athenian
navy, were entirely distinct from the rowers,
and also from the land soldiers, such as hoplite,
pel
tasts, and cavalry. (Xen. Hell. i. 2, § 7, v. 1.
§ 11; Harpocrat. and Hesych. s. v.) It appears
that the ordinary number of epibatae on board a
tripreme was ten. Dr. Arnold (ad Thuc. iii. 95)
remarks that by comparing Thuc. iii. 95 with cc. 91,
94, we find three hundred epibatae as the comple
ment of thirty ships, and also by comparing ii. 92
with c. 102, we find four hundred as the comple
ment of thirty ships, and also by comparing ii. 92
with c. 102, we find four hundred as the comple
ment that may be urged for and against it is pre
cluded by our limits. (See Thirlwall, vol. iv.
p. 377.) We only add that the ephors became at
last thoroughly identified with all opposition to the
extension of popular privileges.
For this and other reasons, when Agis and
Cleomenes undertook to restore the old constitu
tion, it was necessary for them to overthrow the
ephoralty and accordingly Cleomenes murdered
the ephors for the time being, and abolished the office
(b.c. 225); it was, however, restored under the
Romans. [II. W.]

EPIBATAE (επιβάται), soldiers or marines

longs to the earlier state of Greek naval tactics, when victory depended more on the number and quickness of the soldiers on board than on the manoeuvres of the seamen (Thuc. i. 49); and it was in this very point that the Athenians improved the system, by decreasing the number of επιβάται, and relying on the more skilful management of their vessels."

The epibatae were usually taken from the Thetes, or fourth class of Athenian citizens (Thuc. vi. 42); but on one occasion, in a season of extraordinary danger, the citizens of the higher classes (ἐκ καταλόγων) were compelled to serve as epibatae. (Thuc. viii. 24.)

The term is sometimes also applied by the Roman writers to the marines (Hirt. de Bell. Alex. 11, de Bell. Afric. 65); but they are more usually called classiarii militis. The latter term, however, is also applied to the rowers or sailors as well as the marines (classiariorum remigio veli, Tac. Ann. xiv. 4).

ΕΠΙΒΟΛΗ (ἐπιβολή). [ΑΜΙΣΤΟΣ.]

ΕΠΙΒΟΛΗ (ἐπιβολή), a fine imposed by a magistrate, or other official person or body, for a misdemeanour. The various magistrates at Athens had (each in his own department) a summary penal jurisdiction; i.e. for certain offences they might inflict a pecuniary mule or fine, not exceeding a fixed amount; if the offender deserved further punishment, it was their duty to bring him before a judicial tribunal. Thus, in case of an injury done to orphans or heiresses, the archon might fine the parties, or (if the injury were of a serious nature) bring them before the court of Heliaea. (Dem. c. Onet. 13.)

A magistrate who imposed the fine (ἐπιβόλην ἐπιβάλλει) had not the charge of levying it, but was obliged to make a return thereof to the treasury (ὁ κραταρίων ἢ ἐπιβολήν ἐτάξα), and was bound to find her main protector, who was usually adopted into his maternal family.

If another claimant appeared (ἀμφιθεοῦντι αὐτῷ τῆς ἐπιβολῆς), a court was held for the decision of the right (ἐτάξεια τῆς ἐπιβολῆς), which was determined according to the Athenian law of consanguinity (γένους κατὰ ἁγίασιν). Even where a woman was already married, her husband was obliged to give her up to a man with a better title; and men often put away their former wives in order to marry heiresses. (Dem. c. Onet. argum., c. Eudal. p. 1311; Isaeus, De Pyrr. Hered. p. 78.)

A man without male issue might bequeath his property; but if he had a daughter, the devisee was obliged to marry her. (Isaeus, De Arist. Hered. p. 19.) If the daughter was poor, and the nearest relative did not choose to marry her, he was bound to give her a portion corresponding to his own fortune. (Dem. c. Macart. p. 1067.)

The husband of an heiress took her property until she had a son of full age (ἐπίκλετος οἰκωνόμος), who was usually adopted into his maternal grandfather's family, and took possession of the estate. He then became his mother's legal protector (κύρος), and was bound to find her maintenance (αὐτοῦ). If there were more sons, they shared the property equally. (Isaeus, De Pyrr. Hered. p. 58; De Cir. Hered. p. 40; Dem. c. Steph. pp. 1194, 1135.)

When there was but one daughter, she was called ἐπίκλετος ἐπὶ παντὶ τῷ ἀδίκῳ. If there were more illegitimate sons did not share with the daughter, the law being νόμος μη εἶναι ἀγιασμένοι μηδείς ἱδροι μηθείσιν. (Dem. c. Macart. p. 1067; Aristoph. Aves, 1632.)
the offender, called κακῶσας ἐστιν ἀγγελία. (Isaeus, De Pyrrh. Herod. p. 78; Meier, Att. Proc. pp. 589, 466. 466.)

468. EPIDAU'RIA. [ELEUSINIA.] EPI'DICA/SIA (ἐπιδικασία). [HERES.] EPIDEMIEIRG. [DEMIURG.] EPI'POSEIS (ἐπίδοσεις), were voluntary contributions, either in money, arms, or ships, which were made by the Athenian citizens in order to meet the extraordinary demands of the state. When the expences of the state were greater than its revenue, it was usual for the pytanes to summon an assembly of the people, and after explaining the necessities of the state, to call upon the citizens to contribute according to their means. Those who were willing to contribute then rose and mentioned what they would give; while those, who were unwilling to give anything, remained silent or retired privately from the assembly. (Plut. Alcib. 10, 56; Dem. c. Meid. p. 567; Theophras. Char. 22; Athen. iv. p. 168, e.)

The names of those who had promised to contribute, together with the amount of their contributions, were written on tablets, which were placed before the statues of the Eponymi, where they remained till the amount was paid. (Isaeus, De Dicoog. p. 111, ed. Reiske.)

When the expences of the state were greater than its revenue, it was usual for the prytanes to summon an assembly of the people, and after explaining the necessities of the state, to call upon the citizens to contribute according to their means. Those who were willing to contribute then rose and mentioned what they would give; while those, who were unwilling to give anything, remained silent or retired privately from the assembly. (Plut. Alcib. 10, 56; Dem. c. Meid. p. 567; Theophras. Char. 22; Athen. iv. p. 168, e.)

The names of those who had promised to contribute, together with the amount of their contributions, were written on tablets, which were placed before the statues of the Eponymi, where they remained till the amount was paid. (Isaeus, De Dicoog. p. 111, ed. Reiske.)

These epidesis, or voluntary contributions, were frequently very large. Sometimes the more wealthy citizens voluntarily undertook a trierarchy, or the expences of equipping a trireme. (Dem. c. Meid. p. 566, 23.) We read that Pasion furnished 1000 shields, together with five triremes, which he equipped at his own expense. (Dem. c. Steph. p. 1127, 12.) Chrysippus presented a talent to the state, when Alexander moved against Thebes (Dem. c. Phorm. p. 918, 20); Aristophanes, the son of Nicophon, gave 50,000 drachmae for an expedition against Cyprus (Lysias, pro Aristoph. bonis, p. 64); Charidemus and Dositheus, two commanders, made a free gift of 800 shields (Dem. pro Coron. p. 265, 18); and similar instances of liberality are mentioned by Böckh (Pul. Econ. of Athens, pp. 586, 587, 2nd ed.), from whom the preceding examples have been taken. (Compare Schömann, De Comitiis, p. 292.)

EPIGA'MIA (ἐγγαμία). [CIVITAS (GREEK.)]

EPIGRAPHEIS (ἐγγραφεῖς). [ΕΙΣΘΟΡΑ.] EPI'MELETAE (ἐπιμεληταὶ), the names of various magistrates and functionaries at Athens.

1. Ἐπιμελητὴς τῆς κοινῆς προσόδου, more usually called πολιάς, the treasurer or manager of the public revenue. [ΤΑΜΙΑΣ.]

2. Ἐπιμελητὰ τῶν μαρινῶν Ἐκλαίων, were persons chosen from among the A race, to take care of the sacred olive trees. (Lysias, Aecopag. p. 284, 5.)

3. Ἐπιμελητὰ τοῦ Ἐμπορίου, were the overseers of the emporium. [ΕΜΠΟΡΙΟΝ.] They were ten in number, and were elected yearly by lot. (Har- pocrat. s. v.) They had the entire management of the emporium, and had jurisdiction in all breaches of the commercial laws. (Dem. c. Lacrit. p. 941, 15; c. Meid. p. 1324; Dinarch. c. Aristoph. pp. 81, 92.) According to Aristotle (op. cit. Harpocrat. s. v.), it was part of their duty to compel the merchants to bring into the city two-thirds of the corn which had been brought by sea into the Attic emporium; by which we learn that only one-third could be carried away to other countries from the port of the Peiraeus. (Böckh, Pul. Econ. of Athens, pp. 48, 81, 2nd ed.; Meier, Att. Proc. p. 86.)

4. Ἐπιμελητὰ τῶν Μυστηρίων, were, in connection with the king archon, the managers of the Eleusinian mysteries. They were elected by open vote, and were four in number; of whom two were chosen from the general body of citizens, one from the Eumolpidae, and one from the Ceryces. (Harpocrat. and Suid. s. v.; Dem. c. Meid. p. 570, 6.)

5. Ἐπιμελητὰ τῶν νεωρίων, the inspectors of the dockyards, formed a regular ἀρχή, and were not an extraordinary commission, as appears from Demosthenes (c. Eucyth. et Mnas. p. 1145), Aeschines (c. Cleisth. p. 419), and the inscriptions published by Böckh (Urkunden über das Seewesen des Attischen Staates, Berlin, 1840), in which they are sometimes called ὀργαντζαὶ τῶν νεωρίων, and their office designated an ἀρχή, (No. xvi. b. 104, &c.; No. x. c. 125; No. xiv. c. 122, 128.) We learn from the same inscriptions that their office was yearly, and that they were ten in number. It also appears that they were elected by lot from those persons who possessed a knowledge of shipping.

The principal duty of the inspectors of the dockyards was to take care of the ships, and all the rigging, tools, &c. (σκευή) belonging to them. They also had to see that the ships were seaworthy; and for this purpose they allowed themselves of the services of a διοικητής, who was well skilled in such matters. (Böckh, Ibid. No. ii. 56.) They had at one time the charge of various kinds of military σκευή, which did not necessarily belong to ships, such as engines of war (No. xi. m), which were afterwards, however, entrusted to the generals by a decree of the senate and people. (No. xvi. a. 195.) They had to make out a list of all those persons who owed anything to the docks (Dem. c. Eucyth. et Mnas. p. 1145), and also to get in what was due. (10. c. Androt. p. 612.)

We also find that they sold the rigging, &c., of the ships and purchased new, under the direction of the senate, but not on their own responsibility. (No. xiv. b. 190, &c., compared with Nos. xiv. xvi. u.) They had ἱμπραμαὶ διοικητισὶ in conjunction with the ἄποστολεᾶς in all matters connected with their own department. (Dem. c. Eucyth. et Mnas. p. 1147.) To assist them in discharging their duties they had a secretary (γραμματεῖο, No. xvi. b. 165), and a public servant (δημοσίου ἐν τοῖς νεωρίων, No. xvi. b. 138). For a further account of these inspectors, see Böckh, Urkunden, &c. pp. 48—64.

6. Ἐπιμελητὰ τῶν ψηφίων, the inspectors of the ψηφοφοί or tribes. [ΤΡΙΒΟΙ.]

EPIRHE'DIUM. [RHEDDA.]

EPISCE/PSIS (ἐπισκέψις). [MARTYRIA.]

EPI/SCOPI (ἐπίσκοποι), inspectors, who were sometimes sent by the Athenians to subject states. Harpocrates compares them to the Lacedaemonian harmosts, and says that they were also called φίλακτες. It appears that these Episcopi received a salary at the cost of the cities over which they presided. (Aristoph. Aias, 1022, &c., with Schol.; Harpocrat. s. v.; Böckh, Pul. Econ. of Athens, pp. 156, 235, 23 ed. Schömann, Antig. Juris Pub. Grac. pp. 482, 18.)

EPI'STATES (ἐπιστάται), which means a person placed over anything, was the name of two distinct classes of functionaries in the Athenian state; namely, of the chairman of the senate and assembly of the people, respecting whose duties see the articles BOULE and ECCLESA; and also of the
directors of the public works. (Ἐπίστοτα(t) τῶν ἐπιστοτῶν ῥηγῶν.) These directors had different names, as Τειχοστοί, the repairers of the walls; τροφεοστοί, the builders of the triremes; ταφυστοί, the repairers of the trenches, &c.; all of whom were elected by the tribes, one from each; but the most distinguished of these were the Τειχοστοί. (Aeschin. c. Cleisp. pp. 400, 422, 425.) Over other public buildings a manager of public works had the superintendence; and it was in this capacity that Pericles, and subsequently Lycurgus, undertook so many works of architecture. In the inscriptions relating to the building of the temple of Athena Polias, we find θηρατατα mentioned. (Böckh, Publ. Econ. of Athens, p. 203, 2nd ed.) Similar authorities were appointed for the care of the roads, and of the supply of water (διοστοί, Aeschin. c. Cleisp. p. 419; ἐπισταταὶ τῶν νηκτών, Plut. Them. 31; Schömann, Antiq. Juris Publ. Graec. p. 247).

The directors received the money which was necessary for these works from the public treasury (ἐν τίς διακήρυξ, Aeschin. c. Cleisp. p. 425).

ΕΠΙΣΤΟΛΑ. [Constitutio.]

ΕΠΙΣΤΟΛΕΩΣ (ἐπιστολεος), was the officer second in rank in the Spartan fleet, and succeeded to the command if any thing happened to the ναυαρχος or admiral. (Xen. Hell. i. 1. § 23, iv. 8. § 11, v. 1. § 5, 6; Sturtz, Lex. Xenoph. s. v.) Thus, when the Chians and the other allies of Sparta on the Asiatic coast sent to Sparta to request that Lysander might be again appointed to the command of the navy, he was sent with the title of ΕΠΙΣΤΟΛΕΟΣ, because the laws of Sparta did not permit the same person to hold the office of ναυαρχος twice. (Xen. Hell. ii. 1. § 7.)

ΕΠΙΣΤΥΛΙΟΝ (ἐπίστυλιον), is properly, as the name implies, the architrave, or lower member of an entablature, which lies immediately over the columns. (Plut. Per. 13; Paus. pass.; Varro R. R. iii. 2; Festus, s. v.; comp. COLUMNA, p. 324, a.) The rules for the height of the architrave are given by Vitruvius (iii. 3. s. 5, ed. Schn.).

In the best examples of the Doric order, the front of the architrave was a plain flat surface, with no carvings, but sometimes ornamented with metal shields affixed to it over each column, as in the Parthenon, where there are also inscriptions between the shields. (See Lucas's model.) In the Ionic and Corinthian orders it was cut up into two or usually three surfaces (fasciae), projecting beyond one another, the edges of which were afterwards decorated with mouldings. (See the woodcuts under COLUMNA.) Originally the architrave was the main beam, laid along the top of the columns to support the roof. When stone was used, a natural limit was set to the length of the pieces of the architrave, and consequently the distance of the columns, by the impossibility of obtaining blocks of stone or marble beyond a certain size. In the temple of Artemis at Ephesus the pieces of the architrave were so large that Pliny wonders how they could have been raised to their places. (H. N. xxxvi. 14. s. 21.) When an intercolumniation was of the kind called araeostyle, that is, when the columns were more than three diameters apart, the epistylium was necessarily made of wood instead of stone (Vitruv. iii. 2. s. 3. § 5. ed. Schn.); a construction exemplified by the restoration in the annexed woodcut (Pompeii, vol. i. p. 143) of the Doric portico, which surrounds three sides of the Forum at Pompeii. The holes seen at the back of the frieze received the beams which supported an upper gallery.

The word is sometimes also used for the whole of the entablature. [P. S.]

ΕΠΙΤΑΦΙΟΝ. [Funus.]

ΕΠΙΘΑΛΑΜΙΟΝ. [Matrimonium.]

ΕΠΙΤΙΜΙΑ (ἐπιτίμια). [Atimia.]

ΕΠΙΘΕΙΡΑΧΕΜΑΤΟΣ ΔΙΚΗ (ἐπιθείραχεματος δικη). [ThrARCHIA.]

ΕΠΙΤΡΟΠΕΣ ΓΡΑΦΗ (ἐπιτροπῆς γραφῆ). [ΕΠΙΤΡΟΠΟΣ.]

ΕΠΙΤΡΟΠΟΣ (ἐπιτροπος), which signifies literally a person to whom any thing is given in charge (Dem. c. Aphpol. i. p. 819. 18), occurs, however, much more frequently in the sense of a guardian of orphan children. Of such guardians there were at Athens three kinds: first, those appointed in the will of the deceased father; secondly, the next of kin, whom the law designated as tutores legitimi in default of such appointment, and who required the authorization of the archon to enable them to act; and lastly, such persons as the archon selected if there were no next of kin living to undertake the office. The duties of the guardian comprehended the education, maintenance, and protection of the ward, the assertion of his rights, and the safe custody and profitable disposition of his inheritance during his minority, besides making a proper provision for the widow if she remained in the house of her late husband. In accordance with these, the guardian was bound to appear in court in all actions in behalf of or against his ward, and give in an account of the taxable capital (τιμημα) when an εἰσφορα (the only impost to which orphans were liable) was levied, and make the proportionate payment in the minor's name. With reference to the disposition of the property, two courses were open to the guardian to pursue, if the deceased had left no will, or no specific directions as to its management, viz., to keep it in his own hands and employ it as he best could for the benefit of the minor (διακειτω), or let it out to farm to the highest bidder (μεθοδου των διοκων). In the former case it seems probable (Dem. c. Ondtor. i. p. 865. 17) that a constant control of the guardian's proceedings might be exercised by the archon; and a special law ordained that all money belonging to a minor should be vested in
mortgages, and upon no account be lent out upon the more lucrative but hazardous security of bottomry. (Suidas, s. v. ἔγγυμα.)

To insure the performance of these duties the law permitted any free citizen to institute a public action, as, for instance, an apogogue or esangelia against a guardian who maltreated his ward (κακῶς ὄφοσην, or a γραφὴ ἐπιτροπῆς for neglect or injury of his person or property; and the punishment, upon conviction, depended entirely upon the greater or less severity of the dicasts. (Meier, Att. Proc. p. 294.) If the guardian preferred that the estate should be farmed, the regular method of accomplishing this was by making an application to the archon, who thereupon let the inheritance to the highest bidder, and took care that the farmer should hypothecate a sufficient piece of ground or other real property to guarantee the fulfilment of the contract (ἀποτύμμα). In some cases the guardian might be compelled to adopt this course or be punished, if the lease were irregularly or fraudulently made, by a phasis, which, upon this occasion, might be instituted by any free citizen. The guardianship expired when the ward had attained his eighteen year, and if the estate had been leased out, the farmer paid in the market-place the capital he had received to trade with, and the interest that had accrued to him from that heir he received his property and the account of his disbursements during the minority. In case the accounts were unsatisfactory, the heir might institute an action ἐπιτροπῆς against his late guardian; this, however, was a mere private lawsuit, in which the damages and epolelia only could be lost by the defendant, to the latter of which the plaintiff was equally liable upon failing to obtain the votes of a fifth of the dicasts. This action was barred by the lapse of five years from the termination of the guardianship; and, if the defendant in it died before that time, an action ἀξιόλεγος would lie against his representatives to recover what was claimed from his estate. (Meier, Att. Proc. p. 444, &c.)

EPOBELIA (ἐπωβελία), as its etymology implies, at the rate of one obolus for a drachma, or one in six, was payable on the assessment (τάξια) of several private causes, and sometimes in a case of omission to the litigant that failed to present his case. It was a very prevalent tendency among the ancients in general to refer the origin of their institutions to some ancient or fabulous hero (ἀρχαύγετος, Demost. εν Μουσ. p. 1072), from whom, in most cases, the institution had received its name. In later times new institutions were often named after ancient heroes, on account of some fabulous or legendary connection which was thought to exist between them and the new institutions, and the heroes thus became, as it were, their patrons or tutelary deities. A striking instance of this custom are the names of the ten Attic tribes instituted by Cleisthenes, all of which were named after some national hero. (Dem. Epitaph. p. 1397, &c.; Paus. i. 6.) These ten heroes who were at Athens, generally called the ἐπωβελίως, or ἐπωβελίων τῶν φιλόκ.)

In B. c. 1 the gods; which duty had originally belonged to the Tholos. (Paus. i. 5. § 1; Suidas and Etymol. Magn. s. v. Ἐπωβελίῳ.) If an Athenian citizen wished to make proposals for a new law, he exhibited them for public inspection in front of these statues of the ἐπωβελίως, who were originally three in number (Triuneviri Epulones), were first created in n. c. 196, to attend to the Epulum Jovis (Val. Max. ii. 1. § 2; Liv. xxxi. 4; Goll. xii. 8), and the banquets given in honour of the other gods; which duty had originally belonged to the Pontifices. (Liv. xxxii. 42; Cic. De Orat. iii. 19, De Harusp. Respons. 10; Festus, s. v. Epulones.) Their number was afterwards increased to seven (Goll. i. 12; Lucan, i. 602), and they were called Septemviri Epulones or Septemviri Epulonum; under which names they are frequently mentioned in inscriptions. (Orelli, Inserip. No. 590, 773, 2259, 2260, 2365.) Julius Caesar added three more (Dion Cass. xliii. 51), but after the time the number appears to have been again limited to seven.

The Epulones formed a collegium, and were one of the four great religious corporations at Rome; the other three were those of the Pontifices, Atunes, and Quindicenni. (Dion Cass. liii. 1,
The complete organization of the equites Livy (i. 43) attributes to Servius Tullius. He says that this king formed (accepit) 12 centuries of equites from the leading men of the state (or priorum civitatis); and that he also made six centuries out of the three established by Romulus. Thus, there were now 18 centuries. As each of the 12 new centuries probably contained the same number as the six old centuries, if the latter contained 1200 men, the former would have contained 2400, and the whole number of the equites would have been 3600.

The account, however, which Cicero (De Rep. ii. 20) gives is quite different. He attributes the complete organization of the equites to Tarquinius Priscus. He agrees with Livy in saying that Tarquinius Priscus increased the number of the Ramnes, Titiens, and Luceres, by adding new centuries under the name of Ramnes, Titienses, and Luceres secundi (not, however, posteriorae, as Livy states; compare Festus s. v. Sec Vestae); but he differs from him in stating, that this king also doubled their number after the conquest of the Aequi. Scipio, who is represented by Cicero as giving this account, also says that the arrangement of the equites, which was made by Tarquinius Priscus, continued unchanged to his day (n. c. 129). The account, which Cicero gave of the equites in the constitution of Servius Tullius, is unfortunately lost, and the only words which remain are duodeviginti censu maximo; but it is difficult to conceive in what way he represented the division of the 18 centuries in the Servian constitution, after he had expressly said that the organization of the body by Tarquinius Priscus had continued unchanged to the time of Scipio. The number of equites in this passage of Cicero is open to much doubt and dispute. Scipio states, according to the reading adopted in all editions of the "De Republica," that Tarquinius Priscus increased the original number of the equites to 1200, and that he subsequently doubled this number after the conquest of the Aequi; which account would make the whole number 2400, which number cannot be correct, since if 2400 be divided by 18 (the number of the centuries), the quotient is not a complete number, and only doubled the number of the centuries. The three centuries which he added were called the Ramnes, Titienses, and Luceres Posteriorae. The number ought therefore now to be 1200 in all, which number is given in many editions of Livy (l. c.), but is not found in any manuscript. The number in the manuscripts is different, but some of the best manuscripts have 1800, which has been adopted by most modern editors. This number, however, is opposed to Livy's previous account, and cannot be supported by the statement of Plutarch (Rom. 59), that after the union with the Sabines, the equites were increased to 600; because the original 300 are spoken of as the representatives of the three tribes; whereas, according to Plutarch's account, the original 300 ought only to represent the Ramnes. If therefore we adopt Livy's account that there were originally 300 equites, that these were increased to 600 by Tullus Hostilius, and that the 600 were doubled by Tarquinius Priscus, there were 1200 in the time of the last-mentioned king, being divided into three centuries of Ramnes, Titienses, and Luceres, each century containing 200 priores and 200 posteriores.
latter to 2000 ; but these sums are so large as to be almost incredible, especially when we take into account that 126 years afterwards a sheep was only reckoned at 10, and an ox at 100 asses in the tables of penalties. (Gell. xi. 1.) The correctness of these numbers has accordingly been questioned by some modern writers, while others have attempted to account for the largeness of the sum. Niebuhr (vol. i. p. 433) remarks that the sum was doubtless intended not only for the purchase of the horse, but also for its equipment, which would be incomparable without salth or slaves, who had to be bought and then to be mounted. Böckh (Metrol. Untersuch. c. 29) supposes that the sums of money in the Servian census are not given in asses of a pound weight, but in the reduced asses of the first Roman war, when they were struck of the same weight as the sextans, that is, two ounces, one-sixth of the original weight. [As.] Zumpt considers that 1000 asses of the old weight were given for the purchase of the horse, and 200 for its annual provision; and that the original sum has been retained in a passage of Valerius Maximus (n. equestre publicum mille assuriorum, L. L. viii. 71). All the equestrii, of whom we have been speaking, received a horse from the state, and were included in the 18 equestrian centuries of the Servian constitution; but in course of time, we read of another class of equestrii in Roman history, who did not receive a horse from the state, and were not included in the 18 centuries. This latter class is first mentioned by Livy (v. 7) in his account of the siege of Veii, n. c. 403. He says that during the siege, when the Romans had at one time suffered great disasters, all those citizens who had an equestrian fortune, and no horse allotted to them (quibus census equester erat, equi publici non erant), volunteered to serve with their own horses; and he adds, that from that time equestrii first began to serve with their own horses (tum primum equis merere equestes coeperunt). The state paid them (circa numerum egress est assignatum) as a kind of compensation for serving with their own horses. The foot soldiers had received pay a few years before (Liv. iv. 59); and two years afterwards, n. c. 401, the pay of the equites was made threefold of that of the infantry. (Liv. v. 12; see Niebuhr, vol. ii. p. 439.)

From the year n. c. 403, there were therefore two classes of Roman knights : one who received horses from the state, and are therefore frequently called equites equo publico (Cic. Phil., vi. 5), and sometimes Plebeiunus or Troasali, the latter of which, according to Festus, is an Etruscan word (Plin. H. N. xxxii. 9; Festus, s. v.; Götting, Gesch. der Röm. Staaten, p. 729), and another class, who served, when they were required, with their own horses, but were not classed among the 18 centuries. As they served on horseback they were called equites; and, when spoken of in opposition to cavalry, which did not consist of Roman citizens, they were also called equites Romani; but they had no legal claim to the name of equestrii, since in ancient times this title was strictly confined to those who received horses from the state, as Pliny (H. N. xxxiii. 7) expressly says, "Equitum nomen subsistebat in turmis equorum publicorum."

But here two questions arise. Why did the equestrii, who belonged to the eighteenth centuries, receive a horse from the state, and the others not? and how was a person admitted into each class respectively? These questions have occasioned much controversy among modern writers, but the following account is perhaps the most satisfactory.

In the constitution of Servius Tullius all the Roman citizens were arranged in different classes according to the amount of their property, and it may therefore fairly be presumed that a place in the centuries of equestrii was determined by the same qualification. Dionysius (iv. 18) expressly says, that the equestrii were chosen by Servius out of the richest and most illustrious families; and Cicero (De Rep. ii. 22) that they were of the highest centuries. Livy (i. 48) also states that the twelve centuries forming the Servian constitution consisted of the leading men of the state. None of these writers, however, mention the property which was necessary to entitle a person to a place among the equites; but it was probably of the same amount as in the latter times of the republic, that is, four times that of the first class. Every one therefore who possessed the requisite property, and whose character was unblemished (for this latter qualification appears to have been always necessary in the ancient times of the republic), was admitted among the equestrii of the Servian constitution; and it may be presumed that the twelve new centuries were created in order to include all those persons in the state who possessed the necessary qualifications. Niebuhr (Hist. of Rome, vol. i. p. 427, &c.), however, supposes that the qualification of property was only necessary for admission into the twelve new centuries, and that the statement of Dionysius, quoted above, ought to be confined to those centuries, and not applied to the whole eighteen. He maintains that the twelve centuries consisted exclusively of plebeians; and that the six old centuries (that is, the three double centuries of Ramnes, Tities and Luceres, priores and posteriores), which were incorporated by Servius into his comitia under the title of the sex suffragia, comprised all the patricians, independent of the amount of property which they possessed. This account, however, does not seem to rest on any evidence whatever; and in contrary, an express instance of a patrician, L. Tarquitius, n. c. 458, who was compelled on account of his poverty to serve on foot. (Livy. iii. 27.) That the six old centuries consisted entirely of patricians is most probable, since the plebeians would certainly not have been admitted among the equites at all till the Servian constitution; and as by this constitution new centuries were created, it is not likely that any plebeians would have been placed among the ancient six. But we have no reason for supposing that these six centuries contained the whole body of patricians, or that the twelve consisted entirely of plebeians. We may suppose that those patricians, who belonged to the six, were allowed by the Servian constitution to continue in them, if they possessed the requisite property; and that all other persons in the state, whether patricians or plebeians, who possessed the requisite property, were admitted into the 12 new centuries. That the latter were not confined to plebeians may be inferred from Livy, who says that they consisted of the leading men in the state (primores civitatis), not in the plebs. As vacancies occurred in the eighteen centuries, the descendants of those who were originally enrolled succeeded to their places, whether plebeians or patricians, provided they had not dissipated.
their property; for Niebuhr goes too far when he asserts that all vacancies were filled up according to birth, independent of any property qualification. But in course of time, as population and wealth increased, the number of persons, who possessed an equestrian fortune, also increased greatly; and as the number of equites in the 18 centuries was limited, those persons, whose ancestors had not been enrolled in the centuries, could not receive horses from the state, and were therefore allowed the privilege of serving with their own horses amongst the cavalry, instead of the infantry, as they would otherwise have been obliged to have done. Thus arose the two distinct classes of equites, which have been already mentioned.

The inspection of the equites who received horses from the state, belonged to the censors, who had the power of depriving an eques of his horse, and reducing him to the condition of an acarian (Liv. xxiv. 43), and also of giving the vacant horse to the most distinguished of the equites who had previously served at their own expense. For these purposes they made during their censorship a public inspection, in the forum, of all the knights who possessed public horses (equitatum recognoscunt, Liv. xxxix. 44; equitum centuries recognoscunt, Valer. Max. ii. 9. § 6). The tribes were taken in order, and each knight was summoned by name. Every one, as his name was called, walked past the censors, leading his horse. This ceremony is represented on the reverse of many Roman coins struck by the censors. A specimen is annexed.

If the censors had no fault to find either with the character of the knight or the equipments of his horse, they ordered him to pass on (tradue equum, Valer. Max. iv. 1. § 10); but if on the contrary they considered him unworthy of his rank, they struck him out of the list of knights, and deprived him of his horse (Liv. xxxix. 44) or ordered him to sell it (Liv. xxxix. 37; Valer. Max. ii. 9. § 6), with the intention no doubt that the person thus degraded should refund to the state the money which had been advanced to him for its purchase. (Niebuhr, Hist. of Rome, vol. i. p. 433.) At the same review, those equites who had served the regular time, and wished to be discharged, were accustomed to give an account to the censors of the campaigns in which they had served, and were then dismissed with honour or disgrace, as they might have deserved. (Plut. Pomp. 22.)

This review of the equites by the censors must not be confounded with the Equitum Transvectio, which was a solemn procession of the body every year on the Ides of Quintilis (July). The procession started from the temple of Mars outside the city, and passed through the city over the forum, and by the temple of the Dioscuri. On this occasion the equites were always crowned with olive chaplets, and wore their state dress, the trabca, with all the honourable distinctions which they had gained in battle. (Dionys. vi. 13.) According to Livy (ix. 46) this annual procession was first established by the censors Q. Publius and P. Decius, B.C. 304; but according to Dionysius (l.c.) it was instituted after the defeat of the Latins near the lake Regillus, of which an account was brought to Rome by the Dioscuri.

It may be asked, how long did the knight retain his public horse, and a vote in the equestrian century to which he belonged? On this subject we have no positive information; but as those equites, who served with their own horses, were only obliged to serve for ten years (stipendia, avaritas) under the age of 6 (Polyb. vi. 19. § 2), we may presume that the same rule extended to those who served with the public horses, provided they wished to give up the service. For it is certain that in the ancient times of the republic a knight might retain his horse as long as he pleased, even after he had entered the senate, provided he continued able to discharge the duties of a knight. Thus the two censors, M. Livius Salinator and C. Claudius Nero, in B.C. 294, were also equites (Liv. xxix. 57); and L. Scipio Aemilianus, who was deprived of his horse by the censors in B.C. 204, were also equites (Liv. xxix. 44), had himself been censor in B.C. 191. This is also proved by a fragment in the fourth book (c. 2) of Cicero's "De Republica," in which he says, equitatus, in quo suffragia sunt etiam senatus; by which he evidently means, that most of the senators were enabled to vote at the Comitia Centuriata in consequence of their belonging to the equestrian centuries. But during the later times of the republic the knights were obliged to give up their horses on entering the senate, and consequently ceased to belong to the equestrian centuries. This regulation is alluded to in the fourth book (c. 19), already referred to, in which Scipio says that many persons were anxious that a plebscitem should be passed, ordaining that the public horses should be restored to the state, which decree was in all probability passed afterwards; since, as Niebuhr observes (vol. i. p. 433, note 1016), "when Cicero makes Scipio speak of any measure as intended, we are to suppose that it had actually taken place, but, according to the information possessed by Cicero, was later than the date he assigns to Scipio's discourse." That the greater number of the equites equo publico, after the exclusion of senators from the equestrian centuries, were young men, is proved by a passage in the work of Q. Cicero, De Petitione Consulatus (c. 8).

The equestrian centuries, of which we have hitherto been treating, were only regarded as a division of the army; they did not form a distinct class or ordo in the constitution. The community, in a political point of view, was only divided into patricians and plebeians; and the equestrian centuries were composed of both. But in the year B.C. 123, a new class, called the Ordo Equestribus, was formed in the state by the Lex Semproniana, which was introduced by C. Gracchus. By this law all the judices had to be chosen from those citizens who possessed an equestrian fortune. (Plut. C. Gracch. 5; Appian, De Bell. Civ. i. 22; Tac. Ann. xii. 60.) We know very little respecting the provisions of this law; but it appears from the Lex Servilia repetundarum, passed eighteen years afterwards, that every person who was to be chosen judge was required to be above thirty and under sixty years of age, to have either an equus publicus or to
be qualified by his fortune to possess one, and not to be a senator. The number of judges, who were required yearly, was chosen from this class by the praetor urbanus. (Klenze, Lex Servilia, Berl. 1825.)

As the name of equites had been originally extended from those who possessed the public horses to those who served with their own horses, it now came to be applied to all those persons who were qualified by their fortune to act as judges, in which sense the word is usually used by Cicero. Pliny (H. N. xxxii. 7) indeed says that those persons who possessed the equestrian fortune, but did not serve as equites, were only called judices, and that the name of equites was always confined to the possessors of the equi publici. This may have been the correct use of the term; but custom soon gave the name of equites to the judges chosen in accordance with the Lex Semproniana.

After the reform of Sulla, which entirely deprived the equestrian order of the right of being chosen as judices, and the passing of the Lex Aurelia (b. c. 70), which ordained that the judices should be chosen from the senators, equites, and tribuni aerarii, the influence of the order, says Pliny, was still maintained by the publicani (Plin. H. N. xxxiii. 6), or farmers of the public taxes. We find, however, that the equestrian order was almost always called equites, not because any particular rank was necessary in order to obtain from the state the farming of the taxes, but because the state naturally would not let them to any one who did not possess a considerable fortune. Thus the publicani are frequently spoken of by Cicero as identical with the equestrian order (Ad Att. i. 1. § 8). [Publicani.] The consulship of Cicero and the active part which the knights then took in suppressing the conspiracy of Catiline, tended still further to increase the power and influence of the equestrian order; and from that time,” says Pliny (c. c.), “it became a third body (corpus) in the state, and, to the title of Senatus Populusque Romanus, there began to be added Et Equestris Ordo.”

In b. c. 63, a distinction was conferred upon them, which tended to separate them still further from the plebs. By the Lex Roscic Othonis, passed in that year, the first fourteen seats in the theatre behind the orchestra were given to the equites (Liv. Epit. i. 5), and the gold ring, which was originally confined to the equites eque prisco, was also allowed to the publicani (pro Mur. 19) and Velleius Paterculus (ii. 32), which was only a restoration of an ancient privilege; which is alluded to by Livy (i. 35), when he says that special seats were set apart in the Circus Maximus for the senators and equites. They also possessed the right of wearing the Clavus Augustus [Clauus]; and subsequently obtained the privilege of wearing a gold ring, which was originally confined to the equites eque prisco, the property, without any inquiry into their character or into the free birth of their father and grandfather, which had always been required by the censors under the republic. Property became now the only qualification; and the order in consequence gradually began to lose all the consideration which it had acquired during the later times of the republic. Those who possessed the requisite property became now the only equites as called (Ovid. Fast. iv. 135); and also allowed the names of the plebs to be chosen from them, as well as the senators, and gave them the option at the termination of their office to remain in the senate or return to the equestrian order. (Suet. Aug. 40; Dion Cass. liv. 30.)

This class of knights was distinguished by the special title illustres (sometimes insignes and splendidifi) equites Romani. (Tacit. Ann. xi. 4, with the note of Lipsius.)

The formation of this distinct class tended to lower the others still more in public estimation. In the ninth year of the reign of Tiberius an attempt was made to improve the order by requiring the old qualifications of free birth up to the grandfather, and by strictly forbidding any one to wear the gold ring unless he possessed this qualification. This regulation, however, was of little avail, as the emperors frequently admitted freedmen into the equestrian order. (Plin. H. N. xxxiii. 8.) When private persons were no longer appointed judges, the necessity for a distinct class in the community, like the equestrian order, became still more necessary, and the gold ring came at length to be worn by all free citizens. Even slaves, after their manumission, were allowed to wear it by special permission from the emperor, which appears to have been usually granted provided the patronus consented. (Dig. 40. tit. 10. s. 3. [Annulus].)

Having thus traced the history of the equestrian order to its final extinction as a distinct class in the community, we must now return to the equites eque prisco, who formed the eighteen equestrian centuries. This class still existed during the latter years of the republic, but had entirely ceased to serve as horse-soldiers in the army. The cavalry of the Roman legions no longer consisted, as in the time of Polybius, of Roman equites, but their place was supplied by the cavalry of the allied states. It is evident that Caesar in his Gallic wars possessed no Roman cavalry. (Cass. Bell. Gall. i. 15.) When he went to an interview with Ariovistus, and was obliged to take cavalry with him, we are told that he did not dare to trust his safety to the Gallic cavalry, and therefore mounted his legionary soldiers upon their horses. (Id. i. 42.)

The Roman equites are, however, frequently mentioned in the Gallic and civil wars, but never as common soldiers; they were officers attached to the staff of the general, or commanded the cavalry of the allies, or sometimes the legions. (Id. vii. 70; Bell. Civ. i. 77, ii. 71, &c.)

After the year b. c. 39, there were no censors in the state, and so the aediles would therefore follow that for some years no review of the body took place, and that the vacancies were not filled up. When Augustus however took upon himself, in b. c. 29, the praetorship, he frequently reviewed the troops of equites, and restored, according to Suetonius (Aug. 39), the long-neglected custom of the solemn procession (transsectio); by which we are probably to understand that Augustus connected the review of the knights (rescipient) with the annual procession (transsection) of the 15th of July. From this time these equites formed an honourable corps, from which all the higher officers in the army (Suet. Aug. 38, Claud. 25) and the chief magis-
trates in the state were chosen. Admission into this body was equivalent to an introduction into public life, and was therefore esteemed a great privilege; whence we find it recorded in inscriptions that such a person was *eque publіon honoratus*, *exornatus*, &c. by the emperor. (Orelli, *Inscr.* No. 3457, 313, 1229.) If a young man was not admitted into this body, he was excluded from all civil offices of any importance, except in municipal towns; and also from all rank in the army, with the exception of centurion.

All these equites who were not employed in actual service were obliged to reside at Rome (Dion Cass. lix. 9), where they were allowed to fill the lower magistracies, which entitled a person to admission into the senate. They were divided into six turmae, each of which was commanded by an officer, who is frequently mentioned in inscriptions as the *Sevir turmaruin equitum Romanorum*. From the time that the equites bestowed the title of *principes jurensides* upon Caius and Lucius Caesar, the grandsons of Augustus (Tacit. *Ann.* i. 3; Monum. Ancyr.), it became the custom to confer this title, as well as that of *Sevir*, upon the probable successor to the throne, when he first entered into public life and was presented to admission into the senate. They are mentioned in the time of Severus (Graec. Dic., p. 1001. 5; Papinian, in *Dig.* 29. tit. 1. s. 43), and of Caracalla (Gruter, p. 379. 7) and perhaps later. After the time of Diocletian, the equites became only a city guard, under the command of the Praefectus Vigilum; but they still remained in the time of Valentinianus and Valens, A. D. 364, the second rank in the city, and were not subject to corporal punishment, (Cod. Theod. 6. tit. 56.) Respecting the *Magister Equitum*, see Dict. Annot.

The practice of filling all the higher offices in the state from these equites appears to have continued as long as Rome was the centre of the government and the residence of the emperor. They are mentioned in the time of Severus (Gruter, *Inscr.* p. 1001. 5; Papinian, in *Dig.* 29. tit. 1. s. 43), and of Caracalla (Gruter, p. 379. 7); and perhaps later. After the time of Diocletian, the equites became only a city guard, under the command of the Praefectus Vigilum; but they still retained in the time of Valentinianus and Valens, A. D. 364, the second rank in the city, and were not subject to corporal punishment. (Cod. Theod. 6. tit. 56.) Respecting the *Magister Equitum*, see Dict. Annot.

EQUULEUS or ECULEUS, an instrument of torture, which is supposed to have been so called because it was in the form of a horse. We have no description of its form given by any of the ancients. *Equuleus* or *Equus October*, [PALILIA.]

E'ERANI (έπαιρον), were clubs or societies, established for charitable or convivial purposes, or for both. They were very common at Athens, and were called the temper of the people, who were both social and generous. The term ?επαιρον, in the sense of a convivial party, is of ancient date. (Hom. *Od.* i. 226.) It resembled our picnics, or the German *picknike*, and was also called *δείπνον* or *άληθινον ἁμυρίαν* where every guest brought his own dish, or (to save trouble) one was deputed to cater for the rest, and was afterwards repaid by contributions. (*Corn.* p. 304, b.) The clubs that were formed at Athens used to dine together at stated periods, as often as a month; and every member was bound to pay his subscription, which (as well as the society itself) was called ?επαιρον, and the members ?επαιροτα. If any member failed to pay, the sum was made up by the president, ?επαιρον, also called ?επανοτα, who afterwards recovered it, if he could, from the defaulter.

There were also associations under this name, for the purpose of mutual relief, resembling in some degree our friendly or benefit societies; but with this essential difference, that the relief which they afforded was not (as it is with us) based upon any calculation of natural contingencies, but was given *pro re notas*, to such poor members as stood in need of it. The Athenian societies do not appear to have kept up a common fund by regular subscriptions, though it is probable that the sum which each member was expected to advance, in case of need, was pretty well understood. If a man was reduced to poverty, or in distress for money for any cause, he applied to the members of his club for assistance; this was called *συλλεγένες ?επαιρον*: those who advanced it were said *εφαιτιαν αυτον*: the relief was considered as a loan, repayable by the borrower when in better circumstances. *Iasus* (*De Hugm. Hered.* p. 294) reckons among the assets of a person, *λεγων δικαίωμα ευσπεργημένα*, from which we may infer, that each contributor was entitled to recover the sum he had lent. For the recovery of such loans, and for the decision of other disputes, there were *κρανια* or *δικαίωμα*, in which a summary and equitable kind of justice was administered. Plato (*Leg.* xi. p. 918) disapproved of lawsuits in such matters, and would not allow them in his republic. Salmasius contends that wherever the term ?επαιρον is applied to an established society, it means only a convivial club, and that there were no regular associations for the purposes of charity; but others have held a different opinion. (See Salmas, *De Usuris*, c. 3, *Obs. ad Jus Att. et Rom.* and *Herald. Animadw. in Salmas.*, referred to in Meier's *Att. Proc.* p. 540.)

It is not probable that many permanent societies were formed with the sole view of feasting. We know that at Athens, as well as in the other Grecian republics, there were clubs for exercising purposes, and political combinations. (Plin. *Ep.* x. 93, 94.)
GELEON, or fraternities for mutual aid, among the ancient Saxons, resembled the ἐπάνω of the Greeks. (Turner's *Hist. of the Anglo-Saxons*, iv. 10.) Compare also the ἀγωνι, or love-feasts of the early Christians.

The word ἐπάνω is often used metaphorically, to signify any contributions or friendly advance of money. [C. R. K.]

ERGASTULUM was a private prison attached to most Roman farms, called *career rusticus* by Juvenal (xiv. 24), where the slaves were made to work in chains. It appears to have been usually under ground, and according to Columella (i. 6) ought to be lighted by narrow windows, which should be so high from the ground to be touched by the hand. The slaves confined in an ergastulum were also employed to cultivate the fields in chains. (Plin. *H. N.* xviii. 7. § 44; Flor. iii. 19.) Slaves who had displeased their masters were punished by imprisonment in the ergastulum; and in the same place all slaves who could not be depended upon or were barbarous in their habits, were regularly kept. A trustworthy slave had the care of the ergastulum, and was therefore called *ergastularius*. (Colum. i. 8.) According to Plutarch (Tit. *Grecch.* 58), these prisons arose in consequence of the conquest of Italy by the Romans, and the great number of barbarous slaves who were employed to cultivate the conquered lands. (Spart. *Hadrian*, 18, compared with Gaius, i. 53.) For further information on the subject, see Brissonius, *Antiq. Select.* ii. 9; Lipsius, *Elect.* ii. 15, Opera, vol. i. p. 317, &c.; Gottleib, *Gesch. der Röm. Staaten.* p. 135.

ERVICUS, a military engine full of sharp spikes, which was placed by the gate of the camp to prevent the approach of the enemy. (Caes. *B. G.* iv. 18.)

ERI'CIUS, a military engine full of sharp spikes, which was placed by the gate of the camp to prevent the approach of the enemy. (Caes. *B. G.* iv. 18.)

ESSEDA. According to the account given by Caesar (*Bell. Gall.* iv. 33), and agreeably to the remarks of Diodorus Siculus (v. 21, 29), the method of using the essedum in the ancient British army was very similar to the practice of the Greeks in the heroic ages, as described by Homer, and in the article CURAOS. The principal difference seems to have been that the essedum was stronger and more ponderous than the cisium, and that it was used instead of behind; and that in consequence of these circumstances and the width of the pole, the owner was able, whenever he pleased, to run along the pole (*de temone Britannio excitat*, Juv. iv. 125), and even to raise himself upon the yoke, and then to retreat with the greatest speed into the body of the car, which he drove with extraordinary swiftness and skill. From the extremity of the pole, he threw his missiles, especially the *cestoi* (Val. Placc. *Argon.* vi. 58). It appears also that these cars were purposely made as noisy as possible, probably by the creaking and clanging of the wheels (*streptu rotarum*, Caes. *B. G.* v. 56; *Essedarii*; Claud. *Epig.* iv.) and that this was done in order to strike dismay into the enemy. The formidable British warriors who drove these chariots, the "car-borne" of Osian, were called in Latin *Essedarii*. (Caes. *B. G.* iv. 24; *Cic. ad Fam.* vii. 6.) There were about 4000 of them in the army of Cassivellanus. (Caes. *B. G.* v. 19.) Having been captured, they were sometimes exhibited in the gladiatorial shows at Rome, and seem to have been great favourites with the people. (Sueton. *Calig.* 35, Claud. 21.) They must have held the highest rank in the armies of their own country; and Tacitus (*Agric.* 12) observes that the driver of the car ranked above his fighting companion, which was the reverse of the Greek usage.

The essedum was adopted for purposes of convenience and luxury among the Romans. (Propert. ii. 1. 76; *Cic. ad Att.* vi. 1; Ovid. *Am.* ii. 16, 49.) Cicero (*Phil.* ii. 24) mentions the use of it on one occasion by the tribune of the people as a piece of extravagance; but in the time of Seneca, it seems to have been much more common; for he (*Epist.* 57) reckons the sound of the "essedae transurrectae" among those noises which did not distract him. As used by the Romans, the essedum may have differed from the cisium in this: that the cisium was drawn by one horse (see woodcut, p. 288), the essedum always by a pair. The essedum, like the cisium, appears to have been kept for hire at the post-houses or stations (*Salaminium quinto essedum venditum*, Mar. x. 10, 1). [M. A.] The essedum must have been similar to the *Covinus* except that the latter had a cover. [J. Y.]

ESSEDA'RII. [ESSEDA.]

EVICTIO. If the purchaser of a thing was deprived of it by a third person by legal process (evicted), the seller was bound to make good the loss (*evictionem praestare*). If the seller knew that he was selling what was not his own, this was a case of dolus, and he was bound in case of eviction to make good to the purchaser the value of the thing. [L. S.]

ERRHEPHORIA or ERSEPHORIA (ἐρρήφορια or ἐρσεφορια). [AREU'PHORIA.]

ESCHAIRA (ἐσχαῖρα). [FOCUS.]

ESSEDA or ESSEDUM (from the Celtic Essus, a carriage, Ginzrot, vol. i. 377), the name of a chariot used, especially in war, by the Britons, the Gauls and Belgae (Virg. *Georg.* iii. 204; Servius, *ad loc.*; and also by the Germans (Pers. vi. 47).
verse claim (lievin denunciare), and to pray his aid in defence of the action. The stipulatio duplae was usual among the Romans; and, in such case, if the purchaser was evicted from the whole thing, he might by virtue of his agreement demand from the seller double its value. (Dig. 21. tit. 2, De evictionibus et duplia stipulatone ; Mackeldey, Lehrbuch, &c., § 370, 12th ed.) (G. L.)

EUMOLPIDAE (εὐμολπίδαι), the most distinguished and venerable among the priestly families in Attica. They were devoted to the service of Demeter at Athens and Eleusis, and were said to be the descendants of the Thracian bard Eumolpus, who, according to some legends, had introduced the Eleusinian mysteries into Attica. (Diod. Sic. i. 29; Apollod. iii. 15. § 4; Demosth. c. Neuer. p. 1384.) The high priest of the Eleusinian goddess (ἐγοραστής ou μυσταγγώτης), who conducted the celebration of her mysteries and the initiation of the mystae, was always a member of the family of the Eumolpidae, as Eumolpus himself was believed to have been the first hierophant. (Hesych. s. v. Εὐμολπίδας: Tacit. Hist. iv. 83; Arnob., v. 25; Clemens Alex. Protrept. p. 16, &c.) In his external appearance Eumolpus was distinguished by a peculiar cut of his hair, a kind of diadem (στρώ-ϕων), and a long purple robe. (Arrian. in Epictet. iii. 21; Plut. Alcib. 22.) In his voice he seems always to have affected a solemn tone suited to the sacred character of his office, which he held for life, and which obliged him to remain unmarried. (Paus. ii. 14. § 1.) The hierophant was attended by four ἐγορασταί, one of whom likewise belonged to the family of the Eumolpidae. (Harpocrat. and Suidas, s. v. Εὐμολπίδας οἱ μυσταγγοὶ.) Other members of their family do not seem to have had any particular functions at the Eleusinia, though they undoubtedly took part in the great procession to Eleusis. The Eumolpidae had on certain occasions to offer up prayers for the welfare of the state, and in case of neglect they might be taken out of it and punished; for they were, like all other priests and magistrates, responsible for their conduct, and for the sacred treasures entrusted to their care. (Aeschin. c. Cleophr. p. 56, Steph.; compare Euv. Hist 17. 1.)

The Eumolpidae had also judicial power in cases where religion was violated (τιμωρεῖν διέτιας, Demosth. c. Androt. p. 601). This power probably belonged to this family from the earliest times, and Solon as well as Pericles do not seem to have made any alteration in this respect. Whether this religious court acted independent of the archon king, or under his guidance, is uncertain. The law according to which they pronounced their sentences, and of which they had the exclusive possession, was not written, but handed down by tradition, and the Eleusiniae alone had the right to interpret it, whence they are sometimes called ἕγγυτας. (Excerpt.) In cases for which the law had made no provisions, they acted according to their own discretion. (Lysius, c. Andoc. p. 204; Andoc. De Myst. p. 57.) Respecting the mode of proceeding in these religious courts nothing is known. (Hefter, Athen. Gerichtsverf. p. 405, &c.; Platner, Process, ii. p. 147, &c.) In some cases, when a person was convicted of gross violation of the public institutions of his country, the people, besides sending the offender into exile, added a clause in their verdict that a curse should be pronounced upon him by the Eumolpidae. (Plut. Alcib. 22; Corn. Nep. Alcib. 4, 5.) But the Eumolpidae could pronounce such a curse only at the command of the people, and might afterwards be compelled by the people to revoke it and purify the person whom they had cursed before. (Plut. Alcib. 33; Corn. Nep. Alcib. 6, 5.) [L. S.]

EVOCATI, were soldiers in the Roman army, who had served out their time and obtained their discharge (missio), but had voluntarily enlisted again at the invitation of the consul or other commander. (Dion Cass. xiv. 12.) There appears always to have been a considerable number of evocati in every army of importance; and from the general the legionary soldiers, the number of veterans who joined his standard would of course be increased. The evocati were, doubtless, released, like the vexillarii, from the common military duties of fortifying the camp, making roads, &c. (Tact. Ann. i. 36), and held a higher rank in the army than the common legionary soldiers. They are sometimes spoken of in conjunction with the equites Romani (Caes. Bell. Gall. vi. 65), and sometimes classed with the centurions. (Caes. Bell. Civ. ii. 17.) They were appointed, like the centurions, to the rank of centurions. Thus Pompey induced a great many of the veterans, who had served under him in former years, to join his standard at the breaking out of the civil war, by the promise of rewards and the command of centurions (ordinium, Caes. Bell. Civ. i. 3). All the evocati could not, however, have held the rank of centurions, as we read of two thousand on one occasion (ib. iii. 68), and of their belonging to certain cohorts in the army. Cicero (ad Fam. iii. 6. § 3) speaks of a Praefectus evocatorum. (See Cic. ad Fam. iv. 4. § 3; Caes. Bell. Civ. iii. 91; Suet. Aug. 56; Lipsius, De Milit. Rom. i. 8.)

The name of evocati was also given to a select body of young men of the equestrian order, who were appointed by Domitian to guard his bed-chamber. (Suet. Dom. 10.) This body is supposed by some writers to have existed under the succeeding emperors, and to have been the same as those who are called Evocati Augusti. (Hyginus, de Lem. p. 184, 3d ed., Inscriptioni Antiqu. i. 8.)

EUPATRIDAE (εὔπατρίδαι), i.e. descended from noble ancestors, is the name by which in early times the nobility of Attica was designated. Who the Eupatridae originally were has been the subject of much dispute; but the opinion now almost universally adopted is, that they were the noble Ionic or Hellenic families who at the time of the Ionian migration settled in Attica, and there exercised the power and influence of an aristocracy of warriors and conquerors, possessing the best parts of the land, and commanding the services of a numerous class of dependents. (Thirlwall, Hist. of Greece, vol. i. p. 115, &c.; Wachsmuth, vol. i. p. 361, &c., 2d ed.) The chiefs who are mentioned as kings of the several Attic towns, before the organisation of the country ascribed to Theseus, belonged to the highest or ruling class of the Eupatridae; and when Theseus made Athens the seat of government for the whole country, it must have been chiefly these nobles of the highest rank, that left their former residences and migrated to Athens, where, after Theseus had given up his royal prerogatives and divided them among the nobles, they occupied a station similar to that which they had previously held in their several districts of Attica. Other Eupatridae, however, who either were not
of the highest rank, or were less desirous to exercise any direct influence upon the government, remained in their former places of residence. (Thirlwall, vol. ii. p. 8.) In the division of the inhabitants of Attica into three classes, which is ascribed to Theseus, the Eupatridae were the first class (Plut. Thes. 25), and thus formed a compact order of nobles, united by their interests, rights, and privileges. The first, or at least the most ambitious among them, undoubtedly resided at Athens, where they enjoyed nearly the same privileges as they had before the union in the separate townships of Attica. They were in the exclusive possession of all the civil and religious offices in the state, regulated the affairs of religion, and interpreted the laws human and divine. (Müller, Dor. ii. 2, § 15.) The king was thus only the first among his equals, being distinguished from them only by the duration of his office (Schömann, De Comit. p. 4, transl.) and the four kings of the phylos (φυλοσαράλεις), who were chosen from the Eupatridae, were more his colleagues than his counselors. (Pollux, liv. 111.) The kingly power was in a state of great weakness; and, while the overbearing influence of the nobles, on the one hand, naturally tended gradually to abolish it altogether, and to establish a purely aristocratical government in its stead (Hermann, Pol. Ant. of Greece, § 102), it produced, on the other hand, effects which threatened its own existence, and at last led to the entire overthrow of the hereditary aristocracy as an order: for the commonalty, which had likewise gained in strength by the union of all the Attic townships, soon began to feel the oppression of the aristocracy, which in Attica produced nearly the same effects as that of the patricians at Rome. The legislation of Draco seems to have arisen out of the growing discontent of the commonalty with the oppressive rule of the nobles (Thirlwall, vol. ii. p. 18, &c.) but his attempts to remedy the evil were more calculated to intimidate the people than to satisfy them, and could consequently not have any lasting results. The disturbances which some years after, arose from the attempt of Cylon, one of the Eupatridae, who tried to overthrow the aristocratical government and establish himself as tyrant, at length led to the legislation of Solon, by which the political power and influence of the Eupatridae as an order was broken, and property instead of birth was made the standard of political rights. (Aristot. Polit. ii. 9; Dionys. Hal. Ant. Rom. ii. 8; Aelian, V. H. v. 13.) But as Solon, like all ancient legislators, abstained from abolishing any of the religious institutions, those families of the Eupatridae in which these religious offices and functions were hereditary, retained these distinctions down to a very late period of Grecian history. (Compare Schömann, Antiq. Jur. Bd. Græco. p. 167, &c.; and p. 77, &c.)

EURI'PUS. [Ampitheatrum, p. 88, b.]

EUSTYLOS. [Templum.]

EUTHY'NE and EUTHY'NI (εὐθύνη, εὐθύνοι). All public officers at Athens, especially generals, ambassadors, the archons and their assessors, the diaetes, priests and priestesses (Aeschin. c. Ctesiph. p. 56, Steph.), the treasurers of the state (Lyss. c. Nicias), the superintendents of public buildings, the trierarchs, and even the senate of the Five Hundred and the members of the Areopagus, were accountable for their conduct and the manner in which they acquitted themselves of their official duties. The judges in the popular courts seem to have been the only authorities who were not responsible (Aristoph. Vesp. 516; Hudtwalcker, Von den Dicbet. p. 32); for they were themselves the representatives of the people, and would therefore, in theory, have been responsible to themselves. This account, which officers had to give after the time of their office was over, was called εὐθύνη: and the officers subject to it, διευθύνοι. Every public officer had to render his account within thirty days after the expiration of his office (Harpocr. Phot. and Suid. s. v. Λογισταὶ and Εὐθυνοί); and as long as this duty was not fulfilled, the whole property of the ex-officer was in bondage to the state (Aeschin. c. Ctesiph. p. 56, Steph.): he was not allowed to travel beyond the frontiers of Attica, to consecrate any part of his property as a donarium to the gods, to make his will, or to pass from one family into another by adoption; no public honours or rewards, and no new office could be given to him. (Aeschin. and Demosth. De Coron. and c. Tim. p. 747.) If within the stated period an officer did not send in his account, an action, called αὐλογίου or αὐλογίας δίκη, was brought against him. (Pollux, viii. 54; Hesych. Suid. Etym. Mag. s. v. 'Αὐλογίου δίκη.) At the time when an officer submitted to the εὐθύνη, any citizen had the right to come forward and impeach him. Those who, after having refused to submit to the εὐθύνη, also disobeyed the summons to defend themselves before a court of justice, thereby forfeited their rights as citizens. (Demosth. c. Med. p. 154.) It will appear from the list of officers subject to the euthyne, that it was not confined to those whose office was connected with the administration of the public money, or any part of it; but in many cases it was only an inquiry into the manner in which a person had behaved himself in the discharge of his official duties. In the former case the scrutiny was conducted with great strictness, as the state had various means to check and control the proceedings of its officers; in the latter, the euthyne may in many instances have been no more than a personal attendance of the ex-officer before the representatives of the people, to see whether any charge was brought against him. When no accuser appeared, the officer was honourably dismissed (Ἑπισαλλεγόμενος, Demosth. De Coron. p. 310). After an officer had gone through the euthyne, he became διευθυνός. (Pollux, viii. 54.) The officers before whom the accounts were given were in some places called εὐθυνοί or λογισταί, in others διευθυνοί or συνθυγοροι. (Aristot. Polit. vi. 5, p. 213, ed. Gmeing.) At Athens we meet with the first two of these names, and both are mostly mentioned together; but how far their functions differed is very uncertain. Some grammarians (Etymol. Magn. and Phot. s. v. Εὐθύνοι) state that λογισταί was the name of the same officers who were formerly called εὐθυνοί. But from the manner in which the Greek orators speak of them, it can scarcely be doubted that their functions were distinct. From the authorities referred to by Böckh (Pödl. Econ. p. 160, &c.; 5th ed. compare the Röbein. Mer. 1827, vol. i. p. 72, &c.) it seems, moreover, that the office of the λογισταί, though closely connected with that of the εὐθυνοί, was of greater extent than that of the latter, who appear rather to have been the
EXAIRESEOS DIKE.

EXAGURATIO. 479

ASSASSESSORS of the former, than a totally distinct class of officers, as will be seen hereafter. All accounts of those others who had anything to do with the public money were, after the expiration of their office, first sent in to the λογισταὶ, who examined them, and if any difficulty or incorrectness was discovered, or if charges were brought against an ex-officer within the period of 30 days, the further inquiry devolved upon the ἐθνοὶ, before whom the officer was obliged to appear and plead his case. (Herenn., Polit. Antig. of Greece, § 134. 8.) If the ἐθνοὶ found that the accounts were unsatisfactory, that the officer had embezzled part of the public money, that he had accepted bribes, or that charges brought against him were well founded, they referred the case to a court of justice, for which the λογισταὶ appointed the judges by lot, and in this court their herald proclaimed the question who would come forward as accuser. (Aeschin., c. Ctesiph. p. 57, ed. Steph.; Etnym. Magn. s. v. Ἐθνα; Bekker, Ancisot. p. 245. 6.) The place where the court was held was the same as that to which ex-officers sent their accounts to be examined by the λογισταὶ, and was called λογιστήριον. (Andocid. De Myst. p. 37; Lys. c. Polyestrat. p. 672.) Whether the ἐθνοὶ took an active part in the trials of the λογισταὶ, or whether they, as Pollux states, executed the embezzled sums and fines, instead of the praetors, is uncertain. The number of the ἐθνοὶ, as well as that of the λογισταὶ, was ten, one being taken from every tribe. (Phot. s. v. Ἐθνοὶ, and Harpocrat. s. v. Λογισταῖ.) The λογισταὶ were appointed by the senate, and chosen by lot; whether the ἐθνοὶ were likewise chosen by lot is uncertain, for Plutarch uses the expression derived from κύριος (lot), while Pollux (viii. 29) states that the ἐθνοὶ τραπασίωται, scil. τοῖς λογισταῖς, according to which they were like the assessors of the archons; the latter account, however, seems to be more consistent and more probable. Every ἐθνὸς had two assessors (παρεχρόνοι). (See Böckh, Publ. Econ. l.c.; Titmarn, Griech. Staatsw. p. 233, &c.; Herenn., Polit. Antig. of Greece, § 144; Schömann, Antiq. Jur. publ. Græc. p. 259, &c.)

The first traces of this truly democratic institution are generally found in the establishment of the archons, while Aristotle (Pol. iii. p. 1328) remarks, that in the name itself, as the κύριος (lot) of the ἐθνοὶ was made the subject of the examination, it implied the name itself. (Liv. iii. p. 135.)

The first of these in this system of the archons was established as early as 403 B.C. (Proc. p. 140.)

EXAGO'GES DIKE' (ἐξαγωγή δίκη), a suit of a public nature, which might be instituted against one, who, assuming to act as the protector (κύριος) of an Athenian woman, married her to a foreigner in a foreign land. This was contrary to law, intermarriage with aliens being (as a general rule) prohibited. In the speech of Demosthenes against Timocrates (p. 763), he is charged with having sold his sister to a Corecyrean, on pretence of giving her in marriage. (Meier, Att. Proc. p. 350.)

EXAIRESEOS DIKE' (ἐξαιρέσεως δίκη), was an action brought to recover damages for the attempt to deprive the plaintiff of his slave; not where the defendant claimed a property in the slave, but where he asserted him to be a freeman. As the condition of slavery at Athens incapacitated a man to take any legal step in his own person, if a reputed slave wished to recover his rights as a freeman, he could only do it by the assistance of one who was himself a freeman. He then put himself under the protection of such a person, who was said ἐξαιρέσεως or ἀφαιρέσεως αὐτῶν ἐπὶ κυριαρχία, in libertatem vindicare. If the master sought to reclaim him, he proceeded to take manual possession, ἀγείριν αὐτῶν ἐπιδιώκειν. A runaway slave might at any time be seized by his master, either in the open street or elsewhere, except in a sanctuary. If the friend or person who harboured the slave meant to contest the matter right, the proper course was to go with him before the magistrate, and give security for the value of the slave and costs, in case a court of law should decide against him. The magistrate who took cognizance of the cause was the archon, where a man claimed to be a citizen; the polemarch, where he claimed to be an alien freeman. It was the duty of the archon or polemarch to set the man at liberty pendente lite. In the suit that followed, the plaintiff had to prove his title to the ownership of the slave, and, if he was successful, obtained such compensation as the jury chose to award; this being a τίμημα ἀγώνιος, and half of the τίμημα being given to the state. (Dem. c. Theoc. p. 1328.) A verdict for the plaintiff drew with it, as a necessary consequence, the adjudication of the ownership, and he would be entitled to take possession of his slave immediately; if, however, the slave had escaped in the meantime, and evidence of such fact were produced, the jury would probably take that into consideration in estimating the damage.

If the friend, in resisting the capture of the slave, had used actual violence, he was subject to a δίκη βιοικ. And if the so-disordered master had failed in the δίκη, the injured party might maintain an action against him for the attempted seizure. (Lys. c. Panel. p. 734, &c., with Reiske's note; Dem. c. Nesaer. p. 138; Harpocrat. s. v. ἐξαιρέσεως, and Αγέων; Meier, Att. Proc. p. 394.)

In a speech of Isocrates (Trapes. p. 361), the defendant, a banker, from whom it is sought to recover a deposit, is charged with having asserted the freedom of his own slave, in order to prevent his being examined by torture respecting the sum of money deposited in his hands. This is remarkable on two accounts: first (as Meier observes), because it seems to prove that one not the owner of the slave could bring the ἐξαγωγή, if he had an interest in the matter; secondly, because it was optional with a man to give up his slave to the torture or not, the refusal being only matter of observation to the jury; and, therefore, it appears strange that any one should have recourse to a measure, the result of which (if successful) would be, to deprive him of his property. (C. R. K.)

EXAUCTORATIO. [Exercitus.]

EXAGURATIO is the act of changing a sacred thing into a profane one, or of taking away from it the sacred character which it had received by inauguration, consecration, or dedication. That such an act was performed by the augurs, and never without consulting the pleasure of the gods by augurium, is implied in the name itself. (Liv. l. 55, v. 54; Dionys. Hal. Antiq. Rom. iii. p. 202, ed. Sylburg; Caio. ap. Fest. s. v. Nequilum.) Temples, shrines, and other consecrated places, as
well as priests were considered as belonging to the gods. No consecrated place whatever could be applied for any profane purpose, or dedicated to any other divinity than that to which it originally belonged, without being previously exaugurated; and priests could not give up their sacred functions, or (in case they were obliged to live in celibacy) enter into matrimony, without first undergoing the process of exauguratio. (Gellius, vi. 7. 4; Jul. Capitol. M. Anton. Philos. c. 4.) [L. S.] EXCEPTIO. [Actio.] EXCUBIAE. [Castra, p. 250.]

EXCUBITORES, which properly means watchmen or sentinels of any kind (Caes. Bel. Gall. vii. 69), was at Rome particularly given to the soldiers of the cohort who guarded the palace of the Roman emperor. (Suet. Ner. 8, Oth. 6.) Their commanding officer was called tribunus excubitorum. (Suet. Claud. 42, Ner. 9.) When the emperor went to an entertainment at the house of another person, the excubitors appear to have accompanied him, and to have kept guard as in his own palace. (Suet. Oth. 4.)

EXEDRA (εξεδρα), which properly signifies a seat out of doors, came to be used for a chamber furnished with seats, and opening into a portico, where people met to enjoy conversation; such as the room which Vitruvius describes as opening on to the peristylium of the gymnacaei of a Greek house (Domus), and as the rooms attached to a gymnasium, which were used for the lectures and disputations of the rhetoricians and philosophers. (Gymnasium.) The former class of exedrae Vitruvius indeed calls by another name, namely παραστάς or παναστάς, but the word εξεδρα occurs in Euripides (Orest. 1449) in this sense, and Pollex mentions the words εξεδρας and παναστάδες as synonymous (vii. 122). In this sense the word might be translated parlour.

In old Greek the word λεξείς appears to have had a similar meaning; but the ordinary use of the word is that of a larger and more public place of resort than the εξεδρα. [Lesch.] Among the Romans the word had a wider meaning, answering to both the Greek terms, εξεδρα and λεξείς. Thus it is not only used to signify a chamber for ordinary resort and conversation in a private house, or in the public baths and gymnasia, but is also used to signify a chamber for ordinary resort and conversation in a public place. (Cic. Oraet. iii. 5, De Nat. Doctr. i. 6; Varro, R. R. iii. 5; Ulpius, Dig. ix. tit. 3, leg. 5; but the word is even applied to the hall attached to the theatre of Pompey, which was used as a place of meeting by the senate. [Plut. Brut. 14, 17.])

The diminutive exedrium also occurs. (Cic. ad Fam. vii. 23.) [P. S.]

EXEGETAE (ἐγγράφοι, interpreters; or this and other meanings of the word see Rhunken, ad Tertius Glossar. p. 199, &c.), is the name of the Eumolpidae, by which they were designated as the interpreters of the laws relating to religion and of the sacred rites. (Demosth. Ευρ. p. 1160.) [Eumolpidæ.] They were thus at Athens the only class of persons who, in some measure, resembled the Roman jurists; but the laws, of which the ἐγγραφαι were the interpreters, were not written but handed down by tradition. Plutarch (Thes. 25) applies the term to the whole order of the Eupatridæ, though properly speaking it belonged only to certain members of their order, i.e. the Eumolpidae. The Etymologicum Magn. (s. v.), in accordance with the etymological meaning of the word, states, that it was applied to any interpreter of laws, whether sacred or profane; but we know that at Athens the name was principally applied to three members of the family of the Eumolpidae (Suidas, s. v.), whose province it was to interpret the religious and ceremonial laws, the signs in the heavens, and the oracles; whence Cicero (De Leg. ii. 27) calls them religionum interpretes. (Compare Polux, viii. 124 and 188; Plato, Euthyd. p. 4, d.)

They had also to perform the public and private expiatory sacrifices, and were never appointed without the sanction of the Delphic oracle, whence they were called ὄργανος ἐγγραφαι. (Timaeus, Glosor. s. v. ἐγγραφαι; compare Meier, De Bonis Diamat. p. 7; Müller, ad Asseb. Examen. p. 162, &c.)

The name ἐγγραφής was also applied to those persons who served as guides (ciecorne) to the visitors in the most remarkable towns and places of Greece, who showed to strangers the curiosities of a place, and explained to them its history and antiquities. (Paus. i. 41, § 2.)

Respecting the ἐγγραφής of the laws of Lycur- gus at Sparta, see Müller, Dor. iii. 11. 2. [L. S.]

EXCITATORIA ACTIO, was an action granted by the law against the exercitor navis. By the term navis was understood any vessel, whether used for the navigation of rivers, lakes, or the sea. The exercitor navis is the person to whom all the ship's gains and earnings (obsessiones et reddita) belong, whether he is the owner, or has hired the ship (per accessionem) from the owner for a time definite or indefinite. The magister navis is he who has the care and management of the ship, and was appointed (praeposito) by the exercitor. The exercitor was bound generally by the contract of the magister, who was his agent, but with this limitation, that the contract of the magister must be with reference to furthering the object for which he was appointed; as, for instance, if he purchased things useful for the navigation of the ship, or entered into a contract or incurred expense for the ship's repairs, the exercitor was bound by such contract: the terms of the master's appointment (praeposito) accordingly determine the rights of third parties against the exercitor. If the magister, being appointed to manage the ship and to use it for a particular purpose, used it for a different purpose, he might be held liable by the contract. If there were several magistri, without any partition of their duties (non divisio officiorum), a contract with one was the same as a contract with all. If there were several exercitores, who appointed a magister either out of their own number or not, they were severally answerable (in solidum) for the contracts of the magister. The contracting party might have his action either against the exercitor or the magister, so long as the magister continued to be such.

A party might have an action ex delicto against an exercitor in respect of the act either of the magister or the sailors, but not on the contract of the sailors. If the magister substituted a person in his place, though he was forbidden to do so, the exercitor would still be bound by any proper contract of such person.

The term Nauta properly applies to all persons who are engaged in navigating a ship; but in the Praetor's Edict (Dig. 4. tit. 9. s. 1) the term Nauta means Exercitor (qui nunquam exercet). (Dig. 14. tit. 1; Peckius, in Tit. Dig. et Cod.,
EXERCITUS.

EXERCITUS (στρατός), army. I. GREEK.

The earliest notices which we possess of the military art among the Greeks are those contained in the Homeric poems. The unsettled state of society in the first ages of Greece, led to the early and general cultivation of the art of arms, which were habitually worn for defence, even when aggressive warfare was not intended. (Thuc. i. 6.) But the Homeric poems contain an exhibition of combined military operations in their earliest stage. Warlike undertakings before the time described in them can have been little else than predatory inroads (βοράσια, II. xi. 667). A collection of warriors exhibiting less of organisation and discipline than we see depicted in the Grecian troops before Troy, would hardly deserve the name of an army. The organisation which we see there, such as it was, arose, not from any studied, formative system, but naturally, out of the imperfect constitution of society in that age. Every freeman in those times was of course a soldier; but when all the members of a family were not needed to go upon an expedition under the command of their chieftain or king, those who were to go seem to have been selected by lot (II. x. 418). As the confederated states, which were represented and taking part in the Trojan war, are united by scarcely any other bond than their participation in a common object, the different bodies of troops, led by their respective chieftains, are far from being united by a common discipline under the command-in-chief of Agamemnon. Each body obeys its own leader, and follows him to the conflict, or remains inactive, according as he chooses to mingle in the fight or not. Authority and obedience are regulated much more by the nature of the circumstances, or by the relative personal distinction of the chieftains, than by any law of military discipline. Agamemnon sometimes urges the chieftains to engage, not by commands, but by taunts (II. iv. 338, &c. 368, &c.). Accordingly, nothing like the tactics or strategy of a regularly disciplined army is to be traced in the Homeric descriptions of battles. Each chieftain with his body of troops acts for himself, without reference to the movements of the rest, except as these furnish occasion for a vigorous attack, or, when hard pressed, call for assistance from the common soldiers (πρός πολέμου, II. iv. 299) within which the more important single combats are fought. How they got the chieftains out of the way when the foot soldiers came to close quarters (as in II. iv. 427, &c.) is not described.

Though so little account is usually made of the common soldiers (πολεμίς, II. xi. 49, xii. 77), Homer occasionally lays considerable stress on their orderly and compact array; Nestor and Menestheus are honourably distinguished by the epithet κομμιτόρει πάλαω (II. ii. 553, iv. 289, &c.). The troops were naturally drawn up in separate bodies according to their different nations. It would appear to be rather a restoration of the old arrangement than a new classification, when Nestor (II. ii. 362) recommends Agamemnon to draw the troops up by tribes and phratries. Arranged in these natural divisions, the foot soldiers were drawn up in densely compacted bodies (πυκνα φόλαγγες) shield close to shield,— helmet to helmet— man to man (II. xii. 130, xvi. 212, &c.). In these masses, though not usually commencing the attack, they frequently offer a powerful resistance, even to distinguished heroes (as HECTOR II. xiii. 145, &c., comp. xvii. 267, 354, &c., xiii. 339), the dense array of their spears forming a barrier not easily broken through. The signal for advance or retreat was not given by instruments of any kind, but by the voice of the leader. A loud voice was consequently an important matter, and the epithet βοην σγάθος is common. The trumpet, however, was not absolutely unknown (II. xviii. 219). Respecting the armour, offensive and defensive, see ARM.

Under the king or chieftain who commands his separate contingent we commonly find subordinate chiefs, who command smaller divisions. It is difficult to say whether it is altogether accidental or not, that these are frequently five in number. Thus the Myrmidons of Achilles are divided into five στρίτες, each of 500 men. Five chiefs command the Boeotians; and the whole Trojan army is formed in five divisions, each under three leaders. (II. iv. 295, &c., xvii. 172—197, ii. 494, &c., xii. 67—104.) The term φόλαγγες is applied either to the whole army (as II. vi. 6), or to these smaller divisions and subdivisions, which are also called στρίτες and πύλη.

When an enemy was slain, it was the universal practice to stop and strip off his arms, which were carefully preserved by the victor as trophies. The division of the booty generally was arranged by the leader of the troop, for whom a portion was set aside as an honorary present (γέφας, II. i. 392, 368, ix. 328, xi. 703). The recovery of the dead bodies of the slain was in the Homeric age, as in all later times, a point of the greatest importance, and треб.
EXERCITUS.

exercitiously either led to a fierce contest, or was effected by the payment of a heavy ransom (Köpke, Kriegswesen der Griechen in heroischen Zeitalter; Wachsmuth, Hellen. Altertumsbk. vol. ii. § 110; Grote, History of Greece, vol. ii. p. 141).

After the heroic age considerable impulse was given to the cultivation of the military art by the conquests of the Thessalians (the first Greek people, apparently, that employed cavalry, to the use of which their conquests were probably in great part owing) and Dorians, among the latter of whom the art of warfare was earliest reduced to system. The distinction of heavy and light armed foot soldiers of course took its rise with the beginnings of military service, the poorer class being unable to provide themselves with the more efficient, but more costly weapons of those who were better off than themselves. Political considerations tended to make the distinction more marked and systematic. The system of military castes was indeed unknown among the Greeks, though something answering the same purpose existed in the earliest times, when the nobles and their more immediate dependants and retainers, having greater leisure for the cultivation of skill in the use of arms, and greater means for procuring them, were separated in that respect by a wide interval from the lower castes.

The result was, that in the strictness of their discipline, the precision and facility with which they performed their military evolutions, and the skill and power with which they used their weapons, the Spartans were unrivalled among the Greeks, so that they seemed like real masters of the art of war (τεχνής τῶν πολεμίων), while in comparison with them other Greeks appeared mere novitiates (ἀπορρητικά τῶν στρατευτικῶν). The whole life of a Spartan was little else than either the preparation for or the practice of war. The result was, that in the strictness of their discipline, the precision and facility with which they performed their military evolutions, and the skill and power with which they used their weapons, the Spartans were unrivalled among the Greeks, so that they seemed like real masters of the art of war (τεχνής τῶν πολεμίων), while in comparison with them other Greeks appeared mere novitiates (ἀπορρητικά τῶν στρατευτικῶν). The whole life of a Spartan was little else than either the preparation for or the practice of war.

But in the democracies this distinction as regards the kinds of service depended merely upon the greater or less ability of the citizens to procure arms. In the Greek commonwealths all those who enjoyed the privileges of citizens or freemen were held bound to serve as soldiers when called upon, and were provided with arms and trained in military exercises. The modern system of standing armies was foreign to Greek habits, and would have been dangerous to the liberties of the different commonwealths, though something of the kind may be seen in the body guards, usually of mercenary troops, kept by tyrants. The mercenaries in the pay of Alexander of Phœre formed a considerable army. Practically too, from the continuity of the warlike operations in which they were engaged, the armies of Philip and Alexander of Macedon, and their successors, became standing armies. The thousand άργυροι at Argos (Thuc. v. 67) and the sacred band at Thebes (Plut. Pelop. 18; K. F. Hermann, Griech. Staatsalterth., § 181 note 2) were not considerable enough to be called armies. The employment of mercenary troops might have led to the use of standing armies, had it not been that the use of them characterised the decline of the Greek states, so that the circumstances which led to their employment, also rendered it impossible to provide the resources for their maintenance, except when they were immediately needed. Still, as in the case of the Scythian bowmen at Athens, individual corps of mercenaries might be regularly maintained. Slaves were but rarely trusted with arms, and when it was the case, they were usually manumitted. The Greek armies accordingly were national armies, resembling rather the militia than the regular armies of modern times.

In all the states of Greece, in the earliest as in later times, the general type of their military organisation was the phalanx, a body of troops in close array with a long spear as their principal weapon. It was among the Dorians, and especially among the Spartans, that this type was most rigidly adhered to. The strength of their military array consisted in the heavy-armed infantry (άρματα). They attached comparatively small importance to their cavalry, which was always inferior (Xen. Helen. vi. 4. § 80). Indeed, the Thessalians and Boeotians were the only Greek people who distinguished themselves much for their cavalry; scarcely any other states had territories adapted for the evolutions of cavalry. The Spartan army, as described by Xenophon, was probably in all its main features the same that it was in the time of Lycurgus. The institutions of that lawgiver converted the body of Spartan citizens into a kind of military brotherhood, whose almost sole occupation was the practice of military and athletic exercises.

The political and military divisions of the

political and military divisions of the
not merely divisions of troops engaged in actual and syssitia as military divisions, and we learn that portion of them were detached on foreign service. At all times formed an army, whether they were already been remarked, an army sent on foreign expedition. The whole body of citizens of military age. As has been mentioned, an army sent on foreign service. Herodotus (i. 6.5) speaks of enomoties, triadcs, and asyntas as military divisions, and we learn that the pentaconties presided over the public tables (Plut. Lyc. 12). When a portion of the citizens was sent out on foreign service, the army that they formed was arranged in divisions corresponding to, and bearing the same names as the divisions of the entire military force of Sparta, i. e. of the entire body of citizens of military age. As has already been remarked, an army sent on foreign service consisted of citizens between certain ages, determined according to the number of soldiers wanted. So that, as it would seem, every enomotia of the general body sent out a certain proportion of its numbers for the expedition in question, who (with some Perioeci) formed an enomotia of the army so sent; and the detachment of those enomoties which formed a mora of the whole body of citizens, formed (apparently) a mora of the army on service. All the accounts that we have of Spartan military operations indicate that the Perioeci who served as heavy-armed soldiers, formed integral members of the different divisions to which they were attached; so that an enomotia, pentecostys, &c., in the field, would contain a number of soldiers who did not belong to the corresponding larger divisions of the whole body of citizens of military age. Thirlwall (Hist. of Greece, vol. i. app. ii.) talks of thirty families being represented in the army by thirty soldiers; an idea totally at variance with all the accounts that we have. Supposing a family to consist of a father and three sons, if the latter were above twenty, and the father not above sixty years of age, all would be soldiers, liable to be called out for active service at any time; and according to the limits of the age proclaimed by the ephors, one, two, three, or all of them might be called out at once. The strength of a mora on actual service, of course, varied, according to circumstances. To judge by the name pentecostys, the normal number of a mora would have been 480; but 500, 590, and 900 are mentioned as the number of men in a mora on different occasions (Plut. Pelo. 16; Xen. Hellen. iv. 5. § 11, 12, vi. 4. § 12; Schol. ad Thuc. v. 66; Diod. xv. 32, &c.; Müller, Doriaus, iii. 12. § 2, note t.). That these variations arose from variations in the number of Spartan citizens (Haase in Ersch and Gruber's Encyclopädie, art. Phalana), is an assumption which leaves out of sight the proportion of citizens called out, and the number of Perioeci in the army. (Of the 292 heavy-armed soldiers who surrendered at Sphacteria, 120 were Spartans, Thuc. iv. 38. At the battle of Plataea, one half of the heavy-armed soldiers of the Lacedaemonians were Spartans.) When in battle, the men belonging to a mora of infantry were protected by a mora of cavalry, consisting at the least of 100 men, and commanded by an hipparmost (ιππαρμοστής, Xen. Hellen. iv. 4. § 10, 5. § 12). Plutarch (Lyc. 23) mentions squadrons (οίλαμοι) of fifty, which may possibly be the same divisions. It is not easy, however, to see in what manner the cavalry could have been thus apportioned, or how each mora of cavalry could have "belonged to a mora of infantry without being in close connection with it" (as Müller says). The cavalry seems merely to have been employed to protect the flanks, and but little regard was paid to it. The corps of 300 ἵππες (Herod. viii. 124) formed a sort of body-guard for the king, and consisted of the flower of the young soldiers. Though called horsemen, they fought on foot. (Xen. Rep. Lyc. iv. § 3.) Thucydides in his account of the battle of Mantinea (v. 68) describes the Lacedaemonian army as divided into seven lochi, each containing four pentecostys, and each pentecostys four enomotiae, with thirty-two men in each; so that the lochus here is a body of 512 men, and is commanded by a polemarch. It is clear, therefore, that the lochus of Thucydides, in this instance, answers to the mora of Xenophon. As on this occasion, the pentecostys contained four instead of two enomotiae, and as four pentecostys were thrown together into one division, Thucydides may have been led to call this division a lochus, as being next above the pentecostys, though it was, in fact, a mora commanded by a polemarch (Thirlwall, l. c. p. 445; comp. Arnold on Thuc. v. 68). Aristotle appears to use the terms lochus and mora indiscriminately (Λοχέων πόλεων, Fr. 5 and 6; Photius s. v. λέχυς). The suggestion of Arnold (l. c.) that one of the seven lochi spoken of consisted of the Brasidean soldiers and Neodamodes, which would not be taken account of in the ordinary divisions of the Spartan forces, is not unlikely, and would explain the discrepancy between the number of lochus (or mora) here, and the ordinary number of six morae; but even independently of it, no difficulty need be felt with respect to that particular point, as the whole arrangement of the troops on that occasion was a departure from the ordinary divisions. It was not universally the case that an army was made up of six morae and twenty-four ordinary lochi. On one occasion, we hear of twelve lochi (Xen. Hellen. vii. 4. § 20, comp. § 27), each of about 100 men. The Neodamodes were not usually incorporated in the morae (Xen. Hellen. iv. 3. § 15). It seems a probable opinion that the number of morae in the Spartan military force had reference to the districts into which Lacedaemon was divided. These, including Sparta and the districts immediately around it, were six in number. Perhaps, as Thirlwall suggests, the division of the army may have been founded on the fiction that one mora was assigned for the protection of each district. The same writer also suggests a very probable explanation of the λέχυς Πινακίδης.
which Herodotus (ix. 53) speaks of, and of which Thucydides (i. 20), though doubtless erroneously, denies the existence. Thirlwall suggests that as each mora consisted of four lochi, the four lochi of the mora belonging to the district of Sparta may have been distributed on the same principle among the four κώμαι, Limnæe, Cynosura, Mesoa, and Piana, of which Sparta was composed.*

A Spartan army, divided as above described, was drawn up in the dense array of the phalanx, the depth of which depended upon circumstances. An ἑκτομία sometimes made but a single file, sometimes was drawn up in three or six files (‘ CONTRACT, Xen. Rep. Lac. xi. § 4; Müller, iii. 12. § 3, note a). At the battle of Mantinea the phalanx was eight deep, so that each enomotia made four files. (Thuc. v. 68; comp. Xen. Hellen. iii. 2. § 16. vi. 2. § 21.) At the battle of Leuctra it was twelve deep. (Xen. Hellen. vi. 4. § 12.) The enomotarch stood at the head of his file (πρωτωτάρτη), or at the head of the right-hand file, if the enomotia was broken up into more than one. The last man was called οὐράγος. It was a matter of great importance that he, like the enomotarch, should be a man of strength and skill, as in certain evolutions he would have to lead the movements. (Xen. Cyrop. iii. 3. § 41, &c.) The commander-in-chief, who was usually the king (after the affair of Demaratus and Cleomenes it was the practice not to send out both kings together, Herod. v. 75; but comp. vi. 73), had his station sometimes in the centre (as at Mantinea, Thuc. v. 72), more commonly (as at Leuctra) on the right wing. The deployments by which the arrangements of the phalanx were altered took place under the direction of the enomotarch. When the troops were drawn up in a line in the ordinary battle array, they were said to be ἐπὶ φαλάγγος. Supposing an enomotia to consist of twenty-five men, including its leader, and to be drawn up eight deep, the front line of the army would consist of 288. In an ordinary march the army advanced eir'i κέρας (or κατὰ κέρας, Xen. Hellen. vii. 4. § 23), the first enomotia of the right wing filing off, and the rest in succession following it; so that if the enomotia was drawn up in three or two files, the whole army would march in three or two files. The most usual arrangement was in two files. (Xen. Hellen. vii. 4. § 22, iii. 1. § 22, Polyæn. ii. 1. § 10.) If an army commander ever had to face an enemy, the movement began with the hindmost enomotia of the column, which placed itself on the left of (παρὰ δύσιθα) and on a line with (εἰς μέτωπον) the enomotia before it. These two then performed the same evolution with respect to the last but two, and so on, till all were in a line with the first enomotia, which now, with the commander-in-chief at its head, occupied the extremity of the right wing. This evolution was called παραγωγή (Xen. Rep. Lac. xi. § 6), a name also given to the reverse movement, when a phalanx had to fall into marching order, to have subordinate movements on the same kind for changing the depth of the phalanx. In the latter the evolutions were conducted on much the same principle. Thus, if the depth of the phalanx was to be diminished by half, the hinder portion of each enomoty marched forwards and placed itself on the left of the half in front of it. Similarly, if the depth had to be increased, the left-hand portion of each enomoty faced about towards the right, took up its station in the rear, and then, facing to the left again, assumed their proper position. (Xen. Rep. Lac. xi. § 8.) The facing to the right was always the usage, because if the evolution were performed in the face of an enemy, the shielded side could be presented towards him. Modifications of this evolution, conducted on the same principle, were employed if the depth had to be increased or diminished in any other proportion (comp. Xen. Anab. iv. 3. § 26, iv. 6. § 6, Cyrop. ii. 3. § 21.) It is very likely that at those points of the files where in such evolutions they would have to separate, there were placed men suitable for taking their station in the front rank, where it was always an object to get the best men. These would answer to the δεκαδάρχους and πεντάδαρχους of Xenophon. (Cyrop. ii. 1; comp. Piïparach. ii. § 6, iv. § 9.) If an enemy appeared in the rear, it was not enough that the soldiers should face about towards the enemy. The Spartan tactics required that the stoutest soldier should be opposed to the enemy. This was accomplished by the manoeuvre termed ἑπικύρωμα. Of this there are two varieties: 1. The Macedonian. In this the leader of each file kept his place, only turning towards the enemy. The man behind him (ὑπωτάρτης) re-treating and again taking up his station behind him, and so on. In this way the army retreated from the enemy by a distance equal to its depth. 2. The Laconian (the one usually adopted by the Macedonian phalanx of Philip and Alexander). This was the reverse of the preceding, the rear man remaining stationary and the others advancing successively one before the other. In this way of course the front and rear of the phalanx continued always a distance equal to its depth. 3. The Creton. In this the leader and rearman, the second and last but two, and so on, changed places, so that the whole army remained at the same distance from the enemy. This species was also called χρωσία (Hanse ad Xen. Rep. Lac. xi. § 9; Müller, iii. 12. § 8; Aelianus, Tact. 26, 27, 33.) These evolutions would of course leave the general on the left wing. If it was deemed expedient that he should be upon the right, it was not enough that he should simply remove from the left to the right, the whole army had to reverse its position, so that what was the left wing should become the right. This was effected by an exeligmus, termed (at least by the later tacticians), ἐξελεύγµα κατὰ γύνα, as contrasted with the ἐξελεύγµα κατὰ στίγµα. If the army changed its front by wheeling round through a half circle, round one corner as a pivot, the movement seems to have been expressed by περιστύσεως or ἀναπτύσεως. One more evolution remains to be noticed. Suppose an enemy

* Müller (Dorians, book iii. c. 3. § 7) talks of a πόλις distinct from these κώμαι. But the latter were certainly not mere suburbs, but component parts of Sparta itself (comp. Paus. iii. 16. § 5), Haaso (L.c.) speaks of five divisions of the city besides Piana, so that the six morae or lochi in the sense of Thucydides correspond to these six divisions. For this arrangement, there seems no authority, except the statement of the scholar on Aristoph. (Lys. 453), that there were six lochi at Sparta, five of which he names, one of the names being corrected conjecturally by Müller to Μεροδήρας. But there seems here little more than a confused version of the division into six morae.
appeared on the right, while the army was marching in column, two abreast. The different lochi wheeled round through a quadrant of a circle, round their leader, as on a pivot, so that the army presented twenty-four columns to the enemy, consisting of two files each, and separated by a considerable interval from each other. The depth of the whole body was then lessened, and these intervals filled up by the ordinary paragoge, and by the different lochi siding up nearer to each other in case the intervals still remained too great. If it was necessary for the general to take his station on the right, this would be effected, as in other cases, by an ἕλκυσμα. Similar manoeuvres took place if the enemy appeared on the left, though, as this was the sheltered side of the soldiers, and the danger was consequently less, it was frequently thought sufficient to keep the enemy in check by the right, each man pressing closer to his right-hand neighbour in order to protect his unshielded side, so that the right wing frequently got beyond the left wing of the enemy. (See especially the account of the battle of Mounteniala, Thucyd. v. 71.)

A slight consideration will shew that the analogy traced between the evolutions of an army and those of a chorus is by no means fanciful. One kind of ἕλκυσμα was even called χορήγος. The importance attached to the war dances among the Spartans is a matter of history.

When an army was led to attack a height, it was usually drawn up in what were termed λέχος ἔθρων, a term which merely implies that the lochi had greater depth than breadth (παραμέτροι μὲν λέγονται παρά τάξιν δὲ τὸ μῦκον ἐχθρὸν πάντων τῶν ἔθρων ἔθρων δὲ τὸ ἔθρον τῶν μῦκων, Aelian. Tact. c. 29). The breadth of the lochi would, of course, vary according to circumstances. They were drawn up with considerable intervals between them. In this way the army presented a considerable front to the enemy, and was less liable to be thrown into confusion than if drawn up in close phalanx, while at the same time the intervals between the lochi were not left so great that the enemy could safely press in between them. In battle, they occupied the extreme left of the line.

The commander of the army, whether he was a polemarch, or formed one of the pentecosteres, by these to the lochagi, by these last to their respective divisions. From the orderly manner in which this was done, commands were transmitted with great rapidity: every soldier, in fact, regulating the movements of the man behind him, every two being connected together as πρωτοπάτης and εὐπατρίς.

In later times the king was usually accompanied by two ephors, as controllers and advisers. These, with the polemarchs, the four Pythii, three peers (δύοι), who had to provide for the necessities of the king in war, the laphyropoleis and some other officers, constituted what was called the δαμασία of the king. (Xen. Rep. Lac. xi. § 10.) One point that a general had to be on his guard against was the tendency of an army, when advancing ἐτὸς προαγαγός, to sheer off towards the right, each man pressing closer to his right-hand neighbour in order to protect his unshielded side, so that the right wing frequently got beyond the left wing of the enemy. (See especially the account of the battle of Mounteniala, Thucyd. v. 71.)

When the battle was joined, the king in war, the laphyropolae and some other officers, constituted what was called the δαμασία of the king. (Xen. Rep. Loc. xii. § 1, xv. § 14, Hellen. iv. 5, § 8, vi. 4. § 14 ; Plut. Lyce. 22.) The polemarchs also had some sort of suite or staff with them, called συναφορίς (Plut. Pelop. 17 ; Xen. Hellen. vi. 4. § 14). With the exception of the enomotarchs, the superior officers and those immediately about them, are not to be reckoned with the division which they led. They stood distinct, forming what was called the ἐγκυμοσύνη.

The Spartan and Perioecian hoplites were accompanied in the field by helots, partly in the capacity of attendants, partly to serve as light-armed troops. The number attached to an army was probably not uniform. At Plateae each Spartan was accompanied by seven helots, but that was probably an extraordinary case. One helot in particular of those attached to each Spartan was called his δημάρχος, and performed the functions of an armourex or shield-bearer (Eustath. ad Dionys. Per. 533). Xenophon (Hellen. iv. 5. § 14, 8. § 59) calls them ἑσπαστικαὶ. (Comp. Herod. v. 111 ; Müller, Dor. iii. 3. § 2.) In extraordinary cases, helots served as hoplites, and in that case it was usual to give them their liberty (Thucyd. vii. 19, iv. 80, v. 34). Distinct corps were, sometimes, composed entirely of these Neo-damodes. A separate troop in the Lacedaemonian army was formed by the Sciritae (Σκηρίται), originally, no doubt, inhabitants of the district Sciria, but in battle, they occupied the extreme left of the line. On a march, they formed the vanguard, and were usually employed on the most dangerous kinds of service. (Thuc. v. 67, with Arnold's note ; Xen. Cyrop. iv. 2. § 1 ; K. F. Hermann, § 29, note 13, infers from this passage that they were cavalry, an inference which is certainly not necessary, and is contradicted by Müller, Manso, Haase, Thirlwall, Arnold, &c.)

The arms of the phalanx consisted of the long spear and a short sword (ἀγδάν). The chief part of the defensive armour was the large brazen shield, which covered the body from the shoulder to the knee (Tyrtaeus, fr. ii. 23), suspended, as in ancient times, by a thong round the neck, and managed by a simple handle or ring (πέρατα). The improved Carian handle (ἐχθρόν) was not introduced till the time of Cleomenes III. Besides this, they had the ordinary armour of the hoplite (Ἀχίλλας). The heavy-armed soldiers wore a scarlet uniform (Xen. Rep. Lac. xi. § 3, Ages. ii. 7). The Spartan encampments were circular.
Only the heavy-armed were stationed within it, the cavalry being placed to look out, and the helots being kept as much as possible outside. As another precaution against the latter, every soldier was obliged always to carry his spear about with him. (Xen. Rep. Lac. xii.) Though strict discipline was, of course, kept up in the camp, it was less rigorous than in the city itself (Plut. Lyg. 22, comp. Herod. vii. 208). Preparatory to a battle the Spartan soldier dressed his hair and crowned himself as others would do for a feast. The signal for attack in ancient times was given by priests of Ares (ἱερέα), who threw lighted torches into the interval between the two armies (Schol. ad Eurip. Phoen. 1186). Afterwards it was given not only by the trumpet, but by the music of flutes, and sometimes also of the lyre and cithara, to which the men sang the battle song (παιάς ἐματήροι). (Paus. iii. 17, § 5 ; Plut. l. c.) The object of the music was not so much to inspirit the men, as simply to regulate the march of the phalanx (Thuc. v. 70). This rhythmical regularity of movement was a point to which the Spartans attached great importance. A sacrifice was offered to the Muses before a battle, as also to Ares (Plut. Aristid. 17). To prevent the ranks being broken the soldiers were forbidden to stop in order to strip a slain enemy while the fight lasted, or to pursue a routed enemy. The younger hoplites or the cavalry or light-armed troops were despatched for this purpose (Xen. Hell. iv. 4, § 16, v. 14, § 16). All the booty collected had to be handed over to the laphyropolae and ephors, by whom it was sold.

The rigid inflexibility of the Spartan tactics rendered them indisposed to the attack of fortified places. At the battle of Platææ, they even assigned to the Athenians the task of storming the palisade formed by the γύμνα of the Persians.

In Athens, the military system was in its leading principles the same as among the Spartans, though differing in detail, and carried out with less exactness; inasmuch as when Athens became powerful, greater attention was paid to the navy. Of the times before Solon, we have but little information. We learn that there were twelve phratriae, and in each of these four naucrariae, the citizens of the first and second served as cavalry, or as commanders of the infantry (still it was the heavy-armed infantry, as we have seen, to which the Athenians had to look as a point of strength). The Phratria (ιερά) contained four lochi, and consisted of one hundred men. (Comp. Xen. Mem. iii. 17.) Each horseman also had a servant, called ἵππον, and received a shield and spear in a public assembly of the people, binding themselves by oath to perform rightly the duties of a citizen and a soldier (Aristot. ap. Harpocr. p. 241 ; Hermann, i. c. § 123). During the first two years, they were only liable to service in Attica itself, chiefly as garrison soldiers in the different fortresses in the country. During this period, they were called περίστολοι. (Harpocr. s. v. περίστολος ; Pollux, viii. 105 ; Lycurg. Leocr. § 76.) According to some authorities, this service was also called στρατεύετον τοῖς ἐμφεύγοις (Wachsmuth, l. c. vol. i. § 56, note 42). The naucrariae were made under the direction of the generals [ΣΤΡΑΤΕΥΟΝ].

The soldiers were selected either according to age, as among the Spartans (Aristot. ap. Harpocr. s. v. στρατεύετον and Phot. s. v. στρατεύετον) by the generals [ΣΤΡΑΤΑΧΕΣ], and of another 

§ 16). All the booty collected had to be handed over to the laphyropolae and ephors, by whom it was sold.

The rigid inflexibility of the Spartan tactics rendered them indisposed to the attack of fortified places. At the battle of Platææ, they even assigned to the Athenians the task of storming the palisade formed by the γύμνα of the Persians.

In Athens, the military system was in its leading principles the same as among the Spartans, though differing in detail, and carried out with less exactness; inasmuch as when Athens became powerful, greater attention was paid to the navy. Of the times before Solon, we have but little information. We learn that there were twelve phratriae, and in each of these four naucrariae, each of which was bound to furnish two horsemen and one ship. Of the four classes into which the citizens were divided by the constitution of Solon, the heavy-armed infantry, were enrolled in a list [CATALOGUS]. The case of Thetes serving as cavalry (Thuc. ii. 13, 31, iv. 90 ; Xen. de Vact. ii. § 5, Hippiarch. ix. § 6). Slaves were only employed as soldiers in cases of great necessity, as at Marathon (according to Paus. i. 32, § 33), and Arginusae (Xen. Hellen. i. 6, § 17).

Of the details of the Athenian military organisation, we have no distinct accounts as we have of those of Sparta. The heavy-armed troops, as was the universal practice in Greece, fought in phalanx order. They were recruited in a manner dependent on the political divisions of the citizens. The soldiers of each tribe formed a separate body in the army, also called a tribe, and these bodies stood in some preconcerted order (Herod. vi. 111 ; Plut. Arist. 5 ; Thuc. vi. 98 ; Xen. Hellen. iv. 2, § 19, with Schneider's notes). It seems that the name of one division was τάξις, and of another λόχος, but in what relations these stood to the φιλακρυ, and to each other, we do not learn, unless Xenophon's expressions (Cyrop. ii. 1. § 4) may be looked upon as indicating that the τάξις contained four lochi, and consisted of one hundred men. (Comp. Xen. Mem. iii. 4, § 1 ; Pollux, viii. § 114 ; Lysias pro Mantitheo, § 15, &c.) Every hoplite was accompanied by another attendant (ὑποδίπτης, Thuc. iii. 17), to take charge of his baggage, and carry his shield on a march. Each horseman also had a servant, called ἵπποκώμος, to attend to his horse (Thuc. vii. 75, 78 ; Xen. Hellen. ii. 4).

It would appear, that before the time of Solon the cavalry which the Athenians could muster was under 100. In the time of Cimon it was...
300, and soon after, 600 (Andoc. de Pace, p. 92 ;
Schol. Aristoph. Euit. 577, 624) ; at the begin-
ing of the Peloponnesian war, 1200, of whom
200 seem to have been hired Scythian bowmen
(Thuc. ii. 13, v. 94, vi. 94). Besides the light-
armed soldiers drawn from the ranks of the
poorer citizens, there was at Athens a regiment
armed at Plataeae; and at the beginning of the
Peloponnesian war, to 1600 (Thuc. ii. 13 ; Böckh,
Public Econ. of Ath. book ii. c. 11). These, how-
ever, were generally employed as a sort of police
or city guard. Besides these, however, the Athe-
nians had a troop of bowmen of their own citizens,
amounting, at the beginning of the Peloponnesian
war, to 1600 (Thuc. ii. 13 ; Böckh, l.c. ii. c. 21).
For the command of the army, these were chosen
every year ten generals [STRATEGI], and
ten taxiarhés [TAXIARCHI], and for the cavalry,
two hipparchs (ΣΩΠΧΟ) and ten phylarchs (ΦΥΛ-
ΑΡΧΩ). Respecting the military functions of the
άρχουν τοιμάρχους, see the article ARCHON.
The number of strategi sent with an army was not
uniform. There was a common number. Some-
times one was invested with the supreme com-
mand; at other times, they either took the com-
mand in turn (as at Marathon), or conducted
their operations by common consent (as in the
Sicilian expedition). (Xen. Hipparch. i. § 6 ;
Demosth. Phil. i. § 26 ; Pol lux, viii. § 67 ; Schö-
mann, de Com. Ath. pp. 315—315.)
The practice of paying the troops when upon
service was first introduced by Pericles (Ulpian,
ad Demosth. περὶ στρατευτῆς, p. 50, a). The pay
consisted partly of wages (μισθὸς), partly of provi-
sions, or more commonly, provision-money (στρά-
τια). The ordinary μισθὸς of a hoplite was
two obols a day. The στρατιωτὴς amounted to
two obols more. Hence, the life of a soldier was
considered partly of wages (μισθὸς), partly of provi-
sions, or more commonly, provision-money (στρά-
τια). The ordinary μισθὸς of a hoplite was
two obols a day. The στρατιωτὴς amounted to
two obols more. Hence, the life of a soldier was
considered partly of wages (μισθὸς), partly of provi-
sions, or more commonly, provision-money (στρά-
τια).

The Peltastae (πελτασταί), so called from the
kind of shield which they wore [ΠΕΛΤΑ], were a
kind of troops of which we hear very little before
the end of the Peloponnesian war. The first time
we have any mention of them is in Thuc. iv. 111,
where they are spoken of as being in the army of
Brasidas. With the more frequent employment
of mercenary troops a greater degree of attention
was bestowed upon the peltastae; and the Athe-
nian general Iphicrates introduced some important
improvements in the mode of arming them, com-
bining as far as possible the peculiar advantages of
heavy (δεραταί) and light armed (φιλόλημοι) troops.
He substituted a lighter corselet for the coat of mail
worn by the hoplites, and lesser度 the shield, while
he doubled the length of the spear and sword. He
even took the pains to introduce for them an im-
proved sort of shoe, called after him ἱφικράτιδες
(Pol lux, vii. 89). This equipment was very com-
monly adopted by mercenary troops, and proved
very effective. The almost total destruction of a
mora of Lacedaemonian heavy-armed troops by a
body of peltastae under the command of Iphicrates
was an exploit that became very famous. (Xen.
Hellen. iv. 5 § 11.) The peltast style of arming
was general among the Achaenae until Philip-
pomaeon again introduced heavy armour. (Plut.
Philop. 9; Liv. xlii. 55.)

When the use of mercenary troops became general,
Athenian citizens seldom served except as
volunteers, and then in but small numbers. Thus
we find 10,000 mercenaries sent to Olynthus with
only 400 Athenians (Demosth. de fals. Leg. p. 425). With
13,000 mercenaries sent against
Philip to Chaeroneia, there were 2000 citizens (De-
mosth. de Cor. p. 306). It became not uncommon
also for those bound to serve the cavalry to
commute their services for those of horsemens hired
in their stead, and the duties of the ιπποπορφυρα
were ill executed. The employment of
mercenaries also led in other respects to considerable
alterations in the military system of Greece. War
 came to be studied as an art, and Greek generals,
rising above the old simple rules of warfare, be-
came tacticians. The old method of arranging
the troops, a method still retained by Agesilaus
at the battle of Coronea, was to draw up the
opposing armies in two parallel lines of greater or
less depth, according to the strength of the
forces, the engagement commencing usually very
nearly at the same moment in all parts of the line.
The genius of Epaminondas introduced a complete revolution in the military system. He was the first who adopted the method of charging in column, concentrating his attack upon one point of the hostile line, so as to throw the whole into confusion by breaking through it. For minute details the reader is referred to the account of the battle of Mantinea (Xen. Hell. vi. 5, § 22; comp. vi. 4, § 12). It seems from the description that the troops were drawn up in a form somewhat like a wedge.

Philip, king of Macedonia, is sometimes spoken of by Greek writers as the inventor of the phalanx. It is probable enough that he was the first to introduce that mode of organisation into the army of Macedonia, and that he made several improvements in its arms and arrangement, but the phalanx was certainly not invented by him. The spear (σάρισσα or σαρυς), with which the soldiers of the Macedonian phalanx were armed, was ordinarily 24 feet long; but the ordinary length was 21 feet (Polyb. xviii. 12; Aelian, Tact. 14), and the lines were arranged at such distances that the spear of the fifth rank projected three feet beyond the first, so that every man in the front rank was protected by five spears. The men in the ranks further back rested their spears on the shoulders of those in front of them, inclining them upwards, in which position they, to some extent at least, arrested the missiles that might be hurled by the enemy. Besides the spear they carried a short sword. The shield was very large and covered nearly the whole body, so that on favourable ground an impenetrable front was presented to the enemy. The soldiers were also defended by helmets, coats of mail, and greaves; so that any thing like rapid movement was impossible. When in dense battle array (πώνυκτας or πωνύκτης), three feet were allowed for each man, and in this position their shields touched (συναυσιωμα), Polyb. I. c.; Aelian, Tact. c. 11 gives six feet for each man in the ordinary arrangement, three feet for the πώνυκτας or dense battle array, and one and a half feet for the συναυσιωμα. On a march six feet were allowed for each man. The ordinary depth of the phalanx was sixteen, though depths of eight and of thirty-two are also mentioned. (Polyb. 1. c. comp. xii. 19—21.) Each file of sixteen was called λόγος. It is difficult to say what reliance is to be placed upon the subdivisions mentioned by the tacticians Aelian, &c. as connected with the phalanx of Philip, though they may have been usual in later times. According to them each higher division was the double of the one below it. Two lochi made a διλοχία; two διλοχίαι made a τετραχία, consisting of sixty-four men; two τετραχίαι made a τέτραχος, to which were attached five supernumeraries, a herald, an ensign, a trumpeter, a servant, and an officer to bring up the rear (οξερογός); two συνταγματα made a pentecosiaichiria, two of which made a χιλιαρχία, containing 1024 men; two χιλιαρχίαι made a τέτερος, and two τέτεροι made a phalanx, which in the narrower sense of the word, the normal number of which would before be 4096. It was commanded by a polemarch or strategus; four such bodies formed the larger phalanx, the normal number of which would be 16,384. Then drawn up, the two middle sections constituted what was termed the ἄμφωρα, the others being called κέρατα or wings. The phalanx soldiers in the army of Alexander amounted to 18,000, and were divided not into four but into six divisions, each named after a Macedonian province, from which it was to derive its recruits. These bodies are often called τάξεις than φαλάγγες by the historians, and their leaders tactiarchs or strategi. The phalanx of Antiochus consisted of 16,000 men, and was formed into ten divisions (μέρη) of 1600 each, arranged 50 broad and 32 deep (Appian, Syr. 32; Liv. xxi. 40). In the general principles of its arrangement and the modes of altering its form, the Macedonian phalanx resembled the Lacedaemonian, though the late tacticians do not always describe the movements by the same technical terms as Xenophon. The Macedonian phalanx, however, altered its form with great difficulty. If an attack on the flanks or rear was apprehended, a separate front was formed in that direction, if possible before the commencement of the fight. Such a double phalanx, with two fronts in opposite directions, was called φαλάγγα άμφωρομος. To guard against being taken in flank, the line was bent round, forming what was called the στόματος τάξεως. The cavalry or light troops were not unfrequently employed for this purpose, or to protect the rear (comp. Arrian, Anab. ii. 9, iii. 12; Polyb. xii. 21). Respecting the relative advantages and disadvantages of the Roman legion and the phalanx, there is an instructive passage in Polybius (xviii. 12, and comp. xii. 19, &c.). The phalanx, of course, became all but useless, if its ranks were broken. It required, therefore, level and open ground, so that its operations were restricted to very narrow limits; and being incapable of rapid movement, it became almost helpless in the face of an active enemy, unless accompanied by a sufficient number of cavalry and light troops.

The light-armed troops were arranged in files (άδύναοι) eight deep. Four lochi formed a σύνωνας, and then larger divisions were successively formed, each being the double of the one below it; the largest (called ἐπιτάγμα), consisting of 8192 men. The cavalry (according to Arrianus), were arranged in an analogous manner, the lowest division or squadron (Ὁν), containing 64 men, and the successive larger divisions being each the double of that below it; the highest (ἐπιτάγμα) containing 4096.

Both Philip and Alexander attached great importance to the cavalry, which, in their armies, consisted partly of Macedonians, and partly of Thessalians. The Macedonian horsemen were the flower of the young nobles. They amounted to about 1200 in number, forming eight squadrons, and, under the name έφαρμος, formed a sort of body-guard for the king. The Thessalian cavalry consisted chiefly of the elite of the wealthier class of the Thessalians, but included also a number of Greek youth from other states. There was also a guard of foot-soldiers (σπασισταλ), whom we find greatly distinguishing themselves in the campaigns of Alexander. They seem to be identical with the πέξεφλαρμος, of whom we find mention. They amounted to about 3000 men, arranged in six battalions (τάξεις). There was also a troop called Άγγυρασπίδες, from the silver with which their shields were ornamented. [Άγγυρασπίδες.] They seem to have been a species of peltaste. Alexander also organised a kind of troops called δυάναοι, who were something intermediate be-
tween cavalry and infantry, being designed to fight on horseback or on foot, as circumstances required.

It is in the time of Alexander the Great, that we first meet with artillery in the train of a Greek army. His balistae and catapetale were frequently employed with great effect, as, for instance, at the passage of the Jaxartes (Arrian. iv. 4. § 7). After the invasion of Asia also elephants began to be employed in connection with Grecian armies. (Müller, Doriains, book iii. c. 12; Wachsmuth, Hellenische Allerkunstden, book vi.; K. F. Hermann, Griech. Staatsalterth. § 29, 30, 152; Haeae in Erash and Gruber's Encyclop. art. Phalanx; Heeren's Reflections, &c. Ancient Greece, by Böckh's Public Economy of Athens, c. xxi. xxii.) [C. P. M.]

2. Roman. In the present article we shall attempt to present a view of the constitution of a Roman army at several remarkable epochs, and to point out in what respect the usages of one age differed most conspicuously from those of another, abstaining most carefully from those general statements which in many works upon antiquities are enunciated broadly, without reference to any specified time, as if they were applicable alike to the reigns of Trajan and of Hadrian, and to the reign of Valentinian, including the whole intermediate space within their wide sweep.

Our authorities will enable us to form a conception, more or less complete, of the organisation of a Roman army at five periods: —

1. At the establishment of the comitia centurionata by Servius.

2. About a century and a half after the expulsion of the kings.

3. During the wars of the younger Scipio, when the discipline of the troops was, perhaps, more perfect than at any previous or subsequent era; and here, fortunately, our information is most complete.

4. In the times of Marius, Sulla, and Julius Caesar.

5. A hundred and fifty years later, when the empire had reached its culminating point under Trajan and Hadrian.

Beyond this, we shall not seek to advance. After the death of M. Aurelius, we discern nought but disorder, decay, and disgrace; while an inquiry into the complicated arrangements introduced by Severus, supposed to be a portion of his lost history, which bore the name 'Aegeus, consisting of instructions for the order of march to be adopted by the force despatched against the Scythians, and for the precautions to be observed in marshalling the line of battle. This piece taken in connection with the essay of Hyginus, of which we have spoken under Casta, will assist us materially when we seek to form a distinct idea of the constitution of a Roman army in the early part of the second century. It is to notice the Latin "Scriptores de Re Militari," Frontinus, Modestus, and Vegetius. The Strategemata of the first, who lived under Vespasian, is merely a collection of anecdotes compiled without much care or nice discrimination, and presents very little that is available for our present purpose; the Libellus de Vocabulis Rei Militariae of the second, addressed to the emperor Tactitus, affords a considerable number of technical terms, but is in such a confused state, and so loaded with interpolations that we cannot gainsay the opinion of Hyginus, that the Rei Militaris Instituta of the third, dedicated to the younger Valentinian, is a formal treatise drawn up in an age when the ancient discipline of Rome was no longer known, or had, at least, fallen into desuetude; but the materials, we are assured by the author himself, were derived from sources the most pure, such as Cato the Censor, Cornelius Celsius, and the official regulations of the earlier emperors. Misled by these specious professions, and by the regularity displayed in the distribution of the different sections, many scholars have been induced to adopt the statements here embodied without hesitation, without even asking to what period they applied. But when the book is subjected to critical scrutiny, it will be found to be full of inconsistencies and contradictions, to mix up into one confused and heterogeneous mass the systems pursued at epochs the most remote from each other, and to exhibit a state of things which never did and never could have existed. Hence, if we are to consider it with little confidence, we must proceed with the utmost caution, and ought to accept the novelties which it offers, merely in illustration or confirmation of the testimony of others, without ever permitting them to weigh against more trustworthy witnesses.

But while the number of direct authorities is very limited, much knowledge may be obtained through a multitude of indirect channels. Not only do the narratives of the historians of Roman affairs abound in details relating to military operations, but there is a scarcely a Latin writer upon any topic, whether in prose or verse, whose pages are not filled with allusions to the science of war. The writings of the jurists also, inscriptions, medals, and monuments of art communicate much that is curious and important; but even after we have brought together and classified all these scattered notices, we shall have to regret that there are many things left in total darkness, and many upon which the assertions of different writers cannot by any dexterity be reconciled in a satisfactory manner. We shall endeavour to ex- pound in each case those views which are supported by the greatest amount of credible evidence,

minute practical exposition of the preliminary exercises by which the Roman cavalry were trained; to Arrian, likewise, we are indebted for a very interesting fragment entitled 'Aegeus, supposed to be a portion of his lost history, which bore the name 'Aegeus, consisting of instructions for the order of march to be adopted by the force despatched against the Scythians, and for the precautions to be observed in marshalling the line of battle. This piece taken in connection with the essay of Hyginus, of which we have spoken under Casta, will assist us materially when we seek to form a distinct idea of the constitution of a Roman army in the early part of the second century. It is to notice the Latin "Scriptores de Re Militari," Frontinus, Modestus, and Vegetius. The Strategemata of the first, who lived under Vespasian, is merely a collection of anecdotes compiled without much care or nice discrimination, and presents very little that is available for our present purpose; the Libellus de Vocabulis Rei Militariae of the second, addressed to the emperor Tactitus, affords a considerable number of technical terms, but is in such a confused state, and so loaded with interpolations that we cannot gainsay the opinion of Hyginus, that the Rei Militaris Instituta of the third, dedicated to the younger Valentinian, is a formal treatise drawn up in an age when the ancient discipline of Rome was no longer known, or had, at least, fallen into desuetude; but the materials, we are assured by the author himself, were derived from sources the most pure, such as Cato the Censor, Cornelius Celsius, and the official regulations of the earlier emperors. Misled by these specious professions, and by the regularity displayed in the distribution of the different sections, many scholars have been induced to adopt the statements here embodied without hesitation, without even asking to what period they applied. But when the book is subjected to critical scrutiny, it will be found to be full of inconsistencies and contradictions, to mix up into one confused and heterogeneous mass the systems pursued at epochs the most remote from each other, and to exhibit a state of things which never did and never could have existed. Hence, if we are to consider it with little confidence, we must proceed with the utmost caution, and ought to accept the novelties which it offers, merely in illustration or confirmation of the testimony of others, without ever permitting them to weigh against more trustworthy witnesses.

But while the number of direct authorities is very limited, much knowledge may be obtained through a multitude of indirect channels. Not only do the narratives of the historians of Roman affairs abound in details relating to military operations, but there is scarcely a Latin writer upon any topic, whether in prose or verse, whose pages are not filled with allusions to the science of war. The writings of the jurists also, inscriptions, medals, and monuments of art communicate much that is curious and important; but even after we have brought together and classified all these scattered notices, we shall have to regret that there are many things left in total darkness, and many upon which the assertions of different writers cannot by any dexterity be reconciled in a satisfactory manner. We shall endeavour to ex- pound in each case those views which are supported by the greatest amount of credible evidence,
without attempting to discuss the various points upon which controversies have arisen.

Among the writings of modern scholars we ought to notice specially the dialogues "De Militia Romana" by the learned and indefatigable Lipsius, in which the text of Polybius (vi. 19, 42), and a chapter in Livy (viii. 8) serve as a base for a great superstructure of illustration and supplementary matter; nor must we forget the "Polioretica" of the same author, which may be regarded as a continuation of the preceding. The posthumous dissertation of Salmusius "De Re militari Romanorum," which displays the deep reading of a man of the classics, of that celebrated critic, is well worthy of perusal, and will be found in the "Corpus Antiquitatum Romanarum" of Graevius, vol. x. p. 1284.

The same volume includes the admirable commentary of Sclclius on Hyginus, his notes on Polybius, together with essays on various topics connected with Roman warfare by Boecklers, Robertilius, Ergieus Putoans, M. A. Cauweis (De la Chaussee), Petrus Ramus, &c. A most elaborate series of papers by M. Le Beau is printed in the twenty-fifth and several following volumes of the "Memoires de l'Academie des Inscriptions et Belles Lettres," and although we are far from acquiescing in all the conclusions at which he arrives, it is impossible to deny that in so far as facts are concerned, he has almost exhausted every topic on which he has entered, and we cannot but lament that he should not have completed the design which he originally sketched out. We may consult with profit Folard's "Commentaire," attached to the French translation of Polybius, by the Benedictine Vincent Thuiller, 6 tomo. Amst. 1729; Guicheard, "Memoires Militaires sur les Grees et les Romains," 2 tomo. 4to, 1757; and "Memoires Critiques et Historiques sur Plusieurs Ponts et Antiquites Militaires," 4 tomo. 4to, Berlin et Paris, 1775; Vaudoncourt, "Histoire des Campagnes d'Hangibal en Italie," 3 tomo. 4to, Paris, 1812; Roy, "Military Antiquities of the Romans in Britain," fol. Lond. 1793; Nast, "Rissische Kriegsalturhumer," 8vo, Halle, 1782; Leder, "Uber die Thatict und das Kriegswesen der Griechen und Römer," 8vo. Kempt. 1787; Jeaurat, "De Republica Romana," tino. x. p. 1284. See below the remarks on the Cohns.

In the Scriptures of the New Testament, in Plutarch (e.g. Rom. 13, 20), and elsewhere, we meet with the Grecized word λεγειν, but the Greek writers upon Roman affairs for the most part employ some term borrowed from the literature as an equivalent; and since each considered himself at liberty to select that which he deemed most appropriate or which suggested itself at the moment, without reference to the practice of those who had gone before him, and without endeavouring to preserve uniformity even within the bounds of his own writings, we not only find a considerable variety of words used indiscriminately as representatives of Legio, but we find the same author using different words in different passages, and, what is still more perplexing, the same word which is used by one author for the legion as a whole is used by others to indicate some one or other of the subdivisions. The terms which we meet with most commonly are, στρατοσθενος, φαλαξες, ταγμα, τελος, less frequently στρατευμα and τεχος. Polybius in those chapters which are devoted exclusively to a description of the legion uniformly designates it by στρατοσθενος, which he sometimes applies to an army in general (e.g. ii. 73, 86), while by others it is usually employed to denote a camp (outra). Again Polybius gives a choice of the names for the upper o'νονης, or σνφης, and ταγμα, but of these the first is for the most part introduced by others as the translation of the Latin vexillum, the second almost uniformly as equivalent to cohorts, and the third, although of wide acceptation, is constantly the representative of λεγειν. Dionysius uses sometimes, especially in the earlier books of his history, φαλαξες (e. g. v. 67), sometimes ταγματα (e. g. vi. 45, ix. 10, 13), or στρατευτικα ταγματα (vi. 42), and his example is followed by Josephus (B. J. iii. 5, § 5; 6, § 2); Appian adopts τηλος (e. g. Annales, B. C. i. 76, 79, 96, iii. 45, 83, 92, iv. 115); Plutarch within the compass of a single sentence (M. Anton. 18) has both ταγματα and τελος; Dion Cassius, when speaking of the legions in contradistinction to the household troops, calls them in one passage τα πολιτικα στρατευτε (xxxviii. 47), in another ταιχη των εκ καταλογου στρατευτεων (iv. 24), and where no particular emphasis is required, we find στρατευμα (το δεκατον στρατευμα, xxxviii. 47, xl. 63), τεχος (το τεταρτον του οκτουβριου ταγματος, ixxx. 7), στρατευτεων (xxxviii. 46, xl. 63, 86), and στρατευτεων κε καταλογου (xl. 27 translated by battalion, division, detachment, nor any other term in ordinary use among modern tacticians. Ancient etymologists agree in deriving legio from legere to choose (Varr. L. v. § 87, vi. § 66. ed. Müller; Plut. Rom. 13; Non. Marc. i. s. o. legionum; Modest. de Vocab. R. M.; Isidor. Orig. ix. 3, § 46), and the name endured as long as the thing itself. Le Beau and others are mistaken when they asert that in Tacitus, and the writers who followed him, the word numeri is frequently substituted for legio, for it will be seen from the passages to which we give references below, that numeri is used to denote either the different corps of which a legion was composed, or a corps generally, without any allusion to the legion (Tac. Hist. i. 6, 87. Agric. 18, comp. Ann. ii. 80, Hist. ii. 69; Plin. Ep. iii. 8, x. 38; Vopisc. Prob. 14; Ulpian, in Dig. 3. tit. 3. s. 8. § 2; 29. tit. i. s. 43, &c. &c. See below the remarks on the Cohors).
EXERCITUS.

comp. xl. 18), whence the legionaries are styled δι' έκ του καταλογου στρατευματος (iv. 24, lli. 22, lnx. 2), or simply καταλεγμένοι (l. 25).

Neither Livy nor Dionysius notice the first establishment of the legion, but they both take for granted that it existed from the very foundation of the city, while Varro (L. L. x. § 89) and Plutarch (Rom. 13) expressly ascribe the institution to Romulus. The latter speaks of the band led by Romulus against Amulius as being divided into centuries (δύοινα υπάλληλοις εις εκατοσταί), giving at the same time the origin of the term maniple, and the former states that Romulus, to establish his legion, took 1000 men from each tribe.

Constitution of the Legion. The legion for many centuries was contested exclusively of Roman citizens. By the ordinances of Servius Tullius those alone who were enrolled in the five classes were eligible, and one of the greatest changes introduced by Marius was the admission of all orders of citizens, including the lowest, into the ranks. (Sall. Jug. 86; Plut. Mar. 9; Flor. iii. 1; Gell. xvi. 10.) Up to the year B.c. 107 no one was permitted to serve among the regular troops of the state except those who were regarded as possessing a strong personal interest in the stability of the commonwealth, but the principle having been at this period abandoned, the privilege was extended after the close of the Social War (B.C. 87) to nearly the whole of the free population of Italy, and by the famous edict of Caracalla (or perhaps of M. Aurelius), to the whole Roman world. Long before this, however, the legions were raised chiefly in the provinces, and hence are ranked by Hyginus among the provincialis militia (legiones quorum sunt militiae provincialis sedelissima). Even under Augustus, the youth of Latium, Umbria, Etruria, and the ancient colonies, served chiefly in the household troops (Tac. Ann. iv. 5), who for this reason are complimented by Otho as Italiae urbanae et vere Romanae iuventus (Tac. Hist. i. 84). But although the legions contained comparatively few native Italians, it does not appear that the admission of foreigners not subjects was ever practiced upon a large scale until the reign of the second Claudius (A.D. 269—270), who incorporated a large body of vanquished Goths, and of Probus (A.D. 276—282), who distributed 16,000 Germans among legionary and frontier battalions (numerus et limitaneis militibus, Vopisc. Prob. 14.). From this time forward what had originally been the leading characteristic of the legion was rapidly obliterated, so that under Diocletian, Constantine, and their successors, the best soldiers in the Roman armies were barbarians. The name Legion was still retained in the fifth century, since it appears in an edict addressed by the emperors Arcadius and Honorius to the prefect Romulianus (Cod. Justin. 12. tit. 36. a. 13) and also in the tract known as the Notitia Dignitatum Imperii (c. 59). It probably did not fall into total disuse until the epoch of Justinian's sway; but in the numerous ordinances of that prince with regard to military affairs nothing bears in any way upon the constitution of the legion, nor does the name occur in legal documents subsequent to the above-mentioned edict of Arcadius and Honorius.

There is yet another circumstance connected with the social position of the soldier to which it is very necessary to advert, if we desire to form a distinct idea of the changes gradually introduced into the Roman military system. The Roman armies for a long period consisted entirely of what we might term militia. Every citizen was, to a certain extent, trained to arms during a fixed period of his life; he was, at all times, liable to be called upon to serve; but the legion in which he was enrolled was disbanded as soon as the special service for which it had been levied, was performed; and although these calls were frequent in the early ages of the kingdom and the commonwealth, when the enemies of the republic were almost at the gates, yet a few months, or more frequently, a few weeks or even days, sufficed to decide the fortunes of the campaign. The Roman annalists assure us that a Roman army had never occupied in the field a longer time than three centuries after the foundation of the city, when the blockade of Veii required the constant presence of the besiegers. As the scene of action became by degrees farther removed from Latium, when southern Italy and Sicily were now the seat of war—when the existence of Rome was menaced by the Carthaginian invasion—when her armies were opposed to such leaders as Pyrrhus, Hamilcar, and Hannibal—it was, of course, impossible to leave the foe for a moment unwatched; and the exigencies of the state compelled the republic to send the same legions and the same soldiers should remain in activity for several years in succession. This protracted service became inevitable as the dominion of Rome extended over Greece and Asia, when the distances rendered frequent relief impracticable; but down to the very termination of the republic, the ancient principle was recognised, that when a campaign was concluded, the soldier was entitled to return home and to resume the occupation of his peaceful calling. It was a conviction that their leader had broken faith with them by commencing a new war against Tigranes, after the defeat of Mithridates, their proper and legitimate opponent, which induced the troops of Lucullus to mutiny, and compelled their leader to abandon his Armenian conquests. Hence, for upwards of seven centuries, there was no such thing as the military profession, and no man considered himself as a soldier in contradistinction to other callings. Every individual knew that he was bound as a citizen to be enrolled at certain periods of the year, to perform certain duties; but these duties were performed without distinction by all—at least by all whose stake in the prosperity of their country was considered sufficient to insure their zeal in defending it; and each man, when his share of this obligation was discharged, returned to take his place in society, and to pursue his ordinary avocations. The admission of the Capite Censi into the ranks, persons who, probably, found their condition as soldiers much superior to their position as civilians, and who could now cherish hopes of amazing wealth by plunder, or of rising to honour as officers, tended to create a numerous class disposed to devote themselves permanently to a military life as the only source from whence they could secure comfort and distinction. The long-continued operations of Caesar in Gaul, and the necessity imposed upon Pompeius of keeping up a large force as a check on his dreaded rival, contributed strongly to nourish this feeling, which was, at length, fully developed and confirmed by the civil broils which lasted for twenty years, and by the
practice first introduced upon a large scale, after the Mithridatic wars, of granting pensions for long service in the shape of donations of land. Hence, when Augustus in compliance, as we are told by Dion Cassius (iii. 27), with the advice of Mæcenas, determined to provide for the security of the distant provinces, and for tranquil submission at home by the establishment of a powerful standing army, he found the public mind in a great degree prepared for such a measure, and the distinction between soldier and civilian unknown, or at least not recognised before, became from this time forward as broadly marked as in the most pure military despotisms of ancient or modern times. In this place, we are required simply to call attention to the fact—it belongs to the philosophic historian to trace the results.

The numbering of the legions and their titles.
The legions were originally numbered according to the order in which they were raised. Thus in the early part of the second Punic war, we hear of the fourth legion (τὸ τέταρτον στρατόπεδον), being hard pressed by the Boii (Polyb. iii. 40); the tenth legion plays a conspicuous part in the history of Caesar as his favourite corps (Dion Cass. xlv. 13 ; Appian, B. C. iv. 115), and the Legio Quinta Alauda. [ALEUDA.]

Dion Cassius, who flourishes under Alexander Severus, tells us (Iv. 23) that the military establishment of Augustus consisted of twenty-three or twenty-five legions (we know from Tac. Ann. iv. 5, that twenty-five was the real number), of which nineteen still existed when he wrote, the rest having been destroyed, dispersed, or incorporated by Augustus or his successors in other legions. He gives the names of nineteen, and the localities where they were stationed in his own day, adding the designations of those which had been raised by subsequent emperors. This list has been considerably enlarged from inscriptions and other authorities, which supply also several additional titles. We give the catalogue as it stands in the pages of the historian, and refer those who desire more complete information to the collections of Roman Inscriptions by Gruter and Orelli, to the fifth book of the Comment. Remp. Rom. of Wolfgang Lazius, fol. Francf. 1598, and to Eckhel, Doctrina Numm. Vet. vol. vi. p. 56, vol. viii. p. 490. In the following table an asterisk is subjoined to the nineteen legions of Augustus, to the remainder the name of the prince by whom they were first levied; the epithets included within brackets are not given by Dion, but have been derived from various sources:

* The numbering of the legions and their titles.

List of the Legions in the Reign of Alexander Severus.
EXERCITUS.

On this we may remark—

1. That several legions bore the same number; thus there were four Firsts, five Seconds, and five Thirds.

2. The titles were derived from various circumstances; some indicated the deity under whose patronage the legions were placed, such as Minervia and Apollinaris; some the country in which they had been levied or recruited, as Italica, Macedonica, Gallica; some the scene of their most brilliant achievements, as Partica, Scythica; some the emperor under whom they had served or by whom they had been created, as Augusta, Flavia, Ulpia; some a special service, as Claudia Pontifex, applied to the 7th and 11th, which had remained true to their allegiance during the rebellion of Camillus, prefect of Dalmatia, in the reign of Claudius (Dion Cass. li. 15); some, the fact that another legion had been incorporated with them; at least, this is the explanation given by Dion Cassius of the epithet Gemini (Δίβους), and there seems little doubt that he is correct. (See Eckhel, vol. iv. p. 472.)

3. The same legions appear in certain cases to have been quartered in the same districts for centuries. Thus the Secunda Augusta, the Sexta Victor, and the Victa Victor, which were stationed in Britain when Dion drew up his statement, were there in the age of the Antonines, as we learn from Ptolemy (ii. 31), and the first of them as early as the reign of Claudius. (Tac. Hist. iii. 22, 24.)

4. The six legions of Augustus which had disappeared when Dion wrote, were probably the following, whose existence in the early years of the empire can be demonstrated: Prima Germania; Quarta Macedonica; Quinta Alauda; Nova Hispana; Decima Sexta Gallica; Vigesima Prima Rapax; besides these, it would seem that there was a second fifteenth and a twenty-second, both named Primaevicia, and one of these ought, perhaps, to be substituted for the second twentieth in the above table, since the words of Dion with regard to the latter are very obscure and apparently corrupt.

5. We find notices also of a Prima Macedonica Liberataria raised in Africa, after the death of Nero, by Clodius Macer; of a Decima Sexta Flavia Firma raised by Vespasian; and of a Vigesima Secunda Deiotariana, apparently originally a foreign corps, raised by Deiotarus, which, eventually, like the Alauda and the Flavia Firma, was commingled with provincial troops, and received the name and privileges of a Roman legion.

6. It will be seen that the numbers XVII., XVIII., XIX. are altogether wanting in the above lists. We know that the XVIII. and XIX. were two of the legions commanded by Varus, and hence it is probable that the XVII. was the third in that ill-fated host.

7. The total number of legions under Augustus was twenty-five, under Alexander Severus thirty-two, but during the civil wars the number was far greater. Thus, when the second triumvirate was formed, the forces of the confederates were calculated at forty-three legions, which, after the battle of Philippi, had dwindled down to twenty-eight (Appian, B. C. v. 6); but a few years afterwards, when war between Octavianus and M. Antonius was imminent, the former alone had upwards of forty legions, and his adversaries nearly the same. (Appian, B. C. v. 53.) In order that we may be able to form some idea of the magnitude of these and other armies, we must next consider

The number of foot soldiers in a Roman legion.—Although we can determine with tolerable certainty the number of soldiers who, at different periods, were contained in a legion, we must bear in mind that at no epoch does this number appear to have been absolutely fixed, but to have varied within moderate limits, especially when troops were required for some special or extraordinary service. The permanent changes may be referred to four epochs.

1. Under the Kings.—Varro (L. L. v. § 88) and Plutarch (Rom. 13), both of whom describe the first establishment of the legion, agree that under Romulus it contained 3000 foot soldiers. The words of Plutarch indeed, in a subsequent passage (Rom. 20), would, at first sight, appear to imply that after the junction with the Samnites the number was raised to 6000; but he must be understood to mean two legions, one from each nation. It is highly probable that some change may have been introduced by Servius Tullius, but, in so far as numbers are concerned, we have no evidence.

2. From the expulsion of the Kings until the second year of the second Punic War.—The regular number during this space of time may be fixed at 4000 or 4200 infantry. According to Dionysius (vi. 42) M. Valerius, the brother of Publicola, raised two legions (a. c. 292), each consisting of 4000, and Livy, in the first passage, where he specifies the numbers in the legions (vi. 22, a. c. 378), reckons them at 4000, and a few years afterwards (vii. 25, a. c. 346) he tells us that legions were raised each containing 4200 foot soldiers, and 300 horse.

The legion which possessed itself of Rhegium (a. c. 281—271) is described (Livy xxviii. 28) as having consisted of 4000, and we find the same number in the first year of the second Punic War (Livy xxii. 17, a. c. 218). Polybius, in like manner (i. 16), fixes the number at 4000 in the second year of the first Punic War (a. c. 263), and again in the first year of the second Punic War (iii. 72, a. c. 218). In the war against Veii, however, when the Romans put forth all their energies, according to Dionysius (ix. 13), an army was raised of 20,000 infantry and 1200 cavalry, divided into four legions; and, according to Polybius (ii. 24), in the war against the Gauls, which preceded the second Punic War, the legions of the consuls consisted of 5200 infantry, while those serving in Sicily and Tarentum contained 4200 only, a proof that the latter was the ordinary number.

3. From the second year of the second Punic War until the consulship of Marius.—During this interval the ordinary number may be fixed at 5000 to 5200. Polybius, indeed, in his treatise on Roman warfare, lays it down (vi. 20) that the legion consists of 4200 foot soldiers, and in cases of peculiar danger of 5000. However, the whole of the space we are now considering, was in fact a period of extraordinary exertion, and hence from the year a. c. 216, we shall scarcely find the number stated under 5000 (e. g. Polyb. iii. 107, Liv. xxxii. 36, xxvi. 28, xxxii. 39), and after the commencement of the Cilician war it seems to have been raised to 5200 (Livy xi. 1, 18, 36, xii. 9, but in xii. 21 it is again 5000). The two legions which passed over into Africa under Scipio (a. c. 204) contained each 6200 (Livy xxxiv. 24), those which served against Antiochus 5400 (Livy xxxvii. 39), those employed in the last Macedonian war 6000 (Livy xiii. 51, xiv. 21, comp. xiii. 12), but these were special cases.
EXERCITUS.

4. From the first consulship of Marius (b.c. 107) until the extinction of the legion. — For some centuries after Marius the numbers varied from 3000 to 6000, but his system in this respect was not immediately adopted, for in the army which Sulla led against Rome to destroy his rival, the six complete legions (ξεί τάγματα τέλεια) amounted to 30,000 men (Plut. Sall. 9, Mar. 35, but the text in the latter passage is doubtful). In the war against Mithridates again, the 30,000 men of Lucullus formed five legions (Appian. Mithr. 72). Comparing Plutarch (Cic. 360) with Cicero (ad Att. v. 15) we conclude that the two legions commanded by the latter in Cilicia contained each 6000. Caesar never specifies in his Commentaries the number of men in his legions, but we infer that the 13th did not contain more than 5000 (B. C. i. 7), while the two mentioned in the fifth book of the Gallic war (c. 48, 49) were evidently incomplete. In Appian, M. Antonius is represented as calculating the amount of 28 legions at upwards of 170,000 men, that is nearly 6100 to each legion, but the second (c. 49) of which he speaks is the one to which the words of Polybius, which represent, it is true, most uniformly, amid all the variations with regard to the cavalry, 300 horsemen set down as the regular complement (justas equitatus) of the legion.

Polybius, however, is at variance with these authorities, for although in his chapter upon Roman warfare (vi. 20) he gives 300 as the number, yet when he is detailing (iii. 107) the military preparations of the year B. c. 216, after having remarked that each legion contained 5000 infantry, he adds, that under ordinary circumstances it contained 4000 infantry and 200 cavalry, but that when passing emergencies it was increased to 5000 infantry and 300 cavalry, and this representation is confirmed by his review of the Roman forces at the time of the war against the Cisalpine Gauls (ii. 24). It is true that when narrating the events of the first Punic War, he in one place (i. 16) makes the legions to consist of 4000 infantry and 300 cavalry; and in the passage referred to above (ii. 24) the consular legions amounted to 5200 infantry and 300 cavalry, but both of these were pressing emergencies. The statements, therefore, of Polybius upon this point are directly at variance with those of Dionysius and Livy, and it does not seem possible to reconcile the discrepancy. There are two passages in the last-named historian which might appear to bear out the Greek (Livy. xii. 36, xiii. 31), but in the first he is evidently alluding to the asser tions of Polybius, and in the second the best editors agree in considering the text corrupt, and it should substitute duces pedites for dueci equites.

When troops were raised for a service which required special arrangements, the number of horsemen was sometimes increased beyond 300. Thus the legion despatched to Sardinia in B. c. 215 (Livy. xiii. 34) consisted of 5000 infantry and 400 cavalry, the same number of horsemen was attached to a legion sent to Spain in B. c. 180 under Tiberius Sempronius (Livy. xl. 30), and in B. c. 169 it was resolved that the legions in Spain should consist of 5000 infantry and 300 cavalry (Livy. xiii. 112), but in the war against Persians when the infantry of the legions was raised to 6000 the cavalry retained the ancient number of 300. (Livy. xiii. 31.) It must be observed that these remarks with regard to the cavalry apply only to the period before Marius; about that epoch the system appears to have undergone a very material change, which will be adverted to in the proper place.

We now proceed to consider the organisation of the legion at the five periods named above.

First Period. Servius Tullius. — The legion of Servius is so closely connected with the Comitia Centuriata that it has already been discussed in a former article [Comitia], and it is only necessary to repeat here that it was a phalanx equipped in the Greek fashion, the front ranks being furnished with a complete suit of armour, their weapons being long spears, and their chief defence the round Argolic shield (clipeus).

Second Period. The Great Latin War, B. c. 340.— Our sole authority is a single chapter in Livy (viii. 8), but it is equalled by few others in compressedness of information and compressed richness of information, and it is sufficiently intelligible, although tortured and elaborately corrupted by Lipsius and others, who were determined to force it into harmony with the words of Polybius, which represent, it is true, most accurately the state of a Roman army, but of a Roman army as it existed two centuries afterwards. According to the plain and obvious sense of the passage in question, the legion in the year B. c. 340 had thrown aside the arms and almost entirely discarded the tactics of the phalanx. It was now drawn up in three, or perhaps we ought to say, in five lines. The soldiers of the first line, called Hastati, consisted of youths in the first bloom of manhood (florem juvenum subsecenstein in militiam) distributed into fifteen companies or maniples (manipuli), a moderate space being left between each. The maniple contained sixty privates, two centurions (centuriones), and a standard bearer ( vexillarius); two thirds were heavily armed and bore the scutum or large oblong shield, the remainder carried only a spear (hastae) and light javelins (gemmae). The second line, the Principes, was com-
posed of men in the full vigour of life, divided in like manner into fifteen maniples, all heavily armed (scutati omnes), and distinguished by the splendour of their equipments (insignibus maximo armis). The two lines of the Hastati and Principes taken together amounted to thirty maniples and formed the Antepilani. The third line, the Triarii, composed of tried veterans (veteranum militem spectacum virtutis), was also in fifteen divisions, but each of these was triple, containing 3 manipuli, 180 privates, and 3 vexillarii. In these triple manipuli the veterans or triarii proper formed the front ranks; immediately behind them stood the Rorarii, inferior in age and prowess (minus roboris utetd factisque), while the Accensi or supernumeraries, less trustworthy than either (minimae fidctiae manum), were posted in the extreme rear. The battle array may be thus represented.

The fight was commenced by the Rorarii, so called because the light missiles which they sprinkled among the foe were like the drops which are the forerunners of the thunder shower (Festus s. v. Rorarios milites), who, running forward between the ranks of the antepilani, acted as tirailleurs; when they were driven in they returned to their station behind the triarii, and the battle began in earnest by the onset of the hastati; if they were unable to make any impression they retired between the ranks of the principes, who now advanced and bore the brunt of the combat, supported by the hastati, who had rallied in their rear.

If the principles also failed to make an impression, they retired through the openings between the maniples of the triarii, who up to this time had been crouched on the ground (hence called subsidiiarii), but now arose to make the last effort (whence the phrase rem ad triarios redisse). No longer retaining the open order of the two first lines, they closed up their ranks so as to present an unbroken line of heavy-armed veterans (veteranum militem spectacum virtutis), and distinguished by the splendour of their equipments (insignibus maximo armis), and were posted in the extreme rear. The battle array may be thus represented.

4725

In deference to a great name, we ought not to omit mentioning that Niebuhr (Hist. of Rome, vol. iii. p. 97), while he admits that the text of Livy is sound and consistent with itself, argues, we venture to think, somewhat unreasonably, that he did not understand his excellent materials, and although clear at first, became eventually completely bewildered and wrote nonsense.

Third Period. Polybius.—Polybius describes minutely the method pursued in raising the four legions, which under ordinary circumstances were levied yearly, two being assigned to each consul. It must be observed that a regular consular array (justus consularis exercitus) no longer consisted of Roman legions only, but as Italy became gradually subjugated, the various states under the dominion of Rome were bound to furnish a contingent, and the number of allies (socii) usually exceeded that of citizens. They were, however, kept perfectly distinct, both in the camp and in the battle field.

1. After the election of consuls was concluded, the first step was to choose the twenty-four chief officers of the legions, named tribuni militum, and by the Greek writers χαλιφροι. Of these, fourteen were selected from persons who had served five campaigns of one year (annua stipendia, έτυψιαυσίας στρατελέως) and were termed juniores (οι νεότεροι των χαλιφρων), the remaining ten (seniores, πρεσβυτέροι), from those who had served for ten campaigns. The manner of their election will be explained below, when we treat more particularly of the legimnary officers. (Polyb. vi. 19.)

2. All Roman citizens whose fortune was not rated under 4000 asses were eligible for military service from the age of manhood up to their forty-sixth year, and could be required to serve for twenty years if in the infantry, and for ten years, if in the cavalry. Those whose fortune was below the above sum were reserved for naval service, except in any case of great necessity, when they also might be called upon to serve for the regular period in the infantry.

The consuls having made proclamation of a day upon which all Roman citizens eligible for service must assemble in the Capitol, and these being in attendance at the time appointed in the presence of the consuls, the tribunes were divided into four
sections, according to the order of their election, in the following manner: — The four junior tribes were first elected, and the two senior tribes next elected were assigned to the first legion, the three juniors and the three seniors next in order to the second; the four juniors and the two seniors next in order to the third, the last three juniors and the last three seniors to the fourth legion. (Polyb. vi. 14.)

The tribes being thus distributed into four parties of six, those belonging to each legion seated themselves apart, and the tribes were summoned in succession by lot. The tribe whose lot came out first being called up, they picked out from it four youths as nearly matched as possible in age and form; out of these four, the tribes of the first legion chose one, the tribes of the second legion one of the remaining three; the tribes of the third legion, one of the remaining two, and the last fell to the fourth legion. Upon the next tribe being called up, the first choice was given to the tribes of the second legion, the second choice to those of the third, and the last man fell to the first legion. On the next tribe being called up, the tribes of the third legion had the first choice, and so on in succession, the object in view being that the four legions should be as nearly alike as possible, not in the number only, but in the quality of the soldiers. This process was continued until the ranks were complete, the regular number, according to Polybius in this passage, being 4200, but when any danger greater than usual was impending, 5000.

In ancient times, the cavalry were not chosen until after the infantry levy was concluded, but when Polybius wrote the cavalry were picked in the first place from the list on which they were enrolled by the censor according to their fortune, and 300 were apportioned to each legion. (Polyb. vi. 20.)

3. The levy being completed (ἐκτελεσθεὶσις τῆς καταγραφῆς), the tribes collected the men belonging to their respective legions, and making one individual stand out from the rest administered to him an oath (ἐξορκισμός) "that he would obey orders and execute to the best of his ability the command of his officers." (Sacramentum s. Jusjurandum militare, Cic. de Off. i. 11; Liv. xxii. 38; sacramento militis adiure s. rogare, Liv. vii. 11; sacramentum s. sacramento dicer, Fest. s. v.; Caes. B. C. i. 23; Liv. ii. 24, iv. 53; Gall. xvi. 4.) The rest of the soldiers then came forward one by one, and swore to do what the first had bound himself to perform. They were then dismissed, a day and place having been appointed where each legion was to assemble without arms. (Polyb. vi. 21; Caes. B. C. i. 76.) The words uttered by each soldier after the first were probably simply "I am in me," (see Fest. s. v. Praejuratio.)

4. At the same time the consuls gave notice to the magistrates of those towns in Italy in alliance with Rome, from whom they desired to receive a contingent, of the number which each would be required to furnish, and of the day and place of gathering. The allied cities levied their troops and administered the oath much in the same manner as the Romans, and then sent them forth after appointing a commander and a pay-master (δρμουτρι καὶ μυστηριός). [Socci.] (Polyb. vi. 21.)

5. The soldiers having again assembled, the men belonging to each legion were separated into four divisions; and here, we must remark in passing, that Polybius has fallen into a slight inconsistency, for while in the passage quoted above he fixes the number of the legion when he wrote, under ordinary circumstances, at 4200, in describing the arrangements which follow he supposes it to consist of 4000 only (vi. 21).

(1) One thousand of the youngest and poorest were set apart to form the Velites (Τροφοφόροι, Τροφοφόροι), or skirmishers of the legion.

(2) Twelve hundred who came next in age (or who were of the same age with the preceding but more wealthy — the words of Polybius are not very distinct) formed the Hastati (Πράγματες).

(3) Twelve hundred, consisting of those in the full vigour of manhood, formed the Principes (Πρύγκπεις).

(4) Six hundred, consisting of the oldest and most experienced, formed the Triarii (Τριάρεις). When the number of soldiers in the legion exceeded 4000, the first three divisions were increased proportionally, but the number of the Triarii remained always the same.

The equipment of these corps was as follows: — For defensive armour the Velites were furnished with a plain head-piece (Λεονταριοι), sometimes covered with the hide of a wolf (Αυκάρα) or any similar material, and a strong circular buckler (περίκρατος), three feet in diameter. Their offensive weapons were a sword (μαχαίρα), and the light javelin (hasta volitans — γράφοσ), the shaft of which (hastile — τό γκλάρ) was generally two cubits (δίπτυχος), that is, about three feet in length, and in thickness a finger's breadth (τῇ δὲ πάχῳ δυντυλίων), i. e. about 1.754 of an inch; the iron point a span in length (τῇ δὲ κέντρων σταθμίων), i. e. about nine inches, hammered out so fine that it was of necessity bent at the first cast, and therefore could not be hurled back by the enemy.

The Hastati wore a full suit of defensive armour (πανοπλία), consisting of shield, helmet, breast-plate, and greave. Their shield, termed Scutum (Σκυτός), was formed of two rectangular boards from four feet to four feet three inches long by two and a half feet broad, the one laid over the other, and united with strong glue; the outer surface was then covered with coarse canvas, and over this a calf's hide was stretched, and a curvature was given to the whole, the convexity being turned outwards. The upper and under edge was strengthened by an iron rim (σαρκοσαρκία χάλαμα), the former, that it might resist the downward stroke of a sword; the latter, that it might not be injured by resting upon the ground. In addition, it was still further fortified by an iron boss (σαρκός κόχυς), which served to render it more secure against blows from stones, against thrusts from the long pikes of the phalanx, and, in general, from all heavy missiles. [See a figure of the Scutum under that article.] One leg was protected by a greave (νάους — παρασκυτός), and the head by a bronze helmet (γαλέα — περικράτοια γαλέα), with a crest composed of three scarlet or black feathers, standing erect to the height of about eighteen inches, so that the casque added greatly to the apparent stature and imposing carriage of the soldier. The greater number of the Hastati wore in front of their breast a brass plate nine inches square, which was called the Heart-preserver (καρδιοσαφές); but those whose fortune exceeded
100,000 asses had complete cuirasses of chain-armour (loricae — ἀλυσινωτά χάλκης).

The offensive weapons of the Hastati consisted of a sword and heavy javelins. The sword, which was girded on the right side, had a strong straight blade, double-edged, and sharp-pointed, being thus calculated both for cutting and thrusting. It was called a Spanish sword (μαχαίρα ἔθνητου), in contradistinction to the Gaulish sword, which was a cutting sword only. Each man carried in his hand two of those heavy missiles, called pilae by the Latins, ὀστοῖ by the Greeks, which may be regarded as the characteristic weapon of the Roman infantry. The shaft of these was in every case four and a half feet (three cubits) long, and the barbed iron head was of the same length, but this extended half way down the shaft to which it was attached with extreme care (Polyb. vi. 23), so that the whole length of the weapon was about six feet nine inches. The shaft varied both in form and thickness—in form it was sometimes cylindrical, sometimes quadrangular—in the heaviest, the diameter of the cylinder or the breadth across one of the flat sides was about three inches (παλαιστιαίων ἔξωτοι, τὴν διάμετρον).

The equipment of the Princes and the Triarii was in every respect the same with that of the Hastati, except that the latter carried pikes (hastæ — δόπαρα) instead of pilae. (Polyb. vi. 21, 22, 23. For more minute information with regard to the different parts of the equipment, consult: QALEA, HASTA, LORICA, SCUTUM, PARMA, &c.)

We may remark, in passing, that in addition to his armour and weapons the legionary, when in marching order, usually carried provisions for a fortnight at least, and three or four stakes, used in forming the palisade of the camp, besides various tools, an enumeration of which will be found in Josephus. (B. J. iii. 5 § 5.)

The Roman writers frequently allude with pride to the powers of endurance exhibited by their countrymen in supporting with ease such overwhelming loads; and Polybius draws a contrast between the Italian and the Greek soldier in this respect little favourable to the energy of the latter. (See Cic. Tuscul. ii. 16., which is the locus classicus; Polyb. xviii. 1; comp. Veget. i. 19; from Liv. Epit. ivii. it appears that Scipio trained his men to carry food for thirty days, and seven stakes each — double the usual burden.)

6. The Hastati, Princes, and Triarii were each divided into ten companies called Maniples, to which Polybius gives, as equivalents, the three terms τάρμα, στρατιά, συμπλήρωμα. The Velites were not divided into companies, but were distributed equally among the Hastati, Princes, and Triarii.

7. Before the division of the three classes into maniples, officers were appointed inferior to the tribunes. Thirty men were chosen by lot, ten from the Hastati, ten from the Princes, and ten from the Triarii; and this first choice being completed, thirty more in like manner. These sixty officers, of whom twenty were assigned to each of the three classes, and distributed equally among the maniples, were named Centuriones, or ordinarii, centuriones, or ordinariorum conductores (κατηθαυματες, τάξισθαυματες), and each of the sixty chose for himself a lieutenant (optio), who, being posted in the rear of the company while the centurion was at the head, was named obparyos (i.e. Tergiuductor) by the Greeks, so that in each maniple there were two centurions and two op-
cular difficulty and danger it was augmented to 5000 infantry and 300 cavalry, adds distinctly that the allies supplied a force of infantry equal to that of the legions and generally thrice as many cavalry (τῶν δὲ αὐτοκράτων, τὸ μὲν τῶν πείσων πλῆθος πάροικοι τοις Ῥωμαϊκοῖς στρατοπέδοις, τὸ δὲ τῶν πτερών ὡς εἴπεται τριπλάσιον). When treating more formally of the same subject (vi.26) he repeats the above observation in nearly the same words, but when he came to τὸ δὲ τῶν πτερών τριπλάσιον, many of the MSS. present διπλάσιον; and a little further on (vi.30), in the passage where he explains the manner in which the troops were quartered in a camp, his expressions, when interpreted according to their natural meaning and their connection with the preceding clause, must signify that the total number of the allied cavalry was double that of the Romans, and not, as the Latin translation attached to the edition of Schweighaeuser has it, double that of the Romans after deducting one-third for the extraordinary equites. Livy, when referring to the position of affairs between the Romans and their allies before the great Latin war in B.C. 340, after specifying the ordinary strength of the Roman armies, adds (viii. 9) "alterum tantum ex Latino socium Latini nominis, quantus semper numerus, et socii duplicem numerum equitum darent." When recounting the preparations for the campaign of Caius Cottius, although he appears to allude directly to the narrative of Polybius and to copy his words, he contradicts him directly with regard to the allied cavalry (xxii. 36), "socii duplicem numerum equitum darent." At a somewhat later period (n. c. 189), when four legions were raised, the socii were required to contribute 15,000 infantry and 1200 cavalry (xxxxviii. 35), and nine years afterwards the consuls were ordered to levy a new army of four legions "et socium Latini nominis, quod immixtis etiam jumentis incedit, ut quod sine jun
temis incredit, sed inter se densum est, quo facili
mus per iniquiora loca tramitterat," has not been understood by some modern editors. Polybius, himself a soldier, should have understood the expression "columns bristling with spears." Polybius being our most copious and pure source of information, before passing on to the fourth period, it may be fitting to enter more fully upon certain topics which he has either touched very lightly or passed over in silence. We shall, therefore, make a few remarks: — 1. On the levying of the army. The Extraordinarii led the van followed by the right wing of the infantry of the allies and the baggage of these two divisions; next came one of the Roman legions with its baggage following; next the other Roman legion with its own baggage, and that of the left wing of the allies, who brought up the rear. The different corps of cavalry sometimes followed immediately behind the infantry to which they were attached, sometimes rode on the flanks of the beasts of burden, at once protecting them and preventing them from straggling. If there was any apprehension of an attack from behind, the only change in the above order consisted in making the Extraordinarii bring up the rear instead of leading the van. As far as the position of the two legions with regard to each other, and also of the two wings of the allies, was concerned, it was understood that the legion and the wing which took the lead upon one day should fall behind upon the next day, in order that each in turn might have the advantage of arriving first at the watering places and fresh pastures. When marching in open ground where an attack on the flanks was anticipated, a different disposition was sometimes adopted. The Hastati, Principes, and Triarii marched in three columns parallel to each other, the baggage of the first maniples took the lead, the baggage of the second maniples was placed between the first and second maniples, and so on for the rest, the baggage in each case preceding the maniples to which it belonged. If an attack was made then the soldiers wheeling either to the right or to the left, according to circumstances, and advancing at the same time a few paces in a perfectly unhesitating movement presented at once an even front to the enemy, the whole of the baggage being now in the rear.

Generally, when advancing through a country which was not too campaign, and of the battle array of the Roman armies, he promises an account of the order of march, of the Labienus, and to the edition of Polybius, himself a soldier, should have understood the expression "columns bristling with spears." Polybius being our most copious and pure source of information, before passing on to the fourth period, it may be fitting to enter more fully upon certain topics which he has either touched very lightly or passed over in silence. We shall, therefore, make a few remarks: — 1. On the levying of the army. The Extraordinarii led the van followed by the right wing of the infantry of the allies and the baggage of these two divisions; next came one of the Roman legions with its baggage following; next the other Roman legion with its own baggage, and that of the left wing of the allies, who brought up the rear. The different corps of cavalry sometimes followed immediately behind the infantry to which they were attached, sometimes rode on the flanks of the beasts of burden, at once protecting them and preventing them from straggling. If there was any apprehension of an attack from behind, the only change in the above order consisted in making the Extraordinarii bring up the rear instead of leading the van. As far as the position of the two legions with regard to each other, and also of the two wings of the allies, was concerned, it was understood that the legion and the wing which took the lead upon one day should fall behind upon the next day, in order that each in turn might have the advantage of arriving first at the watering places and fresh pastures. When marching in open ground where an attack on the flanks was anticipated, a different disposition was sometimes adopted. The Hastati, Principes, and Triarii marched in three columns parallel to each other, the baggage of the first maniples took the lead, the baggage of the second maniples was placed between the first and second maniples, and so on for the rest, the baggage in each case preceding the maniples to which it belonged. If an attack was made then the soldiers wheeling either to the right or to the left, according to circumstances, and advancing at the same time a few paces in a perfectly unhesitating movement presented at once an even front to the enemy, the whole of the baggage being now in the rear.
a deeree of the senate “ne vacationes valerent,” and hence in the case of a Gallic war, we read that Aemilius Mamercinus, then consul, was instructed “acribere exercitum sine ulla vacationis venia” (Liv. viii. 20), and one of the measures urged by Cicero upon the senate in the contest with Antonius was “delecturum haberi sublatis vacationibus” (Philipp. v. 12). So, also, if the soldier, after being enrolled, failed to appear at the place of muster appointed by the consul, his absence might be justified by various “excausations,” a list of which will be found in Gallius (xvi. 4), the most important being severe bodily ailment (morbus soticon); the death of a near relation (funus familiaris); the obligation of performing a stated sacrifice (sacrificium anniversarium), or some other religious impediment.

While those who had served for the stipulated period were entitled to immunity for the future, even although within the legal age, and were styled Emeriti, so on the other hand, it appears from some passages in the classics, that persons who had not insisted upon their regular term within the usual limits, might be forced, if required, to serve between the ages of forty-five and fifty (Liv. xxv. 5). Towards the close of the republic, and under the empire, when the legions became permanent, the soldier who had served his full time received a regular discharge (missio) together with a bounty (praemium) in money or an allotment of land. The jurists distinguish three kinds of discharge: — 1. Missio honesta, granted for length of service. 2. Missio causarum, in consequence of bad health. 3. Missio Ignominiosa, when a man was drummed out for bad conduct (Macer in Dig. 49. tit. 16. s. 13; Ulpian in Dig. 3. tit. 2. s. 2, comp. Hist. B. C. 54.; Suet. Jul. 69, Octav. 24). It frequently happened that emeriti were induced to continue in the ranks, either from attachment to the person of the general or from hopes of profit or promotion (Appian. B. C. v. 3), and were then called veterani, or when they joined an army, in consequence of a special invitation evocati (evocati) of the veterans of Julius Caesar to aid him against Antonius, but we read of them at an earlier period (Caesar. B. G. vii. 65, B. C. i. 17, iii. 93.) [Evocati]. They must in no way be confounded with the volunteers mentioned by Polybius in a description of a Roman camp (tives των ἑθελοντῶν σπαστεινέον τη τῶν ἱππῶν ἱπτερίς), who seem to have formed part of what may be termed the personal suite of the general. (Comp. Sallust. Jug. 84.) We shall make some further remarks upon the Veterani and the changes introduced by Augustus with regard to the term of service, when we speak of the vexillarii, in our fifth period.

2. We next proceed to consider the division of the legion into Cohortes, Maniples, Centuriae, Signa, Ordines, Contubernia. Cohortes.—It will be observed that Polybius takes no notice of the Cohort, a division of the legion mentioned so often in the Roman writers. Hence Salmesius and other distinguished scholars have supposed that the cohort had no existence until the time of Marius, and although named by Livy almost immediately after the expulsion of
EXERCITUS.
the rest; and this was certainly the case under the
counting from 1 to 10, the centurion of the first
under the limits of 300 and 600. They were regularly
legions, and thus at different periods ranged between
Cincius, when he uses the expression
the same chapter when he uses the expression
sent for so as the representative of
cohorts. Hence considerable confusion
is apt to arise; and Livy has rendered his de-
scription of the order in which Scipio marshalled
his army at Zama unintelligible by translating τας
στειρας in the text of Polybius by cohortes instead
of manipulos (Livy. xxx. 33; Polyb. xv. 9) ; while
Polybius himself is guilty of an inconsistency in the
same chapter when he uses the expression παρά Ρωμαίους στειρεσ... where it must be borne
in mind that Polybius uses the words στειρα, σημαία, and στειρα indifferently, to denote the
maniple. On the other hand, the later Greek
writers generally designate the maniple by Λέχες,
and almost invariably employ στειρα as the repre-
sentative of cohors. Hence there are two
meanings of the word cohors. In its original
sense of the Latin word cohors, it signified the
army in Zama un intelligible by translating τας
στειρας in the text of Polybius by cohortes instead
of manipulos (Livy. xxx. 33; Polyb. xv. 9) ; while
Polybius himself uses the Latin word
cohors. On the other hand, the later Greek
writers generally designate the maniple by Λέχες,
and almost invariably employ στειρα as the repre-
sentative of cohors. Hence there are two
meanings of the word cohors. In its original
sense of the Latin word cohors, it signified the
army in Zama un intelligible by translating τας
στειρας in the text of Polybius by cohortes instead
of manipulos (Livy. xxx. 33; Polyb. xv. 9) ; while
Polybius himself uses the Latin word

When the soldiers of the legion were classified
as Velites, Hastati, Principes and Triarii, the co-
hort contained one maniple of each of the three latter
denominations, together with their complement of
Velites, so that when the legion contained 4000,
each cohort would consist of 60 Triarii, 120
Principes, 120 Hastati, and 100 Velites, in all
400 men.
The number of cohorts in a legion being always
ten (Cincius, i.e. ; Cic. Philop. iv. 27; the words
of Isidor. Orig. ix. 3. § 47, are evidently corrupt),
and the cohorts during the republic, being all
equal to each other, the strength of the cohort
varied from time to time with the strength of the
legion, and thus at different periods ranged between
the limits of 300 and 600. They were regularly
numbered from 1 to 10, the centurion of the first
century of the first maniple of the first cohort
was the guardian of the eagle, and hence the first
cohort seems always to have been regarded as
superior in dignity to the rest. (Caes. B. C. iii. 64,
Cic. ad Att. v. 26.) From some expressions in the
description given by Caesar of the battle of Pharsal,
if has been inferred that even then the first
cohorts in the legions were more numerous than
the rest; and this was certainly the case under the
empire, when they were termed cohortes milliariae,
and contained twice as many soldiers as the others.
Thus the legion described by Hyginus amounted
to 5280 men, divided into ten cohorts; and of
these, the first, which had the charge of the eagle,
consisted of 960 men, while the remaining nine
had 480 each.
The word cohors lasted as long as the word le-
gion, and even longer, for not only does Ammians
xxx. 13, xxxii. 5 speak of centuries and cohorts
in the army of Julian, but cohors, as a military
term, is met with in authors after Justinian. But
although cohors is found occasionally in the writ-
ers of the later empire, they for the most part
prefer the somewhat vague term numeri, which
appears in Tacitus and Suetonius, and perhaps
even in Cicero (ad Fam. xi. 10, xii. 13). Numeri
seems to have signified strictly the muster roll,
whence the phrases referre in numeros, distribuire
in numeros (Plin. Ep. iii. 8, xii. 30, 31), and they
were served to denote any body of legionaries.
In the Digest and the two Codes it is used sometimes
for a century, sometimes for a cohort; but Suetonius
(Varas. 6) for a detachment selected from three
different legions. Nor is it absolutely restricted to
legionaries, for we read in inscriptions of Numerus
Britonum (Orell. 1627), Numeri Dalmatarum
Grut. dxxviii.; Orell. 3410), while Ammianus
applies it to cavalry as well as infantry, and to
auxiliaries as well as legionaries (xxii. 2). In
like manner the later Greeks introduced ἄρπαχο
or νουμεποι for cohors, the former being the ex-
planation given by St. Chrysostom in his exposition
of the tenth chapter of the Acts for the word
στειρας, while Suidas interprets στειρας by νοῦ-
μερα.
Whenever Cohors occurs in the Latin classics in
connection with the legion, it always signifies a
specific division of the legion; but it is very fre-
quently found, in the general sense of battalion,
to denote troops altogether distinct from the
legion. Thus in Livy (iv. 39) it is applied to a body
of dismounted cavalry, to the force of the allies
(alariae cohortes, x. 40, 41; cohors Poligna, xxv.
14; cohortem Mavarius, xxxix. 36), to the
troops of an enemy (vii. 7, x. 40, xxx. 38), with
various other modifications; and we shall be
called upon to speak under our fifth period of
Cohortes praetorianae, Cohortes pediatae, Cohortes equitatae,
and several others.
Manipulus.—The original meaning of this word,
which is clearly derived from manus, was a hand-
ful or wisp of hay, straw, fern, or the like,
and this, according to Roman tradition, affixed to the end
of a pole, formed the primitive military standard in
the days of Romulus —

Pertica suspenso portabat longa maniplio
Unde maniplaria nominis miles habet.

(Ovid. Fast. iii. 117; compare Plut. Rom. 8).
Hence it was applied to a body of soldiers serving
under the same ensign (see Varr. L. L. v. 8, vi. 85,
who connects it in this sense directly with manus):
when the ponderous mass of the phalanx was re-
solved into small companies marshalled in open
order, these were termed manipuli, and down to a
very late period the common soldiers of the legion
were designated as manipulares or manipolarii,
terms equivalent to gregarii militis. By whom
this momentous innovation upon the tactics of a
Roman army was first introduced, it is impossible
to determine with certainty; but from the remark
of Livy (viii. 8), that a change in the equipment
of the heavy-armed soldier was made at the
period when they began to receive pay, compared
with the words of Plutarch (Camill. 40), we may
conjecture that the revolution was brought about
in part at least by the greatest general of whom
the infant republic could boast — Camillus. When
the phalanx was first broken up, it ap-
pears (Liv. viii. 8) that each of the three classes
of Hastati, Principes, and Triarii, contained fif-
teen manipules; but before the second Punic war
(see Cincius, as quoted by Gell. above) the nu-
mer of manipules in each of these classes was re-
duced to ten, as stated by Polybius. Hence it is easy to calculate the number of soldiers in each maniple, according to the varying numbers in the legion, it being always borne in mind that the Triarii never exceeded 600, and that the Velites were not divided into maniples, but distributed equally among the heavy-armed companies.

Some writers, especially Le Beau, in his "Mémoires" on the Legion, maintain that, after the distinctions between the Hastati, Principes and Triarii were abolished, and the legion was marshalled in cohorts, the division into maniples was no longer practised, and that the term manipulus must from this time be understood to indicate either a small number of men indefinitely, or a mass of ten soldiers quartered in the same tent. No one, however, who reads without prejudice the words of Caesar "ado ut pauci mutatis centurionibus, idem ordines, manipulique constarent" (B. C. ii. 28, comp. B. G. ii. 25, vi. 33), and of Tacitus, "assistentem concionem quia permixta videbatur discedere in manipulos jubet" (Ann. i. 34), together with the still more explicit expressions of Ammianus, "omnes centurias et manipulos et cohorts in concionem convocabat" (Liv. xxxiii. 1.), the centurions upon which Le Beau himself bestows so much labour and ingenuity is unintelligible upon any other supposition. At the same time it cannot be denied that manipulus must sometimes be taken in a general sense, as when Tacitus gives

---

**EXERCITUS.**

3. Hastati, Principes, Triarii, Pilani, Antipilani, Antesignani, Principia. — No reasonable doubt can exist that the Hastati were so called, from having been armed with a *hasta* (Hastati dicti qui primi hastis pugnavant, Var. L. L. v. 39), the Principes from having occupied the front line (the etymology of Varro, l. c. is here not distinct, Principes qui a principi gladiis), the Triarii, otherwise named Pilani, from having been ranged behind the first two lines as a body of reserve and armed with the *pilum* (Pilani, qui pilis . . . Pilani Triarii quoque dicti quod in acte terto ordine extremis subsidio dopomembatur; quod hi subsidabant, ab eo subsidium dictum, a quo Plautus, Agile nunc subsidite omnes quasi solent triarii, Varr. l. c.; comp. Liv. viii. 8), while the first two lines were termed collectively Antipilani, from standing in front of the Pilani. In the course of time, it came to pass, that these designations no longer expressed the actual condition of the troops to which they were attached. When Polybius wrote, and long before that period, the Hastati were not armed with *hastae*, but in common with the Principes bore the heavy *pilum*; on the other hand, the *pilani* carried *hastae* and not *pila*, while the Principes were not drawn up in the front, but formed the second line. The origin of this discrepancy between the names and the objects which they represented, is somewhat obscure, but perhaps not altogether beyond the reach of a very simple conjecture. The names were first bestowed when the Roman army was disciplined according to the tactics of the Macedonian phalanx. At that time the hastati were the skirmishers armed with a light javelin (the *hasta velitaris*), who were thrown forward in advance of the main body, and it is with reference to their ancient duty that Ennius in the eighth book of his annals uses an expression no longer applicable in his day.

"Hastatae spargunt hastas, fit ferreus imber."
EXERCITUS.

In corroboration of this, it will be seen from the celebrated chapter in Livy (viiii, 8), which we have discussed at length above, that after the open order had been established, and the majority of the hastati had become hoplites (scutati), one-third of the men in each manipule were equipped as light troops "manipulus levibus vienonas miltias . . . levess autem, qui hastam tantum gansaque gerrent." The Principes were the front ranks of the phalanx, men in the full vigour of their years and strength, clad in complete defensive armour, and hence distinguished by Livy (l.c.) as "insignibus maxime armatis." The Pilani were in the rear of the phalanx, and as the opposing hosts approached each other, before they were required to give weight and momentum to the mass, threw the heavy pilum over the heads of their comrades, in order to break, if possible, the continuity of the enemy's line.

Vegetius uniformly places the Principes in front (i. 20, ii. 2, 15, iii. 14), and it is only necessary to read the sentences in which they are mentioned, to perceive how hopeless is the confusion which pervades his statements.

Antesignani.—While the Hastati and Principes, taken together, were sometimes termed Antepilani, in contradistinction to the Triarii, so the Hastati alone were sometimes termed Antesignani, in contradistinction to the Principes and Triarii taken together. That the Antesignani were the soldiers who fought in the front ranks, is manifest from almost every passage in which the word is found (e.g. Liv. ii. 20, vii. 33); that they were so called from being placed before the standards, is proved by the description of the confusion which prevailed in the engagement at the Tresymene lake. "Non in sui praecordia, sed in præcipue hastatisq; praecordia, nec ut pro signis antesignani, post signa cadunt antesignani, et ne nudentur pro signis antesignani," (Livy. xxx. 33, who here translates Polybius) ; and from these two quotations, it is evident that the Antesignani were the very best soldiers, who now led the van. Comp. Varro, L. L. viii. 57, whose method of fighting has been described above (p. 493). The Accessi, as described by Livy (viiii, 8), were inferior in equipment to the roarii, although employed in a similar manner, and seem to have been camp followers or servants (Accessiti ministratores, Accessiti ministrati,VICES, ceteri servuli). The term is twice explained by Vegetius (Hist. i. 70, iv. 33) to be the same with the Veitarii, who fall under our next period.

Rorarii, Accessi, Ferentarii, Jaculatores, Velites, Prouditores.

Light-armed troops (levis armatura) were, from the first, associated with the hoplites, but under different circumstances and different names, at different periods.

When the Hastati had, in a great measure, ceased to act as tirailleurs, their place was supplied by the Rorarii (RORARI De ab ore, qui committent bellum ante, ideo quod ante rorat quam pluit, Varro, L. L. viii. 57), whose method of fighting has been described above (p. 453). The Accessi, as described by Livy (viiii, 8), were inferior in equipment to the rorarii, although employed in a similar manner, and seem to have been camp followers or servants (Accessiti ministratores Umb. eone servuli, Varro, L. c. et ap. Non. Marcell. s. v. accessi), and hence the name is given to those also who attended upon magistrates or other officials (e.g. Cic. ad Fam. iii. 7, ad Q. Fr. i. 1. § 4, 7). At a later period the accessi were supernumeraries, who served to fill up any vacancies which occurred in the course of a campaign (Accessi diebantur qui in locum mortuorum militum subito subrogabant, fast. s. c.), persons to whom Varro gives the name of adscriptorius (quad. eum adscriptorius ianuarius, armatius militiae qui succurrent, L. L. viii. § 56); and, according to Festus (p. 198, ed. Müller), accessus was the name given, originally, to the optio or lieutenant of the centurion, a fact to which the Pseudo-Asconius, perhaps, refers, when he says (in verr. ii. 23), "Accessus nomen est ordinis et promotionis in militia, ut nunc dicitur principes, vel commentarienis aut cornicularis. Hac enim nomina de legionaria militia sumpta sunt."

Another ancient term for light-armed soldiers was Ferentarii, a word found in the Trinummu of Plinius (ii. 4. 33), where ferentarii amicus signifies a friend nimble and prompt to lend assistance; in Sallust (Catil. 60), "Postquom co ventum est, unde ferentariis procliam commissi posset;" and even in Tacitus (Ann. xii. 35), "ferentarius gravisque miles." The term is twice explained by Varro, who, in his treatise De Vita Populi Romani, after defining accessi, adds (ap. Non. Marcell. s. v. Decurio), "Eosdem etiam quidam vocabant ferentariis qui depugnabant pugnis et lapidibus, armatis militibus qui succurrent." When the Hastati had, in a great measure, ceased to act as tirailleurs, their place was supplied by the Rorarii (RORARI De ab ore, qui committent bellum ante, ideo quod ante rorat quam pluit, Varro, L. L. viii. 57), whose method of fighting has been described above (p. 493). The Accessi, as described by Livy (viiii, 8), were inferior in equipment to the rorarii, although employed in a similar manner, and seem to have been camp followers or servants (Accessiti ministratores Umb. eone servuli). The term is twice explained by Vegetius (Hist. i. 70, iv. 33) to be the same with the Veitarii, who fall under our next period.

Ubi rorarii estis? en sunt. Ubi sunt accensi? Rorarii velox occurs twice in the fragments of Lucullus; and even Symmachus, in one of his
epistles (viii. 47), draws an illustration from this source "tamquam levis armaturae miles Rorarios anemularis."

The Velites, called also Procubitores, because they were employed on outpost duty when the Romans were encamped before an enemy (Festus, s. v.), were first formed into a corps at the siege of Capua, B.C. 211, as we are informed by Livy (xxvi. 4, comp. xxxvii. 21, and Val. Max. ii. 3; Frontin. iv. 7), who gives a minute description of the circumstances which led to their institution, and of the manner in which they were armed. It is true that the historian uses the term Velites before the epoch in question (e. g. xxi. 58, xxiv. 34); and Polybius, in like manner, speaks of γραπτούμενον from the time of the first Punic war; but these expressions must be understood to indicate the light-armed troops as they then existed, and which, after the name Rorarii fell into disuse, were styled juculatoris or πεζανοικάτωτα. We must not conclude from the narrative of Livy, that it was customary for the Velites to mount behind the cavalry; on the contrary, the above passage is, it must not conclude from the narrative of Livy, that it was customary for the Velites to mount behind the cavalry; on the contrary, the above passage is, in later times, it was by no means uncommon for light-armed troops to mingle with the horsemen, to keep pace with them, and to support them in their operations (Caesar, B. G. i. 48, viii. 19, B. C. iii. 84; Sall. Aug. 91).

The foreign light-armed troops will be noticed under the next epoch.

The Officers of the Legion.

Tribuni. — The chief officers of the legion were the Tribuni Militum, rendered by the Greeks χιταβροχαί. Tribunus is, unquestionably, derived from tribus; and, according to Varro (J. L. v. § 81), in ancient times three were sent to the army, — one from the Ramnes; one from the Luceres; one from the Titii, — who would then be the commanders of the original legion of 3000.

In the time of Polybius, the number in each legion was six; but when and under what circumstances this increase took place, is unknown. Two passages from Livy (vii. 5, ix. 30), to be more particularly adverted to in which Sycinus endeavoured to throw light upon the question, admit of an interpretation totally different from that which he has assigned to them, and they leave the matter altogether in doubt. After the number six was once established, it does not appear to have varied for many centuries, nor do we know what changes were introduced, in this respect, during the decline of the empire. The case in Livy (xlii. 35), where four military tribunes are represented to have been chosen from the senate to command four legions, supposing the text to be faultless, is manifestly quite special.

It must be understood that the authority of each tribune was not confined to a particular portion of the legion, but extended equally over the whole. In order, however, to prevent confusion and collision, it was the practice (Polyb. vi.) for the tribunes to divide themselves into three sections of two, and each pair undertook the routine functions for two months out of the six, during which active operations in the field usually lasted. (Comp. Liv. xl. 41, "Secundae legionis Fulvius tribunus militum cent, is secundas in eundem legionem.")

In addition to the duties specified by Polybius, and already detailed under Caesar, and to the superintendence which they must have exercised, we perceive that they nominated the centurions, and assigned to each the company which he was to command. They presided also at courts-martial, and had the power of awarding the highest punishments.

Up to the year B.C. 361, the tribunes were chosen by the commanders-in-chief, that is, by the kings in the first instance, and afterwards by the consuls, or a dictator, as the case might be. In the year above named the people assumed to themselves the right of electing either the whole, or a certain number, it is impossible to say which (Livy, vi. 5), but they seem to have allowed matters to return to a great extent to their former state until B.C. 311, when it was ordained that they should choose sixteen for the four legions (Livy. ix. 30); but whether this embraced a whole or a part only, is a point upon which we are again left in doubt. From this time forward, in virtue of the rotation then passed, the people continued to elect the whole, or, at all events, the greater number until B.C. 207, when it is stated by Frontin. iv. 7, that both Numa and Livius Salinator, appointed the tribunes to nineteen out of the twenty-three legions of that year, the people taking to themselves the nomination to the first four only (Livy. xxvii. 36). When war was declared against Perseus B.C. 171, a special act was passed that the military tribunes for that year should not be elected by the votes of the people, but should be nominated by the consuls and praetors (Livy. xiii. 31); the same arrangement probably was adopted the following year, for it is particularly mentioned that in the third year of the war (B.C. 169), the people named the tribunes of four legions, which were kept in reserve (Livy. xiii. 12); and, finally, in the fourth and last year of the war (B.C. 168), the senate resolved that the tribunes for the eight legions should be named one half by the people and one half by the consuls, Aemilius Paulus being allowed to select out of the whole body those whom he considered best fitted for serving in the two legions which he was about to transport into Macedonia. Polybius (vi. 19) refers incidentally to the fact that some of the tribunes were embroiled in which Siginius endeavoured to throw light upon the question, admit of an interpretation totally different from that which he has assigned to them, and they leave the matter altogether in doubt. After the number six was once established, it does not appear to have varied for many centuries, nor do we know what changes were introduced, in this respect, during the decline of the empire. The case in Livy (xlii. 35), where four military tribunes are represented to have been chosen from the senate to command four legions, supposing the text to be faultless, is manifestly quite special.

It must be understood that the authority of each tribune was not confined to a particular portion of the legion, but extended equally over the whole. In order, however, to prevent confusion and collision, it was the practice (Polyb. vi.) for the tribunes to divide themselves into three sections of two, and each pair undertook the routine functions for two months out of the six, during which active operations in the field usually lasted. (Comp. Liv. xl. 41, "Secundae legionis Fulvius tribunus militum cent, is secundas in eundem legionem.")

In addition to the duties specified by Polybius, and already detailed under Caesar, and to the general superintendence which they must have exercised, we perceive that they nominated the centurions, and assigned to each the company which he was to command. They presided also at courts-martial, and had the power of awarding the highest punishments.
a law of Rutilius Rufus. (Liv. vii. 5; Pseud. Ascon. in Verr. Act. i. 30; Festus, s. v. Rufili.) That all tribunes were not upon an equality is clear from the expression of Livy (xli. 3), “L. Atius, tribunos primus secundae legionis;” and, from the Cornelian law quoted by Cicero (Pro Client. 5.1), where the tribunes of the first four legions are evidently regarded as superior to others. How this precedence was regulated, whether by seniority, by the mode of election, or by some other principle we cannot determine.

We have seen from Polybius that no one was eligible to the office of tribune who had not served for ten years in the infantry or five in the cavalry. This rule admitted of exceptions, for we find that the elder Scipio Africanus was tribune of the soldiers at the battle of Cannae (Liv. xxii. 53), although certainly not twenty years old; and Horntienius rose to the same rank in his second campaign. Augustus introduced certain regulations altogether new. He permitted the sons of senators to wear the tunica laticlavia as soon as they assumed the toga palla. The gold ring, and tunic, were to be the insignia of their military career as tribunes, or as commanders (praefecti) of cavalry (Suet. Octavi. 30). Such persons were the Tribuni Laticlavi (Sueton. Dom. 10), whom we find frequently commemorated in the inscriptions of the empire (Orelli. n. 133, 1665, 2379, 3113, 3143, 3441), and to these we observe allusions in Horace (Sat. i. 6. 25.), and in Statius (Sylv. v. 1. 97). We find also, in one passage at least, the phrase Tribunus Augustaniclavius (Suet. Oth. 10). We can scarcely suppose that raw youths entering the army for the first time were actually allowed to exercise the authority which the name implies; and hence we may conclude that in their case it was a mere honorary title. By the later emperors, tribuneships were bestowed without regard to the birth of the individual; and, in order that they might have an opportunity of obliging a greater number of applicants, the post was frequently conferred for six months only. Hence, we read in Pliny (Ep. iv. 4. 1), “Hunc rogo semestri tribunatu splendidiorum facias;” and in Juvenal, “Sestriuri vatam digitos circumligat auro,” where there is an allusion to the gold ring which formed one of their insignia.

Tribunes were, from a very early period, distinguished by the uniform of the common soldiers (Liv. vii. 34), and their equipments and rations in the middle of the third century may be seen from a curious letter written by Valerian, when he bestowed the command of certain battalions of Saracens on Probus. (Vopisc. Prob. 4.) Under the empire they were attended by a certain number of apparatores, or of soldiers who walked before them (Lamp. Act. i. 50), by a Vicarius, or aide-de-camp (Vopisc. Aurelian. 7. 10), and by a person termed Cornucizzasrius Tribuni (Val. Max. vi. 1; Frontin. iii. 14; Orelli, Inscrip. Lat. 3465), who was probably a sort of flegman who gave certain signals according to the orders which the officers wished to communicate—thus we meet with the Cornucialis of a centurion (Val. Max. vi. 1. § 11), of a proprætor (Orell. 3466), and others. (Orell. 3467, 3522, comp. 1251, comp. Suet. Dom. 17.)

Tribuni Cohortis.—It has been maintained by some critics, that in addition to the six tribunes of the legions there were ten inferior tribunes, each of whom commanded a cohort. We have no reason to believe that any such tribunes existed even so late as Hadrian; for Hyginus, in his minute description of a camp, and of the accommodation required for the officers, makes no mention of them. It is true that we read in Caesar (B. C. ii. 20), and in Pliny (Ep. iii. 9; comp. Juv. i. 58; Stat. Syb. v. 90) of tribunes who commanded cohorts; but those in Caesar were not legionary but auxiliary cohorts, and such, in all probability, was the cohort alluded to by Pliny.

Under Augustus and his successors Tribunus was employed with reference to many military offices. Thus Velleius Paterculus tells us (ii. 104), that he discharged the duties of Tribusnius Castrorum, and in inscriptions we meet with Tribunus Practorianus (Orell. 1133), Tribunus Fabrum Navidam (Orell. 3140), and many others.

Centuriones.—Next in rank to the Tribunus was the Centurio, who, as the name implies, commanded a century; and the century, being termed also ordo, the centuriones were frequently designated ordinum duce Los (hence, adiuers oridentes, offere oridentes, ordinis imperatrice, &c.), words reprinted in the Greek historians by ηιστονταρχεις δι αραγιαρον, and more rarely by ιοιαγωγος. The number of centuriones in a legion was sixty, that being at all epochs the number of centuries. (Dionys. i. 107; Tac. Ann. i. 82.)

The moral qualities desired in a centurion are described by Polybius (vi. 24), who tells us that those regarded as best adapted for the office were persons not so much remarkable for daring valour as for calmness and sagacity; men not eager to begin a battle at all hazards, but who would keep their ground although overwhelmed by a superior force, and die rather than quit their post. Their chief ordinary duties were to drill the soldiers, to inspect their arms, clothing, and food, to watch the execution of the toils imposed, to visit the centinels, and to regulate the conduct of their men, both in the camp and in the field. They sat as judges also in minor offences, and had the power of inflicting corporal punishment, whence their badge of office was a vine sapling; and thus vitilis is frequently used as a term of the office itself. (Tac. Ann. i. 23; Plin. H. N. xiv. 1; Martial. x. 26; comp. Juiv. vii. 247, xiv. 103, viena posse labello; Spartan. Hadrian. 10.)

According to the system described by Polybius, the centuriones were chosen according to merit by the tribunes (εξελεγενε ταγιαρχους αριστονδρον), subject, however, it is evident, to the control of the consul (see Liv. xiii. 33, 34); during the decline of the republic, it was notorious that these posts were made an object of mercenary traffic (Quem enim possimus imperstorem aliquo in numero putare, catus in exercitu censuet centuriam nostram tu centuriatem? Cic. pro Leg. Manil. 13. Quid? centuriones pulam venelitos? Cic. in Pison. 36); and under the empire, the greatest corruption prevailed (Tac. Hist. i. 52, iii. 49; Plin. Ep. vi. 25), although many laws, as may be seen upon reference to the codes, were promulgated from time to time to remedy such disorders. The regular pay of the centuriones is considered under another head [STIPENDIUM]; but, in addition to this, their income was increased by the money which they received from the soldiers for leave of absence, exemption from fatigue or disagreeable duties, and other indulgences. This abuse, so subversive of all discipline, probably arose during the confusion of the civil wars, and gradually be-
EXERCITUS.
came so intolerable that Otho, to satisfy all parties, granted to the centurions a fixed sum out of the imperial exchequer as a compensation for these emoluments; and his example, in this respect, was followed by the most worthy of his successors. (Tac. Hist. i. 46; comp. i. 17.) Even the tribunes appear to have derived perquisites, called stellatura, from the rations of the soldiers, and these, although for a time strictly prohibited, were eventually recognised as lawful. (Spartian. Hadr. 10; Spartan. Paeon. Nig. 3; Lamprid. Alex. Sever. 15; Cod. 12. tit. 38. s. 12; Cod. Theod. 7. tit. 4. s. 28.)

It will be seen from Polybius that of the two centurions in each maniple the one first chosen took the command of the right division (δὲ μὲν πρῶτος ἀρχηγὸς ἦγεται τοῦ δεξίου μέρους τῆς στρατευματος), the other of the left. The century to the right was considered as the first century of the maniple, and its commander took precedence probably with the title Prior, his companion to the left being called Posterior, the priores in each of the three divisions of Triarii, Principes, and Hastati being the two highest first chosen. (Polyb. vi. 24.) So long as these divisions were recognised, all the centurions of the Triarii appear to have ranked before those of the Principes, and all the centurions of the Principes before those of the Hastati. Moreover, since the maniples were numbered in each division from 1 to 10, there was probably a regular progression from the first century of the first maniple down to the second century of the tenth maniple.

The first centurion of the first maniple of the Triarii, originally named (Liv. vii. 41) Centurio Primus, and afterwards Centurio Primipilus, or simply Primipilus, occupied a very conspicuous position. He stood next in rank to the Tribuni militum; he had a seat in the military council representing Principes, the third as representing Hastati. Moreover, since the maniples were numbered in each division from 1 to 10, there was probably a regular progression from the first century of the first maniple down to the second century of the tenth maniple.

The first centurion of the first maniple of the Triarii, originally named (Liv. vii. 41) Centurio Primus, and afterwards Centurio Primipilus, or simply Primipilus, occupied a very conspicuous position. He stood next in rank to the Tribuni militum; he had a seat in the military council (Polyb. vi. 24); to his charge was committed the eagle of the legion, whence he is sometimes styled Aquilifer (Val. Max. i. 6. § 11; Tac. Hist. iii. 22; Dionys. x. 36), and, under the empire at least, his office was very lucrative (locupletem aquilam, Juv. xiv. 197; Mart. i. 32, vi. 58).

A series of terms connected with these arrangements are furnished by the narrative which Sp. Ligustinus gives of his own career in the 54th chapter of the 42d Book of Livy. He there enumerates the various steps of his promotion: "Mihi T. Quinctius Flamininus docuam ordinem hastatum assignavit... me imperator dignum judicavit cui primum hastatum prioris centuriae assignaret... a M'. Acilio mihi primus princeps prioris centuriae est assignatus quater intra paucos annos primum pilum duxit." The gradual ascent from the ranks being to the post of centurion: 1. In the tenth maniple of the Hastati. 2. In the first century of the first maniple of the Hastati. 3. In the first century of the first maniple of the Principes. 4. In the first century of the first maniple of the Triarii.

But even after the distinction between Hastati, Principes, and Triarii was altogether abolished, and they were all blended together in the cohorts, the same nomenclature with regard to the centuries and their commanders was retained, although it is by no means easy to perceive how it was applied. The cohorts being numbered from 1 to 10, and the first cohort having unquestionably the precedence over the others, we may suppose that the rest took rank in like manner in regular order, each containing three maniples. The first maniple in each cohort may have been considered as representing Triarii according to the ancient arrangement, the second maniple in each cohort as representing Principes, the third as representing Hastati.

If this hypothesis be admitted, the Primipilus, whom we find mentioned down to a very late date, was, under the new system, the first centurion of the first maniple of the first cohort, and as such had as formerly the charge of the eagle; thus also, when Caesar says (B. C. iii. 64), "Hoc ex aquila conservatur omnibus primae cohortis centurionibus interfectis praeter principem priorum," he must intend to designate the first centurion of the second maniple of the first cohort, who would at full length have been denominated primus princeps prior; in like manner, "Cretensi bello octavum principem duumit" (Ep. ad Brut. i. 8) will denote the second maniple of the eighth cohort, "Q. Fulginius ex primo hastato legionis XIV. qui propit eximiam virtutem ex inferioribus ordinibus in eum locum pervenaret" (Caes. B. C. i. 46), and "Cum signifer primum hastatus signum non posset movere loco" (Cic. de Div. i. 35), the third maniple of the first cohort.

That great differences of rank existed among the centurions is evident from the phrases primum centurionum (Liv. xxvi. 5), priimi ordinis (i.e. chief centurions, Caes. B. C. vi. 6), as opposed to inferioriorum ordinis (Caes. B. C. i. 46), and infirmi ordinis (Ibid. i. 35); and that promotion from a lower to a higher grade frequently took place, is evident from the career of Ligustinus as detailed by himself (Liv. xiii. 54), of Scævola, who was raised "ab octavis ordinibus ad primum praetum" (Caes. B. C. iii. 53) for his gallant conduct at Dyrrhachium, and from many other passages of which it will be sufficient to quote one from Caesar (B. G. vi. 42): "Centuriones quorum nonnulli ex inferioribus ordinibus reliquarum legionum virtutis causa in superioribus erant ordines huius legionis traducti;" but we are ignorant whether in ordinary cases this promotion proceeded regularly, or was conducted according to any fixed principle. While on the one hand we should be led to infer that there was some regular progression, from such observations as "Erant in legione fortissimi viri centuriones qui jam primum erant indicii (Caes. B. G. v. 44), and while it is probable that such was actually the case when the legion became permanent, so on the other hand it is difficult to see how promotion could have been systematic during the long period when the legions were disbanded annually, since the choice of the centurion depended entirely upon the discretion of the tribunes subject to the control of the general, who was himself changed from year to year, so that those who served together in one season might be in different legions and different countries the next. Nor was it unconstitutional for a centurion who had commanded one of the higher companies to be called upon subsequently to fill lower stations; this was not common, as we conceive from a case in which strenuous resistance was offered by twenty-three centurions "qui primos pilos duxerant" to enrolling unless their former rank was guaranteed to them (Liv. xii. 32, 33), but this resistance was overcome, and it was held, that the consul ought not to be prevented from assigning that post to any individual in which his services were likely to prove most
valuable to the state. It was not until the year n. c. 841, that a law was passed by which it was ordained, that no one who had held the office of military tribune should be eligible as a centurion (ne quis, ubi tribunus militum fuisse, postea ordinum dux esset, Liv. vii. 41), and at that time the regulation was made in consequence of the dislike entertained by the soldiers to a particular individual who during a succession of years had been alternately a tribune and primipilus.

Optiones.—In like manner as the tribunes named the centurions, so each centurion named his own lieutenant, who is called by Polybius opypode, because his station was in the rear of the company. By Livy (viii. 8), a subaltern of this kind is named subcenturio, but the individual there mentioned was selected for a particular purpose, and it seems clear from Varro and Festus that the regular term was optio, which signifies in general a person chosen (optatus), by another as an assistant. They agree as to the etymology, but the former (L. L. v. 91) confines the term to the lieutenant chosen originally by the decurio in a troop of cavalry, and adds that the tribunes had assumed to themselves the patronage. Quos hi (se, decuriones) primo administratos ipsi sibi adoptabant, optiones vocari coepit, quo nunc propter ambitiones tribuni faciunt, while the words of the latter (p. 198, ed. Müller), although very corrupt, seem to imply that they had been originally appointed by the tribunes, and the nomination afterwards transferred to the centurions: “Optio qui nunc dictur, ante appellabatur Aecenurus, his adjutor dabatur A Trib. Militum, qui ex eo tempore, quem velit, centurionibus permium est optare, etiam nomen ex facto sortitus est.” The explanation in the Excerpta of Paulus Diaconus, is somewhat different from either: “Optio est optatio, sed in re militari optio appellatur, sc. quem decurio aut centurio optat sibi rerum privaturn ministram, quo facilius obtur publica officia” (p. 184, ed. Müller).

Fourth Period. From the times of the Gracchi until the downfall of the Republic.—The century which immediately preceded the destruction of the Roman constitution, was above all others a season of restless excitement and revolution. A vast number of organic changes was introduced into the army, the greater number of which are commonly ascribed to Marius, but although he was undoubtedly the author of many most important modifications, others not less vital were the result of the new position assumed by the Italian states; and some must have required so much time for their full development, that they could scarcely have been the work of a single individual. We shall call attention very briefly to the leading features of the new system, in so far as they can be gleaned from the pages of Sallust, Caesar, and Plutarch, who must be here regarded as our chief guides.

1. In the first consulship of Marius, the legions were thrown open to citizens of all grades, without distinction of fortune. (See above.)

2. The whole of the legionsaries were armed and equipped in the same manner, all being now furnished with the pilum; and hence we see in Tacitus (Ann. xii. 35) the pilae and gladii of the legionsaries, opposed to the hastae and epitaes of the auxiliaries.

3. The legionsaries when in battle order were no longer arranged in three lines, each consisting of ten maniples with an open space between each maniple, but in two lines, each consisting of five cohorts with a space between each cohort.

4. The younger soldiers were no longer placed in the front, but in reserve, the van being composed of veterans as may be seen from various passages in Caesar.

5. As a necessary result of the above arrangements, the distinction between Hastati, Principes, and Triarii ceased to exist. These names, as applied to particular classes of soldiers, are not found in Caesar, in Tacitus, in the treatise of Hyginus on astronomy, nor do we meet with any mention upon military affairs after the time of Marius, while Varro explains them as terms no longer in use. The words Hastatus and Principes occur at a later period, in connection with the legion, but are used only with reference to the precedence of the centuries and of the officers by whom they were commanded, as we have pointed out when treating of the centuriones.

6. The Velites disappeared. The skirmishers, included under the general term levis armatura, consisted for the most part of foreign mercenaries possessing peculiar skill in the use of some national weapon, such as the Balearic slingers (fusillatores), the Cretan archers (sagitarii), and the Moorish dartmen (jacio). Troops of this description had, it is true, been employed by the Romans even before the second Punic war (Liv. xxii. 37), and were denominated levis armatorum (s. armorum) auxilia (Liv. l. c. and xlii. 65, where they are distinguished from the Velites), but now the levis armatura consisted exclusively of foreigners, were formed into a regular corps under their own officers, and no longer entered into the constitution of the legion; indeed, the terms legionaries and levis armaturae became opposed to each other in the Latin writers, just as εὐαγορία and φάλαι among the Greeks (e. g. “cecederunt ex levi armatura cxxxiv. ex legionariis cxxxviii.” Auct. do B. Hispam, 24, comp. Tacit. Ann. ii. 16). The word velites is not found in Caesar, and that they had ceased to exist when Livy wrote is clear from the expression in his description of the battle of Zama, where after having used the word “velitiis,” he adds the explanation “ea tunque levitibus erat” (xxx. 33). When operations requiring great activity were undertaken, such as could not be performed by mere skirmishers, detachments of legionaries were lightly equipped, and marched without baggage, for these special services; and hence, the frequent occurrence of such phrases as exspectidi, exspectat milites, exspectat coheors, and even exspectat legiones.}

7. The cavalry of the legion underwent a change in every respect analogous to that which took place in regard of the light-armed troops. Whoever reads with attention the history of Caesar’s campaigns in Gaul, will perceive that the number of Roman equites attached to his army was very small, and that they were chiefly employed as aide-de-camps, and on confidential missions. On the other hand, it is evident that the bulk of his cavalry consisted of foreigners, a fact which becomes strikingly apparent when we read that Ariovistus having stipulated that the Roman general should come to their conference attended by cavalry alone, Caesar feeling no confidence in his Gaulish horse, dispersed them and supplied their place by soldiers of the tenth legion. (B. G. i. 42.) In like manner they ceased to form part of the legion, and from
this time forward we find the legions and the cavalry spoken of as completely distinct from each other (e.g. Caesar, B. G. v. 11, 18; Appian, B. C. v. §). Whether there was not to a certain extent a return to the ancient system under the empire, is a question which will fall to be considered in the next section.

8. When, after the termination of the Social War, a large proportion of the inhabitants of Italy were admitted to the privilege of Roman citizens, the ancient distinction so long maintained between the Legiones and the Socii at once disappeared, all who had formerly served as Socii became as a matter of right incorporated with the legiones, and an army during the last years of the republic and under the earlier emperors consisted of Romanae Legiones et Auxilia s. Auxiliares, the latter term comprehending troops of all kinds, except the legions and the imperial guards, whether infantry or cavalry, light armed or heavy armed, mercenaries in the pay of the state or contingents furnished at the cost of kings and cities in alliance with Rome. The infantry, not legionary, was for the most part organised in battalions called cohor tes, the cavalry in squadrons called alae, the numbers in each cohors and ala varying according to circumstances, and hence such phrases as alae auxiliae cohortis (Tacit. Ann. iv. 5); alae hastae, legiones hastae, wearis, coaxortes perpetuo praevenerint. Whenever the word socii is applied to troops after the date of the Marsei war, it is generally to be regarded as equivalent to auxiliares, although a distinction is occasionally drawn between socii in the sense of the civilised allies or subjects of Rome, and the barbarian Germans, Numidians, Spaniards and others who are more specially termed auxiliares (Auxiliares divitatur in bello socii Romanorum exteriorum nationum, Paul. Diacon.). In the description of the army of Germanicus, as marshalled to encounter Arminius, (Tacit. Hist. iv. 5) we are told that the army was composed of auxiliares Galli Germanici, bellicos sagittarii, quatuor legiones, duae praetoriae cohortes ac delecti equites, quator legiones, levii armaturae, equites sagittarii, ceterar sociorum cohortes.

9. The manner of levying troops in Italy must necessarily have changed with this change of circumstances. We are destitute of any definite information, but, in all probability, a system of conscription was established and carried on by means of Consuoiatores, as were occasionally appointed in ancient times when difficulty was experienced in finding men (see Liv. xxii. 11; comp. Cic. ad Att. vii. 10; Hirt, B. Alex. 2); and we find that the Emperor Tiberius was not satisfied with obtaining volunteers, whom he regarded as, for the most part, an indifferent class of soldiers, and insisted upon the necessity of recruiting the legions " delectibus." (Ann. iv. 4.)

10. The most important change of all, in so far as society at large was concerned, was that to which we have already adverted, the establishment namely of the military profession, and the distinction now first introduced between the civilian and the soldier. This naturally led to the abrogation of the rule, still in force when Polybius wrote, by which no one could hold any magistracy (κατα- τητηριον ἁρξαν) until he had completed ten years of military service, a rule which had fallen so completely into desuetude in the course of sixty or seventy years afterwards, that we see Cicero passing through all the highest dignities and attaining to the consulsiphip, although his experience of military life was limited to a single campaign under Pompeius Strabo.

Fifth Period. From the establishment of the Imperial government until the age of the Antonines. B. C. 31—A. D. 150.—We shall be enabled to form a correct idea of the materials which constituted an imperial army during the first two centuries of our era by passing under review the various kinds of troops for which Hyginus proposes to provide accommodation in the camp, whose construction he describes (Castra). We shall not take these precisely in the order in which they are named by him, but shall endeavour to arrange them systematically.

A regular army during this period consisted of a certain number of Legiones and of Supplementa, the Supplementa being again divided into the imperial guards, which appear under several different forms, distinguished by different names; and the Auxilia, which were subdivided into Sociæ Cohortes and Nationes, the latter being for the most part barbarians.

1. The Legiones, as we have already had occasion to point out, although still composed of persons who enjoyed the privileges of Roman citizens, were now raised almost exclusively in the provinces; and hence Tiberius, when about to undertake his long projected progress through the provinces, alleged as one of his excuses for quitting Italy, the necessity of recruiting the legions by a regular levy or conscription. (Tac. Ann. iv. 4.) The legion was divided into ten cohorts, and each cohort into six centuries; the first cohort, which had the custody of the eagle, was double the size of the others, and contained 500 men, the remaining cohorts contained each 480 men; and consequently each ordinary century 80 men, the total strength of the legion being thus 5280 men.

2. Legionum Vexillarii. The term Vexillarii or Vexillia, which is found repeatedly in Tacitus, has proved a source of the greatest embarrassment to commentators, and a vast number of hypotheses, all of them highly unsatisfactory, have been proposed in order to reconcile the statements of the historian, which at first sight appear replete with contradictions. But the difficulty has arisen entirely from almost all critics having entered upon a wrong path from the very first, starting upon the supposition that Vexillarii, in every case, denoted troops of the same kind, whereas, in reality, the word is a general term; and we must ascertain its significance in each particular case from the words with which it is immediately joined or the general context of the passage. Vexillum is used in the earliest account of the manipular legion (Liv. viii. 8) to denote the standard of the urdo or maniple, vexillarius being the standard bearer; and in process of time, vexillum was employed to denote any military standard whatsoever, except the sacred eagle of the legion. By a careful examination of the various passages in Tacitus where Vexillarii are mentioned, it will be seen that he designates by this appellation any body of soldiers serving apart from the legion under a separate ensign, or even an army collectively. In this sense we must understand such expressions as Vexillum trium (Ann. ii. 78); Germania vexilla (Hist. l. 31); Germanis vexillis (Hist. l. 70); vexillis inferioris
EXERCITUS.

Germaniae praetorium est (Hist. i. 53); Equitum vexillae (Hist. ii. 11). Compare, Manipuli auti coep tum vexillum Nauportum missi . . . vexilla cœnectil (Ann. ii. 20). But when Vexillarii or Vexilla are accompanied by any word which denotes an immediate connection with a legion, as vexillarii discursum legionum (Ann. i. 38); quarta decima legio cum vexillariis vicesimatis (Ann. xiv. 34); cum vexillis nume secondaque et vicesimae Britanniarum legionum (Hist. iii. 22), then they bear a specific meaning connected with certain changes introduced by Augustus. We have seen that under the republic a citizen might be called upon to serve for twenty years in the infantry; when the legions became permanent the full period was generally exacted, and those who chose to remain after their time was completed, were termed veterani. Augustus, in the year B.C. 13, limited the period of service to twelve years for the praeltorians, and sixteen for the legionsaries, after which they were to be entitled to an honourable discharge (missio honesta), and to receive a bounty (præstum, commoda missionum); but not long afterwards A.D. 3, it was found necessary to increase the period to sixteen years for the praetorians, and twenty years for the legionaries. At this time it appears probable that the practice was first introduced of discharging the soldiers from the legion at the end of sixteen years, and keeping them together under a vexillum with peculiar privileges during the remaining four years of their service. Abuses, however, crept in, and many soldiers, instead of being pensioned off at the end of twenty years, were compelled to remain for a much longer period, and the discontent caused by such oppression gave rise to the formidable mutinies in Pannonia and Germany, which burst forth immediately after the accession of Tiberius. The soldiers then demanded that the original arrangement by Augustus should be restored, and that they should receive a full discharge and the bounty in consequence of being selected individually from other corps, and thus they may belong to the same class with the Equites Eloceti and the Equi Custodes. (Dig. 36. tit. 4. s. 5; comp. Gruter, Inser. p. cxxvii; Orelli, No. 2952, 4013.)

6. Equites Singulares Imperatoris. These were classed by Hyginus along with the Equites Praetoriani, were the title given to the body of life-guards that Augustus began to employ with the name of Julius Caesar to aid him against Antonius. They still, says Dion, form a peculiar corps (σότριμας Smir), and carry sticks in their hands like centurions. (Dion Cass. xiv. 12, lv. 24). Galba gave the name of Evocati to a body of life-guards instituted by himself, who are described by Suetonius (Gall. 10), "Delegit et equestri ordinis juvenes, qui, manente anumlorum aurorem usus, Evocati appellarentur, excubiasque circa cubiculum suum vice militum aegerent." 4. Cohortes Praetoriae. To these a separate article is devoted. [PRAETORIANI.]

5. Equites Praetoriani. [PRAETORIANI.]

6. Primipilares. These, according to the arrangements of the Hyginian camp, were placed close to the person of the emperor, and must have been a small corps, consisting of persons who had discharged the office of legionary or Primipilus, and who now acted as guards or aide-de-camps to the commander-in-chief. Primipilares is met with frequently in Tacitus and in inscriptions (e. g. Tacit. Ann. ii. 11, iv. 72; Hist. i. 31, 87, ii. 22, iii. 70, iv. 15, Ann. xii. 36; Orelli, No. 517, 748, 3569.)

7. Officines. These appear to have been public servants. Thus we read in Appuleius of the official of an aedile, and in Ulpian of the official of a praefectus (Hist. iii. 22), then they are noticed in Tacitus, who, in that portion of his History (iv. 70) where he is describing the confusion that arose upon the death of Vitellius, mentions among the troops "ala Singularium exicit olim a Vitellio, deinde in partes Vespasiani transgressa," but they are very frequently commemorated in inscriptions, as Equites Singulares s. Singularis Imperatoris—Augusti—Caesaris—Domini Nostri, &c. (Orell. No. 3325, &c., 3100, 3496, 1356), and on one stone we read T. Flavius. Quintinus. Eq. Sing. Aug. Lectus. Eq. Exercitus. Raetico. Ex. Ala. Flavia. Pia. Fidei. Millaria. (Orell. No. 3409), which may lead us to suppose that they received their appellation in consequence of being selected individually from other corps, and thus they may belong to the same class with the Equites Eloceti (Orell. 3155) and the Equ. Cust. Aug. (Orell. 4453).

9. Statores. Hyginus assigns a place for two "Centuriae Statorum" immediately in the rear of the Praetorian camp which they protected, and allot to them, as to the Praetorians, twice as much space, in proportion to their numbers, as to the troops of the line. Hence, it is evident that they were ranked among the life-guards, although members of their body may have been employed in the capacity of couriers, as persons bearing the same designation certainly were employed both under the republic and the empire by those invested with military command. (Cic. ad Fam. ii. 17, 19; "ut ad te statores meos et lictores cum litera mittarem;" comp. x. 21; Vulp. Gallic. Aed. Cass. 9; Lamprid. Ael. Sec. 52; Ulpian, Dig. i. tit. 16, s. 4.) In inscriptions we find Stator. Aug. (Orell. 3524), Stator. Civitatis. Vienenses. (Iu. 2780), and once Statorum. Evocati. (Ib. 3422.)

10. Speculatores, although not provided for by Hyginus, ought to be mentioned here, since they also occupied a place among the personal attendants of the emperors (Ipsum Othonem comitabantur speculatores lecta corpora, Tacit. Hist. ii. 11. comp. x. 24; Suet. Octav. 74.). They were the executioners of the army (Senec. de Ira, i. 16;
St. Mark, vi. 27, and comment. of Chrysost.; comp. Suet. Calig. 32), and seem to have acted as couriers likewise. (Tact. Hist. ii. 73.) They formed a regular corps with officers of their own (Tactius speaks of an optio speculatorem, Hist. ii. 25), and must have been numerous, as appears from such expressions as praetorium cohort et speculatorem equitumque valida muns (Tact. Hist. ii. 23); and from inscriptions where mention is made of a sixth cohort of speculatores (Orell. 3538); while from another inscription, in which a certain L. Veturius is styled Praef. TURMAE. SPECULAT., it is manifest that there must have been mounted speculatores. The word is used also by Tacitus to denote an ordinary scout. (Ann. ii. 12.)

11. The scouts, however, formed a distinct body under the name of Exploratores, and Hyginus quarters them appropriately at the extremity of the camp nearest to the Praetorian gate, and close to

12. Aule.—From the time when the cavalry were separated from the legion they were formed into bodies called aule, which varied in number according to circumstances. Hyginus provides accommodation in his camp for four Aulei Militiae, and for five Aulei Quingenariae.

The Aulei Militiae was divided into 24 turmae, each of which, according to the conjecture of Cæcina, consisted of one, except the first which had 80. The commander of the whole was the Praefectus Aule, the inferior officers were 24 decuriones, 24 duplicarii, and 24 sesquiplarii, that is, a decurio, a duplicarius, and a sesquiplarius for each.

The Aulei Quingenariae was divided into 16 turmae with a decurio, a duplicarius and sesquiplarius for each, and we may suppose that each turma consisted of 30 men except the first, which thus would have had 80 men.

Each decurio had three horses allowed to him, each duplicarius and each sesquiplarius two horses, so that the total number of horses in the Aula Militiae was 1090, and in the Aula Quingenaria 504, exclusive of those belonging to the Praefecti.

It is evident that the duplicarius and sesquiplarius were named subalterns; according to the ancient signification of duplicarius, as interpreted by Varro (L. L. v. § 90), it denoted a soldier who on account of his valour was allowed double rations (comp. Liv. xxiv. 47, ii. 59), which must of course have been convertible into increased pay. (Orelli, C. I. 3535.) Such persons are frequently presented to us in inscriptions under the cognate forms duplicarius, duplicarius, and dublicarius. Thus we have DUP. N. EXPLOR. (Duplicarii numeri exploratorum, Orell. 3531); DUP. ALARII (ib. 3538); DUTCPLARIU (ib. 3538); DUTCPLIARII (ib. 3534). Sesquiplarii, which evidently denoted a soldier who received a ration and a half, appears in no authors except Hyginus and Vegetius, of whom the latter gives them gold collars and styles them Torquati duplicares, torquati sesquiplares (Hist. ii. 7), but the title is met with in inscriptions. (Orell. 3470.)

13. Mauri Equites. Passionum Veredarii. —The aule were raised in the Roman provinces and consisted, probably, for the most part, of citizens, or at least subjects. But in addition to these every army at this period was attended by squadrons of light horse composed entirely of barbarians; and the chief duty performed by those named above was guarding the pioneers as they performed their labours in advance of the army.

When Tacitus speaks of Alares Pannonios, robur equitatus (Ann. xvi. 10) he must mean cavalry of a different description from the Panonii veredarii of Hyginus, who, probably, resembled the Cossacks of modern warfare.

14. Cohortes peditatae, were battalions raised chiefly in the provinces, composed of Roman citizens, of subjects and allies, or of citizens, allies, and subjects indiscriminately. They were, it would appear, not bound down by the same strict rules with regard to the period of service as the legionaries, not so heavily equipped, and not subjected to the same exhausting labours. Vegetius, in the chapter where he endeavours to account for the decay of the legionary force (ii. 2), throws some light upon these points. To this class of troops belonged the cohortes auxiliares, the auxilia cohortium, and the sociorum cohortes, of whom we read in Tacitus, together with a multitude of others recorded in inscriptions and named for the most part from the nations of which they were composed. The expression cohortes pedatum octoarm (Tacit. Hist. ii. 64) indicates that these cohorts were numbered regularly like the legions. Hyginus provides accommodation for Cohortes peditatae miliariae tres, and Cohortes peditatae quingenariae tres.

15. Cohortes Equitatae differed from the Peditatae in this only, that they were made up of infantry combined with cavalry. A Cohors Equitata Miliaria contained 760 foot soldiers divided into 10 centuries, and 240 horsemen divided into 10 turmae. A Cohors Equitata quingenariae contained 350 soldiers divided into 6 centuries and 120 horsemen, divided into 5 turmae. There is an inscription in the collections of Gruter (p. MCVIII.) to the memory of L. Flavius, who among other military titles is styled Praef. Coh. PRIMAE. EQUITAT. CVI. ROMAN. IN. GERMAN. INFERIORE; Pliny, in one of his epistles (x. 106), and Trajan in his reply, make use of the terms Cohors equestria, the former mentioning a centurion in connection with it, which proves that it contained infantry. Tacitus (Hist. iv. 19) speaks of cohorts of the Batavi and Canninefates, who, among other demands, insisted that the number of horse should be increased (augeri numerum equitum); and Josephus, in describing the army of Vespasian, notices 10 cohorts (σπιειά) of 600 infantry and 120 cavalry, a series of passages which evidently refer to Cohortes Equitatae. The Cohortes Peditatae are not mentioned under that name except by Hyginus, but are indicated by Tacitus in the words (Ann. xiii. 35), 'ex Germania legio cum equitibus alaria et peditatu cohortium.' Hyginus allows space for Cohortes equitatae miliariae duae, and Cohortes equitatae quingenariae quattuor.

16. Cassici, which we may fairly render Navires, were employed, according to Hyginus, as pioneers. They corresponded to the Navales Socii, under the republic, who were always regarded as inferior to regular soldiers, and were recruited, as we learn from Polybius, among those persons whose fortune did not entitle them to the levies of the legions. After the establishment by Augustus of regular permanent fleets at Misenum, Ravenna, and on the coast of Gaul, a large body of men must have been required to man them, who, when their services were not required afloat, were called upon, at least in great emergencies, to serve as
EXERCITUS.

ordinary soldiers. Tacitus mentions at the commencement of his history (i. 6), that Galba found in the city a legion (quam e classe Nero conscripsit) (Hist. ii. 4. 8; Cass. xi. 3; Plut. Galb. 15), which he subsequently (i. 31, 36) terms "legio classica" and "classicum legio" (comp. i. 11, 14, 17, 22, iii. 55), and elsewhere (ii. 67) we hear of the "prima classicum legiorn."

In the Annals claussarius is the form which he generally employs, as classiariurn copia (Ann. iv. 27), and centuriare classiari (Ann. xiv. 9).

17. Nationes. — These occupied the same position as the socio cohortes, that the Mauri and Pannonic Vereatdii did with regard to the regular Alae of cavalry. They were battalions composed entirely of barbarians, or of the most uncivilised among the subjects of Rome, and were probably chiefly employed upon outpost duties. Hyginus allows space for 3300, consisting of Patmyreni; Gaetae; Danu; Britones; Cantabri.

Urbanae Cohortes. — We may take occasion to notice in this place two bodies of men established during the first years of the empire, who held a station intermediate between regular troops and an armed police, their services being, properly speaking, confined to the city. These were the Urbanae Cohortes and the Cohortes Vigilum.

Dion Cassius (iv. 24) informs us that Augustus, in addition to the praetorian cohorts, instituted a force of city guards, amounting to six thousand men divided into four battalions: to these he elsewhere gives the name of δυστικος (lix. 2), while, by the Latin writers, they are usually distinguished as Cohortes Urbanae or Urbana militia, their quarters, which were within the city, being the Urbana Castra. According to Tacitus, who states the number of cohorts at three only, they, like the praetorians, were levied in Latium, Umbria, Etruria, and the ancient Roman colonies (Tacit. Ann. iv. 5), and were under the immediate command of the prefect of the city, whence it was urged upon Flavius Sabinus (Tacit. Hist. iii. 64), "esse illi proprium militem cohortium urbanarum."

Cohortes Vigilum. — Augustus organised a large body of night-watchers also, whose chief duty was to act as firemen (Adversus incendia excubia nocturnas vigilique commentus est, Sueton. Octav. 30). They were divided into seven cohorts, in the proportion of one cohort to each two Regions, which were stationed in fourteen guardhouses (excubatoria), and are called eueropholakes by the Greek, Cohortes Vigilum by the Latin writers. They were commanded by a Praefectus (Tacit. Ann. xi. 35), who was of equestrian rank; but the corps, in consequence of being raised among the class of libertini, was regarded as occupying a position inferior to that of regular soldiers (Dion Cass. iv. 26, lix. 2). In Tacitus (Hist. iii. 64), they are termed the servilia of the aristocracy, and Suetonius (Octav. 25) alludes to them as "libertino milite." (Comp. Dig. 1. tit. 15. s. 3.)

Equipment of the Troops under the Empire.

Josephus has transmitted to us a description of the equipment of the Roman troops, and his testimony is peculiarly valuable, proceeding, as it does, from a competent eye-witness (B. J. iii. 5. § 5).

The infantry wore cuirasses, helmets, and two swords (διφαστή τε πεφραγμένοι καὶ κράνες καὶ μαχαιροφοροῦστες ἀμφότεροι), that is, a long sword on the left, and a short dagger (σπαθῆς od πλέον ξεκε μήχος) on the right side. The select infantry in attendance upon the general carried a long spear (Aρχετήριον, κατάστολον), and a round shield (πτέρημα) the rest of the legionaries (οι βαλέντιοι μάχαιρας) a pilum (? Xωστος), and a scutum (Συκοτινής πτερήμα). In addition, each man had a saw and a basket (πίπα καὶ κόμων), a mattock and a hatchet (ἀπίτι καὶ πέλλεκα), a leather strap, a hook and a chain (ἱδράτε καὶ βίδο χρώμα καὶ λόμον), together with provisions for three days,—so that, says Josephus, the Roman infantry differ little from mules of burden.

The Equites wore helmets and cuirasses like the infantry, with a broadsword at their right side (μίχαρα μαχαιρία) and carried in their hand a long pole (καρπεύς) and in their horses' flank (Συκοτινής δὲ παρὰ πλευρὰν τοῦ πάλαγος), and they were furnished with a quiver containing three or more javelins (εκκοτίς), with broad points, and as large as spears (οι άπόδοτος καὶ δοράτος μέγεθος). Those selected to receive the general differed, in no respect, in their appointments from the regular cavalry (τῶν εἰς τὰς οἰκόν Ἱππέας).

The Jewish historian has moreover given an account of the Agmen or line of march in which the army of Vespasian entered Galilee (B. J. iii. 6, § 2), this being, he adds, the regular arrangement followed by the Romans. 1. The light-armed auxiliaries and bowmen (τῶν μὲν γε ψιλῶν τῶν ἐπικούρων καὶ ταύτα) advanced first to reconnoitre, to examine woods and suspicious localities, and to give timely notice of the approach of an enemy. 2. A detachment of Roman heavy-armed troops, horse and foot (Ρωμαίων ἄσπιττων μοίρα, πετοί τε καὶ ἱππεῖς). 3. Ten men out of each century carrying their own equipments and the measures of the tent (μέτρα τῆς τεμπεῖος). 4. The pioneers (Βδομαδιαται). The baggage of Vespasian and his legati (τῶν ουκ αὐτῷ άρχων) guarded by a strong body of horse. 6. Vespasian himself attended by Selecti Petites, Selecti Equites, and a body of spearmen (Λογοφόροι). 7. The peculiar cavalry of the legion (τῶν τούτων τῶν τάγματος ἐπιδιόνων), for, he subjoins, each legion has 120 horse attached to it. This we perceive was a return, to a certain extent, to the ancient system. 8. The artillery dragged by mules (οι τῶν ἐπελείως στρεῦται όρει καὶ τὰ λοιπὰ μιχανίματα). 9. The legati, praefects of cohorts and tribunes (Συγκομιδαὶ tτ καὶ στεφανοῖ ἔποροι σὺν χιλιάρχοι) guarded by a body of picked soldiers. 10. The standards surrounding the eagle (οὶ σημαίαι περιλυγχυνομέναι τῶν ἀετῶν). 11. The trumpeters (οἱ σαλαντικταί). 12. The main body of the infantry (οἱ φαλαγη) six abreast, accompanied by a centurion (Εκατοντάρχης), whose duty it was to see that the men kept their ranks. 13. The whole body of slaves attached to each legion (τοί κοίτειμοι ἐκατοτάγμαστα), driving the mules and beasts of burden loaded with the baggage. 14. Behind all the legions followed the mercenaries (οἱ μίσθους ἄγχος). 15. The rear was brought up by a strong body of infantry and cavalry. Josephus seems to designate the legati by the word ἐγγένες, the Tribuni militum by λοχαγοῖ or χιλαρχοί, the centuriones by τάξις ἐκατοτάρχης; whether he means οἱ παράσημοι (in iii. 6. § 2) the optiones who are so designated by Polybius, or intends to comprehend the whole rear-guard under the appellation, we admit of doubt. Four words are used to denote
EXERCITUS.

weapons of the spear kind,—σῦρη probably intended to represent the πῆλον, for which σῦρος is generally employed, from the light javelin; λύχνυς and δὸρο, pikes of different kinds. It would appear from Arrian that the λύχνυς was sometimes used as a missile.

Finally, some additional light will be thrown upon the constitution of a Roman army about half a century later by the instructions issued for the line of march to be observed by the force despatched against the Scythian Alani, preserved in the fragment of Arrian, of which we have spoken above.

The force in question consisted of the fifteenth legion, which was complete, and of the twelfth, which appears to have been a fragment only, these legions having both cavalry and skirmishers attached to them exactly as under the republic,—of several cohortes equitatae, composed of Italians, Cyrenians, Armenianians, and others, each of these battalions containing heavy and light infantry together with squadrons of cavalry,—of cohortes peditatae, including infantry only, both light and heavy, and of light cavalry of the allies and of barbarians. The order in which they were to advance was as follows:

1. Horse scouts (κατασκόπους ἵππους), horse archers (εἰπτοτόσταται καὶ πεταλιῶται), commanded by their own decurions (δεκαδόραχοι).
2. Various corps of foreign cavalry, Cyrenians, Ituracans, Cots, and others, of whom the names are doubtful.
3. The whole of the infantry archers, followed by different bodies of heavy-armed infantry, not legionaries, Italians, Cyrenians, Borporanians and Numidians, the flanks of this division being covered by cavalry.
4. The equites selecti and the equites of the legion (οἱ ἀνὰ τὰς φαλάγγας ἵππεις). 5. The artillery (καταστάται). 6. The standard (σημεῖον) of the fifteenth legion, and around it the principal officers, namely, the commander of the legion (ὑγιεὺς ἡς φαλάγγας), the legatus (ὁ χιλιαρχαῖος), and the centurions of the first cohort (ἐκατόστραται οἱ τῆς πρῶτης στείρης ἐπιστάται). Here, it will be remarked, we meet with an officer called the χιλιαρχαῖος.
7. The infantry of the legion, four and four, preceded by their own skirmishers (πεζῶν οἱ ἄκατοι).
8. Foreign (τὸ σωμαχίων) infantry, both light and heavy. 9. The baggage (τὰ σκυγμοσφόρα).
10. The rear brought up by an ala of Getae under their praefectus (ἐλαχάρχης). The centurions were to march on the flanks of the infantry, keeping the men to their ranks. For sake of greater security a body of horsemen was to ride in single file along the whole length of the line; the commander-in-chief, Xenophon, was to march in front of the infantry standards, but to move about occasionally from place to place, watching everything, and preserving order everywhere. It appears that of the cavalry some were archers (ὑποτοτόσταται), some lancers (λογχοσφόροι), some pole-men (κοστοφόροι), some sword-men (μαχαιροφόροι), some axe-men (πελεκοφόροι); these and many other curious particulars may be extracted from the detailed account of the Ἀμύνας, and from the tables or scheme of battle by which it is followed; but unfortunately we are so much embarrassed at every step by the uncertainty of the text that it is scarcely safe to form positive conclusions.

A great many topics connected with a Roman army are discussed under separate articles: thus, much that belongs to the cavalry is necessarily included under Εὐκρίται; the position of the allies in the service under Σωτήρ; the life-guards under Πραιτορία; the pay of the soldier under Στίπεδιον; a detailed account of his armour and weapons under Γάλα, Λορίκα, Οκρέα, Καλίγα, Χαστά, Πίλωμ, Γλαδίας, Σκυτημ., &c.; of his dress under Χλαμύς, Παλούδα, Σαγον, of the standards under Σημεία Μυραμέρης; of military processions under Ουατίο, Τριυμπθίουs; of punishments under Φυστυρίαος, Δικαίαος; of military engines under Τορμές, Φνελαξ, Κορώνα; of military engines on the Mounts under Τορμές, Άρης, Βινεας, Λυτριμ., Πλοτικ., Εκάλας, Ιτωρίκ., &c. [W. R.]

EXETASTAE (ἐξέσταται), the special commissioners sent out by the Athenian people to investigate any matters that might claim attention. Thus we find mention of Exetastae being appointed to ascertain whether there were as many mercenaries as the generals reported. It appears to have been no uncommon plan for the commanders, who received pay for troops, to report a greater number than they possessed, in order to receive the pay themselves; in which case they were said "to draw pay for empty places in the mercenary force" (ἐπεξεργασθησθαι εἰς εὐκρίτας κάθεις χρήματι, Aeschin. c. Ches. p. 536). The commissioners, however, who were sent to make inquiries into the matter, often allowed themselves to be bribed. (Aeschin. c. Timarch. p. 131, De Fals. Leg. p. 339; Böckh. Pudl. Econ. of Athens, p. 292, 2nd ed.)

EXHIBERES. [HERES.]

EXHIBENDUM, ACTIO AD. This action was introduced mainly with respect to vindicationes or actions about property. "Exhibere" is defined to be "facere in publico potestatem, ut ei qui agat experiundi sit copia." This was a personal action, and he had the right of action who intended to bring an actio in rem. The actio ad exhibendum was against a person who was in possession of the thing in question, or bad fraudulently parted with the possession of it; and the object was the production of the thing for the purpose of its being examined by the plaintiff. The thing, which was of course a movable thing, was to be produced at the place where it was at the commencement of the legal proceedings respecting it; but it was to be taken to the place where the action was tried, at the cost and expense of the plaintiff.

The action was extended to other cases: for instance, to cases when a man claimed the privilege of taking his property off another person's land, that other person not being legally bound to restore the thing, though bound by this action to allow the owner to take it; and to some cases where a man had in his possession something in which his own and the plaintiff's property were united, as a jewel set in the defendant's gold, in which case there might be an actio ad exhibendum for the purpose of separating the things (ut excludatur ad exhibendum agi potest, Dig. 10. tit. 4. s. 6).

If the thing was not produced when it ought to have been, the plaintiff might claim damages for loss caused by such non-production. This action would lie to produce a slave, in order that he might be put to the torture to discover his confederates.

The ground of the right to the production of a thing, was either property in the thing or some interest; and it was the business of the judex to
declare whether there was sufficient reason (justa et probabilis causa) for production. The word interrex was formerly a word of doubtful import. Accordingly, it was a question if a man could bring this action for the production of his adversary's accounts, though it was a general rule of law that all persons might have this action who had an interest in the thing to be produced (quorum in terest); but the opinion as given in the Digest (Dig. 10. tit. 4. s. 19) is not favourable to the production on the mere ground of its being for the plaintiff's advantage. A man might have this actio though he had no vindicatio; as, for instance, if he had a legacy given to him of such a slave as Titius might choose, he had a right to the production of the testator's slaves in order that Titius might make the choice; when the choice was made, then the plaintiff might claim the slave as his property, though he had no power to make the choice. If a man wished to assert the freedom of a slave in order that Titius might choose, he had a right to the production on the mere ground of its being for the plaintiff's advantage. A man might have this actio though he had no vindicatio; as, for instance, if the testator's slaves in order that Titius might make the choice; when the choice was made, then the plaintiff might claim the slave as his property, though he had no power to make the choice. If a man wished to assert the freedom of a slave (in libertatem vindicare), he might have this action.

This action was, as it appears, generally in aid of another action, and for the purpose of obtaining evidence; in which respect it bears some resemblance to a Bill of Discovery in Equity. (Mühlenbruch, Doctrina Pandectarum; Diq. 10. tit. 4. [G. L.]

EXODIÆ or EPEXODIA (ἐξοδίας or ἐπεξοδίας), the names of the sacrifices which were offered by generals before they set out on their expeditions. (Xenoph. Ancab. vi. 5. § 2.) The principal object of these sacrifices always was to discover from the accompanying signs the favourable or unfavourable issue of the undertaking on which they were about to enter. According to Hesychius, ἐξοδία was also the name of the day on which the annual magistrates laid down their offices.

EXODIA (ἐξοδία, from ἔξω and ὀδος) were old-fashioned and laughable interludes in verses, inserted in other plays, but chiefly in the Atellaneae. (Liv. vii. 2.) It is difficult to ascertain the real character of the exodia; but from the words of Livy we must infer that, although distinct from the Atellaneae, they were closely connected with them, and never performed alone. Hence Juvenal calls them exodium Atellaneae (Sat. vi. 71), and Suetonius (Tib. 45) exodium Atellanieum. They were like the Atellaneae themselves, played by young and well-born Romans, and not by the histriones. Since the time of Joa. Scaliger and Casaubon, the exodia have almost generally been considered as short comedies or farces which were performed after the Atellaneae; and this opinion is founded upon the vague and incorrect statement of the Scholast on Juvenal (Sat. iii. 174). But the words of Livy, exodia conserta fabellis, seem rather to indicate interludes, which, however, must not be understood as if they had been played between the acts of the Atellaneae, which would suggest a false idea of the Atellaneae themselves. But as several Atellaneae were performed on the same day, it is probable that the exodia were played between them. This supposition is also supported by the etymology of the word itself, which signifies something ἐξ ὀδος, extra viam, or something not belonging to the main subject, and thus is synonymous with ἐπεξοδιον. The play, as well as the name of exodium, seems to have been introduced among the Romans from Italian Greece; but after its introduction it appears to have become very popular among the Romans, and continued to be played down to a very late period. (Sueton. Domit. 10. [L. S.]

EXOMIS (ἐξομις), a dress which had only a sleeve for the left arm, leaving the right with the shoulder and a part of the breast free, and was for this reason called exomis. It is also frequently called χιτῶν ἑπεξομισάχαλος. (Phot. and Hesych. s. v. ἑτερωτομ. : Heliod. Aetiol. iii. 1; Paus. v. 16. § 2.) The exomis, however, was not only a chiton [TUNICA], but also an ἴδιας or περιθλαμ. (Pallium.) According to Hesychius (s. v. ἐξομις), and Aelius Dionysius (ap. Bostath. ad ll. xviii. 595), it served at the same time both the purposes of a chiton and an himation; but Pollux (vii. 48) speaks of two different kinds of exomis, one of which was a περιθλαμα and the other a χιτῶν ἑπεξομισάχαλος. His account is confirmed by existing works of art. Thus we find in the Mus. Pio-Clement. (vol. iv. pl. 11), Hephaestos wearing an exomis, which is an himation thrown round the body in the way in which this garment was always worn, and which clothes the body like an exomis when it is girded round the waist. The following figure of Charon, on the contrary (taken from Stackelberg, Die Grüber der Hellenen, pl. 47), represents the proper χιτῶν ἑπεξομισάχαλος, and we see a similar dress in the figure of Ulysses represented in the article PILEUS.

The exomis was usually worn by slaves and working people (Phot. s. v.; Schol. ad Aristoph. Eust. 879), whence we find Hephaestos, the working deity, frequently represented with this garment in works of art. (Müller, Archäol. der Kunst, § 396. 6.) The chorus of old men in the Lysistrata of Aristophanes (I. 662) wear the exomis; which is in accordance with the statement of Pollux (iv. 116), who says that it was the dress of old men in comic plays. According to Gellius (vii. 12), the exomis was the same as the common tunic without sleeves (eitra humerum do-sinentes); but his statement is opposed to the accounts of all the Greek grammarians, and is without doubt erroneous. (Becker, Charikles, vol. ii. p. 112, &c.)

EXOMOSIA (ἐξομοσία). Any Athenian citizen when called upon to appear as a witness in
EXSILIUM.

a court of justice (κλητέων or εκκλησία), Pollux, viii. 37; Aeschin. c. Timodach. p. 71), was obliged by law to obey the summons, unless he could establish by oath that he was unacquainted with the case in question. (Demosth. De Fals. Leg. p. 396, c. Neoter. p. 1534, c. Arish. p. 850; Suidas. n. εξοστρα, which was thrown from a tower of the besieged town. (Veget. De Re Milit. c. 234) — Banishment among the Greek states seldom, if ever, appears as a punishment appointed by law for particular offences. We might, indeed, expect this; for the division of Greece into a number of independent states would neither admit of the establishment of penal colonies, as amongst us, nor of the various kinds of exile which we read of under the Roman emperors. The general term φυγή (flight) was for the most part applied in the case of those who, in order to avoid some punishment or danger, flight was called εξοστρα, and the act of taking it was expressed by εξοστρασθαι. (Demosth. c. Steph. i. p. 1119; c. Eubulus. p. 1317; Harpocrat. s. e.) Those who refused to obey the summons without being able to take the εξοστρα, incurred a fine of one thousand drachmae; and if a person, after promising to give his evidence, did nevertheless not appear when called upon, an action called λατισματαρσίου, or Βλάδης δίκη, might be brought against him by the parties who thought themselves injured by his having withheld his evidence. (Demosth. c. Timodach. p. 1150; Meier, Att. Proc. p. 338, 67.)

When the people in their assembly appointed a man to a magistracy or any other public office, he was at liberty, before the δοκιμασία took place, to decline the office, if he could take an oath that the state of his health or other circumstances rendered it impossible for him to fulfil the duties connected with it (εξοστρασθαύε την ἀρχήν, or τὴν γειστοτηταν); and this oath was likewise called εξοστρα, or sometimes δεισνατα. (Demosth. De Fals. Leg. p. 379, c. Timodach. p. 1204; Aeschin. De Fals. Leg. p. 271; Pollux, viii. 55; Etymol. c. Timodach. p. 1150; Meier, Att. Proc. p. 338, 67.)

EXOSTRA (εξόστρα, from εξώθεω), was one of the many kinds of machines used in the theatres of the ancients. Cicero (De Procr. Cons. 6), in speaking of a man who formerly concealed his vices, expresses this sentiment by post siparium neemauta; and then stating that he now shamelessly indulged in his vicious practices in public, σαυτια, έν εξοστρα. helauta. From an attentive consideration of this passage, it is evident that the exostra was a machine by means of which things which had been concealed behind the siparium, were pushed or rolled forward from behind it, and thus became visible to the spectators. This machine was therefore very much like the ἔκκυκλημα, with this distinction, that the latter was moved on wheels, while the exostra was pushed forward upon rollers. (Pollux, iv. 128; Schol. ad Aristoph. Acharn. 375.) But both seem to have been used for the same purpose; namely, to exhibit to the eyes of the spectators the results or consequences of such things—a, a murderer or suicide, which had been concealed behind the siparium, were thus put in front of the spectators in the proscenium, and were therefore described as having occurred behind the siparium or in the scene.

The name exostra was also applied to a peculiar kind of bridge, which was thrown from a tower of the besieging towers upon the walls of the besieged town, and across which the assailants marched to attack those of the besieged who were stationed on the ramparts to defend the town. (Veget. De Re Milt. c. 85.)

EXSILIUM (φυγή), banishment. 1. GREEK.

— Banishment among the Greek states seldom, if ever, appears as a punishment appointed by law for particular offences. We might, indeed, expect this; for the division of Greece into a number of
satisfied, he was liable to be driven or carried out of the country by force. (Dem. c. Aris. pp. 634 and 644.) It sometimes happened that a fugitive for manslaughter was charged with murder; in that case he pleaded on board ship, before a court which sat at Phreatto, in the Peiraeus. (Dem. c. Aris. p. 646.) We are not informed what were the consequences if the relatives of the slain man refused to make a reconciliation; suppose that there was no compulsion, it is reasonable to conclude that the exile was allowed to return after a fixed time. In cases of manslaughter, but not of murder, this seems to have been usual in other parts of Greece as well as at Athens. (Meursius, ad Lycop. 203; Burris. Hist. II., and Schol.) Plato (Leg. ix. p. 94,) who is believed to have carried many of his laws from the constitution of Athens, fixes the period of banishment for manslaughter at one year, and the word ἀσυναιτισμός, explained to mean a year's exile for the commission of homicide (τοῦ φθόνος δράσασι) seems to imply that the custom was pretty general. We have indeed the authority of Xenophon (Anab. iv. 8. §15) to prove that at Sparta banishment was the consequence of involuntary homicide, though he does not tell us its duration. Moreover, not only was an actual murder punished with banishment and confiscation, but also ἱππαμαίνειν, or wounding with intent to kill, though death might not ensue. (Lyssias, c. Simons. p. 100; Dem. c. Boeot. p. 1018. 16.) The same punishment was inflicted on persons who rooted up the sacred olives at Athens (Lyssias, "Τῷ Σηκῶν Ἀπολογία), and by the laws of Solon every one was liable to it who remained neuter during political contentions. (Plut. Sol. 20; Gell. ii. 12.)

Under φυργή, or banishment, as a general term, is comprehended Ostracism (ἀστραγασμός); the difference between the two is clearly stated by Suidas, and the Scholast on Aristophanes (Equiv. 861), if we are to understand by the former ἀσφυρια, or banishment for life. "Φυργή (say they) differs from ostracism, inasmuch as those who are banished lose their property by confiscation, whereas the ostraecised do not; the former also have no fixed place of abode, no time of return assigned, but the latter have." This ostracism was instituted by Cleisthenes, after the expulsion of the Peisistratidae; its nature and objects are thus explained by Aristotle (Pol. ii. 13.):—"Democratical states (he observes) used to ostracise, and remove from the city for a definite time, those who appeared to be pre-eminent above their fellow-citizens, by reason of their wealth, the number of their friends, or any other means of influence." It is well known, and implied in the quotation just given, that ostracism was not a punishment for any crime, but rather a precautionary removal of those who possessed sufficient power in the state to excite either envy or fear. Thus Plutarch (Arist. 19) says it was a good-natured way of allaying envy (φθόνον παραμυθεύοντος), by the humiliation of superior dignity and power. Mr. Grote (History of Greece, vol. iv. p. 200, &c.) has some very ingenious remarks in defence of ostracism, which he maintains was a wise precaution for maintaining the democratical constitution established by Cleisthenes. He observes that "Cleisthenes, by the spirit of his reforms, secured the hearty attachment of the body of citizens; but from the first generation of leading men, under the nascent democracy, and with such precedents as they had to look back upon, no self-imposed limits to ambition could be expected; and the problem required was to eliminate beforehand any one about to transgress these limits, so as to prevent the necessity of putting him down afterwards, with all that bloodshed and reaction, in the midst of which the free working of the constitution would be suspended at least, if not irrecoverably extinguished. To acquire such influence as would render him dangerous under democratical forms, a man must stand in evidence before the public, so as to afford some reasonable means of judging of his character and purposes; and the security which Cleisthenes provided was, to cull in the positive judgment of the citizens respecting his future promise pure and simple, so that they might not remain too long neutral between two political rivals. He incorporated in the constitution itself the principle of privilegium (to employ the Roman phrase, which signifies, not a peculiar favour granted to any one, but a peculiar inconvenience imposed), yet only under circumstances solemn and well defined, with full notice and discussion beforehand, and by the positive secret vote of a large proportion of the citizens. 'No law shall be made against any single citizen, without the same being made against all Athenian citizens; unless it shall so seem good to 6000 citizens voting secretly' (Andoc. de Myst. p. 12.) Such was that general principle of the constitution, under which the ostracism was a particular case." Mr. Grote further observes,—"Care was taken to divest the ostracism of all painful consequence, except what was inseparable from exile; and this is not one of the least proofs of the wisdom with which it was devised. Most certainly it never deprived the public of candidates for political influence; and when we consider the small amount of individual evil which it inflicted, two remarks will be quite sufficient to offer in the way of justification. First, it completely produced its intended effect; for the democracy grew up from infancy to manhood without a single attempt to overthrow it by force: next, through such tranquil working of the democratical forms, a constitutional morality quite sufficiently complete, was produced among the leading Athenians, to enable the people after a certain time to dispense with that exceptional security which the ostracism offered. To the nascent democracy, it was absolutely indispensable; to the grown democracy it was necessary; but the full-grown democracy both could and did stand without it." The manner of effecting it was as follows:—Before the vote of ostracism could be taken, the senate and the ecclesia had to determine in the sixth prytany of the year whether such a step was necessary. If they decided in the affirmative, a day was fixed, and the agora was enclosed by barriers, with ten entrances for the ten tribes. By these the tribe-men entered, each with his ὀστρακόν, or piece of tile, on which was written the name of the individual whom he wished to be ostracised. The nine archons and the senate, i.e. the presidents of that body, superintended the proceedings, and the party who had the greatest number of votes against him, supposing that this number amounted to 6000, was obliged to withdraw (μετατηγών) from the city within ten days; if the number of votes did not amount to 6000, nothing was done. (Schi. ad Aristoph. Eqm. 851; Pollex, viii. 19.) Plutarch (Arist. c. 7) differs
from other authorities in stating, that for an ex-
pulsion of this sort it was not necessary that the
votes given against any individual should amount
to 6000, but only that the sum total should not be
less than that number. Böckh and Wachsmuth
are in favour of Plutarch; but Mr. Grote, who
supports the other opinion, justly remarks, “that
the purpose of the general law would by no means
be obtained, if the simple majority of votes among
6000 in all, had been allowed to take effect.
A person might then be ostracised with a very small
number of votes against him, and without creating
any reasonable presumption that he was dangerous
to the constitution, which was by no means either
the purpose of Cleisthenes, or the well-understood
character, whom Nicias and Alcibiades conspired
to remove, from their native city when the opposite
faction became predominant. They are spoken of
by after their return (ἡ καθοδος), the word
κατάγειν being applied to those who were instru-
mental in effecting it. [R. W.]

2. Roman. In the later imperial period, exsi-
lium was a general term used to express a punish-
ment, of which there were several species. Paulinus
(Dig. 48. tit. 1. s. 2), when speaking of those
judicia publics, which are capitalia, defines them
by the consequent punishment, which is death, or
exsilium; and exsilium he defines to be a quoque et
ignis interdictio, by which the ceput or citizenship
of the criminal was taken away. Other kinds of
exsilium he says were properly called relegatio,
and the relegatus retained his citizenship. The
distinction between relegatio and exsilium existed
under the republic. (Liv. iii. 10, iv 4; Cic. Pro
P. Scip. c. 12.) Ovid also (Fast. v. 11) describes
himself, not as exsilium, which he compels to
reproach, but as relegatus. Speaking of the em-
peror, he says,—

"Nec vitam, nec opes, nec jus nihi civis ademits;"
and a little further on,

"Nill nisi me patriis jussit abire focius."

Compare also Tristis, ii. 127, &c.

Marcianus (Dig. 48. tit. 22. s. 5) makes three
divisions of exsilium: it was either an interdiction
from certain places named, and was then called lata
fuga (a term equivalent to the liberum exsilium
or earthenware scourge, from the material
of the στέρμακων on which the names were written.

Some of the most distinguished men at Athens
were removed by ostracism, but recalled when the
city found their services indispensable. Amongst
these were Themistocles, Aristides, Cimon, and
Alicibades; of the first of whom Thucyldides (i.
135) states, that his residence during ostracism was
at Argos, although he was not confined to the city,
but visited other parts of Peloponneseus. The
last person against whom it was used at Athens
was Hyperbolus, a demagogue of low birth and
character, whom Nicias and Alicibades conspired
together to ostracise, when the banishment threat-
ened each of themselves; but the Athenians
thought their own dignity compromised, and os-
tracism degraded by such an application of it, and
accordingly discontinued the practice. (Plut. Nic.
c. 11, Alei. c. 13, Arist. c. 7; Thuc. viii. 73.)

Ostracism prevailed in other democratical states
as well as Athens; namely, at Argos, Miletus, and
Megara, but we have no particulars of the way
in which it was administered in those states.
Aristotle says (Pol. iii. 8) that it was abused for
party purposes.

From the ostracism of Athens was copied the
Petalism (πεταλισμός) of the Syracusans, so called
from the πέταλα, or leaves of the olive, on which
was written the name of the person whom they
wished to remove from the city. The removal,
however, was only for five years; a sufficient
length of time, as they thought, to humble the pride and hopes of
the exile. But petalism did not last long; for the fear of this "humbling," deterred the best
qualified among the citizens from taking any part
in public affairs, and the degeneracy and bad govern-
ment which followed, soon led to a repeal of
the law. c. 452. (Diod. xi. 87.)

In connection with petalism it may be remarked
that if any one were falsely registered in a demus,
or ward, at Athens, his expulsion was called
ἐκφολαφορία, from the votes being given by leaves.

The reader of Greek history will remember, that
besides those exiled by law, or ostracised, there
was frequently a great number of political exiles in
Greece; men who, having distinguished themselves
as the leaders of one party, were expelled, or obliged
to remove, from their native city when the opposite
faction became predominant. They are spoken of
as οἱ φεύρωτες, or οἱ ἐκπαραστήτες, and as οἱ κατελ-

* Noodt (Op. Omn. i. 58) corrects the extract
from Marcianus thus:—"Exsilium duplicae est: aut
certorum locorum interdictio, ut lata fuga; aut
omnia locorum præter certum locum, ut insulae
vinctum," &c.

The passage is evidently corrupt in some editions
of the Digest, and the correction of Noodt is sup-
ported by good reasons. It seems that Marcian is
here speaking of the two kinds of relegatio (com-
pare Ulpian, Dig. 48. tit. 22. s. 7), and he does
not include the exsilium, which was accompanied
with the loss of the civitas; for if his definition
is intended to include all the kinds of exsilium, it
is manifestly incomplete; and if it includes only
relegatio, as it must do from the terms of it, the
definition is wrong, inasmuch as there are only
two kinds of relegatio. The conclusion is, that
the text of Marcianus is either corrupt, or has been
altered by the compilers of the Digest.
cally correct. (Instances of relegatio occur in the following passages:—Suet. Aug. c. 16, Tib. c. 50; Tacit. Ann. c. 13; De orig. gent. c. 23, which last, as the historian remarks, was a new kind of relegatio.) The term relegatio is applied by Cicero (de Off. iii. 31) to the case of T. Manlius, who had been compelled by his father to live in solitude in the country.

Deportatio in insulam, or deportatio simply, was introduced under the emperors in place of the aequa et ignis interdicto. (Ulpian, Dig. 46. tit. 15. s. 3; tit. 18. s. 2.) The governor of a province (praeses) had not the power of pronouncing the sentence of deportatio; but this power was given to the praefectus urb. by a rescript of the emperor Severus. The consequence of deportatio was loss of property and citizenship, but not of freedom. Though the deportatus ceased to be a Roman citizen, he had the capacity to buy and sell, and do other acts which might be done according to the jus gentium. Deportatio differed from relegatio, as already shown, and also in being always for an indefinite time. The relegatus went into banishment; the deportatus was conducted to his place of banishment, sometimes in chains.

As the exsilium in the special sense, and the deportatio took away a person's civitas, it followed that if he was a father, his children ceased to be in his power; and if he was a son, he ceased to be in his father's power; for the relationship expressed by the terms patria potestas could not exist when either party had ceased to be a Roman citizen. (Gaius, i. 128.) Relegatio of a father or of a son, of course, had not this effect. But the interdict and the deportatio did not dissolve marriage. (Cod. 5. tit. 16. s. 24; tit. 17. s. 1; compare Gaius, i. 128, with the Institutes, i. tit. 12, in which the deportatio stands in the place of the aequa et ignis interdicto of Gaius.)

When a person, either parent or child, was condemned to the mines or to fight with wild beasts, the relation of the patria potestas was dissolved. This, though not reckoned a species of exsilium, resembled deportatio in its consequences. It remains to examine the meaning of the term exsilium in the republican period, and to ascend, so far as we can, to its origin. Cicero (Pro Cuccina, c. 34) affirms that no Roman was ever deprived of his civitas or his freedom by a lex. In the oration Pro Balbo (c. 16) the proposition is put rather in this form; that a Roman who became a citizen of another state, thereby ceased to be a Roman citizen. It must not be forgotten that in the oration Pro Cuccina, it is one of Cicero's objects to prove that his client had the rights of a Roman citizen; and in the oration Pro Domo, to prove that he himself had not been an exsil, though he was interdicted from fire and water within 400 miles of Rome. (Cic. Ad Attic. iii. 4.) Now, as Cicero had been interdicted from fire and water, and as he evaded the penalty, to use his own words (Pro Cuccina c. 34), by going beyond the limits, he could only escape the consequences, namely, exsilium, either by relying on the fact of his not being received as a citizen into another state, or by alleging the illegality of the proceedings against him. But the latter is the ground on which he seems to maintain his case in the Pro Domo: he alleges that he was made the subject of a privilégium, without having been first condemned in a judicium (c. 17).

In the earlier republican period, a Roman citizen might have a right to go into exsilium to another state, or a citizen of another state might have a right to go into exsilium at Rome, by virtue of certain isopolitical relations existing between such state and Rome. This right was called jus exulandi with reference to the state to which the person came; with respect to his own state which he left, he was exul, and his condition was exsilium: with respect to the state which he entered, he was inquinulius: and at Rome he might attach himself (applicare se) to a quasi patronus, a relationship which gave rise to questions involving the jus applicationis.

The sentence of aquae et ignis, to which Cicero adds (Pro Domó, c. 30) teicti interdictio (comp. Plut. Marius, c. 29), was equivalent to the deprivation of the chief necessaries of life, and its effect was to incapacitate a person from exercising the rights of a citizen within the limits which the sentence comprised. Supposing it to be true, that no Roman citizen could in direct terms be deprived of his civitas, it requires but little knowledge of the history of Roman jurisprudence to perceive that a way would readily be discovered of doing that indirectly which could not be done directly; and such, in fact, was the aquae et ignis interdictio. The meaning of the sentence of aquae et ignis interdictio is clear when we consider the symbolic meaning of the aqua et ignis. The bride, on the day of her marriage, was received by her husband with fire and water (Dig. 24. tit. 1. s. 66), which were symbolic of his taking her under his protection and sustentation. Varro (De ling. Lat. iv.) gives a different explanation of the symbolic meaning of aquae et ignis in the marriage ceremony:—Aqua et ignis (according to the expression of Festus) sunt duo elementa quae humanam vitam maxime conservant. The sentence of interdict was either pronounced in a judicium, or it was the subject of a lex. The punishment

* This word appears, by its termination inus, to denote a person who was one of a class, like the word libertinus. The prefix in appears to be the correlative of ex in exsil, and the remaining part guel, is probably related to col in incola and colonus.
was inflicted for various crimes, as *via publica*, *peculatus*, *veneficium*, &c. The Lex Julia de *publicis et privatis* applied, among other cases, to any person qui *repererit*, *celaverit*, *tenuerit*, the interdicted person (Paulus, Sent. Recept. ed. Schulting); and there was a clause to this effect in the lex of Clodius, by which Cicero was banished.

The sentence of the interdict, which in the time of the Antonines was accompanied with the loss of citizenship (Gaius, i. 90), could hardly have had any other effect in the time of Cicero. It may be true that exsilium, that is, the change of *solum*, or ground, was not in direct terms included in the sentence of *aqua et ignis interdictio*: the person might stay if he liked, and submit to the penalty of being an outcast, and being incapacitated from doing any legal act. Indeed, it is not easy to conceive that *banishment* can exist in any state, except such state has distant possessions of its own to which the offender can be sent. Thus banishment as a penalty did not exist in the old English law. When isopolitical relations existed between Rome and another state, exsilium might be the privilege of an offender. Cicero might then truly say that exsilium was not a punishment, but a mode of evading punishment (*Pro Caeceina*); and this is quite consistent with the interdict being a punishment, and having for its object the exsilium.

According to Niebuhr, the interdict was intended to prevent a person, who had become an exile, from returning to Rome and resuming his citizenship, and the interdict was taken off when an exsul was recalled. Further, Niebuhr asserts, that they who settled in an unprivileged place (one that was not in an isopolitical connection with Rome) needed a decree of the people, declaring that their settlement should operate as a legal exsilium. And this assertion is supported by a single passage in Livy (xxvi. 3), from which it appears that it was declared by a plebiscitum, that C. Fabius, by going into exile (*exulatum*) to Tarquinii, which was a municipium (*Pro Caecein. c. 4*), was legally in exile.

Niebuhr asserts that Cicero had not lost the civitas by the interdict; but Cicero (*Ad Attic. iii. 23*) by implication admits that he had lost his civitas and his ordo, though in the Oratio Pae*, Domque* he says he had lost his civitas. (And the ground on which he mainly attempted to support his case was, that the lex by which he was interdicted, was in fact no lex, but a proceeding altogether irregular. Cicero was restored by a lex Centurinata. (*Ad Attic. iv. 1*) [G. L.]

**EXTISPEX. [HARUSPEX.] EXTRAORDINARII. [EXERCITUS, p. 487, b.]**

**F.**

**FABRI,** are workmen who make any thing out of hard materials, as *fabri tignarii*, carpenters, *fabri aerarii*, smiths, &c. The different trades were divided by Numa (Plut. Numa, 17) into nine collegia, which correspond to our companies or guilds. In the constitution of Servius Tullius, the *fabri tignarii* (*tectores*, Orelli, Inserip. 60, 417, 3690, 4068, 4088, 4184) and the *fabri aerarii* or *ferriarii* (*ixalocriopus*) were formed into two centuries, which were called the *centuriae fabrum*, and not *fabrorum*. (*Cic. Orat. 46*) They did not belong to any of the five classes into which Servius divided the people; but the *fabri tigna* probably voted with the first class, and the *fabri aer* with the second. Livy (i. 43) and Dionysius (vii. 59) name both the centuries together: the former says that they voted with the first class; the latter, that they voted with the second. Cicero (*De Rep. ii. 22*) names only one century of fabri, which he says voted with the first class; but as he adds the word *tigiororum*, he must have recognized the existence of the second century, which we suppose to have voted with the second class. (Götting, Gesch. des Rom. Staates, p. 249.)

The fabri in the army were under the command of an officer called *praefectus fabrum*. (*Caes. ap. Cic. ad Att. ix. 8, Bell. Civ. i. 24*; *Veg. ii. 11*) It has been supposed by some modern writers that there was a praefectus fabrum attached to each legion; and this may have been the case. No genuine inscriptions however, contain the title of praefectus fabrum with the name of a legion added to it. There were also civil magistrates at Rome and in the municipal towns, called praefecti fabrum; but we know nothing respecting them beyond their name. Thus we find in Gruter, *Praef. Fabr. Romak* (467. 7). *Praefectus Fabr. Carr.* (235. 9.) The subject of the praefectus fabrum is discussed with great accuracy in a letter of Hagenbachius, published by Orelli (*Inserip. vol. ii. p. 95, &c.*).

**FACTIO'NES NERI'AURIGAR'UM. [Circus, p. 287.]**

**FAL'ARA. [HASTA.]**

**FALSA'RIUS. [FALSUM.]**

**FALSUM.** The oldest legislative provision at Rome against Falsum was that of the Twelve Tables against false testimony (Gell. xx. 1); but there were trials for giving false testimony before the enactment of the Twelve Tables. (Liv. iii. 24, &c.) The next legislation on Falsum, so far as we know, was a Lex Cornelia, passed in the time of the Dictator Sulla, which Cicero also calls testamentaria and numaria (*In Verr. ii. lib. i. c. 42*), with reference to the crimes which it was the object of the law to punish. The offence was a Crimen Publicum. The provisions of this lex are stated by Paulus (Sent. Recept. v. 25, ed. Berl.), who also entitles it Lex Cornelia testamentaria, to apply to any person “qui testamentum quodque aliud instrumentum falsum scens dolo malo scripserit, recitaverit, subjecerit, suppresserit, amoverit, resignaverit, deleverit,” &c. The punishment was deportatio in insulam (at least when Paulus wrote) for the “honestiores;” and the mines or crucifixion for the “humiliores.” In place of deportatio, the law probably contained the punishment of the interdictio aquae et ignis. According to Paulus the law applied to any instrument as well as a will, and to the adulteration of gold and silver coin, or refusing to accept in payment genuine coin stamped with the head of the princes. But it appears from Ulpian (sub titulo de poena legis Corneliae testamentariae) that these were subsequent additions made to the Lex Cornelia (*Mos. et Rom. Leg. Coll. tit. 8. a. 7*) by various senatus-consulta. (*Tact. Ann. xiv. 40, 41*) By a senatus-consultum, in the consulsiphip of Statilius and Taurus, the penalties of the law were extended to the case of other than testamentary instruments. It is conjectured that, for the consulsiphip of Statilius
and Taurus, as it stands in the text of Ulpian, we should read Statilius Taurus, and that the consuls
ship of T. Statilius Taurus and L. Scribonius Libo (A.D. 16) is meant. A subsequent senatus-consultum,
by the pruning-hook, it was often smoothed, as in modern gardening, by the chisel. (Colum. De Arbor. 10.) [DOLABRA.] The edge of the falx was often toothed or serrated (ερυνη καρ
laphynta, Hesiod, Theog. 174, 179 ; dentiliana, Colum. De Re Rust. ii. 21). The indispensable
process of sharpening these instruments (ερυνη χαρασμένη, Hesiod, Op. 573 ; ερυνη εὐκάμη
νευθηγγα, Apoll. Rhod. iii. 1388) was effected by whetstones which the Romans obtained from Crete and other distant places, with the addition of oil or water which the mower (foenixis) car
ried in a horn upon his thigh. (Plin. H. N. xvii. 67.)

Numerous as were the uses to which the falx was applied in agriculture and horticulture, its employment in battle was almost equally varied, though not so frequent. The Geloni were noted
for its use. (Claudian, De Laud. Stil. i. 110.) It was the weapon with which Jupiter wounded Typhon (Apollod. i. 6); with which Heracles slew the Lernaean Hydra (Eurip. Ion, 191); and
with which Mercury cut off the head of Argus (falce atro, Ovid, Met. i. 718 ; harpen Cyllenida, Lucan, ix. 662-667). Perseus, having received the same weapon from Mercury, or, according to other authorities,
from Vulcan, used it to decapi
tate Medusa and to slay the sea-monster. (Apollod. ii. 4; Eratosth. Catalog. 22; Ovid, Met. iv. 666, 720, 727, v. 69; Brunck, Anal. iii. 157.) From the passages now referred to, we may conclude that
the falchion was a weapon of the most remote antiquity; that it was girt like a dagger upon the
waist; that it was held in the hand by a short hilt; and that, as it was in fact a dagger or sharp
pointed blade, with a proper falx projecting from one side, it was thrust into the flesh up to this lateral curvature (curvo tenus abdid-it hamo). In the following woodcut, four examples are selected from
works of ancient art to illustrate its form. One of the four cameos here copied represents Perseus with the falchion in his right hand, and the head of Medusa in his left. The two smaller
figures are heads of Saturn with the falx in its original form; and the fourth cameo, representing the
same divinity at full length, was probably engraved in Italy at a later period than the others, but early enough to prove that the scythe was in use among the Romans, whilst it illustrates the adapta
tion of the symbols of Saturn (Κπως) senex falcifer, Ovid, Fast. v. 627, in Ibiu, 216) for the purpose of personifying Time (Χρονος).

If we imagine the weapon which has now been
The word "familia" sometimes signifies only "persons," that is, all those who are in the power of a paterfamilias, such as his sons (filii familiae), daughters, grandchildren, and slaves, who are strictly objects of dominium, but are also in a sense objects of potestas. In another sense "familia" signifies only the free persons who are in the power of a paterfamilias; and, in a more extended sense of this kind, all those who are agnati, that is, all who are sprung from a common ancestor, and would be in his power if he were living. With this sense of familia is connected the status familiaris, by virtue of which a person belonged to a particular familia, and thereby had a capacity for certain rights which only the members of the familia could claim. A person who changed this status, ceased to belong to the familia, and sustained a capitis diminutio minima. [Adoptio; Caput.] Members of the same familia were "familiares;" and hence familiaris came to signify an intimate friend. Slaves who belonged to the same familia were called, with respect to this relation, familiares. Generally, "familiaris" might signify anything relating to a familia.

In the passage of the Twelve Tables which declares that in default of any heres suus, the property of the intestate shall go to the next agnatus, the word "familia" signifies the property only: "Agnatus proximus familiae habebat." In the same section in which Ulpian (Frag. tit. 26, 1) quotes this passage from the Twelve Tables, he explains agnati to be "cognati virilis sexus per mares descendentes ejusdem familiae," where the word "familia" comprehends only persons. (Dig. 50. tit. 16. s. 195; 10. tit. 2.)

The notion of Familia as a natural relation consists of Marriage, the Patria Potestas, and Cognatio (kinship). But Positive Law can fashion other relations after the type of these natural relations. Of these artificial family relations the Roman law had five, which are as follow: — (1) Manus, or the strict marriage relation between the husband and wife; (2) Servitus, or the relation of master and slave; (3) Patronatus, or the relation of former master to former slave; (4) Mancipii causa, or that intermediate status between servitus and libertas, which characterized a child who was emancipated by his father [Emancipatio]; (5) Tutela and Curatio, the origin of which must be...
The doctrine of representation, as applied to the acquisition of property, is connected with the doctrine of the relations of familia; but being limited with reference to potestas, manus, and mancipium, it is not co-extensive nor identical with the relations of familia. Legal capacity is also connected with the relations of familia, though not identical with, but rather distinct from them. The notions of liberi and servi, sui juris and alieni, are comprised in the above-mentioned relations of familia. The distinctions of Gises, Latinis, Peregrini, are entirely unconnected with the relations of familia. Some of the relations of familia have no effect on legal capacity, for instance, marriage as such. That family relationship which has an influence on legal capacity, is the Patria Potestas, in connection with which the legal incapacities of filiusfamilias, filastiamfamilias, and a wife in manu, may be most appropriately considered. (Savigny, System des heutigen Römi. Rechts, vol. i. pp. 345, &c., 356, &c. vol. ii. Berlin, 1840; Böcking, Institutionen, vol. i. p. 213, &c.) [G. L.]

FAMILIAE ERCISCUNDAE ACTIO.
Every heres, who had full power of disposition over his property, was entitled to a division of the hereditas, unless the testator had declared, or the co-heredes had agreed, that it should remain in common for a fixed time. The division could be made by agreement among the co-heredes; but in case they could not agree, the division was made by a judex. For this purpose every heres had against each of his co-heredes an actio familiae erciscundae, which, like the actiones communi dividundo, and finium regundorum, was of the class of Mixtae Actiones, or, as they were sometimes called, Duplicita Judicia, because, as in the familiae erciscundae judicium, each heres was both plaintiff and defendant (actor and reus); though he who brought the actio and claimed a judicium (ad judicium provocatum) was properly the actor. A heres, either ex testamento or ab intestato, might bring this action. All the heredes were liable to the bonorum collatio (bonorum collatio), that is, bound to allow, in taking the account of the property, what they had received from the testator in his lifetime, as part of their share of the hereditas, at least so far as they had been enriched by such donations.

This action was given by the Twelve Tables. The word Familia here signifies the “property,” as explained in the previous article, and is equivalent to hereditas.

The meaning and origin of the verb icer, icere, or here, icere, have been a subject of some dispute. It is, however, certain that the word means a division.” (Dig. 10. tit. 2; Cic. De Orat. i. 56, Pro Cac. c. 7; Apul. Met. ix. p. 210, Bipont.) [G. L.]

FAMO'SI LIBELLI. [LIBELLUS.]
FANUM. [TEMPLUM.]
FA'RREUM. [MATHIMONIUM.]
FARTOR (στάρτορ), was a slave who fattened poultry. (Colum. viii. 7; Hor. Sat. ii. 3. 228; Plaut. T, i. 2. 11.) Donatus (ad Terent. Epist. ii. 2. 26) says that the name was given to a maker of sausages; but compare Becker, Gallus, vol. ii. p. 190.

The name of fartores or crammers was also given to the nomenclatores, who accompanied the candidates for the public offices at Rome, and gave them the names of such persons as they might meet. (Pestus, s. v. Fartores.)

FAS. [FASTI; JUS.]
FASCE, were rods bound in the form of a bundle, and containing an axe (secutis) in the middle, the iron of which projected from them. These rods were carried by lictors before the superiour magistrates at Rome, and are often represented on the reverse of consensus coins. (Spanh. De Præst. et Usu Numism. vol. ii. pp. 88, 91.)

The following woodcuts give the reverses of four consular coins; in the first of which we see the lictors carrying the fasces on their shoulders; in the second, two fasces, and between them a sella curulis; in the third, two fasces crowned, with the consul standing between them; and in the fourth, the same, only with no crowns around the fasces.

The fasces appear to have been usually made of birch (betulla, Plin. H. N. xvi. 30), but sometimes also of the twigs of the elm. (Plaut. Asin. iii. 2. 29, ii. 3. 74.) They are said to have been derived from Vetulonia, a city of Etruria. (Sil. Ital. viii. 485; compare Liv. i. 6.) Twelve were carried before each of the kings by twelve lictors; and on the expulsion of the Tarquins, one of the consuls was preceded by twelve lictors with the fasces and secures, and the other by the same number of lictors with the fasces only, or, according to some accounts, with crowns round them. (Dionys. v. 2.) But P. Valerius Publicola, who gave to the people the right of provocatio, ordained that
the secures should be removed from the fasces, and allowed only one of the consuls to be preceded by the lictors while they were at Rome. (Cic. de Rep. ii. 31 ; Valer. Max. iv. 1. § 1.) The other consul was attended only by a single accensus [ACCENSUS]. When they were out of Rome, and at the head of the army, each of the consuls retained the axe in the fasces, and was preceded by his own lictors. (Dionys. v. 19 ; Liv. xxiv. 9, xxviii. 27.)

When the decemviri were first appointed, the fasces were only carried before the one who presided for the day (Liv. iii. 33) ; and it was not till the second decemvirate, when they began to act in a tyrannical manner, that the fasces with the axe were carried before each of the ten. (Liv. iii. 36.) The fasces and secures were, however, carried before the dictator even in the city (Liv. vi. 18) : he was preceded by 24 lictors, and the magister equitum by six.

The praetors were preceded in the city by two lictors with the fasces (Censorin. De Leg. Nat. ii. 24; Cic. Agrar. ii. 34) ; but out of Rome and at the head of an army by six, with the fasces and secures, whence they are called by the Greek writers στρατηγοὶ έξαπελείκεις. (Appian, Syr. 15 ; Polyb. ii. 24. § 6, iii. 40. § 9, 106. § 6.) The proconsuls also were allowed, in the time of Ulpian, six fasces. (Dig. 1. tit. 16. s. 14.) The tribunes of the plebs, the aediles and quaestors, had no lictors in the city (Quaest. Rom. iii. 71.) ; but in the provinces the quaestors were permitted to have the fasces. (Cic. Pro Planc. 41.)

The lictors carried the fasces on their shoulders, as is seen in the coin of Brutus given above ; and when an inferior magistrate met one who was higher in rank, the lictors lowered their fasces to him. This was done by Valerius Publicola, when he addressed the people (Cic. de Rep. ii. 31 ; Liv. ii. 7 ; Valer. Max. iv. 1. § 1) ; and hence came the expression submittere fasces in the sense of to yield, to confess one's self inferior to another. (Cic. Div. 63.)

When a general had gained a victory, and had been saluted as Imperator by his soldiers, his lictors were preceded by six. (Cic. de Nat. i. 28 ; Caes. B. C. iv. 71.)

FASCIA, FASCIO, a band or fillet of cloth, worn, 1. round the head as an ensign of royalty (Sueton. Jul. 79) [DIADEMA] ; woodcut to FALX] : 2. by women over the breast as an ensign of royalty (Sueton. Aug. 28) ; and 3. round the head as an ornament, upon his head (op. Non. Marc. xiv. 2). Afterwards, when the toga had fallen into disuse, and the shorter pallium was worn in its stead, the head of the emperor was adorned with the fasces, and the shorter pallium was worn in its stead, the head of the emperor Alexander Severus (Lamprid. Alex. Sever. 40) always used them, even although, when in town, he wore the toga. Quin- tillian, nevertheless, asserts that the adoption of them could only be excused on the plea of infirm health. (Inst. Or. xi. 3.) White fasces, worn by men (Val. Max. l. c. ; Phaed. v. 7, 87), were a sign of extraordinary refinement in dress ; the mode of cleaning them was by rubbing them with a white tenacious earth, resembling our pipe-clay (fascie cretae, Cic. ad Att. ii. 3). The finer fasces, worn by ladies, were purple. (Cic. de Harusp. Resp. 21.) The bandages wound about the legs, as shown in the illuminations of ancient MSS., prove that the Roman usage was generally adopted in Europe during the middle ages.

On the use of fasces in the nursery of children (Plaut. Truc. v. 13) see INCUINABULA. [J. Y.]

FASCIA (fasia), in architecture, signifies (by an obvious analogy with the ordinary meaning of the word) any long flat surface of wood, stone, or marble, such as the band which divides the architrave from the frieze in the Doric order, and the surfaces into which the architrave itself is divided in the Ionic and Corinthian orders. (See ERYXSTYLIUM, and the cuts under COLUMNA.) [P. S.]

FASCICUM (bastowia), fascination, enchantment. The belief that some persons had the power of injuring others by their looks, was as prevalent among the Greeks and Romans as it is among the superstitious in modern times. The ὅθθαλμος βάστακος, or evil eye, is frequently mentioned by ancient writers. (Aleiphr. Ep. i. 15 ; Heliod. Ath. i. 7 ; compare Plin. H. N. vii. 2.) Plutarch, in his Symposium (v. 7), has a separate chapter περὶ τῶν κατασκευάσματων λεγόμενων, καὶ βάστακων ἄσεως ὅθθαλμον. The evil eye was supposed to injure children particularly, but sometimes cattle also ; whence Virgil (Eccl. iii. 103) says,

"Nescio quis teneros oculos mihi fascinat agnum."

Various amulets were used to avert the influence of the evil eye. The most common of these appears to have been the phallus, called by the Romans fascinum, which was hung round the necks of children (turpilica res, Var. De Ling. Lat. vii. 97, ed. Müller). Pliny (H. N. xix. 19. § 1) also says that Scotrycs sigma, by which he means the phallos, worn in ancient times, was put in place of an evil eye, either as a protection against the fascinations of the envious ; and we learn from Pollux (viii. 118) that smiths were accustomed to place the same figures before their forges with the same design. Sometimes other objects were employed for this purpose. Peisistratus is said to have hung the figure of a kind of grasshopper before the Acropolis as a preservative against fascination. (Hesych. s. v. Κατασκήνης.)

Another common mode of averting fascination was by splitting into the folds of one's own dress. (Theoc. vi. 39 ; Plin. H. N. xxvii. 7 ; Lucian, Navig. 15. vol. iii. p. 250, ed. Reitz.)

According to Pliny (H. N. xxvii. 7), Fascinus was the name of a god, who was worshipped among the Roman sacra by the Vestal virgins, and was placed under the chariot of those who triumphed as a protection against fascination ; by which he means in all probability that the phallus was placed under the chariot. (Müller, Archiöld. der Kunst, § 436. 1, 2 ; Böttiger, Klem. Schr. iii. p. 111 ; Becker, Charikles, vol. ii. pp. 104, 291.)

FASTI. Fasti signifies divine law : the epithet fastus is properly applied to anything in accordance with divine law, and hence those days upon which legal business might, without impiety (sine pignulo), be transacted before the praetor, were technically
denominated fasti dies, i. e. lawful days. Varro and Festus derive fastus directly from fari (Varr. de Ling. Lat. vi. 2; Festus, s. v. Fasti), while Ovid (Fast. i. 47) may be quoted in support of either etymology.

The sacred books in which the fasti dies of the year were marked, were themselves denominated fasti; the term, however, was employed in an extended sense to denote registers of various descriptions, and many mistakes have arisen among commentators from confounding fasti of different kinds. It will be useful, therefore, to consider separately the two great divisions, which have been distinguished as Fasti Sacri or Fasti Kalendars, and Fasti Annales or Fasti Historici.

I. FASTI SACRI OR KALENDARES. For nearly four centuries and a half after the foundation of the city a knowledge of the calendar was possessed exclusively by the priests. One of the pontifices regularly proclaimed the appearance of the new moon, and at the same time announced the period assembled for the purpose of learning from the Rex Sacrorum the various festivals to be celebrated during the month, and the days on which they would fall. (Macrobi. i. 15.) In like manner all who wished to go to law were obliged to inquire of the privileged few on what day they might bring their suit, and received the reply as if from the lips of an astrologer. (Cic. Pro Murex. 11.) The whole of this lore, so long a source of power and profit, and therefore jealously enveloped in mystery, was at length made public by a certain Cn. Flavins, scribe to App. Claudius Caecus (Liv. ix. 46; Varr. de Ling. 11.; Plin. H. N. xxxiii. 1; Gall. vi. 9; Val. Max. ii. 5), who, having gained access to the pontifical books, copied out all the requisite information, and exhibited it in the forum for the use of the people at large. From this time forward such tables became common, and were known by the name of Fasti. They usually contained an enumeration of the months and days of the year; the Nones, Ides, Nonae, Dies Fasti, Nefasti, Comitiales, Atellanae, &c. (Calendarium), together with the different festivals, were marked in their proper places: astronomical observations on the risings and settings of the fixed stars, and the commencement of the seasons were frequently inserted, and sometimes brief notices annexed regarding the introduction of the months.

In later times it became common to pay homage to the imperial family by noting down their exploits and honours in the calendar, a species of flattery with which Antonius is charged by Cicero (Philipp. ii. 34. See also Tacit. Ann. i. 15).

It will be seen from the above description that these fasti closely resembled a modern almanac (Fastorum libri appellantur totius anni descriptio. Festus); and the celebrated work of Ovid may be considered as a poetical Year-book or Companion to the Almanac, having been composed to illustrate the Fasti published by Julius Caesar, who remodelled the Roman year. All the more remarkable epochs are examined in succession, the origin of the different festivals explained, the various ceremonies described, the legends connected with the principal constellations narrated, and many curious discussions interwoven upon subjects likely to prove interesting to his countrymen; the whole being seasoned with frequent allusions to the glories of the Julian line.

Several specimens of fasti, more or less perfect, on stone and marble, have been discovered at different times in different places, none of them, however, older than the age of Augustus. The most remarkable, though one of the least entire, is that known as the Kalendarium Praenestinum or Fasti Verrucini. Suetonius, in his short treatise on distinguished grammarians, tells us that a statue of Verrius Flaccus, preceptor to the grandsons of Augustus, stood in the lower part of the forum of his native town, Praeneste, opposite to the Homerycium, on which he had exhibited to public view the fasti, arranged by himself, and engraved on marble slabs. In the year 1770 the remains of a circular building were discovered in the immediate vicinity of the modern Palestrina, together with several fragments of marble tablets, which were soon recognised as forming part of an ancient calendar; and upon further examination no doubt was entertained by the learned that these were the very fasti of Verrus described by Suetonius. An Italian antiquary, named Foggini, continued the excavations, collected and arranged the scattered morsels with great patience and skill; and in this manner the months of January, March, April, and December, to which a very small portion of February was afterwards added, were recovered; and, although much defaced and mutilated, form a very curious and useful monument. They appear to have embraced much information concerning the festivals, and a careful detail of the honours bestowed upon, and the triumphs achieved by, Julius, Augustus, and Tiberius. The publication of Foggini contains not only an account of this particular discovery, but also the complete fasti of the Roman year, so far as such a compilation can be extracted from the ancient calendars now extant. Of these he enumerates eleven, the names being derived either from the places where they were found, or from the family who possessed them when they first became known to the literary world:—

1. Calendarium Maffiorum, which contains the twelve months complete.
2. Cal. Praenestinum, described above.
3. Cal. Capranicorum, August and September complete.
5. Cal. Antistinum, fragments of the six last months.
7. Cal. Farnesianum, a few days of February and March.
10. Cal. Vaticanum, a few days of March and April.
11. Cal. Allocinum, a few days of July and August.

Some of the above, with others of more recent date, are given in the Corpus Inscriptionum et Rituarum, in the 11th vol. of the Thesaurus Rom. Antiq. of Graevius, and in other works of a similar description; but the fullest information upon all matters connected with the Fasti Sacri is embodied in the work of Foggini, entitled Fastorum...
annis Romanis a Verrio Flaco ordinatarum Reliquiae, &c. Rome, 1779; and in loc. Var. Vassum Antiquitatem, ad Fastos Rom. Sacros fragmenta, Traj. ad Rhen. 1795: to which add Ideler's &c. Romae, 1779; and in ad verss. ad Fastos Rom. Sacros fragmenta, which has been called in question without good make mention of a curious relic, the antiquity of Berlin, 1826.

Before quitting this part of our subject, we may make mention of a curious relic, the antiquity of which has been called in question without good cause, the Calendarium Rusticum Parneaeum. This Rural Almanac is cut upon four sides of a cube, each face being divided into three columns, and each column including a month. At the top of the column is carved the appropriate sign of the zodiac; then follows the name of the month, the number of the days, the position of the nones, the length of the day and night, the name of the sign through which the sun passes, the god under whose protection the month was placed, the various agricultural operations to be performed, and a list of the principal festivals. Take May as an example:

**MENSIS MAYS**

**DIES. XXXI.**

**NOM. SEPTIM.**

**DIES. HOR. XIIII.**

**NOX. HOR. VIIIIS.**

**SOL. TAYRO.**

**SEGETES**

**LVSTRANTVR.**

**SACRVM. MERCVR.**

**ST. FLORAE.**

(See the commentary of Morcelli in his Opera Epigraphica, vol. i. 77.)

II. **FASTI ANNALES or HISTORICI.** Chronicles such as the Annales Maximi, containing the names of the chief magistrates for each year, and a short account of the most remarkable events noted down opposite to the days on which they occurred, were, from the resemblance which they bore in arrangement to the sacred calendars, denominated fasti; and hence this word is now used, especially by the poets, in the general sense of historical records. (Hom. Sat. i. 3. 112, Carm. iv. 13. 13, iii. 17. 7.)

In prose writers fasti is commonly employed as the technical term for the registers of consuls, dictators, censors, and other magistrates, which formed part of the public archives. (Liv. ix. 18; Cic. Pro Sort. 14; compare Cic. Philipp. xii. 12; Tacit. Ann. iii. 17. 18.) Again, when Cicero remarks in the famous epistle to Lucceius (Ad Fam. v. 12), "Etenim ordo ille annalium medico-criter nos retinet quasi enumeratione fastorum," he means that the regular succession of events meagrely detailed in chronicles fixed the attention but feebly, and was little more interesting than a mere catalogue of names. (Compare Ad Att. iv. 8.)

A most important specimen of fasti belonging to this class, executed probably at the beginning of the reign of Tiberius, has been partially preserved. In the year 1547, several fragments of marble tablets were discovered in excavating the Roman forum, and were found to contain a list of consuls dictators with their masters of horse, censors with the laura which they closed, triumphs and ovals, all arranged in regular succession according to the years of the Catonian era. These had evidently extended from the expulsion of the kings to the death of Augustus, and although defective in many places, have proved of the greatest value in chronology. The different pieces were collected and arranged under the inspection of Cardinal Alexander Farnese, and deposited in the Capitol, where they still remain. From this circumstance they are generally distinguished as the Fasti Capitolini. In the years 1817 and 1818, two other fragments of the same marble tablets were discovered in the course of a new excavation in the Forum. A fac-simile of them was published at Milan, by Borghesi, in 1818. [W.R.]

**FASTIGIUM (aëros, aërhoës), literally, a slope, in architecture a pediment, is the triangle which surmounts each end of a rectangular building, and which, in fact, represents the gable end of the roof. (See woodcut, p. 97.) It is composed of three sets of mouldings (forming respectively the horizontal base and the sloping sides of the triangle, and representing the timber framing of the roof), and of a flat surface enclosed by them, which covers the vacant space of the roof, and which, from its resemblance to a membrane stretched upon the triangular frame, is called tympanum. (Vitruv. iii. 5.) This flat surface was generally ornamented with sculpture; originally, in the early temples of Zeus, with a simple eagle as a symbol of the god (Pind. Olymp. xii. 29, and Schol. ad loc.), an instance of which is afforded by the coin represented in the following woodcut (Beger. Spicil. Antiq. p.6), whence the Greek name aëros which was at first applied to the tympanum and afterwards to the whole pediment; and in after times with elaborate sculptures in high relief, such as those in the pediments of the Parthenon, the fragments of which are among the Elgin marbles in the British Museum; where also may be seen a full-sized model of the pediments of the temple of Zeus Panhellenius, at Aegina, with casts of the statues in them, restored. Most of the celebrated Greek temples were similarly adorned. (See Paus. i. 24; § 3, ii. 7 § 3, v. 10; § 2, ix. 11; § 4; and Aristoph. Aias, 1110.) Terra-cotta figures were applied in a similar manner by the Romans in the early ages. (Cic. Divin. i. 10; Vitruv. iii. 2; Plin. H. N. xxxv. 12. s. 43, 46, xxxvi. 2.)

The dwelling-houses of the Romans had no gable ends; consequently, when the word is applied to them (Cic. Epist. ad Q. Fr. iii. 1. 4; Virg. Aen. viii. 491), it is not in its strictly technical sense, but designates the roof simply, and is to be understood of one which rises to an apex as distinguished
from a flat one, or sometimes it may refer to the pediment of a portico attached to the front of a mansion, as when the Romans decreed to Caesar the liberty of erecting a fastigium to his house (Cic. Phil. ii. 43; Florus, iv. 2; Plut. Caes. 81; comp. Acrotarium), that is, a portico and pediment towards the street like that of a temple. [A. R.]

FAUCES. [Domus, p. 428, a.]

FAX (φανός), a torch. The descriptions of poets and mythologists, and the works of ancient art, represent the torch as carried by Diana, Ceres, Art, represent the torch as carried by Diana, Ceres, Juno, Minerva, and occasionally by the Graces, as when the Romans decreed to Caesar the liberty of erecting a fastigium to his house (Cic. Phil. ii. 43; Florus, iv. 2; Plut. Caes. 81; comp. Acrotarium), that is, a portico and pediment towards the street like that of a temple. [A. R.]

ACROTERIUM), that is, a portico and pediment o
to the chariot of Jupiter (Martial, i. 107; Valer. Max. iv. 23), and, in an inverted position, by Sleep and Death. In the annexed woodcut, the female figure in the middle is copied from a fictile vase. The winged figure, also with the torch inverted, is taken from an antique gem, and represents Cupid under the character of Ἀκρεπώς (Serv. iv. 520) or "Lethaeus Amor" (Ovid, Fasti ii. 120), both because these were often nocturnal ceremonies, and because it was used to set fire to the pile. Hence the expression of Propertius (iv. 12, 46), "Vivimus insignes inter utrumque facem." The torch-bearer turned away his face from the pile in setting it on fire. (Virg. Aen. vi. 224.)

FEBRUUM. [LUPERCALIA.]

FECIACES. [FETIAGES.]

FEMINACEA, were worn in winter by Augustus Caesar, who was very susceptible of cold. (Sueton. Aug. 82.) Casuobium supposes them to have been bandages or fillets [FASCIA] wound about the thighs; it seems more probable that they were breeches, and that loose garments for the thighs (περιφρᾶς) were worn by the Roman horsemen (Arrian, Tact. p. 14, ed. Blanck); and the column of Trajan, the arch of Constantine, and other monuments of the same period, present numerous examples of both horse and foot soldiers who wear breeches, closely fitted to the body, and never reaching much below the knees. (See woodcuts, pp. 2, 117, 136.)

FENESTRA. [Domus, p. 432.]

FENUS (φένος), interest of money. 1. GREEK. At Athens, Solon, among other reforms, abolished the law by which a creditor was empowered to sell or enslave a debtor, and prohibited the lending of money upon a person's own body (ἐν τοῖς σώμασι μηδενα δανείζειν, Plut. Sol. c. 15). No other restriction, we are told, was introduced by him, and the rate of interest was left to the discretion of the lender (τῷ ἀρχέουσι στάδησιν ἐστι; ἐφ' ὅπϊ σώμα τ' ὑπὸ λατιταται δ δανείζουν, Lys. in Theom. p. 117). The only case in which the rate was prescribed by law, was in the event of a man separating from his lawful wife, and not refunding the dowry he had received with her. Her trustees or guardian (οἱ κύραιοι) could in that case proceed against him for the principal, with lawful interest at the rate of 18 per cent. [Dos (GREEK).]

Any rate might be expressed or represented in two different ways: (1) by the number of oboli or drachmae paid by the month for every mina; (2) by the part of the principal (τὸ ἀργυρὸν ορ κεφάλαιον) paid as interest either annually or for the whole period of the loan. According to the former method, which was generally used when money was lent upon real security (τούς ἐγγυους ἢ ἐγγυους), different rates were expressed as follows:—10 per cent. by ἐν τίτε ὀδολοὶ, i.e. 5 oboli per month for every mina, or 60 oboli a year=10 drachmae=5 of a mina. Similarly,

12 per cent. by ἐν δραχμηὶ per month.
16 per cent. ἐν ὀκτὼ ὀδολοὶ.
18 per cent. ἐν ἐβδομα ὀδολοὶ.
24 per cent. ἐν τρεῖ ὀδραχμαί.
36 per cent. ἐν τριτε ὀδραχμαί.
5 per cent. ἐν τρίτῃ ἡμιοδολο, probably.

Another method was generally adopted in cases of bottomry, where money was lent upon the ship's cargo or freightage (ἐν τῷ μάρτυρ) or the ship itself, for a specified time, commonly that of the voyage. By this method the following rates were thus represented.

10 per cent. by τόκου ἐπιδέκατο, i.e. interest at the rate of a tenth: 124, 163, 20, 335, by τόκου ἐπιδύομον, ἐπικτοῦ, ἐπανεπικτοῦ, and ἐπιπτοῦ, respectively. So that, as Büch (Pub. Economy of Athens, pp. 128, 129, 2nd ed.) remarks, the τόκος ἐπιδέκατος is equal to the ἐν τίτε ὀδολοὶ;
the τόκος ἐνδύναος = the ἐπὶ δραχμὴ nearly.
= " ἐπίκτησις = ἐπὶ ὑπότω λόγοις
= " ἐπίσκεψις = ἐπὶ ἐννέα λόγοις
= " ἐπίπτυσ = ἐπὶ τριάδραχμαιν

These nearly corresponding expressions are not to be considered as identical, however closely the rates indicated by them may approach each other in value; although so the T<KOJOS eiriSe/caros or 10 per cent., the orators; the lowest in ordinary use at Athens in value; although in the age of Justinian, as Salmasius (de M. U.) observes, the τόκος ἐνδύναος of eight oboli or 16 per cent., the highest in the time of Demosthenes (c. Aph. p. 820. 16), but appears to have been thought low. The interest of eight oboli or 16 per cent. occurs in that orator (c. Nicos. p. 1250. 18): and even in the age of Lysias (n. c. 440) and Isaeus (n. c. 400), nine oboli for the mina, or 18 per cent., appears to have been a common rate. (Isaeus, de Hym. Hered. p. 293.) Aeschines also (c. Timarch. p. 15) speaks of money being borrowed on the same terms; so that on the whole we may conclude, that the usual rates of interest at Athens about the time of Demosthenes varied from 12 to 18 per cent. That they were more or less uniform, and similarly expressed, throughout the rest of Greece, appears from the authorities quoted by Bökck. No conclusions on the subject of the general rate of interest can be drawn from what we are told of the exorbitant rates exacted by common usurers (τόκογλυφοι, τολυκίνοι, ἡμεραδαινιαλτι). Some of these (Theophr. Charact. 6) exacted as much as an obolus and a half per day for each drachma; and money-lenders and bankers in general, from the high profits which they realised, and the security with which they exacted their dues, seem to have had as an unpopular maxim among their fellow-citizens as Jews and usurers in more modern times. Demosthenes (c. Pant. p. 981), indeed, intimates that the fact of a man being a money-lender was enough to prejudice him, even in a court of law, amongst the Athenians. (Μισοῦσι αἱ Ἀθηναὶ τὸν δανείωτας.) It is curious also to observe that Aristotle (Pol. i. 3. § 23) objects, on principle, to putting money out at interest (ἐνδύναυα μείζον ἡ δανειαστική), as being a perversion of it from its proper use, as a medium of exchange, to an unnatural purpose, viz. the reproduction or increase of itself; whence, he adds, comes the name of interest or τόκος, as being the offspring (τὸ γιγανθέμενον) of a parent like itself.

The arrangement of a loan would of course depend upon the relation between the borrower and the lender, and the confidence placed by one in the other. Sometimes money was lent, e. g. by the banker Pasion at Athens, without a security, or written bond, or witnesses. (Dem. c. Timoth. p. 1183.) But generally either a simple acknowledgment (χειρόγραφον) was given by the borrower [CHIROGRAPHUM]; or a regular instrument (συγγραφή), executed by both parties and attested by witnesses, was deposited with a third party, usually a banker. (Dem. c. Lecr. p. 927, c. Phorm. p. 908. 22.) Witnesses, as we might expect, were also present at the payment of the money borrowed. (Id. c. Phorm. p. 915. 27.) The security for a loan was either a σφαγην or an ἔνθηγον: the latter was put into the possession of the lender, the former was merely assured to him, and generally, though not always, consisted of real or immovable property. The ἔνθηγον, on the contrary, generally consisted of movable property, such as goods or slaves. (Bökck, Ibid. p. 128.) At Athens, when land was given as security, or mortgaged (οὐσία ὑπόθριας), pillars (ὁποὶ ὡς στῆλαι) were set upon it, with the debt and the mortgagee's name inscribed. Hence an unencumbered estate was called an ἀστυκτὸν χωρίον. (Harpocrat. s. v.) In the rest of Greece there were public books of debt, like the German and Scotch registers of mortgages; but they are not mentioned as having existed at Athens.

Bottomry (τὸ ναυτικόν, τόκοι ναυτικοῦ, or ἔδεσις) was considered a matter of so much importance at Athens, that fraud or breach of contract in transactions connected with it was sometimes punished with death. (Dem. c. Phorm. p. 922. 3.) In these cases the loans were generally made upon the cargo shipped, sometimes on the vessel itself, and sometimes on the money received or due for passengers and freightage (ἐπὶ τῷ ναυλῷ). The principal (ἔδεσις, οὐκέτι ἐξά ὁδας, Harpocrat.) as well as the interest, could only be recovered in case the ship met with no disaster during her voyage (ἐπεθείρηκα τῇ νεά, Dem. c. Zenoth. p. 893. 16); a clause to this effect being generally inserted in all agreements of bottomry or ναυτικοῦ συγγραφαί. The additional risk incurred in loans of this description was compensated for by a high rate of interest, and the lenders took every precaution against negligence or deception on the part of the borrowers; the latter also were careful to have witnesses present when the cargo was put on board, for the purpose of disposing, if necessary, to a bona fide ship owner or movable property of the same type. (Dem. c. Phorm. p. 915. 13.) The loan itself was either a δάνειον ἐτρόπλοιν, i. e. for a voyage out, or it was a δάνειον ἀμφοτέροπλοιν, i. e. for a voyage out and home. In the former case the principal and interest were paid at the place of destination, either to the creditor himself, if he sailed in the ship, or to an authorised agent. (Dem. c. Phorm. p. 909. 24, and p. 914. 28.) In the latter case the payment was made on the return of the ship, and it was specially provided in the agreement between the contracting parties, that she should sail to some specified places only. A deviation from the terms of the agreement, in this or other respects, was, according to a clause usually inserted in the agreement, punishable by a fine of twice the amount of the money lent. (Dem. c. Dionys. p. 1294.) Moreover, if the goods which formed the original security were sold, fresh articles of the same value were to be shipped in their place. (Dem. c. Phorm. p. 908. 26.) Sometimes also the trader (οὐσία) was himself the owner of the vessel (ὁ ναυληκρατος), which in that case might serve as a security for the money borrowed. (Id. c. Dionys. p. 1294. 11.)
The rate of interest would of course vary with the risks and duration of the voyage, and therefore we cannot expect to find that it was at all fixed. Xenophon (de Vect. iii. 7—14) speaks of the fifth and third parts of the capital lent as being commonly given in bottomry, referring of course to voyages out and home. The interest of an eighth or 12½ per cent., mentioned by Demosthenes (c. Pol. p. 1212), was for money lent on a trireme, during a passage from Sestos to Athens, but upon condition that she should first go to Hierom to convoy vessels laden with corn; the principal and interest were to be paid at Athens on her arrival there.

The best illustration of the facts mentioned above, is found in a κατωτική συγγραφή, given in the speech of Demosthenes against Laecritus. It contains the following statement and conditions.

Two Athenians lent two Phaselitans 3000 drachmae upon a cargo of 3000 casks of Mendean wine, on which the latter were not to owe anything else, or raise any additional loan (οὐδὲ ἐπεδωάσαντο). They were to sail from Athens to Scione, where the wine was to be shipped, and thence to the Bosporus, with liberty, if they preferred it, to continue their voyage on the left side of the Black Sea as far as the Bosythennes, and then to return to Athens; the rate of interest being fixed at 225 drachmae in 1000, or 25 per cent. for the whole time of absence. If, however, they did not return to Hierom, a port in Bithynia close to the Thracean Bosporus (Wolf, ad Lept. p. 239), before the early rising of Arcturus, i.e. before the 20th of September or thereabouts, when navigation began to be dangerous, they had to pay a higher rate of 30 per cent. on account of the additional risk. The agreement further specified that there should be no change of vessel for the return cargo, and that if it arrived safe at Athens, the loan was to be repaid within twenty days afterwards, without any deductions except for loss by payments made to enemies, and for jettisons (ἐκτελεῖν πλὴν ἐκδοθῆς, κ. τ. λ.) made with the consent of all on board (ὅσι σύμϕοι); that till the money was repaid, the goods pledged (τὰ ὑποκείμενα) should be under the control of the lenders, and be sold by them, if payment was not made within the appointed time; that if the sale of the goods did not realise the required amount, the lender might raise the remainder by making a levy (πράξεις) upon the property of both or either of the traders, just as if they had been cast in a suit, and became ὑπερήμεροι, i.e. had not complied with a judgment given against them within the time appointed. Another clause in the agreement provides for the contingency of their not entering the Pontus; in that case they were to remain in the Hellespont, at the end of July, for ten days after the early rising of the dog-star (εἴρη κυιν), discharge their cargo (ἐξελευθερώσατο) in some place where the Athenians had no right of reprisals (ὅπου δὲ μὴ σύλα ὄπις τοῖς Ἀθηναίοις), (which might be executed unfairly, and would lead to retaliations,) and then, on their return to Athens, they were to pay the lower rate of interest, or 25 per cent. Lastly, if the vessel were to be wrecked, the cargo was, if possible, to be saved; and the agreement was to be conclusive on all points.

From the preceding explanation, it appears that the rate of interest amongst the ancient Greeks was higher than in modern Europe, and at Rome in the age of Cicero. This high rate does not appear to have been caused by any scarcity of money, for the rent of land and houses in Athens and its neighbourhood was not at all proportional to it. Thus Iassus (de Hagm. Herod. p. 88) says that a house at Thriae was let for only 8 per cent. of its value, and some houses at Melite and Eleusis for a fraction more. We should therefore rather refer it to a low state of credit, occasioned by a variety of causes, such as the division of Greece into a number of petty states, and the constitution and regulation of the courts of law, which do not seem to have been at all favourable to money-lenders in enforcing their rights. Böckh assigns as an additional cause "the want of moral principles." (Böckh, Ibid. pp. 123—139, 2nd ed.)

1. ROMAN. The Latin word for interest, fenus or foenus, originally meant any increase, and was thence applied, like the Greek τόκος, to denote the interest or increase of money. "Fenus," says Varro (apud Gall. xvi. 12), "dictum a feta quæ et quasi una quædam pecuniae patiens atque incrementa centesimae." The same root is found in fenestus. Fenus was also used for the principal as well as the interest. (Tacit. Ann. vi. 17, xiv. 53.) Another term for interest was usurae, generally found in the plural, and also impendium, on which Varro (de Ling. Lat. v. 183, Müller) remarks, "a quo (pondere) usura quidque in sorte accedebat, impendium appellatum."  

Towards the close of the republic, the interest of money became due on the first of every month; hence the phrases trites or celeres calendae and calendarium, the latter meaning a debt-book or book of accounts. The rate of interest was expressed in the time of Cicero, and afterwards by means of the as and its divisions, according to the following table:

<table>

Instead of the phrase asses usurae, a synonyme was used, viz. centesimae usurae, inasmuch as at this rate of interest there was paid in a hundred months a sum equal to the whole principal. Hence binae centesimae = 24 per cent., and quaternae centesimae = 48 per cent. So also in the line of Horace (Sat. i. 2. 14), "Quinna hic capiti mercedes exsecat," we must understand quinas centesimas, or 60 per cent., as the sum taken from the capital. Niebuhr (Hist. of Rom. vol. iii. p. 57) is of opinion that the monthly rate of the centesimae was of foreign origin, and first adopted at Rome in the time of Sulla. The old yearly rate established by the Twelve Tables (n. c. 450) was the ucinaria fenus. This has been variously interpreted to mean, (1) one-twelfth of the centesima paid monthly, i.e. one per cent. per annum; and (2) one-twelfth of the principal paid monthly, or a hundred per cent. per annum. Niebuhr (l. c.) re-
futes at length the two opinions; but it may be sufficient to observe that one is inconsistent with common sense, and the other with the early history of the republic. A third and satisfactory opinion is as follows:—The uncia was the twelfth part of the as, and since the full (12 oz.) copper coinage was still in use at Rome when the Twelve Tables became law, the phrase uncia rim fenus would be a natural expression for interest of one ounce in the pound; i.e. a twelfth part of the sum borrowed, or 8½ per cent., not per month, but per year. This rate, if calculated for the old Roman year of ten months, would give 10 per cent. for the civil year of twelve months, which time was generally reckoned aulicia in the time of the decemvirs. The analogy of the year of twelve months, which was in common use by the admission, that it supposes a yearly and not a monthly payment of interest; for though in the case formerly. (Rein, Romische Privatrecht, p. 304.) Nor is it difficult to account for the modifica tions made from time to time in the Roman law of debtor and creditor (such as the abolition of personal slavery for debt), the natural effect of which would be to make creditors more scrupulous in lending money, and more vigilant in exacting the interest due upon it.

If a debtor could not pay the principal and interest at the end of the year, he used to borrow money from a fresh creditor, to pay off his old debt. This proceeding was very frequent, and called a versura (compare Ter. Phorm. v. 2. 16), a word which Festus (s. e.) thus explains: "Versura facere, mutuam pecuniam sumere, ex eo dicetur, quod initio quo mutuum anterit ab allis, ut alius solventer, velut verterent creditorum." It amounted to little short of paying compound interest, or an Anatoctismus anniversarius, another phrase for which was usura renovata; i.e. centesima renovata is twelve per cent. compound interest, to which Cicero (ad Att. v. 21) opposes centesima per perpetuo fenere = 12 per cent. simple interest. The following phrases are of common occurrence in connection with borrowing and lending money at interest: "Caesius colloquus, to lend money at interest; relegere, to call it in again; averere, to give security for it; opponere or opponere pignori, to give as a pledge or mortgage; hence the pun in Catullus (Car. 26).

"Furi, villula nostram non ad Austri Fhutas opposita est, nec ad Favoni: Verum ad millia quindecim et ducentos. O ventum horribile atque pestilentem."

The word nomen is also of extensive use in money transactions. Properly it denoted the name of a debtor, registered in a banker's or any other account-book; hence it came to signify the articles of an account, a debtor, or a debt itself. Thus we have bonum nomen, a good debt: nomina facere, to lend monies (Cic. ad Fam. vii. 23), and also to borrow money (Id. de Off. iii. 14). Moreover, the Romans generally discharged debts through the agency of a banker (in foro et de mensae scriptura) rather than by a direct personal payment (ex arca domoquent); and as an order or undertaking for payment was given by writing down the sum to be paid, with the receiver's name underneath or along side it (see Dem. c. Callip. p. 1236), hence came the phrases scribere munus aliqui, to promise to pay (Plaut. Asin. ii. 4. 34); rescribere, to pay back, of a debtor (Ter. Phorm. v. 7. 29). So also perscribere, to give a bill or draft (perscriptio) on a banker for payment, in opposition to payment by ready money. (Cic. ad Att. xii. 51, xvi. 2.)

The Roman law of debtor and creditor is given under NEXUM. It is sufficient to remark here that the Licinian laws [LEGES LICINIAE], by which the grievances of debtors were to a certain extent redressed, did not lay any restriction on the rate of interest that might be legally demanded; and it is clear from various circumstances that the scarcity of money at Rome after the taking of the city by the Gauls had either led to the actual abolition of the old uncial rate (uncia rim fenus) of the Twelve Tables, or caused it to fall into disuse. Nine years, however, after the passing of these laws (Liv. vii. 16) the rate of the Twelve Tables was re-established, and any higher rate prohibited by the bill (ropatio) of the tribunes Duilius and Maenius. Still this limitation of the rate of interest did not enable debtors to pay the principal, and what Tuscus (Ann. vi. 16) tells us of his own case was something more decisive—neither more nor less than a species of national bankruptcy—a general abolition of debts of χρεών ἀνακοθή. This happened in B.C. 341, a year remarkable for political changes of great importance, and was followed up by the passing of the Genucian laws, which forbade the taking of usury altogether. (Liv. vii. 42.) A law like this, however, was sure to be evaded, and there was a very simple way of doing so; it only affected Roman citizens, and therefore the usurers granted loans, not in the name of themselves, but of the Latins and allies who were not bound by it. (Liv. xxxv. 7.) To prevent this evasion the Sempronian law was passed (B.C. 194), which placed the Latins and allies on the same footing in respect of lending money as the full Roman citizens. At last, after many futile attempts to prevent the exacting of interest at any rate, and in any shape, the idea was abandoned altogether, and the centesima or 12 per cent. per annum became the legal and recognized rate.
tion that it was first adopted at Rome in the time of Sulla; but whether it became the legal rate by any special enactment, or from general consent, does not appear. Some writers have inferred (Heinecc. iii. 15) that it was first legalised by the edicts of the city praetors, an inference drawn from the general resemblance between the praetorian and proconsular edicts, coupled with the fact that some proconsular edicts are extant, by which the centesima is fixed as the legal rate in proconsular provinces. (In edicto tralaticio centesimas me observarum habebat, Cic. ad Att. v. 21.) Whether this supposition is true or not, it is admitted that the centesima or 12 per cent. was the legal rate towards the close of the republic, and also under the emperors. Justinian reduced it to 6 per cent. (Heinecc. iii. 16.)

In cases of funes nauticum, however, or bottomry, as the risk was the money lender's, he might demand any interest he liked while the vessel on which the money was lent was at sea; but after she reached harbour, and while she was there, no more than the usual rate of 12 per cent. on the centesima could be demanded.

Justinian made it the legal rate for funes nauticum under all circumstances. (Heinecc. l.c.) [R.W.]

FERAIA. [FUNUS.]

FERCULUM (from fero) is applied to any kind of tray or platform used for carrying anything. Thus it is used to signify the tray or frame on which several dishes were brought in at once at dinner (Petron. 33; Plin. H. N. xxvii. 2); and hence fercula came to mean the number of courses at dinner, and even the dishes themselves. (Suet. Aug. 74; Serv. ad Verg. Aen. i. 697; Juv. i. 93, xii. 54; Hor. Sat. ii. 6. 104; Mart. iii. 50, ix. 82, xi. 31.)

The ferculum was also used for carrying the images of the gods in the procession of the circus (Suet. Jul. 76) [CIRCUS, p. 297, a], the ashes of the dead in a funeral (Suet. Cal. 15), and the spoils in a triumph (Suet. Jul. 37; Liv. i. 10); in all which cases it appears to have been carried on the shoulders or in the hands of men. The most illustrious captives were sometimes placed on a ferculum in a triumph, in order that they might be better seen. (Suetec. Her. Oct. add.)

FERENTARI.II. [EXERCITUS, p. 502, b.]

FERETRUM. [FUNUS.]

FERIAE, holidays, were, generally speaking, days, or seasons during which free-born Romans suspended their political transactions and their law-suits, and during which slaves enjoyed a cessation from labour. (Cic. de Leg. ii. 8. 12, de Div. i. 45.) All feriae were thus dies nefasti. The feriae included all days consecrated to any deity; consequently all days on which public festivals were celebrated were feriae or dies feriati. But some of them, such as the feria vindemiais, and the feriae aestivae, seem to have had no direct connection with the worship of the gods. The numinae, however, during the time of the kings and the early period of the republic, were feriae only for the populus, and days of business for the plebeians; until, by the Hortensian law, they became fasti or days of business for both orders. (Macrobr. Sat. i. 16; compare Niebuhr, Hist. of Rome, vol. ii. p. 213, &c.; Walter, Geschichte d. Röm. Rechts, P. 190.)

All feriae were divided into two classes, feriae publcae and feriae privatae. The latter were only observed by single families or individuals, in commemoration of some particular event which had been of importance to them or their ancestors. As family feriae, are mentioned the feriae Claudiae, Aemiliane, Juliae, Corneliae, &c., and we must suppose that all the great Roman families had their particular feriae, as they had their private sacra. Among the family-holidays we may also mention the feriae denicales, i.e. the day on which a family, after having lost one of its members by death, underwent a purification. (Fest. s. v.; Cic. de Leg. ii. 22; Columell. ii. 22.) Individuals kept feriae on their birthdays, and other occasions which marked any memorable event of their lives. During the time of the empire the birthday of an emperor sometimes assumed the character of a public holiday, and was celebrated by the whole nation with games and sacrifices. Thus the birthday of Augustus, called Augustalia, was celebrated with great splendour even in the time of Dion Cassius (liv. 34, lvi. 46). The day on which Augustus had returned from his wars was likewise for a long time made a holiday of. (Tacit. Annal. i. 15, with the note of Lipsius; Dion Cass. liv. 10.) The dies natalis of the cities of Rome and Constantinople were at a still later period likewise reckoned among the feriae. (Cod. 3. tit. 12. s. 6.)

All feriae publicae, i.e. those which were observed by the whole nation, were divided into feriae stativae, feriae conceptivae, and feriae imperativae. Feriae stativae or stateae were those which were held regularly, and on certain days marked in the calendar. (Fest. s. v.; Macrobr. l.c.) To these belonged some of the great festivals, such as the Agonalia, Carmentalia, Lupercalia, &c. Feriae conceptivae or acceptae were the dies natalicii of the cities of Rome and Constantinople; they were at a still later period likewise reckoned among the feriae. (Cod. 3. tit. 12. s. 6.)

The manner in which all public feriae were kept bears great analogy to our Sunday. The people generally visited the temples of the gods, and offered up their prayers and sacrifices. The most serious and solemn seem to have been the feriae imperativae, but all the others were generally attended by rejoicings and feasting. All kinds of business, especially law-suits, were suspended during the public feriae, as they were considered to
pollute the sacred season; the rex sacrorum and the flamines were not even allowed to behold any work being done during the feriae; hence, when they went out, they were preceded by their heralds (praecaeae, praecamitatores, or calatores), who enjoined the people to abstain from working, that the sanctity of the day might not be polluted by the priests seeing persons at work. (Fest. s. v. Praeciae; Macrob. l. c.; compare Serv. ad Virg. Georg. v. 268; Plut. Numa, c. 14.) Those who neglected this admonition were not only liable to a fine, but in case their disobedience was intentional, their crime was considered to be beyond the power of any atonement; whereas those who had conscientiously continued their work, might atone for their transgression by offering a pig. It seems that doubts as to what kinds of work might be done at public feriae were not infrequent, and we possess some curious and interesting decisions given by Roman pontiffs on this subject. One Umbro declared it to be no violation of the feriae, if a person did such work as had reference to the gods, or was connected with the offering of sacrifices; all work, he moreover declared, was allowed which was necessary to supply the urgent wants of human life. The pontiff Scaccola, when asked what kind of work might be done on a dies feriatus, answered that any work might be done, if any suffering or injury should be the result of neglect or delay, e.g. if an ox should fall into a pit, the owner might employ workmen to lift it out; or if a house threatened to fall down, the inhabitants might take such measures as would prevent its falling, without polluting the feriae. (Macrob. l. c. and iii. 3; Virg. Georg. i. 270, with the remarks of J. H. Voss; Cato, de Re Rust. 2; Columella, ii. 22; compare Math. xii. 1; Luke xiv. 5.) Respecting the various kinds of legal affairs which might be brought before the praetor on days of public feriae, see Digest. 2. tit. 12. s. 2.

It seems to have been owing to the immense increase of the Roman republic and of the accumulation of business arising therefrom, that some of the feriae such as the Compitalia and Lupercalia, in the course of time ceased to be observed, until they were restored by Augustus, who revived many of the ancient religious rites and ceremonies. (Suet. Aug. 31.) Marcus Antoninus increased the number of days of business (dies fasti) to 230, and the remaining days were feriae. (Capitol. M. Anton. Phil. c. 10.) After the introduction of Christianity in the Roman empire, the old feriae were abolished, and the Sabbath, together with the Christian festivals, were substituted; but the manner in which they were kept was nearly the same as that in which the feriae had been observed.

Law-suits were accordingly illegal on Sundays and holidays, though a man might mean to have an action at law if he liked. (Cod. 3. tit. 12.) All work and all political as well as judicial proceedings, were suspended; but the country people were allowed freely and unrestrainedly to apply themselves to their agricultural labours, which seem at all times to have been distinguished from and thought superior to all other kinds of work; for, as mentioned below, certain feriae were instituted merely for the purpose of enabling the country people to follow their rural occupations without being interrupted by law-suits and other public transactions.

After this general view of the Roman feriae, we shall proceed to give a short account of those festivals and holidays which were designated by the name of feriae.

Feriae Latinae, or simply Latiniae (the original name was Latiae, Macrob. l. c.; Cic. ad Quint. Frat. ii. 4), had, according to the Roman legends, been instituted by the last Tarquin in commemoration of the alliance between the Romans and Latins. (Dionys. Hal. iv. p. 220. Syll.) But Niebuhr (Hist. of Rome, ii. p. 81) has shown that the festival, which was originally a panegyris of the Latins, is of much higher antiquity; for we find it stated that the towns of the Priscans and Latins received their name from the Alban mount—which was the place of its celebration—along with the Albans and the thirty towns of the Alban commonwealth. All that the last Tarquin did was to convert the original Latin festival into a Roman one, and to make it the means of hallowing and cementing the alliance between the two nations. Before the union, the chief magistrate of the Latins had presided at the festival; but Tarquin now assumed this distinction, which subsequently, after the destruction of the Latin commonwealth, remained with the chief magistrates of Rome. (Liv. v. 17.) The object of this panegyris on the Alban mount was the worship of Jupiter Latialis, and, at least as long as the Latin republic existed, to deliberate and decide on matters of the confederacy, and to settle any disputes which might have arisen among its members. As the feriae Latinae belonged to the concepiae, the time of their celebration greatly depended on the state of affairs at Rome, as the consuls were never allowed to take the field until they had held the Latinae. (Liv. xxii. 1, xxvi. 11, xxv. 1.) This festival was a great engine in the hands of the magistrates, who had to appoint the time of its celebration (concepere, edicere, or indicere Latiae); as it might often suit their purpose either to hold the festival at a particular time or to delay it, in order to prevent or delay such public proceedings as seemed injurious and pernicious, and to promote others to which they were favourably disposed. This feature, however, the feriae Latinae had in common with all other feriae concepiae. Whenever any of the forms or ceremonies customary at the Latinae had been neglected, the consuls had the right to propose to the senate, or the college of pontiffs, that their celebration should be repeated (instaurari, Cic. ad Quint. Frat. ii. 6; Liv. xxii. i, xii. 16.) Respecting the duration of the feriae Latinae, the common opinion formerly was, that at first they only lasted for one day, to which subsequently a second, a third, and a fourth were added (Dionys. Hal. vi. p. 415. Syll.); but it is clear that this supposition was founded upon the Luxus Latinae with the Ludi Maximi, and that they lasted for six days; one for each decury of the Alban and Latin towns. (Niebuhr, Hist. of Rome, ii. p. 35; comp. Liv. vi. 42; Plut. Camill. 42.) The festive season was attended by a sacred truce, and no battle was allowed to be fought during those days. (Dionys. Hal. iv. p. 220, Syll. ; Macrob. l. c.) In early times, during the alliance of the Romans and Latins, the chief magistrates of both nations met on the Alban mount, and conducted the solemnities, at which the Romans, however, had the presidency. But afterwards the Romans alone conducted the celebration, and offered the
common sacrifice of an ox to Jupiter Latinius, in the name and on behalf of all who took part in it. The flesh of the victim was distributed among the several towns whose common sanctuary stood on the Alban mount. (Dionys. Hal. I. c.; Varro, de Ling. Lat. vi. 25; Schol. Bobiens. in Cic. Orot. pro Plane, p. 235, &c. Orelli.) Besides the common sacrifice of an ox, the several towns offered each separately lambs, cheeses, or a certain quantity of milk (Cic. de Div. i. 11), or cakes. Multitudes flocked to the Alban mount on the occasion, and the season was one of great rejoicings and feasting. Various kinds of games were not wanting, among which may be mentioned the oscilatio (swinging). Festus (s. v. Oscillum). It was a symbolic game, and the legend respecting its origin shows that it was derived from the Latins. Pliny (H. N. xxvii. 2) mentions that during the Latin holidays a race of four-horse chariots (quadrigae certant) was held on the Alban mount, and conducted the minor festivals, was given by the senate to the Aediles, and was filled by the praefectus urbi. [PRAEFECTUS URB.] Although the Roman consuls were always present on the Alban mount, and conducted the solemn sacrifice of an ox, yet we read that the superintendence of the Latinae, like that of other festivals, was given by the senate to the Aediles, who, therefore, probably conducted the minor sacrifices, the various games, and other solemnities that no marriages could be contracted. (Cic. de Div. i. 11.) While the consuls were engaged on the Alban mount, their place at Rome was filled by the praefectus urbi. [PRAEFECTUS URB.]

The two days following the celebration of the Latin holidays were considered as dies religiosi, so that no marriages could be contracted. (Cic. ad Quint. Prof. ii. 4.) From Dion Cassius we see that in his times the Feriae Latinae were still strictly observed by the Romans, whereas the Latin towns had, at the time of Cicero, almost entirely given up taking any part in them. The Romans seemed to have continued to keep them down to the fourth century of our era. (Laurent. Institut. i. 21.)

Feriae Sementivae, or Semestina dies, was kept in seed-time for the purpose of praying for a good crop; it lasted only for one day, which was fixed by the pontiffs. (Varro, de Ling. Lat. vi. 26, de Re Rust. i. 2, init.; Ovid, Fast. i. 635, &c.)

Feriae Vestaliae lasted from the 22d of August to the 15th of October, and was instituted for the purpose of enabling the country-people to get in the fruits of the field and to hold the vintage. (Codex, 3. tit. 12.)

Feriae aestivae were holidays held during the hottest season of summer, when many of the wealthier Romans left the city and went into the rural districts, been connected with the amusements of the fescennina. But whatever may be thought of this etymology, it is of importance not to be misled by the common opinion that the fescennina were of Etruscan origin. [L. S.]

FESTI DIES. [DIES.]

FESTU'CA. [MANUMISSIO.]

FETIALES. [FETIALES, a college (Liv. xxxvi. 3) of Roman priests who acted as the guardians of the public faith. It was their province, when any dispute arose with a foreign state, to demand satisfaction, to determine the circumstances under which hostilities might be commenced, to perform the various religious rites attendant on the solemn declaration of war, and to preside at the formal ratification of peace. These functions are briefly but comprehensively defined by Varro (De Ling. Lat. v. 86, ed Müller), “Fetiales... fidei publicae praeceptor; man per hos fiebat ut jusium concionarius bellum et inde diesium, ut foedere fides pacis constituenterat. Ex his mitabantur, antequam cessaret locii res syncerus, et per hos etiam iuncturis in fœdus,” to which we may add the old law quoted by Cicero (De Leg. ii. 9), “Foderum, facis, belii, indiciarum oratores fetiales judicisque sonto; bella discipiant.”) Dionysius (ii. 72) and Livy (i. 32) detail at considerable length the ceremonies observed by the Romans in the earlier ages, when they felt themselves aggrieved by a neighbouring
people. It appears that when an injury had been sustained, four fetiales (Varro, *ap. Non.*) were deputed to seek redress, who again elected one of their number to act as their representative. This individual was styled the *pater patratus populi Romani*. A fillet of white wool was bound round his head, together with a wreath of sacred herbs gathered within the inclosure of the Capitoline hill (*verbena, sagmina*) [*Sagmina*], whence he was sometimes named *Verbenerarius*. (*Plin. H. N.* xxii. 2.) Thus equipped he proceeded to the confines of the offending tribe, where he halted and addressed a prayer to Jupiter, calling the god to witness, with heavy imprecations, that his complaints were well founded and his demands reasonable. He then crossed the border, and the same form was repeated in nearly the same words to the first native of the soil whom he might chance to meet; again a third time to the sentinel or any citizen whom he encountered at the gate of the chief town; and a fourth time to the magistrates in the forum in presence of the people. If a satisfactory answer was not returned within thirty days, after publicly delivering a solemn denunciation,—in which the gods celestial, terrestrial, and infernal were invoked,—of what might be expected to follow, he returned to Rome, and, accompanied by the rest of the fetiales, made a report of his mission to the senate. If the people (*Liv. x. 45*), as well as the senate, decided for war, the pater patratus again set forth to the border of the hostile territory, and launched a spear tipped with iron, or charred at the extremity and smeared with blood (emblematic of fire and slaughter) across the boundary, pronouncing at the same time a solemn declaration of war. The demand for redress and the proclamation of hostilities were alike termed *darigatio*, which word the Romans in later times sometimes named *darigarius*.

Several of the formulae employed on these occasions have been preserved by Livy (*i. 24, 32*), and Aulus Gellius (*xvi. 4*), forming a portion of the *Jus Fetiale* by which the college was regulated. The services of the fetiales were considered absolutely essential in concluding a treaty (Livy. *ix. 5*); and we may at once reject the speculations of Servius (*ad Aen. ix. 53*, x. 14, xii. 206) and Plutarch (*Q. R.* p. 127, ed. Reiske) ; the former of whom supposes that he was so called because it was necessary that his father should be alive, the latter that the name indicated that his father was living, and that he himself was the father of children. [W. R.]

**FIBULA.**

Women wore the fibula both with the *amictus* and the *industus*; men wore it with the amictus only. Its most frequent use was to pin together two parts of the scarf, shawl or cloak (*chlamys; peplos; pallium*), which constituted the amictus, so as to fasten it over the right shoulder. (*Soph. Trach. 923; Theocrit. xiv. 66; FIBULA.*
FIBULA.

Ovid, Met. viii. 318; Tacit. Germ. ii. [Woodcuts, pp. 2, 117, 213.] More rarely we see it over the breast. [Woodcut, p. 218.] The epitaph  

τετράφορος 

was applied to a person wearing the fibula on one shoulder only (Schol. in Eurip. Hep. 933, 934); for women often wore it on both shoulders. [Woodcuts, pp. 136, 245, 257.] In consequence of the habit of putting on the ancient with the aid of a fibula, it was called περονίνα or ἀμφερονία (Theorit. Adv. 34. 79.), παράβια (Eurip. Elect. 820), or ἀμφεχύτων περονί-

της (Brunck, Anal. ii. 28). The splendid shawl of Ulysses, described in the Odyssey, (xix. 225—231), was bordered with two small pipes for admitting the pin of the golden brooch; this contrivance would secure the cloth from being torn. The highest degree of ornament was bestowed upon brooches after the fall of the western empire. Justin II. (Corippus, ii. 122), and many of the emperors who preceded him, as we perceive from the portraits on their medals, wore upon their right shoulders fibulae, from which jewels, attached by three small chains, depended. (Beger, Thes. Pal. p. 407, 408, &c.) It has been already stated that women often wore the fibula on both shoulders. In addition to this, a lady sometimes displayed an elegant row of brooches down each arm upon the sleeves of her tunic (Aelian, V. H. i. 18), examples of which are seen in many ancient statues. It was also fashionable to wear them on the breast (Isid. Orig. xix. 30); and another occasional distinction of female attire, in later times, was the use of the fibula in tucking up the tunic above the knee.

Not only might slight accidents to the person arise from wearing brooches (Hom. II. v. 426), but they were sometimes used, especially by females, to inflict serious injuries. The pin of the fibula is the instrument, which the Phrygian women employ to deprive Polyandrocton of his sight by piercing his pupils (Eurip. Hep. 1170), and with which the Athenian women, having first blinded a man, then dispatch him. (Herod. v. 87; Schol. in Eurip. Hep. 934). Oedipus strikes the pupils of his own eye-balls with a brooch taken from the dress of Jocasta (Soph. Oed. Tyr. 1269; Eurip. Phoen. 82). For the same reason we find that περονία meant to pierce, since περονή was properly the pin of the brooch (περονίνας, "pinned him," Hom. II. viii. 145; xiii. 397).

Brooches were succeeded by buckles, especially among the Romans, who called them by the same name. The preceding woodcut shows on the right hand the forms of four bronze buckles (4, 5, 6, 7) from the collection in the British Museum. This article of dress was chiefly used to fasten the belt [BΑΤΟΕ], and the girdle [ΖΟΝΑ]. (Virg. Aen. xii. 274; Lydus, De Mag. Rom. ii. 13). It appears to have been in general much more richly ornamented than the brooch; for, although Hadrian was simple and unexpensive in this as well as in other matters of costume (Spartian. Hadr. 10), yet many of his successors were exceedingly prone to display buckles set with jewels (fibulæ gemmatae).

The terms which have now been illustrated as applied to articles of dress, were also used to denote pins variously introduced in carpentry; e. g. the linch-pins of a chariot (Parthen. 6); the wooden pins inserted through the sides of a boat, to which the svisors fasten their lines or ropes (Apoll. Rhod. i.

FICTILE.

The treails which unite the posts and planks of a wooden bridge (Caesar, B. G. iv. 17); and the pins fixed into the top of a wooden triangle used as a mechanical engine (Vitruv. v. 2).

The practice of infibulating singers, alluded to by Juvenal and Martial, is described in Rhodius De Acta and Pitiaces. [J. Y.]

FICTILE (κεράμος, κεράμων, βατρακον, βατράκιον), earthenware, a vessel or other article made of baked clay.

The instruments used in pottery (ars figulina) were the following:—1. The wheel (πτερόσ, orbis, rota, "rota figuraria," Plaut. Epid. iii. 2, 35), which is mentioned by Homer (I. xlviii. 600), and is among the most ancient of all human inventions. According to the representations of it on the walls of Egyptian tombs (Wilkinson, Manners and Customs, iii. p. 163), it was a circular table, placed on a cylindrical pedestal, and turning freely on a pivot. The workman, having placed a lump of clay upon it, whirled it swiftly with his left hand, and employed his right in moulding the clay to the requisite shape. Hence a dish is called "the daughter of the wheel" (τραπεζαθθαρα κόρα, Xenocrates, ap. Athen. ii. p. 64). 2. Pieces of wood or bone, which the potter (κεραμίς, figulus) held in his right hand, and applied occasionally to the surface of the clay during its revolution. A pointed stick, touching the clay, would inscribe a circle upon it; and circles were in this manner disposed parallel to one another, and in any number, according to the fancy of the artist. By having the end of the stick curved or indented, and by turning it in different directions, he would impress many beautiful varieties of form and outline upon his vases. 3. Moulds (formae, χρυσ., Schol. in Arist. Ecles. 1), used either to decorate with figures in relief (πρόσωπα) vessels which had been thrown on the wheel, or to produce foliages, animals, or any other appearances, on ANTEFIXA, on cornices of terra cotta, and imitative or ornamental pottery of all other kinds, in which the wheel was not adapted to give the first shape. The annexed woodcut shows three moulds, which were found near Rome by M. Seroux d’Agincourt. (Recueil de Fragmens, p. 88—92.) They are cut in stone. One of them was probably used for making ante-

fixa, and the other two for making hearts and legs, designed to be suspended by poor persons "ex votu," in the temples and sanctuaries. [Do-

NARIA.] Copies of the same subject, which might
riving their efficiency altogether from the ability and taste of the sculptor, would not only contribute to the more exquisite decoration of earthen vessels, but would be almost the only tools applicable for making "Dii fictiles," or gods of baked earth, and other entire figures. (Propert. ii. 3, 25, iv. 1, 5; Plin. N. xxxv. 45, 46; Sen. Cons. ad. Alb. 10; αγάλαστα δε πηλοῖ, ὡτὶς γῆς, Paus. i. 2. § 4, i. 3. § 1, vii. 22. § 6.) These were among the earliest efforts of the plastic art, and even in times of the greatest refinement and luxury they continued to be regarded with reverence.

Vessels of all kinds were very frequently furnished with at least one handle (anus, obex, ἀξ). The amphora was called Diota, because it had two. The name of the potter was commonly stamped upon the handle, the rim, or some other part. Of this we have an example in the amphora, adapted for holding grain or fruits, oil or wine, which is here introduced from the work of Seroux d'Agincourt. The figure on the right hand shows the name in the genitive case "Maturi," impressed on an oblong surface which is seen on the handle of the amphora.

The earth used for making pottery (κεραμική γῆ, Geopon. ii. 49) was commonly red, and often of so lively a colour as to resemble coral. Vanquelin found, by analysis, that a piece of Etruscan earthenware contained the following ingredients: — Silica, 53; alumina, 15; lime, 8; oxide of iron, 24. To the great abundance of the last constituent the deep red colour is to be attributed. Other pottery is brown or cream-coloured, and sometimes white. The pipe-clay, which must have been used for white ware, is called "figlina creta." (Varro, Re Rust. iii. 9.) Some of the ancient earthenware is throughout its substance black, an effect produced by mixing the earth with comminuted asphaltum (ραγιτα), or with some other bituminous or oleaginous substance. It appears also that asphaltum, with pitch and tar, both mineral and vegetable, was used to cover the surface like a varnish. In the finer kinds of earthenware this varnish served as a black paint, and to its application many of the most beautiful vases owe the decorations which are now so highly admired. (Plin. H. N. xxxvi. 34.) But the coarser vessels, designed for common purposes, were also smeared with pitch, and had it burnt into them, because by this kind of encaustic they became more impervious to moisture and less liable to decay. (Hor. Carm. i. 20. 3; Plin. H. N. xiv. 25, 27.) Hence a "dolum pictum ficate" was used, as well as a glass jar to hold pickles. (Colum. Re Rust. xii. 18, 54.) Also the year of the vintage was inscribed by the use of pitch, either upon the amphorae themselves or upon the labels (πτιττασι, σχεδία), which were tied round their necks. (Hor. Carm. iii. 21. 1—5.) Although oily or bituminous substances were most commonly employed in pottery to produce by the aid of fire (εὖ δὲ μελανείες, Hom. Epig. xiv. 9) the various shades of black and brown, the vessels, before being sent for the last time to the furnace (Fornax), were sometimes immersed in that finely prepared mud, now technically called "slip," by which the surface is both smoothed and glazed, and at the same time receives a fresh colour. Ruddle, or red ochre (μιλατο, rubrina), was principally employed for this purpose. (Suidas, s. v. Κολάδος κεραμεύς.) To produce a further variety in the paintings upon vases the artists employed a few brightly coloured earths and metallic ores. [PICTURA, No. 9.]

As we might expect concerning an art so indispensable as that of the potter, it was practised to a great extent in every ancient nation; even the most uncivilized not being strangers to it, and sometimes displaying a surprising degree of dexterity. The remains of an ancient pottery have been found in Britain, and some of the potters' names preserved on their works, are probably British. We are told of a place called the Potteries (Fictiliae) in Gaul. Numa instituted a corporation of potters at Rome. (Plin. H. N. xxxv. 46.) Mention has already been made of Egypt, and there are frequent allusions to the art in the ancient writings of the Jews. We also read of its productions in Tralles, Pergamus, Chiusa, Sicyon, Corinth, Cumae, Adria, Modena, and Nola, from which city the exports of earthenware were considerable, and where some of the most exquisite specimens are still discovered. But three places were distinguished above all others for the extent and excellence of this beautiful manufacture.

1. Samos, to which the Romans resorted for the articles of earthenware necessary at meals, and intended for use rather than display. (Plaut. Bacch. ii. 2, 24, Stich. v. 4, 12; Tibull. ii. 3, 51; Cic. pro Murem. 36; Plin. H. N. xxxv. 46; Tertull. Apol. 25.)

2. Athens, a considerable part of which was called Ceramicus, because it was inhabited by potters. In this quarter of the city were temples dedicated to Athena, as presiding over every kind of handicraft, and to the two fire-gods, Hephaestos and Prometheus, the latter of whom was also the mythical inventor of the art of modelling. Various traditions respecting Coreobus and others point to the early efforts of the Athenian potters (Plin. H. N. vii. 57, xxxv. 45; Critias ap. Athen. i. p. 288); and it is a remarkable circumstance that the enemies of free trade, and especially of Athenian influence at Aegina and Argos, imposed restrictions on the use of these productions. (Herod. v. 83.) The Athenian ware was of the finest description; the masterpieces were publicly exhibited at the Panathenaia, and were given, filled with oil, to the victors at the games; in consequence of which, we now read on some of them, in the British Museum and other collections, the inscription Τῶν Ἀθηναίων ἄθλοιν or other equivalent expressions. (Pind. Nem. N. vi. 5.)
Many other specimens were presented given particular occasions, and often distinguished by the epithets καλὰς and καλῆς added to their names. A circumstance which contributed to the success of the Athenians in this manufacture, was a mine of fine potter’s clay in the Colian Promontory, near Phalerum. (Suidas, l. c.; Athen. xi. p. 482.) The articles made from it became so fashionable, that Plutarch (De Audit.) describing an act of extreme folly, compares it to that of the man who, having swallowed poison, refuses to take the antidote unless it be administered to him in a cup made of Colian clay. Some of the “Panathenaeic” vases, as they were called, are two feet in height, which accords with what is said by ancient authors of their uncommon size. (Athen. xi. p. 495; Büch, in Pind. Frag. No. 89.) A diota was often stamped upon the coins of Athens, in allusion to the facts which have now been explained.

3. Etruria, especially the cities of Aretium and Tarquinii. Whilst the Athenian potters excelled all others in the manufacture of vessels, the Tuscanians, besides exercising this branch of industry to a great extent though in a less tasteful and elaborate manner, were very remarkable for their skill in producing all kinds of statuary in baked clay. Even the most celebrated of the Roman temples were adorned, both within and without, by the aid of these productions. The most distinguished among them was an entire quadriga, made at Veii, which surmounted the pediment of the temple of Jupiter Capitolinus. (Plin. H. N. xxviii. 4, xxxv. 45, xxxvi. 2; K. O. Müller, Etruscius, iv. 3. 1, 2.) The Etrurians also manifested their partiality to this branch of art by recurring to it for the purpose of interment; for whilst Pliny mentions (H. N. xxxv. 46), that many persons preferred to be buried in earthen jars, and in other parts of Italy the bones of the dead have been found preserved in amphorae, Etruria alone has afforded examples, some of them now deposited in the British Museum, of large sarcophagi made wholly of terra cotta, and ornamented with figures in bas-relief and with recumbent statues of the deceased.

Among many qualities which we admire in the Greek pottery, not the least wonderful is its thinness (Άκρα) and consequent lightness, not least owing to the “Panathenaeic” vessels, as they were called, being so remarkable for their size and the perfect regularity and elegance of their forms. That it was an object of ambition to excel in this respect we learn from the story of a master and his pupil, who contended which could throw the thinnest clay, and whose two amphorae, the result of the trial, were preserved in the temple at Erythrae. (Plin. H. N. xxxv. 46.)

Another term, often used as synonymous with fictile was testa. [DOLIUM; LATER; PATERA; PATINA; TEGULA.] [J. Y.]

FICTIO. Fictions in Roman law are like fictions in English law, of which it has been said that they are those things that have no real essence in their own body, but are so acknowledged and accepted in law for some especial purpose.” The fictions of the Roman law apparently had their origin in the edictal power, and they were devised for the purpose of providing for cases where there was no legislative provision. A fiction supposed something to be which was not; but the thing supposed to be was such a thing as, being admitted to be a fact, gave to some person a right or imposed on some person a duty. Various instances of fictions are mentioned by Gaius. One instance is that of a person who had obtained the bonorum possessio ex edicto. As he was not heres, he had no direct action; he could neither claim the property of the defunct as his (legal) property, nor could he claim a debt due to the defunct as his (legal) debt. He therefore brought his suit (intendit) as heres (facto se herede), and the formula was accordingly adapted to the fiction. In the Publicani Actio, the fiction was that the possessor had obtained by usucaption the ownership of the thing of which he had lost it as a woman by coemption, and a male by being adrogated, ceased, according to the civil law, to be debtors, if they were debtors before; for by the coemption and adrogatio they had sustained a capitis diminutio, and there could be no direct action against them. But as this capitis diminutio might be made available for fraudulent purposes, an actio utilia was still allowed against such persons, the fiction being that they had sustained no capitis diminutio. The formula did not (as it appears from Gaius) express the fiction as a fact, but it ran thus:—If it shall appear that such and such be the facts (the facts in issue), and that the party, plaintiff or defendant, would have such and such a right, or be liable to such and such a duty, if such and such other facts (the facts supposed) were true; et reliqua. (Gaius, iv. 10. 32, &c.; Ulp. Frag. xxviii. 12.)

It was by a fiction that the notion of legal capacity was extended to artificial persons. [COLLEGIIUM; FISCUS.] Instances of fiction occur in the chapter intitled Juridische Personen in Savigny’s
FIDEICOMMISSUM.

System des hett. R. R. vol. ii., and in Puchta's Institutionen, i. § 80, ii. § 165.) (G. L.)

FIDEICOMMISSUM is a testamentary disposition, by which a person who gives something to another imposes on him the obligation of transferring it to a third person. The obligation was not created by words of legal binding force (civilia verba), but by words of request (procativae), such as "fideicommittit," "peto," "volo dari," and the like; which were the operative words (verba utilia). If the object of the fideicommissum was the hereditas, the whole or a part, it was called fideicommissaria hereditas, which is equivalent to a universal fideicommissum; if it was a single thing or a sum of money, it was called fideicommissum singulae rei or fideicommissum speciale.

The obligation to transfer a fideicommissaria hereditas could only be imposed on the heres; the obligation of transferring a single thing might be imposed on a legatee.

By the legislation of Justinian a fideicommissum of the hereditas was a universal succession; but before his time the person entitled to it was sometimes"heres loco," and sometimes "legatarii loco." The heres still remained heres after he had parted with the hereditas. Though the fideicommissum resembled a vulgar substitution, it differed from it in this:— in the case of a vulgar substitution, the substituted person only became heres when the first person, named heres, failed to become such; in the case of the fideicommissum, the second heres had only a claim on the inheritance which the first person, named heres, had parted with the hereditas. Though the heres who was charged with a universal fideicommissum could only be imposed on the heres; the obligation of transferring a single thing might be imposed on a legatee.

The person who created the fideicommissum must be a person who was capable of making a will; but he might create a fideicommissum orally without having made a will. The person who was to receive the benefit of the fideicommissum was the fideicommissarius; and a person might be a fideicommissarius who could take a legacy (Ulp. Frag. xxv. 6); the person on whom the obligation was laid was the fiduciarius. The fideicommissarius himself might be bound to give the fideicommissum to a second fideicommissarius. Originally the fideicommissarius was considered as a purchaser (emptoris loco); and when the heres transferred to him the hereditas, mutual covenants (cautiones) were entered into by which the heres was not to be answerable for any thing which he had been bound to do as heres, nor for what he had given bona fide, and if an action was brought against him as heres, he was to be defended. On the other hand the fideicommissarius (qui recipierat hereditatem) was to have whatever part of the hereditas might still come to the hands of the heres, and was to be allowed to prosecute all rights of action which the heres might have. But it was enacted by the senatus-consultum Trebellianum, in the time of Vespasian, that the fiduciarius might retain one fourth of the hereditas, and the same power of retainer was allowed him in the case of single things. In this case the heres was liable to all debts and charges (onera hereditaria); but the same agreement was made between him and the fideicommissarius which was made between the heres and the legatus partarius, that is, the profit or loss of the inheritance was shared between them according to their shares (pro rata parte). Accordingly, if the heres was required to restore not more than three-fourths of the hereditas, the senatus-consultum Trebellianum took effect, and any loss was borne by him and the fideicommissarius in proportion to their shares. If the heres was required to restore more than three-fourths or the whole, the senatus-consultum Pegasianum applied. If the heres refused to take possession of (adiire) the hereditas, the fideicommissarius could compel him, by application to the praetor, to take possession of it and to restore it to him; but all the costs and charges accompanying the hereditas were borne by the fideicommissarius.

Whether the heres was sole heir (ex asse), and required to restore the whole or a part of the hereditas, or whether he was not sole heir (ex parte) and was required to restore the whole of such part, or a part of such part, was immaterial: in all cases the S. C. Pegasianum gave him a fourth.

By the legislation of Justinian the senatus-consultum Trebellianum and Pegasianum were consolidated, and the following rules were established:—

The heres who was charged with a universal fideicommissum always retained one-fourth part of the hereditas (which was called simply Quarta, or Falcidia, or commodum Legis Falcidiae), and all claims on behalf of or against the hereditas were shared between the fiduciarius and fideicommissarius who was considered heres loco. If the fiduciarius suffered himself to be compelled to take the inheritance, he lost his Quarta, and any other advantage that he might have from the hereditas. If the fiduciarius was in possession, the fideicommissarius had a personal actio ex testamento against him for the hereditas. If not in possession, he must at least verbally assent to the claim of the fideicommissarius, who had then the hereditas petitio fideicommisaria against any person who was in possession of the property.

The Quarta is in fact the Falcidia, applied to the case of universal fideicommissa. Accordingly, the heres only was entitled to it, and not a fideicommissarius, who was himself charged with a fideicommissum. If several heres were charged with fideicommisum, each was entitled to a quarta of his portion of the hereditas. The heres was entitled to retain a fourth out of the hereditas, not including therein what he took as legatee.

The fiduciarius was bound to restore the hereditas at the time named by the testator, or, if no time was named, immediately after taking possession of it. He was entitled to be indemnified for all proper costs and charges which he had sustained with respect to the hereditas; but he was answerable for any damage or loss which it had sustained through his culpa.

Res singulae, as already observed, might also
be the objects of a fideicommissum, as a particular piece of land, a slave, a garment, piece of silver, or a sum of money; and the duty of giving it to the fideicommissarius might be imposed either on the heres or on a legatee. In this way a slave also might receive his liberty, and the request to manumit might be addressed either to the heres or the legarius. The slave when manumitted was the libertus of the person who manumitted him.

There were many differences between fideicommissa of single things and legacies. A person about to die intestate might charge his heres with a fideicommissum whereas a legacy could only be given by a testament, or by a codicil which was confirmed by a proper declaration of the testator in a will; but a fideicommissum could be given by a simple codicil not so confirmed. A heres instituted by a will might be requested by a codicil, not so confirmed as above, to transfer the whole hereditas, or a part, to a third person. A woman who was prevented by the provisions of the Voconia lex from taking a certain hereditas, might take it as a fideicommissum. The Latini, also, who were prohibited by the Lex Junia from taking hereditates and legacies by direct gift (directo jure) could take by fideicommissa. It was not legal to name a person as heres, and also to name another who after the death of the heres, should become heres; but it was lawful to request the heres on his death to transfer the whole or a part of the hereditas to another. In this way a testator indirectly exercised a testamentary power over his property for a longer period than the law allowed him to do directly. A man sued for a fideicommissum, observes that “this” (the object of evading the law) “was probably the origin of fideicommissa. The consuls still retained the jurisdiction, but he sued for a fideicommissum before the consul or praetor for fideicommissa at Rome, and in the provinces before the praeses. A fideicommissum was valid, if given in the Greek language, but a legacy was not, until a late period. Justinian finally assimilated legacies and singular fideicommissa.

It appears that there were no legal means of enforcing the due discharge of the trust called fideicommissum till the time of Augustus, who gave the consuls jurisdiction in fideicommissa. If a man transferred his property to another, on condition that it should be restored to him, this contract was called Fiducia, and the person to whom the property was so transferred was said fiduciarius accipere. (Cic. Top. c. 10.) A man might transfer his property to another for the sake of greater security in time of danger, or for other sufficient reason. (Gaius, ii. 60.) The contract of fiducia or pactum fiduciae also existed in the case of pignus; and in the case of mancipation. [EMANCIPATIO.] The hereditas itself might be an object of fidejussor.

If a man transferred his property to another, on condition that it should be restored to him, this contract was called Fiducia, and the person to whom the property was so transferred was said fiduciarius accipere. (Cic. Top. c. 10.) A man might transfer his property to another for the sake of greater security in time of danger, or for other sufficient reason. (Gaius, ii. 60.) The contract of fiducia or pactum fiduciae also existed in the case of pignus; and in the case of mancipation. [EMANCIPATIO.] The hereditas itself might be an object of fidejussor. [INTERCESSIO.] The trustee was bound to discharge his trust by restoring the thing; but if he did not, he was liable to an actio fiduciae, or to give the hereditas, or a legacy, to a person ad hoc usque, as in the case of gifts to women, in order to evade the Lex Voconia [LEX VOCONIA]; and in the case of prescribed persons, incertae personae, Latini, peregrini, caelibes, orbi. But the senatus-consulatus Pegasianum destroyed the capacity of caelibes and orbi to take fideicommissa, and gave them to those persons mentioned in the will who had children, and in default of such to the populus, as in the case of hereditates and legata. [BONA CADUCA.] Municipia could not take as heredes [COLLEGIUM]; but by the senatus-consulatus Aponianum, which was probably passed in the time of Hadrian, they could take a fideicommissum here. (Ulp. Freg. tit. 22. s. 5; Plin. Ep. v. 7.) [HERES (ROMAN.]) (Gaius, ii. 247—289; Ulp. Freg. tit. 25: Inst. 2. tit. 23, 24; Dig. 36. tit. 1; Cod. 6. tit. 49; Mackelday, Lehrbuch, &c., 12th ed. § 726, &c.; Vangroev, Leitfaden füer Pandekten Vorlesungen, vol. ii. p. 561.)

FIDEJUSSOR. [INTERCESSIO.] FIDEPROMISSOR. [INTERCESSIO.] FIDES [LYRA.]

FIDUCIA. If a man transferred his property to another, on condition that it should be restored to him, this contract was called Fiducia, and the person to whom the property was so transferred was said fiduciarius accipere. (Cic. Top. c. 10.) A man might transfer his property to another for the sake of greater security in time of danger, or for other sufficient reason. (Gaius, ii. 60.) The contract of fiducia or pactum fiduciae also existed in the case of pignus; and in the case of mancipation. [EMANCIPATIO.] The hereditas itself might be an object of fidejussor. [INTERCESSIO.] The trustee was bound to discharge his trust by restoring the thing; but if he did not, he was liable to an actio fiduciae, or fiduciarius, which was an actio bonae fidei. (Cic. de Off. iii. 15, ad Fam. vii. 12; ut inter bonos bene aegre operetur.) If the trustee was condemned in the action, the consequence was infamia. Cicero enumerates the judicium fiduciae with that tutelae and societatis as “judicia summae exactionem et paene capitis” (Cic. pro Ros. Com. c. 6), where he is evidently alluding to the consequence of infamia. (Compare Savigny, System, &c., vol. ii. p. 176.) When the object was which a thing was transferred to another was attained, a remanicipatio of those things which required to be transferred by mancipatio or in jure cessio was necessary; and with this view a particular contract (pactum fiduciæ) was inserted in the formula of mancipatio. If no remanicipatio took place, but only a simple restitution, usurcapio was necessary to restore the QUIRITARIAN ownership, and this was called usureceptio. The contract of fiducia might be accompanied with a condition, by virtue of which the fiducia might cease in a given case, and thus the fiducia was connected with the Commissoria Lex, as we see in Paulus (Sent. Recept. ii. tit. 13), and in Cic. pro Viscaro, c. 21, “fiducia commissi,” which may be
Among barbarous nations the amictus was often worn by men with a fringe, as is seen very conspicuously in the group of Sarmatians at p. 213 by crossing the bundles of thrums, and tying them at the points of intersection, a kind of net work was produced, and we are informed of a fringe of this description, which was, moreover, hung with bells. (Diod. xvii. 26.) The ancients also manufactured fringes separately, and sewed them to the borders of their garments. They were likewise made of gold thread and other costly materials. Of this kind was the ornament, consisting of a hundred golden tassels, which surrounded the mythical shield of Jupiter, the aigis Sancovsca, and which depended from the girdle of Juno. (Hom. H. ii. 446, v. 736, xiv. 181, xvii. 593.) In consequence of the tendency of wool to form itself into separate bundles like tassels (δυανδομ), Aelian, H. A. xvi. 11), the poets speak of the golden fleece as consisting of them (Pind. Pyth. iv. 411; Apoll. Rhod. iv. 1146); and Cicero, declaring against the effeminacy of Gabinius, applies the same expression to his curling locks of hair (in Pis. 11). [J. Y.] FINS RES. [AGORAMESORES.] FINEUM REGEDNO RIUM ACTIO. If the boundaries of contiguous estates were accidentally confused, each of the parties interested in the re-establishment of the boundaries might have an action against the other for that purpose. This action belonged to the class of duplicia judicia. [FAMILIAR ERCISCUNDAE ACTIO.] In this action each party was bound to account for the fruits and profits which he had received from any part of the land which did not belong to him, and also to account for any injury which it had sustained through his culpa. Each party was also entitled to compensation for improvements made in the portion of land which did not belong to him. (Dig. 10. tit. 1.) There is an article entitled ‘Über die Grünscheidungsklage’ by Rudorff in the Zeit- schrift für Geschichtliche Rechtswissenschaft, vol. II. [AGER.] FISCUS. The following is Savigny’s account of the origin and meaning of this term:— In the republican period, the state was designated by the term Aerarium, in so far as it was viewed with respect to its having property, which ultimately resolved itself into receipts into, and payments made out of, the public chest. On the establishment of the imperial power, there was a division of the provinces between the senate, as the representative of the old republic, and the Caesar; and there was consequently a division of the most important branches of public income and expenditure. The property of the senate retained the name of Aerarium, and that of the Caesar, as such, received the name of Fiscus. The private property of the Caesar (res privata Principis, ratio Caesaris) was quite distinct from that of the Fiscus. The word Fiscus signified a wicker-basket, or panier, in which the Romans were accustomed to keep and carry about large sums of money (Cic. Verr. i. 8; Phaedr. Fab. ii. 7); and hence Fiscus came to signify any person’s treasure or money chest. The importance of the imperial Fiscus soon led to the practice of appropriating the name to that property which the Caesar claimed as Caesar, and the word Fiscus, without any adjunct, was used in this sense (res fisci est, Juv. Sat. iv. 54). Ultimately the word came to signify generally the property of the state, the Caesar having concentrated in himself all the sovereign power, and thus the word Fiscus finally had the same signification as Aerarium in the republican period. It does not appear at what time the Aerarium was merged in the Fiscus, though the distinction of name continued at least to the time of Hadrian. In the later periods the words Aerarium and Fisc-
FISTUCA. was often used indiscriminately, but only in the sense of the imperial chest, for there was then no other public chest. So long as the distinction existed between the aerarium and the fiscus, the law relating to them severally might be expressed by the terms jus populi and jus fisci, as in Paulus (Sent. Recept. v. 12), though there is no reason for applying the distinction to the time when Paulus wrote; for, as already observed, it had then long ceased.

The Fiscus had a legal personal existence; that is, as the subject of certain rights, it was legally a person, by virtue of the same fiction of law which gave a personal existence to corporations, and the communities of cities and villages. But the Fiscus differed in many respects from other persons existing by fiction of law; and, as an instance, it was never under any incapacity as to taking an heraldic shield, which, for a long time, was the case with corporations, for the reason given by Ulpian. (Collegium). These reasons would also apply to the Populus, as well as to a Municipium, and yet the populus is never alluded to as being under such disability; and in fact it could not, consistently with being the source of all rights, be under any legal disabilities.

Various officers, as Praetores Fiscalis, Advocati, Patroni, and Prefecti were employed in the administration of the Fiscus. Nerva established a Praetor Fiscalis to administer the law in matters relating to the Fiscus. The patrimonium of the Caesar was administered by Procuratores Caesarii. The privileges of the Fiscus were, however, extended to the private property of the Caesar, and of his wife the Augusta. (Dig. 49. tit. 14. s. 6.)

Property was acquired by the Fiscus in various ways, enumerated in the Digest (49. tit. 14. s. 1), many of which may be arranged under the head of penalties and forfeitures. Thus, if a man was led to commit suicide in consequence of having done some criminal act (flagitium), or if a man made counterfeit coin, his property was forfeited to the fiscus. (Paulus, S. R. v. 12.) The officers of the Fiscus generally received information (nunciationes) of such occurrences from private individuals, who were rewarded for their pains. Treasure (thesaurus) which was found in certain places was also subject to a claim on the part of the Fiscus. (Paulus, 5. 7. v. 12.) The officers of the Fiscus were, however, extended to the private property of the Caesar, and of his wife the Augusta. (Dig. 49. tit. 14. s. 5.)

In the manufacture of these pipes, particular attention was paid to the bore, and to the thickness. The accounts of Vitruvius, Frontinus, and other writers, are not in perfect accordance; but it appears, from a comparison of them, that two different systems of measurement were adopted, namely, either by the width of the plate of lead (lamina or lamina) before it was bent into the shape of a pipe, or by the internal diameter or bore (lumen) of the pipe when formed. The former is the system adopted by Vitruvius (l. c. § 4); according to him the leaden plates were cast of a length not less than ten feet, and of a width containing an exact number of digits (sixteenths of a foot), which number was of course different for different sized pipes; and then the sizes of the pipes were named from the number of digits in the width of the plates, as in the following table, where the numbers on the right hand indicate the number of pounds which Vitruvius assigned to each ten-feet length of pipe:

| Centenaria, from a plate 100 digits wide | 1200 lbs. Octogenerata | 80 | 960 |
| Quinquagenaria-50 | 690 | |

* The etymological distinction between fistula and tubus seems to be that the former, which originally signified a flute, was a small pipe, the latter a large one; but, in usage, at least so far as water-pipes are concerned, it seems that fistula is applied to a leaden pipe, tubus to one of any other material, especially of terra-cotta, as in the above and the following passages. (Varro, R. R. i. 18; Colum. i. 5; Plin. v. 31. a. 64. xvi. 45. a. 81. xxxv. 12. a. 46; Frontinus, see below.)
From this scale it is evident, at a mere glance, that the thickness of the plates was the same for pipes of all sizes, namely, such that each strip of lead, ten minuta, objects to the system of Vitruvius as too the names were derived from the length of the in Dena — Octona — From this scale it is evident, at a mere glance, that feet long and one digit wide, weighed twelve pounds. The account of Vitruvius is followed by Pliny the notes of Schneider and Gesner).

Dena — Octona — Vicenaria — Centum H. A. xxvi. 42. s. 81.) 

FLABELLUM. dim. FLABELLULUM, (fruntis, fruntispira, dim. fruntis) a fan. “The exercise of the fan,” so wittily described by Addison (Spect. No. 102), was wholly unwitting to the ancients. Neither were their fans so constructed

* Pliny and Palladius, and even the ancient MSS. of Vitruvius, give here C, which, however, is clearly an error of a transcriber who did not perceive the law of the proportion, but who had a fancy for the round number.
was knotted with bones or heavy indented circles of bronze or terminated by hooks, in which case it was aptly denominated a *scorpion*. The cut below represents a scourge taken from a bas-relief of the statue of Cybele in the Museum of the Capitol at Rome, and fully justifies the epithet of Horace (I. c.), *horrida flagella*. The infliction of punishment with it upon the naked back of the sufferer (Juven. vi. 382) was sometimes fatal (Hor. Sat. i. 2, 41), and was carried into execution by a class of persons, themselves slaves, who were called *lorarii*. A slave who had been flogged was called *flagrio* (*maestro*), Philemon, p. 415, ed. Mein.; Aristoph. *Rus.* 502, *Epid.* 1225, *Ilys.* 1242; *modestia*, Plautus, *passim*; *Ter.* *Adelph.* v. 2, 6), which of course became a term of mockery and contempt. During the Saturnalia the scourge was deposited under the seal of the master. We likewise find that some gladiators fought with the flagella (Tertull. *Apol.* 21), as in the coin here introduced. The flagellum here has two lashes. (See also cut, p. 101.)

**FLAMEN.**

FLAMEN, the name for any Roman priest who was devoted to the service of one particular god (*divusque aliis ali sacrorum, omnibus pontificibus, singulis flamines sunt*). *Cic.* *De Leg.* ii. 8), and who received a distinguishing epithet from the deity to whom he ministered. *(Horat. sc. flamium, singuli cognomina habent ab eo deo qui sacra faciunt, Varro, De Ling. Lat. v. 84.)* The most dignified were those attached to Divos, Mars, and Quirinus, the *PONTIFICES*, *SINGULIS FLAMINES SUNTO* (*Cic.*). (The cut below *Deid*)

The office was understood to last for life; but a flamen might be compelled to resign (*flaminio abire*) for a breach of duty, or even on account of the occurrence of an ill-omened accident while discharging his functions. (*Val. Max.* i. 1 § 4.)

Their characteristic dress was the *apex* (*Apex*), the *laena* (*Laena*), and a laurel wreath. The name, according to Varro and Festus, was derived from the band of white wool (*filium, flamines, flamen*) which was wrapped round the apex, and which they wore, without the apex, when the heat was oppressive. (*Serv. Virg. Aen.* viii. 604.) This etymology is more reasonable than the transformation of *pileamines* (from *pileus*) into *flamines*. (*Plutarch, Num.* 7.) The most distinguished of all the flamens was the *Dialis*; the lowest in rank the *Pononamis*. (*Festus, s. v. Maximae dignationis.*)

When a vacancy occurred, three persons of patrician descent, whose parents had been married according to the ceremonies of *confarreatio* (*Marriage*), were nominated by the Comitia, one of whom was selected (*exopti*) and consecrated (*inaugurabantur*) by the Pontifex Maximus. (*Tacit. Ann.* iv. 16; *Liv.* xxvii. 8.) From that time forward he was emancipated from the control of his father, and became sui *juris*. (*Gaius, i. 130; Ulpian, *Pug.* x. 5; *Tacit. Ann.* iv. 16.) He alone of all priests wore the *aloepus* (*Apex*) (*Varro, ap. Gell.* x. 15); he had a right to a *litor* (*Plut. Q. R.* p. 119, ed. Reiske), to the *topa praetexta*, the *sellis curulis*, and to a seat in the senate in virtue of his office. This last privilege, after having been suffered to fall into disuse for a long period, was asserted by C. Valerius Flaccus (B. c. 209), and the claim allowed, more, however, says Livy, in deference to his high personal character than from a conviction of the justice of the demand. (Livy xxvii. 8; compare i. 20.) The *Ree Sacrificioles* alone was entitled to recline above him at a banquet; if one in bonds took refuge in his house, the chains were immediately struck off and conveyed through the *impluvium* to the roof, and thence cast down into the street (*Aul. Gell.* x. 15); if a criminal on his way to punishment met him, and fell suppliant at his feet, he was respited for that day (*Aul. Gell.* x. 15; *Plut. Q. R.* p. 166); usages which remind us of the right of sanctuary attached to the persons and dwellings of the papal cardinals.

To counterbalance these high honours, the Dialis was subjected to a multitude of restrictions and
privations, a long catalogue of which has been compiled by Aulus Gellius (x. 15) from the works of Fabius Pictor and Masarius Sabinus, while Plutarch, in his Roman Questions, endeavours to explain their import. Among these were the following:—

It was unlawful for him to be out of the city for a single night (Liv. v. 52); a regulation which seems to have been modified by Augustus, in so far that an absence of two nights was permitted (Tact. Ann. iii. 58, 71); and he was forbidden to sleep out of his own bed for three nights consecutively. Thus, it was impossible for him to undertake the government of a province. He might not mount upon horseback, nor even touch a horse, nor look upon an army marshalled without the pommel, and hence was seldom elected to the consularship. Indeed, it would seem that originally he was altogether precluded from seeking or accepting any civil magistracy (Plut. Q. R. p. 169); but this last prohibition was certainly not enforced in later times. The object of the above rules was manifestly to make him literally Jovi adiuvandum suerdotem; to compel constant attention to the duties of the priesthood; to leave him in a great measure without any temptation to neglect them. The origin of the superstitions which we shall next enumerate is not so clear, but the curious will find abundance of speculation in Plutarch (Q. R. pp. 114, 118, 161—170), Festus (s. v. Eclora and Equo), and Pliny (H. N. xvii. 30, xxviii. 40). He was not allowed to swear an oath (Liv. xxi. 50); nor to wear a ring "nisi perito et casu," that is, as they explain it, unless plain and without stones (Kirchmann, De Annulis, p. 14); nor to strip himself naked in the open air, nor to go out without his proper head-dress, nor to have a knot in any part of his attire, nor to walk along a path overgrown with clay; and it was unlawful to place a box contained in a conical form under a felix arbor. No one might sleep in his bed, the legs of which were smeared with fine clay; and it was unlawful to place a box containing sacrificial cakes in contact with the bedstead.

Flaminica was the name given to the wife of the flapis. He was required to wed a virgin according to the ceremonies of confarreatio, which regulation also applied to the two other majores (Serv. ut Virg. Aen. iv. 104, 374; Gaius, i. 112); and he could not marry a second time. Hence, since her assistance was essential in the performance of certain ordinances, a divorce was not permitted, and if she died the dialis was obliged to resign. The restrictions imposed upon the flaminica were similar to those by which her husband was fettered. (Aul. Gell. x. 13.) Her dress consisted of a dyed robe (cenenato operitur); her hair was plaited up with a purple band in a conical form (tutulus); and she wore a small square cloak with a border (rico), to which was attached a slip cut from a felix arbor. (Fest. s. v. Tutulus, Rices; Varro, De Ling. Lat. vii. 44.) It is difficult to determine what the rico really was; whether a short cloak, as appears most probable, or a napkin thrown over the head. She was prohibited from mounting a staircase consisting of more than three steps (the text of Aulus Gellius is uncertain, but the object must have been to prevent her ankles from being seen); and when she went to the argei she neither combed nor arranged her hair. On each of the sundae a ram was sacrificed to Jupiter in the regia by the flaminis. (Macrobi. i. 16.)

After the death of the flaminus Merula, who was chosen consul de facto on the expulsion of Cicero (Vell. Pat. ii. 20; Val. Max. xx. 12. § 8), and who, upon the restoration of the Marian faction, shed his own blood in the sanctuary (b. c. 87), calling down curses on his enemies with his dying breath (Vell. Pat. ii. 22), the priesthood remained vacant until the consecration of Servius Maluginensis (b. c. 11) by Augustus, then Pontifex Maximus. Julius Caesar had indeed been nominated in his 17th year, but was never installed; and during the whole of the above period the duties of the office were discharged by the Pontifex Maximus. (Suet. Jul. c. 1, compared with Vell. Pat. ii. 43, and the Commentators. See also Suet. Octav. 31; Dion Cass. liv. 36; Tact. Ann. iii. 58. The last quoted historian, if the text be correct, states the interruption lasted for 72 years only.)

The municipal towns also had their flaves. Thus the celebrated affair between Milo and Ciodius took place while the former was on his way to Lounvium, of which he was then dictator, to declare the election of a flamen (ad flaminum pro- deedmn). After the dedication of the emperors, flamines were appointed to superintend their worship in Rome and in all the provinces; and we find constantly in inscriptions such titles as FLAMEN AUGUSTALIS; FLAMEN TIBERII CAESARIS; FLAMEN D. JULII, &c., and sometimes FLAMEN DI VORUM OMNII (sc. imperatorum).

Flaminia, according to Festus and Aulus Gellius (x. 15), was the house of the Flamin Dialis, from which it was unlawful to carry out fire except for sacred purposes. Flaminia, according to Festus, was also a name given to a little priestess (sacerdotula), who assisted the flaminica in her duties. [W. R.]

FLAMMEUM. [Matrimonium.] FLEXU' MINES. [Equites.]

FLORALIA, or Floraes Ludi, a festival which was celebrated at Rome in honour of Flora or Chloris. It was solemnized during five days, beginning on the 28th of April and ending on the 2d of May. (Ovid, Fast. v. 185; Plin. H. N. xviii. 69.) It was said to have been instituted at Rome in 238 B. c., at the command of an oracle in the Sibylline books, for the purpose of obtaining from the goddess the protection of the blossoms (ut omnia bene deflorescerent, Plin. l. c.; compare Vell. Pat. i. 14; Varro, De Re Rust. i. 1). Some time after its institution at Rome its celebration was discontinued; but in the consulship of L. Postumius Albinus and M. Popilius Laenas (173 B. c.), it was restored, at the command of the senate, by the aedile C. Servilius (Eckhel, De Num. Vet. v. p. 308; compare Ovid, Fast. v. 329, &c.), as the blossoms in that year had severely suffered from winds, hail, and rain. The celebration was, as usual, conducted by the aediles (Cic. in Verr. v. 14; Valer. Max. ii. 10. § 8; Eckhel, l. c.), and was carried on with excessive merriment, drinking, and lascivious games. (Mart.
FOCUS.

In accordance with the sentiments of veneration with which the domestic fire-place was regarded, we find that the exercise of hospitality was at the same time an act of religious worship. Suppliants, strangers, all who sought for mercy and favour, had recourse to the domestic hearth as to an altar. (Hom. Od. vii. 153—169; Apoll. Rhod. iv. 693.) The phrase "pro aris et focis" was used to express attachment to all that was most dear and venerable. (Cic. De Nat. Deor. iii. 40; Flor. iii. 13.) Among the Romans the focus was placed in the atrium, which, in primitive times, was their kitchen and dining-room. (Virg. Aen. i. 726; Servius, ad loc.) There it remained, as we see in numerous examples at Pompeii, even after the progress of refinement had led to the use of another part of the house for culinary purposes. On festivals the house-wife decorated the hearth with garlands (Cato, De Re Rust. 143; Ovid, Trist. v. 3. 10); a woolen fillet was sometimes added. (Propert. iv. 6. 1—6.)

FOEDERATAE CIVITATES, FOEDE- RATTI, SOCIi. In the seventh century of Rome these nations expressed those Italian states which were connected with Rome by a treaty (foedus). These names did not include Roman colonies or Latin colonies, or any place which had obtained the Roman civitas. Among the foederati were the Latini, who were the most nearly related to the Romans, and were designated by this distinctive name; the rest of the foederati were comprised under the name of Socii or Foederati. They were independent states, yet under a general liability to furnish a contingent to the Roman army. Thus they contributed to increase the power of Rome, but they had not the privileges of Roman citizens. The relations of any particular federate state to Rome might have some peculiarities, but the general relation was that expressed above; a kind of condition, inconsistent with the sovereignty of the federates, and the first stage towards unconditional submission. The discontent among the foederati, and their claims to be admitted to the privileges of Roman citizens, led to the Social War. The Julia Lex (B. C. 90) gave the civitas to the Socii and Latini; and in the next year, after the passage of other provisions, one for the admission to the Roman civitas of those peregrini who were entered on the lists of the citizens of federate states, and who complied with the provisions of the lex. [CIVITAS.] It appears, however, that the Lex Julia, and probably also the Lex of the following year, contained a condition that the federate state should consent to accept what the Leges offered, or, as it was technically expressed, "populus fundus sicut," (Cic. pro Balbo, c. 48.) Those who did not become fundi populi did not obtain the civil rights; Balbus, the client of Cicero, was a citizen of Gades, a federate town in Spain. Cn. Pompeius Magnus had conferred the Roman civitas on Balbus, by virtue of certain powers given to him by a lex. It was objected to Balbus that he could not have the civitas, unless the state to which he belonged "fundus factus esset"; which was a complete mis-apprehension, for the term fundus, in this sense, applied to a whole state or community, whether federate or other free state, which accepted what was offered, and not to an individual of such state or community, for he might accept the Roman civitas without asking the consent of his fellow citizens at home, or without all of them receiving
the same privilege that was offered to himself. The
name of a state which had accepted the Roman
civitas (fundus factus est), were called, in reference
to their condition after such acceptance, fundani."
This word only occurs in the Latin inscription (the
Lex Romana) of the tablet of Heraclea, l. 85, and
proves that the inscription is posterior to the Lex
Julia de Civitate. It has indeed been supposed
that the state of Heraclea of this lex which is on the tablet;
but there is no doubt that it refers to the prior lex
which gave the civitas. [Fundus.]

It must be observed that the acceptance of the
two Leges above mentioned could only refer to the
federate states, and the few old Latin states. The
Latinae coloniae also received the civitas by the
Julia Lex; but as they were under the sovereignty
of Rome, their consent to the provisions of this lex
was not required.

Before the passing of the Julia Lex, it was not
usual for the Socii and Latini to adopt Roman
leges into their own system, as examples of which
Cicero mentions the Lex Furia de Testamentis, and
the Lex Voconia de Mulierum Hereditatibus; and
he adds that there were other instances. [Pro
Balbo, c. 8.] In such cases, the state which
adopted a Roman lex was said "in eam legem
fundus fieri." It hardly needs remark that the
state which adopted a Roman lex, did not thereby
obtain for its citizens any privileges with respect
to the Roman state: the federate state merely
adopted the provisions of the Roman lex as being
applicable to its own circumstances.

An apparent difficulty is caused by the undoubted
fact, that the provisions of the Lex Julia required
that the states which wished to avail themselves
of its benefits, should consent to accept them. As
the federate states commenced the war in order to
obtain the civitas, it may be asked why was it
given to them on the condition of becoming "fun-
dus?" In addition to the reasons for such condi-
tion, which are suggested by Savigny, it may be
observed that the lex only expressed in terms what
would necessarily have been implied, if it had not
been expressed: a federate state must of necessity
declare by a public act its consent to accept such a
proposal as was contained in the Lex Julia. It
appears from the cases of Homclea and Nippea
that the citizens of a federate state were not in all
cases unanimous in changing their former alliance
with Rome into an incorporation with the Roman
state. [Civitas.]

There were federate cities beyond the limits of
Italy, as shown by the example of Gades: Sigan-
tum and Masalia also are enumerated among such
cities. (Savigny, Vollenschluss der Tafel Von Her-
p. 465.) [G. L.]

FOEDUS. [FOEDERATARV CIVITATES.]

FOENUS. [FENUS.]

FOLLIS. [FOLLICULUS]. An inflated ball of leather, perhaps originally the skin of a
quadraped filled with air: Martial (iv 19) calls
it "light as a feather." Boys and old men among
the Romans threw it from one to another with
their arms and hands as a gentle exercise of the
body, unattended with danger. (Mart. vii. 31,
xiv. 45, 47; Athen. i. 25.) The emperor Au-
gustus (Suet. Aug. 63) became fond of the exercise
as he grew old. (See Becker, Gallus, vol. i.
p. 271.)

The term follis is also applied to a leather purse
or bag (Plant. Aul. ii. 4. 23; Juv. xiv. 281); and
the diminutive folliculus to the swollen capsule of
a plant, the husk of a seed, or anything of similar
appearance. (Senec. Nat. Quaest. v. 18; Tertull.
De Res. Carm. 52.)

Two inflated skins (dio phous, Herod. i. 68;
δύο φούς, Ephon. Frag. p. 185; πνευματικαί, Apoll.
Rhod. iv. 763, 777), constituting a pair of bellows,
and having valves adjusted to the natural apertures
at one part for admitting the air, and a pipe in-
to another part for its emission, were an essential
piece of furniture in every forge and found-
dry. (II. xviii. 372—470; Virg. Aen. viii. 449.)

According to the nature and extent of the work
to be done the bellows were made of the hides of
oxen (taurinis foliibus, Virg. Georg. iv. 171), or of
goats (hircaimis, Hor. Sat. i. 4. 19), and other
smaller animals. The nozzle of the bellows was
called αναστροφήν or αναστροφήων (Thucyd. iv.
100; Eust. in II. xviii. 470). In bellows made
after the fashion of those exhibited in the lamp
here introduced from Bartoli (Ant. Lucerne, ii. 21)
we may imagine the skin to have been placed be-
tween the two boards so as to produce a machine
like that which we now employ.
out of which the water flowed into the open air, and with a statue of Apollo, and was enclosed with a wall, on which was painted the slaughter of the suitors by Ulysses. (Paus. ii. 3. § 3; see a paper by Götting, on the present state of this fountain, and of the Cretanion, with an engraving of the source of the Peirene, in Gerhard's Archäologische Zeitung for 1844, pp. 326, 328; the engraving is given below.) Corinth contained numerous other fountains; over one of which was a statue of Bellerophon and Pegasus, with the water flowing out of the horse's hoofs (Ib. § 5); over another, that of Glauce, was the Odeum (Ib. § 6); and another was adorned with a bronze statue of Poseidon, with a dolphin at his feet, out of the mouth of which the water flowed. (Paus. ii. 2. § 7. s. 8.) In the same city, was another fountain on a still grander scale; namely, that of Lerna, which was surrounded by a colonnade with seats for those who desired a cool retreat in summer; the water was no doubt collected in a spacious basin in the centre. (Ib. 4. § 5. s. 6; see also 5. § 1.) Several other fountains of a similar kind to those are described or referred to by Pausanias (ii. 27, iv. 33, 34, vii. 5, 21, viii. 1), among which two deserve special mention, as they were erected for the construction of the cisterns and for the usage of the citizens. (Ib. 10. § 4.) Vitruvius mentions the fountain of Salmacis as among the admirable works of art at Halicarnassus. (ii. 8. § 12.)

The Romans also erected edifices of various degrees of splendour over natural springs, such as the well-known grotto of Egeria, near Rome, where the natural cave is converted by the architect into a sort of temple (comp. Plin. H. N. xxxvi. 21, s. 42), and the baptisterium of Constantine. A simple mode of decorating less considerable springs was by covering them with a vault, in the top of which was an opening, surrounded by a balustrade, or by a low wall adorned with marble bas-reliefs, one example of which, among many, is seen in a relief representing the twelve gods, now in the Capitoline Museum. In all cases, a cistern was constructed to contain the water, either by cutting it out of rock, or by a low wall adorned with marble bas-reliefs, one example of which, among many, is seen in a relief representing the twelve gods, now in the Capitoline Museum. In all cases, a cistern was constructed to contain the water, either by cutting it out of the living rock, or (if the spring did not rise out of rock) by building it of masonry. Vitruvius discusses at length the different sorts of springs, and gives minute rules for testing the goodness of the spring, and for the construction of the cisterns (viii. 3. 7). The observations of Vitruvius apply chiefly to those springs and cisterns which formed the sources of the aqueducts.

At Rome, a very large proportion of the immense supply of water brought to the city by the aqueducts, was devoted to the public fountains, which were divided into two classes; namely, l accus, ponds or reservoirs, and salientes, jets of water, besides which many of the castella were so constructed as to be also fountains. (See Aqueductus, p. 114, b, and the woodcut.) Aprima, who during his aedileship paid special attention to the restoration of the Roman waterworks, is said to have constructed 700 l accus, 105 salientes, and 130 castella, of which very many were magnificently adorned; they were decorated with 300 bronze or marble statues, and 400 marble columns. (Plin. H. N. xxxvi. 15. s. 24. § 9.) There were also many small private fountains in the houses and villas of the wealthy. (Plin. Epist. v. 6.) At Pompeii, the fountains are extremely numerous, and that not only in the streets and public places, especially at the junctions of streets (in trivis, in trivis); but also in private houses. The engraving on p. 109 represents a section of one of these fountains, in which the water pours into a basin; that now given, in which the water is thrown up in a jet, is taken from an arabesque painting on the wall of a house at Pompeii: in the painting, the vase and pedestal rise out of a sheet of water, which may be supposed to represent the impluvium in the atrium of a house. (Respecting the fountains of Pompeii, see Pompeii, vol. i. p. 131, vol. ii. pp. 71, 78, and Sir W. Gell's Pompeiana, vol. i. pp. 330, 335, plates 50, 53.) The proof which these fountains afford, of the acquaintance of the ancients with the chief law of hydrostatics is noticed under Aqueductus, p. 109.

The forms given to fountains were as numerous as the varieties of taste and fancy. The large flat vases were a common form, and they are found, of 5, 10, 20, and 30 feet in diameter, cut out of a single piece of some hard stone, such as porphyry, granite, basanite, breccia, alabaster and marble. An ingenious and elegant variety, of which there is a specimen in the Capitoline Museum, is a tripod, up to a hedge, and with seats for those who desired a cool retreat in summer; the water was no doubt collected in a spacious basin in the centre. (Ib. 4. § 5. s. 6; see also 5. § 1.) Several other fountains of a similar kind to those are described or referred to by Pausanias (ii. 27, iv. 33, 34, vii. 5, 21, viii. 1), among which two deserve special mention, as they were erected for the construction of the cisterns and for the usage of the citizens. (Ib. 10. § 4.) Vitruvius mentions the fountain of Salmacis as among the admirable works of art at Halicarnassus. (ii. 8. § 12.)

The Romans also erected edifices of various degrees of splendour over natural springs, such as the well-known grotto of Egeria, near Rome, where the natural cave is converted by the architect into a sort of temple (comp. Plin. H. N. xxxvi. 21, s. 42), and the baptisterium of Constantine. A simple mode of decorating less considerable springs was by covering them with a vault, in the top of which was an opening, surrounded by a balustrade, or by a low wall adorned with marble bas-reliefs, one example of which, among many, is seen in a relief representing the twelve gods, now in the Capitoline Museum. In all cases, a cistern was constructed to contain the water, either by cutting it out of rock, or (if the spring did not rise out of rock) by building it of masonry. Vitruvius discusses at length the different sorts of springs, and gives minute rules for testing the goodness of the spring, and for the construction of the cisterns (viii. 3. 7). The observations of Vitruvius apply chiefly to those springs and cisterns which formed the sources of the aqueducts.

At Rome, a very large proportion of the immense supply of water brought to the city by the aqueducts, was devoted to the public fountains,
also sculptured over the fountains, as among the Greeks; thus at Rome, there were the fountains of Ganymede and Prometheus, and the Nymphaeum of Jupiter. (Stieglitz, Arch'dol. d. Baukunst, vol. ii. pt. 2. pp. 76, 79; Hirt, Lehre der Geb'dude, pp. 399, 403.)

**FORCEPS** (πυράγγε), tongs or pincers, need no further explanation here, as they were used in antiquity for the same purposes as they are in modern times. They were invented, as the etymology indicates, for taking hold of what is hot (forvum, Festus, s. v.; Servius, ad Virg. Georg. iv. 175, Aen. viii. 453, xii. 404), used by smiths, and therefore attributed to Vulcan and the Cyclopes. (Virg. II. cc.; Horn. /.; xviii. 477, Od. iii. 434; Callim. in Del. 144; forçipe curva, Ovid, Met. xii. 277.)

**FORTES. [JANUA.]**

**FORFEX** (φαλίς, dim. φαλίδων), shears (Serv. in Virg. Aen. viii. 453), used, 1. in shearing sheep, as represented in the annexed woodcut, which is taken from a carnelian in the Stosch collection of antique gems at Berlin; 2. in cutting hair (Eurip. Orest. 954; Schol. in loc.; Brunck, Asal. iii. 9; Virg. Catal. vii. 9; ferro hidenti, Ciris, 213); 3. in clipping hedges, myrtles, and other shrubs (φαλαστοὶ μυρφιῶνες, Hierocles, op. Stob. Serm. 65.)

In military manoeuvres the forfex was a tenaille, i.e. a body of troops arranged in the form of an acute angle, so as to receive and overcome the opposite body, called a Cuncus. (Gell. x. 9; Amm. Marc. xvi. 11.)

In architecture the term φαλίς denoted a construction which was probably the origin of the arch (Macculloch's West. Islands, i. p. 142, iii. p. 49), consisting of two stones leaning against each other so as to form an acute angle overhead, as is seen in the entrance to the pyramid of Cheops and in the ruins of Mycenae; and gradually brought nearer to the forms which we now employ. (See woodcut, p. 125.) (Plat. De Leg. xii. p. 292. ed. Bekker; Diod. Sic. ii. 9.)

**FORTI. [NAVIS; CIRCUS, p. 283, b.]**

**FORMA, dim. FORMULA, second dim. FORMELLA (τιμός), a pattern, a mould; any contrivance adapted to convey its own shape to some plastic or flexible material, including moulds for making pottery, pastry, cheese, bricks, and coins. The moulds for coins were made of a kind of stone, which was indestructible by heat. (Plin. H. N. xxxvi. 49.) The mode of pouring into them the melted metal for casting the coins will be best understood from the annexed woodcut, which represents one side of a mould, engraved by Seroux d'Agincourt. Moulds were also employed in making walls of the kind, now called pisé, which were built in Africa, in Spain, and about Tarentum. (Varro, De Re Rust. i. 14; Pallad. i. 34; parities formacei, Plin. H. N. xxxv. 49.) The shoemaker's last was also called forma (Hor. Sat. ii. 3. 106) and tentipellium (Festus, s. v.), in Greek καλότους. (Plato, Conv. p. 404, ed. Bekker.)

The spouts and channels of aqueducts are called formae, perhaps from their resemblance to some of the moulds included in the above enumeration. (Frontin. De Aquaeuct. 75, 126.)

**FORMULĂ. [ACTIO.]**

**FORNACALIA,** a festival in honour of Fornax, the goddess of furnaces, in order that the corn might be properly baked. (Festus, s. v.) This ancient festival is said to have been instituted by Numa. (Plin. H. N. xviii. 2.) The time for its celebration was proclaimed every year by the Curio Maximus, who announced in tablets, which were placed in the forum, the different part which each curia had to take in the celebration of the festival. Those persons who did not know to what curia they belonged, performed the sacred rites on the Quirinalia, called from this circumstance the Stylorum ferria, which fell on the last day of the Fornacalia. (Ovid, Fasti, ii. 527; Varro, De Ling. N N)
FORNAX.

Lat. vi. 13, with Müller's note; Festus, s. v. (Quirinalia, Stu/ter, feriae.)

The Fornacalia continued to be celebrated in the time of Lactantius. (Lactant. i. 20.)

FORNAX, dim. FORNA'CULA (ἐνάμων, dim. καυτῶν), a kiln; a furnace. The construction of the kilns used for baking earthenware [FICTILE] may be seen in the annexed woodcut, which represents part of a Roman pottery discovered at Castor, in Northamptonshire. (Artis's Lond. 1828.) The dome-shaped roof has been destroyed; but the flat circular floor on which the earthenware was set to be baked is preserved entire. The middle of this floor is supported by a thick column of brick-work, which is encircled by the oven (furnus, κάθων). The entrance to the oven (praefumium) is seen in front. The lower part of a smoking-furnace, shaped like an inverted bell, and sunk into the earth, with an opening and a channel at the bottom for the discharge of the melted metal, has been discovered near Arles. (Florencecourt, über die Bergwerke der Alten, p. 30.) In Spain these furnaces were raised to a great height, in order that the noxious fumes might be carried off. (Strabo, iii. 2. p. 391, ed. Sieb.) They were also provided with long flues (longinquae fornae cunicula, Plin. H. N. ix. 62), and with chambers (camerae) for the purpose of collecting more plentifully the oxides and other matters by sublimation (Ibid. xxxiv. 24, 33—41). Homer describes a blast-furnace with twenty crucibles (χαυνόλ, Ι. xviii. 470). Melting-pots or crucibles have been found at Castor (Artis, pl. 38), and at different places in Egypt, in form and material very like those we now employ. (Wilkinson, Man, and Cast, vol. iii. p. 224.) A glass-house, or furnace for making glass, was called βελογρυγός. (Diog. v. 162.) Furnaces of an appropriate construction were erected for casting large statues of bronze (Claud. De Loud. Stil. ii. 176), and for making lamp-black. (Vitruv. vii. 10.) [ATRAMENTUM.] The lime-kiln (forax calcaria) is described by Cato. (De Re Rast. 38; see also Plin. H. N. xvi. 6; Vitruv. vii. 3.) On the mode of heating baths, see p. 193.

The early Romans recognized, under the name of Fornax, a divinity who presided over ovens and furnaces [FORNACALIA]. [J. Y.]

FORNIX, in its primary sense, is synonymous with ARCUS (Senec. Ep. 90), but more commonly implies an arched vault, constituting both roof and ceiling to the apartment which it encloses. (Cic. Top. 4.) It is composed of a semicylindrical and oblong arch like the Camera, but differs from it in construction, consisting entirely of stone or brick, whereas the other was formed upon a frame-work of wood, like the skeleton of a ship (Sallust, Jug. 18; Suet. Nero, 34; Camera); both of which methods appear to have been sometimes united, as in the roof of the Tullianum, described by Sallust (Cat. 55), where the ribs of the Camera were strengthened by alternate courses of stone arches.*

From the roof alone, the same word came to signify the chamber itself, in which sense it designates a long narrow vault, covered by an arch of brick or masonry (tectum fornaticatum), similar to those which occupy the ground floors of the modern Roman palaces. These cells are represented in the annexed woodcut, from the remains of a villa at Mola di Gaieta, which passes for the Fornian Villa of Cicero. They are covered internally with a coating of stucco, tastily ornamented, and painted in streaks of azure, pink, and yellow.

Being small and dark, and situated upon the level of the street, these vaults were occupied by prostitutes (Hor. Sat. i. 2. 30; Juv. Sat. iii. 156; xi. 171; compare Suet. Jul. 49), whence comes the meaning of the word fornix as applied to the ecclesiastical writers, and its English derivation.

Fornix is also a sallyport in the walls (Liv. xxxvi. 23; compare xiv. 11); a triumphal arch (Cic. De Orat. ii. 66); and a street in Rome, which led to the Campus Martius, was called Via Fornicata (Liv. xxii. 36), probably on account of the triumphal arches built across it. [A. R.]

FORUM. As the plan of the present work does not include a topographical description of the various fora at Rome, the following article only contains a brief statement of the purposes which they served.

Forum, originally, signifies an open place (area) before any building, especially before a sepulcrum (Festus, s. v.; Cic. De Leg. ii. 24), and seems, therefore, etymologically to be connected with the adverb foras. The characteristic features of a Roman forum were, that it was a levelled space of

---

* "Tullianum . . . muniment undique parietes, atque insuper Camera, lapides fornicius vinca." If the stone chamber now seen at Rome under the Mamertine prisons was really the Tullianum, as commonly supposed, it is not constructed in the manner described; being neither cosseratum nor fornicatum, but consisting of a circular dome, formed by projecting one course of stones beyond the course below it, like the treasury of Atreus at Mycenae, described at p. 125. [ARCUS.]
ground of an old long form, and surrounded by build-

ings, houses, temples, basilicae or porticoes. (Vitruv.
v. 1, 2.) It was originally used as a place where justice was administered, and where goods were exhibited for sale. (Varro, De Ling. Lat. v. 145, ed. Müller.) We have accordingly to distinguish between two kinds of fora; of which some were exclusively devoted to commercial purposes, and were real market-places, while others were places of meeting for the popular assembly, and for the courts of justice. Mercantile business, however, was not altogether excluded from the latter, and it was especially the bankers and usurers who kept their shops in the buildings and porticoes by which they were surrounded. The latter kinds of fora were sometimes called fora judiciafia, to distinguish them from the mere market-places.

Among the fora judiciafia the most important was the Forum Romanum, which was simply called forum, as long as it was the only one of its kind which existed at Rome. At a late period of the republic, and during the empire, when other fora judiciafia were built, the Forum Romanum was distinguished from them by the epitheta vetus or magnatum. It was situated between the Palatine and the Capitoline hills, and its extent was seven jugera, whence Varro (De Re Rust. i. 2) calls it the "Septem jugera forensia." It was originally a swamp or marsh, but was said to have been filled up by Romulus and Tatius, and to have been set apart as a place for the administration of justice, for holding the assemblies of the people, and for the transaction of other kinds of public business. (Dion. Hal. Ant. Rom. iii. p. 200, compare ii. p. 113, Syllburg.) In this widest sense the forum included the comitium, or the place of assembly for the curiae (Varro, De Ling. Lat. v. 155, Müller), which was separated from the forum in its narrower sense, or the place of assembly for the comitia tributa, by the Rostra. (Niebuhr, Hist. of Rome, i. p. 291, note 746, and p. 426, note 990; Walter, Gesch. des Röm. Rechts, v. 83; Götting, Gesch. der Röm. Staatsverf. p. 155.) These ancient rostra were an elevated space of ground or a stage (sagum), from which the orators addressed the people. All the rich derived their name from the circumstance that, after the subjugation of Latium, its sides were adorned with the beaks (rostro) of the ships of the Antiates. (Liv. viii. 14.) In subsequent times, when the curiae had lost their importance, the accurate distinction between comitium and forum likewise ceased, and the comitia tributa were sometimes held in the Circus Flamininus; but towards the end of the republic the forum seems to have been chiefly used for judicial proceedings, and as a money market; hence Cicero, De Orat. i. 36) distinguishes between a speaker in the popular assembly (orator) and the mere pleader: "Ego istos non modo oratoris nomine, sed ne foro quidem dignos putarim." The orators when addressing the people from the rostra, and even the tribunes of the people in the early times of the republic, used to front the comitium and the curia; but C. Gracchus (Plut. C. Gracch. 5), or, according to Varro (De Re Rust. i. 2) and Cicero (De Amicit. 25), C. Licinius, introduced the custom of facing the forum, thereby acknowledging the sovereignty of the people. In 306 B.C. the Romans adorned the forum with these shields which they had taken from the Samnites; and this custom of adorning the forum with these shields and other ornaments was subsequently always observed during the time of the Lud. Romani, when the Aediles rode in their chariots (tenae) in solemn procession around the forum. (Liv. ix. 40; Cic. in Verr. i. 54, and ii. 4.) After the victory of C. Dulliius over the Carthaginians the forum was adorned with the celebrated column rostrata [Columna]. In the upper part of the forum, or the comitium, the laws of the Twelve Tables were exhibited for public inspection, and it was probably in the same part, that, in 304 B.C., Cn. Flavius exhibited the Fasti, written on white tables (in albo), that every citizen might be able to know the days on which the law allowed the administration of justice. (Liv. ix. 46.) Besides the ordinary business which was carried on in the forum, we read that gladiatorial games were held in it (Vitruv. v. 1, 2), and that prisoners of war and faithless colonists or legionaries were put to death there. (Liv. vii. 19, ix. 24, xxviii. 26.)

A second forum judiciarium was built by J. Caesar, and was called Forum Caesaris or Julian. The levelling of the ground alone cost him above a million of sestercii, and he adorned it besides with a magnificent temple of Venus Genitrix. (Suet. J. Caes. 26; Plin. H. N. xxxiv. 15; Dion Cass. xiii. 22.)

A third forum was built by Augustus and called Forum Augusti, because the two existing ones were not found sufficient for the great increase of business which had taken place. Augustus adorned his forum with a temple of Mars and the statues of the most distinguished men of the republic, and issued a decree that only the judicata publica and the sortitiones judiciarum should take place in it. (Suet. Oct. 29 and 31; compare Dion Cass. iv. 27; Plin. H. N. i. c.; Vell. Pat. ii. 39; Ovid, Ex Pont. iv. 15, 16; Martian. iii. 38, 3; Seneca, De Inv. ii. 9; Stat. Silv. iv. 9, 15.) After the Forum Augusti had severely suffered by fire, it was restored by Hadrianus. (Ael. Spart. Hadr. c. 13.)

The three fora which have been mentioned seem to have been the only ones that were destined for the transaction of public business, which were subsequently built by the emperors, such as the Forum Trajani or Ulpianum, the Forum Sallustii, Forum Dioecletiani, Forum Aureliani, &c., were probably more intended as embellishments of the city than to supply any actual want.

Different from these fora were the numerous markets at Rome, which were neither as large nor as beautiful as the former. They are always distinguished from one another by epithets expressing the particular kinds of things which were sold in them, e. g. forum bearium, according to Festus, the cattle-market; according to others, it derived the name boarium from the statue of an ox which stood there (Plin. H. N. xxxiv. 2; Ovid, Fast. vi. 477); forum ollorium, the vegetable market (Varro, De Ling. Lat. v. 146); forum piscarium, fish-market; forum cupedinius, market for dainties; forum coquinium, a market in which cooked and prepared dishes were to be had, &c.

(Respecting the fora in the provinces, see the articles COLONIA and CONVENTUS; compare Sigonius, Dict. Antiq. Jur. Ital. ii. 15, and Walter, Gesch. des Röm. Rechts, p. 206.)

FOSSA. [CASTRA.]

FRAMEA. [HASTA.]
Not only was the bridle dispensed with in the management of creatures invented by the imagination of the poet (Aeschyl. Prom. 294), but of some which were actually trained by man to go without it. Thus the Numidian desultor guided his two horses by the whip, and the Gallic assidarius, on the banks of the Rhone, directed and animated his mules entirely by the voice. (Claud. Epig. 4.)

FRIGIDARIUM. [Balnear. pp. 189, 190.]

FRICTUS. [Ususfructus.]

FRUMENTARIAE LEGES. From the earliest times the supply of corn at Rome was consi-dered one of the duties of the government. Not only was it expected that the government should take care that the corn-market (annona) was properly supplied, but likewise that in all seasons of scarcity, they should purchase corn in the sur-rounding countries, and sell it to the people at a moderate price (Liv. ii. 9, 34, iv. 12, 52, x. 11, &c. xxvi. 40; Cic. pro Dom. 5). This price, which is spoken of as annona vetus (Liv. ii. 34), could not rise much, without exciting formidable discontent; and the administration was in all such cases considered to have neglected one of its most im-portant duties. The superintendence of the corn-market belonged in ordinary times to the aediles, but when great scarcity prevailed, an extraordin-ary officer was appointed for the purpose under the title of Praefectus Annuae (Liv. iv. 12). With the decay of agriculture in Italy, which followed the importation of corn from the provinces, and the decrease of the free population, the govern-ment had to pay still further attention to the supply of corn for the city. In addition to this, an indigent population gradually increased in Rome, which could not even purchase corn at the moderate price at which it was usually sold, and who de-manded to be fed at the expense of the state. Even in early times it had been usual for the state on certain occasions, and for wealthy individuals who wished to obtain popularity and influence, to make occasional donations of corn to the people (donatio, largito, divisio; subsequently called frumentatio). But such donations were only casual; and it was not till the year B.C. 123, that the first legal provision was made for supplying the poor at Rome with corn at a price much below its market value. In that year C. Sempronius Gracchus brought forward the Lex Frumentaria, by which each citizen was entitled to receive every month a certain quantity of wheat (triticum) at the price of 63 asses for the mor-dins, which was equal to 1 gallon and nearly 8 pints of English.* (Liv. Epit. 60; Appian, B. C. i. 21;}

* The price of 63 asses (senos carit et trientes) occurs in the Schol. Bod. ad Civ. Sect. c. 25, p. 309. c. 48, p. 309; but in the editions of Livy [Ep. 60], we find ut senis et trium frumentum plebe dicatur, that is, at 43/4s of an as. But instead of senis, the manuscripts have senis, semis, semis, evidently for semis, and therefore there can be little doubt that
Plut. C. Gracchus, 5; Vell. Pat. ii. 6; Cie. pro Sect. 48. This was only a trifle more than half the market price, since in the time of Cicero 3 sentences = 12 modii were considered a low sum for a modius of wheat (Böckh, Metrol. Untersuch, p. 429.) It must not be supposed that each person was allowed to receive as much as he pleased every month; the quantity must of course have been fixed, and was probably five modii monthly, as in later times. This quantity was only given to fathers of families; but it was not confined to the poor, as Plutarch (l. c.) would imply, for every citizen had a right to it, whether he were rich or poor (lūdōtē tōw ἧμητοῶν, Appian, l. c.; virilim, Cie. Tusc. Disp. iii. 20); and even Piso, who had been quaestor for his share at the distribution (Cic. l. c.) It appears, however, from the anecdote which Cicero relates about Piso, that each citizen had to apply in person, a regulation which would of itself deter most of the rich. The example that had been set by Gracchus was too tempting not to be followed, although the consequences of such a measure were equally prejudicial to the public finances and the public morality. It emptied the treasury, and at the same time taught the poor to become state-paupers instead of depending upon their own exertions for obtaining a living.

The demagogue Appuleius Saturninus went still further. In n. c. 100 he brought forward his Lex Appuleia, by which the state was to sell corn at 6ths of an as for the modius. The city quæstor Q. Cæpio pointed out that the treasury could not bear such an expense, and the most violent opposition was offered to the measure. It is doubtful whether it ever passed into a law; and it is at all events certain that it was never carried into execution (Auctor, ad Herenn. i. 12; comp. Cie. de Leg. ii. 6.) The Lex Livia, which was proposed by the tribune, M. Livius Drusus, in n. c. 91, was likewise never carried into effect, as it was repealed by the senate, together with all his other laws as passed in opposition to the auspices. Of the provisions of this Lex Frumentaria we have no account (Liv. Epit. 71.) About the same time, either shortly before or shortly after the Lex Livia, the tribune M. Octavius, supported by the aristocracy, brought forward the Lex Octavia, which modified the law of Gracchus to some extent, so that the public treasury did not suffer so much. He probably either raised the price of the corn, or diminished the number of modii which each citizen was entitled to receive. (Cie. Brut. 22, de Off. ii. 21.) Sulla went still further, and by his Lex Cornelia, n. c. 82, did away altogether with these distributions of corn, so that in the language which Sallust puts into the mouth of Lepidus, populās Romānas—nu servilia quidem alimenta reliqua tabeat. (Sall. Hist. in Orat. Lepid. p. 393, ed. Cort.) But the senate soon found it inexpedient to deprive the people of their customary largesses, as the popular party began to increase in power; and it was accordingly at the desire of the senate, that the consuls of n. c. 73 brought forward the Lex Terentia Cassia, which was probably only a renewal of the Lex Somponia, with one or two additions respecting the manner in which the state was to obtain the corn. The law enacted that each Roman citizen should receive 5 modii a month at the price of 6½ asses for each modius. It appears from the various orations of Cicero, that by this law the provinces were obliged to furnish the greater part of the corn at a fixed price, which was paid by the Roman treasury, and that the governors of the provinces had to take care that the proper quantity of corn was supplied. (Cie. Ferr. iii. 70, v. 21, pro Sect. 25; Ascon. in Pis. 4, p. 9, ed. Orelli.) Occasionally extraordinary distributions of corn were made in virtue of decrees of the senate. (Cie. Ferr. l. c.; Plut. Cat. min. 26, Caes. 6.)

All the Leges Frumentariae, that have been hitherto mentioned, had sold corn to the people, although at a price much below what the state had paid for it; but as the great party-leaders towards the close of the republic were ready to purchase the support of the people at any sacrifice to the state, the distribution of corn became at length quite gratuitous. Caesar, in his consulship, n. c. 59, had threatened to make it so (Cie. ad Att. ii. 19; comp. pro Dom. 10); and this threat was carried into execution in the following year, n. c. 58, by the Lex Clodia of the tribune Clodius. The corn was thus in future distributed without any payment; and the abolition of the payment cost the state a fifth part of its revenues. (Cie. pro Sect. 15; Schol. Ascon. 26; Dion Cass. xxxvi. 18.)

In n. c. 57, Pompey received by the Lex Cornelia Caecilia the superintendence of the corn-market (cura annonae) for a period of five years; but no alteration was made in the distribution of corn by virtue of this measure. The only extension which he gave to the distribution was by allowing those citizens, whose names had not hitherto been entered in the lists of the censors, to share in the bounty of the state. (Dion Cass. xxxix. 24.) The dangerous consequences of such a system did not escape the penetration of Caesar; and accordingly, when he became master of the Roman world, he resolved to remedy the evils attending it, as far as he was able. He did not venture to abolish altogether these distributions of corn, but he did the next best thing in his power, which was reducing the number of the recipients. During the civil wars numbers of persons, who had no claim to the Roman franchise, had settled at Rome in order to obtain a share in the distributions of corn. The first thing, therefore, that Caesar did was to have an accurate list made out of all the corn-receivers, and to exclude from this privilege every person who could not prove that he was a Roman citizen. By this measure the 320,000 persons, who had previously received the corn, were at once reduced to 150,000.* Having thus reduced the number of corn-receivers to 150,000, he enacted that this number should not be exceeded for the future, and that vacancies that occurred by death, should be filled up every year by lot by the praetor urbāns. (Suet. Cæs. 55; Dion Cass. xliii. 21.) It is further exceedingly probable that as a general rule, the corn was not given even to these 150,000, but sold at a low price, as had been the case at an earlier period; and that it was only to the utterly destitute that the corn was supplied.

* It must be borne in mind that this was not a census, as Plutarch (Cæs. 55) and Appian (B. C. ii. 102) state, but simply an enumeration of the corn-receivers.

N N 3
granitously: the latter class of persons were furnished with tickets, called tesserae nummariae or frumentariae. Thus we find it stated (Suet. Octav. 41) that Augustus, on one occasion, doubled the number of the tesserae frumentariae. If, therefore, the corn was, as a general rule, not given, but sold, we may conclude that every citizen was entitled to be enrolled in the 150,000 corn-receivers, independent of his fortune. The opposite opinion has been maintained by many modern writers; but the arguments, which have been brought forward by Mommsen (Die Römischen Tribus, p. 187) and others, but into which our space will not allow us to enter, render the above supposition exceedingly probable.

The useful regulations of Caesar fell into neglect after his death, and the number of corn-receivers was soon increased beyond the limits of 150,000, which had been fixed by the dictator. This we learn from the Monumentum Ancyranum, in which Augustus enumerates the number of persons to whom he had given congiaria at different times; and there can be no doubt that the receivers of the congiaria and of the public corn were the same. Thus, in n. c. 44, and on the three following occasions, he distributed the congiaria to 250,000 persons; and in n. c. 5, the number of recipients had amounted to 320,000. At length, in n. c. 2, Augustus reduced the number of recipients to 200,000, and renewed many of Caesar's regulations. (Suet. Octav. 40; Dion Cass. iv. 10.) He had, indeed, thought of abolishing the system of corn-distributions altogether on account of their injurious influence upon Italian agriculture, but had not persevered in his intention from the conviction that the practice would again be introduced by his successors. (Suet. Octav. 42.) The chief regulations of Augustus seem to have been: 1. That every citizen should receive monthly a certain quantity of corn (probably 5 modii) on the payment of a certain sum. As the number of recipients was fixed by Augustus at 200,000, there were consequently 12,000,000 modii distributed every year. Occasionally, in seasons of scarcity, or in order to confer a particular favour, Augustus made these distributions quite gratuitously; they then became congiaria. (Congiarium.) 2. That those who were completely indigent should receive the corn gratuitously, as Julius Caesar had determined, and should be furnished for the purpose with tesserae nummariae or frumentariae, which entitled them to the corn without payment. (Suet. Octav. 41.)

The system, which had been established by Augustus, was followed by his successors; but as it was always one of the first maxims of the state policy of the Roman emperors to prevent any disturbance in the capital, they frequently lowered the price of the public corn, and frequently distributed it gratuitously as a congiarium. Hence, the cry of the populace panem et circenses. No emperor ventured to abolish the public distributions of corn: the most that he dared to, was to raise the price at which it was sold. When, therefore, we find it stated in Dion Cassius (liv. 10), that Nero did away with the distributions of corn after the burning of Rome, we cannot understand this literally, but must suppose that he either raised the price of the commodity or, what is more probable, obliged those poor to pay for it, who had previously received it gratuitously. The care, which the emperors took to keep Rome well supplied with corn, is frequently referred to in their coins by the legends, Annona, Ubertas, Abundantia, Liberalitas, &c. We find in a coin of Tiberius the legend plebs urbanae frumento constituto. (Eckhel, vol. vi. p. 406.)

In course of time, the sale of the corn by the state seems to have ceased altogether, and the distribution became altogether gratuitous. Every corn-receiver was therefore now provided with a tessera, and this tessera, when once granted to him, became his property. Hence, it came to pass, that he was not only allowed to keep the tessera for life, but even to dispose of it by sale, and bequeath it by will. (Dig. 5. tit. 1. s. 52; 39. tit. 1. s. 49; 39. tit. 1. s. 67.) Every citizen was competent to hold a tessera with the exception of senators. Further, as the corn had been originally distributed to the people according to the thirty-five tribes into which they were divided, the corn-receivers in each tribe formed a kind of corporation, which came eventually to be looked upon as the tribe, when the tribes had lost all political significance. Hence, the purchase of a tessera became equivalent to the purchase of a place in a tribe; and, accordingly, we find in the Digest the expressions emere tribum and emere tesseraum used as synonymous. (Dig. 32. tit. 1. s. 35.)

Another change was also introduced at a later period, which rendered the bounty still more acceptable to the people. Instead of distributing the corn every month, wheaten bread, called annona cieva, was given to the people. It is uncertain at what time this change was introduced, but it seems to have been the custom before the reign of Aurelian (A. D. 270—275), as it is related of this emperor that on his return from his Eastern expedition, he distributed among the people a larger quantity of bread, and of a different form from that which had usually been given. (Vopisc. Aurel. 55; Zosim. i. 61.) The bread was baked by the Pistores, who delivered it to the various depots in the city, from which it was fetched away on certain days by the holders of the tesserae. (Orelli, Inscript. No. 3358.) These depots had steps (gradus) leading to them, whence the bread was called panis gradiilis; and there were the strictest regulations that the bread should only be distributed from these steps, and should never be obtained at the bakers. (Cod. Theod. 14. tit. 17. ss. 3, 4.) When Constantine transferred the seat of government to Constantinople, the system of gratuitous distribution of bread was also transferred to that city; and in order to encourage the building of houses, all householders were entitled to a share of the imperial bounty. (Zosim. ii. 32; Socrat. H. E. ii. 13; Sozom. iii. 7; Cod. Theod. 14. tit. 17.) The distribution of bread at Rome was, however, still continued; and the care which the later emperors took that both Rome and Constantinople should be properly supplied with corn, may be seen by the regulations in the Cod. Theod. 14. tit. 15, De Canone Frumentario urbis Romae, and tit. 16, De Frumento Urbis Constantinopolitanae. The superintendence of the corn-market, under the emperors, belonged to the Projectus Annonae.

Many points connected with this subject have necessarily been omitted in consequence of our limits. The reader who wishes for further information is referred to: Contareni, De Frum. Rom. Lrigiones, in the Theaurnus of Graevius, vol. viii. p. 923; Dirksen, Civilist. Abhandlungen,
FUCUS

FRUMENTARII, officers under the Roman empire, who acted as spies in the provinces, and reported the enemies of Rome, whom they considered it their duty to discover (Ap. Athen. xii. p. 542, &c.). They appear to have been called *Frumentarii* because it was their duty to collect information in the same way as it was the duty of other officers, called by the same name, to collect corn. They were accustomed to accuse persons falsely, and their office was at length abolished by Dio-Cletian. We frequently find in inscriptions mention made of *Frumentarii* belonging to particular legions (Orelli, *Inscr.* 74, 3491, 1929), from which it has been supposed that the *Frumentarii*, who acted as spies, were soldiers attached to the legions in the provinces; they, however, have been different officers, whose duty it was to distribute the corn to the legions.

FRUMENTATIIO. [FRUMENTARIAE LEGES.]

FUCUS (φούκος), was the general term to signify the paint which the Greek and Roman ladies employed in painting their cheeks, eye-brows, and other parts of their faces. The practice of painting the face was very general among the Greeks, and probably came into fashion in consequence of their sedentary mode of life, which robb'd them of their complexion of their natural freshness, and induced them to have recourse to artificial means for restoring the red and white of nature. This at the least is the reason given by some of the ancient writers themselves. (Xen. *Oecon.* 10, § 10; Phintys, *Ap. Stobaeus*, tit. lxxiv. 61.) The practice, however, was of great antiquity among the Greeks, and was probably first introduced among the Asiatic Ionians from the East, where the custom began to prevail from the earliest times. That it was as ancient as the time of Homer is inferred from the expression *ειργαλαρα κεφαλις* (Od. xxvii. 172), but this is perhaps hardly sufficient to prove that the cheeks were painted. The ladies at Athens, as might have been expected, did not always paint their faces when at home, but only had recourse to this adornment when they went abroad or wished to appear beautiful or captivating. Of this we have a striking example in the speech of Lyssias on the murder of Eratosthenes, in which it is related (p. 98, 20, ed. Steph.) that the wife, after leaving her husband to visit her paramour, painted herself, which the husband observed on the following morning, remarking, *σικτο δε μω τα πρόσωπον έγιμωδισα*. (Comp. Aristoph. *L�ηστηρ* 149, *Eccl.* 378, *Plut. Aπελ.* 39.) In order to give a blooming colour to the cheeks, *εγγούεα or εγγογοια, a red, obtained from the root of a plant, was most frequently employed (Xen. *Oecon.* 10, § 2); and the following paints were also used to produce the same colour, namely, *πανθενα*, also a vegetable dye resembling the rosy hue on the cheeks of young children (Alexis, *ap. Athen.* xiii. p. 568, c), *σωκυνος* (Eubulus, *ap. Athen.* xiii. 557, &c.), and *φύκος*, which was probably a red paint, though used to signify paint in general, as has been already remarked. In order to produce a fair complexion, *ψαυθων, cerasus*, white lead was employed. (Alexis, *ap. Athen.* l.c.; Xen. *Oecon.* 10, § 2; Aristoph. *Eccl.* 878, 928.) The eye-brows and eye-lids were stained black with *στιμα* or *στυμα*, a sulphuret of antimony, which is still employed by the Turkish ladies for the same purpose. (Pollux, v. 101.) The eye-brows were likewise stained with *δαλός*, a preparation of soot. Thus Alexis says (l.c.),

τας δερας πυριμας έχει τις θυγατρινις μαθαλω.

(Comp. Jur. ii. 93.) Ladies, who used paint, were occasionally betrayed by perspiration, tears, &c., of which a humorous picture is given by the comic poet Eubulus (*ap. Athen.* l.c.), and by Xenophon (*Oecon.* 10, § 8). It would appear from Xenophon (Ibid. § 5) that even in his time men sometimes used paint, and in later times it may have been still more common: Demetrius Phalereus is expressly said to have done so. (Doris, *ap. Athen.* xii. p. 542, &c.)

Among the Romans the art of painting the complexion was carried to a still greater extent than among the Greeks; and even Ovid did not disdain to write a poem on the subject, which he calls *opus;" though the genuineness of the fragment of the *Medecinae factae*, ascribed to this poet, is doubtful. The Roman ladies even went so far as to paint with blue the veins on the temples, as we may infer from Propertius (ii. 14, 27), "*si currende quedam sua tempora fuco tinxerit.*" The ridiculous use of patches (*splenia*), which were common among the English ladies in the reign of Queen Anne and the first Georges, was not unknown to the Roman ladies. (Mart. ii. 29, 9, x. 22; Plin. *Ep.* vi. 2.) The more effeminate of the male sex at Rome also employed paint. Cicero speaks (in *Pison.* 11) of the coruscata buccae of his enemy, the consul Piso.

On a Greek vase (Tischbein, *Engravings*, ii. 58) we see the figure of a female engaged in putting the paint upon her face with a small brush. This figure is copied in Bottiger's *Museo Borbonico* (vol. iv. pi. 49, 50). From the figure, a fuller, a washer or scourer of cloth and linen. The fullones not only received the cloth as it came from the loom in order to scour and smooth it, but also washed and cleansed garments which had been already worn. As the Romans generally wore woollen dresses, which were often of a light colour, they frequently needed, in the hot climate of Italy, a thorough purification. The way in which this was done has been described by Pliny and other ancient writers, but is most clearly explained by some paintings which have been found on the walls of a fullonica at Pompeii. Two of these paintings are given by Gell (*Pompeiana*, vol. ii. pl. 51, 52), and the whole of them in the Museo Borbonico (vol. iv. pl. 49, 50); from the

FULLO.

[FRUMENTARIAE LEGES.]

FULLO. [FULLUS.

FULLO. (καφείς, γραφείς), also called *NACCA* (Festus, s. v.; *Apul. Met.* ix. p. 206, Bipop), a fuller, a washer or scourer of cloth and linen. The fullones not only received the cloth as it came from the loom in order to scour and smooth it, but also washed and cleansed garments which had been already worn. As the Romans generally wore woollen dresses, which were often of a light colour, they frequently needed, in the hot climate of Italy, a thorough purification. The way in which this was done has been described by Pliny and other ancient writers, but is most clearly explained by some paintings which have been found on the walls of a fullonica at Pompeii. Two of these paintings are given by Gell (*Pompeiana*, vol. ii. pl. 51, 52), and the whole of them in the Museo Borbonico (vol. iv. pl. 49, 50); from the
latter of which works the following cuts have been taken.

The clothes were first washed, which was done in tubs or vats, where they were trodden upon and stamped by the feet of the fullones, whence Seneca (Ep. 15) speaks of saltus fullonicus. The following woodcut represents four persons thus employed, of whom three are boys, probably under the superintendence of the man. Their dress is tucked up, leaving the legs bare; the boys seem to have done their work, and to be wringing the articles on which they had been employed.

The ancients were not acquainted with soap, but they used in its stead different kinds of alkali, by which the dirt was more easily separated from the clothes. Of these, by far the most common was the urine of men and animals, which was mixed with the water in which the clothes were washed. (Plin. H. N. xxviii. 18. 26; Athen. xi. p. 484.) To procure a sufficient supply of it, the fullones were accustomed to place at the corners of the streets vessels, which they carried away after they had been filled by the passengers. (Martial, vi. 95; Macrob. Saturn. ii. 12.) We are told by Suetonius (Vesp. 23) that Vespasian imposed a urinae vectigal, which is supposed by Casaubon and others to have been a tax paid by the fullones. Nitrum, of which Pliny (H. N. xxxi. 46) gives an account, was also mixed with the water by the scourers. Fullers' earth (creta fullonia, Plin. H. N. xviii. 4), of which there were many kinds, was employed for the same purpose. We do not know the exact nature of this earth, but it appears to have acted in the same way as our fullers' earth, namely, partly in scouring and partly in absorbing the greasy dirt. Pliny (H. N. xxxv. 57) says that the clothes should be washed with the Sardinian earth.

After the clothes had been washed, they were hung out to dry, and were allowed to be placed in the street before the doors of the fullonica. (Dig. 43. tit. 10. s. 1. § 4.) When dry, the wool was brushed and carded to raise the nap, sometimes with the skin of a hedgehog, and sometimes with some plants of the thistle kind. The clothes were then hung on a vessel of basket-work (viminea caveat), under which sulphur was placed in order to whiten the cloth; for the ancient fullers appear to have known that many colours were destroyed by the volatile steam of sulphur. (Apul. Met. ix. p. 208; Bipont.; Plin. H. N. xxxv. 50, 57; Polux, vii. 41.) A fine white earth, called Cimolian by Pliny, was often rubbed into the cloth to increase its whiteness. (Theophr. Char. 10; Plaut. Aulul. iv. 9. 6; Plin. H. N. xxxv. 57.) The preceding account is well illustrated by the following woodcut.

On the left we see a fullo brushing or carding a white tunic, suspended over a rope, with a card or brush, which bears considerable resemblance to a modern horse-brush. On the right, another man carries a frame of wicker-work, which was without doubt intended for the purpose described above; he has also a pot in his hand, perhaps intended for holding the sulphur. On his head he wears a kind of garland, which is supposed to be an olive garland, and above him an owl is represented sitting. It is thought that the olive garland and the owl indicate that the establishment was under the patronage of Minerva, the tutelary goddess of the loom. Sir W. Gell imagines that the owl is probably the picture of a bird which really existed in the family. On the left, a well-dressed female is sitting, examining a piece of work which a younger girl brings to her. A reticulum upon her head, a necklace, and bracelets denote a person of higher rank than one of the ordinary work-people of the establishment.

In the following woodcut we see a young man in a green tunic giving a piece of cloth, which appears to be finished, to a woman, who wears a green under-tunic, and over it a yellow tunic with red stripes. On the right is another female in a white tunic, who appears to be engaged in cleaning one of the cards or brushes. Among these paintings there was a press, worked by two upright screws, in which the cloth was placed to be smoothened. A drawing of this press is given on p. 300.

The establishment or workshop of the fullers was called Fullonica (Dig. 39. tit. 3. s. 3), Fullicium
The fullo was answerable for the property while it was in his possession; and if he returned by mistake a different garment from the one he had received, he was liable to an action ex locato; to which action he was also subject if the garment was injured. (Dig. 19. tit. 2. s. 13. § 6; s. 60. § 2; 12 tit. 7. s. 2.) Woollen garments, which had been once washed, were considered to be less valuable than they were previously (Petron. 30; Lamprid. Heliogab. xiv. 11. p. 44, Bipont.) Of such establishments there were great numbers in Rome, for the Romans as it is with us. (Hor. Sat. v. 16.)

The word TrA/inii\' denoted the washing of linen, used in the same manner as a torch [FAX]. The light troops of the Greek and Roman armies consisted in great part of slingers (funditores, ϕονθωρίται). In the earliest times, however, the sling appears not to have been used by the Greeks. It is not mentioned in the Iliad; for in the only passage (II. xiii. 599) in which the word ϕονθωρία occurs, it is used in its original signification of a bandage. But in the times of the Persian wars slingers had come into use; for among the other troops which Gelon offered to send to the assistance of the Greeks against Xerxes, mention is made of 2000 slingers (Herod. vii. 158); and that the sling was then known among the Greeks is also evident from the allusion to it by Aeschylus (Agam. 982). At the same time it must be stated that we rarely read of slingers in these wars. Among the Greeks the Achaeans in early times attained to the greatest expertise in the use of this weapon (Thuc. ii. 81); and at a later time the Achaenians, especially the inhabitants of Agium, Patrae, and Dyme, were celebrated as expert slingers. The slings of these Achaean-ans were made of three thongs of leather, and not of one only, like those of other nations. (Liv. xxxviii. 29.) The people, however, who enjoyed the greatest celebrity as slingers were the natives of the Balearic islands. Their skill in the use of this weapon is said to have arisen from the circumstance, that, when they were children, their mothers obliged them to obtain their food by striking it with a sling. (Veget.
soldier with a provision of stones in the sinus of his pallium, and with his arm extended in order to whirl the sling about his head. (Virg. Aen. ix. 587, 588, xi. 579.) Besides stones, plummets, called glandes (μολωδίδες), of a form between acorns and almonds, were cast in moulds to be thrown with slings. (Lucret. vi. 176; Ovid, Met. ii. 729, vii. 778, xiv. 823, 826.) They have been found on the plain of Marathon, and in other parts of Greece, and are remarkable for the inscriptions and devices of persons, and the word ΔΕΣΑI, meaning "Take this." (Dodwell’s Tour, vol. ii. pp. 159—161; Böckh, Corp. Ins. vol. i. p. 311; Mommsen, in Zeitschrift für die Alterthumswissenschaft, 1846, p. 782.)

While the sling was a very efficacious and important instrument of ancient warfare, stones thrown with the hand alone were also much in use both among the Romans (Veget. i. 16, ii. 23) and with other nations (see πετροθόκα, Xen. Helen. ii. 4, § 12). The Libyans carried no other arms than slings. (Lucret. vi. 176; Ovid, Met. ii. 729, vii. 778.)

FUNDITORES. [FUNDA.]

FUNDUS. The primary significations of this word appear to be the bottom or foundation of a thing; and its elementary part (fundus) seems to be the same as that of θόσος and πολύμην, the in fundus being used to strengthen the syllable. The conjectures of the Latin writers as to the etymology of fundus may be safely neglected.

Fundus is often used as applied to land, the fundus being equivalent to aedes. The term fundus often occurred in Roman wills, and the testator frequently indicated the fundus, to which his last dispositions referred, by some name, such as Sempronianus, Seianus; sometimes also, with reference to a particular tract of country, as Fundus Trebatianus qui est in regione Atollana. (Brissomius, de Formulis, vii. 80.) A fundus was sometimes devised cum omni instrumento, with its stock and implements of husbandry. Occasionally a question arose as to the extent of the word instrumentum, between or among the parties who derived their claim from a testator. (Dig. 39. tit. 17. s. 12.)

Fundus has derived sense which flows easily enough from its primary meaning. "Fundus," says Festus, "dicitur populus esse rei, quam alienat, hoc est auctor." [AUCTOR.] Compare Plautus, Trinum. v. i. 7 (fundus potior). In this sense "fundus esse" is to confirm or ratify a thing; and in Cellius (xix. 6) there is the expression "sententiae legisque fundus subscriptoque fieri." [FORDERATI.]

FUNES. [NAVIS.]

FUNUS. It is proposed in the following article to give a brief account of Greek and Roman funeral ceremonies connected therewith.

1. GREEK. The Greeks attached great importance to the burial of the dead. They believed that souls could not enter the Elysian fields till their bodies had been buried; and accordingly we find the shade of Elpenor in the Odyssey (xi. 66. &c.) earnestly imploring Ulysses to bury his body. Ulysses also, when in danger of shipwreck, deplores that he had not fallen before Troy, as he should in that case have obtained an honourable burial. (Od. v. 311.)

So strong was this feeling among the Greeks, that it was considered a religious duty to throw earth upon a dead body, which a person might happen to find unburied (Ael. Var. Hist. v. 14); and among the Athenians, those children who were released from all other obligations to unworthy parents, were nevertheless bound to bury them by one of Solon’s laws. (Aesch. c. Timarco, p. 40.) The neglect of burying one’s relatives is frequently mentioned by the orators as a grave charge against the moral character of a man (Dem. c. Aristoc. i. p. 787. 2; Lys. c. Phil. p. 883, c. Alcib. p. 539), since the burial of the body by the relations of the dead was considered a religious duty by the universal law of the Greeks. Sophocles represents Antigone as disregarding all consequences in order to bury the dead body of her brother Polyneices, which Creon, the king of Thebes, had commanded to be left unburied. The common expressions for the funeral rites, τά δικαία, ὁμοία σοι νουμίζειι, προήγορσα, show that the dead had, as it were, a legal and moral claim to burial. The custom of burying the dead in Hades. The body was then washed and anointed with perfumed oil, and the head was crowned with the flowers which happened to be in season. The deceased was next dressed in as handsome a robe as the family could afford, in order, according to Lucian, that he might not be
cold on the passage to Hades, nor be seen naked by Cernus: this garment appears to have been usually white. (II. xviii. 353; Artemid. Oid. Herc. u. 5.) These duties were not performed by hired persons, like the ἀνάπτυκτοι among the Romans, but by the women of the family, upon whom was the care of the corpse always devolved. (Isaeus, de Philod. mor. p. 143, de Civón. hor. p. 209.)

The corpse was then laid out (προφθειρά, προτι-σεως) on a bed (ἐκλίνων), which appears to have been of the ordinary kind, with a pillow (προστι-

σελαύων) for supporting the head and back. (Lys. c. Eratosth. p. 935.) It is said that the bed on which the corpse was laid out was originally placed outside the house (Schol. ad Aristoph. Lysistr. 761); but at Athens we know it was generally placed in, by one of Solon’s laws. (Dem. c. Macart. n. 1071.) The object of this formal προφθειρά was that it might be seen that the deceased had died naturally, and that no violence had been done to him. (Pollux, viii. 65.) Plato (Leg. xii. 9. p. 959) assigns another reason, namely, that there might be no doubt that the person was dead, and says, that the body ought only to be kept in the house so long as it may be necessary to ascertain that fact. By the side of the bed there were placed painted earthen vessels, called Λυγεσθά (Aristoph. Eccl. 1092, 200), which were placed with the corpse; examples of which may be seen in the drawings of the coffins given by Böttiger (Vaseg. titie-page) and Stackelberg (Die Gräber der Hellenen, pl. 8). Great numbers of these painted vases have been found in modern times; and they have been of great use in explaining many matters connected with antiquity. A honey-cake, called μελιττοῦτα, which appears to have been intended for Cerberus, was also placed by the side of the corpse. (Aristoph. Lysistr. 601, with Schol.; compare Virg. Aen. vi. 419.) Before the door a vessel of water was placed, called ἐγκράκας, ἐφαλαίων or ἐφαλάων, in order that persons who had been in the house might purify themselves by sprinkling water on their persons. (Aristoph. Eccl. 1023; Pollux, viii. 65; Hesych. κατα. 'Αρ. Αρ. The relatives stood around the bed, the women uttering great lamentations, rending their hair. (Lucian. ib. 12.) Solomon attempted to put a stop to this (Plut. Sol. 12. 21), but his regulations on the subject do not appear to have been generally observed. It was formerly the practice to sacrifice victims before the shade of Patroclus saying to Achilles (II. xxiii. 76). When the pyre was burnt down, the remains of the corpse, which were not burnt, were buried in coffins, which were sometimes made of various materials, but were usually of laked clay or earthenware. Their forms are very various, as may be seen by a reference to Stackelberg (Die Gräber der Hellenen, pl. 7, 8). The pre-

θάντες με μετ'ταχύτητα, τίλδας ἀλδα σεπήσων. (Compare Xen. Mem. i. 2. § 53.) In some places it appears to have been usual to bury the dead on the day following death. (Callim. Epigr. 15; Diog. Laërt. i. 122.) The men walked before the corpse and the women behind. (Dem. i. c.) The funeral procession was preceded or followed by hired mourners (Σφρηγολοι), who appear to have been usually Carian women, though Plato speaks of men engaged in this office. They played mournful tunes on the flute. (Plat. Leg. vii. 9. p. 800; Hesych. κατα. 'Αρ. Αρ. τίλδας φήσων; Pollux, iv. 75.) The body was either buried or burnt. Lucian (Ib. 21) says that the Greeks burn and the Persians bury their dead; but modern writers are greatly divided in opinion as to which was the usual practice. Wachsmuth says that in historical times the dead were always buried; but this statement is not strictly correct. Thus we find that Socrates speaks of his body being either burnt or buried (Plut. Thuc. p. 115); the body of Timoleon was burnt (Plut. Timol. 39), and so was that of Philopoemen. (Id. Philo. 21.) The word δαπτεῖν is used in connection with either mode; it is applied to the collection of the ashes after burning, and accordingly we find the words κατακεῖσαι and δαπτεῖσαι used together. (Dionys. Ant. Rom. v. 48.) The proper expression for interment in the earth is κατορθάσασθαι, whence we find Socrates speaking of τον σώμα το καλέμον τον κατορθότημαν. In Homer the bodies of the dead are burnt (II. xxi. 127, &c., xxiv. 767, &c.; but interment was also used in very ancient times. Cic. (de Leg. ii. 25) says that the dead were buried at Athens in the time of Cercops; and we also read of the bones of Orestes being found in a coffin at Tegern. (Herod. i. 68; compare Plut. Sol. 10.) The dead were commonly buried among the Spartans (Plut. Lyc. 27; compare Thucyd. i. 134) and the Sicyonians (Paus. ii. 7. § 8); and the prevalence of this practice is proved by the great number of skeletons found in coffins in modern times, which have evidently not been exposed to the action of fire. Both burning and burying appear to have been always used to a greater or less extent at different periods; till the spread of Christianity at length put an end to the former practice.

The dead bodies were usually burnt on piles of wood, called νυπαι. The body was placed on the top; and in the heroic times it was customary to burn with the corpse animals and even captives or slaves. Thus at the funeral of Patroclus, Achilles killed many sheep, oxen, horses, and dogs, and also twelve captive Trojans, whose bodies he burnt with those of his friend. (II. xxi. 105, &c.) Oils and perfumes were also thrown into the flames. When the pyre was burnt down, the remains of the fire were quenched with wine, and the relatives and friends collected the bones. (II. xxiv. 791.) The bones were then washed with wine and oil, and placed in urns, which were sometimes made of gold. (Od. xxiv. 71, &c.)

The corpses, which were not burnt, were buried in coffins, which were called by various names, as σοφοῖ, πεινᾷ, ληλοῖ, λάμφρακες, δρούται, though some of these names are also applied to the urns in which the bones were collected. They were made of various materials, but were usually of laked clay or earthenware. Their forms are very various, as may be seen by a reference to Stackelberg (Die Gräber der Hellenen, pl. 7, 8). The pre-
ceding woodcut contains two of the most ancient kind; the figure in the middle is the section of one. The dead were usually buried outside the town, as it was thought that their presence in the city brought pollution to the living. At Athens the dead were formerly buried in their own houses (Plat. Min. l. c.), but in historical times none were allowed to be buried within the city. (Cic. ad Fam. iv. 12. § 3.) Lycurgus, in order to remove all superstition respecting the presence of the dead, allowed of burial in Sparta (Plut. Lyce. 27); and at Megara also the dead were buried within the town. (Paus. i. 43. § 2.)

Persons who possessed lands in Attica were frequently buried in them, and we therefore read of tombs in the fields. (Dem. c. Euxy. p. 1159; Donat, ad Ter. Eun. ProL 10.) Tombs, however, were most frequently built by the side of roads and near the gates of the city. Thus the tomb of Thucydides was near the Melitian gate (Paus. i. 23. § 11); but the most common place of burial was outside of the Itonian gate, near the road leading to the Peiraeus, which gate was for that reason called the burial gate. (Ἡμια πόλις, Etym. Mag. and Harpoc. s. v.; Theophr. Char. 14.) Those who had fallen in battle were buried at the public expense in the outer Cerameicus, on the road leading to the Academia. (Thuc. ii. 34; Paus. i. 29. § 4.)

The tombs were regarded as private property, and belonged exclusively to the families whose relatives had been buried in them. (Dem. c. Eudal. p. 1307; c. Macart. p. 1077; Cic. de Leg. ii. 26.) Tombs were called ἕθσκα, τάφοι, μνήματα, μνήμεια, σήματα. Many of these were only mounds of earth or stones (χώματα, κολάσια, τόμβοι). Others were built of stone, and frequently ornamented with great taste. Some of the most remarkable Greek tombs are those which have been discovered in Lycia by Sir C. Fellows. In the neighbourhood of Antiphellus the tombs are very numerous. They all have Greek inscriptions, which generally much destroyed by the damp sea air. The following woodcut, taken from Fellows's work (Excursion in Asia Minor, p. 219), contains one of these tombs, and will give an idea of the general appearance of the whole.

At Xanthias the tombs are still more numerous. They are cut into, or are formed by cutting away the rock, leaving the tombs standing like works of sculpture. (Id. p. 226.) The same is the case at Telmessus, where they are cut out of the rock in the form of temples. They are generally approached by steps, and the columns of the portico stand out about six feet from the entrance to the cella; the interiors vary but little; they are usually about six feet in height and nine feet by twelve in size. One side is occupied by the door, and the other sides contain benches on which the coffins or urns have been placed. (Id. p. 245.)

Some Greek tombs were built under ground, and called hypogea (ὑπόγεα or ὑπόγεα). They correspond to the Roman conditoris. (Petron. c. i i i.)

At Athens the dead appear to have been usually buried in the earth; and originally the place of their interment was not marked by any monument. (Cic. de Leg. ii. 25.) Afterwards, however, so much expense was incurred in the erection of tombs connected with this practice, that it was provided by one or both of Solon's laws, that no one should erect a monument which could not be completed by ten men in the course of three days. (Id. ii. 26.) This law, however, does not seem to have been strictly observed. We read of one monument which cost twenty-five minae (Lys. c. Diog. p. 905), and of another which cost more than two talents. (Dem. c. Steph. i. p. 1125. 15.) Demetrius Phalerenus also attempted to put a stop to this expense by forbidding the erection of any funeral monument more than three cubits in height. (Cic. L. c.)

The monuments erected over the graves of persons were usually of four kinds: 1. στήλαι, pillars or upright stone tablets; 2. κίονες, columns; 3. ναύδαι or ναοί, small buildings in the form of temples; and 4. τράπεζαι, flat square stones, called by Cicero (l. c.) mensae. The term στήλαι is sometimes applied to all kinds of funeral monuments, but properly designates upright stone tablets, which were usually terminated with an oval heading, called ἐπίθημα. These ἐπίθηματα were frequently ornamented with a kind of arabesque work, as in the two following specimens taken from Stuckenberg (pl. 3). The shape of the ἐπίθημα, however, sometimes differed; among the Sicilians it was in the shape of the αἰετός or fastigium [Fastigium], which is placed over the extremity of a temple. The κίονες, or columns, were of various forms.
The three in the following woodcut are taken from Stackelberg (pl. 44, 46) and Millin (Pein. de Vases Ant. vol. ii. pl. 51.)

The following example of an ἱπποφόν, which is also taken from Stackelberg (pl. 1) will give a general idea of monuments of this kind. Another ἱπποφόν is given in the course of this article (p. 558, a.).

The inscriptions upon these funeral monuments usually contain the name of the deceased person, and that of the demos to which he belonged, as well as frequently some account of his life. A work on such monuments, entitled Ἱερίπαρσοι, was written by Diodorus Periegetes. (Plut. Them. 176.)

Orations in praise of the dead were sometimes pronounced; but Solon ordained that such orations should be confined to persons who were honoured with a public funeral. (Cic. de Leg. ii. 26.) In the heroic ages games were celebrated at the funeral of a great man, as in the case of Patroclus (Il. xxiii.); but this practice does not seem to have been usual in the historical times.

All persons who had been engaged in funerals were considered polluted, and could not enter the temples of the gods till they had been purified. Persons who were reported to have died in foreign countries, and whose funeral rites had been performed in their own cities, were called ὑπερφοτομοι and δευτερφοτομοι if they were alive. Such persons were considered impure, and could only be delivered from their impurity by being dressed in swaddling clothes, and treated like new-born infants. (Hesych. s. v.; Plut. Quaest. Rom. 5.)

On the second day after the funeral a sacrifice to the dead was offered, called ἱπποφόν. Pollux (vi. 146) enumerates, in order, all the sacrifices and ceremonies which followed the funeral,—ὑπερφόν, ἔνατα, τριακάτ, ἔναγισμα, γοαί. Aristophanes (Lysistr. 611, with Schol.) alludes to the ἱπποφόν. The principal sacrifice, however, to the dead was on the ninth day, called ἔνατα or ἔνατα. (Aeschin. c. Ctesiph. p. 617; Isaeus, de Ciron. hered. p. 224.) The mourning for the dead appears to have lasted till the thirtieth day after the funeral (Lys. de caed. Erat. p. 16), on which day sacrifices were again offered. (Harpocrat. s. v. ὑπανώσ.) At Sparta the time of mourning was limited to eleven days. (Plut. Lyc. 27.) During the time of mourning it was considered indecorous for the relatives of the deceased to appear in public (Aeschin. c. Ctesiph. pp. 468, 469); they were accustomed to wear a black dress (Eurip. Helen. 1087, Iphig. Aul. 1438; Isaeus, de Nicostr. her. p. 71; Plut. Pericl. 38), and in ancient times cut off their hair as a sign of grief. (Πλάχαμος πεντατύριος, Aeschyl. Chorip. 7.)

The tombs were preserved by the family to which they belonged with the greatest care, and were regarded as among the strongest ties which attached a man to his native land. (Aeschyl. Pers. 405; Lycurg. c. Leoc. p. 141.) In the Dromos of the Athenian archons it was always a subject of inquiry whether they had kept in proper repair the tombs of their ancestors. (Xen. Mem. ii. 2, § 13.) On certain days the tombs were crowned with flowers, and offerings were made to the dead, consisting of garlands of flowers and various other things; for an account of which see Aeschyl. Pers.
609, &c., Choip. 86, &c. The act of offering these presents was called 

_ενυρίσκω_, and the offerings themselves _ενυρίζω_, or more commonly _χοϊζω_. Such offerings at the tombs are represented upon many _χρυσέων_, or painted vases; of which an example is given in the following woodcut. (Millin, _Point de Vases_, vol. ii. pl. 27.) The tomb is built in the form of a temple (ἵππος), and upon it is a representation of the deceased. (See also Stackelberg, pl. 44—46, and Millin, vol. ii. pl. 32, 38, for further examples.)

The _νετίσω_ mentioned by Herodotus (iv. 26) appear to have consisted in offerings of the same kind, which were presented on the anniversary of the birth-day of the deceased. The _νετίσωρα_ were probably offerings on the anniversary of the day of the death; though, according to some writers, the _νετίσωρα_ were the same as the _νετίσω_ (Hesych., s. a. _Γενετίσω_: Grammat. Bekk. p. 231.) Meals were also presented to the dead and burnt. (Lucian, _Contempl._ 22, vol. i. p. 519, ed. Reitz; _de Merc. Cond._ 28, p. 687; Artemiod. _Oneirocr._ iv. 81.)

Certain criminals, who were put to death by the state, were also deprived of the rights of burial, which was considered as an additional punishment. There were places, both at Athens and Sparta, where the dead bodies of such criminals were cast. (Plut. _Them._ 22; _Thuc._ i. 134.) A person who had committed suicide was not deprived of burial, but the hand with which he had killed himself was cut off and buried by itself. (Aeschin. _c. Ctes._ pp. 636, 637.) The bodies of those persons who had been struck by lightning were reburied in the form of a temple (ἵππος), and upon it is a representation of the deceased. (See also Stackelberg, pl. 44—46, and Millin, vol. ii. pl. 32, 38, for further examples.)

The Libitinarii appear to have been so called because they dwelt near the temple of Venus Libitina, where all things requisite for funerals were sold. (Seneck, _de Benef._ vi. 38; Plut. _Quaest. Rom._ 29; Liv. xli. 21; Plut. _Necr._ 12.) Hence we find the expressions _εἰσαρε Libitinam_ and _ευδοκε Libitinam_ used in the sense of escaping death. (Hor. _Carm._ iii. 30. 6; _Juv._ xii. 122.) At this temple an account (_ratio, ephemeris)_ was kept of those who died, and a small sum was paid for the registration of their names. (Suet._ _Ner._ 39; Dionys. _Ant. Rom._ iv. 15.)

A small coin was then placed in the mouth or the corpse, in order to pay the ferryman in Hades (Juv. iii. 207), and the body was laid out on a couch in the vestibule of the house, and carried towards the door, and dressed in the best robe which the deceased had worn when alive. Ordinary citizens were dressed in a white toga, and magistrates in their official robes. (Juv. _iii._ 172; Liv. _xxxiv._ 7; _Suet. Ner._ 50.) If the deceased had received a crown while alive as a reward for his bravery, it was now placed on his head (Cic. _de Leg._ ii. 24); and the couch on which he was laid was sometimes covered with leaves and flowers. A branch of cypress was also usually placed at the door of the house, if he was a person of importance. (Lucan. _iii._ 442; _Hor. Carm._ ii. 14. 25.)

Funerals were usually called _funera justa_ or _exsequitae_; the latter term was generally applied to the funeral procession (_pompa funeraria_). There were two kinds of funerals, public and private; of which the former was called _funus publicum_ (Tactit. _Ann._ vi. 11) or _indicivum_, because the people were invited to it by a herald. (Festus, s. v.; _Cic. de Leg._ ii. 24); the latter _funus tacitum_ (Ovid, _Prist._ i. 3. 29), or _funus privatorum_, was usually attended by the nearest relations only. A person appears to have usually left a certain sum of money in his will to pay the expenses of his funeral; but if he did not do so, nor appoint any one to bury him, this duty devolved upon the persons to whom the property was left, and if he died without a will, upon his relations according to their order of succession to the property. (Dig. _tit._ 11. 7. 12.) The expenses of the funeral were in such cases decided by an arbiter according to the property and rank of the deceased (Dig. i. c.); whence _arbitrio_ is used to signify the funeral expenses. (Cic._ _pro Dom._ 37, _post Red._ in _Sen._ i. 7._)

The following description of the mode in which a funeral was conducted applies strictly only to the funerals of the great; the same pomp and ceremony could not of course be observed in the case of persons in ordinary circumstances. All funerals in ancient times were performed at night (_Serv._ _ad Virg._ _Aen._ xi. 143; _Isidor._ xi. 2._xx._ 10), but afterwards the poor only were buried at night, because they could not afford to have any funeral procession. (_Prisc._ _v._; _Suet._ _Dom._ 17; Dionys. iv. 40.) The corpse was usually carried out of the house (_afferandatur_) on the eighth day after death. (_Serv._ _ad Virg._ _Aen._ v. 64.)

The order of the funeral procession was regulated by a person called _Designator_ or _Dominus Funeris_, who was attended by lictors dressed in black. (_Donat ad Ter._ _Aed._ 1. 2. 7; _Cic. de Leg._ ii. 24; _Hor._ _Ep._ i. 1. 6.) It was headed by musicians of various kinds (_cornicines, silicines_), who played mournful strains (_Ibid._ ii. 23; _Gell._ xx. 2), and next came mourning women, called _Praefectorae_ (_Festus_, s. v.), who were hired to lament and sing
The funeral song (maenia or lessus) in praise of the deceased. These were sometimes followed by players and buffoons (scurrus, histriones), of whom one, called Archilimnus, represented the character of the deceased, and imitated his words and actions. (Suet. Vesp. 19.) Then came the slaves whom the deceased had liberated, wearing the cap of liberty (pileati); the number of whom was occasionally very great, since a master sometimes liberated all his slaves, in his will, in order to add to the pomp of his funeral. (Dionys. iv. 24; compare Liv. xxxvii. 55.) Before the corpse persons walked wearing waxen masks [Imago], representing the ancestors of the deceased, and clothed in the official dresses of those whom they represented (Polyb. vi. 53; Plin. H. N. xxxv. 2); and there were also carried before the corpse the crowns or military rewards which the deceased had gained. (Cic. de Leg. ii. 24.)

The corpse was carried on a couch (lectica), to which the name of Funerum (Varro, de Ling. Lat. v. 166) or Capulas (Festus, s.v.) was usually given; but the bodies of poor citizens and of slaves were carried in a common kind of bier or coffin, called Standapia. (Mart. ii. 81, viii. 75. 14; Juv. viii. 175; vitis area, Hor. Sat. i. 8. 9.) The Standapia was carried by bearers, called Vespute or Vesplinones (Suet. Dom. 17; Mart. i. 31. 48), because, according to Festus (s.v.), they carried out the corpses in the evening (vespertino tempore). The couches on which the corpses of the rich were carried were sometimes made of ivory, and covered with gold and purple. (Suet. Aug. 100; Tacit. Ann. i. 8.)

The relations of the deceased walked behind the corpse in mourning; his sons with their heads veiled, and his daughters with their heads bare and their hair dishevelled, contrary to the ordinary practice of both. (Plut. Quast. Rom. 14.) They often uttered loud lamentations, and the women beat their breasts and tore their cheeks, though this was forbidden by the Twelve Tables (Mutila, quae ne raduata, Cic. de Leg. ii. 23.) If the deceased was of illustrious rank, the funeral procession went through the forum (Dionys. iv. 40), and stopped before the rostra, where a funeral oration (laudatio) in praise of the deceased was delivered. (Dionys. v. 17; Cic. pro Mil. 13, de Orat. ii. 84; Suet. Jul. 84, Aug. 100.) This practice was of great antiquity among the Romans, and is said by some writers to have been first introduced by Publicola, who pronounced a funeral oration in honour of his colleague Brutus. (Plut. Publ. 9; Dionys. v. 17.)

Women also were honoured by funeral orations. (Cic. de Orat. ii. 11; Suet. Jul. 26, Cal. 10.) From the forum the corpse was carried to the place of burning or burial, which, according to a law of the Twelve Tables, was obliged to be outside the city. (Cic. de Leg. ii. 23.)

The Romans in the most ancient times buried their dead (Plin. H. N. vii. 55), though they also early adopted, to some extent, the custom of burning, which is mentioned in the Twelve Tables. (Cic. l.c.) Burning, however, does not appear to have become general till the later times of the republic; Marius was buried, and Sulla was the first of the Macedonian gens whose body was burned. (Cic. ib. ii. 22.) Under the empire burning was almost universally practised, but was gradually discontinued as Christianity spread (Minuc. Felix, p. 327, ed. Ouzel. 1672), so that it had fallen into disuse in the fourth century. (Macrob. vii. 7.) Persons struck by lightning were not burnt, but buried on the spot, which was called Bidental, and was considered sacred. [BIDENTAL.] Children also, who had not cut their teeth, were not burnt, but buried in a place called Sagra. (Plin. H. N. vii. 18; Juv. xv. 140; Fulgent. de præt. Serv. 7.) Those who were buried were placed in a coffin (area or loculus), which was frequently made of stone (Valer. Max. i. 1. § 12; Aurel. Vict. de Vir. Ill. 42), and sometimes of the Assian stone, which came from Assos in Troas, and which consumed all the body, with the exception of the teeth, in 40 days (Plin. H. N. ii. 98, xxvi. 27), whence it was called Sarcoaphagus. This name was in course of time applied to any kind of coffin or tomb. (Juv. x. 172; Dig. 34. tit. i. s. 18; § 5; Orelli, Inscr. No. 194, 4432, 4854.)

The corpse was carried to the place of the pile of wood (pyra or rogus). Servius (ad Virg. Aen. xii. 185) thus defines the difference between pyra and rogus, "Pyra est lignorum congeries; rogus, cum jam ardere coeperit, dicitur." This pile was built in the form of an altar, with four equal sides, whence we find it called ara segulera (Virg. Aen. vi. 177) and funera ara. (Ovid, Trist. iii. 13. 21.) The sides of the pile were, according to the Twelve Tables, to be left rough and unpolished (Cic. de Leg. ii. 29); but were frequently covered with dark leaves. (Virg. Aen. vi. 215.) Cypress trees were sometimes placed in the pyre (Ovid, i. 8. 26; Sil. Ital. x. 535.) On the top of the pile the corpse was placed, with the couch on which it had been carried (Tibull. i. 1. 61), and the nearest relation then set fire to the pile with his face turned away. (FAX.) When the flames began to rise, various perfumes were thrown into the fire (called by Cicero (l.c.) sumptuosa respersio); though this practice was forbidden by the Twelve Tables; cups of oil, ornaments, clothes, dishes of food, and other things, which were supposed to be agreeable to the deceased, were also thrown upon the flames. (Virg. Aen. vi. 225; Stat. Theb. vi. 126; Lucan. ix. 175.)

The place where a person was burnt was called Bustium, if he was afterwards buried on the same spot, and Ustrina or Ustirina if he was buried at a different place. (Festus, s.v. bastum.) Persons of property frequently set apart a space, surrounded by a wall, near their sepulchres, for the purpose of burning the dead; but those who could not afford the space appear to have sometimes placed the funeral pyres against the monuments of others, which was frequently forbidden in inscriptions on monuments. (Huic monumento ustrinum applicari non licet, Gruter, 755. 4. 656. 3; Orelli, 4384, 4385.) If the deceased was an emperor, or an illustrious general, the soldiers marched (decurrebant) three times round the pile (Virg. Aen. xi. 188; Tacit. Ann. ii. 7), which custom was observed annually at a monument built by the soldiers in honour of Drusus. (Suet. Claud. 1.) Sometimes animals were slaughtered at the pile, and in ancient times captives and slaves, since the Manes were supposed to be fond of blood; but afterwards gladiators,
called Butstauris, were hired to fight round the burning pile. (Serv. ad Virg. Aen. x. 519; comp. Hor. Sat. ii. 3. 85.)

When the pile was burnt down, the embers were soaked with wine, and the bones and ashes of the deceased were gathered by the nearest relatives (Virg. Aen. vi. 226—228; Tibull. i. 3. 6, iii. 2. 10; Suet. Aug. 190), who sprinkled them with perfumes, and placed them in a vessel called urna (Ovid, Am. iii. 9. 39; foralis urna, Tacit. Ann. iii. 1.), which was made of various materials, according to the circumstances of individuals. Most of the funeral urns in the British Museum are made of marble, alabaster, or baked clay. They are of various shapes, but most commonly square or round; and upon them there is usually an inscription or epitaph (titulus or epithapium), beginning with the letters D. M. S. or only D. M., that is, Dis Manibus Sacrum, followed by the name of the deceased, with the length of his life, &c., and also by the name of the person who had the urn made. The following examples, taken from urns in the British Museum, will give a general knowledge of such inscriptions. The first is to Serullia Zosimenes, who lived 26 years, and is dedicated by her son Prosdecius;—

D. M.
Serviliae Zosimeni
Qvae visit ann. xxvi
Bene meren. fecit
Prosdecius Filius.

The next is an inscription to Licinius Successus, who lived 13 years one month and 19 days, by his most unhappy parents, Comicus and Auriola:—

Dis. Man.
Comics. et
Ayriola. Parentes
Infeliciissimi
Licinio Successo. 
V. A. xii. m. l. b. xin.

The following woodcut is a representation of a sepulchral urn in the British Museum. It is of an upright rectangular form, richly ornamented with foliage, and supported at the sides by pilasters. It is erected to the memory of Cossutia Prima. Its height is twenty-one inches, and its width, at the base, fourteen inches six-eighths. Below the inscription an infant genius is represented driving a car drawn by four horses.

After the bones and ashes of the deceased had been placed in the urn, the persons present were thrice sprinkled by a priest with pure water from a branch of olive or laurel for the purpose of purification (Virg. Aen. vi. 229; Serv. ad loc.) after which they were dismissed by the praefica, or some other person, by the solemn word Valet, that is, iro licet. (Serv. l. c.) At their departure they were accustomed to bid farewell to the deceased by pronouncing the word Vale. (Serv. l. c.)

The urns were placed in sepulchres, which, as already stated, were outside the city, though in a few cases we read of the dead being buried within the city. Thus Valerius, Publicola, Tubertus, and Fabricius were buried in the city; which right their descendants also possessed, but did not use. (Cic. de Leg. ii. 23.) The vestal virgins and the emperors were buried in the city, according to Servius (ad Virg. Aen. xi. 205), because they were not bound by the laws. By a rescript of Hadrian, those who buried a person in the city were liable to a penalty of 40 aurei, which was to be paid to the fiscus; and the spot where the burial had taken place was confiscated. (Dig. 47. tit. 12. s. 3 § 5.) The practice was also forbidden by Antoninus Pius (Capitol. Anton. Pius, 12), and Theodosius II. (Cod. Theod. 9. tit. 17. s. 6.)

The verb sepelire, like the Greek σαρκοφαγεν, was applied to every mode of disposing of the dead (Plin. H. N. vii. 55); and sepulcra signified any kind of tomb in which the body or bones of a man were placed. (Sepulcrum est, ubi corpus ossae hominis condita sunt, Dig. 11. tit. 7. s. 2 § 5; compare 47. tit. 12. s. 3 § 2.) The term humare was originally used for burial in the earth (Plin. l. c.), but was afterwards applied like sepelire to any mode of disposing of the dead; since it appears to have been the custom, after the body was burnt, to throw some earth upon the bones. (Cic. de Leg. ii. 23.)

The places for burial were either public or private. The public places of burial were of two kinds; one for illustrious citizens, who were buried at the public expense, and the other for poor citizens, who could not afford to purchase ground for the purpose. The former was in the Campus Martius, which was ornamented with the tombs of the illustrious dead, and in the Campus Esquilineus (Cic. Phil. ix. 7); the latter was also in the Campus Esquilineus, and consisted of small pits or caverns, called patentia or patulagine (Varr. de Ling. Lat. v. 25. ed. Müller; Festus, s. e.; Hor. Sat. i. 8. 10); but as this place rendered the neighbourhood unhealthy, it was given to Macenius, who converted it into gardens, and built a magnificent house upon it. Private places for burial were usually by the sides of the roads leading to Rome; and on some of these roads, such as the Via Appia, the tombs formed an almost uninterrupted street for many miles from the gates of the city. They were frequently built by individuals during their life-time (Senece. de Brev. Vit. 29); thus Augustus, in his sixth consulship, built the Mausolium for his sepulchre between the Via
Flaminia and the Tiber, and planted round it woods and walks for public use. (Suet. Aug. 100.) The heirs were often ordered by the will of the deceased to build a tomb for him (Hor. Sat. ii. 3. 84; Plin. Ep. vi. 10); and they sometimes did it at their own expense (de suo), which is not unremarkably recorded in the inscription on funeral monuments, as in the following example taken from an urn in the British Museum:—

**DIS MANIBVS**
**L. LEPII EPAPHRAE**
**PATRIS OPTIMI**
**L. LEPIIDIVS**
**MAXIMVS F.**
**DE SVO.**

Sepulchres were originally called _busta_ (Festus, s. v. _Sepulerum_), but this word was afterwards employed in the manner mentioned above (p. 559, b.). Sepulchres were also frequently called _Monumenta_, _Cic. ad Fam. iv. 12. § 3_; _Ovid, Met. xiii. 524_, but this term was also applied to a monument erected to the memory of a person in a different place from where he was buried. (Festus, s. v.; _Cic. pro Sext. 67_; comp. _Dig. 11. tit. 9._) _Conditoria_ or _conditiva_ were sepulchres under ground, in which dead bodies were placed entire, in contradistinction to those sepulchres which contained the bones and ashes only. They answered to the Greek _ποιγήν_ or _ποιγίων_.

The tombs of the rich were commonly built of marble, and the ground enclosed with an iron railing or wall, and planted round with trees. (_Cic. ad Fam. iv. 12. § 3_; _Tibull. iii. 2. 22_; _Suet. Ner. 33. 50_; _Martial, i. 89._) The extent of the burying ground was marked by _Cippi_ [Cippus]. The name of _Mausoleum_, which was originally the name of the magnificent sepulchre erected by Artemisia to the memory of Mausolus king of Caria (_Plin. H. N. xxxvi. 4. § 9, xxxv. 49_; _Gell. x. 18_), was sometimes given to any splendid tomb. (Suet. Aug. 100; _Paus. viii. 16. § 3._) The open space before a sepulchre was called _forum_ [FORUM], and neither this space nor the sepulchre itself could become the property of a person by usucaption. (Cic. _de Leg. ii. 24._)

Private tombs were either built by an individual for himself and the members of his family (_sepulcrum familiaria_), or for himself and his heirs (_sepulcrum hereditaria_), _Dig. 11. tit. 7. s. 5._ A tomb, which was fitted up with niches to receive the funeral urns, was called _columbarium_, on account of the resemblance of these niches to the holes of a pigeon-house. In these tombs the ashes of the freedmen and slaves of great families were frequently placed in vessels made of baked clay, called _ollae_, which were let into the thickness of the wall within these niches, the lids only being seen, and the inscriptions placed in front. Several of these _columbaria_ are still to be seen at Rome. One of the most perfect of them, which was discovered in the year 1822, at the villa Rufini, about two miles beyond the Porta Pia, is represented in the annexed woodcut.

![Woodcut of a sepulchre](image)

Tombs were of various sizes and forms, according to the wealth and taste of the owner. The following woodcut, which represents part of the street of tombs at Pompeii, is taken from _Mazois, Pompeiana, part i. pl. 18._

![Woodcut of tombs at Pompeii](image)

All these tombs were raised on a platform of masonry above the level of the footway. The first building on the right hand is a funeral triclinium, which presents to the street a plain front about twenty feet in length. The next is the family tomb of Naevoleia Tyche; it consists of a square building, containing a small chamber, and from the level of the outer wall steps rise, which support a marble cippus richly ornamented. The burial-ground of Nestacidius follows next, which is surrounded by a low wall; next to which comes a monument erected to the memory of C. Calventius Quietus. The building is solid, and was not therefore a place of burial, but only an honorary tomb. The wall in front is scarcely four feet high, from which three steps lead up to a cippus. The back rises into a pediment; and the extreme height of the whole from the footway is about seventeen feet. An unoccupied space intervenes between this tomb and the next, which bears no inscription. The last building on the left is the tomb of Scaurus, which is ornamented with bas-reliefs representing gladiatorial combats and the hunting of wild beasts.

The tombs of the Romans were ornamented in various ways, but they seldom represented death in a direct manner. (Müller, _Archäol. der Kunst_, § 431; Lessing, _Wie die Alten den Tod gebildet haben_?) A horse's head was one of the most common representations of death, as it signified departure; but we rarely meet with skeletons upon tombs. The following woodcut, however, which is taken from a bas-relief upon one of the tombs of Pompeii, represents the skeleton of a child lying on a heap of stones. The dress of the female, who is stooping over it, is remarkable, and is still preserved, according to _Mazois_, in the country around Sora. (Mazois, _Pomp. i. pl. 20._)
A sepulchre, or any place in which a person was buried, was *religiosus*; all things which were left or belonged to the *Dii Manes* were *religiosae*; those consecrated to the *Dii Superi* were called *Sacrae*. (Gaius, ii. 46.) Even the place in which a slave was buried was considered religious. (Dig. 11. tit. 7, s. 2.) Whoever violated a sepulchre was subject to an action termed *sepulcri violati actio*. (Dig. 47, tit. 12; compare Cic. Tusc. i. 12, de Leg. ii. 22.) Those who removed the bodies or bones from the sepulchre were punished by death or deportation in insulam, according to their rank; if the sepulchre was violated in any other way, they were punished by deportation, or condemnation to the mines. (Dig. 47, tit. 12, s. 11.) The title in the Digest (11. tit. 7), "De Religiosis et Sumptibus Funerum," &c., also contains much curious information on the subject, and is well worth perusal.

After the bones had been placed in the urn at the funeral, the friends returned home. They then underwent a further purification called *succitio*, which consisted in being sprinkled with water and stepping over a fire. (Festus, s. v. *Aqua et igni.*) The house itself was also swept with a certain kind of broom; which sweeping or purification was called *excrevisae*, and the person who did it *excrevisator*. (Festus, s. v.) The *De decres Fœriæ* were also days set apart for the purification of the family. (Festus, s. v.; Cic. de Leg. ii. 22.) The mourning and solemnities connected with the dead lasted for nine days after the funeral, at the end of which time a sacrifice was performed, called *Noven dialia*. (Porphyr. ad Horat. Epod. xvii. 48.)

A feast was given in honour of the dead, but it is uncertain on what day; it sometimes appears to have been given at the time of the funeral, sometimes on the Novendial, and sometimes later. The name of *Silurium* was given to this feast (Festus, s. v.), of which the etymology is unknown. Among the tombs at Pompeii there is a funeral triclinium for the celebration of these feasts, which is represented in the annexed woodcut. (Mazonis, *Pomp. i.* pl. xx.) It is open to the sky, and the walls are ornamented by paintings of animals in the centre of compartments, which have borders of flowers. The triclinium is made of stone, with a pedestal in the centre to receive the table.

After the funeral of great men, there was, in addition to the feast for the friends of the deceased, a distribution of raw meat to the people, called *Visceratio* (Liv. viii. 22), and sometimes a public banquet. (Suet. Jul. 26.) Combats of gladiators and other games were also frequently exhibited in honour of the deceased. Thus at the funeral of P. Licinius Crassus, who had been Pontifex Maximus, raw meat was distributed to the people, a hundred and twenty gladiators fought, and funeral games were celebrated for three days; at the end of which a public banquet was given in the forum. (Liv. xxxix. 46.) Public feasts and funeral games were sometimes given on the anniversary of funerals. Faustus, the son of Sulla, exhibited in honour of his father a show of gladiators several years after his death, and gave a feast to the people, according to his father's testament. (Dion Cass. xxxvii. 51; Cic. pro Sull. 19.) At all banquets in honour of the dead, the guests were dressed in white. (Cic. c. Vatin. 13.)

The Romans, like the Greeks, were accustomed to visit the tombs of their relatives at certain periods, and to offer to them sacrifices and various gifts, which were called *Inferia* and *Parentalia*. The Romans appear to have regarded the *Manes* or departed souls of their ancestors as gods; whence arose the practice of presenting to them oblations, which consisted of victims, wine, milk, garlands of flowers, and other things. (Virg. *Aen.* v. 77, ix. 215, x. 519; Tacit. *Hist.* ii. 95; Stat. *Cat.* 15, *Nor.* 57; Cic. *Phil.* i. 6.) The tombs were sometimes illuminated on these occasions with lamps. (Dig. 40. tit. 4. s. 44.) In the latter end of the month of February there was a festival, called *Feralia*, in which the Romans were accustomed to carry food to the sepulchres for the use of the dead. (Festus, s. v.; Varro, *de Ling. Lat.* vi. 13; Ovid, *Fest.* ii. 565—570; *Cic. ad Att.* vili. 14.)

The Romans, like ourselves, were accustomed to wear mourning for their deceased friends, which appears to have been black or dark-blue (*atra*) under the republic for both sexes. (Serv. ad Virg. *Aen.* xi. 287.) Under the empire the men continued to wear black in mourning (*Juv.* x. 245), but the women wore white. (Herodian. iv. 2.) They laid aside all kinds of ornaments (Herodian. l. c.; Terent. *Heaut.* ii. 3, 47), and did not cut either their hair or beard. (Suet. *Jul.* 67, *Aug.* 29, *Cal.* 24.) Men appear to have usually worn their mourning for only a few days (Dion Cass.liv. 43), but women for a year when they lost a husband or parent. (Ovid, *Fest.* iii. 134; *Senec. Epist.* 63, *Consol. ad Heiv.* 16.)

In a public mourning on account of some signal calamity, as for instance the loss of a battle or the death of an emperor, there was a total cessation from business, called *Justitium*. [*Jus titium.*] In a public mourning the senators did not wear the latus clavus and their rings (Liv. ix. 7), nor the magistrates their badges of office. (Tacit. *Ann.* iii. 4.)

**FURCA.** Which properly means a fork, was also
the name of an instrument of punishment. It was a piece of wood in the form of the letter Λ, which was placed upon the shoulders of the offender, whose hands were tied to it. Slaves were frequently punished in this way, and were obliged to carry about the furca wherever they went (Donat. ad Ter. Andr. iii. 5. 12; Plut. Coriol. 24; Plaut. Cas. ii. 6. 87); whence the appellation of furcifer was applied to a man as a term of reproach. (Cic. in Val. 6.) The furca was used in the ancient mode of capital punishment among the Romans; the criminal was tied to it, and then scourged to death. (Liv. i. 26; Suet. Ner. 49.) The patibulum was also an instrument of punishment, resembling the furca; it appears to have been in the form of the letter Π. (Plaut. Milt. ii. 4. 7, Mostell. i. 1. 53.) Both the furca and patibulum were also employed as crosses, to which criminals were nailed (in furca suspendere, Dig. 48. tit. 13. s. 6; tit. 19. s. 28. § 15; tit. 19. s. 30). See Lipsius, de Cruce.

FURCIFER. [Furca.]
FURIO/SUS. [Curator.]
FURNUS. [Fornax.]
FUBOR. [Curator.]
FURTI ACTIO. [Furtum.]

FURTUM. "thief," is one of the four kinds of delicts which were the foundation of obligations; it is also called "crimen." Moveable things only could be the objects of furtum; for the fraudulent handling (contractatio fraudulosa) of a thing was furtum, and contractatio is defined to be "loco movere." But a man might commit theft without carrying off another person's property. Thus it was furtum to use a thing which was deposited (depositum). It was also furtum to use a thing which had been lent for use, in a way different from that which the lender had agreed to; but with this qualification, that the borrower must believe that he was doing it against the owner's consent, and that the owner would not consent to such use if he was aware of it; for dolus malus was an essential ingredient in furtum. Another requisite of furtum (Dig. 47. tit. 2. s. 1) is the "lucri faciendi gratia," the intention of appropriating the property. This was otherwise expressed by saying that furtum consisted in the intention (furtum ex affectu consistit; or, sine affectu furandi non committitur, Gaius, ii. 3.). It was not necessary, in order to constitute furtum, that the thief should know whose property the thing was. A person who was in the power of another might be the object of furtum. (Inst. 4. tit. 1. § 9.) A debtor might commit furtum by taking a thing which he had given as a pledge (pignori) to a creditor; or by taking his property when in the possession of a bona fide possessor. Thus there might be furtum either of a moveable thing itself, or of the use of a thing, or of the possession, as it is expressed. (Inst. 4. tit. 1. § 1.)

The definition of furtum in the Institutes is not contractatio fraudulosa, without the addition of the word "alienae." Accordingly the definition comprises both the case of a man stealing the property of another, and also the case of a man stealing his own property, as when a man fraudulently takes a moveable thing, which is his property, from a person who has the legal possession of it. This latter case is the "furtum possessionis." The definition in the Institutes is not intended as a classification of theft into three distinct kinds, but only to show by way of example the extent of the meaning of the term Furtum. This is well explained by Vangerow, Pandekten, &c. iii. p. 550. See also Rein, Das Criminalrecht der Römer, p. 304.

A person might commit furtum by aiding in a furtum, as if a man should jostle you in order to give another the opportunity of taking your money; or drive away your sheep or cattle in order that another might get possession of them: but if it were done merely in a sportive way, and not with a view of aiding in a theft, it was not furtum, though there might be in such case an actio utilis under the Lex Aquilia, which gave such an action even in the case of culpa. [DAMNUM.]

Furtum was either Manifestum or Nee Manifestum. It was clearly manifestum when the person was caught in the act; but in various other cases there was a difference of opinion as to whether the furtum was manifestum or not. Some were of opinion that it was furtum manifestum so long as the thief was engaged in carrying the thing to the place to which he designed to carry it; and others maintained that it was furtum manifestum if the thief was ever found with the stolen thing in his possession; but this opinion did not prevail. (Gaius, iii. 154, Inst. 4. tit. 1. § 5.) That which was not manifestum was nec manifestum. Furtum conceptum and oblatum were not species of theft, but species of action. It was called conceptum furtum when a stolen thing was sought and found, in the presence of witnesses, in the possession of a person, who, though he might not be the thief, was liable to an action called Furti Concepti. If a man gave you a stolen thing, in order that it might be found (conseciperetur) in your possession, rather than in his, this was called Furtum Oblatam, and you had an action Furti Oblati against him, even if he was not the thief. There was also the action Prohibiti Furti against him who prevented a person from searching for a stolen thing (furtum); for the word furtum signifies both the act of theft and the thing stolen.

The punishment for furtum manifestum by the law of the Twelve Tables was capitation, that is, it affected the person's caput; a freeman who had committed theft was flogged and consigned (addictus) to the injured person; but whether the thief became a slave in consequence of this addic- tus, or an adjudicatus, was a matter in dispute among the ancient Romans. The Edict subsequently changed the penalty into an actio quadrupli, both in the case of a slave and a freeman. The penalty of the Twelve Tables, in the case of a furtum nec manifestum, was duplum, and this was retained in the Edict: in the case of the conceptum and oblatum it was tripulum, and this also was retained in the Edict. In the case of Prohibiti, the penalty was quadruplum, according to the provisions of the Edict; for the law of the Twelve Tables had affixed no penalty in this case, but merely enacted that if a man would search for stolen property, he must be naked all but a cloth round his middle, and must hold a dish in his hand. If he found any thing, it was furtum manifestum. The absurdity of the law, says Gaius, is apparent; for if a man would not let a person search in his ordinary dress, much less would he allow him to search unclothed, when the penalty would be so much more severe if any thing was found. (Compare Grimm, Von der Poesie in Recht, Zeitschrift, vol. ii. p. 91.)

The actio furti was given to all persons who had an interest in the preservation of the thing stolen (cujus interest rursus saltem esse), and the owner of
A thing, therefore, had not necessarily this action. A creditor might have this action even against the owner of a thing pledged, if the owner was the thief. A person to whom a thing was delivered in order to work upon it, as in the case of clothes given to a tailor to mend, could bring this action against the thief, and the owner could not, for the owner had an action (locust) against the tailor. But if the tailor was not a solvent person, the owner had his action against the thief, for in such case the owner had an interest in the preservation of the thing. The rule was the same in the case of commodatum (Commodatum). But in a case of depositum, the depositee was under no obligation for the safe custody of the thing (custodiam praestare), and he was under no liability except in the case of dolus; consequently, if the deposited thing was stolen, the owner alone had the actio furti. A bona fide purchaser might have the actio furti, even if the thing had not been delivered to him, and he were consequently not dominus.

An impiace might commit theft (diligatur criminis furti), if he was bordering on the age of puberty, and consequently had insufficient capacity to understand what he was doing. If a person who was in the power of another committed furtum, the actio furti was against the latter.

The right of action died with the offending person. If a peregrinus committed furtum, he was made liable to an action by the fiction of his being a Roman citizen (Gaius, iv. 37); and by the same fiction he had a right of action, if his property was stolen.

He who took the property of another by force was guilty of theft; but in the case of this delict, the praetor gave a special action Vi bonorum raptorum. The origin of the action Vi bonorum raptorum is referred by Cicero to the time of the civil wars, when men had become accustomed to acts of violence and to the use of arms against one another. Accordingly, the Edict was originally directed against those who with bodies of armed men (hominibus armatis coactisque) did injury to the property of another or carried it off (quid aut rapuerint aut damni deberint). With the establishment of order under the empire the prohibition against the use of arms was less needed, and the subject requires to be treated historically in order to be fully understood.

The work of Rein (Das Criminalrechts der Römer) contains a complete view of the matter.

(Gaius, iii. 183—209, iv. 1; Gellius, xi. 18; Dig. 47. tit. 2; Inst. 4. tit. 1; Dirkens, Ueber-sicht, &c. pp. 564—594; Heinec. Syntag. ed. Haubold; Rein, Das Röm. Privatrecht, p. 343; Rein, Das Criminalrecht der Römer, p. 293.) [G. L.]

FUSTUARIUM (φυσταριος), a trident; more commonly called tridens, meaning tridens stimulus, because it was originally a three-pronged goad, used to incite horses to greater swiftness. Neptune was supposed to be armed with it when he drove his chariot, and it thus became his usual attribute, perhaps with an allusion also to the use of the same instrument in harpooning fish. It is represented in the cut on p. 276. (Hom. i. 36; Philost. Imag. i. 138, 145, ii. 610; Cic. de Nat. Deor. i. 36; Philost. Imag. ii. 14.)

The trident was also attributed to Nereus (Virg. Aen. ii. 140) and to the Tritons. (Cic. de Nat. Deor. ii. 33; Mart. Spect. xxvi. 3.)

In the contest of gladiators the Retiarius was armed with a trident. (Juv. i. 149, viii. 203.) [Gladiator.] (3) Actio furti adversus proprium Raptorum. The object of the furti actio was to get a penalty; as to the thing stolen the owner could recover it either by a vindicatio, which was available against any possessor, whether the thief or another, or by a condictio, which was available against the thief or his heres, though he had not the possession. (Inst. 4. tit. 1. § 19.)

The strictness of the old law in the case of actions of theft was gradually modified, as already shown. By the law of the Twelve Tables, if theft (furtum) was committed in the night, the thief, if caught in the act, might be killed; and he might also be killed in the daytime, if he was caught in the act and defended himself with any kind of a weapon (telum); if he did not so defend himself, he was whipped and became addictus, if a freeman (as above stated); and if a slave, he was whipped and thrown down a precipice.

The following are peculiar kinds of actions of furti: (1) Actio de tigno juncto, against a person who employed another person's timber in his building; (2) Actio arborum furtim caesaratrum, against a person who secretly cut wood on another person's ground; (3) Actio arborium, against autem (since) and cauponae (Exercitibus), who were liable for the acts of the men in their employment.

There were two cases in which a bona fide possessor of another person's property could not obtain the ownership by usucaption; and one of them was the case of a res furtiva, which was provided for in the Twelve Tables. The Roman Law as to Furtum underwent changes, as appears from what has been said; and the subject requires to be treated historically in order to be fully understood.

The work of Rein (Das Criminalrecht der Römer) contains a complete view of the matter.

(Gaius, iii. 183—209, iv. 1; Gellius, xi. 18; Dig. 47. tit. 2; Inst. 4. tit. 1; Dirkens, Uber-
ment continued to be inflicted in the later times of the republic (Cic. Phil. iii. 6), and under the empire. (Tact. Ann. iii. 21.)

Different from the fustuarium was the animadversio fustium, which was a corporal punishment inflicted under the emperors upon free men, but only those of the lower orders (teniusiores, Dion. vii. 19. § 2). It was a less severe punishment than the flogging with flagella, which punishment was confined to slaves. (Dig. 48. tit. 19. s. 10; 47. tit. 10. s. 45.) [Flagrum.]

FUSUS (ἔργαστος), the spindle, was always, when in use, accompanied by the distaff (colus, ἀλακάττυν), as an indisputable part of the same apparatus. (Ovid, Met. iv. 220—229.) The wool, flax, or other material, having been prepared for spinning, and having sometimes been dyed (ἰδοβρέγαις ἐποτ ἔγονοι, Hom. Od. iv. 135), was rolled into a ball (τοκίων, glomus, Hor. Epist. i. 13. 14; Ovid, Met. vi. 19), which was, however, sufficiently loose to allow the fibres to be easily drawn out by the hand of the spinner. The upper part of the distaff was then inserted into this mass of flax or wool (colus comta, Plin. H. N. viii. 74), and the lower part was held in the left hand under the left arm in such a position as was most convenient for conducting the operation. The fibres were drawn out, and at the same time spirally twisted, chiefly by the use of the fore-finger and thumb of the right hand (σκεκτῶν ἄλακτην, Eurip. Orest. 1414; pollice docto, Claud. de Prob. Cons. 177); and the thread (filum, stamen, πήμα) so produced was wound upon the spindle until the quantity was as great as it would carry.

The spindle was a stick, 10 or 12 inches long, having at the top a slit or catch (dens, ἐγκυμοτρόφος) in which the thread was fixed, so that the weight of the spindle might continually carry down the thread as it was formed. Its lower extremity was inserted into a small wheel called the whorl (vorticulum), made of wood, stone, or metal (see woodcut), the use of which was to keep the spindle strong and thick in proportion, and to promote its rotation: for the woodcut is taken from a series of bas-reliefs representing the arts of Minerva upon a frieze of the Forum Palladium at Rome. It shows the operation of spinning, at the moment when the woman has drawn out a sufficient length of yarn to twist it by whirling the spindle with her right thumb and fore-finger, and previously to the act of taking it out of the slit to wind it upon the bobbin (σπώνος) already formed.

The distaff was about three times the length of the spindle, strong and thick in proportion, commonly either a stick or a reed, with an expansion near the top for holding the ball. It was sometimes of richer materials and ornamented. Theocritus has left a poem (Idyll, xxviii.) written on sending an ivory distaff to the wife of a friend. Golden spindles were sent as presents to ladies of high rank (Hom. Od. iv. 131; Herod. iv. 162); and a golden distaff is attributed by Homer and Pindar to goddesses, and other females of remarkable dignity, who are called χρυσαφάκατοι.

It was usual to have a basket to hold the distaff and spindle, with the balls of wool prepared for spinning, and the bobbins already spun. (Bruncn. Anad. ii. 12; Ovid, Met. iv. 10.) [Calathus.]

In the rural districts of Italy women were forbidden to spin when they were travelling on foot, the act being considered of evil omen. (Plin. H. N. xxviii. 5.) The distaff and spindle, with the wool and thread upon them, were carried in bridal processions; and, without the wool and thread, they were often suspended by females as offerings of religious gratitude, especially in old age, or on relinquishing the constant use of them. (Plin. H. N. viii. 74.) [Donaria.] They were most frequently dedicated to Pallas, the patroness of spinning, and of the arts connected with it. This goddess was herself rudely sculptured with a distaff and spindle in the Trojan Palladium. (Apollod. iii. 12. 3.) They were also exhibited in the representations of the three Fates, who were conceived, by their spinning, to determine the life of every man; and at the same time by singing, as females usually did whilst they sat together at their work, to predict his future lot. (Catull. l. c.) [J. Y.]

---

GABINUS CINCTUS. [Toga.]

GAESUM. [Hasta.]

GA'LEA. (καπέος, post. κάρβος, πίλης), a helmet; a casque. The helmet was originally made of skin or leather, whence is supposed to have arisen its appellation, καπέος, meaning properly a helmet of dog-skin, but applied to caps or helmets made of the hide of other animals (ταυκείν, κτιδέα, Hom. Il. x. 258, 335; aἰγείν, Od. xxiv. 230; Herod. vii. 77; compare κρανίς σκότινα, Xen. Anab. v. 4. § 13; galea lupina, Prop. iv. 11, 19), and even to those which were entirely of bronze or iron (πάγιον χαλκος, Od. xviii. 377). The leathern basis of the helmet was also very commonly strengthened and adorned by the addition of either bronze or gold, which is expressed by such epithets as χαλκομίρη, ἑγαλκας, χρωστείν. Helmets which had a metallic basis (καπέος χαλκας, Xen. Anab. i. 2. § 16) were in Latin properly called cassetas (Id. Orig. xviii. 14; Tacit. Germ. 6; Caesar, B. G. iii. 45), although the terms galea and cassis are often confounded. A casque (cassis) found at Pompeii is preserved in the collection at Goodrich Court.
GALEA.

Twocasquesverylike this werefished up from the bedof the Alpheus, near Olympia, and are in the possession of Mr. Hamilton. (Dodwell, Text. Tour, vol. ii. p. 330.) Among the materials used for the lining of helmets were felt (πόλος, Hom. II. x. 364) and sponge. (Aristot. H. A. v. 16.)

The helmet, especially that of skin or leather, was sometimes a mere cap conformed to the shape of the head, without either crest or any other ornament (ἀφαλός τε καὶ ἄλοφος, II. x. 358). In this state it was probably used in hunting (galea venatoria, C. Nep. Ditt. iii. 2.), and was called καινιτις (Hom. II. l. c.), in Latin Capa. The preceding woodcut shows an example of it as worn by Diomede in a small Greek bronze, which is also in the collection at Goodrich Court. (Skelton, C. Nep. Ditt. iii. 2.footnote.)

The additions by which the external appearance of the helmet was varied, and which served both for ornament and protection, were the following:

1. Bases or plates, proceeding either from the top (φάλος, Hom. II. iii. 362) or the sides, and varying in number from one to four (ἀκριβοῖατος, διφάλος, Ἀρ. τ. 743, xi. 41; Eustath. ad loc.; τετραφάλος, II. xii. 384). It is however very doubtful what part of the helmet the φάλος was. Buttmann thought that it was what was afterwards called the κόρος, that is, a metal ridge in which the plume was fixed; but Liddell and Scott (Lex. c. c.) maintain with more probability that the φάλος was the shade or fore-piece of the helmet; and that an ἀκριβοῖατος helmet was one that had a like projection behind as well as before, such as may be seen in the representations of many ancient helmets.

2. The helmet thus adorned was very commonly surmounted by the crest (ἐρίσα, λόφος, Hom. II. xxii. 316), which was often of horse-hair (Τυπεροῦς, ἴπποδόκαι, Hom. Ill. c. c.; λόφον θειαν, Theoc. xxii. 188; ηρώκα ἱππά, Propert. iv. 11. 19), and made so as to look imposing and terrible (Hom. ll. iii. 387; Virg. Aen. viii. 620), as well as handsome. (Ju. x. 365; οἴκωνας, Heliod. Aeth. vii.) The helmet often had two or even three crests. (Aesch. Sep. c. Theb. 384.) In the Roman army of later times the crest served not only for ornament, but also to distinguish the different centurions, each of whom wore a casque of a peculiar form and appearance. (Veget. ii. 13.)

3. The two cheek-pieces (bacculæ, Juv. x. 134; παραγωγαῖς, Eustath. in II. v. 743), which were attached to the helmet by hinges, so as to be lifted up and down. They had buttons or ties at their extremities for fastening the helmet on the head. (Val. Place, vi. 626.)

4. The beaver, or visor, a peculiar form of which is supposed to have been the αὐλώνις τριμφλεκτα, i.e. the perforated beaver. (Hom. ll. ii. 353.)

The gladiators wore helmets of this kind (Juv. viii. 203), and specimens of them, not unlike those worn in the middle ages, have been found at Pompeii. See the wood-cut to Galerates.

The five following helmets are selected from antique gems, and are engraved of the size of the originals.

[G. Y.]

GALLI.

GALERI'CULUM. [GALI'RUS.

GALER'US or GALER'UM, was originally a covering for the head worn by priests, especially by the flamen dialis (Gell. x. 15; Serv. ad Virg. Aen. ii. 683). It appears to have been a round cap made of leather, with its top ending in an apex or point. [See cut on p. 102.] The word is probably connected with galea, a helmet. In course of time the name was applied to any kind of cap fitting close to the head like a helmet. (Virg. Aen. vii. 685; Virg. Mor. 121; Suet. Ner. 26.) Galerura and its diminutive Galericulum are also used to signify a covering for the head made of hair, and hence a wig. (Juv. Sat. vi. 120, with the Schol.; Suet. Oth. 12; Mart. xiv. 50.)

GALLI, the priests of Cybele, whose worship was introduced at Rome from Phrygia, in B.C. 204. (Liv. xxxix. 10, 14, xxxvi. 36.) The Galli were, according to an ancient custom, always castrated (spadones, semimares,semiviri, neo viri necfeminae), and it would seem that impelled by religious fanaticism they performed this operation on themselves. (Juv. vii. 132, &c.; Ovid, Fast. iv. 237; Martial, iii. 81, xi. 74; Plin. H. N. xi. 49.) In their wild, enthusiastic, and boisterous rites, they resembles the Corybantes (Lucan. i. 565, &c.; compare Hilaria), and even went further, in as much, as in their fury, they mutilated their own bodies. (Propert. ii. 18. 15.) They seem to have been always chosen from a poor and despised class of people, for while no other priests were allowed to beg, the Galli (famati Idaeae matris) were allowed to do so on certain days. (Cic. de Leg. ii. 6 and 16.) The chief priest among them was called archgallus. (Servius, ad Aen. ix. 116.) The origin of the name of Galli is uncertain: according to Festus (s. v.), Ovid (Fast. iv. 263), and others, it was derived from the river Gallus in Phrygia, which flowed near the temple of Cybele, and the water of which was said to have imparted to those persons who drank of it such a state of madness, that they castrated themselves. (Compare Plin. H. N. v. 32, xi. 40, xxxi. 2; Herod. ii. 1.) The supposition of Hieronymus (Cap. Osmæ, 4) that Gallus was the name of the Gauls, which had been given to these priests by the Romans in order to show their contempt of that nation, is unfounded, as the Romans must have received the name from Asia, or from the Greeks, by whom, as Suidas (s. v.) informs us, Gallus was used as a common noun in the sense of eunuch. There exists a verb gallare, which signifies to rage (incansare, bacchari), and
GENIUS. [TRIBUS, GREEK.]

GENOS (γένος). 

GENS. This word contains the same element as the Latin genus, and gen., and as the Greek γένος, γέν-ναμα, &c., and it primarily signifies kin. But the word has numerous significations, which have either a very remote connection with this its primary notion, or perhaps none at all.

GENS sometimes signifies a whole political community, as Gens Latinorum, Gens Campanorum, &c. (Juv. Sat. viii. 239, and Heinrich’s note); though it is probable that in this application of the term, the notion of a distinction of rank or stock is implied, or at least the notion of a totality of persons distinguished from other totalities by sameness of language, community of law, and increase of their numbers among themselves only. Cicero (pro Balbo, c. 13) speaks of “Gentes universalibus in civitatibus receptae, ut Sabiniorum, Volscorum, Hercularum.” It is a consequence of such meaning of Gens, rather than an independent meaning, that the word is sometimes used to express a people simply with reference to their territorial limits.

The meaning of the word in the expression Jus Gentium is explained under Jus.

The words Gens and Gentiles have a special meaning in the system of the Roman law and in the Roman constitution. Cicero (Top. 6) has preserved a definition of Gentiles which was given by Scaevola, the pontifex, and which, with reference to the time, must be considered complete. These were Gentiles, according to Scaevola, (1) who bore the same name, (2) who were born of freemen (ingenii), (3) none of whose ancestors had been a slave, and (4) who had suffered no capitis diminution. This definition contains nothing which shows a common bond of union among gentiles, except the possession of a common name; but those who had a common name were not gentiles, if the three other conditions, contained in this definition, were not applicable to them. There is also a definition of gentiles by Festus: — “That is called Gens Aelin which is composed (conficitur) of many familiar. Gentilis is both one who is of the same stock (genus), and one who is called by the same name (simili nomine) *, as Cincius says, those are my gentiles who are called by my name.”

We cannot conclude any thing more from the conficitur of Festus than that a Gens contained several families, or that several families were comprehended under one Gens. According to the definition, persons of the same genus (kin) were gentiles, and also persons of the same name were gentiles. If Festus meant to say that all persons of the same genus and all persons of the same name were gentiles, his statement is inconsistent.

* “Gentilis dicitur et ex codem genere ortus, et is qui simili nomine appellatur.” The second et is sometimes read ut, which is manifestly not the right reading, as the context shows. Besides, if the words “ut is qui simili nomine appellatur” are to be taken as an illustration of “ex codem genere ortus,” as they must be if ut is the true reading, then the notion of a common name is viewed as of necessity being contained in the notion of common kin, whereas there may be common kin without common name, and common name without common kin. Thus neither does common name include all common kin, nor does common kin include all common name; yet each includes something that the other includes.
with the definition of the Pontifex; for persons might be of the same genus, and might have sustained a capitis diminutio by adoption or adrogation, or by emancipation; in all these cases the genus would remain, for the natural relationship was not affected by any change in the juridical condition of a person; in the cases of adoption and adrogation the name would be lost: in the case of emancipation it would be retained. If the definition of Festus means that among those of the same genus there may be gentiles; and among those of the same name, gentiles may also be included, his definition is true; but neither part of the definition is absolutely true, nor, if both parts are taken together, is the whole definition absolutely true. It seems as if the definition of gentiles was a matter of some difficulty; for while the possession of a common name was the simplest general characteristic of gentilitas, there were other conditions which were equally essential.

The name of the gens was generally characterised by the termination *eius* or *ius*, as Julia, Cornelia, Valeria. When a man died intestate and without agnati, his familia [familia] by the law of the Twelve Tables came to the gentiles; and in the case of a lunatic (furiusus) who had no guardians, the guardianship of the lunatic and his property belonged to the agnati and to the gentiles; to the latter, we may presume, in case the former did not exist.

Accordingly, one part of the jus gentilium or jus gentilitatis related to successions to the property of intestates, who had no agnati. A notable example of a dispute on this subject between the Claudii and Marcelli is mentioned in a difficult passage of Cicero (de Ora. i. 39). The Marcelli claimed the inheritance of an intestate son of one of the liberti or freedmen of their familia (stirpes); the Claudii claimed the same by the gentile rights (gens). The Marcelli were plebeians and belonged to the patrician Claudia gens. Niebuhr observes that this claim of the Claudii is inconsistent with Cicero's definition, according to which no descendant of a freedman could be a gentilis; and he concludes that Cicero (that is Senevola) must have been mistaken in this part of his definition. But it must be observed though the descendants of freedmen might have no claim as gentiles, the members of a gens might as such have claims against them; and in this sense the descendants of freedmen might be gentiles. It would seem as if the Marcelli united to defend their supposed paternal rights to the inheritance of the sons of freedmen against the claims of the gens; for the law of the Twelve Tables gave the inheritance of a freedman only, who died intestate and without heirs, to his patron, and not the inheritance of the son of a freedman. The question might be this: whether the law, in the case supposed, gave the hereditas to the gens as having a right paramount to the patronal right. It may be that the Marcelli, as being included in the Claudia gens, were supposed to have merged their patronal rights (if they really existed in the case in dispute) in the rights of the gens. Whether the name of the gens, the plebeian Marcelli would take as gentiles what they lost as patroni, may be doubted.

It is generally said or supposed that the hereditas which came to a gens was divided among the gentiles, which must mean the heads of families. This may be so; at least we must conceive that the hereditas, at one period at least, must have been a benefit to the members of the gens; Caesar is said (Sueton. Aug.) to have been deprived of his gentilitiae hereditates.

In determining that the property of intestates should ultimately belong to the gens, the law of the Twelve Tables was only providing for a case which in every civilized country is provided for by some positive law; that is, the law finds some rule as to the disposition of the property of a person who dies without having disposed of it or leaving those whom the law recognizes as immediately entitled to it in case there is no disposition. The gens had thus a relation to the gentiles, similar to that which subsists in modern states between the sovereign power and persons dying intestate and without heirs or next of kin. The mode in which such a succession was applied by the gens was probably not determined by law; and as the gens was a kind of juridical person, analogous to the community of a civitas, it seems not unlikely that originally inheritances accrued to the gens as such, and were common property. The gens must have had some common property, such as sacella, &c. It would be no difficult transition to imagine, that what originally belonged to the gens as such, was in the course of time distributed among the members, which would easily take place when the familiae included in a gens were reduced to a small number.

There were certain sacred rites (sacra gentilitia) which belonged to a gens, to the observance of which all the members of a gens, as such, were bound, whether they were members by birth, adoption, or adrogation. A person who was freed from the observance of such sacra, and lost the privileges connected with his gentile rights, when he lost his gens, that is, when he was adrogated, adopted, or even emancipated; for adrogation, adoption, and emancipation were accompanied by a diminutio capitatis.

When the adoption was from one familia into another of the same gens, the name of the gens was still retained; and when a son was emancipated, the name of the gens was still retained; and yet in both these cases, if we adopt the definition of Scaevola, the adopted and emancipated persons lost the gentile rights, though they were also freed from the gentile burdens (sacra). In the case of adoption and adrogation, the adopted and adrogated person who passed into a familia of another gens, must have passed into the gens of such familia, and so must have acquired the rights of that gens. Such a person had sustained a capitis diminutio, and its effect was to destroy his former gentile rights, together with the rights of agnation. The gentile rights were in fact implied in the rights of agnation, if the pater-familias had a gens. Consequently he who obtained by adrogation or adoption the rights of agnation, obtained also the gentile rights of his adopted father. In the case of adrogation, the adrogated person renounced his gens at the Comitia Curiata, which solemnity might also have been of some difficulty; for while the possession of a common name was the simplest general characteristic of gentilitas, there were other conditions which were equally essential.
they were not lost. (Pro Domo, c. 13, &c.) Each gens seems to have had its peculiar place (associatio) for the celebration of the dirges, which were performed at stated times. The sacra gentilitia, as already observed, were a burden on the members of a gens as such. The sacra privata were a charge on the property of an individual; the two kinds of sacra were thus quite distinct.

According to Dionysius (Antiq. Rom. ii. 7), the curiae were respectively subdivided into Decades; and Niebuhr argues that Decades and Gentes were the same. Accordingly each of the three tribes contained ten curiae and 100 gentes; and the three tribes contained 300 gentes. Now if there is any truth in the tradition of this original distribution of the population into tribes, curiae and gentes, it follows that there was no necessary kinship among those families which belonged to a gens, any more than among those families which belonged to one curia.

We know nothing historically of the organisation of civil society, but we know that many new political bodies have been organised out of the materials of existing political bodies. It is useless to conjecture what was the original organisation of the Roman state. We must take the tradition as it has come down to us. The tradition is not, that families related by blood were formed into gentes, that these gentes were formed into curiae, that these curiae were formed into tribes. Such a tradition would contain its own refutation, for it involves the notion of the construction of a body politic by the aggregation of families into unities, and by further combinations of these new unities. The tradition is of three fundamental parts (in whatever manner formed), and of the divisions of them into smaller parts. The smallest political division is gens. No further division is made, and thus of necessity, when we come to consider the component parts of a gens, we come to consider the individuals comprised in it or the heads of families. According to the fundamental principles of Roman law, the individual families, like the families which belonged to a curia and a tribe, have a gens were synonymous; and thus we find the expressions gens and patricii constantly united. Yet it appears, as in the case already cited, that some gentes contained plebeian families, which it is conjectured had their origin in marriages between patricians and plebeians before there was connubium between them. When the lex was carried which established connubium between the plebs and the patres, it was alleged that this measure would confound the gentile rights (jura gentilium, Liv. iv. 1). Before this connubium existed, if a gentilis married a woman not a gentilis, it followed that the children could not be gentiles; yet they might retain the gentile name, and thus, in a sense, the family might be gentiles without the gentile privileges. Such marriages would in effect introduce confusion; and it does not appear how this would be increased by giving to a marriage between a gentile man, and a woman not gentilis, the legal character of connubium; the effect of the legal change was to give the children the gentilities of their father. It is sometimes said that the effect of this lex was to give the gentile rights to the plebs, which is an absurdity; for, according to the expression of Livy (iv. 4), which is conformable to a strict principle of Roman law, “patrem sequuntur liberi,” and the children of a plebeian man could only be plebeian. Before the passing of this lex, it may be inferred that if a patrician woman married out of her gens (e gente, e patribus enupsit) it was no marriage at all, and that the children of such marriage were not in the power of their father, and, it seems, a necessary consequence, not Roman citizens. The effect would be precisely the same, if the principles of Roman law, if a plebeian married a patrician woman, before there was connubium between them; for there was no connubium, there was no legal marriage, and the offspring were not citizens, which is the thing complained of by Canuleius. (Liv. iv. 4.) It does not appear then how such marriages will account for plebeian families being contained in patrician gentes, unless we suppose that when the children of a gentile man and a plebeian woman took the name of the father, and followed the condition of the mother, they were in some way or other not easy to explain, considered as citizens and plebeians. But if this be so, what would be the status of the children of a patrician woman by a plebeian man?

Niebuhr assumes that the members of the gens (gentiles) were bound to assist their indigent fellows in bearing extraordinary burdens; but this assertion is founded on the interpretation given to the words τοὺς τέσσερις προσήκουτας of Dionysius (ii. 10), which have a simpler and more obvious meaning. Whatever probability there may be in the assumption of Niebuhr, as founded on the passage above cited, and one or two other passages, it cannot be considered as a thing demonstrated.

A hundred new members were added to the Senate by the first Tarquin. These were the re-
It is probable that even in the time of Cicero the proper notion of a gens and its rights were ill understood; and still later, owing to the great changes in the constitution, and the extinction of so many ancient gentes, the traces of the jus gentilium were nearly effaced. Thus we find that the words gens and familia are used indifferently by later writers, though Livy carefully distinguishes them. The "elder Pliny speaks of the sacra Serviliae familiae; Macrobius of the sacra familiae Claudiae, Aemiliae, Juliae, Corneliae; and an ancient inscription mentions an Aeditus and a Sacerdos Sergiae familiae, though those were all well known ancient gentes, and these sacra, in the more correct language of the elder writers, would certainly have been called sacra gentili" (Saivygny, Zeitschrift, &c. vol. ii. p. 365.)

In the time of Gaius (the age of the Antonines), the jus gentilium had entirely fallen into disuse. (Gaius, iii. 17.) Thus an ancient institution, which formed an integral part of the old constitution, and was long held together by the conservative power of religious rights, gradually lost its primitive character in the changes which circumstances impressed on the form of the Roman state, and was finally extinguished.

The word Gens has recently been rendered in English by the word House, a term which has here been purposely not used, as it is not necessary, and can only lead to misconception.

The subject of the gens is discussed with great acuteness both by Niebuhr (Rom. Hist. vol. i.) and by Malden (Hist. of Rome, published by the Society for the Diffusion of Useful Knowledge).

GENTILES. [GENS.]

GEOMORI. (γεωμόριος; Doric, γάμωρος) is the name of the second of the three classes into which Theseus is said to have divided the inhabitants of Attica. (Plut. Thes. 25; Pollux, viii. 111.) This class was, together with the third, the ἄγαμοροι, excluded from the great civil and priestly offices which belonged exclusively to the eupatrids, so that there was a great distinction between the first and the two inferior classes. We possess, however, no means to ascertain any particulars respecting the relation in which the γεωμόριοι stood to the other two classes. The term may either signify independent land-owners, or peasants who cultivated the lands of others as tenants. The γεωμόριοι have, accordingly, by some writers been thought to be free land-owners, while others have conceived them to have been a class of tenants. It seems, however, inconsistent with the state of affairs in Attica, as well as with the manner in which the name γεωμόριος was used in other Greek states, to suppose that the whole class consisted of the latter only; there were undoubtedly among them a considerable number of freemen who cultivated their own lands (Timaeus, f. v. 1; Gower, s. v. Πυθερος; Valckenæer ad Herod. v. 77), but had by their birth no claims to the rights and privileges of the nobles. We do not hear of any political distinctions between the γεωμόριοι and the ἄγαμοροι; and it may either be that there existed none at all,
or if there were any originally, that they gradually vanished. This would account for the fact that Donysius (ii. 8) only mentions two classes of Atticans; one corresponding to the Roman patricians, the other to the plebeians. (Thirlwall, History of Greece, vol. ii. p. 14; Wachsmuth, Hellemische Alterthümer, Staatsh. der att. kaiserl. 2d edit. Plato., Heidelberg, loc. cit., p. 19; Timann, Griech. Staatsverfassungen, p. 575, &c.)

In Samos the name γεώμοροι was applied to the oligarchical party, consisting of the wealthy and powerful. (Thucyd. viii. 21; Plut. Quest. Rom. p. 303; Müller, Dor. iii. 1 § 4.) In Syracuse the aristocratical party was likewise called γεώμοροι or γεώμοροι, in opposition to the δήμοι. (Herod. vii. 153; Hesych. s. v. Τάμωροι; Müller, Dor. iii. 4 § 4; Gillier, de Situ et Orig. Syrac. p. 8.) (L. S.)

GERAEAE or GERARAE (γεραιαί or γεραραί). [Donysias, p. 412, a.]

GERANOS (γερανός). [Hyponge.] GERMA'NI. [Cognat.] GEROU'SIA (-yepowria), the council of elders (γέροποις), was the name of the Senate in most Doric states, and was especially used to signify the Senate at Sparta. In connection with this subject it is proposed to give a general view of the Spartan constitution, and to explain the functions of its legislative and administrative elements. In the later ages of Spartan history the one of the most prominent of these was the college of the five ephors; but as an account of the Ephoralty is not to be offered as a sacrifice to Apollo, and then served up at the royal table. Whenever also any of the citizens made a public sacrifice to the gods, the kings were invited to the feast, and honoured above the other guests: a double portion of food was given to them, and they commenced the libations to the gods. (Herod. vi. 57.) All these distinctions are of a simple and antiquated character, and, so far as they go, prove that the Spartan sovereignty was a continuation of the heroic or Homeric. The distinctions and privileges granted to the king as commander of the forces in war, lead to the same conclusion. These were greater than he enjoyed at home. He was guarded by a body of 100 chosen men, and his table was maintained at the public expense: he might sacrifice in his sacerdotal capacity as many victims as he chose; the skins and backs of which were his perquisites, and he was assisted by so many subordinate officers, that he had nothing else to do, except to act as priest and strategist. (Xen. De Rep. Lac. 14, 15; Herod. vi. 55.)

The accession and demise of the Spartan kings were marked by observances of an Oriental character. (Herod. vi. 53.) The former event was signalized by a remission of all debts due from private individuals to the state or the king; and on the death of a king, the funeral solemnities were celebrated by the whole community. There was a general mourning for ten days, during which all public business was suspended: horsemen went round the country to carry the tidings, and a fixed number of the perioeci, or provincials, was obliged to come from all parts of the country to the city, where, with the Spartans and Helots, and their wives, to the number of many thousands, they made loud lamentations, and proclaimed the virtues of the deceased king as superior to those of all his predecessors. (Herod. 1. c.)

In comparison with their dignity and honours, the constitutional powers of the kings were very limited. In fact they can scarcely be said to have possessed any; for though they presided over the council of γέροποις or ἀρχαγειας, or principes senatus, and the king of the elder house probably had a casting vote, * still the voice of each counted for no more than that of any other senator: when the latter were absent, their votes were decided by a majority of the councillors who were not more related to them, and therefore of an Heraclidian family. Still the kings had some important preroga-

* Dr. Thirlwall observes that this supposition may perhaps reconcile the difference between Herod. vi. 57. and Thucyd. i. 20.
This council till he was sixty years of age (Plut. Lycurg. 26), and the additional qualifications were strictly of an aristocratic nature. We are told, for instance, that the office of a councillor was the reward and prize of virtue (Aristot. Polit. ii. 6. § 15; Demosth. c. Lept. p. 489), and that it was confined to men of distinguished character and station (καλὸς καγαθὸς).

The election was determined by vote, and the mode of conducting it was remarkable for its old-fashioned simplicity. The competitors presented themselves one after another to the assembly of electors (Plut. Lycurg. 26); the latter testified their esteem by acclamations, which varied in intensity according to the popularity of the candidates for whom they were given. These manifestations of esteem were noted by persons in an adjoining building, who could judge of the shooting, but could not tell in whose favour it was given. The person whom these judges thought to have been most applauded was declared the successful candidate. The different competitors for a vacant place offered themselves upon their own judgment (Aristot. Polit. ii. 6. § 18), probably always from the ἄδεια, to which the councillor whose place was vacant had belonged; and as the office was for life, and therefore only one vacancy could (in ordinary cases) happen in a lifetime, the attention of the whole state would be fixed on the choice of the electors.

The office of a councillor, however, was not only for life, but also irresponsible (Aristot. Polit. ii. 6), as if a previous reputation, and the near approach of death, were considered a sufficient guarantee for integrity and moderation. But the councillors did not always prove so, for Aristotle (l. c.) tells us that the members of the γερουσία received bribes, and frequently showed partiality in their decisions.

The functions of the councillors were partly deliberative, partly judicial, and partly executive. In the discharge of the first they prepared measures and passed preliminary decrees (Plut. Aphi, 11) which were to be laid before the popular assembly, so that the important privilege of initiating all changes in the government or laws was vested in them. As a criminal court they could punish with death and civil degradation (ἄρτια, Xen. De Rep. Loc. 10. § 2; Arist. Polit. iii. 1), and that, too, without being restrained by any code of written laws (Aristot. Polit. ii. 6), for which national feeling and recognised usages would form a sufficient substitute. They also appear to have exercised, like the Areopagus at Athens, a general superintendence and inspection over the lives and manners of the citizens (arbitri et magistri disciplinae publicae, Aul. Gall. xviii. 3), and probably were allowed "a kind of patriarchal authority to enforce the observance of ancient usage and discipline." (Thirlwall, Hist. of Greece, vol. i. p. 318.) It is not, however, easy to define with exactness the original extent of their functions; especially as respects the last-mentioned duty, since the ephors not only encroached upon the prerogatives of the king and council, but also possessed, in very early times, a censorial power, and were not likely to permit any diminution of its extent.

III. The ἐκκλησία, or assembly of Spartan freemen. This assembly possessed, in theory at least, the supreme authority in all matters affecting the general interests of the state. Its original position at Sparta is shortly explained by a rhetor or ordinance of Lycurgus, which, in the form of an...
By this ordinance full power was given to the people to adopt or reject whatever was proposed to them by the king and other magistrates. It was, however, found necessary to define this power more exactly, and the following clause, ascribed to the kings Lycompus and Polydorus, was added to the original rhetra, “but if the people should oppose a crooked opinion the elders and the princes shall withdraw” (τόσο προσευγενεία καὶ ἀρχαγέτας ἀποστάταρσις ἡμῶν). Plutarch (l. c.) interprets these words to mean “That in case the people does not either reject or approve in toto a measure proposed to them, the kings and councillors should dissolve the assembly, and declare the unexecuted decree to be inoperative.” According to this interpretation, which is confirmed by some verses in the Eunomia of Tyrtaeus, the assembly was not competent to originate any measures, but only to pass or reject, without modification, the laws and decrees proposed by the proper authorities: a limitation of its power, which almost determined the character of the Spartan constitution, and justifies the words of Demosthenes, who observed (c. Lep. b. 489. 20), that the γενοκτονία at Sparta was in many respects supreme—Δεσποτίσθη ἐστὶ τῶν πολιτών. All citizens above the age of thirty, who were not labouring under any loss of franchise, were admissible to the general assembly or ἐκκλησία (Lyt. Lycurg. 25), as it was called in the old Spartan language; not one except public magistrates, and chiefly the ephors and kings, addressed the people without being specially called upon. (Müller, Dor. iii. 4. § 11.) The same public functionaries also put the question to the vote. (Thuc. i. 80. 87.) Thus, as the magistrates only (τὰς τέκνα οὗ ἀρχῆς) were the leaders and speakers of the assembly, decrees of the whole people are often spoken of as the decrees of the constitution generally, especially in matters relating to foreign affairs. The intimate connection of the ephors with the assembly is shown by a phrase of very frequent occurrence in such cases (ἐκκλησία τοῦ εὐφρον καὶ τῆς ἐκκλησίας). The method of voting was by acclamation; the place of meeting between the brook BABYCA, and the bridge BABYCA, to the west of the city, and enclosed. (Plut. Lycurg. 6.) The regular assemblies were held every full moon; and on occasions of emergency extraordinary meetings were convened.

The whole people alone could proclaim “a war, conclude a peace, enter into an armistice for any length or time; and all negotiations with foreign states, though conducted by the kings and ephors, could be ratified by the same authority only.” With regard to domestic affairs, the highest offices, such as magistracies and priesthoods, were filled by the votes of the people; a disputed succession to the throne was decided upon by them; changes in the constitution were proposed and explained, and all new laws, after a previous decree in the senate, were confirmed by them.” (Müller, Dor. i. 4. § 9.)

It appears, therefore, to use the words of Müller, that the popular assembly really possessed the supreme political and legislative authority at Sparta, but it was so hampered and checked by the spirit of the constitution, that it could only exert its authority within certain prescribed limits; so that the government of the state is often spoken of as an aristocracy.

Besides the ἐκκλησία which we have just described, we read in later times of another called the small assembly (Xen. Hell. iii. 3. § 18), which appears to have been convened on occasions of emergency, or which were not of sufficient importance to require the decision of the entire body of citizens. This more select assembly was probably composed of the ὑμεία or superior citizens, or of some class enjoying a similar precedence, together with some of the magistrates of the state (Ecclesi). If, and if, as appears to have been the case, it was convened more frequently than the greater assembly, it is evident that an additional restraint was thus laid upon the power of the latter (Philol. Museum, vol. ii. p. 65), the functions of which must have been often superseded by it.

The preceding remarks will enable us to decide a question which has been raised, what was the real nature of the constitution of Sparta? From the expressions of Greek writers, every one would at once answer that it was aristocratic; but it has been asserted that the aristocracy at Sparta was an aristocracy of conquest, in which the conquering people, or Dorians, stood towards the conquered, or Achaeans, in the relation of nobles to commons, and that it was principally in this sense that the constitution of Sparta was so completely anti-popular or oligarchical. (Arnold, Thuc. Append. ii.) Now this indeed is true; but it seems no less true that the Spartan government would have been equally called an oligarchy or aristocracy even if there had been no subject class at all, on account of the disposition and administration of the sovereign power within the Spartan body alone. The fact is, that in theory at least, the Spartan constitution, as settled by Lycurgus, was a decided democracy, with two hereditary officers, the generals of the commonwealth, at its head; but in practice (at least before the encroachments of the ephors) it was a limited aristocracy; that is, worked as if the supreme authority was settled in the hands of a minority. The principal circumstances which justify us in considering it as such, are briefly “the restraints imposed upon the assembly, the extensive powers of the censors, their election for life, their irresponsibility, the absence of written laws, of paid offices, of offices determined by lot,” and other things thought by the Greeks characteristic of a democracy. Independent of which we must remember that Sparta was at the head of the oligarchical interest in Greece, and always supported, as at Corycyra and Argos, the oligarchical party, in opposition to the democratic, which was aided by Athens. In fact Dr. Arnold himself observes, that even in the relations of the conquering people among themselves the constitution was far less popular than at Athens. We must, however, bear in mind that the constitution, as settled by Lycurgus, was completely altered in character by the usurpation of the ephors. To such an extent was this the case, that Plato (Leg. iv. p. 713) doubted whether the government at Sparta might...
GLADIATORES.

not be called a "tyranny," in consequence of the extensive powers of the ephoralty, though it was as much like a democracy as any form of government could well be; and yet, he adds, not to call it an aristocracy (i.e., a government of the &phil;ματος), is quite absurd. Moreover, Aristotle (Polit. iv. 8), when he enumerates the reasons why the Spartan government was called an oligarchy, makes no men quite absurd. Moreover, Aristotle this name because it had many oligarchical institutions, such as that none of the magistrates were chosen by lot; that a few persons were competent to inflict banishment and death.

Perhaps the shortest and most accurate description of the constitution of Sparta is contained in the following observations of Aristotle (Polit. ii. 6):

— Some affirm that the best form of government is one mixed of all the forms, wherefore they praise the Spartan constitution: for some say that it is composed of an oligarchy, and a monarchy, and a democracy—a monarchy on account of the kings, an oligarchy on account of the councillors, and a democracy on account of the ephors; but others say that the oligarchy is a "tyranny;" whereas, on the other hand, it may be affirmed that the public tables, and the regulations of public life, are of a democratic tendency. [R. W.]

GERRHA (γερήα), in Latin, Gerrae, properly signified any thing made of wicker-work, and was especially used as the name of the Persian shields, which were made of wicker-work, and were smaller and shorter than the Greek shields (δερία διώρισαν, γερήα, Herod. vii. 61, ix. 61; Xen. Anab. ii. I. § 6; Festus, s.v. gerrae, gerrae).

GLADIATORI (σωματική), were men who fought with swords in the amphitheatre and other places for the amusement of the Roman people. (Gladiator est, qui in arena, populo spectante, pugnabit, Quintil. Declam. 302.) They are said to have been first exhibited by the Etruscans, and to have had their origin from the custom of killing slaves and captives at the funereal pyres of the deceased. (Tertull. de Spectac. 12; Serv. ad Virg. Aen. x. 519.) [Funus, p. 359, a.] A show of gladiators was called munus, and the person who exhibited (exeleit) it, editor, numeratus, or dominus, who was honoured during the day of exhibition, if a private person, with the official signs of a magistrate. (Capitol. M. Anton. Philos. 23; Flor. iii. 20; Cic. ad Att. ii. 19. § 3.)

Gladiators were first exhibited at Rome in B. c. 264, in the Forum Boarium, by Marcus and Decimus Brutus, at the funeral of their father. (Valer. Max. ii. 4. § 7; Liv. Epit. 16.) They were at first confined to public funerals, but afterwards fought at the funerals of most persons of consequence, and even at those of women. (Suet. Jul. 28; Spartan. Hadr. 9.) Private persons sometimes left a sum of money in their will to pay the expenses of such an exhibition at their funerals. (Sen. de Brev. Vit. 20.) Combats of gladiators were also exhibited at entertainments (Athen. iv. p. 153; Sil. Ital. xi. 51), and especially at public festivals by the acediles and other magistrates, who sometimes exhibited immense numbers with the view of pleasing the people. (Cic. pro Mar. 18; de Off. ii. 16; [Aediles].) Under the empire the passion of the Romans for this amusement rose to its greatest height, and the number of gladiators who fought on some occasions appears almost incredible. After Trajan's triumph over the Dacians, there were more than 10,000 exhibited. (Dion Cass. lxxviii. 15.)

Gladiators consisted either of captives (Vopisc. Prob. 19), slaves (Suet. Vitell. 12), and condemned malefactors, or of freeborn citizens who fought voluntarily. Of those who were condemned, some were said to be condemned ad gladium, in which case they were obliged to be killed at least within a year; and others ad ludum, who might obtain their discharge at the end of three years. (Ulpian, Collat. Mos. et Rom. Leg. tit. ii. s. 7. § 4.) Free-men, who became gladiators for hire, were called auctorati (Quint. i. c.; Hor. Sat. ii. 7. 58), and their hire auctoramentum or gladiatorium. (Suet. Tib. 7; Liv. xiv. 31.) They also took an oath on entering upon the service, which is preserved by Petronius (117).—"In verba Eumolpi sacramento junvimus, uiri, vini, venerari, ferroque necari, et quicquid aliud Eumolpus jussisset, tantaque legitimi gladiatores domino corpora animasque religiosissime addicimus." (Compare Senec. Epist. 7.)

Even under the republic free-born citizens fought as gladiators (Liv. xxviiii. 21), but they appear to have belonged only to the lower orders. Under the empire, however, both equites and senators fought in the arena (Dion Cass. ii. 22; Liv. 25; Suet. Jul. 39; Aug. 43; Ner. 12), and even women (Tacit. Ann. xv. 52; Suet. Dom. 4; Juv. vi. 250, &c.; Stat. Silv. i. v. 53) which practice was at length forbidden in the time of Severus. (Dion Cass. lxxx. 16.)

Gladiators were kept in schools (ludi), where they were trained by persons called lanistae. (Suet. Jul. 26; Cic. pro Rosc. Amer. 49; Juv. vi. 216, xi. 8.) The whole body of gladiators under one lanista was frequently called familia. (Suet. Aug. 42.) They sometimes were the property of the lanistae, who let them out to persons who wished to exhibit a show of gladiators; but at other times belonged to citizens, who kept them for the purpose of exhibition, and engaged lanistae to instruct them. Thus we read of the ludus Aemilius at Rome (Hor. de Art. poet. 82), and of Caesar's ludus at Capua. (Cass. Dio. lxxv. 164.)

The superintendence of the ludi, which belonged to the emperors, was entrusted to a person of high rank, called curator or procurator. (Tacit. Ann. xi. 35; xiii. 22; Suet. Cal. 27; Gruter, Inscr. p. 489.) The gladiators fought in these ludi with wooden swords, called rudera. (Suet. Cal. 32, 54.)

Great attention was paid to their diet in order to increase the strength of their bodies, whence Cicero (Phil. ii. 25) speaks of "gladiatoria totius corporis firmatia." They were fed with nourishing food, called gladiatoria salvana. (Tactit. Hist. ii. 50.)

A great number of gladiators were trained at Ravenna on account of the salubrity of the place. (Strabo, v. p. 213.)

Gladiators were sometimes exhibited at the funeral pyre, and sometimes in the forum, but more frequently in the amphitheatre. [AMPHITHEATRUM.] The person who was to exhibit a show of gladiators published some days before the exhibition bills (libelli), containing the number and sometimes the names of those who were to fight. (Cic. ad Fam. ii. 8; Suet. Caes. 26.)

When the day came, they were led along the arena in procession, and made to pay a tribute to the Emperor. (Liv. xxi. 7. 30.) And their swords were examined by the editor to see if they were sufficiently sharp.
GLADIATORES.

(Dion Cass. lxxxii. 3; Suet. Tit. 9; Lipsius, Exerc. ad Tusc. Ann. iii. 37.) At first there was a kind of sham battle, called praetutio, in which they fought with wooden swords, or the like (Cic. de Orat. ii. 78, 80; Ovid, Ars Amor. iii. 515; Senec. Epist. 117), and afterwards at the sound of the trumpet the real battle began. When a gladiator was wounded, the people called out habet or hoc habet; and the one who was vanquished lowered his arms in token of submission. His fate, however, depended upon the people, who pressed down their thumbs if they wished him to be saved, but turned them up if they wished him to be killed (Hor. Ep. i. 18, 66; Juv. iii. 36), and ordered him to receive the sword (ferrum reciperere), which gladiators usually did with the greatest firmness. (Cic. Tusc. ii. 17, pro Suet. iii. 37; pro Mil. 34.) If the life of a vanquished gladiator was spared, he obtained his discharge for that day, which was called missio (Mart. xii. 29. 7); and hence in an exhibition of gladiators sine missione (Liv. xii. 20), the lives of the conquered were never spared. This kind of exhibition, however, was forbidden by Augustus. (Suet. Aug. 45.)

Palms were usually given to the victors gladiators (Suet. Cal. 32); and hence, a gladiator, who had frequently conquered, is called plurimum palmarum gladiator (Cic. pro Rosc. Amer. 6); money also was sometimes given. (Juv. vii. 243; Suet. Claud. 21.) Old gladiators, and sometimes those who had only fought for a short time, were discharged from the service by the editor at the request of the people, who presented each of them with a rudi or wooden sword; whence those who were discharged were called Rudiarii. (Cic. Phil. ii. 29; Hor. Ep. i. 1, 2; Suet. Tib. 7; Quint. L.c.) If a person was free before he entered the ludus, he became on his discharge free again; and if he had been a slave, he returned to the same condition again. A man, however, who had been a gladiator was always considered to have disgraced himself, and consequently it appears that he could not obtain the equestrian rank if he afterwards acquired sufficient property to entitle him to it (Quint. L.c.); and a slave who had been sent into a ludus and there manumitted either by his then owner or another owner, merely acquired the status of a peregrinus dediticius. (Gain., i. 13.) [DEDITICI.]

Shows of gladiators were abolished by Constantine (Cod. 11. tit. 43), but appear notwithstanding to have been generally exhibited till the time of Honorius, by whom they were finally suppressed. (Theodoret. Hist. Eccles. v. 20.)

Gladiators were divided into different classes, according to their arms and different mode of fighting, or other circumstances. The names of the most important of these classes is given in alphabetical order:

Andalabatæ (Cic. ad Fam. vii. 10), wore helmets without any aperture for the eyes, so that they were obliged to fight blindfold, and thus excited the mirth of the spectators. Some modern writers say that they fought on horseback, but this is denied by Orelli. (Inscrip. 2577.)

Catervarii was the name given to gladiators when they did not fight in pairs, but when several fought together. (Suet. Aug. 45; gregutim diminuunt, Col. 30.)

Dumacheri appear to have been so called, because they fought with two swords. (Artemiod. ii. 32; Orell., Inscrip. 2584.)

Equites were those who fought on horseback. (Orelli, 2568. 2577.)

Essolarii fought from chariots like the Gauls and Britons. [Essera.] They are frequently mentioned in inscriptions. (Orelli, 2566. 2584, &c.)

Fiscules were those under the empire, who were trained and supported from the fiscus. (Capitol. Cons. 33.)

Hoplomachi appear to have been those who fought in a complete suit of armour. (Suet. Cal. 32; Martial, viii. 74; Orelli, 2566.) Lipsius considers them to have been the same with the Samnites, and that this name was disused under the emperors, and hoplonachus substituted for it.

Laqueatores were those who used a noose to catch their adversaries. (Isiod. xviii. 56.)

Meridiani were those who fought in the middle of the day, after combats with wild beasts had taken place in the morning. These gladiators were very slightly armed. (Senec. Epist. 7; Suet. Claud. 34; Orelli, 2567.)

Mirmillones are said to have been so called from their having the image of a fish (mormyr, μορμύρος) on their helmets. (Festus, s. v. Retiario.) Their arms were like those of the Gauls, whence we find that they were also called Galli. They were usually matched with the retiarii or Thracians. (Cic. Phil. iii. 12, vii. 6; Juv. viii. 200; Suet. Cal. 32; Orelli, 2566, 2560.)

Ordinarii was the name applied to all the regular gladiators, who fought in pairs, in the ordinary way. (Senec. Epist. 7; Suet. Aug. 45, Cal. 26.)

Postulaticii were such as were demanded by the people from the editor, in addition to those who were exhibited. (Sene. l.c.)

Provoctores fought with the Samnites (Cic. pro Suet. 64), but we do not know any thing respecting them except their name. They are mentioned in inscriptions. (Orelli, 2566.) The προβοκατωρ mentioned by Artemidorus (ii. 32) appears to be the same as the provocator.

Retiarii carried only a three-pointed lance, called tridens or fuscinæ (Fuscina), and a net (rete), which they endeavoured to throw over their adversaries, and then to attack them with the fuscinæ while they were entangled. The retiarius was dressed in a short tunic, and wore nothing on his head. If he missed his aim in throwing the net, he beserked himself to flight, and endeavoured to prepare his net for a second cast, while his adversary followed him round the arena in order to kill him before he could make a second attempt. His adversary was usually a secutor or a mirmillo. (Juv. ii. 143, viii. 203; Suet. Cal. 30; Claud. 34; Orelli, 2578.) In the following woodcut, taken from Winckelmann (Monum.
GLADIATORES.

Intnl. pl. 197), a combat is represented between a retiarius and a mirmillo: the former has thrown his net over the head of the latter, and is proceeding to attack him with the fuscina. The lanista stands behind the retiarius.

Samnites were so called, because they were armed in the same way as that people, and were particularly distinguished by the oblong scutum. (Liv. ix. 40 ; Cic. pro Sext. 64.)

Secutores are supposed by some writers to be so called because the secutor in his combat with the retiarius pursued the latter when he failed in securing him by his net. Other writers think that they were the same as the supposititi, mentioned by Martial (v. 24), who were gladiators substituted in the place of those who were wearied or were killed. (Suet. Col. 30 ; Juv. viii. 210.) If the old reading in a letter of Cicero's (ad Att. vii. 14) is correct, Julius Caesar had no less than 500 secutores in his ludus at Capua; but it appears probable that we ought to read secutorum instead of secutorum.

Supposititi. See Secutores.

Thraeces or Thracians were armed like the Thracians with a round shield or buckler (Festus, s. v. Thraeces), and a short sword or dagger (sica, Suet. Col. 32), which is called falc supina by Juvenal (viii. 201). They were usually matched, as already stated, with the mirmillones. The woodcut in the next column, taken from Winckelmann (l. c.), represents a combat between two Thracians. A lanista stands behind each.

Paintings of gladiatorial combats, as well as of the other sports of the amphitheatre, were favourite subjects with the Roman artists. (Plin. H. N. xxxv. 33 ; Capitol. Gord. 3 ; Vopisc. Carin. 18.) Several statues of gladiators have come down to us, which are highly admired as works of art; of these the most celebrated is the gladiator of the

Borghese collection, now in the Museum of the Louvre, and the dying gladiator, as it is called, in the Capitoline Museum. Gladiatorial combats are represented in the bas-reliefs on the tomb of Scaurus at Pompeii, and illustrate in many particulars the brief account which has been given in this article of the several classes of gladiators. These bas-reliefs are represented in the following woodcuts from Mazois (Pomp. i. pl. 32). The figures are made of stucco, and appear to have been moulded separately, and attached to the plaster by pegs of bronze or iron. In various parts of the frieze are written the name of the person to whom the gladiators belonged, and also the names of the gladiators themselves, and the number of their victories. The first pair of gladiators on the left hand represents an equestrian combat. Both wear helmets with vizors, which cover the whole face, and are armed with spears and round bucklers. In the second pair the gladiator on the left has been wounded; he has let fall his shield, and is imploring the mercy of the people by raising his hand towards them. His antagonist stands behind him waiting the signal of the people. Like

all the other gladiators represented on the frieze, they wear the subligaeulum or short apron fixed above the hips. The one on the left appears to be a mirmillo, and the one on the right, with an oblong shield (scutum), a Samnite. The third pair consists of a Thracian and a mirmillo, the latter of whom is defeated. The fourth group consists of four figures; two are secutores and two retiarii. The secutor on his knee appears to have been defeated by the retiarius behind him, but as the fuscina is not adapted for producing certain death, the other secutor is called upon to do it. The
retarius in the distance is probably destined to fight in his turn with the surviving sectator. The last group consists of a mirmillo and a Samnite; the latter is defeated.

In the last woodcut two combats are represented. In the first a Samnite has been conquered by a mirmillo; the former is holding up his hand to the people to implore mercy, while the latter apparently wishes to become his enemy's executioner before receiving the signal from the people; but the lanista holds him back. In the other combat a mirmillo is mortally wounded by a Samnite.

It will be observed that the right arm of every figure is protected by armour, which the left does not require on account of the shield. [Bestiarium Venaticum.]

LAIDIUS (ἔφος, poet. ἀρη, φάργανων), a sword or glaive, by the Latin poets called ensis. The ancient sword had generally a straight two-edged blade (ἀμφιπόρη, Hom. Η. ii. 256), rather broad, and nearly of equal width from hilt to point. Gladiators, however, used a sword which was curved like a scimitar. (Mariette, Recueil, No. 92.) In times of the remotest antiquity swords were made of bronze, but afterwards of iron. (Eurip. Androm. iv. 44); so that an iron sword, found in a tomb near Ailiens, and represented by Dodwell (Tour, i. 116), was two feet five inches long, including the scabbard. (Diod. v. 36.) The Greeks and Romans wore them on the left side (Sid. Apollin. i. 17); as was the case also with their other weapons, to avoid the inconvenience of the use of the acinaces instead of the sword.

The early Greeks used a very short sword, which was of an oval shape, made various improvements in armour about 400 B.C., doubled its length (Diod. xiv. 44), so that an iron sword, found in a tomb at Athens, and represented by Dodwell (Tour, i. 443), was two feet five inches long, including the scabbard, which was also of iron. The Roman sword, as was the case also with their other weapons, was larger, heavier, and more formidable than the Greek. (Florus, ii. 7.) Its length gave occasion to the joke of Lentulus upon the name of his son-in-law, who was of very low stature, "οὐδὲν μοι σύνοιχος τῷ στυῖ" (Marmor. Saturn. ii.) To this Roman sword the Greeks applied the term σταθή (Arrian, Tacit.), which was the name of a piece of wood of the same form used in weaving (Tela). The British glaive was still larger than the Roman. (Tac. Agric. 96.)

The principal ornament of the sword was bejewelled upon the hilt. (Capulus.)

Gradus was sometimes used in a wide sense, so as to include Pugio. (A. Gell. ix. 13.)

GLANDES. [Fundus.]

GNOMON (γνώμων). [Horologium.]

GOMPHI. [Vía.]

GORGÝRA (γόργη). [Carcer.]

GRADUS (βόξα), a step, as a measure of length, was half a pace (passus) and contained 2½ feet, Greek and Roman respectively, and therefore the Greek ρύγα was rather more, and the Roman gradus rather less, than 2½ feet English. (See the Tables.)

GRADUS COGNATIONIS. [Cognatio.]

GRAECOSTASIS, a place in the Roman forum, on the right of the Comitium, was so called because the Greek ambassadors, and perhaps also deputies from other foreign or allied states, were allowed to stand there to hear the debates. The Graecostasis was, as Niebuhr remarks, like privileged seats in the hall of a parliamentary assembly. The Stationes Municipiorum, of which Phiny speaks (H. N. xvi. 44, s. 80), appear to have been places allotted to the visitors for the same purpose. When the sun was seen from the Curing coming out between the Rostra and the Graecostasis, it was mid-day; and an accession of the consul announced the time with a clear loud voice. (Plin. H. N. vii. 60, xxxiii. 1. s. 6; Cic. ad Q. Fr. ii. 1; Varr. L. L. v. 155, ed. Müller; Niebuhr, Hist. of Rome, vol. ii. note 116.)

GRAMMATEUS (γραμματεύς), a clerk or scribe. Among the great number of scribes employed by the magistrates and governments of Athens, there were three of a higher rank, who were real state-officers. (Suidas, s. v.) Their functions are described by Pollux (viii. 98). One of them was appointed by lot, by the senate, to serve the time of the administration of each prytany, though he always belonged to a different prytany from that which was in power. He was therefore called γραμματεύς κατά πρυτανείας. (Demosth. c. Timocra. p. 720.) His province was to keep the public records, and the decrees of the people which were made during the time of his office, and to deliver to the thalamites the decrees of the senate. (Demosth. l. c.)

A class of scribes, inferior to these, were those who officiated during the administration of the first prytany in a year, like that of the archon eponymus. Previous to the archonship of Eucleides, the name of this scribe was attached to the beginning of the public records, and the decrees of the people which were required to be read in the assembly or in the senate, or who served any of the three civil or military officers of the state, who served any of the three χρωματίδες mentioned above as under-clerks (ὑπογραμματεύς). Demosth. de Pals.
GRAPHE.

These persons were either public slaves or citizens of the lower orders, as appears from the manner in which Demosthenes speaks of them, and were not allowed to hold their office for two succeeding years. (Lysias, c. Nicomach. p. 864, according to the interpretation of this passage by Böckh, Publ. Econ. p. 188, note 168.)

Different from these common clerks were the ἀντυγράφεις, checking-clerks or counter-scribes, who must likewise be divided into two classes, a lower and a higher one. The former comprised those who had charge of the documents of the armies (Demosth. de Orest. p. 101), who kept the control of the expenditure of the sacred money, &c. (Böckh, Publ. Econ. p. 187). The higher class of ἀντυγράφεις, on the other hand, were public officers. Their number was, according to Ἴπαρκος (s. v.), only two, the ἀντυγράφεις τῆς διοίκησεως, and the ἀντυγράφεις τῆς βουλῆς. The office of the former was to control the expenditure of the public treasury (διοίκησεως); the latter was always present at the meetings of the senate, and received the account which was passed into the senate. (Compare Pollux, viii. 98; Suidas, s. v.) He had also to lay the accounts of the public revenue before the people in every prytany, so that he was a check upon the ἀποδέκται. He was at first elected by the people by χειροτονία, but was afterwards appointed by lot. (Aeschin. c. Ctesiph. p. 417; Pollux, l. c.)

The great number of clerks and counter-clerks at Athens was a consequence of the institution of the ἐσταυροπλήκτωρ, a check upon the ἀρτοστήρα. He was at first elected by the people by χειροτονία, but was afterwards appointed by lot. (Aeschin. c. Ctesiph. p. 417; Pollux, l. c.)

The great number of clerks and counter-clerks at Athens was a necessary consequence of the institution of the ἐσταυροπλήκτωρ, a check upon the ἀρτοστήρα. He was at first elected by the people by χειροτονία, but was afterwards appointed by lot. (Aeschin. c. Ctesiph. p. 417; Pollux, l. c.)

The great number of clerks and counter-clerks at Athens was a necessary consequence of the institution of the ἐσταυροπλήκτωρ, a check upon the ἀρτοστήρα. He was at first elected by the people by χειροτονία, but was afterwards appointed by lot. (Aeschin. c. Ctesiph. p. 417; Pollux, l. c.)

The great number of clerks and counter-clerks at Athens was a necessary consequence of the institution of the ἐσταυροπλήκτωρ, a check upon the ἀρτοστήρα. He was at first elected by the people by χειροτονία, but was afterwards appointed by lot. (Aeschin. c. Ctesiph. p. 417; Pollux, l. c.)

The courts before which public causes could be tried were very various and, besides the ordinary Heliasitic bodies under the control of the nine archons or the generals or logistae, the council and even the assembly of the people occasionally became judicial bodies for that purpose, as in the case of certain Dociusine and Eisangeline. (Meier, Att. Proc. pp. 205, 268.) The proper court in which to bring a particular action was for the most part determined by the subject-matter of the accusation. In the trial of state offences it was in general requisite that the ostensible prosecutor should be an Athenian citizen in the full possession of his civil rights, and a resident alien on the other hand, was public officer. (See Schb'mann, p. 419; Antiphon, de Orest. p. 732.) Below these temporary appointments, the protection of purely state interests seems to have been left to volunteer accusers. (Meier, Att. Proc. p. 601; and a complete foreigner would upon this occasion require the same or a still further protection from the proxenus of his country. With the exception of cases in which the Apagoge, Ephesigas Endexias, or Eisangeline were adopted, in the three first of which an arrest actually did and in the last might take place, and accusations at the Euthynae and Dociusine, when the accused was or was supposed by the law to be present, a public action against a citizen commenced like an ordinary law-suit, with a summons to appear before the proper magistrate on a fixed day. (Philo, Euthynae. init.) But the bill of accusation was called a γραφή, or φάστις, as the case might be, and not an ἐγκαταλείματος or Λῆσις, as in private actions; neither could a public prosecution be referred to an arbitrator (Diatetara), and if it were compromised, would in many cases render the accused liable to an action καθαρήσεως, if not ipso facto to a fine of a thousand drachmae. (Meier, Att. Proc. p. 535.) The same sum was also forfeited when the prosecutor failed to obtain the voices of a man of the dicasts in all cases except those motions before the archon that had reference to ἐνηλίκου (κάκων) done to women or orphans, and besides this penalty, a modified disfranchisement, as, for instance, an incapacity to bring a similar accusation, was incurred upon several occasions. Upon the conviction of the accused, if the sentence were death, the presiding magistrate of the court delivered the prisoner, who remained in the custody of the Scytae during the trial, to the Eleven, whose business it was to execute judgment upon him. If the punishment were confiscation of property, the demands made an inventory of the effects of the criminal, which was read in the assembly of the people, and delivered to the petitioner, that they might make a sale of the goods, and pay...
in the proceeds to the public treasury. (Meier, Att. Proc. p. 210, &c.)

GUTUS, a vessel, with a narrow mouth or neck, from which the liquid was poured in drops: hence its name “Qui vinum dabant ut minutatim funderent, a gutus guttamin appellatur.” (Varr. L. L. v. 124, ed. Müller.) It was especially used in sacrifices (Plin. H. N. xvi. 7, 73), and hence we find it represented on the Roman coins struck by persons who held any of the priestly offices; as, for instance, in the annexed coin of L. Plancus, the contemporary of Augustus, where it appears, though in different forms, both on the obverse and reverse. The gutus was also used for keeping the oil, with which persons were anointed in the baths. (Juv. iii. 263, xi. 156.) A gutus of this kind is figured on p. 192.

GYMNASIARCHE S. [GYMNASIUM.]

GYMNASIUM (γυμναστήριον). The whole education of a Greek youth was divided into three parts: grammar, music, and gymnastics (γυμνάσια, μουσική, and γυμναστική), Plato, Theog. p. 123; Plut. de aulit. c. 17; Clitoph. p. 497), to which Aristoteles (de Republ. viii. 3) adds a fourth, the art of drawing or painting. Gymnastics, however, were thought by the ancients a matter of such importance, that this part of education alone occupied as much time and attention as all the others put together; and while the latter necessarily ceased at a certain period of life, gymnastics continued to be cultivated by persons of all ages, though those of an advanced age naturally took lighter and less fatiguing exercises than boys and youths. (Xen. Sympos. i. 7; Lucian, Leo ph. 5.) The ancients, and more especially the Greeks, seem to have been thoroughly convinced that the mind could not possibly be in a healthy state, unless the body was likewise in perfect health, and no means were thought, either by philosophers, or physicians, to be more conducive to preserve or restore bodily health than well-regulated exercise. The word gymnastics is derived from γυμνός (naked), because the persons who performed their exercises in public or private gymnasia were either entirely naked, or merely covered by the short χιτών. (See the authorities in Wachsmuth, Hellen. Alterth. vol. ii. p. 534. 2d edit., and Becker, Charibtes, vol. i. p. 316.)

The great partiality of the Greeks for gymnastic exercises was productive of infinite good: they gave to the body that healthy and beautiful deve-

lopment by which the Greeks excelled all other nations, and which at the same time imparted to their minds that power and elasticity which will ever be admired in all their productions. (Locius, de Gymnast. 15.) The plastic art in particular must have found its first and chief nourishment in the gymnastic and athletic performances, and it may be justly observed that the Greeks would never have attained their preeminence in sculpture had not their gymnastic and athletic exhibitions made the artists familiar with the beautiful forms of the human body and its various attitudes. Respecting the advantages of gymnastics in a medical point of view, some remarks are made at the end of this article. But we must at the same time confess, that at a later period of Greek history, when the gymnasium had become places of resort for idle loungers, their evil effects were no less striking. The chief objects for which they had originally been instituted were gradually lost sight of, and instead of being places of education and training they became mere places of amusement; and among other injurious practices to which they gave rise, the gymnasium was charged, even by the ancients themselves, with having produced and fostered that most odious vice of the Greeks, τὸ πανδαιστεία. (Plut. Quaest. Rom. 40. vol. iii. p. 122, ed. Wytenh.; compare Aristol. de republ. viii. 4; Plut. Philop. 3.)

Gymnastics, in the widest sense of the word, comprehended also the agonistic and athletic arts (ἀγωνιστική and ἀθλητική), that is, the art of those who contended for the prizes at the great public games in Greece, and of those who made gymnastic performances their profession [ATHLETAE and AGONISTAE]. Both originated in the gymnasium, in as far as the gymnasia, as well as the agonistae were originally trained in them. The athletes, however, afterwards formed a distinct class of persons unconnected with the gymnasium; while the gymnasia, at the time when they had degenerated, were in reality little more than agonistic schools, attended by numbers of spectators. On certain occasions the most distinguished pupils of the gymnasium were selected for the exhibition of public contests [ΛΑΜΠΑΔΕΦΟΡΙΑ], so that on the whole there was always a closer connection between the gymnastic and agonistic than between the gymnastic and athletic arts. In a narrower sense, however, the gymnasia had, with very few exceptions, nothing to do with the public contests, and were places of exercise for the purpose of strengthening and improving the body; or in other words, places for physical education and training; and it is chiefly in this point of view that we shall consider them in this article.

Gymnastic exercises among the Greeks seem to have been an old part of the Greek nation itself, and may be inferred from the fact that gymnastic contests are mentioned in many of the earliest legends of Greek story; but they were, as might be supposed, of a rude and mostly of a warlike character. They were generally held in the open air, and in plains near a river, which afforded an opportunity for swimming and bathing. The Attic legends indeed refer the regulation of gymnastics to Theseus (Paus. v. 39. § 3), but according to Galen it seems to have been about the time of Cleisthenes that gymnastics were reduced to a regular and complete system. Great progress, however, must have been made as early as the time of Solon, as appears...
from some of his laws which are mentioned below. It was about the same period that the Greek towns began to build their regular gymnasia as places of exercise for the young, with baths, and other conveniences for philosophers and all persons who sought intellectual amusements. There was probably no Greek town of any importance which did not possess its gymnasium. In many places, such as Ephesus, Hierapolis, and Alexandria in Troas, the remains of the ancient gymnasia have been discovered in modern times. Athens alone possessed three great gymnasia, the Lyceum (Λύκειον), Cynosarges (Κυνοσάρχες), and the Academia (Ἀκαδήμεια); to which, in later times, several smaller ones were added. All places of this kind were, on the whole, built on the same plan, though, from the remains, as well as from the descriptions still extant, we must infer that there were many differences in their detail. The most complete description of a gymnasium which we possess, is that given by Vitruvius (v. 11), which, however, is very obscure, and at the same time defective, in as far as many parts which seem to have been essential to a gymnasium, are not mentioned in it. Among the numerous plans which have been drawn, according to the description of Vitruvius, that of W. Newton, in his translation of Vitruvius, vol. i. fig. 52, deserves the preference. The following woodcut is a copy of it, with a few alterations.

The peristylia (D) in a gymnasium, which Vitruvius incorrectly calls palaestra, are placed in the form of a square or oblong, and have two stadia (1200 feet) in circumference. They consist of four porticoes. In three of them (A B C) spacious exedrae with seats were erected, in which philosophers, rhetoricians, and others, who delighted in intellectual conversation might assemble. A fourth portico (E), towards the south, was double, so that the interior walk was not exposed to bad weather. The double portico contained the following apartments:—The Ephebeum (F), a spacious hall with seats, in the middle, and by one-third longer than broad. On the right is the Coryceum (G), perhaps the same room which in other cases was called Apodyterium; then came the Conisterium (H) adjoining; and next to the Conisterium, in the returns of the portico, is the cold bath, λαότρων (I). On the left of the Ephebeum is the Elaeothesium, where persons were anointed with the alipite (K). Adjoining the Elaeothesium is the Frigidarium (L), the object of which is unknown. From thence is the entrance to the Propnigeum (M), on the returns of the portico; near which, but more inward, behind the place of the frigidarium, is the vaulted sudatory (N), in length twice its breadth, which has on the returns the Laconicum (O) on one side, and opposite to the Laconicum, the hot-bath (P). On the outside three porticoes are built; one (Q), in passing out from the peristyle, and, on the right and left, the two stadial porticoes (R S), of which, the one (S) that faces the north, is made double and of great breadth, the other (R) is single, and so designed that in the parts which incircle the walls, and which adjoin to the columns, there may be margins for paths, not less than ten feet; and the middle is so excavated, that there may be two steps, a foot and a half in descent, to go from the margin to the plane (R), which plane should not be less in breadth than 12 feet; by this means those who walk about the margins in their apparel will not be annoyed by those who are exercising themselves. This portico is called the Greeks ξυπτός, because in the winter season the athletes exercised themselves in these covered stadia. The ξυπτός had groves or plantations between the two porticoes, and walks between the trees, with seats of signine work. Adjoining to the ξυπτός (R) and double portico (S), are the uncovered walks (U), which in Greece are called χαλαζοπόδες, to which the athletes, in fair weather, go from the winter-xystus, to exercise. Beyond the xystus is the stadium (W), so large that a multitude of people may have sufficient room to behold the contests of the athletes.

It is generally believed that Vitruvius in this description of his gymnasium took that of Naples as his model; but two important parts of other Greek gymnasia, the apodyterium and the sphaeristerium, are not mentioned by him. The Greeks bestowed great care upon the outward and inward splendour of their gymnasia, and adorned them with the statues of gods, heroes, victors in the public games, and of eminent men of every class. Hermes was the tutelary deity of the gymnasia, and his statue was consequently seen in most of them.

The earliest regulations which we possess concerning the gymnasia are contained in the laws of Solon. One of these laws forbade all adults to enter a gymnasium during the time that boys were taking their exercises, and at the festivals of the Hermaea. The gymnasia were, according to the same law, not allowed to be opened before sunrise, and were to be shut at sunset. (Aeschin. c. Timarch. p. 88.) Another law of Solon excluded slaves from gymnastic exercises. (Aeschin. c. Timarch. p. 147; Plut. Solon, 1; Demosth. c. Timoecrat. p. 785.) Boys, who were children of an Athenian citizen and a foreign mother (υδατοι), were not admitted to any other gymnasium but the Cynosarges. (Plut. Them. 1.) Some of the laws of Solon relating to the management and the superintendence of the gymnasia, show that he was aware of the evil consequences which these institutions might produce, unless they were regulated...
by the strictest rules. As we, however, find that adults also frequented the gymnasia, we must suppose that, at least as long as the laws of Solon were in force, the gymnasia were divided into different parts for persons of different ages, or that persons of different ages did exercise at different times of the day. (Böckh, Corp. Inscription. n. 246 and 2214.) The education of boys up to the age of sixteen was divided into the three parts mentioned above, so that gymnastics formed only one of them; but during the period from the sixteenth to the eighteenth year the instruction in grammar and music seems to have ceased, and gymnastics were exclusively pursued. In the time of Plato the salutary regulations of Solon appear to have been no longer observed, and we find persons of all ages visiting the gymnasia. (Plat. De Rep. v. p. 452 ; Xen. Symposium. ii. 18.) Athens now possessed a number of smaller gymnasia, which are sometimes called palaestrae, in which persons of all ages used to assemble, and in which even the Hermae were celebrated by the boys, while formerly this solemnity had been kept only in the great gymnasia, and to the exclusion of all adults. (Plat. Lys. p. 206.) These changes, and the laxitude in the superintendence of these public places, caused the gymnasia to differ very little from the schools of the athletae; and it is perhaps partly owing to this circumstance that writers of this and subsequent times use the words gymnasium and palaestra indiscriminately. (Becker, Charikides, vol. i. p. 341.)

Married as well as unmarried women were, at Athens, and in all the Ionian states, excluded from the gymnasia; but at Sparta, and in some other Doric states, maidens, dressed in the short χιτών, were not only admitted as spectators, but also took part in the exercises of the youths. Married women, however, did not frequent the gymnasia. (Plut. De Leg. vii. p. 806.)

Respecting the superintendence and administration of the gymnasia at Athens, we know that Solon in his legislation thought them worthy of great attention; and the transgression of some of his laws relating to the gymnasia was punished with death. His laws mention a magistrate, called the Gymnasiarch (γυμνασιάρχης or γυμνασίαρχης) who was entrusted with the whole management of the gymnasia, and with everything connected therewith. The gymnasia were usually visited by the gymnasiarch, but in the later times it appears that the gymnasiarch was, according to Libanius on Demosthenes (c. Mid. p. 510) ten, one from every tribe. (Compare Demosth. Philipp. c. Boed. p. 996 ; Isaeus, De Menecel. c. 42.) They seem to have undertaken their official duties in turns, but in what manner is unknown. Among the external distinctions of a gymnasiarch, were a purple cloak and white shoes. (Plut. Anton. 53.) In early times the office of gymnasiarch lasted for a year, but under the Roman emperors we find that sometimes they held it only for a month, so that there were 12 or 15 gymnasiarchs in one year. This office seems to have been considered so great an honour, that even Roman generals, and emperors were ambitious to hold it. Other Greek towns, like Athens, had their own gymnasiarchs, but we do not know whether, or to what extent their duties differed from the Athenian gymnasiarchs. In Cyrene the office was sometimes held by women. (Krause, Gymnastik und Agonistik d. Hellenen, p. 179, &c.)

Another office which was formerly believed to be connected with the superintendence of the gymnasia, is that of Xystarchus (υστάρχος). But it is not mentioned previous to the time of the Roman emperors, and only in Italy and Crete. Krause (Ib. p. 205, &c.) has shown that this office had nothing to do with the gymnasia properly so called, but was only connected with the schools of the athlete.

An office which is likewise not mentioned before the time of the Roman emperors, but was nevertheless decidedly connected with the gymnasia, is that of Cosmetes. He had to arrange certain games, to register the names and keep the lists of the ephebi, and to maintain order and discipline among them. He was assisted by an Anticosmetes and two Hypocoemetes. (Krause, Ib. p. 211, &c.)

An office of very great importance, in an educational point of view, was that of the Sophroniastes (σωφρονισταί). Their province was to inspire the youths with a love of σωφροσύνη, and to protect this virtue against all injurious influences. In early times their number at Athens was ten, one from every tribe, with a salary of one drachma per day. (Ethymol. Mag. s. e.) Their duty not only required them to be present at all the games of the ephebi, but to watch and correct their conduct wherever they might meet them, both within and without the gymnasia. At the time of the emperor Marcus Aurelius only six Sophroniastes, assisted as many Hypo sophroniastes, are mentioned. (Krause, Ib. p. 214, &c.)

The instructions in the gymnasia were given by the Gymnastes (γυμνασταί) and the Paedotribae (παιδοτρῆβαι); at a later period Hypopaedotribae were added. The Paedotribes was required to possess a knowledge of all the various exercises which were performed in the gymnasia; the Gymnastes was the practical teacher, and was expected to know the physiological effects and influences on the constitution of the youths, and therefore assigned to each of them those exercises which he thought most suitable. (Gal. De Valet. tuend. ii. 9, 11 ; Aristot. Polit. viii. 3. 2.) These teachers were usually athletes, who had left their profession, or could not succeed in it. (Aelian, V. H. ii. 6 ; Gal. l. c. i. 3, &c.)

The anointing of the bodies of the youths, and
strewing them with dust, before they commenced their exercises, as well as the regulation of their diet, was the duty of the aliptae. [ALIPTAE.]

These men sometimes also acted as surgeons or teachers. (Plut. Dion. c. 1.) Galen (i.e. ii. 11) mentions among the gymnastic teachers, a σφαιριστής, or teacher of the various games at ball; and it is not improbable that in some cases particular games may have been taught by separate persons.

The games and exercises which were performed in the gymnasia seem, on the whole, to have been the same throughout Greece. Among the Dorians, however, they were regarded chiefly as institutions for hardening the body and for military training; among the Ionians, and especially the Athenians, they had an additional and higher object, namely, to give to the body and its movements grace and beauty, and to make it the basis of a healthy and sound mind. But among all the different tribes of the Greeks the exercises which were carried on in a Greek gymnasium were either mere games, or the more important exercises which the gymnasia had in common with the public agones in the great festivals.

Among the former we may mention, 1. The ball (σφαίρασις, σφαιρομαχία, &c.), which was in universal favour with the Greeks, and was here, as at Athens, played upon various occasions. Two stones, which were thrown up from the upper part of a tree or a post. Two boys, one on each side of the post, turning their backs towards one another, took hold of the ends of a rope, tried to pull the boy who held its other end, across a line marked between them on the ground. 2. The πήστις, or a game in which one boy, holding one end of a rope, tried to pull the boy who held its other end, across a line marked between them on the ground. 3. The top (πετρόνιος, πετρονία, &c.), which was in universal favour with Greek boys as in our own. 4. The πετσάρια (πετσάρια, κπαφέα, στρωμίλλος), which was as common an amusement with Greek boys as in our own days. 5. The πετσάρια, which was a game with five stones, which were thrown up from the upper part of the hand and caught in the palm. 6. The σκάφηρα, which was a game in which a rope was drawn through the upper part of a tree or a post. Two boys, one on each side of the post, turning their backs towards one another, took hold of the ends of the rope and tried to pull each other up. This sport was also one of the amusements at the Attic Dionysia. (Hesych. s. v.) These few games will suffice to show the character of the gymnastic sports.

The more important games, such as running (δρόμος), throwing of the discus and the σκόρπιον, jumping and leaping (άλμα, with and without αλάττης), wrestling (πάλη), boxing (πυργαί), the panmentum (πανκέταμον), πεντάθλος, λαμπαδορία, dancing (δράχίστας), &c., are described in separate articles.

A gymnasia was, as Vitruvius observes, not a Roman institution, and Dionysius of Halicarnassus (Ant. Rom. vii. 70—72), expressly states that the whole παραγωγή των Ῥωμαίων, though it was practised at an early period in the Ludi Maximi, was introduced among the Romans from Greece. Their attention, however, to developing and strengthening the body by exercises was considerable, though only for military purposes. The regular training of boys in the Greek gymnastics was foreign to Roman manners, and even held in contempt. (Plut. Quaest. Rom. 40.) Towards the end of the republic many wealthy Romans, who had acquired a taste for Greek manners, used to attach to their villas small places for bodily exercise, sometimes called gymnasia, sometimes palaestrae, and to adorn them with beautiful works of art. (Cic. ad Att. i. 4, iv. 3.) The emperor Nero was the first who built a public gymnasia at Rome (Sueton. Ner. 12); another was erected by Commodus. (Herod. i. 12.) But although these institutions were intended to introduce Greek gymnastics among the Romans, yet they never gained any great importance, as the magnificent thermae, amphitheatres, and other colossal buildings had always greater charms for the Romans than the gymnasia.

For a fuller account of this important subject, which has been necessarily treated with brevity in this article, the reader is referred to Hieronymus Mercurialis, De Arte Gymnastica, Libri vi. et ed. Venice, 1573, 4th ed. 1601; Burette, Histoire des Athlètes, in the Mem. de l'Acad. des Inscriptions, i. 3; G. Lübcke, Die Gymnastik der Hellenen, Münster, 1835; Wachsmuth, Hellen. Alterth. vol. ii. p. 344, &c. 2d. ed.; Müller, Dor. iv. 5, § 4, &c. ; Becker, Gallus, vol. i. p. 270, &c.; Charidès, vol. i. pp. 309—345; and especially J. H. Krause, Die Gymnastik und Agonistik der Hellenen, Leipzig, 1841; Olym, and Gymn. Werners, ii. 1838; von Pflüger, Mundi, &c., Leipzig, 1841. The histories of education among the ancients, such as those of Hochheimer, Schwartz, Cramer, and others, likewise contain much useful information on the subject. [L. S.]

The Relation of Gymnastics to the Medical Art. —

The games of the Greeks had an immediate influence upon the art of healing, because they considered gymnastics to be almost as necessary for the preservation of health, as medicine is for the cure of diseases. (Hippocrates, De Locis in Homine, vol. ii. p. 138, ed. Kühn; Timaeus Locrensis, De Animal. Mundi, p. 584, in Gal's Opusc. Mythol.) It was for this reason that the gymnasia were dedicated to Apollo, the god of physicians. (Plut. Symp. viii. 4, § 4.) The directors of these establishments, as well as the persons employed under their orders, the bathers or aliptae, passed for physicians, and were called so, on account of the skill which long experience had given them. The directors, called παλαστροφάδες, regulated the diet of the young men brought up in the gymnasia; the sub-directors or gymnastics, prescribed for their diseases (Plat. de Leg. xi. 916); and the inferiors or bathers, aliptae, inter alia, practiced blood-letting, administered oysters, and dressed wounds, ulcers, and fractures. (Plat. Leg. iv. p. 720; Celsius, de Medic. i. 1; Plin. H. N. xxix. 2.) Two of these directors, Icicus, of Tarentum, and Herodicus, of Selymbria, a town of Thrace, deserve particular notice for having contributed to unite more closely medicine and gymnastics. Icicus, who appears to have lived before Herodicus (Olym. lxvii. Stephan. Byzant. v. Tapds, p. 693; compare Paus. vii. 10, § 2), gave his chief attention to correcting the posture of the wrestlers, and to accustoming them to greater moderation and abstinence, of which virtues he himself was a perfect model. (Plat. de Leg. viii. p. 840; Aelian, Var. Hist. xi. 3; Id. Hist. Animal. vi. 1.) Plato considers him, as well as Herodicus, to have been one of the inventors of medical gymnastics. (Plat. Protagor. § 20, p. 316; Lucian, De Conscrib. Hist.)
a short time before the Peloponnesian war. Plato says that he was not only a sophist (Plat. Prolog. ii. c.), and tried if gymnastic exercises would not help to improve it; and having perfectly succeeded, he recommended several sorts of exercises upon proper occasions; as first, friction or chafing, as he recommended his patients to bring down the bloatedness of the solid parts, in some cases he advises the 110X17, or common wrestling, hands only, without coming close, and also the terous and regular motion of the hands, and upper parts of the body, something after a military man ; the 'AAiySrjtns, or rolling in sand ; and once 'ITTTTOI, the open field.

As for Galen, he follows Hippocrates in this, as closely as in other things, and declares his opinion of the benefit of exercises in several places; his second book "De Saunitate Tuenda," is wholly upon the use of the strigil, or the advantage of

regular chafing: he has written a little tract, Peri tou idia Miprat SIAOIAI Gymnasion, where he recommends an exercise, by which the body and mind are both at the same time affected. In his discourse to Thrasylalus, Pó- teron I'rsipniks, where he inveighs against the athletic and other violent practices of the gymnasion, but approves of the more moderate exercises, as subservient to the ends of a physician, and consequently part of that art. The other Greek writers express a similar opinion; and the sense of most of them in this matter is collected in Orbihaus' "Collecta Medicinalia." In those remains which are preserved of the writings of Antyllus, we read of some sorts of exercises that are not mentioned by Galen or any former author; among the rest the Cricocia as the translators by mistake call it, instead of Cricoicias. This, as it had for many ages been disused, Mercurialis himself, who had made the most judicious inquiries into this subject (De Arte Gymnastica, 4to. Amst. 1672), does not pretend to explain; and I believe, says Freind (Hist. of Physic, vol. ii. p. 228), he much abused the exercise of gymnastic, as he recommended his patients to walk from Athens to Megara and to return as soon as they had reached the walls of the latter town.

The author of the sixth book De Mort. Vulgar. (Hippocr. Epist. vi. c. 3. vol. iii. p. 593) agrees with Plato: "Herodicus, says he, "caused people, attacked with fever, to die from walking and too hard exercise, and many of his patients suffered much from dry rubbing."

A short time after we find, says Fuller (Medicina Gymnastica, &c. Lond. 1718, 8vo), that Hippocrates (De Victoriai. iii. vol. i. p. 716), with some sort of glory, assumes to himself the honour of bringing that method to a perfection, so as to be able to distinguish πότερον το σίτιον κρατεί τοις πόνοι, ἢ οἱ πόνο τα στίγμα, ἢ μετρίας ἔχει πρός θάλαμα, as he expresses it. Pursuant to this, we find him in several places of his works recommending several sorts of exercises upon proper occasions as first, friction or chafing, the effects of which he explains (De Victoriai. ii. p. 701), and tells us, that in some cases it will bring down the bluntedness of the solid parts, in others it will incan and cause an increase of flesh, and make the part thrive. He advises (ibid. p. 700) walking, of which they had two sorts, their round and straight courses. He gives his opinion (ibid. p. 701) of the 'Aneakhsma, or preparatory exercises, which served to warm and fit the wrestlers for the more vehement ones. In some cases he advises the 'Teleia, or common wrestling by (ibid.), and the 'Axe económico, or wrestling by the hands only, without coming close, and also the Karpoumuaxia, or the exercise of the Corycus, or the hanging ball (see Antyllus, opud Mercur. de Arte Gymn. p. 123); the Xersopanax, a sort of dexterous and regular motion of the hands, and upper parts of the body, something after a military manner; the 'Alydhsia, or rolling in sand; and once (ibid. p. 700) we find mentioned, with some approbation, the ἠνεκριτος Ἕρυη, Equi Indefiniti, by which is probably meant galloping long courses in the open field.

As for Galen, he follows Hippocrates in this, as closely as in other things, and declares his opinion of the benefit of exercises in several places; his second book "De Saunitate Tuenda," is wholly upon the use of the strigil, or the advantage of

* "The distance from Athens to Megara was 210 stadia, as we learn from Procopius. (Bell. Vandal. l. 1.) Dion Chrysostom calls it a day's journey. (Orat. vi.) Modern travellers reckon eight hours. (Doddweil, Class. Tour, vol. ii. p. 177.)" Cranmer, Aes. Grecae, vol. ii. sect. 15, p. 400."
chief remedies. As for the other more common exercises, they were daily practised, as is manifest from Celsus, Caelius Aurelianus, Theodorus Priscianus, and the rest of the Latin physicians. And we do not want instances of cures wrought by these means. Suetonius (Calig. c. 3) tells us that Germanicus was cured of a "crurm gracilitas," as he expresses it (by which he probably means an Atrophy), by riding; and Plutarch, in his life of Cicero, gives us an account of his weakness, and that he recovered his health by travelling, and excessive diligence in rubbing and chafing his body. (Compare Cic. Brut. c. 91.) Pliny (H. N. xxxi. 33) tells us Amneus Gallio, who had been consul, was cured of a consumption by a sea voyage; and Galen gives us such accounts of the good effects of particular exercises, and they were practised so universally by all classes, that it cannot be supposed but they must have been able to produce great and good effects. However, from an attentive perusal of what we find on this subject in the classical authors, the reader can hardly fail of being convinced that the ancients esteemed gymnastics too highly, just as the moderns too much neglect them; and that in this, as in many other matters, both in medicine and philosophy, truth lies between the two extremes. [W. A. G.]

GYMNASTES. [GYMNASIUM, p. 581, b.]

Gymnasti or Gymnastes (γυμναστής, or γυμνιτής), were a class of bond-slaves at Argos, who may be compared with the Helots at Sparta. (Steph. Byz. s. v. Χώρας; Polliux, iii. 63.) Their name shows that they attended their masters on military service in the capacity of light-armed troops. (Müller, Dor. iii. 4 § 2) remarks that it is to these gymnasi that the account of Herodotus (vi. 83) refers, that 6000 of the citizens of Argos having been slain in battle by Cleomenes, king of Sparta (id. vii. 148), the slaves got the government into their own hands, and retained possession of it until the sons of those who had fallen had grown to manhood. Afterwards, when the young citizens had grown up, the slaves were compelled by them to retire to Tyryns, and then after a long war, as it appears, were either driven from the territory.

GYMNOPAEDIA (γυμνοπαεία), the festival of "naked youths," was celebrated at Sparta every year in honour of Apollo Pythaeus, Artemis, and Leto. The statues of these deities stood in a part of the Agora called X0/ an(i it was around every year in honour of Apollo Pythaeus, Artemis, and Leto. The statues of these deities stood in a part of the Agora called X0/ an(i it was around every year in honour of Apollo Pythaeus, Artemis, and Leto. The statues of these deities stood in a part of the Agora called X0/ an(i it was around...
engaged for the occasion had to give in their names to the γυραυκοβόης. (Athen. l. c.) They had also to punish those men who showed their effeminate character by frantic or improper wailing at their own or other persons' misfortunes. (Plut. l. c.) The number of these officers is unknown. Meier (Att. Proc. p. 97) thinks that they were appointed by lot; but Hermann (Pol. Ant. § 150. n. 5), referring to Menander (Rhet. de Encom. p. 105, ed. Heeren), reckons them among those officers who were elected. [L.S.]

H.

HABÈNE'NAE (ἁβιά) were, generally speaking, leathern thongs, by means of which things were held and managed. Hence the word was in particular applied—1. To the reins by means of which horses were guided and managed. (Virg. Aen. x. 576, xi. 670, 765, xii. 327.) The habenae were, as with us, fixed to the bit or bridle (fraenum).

2. To the thongs attached to a lance, by which it was held and wielded. (Lucan. vi. 221.) [Compare HASTA, p. 558, a.]

3. To the thongs which were formed into a sling, by means of which stones were thrown. (Lucan. iii. 710; Valer. Flacc. v. 609.)

[Funda.] 4. To thongs by means of which the sandals were fastened to the feet. (Gellius, xiii. 21. 4.) From this passage it is also clear that the habenae in this case were not always made of leather, but of strings or chords, whence Gellius calls them teretes habenae. 5. To the thongs formed into a scourge with which young slaves were chastised. (Horat. Epist. ii. 2. 15.) The commentators on this passage, indeed, differ about the meaning of habenae; but if we consider the expressions of Ulpius (Dig. 29. tit. 5. § 33), impubeseris servi tertiarii tontum solent, et habena vel ferula caudis, it is clear that the habena is the scourge itself. (Comp. Of. Heroid. ix. 81; Virg. Aen. vii. 330.) [L.S.]

HABITAT'TIO. [SERVITU'TES.]

HA'ERES. [HERES.]

HALIA (ała). [AGORA.]

HALMA (ała). [PIKATHLON.]

HAL'O'A (الة). [ALOA.]

HAL'TERES (αλτέρες) were certain masses of stone or metal, which were used in the gymnastic exercises of the Greeks and Romans. Persons who practised leaping often performed their exercises with halters in both hands; but they were also frequently used merely to exercise the body in somewhat the same manner as our dumb-bells. (Martial, xiv. 49, vii. 67. 6; Pollux, iii. 155, x. 64; graces massae, Juv. vii. 421; Senec. Ep. 15, 56.) Pausanias (v. 26. § 3, v. 27. § 8, vi. 3. § 4) speaks of certain statues of athletes who were represented with halters. They appear to have been made of various forms and sizes. The preceding woodcut is taken from Tassie, Catalogue, &c. pl. 46, No. 7976. (Mercurialis, De Arte Gymnastica, ii. 12; Becker, Gallus, vol. i. p. 277; Krause, Die Gymnastik und Agonistik der Hellenen, vol. i. p. 385.)

HARMAXA (ἡμαξα). [HARMAMAXA; PLAUS-TUM.]

HAXAM'OXODES (ἁμαξωνοδῆς), in Latin, ARBUSCULAR, appear to have been cylindrical pieces of wood, placed vertically, and with a socket cut in the lower end, to receive the upright pivot fixed above a wheel or above the middle of the axis of a pair of wheels, which could thus turn horizontally in every direction. One use of this sort of socket was to unite the axis of the fore-wheels of a chariot to the body (Pollux, i. 144, 253; Hesych. s. v. ἁμαξωνοδῆς); another use of it was to attach the wheels of a testudo to the framing in such a manner, that the machine might easily be moved in any direction: in fact, the arbuscula and the wheel together formed a castror or universal joint. (Vitrus, x. 20. § 14, § 1, ed. Schneider.) Newton (ad loc.) supposes that, for the latter purpose, a single piece of timber would be both clumsy and insufficient, and that the arbuscula must have been a sort of framing. (See his figure, No. 11.)

[Compare P. S.]

HARMA (ἡμα). [CURRUS; HARMAMAXA.]

HARMAMAXA (ἁμαμάξα) is evidently compounded of ἁμα, a general term, including not only the Latin CURRUS, but other descriptions of carriages for persons; and ἁμαξα, which meant a cart, having commonly four wheels, and used to carry loads or burdens as well as persons. (Hes. Op. et Dies, 692; Hom. Il. vii. 426, xxiv. 782.) The harmanaxa was a carriage for persons, in its construction very similar to the CARPENTUM, being covered overhead and inclosed with curtains (Diod. xi. 56; Charito, v. 2, 3), so as to be used at night as well as by day (Xen. Cyr. iv. 2. § 15); but it was in general larger, often drawn by four horses, or other suitable quadrupeds, and attired with ornaments more splendid, luxurious, and expensive, and in the Oriental style. (Diod. xvi. 35; Aristoph. Achar. 70.) It occupied among the Persians (Max. Tyr. 34) the same place which the carpentum did among the Romans, being used, especially upon state occasions, for the conveyance of women and children, of eunuchs, and of the sons of the king with their tutors. (Herod. vii. 83, ix. 76; Xen. Cyr. iii. 1. § 8, iv. 3. § 11; Q. Curt. iii. 3. § 23.) Also, as persons might lie in it at length, and it was made as commodious as possible, it was used by the kings of Persia, and by men of high rank in travelling by night, or in any other circumstances when they wished to consult their ease and their pleasure. (Herod. vii. 41 Xen. Cyr. iii. 1. § 40.)

The body of Alexander the Great was transported from Babylon to Alexandria in a magnificent harmanaxa, the construction of which occupied two years, and the description of which, with its paintings and ornaments in gold, silver, and ivory, employed the pen of more than one historian.
HARPAGINETULI. (Diod. xviii. 26—28 ; Athen. v. p. 206, c ; Aelian, V. H. xii. 64.)

The harmanaxa was occasionally used by the ladies of Greece. A priestess of Diana is represented as riding in one which is drawn by two white cows (Heliod. Aeth. iii. p. 138, ed. Comenelini), and the coins of Ephesus show, that this carriage, probably containing also symbols of the attributes and worship of Diana, added to the splendour of the religious processions in that city. [J. Y.]

HARMOSTAE (from ἄρμος, to fit or join together) was the name of the governors whom the Lacedaemonians, after the Peloponnesian war, sent into their subject or conquered towns, partly to keep them in submission, and partly to abolish the tyrannical government of a town, and to restore its stead one similar to their own. (Diod. Sic. xiv. 10 ; Xen. 

It is uncertain how long the office of an harmost lasted; but it appears both from the etymology of the word καρπάκτιος, which is from καρπάς, and Demosthenes (De Coron. p. 259) use in speaking of the harmostae. (Compare Demosth. c. Timocr. p. 740 ; Plut. Narrat. Amat. c. 3.) Even Xenophon (De Rep. Lac. c. 14) could not help censoring the Lacedaemonians for the manner in which they allowed their harmostae to govern.

HARMOSTAE was merely another name for kings. How little sincere the Lacedaemonians were in their professions to re-store their subject towns to freedom was manifest after the peace of Antalcidas; for although they had pledged themselves actually to re-establish free governments in the various towns, yet they left them in the hands of the harmostae. (Polyb. iv. 27.) The character of their rule is sufficiently described by the word καρπάκτιος, which is from καρπάς, and Demosthenes (De Coron. p. 259) use in speaking of the harmostae. (Compare Demosth. c. Timoc. p. 740 ; Plut. Narrat. Amat. c. 3.) Even Xenophon (De Rep. Lac. c. 14) could not help censoring the Lacedaemonians for the manner in which they allowed their harmostae to govern.

HARPAGES GRAPHE (ἀπτρεύς, to fit or join together) was the name of the governors whom the Lacedaemonians, after the Peloponnesian war, sent into their subject or conquered towns, partly to keep them in submission, and partly to abolish the tyrannical government of a town, and to restore its stead one similar to their own. (Diod. Sic. xiv. 10 ; Xen. 

These instruments appear to have been much the same as the manus ferreæ (manus ferreæ atque harpagoes, Caes. B. C. i. 57 ; Q. Curt. iv. 9 ; Dion Cass. xliii. 3, l. 32, 34). The manus ferreæ were employed by the Consul Duilius against the Carthaginians (Flor. ii. 2 ; Front. Stratag. ii. 3, § 24), and were said to have been invented by Pericles. (Plin. H. N. vii. 57.) [J. Y.]

HARPASTUM (αρπαστῶν from ἄρπασα) was a ball, used in a game of which we have no accurate account; but it appears both from the etymology of the word and the statement of Galen (Περὶ μυκῶν Στάδος, p. c. 902, ed. Kühn), that a ball was thrown among the players, each of whom endeavoured to obtain possession of it. (Comp. Pollux, ix. 108, 109 ; Athen. i. p. 108, d.)

The game required a great deal of bodily exertion. (Martial, vii. 67. 4 ; comp. xiv. 48.) (See Becker, Gallus, vol. i. p. 271 ; Krause, Gymnastik und Agonistik der Hellenen, vol. i. pp. 307, 308.)

HARUSPICES, or ARUSPICES, were soothsayers or diviners, who interpreted the will of the gods. They originally came to Rome from Etruria, whence haruspices were often sent for by the Romans on important occasions. (Liv. xxvii. 37 ; Cic. Cat. iii. 8, de Div. ii. 4.) The art of the haruspices resembled in many respects that of the augurs; but they never acquired that political importance which the latter possessed, and were regarded rather as means for ascertaining the will of the gods than as possessing any religious authority. They did not in fact form any part of the ecclesiastical polity of the Roman state during the republic; they are never called augures; they did not form a collegium, and had no magistrate at their head. The account of Dionysius (ii. 22),
that the haruspices were instituted by Romulus, and that one was chosen from each tribe, is opposed to all the other authorities, and is manifestly incorrect. In the time of the emperors, we read of a collegium or order of sixty haruspices (Tacit. Ann. xi. 15; Orelli, Inscrip. i. p. 389); but the time of its institution is uncertain. It has been supposed that such a collegium existed in the time of Cicero, since he speaks of a suumus maigster (de Div. ii. 24); but by this we are probably to understand not a maigster collegii, but merely the most eminent of the haruspices at the time.

The art of the haruspices, which was called haruspicia, consisted in explaining and interpreting the will of the gods from the appearance of the entrails (exa) of animals offered in sacrifice, whence they are sometimes called extispices, and their art extispicium (Cic. de Div. ii. 11; Suet. Ner. 56); and also from lightning, earthquakes, and all extraordinary phenomena in nature, to which the general name of portenta was given. (Valer. Max. i. 1. § 1.) Their art is said to have been invented by the Etruscan Tages (Cic. de Div. ii. 23; Festus, s. v. Tages), and was contained in certain books called livi haruspincic, fulgurates, and tonitrataes. (Cic. de Div. i. 53; compare Macrob. Saturm. iii. 7).

This art was considered by the Romans so important at one time, that the senate decreed that a certain number of young Etruscans, belonging to the principal families in the state, should always be instructed in it. (Cic. de Div. i. 41.) Niebuhr appears to be mistaken in supposing the passage in Cicero to refer to the children of Roman families. (See Orelli, ad loc.) The senate sometimes consulted the haruspices (Cic. de Div. i. 43, ii. 35; Liv. xxvii. 37), as did also private persons. (Cic. de Div. ii. 29.) In later times, however, their art fell into disrepute among well-educated Romans; and Cicero (de Div. ii. 24) relates a saying of Cato, that he wondered that one haruspex did not laugh when he saw another. The Emperor Claudius attempted to revive the study of the art, which had then become neglected; and the senate, under his directions, passed a decree that the pontifices should examine what parts of it should be retained and established (Tacit. Ann. xi. 15); but we do not know what effect this decree produced.

The name of haruspex is sometimes applied to any kind of soothsayer or prophet (Prop. iii. 19), whereas Juvenal (vi. 550) speaks of Armerius vel Commagenus haruspex.

The latter part of the word haruspex contains the root spec; and Donatus (ad Ter. Phorm. iv. 4. 28) derives the former part from haruga, a victim. Compare Festus, s. v. Harriga, and Varro, De Ling. Lat. v. 98, ed. Müller. (Gotting. Gesch. der Rom. Staaten, p. 213; Walter, Gesch. des Röm. Rechts, §§ 142, 770, 2nd ed.; Brissanius, De Formulis, i. 28, &c.)

HASTA (γχος, παλτων), a spear. The spear is defined by Homer, δορυ χαλκηπες, "a pole fitted with bronze" (Il. vi. 3), and δορυ χαλκεοβαρες, "a pole heavy with bronze" (Od. xi. 531). The bronze, for which iron was afterwards substituted, was indispensable to form the point (αίχημ, ávχημ, Homer; ἀγχης, Xenophon; osīex, cuspis, spiculum, Ovid, Met. viii. 375) of the spear. Each of these two essential parts is often put for the whole, so that a spear is called δορυ and δορατων, αίχημ, and ἀγχης. Even the more especial term μελις, meaning an ash-tree, is used in the same manner, because the pole of the spear was often the stem of a young ash, stript of its bark and polished. (H. N. xxi. 327, xxv. 328, Od. xxi. 329; Plin. H. N. xvi. 24; Ovid, Met. xii. 369.) In like manner the spear is designated by the term κάμια (Aesch. Ag. 65; Eurip. Hec. 1155, Phoenix. 1421; Bruckn, Anal. i. 191, 226; Ant. Sid. 34), meaning properly the strong tall reed of the south of Europe, which served both for spears and for various other uses. (Hes. Sat. 298; Schol. in loc.; Xen. de Rer. Exspect. xii. 12.) The bottom of the spear was often inclosed in a pointed cap of bronze, called by the Ionic writers σαυρωτόκς (Hom. Il. x. 157; Herod. vii. 40, 41; also Polyb. vi. 23), and φιλίακος (Il. xiii. 443, xvi. 612, xvii. 528), and in Attic or common Greek στύραξ. (Xen. Hellen. vi. 2, § 19; Athen. xii. p. 514, b, στυράκω, Thuc. ii. 4; Aen. Tact. 18.) By forcing this into the ground the spear was fixed erect. (Virg. Aen. xii. 130.) Many of the lancers (δοροφόροι, αίχωμοφόροι, λογχεφόροι, woodcut, p. 237), who accompanied the king of Persia, had, instead of this spike at the bottom of their spears, an apple or a pomegranate, either gilt or silvered. (Herod.: Athen.; Il. oc.) With this, or a similar ornament, the spear is often terminated both on Persian and Egyptian monuments. Fig. 1. in the annexed woodcut shows the top and bottom of a spear, which is held by one of the king's guards in the sculptures at Persepolis. (Sir R. K. Porter's Travels, vol. i. p. 601.) It may be compared with those in the hand of the Greek warrior at p. 133, which have the spike at the bottom. The spike at the bottom of the spear was used in fighting by the Greeks and Romans, when the head was broken off. (Polyb. vi. 25.)

A well-finished spear was kept in a case (δορατοθηκή), which, on account of its form, is called by Homer a pipe (σφυρίκ, Il. xiii. 387). The spear was used as a weapon of attack in three different ways:—1. It was thrown from catapults and other engines [TORMENTUM]. 2. It was thrust forward as a pike. In this manner Achilles killed Hector by piercing him with his spear through the neck. (Il. xxii. 326.) The Euboeans...
were particularly celebrated as pikemen. (Hom. II. ii. 543.) 3. It was commonly thrown by the hand. The Homeric hero generally went to the field with two spears. (Hom. II. iii. 18, x. 76, xii. 298; Pind. Pyth. iv. 139.) On approaching the enemy he first threw either one spear or both, and then on coming to close quarters drew his sword. (Hom. II. iii. 340, xvii. 530, xx. 273—284.) The spear frequently had a leathern thong tied to the middle of the shaft, which was called ἄγγιον by the Greeks, and ammenos by the Romans, and which was of assistance in throwing the spear. (Pollux, l. 136; Schol. ad Eurip. Orest. 1477; Xen. Anab. iv. 2, § 28; Virg. Aen. ix. 665; Ov. Met. xii. 321; Cic. de Orat. i. 57.) The annexed figure, taken from Sir W. Hamilton’s Etruscan Vases (iii. pl. 33), represents the ammenum attached to the spear at the centre of gravity, a little above the middle.

We are not informed how the ammenum added to the effect of throwing the lance; perhaps it was by giving it rotation, and hence a greater degree of steadiness and directness in its flight, as in the case of a ball, shot from a rifle-gun. This supposition both suits the expressions relative to the insertion of the fingers, and accounts for the frequent use of the verb ἀγγυρεῖ, to whirl, or twist, in connection with this subject. We also find mention in the Latin grammarians of hastae ansatae, and Ennius speaks of Ansate concurrendi undique tellis (Macrob. Sat. vi. 1). The annexed figure, taken from Sir W. Hamilton’s Etruscan Vases (iii. pl. 33), represents the ammenum attached to the spear at the centre of gravity, a little above the middle.

Under the general terms hasta and ἵστατος were included various kinds of missiles, of which the principal were as follow:

1. The spear (Hasta ansata, Spiræa). This weapon was used by the Grecian horsemen (Polyb. vi. 23); and by means of an appendage to it, which is supposed by Stuart (Ant. of Athens, vol. iii. p. 47; woodcut, fig. 2) to be exhibited on the shafts of three spears in an ancient bas-relief, they mounted their horses with greater facility. (Xen. de Re Equest. vii. xii.)

2. The javelin (βοῶρα), the javelin, much thicker and stronger than the Grecian lance (Flor. ii. 7), as may be seen on comparing the woodcuts at pp. 135 and 136. Its shaft, often made of cornel (Virg. Aen. ix. 698; Ovid. Met. viii. 408), was four and a half feet (three cubits) long, and the barbed iron head was of the same length, but this extended half way down the shaft, to which it was attached with extreme care, so that the whole length of the weapon was about six feet nine inches. Each soldier carried two. (Polyb. vi. 23.) (Exercitus, p. 497, a.) It was used either to throw or to thrust with; it was peculiar to the Romans, and gave the name of pilari to the division of the army by which it was adopted. When Marius fought against the Cimbri, he ordered that of the two nails or pins (ερεύδων) by which the head was fastened to the shaft, one should be of iron and the other of wood. The consequence was, that, when the pilum struck the shields of the enemy, the wooden nail broke, and as the iron head was thus bent, the spear, owing to the twist in the metal part, still held to the shield and so dragged along the ground. (Plut. Mar. 25.)

3. The long lance and the thick and ponderous javelin, the light-armed used smaller missiles, which, though of different kinds, were included under the general term hastae vetiles (Liv. xxviii. 40; Plin. H. N. xxvii. 6). From γρότος, the corresponding Greek term (Polyb. i. 40; Strabo, iv. 4, § 3), the velites, or light-armed, are called by Polybius γρόσπομαχοι (vi. 19, 20). According to his description the γρότος was a dart, with a shaft about three feet long and an inch in thickness; the iron head was a span long, and so thin and acuminate as to be bent by striking against any thing, and thus rendered unfit to be sent back against the enemy. (Fig. 3, in the preceding woodcut, shows one which was found, with nearly four hundred others, in a Roman entrenchment at Moon Hill, in Gloucestershire. (Skelton’s Engraved Illustrations, vol. i. pl. 45.)

The light infantry of the Roman army used a similar weapon, called a spic (vera, veratum, Liv. xxi. 55; σαπιόν, Diol. Sic. xiv. 27; Festus, s. v. Samnites). It was adopted by them from the Samnites (Virg. Aen. vii. 665), and the Volsci (Georg. ii. 108). Its shaft was ¾ feet long, its point five inches. (Veget. ii. 15.) Fig. 4, in the preceding woodcut, represents the head of a dart in the Royal Collection at Naples; it may be taken as a specimen of the veratum, and may be contrasted with fig. 5, which is the head of a lance in the same collection. The Romans adopted in like manner the gæsum, which was properly a Celtic weapon (Liv. xxviii. 45); it was given as a reward to any soldier who wounded an enemy. (Polyb. vi. 37.) Sparus is evidently the same word with the English spear and spear. It was the rudest missile of the whole class, and only used when better could not be obtained. (Virg. Aen. xi. 682; Sallust, Cat. 58; Gall. x. 25.)
Besides the terms *jaculum* and *spiculum* (**κωνο**, **δειντων**), which probably denoted darts, resemb-
bling in form the lance and javelin, but much smaller, adapted consequently to the light-armed
*Jaculatores*, and used in hunting as well as in battle (Thucyd. ii. 4; Virg. Aen. ix. 52; Serv. in
loc.; Ovid, *Met.* viii. 411; Cis. *ad Fam.* v. 12; Flor. ii. 7), we find in classical authors the names
of various other spears, which were characteristic
of particular nations. Thus, Servius states
vii. 664), that, as the
exceeded in length all other missiles. [See p.
Romans, and the
488, a.] It was made of cornel, the tall dense
stems of which also served to make spears of other
probably not unlike the sarissa; since Livy asserts
v. 36, 22: the hasty conjecture that these **ΚΤΧΧ** must have
been of
fastened into the body of a gladiator lying dead on
the arena, was used at marriages to part the hair
of a fellow-citizen, was a spear
when tenders were received for public offices
(hasta). The iron head of the German spear, called
framea, was short and narrow, but very sharp.
The Germans used it with great effect either as
a lance or a pike: they gave to each youth a
framea and a shield on coming of age. (Tacit.
Pkalarica and ponderous, having a head of iron a cubit in
length, sometimes recorded in funereal inscriptions.
fixed into the body of a gladiator lying dead on
the court of the CENTUMVIRI.
It was also the practice to set up a spear in the
court of the CENTUMVIRI.
The throwing of spears (**κωμοσκοι**) was one of
the gymnastic exercises of the Greeks, and is
described at length by Krause (Gymnastik und Agon-
istik der Hellenen, vol. i. p. 465, &c.). [J. Y.]
HASTA. [**EXERCITUS**, pp. 494—496, 501, 502.]
**HECATOMBAREA.** [**HERERA.**]
**HECATOMBAEON.** [**CALENDARIUM**,
**GREEK.**]
**HECATOMBE.** [**SACRIFICIUM.**]
**HECATOMPEDON.** [**PES; TEMPLUM.**]
**HECATOSTE (**κασατοσση**).** [**PRONTECOSTE.**]
**HECTE or HECTUS (**εκτης, **εκτεις**),
and its half, *Hemitecton or Hemiecton* (**εκιεκτον, **εκιεκτοτων**), are terms which occur, in more than one
sense, in the Greek metrical system, and are interesting on account of the examples they furnish of the
duodecimal division.
1. In dry measures, the *hectes* was the sixth
part of the *metimnas*, and the hemitecton, of course,
the twelfth part. (Aristoph. *Ecd.* 547, *Nub.* 639,
645.) The *hectes* was equal to the Roman *modius",
as each contained 16 **ξετα** or sextarii. (Böckh,
*Metrol. Untersuch.* pp. 33, 200.)
2. The *Hecte or Hectes* and *Hemicton* were also
the names of coins, but the accounts we have of
their value are very various. The only consistent
explanation is, that there were different *hectes*,
derived from different units; in fact, that these coins
were not properly denominations of money, but sub-
divisions of the recognised denominations. This
view is confirmed by the statement of Hesychius,
that the words **εκτης, τριτης, and τεταρτη** were
applied to coins of gold, silver, and copper; that is,
that we think, that the various denominations of money
were subdivided for convenience into thirds, fourths,
and sixths, which would be of gold, silver, and
copper, according to the value of their respective
units. (Hesych. *s. v. **εκτης.**)
Now, since the drachma
was the unit of the silver coinages, which chiefly
prevailed in Greece, we might expect, *a priori*,
that the common *hectes* would be the sixth of a
drachma, that is, an obol; and that there was
such a *hectes*, as expressly stated by Hesychius,
who gives **ξεκιεκτον** as the equivalent of **εκιεκτον**
(*s. v.*). But then from a passage of the comic poet
Crates (Pollux, i. 374), we learn that the
*hemicton of gold* was eight obols, the natural in-
terpretation of which is, that it was *equal in value
**HASTE.**

who gives **ξεκιεκτον** as the equivalent of **εκιεκτον**
(*s. v.*). But then from a passage of the comic poet
Crates (Pollux, i. 374), we learn that the
*hemicton of gold* was eight obols, the natural in-
terpretation of which is, that it was *equal in value
eight silver obols or (according to Mr. Hussey's
computation of the drachma), a little more than 135d.,
which is certainly a very small value for a gold
coin. This objection Böckh meets by supposing
that the gold had a very large mixture of alloy;
and the probability of this will appear further pre-
sently.

This stater could not have been an Attic
coin, for at that time Athens had no gold money:
the question therefore arises, to what foreign state
it belonged? Now, among the foreign states,
which were current at Athens in the fifth century
B.C., that of Phocaea is frequently mentioned,
and an inscription exists (found in the Acropolis) in
which, among certain offerings, we find *Phocaean
staters*, and **εκτα** *Phoconides* (Böckh, *Corp. Inscr.*
No. 150, lines 41, 43, vol. i. pp. 231, 245. §§ 19,
22: the hasty conjecture that these **εκτα** must have
been of silver, is corrected by Böckh himself, in his
*Metrologische Untersuchungen*, p. 135). Little
doubt can remain that these **εκτα** were the sixth,
and the hemieicta of Crates the twelfth of the Phocaea stater. The weight of the hemieicta would be a little less than that of the Attic obol; and their value would therefore give a ratio of gold to silver, as 8 to 1, a low value for gold, it is true, but one easily explained by the fact, conjectured by Büchh, and distinctly stated by Heuschius (s.v. Φωκαίς), that the Phocaea gold money was very base; this fact also will explain the light weight of the coin as compared with the Attic obol. The result of this somewhat intricate discussion seems to us both clear and consistent: namely, that the standard weight, the drachma, was divided, on the duodecimal system, into sixths (ἐκτριαί or διδραχμαί), and twelfths, ἰσημεία: that Athens had silver coins of these weights: and that, in those states which used a gold coinage, of which the unit was a stater equal (generally) in weight to two drachmae and in value to twenty, this stater was subjected to a similar duodecimal division, by which the sixth (ἐκτριαί or ἰσημεία) became in weight a piece of two obols, and the twelfth (ἰσημεῖα) a piece of one obol. The values of these coins (according to the average ratio of the value of gold to that of silver, namely 10 : 1) would have been 20 obols and 10 obols respectively; but those of Phocaea were so light and debased, that they were only worth 16 and 8 respectively of the obols of Athens, whose coinage was proverbially pure. 

P. S.

Hekteomōri (ἐκτητομοι), a name given to the poor citizens of Attica before the time of Solon, who cultivated the fields of the rich and received only a sixth part (hence their name) of the produce. (Hesych. s.v. ἐκτητομοί; Eustath. ad Hom. Od. xix. 26, p. 689, 49, ed. Basili, p. 1854, ed. Rom.) Plutarch (Solon, 13) seems to have made a mistake in stating that they paid a sixth portion to their masters, and retained five-sixths themselves. (Comp. Schömann, De Comitiis, p. 362, Antiq. Jur. Publ. Graec. p. 169; Hermann, Lehrbuch d. Griech. Staatsalterth. § 101, n. 10.)

Hedna (ἡδνα). (Dios.)

Hegemōnia Dicaste'riou (ἡγεμονία δικαστηρίου). (Eisagogeis.)

Hegistōriris (Ἡγίστορηρις).

Heirmou Graphei' (ἡερμοῦ γραφεῖ). This was an action for false imprisonment of a free citizen or stranger, and keeping such person in private custody. There are no orations upon this subject extant, nor indeed any direct allusions to it by name; but it is hinted at as a remedy that might have been adopted by Agatharchus, the painter, for the restraint put upon his personal liberty by Alcibiades (Andoc. c. Ale. p. 118); and in a passage of Deinarchus (c. Dem. 17), where a miller is mentioned to have incurred capital punishment for a like offence. The themotheretae probably presided in the court before which offenders of this kind were brought to trial. (Meier, Att. Proc. p. 332.)

HELEPOLIS. (.XPathωλουs). When Demetrius Poliorcetes besieged Salamis, in Cyprus, he caused a machine to be constructed, which he called "the taker of cities." Its form was that of a square tower, each side being 90 cubits high and 45 wide. It rested on four wheels, each eight cubits high. It was divided into nine stories, the lower of which contained machines for throwing great stones, the middle large catapults for throwing spears, and the highest, other machines for throwing smaller stones, together with smaller catapults.

It was manned with 200 soldiers, besides those who moved it by pushing the parallel beams at the bottom. (Diod. xx. 48.)

At the siege of Rhodes, B.C. 306, Demetrius employed an helepolis of still greater dimensions and more complicated construction. Besides wheels it had castors (διαστριβόμενα), so as to admit of being moved laterally as well as directly. Its form was pyramidal. The three sides which were exposed to attack, were rendered fire-proof by being covered with iron plates. In front each story had port-holes, which were adapted to the several kinds of missiles, and were furnished with shutters that could be opened or closed at pleasure, and were made of skins stuffed with wool. Each story had two broad flights of steps, the one for ascending, the other for descending. (Diod. xx. 91; compare Vitruv. x. 22.) This helepolis was constructed by Epimachus the Athenian; and a much esteemed description of it was written by Dioecides of Abdera. (Athen. v. p. 206, d.) It was no doubt the greatest and most remarkable engine of the kind that was ever erected. In subsequent ages we find the name of "helepolis" applied to moving towers which carried battering rams, as well as machines for throwing spears and stones. (Amn. Marcell. xxiii.; Agathias, i. 18. p. 30, ed. Ven.; Nicet. Chon. Jo. Comment. p. 14, b.)

Towers of this description were used to destroy the walls of Jerusalem, when it was taken by the Romans. (Jos. B. J. ii. 19. § 9, iii. 6. § 2) (Aries; Tormentum.)

HELIARCA. [Dicasterion.]

HELOCAMIS'NUS. [Domus, p. 432, b.]

HELIX (ἠλίξ), anything of a spiral form, whether in one plane, as the spiral curve, or in different planes, as the screw.

1. In architecture, the spiral volutes of the Ionic and Corinthian capitals. The Roman architects, while they used the word volutes for the angular spirals, retained the term helices for the smaller spirals in the middle of each face of the Corinthian capital. (Vitruv. iv. 1. § 12.)

2. In mechanics, the word designates the screw in its various applications; but its chief use was to describe a machine used for pushing or drawing ships in the water from the beach, which was said to have been invented by Archimedes. (Athen. v. p. 207, a., with Casaubon's Notes.)

HELLANO'DICA (Ἑλλανοδικά), the judges in the Olympic games, of whom an account is given under OLYMPIA. The same name was also given to the judges or court-martial in the Lacedaemonian army (Xen. Rep. Lec. xiii. 11); and they were probably first called by this name when Sparta was at the head of the Greek confederacy.

Hellenotami'ae (Ἑλληνοταμίαι), or treasurers of the Greeks, were magistratest appointed by the Athenians to receive the contributions of the allied states. They were first appointed B.C. 477, when Athens, in consequence of the conduct of Pausanias, had obtained the command of the allied states. The money paid by the different states, which was originally fixed at 460 talents, was deposited in Delos, which was the place of meeting for the discussion of all common interests; and there can be no doubt that the hellenotamiæ not only received, but were also the guardians of these monies, which were called by Xenophon (De Vect. v. 5) Ελληνοταμία. (Thuc.
The Helots were regarded as the property of the state, which, while it gave their services to individuals, reserved to itself the power of emancipating them. (Ephorus, op. Strabo, I. c.) They were attached to the land, and could not be sold away from it. Several families, as many perhaps as six or seven, resided on each καβάρος, in dwellings of their own, either in detached farms or in villages. They cultivated the land and paid to their masters as rent a fixed measure of corn, the exact amount of which had been fixed at a very early period, the raising of that amount being forbidden under heavy impositions. (Plut. Inst. Lac. p. 255.) The annual rent paid for each καβάρος was eighty-two medimni of barley, and a proportionate quantity of oil and wine. (Plut. Lac. 8. 24.) The domestic servants of the Spartans were all Helots. They attended on their masters at the public meal; and many of them were no doubt employed by the state in public works.

In war the Helots served as light-armed troops (φιλάοι), a certain number of them attending every heavy-armed Spartan to the field; at the battle of Plateaean, there were seven Helots to each Spartan, and one to every hoplite of the Perioeci. (Herod. ix. 10. 29.) These attendants were probably called διαφεναρεῖς (i.e. διαφενάρεται, Hesych. s. v.), and one of them was in particular a slave or servant (Herod. vii. 229; Sturtz. Lex. Xen. s. v.); though διάθεναρ was also used by the Dorians as...
a general name for armed slaves. The Helots only served as hoplites in particular emergencies; and on such occasions they were generally emancipated, if they showed distinguished bravery. The first instance of this kind was in the expedition of Brasidas, B.c. 424. (Thucyd. iv. 80, v. 34, vii. 19.)

The treatment to which the Helots were subjected, as described by the later Greek writers, is manifest by the most wanton cruelty. Thus Myron states that “the Spartans impose upon them every ignominious service, for they compel them to wear a cap of dog’s skin, and to be clothed with a garment of sheep’s skin, and to have stripes inflicted upon them every year for no fault, that they may never forget that they are slaves. And besides all this, if any rise by their qualities above the condition of a slave, they appoint death as the penalty, and their masters are liable to punishment if they do not destroy the most excellent.” (Athen. xiv. p. 657.) And Plutarch (Lyc. 28) states that Helots were forced to intoxicate themselves, and perform indecent dances as a warning to the Spartan youth. These statements must be received with some caution. There is no evidence that they are true of the period before the Messenian wars; nor can we believe that such wanton and impolitic oppressions, provocations, and destruction of a valuable servile population formed any part of the original system of Lycurgus. What has been said above, respecting the legal condition of the Helota, indicates a very different state of things; and their real condition is probably not misrepresented by Grote, when he says:—“The Helots were a part of the state, having their domestic and social sympathies developed, a certain power of acquiring property (Plut. Cleom. 23), and the consciousness of Grecian lineage and dialect—all points of marked superiority over the foreigners who formed the slave population of Athens or Chios. They seem to have been no way inferior to any village population of Greece.” As is usual with serfs, every means was taken to mark the distinction between them and their masters: they were obliged to wear the rustic garb described above, and they were not permitted to sing any of the Spartan songs. (Plut. Lyc. 28.) But the state of things described in the above quotations belongs to a period when the fear of a servile insurrection had produced the natural result of cruel oppression on the one part and rebellious hatred on the other. That the cruelty of their masters knew no restraint when it was thus stimulated by fear, is manifest enough from the institution of the atrippeia [CRYPTEIA].

The Helots might be emancipated, but in that case, instead of passing into the class of Perioeci, they formed a distinct body in the state, known, at the time of the Peloponnesian war, by the general term of /ρωδιάμοις, but subdivided into several classes. Myron of Priene (ap. Athen. vi. p. 271 f.), enumerates the following classes of Helots:—/αμφιτρα, /δίστοτα, /ερκτυρίς, /δεσποινοπατα, and /νεοδαμώτες. Of these the /αμφιτρα were probably released from all service; the /ερκτυρίς were those employed in war; the /δεσποινοπατα served on board the fleet; and the /νεοδαμώτες were those who had been possessed of freedom for some time. Besides these there were the /μπανε or /μπάβαζες, who were domestic slaves, brought up with the young Spartans, and then emancipated. Upon being emancipated they received permission to dwell where they wished. [Compare CIVITAS (Greek), p. 300.]

(Miller, Dorian, iii. 3.; Hermann, Political Antiquities of Greece, §§ 19, 24, 28, 30, 48; Wachmuth, Hellen. Alterth. 2d ed. see Index; Manso, Sparta, see Index; Thirlwall's Hist. of Greece, vol. i. pp. 309—313; Grote, Hist. of Greece, vol. ii. pp. 494—499.)

HEMERA (ήμηρα). [DIS.] HEMERODROMI (ήμεροδρόμων), were couriers in the Greek states, who could keep on running all day, and were often employed to carry news of important events. As the Greeks had no system of posts, but few roads, such messengers must have been of great service. They were trained for the purpose, and could perform the longest journeys in an almost incredibly short space of time. (Herod. vi. 105; Corn. Nep. Mill. 4; Plut. Arist. 20; Paus. vi. § 5.) Such couriers appear to have been kept by most of the Greek states, and were in times of danger stationed on some eminence in order to observe any thing of importance that might happen, and carry the intelligence with speed to the proper quarter. Hence, we frequently find them called Hemerodromi (ήμεροδρόμων); see Index; but also from the words of Livy (xxxi. 24) “ni specular (hemerodromos vocant Graeci, ingens die uno cursu emetientes spatium), contemplos region agmen e specula quadam, progresus nocte media Athenas pervenisset.” (See Ducker, ad Liv. l. c.) The Hemerodromi were also called Dromokrakes (δρομοκράκτες), Harpocratis, and Hesych. s. v.)

HEMERICUS. [HEMEERICUS.] HEMICHRYSSUS. [AURUM; STATER.] HEMICHIONGUS. [CONGIUS; and the Tables.] HEMICYCLIUM. [HEMERODROMI.]

HEMICHRYSUS. [AURUM; STATER.] HEMICO'NGIUS. [CONGIUS; and the Tables.]

HEMICY'Lium (ήμικύλιον), a semicircular seat, for the accommodation of persons engaged in conversation, either in private houses or in places of public resort; and also the semicircular seat round the tribunal in a basilica. (Plut. Alex. 17, Nic. 12; Cic. Lael. 1; Vitruv. v. l. § 8, comp. Schneider’s Note.)

HEMINE'TEON. [HEMIECTON. [HECTUS.]] HEMILITRON. [LITRA.]

HEM'INA (ήμηνα), the name of a Greek and Roman measure, seems to be nothing more than the dialectic form used by the Sicilian and Italian Greeks for /ḥimans. (See the quotations from Epicharmus and Sophron, ap. Ath. xi. p. 479, a, b, xiv. p. 648, d, and Hesych. s. v. ἡμίνα, which he explains as ἡμείνα.) It was therefore naturally applied to the half of the standard fluid measure, the /λίτρον, which the other Greeks called /κυκλίμα, and the word passed into the Roman metrical system, where it was used as the half of a standard measure, namely for a measure which is half of the sextarius, and equal to the Greek corycle. (Böckh Metrol. Untersuch. pp. 17, 200, 203.) [P. S.]
HEMIOBO' LION, HEMIO' BOLUS. [OBO- LUS].
HEMIPO' DION. [PES].
HEMISTATER. [STATRER].
HEMIXESTON. [SHEXTARUS].

HE'NDECA, HOI, (o svnµa, the Eleven, were
magistrates at Athens of considerable im-
portance. They are always called by this name in
the classical writers; but in the time of Demetrius
Phalereus, their name is said to have been changed
into that of πολυφύλακες (Pollux, viii. 192), who
were, however, during the democracy distinct func-
tionaries. [ΝΟΜΟΦΥΛΑΚΕΣ.]

The grammarians also give other names to the Eleven, as διεφφυ-
λακες, δεσποφύλακες, &c. (Schol. ad Aristoph.
Plit. 277, Vesp. 775, 1108).

The time at which the office of the Eleven is
instituted is disputed. Ulrich considers the office
to have been of an aristocratical character, and
connected with the office of secretary to the
magistrates at Athens of considerable im-
portance. They were annually chosen
by lot, one from each of the ten tribes, and
The principal duty of the Eleven was the care
and management of the public prison (δεσποφύ-
λακες). The priest of the place was also apply-
ed in Athenian law to
man-stealers (κακοφύλακες), but is only applied in

The Eleven are also said to have possessed ἀγα-
μονία δικαστηρίου in the case of confiscated pro-

erty (Etymol. Mag. p. 338, 35), which statement
in confirmed by an inscription published by Bückh
(Urkunden über das Seecesen des Attischen Staates,
p. 555). (Ulrich, Uber die Elf Männer, ap-

pended to his translation of Plato’s Meno, Crito,
and the first and second Alcibiades, Berlin, 1821;
Sluiter, Lecture Andreide. pp. 256—261; Meier,
Att. Proe. pp. 69—77; Schubert, de Aeliniia,
p. 93—96; Hermann, Leich. der Griech. Staats-
alterth. § 132.)

HEPHAESTAEA. [LAMPADEPHORIA.]

The Elephant was one of the names of festivals
celebrated in honour of Hera in all the towns of
Greece where the worship of this divinity was
introduced.

The Elephant was chosen by the Athenians as a mere place of confinement,
Serving generally for punishments and executions.

The time at which the office of the Eleven was
instituted is disputed. Ulrich considers the office
to have been of an aristocratical character, and
connected with the office of secretary to the
magistrates at Athens of considerable im-
portance. They were annually chosen
by lot, one from each of the ten tribes, and
A secretary (γραμματέως), who must properly be
regarded as their servant (ὑπηρέτης), though he
formed one of their number. (Pollux, viii. 102.)

The principal duty of the Eleven was the care
and management of the public prison (δεσποφύ-
λακες). This was entirely under their juris-
diction. The office, however, was seldom used
by the Athenians as a mere place of confinement,
serving generally for punishments and executions.

When a person was condemned to death he was
immediately given into the custody of the Eleven,
and, according to the calculation of Bockh
(Asbann. der Berl. Akad. von 1818—19, p. 92,
&c.) in the middle of the second year of every
Olympiad. One of the great solemnities which
took place on the occasion, was a magnificent pro-
cession to the great temple of Hera, between Argos
and Mycenae. A vast number of young men—for
the festival is called a panegyria—assembled at
Argos, and marched in armour to the temple of the
goddess. They were preceded by one hundred
oxen (-κατάργες, whence the festival is also called
κατάργες). The high-priestess accompanied this
procession, riding in a chariot drawn by two white
oxen, as we see from the story of Cleobis and
Biton related by Herodotus (i. 31) and Cicero
(Tuscul. i. 47). The hundred oxen were sacrificial,
and their flesh distributed among all the citizens.
(Schol. ad Pind. Ol. vii. 152, and ad Non. x. 39.)
The sacrifice itself was called λεγέρα (Hesych. s. v.)
or “the bed of twigs.” (Comp. Weleker
on Schwegel’s Elymologische Anleitungen, p. 268.)
The games and contests of the Heraea took place in
the stadium, near the temple on the road to the
acropolis. A bronze shield was fixed in a place
above the theatre, which was scarcely accessible to
any one, and the young man who succeeded in
pulling it down received the shield and a garland
of myrtle as a prize. Hence Pindar
(Non. x. 41) calls the contest ἀγών χάλκεος. It seems
that this contest took place before the procession
went out to the Heraeon, for Strabo (viii. p. 556)
states that the victor went with his prizes in solemn
procession to that temple. This contest was said
to have been instituted, according to some traditions,
by Arriasus and Precus (Aelian. V. H. vii. 24),
according to others by Archias. (Schol. ad Pind.
Ol. vii. 152.)

The Heraea or Heacketmae of Aegina were
celebrated in the same manner as those of Argos

q q
The Heraea of Samos, which island also derived the worship of Hera from Argos (Paus. vii. 4 § 4), were perhaps the most brilliant of all the festivals of this divinity. A magnificent procession, consisting of maidens and married women in splendid attire, and with floating hair (Asius, ap. Athen. xii. p. 595), was made as a sacrifice to Hera, and youths in armor (Polyaenus, Strat. i. 23, vi. 45), went to the temple of Hera. After they arrived within the sacred precincts, the men deposited their armor; and prayers and vows were offered up to the goddess. Her altar consisted of the ashes of the victims which had been burnt to her. (Paus. v. 13 § 5.)

The Heraea of Elis were celebrated every fifth year, or in the fourth year of every Olympiad. (Corinii, Dissert. iii. 90.) The festival was chiefly celebrated by maidens, and conducted by sixteen matrons who wove the sacred peplos for the goddess. But before the solemnities commenced, these matrons sacrificed a pig, and purified themselves in the well Piera. (Paus. v. 16 § 5.) One of the principal solemnities was a race of the maidens in the stadium, for which purpose they were divided into three classes, according to their age. The youngest ran first and the oldest last. Their only dress on this occasion was a χρυσι, which came down to the knee, and their hair was floating. She who won the prize, received a garland of olive boughs, together with a part of the cow which was sacrificed to Hera, and might dedicate her own painted likeness in the temple of the goddess. The sixteen matrons were attended by as many female attendants, and performed two dances; the one called the dance of Phrysoe, the other the dance of Hippodameia. Respecting further particulars, and the history of this solemnity, see Paus. v. 16 § 2, &c.

The Heraea were celebrated in various other places; e.g. in Cos (Athen. xiv. p. 659, vi. p. 262), at Corinth (Eurip. Med. 1579; Philostrat. Her. xix. 14), at Athens (Plut. Quaest. Rom. vii. 168), at Cnosus in Crete (Diod. ii. 72), &c. [L. S.]

HERES/DITAS. [HERES.]

HERES. 1. GREEK. The Athenian laws of inheritance are to be explained under this title. The subject may be divided into five parts, of which we shall speak: 1st, of personal capacity to inherit; 2dly, of the rules of descent and succession; 3dly, of the power of devising; 4thly, of the remedies of the heir for recovering his rights; 5thly, of the obligations to which he succeeds.

i. Of Personal Capacity to Inherit.—To obtain the right of inheritance as well as citizenship (ἐγγοιστεία and πολιτεία), legitimacy was a necessary qualification. These children were legitimate who were born in lawful wedlock. (Dem. c. Neer, p. 1386.) The validity of a marriage depended partly on the capacity of the contracting parties, partly on the nature of the contract. On the first point little needs to be noticed here, except that brother and sister by the same mother were forbidden to marry; but consanguinity in general was so far from being deemed an objection, that marriage between collateral relations was encouraged, in order to keep the property in the family. (Andoc. de Myst. § 119, c. Alcib. § 33, ed. Bekk.; Lys. c. Alc. § 41, ed. Bekk.; Dem. c. Leoch. p. 1083, c. Eubul. p. 1305; Plut. Cimon, 4, Themist. 32.) The contract was made by the husband with the father, brother, or other legal guardian (κύρος) of the intended wife: then only was she properly betrothed (ἔγγυστη). An heiress, however, was assigned, or adjudged, to the next of kin (ἐρυθαι) by process of law, as explained under ΕΠΙΟΚΛΕΟΣ. (Isaeus, de Cis. her. § 29, de Philoct. her. § 19, ed. Bekk.; Dem. pro Phorm. p. 834, c. Steph. p. 1184.) No ceremony was necessary to ratify the contract: but it was usual to betroth the bride in the presence of witnesses, and to give a marriage feast, and invite the friends and relations, for the sake of publicity. (Isaeus, de Cis. her. § 18; Dem. c. Ondet. p. 869, c. Eubul. pp. 1311, 1312.) A marriage without proper espousals was irregular; but the issue lost their heritable rights only, not their franchise; and the former, it seems, might be restored, if the members of their father's clan would consent to their being registered. (Isaeus, de Philoct. her. §§ 29—33.) As it was necessary for every man to be enrolled in his clan, in order to obtain his full civil rights, so was the registration the best evidence of legitimacy, and the ἐπιόκλεος and ἐπιοκλεῖς were usually called to prove it in courts of justice. (Andoc. de Myst. § 127, ed. Bekk.; Isaeus, de Cis. Her. § 26, de Philoct. her. § 13; Dem. c. Eubul. p. 1305, &c.) For further particulars see Platner, Beiträge, p. 104, &c.; Schömann, Antig. juris publici Graecorum, lib. v. §§ 19, 21, 88.

ii. Of the Rules of Descent and Succession.—Here we would premise, that, as the Athenian law made no difference in this respect between real and personal estate, the words heir, inherit, &c., will be applied indiscriminately to both. When an Athenian died leaving sons, they shared the inheritance, like our heirs in gavelkind, and as they now do in France (Isaeus, de Philoct. her. § 32): a law no less favourable to that balance of property which Solon meant to establish, than the law of primo geniture was suited to the military aristocracies created in the feudal times. The only advantage possessed by the eldest son was the first choice in the division. (Dem. pro Phorm. p. 947.) If there was but one son, he took the whole estate; but if he had sisters, it was incumbent on him to provide for them, and give them suitable marriage portions; they were then called εὐπροσωποι. (Harpocr. s. v. Εὐπροσωπος.) There was no positive law, making it imperative on a brother to give his sister a portion of a certain amount; but the moral obligation, to assign her a fortune corresponding to his own rank, was strengthened by custom and public opinion, insomuch that if she was given in marriage portionless, it was deemed a slur upon her character, and might even raise a doubt of her legitimacy. (Isaeus, de Pyrr. her. § 40; Lys. de Arist. bon. § 16, ed. Bekk.; Dem. c. Boed, de dote, p. 1014.) On failure of sons and their issue, daughters and daughters' children succeeded (as to the law concerning heiresses, see ΕΠΙΟΚΛΕΟΣ); and there seems to have been no limit to the succession in the descending line. (Isaeus, de Cis. her. §§ 39—46, de Pyrr. her. § 55, de Philoct. §§ 38, 67; Dem. c. Macer. pp. 1057, 1058.) If the deceased left grandsons by different sons, it is clear that they would take the shares of their respective fathers. So if he had a granddaughter by one son, and a grandson by another, the latter would not exclude the former, as a brother would a sister, but both would share alike. Of this there is no direct evidence; but it follows from a principle of Attic law.
by which, on the birth of a son, his title to his father's inheritance, or to a share thereof, immediately accrued; if then he died before his father, but leaving issue, they claimed his grandfather's inheritance as representing him. It was otherwise with daughters. Their title did not thus accrue; and therefore it was the practice for the son of an aunt's son to marry the daughter of an uncle. On the same principle Isaeus (§§ 1, 2, p. 1067, c. Leoch. p. 1083) and after them, sisters and sisters' children, among whom the principle of representation also prevailed (Isaeus, de Apoll. her. § 23); but whether sisters' children took per stripes or per capita, does not appear.

Next come the descendants of the same grandfather with the deceased; cousins and cousins' children. Here the law declared, that males and the issue of males should be preferred to females and their issue. (Isaeus, de Hagm. her. §§ 1, 2; Dem. c. Macart. p. 1067.) Thus, the son of an uncle would exclude the son of an aunt, while the son of an aunt would exclude the daughter of an uncle. On the same principle Isaeus (de Apoll. her. §§ 25, 26) contends that the son of a female cousin prevented his mother's sister from inheriting, although he was further removed from the deceased (γερατέα) by one degree. This preference, however, was confined to those who were descended from the same common ancestor, that is to say, from the grandfather of the deceased. For the words έκ τών αυτών in Demosthenes are to be explained by the τριτα γένει of Isaeus. Therefore a first cousin once removed, claiming through a female, had a better title than a second cousin claiming through males; for a second cousin is descended not from the grandfather, but only from the great-grandfather, and so is beyond the legal degrees of succession (ή έκ τών γιαγιατέων ευγένειας). On this, Enulkius finds his pretension to the estate of Hagnias; because he claims as representative (son by adoption) of his maternal grandfather, who was first cousin to Hagnias; whereas the father of his opponent, Macartatus, was second cousin to Hagnias, and (as Demosthenes expresses it) was not in the same branch of the family (οίκ έκ τών οίκων τού Αγρίου, c. Macart. p. 1070).

On the descent of cousins and their issue, the inheritance went to the half-blood by the mother's side; brothers and sisters, nephews and nieces, cousins and their children, as before. But if there were no maternal kinsmen within the legal degree, it returned to the οματι, or next of kin on the paternal side (τόσο πόσο πατρός), whose proximity was traced by counting the degrees from the common ancestor. (Isaeus, de Hagm. her. §§ 1—18; Dem. c. Macart. p. 1067.)

The succession of parents to their children is matter of dispute among the learned. From the silence of the orators, the absence of any example, and the express declaration of Isaeus (de Hagm. her. § 26) respecting the mother, it may be inferred that parents could not inherit at Athens; At Athens the maxim, hereditas summun ascendet, held only of lineal, not of collateral ascent. For example, an uncle might inherit. (Isaeus, de Cleon. her. §§ 55.) So also he might marry the heiress, as next of kin. (De Pyrr. her. § 90.) On this part of the subject the reader is referred to Bunsen, de juris hered. Athen.; SirWilliam Jones's Commentary annexed to the translation of Isaeus; and a short summary of the law by Schomann, Ant. j. p. Gr. lib. v. § 20. These and other writers are not agreed on many of the foregoing points, which are left in much obscurity, owing to the mutilated state in which the laws have reached us, and the artifices used by the orators to misrepresent the truth.

It will assist the student to be informed, that ἀγενεστέα is a first cousin. Ἀγενεστέας is a first cousin's son; formed in the same manner as ἀδελφός from ἀδέλφος, and διωτεῖος from διώτειος. Thus, my first cousin's son is ἀγενεστέας to me; but not conversely. Again, though it is true that two or more second cousins may be spoken of collectively as ἀγενεστέας (Dem. c. Stephan. p. 1117), yet one of them cannot be said to be ἀγενεστέας to another. Herein consists the fallacy of those who maintain that second cousins came within the legal degrees of succession.

Κλάδος is the subject-matter of inheritance, or (in one sense of the word) the inheritance; κλάπομος the heir. Ἀγγειατέα, proximity of blood in reference to succession, and sometimes right of succession. Συγγειατέα, natural consanguinity. Συγγεινίς, collateral relations, are opposed to ἀγγειατέα and lineal descendants.

III. Of the Power of Devising.—That the owner had power to alienate his property during his lifetime, and that such alienation was valid in point of law, both as against the heir and all the rest of the world, is beyond a doubt. There was, however, an ancient law which punished with degradation (ἁπτιμία) a man who had wasted his patrimony (τά πατρίμια κατεδαφικω). He was considered an offender against the state, because he disabled himself from contributing to the public service. Prosecutions for such an offence were rare; but the reputation of a spendthrift was always prejudicial to a man in a court of justice. (Digg. Laërt. Sénèc. 55; Aeschin. c. Timarch. §§ 97—105, 154, ed. Bekk.)

Every man of full age and sound mind, not under duress or improper influence, was competent to make a will; but if he had a son, he could not disinherit him; although his will might take effect on the contingency of the son not completing his seventeenth year. (Isaeus, de Arist. her. § 14, de Philoct. § 10; Dem. c. Stephan. pp. 1193, 1196.) The bulk of the estate being left to the son, legacies might be given to friends and relations, especially to those who performed the office of our executor or testamentary guardian. (Dem. c. Aphob. pp. 814, 827.) And in the division of property among sons, the recommendations of the father would be attended to. (Dem. c. Macart. p. 1055, pro Phorm. p. 955.) Also a provision, not exceeding a thousand drachmas, might be assigned to an illegitimate child. (Harperc. s. v. Nobilia.)

A daughter could not be disinherited, though the estate might be devised to any person on condition of her marrying her. (Isaeus, de Pyrr. her. §§ 82—84.)
It was only when a man had no issue that he was at full liberty to appoint an heir. His house and heir were then considered desolate (Σεριος καὶ ἀνέμοιος), a great misfortune in the eyes of an Athenian; for every head of a family was anxious to transmit his name and religious usages to posterity. The same feeling prevailed among the Greeks in more ancient times. We learn from Hesychius and the Etymol. Mag. that distant relations were called χρηστάται, because, when they inherited, the house was χρηστόν καὶ έφροιμος. (See Hom. II. v. 158; Hes. Theog. 607.) To obviate this misfortune, an Athenian had two courses open to him. Either he might bequeath his property by will, or he might adopt a son in his lifetime. [ADOPTIO, GREEK.]

Wills were in writing, and usually had one or more attesting witnesses, whose names were super- scribed, but who did not know the contents. They were often deposited with friends, or other trust- worthy persons, such as a magistrate. It was considered a badge of fraud if they were made secretly or in the presence of strangers. (Isaeus, de Philoct. her. § 8, de Astph. her. §§ 8—17; Dem. c. Steph. p. 1137.) A will was ambulatory until the death of the maker, and might be revoked wholly or par- tially, by a new will, or by will and devise. In some cases it seems probable that there might be a parol revocation. (Isaeus, de Philoct. her. § 40, de Cleon, her. § 32.) The client of Isaeus, in the last-cited cause, contends, that the testator sent for the depositary of his will, with an intention to cancel it, but died before he got it into his possession; this (he says) was a virtual revocation. He calls witnesses to prove the testator’s affection for himself and dislike of his opponents, and thence infers that the will was unnatural, and a proof of insanity. Similar arguments were often used. (Isaeus, de Nicost. her. §§ 23, de Astph. her. § 21.)

With respect to the proceeding by which a father publicly renounced his paternal authority over his son, see ἈΡΚΕΝΙΧΗΣ. Plato (Leg. xi. 9, p. 923) refers to it, and recommends that a father should not take such a step alone, but in conjunction with the other members of the family. At Athens the paternal authority ceased altogether after the son had completed his nineteenth year; he was then considered to belong less to his father than to the state. (Valckenear, ad Antoonium, s. v. Ἀποκοροπτός: Meier, de Bonis Donum. p. 29.)

IV. Of the Remedies of the Heir for Recovering his Rights. — A son or other male descendant might enter and take possession of the estate immediately after the owner’s death. (Isaeus, de Pyrr. her. § 72, de Cir. her. § 47.) If he was prevented from so doing, he might bring an action of ejectment against the intruder. [ΕΜΒΑΤΙΑ.] Any one who disturbed a minor in the enjoyment of his patrimony was liable to a criminal prosecution (κακώσεως εἰσαγγελία, Isaeus, de Pyrr. her. § 76). As to the proceedings in case of heirs, see ΕΠΙΚΕΘΗΣ.

Other heirs at law and claimants by adoption or devise were not at liberty to enter, until the estate was formally adjudged to them. The proper course was, to make application to the archon, who attended at his office for that purpose every month in the year except the last (Scirophorion). The party who applied was regarded as a suitor, and (on obtaining a hearing) was said λαγχάδει τοῦ κλῆρου. (Isaeus, de Hagm. her. §§ 23, 40, de Pyrr. her. § 74, de Astph. her. § 4; Dem. c. Steph. p. 1136.)

At the first regular assembly (κυρία ἐκκλησία), held after he had received notice, the archon caused proclamation to be made, that such a person had died without issue, and that such and such persons claimed to be his heirs. The herald then asked εἰ τις ἀμφοτέρων ἢ παρακαταβάλλων βοήθατο τοῦ κλῆρου; these words are variously interpreted. Perhaps the best explanation is this: — Αμφοτέ- ρεών is a term of general import, applied to all who dispute the title of another, and would include those who claimed a moiety or other share of the estate. Παρακαταβάλλω signifies to make a deposit by way of security for costs, which was required of those who maintained their exclusive title to the whole inheritance. Perhaps, however, the payment in the third case was optional, and might be intended for the mere purpose of compelling the other parties to do the same. The deposit thus paid was a tenth part of the value of the property in dispute, and was returned to the party if successful. (Pollux, viii. 32, 95; Isaeus de Nicost. her. § 13, de Hagm. her. § 20; Dem. c. Macart. p. 1051, c. Leoci. pp. 1090—1093.)

If no other claimant appeared the archon ad- judged the estate to the first suitor (ἐκκλίασαν αὐτῷ τὴν κλῆρον). If, however, there were ad- verse claims, he proceeded to settle them by trial (δικαίωσις). First came the ἀνδριάρια, in the usual way, except that no party was considered as plaintiff or defendant; and the bills in which they set forth their respective titles, were called ἀντιγραφά. (Harpocr. s. v.; Dem. c. Olympia. pp. 1173, 1175.) The dicasts were then to be summoned, and, whatever the number of parties, one court was held for the decision of all their claims. If any one neglected to attend on the appointed day, and had no good excuse to offer, his claim was struck out of the record (νεγαρίζει τῷ ἀμφοτέρειν), and the contest was carried on between the remaining parties, or, if but one, the estate was awarded to him. (Dem. c. Olympia. p. 1174.) The trial was thus managed. The dicasts had to give their verdict either for one person proving a title to the whole, or for several persons coming in under the same title, as (for instance) two brothers entitled each to a moiety. One balloting box therefore was provided for every party who appeared in a distinct interest. The speeches were measured by the clepsydra. Each party had an ἀμφοτέρεις of water for his first speech, and half that, or three χορεῖς for the second. (Isaeus, de Hagm. her. § 30, &c.; Dem. c. Macart. p. 1052.) That these ar- rangements gave rise to fraud and collusion, is clearly shown in the cases above cited.

The verdict, if fairly obtained, was final against the parties to the cause. But any other person, who by absence or unavoidable accident was prevented from being a party, might afterwards bring an action against the successful candidate, to recover the estate. He was then obliged to pay his deposit (παρακαταβάλει), summon the defendant, and proceed in other respects as in an ordinary suit. This he might do at any time during the life of the person in possession, and within five years after his death. (Isaeus, de Pyrr. her. § 70; Dem. c. Olympia. p. 1175, c. Macart. p. 1054.)

It has hitherto been supposed that a simple issue was raised between the litigant parties, viz. who was entitled to possess the estate; and that they proceeded at once to the trial of such issue. This was called εἰσόδια τῆς εἰσόδου. The cause, however,
might become more complicated, if one of the parties chose to make an exception to the right of any other to dispute his title; this was done by tendering an affidavit (διαμαρτυρία) sworn either by himself or by another, wherein he declared that the estate was not the subject of litigation (μὴ ἐπίδικος), and alleged some matter of fact or law to support his assertion. Sons, adopted sons, and persons in legal possession, were allowed this advantage.

For example, a witness might depose that the last occupier had left male issue surviving him, and therefore the property could not be claimed by any collateral relative or devisee; or that the title had already been legally determined, and that the new claimant was, in that case, bound to discontinue the question. This had the effect of a dilatory plea, and stayed further proceedings in the cause. (Isaeus, de Deaeag. her. § 30, de Apoll. § 3, de Philoct. §§ 4, 52, de Pyrr. § 3; Dem. c. Leoc. p. 1097.) If then the suitor was resolved to prosecute his claim, he had no other course but to procure a conviction of the witness (who had sworn the affidavit) in an action for false testimony (δική σεβομαρτυρία). Examples of such actions are the causes in which Demoethenes was engaged against Leochares, and Isaeus for the estate of Philoctemon. On the trial of the witness the questions were, first, the truth of the facts deposed to; secondly, their legal effect, if true. With respect to the witness, the consequences were the same as in any other action for false testimony. (Μαρτυρία.) With respect to the original cause nothing further was determined, than that it could or could not be entertained; the διαμαρτυρία in this particular resembling the παραγραφή. If the court decided that the suit could be entertained, the parties proceeded to trial in the manner before explained.

As to the further remedies to be pursued by the successful party, in order to obtain the fruits of his judgment, see ᾲμπατεία and ἔξοιλες δικά. And on this part of the subject see Meier, Att. Proc. pp. 459, 616, 639; Platner, Att. Proc. vol. i. p. 163, vol. ii. p. 309.

V. Of the Obligations to which the Heir succeeded.

—The first duty of an heir, as with us of an executor, was, to bury the dead and perform the customary funeral rites (τὰ νομοθεμένα ποιεῖν). It is well known what importance was attached to this by the ancients. The Athenian law regulated the time of burial, and the order in which the female relations should attend. If no money was left to pay the expenses of burial, still the nearest relatives were bound to defray them; and if they neglected to perform their duty, the chief magistrate (δήμαρχος) of the demus, in which the death took place, after warning them by public notice (ἀναρίτων καὶ διαδικασίων, καὶ καθηκόντων τοῦ δήμων), got the work done by contract, paid for it himself, and was then empowered to sue them for double the amount. When a rich man died, there was no backwardness about his funeral. It is rather amusing to see how eagerly the relations hastened to show respect to his memory, as if to raise a presumption of their being his heirs. (Isaeus, de Astyg. her. § 40, de Cir. her. §§ 29—33, de Nicos. her. §§ 9, 25; Dem. c. Macart. pp. 1069, 1071.)

Children, who neglected to bury their parents, were liable to a criminal prosecution (γραφὴ κακοσεῖως γνωσ那么容易), just as they were for refusing to support or assist them in their lifetime. The word γονεῖς in this case includes all ancestors. (Meier, de Bon. Damn. pp. 126.)

Among heritable obligations may be reckoned that of marrying a poor heiress (δοξολόγια), or giving her in marriage with a suitable portion. (See Επικλέροις and Μεραίτων, Theon. Att. i. 13.)

That the heir was bound to pay the debts of the deceased, as far as the assets would extend, cannot be doubted. Five years seem to have been the period for the limitation of actions against him (τροχοδομία). In case of a mortgage, he was entitled only to the surplus of the mortgaged property, remaining after payment of the debt charged thereon. (Lys. de Bon. Pobl. §§ 4, 5; Isaeus, de Arist. her. § 22; Demosth. c. Catipp. p. 1240, c. Syr. p. 1300, c. Naassum. pp. 268, 293.)

State debtors, such as farmers of the public revenue who had made default, or persons condemned to pay a fine or penalty, were disfranchised (ἐβίων) until they had settled the debt; and the disgrace extended to their posterity. Thus Cimon, son of Miltiades, was compelled to pay a fine of fifty talents which had been imposed on his father; and the story is, that Callias advanced him the money, in return for the hand of his sister Elpinice. (Dem. c. Androt. p. 693; c. Theoc. pp. 1922, 1927; c. Apollopp. p. 636, pro Cor. p. 329, c. Macart. p. 1097.) When the whole of a man's property was confiscated, of course nothing could descend to his heirs. It seems to have been a common practice, in such a case, for the relations of the deceased to conceal his effects, or to lay claim to them by pretended mortgages. Against these frauds there were severe penalties, as may be seen from the speeches of Lysias, c. Philoer. and de bon. Arist. (Meier, de Bon. Damn. p. 212.)

The posterity of those who were put to death by the people, or were convicted of certain infamous crimes, such as theft, inherited the δρᾶμα of their ancestors, a damaosa herodias, which they could not decline or escape from. It may be compared to the corruption of blood following upon attainer in the feudal law. The legislator seems to have thought that such children must be the natural enemies of their country, and ought to be disarmed of all power to do mischief. We cannot wonder at this, when we consider, that with respect to private feuds, it was deemed honourable and meritorious in the child to preserve the enmity to his sire. (See Lys. c. Cor.) It is surely disgusting when we consider, that with respect to public matters, it was deemed right that the children of a public enemy should remain in exile, until they had appeased by death the enmity of the state, or had made amends by his death. (See Lys. c. Orestes.)

As to the further consequences of the death of a public enemy, or of one convicted of a famous crime, such as theft, inherited the δρᾶμα of his actions, which may be seen from the speeches of Lysias, c. Agoratus, of Demoethenes against Theocles, of Meletus against Themistocles. (See Lys. c. Theoc. c.Themist.)

The property of those who were put to death by the people, or were convicted of certain infamous crimes, such as theft, descended to the nearest male relatives of the heirs, as far as the assets would extend. (See Lys. c. Orestes.)
the state of Athens for want of heirs. This probably arose from the principle of Athenian law, according to which no civic family was suffered to expire; and therefore the property of an intestate was always assigned to such person as was most fit to be his successor and representative. With aliens, and those illegitimate children who were regarded as aliens, it was no doubt otherwise. (Meier, de Bon. Damn. p. 148.)

2. ROMAN. When a man died, a certain person or certain persons succeeded to all his property, under the name of heres or herdeditas: this was a universal succession, the whole property being considered a universitas [UNIVERSITAS]. Such a succession comprehended all the rights and liabilities of the person deceased, and was expressed by the term Hereditas. The word herdeditas is accordingly defined to be a succession to all the rights of the deceased (Dig. 50. tit. 16. a. 24.) and sometimes it is used to express the property which is the object of the succession. The term pecunia is sometimes used to express the whole property of a testator or intestate (Cic. de Invent. ii. 21; Gaius, ii. 104) but it only expresses it as property, and therefore the definition of herdeditas by pecunia would be incomplete. Cicero (Top. 6) completes the definition thus: "Heralditas est pecunia quae morte alicujus ad quemquam pervenit jure, nec ea aut legata testamento aut possessione retenta." The negative part of the definition excludes legacies, and property of the deceased, the ownership of which is acquired by a sufficient possession of it. The word "jure" excludes the "bDownloader error" in possession, in opposition to which the herdeditas is appropriately called "justa." The heres was the person who acquired all that had belonged to another, morte et jure; the etymological relation of the word to heres seems probable.

A person might become a heres by being named as such (institutus, scriptus, factus) in a will, executed by a competent person, according to the forms required by law [TESTAMENTUM]. If a person died intestate ( intestatus ), or having made a will which was not valid, the inheritance came to those to whom the law gave it in such cases, and was called heralditas legitima or ab intestato. But a man could not die intestate as to part of his property and intestate as to another part, except he were a soldier (cujus sola voluntas in testando spectatur). Accordingly, if a man gave a part of the herdeditas to one heres or more, and did not dispose of the rest, the heres or heres took the whole. (Inst. ii. tit. 14. § 5; Cic. de Invent. ii. 21; Vangerow, Pandekten, &c. vol. ii. p. 5.)

In order that a testamentary succession should take place, the person dying must have such rights as are capable of being transmitted to another; consequently neither a slave, nor a filius-familias, according to the old Roman law, could make a heres. Also, the person who is made heres must have a legal capacity to be heres.

The institution of a heres was that formality which could not be dispensed with in a will. If the testator named no heres or herdeditas, and complied with all the other legal forms, still his disposition of his property was not a will. The heres called heres directus, or simply heres, represented the testator, and was thus opposed to the heres fideicommissarius. [FIDEICOMMISSUM.] The testator might either name one person as heres, or he might name several herdeditas (coheredes), and he might divide the herdeditas among them as he pleased. The shares of the herdeditas were generally expressed by reference to the divisions of the herdeditas; thus, "heres ex asso" is heres to the whole property; "heris ex drorum," heres to three-fourths; heres "ex seminancia," heir to one-twenty-fourth. (Cic. ad Att. xiii. 48, viii. 8; Cic. Pro Ccecina, 6; Inst. II. tit. 14. § 5.) If there were several herdeditas, named without any definite shares being given to them, the property belonged to them in equal shares. A heres might be instituted either unconditionally (pure), or conditionally (sub conditione).

If the testator had a legal capacity to dispose, and if his will was made in due form, the first inquiry as to the heres was, whether he had a legal capacity to take what was given to him. He must have this capacity at the time of the institution, or the institution is null; and in order to take he must have the capacity to take (Inst. ii. tit. 19, § 4), at the time of the testator's death, and at the time of accepting the inheritance. This capacity might be expressed by the word " testamentatio," an expression which had reference not only to the legal capacity of the testator, but also to the legal capacity of the person named heres. As a general rule, only Roman citizens, who had received the commercium, could take herdeditas, legata and fideicommissa by testament. (Cic. pro Ccecina. 7, 32; Savigny, Zeitschrift, vol. v. p. 229, System, &c. vol. ii. p. 27.)

Heredes were either Necessarii, Sui et Necessarii, or Extraneci. The heres necessarius was a slave of the testator, who was made a heres and liber at the same time; and he was called necessarius, because of the necessity that he was under of accepting the herdeditas. A slave was sometimes appointed heres, if the testator thought that he was not solvent, for the purpose of evading the ignominia which was a consequence of a person's property being sold to pay his debts, as explained by Gaius (ii. 154, &c.). The heres sui et necessarius were sons and daughters, and the sons and daughters of a son, who were in the power of a testator; but a grandson or granddaughter could not be a suus heres, unless the testator's son had ceased to be a suus heres in the testator's lifetime, either by death or being released from his power. These heredes sui et necessarii, because of the necessity that they were under, according to the civil law, of taking the herdeditas with its incumbrances. But the praetor permitted such persons to refuse the herdeditas (ablatere se ob hereditatem), and to allow the property to be sold to pay the testator's debts (an instance is mentioned by Cic. Philipp. ii. 16); and he gave the same privilege to a mancipated son (qui in causa mancipii est). All other herdeditas are called extranei, and comprehend all persons who are not in the power of a testator, such as emancipated children. As a mother had no potestas over her children, they were extranei
heredes when named heredes in her will. Extranei heredes had the potestas or jus deliberaendi (Dig. 23. tit. 8. s. 1), or privilege of considering whether they would accept the hereditas or not: but if either extranei heredes, or those who had the abstinendi potestas, meddled with the testator's property, they could not afterwards disclaim the inheritance, unless the person who had so meddled was under twenty-five years of age, and so belonged to a class who were relieved by the praetor. 

A certain time was allowed to extranei for the cession of hereditates, that is, for them to determine whether they would take the hereditas or not; hence the phrase "cernere hereditatem." (Cic. ad Att. xi. 12.) Thus, if the testator had written in his will "Heres Titius esto," he ought to add, "Cerniteque in centum diebus proximae quibus cesses poterisque: quod ni ita crevies exheres esto." (Gaius, ii. 165 ; Cic. de Orat. i. 22.) If the extraneus wished to take the hereditas, he was required to make a formal declaration of his intention within a certain time prescribed by law. (Gaius observes (ii. 183) that all his remarks with reference to substitution for children impuberes, are in the first part of the will that this second part should not be opened so long as the son lived and was impubes. A substitution could also be made in the case of children being exheredated (disinherited) by the parent's will, and the substituted person then took all that the pupillus acquired by hereditas, legatum (legacy) or gift. (Gaius observes (ii. 183) that all his remarks with reference to substitution for children impuberes, when made heredes or exheredated, apply to posthumous (postumi) children, of which there is an example cited by Cicero (Top. 10). Si filius natus est in decem mensibus, &c.,"

If an extraneus was made heres, there could be no substitution to the effect, that if he died within a certain time, another person should be heres: for though a testator could attach a condition to be performed before a person could take the hereditas, a person when he had once become heres continued such. The case of a pupillaris substitution, which was an exception to this general rule, was probably founded on the patria potestas. The heres might, however, be charged with a fideicommissum, in which case he was heres fiduciarius. [FIDEICOMMISSUM.] As to conditions which the heres was bound to perform, they might be any that were not contrary to positive law or positive morality; such as the setting up of statues, &c. (Cic. Verr. ii. 8, 9, 14), or changing the name (ad Atis viii. 8). Impossible conditions were treated as if there were no conditions mentioned (pro non scripto, Inst. 2. tit. 14. s. 10).

If a man's own slave was made heres by his will, it was necessary that he should be made free also by the will: the words were "Stichus servus meus liber heres esto." If the slave were not made free by the testament, he could not take under it, even if he were manumitted by his master, and of course he could not if he were sold; and the reason is, that the institution was not valid. If he was instituted free as well as heres, he became both a freeman and heres necessarius by the death of his master: if he was manumitted by his master in his lifetime, he might accept the inheritance or refuse it. If he was sold by his master in his lifetime, he could take possession of the inheritance with the permission of his new master, who thus became heres through the medium of his slave. If the slave who was made heres was at
that time the property of another person, and not of the testator, he could not take the inheritance without the consent of his master, for if he took it his master became heres: if such slave was manumitted before taking possession of the inheritance, he might accept it or refuse it as he pleased.

If an Ingenius died intestate, either from not having made a will, or having made a will but not in due form, or having made a will in due form which afterwards became invalid (rupta, irrita), or if there was no heres under the will, the hereditas, according to the law of the Twelve Tables, came to the heres sui, and was then called legatim paterni (Gaius, ii. 125). The principle of Roman law which gave to those who came into the potestas or manus the quality of children of the blood, was followed out in this case also: a mother or a stepmother who had come in manum viri thereby obtained the status of a daughter; and, consequently, as to legitimate succession, there was a legitimate maternal stepmother, and stepfather. Thus, if there were a son, and the sons of the deceased son, the children of the testator's male children, and the children of a son's son, adopted children were considered the same as other children. But grandchildren could not be heredes sui, unless their father had ceased to be in the power of the intestate, either by death or in any other way, as by emancipation. A wife in manu being considered as a daughter, and a daughter-in-law (natus), a daughter in manu filii being considered a granddaughter, a daughter in manu of a deceased son, take the inheritance. He was the nearest agnatus who was nearest at the time when it was ascertained that a person had died intestate.

If the nearest agnatus either neglected to take the inheritance or died before he had taken possession of it, in neither case did the next in suc-cession, if female, take the inheritance. He was the nearest agnatus who was nearest at the time when it was ascertained that a person had died intestate, and not he who was nearest at the time of the death; the reason of which appears to be that the hereditas was in a sense the property of the intestate until his heir was ascertained, and his heir could not be ascertained until it was certain that he had left no will; and as Gaius observes, if he had left a will, still it might happen that no person would be heres under that will; and accordingly it seemed better, as he observes, to look out for the nearest agnatus at the time when it is ascertained that there is no heres under the will. If there were several agnati in the same degree, and any one refused to take his share or died before he had as-”

In the case of women, there were some peculiarities which arose from their legal condition (Gaius, iii. 14). The hereditates of women intestate came to their agnati just as the inheritances of males; but women who were beyond the degree of consanguinei (a term which legally means brothers and sisters) could not take hereditates ab intestato. Thus, a sister might take from a brother or sister as legitima heres; but an aunt or a brother's daughter could not be a legitima heres. The principle of Roman law which gave to those who came into the potestas or manus the quality of children of the blood, was followed out in this case also: a mother or a stepmother who had come in manum viri thereby obtained the status of a daughter; and, consequently, as to legitimate succession, there was a legitimate maternal stepmother, and stepfather. Thus, if there were a son, and the sons of the deceased son, the children of the testator's male children, and the children of a son's son, adopted children were considered the same as other children. But grandchildren could not be heredes sui, unless their father had ceased to be in the power of the intestate, either by death or in any other way, as by emancipation. A wife in manu being considered as a daughter, and a daughter-in-law (natus), a daughter in manu filii being considered a granddaughter, a daughter in manu of a deceased son, took the inheritance. He was the nearest agnatus who was nearest at the time when it was ascertained that a person had died intestate.

If an intestate had no sui heredes, the Twelve Tables gave the hereditas to the agnati. (Gaius, iii. 8.) It is stated under COGNATI, who are agnati. The hereditas did not belong to all the agnati, but only to those who were nearest at the time when it was ascertained that a person had died intestate. If the nearest agnatus either neglected to take the inheritance or died before he had taken possession of it, in neither case did the next in succession, if female, take the inheritance. He was the nearest agnatus who was nearest at the time when it was ascertained that a person had died intestate, and not he who was nearest at the time of the death; the reason of which appears to be that the hereditas was in a sense the property of the intestate until his heir was ascertained, and his heir could not be ascertained until it was certain that he had left no will; and as Gaius observes, if he had left a will, still it might happen that no person would be heres under that will; and accordingly it seemed better, as he observes, to look out for the nearest agnatus at the time when it is ascertained that there is no heres under the will. If there were several agnati in the same degree, and any one refused to take his share or died before he had as-
For instance, if the heredes instituti were sui, the person or persons passed over took an equal share with them. If the heredes instituti were extranei, the person or persons passed over took a half of the whole hereditas; and as the praetor gave the contra tabulas honorum possessio to the person so passed over, the extranei were deprived of all the hereditas. A rescript of the emperor M. Antoninus limited the amount which women could take by the honorum possessio to that which they could take jure adresendae; and the same was the law in the case of emancipated females.

It was necessary either to institute as heredes, or to exheredate posthumous children nominatur, otherwise the will, which was originally valid, became invalid (ruptum); and the will became invalid by the birth either of a posthumous son or daughter, or, as the phrase was, adgnascendosum riputur testamentum. (Cic. de Or. i. 57.) Postumi were not only those who were born after the testator's will was made, and came into his power or would have come into his power if he had lived, but also those who might become the sui heredes of the testator by the death of some other person in the testator's lifetime. Thus, if a testator's son, who was in his power, had children, and the son died in the testator's lifetime, the grandchildren became sui heredes, and the testament became ruptum by this quasi agratio: it was therefore a necessary precaution to institute as heredes or to exheredate such grandchildren. It follows that if the testament could be made invalid by this quasi agratio, it must have become invalid by a son being born in the lifetime of the testator, unless the will had provided for the case; for it became invalid if the testator adopted a son or a daughter (Ulpian) either by adrogation or adoption properly so called, after the date of his will. The case was the same if he took a wife in manum after the date of the will.

The word Postumus has clearly the same signification as Postremus, and literally means a child born last. The passage of Gaius is defective where he treats of Postumus; but the definition of Postumi, as preserved in the Breviarium, appears to be exact: "Postumorum duo genera sunt: quia postumi adpellantur hi, qui post mortem patris de uxore nati fuerint, et illi qui post testamentum fecerint natus es."

Sometimes the word postumus is defined only as a child born after a father's death, as we see in some of the Glossae, and in Plutarch (Sulla, 37); but there is no proof that the meaning was limited to such children; and the passages sometimes cited as being to that effect (Dig. 50. tit. 16. s. 164; 28. tit. 3. s. 3) have been misunderstood.

As to Postumi alieni, see Gaius, i. 147, ii. 242; Vangerow, Pandekten, &c. vol. ii. p. 90.

Other cases in which a valid testamentum became ruptum or irritum, are more properly considered under Testamentum.

The strictness of the old civil law was modified by the praetorian law, which gave the bonorum possessio to those who could not take the hereditas by the rules of the civil law. [Bonorum Possessio.] The heres represented the testator and intestate (Cic. de Leg. ii. 19), and had not only a claim to all his property and all that was due to him, but was bound by all his obligations. He succeeded to the sacra privata, and was bound to maintain them, but only in respect of the property, for the obligation of the sacra privata was attached to property and to the heres only as the owner of it. Hence the expression "sine sacris hereditas" meant an hereditas unencumbered with sacra. (Plaut. Caj. iv. 1. 8, Trinum. ii. 4. 83; Festus, s. v. Sine sacris hereditas.)

The legislation of Justinian released the heres, who accepted an hereditas, from all the debts and obligations of the testator or intestate, beyond what the property would satisfy, provided he made out an inventory (inventarium) of the property in a certain form and within a given time. (Cod. 6. tit. 30. s. 22.) It also allowed the institution of a man's own slave as heres without giving him his freedom. (Inst. 2. tit. 14; comp. Gaius, ii. 185.)

The heres could claim any property which belonged to his testator or intestate by the hereditatis petti (Dig. 5. tit. 5. s. 29), which was an actio in rem, and properly belonged to a heres only, though it was afterwards given to the bonorum possessor. Each heres claimed only his share. (Cic. Pro Rosc. Com. c. 10.)

The coheredes shared among themselves the property, and bore their share of the debts in the same proportions. For the purpose of division and settling the affairs of the testator, a solo was often necessary. (Cic. ad Att. xi. 15.) If the parties could not agree about the division of the property, any of them might have an actio familie e rexusandum. [Familiae Erc. Ac.]

The hereditas might be alienated by the form of in jure cessio. The heres legitimus might alienate the hereditas before he took possession of it, and the purchaser then became heres, just as if he had been the legitimus heres. The scriptus heres could only alienate it after the aditio; after such alienation by him, or by the heres legitimus after aditio, both of them still remained heredes, and consequently answerable to creditors, but all debts due to them as heredes were extinguished.

The hereditates of freedmen are more properly considered under Liberti and Patroni.

Before it was determined who was heres, the hereditas was without an owner, and was said "jacere." When a heres was ascertained, such person was considered to possess all the rights incident to the hereditas from the time of the death of the testator or intestate. But this does not explain how we are to view the hereditas in the interval between the death of the former owner and the time when the heres is ascertained. During such interval, according to one form of expression used by the Roman jurists, the hereditas is a juridical person (vico personae fungitur), and is the domina, that is, the domina of itself; according to another form of expression, it represents the defunct, and not the person of the future heres. These two forms are the same in meaning, and they express a fiction which has relation to the legal capacity of the defunct, and not that of the future heres, and which does not involve the notion of any juridical personality of the hereditas. The relation to the legal capacity of the defunct is this: — Slaves generally belonged to an hereditas. A slave, as is well known, could acquire property for his living master, even without his knowledge; but the validity of the act of acquisition, in some cases, depended on the legal capacity of his master to acquire. Now, while the hereditas was without an ascertained owner, many acts of a slave by
which the hereditas might receive additions, were strictly void, and such acts could only have their legal effect on the supposition that the slave had an owner of a sufficient legal capacity; and accordingly, the fiction of law gave validity to the act of the slave by relation to the known legal capacity of the late owner, and not by relation to the yet unascertained owner who might not have such legal capacity. The following are examples:—

"When a Roman, who had a legal capacity to make a will, died intestate, and another person appointed as his heres a slave, who belonged to this hereditas which was still without an owner, such institution of a heres would be valid by virtue of this fiction, because it had reference to the legal capacity of the defunct. If there had been no such fiction, the validity of the institution would have been doubtful, for the unascertained legitimus heres might be an intestabilis, who (at least according to the old law) could not be instituted heres. — If a soldier died and left a will, which was not yet opened, another testator might institute as heres a slave belonging to the soldier's hereditas, because the institution, according to this fiction, had reference to the deceased; but if there were not this fiction, the institution might be void, inasmuch as the unascertained heres might be a peregrinus who had no testamentificatio with this other testator. — It was to provide for such cases as these only, that this fiction was introduced; and it had no other object than to facilitate certain acquisitions by means of the slaves who belonged to an hereditas."

This masterly exposition is by Savigny (System des bent. R. R. vol. ii. p. 363).

HERMAE (エルマ), and the diminutive Hermulii (エルミリ), statues composed of a head, usually that of the god Hermes, placed on a quadrangular pillar, the height of which corresponds to the stature of the human body (ἡ τετράγωνος ἡρμος, Thuc. vi. 21 et σχῆμα τοῦ τετράγωνου, X. Pol. 33, § 4, a. 3). Some difficulties are involved in the question of their origin, and of their meaning as symbols of Hermes. One of the most important features in the mythology of Hermes is his presidency over the common intercourse of life, traffic, journeys, roads, boundaries, and so forth, and there can be no doubt that it was chiefly in such relations as these that he was intended to be represented by the Hermes of the Greeks and by the Terminus of the Romans, when the latter were identified with the Hermæ. It is therefore natural that we should look for the existence of this symbol in the very earliest times in which the use of boundary-marks was required; and in such times the symbols would be of the simplest character, a heap of stones or an unheawn block of marble. Now we find that there were in many parts of Greece heaps of stones by the sides of roads, especially at their crossings, and on the boundaries of lands, which were called ἑρμαί or ἑρμαία, ἑρμαίοι λόφοι and ἑρμακες*.

* Lessing, Böttiger (Antiquit. p. 45), and others derive these words, and also the name of the god, (Hesych. s. ev.). An ἐρμαίος λόφος near Thesauros is mentioned in the Odyssey (xxvi. 471); Strabo noticed many ἑρμαί on the roads in Elis (viii. p. 343); and even now an ancient heap of stones may be seen on the boundary of Laconia (Ross, Pelop. vol. i. pp. 18, 174). The religious respect paid to such heaps of stones, especially at the meetings of roads, is shown by the custom of each passer by throwing a stone on to the heap (Nicias, Thier. 150); this custom was also observed with reference to the Hermes of later times, at least to those which stood where roads met. (Ath. Gram. loc. infra cit.) Such heaps of stones were also seen by Strabo on the roads in Egypt (xvii. p. 818). Another mode of marking a boundary or other definite locality was by a pillar of stone, originally unheawn, the sacred character of which was marked by pouring oil upon it and adorning it (Theophrast. 16, comp. Genesis xxviii. 18, 22, xxxi. 45—48, where both the pillar and the heap of stones are set up for a witness, xxxv. 14). The Egyptian obelisk probably belongs to the same class of monuments.

Referring the reader, for the further examination of these matters, to works in which they are discussed at length (Zosimus, de Orig. et Us. Obelise., Romae, 1797, p. 217; Gerhard, de Religione Hermarum, Berol. 1845, 4to.; Otto, de Dios Vincit, c. 7; Müller, Archäol. d. Kunst, § 66; Preller, in Pauly's Real-Encyc. d. Class. Alterth. s. v. Mercarius, vol. iv. p. 1845), we assume that, of these heaps of stones and pillars, those which marked boundaries were either originally symbols of, or were afterwards consecrated to, the god Hermes. It is not denied that such rude memorials were at first symbols of the various gods alike, but at a very early period they came to be more especially associated with the worship of Hermes.

The first attempt at the artistic development of the blocks of stone and wood, by which, in the earliest period of idol-worship, all the divinities were represented, was by adding to them a head, in the features of which the characteristics of the god were supposed to be expressed; and afterwards other members of the body were added, at first with a symbolical meaning. These changes produced the Hermes, such as they are described by the ancient authors, and as we now have them. (The symbol is described by Herodotus, who ascribes the origin of it to the Pelasgians, who probably because the divinity represented by it was in the earliest times, before the worship of Dionysus was imported from the East, the personification of the reproductive powers of nature. So the symbol described by Herodotus, who ascribes the origin of the god to the Pelasgians, who communicated it to the Athenians, and they to the other Greeks. (Herod. ii. 51; Pint. an Sent. st spect. gen. 28, p. 797, f.; Cic. de Nat. Deor. iii. 21; comp. Crozer's Note, in Basel's edition of Herodotus.) Pananias gives the same account of the matter (i. 24, § 3, iv. 33, § 3, 4, s. 6), and also states that the Arcadians were particularly fond of the άγαλμα τετράγωνου (viii. 48, § 4, s. 6; where the statue referred to is one of Zeus), which is from έρµα, a heap (comp. Buttmann, Lexil. pp. 302, 303). It would seem, at all events, that the words are in some way connected; though the question, whether the god took his name from the symbol, or the symbol from the god, cannot be entered into here.
some confirmation of the tradition which carried back the invention to the Pelasgic times.

In the historical times of Greece, too, it was at Athens that the Hermae were most numerous and most venerated. So great was the demand for these works that the words ἑρμογλύφω ἐρμογλύφω τέχνη, and ἑρμογλύφων, were used as the generic terms for a sculptor, his art, and his studio (Plat. Symp. p. 215, a.; Lucian, de Somn. i. 7, vol. i. pp. 3, 4, 10, 11; and the Lexicons).

Houses in Athens had one of these statues placed at the door called ἑρμαὶ στροφαῖοι οὗτοι στροφαῖοι (Thucyd. vi. 27; Aelian, V. H. ii. 41; Snid. s. v.; Pollux, viii. 72; Ath. x. p. 437, b.) sometimes also in the peristyle (Lucian, Namia, 20, vol. iii. p. 262), which were worshipped by the women as instrumental to fecundity (see bas-relief in Boissarde, Antiq. Roman, part 1), and the great reverence attached to them is shown by the alarm and indignation which were felt at Athens in consequence of the mutilation of the whole number in a single night, just before the sailing of the Sicilian expedition. (Thucyd. vi. 27, with Poppo’s note; Andoc. de Myst.; Aristoph. Lysist. 1093, 1094, and Sehol.; Aristophanes applies the term ἑρμοκωμίδου to the mutilators; see also Phot. s. v. ἑρμοκωμίδου.

They were likewise placed in front of temples, near to tombs, in the gymnasia, palaestrae, libraries, porticoes, and public places, at the corners of streets, or high roads as sign-posts, with distances inscribed upon them (Böckh, Corp. Inscr. No. 12; Epigr. Incert. No. 234, Bruck, Anal. vol. iii. p. 197, Anth. Planum. iv. 234; the other epigrams on hermae, Nos. 253, 256, deserve notice); and some are still to be seen at Athens with the names of victors in the gymnastic contests inscribed upon them. (Loeck, Athens, p. 17, n. 1.) They were even made vehicles of public instruction, according to the author of the Hipparchus (falsely ascribed to Plato, p. 229), who says that the tyrant Hipparchus placed hermae in the streets of the city and in roads throughout Attica, inscribed with moral verses, such as the following:

Μνήμη τὸυ ἵππαρχου στείχει δίκαια φρονίων.  Μνήμη τὸυ ἵππαρχος μὴ φίλοι ἔσπατα.

A. Hermon. Harpocr. s. v. Ἐρμαί; Heyseh. s. v. ἵππαρχοι Ἐρμαί, with Alberti’s note). Those which stood at cross roads had often three or four heads (Philoch. p. 45, ed. Siebelis; Harpocr. and Eustath. s. v. ἕρμακελαὶ Ἐρμηῖς; Phot. Heyseh. s. v. ἕρμακελαὶ Ἐρμηῖς; Eustath. ad Hom. p.

Numerous examples occur in Pausanias and other writers of their being placed on the boundaries of lands and states and at the gates of cities (πόρος τῇ πολικῇ, πορπολοίκῳ, Paus. viii. 34. § 8; s. a. iv. 38; § 3. 3. 4, et al.; Harpocr.) Small hermae were also used as pilasters, and as supports for furniture and utensils. (Pollux, vii. 15, 73; Müller, Arch. § 379, n. 2.) Respecting the use of the Hermae and Hermali in the Circus, see pp. 263, a, 266, a.

With respect to the form of these works, the essential parts have been already mentioned. A pointed head (σφηνωτάτης) belonged to the ancient type (Artemid. ii. 37). A mantle (μακρόν) was frequently hung over the shoulders (Paus. viii. 38. § 4; Diog. Laërt., v. 82). Originally the legs and arms were altogether wanting (Pausanias calls them ἑκα-
The Hermae of all kinds were in great request among the wealthy Romans, for the decoration of their houses and villas. It is also stated that they used them as posts for ornamental railings to a garden, in which case they were commonly decorated with the busts of philosophers and eminent men, some of which may be seen at the Vatican and other museums, with the square holes in their shoulders into which the transverse rail was inserted. This square hole, however, is also seen in Hermae of old Greek workmanship, in which cases they were probably the sockets of the projections, above mentioned, for hanging garlands on.

The existing remains of ancient art are rich in terminal statues of all the classes which have been described; and specimens of nearly all may be seen in the British Museum, and in engravings in Müller's Denkmäler der alten Kunst (vol. i. pl. i. Nos. 3, 4, 5, vol. ii. pl. xxvii. Nos. 299, 300, 303, pl. xxxi. No. 341, pl. xxxii. Nos. 376, 386, 387, pl. xxxvi. Nos. 426, 429, pl. xliii. No. 526). The first two examples in Müller are very interesting: the one is a bas-relief, exhibiting a Hermes decorated with garlands and surrounded with the implements of his worship, as shown in the following engraving; the other is also a bas-relief, in which we see a terminal bust of Dionysus washed and decorated by a man and three women. Respecting the Hermæ on coins, see Rasche, Gymnasium, p. 580, b.)

HERMAEA. (Hermathea.)

The town of Pheneos, in Arcadia, of which Hermes was the principal divinity, likewise celebrated Hermaea with games and contests. (Paus. viii. 14. § 7.) A festival of the same kind was celebrated at Pellene, (Schol. ad Pind. Ol. vii. 156, and Nem. x. 82.) Tanagra, in Boeotia (Paus. ix. 22. § 2), and some other places, likewise celebrated festivals of Hermes, but particulars are not known. [L. S.]

HERMAE. [HERMAE.]

HERMARCLAES. [HERMAE.]

HEROENES, baskets or crates of sedge, which were employed, when filled with chalk, for marking a foundation in the water (Vitruv. v. 12. § 5). Pliny states, that the architect of the temple of Diana, at Ephesus, raised to their places immense blocks, which formed the architrave, by means of an inclined plane, constructed of herones filled with sand (H. N. xxxvi. 14. s. 21). In these and the few other passages where it occurs, the readings of the word are very various. Different modern scholars have adopted one of the three forms, aerones, erones, or herones. (See Schneider, ad Vitruv. l. c.)

HEROON (ἡρώων) [APOTHEOSIS ; FUNUS, pp. 556, b. 564, &c.]

HESTIA (ἡστία) [FOCUS.]

HESTIASIS (ἡστιασία), was a species of liturgy, and consisted in giving a feast to one of the tribes at Athens (ἡστιασία, Dem. c. Meid. p. 565. 10 ; Pollux, iii. 67.) It was provided for each tribe at the expense of a person belonging to that tribe, who was called ἵστιατος. (Dem. c. Boec. p. 996, 24.) Harpocration (s. v. ἵστιατος) states on the authority of the speech of Demo-thenes against Meidias, that this feast was sometimes provided by persons voluntarily, and at other times by persons appointed by lot; but as Dobson remarks, nothing of this kind occurs in the speech, and no burthen of this description could have been imposed upon a citizen by lot. The ἵστιατοσ were doubtless appointed, like all persons serving liturgies, according to the amount of their property in some regular succession. These banquets of the tribes, called φανερατικα δίαιτα by Athenaeus (v. p. 185, d), were introduced for sacred purposes, and for keeping up a friendly intercourse between persons of the same tribe, and must be distinguished from the great festivities of the people, which were c. defrayed from the Theorica. (Böckh, Pd. Econ. of Athens, p. 452, 2nd. ed. ; Wolf, Proleg. ad Dem. Leptin. p. lxxxvii. note 60.)

HETAERAE. (ηταεραι.) The word ἡταερα originally signified a friend or companion, but at Athens, and in other towns of Greece, it was afterwards used as a euphemistic name for φθηνή, that is, a prostitute, or mistress. (Plut. Solon, c. 15: Athen. xiii. p. 371.) As persons of this class acted a much more prominent and influential part in some of the Greek states than in any of the most demoralized capitals of modern times, we cannot avoid in this work stating their position and their relations to other classes of society. But as their conduct, manners, ensuring artifices, and impositions, have at all times and in all countries been the same, we shall confine ourselves to those points which were peculiar to the hetaerae in Greece.

First we may mention that the young men at Athens, previous to their marriage, spent a great part of their time in the company of hetaerae without its being thought blamable in any respect
whatever. Marriage, indeed, produced on the whole a change in this mode of living of young men, but in innumerable instances even married men continued their intercourse with hetærae, without drawing upon themselves the censure of public opinion; it seems, on the contrary, evident from the manner in which Demosthenes (c. Neuter. v. 1351, &c.) relates the history of Lyssias the sophist, that such connections after marriage were not looked upon as anything extraordinary or inconsistent, provided a man did not offend against public decency, or altogether neglect his legitimate wife and the affairs of his household, as was the case with Alcibiades. (Andoc. c. Alcibi. p. 177.) This irregular condition of private life among the Greeks seems to have arisen chiefly from two causes: first, from the great love of sensual pleasures, which the Greeks appear to have possessed in as high a degree as most other southern nations; and, secondly, from the generally prevailing indifference between husbands and wives. As regards the latter point, matrimonial life in the historical times of Greece was very often a mere means of producing citizens or state servants. (Dem. c. Neuter. p. 1386; Becker, Charikles, vol. i. p. 215, &c.) The education of women was almost entirely neglected; they were thought a kind of inferior beings, less endowed by nature, and incapable of taking any part in public affairs and of sympathising with their husbands. In an intellectual point of view, therefore, they were not to be regarded as companions to their husbands, who consequently sought elsewhere that which they did not find at home. It is true the history of Greece furnishes many pleasing examples of domestic happiness, and well-educated women, but those are exceptions, and only confirm the general rule. A consequence of all this was, that women were bound down by rules which men might violate with impunity; and a wife appears to have had no right to proceed against her husband, even if she could prove that he was unfaithful (Plaut. Merc. iii. 6.3), nor were they subject to the strict conventional rules which honest women had to observe; their wit and humour, of which so many instances are recorded; were well calculated to ensnare young men, and to draw the attention of sufferers away from their husbands. Women, however, of the intellect and character of Aspasia were exceptions; and even Athenian citizens did not scruple to introduce their wives and daughters to her circles, that they might learn there the secrets by which they might gain and preserve the affections of their husbands. The disorderly life of the majority of Greek hetærae is nowhere set forth in better colours than in the works of the writers who belong to the so-called school of the middle comedy, and in the plays of Plautus and Terence; with which may be compared Demosth. c. Neuter. p. 1355, &c., and Athen. book xiii. It was formerly supposed that at Athens a peculiar dress was by law prescribed to the hetærae, but this opinion is without any foundation. (Becker, Charikles, vol. i. p. 126, &c.)

The conduct of the hetærae in these houses is described in Athenaeus (xiii. p. 508). All the hetærae of such houses, as well as individuals who lived by themselves and gained their livelihood by prostitution, had to pay to the state a tax (πρωνικόν τέλος, Desch. c. Timarch. p. 134, &c.), and the collecting of this tax was every year let by the senate to such persons (πρωνικόν τέλος, Philonides, op. Pollic. vii. 202) as were best acquainted with those who had to pay it. The hetærae were under the superintendence of the ἀγοραστής (Suidas, s. v. Διαγραμμα), and their places of abode were chiefly in the Ceramicus. (Hesych. s. v. Κεραμεικός.)

The number of private hetærae, or such as did not live in a πόρτον, was very great at Athens. They were, however, generally not mere prostitutes, but acted at the same time as flute or cithara players, and as dancers, and were as such frequently engaged to add to the splendour of family sacrifices (Plaut. Epid. iii. 4. 64), or to enliven and heighten the pleasures of men at their symposia. Their private abodes, where often two, three, and more lived together, were also frequently places of resort for young men. (Isocrates. Areopog. p. 202, Bekker.) Most of these hetærae not only took the greatest care to preserve their physical beauty, and to acquire such accomplishments as we now call mere polite education, but frequently engaged to add to the cultivation of their minds. Thus the Athenian Lachneia was a disciple of Plato (Athen. xii. p. 546), and Leontion a disciple of Epieicus (Athen. xiii. p. 588); Aspasia is even said to have instructed Socrates and Pericles. Whatever we may think of the historical truth of these and similar reports, they are of importance to the historian, inasmuch as they show in what light these hetærae were looked upon by the ancients. It seems to have been owing, especially to their superiority in intellectual cultivation over the female citizens, that men preferred their society and conversation to those of citizens and wives, and that some hetærae, such as Aspasia, Lais, Phryne, and others, formed connections with the most eminent men of their age, and acquired considerable influence over their contemporaries. The free and unrestrained conduct and conversation, which were not subject to the strict conventional rules which honest women had to observe; their wit and humour, of which so many instances are recorded; were well calculated to ensnare young men, and to draw the attention of sufferers away from their wives. Women, however, of the intellect and character of Aspasia were exceptions; and even Athenian citizens did not scruple to introduce their wives and daughters to her circles, that they might learn there the secrets by which they might gain and preserve the affections of their husbands. The disorderly life of the majority of Greek hetærae is nowhere set forth in better colours than in the works of the writers who belong to the so-called school of the middle comedy, and in the plays of Plautus and Terence; with which may be compared Demosth. c. Neuter. p. 1355, &c., and Athen. book xiii. It was formerly supposed that at Athens a peculiar dress was by law prescribed to the hetærae, but this opinion is without any foundation. (Becker, Charikles, vol. i. p. 126, &c.)
prostitution, or sold them to men who wished to
young children, and afterwards compelled them to
houses were either real slaves or at least looked

periphrasies, which seems to have happened very seldom.
There are cases in which daughters of Athene, as
fields, where the hetaerae seem never to have acquired that importance which they
had in other parts of Greece, and among the Greeks of
Asia Minor.
An important question is who the hetaerae gener-
ally were? The iepodovoi of Corinth were, as
their name indicates, persons who had dedicated themselves as slaves to Aphrodite; and their
prostitution was in fact a service to the goddess. [Hieroduli] Those πόρναι who were kept at
Athens in public brothels by the παροδοσκολοι, were generally slaves belonging to these παροδοσκολοι, who
compelled them to prostitute their persons for the
purpose of enriching themselves. The owners of
these πόρναι were justly held in greater contempt
than the unhappy victims themselves. Sometimes,
however, they were real prostitutes, who voluntarily
entered into a contract with a παροδοσκολος: others
again were females who had been educated in
better circumstances and for a better fate, but had
by misfortune lost their liberty, and were compelled
by want to take to this mode of living. Among
this last class we may also reckon those girls who
had been picked up as young children, and brought
up by παροδοσκολοι for the purpose of prostitution.
An instance of this kind is Nicarete, a freed
woman, who had contrived to procure seven
young children, and afterwards compelled them to
prostitution, or sold them to men who wished to
have the exclusive possession of them. (Dem.
c. Neaer. p. 1351, &c.) Other instances of the
same kind are mentioned in the comedies of Pau-
tus. (Compare Isaues, De Philocten. herod. p. 143.) Thus all prostitutes kept in public or private
houses were either real slaves or at least looked
upon and treated as such. Those hetaerae, who the other
hand, who lived alone either as mistresses of
certain individuals or as common hetaerae, were
almost invariably strangers or aliens, or freed-
women. The cases in which daughters of Athe-
nian citizens adopted the life of an hetaera, as
Lamia, the daughter of Cleanor (Athen. xiii. p. 677),
seem to have occurred very seldom; and
whenever such a case happened, the woman was
by law excluded from all public sacrifices and offices,
sunk down to the rank of an alien, and as such be-
came subject to the παροδοσκολος: she generally
also changed her name. The same degradation
took place when an Athenian citizen kept a πό-
ρνα, which seems to have happened very seldom.
(Bückl. Pabul. Econ. of Athens, p. 333, 2nd ed.)
(3.) Other instances of these same kind are men
tioned in the comedies of Pau-
tus. (Compare Isaues, De Philocten. herod. p. 143.) Thus all prostitutes kept in public or private
houses were either real slaves or at least looked
upon and treated as such. Those hetaerae, who the other
hand, who lived alone either as mistresses of
certain individuals or as common hetaerae, were
almost invariably strangers or aliens, or freed-
women. The cases in which daughters of Athe-
nian citizens adopted the life of an hetaera, as
Lamia, the daughter of Cleanor (Athen. xiii. p. 677),
seem to have occurred very seldom; and
whenever such a case happened, the woman was
by law excluded from all public sacrifices and offices,
sunk down to the rank of an alien, and as such be-
came subject to the παροδοσκολος: she generally
also changed her name. The same degradation
took place when an Athenian citizen kept a πό-
ρνα, which seems to have happened very seldom.
(Bückl. Pabul. Econ. of Athens, p. 333, 2nd ed.)
(3.) Other instances of these same kind are men
tioned in the comedies of Pau-
tus. (Compare Isaues, De Philocten. herod. p. 143.) Thus all prostitutes kept in public or private
houses were either real slaves or at least looked
upon and treated as such. Those hetaerae, who the other

ρνα, which seems to have happened very seldom.
(Bückl. Pabul. Econ. of Athens, p. 333, 2nd ed.)
and even persons of the highest families sent their daughters to the temples to sacrifice their chastity to the gods, at least till the time of their marriage. The practice of females offering their chastity to the gods was of ancient origin in the East, and even persons of the highest families sent their offspring to the lowest services (Paus. x. 32. § 8) ; but we also find mention in some Greek temples of free persons of both sexes, who had dedicated themselves voluntarily to the services of some god, and to whom the term of hieroduli was generally applied. Masters, who wished to give slaves their freedom, but were prevented by various causes from manumitting them, presented them to some temple as ιεροδουλαί under the form of a gift or a sale, and thus procured for them liberty in reality. Such cases of manumission frequently occur in inscriptions, and are explained at length by Curtius (De Manumissione sacra Graecorum, in his Analecta Delaviscia, Berlin, 1843, p. 10, &c.; comp. Plat. Amy. c. 21, τῶν ἐλλων διεστών καὶ ἀρχηγῶν ἐξευθέντι καὶ ἀρίττοι καθάπερ ιεροδουλοι διατελεύ-
σιν). The female hierodula, who prostituted their services, are only found in Greece connected with the worship of divinities who were of Eastern origin, as many of whose religious rites were borrowed from the East. This was the case with Aphrodite, who was originally an Oriental goddess. At her temple at Eryx, in Sicily, there were a thousand Hieromnemones (περοτριοιδα, who were the ruin of many a stranger who visited Corinuth, and there was also a large number of the same class of women at her temple at Eryx, in Sicily. (Strab. viii. p. 578, vi. p. 272, comp. xii. p. 559.) (Hirt, Die Hierodulen, with appendices by Böckh and Buttmann, Berlin, 1818; Kreuser, Der Helenen Priesterstaat, mit vorzüglich Rücksicht auf die Hierodulen, Mainz, 1824; Movera, Die Phénizier, p. 350, &c.; Hornung, Lehrsueh d. oesterlischen Alterthümer d. Griechen, § 20, u. 13—16.)

HIEROMANTEIA (ἰερομαντεία). [DIVINATION.]

HIEROMENIA (ἰερομνία), was the time of the month at which the sacred festivals of the Greeks began, and in consequence of which the whole month received the name of μῆνιος ἱερός. It was a part of the international law of Greece that all hostilities should cease for the time between the religious festivals of the different states (Herod. i. 169). This was the case with Aphrodite, who received the whole month received the name of θεσμωτείον, in that it was directed against the offence of robbery, aggravated by violence and desecration, to which the penalty of death was awarded. In the latter action, on the contrary, the theft or embezlement, and its subject-matter, only were taken into consideration, and the and the dicasts had a power of assessing the penalty upon the conviction of the offender. With respect to the tribunal before which a case of sacrilege might have been tried, some circumstances seem to have produced considerable differences. The γραφή might be preferred to the king archon, who would thereupon assemble the areiopagus and preside at the trial, or to one of the thesmothetae in his character of chief of an ordinary Heliotic body; or, if the prosecution assumed the form of an apagoge or ephegesis, would fall within the jurisdiction of the Eleven. Before the first-mentioned court it is conjectured (Meier, Att. Proc. p. 307) that the sacrilege of the alleged violation, as well as the fact itself, came into consideration; that the thesmothetae took cognizance of those cases in which the sacrilege was obvious if the fact were established; and that the Eleven had jurisdiction when the criminal appeared in the character of a common robber or burglar, surprised in the commission of the offence. In all these cases the convict was put to death, his property confiscated, and his body denied burial within the Attic territory. There is a speech of Lyssias (ποιο Cullia) extant upon this subject, but it adds little to our knowledge; except that slaves were allowed upon that occasion to appear as informers against their master—a resident alien—and anticipated their emancipation in the event of his conviction.
HIPPODAMEIA. HOMER'S Homer, was the name of the nobility of Chalcis in either to wealthy Romans or to the emperors themselves. All kinds of games and amusements were allowed on this day; masquerades were the most his disguise, imitate whomsoever he liked, and of March, and was solemnised by the Galli with various mysterious rites. (Ovid, measure of distance, equal to four stadia. Accord games in honour of the mother of the gods. Re according to Plutarch it was mentioned in the laws of HIPPODROMUS; STADIUM.) [P. S.] HIPPODROMUS (ιππόδρομος) was a name by which the Greeks designated the place appropriated to the horse-races, both of chariots and of single horses, which formed a part of their games. The word was also applied to the races themselves. The mode of fighting from chariots, as described by Homer, involves the necessity of much previous practice; and the funeral games in honour of Patroclus present us with an example of the chariot-race, occupying the first and most important place in these games. (H. xxii. 282—630.) In this vivid description the nature of the contest and the arrangements for it are very clearly indicated. There is no artificially constructed hippodrome; but an existing land mark or monument (σίμα, 331) is chosen as the goal (τεράων), round which the chariots had to pass, leaving it on the left hand (336), and so returning to the Greek ships on the sea-shore, from which they had started (365). The course thus marked out was so long, that the goal, which was the stump of a tree, could only be clearly seen by its having two white stones leaning against it (327—329), and that, as the chariots return, the spectators are uncertain which is first (436, &c.: the passage furnishes a precedent for betting at a horse-race, 485). The ground is a level plain (330), but with its natural inequalities, which are sufficient to make the light chariots leap from the ground (369, 370), and to threaten an overthrow where the earth was broken by a winter torrent, or a collision in the narrow hollow way thus formed (419—447). The chariots were five in number, each with two horses and a single driver (286, &c.)*; who stood upright in his chariot (370).

In a race of this nature, success would obviously depend quite as much on the courage and skill of the driver as on the speed of the horses; a fact which Homer represents Nestor as impressing upon his son Antilochus in a speech which fully explains the chief strategems and dangers of the contest, and is nearly as applicable to the chariot races of later times as to the one described by Homer (305—348). At starting, it was necessary so to direct the horses as, on the one hand, to avoid the loss of time by driving wide of the straightest course, and on the other not to incur the risk of a collision in the crowd of chariots, nor to make so straight for the goal as to leave insufficient room to turn it. Here was the critical point of the race, to turn the goal as sharp as possible, with the nave of the near wheel almost grazing it, and to do this safely: very often the driver was here thrown out, and the chariot broken in pieces (334—343, 465—468). There was another danger at this point, which deserves particular notice as connected with the arrangements of the hippodrome of later times. As the horse is a very timid animal, it can easily be understood that the noise and crush of many chariots turning the goal together, with the addi—

* But Nestor complains of having been once beaten by two brothers driving at once, the one managing the reins and the other plying the whip (638—642).
tional confusion created by the overthrow of some of them, would so frighten some of the horses as to make them unmanageable; and this is expressly referred to by Homer (468).

Among the other disasters, to which the competitors were liable were the loss of the whip (384); the reins escaping from the hands (465); the breaking of the pole (392); the light chariot being overturned, or the driver thrown out of it, through the roughness of the ground, or by neglecting to balance the body properly in turning the goal (368, 369, 417—425, 335); and the being compelled to give way to a bolder driver, for fear of a collision (426—437); but it was considered foul play to take such an advantage (439—441, 566—611). These and similar disasters were no doubt frequent, and, in accordance with the religious character of the games, they were ascribed to the intervention of the deities, whom the sufferer had neglected to propitiate (383—393, 546, 547). The prizes, as in the other Homeric games, were of substantial value, and one for each competitor (263—270). The charioteer accused of foul play was required to lay his hand upon his horses, and to swear by Poseidon, the patron deity of the race, that he was guiltless (581—585).

This description may be illustrated by the following engraving from an antique Greek vase; in which we see the goal as a mere stone post, with a fillet wound round it; the form of the chariots are well shown, and the attitude of the drivers; each has four horses, as in the earliest Olympic chariot race; and the vividness of the representation is increased by the introduction of the incident of a horse having got loose from the first chariot, the driver of which strives to retain his place with the other. (Panofka, Bilder Antiken Lebens, pl. iii. No. 10.)

For other representations of the race and its disasters, see CIRCUS, p. 285, CURRUS, p. 379.

In no other writer, not even in Pindar, have we a description at once so vivid and so minute, of the Greek chariot race as this of Homer's; but it may be safely assumed that, with a few points of difference, it will give us an equally good idea of a chariot race at Olympia or any other of the great games of later times. The chief points of difference were the greater compactness of the course, in order that a large body of spectators might view the race with convenience, and the greater number of chariots. The first of these conditions involved the necessity of making the race consist of several double lengths of the course, instead of only one; the second required some arrangement by which the chariots might start without confusion and on equal terms. It is now to be seen how these conditions were satisfied in the hippodrome at Olympia; of which the only description we possess is in two passages of Pausanias (vi. 20, v. 15. § 4). Very different explanations have been proposed of some important points in those descriptions; but, from want of space, and from a strong conviction of what the correct explanation is, we pass over the discussion, and give only the result of it, according to the view of Alexandre de la Borde, which is adopted by Hirt (Lehrer d. Geb"ude, pp. 147—150). The following is the ground-plan, which Hirt (pl. xx. fig. 8) has drawn out from the description of Pausanias. A, B, the sides, C, the end of the hippodrome, with raised seats for the spectators (the dotted line D d is the axis of the figure). a, Place of honour for the magistrates and musicians; b, d, gateways; D, the starting-place; e, its apex; f, g, its curved sides; h, i, &c., up to l, stations of the chariots, their directions converging towards the point E. F, G, the goals, or turning-posts; H, the spina; p p, small intervals between the spina and the goals; q, the winning line; m, dolphin used as a signal; n, altar, with eagle for signal; o o o, portico of Agamemnon.

The general form of the hippodrome was an oblong, with a semicircular end, and with the right side, A, somewhat longer than the left, B, for a reason to be stated presently. The right side, A, was formed by an artificial mound; the left, B, by the natural slope of a hill. There were (besides
the starting-place) two entrances to the area, b and d, of which the former was probably for the exit of disabled chariots and horses, and the latter appears to have been for the same purpose as the porta triumphalis in the Roman circus. The base of the fourth side, D, was formed by the portico of Agnampus, so called from its builder. At this end of the hippodrome was the starting-place (aphesis), in the form of the prow of a ship, with its apex, e, towards the area, and each of its sides more than 400 feet long. Along both these sides were stalls (οἰκήματα) for the chariots about to start, like the careares in the Roman circus; and it was in the arrangement of these stalls that the peculiarity of the Greek starting-place consisted.

According to the view which we follow, the stalls were so arranged, as that the pole of each chariot, while standing in its stall, was directed to a normal point, E, at which, as nearly as possible, each chariot ought to fall into its proper course. As this point, E, was necessarily on the right side of the area (in order to turn the goal on the left hand), and as the corresponding stalls on each side were required to be equidistant from the apex, e, (as will presently be seen) and of course also from the point E, it follows that the base of the aphesis must have been perpendicular to the line E e, and therefore oblique to the axis D d; and this is the reason why the side A was longer than the side B. The curvature of the sides of the aphesis, f, g, is a conjectural arrangement, assumed as that which was probably adopted to give more space to each chariot at starting. The front of each stall had a cord drawn across it, and the necessary arrangements were made for letting these cords fall at the right moments. On the signal being given for the race to begin, the cords in front of the two extreme stalls, a, b, were let fall simultaneously, and the two chariots started; then those of the next pair; and so on, each pair of chariots being liberated at the precise moment when those which had already started came abreast of their position; and, when all the chariots formed an even line abreast of the apex of the aphesis, e, it was a fair start. This arrangement of the aphesis was the invention of the statuary Cleoetas; and was improved by Aristocles (perhaps the famous painter; see Hirt, c.). Cleoetas celebrated his invention in an epigram, which he inscribed on the base of a statue made by him at Athens: *Os τῷ ἐπιφάνεισ ἐν ὦ Ολυμπιακῷ ἕρατῳ πρῶτος Τεύξε μὲ Κλεοίτας, ὁδὸς Ἀριστοκλέους.*

Precisely the same arrangements were made for the start in the race of single horses (κέλατρες), and in both cases, as in the race described by Homer, the stalls were assigned to the competitors by lot. How many chariots usually started, cannot be determined; but that the number was large is proved by the well-known story, that Alexiades alone sent to one race seven chariots. Sophocles (Elec. 701—709) mentions ten chariots as running at once in the Pythian games; and the number at Olympia was no doubt greater than at any of the other games. This is probably the reason why the arrangements of a starting-place were so much more complicated in the Greek hippodromus than they were in the Roman circus [Circus]. About the centre of the triangular area of the aphesis there was an altar, n, of rough brick, which was plastered a rash before each festival, surmounted by a bronze eagle with out-stretched wings; and above the apex of the aphesis was a bronze dolphin, m. As the signal for the race to begin, the eagle was made to soar aloft, so as to be seen by all the spectators, and the dolphin sank to the ground.

The chariots, thus started, had to pass several times round two goals (vipsae), the distinction between which is one of the difficult points in the description of Pausanias. On the whole it seems most probable that the one which he describes as having upon it a bronze statue of Hippodameia, holding out the victor’s fillet, as if about to crown Pelops with it, was the one nearer to the aphesis, and abreast of the winning line, P; and that the other, G, round which the chariots made their first turn, was that which Pausanias calls “Taraxippus, the terror of the horses.” This was a round altar, dedicated to Taraxippus, who was supposed to strike a supernatural terror into the horses as they passed the spot, and whom, therefore, the charioteers sought to propitiate, before the race began, by offering sacrifices and making vows at this altar.

Pausanias gives various accounts as to who this Taraxippus was; some modern scholars take the word for an appellation of Poseidon Hippius. He was similarly honoured in the Isthmian hippodrome. At Nemea there was no such hero, but above the turning point of the course there was a bright red rock, which was supposed to frighten the horses. He adds the remark that, the Olympian Taraxippus had by far the most powerful effect upon the horses; and considering that the number of chariots which joined in the race there was greater than at any of the other games, that remark affords a pretty clear proof that the explanation of the supposed supernatural terror is that which has been given above in describing the Homeric race. There are several vase paintings, on which chariots or single horses are exhibited turning the goal, which is represented as a Doric or Ionic column. (See Panofka, Bilder Antiker Lebens, pl. iii.) One of these is shown in the following engraving, which exhibits a vivid picture of a race of single horses: the last rider has been unlucky in turning the goal.

There is no authority in the account of Pausanias

![Engraving of chariots turning the goal](image-url)
for the connecting wall, H, between the goals, nor does he state that the winning line, q, was marked out as a white line; but these details are inserted from the analogy of the Roman circus.

So also is the oblique position of the line of the course the greatest space was required at E, where the chariots were all nearly abreast of each other. Perhaps rather from one goal to the other, was two stadia, so that one double course was four stadia.

How many such double courses made up the whole race, we are not informed. The width must have been, at least, as great as the length of each side of the apheis, namely, more than 400 feet. There does not appear to have been much architectural display in the structure, and not many statues.

The internal area of the apheis, D, contained several altars.

The chief points of difference between the Greek hippodrome and the Roman circus are the smaller width of the latter, as only four chariots ran at once, and the different arrangement of the carereis. The periods at which the Olympic horse-races were instituted are mentioned under Olympia.

A few other hippodromes in Greece, Syria, and Egypt, are mentioned by Pausanias and other writers; but they deserve no special mention.

[Comp. Krause, Gymn. and Agon. vol. i. pp. 151, &c.] See also Horus.

HIPOPORAEE (ἵπποπόραι), saddle-lags. This appendage to the saddle [EHPPIUM] was made of leather (ephepioc scortai; Festus, s. v. Bulgo), and does not appear ever to have changed its form and appearance. Its proper Latin name was bisaccium (Petron. Sat. 31), which gave origin to bisaccia in Italian and besace in French. By the Gauls, saddle-lags were called balgae (Festus, l. c.; Onomast. Gr. Lat.), because they bulge or swell outwards; this significant appelliation is still retained in the Welsh bolgan or beulgan.

The more elegant term hipoereia is adopted by Seneca (Epist. 88).

HISTRO and HISTOS (ιστρος, ιστρός). [NAXOS.]

HISTRO (ἵστρος), an actor. 1. Greek. It is shown in the articles CHORUS and DIONYSIA that the Greek drama originated in the chorus which at the festivals of Dionysus danced around his altar, and that at first one person detached himself from the chorus, and, with mimic gesticulation, related his story either to the chorus or in conversation with it. If the story thus acted required more than one person they were all represented in succession by the same actor, and there was never more than one person on the stage at a time. This custom was retained by Thespis and Phrynichus. But it was clear that if the chorus took an active and independent part in such a play, it would have been obliged to leave its original and characteristic sphere. Aeschylus therefore added a second actor, so that the action and the dialogue became independent of the chorus, and the dramatist at the same time had an opportunity of showing two persons in contrast with each other on the stage. (Aristot. Poet. ii. 14.) Towards the close of his career, Aeschylus found it necessary to introduce a third actor, as is the case in the Agamemnon, Choephori, and Eumenides. (Pollux, iv. 110.) This number of three actors was also adopted by Sophocles and Euripides, and was but seldom exceeded in any Greek drama. In the Oedipus in Colonus, however, which was performed after the death of Sophocles, four actors appeared on the stage at once, and this deviation from the general rule was called parakrostita. (Pollux, l. c.) The three regular actors were distinguished by the technical names of πιθηκωνοι, δεινηρωνοι, and τριγωνωνοι: Demosth. de Coron. p. 315, de Fest. Leg. p. 344 and 403), which indicated the more or less prominent part which an actor had to perform in the drama. Certain conventional means were also devised, by which the spectators, at the moment an actor appeared on the stage, were enabled to judge which part he was going to perform; thus, the protagonists always came on the stage in the centre, the deuteragonists from one on the right, and the tritagonists from a door on the left hand side. (Pollux, iv. 124.) The protagonists was the principal hero or heroine of a play, in whom all the action and energy were concentrated; and whenever a Greek drama is called after the name of one of its personae, it is always the name of the character which was performed by the protagonists.

The deuteragonists, in the pieces of Aeschylus for two actors, calls forth the various emotions of the protagonists either by friendly sympathy or by painful tidings, &c. The part of a tritagonistes is represented by some external and invisible power, by which the hero is actuated or caused to suffer. When a tritagonistes was added, the part assigned to him was generally that of an instigator who was the cause of the sufferings of the protagonists, while his himself was the least capable of depth of feeling or sympathy. The deuteragonists in the dramas for three actors is generally distinguished by loftiness and warmth of feeling, but has not its depth and vehemence peculiar to the protagonists, and thus serves as a foil to set forth the character of the chief hero in its most striking and vivid colours. (Müller, Hist. of Greek Lit. i. p. 305, &c.; compare Büttiger, De Actoribus Primarum, Secund. et Tert. Partium.)

The female characters of a play were always performed by young men. A distinct class of persons, who made acting on the stage their profession, was unknown to the Greeks during the period of their great dramatists. The earliest and greatest dramatic poets, Thespis, Melanthius, Sophocles, and probably Aeschylus also, acted in their own plays, and in all probability as protagonists. We also know of several instances in which distinguished Athenian citizens appeared on the stage, and Aeschines, the orator, did not scruple to act the part of tritagonistes. (Demosth. l.c.) These circumstances show that it was by no means thought degrading in Greece to perform as an actor, and that no stigma whatever was attached to the name of a man for his appearing on the stage. Bad actors, however, to whatever station in life they belonged, were not, on that account, spared; and the general mode of showing displeasure on the part of the spectators seems to have been by whistling. (D-moth. De Coron. p. 315.) It appears that when the spectators showed their displeasure in too offensive or insulting a manner,
the actors would sometimes attack the most forward of the audience, and quarrels of this kind ended not unfrequently in blows and wounds. (Demosth. c. Mid. 314; Athen. x. 406.) At a later period, however, persons began to devote themselves exclusively to the profession of actors, and distinguished individuals received even as early as the time of Demosthenes exorbitant sums for their performances. Various instances are mentioned in Böckh's *Publ. Econ. of Athens*, p. 126, &c. At the time when Greece had lost her independence, we find regular troops of actors, who were either stationary in particular towns of Greece, or wandered from place to place, and engaged themselves wherever they found it most profitable. They formed regular companies or guilds, with their own internal organisation, with their common officers, property, and sacra. We possess a number of inscriptions belonging to such companies, with decrees to honour their superiors, or to declare their gratitude to some king by whom they had been engaged. But these actors are generally spoken of in very contemptuous terms; they were perhaps in some cases slaves or freedmen, and their ordinary pay seems to have been seven drachmae for every performance. (L树木 *Ic. rerum, 29, de Merced. Cons. 5; Theophrast. Charact. 6.)

2. ROMAN. The name *histrionem* by which the Roman actors were called, is said to have been formed from the Etruscan *histor* which signified a ludio or dancer. (Liv. vii. 2; Val. Max. ii. 4. § 4; compare Plut. *Quaest. Rom.* p. 289, c.) In the year 346 B.C. Rome was visited by a plague, and as no human means could stop it, the Romans are said to have tried to avert the anger of the gods by scenic plays (*ludi sacrae*), which, until then, had been unknown to them; and as there were no persons at Rome prepared for such performances, the Romans sent to Etruria for them. The first histriones who were thus introduced from Etruria, were dancers, and performed their movements to the accompaniment of a flute. That the real secret must have been in the mode of dancing, that is, in the mimic representations of the dancers, such as they are described by Dionysius (*Antiq. Rom.* vii. 72) and Appian (viii. 66). That the Etrusca far excelled the Romans in these mimic dances, is more than probable; and we find that in subsequent times also, a fresh supply of Etruscan dancers (*histriones*) came to Rome. (Müller, *Etrusk. iv.* 1. 6.) Roman youths afterwards not only imitated these dancers, but also recited rex and *ludi sacrae*, adapted to the movements of the dance and the melody of the flute. This kind of amusement, which was the basis of the Roman drama, remained unaltered until the time of Livius Andronicus, who introduced a slave upon the stage for the purpose of singing or reciting the recitative, while he himself performed the appropriate dance and gesticulation. ([CANTICUM.]

A further step in the development of the drama, which is likewise ascribed to Livius, was, that the dancer and reciter carried on a dialogue, and acted a story with the accompaniment of the flute. (See Gramov, *ad Liv. l.c.*) The name histrio, which originally signified a dancer, was now applied to the actors in the drama. The stelatiae were played by the Romans, while the regular drama was left to the histriones who formed a distinct class of persons. It is clear from the words of Livy, that the histriones were not citizens; that they were not contained in the tribes, nor allowed to be enlisted as soldiers in the Roman legions; and that if any citizen entered the profession of histrio, he, on this account, was excluded from his tribe. Niebuhr (*Hist. of Rome*, i. p. 520, note 1150) thinks differently, but does not assign any reason for his opinion. The histriones were therefore always either freed-men, strangers, or slaves, and many passages of Roman writers show that they were generally held in great contempt. (Cic. *pro Arch. 5; Corn. Nep. *Praef. 5; Sueton. Tib. 55.*

Towards the close of the republic it was only such men as Cicero, who, by their Greek education, raised themselves above the prejudices of their countrymen, and valued the person no less than the talents of an Aesopos and Roscius. (Macrobi. *Sat.* 1. 10.) But notwithstanding this low estimation in which actors were generally held, distinguished individuals among them attracted immense crowds to the theatres, and were exorbitantly paid. (Cic. *c. Verri. iv.* 16.) Roscias alone received every day that he performed one thousand denarii, and Aesopos left his son a fortune of 200,000 sesterces, which he had acquired solely by his profession. (Macrobi. *l. c.*) The position of the histriones was in some respects altered during the empire. By an ancient law the Roman magistrates were empowered to coerce the histriones at any time and in any place, and the praetor had the right to scourge them (*jus virgarum in histriones*). This law was partly abolished by Augustus, as far as he did entirely away with the *jus virgarum*, and confined the interference of the magistrates to the time when, and the place where (*ludi et scenae*) the actors performed. (Tacit. *Annal.* i. 77.) But he nevertheless inflicted very severe punishments upon those actors who, either in their private life or in their conduct on the stage, committed any impropriety. (Suet. *Aug.* 45.) After these regulations of Augustus the only legal punishments that could be inflicted upon actors for improper conduct, seem to have been imprisonment and exile. (Tacit. *Annal.* iv. 14, xiii. 28.) The *jus virgarum* is indeed said to have been restored to the praetor by a law of Augustus himself (Paul. *Sent. v.* tit. 26), not expressly, but by the interpretation put upon this law by the jurists. But this interpretation cannot have become valid till after the reign of Tiberius, of whom it is clearly stated that he refused to restore the *jus virgarum*, because it had been abolished by his predecessor. (Tacit. *Annal.* i. 77.) These circumstances, and the favour of the court, increased the arrogance and the licentious conduct of the histriones, and the theatres were not seldom the scenes of bloody fights. Hence Tiberius on one occasion found himself obliged to expel all histriones from Italy (Tacit. *Annal.* iv. 14; Dion Cass. *lxx.* 2); but they were recalled and patronised by his successor. (Dion Cass. *lxx.* p. 738.) Some of the later emperors were exceedingly fond of histriones, and kept them for their private amusement (*histriones audacii*, Sperrian. *Hadr. c.* 19; *Jul. Capitol. Verus, c.* 5.) They performed at the repeats of
the emperors (Suet. Aug. 74), and were occasionally allowed also to play in the theatres before the people (publicam cantantur). In the Digest (3. tit. 2. s. 1) we read that all actors were infamous. From the time of Tacitus the word histrio was used as synonymous with pantomimus. (Bötticher, Lee. Theat. p. 406.)

Respecting the ordinary pay which common actors received during the time of the republic nothing is known. The pay itself was called lucor (Tacit. Annal. i. 77; Plut. Quaes. Rom. p. 285, c.; Festus, s. v. lucar and pocunia) which word was perhaps confined originally to the payment made to those who took part in the religious services celebrated in groves. In the times of the empire it seems that five denarii (Senec. Epist. 60), or, according to others (Lucian. Incromen. c. 29), seven drachmai, was the common pay for a performance for one performance. Several emperors found it necessary to restrict the practice of giving immoderate sums to actors. (Tacit. l. c. Sueb. Thb. 34.) The emperor M. Antoninus, who was fond of all his trionic arts, ordained that every actor should receive five aurei, and that no one who gave or conducted theatrical representations should exceed the sum of ten aurei. (Jul. Capitol. M. Anton. c. 11; compare Schol. ad Juvenal. vii. 243.) But it is not clear whether in this regulation the payment for one or more performances is to be understood. These sums were either paid by those who engaged the actors to play for the amusement of the people, or from the fiscus. (Lipsius, Excurs. N. ad Tacit. Annal. i.) Besides their regular pay, however, skilful histrones received from the people gold and silver crowns which were given or thrown upon them. (Phaedr. Pub. v. 7. 36; Plin. H. N. xxi. 3.)

HODORPEEI (δυσωιαι), public officers at Athens, who had to take care of the roads (of δώας πετακιαλα, Phot. Lec. s. v.). They were mentioned in a fragment of a comic poet of the time of Pericles (Plut. Prase. Pol. c. 15); but in the time of Aeschines their duties were discharged by the managers of the Theoric fund. (Aesch. c. Ctes. p. 419, Reiske; comp. Büch, Publ. Econ. of Athens, p. 203, 2nd ed.)

HOLOSEERICA VESTIS. [SERICUM.]

HOLOSPHYRATON, HOLOSPHYRE-LATA. [MALLEUS; METALLA.]

HOMOEI (δυσωιαι), the Equals, were those Spartans who possessed the full rights of citizenship, and are opposed to the ἰσωιαι, those who had undergone some kind of civil degradation. (Xen. de Rep. Lacid. x. 4. s. 7, Hellen. ii. 3. § 5; Arist. Pol. ii. 6. § 21.) This distinction between the citizens was no part of the ancient Spartan constitution, and is not mentioned by any writer before Xenophon; and Aristotle simply makes a later institution applicable to an early time, when he speaks of the Partheniae as belonging to the Homoei (Pol. v. 6. § 1). In the institution ascribed to Lycurgus, every citizen had a certain portion of land; but as in course of time many citizens lost their lands through various causes, they were unable to pay the fines of the sysaita, and therefore ceased to possess the full rights of Spartan citizens. Hence the distinction appears to have arisen between the ἰσωιαι and ἰσωιαι, the former being those who were in the possession of their land, and consequently able to contribute to the sysaita, the latter those who through having no land were unable to do so. (Comp. Arist. Pol. ii. 6. § 21, ii. 7. § 4.) Persons likewise, who did not adopt the Spartan mode of life or had disgraced themselves by any base act, were also reduced to the condition of ἰσωιαι, even if they possessed the requisite landed property (Xen. de Rep. Lac. x. 4. s. 7; Plut. Inst. Loc. 21; Teles. ap. Stob. Floril. xl. p. 233); but as the severity of the ancient Spartan manners decayed, the possession of property became the chief test to a place among the Homoei. The Homoei were the ruling class in the state, and they obtained possession of almost all the privileges and exclusive rights which the legislation of Lycurgus conferred upon the Spartan citizens. They filled all the public offices of the state with the exception of the Ephoralty, and they probably met together to determine upon public affairs under the name of ἐκκλησία in an assembly of their own, which is called ἥ μηδε ἐκκλησία, to distinguish it from the assembly of the whole body of Spartan citizens. (Hermann, Lehr. d. Griech. Staatsterr. II. § 47; Id. de Conditione atque Origine eorum qui Homoei ap. Laced. diekathartan, Marburg, 1832; Schönann, Antiq. Jur. Publ. Graec. p. 119.)

HONORARIA ACTIO. [ACTIO.]

HONORARII LUDI. [LUDI.]

HONORARIUM. [ADVOCATUS; LEX CINCIARIA.]

HONORARIUM JUS. [EDITUM.]

HONOR RES. Cicero (Top. c. 20) speaks of the "honores populi," and Horace (Serm. i. 6. 5) speaks of the populus "qui stultus honores Saepe dat indigna." In both passages the word "honores" means the high offices of the state to which qualified individuals were called by the votes of the Roman citizens. Cicero calls the quaestorship "honor" (see also Liv. vi. 39); and the words "magistratus" and "honores" are sometimes coupled together. The capacity of enjoying the honores was one of the distinguishing marks of citizenship. (Civitas.) In Sulla's prescription (Vell. Pat. ii. 23), there was a clause that the children of the proscribed "petendorum honorum jure prohiberentur." There appears to be no exact definition of honor earlier than in the jurists whose writings are excerpted in the Digest. "Honor municipalis" is defined to be "administratio reipublicae cum dignitatibus grada, sive cum sumptibus, sive sine erogatione contingenti." Munus was either publicum or privatum. A publicum munus was concerned about administration (in administranda republica), and was attended with cost (sumptus) but not with rank (dignitas). "Honor" was properly said "deferri," "dari." munus was said "imponit." Cicero (De Or. i. 45) uses the phrase "honoris et reipublicae numeriis perfuctum," to signify one who has attained all the honours that his state can give, and discharged all the duties which can be required from a citizen. A person who held a magistratus might be said to discharge numerum, but only as incident to the office (magnificentissimo numere acclimatit perfuctus, Cic. ad Fam. xi. 17). For the office itself was the honor. Such munera as these were other public and other things of the kind. (Dig. 50. tit. 4. De Muneribus et Honoris.)

[PLATE]
Roman Hours.  Modern Hours.

11th hour . 2 o'clock, 58 minutes 0 seconds.
12th "   3 "  42 " 30 "
End of the day 4 " 27 " 0 "

The custom of dividing the natural day into twelve equal parts or hours lasted, as we have observed, till a very late period. The first calendar in which we find the duration of day and night marked according to equinoctial hours, is the calendarium rusticum Farnesianum. (Ideler, Handbuch der Chronologie. ii. p. 139, &c.; Graev, Thesaur. Ant. Rom. viii.)

Another question which has often been discussed, is whether in such expressions as prima, altera, tertia, hora, &c., we have to understand the hour which is passing, or that which has already elapsed. From the construction of ancient sun-dials on which the hours are marked by eleven lines, so that the first hour had elapsed when the shadow of the gnomon fell upon the first line, it might seem as if hora prima meant after the lapse of the first hour. But the manner in which Martial (iv. 8), when describing the various purposes to which the hours of the day were devoted by the Romans, speaks of the hours, leaves no doubt that the expressions prima, altera, tertia hora, &c., mean the hour which is passing, and not that which has already elapsed. (Becker, Gallia, vol. i. p. 184, &c.) [L. S.]

HORCUS (h'kws). [Jusjurandum.]

HORDEARIUM AES. [AES HORDEARIUM.]

HORI (h'kws), were stone tablets or pillars placed on mortgaged houses and lands at Athens, upon which the debt and the creditor's name were inscribed, and also the name of the archon eponymus in whose year the mortgage had been made. (Harpoct. s. e. "Opes" and "Assiustov; Pollux, iii. 83, ix. 9.) The following inscription upon an opes, found at Acharnae, is taken from Böckh (Corpus, Inscript. i. p. 484):—'Eπι Θεοφαρτότα όρχοντος, όρος χαριν τιμήν ἐνορθέλαιναι Φαυσταντερ Πανων (ιτε) χρ. θα, that is, διοχθάλων δραχμών. It appears that the estate had been bought of Phaonstratus, but that the purchase-money, instead of being paid, was allowed to remain on mortgage.

When the estate of an orphan was let by the archon and his guardian [Epitropus], the person to whom it was let was obliged to hypothecate a sufficient piece of ground or other real property, which was called ἀποτιμίαμα : and upon this an ὅρος was placed, bearing an inscription to that effect, as in the following example, which is taken from an ὅρος found upon the plain of Marathon (Böckh, p. 485):—"Ὅρος χαριν καλ ισία, ἀποτιμίαμα ταύτι οὖσαν Πρεσβάτη (Ἀρέων). (Compare Isaacus, Philoct. hered. p. 141.) "Opes" were also placed upon houses and lands on account of money due to a husband for the dowry of his wife (Dem. c. Spud. p. 1029, 21), and also upon the property which a husband was obliged to give as a security for the dowry which he received with his wife. (Dem. c. Onetor. ii. p. 877.)

The practice of placing these ὅροι upon property was of great antiquity at Athens: it existed before the time of Solon, who removed all stones standing upon estates, when he released or relieved the debtors. (Plut. Sol. 15.)

HOROLOGIUM (ἀρχολόγιον) was the name of the various instruments by means of which the ancients measured the time of the day and night. The earliest and simplest horologium of which mention is made, were called πόλος and γραμμα. Herodotus (ii. 109) ascribes their invention to the Babylonians; Phavorinus (ap. Diog. Laert. ii. 1. 3; compare Suidas, s. v. Γραμμα and Ἀναξειμανδρ) to Anaximander; and Pliny (II. N. ii. 76) to his disciple Anaximenes. Herodotus mentions the πόλος and γραμμα as two distinct instruments. Both, however, divided the day into twelve equal parts, and were a kind of sun-dial. The γραμμα, which was also called σταγος, was the more simple of the two, and probably the more ancient. It consisted of a staff or pillar standing perpendicular, in a place exposed to the sun (σκειδήμον), so that the length of its shadow might be easily ascertained. The shadow of the gnomon was measured by feet, which were probably marked on the place where the shadow fell. (Hesych. s. v. Ἐπτάκον, σκια and διοδεκάδος; Pollux, i. 72.)

The gnomon is almost without exception mentioned in connection with the δέκατον or the bath; and the time for the former was towards sunset, or at the time when the shadow of the gnomon measured ten or twelve feet. (Aristoph. Εκολο. 652, with the Schol.; Pollux, i. c.; Menander, ap. Athen. vi. p. 243; Hesych. s. v. Δικαία, σταγος.) The longest shadow of the gnomon, at sunrise and sunset, was generally 12 feet, but in some cases 24 feet, so that at the time of the δέκατον it was 20 feet. (Eubulides, ap. Athen. i. p. 8.) The time for bathing was when the gnomon threw a shadow of six feet. (Lucian, Κρονός, c. 17, Σομμ. ζ. Ο. Γεγ. c. 9.) In later times the name gnomon was applied to any kind of sun-dial, especially its finger, which threw the shadow, and thus pointed to the hour. Even the clepsydra is sometimes called gnomon. (Athen. ii. p. 42.)

The gnomon was evidently a very imperfect instrument, and it was impossible to divide the day into twelve equal spaces by it. This may be the reason that we find it only used for such purposes as are mentioned above. The πόλος or ηλιοστροφιν, on the other hand, seems to have been a more perfect kind of sun-dial; but it appears, nevertheless, not to have been much used, as it is but seldom mentioned. (Aristoph. ap. Φασ. c. 4.) It consisted of a vessel with several little openings (κυβηγματα) at the bottom, through which the water contained in it escaped, as it were, by stealth. This instrument seems as first to have been used only for the purpose of measuring the time during which persons were allowed to speak in the courts of justice at Athens. The time of its invention or introduction is not known; but in the age of Aristophanes (see Acharn. 653, Vesp. 93 and 827) it appears to have been in common use. Its form and construction may be seen very clearly from a passage of Aristotle (Problem. vii. 8). The clepsydra was a hollow globe, probably some what flat at the top part, where it had a short neck (αιλός), like that of a bottle, through which the water was poured into it. This opening might be closed by a lid or stopper (κοντα), to prevent the water running out at the bottom. The clepsydra which Aristotle had in view was probably not of glass or of any transparent material, but of bronze or brass, so that it could not be seen in the clepsydra itself what quantity of water had escaped. As the time for speaking in the Athenian courts was thus measured by water, the orators frequently use the term δικη instead of the time allowed to them (ἐν τῷ ἐνάτῳ, Demosth. de Cron. p. 274; τὰς ἐκχειρίς τῷ δικη, c. Leoc. p. 1094). The Athenians (c. Κλεσφ. p. 587), when describing the order in which the several parties were allowed to speak, says that the first water was given to the accuser, the second to the accused, and the third to the judges. An especial officer (ὁ ἐπ' δικη) was appointed in the courts for the purpose of watching the clepsydra, and stopping it when any documents were read, whereby the speaker was interrupted; and it is to this officer that Demosthenes (c. Φιλοκ. i. p. 1103) calls out: οὔτε ἐκχειρίς τῷ δικη. The time, and consequently the quantity of water allowed to a speaker depended upon the importance of the case; and we are informed that in a γραφὴ παραπρευτείας the water allowed to each party amounted to eleven amphorae (Aeschin. de Fals. Leg. § 126), whereas in trials concerning the right of inheritance only one amphora was allowed. (Demosth. c. Μακρ. p. 1502.) Those actions in which the time was thus measured to the speakers are called by Pollux (vii. 113) δικαί ποσὸ δικη: others are termed δικαί ἀναδικαί, and in these the speakers were not tied down to a certain space of time. The only instance of this kind of actions of which we know, is the γραφὴ καικεύσεως (Harpocrat. s. κκκαίκευσις).

The clepsydra used in the courts of justice however was, properly speaking, no horologium; but smaller ones, made of glass, and of the same simple structure, were undoubtedly used very early in families for the purposes of ordinary life, and for dividing the day into twelve equal parts. In these glass-clepsydras the division into twelve parts must have been visible, either on the glass-globe itself, or in the basin into which the water flowed. These instruments, in order in which the several parties were allowed to speak, were called δικη, and the times allowed were measured correctly all the year round; first, because the water ran out of the clepsydra sometimes quicker and sometimes slower, according to the different temperature of the water (Athen. ii. p. 42; Plut. Quaest. Nat. c. 7); and secondly, because the length of the hours varied in the different seasons of the year. To remove the second of these defects the inside of the clepsydra was covered with a coat of wax during the shorter days, and when they became longer the wax was gradually taken away again. (Aen. Tact. c. 22.) Plutus is said to have used a κοιτήμα χρυσοποίου in the shape of a large clepsydra, which indicated the hours of the night, and seems to have been of a complicated structure. (Athen. iv. p. 174.) This instance shows that at an early period improvements were made on the old and simple clepsydra. But all these improvements were excelled by the ingenious invention of Ctesibius, a celebrated mathematician of Alexandria (about 135 B. C.). It is called ἀρχολόγιον δειγματικός, and is described by Vitruvius (ix. 9; compare Athen. l. c.). Water was
made to drop upon wheels which were thereby turned. The regular movement of these wheels was communicated to a small statue, which, gradually rising, pointed with a little stick to the hours marked on a pillar which was attached to the mechanism. It indicated the hours regularly throughout the year, but still required to be often attended to and regulated. This complicated clepsydra seems never to have come into general use, and was probably only found in the houses of very wealthy persons. The sun-dial or gnomon, and a simpler kind of clepsydra, on the other hand, were much used down to a very late period. The twelve parts of the day were not designated by the name &rho; until the time of the Alexandrian astronomers, and even then the old and vague divisions, described in the article DIES, were preferred in the affairs of common life. At the time of the geographer Hipparchus, however (about 150 B.C.), it seems to have been very common to reckon by hours. (Comp. Becker, Charikles, vol. ii. p. 490, &c.)

There is still existing, though in ruins, a horological building, which is one of the most interesting monuments at Athens. It is the structure formerly called the Tower of the Winds, but now known as the Horological Monument of Andronicus Cyrrhestes (see Diet. of Biog. s. v.). It is expressly called horologium by Varro (R. R. iii. 5. § 17). This building is fully described by Vitruvius (i. 6. § 4), and the preceding woodcuts show its elevation and ground plan, as restored by Stuart. (Antiq. of Athens, vol. i. c. 3.)

The structure is octagonal; with its faces to the points of the compass. On the N.E. and N.W. sides are distyle Corinthian porticoes, giving access to the interior; and to the south wall is affixed a sort of turret, forming three quarters of a circle, to contain the cistern which supplied water to the clepsydra in the interior. On the summit of the building was a bronze figure of a Triton, holding a wand in his hand; and this figure turned on a pivot, so that the wand always pointed above that side of the building which faced the wind then blowing. The directions of the several faces were indicated by figures of the eight winds on the frieze of the entablature. On the plain wall below the entablature of each face, lines are still visible, which, with the gnomons that stood out above them, formed a series of sun-dials. In the centre of the interior of the building was a clepsydra, the remains of which are still visible, and are shown on the plan, where the dark lines represent the channels for the water, which was supplied from the turret on the south, and escaped by the hole in the centre.

The first horologium with which the Romans became acquainted was a sun-dial (solarium, or horologium sciothericum), and was, according to some writers, brought to Rome by Papirius Cursor twelve years before the war with Pyrrhus, and placed before the temple of Quirinus (Plin. H. N. vii. 60); others stated that it was brought to Rome at the time of the first Punic war, by the consul M. Valerius Messala, and erected on a column behind the Rostra. But this solarium being made for a different latitude did not show the time at Rome correctly. Ninety-nine years afterwards, the censor Q. Marcius Philippus erected by the side of the old solarium a new one, which was more carefully regulated according to the latitude of Rome. But as sun-dials, however perfect they might be, were useless when the sky was cloudy, P. Scipio Nasica, in his censorship, 159 B.C., established a public clepsydra, which indicated the hours both of day and night. This clepsydra was in aftertimes generally called solarium. (Plin. H. N. vii. 60; Censorin. de Die Nat. c. 23.) The word hora for hour was introduced at Rome at the time when the Romans became acquainted with the Greek horologia, and was in this signification well known at the time of Plautus. (Pseudol. v. 2. 10.) After the time of Scipio Nasica several horologia, chiefly solaria, seem to have been erected in various public places at Rome. A magnificent horologium was erected by Augustus in the Campus Martius. It was a gnomon in the shape of an obelisk; but Pliny (H. N. xxxvi. 10) complains that in the course of time it had become incorrect. Another horologium stood in the Circus Flaminius. (Vitruv. ix. 9. 1.) Sometimes solaria were attached to the front-side of temples and basilicas. (Varro, de Ling. Lat. vi. 4; Gruter, Inscrip. vi. 6.) The old solarium which had been erected behind the Rostra seems to have existed on that...
Horologium.

spot till a very late period, and it would seem that the place was called ad Solarium, so that Cicero uses this expression as synonymous with Rostra or Forum (pro Quinct. 18, ad Herenn. iv. 10). Horologia of various descriptions seem also to have been commonly kept by private individuals (Cic. ad Fam. xvi. 18); and at the time of the emperors, the wealthy Romans used to keep slaves whose special duty it was to announce the hours of the day to their masters. (Juven. x. 215; Mart. viii. 67; Petron. 26.)

From the number of solaria which have been discovered in modern times in Italy, we must infer that they were very generally used among the ancients. The following woodcut represents one of the simplest horologia which have been discovered; it seems to bear great similarity to that, the invention of which Vitruvius ascribes to Berosus. It was discovered in 1741, on the hill of Tusculum, among the ruins of an ancient villa, and is described by Gio. Luca Zuzzeri, in a work entitled D'una antica villa scoperta sul dosso del Tuscelo, e d'un antico orologio a sole, Venezia, 1746, and by G. H. Martini, in his Abhandlung von den Sonnenuhren der Alten, Leipzig, 1777.

The following woodcut shows the same solarium as restored by Zuzzeri.

The breadth as well as the height (A O, and x y z) are somewhat more than eight inches; and the length (A B) a little more than sixteen inches. The surface (A O B R) is horizontal. S P Q T is the basis of the solarium, which, originally, was probably erected upon a pillar. Its side, A S T B, inclines somewhat towards the basis. This inclination was called γραλίας, or inclination of the solarium and enclima succissum (Vitruv. L. c.), and shows the latitude or polar altitude of the place for which the solarium was made. The angle of the enclima is about 40° 43', which coincides with the latitude of Tusculum. In the body of the solarium is the almost spherical excavation, H K D M IF N, which forms a double hemicyclium (hemicyclicum excavatum ex quadrato, Vitruv.). Within this double hemicyclium eleven hour-lines are marked which pass through three semicircles, H L N, K E F, and D M J. The middle one, K E F, represents the equator, the two others the tropic lines of winter and summer. The curve representing the summer tropic is somewhat more than a semicircle, the other two curves somewhat smaller. The ten middle parts or hours in each of the three curves are all equal to one another; but the two extreme ones, though equal to each other, are by one-fourth smaller than the rest. In the middle, O, of the curve D K H N I J, there is a little square hole, in which the gnomon or pointer must have been fixed, and a trace of it is still visible in the lead by means of which it was fixed.

It must have stood in a perpendicular position upon the surface A B R O, and at a certain distance from the surface it must have turned in a right angle above the spheric excavation, so that its end (C) extended as far as the middle of the equator, as it is restored in the above woodcut. See the description of another solarium in G. H. Martini's Antiquorum Monumentorum Syllagae, p. 95, &c.

Clepsydrae were used by the Romans in their camps, chiefly for the purpose of measuring accurately the four vigiliae into which the night was divided. (Cæs. de Bell. Gall. v. 13; Veget. de Re Milit. iii. 8; Aen. Tact. c. 22.)

The custom of using clepsydrae as a check upon the speakers in the courts of justice at Rome was introduced by a law of Cn. Pompeius, in his third consulship. (Tacit. D. clar. Orat. 38.) Before that time the speakers had been under no restrictions, but spoke as long as they deemed proper. At Rome, as at Athens, the time allowed to the speakers depended upon the importance of the case. Pliny (Epist. ii. 11) states that on one important occasion he spoke for nearly five hours, ten large clepsydrae having been granted to him by the judges, but the case was so important that four others were added. (Compare Plin. Epist. vi. 2; Martial, vi. 53, viii. 7.) Pompeius, in his law, is said to have limited the time during which the accuser was allowed to speak to two hours, while the accused was allowed three hours. (Ascon. in Milon. p. 37, ed. Orelli.) This, however, is clear from the case of Pliny and others, was not observed on all occasions, and we must suppose that it was merely the intention of Pompeius to fix the proportions of the time to be allowed to each party, that is, that in all cases the accuser should only have two-thirds of the time allowed to the accused. This supposition is supported by a case mentioned by Pliny (Epist. v. 3), where, according to law (e lege) the accuser had six hours, while the accused had nine. An especial officer was at Rome as well as at Athens appointed to stop the clepsydra during the time when documents were read. (Apul. Apolog. i. and ii.; compare Ernesti, de Solarisius, in his Opusc. Philolog. et Crit. pp. 21—31; Becker, Gallus, vol. i. p. 186, &c.)

Horoscopus. [Astrologia, p. 144, b.]
HORREARI. [HORREUM.]

HORREUM (ἀρρευς, εὐφορλακτῖν, ἀποθήκη) was, according to its etymological signification, a place in which ripe fruits, and especially corn, were kept, and thus answered to our granary. (Virg. Georg. iv. 52 ; Cic. de Leg. Agr. ii. 43.) During the empire the name horreum was given to any place destined for the safe preservation of things of any kind. Thus we find it applied to a place in which beautiful works of art were kept (Plin. Epist. viii. 18) ; to cellars (horrea subterranea, horrea vinaria, Dig. 18. tit. 1. s. 76) ; to depôts for merchandise, and all sorts of provisions (horrea penaria, Dig. 30. tit. 9. s. 3). Seneca (Epist. 45) even calls his library a horreum. But the more general application of the word horreum was to places for keeping fruit and corn ; and as some kinds of fruit required to be kept more dry than others, the ancients had besides the horrea subterranea, or cellars, two other kinds, one of which was built like every other house upon the ground ; but others (horrea penaria or sublimia) were erected above the ground, and rested upon posts or stone pillars, that the fruits kept in them might remain dry. (Colum. xii. 50, 1. c. : Horreum. i. 1.)

From about the year 140 after Christ, Rome possessed two kinds of public horrea. The one class consisted of buildings in which the Romans might deposit their goods, and even their money, securities, and other valuables (Cod. 4. tit. 24. s. 9), for which they had no safe place in their own houses. This kind of public horrea is mentioned as early as the time of Antoninus Pius (Dig. 1. tit. 15. s. 3), when Lampridius (Alex. Sever. c. 39) assigns their institution to Alexander Severus. (Compare Dig. 10. tit. 4. s. 5.) The officers who had the superintendence of these establishments were called horreaearii. The second and more important class of horrea, which may be termed public granaries, were buildings in which a plentiful supply of corn was constantly kept at the expense of the state, and from which, in seasons of scarcity, the corn was distributed to the poor, or sold at a moderate price. The first idea of building such a public granary arose with C. Sempronius Gracchus (lex Sempronia frumentaria) ; and the ruins of the great granary (horres populi Romani) which he built were seen down to the sixteenth century between the Avenue and the Monte Testaceo. (Appian, de Bell. Civ. i. 21 ; Plut. C. Gracch. 5 ; Liv. Epit. 60 ; Veil. Pat. ii. 6 ; Cic. pro Scafr. 24.)

The plan of C. Gracchus was followed out and carried further by Clodius, Pompey, and several of the emperors ; and during the empire we thus find a great number of public horrea which were called after the names of their founders, e. g., horrea Aniceti, Vargunteii, Seiani, Augusti, Domitiani, &c. The manner in which corn from these granaries was given to the people differed at different times. [Comp. Frumentariai Leges.]

HORTUS. [hortos.]

HORTUS (hortos), garden. 1. GREEK. Our knowledge of the horticulture of the Greeks is very limited. We must not expect a detailed examination respecting their gardens to the accounts which we find in Greek writers of the gardens of Alcinos, filled with all manner of trees and fruit and flowers, and adorned with fountains (Odyss. vii. 112—130), or of those of the Hesperides (Hesiod. Theog. 25), or of the paradies of the Persian satraps, which resembled our parks (Xen. Anab. i. 2. § 7, Occa-
HOSPITIUM.

HOSPITIUM (τέβεια, προζεφία). Hospitality is one of the characteristic features of almost all nations previous to their attaining a certain degree of civilisation. In civilised countries the necessity of general hospitality is not so much felt; but at a time when the state or the laws of nations afforded scarcely any security, and when the traveller on his journey did not meet with any places destined for his reception and accommodation, the exercise of hospitality was absolutely necessary. Among the nations of antiquity, with whom the right of hospitality was hallowed by religion, it was to some degree observed to the latest period of their existence, and acquired a political importance which it has never had in any other state. It was in Greece, as well as at Rome, of a twofold nature, either private or public, in as far as it was either established between individuals, or between two states. (Hospitium privatum and hospitium publicum, Εξωτική ουτοτική.)

1. GREEK. In ancient Greece the stranger, as such (ξένος and hostis), was looked upon as an enemy (Cic. de Off. i. 12; Herod, ix. 11; Plut. Aristid. 10); but whenever he appeared among another tribe or nation without any sign of hostile intentions, he was considered not only as one who required aid, but as a supplicant, and Zeus was the protecting deity of strangers and suppliants. (Zeus ξένος and ἱερός: Hom. Od. xiv. 57, &c. 283. ix. 270, xiii. 213, vii. 164: compare Apoll. Argonaut. ii. 1134; Aelian, V. H. iv. 1.) This religious feeling was strengthened by the belief that the stranger might possibly be a god in disguise. (Odys. xvii. 484.) On his arrival therefore, the stranger, of whatever station in life he might be, was kindly received, and provided with everything necessary to make him comfortable, and to satisfy his immediate wants. The host did not inquire who the stranger was, or what had led him to his house, until the duties of hospitality were fulfilled. During his stay, it was a sacred duty of his host to protect him against any persecution, even if he belonged to a politically hostile race, so that the host's house was a perfect asylum to him. On his departure he was dismissed with presents and good wishes. (Odys. iv. 37, &c., Nitzch's note.) It seems to have been customary for the host, on the departure of the stranger, to break a die (ἀρταγάλος) in two, one half of which he himself retained, while the other half was given to the stranger; and when at any future time they or their descendants met, they had a means of recognising each other, and the hospitable connection was renewed. (Schol. ad Eurip. Med. 613.) Hospitality thus not only existed between the persons who had originally formed it, but was transferred as an inheritance from father to son. To violate the laws of hospitality was a great crime and act of impiety, and was punished by men as well as gods (δικαι κακοφειας, Aelian, l. c.; Paus. vii. 25). Instances of such hereditary connections of hospitality are mentioned down to a very late period of Greek history; and many towns, such as Athens, Corinth, Byzantium, Phasis, and others, were celebrated for the hospitable character of their citizens. (Herod. vi. 35; Thucyd. ii. 13; Plato, Cris. p. 43, c. 3, 32; Plut. Flam. tit. xiv. 40, &c.) But when a more regular and frequent intercourse among the Greeks began to be established, it was impossible to receive all these strangers in private houses. This naturally led to the establishment of inns (πανδοκείαν, καταγώγιον, κατάλωσις), in which such strangers as had no hospitable connections found accommodation. For those occasions, on which numerous visitors flocked to a particular place for the purpose of celebrating one of the great or national festivals, the state or the temple provided for the accommodation of the visitors either in tents or temporary inns erected about the temple. (Aelian, V. H. iv. 9; Schol. ad Pind. Ol. xi. 51 and 55: compare Plato, de Leg. xii. p. 952; Lucian, Amor. 12; Thucyd. iii. 68.) The kind of hospitality which was exercised by private individuals on such festive occasions probably differed very little from that which is cus-
HOSPITIUM.

HOSPITIUM.

HOSPITIUM.

The custom of conferring the honour of proxenus upon a citizen of the state with which public hospitality existed, seems in later times to have been universally adopted by the Greeks. Thus we find besides the instances of Spartan proxeni mentioned above, Nicias the Athenian, as proxenus of Syracuse at Athens (Diodor. xiii. 27), and Arthymus, of Zeleia, as the proxenus of Athens at Zeleia (Aeschyl. c. Orest. p. 647; compare Plato, de Leg. i. p. 642.) The common mode of appointing a proxenus was, with the exception of Sparta, by show of hands. (Demosth., ad Demosth. Mid. p. 374.) The principal duties of a proxenus were to receive those persons, especially ambassadors, who came from the state which he represented; to procure for them the admission to the assembly, and seats in the theatre (Pollux, ii. c.); to act as the patron of the strangers, and to mediate between the two states if any disputes arose. (Xen. Hellen. vi. 3. § 4.) If a stranger died in the state, the proxenus of his country had to take care of the property of the deceased. (Demosth. c. Callip. p. 1227, &c.)

Regarding the honours and privileges which a proxenus enjoyed from the state which he represented, the various Greek states followed different principles; some honoured their proxenus with the full civic franchise, and other distinctions besides. (Böckh, Corp. Inscript. i. 1691—93, and ii. p. 79; Demosth. de Cor. p. 356; Xen. Hellen. i. 1. § 26.) But the right of acquiring property in the state of which he thus became a citizen seems not to have been included in his privileges; for we find that where this right was granted, it was done by an especial document. (Böckh, Publ. Econ. p. 140.) A foreigner who was appointed in his own country as proxenus of Athens, enjoyed for his own person the right of hospitality at Athens whenever he visited this city, and all the other privileges that a foreigner could possess without becoming a real Athenian citizen. Among these privileges, though they were not necessarily included in the proxeny, but were granted by the proxenus; this person, so appointed, enjoyed from paying taxes (ἀπελευθέρωσις, εἰσαγωγή, ἐξορία); 2. The right to acquire property at Athens (Εὔστομος, οἰκονόμως, ἐξόρια); 3. The exemption from paying taxes (ἀγίασμα, οἰκία, ἀκέραιος, ἐπατρίως); 4. Inviolability in times of peace and war, both by sea and by land. (Böckh, Corp. Inscript. i. p. 725.) Some of these privileges were granted to individuals as well as to whole states; but we have no instance of a whole state having received all of them, with the exception of those cases where the civic franchise or iapoltiy was granted to a whole state; and in this case the practical consequences could not become manifest, unless a citizen of the privileged state actually took up his residence at Athens. (Compare F. W. Ulrich, de Proxenia, Berlin, 1822; Wachsmuth, Hellen. Alterth. vol. i. p. 196, &c.; Hermann, Poet. Ant. § 116.)

2. ROMAN. The hospitality of the Romans was,

notary among ourselves, and was chiefly shown towards friends or persons of distinction and merit, whose presence was an honour to the house wherein they stayed. (Xen. Hell. v. 4. § 22, vi. 3. § 4, &c.) At Elis, the Elian Xenias (Paus. iii. 8. § 2) and at Argos, the Argive Alciphrion. (Thucyd. v. 59.) A Spartan sent out as proxenus was sometimes also entrusted with the power of harmostes, as Clearachus at Byzantium. (Xen. Hellen. i. 1. § 35, i. 3. § 15.)

What has been said hitherto, only refers to hospitium privatum, that is, the hospitality existing between two individuals or families of different states. Of far greater importance, however, was the hospitium publicum, which after the abolition of the kingly power, continued to exist between the new republics as a sort of federal connection. The hospitium publicum, the private hospitality existing among the Greeks, was provided with all the necessaries of life, whether they stayed. (Xen. Hell. v. 4; Apul. Met. i. p. 19.)

Among the Greeks arose undoubtedly from the habit of hospitium privatum, consisting of fowl, eggs, and fruit, were either sent to them, or they had to purchase them themselves. (Vitruv. vi. 7. 4; Apul. Met. iii. p. 19.)

On the first day after their arrival they were generally invited to the table of their host; but afterwards their provisions (εξορία), consisting of fowl, eggs, and fruit, were either sent to them, or they had to purchase them themselves. (Vitr. vi. 7. 4; Apul. Met. iii. p. 19.)

Regarding the honours and privileges which a proxenus enjoyed from the state which he represented, the various Greek states followed different principles; some honoured their proxenus with the full civic franchise, and other distinctions besides. (Böckh, Corp. Inscript. i. 1691—93, and ii. p. 79; Demosth. de Cor. p. 356; Xen. Hellen. i. 1. § 26.) But the right of acquiring property in the state of which he thus became a citizen seems not to have been included in his privileges; for we find that where this right was granted, it was done by an especial document. (Böckh, Publ. Econ. p. 140.) A foreigner who was appointed in his own country as proxenus of Athens, enjoyed for his own person the right of hospitality at Athens whenever he visited this city, and all the other privileges that a foreigner could possess without becoming a real Athenian citizen. Among these privileges, though they were not necessarily included in the proxeny, but were granted by the proxenus; this person, so appointed, enjoyed from paying taxes (ἀπελευθέρωσις, εἰσαγωγή, ἐξορία); 2. The right to acquire property at Athens (Εὔστομος, οἰκονόμως, ἐξόρια); 3. The exemption from paying taxes (ἀγίασμα, οἰκία, ἀκέραιος, ἐπατρίως); 4. Inviolability in times of peace and war, both by sea and by land. (Böckh, Corp. Inscript. i. p. 725.) Some of these privileges were granted to individuals as well as to whole states; but we have no instance of a whole state having received all of them, with the exception of those cases where the civic franchise or iapoltiy was granted to a whole state; and in this case the practical consequences could not become manifest, unless a citizen of the privileged state actually took up his residence at Athens. (Compare F. W. Ulrich, de Proxenia, Berlin, 1822; Wachsmuth, Hellen. Alterth. vol. i. p. 196, &c.; Hermann, Poet. Ant. § 116.)

2. ROMAN. The hospitality of the Romans was,
as in Greece, either hospitium privatum, or publicum. Private hospitality with the Romans, however, seems to have been more distinctly and legally defined than in Greece. The character of a hospes, i.e., a person connected with a Roman by ties of hospitality, was deemed even more sacred, and to have greater claims upon the host, than that of a person connected by blood or affinity. The relation of a hospes to his Roman friend was next in importance to that of a cliens. (Gellius, v. 13.) According to Massurius Sabinus (ap. Gellium, l.c.), a hospes had even higher claims than a cliens. The obligations which the connection of hospitality with a foreigner imposed upon a Roman were to receive in his house his hospes when travelling (Liv. xii. 1), and to protect, and, in case of need, to represent him as his patron in the courts of justice. (Cic. in Q. Cæcil. Divin. c. 20.)Private hospitality thus gave to the hospes the claims upon his host which the client had on his patron, but without any degree of the dependence implied in the clientela. Private hospitality was established between individuals by mutual presents, or by the mediation of a third person (Serv. ad Aen. ix. 360), and hallowed by religion; for Jupiter hospitius was thought to watch over the jus hospitii, as the violation of it was as great a crime and impiety at Rome as in Greece. When hospitality was formed, the two friends used to divide between themselves a tessera hospitalis (Plaut. Poen. v. 2. 87, &c.), by which, afterwards, they themselves or their descendants—for the connection was hereditary as in Greece—might recognise one another. From an expression in Plautus (deum hospitalem at tesserae mensum fero, Poen. v. 1. 25) it has been concluded that this tessera bore the image of Jupiter hospitius. Hospitality, when thus once established, could not be dissolved except by a formal declaration (renuntiatio, Liv. xxv. 18; Cic. in Verr. ii. 36), and in this case the tessera hospitalis was broken to pieces. (Plaut. Cistell. i. 1. 27.) Hospitality was at Rome never exercised in that indiscriminate manner as in the heroic age of Greece, but the custom of observing the laws of hospitality was probably common to all the nations of Italy. (Aelian. V. H. iv. 1; Liv. i. 1.) In many cases it was exercised without any formal agreement between the parties, and it was kept up as an honourable duty to receive distinguished guests into the house. (Cic. de Off. ii. 18, pro Rosc. Am. 6.) Public hospitality seems likewise to have existed at a very early period among the nations of Italy, and the fœcus hospitii mentioned in Livy (i. 9) can scarcely be looked upon in any other light than that of hospitium publicum. But the first direct mention of public hospitality being established between Rome and another city, is after the Gauls had departed from Rome, when it was decreed that Caere should be rewarded for its good services by the establishment of public hospitality between the two cities. (Liv. v. 50.) The public hospitality after the war with the Gauls gave to the Caetulii the right of isopality with Rome, that is, the civitas without the suffragium and the honores. [CIVITAS; COLONIA.] In the later times of the republic we no longer find public hospitality established between Rome and a foreign state; but a relation which amounted to the same thing was introduced in its stead, that is, towns were raised to the rank of municipia (Liv. viii. 14), and thus obtained the civitas without the suffragium and the honores; and what would have been dangerous of forming a similar relation with Rome, it entered into clientela to some distinguished Roman, who then acted as patron of the client-town. But the custom of granting the honour of hospes publicus to a distinguished foreigner by a decree of the Senate, seems to have existed down to the end of the republic. (Liv. i. 45, v. 28, xxxvii. 54.) Whether such a public hospes undertook the same duties towards Roman citizens, as the Greek proxenus, is uncertain; but his privileges were the same as those of a muneipus, that is, he had the civitas, but not the suffragium (Or. 2. 118), and the hospes publicus was, like the hospitium privatum, hereditary in the family of the person to whom it had been granted. (Diod. Sic. xiv. 93.) The honour of public hospes was sometimes also conferred upon a distinguished Roman by a foreign state. (Boèckh, Corp. Inscrip. vol. i. n. 1331; Cic. pro Balb. 18, c. Verr. iv. 65. Compare Niebuhr, Hist. of Rome, vol. ii. p. 58; Walter, Gesch. des Röm. Rechts, p. 54, &c.; Güttling, Gesch. der Röm. Staaten, p. 216, &c.)

HOSTIA. [SACRIFICIUM.] HOSTIS. [HOSPITIUM; POSTLIMINUM.]

HYACINTHIA (Takwódhae), a great national festival, celebrated every year at Amycle by the Amycleans and Spartans. The ancient writers who mention this festival do not agree in the name of the divinity in whose honour it was held: some say that it was the Amyclean or the Carnean Apollo, others that it was the Amyclean hero, Hyacinthus: a third and more probable statement assigns the festival to the Amyclean Apollo and Hyacinthus together. This Amyclean Apollo, however, with whom Hyacinthus was assimilated in later times, must not be confounded with Apollo, the national divinity of the Dorians. (Müller, Orchom. p. 327, Dor. ii. 8. § 15.) The festival was called after the youthful hero Hyacinthus, who evidently derived his name from the flower hyacinth (the emblem of death among the Egyptians), but with Apollo, the national divinity of the Dorians. At Amycle it lasted for three days, and began on the longest day of the Spartan month Hecatomboës (the Attic Hecatombaeon, Hesych. s. v. Σταρνία, ii. 2. p. 201), at the time when the tender flowers oppressed by the heat of the sun, drooped their languid heads. On the first and last day of the Hyacinthia sacrifices were offered to the dead, and the death of Hyacinthus was lamented. During these two days nobody wore any garlands at the repasts, nor took bread, but only cakes and similar things, and no paecans were sung in praise of Apollo; and when the solemn repasts were over, every body went home in the greatest quiet and order. This serious and melancholy character was foreign to all the other festivals of Apollo. The second day, however, was wholly spent in public rejoicings and amusements. Amyclea was visited by numbers of strangers (παρήγοροι αξίδωνοι καλ. καλοί), and boys played the cithara or sang to the accompaniment of the flute, and celebrated in anaepaestic metres the praise of Apollo, while others, in splendid attire, performed a horse-race in the theatre. This horse-race is probably the κεφαλι mentioned by Strabo (vi. p. 270). After this race there followed a number of choruses of youths
conducted by a χορωπόδος (Xen. Agisil. 2. 17), in which some of their national songs (ἐνυπιγράμμα ποιήματα) were sung. During the songs of these choruses dancers performed some of the ancient and simple movements with the accompaniment of the flute and the song. The Spartan and Amyclaean maidens, after this, riding in chariots made of wicker-work (κάδαφα), and splendidly adorned, performed a beautiful procession. Numerous sacrifices were also offered on this day, and the citizens kept open house for their friends and relations; and even slaves were allowed to enjoy themselves. (Didymus, in Athen. iv. p. 139.) One of the favourite meals on this occasion was called κόπτη, and is described by Molpis (ap. Athen. iv. p. 140) as consisting of cake, bread, meat, raw herbs, broth, figs, dessert, and the seeds of lupine. Some ancient writers, when speaking of the Hyacinthia, apply to the whole festival such epithets as can only be used in regard to the second day; for instance, when they call it a merry or joyful solemnity. Macrobius (Saturn. i. 11) states that the Amyclaeans were chaplets of ivy at the Hyacinthia, which can only be true if it be understood of the second day. The incorrectness of these writers is however in some degree excused by the fact, that the second day formed the principal part of the festive season, as appears from the description of Didymus, and as may also be inferred from Xenophon (Hellen. iv. 5. § 11; compare Agesil. 2. 17), who makes the παρεαν the principal part of the Hyacinthia. The great importance attached to this festival by the Amyclaeans and Lacedaemonians is seen from the fact, that the Amyclaeans, even when they had taken the field against an enemy, always returned home on the approach of the Syrinx or Pandean pipes, a musical instrument of the highest antiquity among the Greeks. His object being to employ a row of pipes of great size, and capable of emitting the most powerful as well as the softest sounds, he contrived the means of adjusting keys with levers (ἀρχαία μετακινήσεις), which, by opening and shutting the mouths of the pipes (χυλωτόκομα), a supply of wind being obtained, without intermission, by bellows, in which the pressure of water performed the same part which is fulfilled in the modern organ by a weight. On this account the instrument invented by Cresibius was called the water-organ (διηρωτής, Athen. 1. c. ; διηρωτην ὤργανον, Hero, Spirit.; hydraulicis machina, Vitruv. x. 13; Schneider, ad loc.; Driberg, die pneum. Erfindungen der Griechen, pp. 53–51; hydraulicis, Plin. H. N. ix. 85; Cic. Tusq. ii. 18.) Its pipes were partly of bronze (χάλκης ἀφώλης, Jul. Imp. in Brunck's Anal. ii. 403; soges aicina, Claud. do Mall, Theod. Cosm. 316), and partly of reed. The number of its stops, and consequently of its rows of pipes, varied from one to eight (Vitruv. 1. c.), so that Tertullian (de Anim., 14) describes it with reason as an exceedingly complicated instrument. It continued in use so late as the ninth century of our era; in the year 826, a water-organ was erected by a Venetian in the church of Aquigranum, the modern Aix-la-Chapelle. (Quix, Münster-kirche in Aachen, p. 14.) The organ was well adapted to gratify the Roman people in the splendid entertainments provided serious, for the loss of his services [BLAKES DIBKI in a private lawsuit. (Moer, All. Proc. p. 326.)] These two last-mentioned actions might also be resorted to by a free citizen when similarly outraged in his own person, if he were more desirous of obtaining compensation for the wrong, than the mere punishment of the wrongdoer, as the penalty incurred by the defendant in the public prosecution accrued to the state and not to the plaintiff. A fine also of a thousand drachmae, forfeited by the prosecutor upon his relinquishing his suit or failing to obtain the verdict of a forum of the dioces, may have contributed to render cases of this kind less frequent, and partly account for the circumstance that there are no speeches extant upon this subject. If, however, the case for the prosecution was both strong and clear, the redress afforded by the public action was prompt and efficient. Besides the legitimate protectors of women and children, any Athenian citizen in the enjoyment of his full franchise might volunteer an accusation: the declaration was laid before the thesmothetae, who, except it were hindered by extraordinary public business, were bound not to defer the trial before the Heliaea beyond a month. The severity of the sentence extended to confiscation or death; and if the latter were awarded, the criminal was executed on the same day: if a fine were imposed upon him he was allowed but eleven days for its payment, and, if the object of his assault were a free person, he was imprisoned till the claim of the state was liquidated. (Dem. L. c.; Aeschin. c. Timarch. p. 41.) [J. S. M.] HYDRA'LETA. [MOLA.] HYDRAULABA (διηρωτής), an organist. According to an author quoted by Athenaeus (iv. 75; compare Plin. H. N. vii. 36), the first organist was Cresibius of Alexandria, who lived about a. c. 200. He evidently took the idea of his organ from the SYRINX or Pandean pipes, a musical instrument of the highest antiquity among the Greeks. His object being to employ a row of pipes of great size, and capable of emitting the most powerful as well as the softest sounds, he contrived the means of adjusting keys with levers (ἀρχαία μετακινήσεις) which, by opening and shutting the mouths of the pipes (χυλωτόκομα), a supply of wind being obtained, without intermission, by bellows, in which the pressure of water performed the same part which is fulfilled in the modern organ by a weight. On this account the instrument invented by Cresibius was called the water-organ (διηρωτής, Athen. 1. c. ; διηρωτην ὤργανον, Hero, Spirit.; hydraulicis machina, Vitruv. x. 13; Schneider, ad loc.; Driberg, die pneum. Erfindungen der Griechen, pp. 53–51; hydraulicis, Plin. H. N. ix. 85; Cic. Tusq. ii. 18.) Its pipes were partly of bronze (χάλκης ἀφώλης, Jul. Imp. in Brunck’s Anal. ii. 403; soges aicina, Claud. do Mall, Theod. Cosm. 316), and partly of reed. The number of its stops, and consequently of its rows of pipes, varied from one to eight (Vitruv. 1. c.), so that Tertullian (de Anim., 14) describes it with reason as an exceedingly complicated instrument. It continued in use so late as the ninth century of our era; in the year 826, a water-organ was erected by a Venetian in the church of Aquigranum, the modern Aix-la-Chapelle. (Quix, Münster-kirche in Aachen, p. 14.) The organ was well adapted to gratify the Roman people in the splendid entertainments provided. [BIAION DIERE.] With respect to common assaults, a prosecution of this kind seems to have been allowable only when the object of a wanton attack was a free person (Aristot. Rhet. ii. 24), as the essence lay in its contempt, and a slave could incur no degradation by receiving a blow, though the injury, if slight, might entitle the master to recover damages for the battery (αἰκία), or, if...
for them by the emperors and other opulent persons. Nero was very curious about organs, both in regard to their musical effect and their mechanism. (Sueton. Nat. vi. 54.) A cornucopiae coin of this emperor, in the British Museum (see woodcut), shows an organ with a sprig of laurel on one side, and a man standing on the other, who may have been victorious in the exhibitions of the circus or the amphitheatre. It is probable that these medals were bestowed upon such victors, and that the organ was impressed upon them on account of its introduction on such occasions. (Havercamp, de Num. contorniatis; Rasche, Lex. Univ. Res Num. s.v. Hydraulicum Instrumentum.) The general form of the organ is also clearly exhibited in a poem by Publius Porphyrius Optatianus, describing the instrument, and composed of verses so constructed as to show both the lower part which contained the bellows, the wind-chest which lay upon it, and over this the row of 26 pipes. These are represented by 26 lines, which increase in length each by one letter, until the last line is twice as long as the first. (Wernsdorf, Poetae Lat. Min. vol. ii. pp. 394—413.) [J. Y.]

HYDRAULICA MACHINA. [Hydraulus.]

HYDRAULUS [Hydraula.]

HYDRIA (iödria). [Situ/a.]

HYDRIAPHORIA (iödriaphoria) was one of the services which aliens (μετότοιοι) residing in Athens had to perform to the Athenians at the Panathenaea, and by which it was probably only intended to impress upon them the recollection that they were mere aliens and not citizens. The hydriaphoria was performed only by the wives of aliens (Pollux, iii. 55); whereas their daughters had on the same occasion to perform the σκαπηφορία (the carrying of parnsols) to the Athenian maids, and their husbands the σκαπηφορία (the carrying of vessels, see Aelian, V. H. i. 1, with Perizonius; Harpocrat. s. v. Σκαπηφοροι). It is clear from the words of Aelian that these humiliating services were not demanded of the aliens by the laws of Solon, but that they were introduced at a later period. (Ptol. Leg. Att. p. 55.) The hydriaphoria was the carrying of a vessel with water (iödria, Aristoph. Eccles. 738), which service the married alien women had to perform to the married part of the female citizens of Athens, when they walked to the temple of Athena in the great procession at the Panathenaea. (Compare Meursius, Panathenaeae, c. 21.) [L. S.]

HYDROMELI. [Vestum.]

HYLORI or HYELEORI (iöloroi, ẹẹloroi), are said by Hesychius (s. v.) to have been officers who had the superintendence of forests (iδων φωλιάσων, compare Suidas, s. v.). Aristotle (Polit. vi. 5), who divides all public officers into three classes (άρχαλ, ερημεληται, and ὑπηρεται), reckons the ἰδωροι among the ερημεληται, and says that by some they were called ἀγροβούλοντες. They seem to have been a kind of police for the protection of the forests, similar to the German Förster. But the exact nature of their office, or the Greek states where it existed, are unknown. [L. S.]

HYPARCHY. [Temple.]

HYPASPISTAE (iöpasistai). [Exercitus, p. 486, h.]

HYPERETES (iöperetai). This word is derived from ερήται, ερήσης, and therefore originally signifies a rower; but in later times the word was, with the exception of the soldiers or marines, applied to the whole body of persons who performed any service in a vessel. (Thucyd. vi. 31, with Goele's note; Demosth. c. Polyb. pp. 1214, 1216, &c.; Polyb. v. 109.) In a still wider sense ὑπηρεσία was applied to any person who acted as the assistant of another, and performed manual labour for him, whether in sacred or profane things (Pollux, i. 16, vii. 10), whereas the word is sometimes used as synonymous with slave. (Cic. ap. Athen. vi. p. 267; compare Pollux, vii. 8. 2; Hesych. s. v.) Hence also the name ὑπηρεται was sometimes given to those men by whom the hoplitae were accompanied when they took the field, and who carried the luggage, the provisions, and the shield of the hoplitae. (Xen. Cyrop. ii. 1. § 31.) The more common name for this servant of the hoplitae was σκευηφόρος.

At Athens the name ὑπηρετες, or the abstract ὑπηρεσία, seems to have been applied to a whole class of officers. Aristotle (Polit. vi. 5) divides all public offices into three classes, ἀρχαλ or magistracies, ερημελεία or administrations, and ὑπηρεσία or services. Now all public officers at Athens, in as far as they were the representatives of the people, or the executors of its will, were appointed by the people itself or by the senate; and with the exception of some subaltern military officers, we never find that one public officer was appointed by another. A public officer, therefore, when he appointed another person to perform the lower or more mechanical parts of his office, could not raise him to the rank of a public officer, but merely engaged him as a servant (ὑπηρετες), and on his own responsibility. These ὑπηρεται, therefore, were not public officers, properly speaking, but only in as far as they took a part in the functions of such officers. The original and characteristic difference between them and real public officers was, that the former received salaries, while the latter had none. Among the ὑπηρεται were reckoned the lower classes of scribes [Grammataires], heralds, messengers, the ministers of the Eleven, and others. This class of persons, as might be supposed, did not enjoy any high degree of estimation at Athens (Pollux, vi. 31), and from Aristotle (Polit. iv. 12) it is clear that they were not always Athenian citizens, but sometimes slaves. [L. S.]

HYPOOON (ὑποόων), [Domus, p. 426, a.]

HYPOBOLES GRAPHE (ὑποβολὴ γραφή), Of this action we learn from the Lex Rhet. that it was one of the many institutions calculated to preserve the purity of Attic descent, and preferred against persons suspected of having been supposititious children. If this fact was established at the
trial, the pretended citizen was reduced to slavery, and his property confiscated. [J. S. M.] HYPOCAUSTUM. [Balnear. p. 192, 1.]

HYPOCOSMOS/TAE (?poxoss?mptai), frequently occur in Athenian inscriptions of the time of the Roman empire, as assistants of the koim?th?, who at that period was the chief officer who regulated the exercises of the Gymnasion. (Krause, Gym- 

HYPO/M?SIA (?poymosia). [Diaetae; Di?k.]

HYPO/NOMUS. [Emis?rium.]

HYPORCHEMA (?po?khema), was a lively kind of mimic dance which accompanied the songs used in the worship of Apollo, especially among the Dorians. It was performed by men and women. (Athen. xiv. p. 631.) A chorus of singers at the festivals of Apollo usually danced around the altar, while several other persons were appointed to accompany the action of the song with an appropriate mimic performance (?poyreich?si). The hyporche- 

ma was thus a lyric dance, and often passed into the playful and comic, whence Athenaeus in his return from Crete was said to have performed the hyporchemata. The fragments of the hyporchemata were likewise called hyporchemata. The first poet to whom such poems are ascribed was the semicircle, with leaders at the two wings. (Pol.

lar inoint may also serve to show what Theocritus has expressed in his return from Crete was said to have performed in Delos, and which was customary in this island as late as the time of Plutarch. (Thea. 21.) The leader of this dance was called ?yepavov?klos. (Hesych. s. v.) It was performed with blows, and with various turnings and windings (t? bth? ?poq?kama k?w?kh?i), and was said to be an imitation of the windings of the Cretan labyrinth. When the chorus was at rest, it formed a semicircle, with leaders at the two wings. (Polux, iv. 101.)

The poems or songs which were accompanied by the hyporchemae were likewise called hyporchemata. The first poet to whom such poems are ascribed was Thales; their character must have been in accordance with the playfulness of the dance which bore the same name, and by which they were accompanied. The fragments of the hyporchemata of Pindar confirm this supposition, for their rhythms are peculiarly light, and have a very imitative and graphic character. (B?ckh, de M?tr. Pind. p. 201, &c., and p. 270.) These characteristics must have existed in a much higher degree in the hyporchematic songs of Thaletas. (M?ller, Hist. of Greek Lit. i. p. 23, &c.; compare with p. 160, &c.) L. S.]

HYPOSC/NIUM. [Theatrum.]

I. J.

JACULATORES. [Exercitus, p. 503, a.] JACULUM. [Hasta.]

JANITOR. [Janua.]

JANUA (??pa), a door. Besides being applicable to the doors of apartments in the interior of a house, which were properly called ost? (Isid. Orig. xv. 7; Virg. Aen. vi. 48. 81), this term more especially denoted the first entrance into the house, i.e., the front or street door, which was also called anticum (Feustus, s. v.), and in Greek ???a ??liai, ?liai, ???a, ???a (Od. xii. 19; Pind. Nem. i. 19; Menand. p. 87, ed. Mein.; Harpocration, s. v.; Theophr. Char. 18; Theoret. xv. 43; Charit. i. 2; Herodian, ii. 1). The houses of the Romans commonly had a back-door, called podium, postica, or posticula (Feustus, s. v.; Hor. Epist. i. 5. 31; Plant. Most. iii. 3. 27; Sueton. Claud. 18), and in Greek ?ap?th? d?n ?pa?th?ov, ?pa?th?ov, Cicero (post. i. 10) and Vitruvius (Stich. iii. 1. 40—44), it was called the garden-door (?p?yn?l?, Hermip. ap. Athen. xiv. 6).

The door-way, when complete, consisted of four indispensable parts, the threshold, or sill; the lintel; and the two jambs. The threshold (?le?n, ?ple?k, ?dda?) was the object of superstitious reverence, and it was thought unfortunate to tread on it with the left foot. On this account the steps leading into a temple were of an uneven number, because the worshipper, after placing his right foot on the bottom step, would then place the same foot on the threshold also. (Vitruv. i. 4.) Of this an example is presented in the woodcut, p. 97.

The lintel (jungumentum, Cat. de Re Rust. 14; supercilium, Vitruv. iv. 6) was also called lumen (Juv. vi. 227), and more specifically lumen superum, to distinguish it from the sill, which was called lumen inferum. (Plant. More v. 1. 1.) Being designed to support a supercumbent weight, it was generally a single piece, either of wood or stone. Hence those lintels, which still remain in ancient buildings, astonish us by their great length. In large and splendid edifices the jambs or door-posts (postes, ?ta?mi) were made to converge towards the top, according to certain rules, which are given by Vitruvius (l. c.). In describing the construction of temples he calls them antepagamenta, the propriety of which term may be understood from the ground-plan of the door at p. 241, where the hinges are seen to be behind the jambs. This plan may also serve to show what Theocritus means by the hollow door-posts (?ta?mi ?k?ta ?p?d??n, Idyll. xxiv. 15). In the Augustan age it was fashionable to inlay the posts with tortoise-shell. (Virg. Georg. ii. 463.) Although the jamb was sometimes nearly twice the length of the lintel, it was made of a single stone even in the largest edifices. A very striking effect was produced by the height of these door-ways, as well as by their costly decorations, beautiful materials, and tasteful proportions.

The door in the front of a temple, as it reached nearly to the ceiling, allowed the worshippers to view from without the entire statue of the divinity,
and to observe the rites performed before it. Also the whole light of the building was commonly admitted through the same aperture. These circumstances are illustrated in the accompanying woodcut, showing the front of a small temple of Jupiter, taken from a bas-relief. (Mon. Matt. vol. iii. Tab. 39.) The term antepagmentum, which has been already explained, and which was applied to the lintel as well as the jambs (antepagmentum superius, Vitruv. iv. 6. § 1), implies, that the doors opened inwards. This is clearly seen in the same woodcut, and is found to be the construction of all ancient buildings at Pompeii and other places. In some of these buildings, as for example, in that called "the house of the tragic poet," even the marble threshold rises about an inch higher than the bottom of the door (Gell's Pompeiana, 2nd Ser. vol. i. p. 144), so that the door was in every part behind the door-case. After the time of Hippias the street-doors were not permitted to open outwardly at Athens (Becker, Charicles, vol. i. pp. 189, 200); and hence ἐπὶ ὁδόνα meant to open the door on coming in, and ἐπίσωπάσαι or ἐφελκώσασθαι to shut it on going out. In a single instance only were the doors allowed to open outwardly at Rome; an exception was made as a special privilege in honour of M. Valerius Publicola. (Schneider, in Vitruv. iv. 6. § 6.)

The lintel of the oblong door-case was in all large and splendid buildings, such as the great temples, surmounted either by an architrave and cornice, or by a cornice only. As this is not shown in the bas-relief above introduced, an actual door-way, viz., that of the temple of Hercules at Cora, is here added. Above the lintel is an architrave with a Latin inscription upon it, and above this a projecting cornice supported on each side by a console, which reaches to a level with the bottom of the lintel. The top of the cornice (corona summa, Vitruv. iv. 6. § 1) coincided in height with the tops of the capitals of the columns of the pronao, so that the door-way, with its superstructure, was exactly equal in height to the columns and the superstructure was the hyperthyrum of Vitruvius (i. c.), and of the Greek architects whom he followed. The next woodcut shows one of the two consoles which support the cornice of a beautiful Ionic door-way in the temple of Minerva Polias at Athens. In the inscription relating to the building of that temple, which is now in the Elgin collection of the British Museum, the object here delineated is called ὁσ τῷ ὑπερθύρῳ. Other Greek names for it, used by Vitruvius (iv. 6. § 4), are parotis and ancon, literally a "side-ear" and "an elbow." The use of consoles, or trusses, in this situation was characteristic of the Ionic style of architecture, being never admitted in the Doric. It is to be observed that Homer (Od. vii. 90), Hesiod (Scut. 271), and Herodotus (i. 179), use the term ὑπερθύρων, or its diminutive ὑπερθύρων, to include the lintel. Upon some part of the hyperthyrum there was often an inscription, recording the date and occasion of the erection, as in the case of the temple of Hercules above represented, or else merely expressing a moral sentiment, like the celebrated "Know thyself" upon the temple at Delphi.

The door itself was called foris or valva, and in Greek σαῦς, κλαθά, or δερθυρ. These words are commonly found in the plural, because the doorway of every building of the least importance contained two doors folding together, as in all the instances already referred to. When foris is used in the singular, we may observe that it denotes one of the folding-doors only, as in the phrase foris crepidt, which occurs repeatedly in Plautus, and describes the creaking of a single valve, opened alone and turning on its pivots. Even the internal doors of houses were bivalve (Gell's Pompeiana, 2nd Ser. vol. i. p. 166); hence we read of "the folding-doors of a bed-chamber" (fores cubiculi, Suet. Aug. 62; Q. Curt. v. 6; σαῦνες ὑπὲρθύρων, Hom. Od. xxiii. 42; πόλης διπλαὶ, Soph. Oed. Tyr. 1261). But in every case each of the two valves was wide enough to allow persons to pass through without opening the other valve also.
Even each valve was sometimes double, so as to fold like our window-shutters (duplices compicia-bileaque, Isid. Orig. xv. 7). The mode of attaching doors to the door-way is explained under the article CARDO.

The remaining specimens of ancient doors are all of marble or of bronze; those made of wood, which was by far the most common material, have perished. The door of a tomb at Pompeii (Mazzol, Ruines de Pompeii, vol. i. pl. xix. fig. 4) is made of a single piece of marble, including the pivots, which were encased in bronze, and turned in sockets of the same metal. It is 3 feet high, 2 feet 9 inches wide, 4½ inches thick. It is cut in front to resemble panels, and thus to approach nearer to the appearance of a common wooden door, and it was fastened by a lock, traces of which remain. The beautifully wrought tombs of Asia Minor and other eastern countries have stone doors, made either to turn on pivots or to slide sideways in grooves. Doors of bronze are often mentioned by ancient writers. (Herod. i. 179; Plin. H. N. xxxiv. 7.) The doors of a supposed temple of Remus, still existing at Rome, and now occupied as a Christian church, are of this material. Mr. Donaldson (Collection of Door-ways from Ancient Buildings, London, 1833, pl. 21) has represented them filling up the lower part of the door-way of the temple at Cora, as shown in the last woodcut, which is taken from him. The four panels are surrounded by rows of small circles, marking the spots on which were fixed rosettes or bosses, similar to those which are described and figured in the article BULLA, and thus to approach nearer to the appearance of a common wooden door, and it was fastened by a lock, traces of which remain. The beautifully wrought tombs of Asia Minor and other eastern countries have stone doors, made either to turn on pivots or to slide sideways in grooves. Doors of bronze are often mentioned by ancient writers. (Herod. i. 179; Plin. H. N. xxxiv. 7.)

The mode of attaching doors to the door-way is explained under the article CARDO.

It the _apiaetrum_, and his language implies that it was commonly used in temples. The folding-doors exhibited in the last woodcut, instead of a rebate such as we employ, have an upright bronze plate standing in the middle of the door-way, so as to cover the joining of the valves. The fastenings of the door (elastra, Ovid. Amor. i. 6. 17; obices) commonly consisted in a bolt (pesulas; μάκταλος, καταγες, κλείθρον, Att. κλῆθρον, Soph. Oed. Tyr. 1262, 1287, 1294) placed at the base of each fores, so as to admit of being pushed into a socket made in the sill to receive it (πυθηρυ, Soph. Oed. Tyr. 1261). The Pompeian door-ways show two holes corresponding to the bolts of the two fores (Gell, Pompeiana, 2nd Ser. vol. i. p. 167); and they agree with numerous passages which mention in the plural number "the bolts," or, "both the bolts" of a door. (Plaut. Autol. i. 2. 26, Curc. i. 2. 69—70; Soph. ll. cc.; Callim. in Apoll. 6.)

The annexed woodcut shows an ancient bolt preserved in the Museum at Naples. (Mazzol, Ruines de Pompeii, vol. i. part. 2. pl. viii.)

By night, the front-door of the house was further secured by means of a wooden and sometimes an iron bar (sera, repagina, μοχλάς) placed across it, and inserted into sockets, on each side of the door-way. (Festus, s. v. Adserere; Ovid. Amor. i. 6. 24—56.) Hence it was necessary to remove the bar (τὸν μοχλὸν παράφεω, ἀναμούσαν, Eurip. Med. 1309) in order to open the door (reserare). (Theophrast. Char. 18; Plutarch, Pelop. p. 517, ed. Steph.; Plaut. Clit. iii. 18; Ovid. Met. v. 120.) Even chamber-doors were secured in the same manner (Heliodor. vi. p. 201, ed. Comm; eulchidi obstasit foribus, Apul. Met. ix.) and here also, in case of need, the bar was employed as a further security in addition to the two bolts (κλῆθρα συμπεραιοντες μόχλαις, Eurip. Orest. 1546, 1566, Iph. Aul. 345, Androm. 952). To fasten the door with the bolt was jamnane pesulas odère, with the bar jamnane obsera (Ter. Eun. iii. 5. 55, iv. 6. 26, Heaut. i. 3. 37). At Athens a jealous husband sometimes even proceeded to seal the door of the women's apartment. (Aristoph. Thesm.
422; Menand. p. 185, ed. Mein.) The door of a bed-chamber was sometimes covered with a curtain [Velum].

In the Odyssey (i. 442, iv. 802, xxi. 6, 46—50) we find mention of a contrivance for bolting or unbolting a door from the outside, which consisted in a leathern thong (luds) inserted through a hole in the door, and by means of a loop, ring, or hook (κλείς, καλύφος), which was the origin of keys, capable of holding the bolt so as to move it in the manner required. The bolt by the progress of improvement was transformed into a lock, and the keys found at Herculaneum and Pompeii and those attached to rings (Gorlaei, Dactylioth, 42, 205—209) prove, that among the polished Greeks and Romans, the art of the locksmith approached very nearly to its present state. (Achill. Tat. ii. 19.)

The door represented in the first woodcut to this article has a ring upon each valve, which was used to shut the door, and therefore called the εἰσωσκόντος. Herodotus (vi. 91) tells a story of a captive who having escaped to a temple of Ceres, clung to the rings on the doors with both his hands. This appendage to the door, which was sometimes gilt and very handsome, was also called, on account of its form, κρίνος and κορώνη, i.e. a "circle" or "crown" (Hom. Od. i. 441, vii. 80); and, because it was used sometimes as a knocker, it was called ἑπτάριον (Harpocrat. s. v.; Xcn. Helen. vi. 4. § 86). The term κορώνη, a "crown" (Brunck, Apol. iii. 198), probably denoted a knocker more nearly approaching the form of that bird, or perhaps of its neck and head. The lowest figure in the last woodcut shows a richly ornamented epispater, from the collection at Naples. That with a lion's head is taken from a bas-relief, representing the doors of a temple, in the collection at Nocera. The third figure is from the Neapolitan Museum.

Before the door of a palace, or of any private house of a superior description, there was a passage leading to the door from the public road, which was called vestibulum (Isid. Orig. vi. 7; Plaut. Most. iii. 2. 182; Gell. xvi. 5) and πρόθυρον (Vitr. vi. 7. 5; Hom. Od. xviii. 10—100; Herod. iii. 35, 149). It was provided with seats (Herod. vii. 3). It was sometimes covered by an arch [Camera], which was supported by two pillars (Serv. ad Virg. Aen. ii. 469); and sometimes adorned with sculptures (Virg. Aen. vii. 181; Juv. vii. 126). Here persons waited, who came in the morning to pay their respects to the occupier of the house. (Gell. iv. 1.) In the vestibule was placed the domestic altar [Ara]. The Athenians also planted a laurel in the same situation, beside a figure designed to represent Apollo (Aristoph. Thesm. 496; Plaut. Merc. iv. 11, 12); and statues of Mercury were still more frequent (Thucyd. vi. 27), being erected there on the principle of setting a thief to catch a thief. (Schol. ad Aristoph. Plut. 1153.)

The Donaria offered to the gods were suspended not only from the Antæ, but likewise from the door-posts and lintels of their temples (Virg. Aen. iii. 287, v. 360; Ovid. Trist. iii. 34; Hor. Carm. iv. 15. 8, Epist. i. 1. 5, i. 18, 56; Pers. Sat. vi. 45; Plin. H. N. xxxv. 4), as well as of palaces, which in ancient times partook of the sanctity of temples. (Virg. Aen. ii. 503, vii. 183.) Victors in the games suspended their crowns at the door of a temple. (Pind. Nem. v. 53.) In like manner persons fixed to the jambs and lintels of their own doors the spoils which they had taken in battle. (Festus, s. v. Resignare; Plin. H. N. xxxv. 22.) Stag's horns and boar's tusks were on the same principle used to decorate the doors of the temples of Diana, and of the private individuals who had taken these animals in the chase. Owls and other nocturnal birds were also painted on the doors as in modern times. (Pallad. de Re Rust. i. 35.) Also garlands and wreaths of flowers were suspended over the doors of temples in connection with the performance of religious rites, or the expression of public thanksgiving, being composed in each case of productions suited to the particular divinity whom they were intended to honour. In this manner the corona spicata was suspended in honour of Ceres (Tib. i. 21; see also Virg. Ciris, 55—90). Laurel was so used in token of victory, especially at Rome (Ovid. Met. i. 562), where it sometimes overshadowed the corona civica on the doors of the imperial palace. (Ovid. Trist. iii. 35—49; Plin. H. N. xv. 39; laureata foribus, Sen. Consol. ad Pol. 35; Val. Max. ii. 8. § 7.) The doors of private houses were ornamented in a similar way, and with different plants according to the occasion. More especially, in celebration of a marriage either laurel or myrtle was placed about the door of the bridegroom. (Juv. vi. 79, 228; Claud. de Nupt. Hon. et Mar. 200.)

Caulibus, in describing an imaginary marriage, supposes the whole vestibulum to have been tastefully overarched with the branches of trees. (Epitaph. Pet. et Thet. 273—283.) The birth of a child was also announced by a chaplet upon the door (Juv. iv. 84), and a death was indicated by cypris, probably in pots, placed in the vestibulum. (Plin. H. N. xvi. 60; Serv. in Virg. Aen. iii. 64.) In addition to trees, branches, garlands, and wreaths of flowers, the Romans sometimes displayed lamps and torches before the doors of their houses for the purpose of expressing gratitude and joy. (Juv. xii. 92.) Music, both vocal and instrumental, was sometimes performed in the vestibulum, especially on occasions when it was intended to do honour to the master of the house, or to one of his family. (Pind. Nem. i. 19, 20, Isth. vii. 3.)

It was considered improper to enter a house without giving notice to its inmates. This notice the Spartans gave by shouting; the Athenians and all other nations by using the knocker already described, but more commonly by rapping with the knuckles or with a stick (σπέντης, κόστος, Becker, Churr. vol. i. pp. 286—287, 151, 159, ed. Bekker.) In the houses of the rich a porter (junitor, custos, ἑσπερός) was always in attendance to open the door. (Tibull. i. 5. 66.) He was commonly a eunuch or a slave (Plat. l. c.), and was chained to his post. (Ovid. Amor. i. 6; Sueton. de Clar. Rhet. 3.) To assist him in guarding the entrance, a dog was universally kept near it, being also attached by a chain to the wall (Theocrit. xv. 43; Apollod. ap. Athen. i. 4; Aristoph. Thesm. 423, Epist. 1217; Tibull. ii. i. 32—36; and in reference to this practice, the warms Ċanem, ἑσπερόν τήν κόνα, was sometimes written near the door. Of this a remarkable example occurs in "the house of the tragic poet" at Pompeii, where it is accompanied by the figure of a fierce dog, wrought in mosaic on the pavement. (Gell's Pomp. 2nd Ser. vol. i. pp. 142, 145.) Instead
of this harsh admonition, some walls or pavements exhibited the more gracious SALVE or XAIPE. (Plut. Charm. p. 94, ed. Heindorf.) The appropriate names for the portion of the house immediately behind the door (Συρών, Soph. Oed. Tyr. 1242, Elect. 329), denotes that it was a kind of apartment; it corresponded to the hall or lobby of our houses. Immediately adjoining it, and close to the front door, there was in many houses a small room for the porter (σαλώτα, or σαλώτων, Sueton. Vitell. 16; Varro, de Re Rust. i. 13; ἱποήθος, Pollux, i. 77). [J. Y.]

IATRALIPTA, IATRALIPTES, or IATROALIPTES (ἰατραλιπτής), the name given by the ancients to a physician who paid particular attention to that part of medical science called Iatraliptice. The name is compounded of ἰατρός and ἄλειφα, and signifies literally a physician that cures by anointing. According to Pliny (H. N. xxix. 2), they were at first only the slaves of physicians, but afterwards rose to the rank of physicians themselves, and were therefore superior to the alipae. [Aliptak.] The word occurs in Paulus Aegineta (De Re Med. iii. 47), Celsius (De Medica, i. 1) and other medical writers. [W. A. G.]

IATRUS (ἰατρός). [Medicus]

IATROSOPISTHA (ἰατροσοπιστῆς), an ancient medical title, signifying apparently (according to Du Cange, Glossar. Med. et. Inf. Graecit.) one who both taught medicine and also practised it himself; as the ancients made a distinction between διδασκαλὴς and ἐργατικός, the art and the science of medicine, the theory and the practice. (Dissensus in vita Iliodori, Eunapius Sardianus (De Vit. Philosoph. et Sophist. p. 168, ed. Antwerp. 1568) calls them ἐργατικοῖς λέγει τε καὶ τοῖς ἰατροῖς. The word is somewhat varied in different authors. Socrates (Hist. Eccles. vii. 13) calls Adamantius ἰατρικὸν λόγων σοφιστής. Stephanus Byzantines (s. v. Ἐρα) mentions τῶν ἰατρῶν σοφιστῶν; Callisthenes (quoted in Du Cange), ἰατρός σοφιστὴς: and Theopanites (ibid.) σοφιστῆς τῆς ἰατρικῆς ἕστιν. Several ancient physicians are called by this title, e.g. Magnes (Theop. Protopath. E. Univit.). Cassius, the author of "Quaestiones Medicinae et Naturae," and others.

JENTA'CULUM. [COENA, p. 306, a.]

IGNOBILES. [Dinales.]

IGNOMINIA. [Infamia.]

ILE (ἰλή). [Exercitus, p. 498, b.]

ILLUSTRES. When Constantine the Great re-organized the Roman administration, he divided the principal magistrates and officials into three classes: 1. The Patricii, the Praefectus praetorio, the Praefectus urbi, the Praepositus sacri cubiculi, the Magister militum, the Magister officiorum, the Quaestor sacri palatii, the Comes sacrarum largitionum, and the Comes rerum privatarum. Even among the Illustres there was a gradation of rank, the Consuls and Patricii being regarded as higher in dignity than the others. The titles Subillustriani, Excellentissimi, and Magnifici are used as synonymous with Illustres. Among the privileges of the Illustres we read that in criminal cases they could only be tried by the emperor himself or by an imperial commission, and that they could appear before the courts by means of procurators. (Cod. Theod. 6, tit. 6, §c., with the commentary of Gothofred; Walter, Geschichtedes Römischen Rechts, § 380, 2nd ed.; Gibbon, Decline and Fall, c. 17. vol. iii. p. 34, London, 1797.)

IMA'GINUM JUS. [NOBILES.]

IMA'GO, the representation or likeness of any object, is derived from the root im or sin, which appears in in-teri and sin-tibi, and likewise in the Greek οὐδὲς ("Imago ab imitatione dicitur,"

Festus, s. v.; "Iaceo dictur quasi imitatio," Porphy. ad Hor. Carm. i. 12. 4.) It was especially applied among the Romans to indicate the waxen busts of deceased ancestors, which distinguished Romans kept in the atra of their houses, and of which an account is given in the article Nobiles. The word is also used in general to signify a portrait or statue of a person; on both of which some remarks are made under Pictura, No. XV. and Statuaria, No. II.

IMBRICES. [Teigna.]

IMMUNITAS (from immunus,imus), signifies, 1. A freedom from taxes. 2. A freedom from services which other citizens had to discharge. With respect to the first kind of immunitas we find that the emperors frequently granted it to separate persons (Suet. Aug. 40), or to certain classes of persons, or to whole states. When granted to individuals the immunitas ceased with their death, but in the case of states the privilege continued to subsequent generations. (Dig. 50. tit. 15. x. 4. § 3.) Thus we find that certain people in Ilyria had immunitas from taxes (Liv. xlv. 26), and that the emperor Claudius granted freedom from taxation in perpetuum to the inhabitants of Ilium. (Suet. Claud. 25.) The Roman soldiers from the time of Nero were exempt from all duties on goods which they might carry into the provinces for their own use or might purchase in any place. (Tac. Ann. xiii. 51; Cod. 4. tit. 61. s. 3.)

The second kind of immunitas was granted to all persons who had a valid excuse (excusatio) to be released from such services, and also to other persons as a special favour. Under the republic, public offices were objects of ambition, and consequently there was no difficulty in obtaining persons to discharge them even when they were attended with expense to the individual who held them. But under the empire the case became different. Many offices which entailed expenses, such, for instance, as that of the decuriones in the municipia, were avoided rather than sought after; and hence various regulations were made at different times to define the classes of persons who were entitled to exemption. (Comp. Dig. 50. tit. 6; Cod. 10. tit. 47 and 48.) The definition of immunitas in this sense is given by Paulus (Dig. 50. tit. 16. s. 18): "Munus—onus, quod cum remittatur, vacationem habet," or "Munus—onus, quod cum remittatur, vacationem atque immunitatem apellari." The immunitas might be either general, from all services which a citizen owed to the state, or special, such as from military service [Exercitus, p. 499], from taking the office of tutor or guardian [Tutor], and the like.

IMPERIUM. [Fenus, p. 526, b.]

IMPERATIRA PERIAE. [Feriae.]

IMPERRATOR. [Imperium.]

IMPERIA. M. Gaius (iv. 105), when making a division of Juvencus into three legions, phenotype constantly, observes that the latter are so called
because they continue in force during the Imperium of him who has granted them. Legitima judicia were those which were prosecuted in Rome or within the first miliarium, between Roman citizens, and before a single judge. By a Lex Julia Judicaria, such judicia expired, unless they were concluded within a year and six months. All other judicia were said Imperio contineri, whether conducted within the above limits before recuperatores, or before a single judge, when either the judex or one of the litigant parties was a peregrinus, or when conducted beyond the first miliarium. If such cases were not concluded within the above limits before recuperatores, or there was a peregrinus concerned, or a man sued at Rome ex lege, and the judicium was legitimum, but was said Imperio contineri, that is, the Imperium of the praeses or proconsul, who gave the judicium. The same was the case if a man sued at Rome ex lege, and the judicium was before recuperatores, or there was a peregrinus concerned. If a man sued under the praetor's edict, and consequently not ex lege, and a judiciwm was granted in Rome and the same was before one judex and no foreigner was concerned, it was legitimum. The judicia legitima are mentioned by Cicero (Pro Rosc. Com. 5; Or. Part. 12); but it may perhaps be doubted if he uses the term in the sense in which Gaius does. It appears then, that as the time of Gaius, so long as a man had jurisdiction, so long was he said to have Imperium. Imperium is defined by Ulpian (Dig. 2. tit. 1. s. 5) to be either merum or mixtum. To have the merum Imperium is to have "gladii potestatem ad animadvertendum in facinorosos homines," a power that had no connection with jurisdictio: the mixtum Imperium is defined by him as that "cui etiam jurisdictio inest," or the power which a magistrate had for the purposes of administering the civil (not criminal) part of the law. It appears then that there was an Imperium which was incident to jurisdictio; but the merum or pure Imperium was conferred by a lex (Dig. 1. tit. 21. s. 1). The mixtum Imperium was nothing more than the power necessary for giving effect to the Jurisdictio. There might therefore be Imperium without Jurisdictio, but there could be no Jurisdictio without Imperium. Accordingly, Imperium is sometimes used to express the authority of a magistratus, of which his Jurisdiction is a part. (Fachta, Zeitsschrift für Gesch. Rechtswissenschaft, vol. i. part ii. p. 21.)

Imperium is defined by Cicero (Phil. v. 16) to be that "sine quo res militaris administrari, teneri exercitus, bellum geri non potest." As opposed to Potestas, it is the power which was conferred by the state upon an individual who was appointed to command an army. The phrases Consularis Potestas and Consulare Imperium might both be properly used; but the expression Tribuni Potestas only could be used, as the Tribuni never received the Imperium. (Liv. v. 57; in Vell. Patres, ii. 2, Imperium is improperly used.) A consul could not act as commander of an army (attingere rem militarem) unless he were empowered by a Lex Curtiara, which is expressed by Livy (v. 52)

thus:—"Comitia Curtiara rem militarem continent." Though consuls were elected at the Comitia Centuriata, the Comitia Curtiara only could give them Imperium. (Liv. v. 52.) This was in conformity with the ancient constitution, according to which the Imperium was conferred on the kings after they had been elected: "On the death of King Pompilius, the populace in the Comitia Curtiara elected Tullus Hostilius king, upon the regation of an interex; and the king, following the example of Pompilius, took the votes of the populace according to their curiae on the question of his Imperium." (Cic. Georg. ii. 13, and Ancus Marcus (ii. 18), the successor of Tullus, after their appointment as Reges, are severally said "De Imperio suo legem curiatam tulisse." It appears then that, from the kingly period to the time of Cicero, the Imperium, as such, was conferred by a Lex Curtiara. On the kingly Imperium see Becker, Handbuch der Rom. Alterthümer, vol. i. part ii. p. 314, &c.

The Imperium of the kings is not defined by Cicero. It was conferred, as modern writers have been the military and the judicial power; and it is said that the consuls also received the Imperium in the same sense; and the reason why the Lex Curtiara is specially said to confer the Imperium Militare, is that it specially referred to the consul, and by the establishment of the praetorship the jurisdictio was separated from the consularship. It may be conjectured that the division of Imperium, made by the jurists, was in accordance with the practice of the republican period: there was during the republican period an Imperium within the walls which was incident to jurisdictio; and an Imperium without the walls, which was conferred by a lex curiata. There are no traces of this separation in the kingly period, and it is probable that the king received the Imperium in its full import, and that its separation into two parts belongs to the republican period. The Imperium, which was conferred by a lex under the republic, was limited, if not by the terms in which it was conferred, at least by usage: it could not be held or exercised within the city. It was sometimes specially conferred on an individual for the day of his triumph within the city; and, at least in some cases, by a plebisicium. (Liv. xxvi. 21, xlv. 35.)

The Imperium was as necessary for the governor of a province, as for a general who merely commanded the armies of the republic, as he could not without it exercise military authority (rem militarem attingere). (See Caes. B. C. i. 6.) So far as we can trace the strict practice of the Roman constitution, military command was given by a special lex, and was not incident to any office, and might be held without any other office than that of imperator. It appears that in the time of Cicero there were doubts as to the necessity of the lex in some cases, which may have gradually arisen from the irregular practices of the civil wars, and from the gradual decay of the old institutions. Cicero, in a passage which is not very clear (Ad Fam. i. 9), refers to a Cornelia Lex according to which an individual who had received a Province ex Senatus-consulto thereby acquired the Imperium, without the formality of a Lex Curtiara. But in some cases, the Imperium (merum) of the republic appears to have been (1), a power which was only exercised out of the city; (2) a power which was
specially conferred by a Lex Curia, and was not incident to any office; (3) a power without which no military operation could be considered as done in the name and on the behalf of the state. Of this a notable example is recorded in Livy (xxvi. 2), where the senate refused to recognise a Roman as a commander because he had not received the Imperium in due form.

In respect of his Imperium, he who received it was styled imperator (\textit{avt\rho\nu\pi\pi\lambda\tau\rho}\alpha\nu\nu) : he might be a consul or a proconsul. It was an ancient practice, observes Tacitus (Ann. iii. 74), for the soldiers of a victorious general to salute him by the title of imperator; but in the instance referred to by Tacitus, the Emperor Tiberius allowed the soldiers to confer the title on an individual who had not already, while under the republic the title as a matter of course was given with the Imperium; and every general who received the Imperium was entitled to the name of imperator. After a victory it was usual for the soldiers to salute their commander as imperator, but this salutation neither gave nor confirmed the title. Under the republic, observes Tacitus, there were several imperatores at a time: Augustus granted the title to some, but the last instance, he adds, of the title being conferred was in the case of Blaesus, under Tiberius. There were, however, later instances.

The assumption of the praenomen of imperator by Julius Caesar (Suet. Cæs. c. 76) was a usurpation; or it may have been conferred by the senate (Dion Cassius, xliii. 44). Under the republic the title came properly after the name; thus Cicero, when he was proconsul in Cilicia, could properly style himself M. Tullius Cicero Imperator, for the term merely expressed that he had the Imperium. Tiberius and Claudius refused to assume the praenomen of Imperator, but the use of it as a praenomen became established among their successors, as we see from the imperial coins. The title Imperator sometimes appears on the imperial medals, followed by a numeral (VI. for instance), which indicated that it was specially assumed to some extent on the occasion of some great victory; for though the victory might be gained by their generals, it was considered to be gained under the auspices of the Imperator.

The term Imperium was applied in the republican period to express the sovereignty of the Roman state. Thus Gaul is said by Cicero (\textit{Pro Font.} 1) to have come under the Imperium and Ditio of the Populus Romanus; and the notion of the Majestas Populi Romani is said to be “in Imperii atque in nominis populi Romani dignitate.” (Gic. Or. Part. 30.) Compare the use of Imperium in Horace, Od. i. 37, iii. 5. 

\textit{IMPLUVIUM.} [Donus, p. 427, b.]

\textit{IMPUBES.} An infant [\textit{infans}] was incapable of doing any legal act. An impubes, who had passed the limits of infancy, could do any legal act with the auctoritas of his tutor; without such auctoritas he could only do those acts which were for his benefit. Accordingly such an impubes could stipulate (\textit{stipulare}), but not promise (\textit{promittere}) ; in other words, as Gaius (iii. 107) expresses it, a pupillus could only be bound by the auctoritas of his tutor, but he could bind another without such auctoritas. [\textit{INFANS}]

But this remark as to pupillis only applies to those who had understanding enough to know what they were doing (\textit{pu\'t jan aliquaem intellectum habeant}), and not to those who were infantes or Infanti proximi, though in the case of the infanti proximi a liberal interpretation was given to the rule of law (\textit{benignior juris interpretatio}), by virtue of which a pupillus, who was infanti proximus, was placed on the same footing as one who was pubertati proximus, but this was done for their benefit only (\textit{propter utilitatem eorum}), and therefore could not apply to a case where the pupillus might be a loser (Compare Inst. iii. tit. 19. s. 10 with Gaius, iii. 108.) An impubes who was in the power of his father, could not bind himself even with the auctoritas of his father; for in the case of pupilles, the auctoritas of the tutor was only allowed, in respect of the pupillus having property of his own, which a son in the power of his father could not have.

In the case of obligationes ex delicto, the notion of the auctoritas of a tutor was of course excluded, as such auctoritas was only requisite for the purpose of giving effect to rightful acts. If the impubes was of sufficient capacity to understand the nature of his delict, he was bound by it; otherwise, he was not. In the case of a person who was Pubertati proximus, there was a legal presumption of such capacity; but still this presumption did not exclude a consideration of the degree of understanding of the impubes and the nature of the act, for the act might be such as either to be perfectly intelligible, as theft, or it might be an act which an impubes imperfectly understood, as when he was made the instrument of fraud. These principles were applicable to cases of furtum, damnum injuria datum, injuria, and others; and also to crimes, in which the nature of the act mainly determined whether or not guilt should be imputed.

An impubes could enter into a contract by which he was released from a debt, but he could not release a debt without the auctoritas of his tutor. He could not pay money without his tutor; nor could he receive money without his tutor, at least it was not a valid payment, because such payment was, as a consequence, followed by a release to the debtor. But since the rule as to the incapacity of an impubes was made only to save him from loss, he could not retain both the money and the claim. An impubes could not be a plasma in a suit without his tutor. He could acquire the ownership of property alone, but he could not alienate it without the consent of his tutor, nor could he manumit a slave without such consent. He could contract sponsalia alone, because the auctoritas of the tutor has reference only to property: if he was in his father's power, he was of course entirely under his father's control.

An impubes could acquire an hereditas with the consent of his tutor, which consent was necessary, because an hereditas was accompanied with obligations. But as the act of cretion was an act that must be done by the heres himself, neither his tutor nor a slave could take the hereditas for a pupillus, and he was in consequence of his age incapable of taking it himself. This difficulty was got over by the doctrine of pro herede gestio: the tutor might permit the pupillus to act as heres, which had the effect of cretion: and this doctrine would apply even in the case of infants, for no expression of words was necessary in order to the pro herede gestio. In the case of the bonorum possessio, the father could apply for it on behalf of his child, and the tutor on behalf of his pupillus, without any act
being done by the impubes. By the imperial legislation, a tutor was allowed to acquire the hereditas for his pupillus, and a father for his son, who was in his power; and thus the doctrine of the pro herede gestio was rendered unnecessary.

A pupillus could not part with a possession without the auctoritas of a tutor, for though possession of itself was no legal right, legal advantages were attached to it. As to the acquisition of possession, possession in itself being a bare fact, and the fundamental condition of it being the animus possidenti, consequently the pupillus could only acquire possession by himself, and when he had capacity to understand the nature of the act. But with the auctoritas of his tutor he could acquire possession even when he was an infans, and thus the acquisition of possession by a pupillus was facilitated, utilitatis causa. There was no formal difficulty in such possession any more than in the case of pro herede gestio, for in neither instance was it necessary for words to be used. Subsequently the legal doctrine was established that a tutor could acquire possession for his pupillus. (Dig. 41. t. 2. l. § 26.)

With the attainment of pubertas, a person obtained the full power of his property, and the tutela ceased: he could also dispose of his property by will; and he could contract marriage. According to the legislation of Justinian (Inst. i. t. 22), pubertas, in the case of a male, was attained with the completion of the fourteenth, and, in a female, with the completion of the tenth year. In the case of a female, it seems that there never had been any doubt as to the period of the twelve years, but there was dispute among the jurists as to the period of fourteen years. The Sabinianni maintained that the age of pubertas was to be determined by physical capacity ( Habituit corporis), to ascertain which a personal examination might be necessary; the Proculiani fixed the age of fourteen complete, as that which absolutely determined the attainment of puberty. (Gains, l. 196; Ulp. Praeg. xi. 26.) It appears, therefore, that under the earlier emperors there was some doubt as to the time when pubertas was attained, though there was no doubt that with the attainment of puberty whatever that time might be, full legal capacity was acquired.

Until a Roman youth assumed the toga virilis, he wore the toga praetexta, the broad purple hem of which (praetexta) at once distinguished him from other persons. The toga virilis was assumed at the Liberalia in the month of March, and though no age appears to have been positively fixed for the ceremony, it probably took place as a general rule on the feast which next followed the completion of the fourteenth year; though it is certain that the completion of the fourteenth year was not always the time observed. Still, so long as a male wore the praetexta, he was Impubes, and when he assumed the toga virilis, he was Pubes. Accordingly, Vesticeps (Festus, s. v.) was the same as Pubes, and Investis or praetextatus the same as Impubes. (Gell. v. 19. Festiceps.) After the assumption of the toga virilis, the son who was in the power of his father had a capacity to contract debts; and a pupillus was released from the tutela. But if neither the pupillus wished to get rid of his tutor, nor the tutor to be released from the responsibility of his office (for which he received no emolument), the period of assuming the toga virilis might be deferred. If the pupillus and the tutor could not agree, it might be necessary that there should be a judicial decision. In such case the Proculiani maintained as a theoretical question, that the age of fourteen should be taken as absolutely determining the question, fourteen being the age after the attainment of which the praetexta had been generally laid aside. The Sabinianni maintained that as the time of puberty had never been absolutely fixed, but had depended on free choice, some other mode of deciding the question must be adopted, where free choice came out of the question, and therefore they adopted that of the physical development (Habituit corporis). But though there are allusions to this matter (Quinct. Inst. Or. iv. 2), there is no evidence to show that inspection of the person was ever actually resorted to in order to determine the age of puberty. It appears that the completion of fourteen years was established as the commencement of pubertas. The real foundation of the rule as to the fourteen and the twelve years appears to be, that in the two sexes respectively, puberty was, as a general rule. In Italy, attained about these ages. In the case of females, the time had been fixed absolutely at twelve by immemorial custom, and had no reference to any practice similar to that among males of adopting the toga virilis, for women wore the toga praetexta till they were married. And further, though the pupiliaris tutela ended with females with the twelfth year, they were from that time subject to another kind of tutela.

A male had a capacity to make a will upon completing his fourteenth, and a female upon completing her twelfth year (Gains, ii. 113; Paulini, S. R. iii. tit. 4. a.); and the same ages, as already observed, determined the capacity, in the two sexes, for contracting a legal marriage. The dispute between the two schools as to the time when the male attained the age of puberty, appears to have had reference to the termination of the tutela, and his general capacity to do legal acts; for the test of the personal examination could hardly, from the nature of the case, apply to the capacity to make a will or contract a marriage, as Savigny shows.

Spendonius (who contrived the law for attaining physical pubertas) might make a testament after attaining the age of eighteen. (Savigny, System des beut. Rom. Rechts, vol. iii. p. 55, &c.) 

INAUGURATIO in general was in a great ceremony by which the augurs obtained, or endeavoured to obtain, the sanction of the gods to something which had been decreed by man; in particular, however, it was the ceremony by which things or persons were consecrated to the gods, whence the terms dedictio and consecratio were sometimes used as synonymous with inauguratio. (Liv. i. 44, 55; Flor. i. 7, 8; Plin. Ep. ix. 39, x. 58, 59, 76; Cic. in Catil. iv. 1.) The ceremony of inauguratio was as follows:—after it had been decreed that something should be set apart for the service of the gods, or that a certain person should be appointed priest, a prayer was addressed to the gods by the augurs or other priests, soliciting them to declare by signs whether the decree of men was agreeable to the will of the gods. (Liv. i. 18.) If the signs observed by the inaugurating priest were thought favourable, the decree of men had the sanction of the gods, and the inauguratio was completed. The inauguratio was, in early times, always performed by the augurs; but subsequently we find that the
inauratio, especially that of the rex sacrificulus and of the flamines, was sometimes performed by the college of pontiffs in the comitia calata. (Gell. xv. 27.) But all other priests, as well as new members of the college of augurs, continued to be inaugurated by the augurs, or sometimes by the augurs in conjunction with some of the pontiffs (Liv. xxvii. 8, xi. 42); the chief pontiff had the right to enforce the inauguratio, if it was refused by the augurs, and if he considered that there was no sufficient ground for refusing it. Sometimes one augur alone performed the rite of inauguratio, as, for instance, Numa Pompilius (Liv. i. 18), and in some cases a newly appointed priest might himself not only fix upon the day, but also upon the particular augur by whom he desired to be inaugurated. (Cic. l. c.; and Philip. ii. 43.)

During the kingly period of Rome the inauguration of persons was not confined to actual priests; but the kings, after their election by the popular vote, were inaugurated by the augurs, and thus became the high-priests of their people. After the civil and military power of the kings had been conferred upon the consuls, and the office of high-priest was given to a distinct person, the rex sacrorum, he, upon the consuls, and the office of high-priest was also upon the particular augur by whom he desired the inauguratio conferred no priestly dignity upon the election. (Serv. iv. 27.) But all other priests, as well as new members of the college of augurs, continued to be inaugurated by the augurs, and thus became high-priests of their people. After the civil and military power of the kings had been conferred upon the consuls, and the office of high-priest was given to a distinct person, the rex sacrorum, he, upon the consuls, and the office of high-priest was also upon the particular augur by whom he desired the inauguratio conferred no priestly dignity upon the election. (Serv. iv. 27.)

(Serv. iv. 27.)
Rome, which was evidently occasioned by frauds. The offenders were discovered and punished (animadversum est), but Livy unfortunately does not state (xxvi. 27) in what manner. The crime of incendium was the subject of various enactments in the last century of the republic. Sulla, in his Lex Cornelia de Sicariis, punished malicious (dolo malo) incendium, but only in the city, or within a thousand paces of it, with aquae et ignis interdictio; since it was frequently employed as a means for the perpetration of murder, which was especially the subject of this law. (Dig. 48. tit. 8. s. l.) Cn. Pompeius, in B.C. 52, made incendium a crime of interdictio, since it was frequently employed as a means for the perpetration of murder, which was especially the subject of this law. (Dig. 48. tit. 8. s. l.) Sulla, in his Lex Pompeia de Vi, in consequence of the burning of the Curia and the Porcia Basilica on the burial of Clodius; and Julius Caesar also included it in his Lex Julia de Vi, which enacted that any act of incendium committed by large numbers of men, even if the object of their assembling together was not incendium, should be treated as Vi, and punished with aquae et ignis interdictio. (Cic. Phil. i. 9; comp. Parad. 4.) The more recent Lex Julia de Vi seems to have been less severe, but it is uncertain what punishment it ordained. (Paull. v. 26. § 3.) Besides the two criminal prosecutions given by the Lex Cornelia and Lex Julia, a person could also bring actions to recover compensation for the injury done to his property: 1. By the actio legis Aquilinae, in case of accidental incendium. (Dig. 9. tit. 2. s. 27 § 5.) 2. In the case of a person who had committed robbery or done injury during an incendium, there was a praetorian action de incendio, which compelled him to restore fourfold the amount. (Dig. 47. tit. 9. ss. 1, 5.) In the imperial period various distinctions were made in the crime. First, a distinction was made according to the greater or smaller danger of the incendium to the contiguous objects: thus incendium in the city was punished with less severity than incendium in the country. Secondly, a distinction was made according as the act had been performed dolo, culpa, or casu. If the incendium was not malicious, but still might have been avoided by ordinary care, a person had to make compensation; but if the incendium was purely accidental, no compensation was necessary. The lex de incendio extraordinario and bello incendio, were also included in the Praefectus urbi, who could inflict whatever punishment it ordained. (Paull. v. 26. § 3.) The preceding account is taken from Rein, Das Criminalrecht der Römer, pp. 763–774, where all the authorities are given.

INCENSUS. INCITE'GA, a corruption of the Greek ğγιτε'γα, a term used to denote a piece of domestic furniture, variously formed ac-
cording to the particular occasion intended; made of silver, bronze, clay, stone, or wood, according to the circumstances of the possessor; sometimes adorned with figures; and employed to hold amphorae, bottles, alabastra, or any other vessels which were round or pointed at the bottom, and therefore required a separate contrivance to keep them erect. (Festus, s.v. Incitega; Bekker, Anecd. 245; Wilkinson, Man. and Customs, vol. ii. pp. 153, 160, 216, 217.) Some of those used at Alexandria were triangular. (Athen. v. 45.) We often see them represented in ancient Egyptian paintings. The annexed woodcut shows three φυλή as, which are preserved in the British Museum. Those on the right and left hand are of wood, the one having four feet, the other six; they were found in Egyptian tombs. The third is a broad earthenware ring, which is used to support a Grecian amphora. [J. Y.]

INCUS (&K/j. CHV), an anvil. The representations of Vulcan and the Cyclopes on various works of art, show that the ancient anvil was formed like that of modern times. When the smith wanted to make use of it, he placed it on a large block of wood (ακύοντος, Horn. Hym. xviii. 410, 476; Od. viii. 274; positis incudibus, Virg. Aen. vii. 629; viii. 451); and when he made the link of a chain, or any other object which was round or hollow, he beat it upon a point projecting from one side of the anvil. The annexed woodcut, representing Vulcan forging a thunderbolt for Jupiter, illustrates these circumstances; it is taken from a gem in the Royal Cabinet at Paris. It appears that in

the "brazen age," not only the things made upon the anvil, but the anvil itself, with the hammer and the tongs, were made of bronze. (Hom. Od. iii. 433, 434; Apollon. Rhod. iv. 761, 762.) [MALLEUS.]

INFA'AMIA. The provisions as to Infamia, as they appear in the legislation of Justinian, are contained in Dig. 3. tit. 2. De his qui notantur Infamia, and in Cod. 2. tit. 12. Ex quibus causis Infamia irrogatur. The Digest contains (s. 1) the cases of Infamia as enumerated in the Prætor's Edict. There are also various provisions on the subject in the Lex Julii Municipalis (b.c. 45), commonly called the Table of Hercules. Infamia was a consequence of condemnation in any Judicium Publicum, of ignominious (ignominiae causa) expulsion from the army (Tab. Herc. l. 121), of a woman being detected in adultery, though she might not have been condemned in a Judicium Publicum, &c.; of condemnatio for Fur-
INFAMIA.

INFAMIA.

635

...Rapina, Injuriae, and Dolus Malus, provided the offender was condemned in his own name, or provided in his own name he paid a sum of money by way of compensation; of condemnation in an action Pro Socio, Tutelae, Mandatum, Depositum or Fiducia (compare the Edict with Cic. pro Rosc. Com. 6, pro Rose. Amer. 38, 39, pro Caelina, 2, Top. c. 10; Tab. Her. c. 111), provided the offender was condemned in his own name. Infamia only followed for a condemnation in a direct action, not if a man was condemned contrary to judicio, unless the person condemned was guilty of some special dishonesty. Infamia was also a consequence of insolvency, when a man's bona were Possessa, Proscripta, Vendita (Cic. pro Quint. 15; Tab. Her. c. 113—117; Gaius, ii. 154); of a widow marrying within the time appointed for mourning, but the Infamia attached to the second husband, if he was a paterfamilias, and if he was not, then to his father, and to the father of the widow if she was in his power; the Edict does not speak of the Infamia of the widow, but it was subsequently extended to her. Infamia was a consequence of a man being at the same time in the relation of a double marriage or double sponsalia; the Infamia attached to the man if he was a paterfamilias, and if he was not, to his father; the Edict here also speaks only of the man, but the Infamia was subsequently extended to the woman. Infamia was a consequence of prostitution in the case of a woman, of similar conduct in a man (qui nulliterias passus est), of Lenocinium or gaining a living by aiding in prostitution (Tab. Her. c. 125); of engaging on a public stage as an actor, of engaging for money to appear in the fights of the wild beasts, even if a man did not appear, and of appearing there, though not for money.

It results from this enumeration that Infamia was only the consequence of an act committed by the person who became Infamus, and was not the consequence of any punishment for such act. In some cases it only followed upon condemnation; in others it was a direct consequence of an act, as soon as such act was notorious.

It has sometimes been supposed that the Praetor established the Infamia as a rule of law, which however was not the case. The Praetor made certain rules as to Postulatio (Dig. 3. tit. 1. s. 1), for the purpose of maintaining the purity of his court. With respect to the Postulatio, he distributed persons into three classes. The second class comprehended, among others, certain persons who were turpitudine notabiles, who might postulate for themselves but not for others. The third class contained, among others, all those "qui Edicto Praetoris ut infames notantur," and were not already enumerated in the second class. Accordingly it was necessary for the Praetor to enumerate all the Infames who were not included in the second class, and this he did in the Edict as quoted. (Dig. 3. tit. 2. s. 1.) Consistently with this, Infamia was already an established legal condition; and the Praetor in his edicts on Postulation did not make a class of persons called Infames, but he enumerated as persons to be excluded from certain rights of Postulation, those who were Infames. Consequently the legal notion of Infamia was fixed before these edicts.

It is necessary to distinguish Infamia from the Nota Censoria. The Infamia does not seem to have been created by written law, but to have been an old Roman institution. In many cases, though not in all, it was a consequence of a judicial decision. The power of the Censors was in its effects analogous to the Infamia, but different from it in many respects. The Censors could at their pleasure remove a man from the Senate or the Equites, remove him into a lower tribe, or remove him out of all the tribes, and so deprive him of his suffragium, by reducing him to the condition of an aerarius. (Cic. pro Client. 43, 45.) They could also affix a mark of ignominy or censure opposite to a man's name in the list of citizens, nota censoria or subscriptio (Cic. pro Client. 42, 43, 44, 46, 47); and in doing this, they were not bound to make any special inquiry, but might follow general opinion. This arbitrary mode of proceeding was however partly remedied by the fact that such a censorian nota might be opposed by a colleague, or removed by the following censors, or by a judicial decision, or by a lex. Accordingly the censorian nota was not perpetual, and therein it differed essentially from Infamia, which was perpetual.

The consequences of Infamia were the loss of certain political rights, but not all. It was not a capita deminutio, but it resembled it. The Infamia became an Aerarius, and lost the suffragium and honores; that is, he lost the capacity for certain so-called public rights, but not the capacity for private rights. Under the empire, the Infamia lost its effect as to public rights, for such rights became unimportant.

It might be doubted whether the loss of the suffragium was a consequence of Infamia, but the affirmative side is maintained by Savigny with such reasons as may be pronounced completely conclusive. It appears from Livy (vii. 2) and Valerius Maximus (ii. 4. § 4), that the Actores Atellanarum were not either removed from their tribe nec tribu moveantur, nor incapable of serving in the army: in other words such actors did not become Infames, like other actors. The phrase "tribu moveri" is ambiguous, and may mean either to remove from one tribe to another, or to move from all the tribes, and make a man an aerarius. Now the mere removing from one tribe to another was not an act of the Censors only, for it was necessary to fix the tribe into which the removal was made: but this could not be the case in a matter of Infamia, which was the effect of a general rule, and a general rule could only operate in a general way; that is, "tribu moveri," as a consequence of Infamia, must have been a removal from all the tribes, and a degradation to the state of an Aerarius. (Compare Liv. xiv. 13.)

The Lex Julia Municipalis does not contain the word Infamia, but it mentions nearly the same cases as those which the Edict mentions as cases of Infamia. The Lex excludes persons who fall within its terms, from being Senatoriae, Decuriones, Conscripunt of their city, from giving their vote in the Comitia of their city, from giving their vote in the Comitia of their city, and from magistracies which gave a man access to the senate: but it says nothing of the right of voting being taken away. Savigny observes that there would be no inconsistency in supposing that the lex refused only the Honores in the municipal towns, while it still allowed Infames to retain the suffragium in such towns, though the practice was different in Rome, if we consider that the suffragium in the Roman Comitia was a high privilege, while in the municipal towns it was comparatively unimportant.
Cicero (pro Rosc. Com. 6) speaks of the judicia Fideuciae, Tutelae, and Societatis as "summae exstimationis et pene capitis." In another oration (pro Quint. 8, 9, 13, 15, 22) he speaks of the ex edicto possessio honorum as a capitis causa, and in fact as identical with Infamia (c. 15, cujus bona ex edicto possidetur, hujus omnis fama et existimatio cum bonis simul possidetur). This capitis minuto, however, as already observed, affected only the public rights of a citizen; whereas the capitis deminuto of the imperial period and the expresiones proximae, apply to the complete loss of citizenship. This change manifestly arose from the circumstance of the public rights of the citizens under the empire having become altogether unimportant, and thus the phrase capitis deminuto, under the empire, applies solely to the individual's capacity for private rights.

In his private rights the Infamia was under some incapacies. He could only postulate before the Praetor on his own behalf, and on behalf of certain persons who were very nearly related to him, but not generally on behalf of all persons. Consequently he could not generally be a Cognitor or a Procurator. Nor could a cause of action be assigned to him, for by the old law he must sue as the cognitor or procurator of the assignor (Gaius, ii. 39); but this incapacity became unimportant when the Cessio was effected by the utiles actiones without the intervention of a Cognitor or Procurator. The Infamis could not sustain a Popularis Actio, for in such case he must be considered as a procurator of the state. The Infamis was also limited as to his capacity for marriage, an incapacity which originated in the Lex Julii. (Ulp. Frag. xiii.) This lex prohibited senators, and the children of senators, from contracting marriage with Libertini and Libertinae, and also with other disreputable persons enumerated in the lex; it also forbade all freemen from marrying with certain disreputable women. The Jurists made the following change:—they made the two classes of disreputable persons the same, which were not the same, not generally, in the old law; but both for senators and others, to all those whom the Edict enumerated as Infames. The provisions of the Lex Julia did not render the marriage null, but it deprived the parties to such marriage of the privileges conferred by the lex; that is, such a marriage did not release them from the penalties of celibacy. A senatus-consultum, under M. Aurelius, however, made such marriage null in certain cases. (Savigny, Systems, &c., vol. ii.)

INFANTS, INFAN'TIA. In the Roman law there were several distinctions of age which were made with reference to the capacity for doing legal acts:—1. The first period was from birth to the end of the seventh year, during which time persons were called Infantes, or Qui fari non possunt. 2. The second period was from the end of seven years to the end of fourteen or twelve years, according as the person was a male or a female, during which persons were defined as those Qui fari possunt. The persons included in these first two classes were Impuberes. 3. The third period was from the end of the twelfth or fourteenth to the end of the twenty-fifth year, during which period persons were Adolescentes, Adulti. The persons included in these three classes were minores xxv annis or annum, and were often, for brevity's sake, called minores only [Curator]; and the persons included in the third and fourth class were Puberes. 4. The fourth period was from the age of twenty-five, during which persons were Majores.

The term Impubes comprehends Infans, as all Infantes are Impubes; but all Impubes are not Infantes. Thus the Impubes were divided into two classes: Infantes or those under seven years of age, and those above seven, who are generally understood by the term Impubes. Papillius is a general name for all Impubes not in the power of a father. (Dig. 50, tit. 16. s. 235.)

The commencement of Pubertas was the commencement of full capacity to do legal acts. Before the commencement of Pubertas, a person, according to the old civil law, could do no legal act without the auctoritas of a tutor. This rule was made for those Impubes who had property of their own; for it could have no application to Impubes who were in the power of a father. Now the age of pubertas was fixed as above mentioned, on the supposition that persons were then competent to understand the nature of their acts, and the age of twelve or fourteen was only fixed because it was necessary to fix some limit which might apply to all cases; but it was obvious that in many cases when a person bordered on the age of Puberty (pubertati proximus), and had not yet attained it, he might have sufficient understanding to do many legal acts. Accordingly, a person who was proximus pubertati was in course of time considered competent to do certain acts without the auctoritas of a tutor; but to secure him against fraud or mistake, he could only do such acts as were for his own advantage. This relaxation of the old law was beneficial both to the Impubes and to others, but owing to its being confined to such narrow limits of time, it was of little practical use, and accordingly it was extended as a positive rule to a longer period below the age of puberty; but still with the same limitation: the Impubes could do no act to his prejudice without the auctoritas of a tutor; he was, however, necessary to fix a limit here also, and accordingly it was determined that such limited capacity to do legal acts should commence with the termination of infantiæ, which, legally defined, is that period after which a person, either alone or with a tutor, is capable of doing legal acts.

Infans properly means Qui fari non potest; and he of whom could be predicated, Fari potest, was not Infans, and was capable of doing certain legal acts. The phrase Qui fari potest is itself ambiguous; but the Romans, in a legal sense, did not limit it to the mere capacity of uttering words, which a child of two or three years generally possess, but they understood by it a certain degree of intellectual development; and, accordingly, the expression Qui fari potest expressed not only that degree of intellectual development which is shown by the use of intelligible speech, but also a capacity for legal acts in which speech was required. Thus the period of infantiæ was extended beyond that which the strict etymological meaning of the word signifies, and its termination was fixed by a positive rule at the end of the seventh year, as appears by numerous passages. (Dig. 26, tit. 7, s. 1; 23, tit. 1, s. 14; Cod. 6, tit. 30, s. 18; Quintilian, Inst. Or. i. 1; Isidorus, Orig. xi. 2.)

The expressions proximus pubertati, and proxi-
inus infantiae or infanti (Gaius, iii. 109), are used by the Roman jurists to signify respectively one who is near attaining Pubertas, and one who has passed the limit of Infantia. (Savigny, System des hent. R. R. vol. iii.) [IMPUBES.] [G. L.]

INFERIAE. [FUSIUS, p. 562, b.]

INFULA, a flock of white and red wool, which was slightly twisted, drawn into the form of a wreath or fillet, and used by the Romans for ornament on festive and solemn occasions. In sacrificing it was tied with a white band [VTTA] to the head of the victim (Virg. Georg. iii. 487; Lucreti. i. 88; Sueton. Calig. 27), and also of the priest, more especially in the worship of Apollo and Diana. (Virg. Aen. ii. 430, x. 538; Servius, in loc.; Isid. Orig. xix. 30; Festus, s. v. Infulae.)

The "torta infula" was worn also by the Vestal Virgins. (Prud. Ar. P. 383.)

INGENIARVM. [FUSIUS, p. 562, b.]

INGENIUS, INGENIUTAS. Freemen (liberi) were either ingenii or libertinii. Ingenii were those free men who are born free. (Gaius, i. 11.)

Libertini are those who are manumitted from legal slavery. Though freedmen (liberti) could not be ingenii, the sons of libertini were ingenii. A libertinus could not by adoption become ingenii. (Gell. v. 18.) If a female slave (ancilla) was pregnant before she gave birth to a child, such child was born free, and therefore was ingenius. In other cases, also, the law favoured the claim of free birth, and consequently of ingeniius. (Paulus, Sent. Recept. iii. 24, and v. 1. De liberali causa.) If a man's ingeniius was a matter in dispute, there was a judicium ingeniiitatis. (Tacit. Ann. xiii. 27; Paulus, S. R. v. 1.)

The words ingenius and libertinus are often opposed to one another; and the title of freeman (liber), which would comprehend libertinus, is sometimes limited by the addition of ingeniius. [Impubes.] According to Cincius, in his work on Comitia, quoted by Festus (s. v. Patricios), those who, in his time, were called ingenii, were originally called patricii, which is interpreted by Goettling to mean that Gentiles were originally called Ingenii also; a manifest misunderstanding of the passage. If this passage has any certain meaning, it is this: originally the name ingeniius did not exist, but the word patricius was sufficient to express a Roman citizen by birth. This remark then refers to a time when there were no Roman citizens except patricii; and the definition of ingeniius, if it had then been in use, would have been a sufficient definition of a patrician. But the word ingeniius was introduced, in the sense here stated, at a later time, and when it was wanted for the purpose of indicating a citizen by birth, merely as such. Thus, in the speech of Appianus Claudius Crassus (Liv. vi. 40), he contrasts with persons of patrician descent, "Unus Quiritium quilibet, dobius ingenius ortus." Further, the definition of Gentilia by Scaevola (Sueton. Cai. 25) shows, that ingeniius could be ingeniius and yet not gentilis, for he might be the son of a freedman; and this is consistent with

Livy (x. 8). If Cincius meant his proposition to be as comprehensive as the terms will allow us to take it, the proposition is this: All (now) ingeniius comprehend all (then) patricii; which is untrue.

Under the empire, Ingeniatus, or the Jura Ingeniatus, might be acquired by the imperial favour; that is, a person, not ingeniius by birth, was made so by the sovereign power. A freedman who had obtained the Jus Annulorum Aureorum, was considered ingeniius; but this did not interfere with the patrimonial rights. (Dig. 40. tit. 10. s. 5 and 6.) By the natalibus restituto the princeps gave to a libertinus the character of ingeniius; a form of proceeding which involved the theory of the original freedom of all mankind, for the libertinus was restored, not to the state in which he had been born, but to his supposed original state of freedom. In this case the patron lost his patrimonial rights by a necessary consequence, if the fiction were to have its full effect. (Dig. 40. tit. 11.) It seems that questions as to a man's ingeniius were common at Rome; which is not surprising, when we consider that patrimonial rights were defended in them.

[G. L.]

INGRATVS. [PATRONUS.]

INJURIA. Injuria, in the general sense, is opposed to Jus. In a special sense injuria was done by striking or beating a man either with the hand or with any thing; by abusive words (convicium); by the proscriptio honorum, when the claimant knew that the alleged debtor was not really indebted to him, for the honorum proscriptio was accompanied with infamia to the debtor (Cic. pro Quinct. 6, 15, 16); by libellous writings or verses; by soliciting a mater familias or a praetextatus [Impubes]; and by various other acts. A man might sustain injuria either in his own person, or in the person of those who were in his power or in manu. No injuria could be done to a slave, but certain acts done to a slave were an injuria to his master, when the acts were such as appeared from their nature to be insulting to the master; as, for instance, if a man should flag another man's slave, the master had a remedy against the wrong-doer, which was given him by the praetor's formula in punishment of the conduct of a slave being maltreated, there was no regular formula by which the master could have a remedy, and it was not easy to obtain one from the praetor.

The Twelve Tables had various provisions on the subject of Injuria. Libellous songs or verses were followed by capital punishment, that is, death, as it appears (Cic. Rep. iv. 10, and the notes in Mll's edition). In the case of a limb appearing from their nature to be insulting to the master; as, for instance, if a man should flag another man's slave, the master had a remedy against the wrong-doer, which was given him by the praetor's formula in punishment of the conduct of a slave being maltreated, there was no regular formula by which the master could have a remedy, and it was not easy to obtain one from the praetor.

The Twelve Tables had various provisions on the subject of Injuria. Libellous songs or verses were followed by capital punishment, that is, death, as it appears (Cic. Rep. iv. 10, and the notes in Mll's edition). In the case of a limb appearing from their nature to be insulting to the master; as, for instance, if a man should flag another man's slave, the master had a remedy against the wrong-doer, which was given him by the praetor's formula in punishment of the conduct of a slave being maltreated, there was no regular formula by which the master could have a remedy, and it was not easy to obtain one from the praetor.

These penalties which were considered sufficient at the time when they were fixed, were afterwards considered to be insufficient; and the injured person was allowed by the praetor to claim such damages as he thought that he was entitled to, and the judex might give the full amount or less. But in the case of a very serious injury (atrox injuria), when the praetor required security for the defendant's appearance, the praetor, if he would allow it, was usual to claim such sum as the damages in the plaintiff's declaration, and though the judex
was not bound to give damages to that amount, he seldom gave less. An injuria had the character of atrox, either from the act itself, or the place where it was done, as for instance, a theatre or forum, or from the condition of the person injured, as if he were a magistratus, or if he were a senator and the wrong-doer were a person of low condition.

A Lex Cornelia specially provided for cases of relatio, circumvulso, and sinister enterio into a man's house (domus). The jurists who commented on this lex defined the legal meaning of pulsatio, verberatio, and domus. (Dig. 47. tit. 10, s. 5.)

The actions for injuria were gradually much extended, and the praetor would, according to the circumstances of the case (causa cognita), give a person an action in respect of any act or conduct of another, which tended, in the judgment of the praetor, to do him injury in reputation or to wound his feelings. (Dig. 47. tit. 10. s. 13, 22, 23, 24, &c.) Many cases of injuria were subject to a special punishment (Dig. 47. tit. 11) as deportatio; and this proceeding extra ordinem was often adopted instead of the civil action. Various imperial constitutions affixed the punishment of death to libellous writings (famosi libellii). [LIBELLI.]

Injuria was a consequence of condemnation in an actio Injuriarum [INFAMIA]. He who brought such an action could be libelled as liable to be punished extra ordinem. (Galus, iii. 220—223; Hor. Sat. i. 1. 80; Dig. 47. tit. 10; Cod. Theod. ix. tit. 34; Cod. ix. tit. 36; Paulus, Sent. Resep. v. tit. 4; Rein, Das Criminalrecht der Römer, p. 35, &c.) [G. L.]

INJURIA/RUM ACTIO. [INUJRIA.]

INOA ('IpcSa), festivals celebrated in several parts of Greece, in honour of the ancient heroine Ino. At Megara she was honoured with an annual sacrifice, because the Megarians believed that her body had been cast by the waves upon their coast, and that it had been found and buried there by some one or other of the noblest families, viz. the torques, the cincinni, and the officer of a city sometimes affixed the emblem to public documents as we do the seal of a state (SIGILLIO). The figure of Mercury was the common sign of a vessel. (Paus. iv. 28. § 3; Virg. Aen. vii. 188, 612, xi. 334; Lydus, de Mag. i. 7, 8, 37.)

II. Badges worn by soldiers. The centurions in the Roman army were known by the crests of their helmets [GALRA], and the common men by their shields, each cohort having them painted in a manner peculiar to itself. (Veget. i. 18; compare Ctes. Bell. Gall. vii. 45.) [CLIPUS.] Among the Greeks the devices sculptured or painted upon shields (see woodcut, p. 298), both for the sake of ornament and as badges of distinction, employed the fancy of poets and of artists of every description from the earliest times. Thus the seven heroes who fought against Thebes, all except Amphiaras, had on their shields expressive figures and moottos, differently described, however, by different authors. (Aeschyl. Sept. le Théb. 383—646; Eurip. Phoen. 1125—1156; Apollodor, Bibli. iii. 6. § 1.) Alcibiades, agreeably to his general character, wore a shield richly decorated with ivory and gold, and exhibiting a representation of Cupid brandishing a thunderbolt. (Athen. xi. 534, e.) The first use of these emblems on shields is attributed to the Carians (Herod. i. 171); and the fictitious employment of them to deceive and mislead an enemy was among the stratagems of war. (Paul. iv. 28. § 3; Virg. Aen. ii. 389—392.)

III. Family badges. Among the insignia practised by the Emperor Caligula, it is related that he abolished the ancient insignia of the noblest families, viz. the torques, the cincinni, and the cognomen " Magnus." (Sueton. Calig. 35.)

IV. Signs placed on the front of buildings. A figure of Mercury was used as a common sign of a gymnasion; but Cicero had a statue of Minerva to fulfil the same purpose. (Ad Att. i. 4.) Cities had their emblems as well as separate edifices; and the officer of a city sometimes affixed the emblem to public documents as we do the seal of a municipal corporation. (Antigonus Carys. 15.)

V. The figure-heads of ships. The insignia of a ship was an image placed on the prow, and giving its name to the vessel. (Tact. Ann. vi. 34; Caes. B. Civ. ii. 6.) Paul sailed from Melite to Puteoli in the Dicurus, a vessel which traded between that city and Alexandria. (Acts, xxvii. 11.)

Enschedé has drawn out a list of one hundred names of ships, which occur either in classical authors or in ancient inscriptions. (Diss. de Tut. et Insignia Navium, reprinted in Ruhnken, Opusc. pp. 257—305.) The names were those of gods and heroes, together with their attributes, such as the helmet of Minerva, painted on the prow of the ship which conveyed Ovid to Pontus (a pieta cadeste numen habet, Trist. i. 9. 2); of virtues and affections, as Hope, Concord, Victory, &c.; and rivers, the Po, the Minus (Virg. Aen. x. 206), the Delta, the Syracusia, the Alexandria (Athen. v. 43); and of men, women, and animals, as the boar's head, which distinguished the vessels of Samos (Herod. iii. 59;
Institutio Actio.

Institutiones.

Choerilus, p. 155, ed. Naucke; Hesych. s. v. Χαίμων τρόπος: Eust. in Hom. Od. xiii. p. 525, the swan, the tiger (Virg. Aen. x. 166), the bull (προτομή ταύρου, Schol. in Apoll. Rhod. ii. 168). Plutarch mentions a Lycian vessel with the sign of the lion on its prow, and that of the serpent on its poop, manifestly intended to express the form of the chimera. (De Mul. Vitr. p. 441, ed. Steph.) After an engagement at sea, the insigne of a conquered vessel, as well as its applique, was often taken from it and suspended in some temple as an offering to the god. (Plut. Themist. p. 217.) Figure-heads were probably used from the first origin of navigation. On the war-galleys of the Phoenicians, who called them, as Herodotus says (iii. 37), πάταγοι, i.e. "carved images," they had sometimes a very grotesque appearance.

Besides the badge which distinguished each individual ship, and which was either an engraved and painted wooden image forming part of the prow, or a figure often accompanied by a name and painted on both the bows of the vessel, other insignia, which could be elevated or lowered at pleasure, were requisite in naval engagements. These were probably flags or standards, fixed to the applique or to the top of the mast, and serving to mark all those vessels which belonged to the same fleet or to the same nation. Such were "the Attic" and "the Persic signals," (τὸ Ἀττικὸν σημείον, Polyb. iii. 11, 8 § 88; Becker, Charicles, vol. ii. p. 68.) A purplie sail indicated the admiral's ship among the Romans, and flags of different colours were used in the fleet of Alexander the Great. (Plin. H. N. xix. 5.)

Institutio. (περιτόδιον), a shoon; a fillet; a band.
The Roman matrons sometimes wore a broad fillet with ample folds, sewed to the bottom of the tunic and reaching to the instep. The use of it indicated a superior regard to decency and propriety of manners. (Hor. Sat. 1. 2. 29; Ovid, Ars Amat. i. 32.) It must have resembled a modern flounce. By the addition of gold and jewellery it took the form of a more splendid fillet, or a flour.

When this term denoted a fillet, which was used by itself, as in the decoration of a Thyrsus (Stat. Theb. vii. 634), it was equivalent to Vitta or Fascia. [Tunic.] [J. Y.]

Institor. [Institorii Actio.]

Institutio Ria Actio. This actio was allowed against a man who had appointed either his son or a slave, and either his own or another man's slave, or a free person, to manage a taberna or any other business for him. The contracts with such manager, in respect of the taberna or other business, could be enforced against the principal. The formula was called Institorius, because he who was appointed to manage a taberna was called an Institor. And the institor, it is said, was so called, "quod negotio gerendo instet sine insitam." If several persons appointed an institor, any one of them might be sued for the whole amount for which the persons were liable on the contract of their institor; and if one paid the demand, he had his redress against the others by a societatis judicium or communi dividendo. A great deal of business was done through the medium of institores, and the Romans thus carried on various lucrative occupations in the name of their slaves, which they could not or would not have carried on personally. Institores are coupled with Nautae by Horace (Ep. xvii. 20), and with the Magister Navis (Carm. iii. 6. 30). (Gaius, iv. 71; Instit. iv. tit. 7; Dig. 14. tit. 8.)

Institutio nes. It was the object of Justinian to comprise in his Code and Digest or Pandect, a complete body of law. But these works were not adapted to elementary instruction, and the writings of the ancient jurists were no longer allowed to have any authority, except so far as they had been incorporated in the Digest. It was, therefore, necessary to prepare an elementary treatise, for which purpose Justinian appointed a commission, consisting of Tribonianus, Theophilus, and Dorotheus. The commission was instructed to compose an institutional work which should contain the elements of the law (legum eunabula), and should not be encumbered with useless matter (Prooem. Inst.). Accordingly, they produced a treatise, under the title of Institutiones, or Elementa (De Juris docend i Ratione), which was based on former elementary works of the same name and of a similar character, but chiefly on the Commentarii of Caius or Gaius, his Res Quotidianae, and various other Commentarii. The Institutiones were published with the imperial sanction, at the close of the year a. d. 533, at the same time as the Digest.

The Institutiones consist of four books, which are divided into titles. They treat only of Privatum Jus; but there is a title on Judicia Publica at the end of the fourth book. The judicia publica are not treated of by Gaius in his Commentaries. Heineccius, in his Antiquitatum Romanarum Jurisprudentiam illustrantium Syntagma, has followed the order of the Institutiones. Theophilus, generally considered to be one of the compilers of the Institutiones, wrote a Greek paraphrase upon them, which is still extant, and is occasionally useful. The best edition of the paraphrase of Theophilus is that of W. O. Reitz, Haag, 1751, 2 vols. 4to. There are numerous editions of the Latin text of the Institutiones. The editio princeps is that of Mainz, 1468, fol.; that of Klenze and Boecking, Berlin, 1829, 4to, contains both the Institutiones and the Com mentarii of Gaius, the most recent edition is that of Schrader, Berlin, 1832 and 1836.

There were various institutional works written by the Roman jurists. Callistratus, who lived under Septimius Severus and Antoninus Caracalla, wrote three books of Institutiones. Aelius Marci anus wrote sixteen books of Institutiones under Antoninus Caracalla. Florentinus, who lived under Alexander Severus, wrote twelve books of Institutiones, from which there are forty-two excerpts in the Digest. Paulus also wrote two books of Institutiones. There are still remain fragments of the Institutiones of Ulpian, which appear to have consisted of two books. But the first treatise of this kind that we know of was the Institutiones of Gaius in four books. They were formerly only known from a few excerpts in the Digest, from the Epitome contained in the Breviariun, from the Collatio, and a few quotations in the Commentary of Boethius on the Topica of Cicero, and in Priscian.

The MS. of Gaius was discovered in the library of the Chapter of Verona, by Niebuhr, in 1816. It was first copied by Goeschen and Bethmann-Hollweg, and an edition was published by Goeschen in 1829. The deciphering of the MS. was a work of great labour, as it is a palimpsest, the writing on which has been washed out, and in some places erased with a knife, in order to adapt
the parchment for the purposes of the transcriber. The parchment, after being thus treated, was used for transcribing upon it some works of Jerome, chiefly his epistles. The old writing was so obscure that it could only be seen by applying to it an infusion of gall-nuts. A fresh examination of the MS. was made by Blume, but with little additional profit, owing to the condition of the manuscript. A second edition of Gaius was published by Goeschen in 1824, with valuable notes, and an Index Siglarum used in the MS. The preface to the first edition contains the complete demonstration that the MS. of Verona is the genuine Commentaries of Gaius, though the MS. itself has no title. An improved edition of Goeschen's by Lachmann appeared in 1842.

It appears from the Institutiones that Gaius wrote that work under Antoninus Pius and M. Aurelius.

Many passages in the Fragments of Ulpian are the same as passages in Gaius, which may be explained by assuming that both these writers copied passages in Gaius, which may be explained by assuming that both these writers copied those of Gaius the compilers of the Institutions of Justinian. The arrangement of the Institutes of Justinian were mainly based on those of Gaius the compilers of the Institutiones of Justinian sometimes followed other works: thus the passage in the Institutes (i. tit. 17. § 2, "si quis priori") is from the fourth book of Marcianus' Institutes (Dig. 36. tit. 1 s. 29); and, in some instances, the Institutiones of Justinian are more clear and explicit than those of Gaius. An instance of this occurs in Gaius (iii. 109) and the Institutiones of Justinian (iii. tit. 19. s. 10).

Gaius belonged to the school of the Sabiniani [Jurisconsulti]. The Jurists whom he cites in the Institutiones, are Cassius, Fufidius, Javolenus, Julianus, Laboe, Maximus, Q. Mucius, Ofulius, Proculus, Sabinus, Servius, Servius Sulpcicius, Sextus, Tubero.

The arrangement of the Institutiones of Justinian is the same as that of the work of Gaius; what ever difference there is between them in this respect, is solely owing to the changes in the Roman law, which had taken place between the time of Gaius and that of Justinian. There has been considerable difference of opinion as to the nature of the arrangement of Gaius; and it is obvious that most persons have misunderstood it. According to Gaius: "omne jus quo utimur vel ad personas pertinet, vel ad res, vel ad actiones" (i. 8). It is generally supposed that the division (the first book) which treats of Persons comprehends the status or condition of persons as the subjects of rights; others affirm that it treats of legal capacity, or of the three conditions which correspond to the threefold capitas deminutio. But the first book of Gaius, which treats of Perscors contains both matter which has nothing to do with legal capacity, and it does not contain all that relates to legal capacity, for it does not treat of one of three chief divisions which relate to legal capacity, that of Civis, Latin, Peregrini. It treats in fact only of Marriage, Patria Potestas, Manus, Slavery, Patronatus with respect to the different classes of freed men, Manicipium and Tutela. Accordingly, this part of the work treats only of persons so far as they belong to Familia, in the widest and Roman acceptance of that term. The part which treats of res comprehends the Law of ownership, &c. and Law of Obligations, which two divisions occupy the second and third books. The fourth book treats of Actiones, which is the third of the three divisions of Gaius. The division of Gaius is faulty in several respects; but this does not detract from the merit of the work, which is perspicuous and abounds in valuable matter. This view of the nature of the division of Gaius is from Savigny. (System, &c., vol. i. p. 303, &c.) [G. L.]

INSTITUTIA ACTIO. [INTERCESSIO.]

INSULA. [DOMUS, p. 430, a.]

INTEGRUM RESTITUTIO, IN. [RESTITUTIO.]

INTENTIO. [ACTIO.]

INTERCESSIO. It is a case of Intercessio when a man takes upon himself the debt of another by virtue of some dealing with the creditor. This may be in either of the following ways: he who intercedes may take upon himself the debt of another, and may become debtor in place of that other: or the intercedent may become debtor while the debtor still continues debtor. (Vangerow, Pseudo-kesten, &c. vol. iii. p. 133, &c.)

To the first class belong (1) the case of a man undertaking already existing obligatio, so as to exclude the existing debtor; (2) And the case of a man taking an obligatio on himself, which does not already exist in the person of another, but which without such intervention would exist.

To the second class belong (1), the case when the creditor may consider either the original debtor or the intercedent as his principal debtor, or when, in other words, the intercedent is corces debendi (Inst. iii. tit. 16. De duobus reis stipulandi et promittendi); (2) When the creditor can consider the intercedent only as liable to pay, when the principal debtor does not pay, or when in other words, the intercedent is a fidejussor. (Inst. iii. tit. 20, de Fidejussoribus.)

The views of Puchta as to the Interessio are contained in his Institutionen, vol. iii. p. 48, &c.)

In the Institutes of Gaius, a distinction is made between sponsors and fidepromissores, on one side; and fidejussores on the other. With respect to one another, sponsors were consponsores. (Cie, ad Jutt. xii. 17.) In the Institutes of Justinian, the distinction between sponsors and fidejussores does not exist.

Sponsors and fidepromissores could only become parties to an obligatio verborum, though in some cases they might be bound, when their principal (qui promissit) was not, as in the case of a pupillus who promised without the auctoritas of his tutor, or of a man who promised something after his death. A fidejussor might become a party to all obligations, whether contracted re, verbis, litteris, or consensu. In the case of a sponsor the interrogatio was, Idem dari spondes? in the case of a fidepromissor, it was, Idem fidepromissit? in the case of a fidejussor, it was, Idem fide tua esse jubes? The object of having a sponsor, fidepromissor, or fidejussor, was greater security to the stipulator. On the other hand, the stipulator had an adstipulator only when the promise was to pay something after the stipulator's death, for if there was no adstipulator the stipulatio was inutilis or void. (Gaius, iii. 100, 117.) The adstipulator was the proper party to sue after the stipulator's death, and he could be compelled by a mandati judicium to pay to the heres whatever he recovered.

The heres of a sponsor and fidepromissor was not bound, unless the fidepromissor were a peregrinus, whose state had a different law on the
matter; but the heres of a fidejussor was bound. By the Lex Furia, a sponsor and fidepromissor were free from all liability after two years, which appears to mean two years after the obligation had become a present demand; but the Lex Furia only obligated by length of time, and each was liable according to his proportion. If any one of them was not solvent, his share became a burden to the rest.

A Lex Apuleia, which was passed before the Lex Furia, gave one of several sponsors or fidepromissors, who had paid more than his share, an action against the rest for contribution. Before the passing of this Lex Apuleia, any one sponsor or fidepromissor might be sued for the whole amount; but this lex was obviously rendered useless by the subsequent Lex Furia, at least in Italy, to which country alone, as already observed, the Lex Apuleia applied, while the Lex Apuleia of the Breviarium (ii. 9. § 2), which is not taken out of Italy; yet not to fidejussores. Fidejussores were never released from their obligation; but by a rescript (epistolæ) of Hadrian, the creditor was required to sue the solvent fidejussores separately, each according to his proportion. If any one of them was not solvent, his share became a burden to the rest.

A fidejussor, who had been compelled to pay the whole amount, had no redress if his principal was insolvent; though, as already observed, he could by the rescript of Hadrian compel the creditor to limit his demand against him to his share.

A creditor was obliged formally to declare his acceptance of the sponsors or fidepromissors who were offered to him, and also to declare what was the object as to which they were security; if he did not comply with this legal requisition, the sponsors and fidepromissors might, within thirty days (it is not said what thirty days, but probably thirty days from the time of the sureties being offered), demand a praecautum (præcautionem postulare), and if they proved that the creditor had not complied with the requisitions of the law, they were released. (Gaius, iii. 123.)

A Lex Cornelia limited the amount for which any person could be a security for the same person to the same person within the same year, but with some exceptions, one of which was a security "dotis nomine." No person could be bound in a mandati judicium from his principal whatever he had been compelled to pay on his account. By a Lex Publilia sponsors had a special action in duplum, which was called an actio depensis.

There is a passage in the Epitome of Gaius in the Breviarium (ii. 3. § 2), which is not taken from Gaius: it is to this effect:—The creditor may sue either the debtor or his fidejussor; but after he has chosen to sue one of them, he cannot sue the other. —Cicero appears to allude to the same doctrine (ad Att. xvi. 15) in a passage which is somewhat obscure, and is variously explained. The subject of the sponsio often occurs in Cicero's letters; and in one case he was called upon in respect of a sponsio alleged to have been given by him twenty-five years before (ad Att. xii. 17). Cicero uses the expression "appellare" to express calling on a surety to pay (ad Att. i. 6).

(Gaius, iii. 115—127; Inst. iii. tit. 20; Dig. 44. tit. 7; 46. tit. 1.)

Women generally were incapacitated from doing many acts on account of the weakness of the sex. It was a general rule that any person might "intercedere," who was competent to contract and to dispose of his property; but minores xxy and women had only a limited capacity in respect of their contracts and the disposition of their estates. In the early part of the reign of Augustus and in that of Claudius, it was declared by the Edict that women should not "intercedere" for their husbands. Subsequently the Senatusconsultum Velleianum [Senatusconsultum Velleianum] absolutely prohibited all intercessio by women; and the Novella 134. c. 8, had for its special object to make null all intercessio of a wife for her husband. A woman who was sued in respect of her intercessio, or her heres, might plead the Senatusconsultum, and she might recover anything that she had paid in respect of her intercessio. The Senatusconsultum, though it made null the intercessio of a woman, protected the creditor so far as to restore him a former right of action against his debtor and fidejussores: this action was called Restitutoria or rescissoria. In the case of a new contract, to which the woman was a party, the intercessio was null by the Senatusconsultum, and the creditor had the same action against the person for whom the woman "intercessit," as he would have had against the woman: this action, inasmuch as the contract had no reference to a former right, but to a right arising out of the contract, was Institutoria. In certain cases, a woman was permitted to renounce the benefit of the Senatusconsultum; and there was a considerable number of exceptions to the rule that a woman could plead the senatusconsultum. (Dig. 16. tit. 1. ad S. C. Vel. Paulus, S. R. ii. tit. 11; Vangerow, Pandekten, &c. iii. p. 149.)

[G. L.]

INTERCESSIO was the interference of a magistratus to whom an appeal [APPPELLATIO] was made. The object of the intercessio was to put a stop to proceedings, on the ground of informality or other sufficient cause. Any magistratus might "intercedere," who was of equal rank with or of rank superior to the magistratus from or against whom the appelatio was. Cases occur in which one of the praetors interposed (intercessit) against the proceedings of his colleague. (Cic. in Verr. i. 46.)

The intercessio is most frequently spoken of with reference to the Tribunes who originally had not jurisdiction, but used the intercessio for the purpose of preventing wrong which was offered to a person in their presence (Gell. xiii. 12). The intercessio of the Tribunes of the Plebs, was Auxilium (Liv. vi. 38; Cic. pro Quinctio, 7, 20); and it might be exercised either in jure or in judicio. The tribune qui intercessit could prevent a judicium from being instituted. That there could be an intercessio after the Litis Contestatio appears from Cicero (pro Tullio, 38). The tribunes could also use the intercessio to prevent execution of a judicial sentence. (Liv. vi. 27.) T. Gracchus interfered (intercessit) against the praetor Terentius, who was going to order execution, in the case of L. Scipio who was condemned for peculation (Liv. xxxvii. 69; Gell. vii. 19), and he prevented Scipio being sent to prison, but he did not intercede to prevent execution being had on his property. A single tribunal could effect this, and against the opinion of
his colleagues, which was the case in the matter of L. Scipio. [TRIBUNI.]
The term Intercessio and the verb intercedo also applied to the tribunitiun opposition to a rogatio. (Liv. vi. 35; Cic. de Orat. ii. 47.) [G. L.]
INTERCESSI DISS. [DIES.]
INTEREOLUMNIA. [TEMPLUM.]
INTERECTION/AQUAE ET IGNIS. [EXSILIAM, p. 516, b.]
INTEREDICTUM. "In certain cases (certis ex causis) the praetor or proconsul, in the first instance (principaliter), exercises his authority for the termination of disputes. This he chiefly does when the dispute is about Possession or Quasi- possession; and the exercise of his authority consists in ordering something to be done, or forbidding something to be done. The formulae and the terms, which he uses on such occasions, are called either Interdicta or Decretas. They are called Decretas when he orders something to be done, as when he orders something to be produced (exhiberi) or to be restored; they are called Interdicta when he forbids something to be done, as when he orders that force shall not be used against a person who is in possession rightfully (sine vitio), or that nothing shall be done on a piece of sacred ground. Accordingly all Interdicta are either Restitutoria, or Exhibitoria, or Prohibitoria." (Gaius, iv. 139, 140.)

This passage contains the essential distinction between an Actio and an Interdict, so far as the praetor or proconsul is concerned. In the case of an Actio, the praetor pronounces no decree, but he gives a Judex, whose business it is to investigate the matter in dispute, and to pronounce a sentence consistently with the formula, which is his authority for acting. In the case of an Actio, therefore, the praetor neither orders nor forbids a thing to be done, but he says Judicium dabo. In the case of an Interdict, the praetor makes an order that something shall be done or shall not be done, and his words are accordingly words of command: Restitutoria, Exhibitoria, Vim fieri veto. This immediate interposition of the praetor is appropriately expressed by the word "principaliter," the full effect of which is more easily seen by its juxtaposition with the other words of the passage, than by any attempt to find an equivalent English expression.

Savigny observes that it may be objected to this exposition, that in one of the most important Interdicts, that of De Vi, the formula is, Judicium dabo. (Dig. 43. tit. 16. a. 1.) But, as he observes, the old genuine formula was, Restitutoria (Cic. pro Caecin. 8, 30); and the "Judicium dabo" must have been introduced when the formula of the two old Interdicta (De Vi Armata and De Vi Quotidianum) were blended together, and at a time when the distinctions between the old formulae had become a matter of indifference.

The mode of proceeding as to the Interdict was as follows: — The party aggrieved stated his case to the praetor, which was the foundation of his demand of an Interdict, and was therefore analogous to the Postulatio actionis. If the praetor saw sufficient reason, he might grant the Interdict, which was often nothing more than the words of the Edict addressed to the litigant parties; and in doing so, he used his "auctoritas finiendi controversia" in the first instance, or immediately, and without the intervention of a judex (principaliter), and also "certis ex causis," that is, in cases already provided for by the Edict. If the defendant either admitted the plaintiff's case before the interdict was granted, and complied with its terms, or submitted to the interdict after it was granted, the dispute was of course at an end. This is not stated by Gaius, but follows of necessity from the nature of the case; and when he goes on to say "that when the praetor has ordered any thing to be done or forbidden anything to be done, the matter is not then ended, but the parties go before a judex or recuperatores," he means that this further proceeding takes place, if the praetor's Interdict does not settle the matter. The whole form of proceeding is not clearly stated by some modern writers, but the following is consistent with Gaius.

The complainant either obtained the Interdict or he did not, which would depend on the case that he made out before the praetor. If he failed, of course the litigation was at an end; and if he obtained the interdict, and the defendant complied with its terms, the matter in this case also was at an end. If the defendant simply did not obey the terms of the Interdict, it was necessary for the complainant again to apply to the praetor, in order that this fact might be ascertained, and that the plaintiff might give full satisfaction. If the defendant was dissatisfied with the Interdict, he might also apply to the praetor for an investigation into the facts of the case: his allegation might be that there was originally no ground for the Interdict. He might also apply to the praetor on the ground that he had satisfied the terms of the Interdict, though the plaintiff was not satisfied, or on the ground that he was unable to do more than he had done. In all these cases, when the praetor's order did not terminate the dispute, he directed an inquiry by certain formulae, which were the instruction of the judex, recuperatores, or arbiter. Accordingly, the process of the Interdict belonged to the ordo judiciorum privatorum, but the judicium was constituted by the peculiar process of the Interdict. The inquiry would be, Whether anything had been done contrary to the Praetor's Edict?; or, Whether that had been done, which he had ordered to be done. The former inquiry would be made in the case of a Prohibitory Interdict; and the latter in the case of an Exhibitory or Restitutorial Interdict.

In the case of Interdica Prohibitoria there was always a sponsio; that is, the parties were required to deposit or give security for a sum of money, the loss of which was in the nature of a penalty (poena) to the party who failed before the judex: this sponsio was probably required by the praetor. In the case of Interdica Restitutoria and Prohibitoria, the proceeding was sometimes per sponsionem, and therefore before a judex or recuperatores, and sometimes, without any sponsio, per formulam arbitrariam, that is, before an arbiter.

In the case of these two latter Interdicts, it seems to have depended on the party who claimed the inquiry whether there should be a sponsio or not: if such party made a sponsio, that is, proffered to pay a sum of money, if he did not make out his
case, the opposite party was required to make one also. In the case of Caecina (Cic. pro Caecin. 8) a sponsio had been made: Cicero says, addressing the recuperators, "sponsio facta est: hac de spon- sione vobis iudicandum est." In fact, when the matter came before a judex or arbiter, the form of proceeding was similar to the ordinary judicium.

The chief division of Interdicts has been stated.

The various purposes to which they were applicable appear from the titles; as, Interdictum de Aqua, de Arboribus caedendis, de Liberis exhi- bendis, de Rivas, de Superficiebus, &c.

Another division of Interdicts was into those for the purpose of acquiring Possession, retaining possession, or recovering possession. (Gaius, iv. 144.)

The Interdictum adipiscendae possessionis was given to him to whom the Bonorum possessio [BONORUM POSSESSIO] was given, and it is referred to by the initial words Quorum bonorum. (Dig. 43. tit. 2. s. 1.) Its operation was to compel a person, who had possession of the property of which the Bonorum possessio was granted to an- other, to give it up to such person, whether the person in possession of such property possessed it pro herede or pro possessore. The Bonorum Emtor [BONORUM EMTIO] was also entitled to this Interdict, which was sometimes called Possessorium.

It was also granted to him who bought goods at public auction, and in such case was called Sector- rium, the name “Sectores” being applied to persons who bought property in such manner. (Cic. pro Rosc. Am. 36.)

The Interdictum Salvianum was granted to the owner of land, and enabled him to take possession of the goods of the colonus, who had agreed that his goods should be a security for his rent. (Dig. 43. tit. 2.)

This Interdict was not strictly a Possessorial Interdict, as Savigny has shown (Das Recht des Besitzes, p. 410; Puchta, Institutionen, &c. ii. § 225.) It did not, like the two other Interdicts, presuppose a lawful possession, that is, a Jus pos- sessionis acquired by the fact of a rightful possess- ion; the complainant neither alleged an actual possession nor a former possession.

The Interdictum retincendae possessionis could only be granted to a person who had a rightful possession, and he was intitled to it in respect of damages sustained by being disturbed in his poss- ession. In respect of anticipated disturbance of his possession, and in the case of a dispute as to ownership in which the matter of possession was first to be inquired into. Its effect in the last case would be, as Gaius states, to determine which of two litigant parties should possess, and be the defend- ant, and which should be the claimant, and have the burden of proof. There were two Interdicts of this class named respectively Utì Possidetis et Utrubi, from the initial words of the Edict. The Interdictum Utì Possidetis applied to land or houses, and the other to moveables. The Utì Possidetis protected the person who at the time of obtaining the Interdict was in actual possession, provided he had not obtained the possession against the other party (adversarius) vi, clam, or precario, which were the three vitia possessionis. (Festus, s. v. Possesso; Gaius, iv. 160.) In the case of the Interdictum Utrubi, the possession of the movable thing was by the Interdict declared to belong to him who had possessed the thing against the other party during the greater part of that year, “ nec vi nec clam nec precario.” There were some peculi- arities as to possession of moveable things. (Gaius, iv. 151.)

The Interdictum recuperandae possessionis might be claimed by him who had been forcibly ejected (vi dejectus) from his possession of an immovable thing, and its effect was to compel the wrong- doer to restore the possession, and to make good all damage. The initial words of the Interdict were, Unde tu illum vi dejectisti; and the words of command were, Eo restituas. (Cic. pro Caecin. 30, pro Tull. 4, 29, 44; Gaius, iv. 154; Dig. 43. tit. 16. s. 1.) There were two cases of Vis: one of Vis armata, which had been obtained by Caecina against Aebutias. The plaintiff had to prove that he was in possession of the premises, and had been ejected by the defendant or his agents (familia or procurator, Cic. pro Tull. 29.) If the matter came before a judex the defendant might allege that he had complied with the Interdict, “restituisse,” though he had not done so in fact; but this was the form of the sponsio, and the defendant would succeed before the judex if he could show that he was not bound to restore the plaintiff to his poss- ession. (Pro Caecin. 8, 32.)

The defendant might put in an answer (exceptio) to the plaintiff’s claim for restitution: he might show that the plaintiff’s possession commenced either vi, clam, or precario with respect to the defendant (pro Caecin. 32, pro Tull. 44); but this exceptio was not allowed in the case of vis armata. (Pro Caecin. 8, 32.) The defendant might also plead that a year had elapsed since the violence complained of, and this was generally a good plea; for the Interdict contained the words “in hoc anno.” But if the defendant was still in possession after the year, he could not make this plea; nor could he avail himself of it in a case of vis armata. (Cic. ad Fam. xv. 16.)

A clandestina possessio is a possessio in which the possessor takes a thing (which must of course be a movable thing) secretly (furte) and without the knowledge of the person whose adverse claim to the possession he bears. Such a possessio, when it was a disturbance of a rightful possessio, gave the rightful possessor a title to have the Interdict de clandestina possessione for the recovery of his possessio. This interdict are nearly lost; but its existence seems probable, and it must have had some resemblance to the Interdictum de vi. The exception clandestinae possessiones was quite a different thing, inasmuch as a clandestina possessio did not necessarily suppose the lawful possession of another party.

The Interdictum de Precario possessione or de Precario applied to a case of Precarium. It is Precarium when a man permits another to exercise ownership over his property, but retains the right of demanding the property back when he pleases. It is called Precarium because the person who received such permission usually obtained it by request (prece); though request was not neces- sary to constitute Precarium, for it might arise by tacit permission. (Paulus, S. R. v. tit. 6. s. 11.) The person who received the detention of the thing, obtained at the same time a legal possess- ion, unless provision to the contrary was made by agreement. In either case the permission could at any time be recalled, and the possessio, which in
lost the possession, which was transferred to the plaintiff (petitor). (Rudorff, Ueber das Interdict Quem Fundum, &c., Zeitschrift, vol. ix.)

“By all these Interdicts Possession is protected, and possession in itself, in its immediate form as power, in fact, over a thing. Possession thus obtains a legal existence, which is simply connected with that fact. This pure reception of possession among Rights is not perplexed by the consideration of the rightful or wrongful origin of the possession, which origin has no effect with respect to the protection given to possession. The Injusta Possessio, that is, the possession which has been acquired vi, or clam or precario, is certainly not protected against the person from whom it has been acquired by the possessor by any one of these three vitia possessionis; but apart from this case, the Injusta Possessio gives the same claim to protection as the Justa. (Dig. 43, tit. 17, s. 2.) The Interdicts arise out of Possessio, and indifferently whether it is Justa or Injusta; only, if two possessors claim against one another, a former and a present possessor, of whose one has obtained possession from the other vitiose, the former is not protected against the latter. (Dig. 43, tit. 17, s. 1. § 9.)” Puchta, Institutionen, &c., ii. § 225.

(For other matters relating to the Interdict see Gaius, iv. 138—170; Paulus, S. R. v. tit. 6; Dig. 43; Savigny, Das Recht des Besitzes, pp. 403—516; Savigny and Haubold, Zeitschrift, vol. iii. pp. 303, 358, 421; Keller, Uber die Deductio quae moribus fit und Das Interdictum Uti possidetis, Zeitschrift, vol. xi. Rudorff, Bemerkungen uber dasselbe Interdict, Zeitschrift, vol. xi.; Puchta, Institutionen, &c., ii. §§ 169, 225.)

INTERPRET. an interpreter. This class of persons became very numerous and necessary to the Romans as their empire extended. Embassies from foreign nations to Rome, and from Rome to other states, were generally accompanied by interpreters to explain the objects of the embassy to the respective authorities. (Cic. de Divinat. ii. 64, de Finib. v. 29; Plin. H. N. xxv. 2; Gall. xvii. 17. 2; Liv. xxvii. 43.) In large mercantile towns the interpreters, who formed a kind of agents through whom business was done, were sometimes very numerous, and Pliny (H. N. vi. 5) states that at Dioscurias in Colchis, there were at one time no less than 130 persons who acted as interpreters to the Roman merchants, and through whom all the business was carried on.

All Roman praetors, proconsuls, and quaestors, who were entrusted with the administration of a province, had to carry on all their official proceedings in the Latin language (Val. Max. ii. 2. § 2), and as they could not be expected to be acquainted with the language of the provincials, they had always among their servants [Apparitores] one or more interpreters, who were generally Romans, but in most cases undoubtedly freedmen. (Cic. pro Balb. 11.) These interpreters had not only to officiate at the conventus [Conventus], but also explained to the Roman governor everything which the provincials might wish to be laid before him. (Cic. c. Verr. iii. 37, ad Fam. xiii. 44; Caes. Bell. Gall. i. 19; compare Diksen, Civil, Abhandl. i. p. 16, &c. [L. S.])

INTERREX, INTERREGNUM (called by the Greek writers μεσοδικεῖον, μεσοδικεῖον ἄρπχ, μεσοδικεῖον αὐτῆς). The office of Interrex is said to have been instituted on the death of Romulus,
when the senate wished to share the sovereign power among themselves instead of electing a king. For this purpose, according to Livy (i. 17), the senate, which then consisted of one hundred members, was divided into ten decuries; and from each of these decuries one senator was nominated. These together formed a board of ten, with the title of Interregges, each of whom enjoyed in succession the regal power and its badges for five days; and if no king was appointed at the expiration of fifty days, the rotation began anew. The period during which they exercised their power was called an Interregnum. Dionysius (i. 57) and Plutarch (Vit. Rom. 22) both state the matter, but that of Livy appears the most probable. Niebuhr (Hist. of Rome, vol. i. p. 334, vol. ii. p. 111) supposes that the first interreges were exclusively Ramnenses, and that they were the Decem Primi, or ten leading senators, of whom the first was chief of the whole senate. (Compare Walter, Gesch. des Röm. Rechts, § 21, 2nd ed.)

The interreges agreed among themselves who should be proposed as king (Dionys. iv. 40, 60), and if the senate approved of their choice, they summoned the assembly of the curiae, and proposed the person whom they had previously agreed upon; the power of the curiae was confined to accepting or rejecting him. The decree of the curiae, by which they accepted the king, was called jussus populi (Liv. i. 22; Cic. de Rep. ii. 13, 21.) After the king had been elected, the curiae conferred the imperium upon him by a special law, lex curiata de imperio. (Cic. de Rep. ii. 13, 17, 18, 20, 21.)

Interreges were appointed under the republic for holding the comitia for the election of the consuls, when the consuls, through civil commotions or other causes, had been unable to do so in their year of office. (Dionys. vii. 90; Liv. iv. 43, &c.) Each held the office for only five days, as under the kings. The comitia were, as a general rule, not held by the first interrex; more usually by the second or third (Liv. ix. 7, x. 11, v. 31); but in one instance we read of an eleventh, and in another of a fourteenth interrex. (Liv. vii. 22, viii. 23.)

The comitia for electing the first consuls were held by Sp. Lucretius as interrex (Dionys. iv. 64), whom Livy (i. 60) calls also praefectus urbis. The interreges under the republic, at least from B.c. 492, were elected by the senate from the whole body, and were not confined to the decem primi or ten chief senators as under the kings. (Dionys. viii. 90.) Plebeians, however, were not admissible to this office; and consequently when plebeians were admitted into the senate, the patrician senators met together (coiere) without the plebeian members to elect an interrex. (Liv. iii. 40, iv. 7, 43, vi. 41; Cic. pro Dom. 14; Niebuhr, vol. ii. p. 429; Walter, §§ 55, 131.) For this reason, as well as on account of the influence which the interrex exerted in the election of the magistrates, we find that the tribunes of the plebs were strongly opposed to the appointment of an interrex. (Liv. iv. 43, xxvii. 84.) The interrex had jurisdiction. (Liv. x. 41; Niebuhr, vol. iii. p. 24.)

Interreges continued to be appointed occasionally till the time of the second Punic war (Liv. xxiii. 33, 34); but after that time we read of no interrex, till the senate, by command of Sulla, created an interrex to hold the comitia for his election as Dictator, B.c. 82. (Appian, Bell. Civ. i. 98.) In B.c. 55 another interrex was appointed to hold the comitia, in which Pompey and Crassus were elected consuls (Dion Cass. xxxix. 27, 31); and we also read of interreges in B.c. 53 and 52, in the latter of which years an interrex held the comitia, in which Pompey was appointed sole consul. (Dion Cass. xl. 45; Ascon. ad Cic. Mil. init. p. 32; Orelli; Plut. Pomp. 54; comp. Becker, Handbuch der Römischen Alterthümer, vol. ii. part i. p. 295, &c.)

INTER/RULA. [TUNICA.]

INTEREST/ABILIS. In the Twelve Tables it was declared "qui se sierit testarier libripens fuerit, ni testimonium fariatur, improbus intestabilis." (Herbert, &c. p. 607; compare Gellius, vi. 7, xxv. 13.) According to Livy, the period during which they exercised their power was called an Interregnum. Dionysius (i. 57) and Plutarch (Vit. Rom. 22) both state the matter, but that of Livy appears the most probable. Niebuhr (Hist. of Rome, vol. i. p. 334, vol. ii. p. 111) supposes that the first interreges were exclusively Ramnenses, and that they were the Decem Primi, or ten leading senators, of whom the first was chief of the whole senate. (Compare Walter, Gesch. des Röm. Rechts, § 21, 2nd ed.)

The interreges agreed among themselves who should be proposed as king (Dionys. iv. 40, 60), and if the senate approved of their choice, they summoned the assembly of the curiae, and proposed the person whom they had previously agreed upon; the power of the curiae was confined to accepting or rejecting him. The decree of the curiae, by which they accepted the king, was called jussus populi (Liv. i. 22; Cic. de Rep. ii. 13, 21.) After the king had been elected, the curiae conferred the imperium upon him by a special law, lex curiata de imperio. (Cic. de Rep. ii. 13, 17, 18, 20, 21.)

Interreges were appointed under the republic for holding the comitia for the election of the consuls, when the consuls, through civil commotions or other causes, had been unable to do so in their year of office. (Dionys. vii. 90; Liv. iv. 43, &c.) Each held the office for only five days, as under the kings. The comitia were, as a general rule, not held by the first interrex; more usually by the second or third (Liv. ix. 7, x. 11, v. 31); but in one instance we read of an eleventh, and in another of a fourteenth interrex. (Liv. vii. 22, viii. 23.)

The comitia for electing the first consuls were held by Sp. Lucretius as interrex (Dionys. iv. 64), whom Livy (i. 60) calls also praefectus urbis. The interreges under the republic, at least from B.c. 492, were elected by the senate from the whole body, and were not confined to the decem primi or ten chief senators as under the kings. (Dionys. viii. 90.) Plebeians, however, were not admissible to this office; and consequently when plebeians were admitted into the senate, the patrician senators met together (coiere) without the plebeian members to elect an interrex. (Liv. iii. 40, iv. 7, 43, vi. 41; Cic. pro Dom. 14; Niebuhr, vol. ii. p. 429; Walter, §§ 55, 131.) For this reason, as well as on account of the influence which the interrex exerted in the election of the magistrates, we find that the tribunes of the plebs were strongly opposed to the appointment of an interrex. (Liv. iv. 43, xxvii. 84.) The interrex had jurisdiction. (Liv. x. 41; Niebuhr, vol. iii. p. 24.)

Interreges continued to be appointed occasionally till the time of the second Punic war (Liv. xxiii. 33, 34); but after that time we read of no interrex, till the senate, by command of Sulla, created an interrex to hold the comitia for his election as Dictator, B.c. 82. (Appian, Bell. Civ. i. 98.) In B.c. 55 another interrex was appointed to hold the comitia, in which Pompey and Crassus were elected consuls (Dion Cass. xxxix. 27, 31); and we also read of interreges in B.c. 53 and 52, in the latter of which years an interrex held the comitia, in which Pompey was appointed sole consul. (Dion Cass. xl. 45; Ascon. ad Cic. Mil. init. p. 32; Orelli; Plut. Pomp. 54; comp. Becker, Handbuch der Römischen Alterthümer, vol. ii. part i. p. 295, &c.)
to Theseus himself, who, according to some legends, was a son of Poseidon, and who, in the institution of the new Isthmian solemnities, is said to have imitated Heracles, the founder of the Olympic games. The celebration of the Isthmia was henceforth conducted by the Corinthians, but Theseus had reserved for his Athenians some honourable distinctions; those Athenians who attended the Isthmia sailed across the Saronic gulf in a sacred vessel (Σευπηρις), and an honorary place (ποσερπηλα), as large as the sail of their vessel, was assigned to them during the celebration of the games. (Plut. l. c.) In times of war between the two states a sacred truce was concluded, and the Athenians were invited to attend at the solemnities. (Thucyd. viii. 10.) The Eleans did not take part in the games, and various stories were related to account for this singular circumstance. (Paus. v. 2. § 2.)

It is a very probable conjecture of Wachsmuth (Hellen. Alterth. vol. i. p. 155), that the Isthmia, after the changes ascribed to Theseus, were merely a panegyris of the Ionians of Peloponnesus and those of Attica; for it should be observed, that Poseidon was an Ionian deity, whose worship appears originally to have been unknown to the Dorians. During the reign of the Cypselids at Corinth, the celebration of the Isthmian games was suspended for seventy years. (Solin. c. 12.) But after that time they gradually rose to the rank of a national festival of all the Greeks. In Olympia they became periodical, and were henceforth celebrated regularly every third year, twice in every Olympiad, that is, in the first and third year of every Olympiad. The Isthmia held in the first year of an Olympiad fell in the Corinthian month Panemus (the Attic Hecataeoon); and those which were held in the third year of an Olympiad, fell either in the month of Munychion or Thargelion. (Corsiini, Dissert. Agron. 4; compare Goeller ad Thucyd. viii. 9.) Pliny (H. N. iv. 5) and Solinus (c. 9) erroneously state that the Isthmia were games. The celebration of the Isthmia was henceforth annually held in the Isthmian (Polyb. ii. 13); and it was at this solemnity that, in B. c. 196 Flamininus proclaimed a panegyris of the Ionians of Peloponnesus and Dorians. During the reign of the Cypselids at Corinth, the celebration of the Isthmian games was suspended for seventy years. (Solin. c. 12.) But after that time they gradually rose to the rank of a national festival of all the Greeks. In Olympia they became periodical, and were henceforth celebrated regularly every third year, twice in every Olympiad, that is, in the first and third year of every Olympiad. The Isthmia held in the first year of an Olympiad fell in the Corinthian month Panemus (the Attic Hecataeoon); and those which were held in the third year of an Olympiad, fell either in the month of Munychion or Thargelion. (Corsiini, Dissert. Agron. 4; compare Goeller ad Thucyd. viii. 9.) Pliny (H. N. iv. 5) and Solinus (c. 9) erroneously state that the Isthmia were celebrated every fifth year. With this regularity the solemnities continued to be held by the Greeks down to a very late period. In 226 B. c. the Romans were allowed the privilege of taking part in the Isthmia (Polyb. ii. 13); and it was at this solemnity that, in B. c. 136 Plancinus proclaimed before an assemblage of two thousand people a sacred truce between all the Greeks and the Romans, who formed a confederacy of Greece (Polyb. xvii. 29). After the fall of Corinth, in B. c. 146, the Sicyonians were honored with the privilege of conducting the Isthmian games; but when the town of Corinth was rebuilt by Julius Caesar (Paus. ii. 1 § 2, ii. 2 § 2), the right of conducting the solemnities was restored to the Corinthians, and it seems that they henceforth continued to be celebrated till Christianity became the state-religion of the Roman empire. (Sueton. Ner. 24; Julius Imperat. Epist. 95.)

The season of the Isthmian solemnities was, like that of all the great national festivals, distinguished by general rejoicings and feasting. The contests and games of the Isthmia were the same as those at Olympia, and embraced all the varieties of athletic performances, such as wrestling, the pancratium, together with horse and chariot racing. (Paus. v. 2. § 4; Polyb. l. c.) Musical and poetical contests were likewise carried on, and in the latter women also were allowed to take part, as we must infer from Plutarch (Sympos. v. 2), who, on the authority of Polemo, states that in the treasury at Sicyon there was a golden book which had been presented to it by Aristophanes, the poetess, after she had gained the victory at the Isthmia. At a late period of the Roman empire the character of the games at the Isthmia appears greatly altered; for in the letter of the emperor Julian, above referred to, it is stated that the Corinthians purchased bears and panthers for the purpose of exhibiting their fights at the Isthmia, and it is not improbable that the custom of introducing fights of animals on this occasion commenced soon after the time of Caesar.

The prize of a victor in the Isthmian games consisted at first of a garland of pine-leaves, and afterwards of a wreath of ivy; but in the end the ivy was again superseded by a pine-garland. (Plut. Sympos. v. 3.) Simple as such a reward was, a victor in these games gained the greatest distinction and honor among his compatriots; and a victory not only rendered the individual who obtained it, a subject of admiration, but shed lustre over his family and the whole town or community to which he belonged. Hence Solon established by a law that every Athenian who gained the victory at the Isthmian games, should receive from the public treasury a reward of one hundred drachmae. (Plut. Sol. 28.) His victory was generally celebrated in lofty odes, called Epinikia, or triumphal odes, of which we still possess some beautiful specimens among the poems of Pindar. (See Massieu in the Mém. de l'Acad. des Insrpt. et Bell. Lett. v. p. 214, &c.; Dissen, De Ratione Poetica Carm. Pindar. numorum, prefixed to the first volume of his edition of Pindar; Müller, Hist. of Greek Lit. p. 220, &c.; Krause, Die Pythien, Nemaeum, und Isthmien, p. 165, &c.; [L.S.] ITA'LIA. [COLONIA ; PROVINCIA.]

ITER. [VIAE.]

ITINERIS SERVITUS. [SERVITUTVS.]

JUDEX, JUDICIUM. A Roman magistrate generally did not investigate the facts in dispute in such matters as were brought before him: he appointed a Judex for that purpose, and gave him instructions. [ACTIO ; INTERDICITUM.] Accordingly, the whole of Civil procedure was expressed by the two phrases Jus and Judicium, of which the former comprehended all that took place before the magistrate (in iure), and the latter all that took place after the independent judex (in judicio). The meaning of the term Judices in a passage of Livy (iii. 55) is uncertain. In the Theodosian Code the term Judex designates the governor of a province. From the earlier periods to the time of Constantine it designated a person, whose functions may be generally understood from what follows.

In many cases a single Judex was appointed: in others, several were appointed, and they seem to have been sometimes called Recuperatores as opposed to the single Judex. (Gaius, i. 104—109.) Under certain circumstances the Judex was called Arbitre: thus Judex and Arbitre are named together in the Twelve Tables. (Dirksen, Ueber- sicht. &c. p. 725.)

A Judex when appointed was bound to discharge the functions of the office, unless he had some valid excuse (excusatio). A person might also be disqualified from being a Judex. There were certain seasons of the year when legal business was done at Rome (cum res apellasur), Gaius, ii. 279), and at these times the services of the judices were required. These legal terms were regulated according to the seasons, so that there
were periods of vacation (Cic. ad Att. i. 1; csm Iudicis forum refredit: in the province, the terms depended on the Conventus. A Judex was liable to a fine if he was not in attendance when he was required. In any given case, the litigant parties agreed upon a judex or accepted him whom the magistrates proposed. A party had the power of rejecting a proposed judex, though there must have been some limit to this power. (Cic. pro Client. 43.) In cases where one of the litigant parties was a peregrinus, a peregrinus might be judex. (Gaius, iv. 105.) The judex was sworn to discharge his duty faithfully. (C. de Invent. i. 39.)

When Italy had received its organization from the Romans, the magistrates of the several cities had jurisdiction, and appointed a Judex as the praetor did at Rome (Lex Rubria de Gallia Cisalpina). In the provinces, the governors appointed a Judex or Recuperatores, as the case might be, at the Conventus which they held for the administration of justice; and the Judex or Recuperatores were selected both from Roman citizens and natives.

When the Judex was appointed, the proceedings in jure or before the praetor were terminated, which was sometimes expressed by the term Litis Contestatio, the phrases Lis Contestata and Judicium acceptum or ordinatum, being equivalent in the classical jurists. [Litis Contestatio.] The parties appeared before the Judex on the third day (comperendinatio), unless the praetor had deferred the judicium for some sufficient reason. The Judex was generally aided by advisers (jurisconsulti) learned in the law, who were said "in consilio adesse" (Cic. pro P. Quintio, 26, Top. 17); but the Judex alone was empowered to give judgment. The matter was first briefly stated to the Judex (causa coniecto, collectio), and the oratores or patroni of each party supported his cause in a speech. The evidence seems to have been given at the same time that the speeches were made, and administration was heard before the parties made their address. (Cic. pro Rosc. Com. 14, pro P. Quintio 18.) But it is probable that the practice in this respect might vary in different cases. Witnesses were produced on both sides and examined orally; the witnesses on one side were also cross-examined by the other. (Cic. pro Cæcina, 10, pro Flacco, 10.) Written documents, such as instruments and books of account, were also given in evidence; and sometimes the deposition of an absent witness was read, when it was confirmed by another. (Cic. pro Rosc. Com. 15, Cic. ad Att. ii. 12, xiv. 15.) There were no direct means of compelling a person to give evidence before the legislation of Justinian, unless they were slaves, who in some cases might be put to the torture. As to the application of the oath in judicio, see Jusurandum.

After all the evidence was given and the patroni had finished, the judex gave sentence: if there were several judges, a majority decided. If the matter was one of difficulty, the hearing might be adjourned as often as was necessary (aemplatio); and if the judex could not come to a satisfactory conclusion, he might declare this upon oath and so release himself from the difficulty. This was done by the form of words "non liquere" (N. L.). (Gell. xiv. 2.) The sentence was pronounced orally, and was sometimes first written on a tablet. If the defendant did not make his appearance after being duly summoned, judgment might be given against him (judicium desertum, eremodicium), according to the proof which the plaintiff had made. If the plaintiff did not appear, the defendant could demand an acquittal. (Dig. 40. tit. 12. s. 27. § 1, 49. tit. 1. s. 28. pr.)

The sentence was either of Absolutio or Condemnatio. That part of the formula which was called the Condemnatio [Actio, p. 12. 91], empowered the Judex to condemn or acquit (condemnare, absolvere, Gaius, iv. 43). The defendant might satisfy the plaintiff after the judicium had been constituted by the litis contestatio (post acceptum judicium, Gaius, iii. 180, iv. 114), and before judgment was given; but in this case it was a disputed question between the two schools whether the judex should acquit, or whether he should condemn on the ground that at the time when the judicium was constituted, the defendant was liable to be condemned and it was the business of the judex merely to follow the instructions. The dispute accordingly involved one of those principles on which the schools were theoretically divided, —the following out of a legal principle to all its logical consequences; but, like many other questions between the schools, this question was practically of no importance, as the plaintiff would not be allowed to have satisfaction twice.

While the Legis actiones were in force, the judgment was for the restitution of a thing, if a given thing (corpus) was the object of the action; but under the process of the formula, the Judex gave judgment, not to the formula, but to the money, even when a piece of property was the object of dispute. The sum of money was either fixed or not fixed in the formula. If the claim was for a certain sum of money, the amount was inserted in the condemnatio, and the judex was bound to give that or nothing to the plaintiff. If the claim was for damages or satisfaction, the amount of which was not ascertained, the condemnatio was either limited to a sum named in the formula, or against which the judex could not exceed except at his own peril (item suum faciendo); or, if the action was for the recovery of property from the possessor, or if it was an actio ad exhibendum, the condemnatio empowered the judge to condemn the defendant in the value of the thing. Generally, the term in the formula which expressed the value which was the object of the demand was, "quantum res est." Res may mean either a thing in the limited sense of the word, or generally the claim or demand, and the fixing this at a money value, was equivalent to litis aestimatio. The judex was always bound to condemn in some definite sum, even though the formula did not contain a definite sum: the reason of which is obvious, for, unless the condemnatio was definite, there would be no judgment. (Gaius, iv. 48—52.)

The following is the distinction between an Arbitrium and Judicium, according to Cicero (pro Rosc. Com. 4): —In a judicium the demand was of a certain sum or definite amount (pecuniae certe); in an arbitrium, the amount was not determined (incertum). In a judicium the plaintiff obtained all that he claimed or nothing, as the words of the formula show: "Si paret H. S. 1003 dari oportere." (Compare Gaius, iv. 50.) The corresponding words in the formula arbitaria were: "Quantum aequus melius id dari;" and their
equivalents were, "Ex fide bona, Ut inter bonos bene agerint." (Top. 17.) In a dispute about dos, which Cicero calls "arbitrium totius urae," the words "Quod aequius, melius," were added. (Compare Gaius, iv. 47, 62.) If the matter was brought before a judex, properly so called, the judicium was constituted with a poena, that is, per spon- sionem; there was no poena, when an arbitrer was demanded, and the proceeding was by the formula arbitrorum. The proceeding by the sponso then was the strict one (augustissima formula sponsonisis, Cic. pro Rosc. Com. 14); that of the arbitrorum was ex fide bona, and the arbiter, though he was bound by the instructions of the formula, was allowed a greater latitude by its terms. The engagement between the parties who accepted an arbiter, by which they bound themselves to abide by his arbitrium, was Compromissum (pro Rosc. Com. 4. 4); but this term was also employed, as it appears, to express the engagement by which parties agreed to settle their differences by arbitration, without the intervention of the praetor. Cicero appears to allude to this arbitration. (Pro P. Quinto, 5; compare Senec. de Benef. i. 7.)

In the division of judicial functions between the Magistratus and Judex such was called the Ordo Judiciorum Privatorum, which existed in the early periods of Rome, and continued till the time of Constantine. At the same time with the Ordo Judiciorum Privatorum existed the proceeding extra ordinem or extraordinaria cognitio, in which the magistrates made a decision by a decretum, without letting the matter come to a judex. Finally, under the later empire the extraordinaria cognitio supplanted the old mode of proceeding.

According to Cicero (pro Caelinia, 2) all Judicia had for their object, either the settlement of disputes between individuals (controversiae), or the punishment of crimes (maleficia). This passage refers to a division of Judicia, which appears in the Jurists, into Publica and Privata. The term Pri- vata Judicia occurs in Cicero (Top. 17), where it refers to the class of Judicia which he indicates in the Caelinia by the term Controversiae. The term Publica Judicia might not then be in use, but the term Publica Causa is used by Cicero (pro Rosc. Amer. c. 21) with reference to aJudicum, which by the Jurists would be called Publicum. In the Digest (48. tit. 1. s. 1) it is stated that all Judicia are not Publica in which a crimen was the matter prosecuted under some lex, such as the Julia Majestatis, Cornelia de Sicariis, and others there enumerated. The Judicia Popularia or Populares Actions as they are called (Dig. 47. tit. 23. s. 1) are defined to be those by which "suum jus sustineat, Majestatis, De Sicariis et Veneficis, De Parricidio, Peculates, Ambitus, De Nummis Adul- terinis, De Falsis or Testamentaria, and De Vi Publica. But in special cases the senate still sometimes by a plebis or appointed the consuls as quaesitores, of which an example occurs in Cic. (Brut. 22.)

Any person, not legally disqualified, might be an accusar (accutor) in a Judex Publicum. On such an occasion a praetor generally presided as quaesitor, assisted by a judex questionis and a body of judices called his consilium. The judex questionis was a kind of assistant to the presiding magistratus, according to some opinions; but others consider him to be a quaesitor, who was sometimes specially appointed to preside in the case of a quaestor. (Walter, Geschichte des Röm. Rechts, p. 861.) The judices were generally chosen by lot out of those who were qualified to act. Both the accusat and the reus had the privilege of rejecting or challenging (rejicere) such judices as they did not like. (Cic. ad Att. i. 16.) The judices appointed according to the provisions of the L Lex Licinia de Ambito, n. c. 55, were called editi, and these were judices named by the ac- cuser; whom the accused (reus) could not chal- lenge. (Cic. pro Ca. Plancio, 15, 17, ed. Wun- der, Prolegen. p. lxxxii.) The judices were called editi, when they could be challenged by the reus. In many cases a lex was passed for the purpose of regulating the mode of procedure. In the matter
of Clodius and the Bona Dea, the senate attempted to carry a lex by which the proctor who was to preside at the trial should be empowered to select the judices, the effect of which would have been to prevent their being challenged by Clodius. After a violent struggle, a lex for the regulation of the trial was proposed by the tribune Fulvius and carried: it only differed from the lex recommended by the senate in the mode of determining who should be the judices (judicium genus): a difference however which was not unimportant, as it secured the acquittal of Clodius. The judices voted by ballot, and a majority determined the acquittal or condemnation of the accused. If the votes were equal, there was an acquittal (Plut. Marius, 5). Each judex was provided with three tablets (tabulae), on one of which was marked A, Absolvo; on a second C, Condemno; and on a third N. L., Non liquet. The judices voted by placing one of these tablets in the urn (urna, Juv. Sat. v. 4), which was then examined for the purpose of ascertaining the votes. It was the duty of the magistratus to pronounce the sentence of the judices; in the case of condemnation, to adjudge the legal penalty; of acquittal, to declare him acquitted; and of doubt, to declare that the matter must be further investigated (amplus cognoscendum).

Mention is often made of the Judicia Populi in the Latin writers. A Judicium was commenced by the accuser, who must be a magistratus, declaring in a contio, that he would on a certain day accuse a certain person, whom he named, of some offence, the accuser, who must be a magistratus, declaring in a contio, that he would on a certain day accuse a certain person, whom he named, of some offence, which he also specified. This was expressed by the phrase "diem dicere" (Virginius Cæsori capitis diei dicit, Liv. iii. 11). If the offender held any high office, it was necessary to wait till his time of service had expired, before proceedings could be thus commenced against him. The accused was required to give security for his appearance on the day of trial; the security was called vades in a causa capitalis, and praedes when the penalty for the alleged offence was pecuniarum. If such security was not given, the accused was kept in confinement. (Liv. iii. 13.) If nothing prevented the inquiry from taking place at the time fixed for it, the trial proceeded, and the accuser had to prove his case by evidence. The investigation of the facts was called Anquisitio with reference to the named person, which is explained. It is easy to conceive that the number of the body so constituted, which was not unimportant, as it secured the acquittal of Clodius. The judices voted by ballot, and a majority determined the acquittal or condemnation of the accused. If the votes were equal, there was an acquittal (Plut. Marius, 5). Each judex was provided with three tablets (tabulae), on one of which was marked A, Absolvo; on a second C, Condemno; and on a third N. L., Non liquet. The judices voted by placing one of these tablets in the urn (urna, Juv. Sat. v. 4), which was then examined for the purpose of ascertaining the votes. It was the duty of the magistratus to pronounce the sentence of the judices; in the case of condemnation, to adjudge the legal penalty; of acquittal, to declare him acquitted; and of doubt, to declare that the matter must be further investigated (amplus cognoscendum).

Mention is often made of the Judicia Populi in the Latin writers. A Judicium was commenced by the accuser, who must be a magistratus, declaring in a contio, that he would on a certain day accuse a certain person, whom he named, of some offence, the accuser, who must be a magistratus, declaring in a contio, that he would on a certain day accuse a certain person, whom he named, of some offence, which he also specified. This was expressed by the phrase "diem dicere" (Virginius Cæsori capitis diei dicit, Liv. iii. 11). If the offender held any high office, it was necessary to wait till his time of service had expired, before proceedings could be thus commenced against him. The accused was required to give security for his appearance on the day of trial; the security was called vades in a causa capitalis, and praedes when the penalty for the alleged offence was pecuniarum. If such security was not given, the accused was kept in confinement. (Liv. iii. 13.) If nothing prevented the inquiry from taking place at the time fixed for it, the trial proceeded, and the accuser had to prove his case by evidence. The investigation of the facts was called Anquisitio with reference to the proposed penalty: accordingly, the phrases pecuniarum, capite or capitis anquirere, are used. (Liv. xxvi. 3.) When the investigation was concluded, the magistratus promulgated a rogatio, which comprehended the charge and the punishment or fine. It was a rule in all cases to make the charge first, and then to proceed to the punishment. (Cic. pro Dom. c. 17.) The rogatio was made public during three mundines, like any other lex; and proposed at the comitia for adoption or rejection. The form of the rogatio, the effect of which was to drive Cicero into banishment, is given in the Oration Pro Domo, c. 18. The accused sometimes withdrew into exile before the votes were taken; or he might make his defence, of which we have an instance in the oration of Cicero for Rabirius. Though these were called Judicia Populi, and properly so in the early ages of the state, the legis passed in such judicia in the latter period of the republic were often Plebiscita.

The offences which were the chief subject of Judicia Populi and Publici were Majestatis, Adulteria and Supra, Parricidium, Falsum, Vis Publica and Privata, Peculatus, Repetundae, Ambitus, which are treated under their several heads.

With the passing of special enactments for the punishment of particular offences, was introduced the practice of forming a body of Judices for the trial of such offences as the enactments were directed against. Thus it is said that the Lex Calpurnia De Pecuniis Repetundis established the Judicium Selectorum, the body out of which Judices were to be chosen. It is not known what was the number of the body so constituted, but it has been conjectured that the number was 350, and that ten were chosen from each tribe, and thus the origin of the phrase Decuriae Judicium is explained. It is easy to conceive that the Judicia Populi, properly so called, would be less frequent as special leges were framed for particular occasions, the circumstances of which could be better investigated by a smaller body of Judices than by the assembled people. It is affirmed that up to the passing of the Calpurnia Lex, the Judices were chosen from the senatores only, but after this time they were not taken from that body exclusively; and further, that not only the Judices in the Qaestiones de Repetundis, but also the Judices in private matters were from the date of this lex taken from the Album Judicium which was annually made (Gotting, Geschichte der Röm. Staatsverfassung, p. 425) for which there appears to be no evidence. Some modern writers affirm that by the Lex Calpurnia the Judices were chosen by the Praetor annually out of the body of senatores, and arranged according to their tribes; and that the necessary number for each trial was chosen out of this body by lot.

As many of those who were tried in the quesiones perpetuae belonged to the class of the Optimates, it often happened that the Judices acquitted those members of their own body, who would have been convicted by impartial judices. Accordingly a struggle arose between the popular party and the Optimates, whom the popular party wished to exclude from the functions of the body. The laws which relate to the constitution of the body of Judices are called Judiciaria, whether these laws related only to this matter, or made rules about other things also. The first lex which excluded the Senators from the Album judicum selectorum was a Lex Sempronia of C. Gracchus, B. C. 123, in accordance with which the Judices were taken only from the Equites. This arrangement lasted above forty years, and gave satisfaction to the popular party; but it did not work well in all respects, and was at last replaced by another. The provinces favoured the rapacity of the Publicani, in order to keep on good terms with the Equites, to which class the Publicani belonged. (Cic. Verr. iii. 41.) A Lex Servilia Caepionis of B. C. 106 is said to have repealed the Sempronia Lex; but this Lex Servilia was itself repealed by a Lex Servilia Glanciae repetundarum, probably in B. C. 104. This Lex is said to have given the Judicia to the Equites, and consequently it either repealed the Lex of B. C. 106 indirectly, or it may merely have confirmed the Lex Sempronia; for the real nature of the Lex of B. C. 106 is hardly ascertainable. There is a passage in Tacitus (Annal. xii. 60) in which he speaks of the Serviliae leges restoring the Judicia to the senate. The Lex Servilia of B. C. 104 excluded from the function of
Judices every person who had been tribunus plebis, quaestor, triumvir capitalis, tribunus militia in one of the first four legions, triumvir agris dandis assignandis, who was or had been in the senate, who was infames, every person who was under thirty or above sixty years of age, every person who did not live in Rome or in the immediate vicinity, any freedman, or son of a person who was or had been in the senate, and every person who was beyond seas. The Praetor who presided in this Quaestio, was to choose 450 judices, from whom the Judices for the particular case were to be taken by lot. (Fragmenta Legis Servillae Repetundarum, &c. C. A. C. Klenze, Berlin, 1825, 4to.)

The attempts of the tribune M. Livius Drusus the younger had no result [Legen Liviae]. A Lex Plautia n. c. 89 enacted, that the Judices should be chosen by the tribes, five by each tribe, without any distinction of class. The Optimates triumphed under L. Cornelius Sulla, who by a Lex Cornelia n. c. 80 enacted that the Judices should be taken exclusively from the Senators. But a Lex Aurelia (n. c. 70) enacted that the Judices should be chosen from the three classes — of Senators, Equites, and Tribuni Aerarii (Vell. ii. 32.) The Tribuni Aerarii were taken from the rest of the citizens, and were, or ought to have been, persons of some property. Thus the three decuriae of Judices were formed; and it was either in consequence of the Lex Aurelia or some other lex that, instead of one urn for all the tablets, the decuriae had severally their ballotting urn, so that the votes of the three classes were known. Dion Cassius (xxxviii. 8) ascribes this regulation to a Lex Fufia, and he says that the object was that the votes of the decuriae (ἐδην, γένη) might be known, though those of individuals could not, owing to the voting being secret. It is not known if the Lex Aurelia determined the number of Judices in any given case. A Lex Pompeia passed in the second consulate of Pompey (n. c. 55), seems to have made some modifications in the Lex Aurelia, as to the qualification of the Judices; but the new provisions of this lex are only known from Asconius, who explains them in terms which are very far from being clear. The Lex Pompeia de Vi, and De Ambitu (n. c. 52) determined that eighty judices were to be selected by lot, out of whom the accuser and the accused might reject thirty. In the case of Clodius (n. c. 61), in the matter of the Bona Den, there were fifty-six judices. It is conjectured that the number fixed for a given case, by the Lex Aurelia, was seventy judices.

A Lex Judicaria of Julius Caesar (Sueton. Jul. 41; Cic. Philip. i. 8) took away the decuria of the Tribuni Aerarii, and thus reduced the judices to two classes (genera, the γένη of Dion Cassius). A Lex Judicaria, passed after his death by M. Antonius, restored the decuria of the Tribuni Aerarii, but required no pecuniary qualification from them: the only qualification which this lex required was, that a person should have been a centurion or have served in the legions. It appears that the previous Lex Pompeia, Lex Aurelia, and a Lex of Caesar, had given to those who had been centuriones (quaestores danda, for serving in the legions) being judices (judicatos), but still they required a pecuniary qualification (census). The Lex of Antonius, besides taking away the pecuniary qualification, opened the judicia to the soldiers. (Cic. Phil. i. 8, v. 5; Sueton. J. Caes. c. 41.) It seems probable that the expression ex centuris, which is used by Asconius in speaking of the change introduced by this Lex Pompeia, had reference to the admission of the centurions into the third class of judices.

Augustus, who altered the whole constitution of the body of judices by his leges judiciorum publiciorum et privatorum, added to the three Decuriae Judicum, a fourth Decuria, called that of the Dacernarii, who had a lower pecuniary qualification, and only decided in smaller matters (de levioribus summis, Sueton. Aug. 32). Caligula (Sueton. Calig. 16) added a fifth Decuria, in order to diminish the labours of the judges. Augustus had already allowed each Decuria, in its turn, an exemption for one year, and had relieved them from sitting in the months of November and December. The whole number of judices was raised by Augustus to near 4000 (Plin. Hist. Nat. xxxiii. 7); and the judices in civil cases were taken out of this body. They were chosen by the Praetors out of the persons who had the property qualification, and the duty of serving as a judex thus became one of the burdens to which citizens were liable.

As to the whole number of judices, included at any given time in the Album Judicum, it seems almost impossible to state any thing with precision; but it is obvious from what has been said, that the number must have varied with the various changes already mentioned. After the time of Augustus the number was about four thousand, and from this period, at least, there is no doubt that the Album Judicum contained the whole number of persons who were qualified to act as judices, both in Judicia Privata and Judicia Publica. The fourth Decuria of Augustus was limited in its functions to the Judicia Privata in which the matter in dispute was of small value. It is often stated by modern writers, without any qualification, that the various changes in the judiciary body from the time of the Lex Calpurnia to the end of the republic had no reference to the Privata, but to the Publica; though it is also stated that the objects of these various enactments were to elevate or depress one of the great parties in the state, by extending or limiting the body out of which the judices in any given case were to be chosen. But it is obvious that these reasons do not apply to the matter of Judicia Privata, in which a single judex generally acted, and which mostly concerned matters of property and contract. Accordingly, a recent writer (Walter, Geschidite des Rom. Reclits, December. The whole number of judices was raised by Augustus to near 4000 (Plin. Hist. Nat. xxxiii. 7); and the judices in civil cases were taken out of this body. They were chosen by the Praetors out of the persons who had the property qualification, and the duty of serving as a judex thus became one of the burdens to which citizens were liable.

kinds of Judicia and the difference in the mode of procedure, which render it almost a matter of demonstration that the various changes in the judiciary body had reference to the Quaestiones and Judicia Publica. It is true that some of these legs may have contained provisions even as to Judicia Privata, for many of the Roman legs contained a great variety of legislative provisions, and it is also true that we are very imperfectly acquainted with the provisions of these legs. Judiciae; but that the regulation of the Judicia Privata was included in their provisions, in the same form and to the same extent as that of the Judiciae; an assertion totally unsupported by evidence, and one which leads to absurd conclusions. Two Leges Julae together with a Lex Achutia put an end to the Legis Actiones (Gaius, iv. 30); and a Lex Julia Judiciae limited the time of the Judiciae Legitima (Gaius, iv. 104); but it does not appear whether these legs were passed solely for these objects, or whether their provisions were part of some other legs.

Bethmann-Hollweg (Handbuch des Civilprozesses, p. 13) observes: "the establishment of a more limited body of judges out of the senatorial body (album judicum selectorum), A. v. c. 695, the transfer of this privilege to the equites, by C. Gracchus, the division of it between both classes after long struggles and changes, and even the giving it to the third class, whereby three classes or decuriae of judges were established; all these changes, which were so important in a constitutional point of view, referred especially to the criminal proceedings which were politically so important."

Though the general character of the Roman Judicia, and the modes of procedure both in civil and criminal matters, are capable of a sufficiently clear exposition, there is much uncertainty as to many details, and the whole subject requires a careful examination by some one who combines with a competent knowledge of the original authorities, an accurate acquaintance with the nature of legal procedure.

The following works may be referred to:—

Bethmann-Hollweg, Handbuch des Civilprozesses, Bonn, 1834; P. Invernizii, De Publicis et Criminalibus Judicis Romanorun, Libri Tres, Leipzig, 1846; Pucht, Instit. i. § 71, ii. § 151, &c. Gaius, iv.; Dig. 5. tit. 1. De Judicis; Dig. 48. De Judicis Publicis; Inst. iv. tit. 18.) [G. L.]

JUDICIA ORDINARIUS. [JUDEX PEDANEUS.]

JUDEX PEDANEUS. The origin and meaning of this term seem to be unknown. It is not used by the classical Roman writers. The judges to whom the praetor or praeses referred a matter in litigation with the usual instructions, were sometimes called Pedanei. (Theophil. iv. 15 ; Cod. 3. tit. 3.) Subsequently the praeses, who was now sometimes designated Judex Ordinarius or Judex simply (Cod. Theod. 1. tit. 7), decided most matters without the intervention of a Judex; but still he was empowered to appoint a permanent body of judges for the decision of less important matters, and these also were called Judices Pedanei, "hoc est qui negotia humiliaire disceptent." (Cod. 3. tit. 3. s. 5.) The proceedings before this new kind of Judices Pedanei were the same as before the praeses. Some modern writers are of opinion that these new pedanei judges did not form a permanent court, but only decided on matters which were referred to them by a superior authority. (Cod. 3. tit. 3.) The reason of these judges receiving a distinctive name is conjectured to be this, that the magistrate himself was now generally called Judex. The Greek translation of Pedaneus is χαμαδικαστής (Theophil. iv. 15. pr.) [G. L.]

JUDEX QUAESTIO NIS. [JUDEX, p. 648.]

JUDICIA QUA EST. A thing was a Res judicata, when the matter in dispute had been determined by a judicial sentence; and the actio judicata was a mode which the successful party might adopt, for obtaining a decree of the magistrate by which he could take possession of the property of the person who had lost the cause and had not satisfied the judgment. The plaintiff in the actio judicata was also protected in his possession of the defendant's property by a special interdict, and he was empowered to sell it. The party condemned was limited as to his defence. Originally the judicatus was obliged to find a vindex (vindicem dare); but in the time of Gaius it had become the practice for him to give security to the amount of the judgment (judicatum solvi satis dare). If the defendant pleaded that there was no res judicata, he was mulcted in double the amount of the judgment, if his plea was false.

The actio judicata, as a peculiar obligation, is merely the development and completion of the obligatio which is founded on the Litis Contestatio; but this peculiar obligatio is merely another form of execution, and it participates in the general nature of the process of execution. The general form of execution, and it participates in the general nature of the process of execution. The general nature of the actio judicata appears from the following passages. (Dig. 42. tit. 1. s. 4, 5, 6, 7, 41. § 2, 43, 44, 61.) Savigny, System, &c. vi. p. 411. (Gaius, iv. 9, 25, 171, 102; Cic. pro Flacc. 21; Paulus, S. R. 1. tit. 19.) [G. L.]

JUDICIUM PRIVATUM, PUBBLICUM. [JUDEX, p. 648.]

JUGERUM or JUGUS (the latter form, as a neuter noun of the third declension, is very common in the oblique cases and in the plural), a Roman measure of surface, 240 feet in length and 120 in breadth, containing therefore 28,800 square feet. (Colum. R. R. v. 1, § 6; Quintil. i. 18.) It was the double of the Actus Quaestorius, and from this circumstance, according to some writers, it derived its name. (Varro, L. L. v. 35, Müller, R. R. i. 10.) [ACTUS.] It seems probable that, as the word was evidently originally the same as jugus or jugum, a yoke, and as actus, in its original use, meant a path wide enough to drive a single beast along, that jugerum originally meant a path wide enough for a yoke of oxen, namely, the double of the actus in width; and that when actus
was used for a square measure of surface, the *jugum*, by a natural analogy, became the double of the *actus quadratus*; and that this new meaning of it superseded its old use as the double of the single *actus*. The uncial division [as] was applied to the *jugum*, its smallest part being the *scrupulum* of 10 feet square, = 100 square feet. Thus the *jugum* contained 288 *scrupula*. (Varro, *R. R. l. c.*). The *jugum* was the common measure of land among the Romans. Two *jugera* formed an *heredium*, a hundred *heredita* a *centuria*, and four *centuriae* a *saltus*. These divisions were derived from the original assignment of landed property, in which two *jugera* were given to each citizen as heritable property. (Varro, *l. c.*; Niebuhr, *Hist. of Rome*, vol. ii. pp. 156, &c., and Appendix ii.)

**JUGUM** (*γυγός, *γυγώ*), signified in general that which joined two things together. It denoted more especially,

1. In architecture any cross beam (Vitruv. *x.* 8. 19).
2. The transverse beam which united the upper right posts of a loom, and to which the warp was attached. (Ovid. *Met.* vi. 55.)

3. The transverse rail of a trellis (Varro, *de Re Rust.* i. 8; Col. *de Re Rust.* iv. 17, 20. xii. 15, *Geopon.* v. 29), joining the upright poles (*perticae*, *χέρσικα*) for the support of vines or other trees. [*CAPISTRUM.*] Hence by an obvious resemblance the ridges uniting the tops of mountains were called *jugum montium*. (Virg. *Ecl.* v. 76; Flor. ii. 3, 9, 17, iii. 8.)
4. The cross-bar of a lyre. (Hom. *Il.* ii. 167.)
5. A scale-beam, and hence a pair of scales [LIBRA]. The constellation Libra was consequently also called *jugum*. (Cic. *Ad Att.* ii. 63; Ovid. *Met.* vii. 211.)

6. The transverse seat of a boat. (Aeschyl. *Agam.* 1608; Soph. *Ajax* 247; Virg. *Aen.* vi. 411.) This gave origin to the term *γυγής*, as applied to a rower. A vessel with many benches or banks for the rowers was called *γυγής* πολικός or *εκκατό*γυγής. (Hom. *Il.* iii. 293, xx. 247.)

7. The yoke by which ploughs and carriages were drawn. The yoke was in many cases a straight wooden plank or pole laid upon the horses' necks; but it was commonly bent to the part of the animal which it touched, and with carving, the yoke, especially among the ancients, was often very elaborate. (Curt, iii. 3.) The passages above cited show that either above them, or at the two ends of the pole, and the horses were then led under it. Either above them, or at the two ends of the yoke, rings were often fixed, through which the reins passed. These frequently appear in works of ancient art, representing chariots.

Morning and evening are often designated in poetry by the act of putting the yoke on the oxen (Hes. *Op. et Dies* 581) and taking it off. (Hor. *Carm.* iii. 6, 42; Virg. *Ecl.* ii. 66; Ovid. *Fast.* v. 497; *Bouchard*, *Bouard*, *Arrian*, *l. c.*; Hom. *Ili. xvi. 779; *Cic. ad Att.* xv. 27; *Boudiccas ίφη* *Arat. Dias.* 387.)

---

[C] This figure also shows the method of tying the yoke to the pole (*λόμος, *λοῦμος*) by means of a leather strap (*γυγοειμένος*, Hom. *Il.* v. 730, xxiv. 268—274), which was lashed from the two opposite sides over the junction of the pole and yoke. These two parts were still more firmly connected by means of a pin (*μυθόλος*, Schol. in *Eurip. Hipp.* 666; *τύρων*, Hom. *l. c.*; *Arrian. Exped.* *Alex.* ii. p. 85, ed. Blan.; *μυθρόν*, Hes. *l. c.*), which fitted a circular cavity in the middle of the yoke (*μυθαλός*, Hom. *l. c.*). Homer represents the leather band as turned over the fastening thrice in each direction. But the fastening was sometimes much more complicated, especially in the case of the celebrated Gordion knot, which tied the yoke of a common cart, and consisted only of flexible twigs or bark, but in which the ends were so concealed by being inserted within the knot, that the only way of detaching the yoke was that which Alexander adopted. (Arrian, *l. c.*; *Q. Curt.* iii. 2; Schol. in *Eurip.* *l. c.*)

Besides being variegated with precious materials and with carving, the yoke, especially among the Persians, was decorated with elevated plumes and figures. Of this an example is preserved in a bas-relief from Persepolis, preserved in the British Museum. The chariot of Dareius was remarkable for the golden statues of Belus and Ninus, about eighteen inches high, which were fixed to the yoke over the necks of the horses, a spread eagle, also wrought in gold, being placed between them. (Q. Curt. iii. 3.) The passages above cited show that when the carriage was prepared for use, the yoke which had been laid aside, was first fastened to the pole, and the horses then led under it. Either above them, or at the two ends of the yoke, rings were often fixed, through which the reins passed. These frequently appear in works of ancient art, representing chariots.

---

[C] This figure shows the method of tying the yoke to the pole (*λόμος, *λοῦμος*) by means of a leather strap (*γυγοειμένος*, Hom. *Il.* v. 730, xxiv. 268—274), which was lashed from the two opposite sides over the junction of the pole and yoke. These two parts were still more firmly connected by means of a pin (*μυθόλος*, Schol. in *Eurip. Hipp.* 666; *τύρων*, Hom. *l. c.*; *Arrian. Exped.* *Alex.* ii. p. 85, ed. Blan.; *μυθρόν*, Hes. *l. c.*), which fitted a circular cavity in the middle of the yoke (*μυθαλός*, Hom. *l. c.*). Homer represents the leather band as turned over the fastening thrice in each direction. But the fastening was sometimes much more complicated, especially in the case of the celebrated Gordion knot, which tied the yoke of a common cart, and consisted only of flexible twigs or bark, but in which the ends were so concealed by being inserted within the knot, that the only way of detaching the yoke was that which Alexander adopted. (Arrian, *l. c.*; *Q. Curt.* iii. 2; Schol. in *Eurip.* *l. c.*)
By metonymy jugum meant the quantity of land which a yoke of oxen could plough in a day. (Varro, *de Rer. Rust.*, i. 10.) It was used as equivalent to the Latin par and the Greek *economos,* as in *aquarum jugum.* (Plin. *H. N.* x. 4, 5.) By another figure the yoke meant slavery, or the condition in which men are compelled against their will, like oxen or horses, to labour for others. (Aeschyl. *Agam.* 512; Florus, *lib.* 14; *Tact. Agric.* 31; *Hor. Sat.* ii. 7. 91.) Hence, to express symbolically the subjugation of conquered nations, the Romans made their captives pass under a yoke (*sub jugum mittere*), which, however, in form and for the sake of convenience, was sometimes made, not like the yoke used in drawing carriages or ploughs, but rather like the jugum described under the two first of the preceding heads; for it consisted of a spears supported transversely by two others placed upright. (J. Y.)

**JUGUMENTUM.** (Janua, p. 624, b.)

**JUNIÓRES.** (*Comitia.* p. 533.)

**JURA IN RE.** (*Dominium.*)

**JURÁCESTIO, IN,** was a mode of transferring ownership by means of a fictitious suit, and so far resembled the forms of conveyance by fine and by common recovery, which, till lately, were in use in England. The In Jure Cessio was applicable to things Mancipi and Non Mancipi, and also to Res Incorporales, which, from their nature, were incapable of tradition. The parties to this transaction were the owner (*dominus qui cedit*), the person to whom it was intended to transfer the ownership (*vindicem, qui estidit*), and the magistratus, qui addicit. The person to whom the proceeding was a legis actio.

**JURIDICI CONVENTUS [PROVINCIA].**

**JURISCONSULTI** or JURECONSULTI. The origin and the Roman peculiarities of those who were expounders of the law, may be referred to the separation of the Jus Civile from the Jus Pontificium. (*Jus Civile Flavianum.*) Such a body certainly existed before the time of Cicero, and the persons who professed to expound the law were called by the various names of jurisprudent, jurisconsulti, or consulti simply. They were also designated by other names, as jurisprudentes, prudentiores, peritiores, and juris auctores. The word which Plutarch uses is *Nomikosts* (*Tit. Gracc.* 9), and *Nomos* (*Salut.* 36.) Cicero (*Top.* 5) enumerates the jurisprudentes auctores among the component parts of the Jus Civile. The definition of a jurisconsultus, as given by Cicero (*De Or.* i. 48), is, “a person who has such a knowledge of the laws (leges) and customs (constituenda) which prevail in a state as to be able to advise (responsum), act (agentum), and to secure a person in his dealings (covendum): Sextus Aurelius Catus (*Jus Aeliamum*), M. Manilius, and P. Mucius are examples.” In the oration *Pro Murena,* Cicero uses *scribere* in the place of “agere.” The business of the early jurisconsulti consisted both in advising and acting on behalf of their clients gratuitously. They gave their advice or answers (responsum) either in public places which they attended at certain times, or at their own houses (*De Or.* iii. 33); and not only on matters of law, but on any thing else that might be referred to them. The words “scribere” and “cavere” referred to their employment in drawing up formal instruments, such as contracts or wills, &c. At a later period, many of these functions were performed by persons who were paid by a fee, and thus there arose a body of practitioners distinct from those who gave responses and who were writers and teachers. The earlier jurisconsults cannot be said to be the same kind of persons as those of a later period. Law had not then assumed a scientific form. The first whom Pomponius mentions was Papirius, who is said to have made a collection of the Leges Regiae. Tiberius Coruncanius, a plebeian, who was consul a. c. 261, and also the first plebeian Pontifex Maximus, is mentioned as the first who publicly professes (*publico professus est*), and he was distinguished both for his knowledge of the law and his eloquence. He left
no writings. It must not, however, be assumed that Coruncanius was a professor of law in the modern sense of the term; nor any other of the jurists after him who are enumerated by Pomponius. Before the time of Cicero the study of the law had become a distinct branch from the study of oratory, and a man might raise himself to eminence in the state by his reputation as a lawyer, as well as by his oratorical power or military skill. There were many distinguished jurists in the last two centuries of the republican period, among whom are M. Manilius; P. Mucius Scaevola, Pontifex Maximus (n. c. 131); P. Mucius Scaevola, the augur; and Q. Mucius Scaevola, the son of Publius, who was consul n. c. 95, and afterwards Pontifex Maximus, and one of the masters of Cicero (juris-peritorum eloquentissimus, eloquentium jurisperitissimus, Cic. de Or. i. 39, Brutus, c. 89). This Scaevola the Pontifex, was considered to have been the first who gave the Jus Civilis a systematic form, by a treatise in eighteen books. (Dig. 1. tit. 2. s. 2. § 41.) There are four excerpts in the Digest from a work of his in one book, on Definitions. Servius Sulpicius Rufus, the friend and contemporary of Cicero, and consul n. c. 51 (Brut. 7, 40), was as great an orator as the Pontifex Scaevola, and more distinguished as a jurist. Many persons, both his predecessors and contemporaries, had a good practical knowledge of the law, but he was the first who handled it in a scientific manner, and as he had both numerous hearers and was a voluminous writer, we may view him as the founder of that methodical treatment of the matter of law which characterised the subsequent Roman jurists (Cic. Brut. 41; Dig. 1. tit. 2. s. 2. § 43), and in which they have been seldom surpassed.

The jurists of the imperial times are distinguished from those of the republican period by two circumstances, the Jus Respondendi, and the rise of two Schools of Law.

It is said that Augustus determined that the Jurisconsulti should give their responsa under his sanction (ex auctoritate ejus respondentem). The jurists who had not received this mark of imperial favour, were not excluded from giving opinions; but the opinions of such jurists would have little weight in comparison with those of the privileged class. Those who obtained the Jus Respondendi from the Princeps, would from this circumstance alone have a greater authority, for formally their Responsa were founded on the authority of the Princeps. These responsa were given sealed (signata), apparently to prevent falsification. The matter proposed for the opinion of the Jurisconsulti was sometimes stated in the Responsum, either fully or briefly; and the Responsum itself was sometimes short, sometimes long; sometimes it contained the grounds of the opinion, and sometimes it did not. (Brison. de Form. litt. c. 85—87.)

The responsa of a privileged jurisconsultus would be an authority for the decision of a judex; if there were conflicting responsa given, the judex would of course decide as he best could. But, besides the direct responsa, which were given in particular cases, there was the authority of the writings of the privileged jurists. As before the time of Augustus, public opinion only gave authority to a jurist's responsa and writings, so from the time of Augustus this authority was given by the Jus Respondendi to the responsa and writings of a jurist. This privilege gave to a jurist the condition of a Juris auctor, and to his writings legal authority, neither of which belonged to a jurist who had not received the privilege. Accordingly, the writings of such privileged jurists received the same authority as their responsa; and if the opinions of the Juris auctores, as expressed in their writings, did not agree, the Judex was left to decide as he best could. This explanation of the nature of the Jus Respondendi, which is by Puchta (Instit. i. § 117), is applied by him to the elucidation of the passage in Gaius (i. 7. Responsa prudentium sunt sententiae et opiniones, &c.). He supposes that this interpretation of the passage is strictly conformable to what has been said of the authority of the writings of the jurists. If we leave out of consideration the technical expression Responsa, with which the passage begins, there is no difficulty at all in applying the words of Gaius to the writings of the jurists; and, in fact, it is most consistent to take responsa in this passage in a wider sense, and as equivalent to auctoritas. The term Responsa originated at a time when responsa, in the simple sense of the term, were the only form in which the auctoritas of a jurist was manifested; whereas in the time of Gaius, the writings of the jurists had become a very important legal authority, and consequently they must be included by Gaius in the term Responsa Prudentium, for otherwise he would not have mentioned at all the Auctoritas Prudentium, to which he so often refers in various parts of his work. Puchta's explanation of this passage, which bears the stamp of great probability, may be compared with that of Savigny (Système, &c. vol. i. p. 155.).

In the time of Augustus there arose two schools (scholae) of Jurists, the heads of which were respectively Ateius Capito and Antistius Labeo. The followers of Labeo, whom we know with certainty to have been such, were Nerva, Proculus, Nerva the son, Pegasus, Celsus, Celsus the son, and Neratius Priscus. The followers of Capito were Massurius Sabinus, C. Cassius Longinus, Coelius Sabinius, Priscus Javolenus, Albinus Valens Tuscianus, Gaius, and probably Pomponius. But the schools did not take their names from Labeo and Capito. The followers of Labeo were named Proculliani, from Proculus. The followers of Capito derived their name of Sabiniiani from Massurius Sabinus, who lived under Tiberius, and as late as the reign of Nero: they were sometimes also called Cassiani, from C. Cassius Longinus. It is not easy to state with precision the differences which characterised the two schools. Whatever may have been the origin of these differences, which may perhaps be partly referred to the personal character of Capito and Labeo, the schools were subsequently distinguished by a difference in their manner of handling the matter of the law. The school of Capito adhered more closely to what was established, and to the letter of what was written. Labeo was a man of greater acquirements than Capito, and his school looked more to the internal meaning than to the external form, and thus, while apparently deviating from the letter, they approached nearer to true results; though the strict logic of this school might sometimes produce a result less adapted to general convenience than the conclusion of the Sabiniiani, which followed the prevailing notions of equity. Much has been written on the characteristics of the two schools,
but to very little purpose. The matter is briefly treated by Puchta. (Inst. i. § 98.)

The writings of the jurisconsulti consisted of commentarii on the Twelve Tables, on the Edict, on particular leges, more especially on some of the Juliae Leges, and on other matters. The later jurists also commented on the writings of the earlier jurists. They also wrote elementary treatises (elementa, commentarii), such as the Institutiones of Gaius, which is the earliest work of the kind that we know to have been written; books called Regulae, and Definitiones, which probably were collections of maxims and legal principles; collections of cases and answers, under the various names of responsa, epistolae, sententiae, and opinions; systems of law; and various works of a miscellaneous character, with a great variety of names, such as disputationes, quaestiones, enchiridia, res quotidianae, and various other titles.

The juridical writers were very numerous: they formed a series, beginning with Q. Mucius Scævola, the Pontifex, and ending about the time of Alexander Severus, with Modestinus who was a pupil of Ulpian. With the exception of the fragments preserved in the Digest, this great mass of literature is nearly lost. [Pandectæ.]

The mode of teaching law at Rome was of a practical nature. Professors of law in the modern sense did not exist till the Imperial periods. Ulpian calls them Juria civilia professores (Dig. 50. tit. 18. s. 1. § 5); but there is no indication that he considered himself as one of the class; nor can we consider that such men as Julian, Papinian or Paulus ever followed the occupation of teacher of law. The instruction which was given in the republican period consisted in the Jurisconsulti allowing young men to be present as auditores, when they delivered their legal opinions, and to see how they conducted their business. (Cic. Brut. 89, Locius, 1.) Previous, however, to attending to this practical instruction, young men were taught the elements of law, which was expressed by the term institutum, whence probably the name Institutiones was given to elementary treatises like those of Gaius. Accordingly, institutum and audire, expressed the two parts of a legal education; and this mode of instruction continued until near the time of Constantine. In the Imperial period, probably young men devoted themselves for a still longer period to attendance on those jurists, who had the Jus Respondendi. These young men were the juris studiosi, who are mentioned by Ulpian and others. Thus Ulpian calls Modestinus, "studiosus meus." As already observed, the class called Juria Civilia Professores arose under the empire, and they received from those who attended them an Honorarium, or fee. (Ulpian, Dig. 50. tit. 18. s. 1. § 5.)

(Pomponius, De Origine Juris, Dig. 1. tit. 2. s. 2; Zimmerm, Geschichte des Römischen Privatrechts.)

[JURISDICTION.]

The "afficium" of him "qui jus dicit" is defined as follows (Dig. 2. tit. 1. De Jurisdictione): — "Bonorum possessionem dare potest, et in possessionem mettere, pupillis non habentibus tutusos constituit, judicis litigantibus dare." This is the general signification of the word Jurisdiction, which expresses the whole "afficium jus dicentis." The functions which are included in the "afficium jus dicentis" belong either to the Jurisdiction (in its special sense), or to the Imperium Mixtum, or they are those which are exercised by virtue of some lex, senatorconsultum, or authority delegated by the princeps, as the "Tutoris datio." (Dig. 26. tit. 1. s. 6.) The Jurisdiction of those magistrates who had no Imperium, was limited in consequence of not having the Imperium, and therefore was not Jurisdiction in the full meaning of that term. [Imperium; Magistratus.] Inasmuch as Jurisdiction in its special sense, and the Imperium Mixtum, are component parts of Jurisdiction in its wider sense, Imperium may be said to be contained in or incident to Jurisdiction (imperium quod jurisdictioni cohaeret, Dig. 1. tit. 21. s. 1). Sometimes Imperium is viewed as the term which designates the full power of the magistrates; and when so viewed, it may be considered as equivalent to Jurisdiction, in its wider sense, or as comprehending Jurisdiction in its narrowest sense. Thus Imperium may be considered as containing or as contained in Jurisdiction, according as we give to each term respectively its wider or its narrower meaning. (Puchta, Uebcr den Inhalt der Lex Rubra, Zeitschrift, vol. x. p. 193.) The Jurisdiction of the Emperor, in the time of the Emperors of the Contantine period, was either Imperium Quod Jurisdictioni Cohæret (Dig. 1. tit. 6. s. 2.) The Jurisdiction Voluntaria rendered valid certain acts done before the magistrates, for which certain forms were required, as adoption and manumission. Thus adoption, properly so called, could take place before the præses of a provincia (Gaius, i. 100); but in Rome it took place before the praetor, and was said to be effected "imperio magistriatus." The Jurisdiction Contentionis had reference to legal proceedings before a magistratus, which were said to be in jure as opposed to the proceedings before a judge, which were said to be in judicio. The parties were said "Leges agere:" the magistratus was said judicere or reddere. Accordingly "magistratus" and "qui Romae jus dicit" are equivalent. (Cic. ad Fam. xiii. 14.) The functions included in Jurisdiction in this, its special sense, were the addicitio in the legis actions, the giving of the formula in proceedings conducted according to the newer process, and the appointment of a judex. The appointing of a judex, "judicis datio," was for the purpose of inquiring into the facts in dispute between the parties. The words of the formula are "Judex esto," &c. (Gaius. iv. 47); and the terms of the edict in which the praetor declares that he will give a judex, that is, will recognise a right of action, are "Judicium dabo." (Cic. pro Flacco. 35.) Addictio belongs to that part of jurisdiction by which the magistratus himself makes a decree or gives a judgment; thus in the case of the In Jure Cessio, he is said "rem addicere." (Gaius, ii. 24.) Addicere is to adjudge a thing or the possession of a thing to one of the litigant parties. In the case of furtum manifestum, inasmuch as the facts would be certain, there was an addictio. (Gaius, i. 168.)

Other uses of the word addicitio are collected in Facciolati.

[JUS.]

It is with reference to the three terms, Do, Dico, Addicio, that Varro (De Ling. Lat. vi. 30) remarks that the praetor must use one of these words "cum leges quis peragatur." Accordingly, those days were called Nefasti on which no legal business could be done, because the words of legal force could not be used. (Compare Ovid. Fast. i. 47; Macrobius, Saturn. i. 16.)

JUS. "All people," says Gaius (i. 1), "who are governed by Leges and Mores, use partly their
own law (jus), partly the law (jus) that is common to all mankind; for the law (jus) which a state establishes for itself is peculiar to such state, and is called Jus Civile, as the peculiar law (jus) of that state. But the law (jus) which natural reason (naturalis ratio) has established among all mankind is equally observed by all people, and is called Jus Gentium, as being that law (jus) which all nations follow. The Roman populus therefore follows partly its own peculiar law (summa proprietatis jus), partly the common law (commune jus) of all mankind.

According to this view, all Law (jus) is distributed into two parts, Jus Gentium and Jus Civile, and the whole body of law peculiar to any state is its Jus Civile. (Cic. de Orat. i. 44.) The Roman law, therefore, which is peculiar to the Roman state, is its Jus Civile, sometimes called Jus Civile Romanorum, but more frequently designated by the term Jus Civile only, by which is meant the Jus Civile of the Romans.

The Jus Gentium is here viewed by Gaius as springing out of the Naturalis Ratio common to all mankind, which is still more clearly expressed in another passage (i. 189) where he uses the expression "omnium civitatum jus" as equivalent to the Jus Gentium, and as founded on the Naturalis Ratio. In other passages he founds the acquisition of property, which was not regulated by Roman law, on the naturalis ratio and on the naturale jus indifferently, thus making naturalis ratio and naturale jus equivalent (ii. 65, 66, 69, 73, 79).

He founds Cognatio on Naturalis Ratio, as being common to all mankind, and Agnatio on Civilis Ratio, as being purely a Roman institution (i. 130). In two passages in the Digest (i. tit. 8) he calls same thing Naturale Jus in s. 2, and Jus Gentium in s. 3, 5. (Compare Gaius, i. 3. 129.) The Naturalis Ratio and the Jus Gentium are therefore identical. (Savigny, System, &c. vol. i. p. 113.) Cicero (de Off. i. 5) opposes Natura to Leges, where he explains Natura by the term Jus Gentium, and makes Leges equivalent to Jus Civile. In the Partitio (c. 37) he also divides Jus into Natura and Lex.

There is a threefold division of Jus made by Ulpian and others, which is as follows: Jus Civile; Jus Gentium, or that which is common to all mankind; and Jus Naturale which is common to man and beasts. The foundation of this division seems to have been a theory of the progress of mankind from what is commonly termed a state of nature, first to a state of society, and then to a condition of independent states. This division had, however, no practical application, and must be viewed merely as a curious theory. Absurd as it appears at first sight, this theory is capable of a reasonable explanation, and Savigny shows that it is not meant to say that beasts have law, but only the matter of law; that is, some of those natural relations on which legal relations are founded, exist among beasts as well as men. Such natural relations are those by which the species is propagated. (See also Puchta’s remarks, Instit. i. § 9, note a.) In the Institutes the two divisions are confounded (i. tit. 2. De Jure Naturali, Gentium et Civili); for the explanation of Jus Naturale is first taken from the threefold division of Ulpian, and then the Jus Gentium and Civile are explained according to the twofold division of Gaius already quoted, so that we have in the same section the Jus Naturale explained in the sense of Ulpian, and the Jus Gentium explained in the sense of Gaius, as derived from the Naturalis Ratio. Further, in the second book (tit. i. s. 11) the Jus Naturale is explained to be the same as Jus Gentium, and the Jus Naturale is said to be coeval with the human race. Notwithstanding this confusion in the Institutes, there is no doubt that the two-fold division of Gaius was that which prevailed in Roman jurisprudence. (Savigny, System, &c. vol. i. p. 413.) This two-fold division appears clearly in Cicero, who says that the old Romans separated the Jus Civile from the Jus Gentium; and he adds that the Jus Civile (of any state) is not therefore Jus Gentium, but that what is Jus Gentium ought to be Jus Civile (de Off. iii. 17).

Those rules which regulated the declaration of war and the conduct of war are comprehended under the term Jus Belligerum. Some modern writers give to the term a wider signification; and others limit it more closely. Osenbrueggen (De Jure Belli et Pacis Romanorum, p. 20, Lips. 1836) defines the Jus Belligerum to be that which preceded the communes, solemnities and ceremonial observed in the declaring and terminating a war, and in the matter of treaties. The Romans often used the expression Jus Gentium in a sense which nearly corresponds to the modern phrase Law of Nations, or, as some call it, International Law. (Livy, ii. 14, vi. 1, quod legatus in Gallos, ad quos missus erat, contra jus gentium pugnasset; xxvii. 48; Sallust. Jug. 22.) The term Jus Belli (Cic. de Leg. ii. 14) is used in the same sense.

The origin of the opposition between Jus Gentium and Jus Civile was not a speculative notion, nor did it originate with the Jurists, though they gave it a theoretical form. The Jus Gentium in its origin was the general law of Peregrini, according to which the Romans determined the legal relations among Peregrini, a class of persons to whom the Jus Civile was not applicable. Consequently, the foundation of the Jus was foreign law, modified by the Romans according to their own notions, so as to be capable of general application. This is one side of the original Jus Gentium. The other is that Law which owed its origin to the more enlarged views of the nature of law among the Roman people, and was the development of the national character. The two notions, however, are closely connected, for the law of Peregrini was that which first presented the Romans with the notion of the Jus Gentium, and it was formed into a body of Law, independent of the Jus Civile, and not interfering with it. But the general Law of Peregrini also obtained among the Romans, as Law, and not considered merely with reference to their intercourse with Peregrini. "The Law of Peregrini and Roman Law, disencumbered of all peculiarity of individual nations, are the two sides of the same notion, which the Romans express by the term Jus Gentium." (Puchta, Instit. i. § 84.) The Jus Gentium was chiefly introduced by the Edictum,—as the Law of Peregrini by the Edict of the Praetor Peregrinus and the Edicta Provincialia, and as Law for the Romans by the Edictum of the Praetor Urbanus.

The Jus Civile of the Romans is divisible into two parts, Jus Civile in the narrower sense, and Jus Pontificium or Sacrum, or the law of religion.
This opposition is sometimes expressed by the words Jus and Fas (Fas et jure simunt, Virg. Geo]. i. 269); and the law of things not pertaining to religion and of things pertaining to it, are also respectively opposed to one another by the terms Res Juris Humani et Divini. (Instit. 2. tit. 1.) [DOMINIUM.] Thus the Pontifices Maxim[i, P. Crassus, and T. Coruncanius, are said to have given Responsa de omnibus divinis et humanis rebus. (Cic. de Ord. iii. 33.)

The Law of Religion, or the Jus Pontificium, was under the control of the Pontifices, who in fact originally had the control of the whole mass of the law, and it was only after the separation of the Jus Civile in its wider sense into the two parts of the Jus Pontificium, in its narrower sense, and the Jus Pontificium, that each part had its proper and peculiar limits. But after this separation was fully made the Auctoritas Pontificum had the same operation and effect with respect to the Law of Religion that its force as law depended on a decision in a judicium. And the meaning is clear, whether we read contradicto or contradicta in the passage just referred to.

The Roman writers indeed frequently refer to a large part of their law as founded on Mores or on the Mos Majorum and not on Leges. (Quint. Inst. Ord. v. 10.) Thus Ulpian (Dig. 1. tit. 6. s. 8) says that the Jus Patriae Potestatis is moribus receptum. But mos contained matters relating to religion as well as to the ordinary affairs of life; and therefore we may also view Mos and Lex, when opposed, as component parts of the Jus Civile in its wider sense, but not as making up the whole of it. Mores in the sense of immorality, that which positive morality disapproves of, must not be confused with mos founded on mos: the former is mali mores in respect of which there was often a jus moribus constitutum. Thus in the matter of the dos there was a retentio in respect of the mores graviore or majores, which was adultery. (Ulp. Frag. tit. 6.)

The terms Jus Scriptum and Non Scriptum, as explained in the Institutes (1. tit. 2), comprehended the whole of the Jus Civile; for it was all either Scriptum or Non Scriptum, whatever other divisions there might be. (Ulp. Dig. 1. tit. 1. s. 6.) Thus Jus Scriptum comprehended every thing except that "quod usus approbatis." This division of Jus Scriptum and Non Scriptum does not appear in Gaius. It was borrowed from the Greek writers, and seems to have little or no practical application among the Romans. The sense in which Written and Unwritten law has been used by English writers is hardly the same as the Roman sense. Hale says (Hist. of the Common Laws, p. 2). "Those laws that I call leges scriptae (he should have used the expression Leges scriptae, though the expression Lex Scripta) are such as are originally reduced into writing before they are enacted." Hale applies his definition only to statutes or acts of parliament; but it is equally applicable to any rules which are promulgated in writing and have the force of law or of a law, by virtue of authority delegated to those who make such rules.

Jus was also divided into Publicum and Privatum by the Roman jurists. (Dig. 1. tit. 1. s. 1.) Publicum Jus is defined to be that which relates to the Status Rei Romanae, or to the Romans as a State; Privatum Jus is defined to be that which relates "ad singulorum utilitatem." The Publicum Jus is further said by Ulpian (Dig. 1. tit. 1. s. 1) "in sacris, in sacerdotibus, in magistratibus constitutum," (Hist. of the Common Law, p. 2). That which is contained in the Institutes of Gaius and Justinian. The elementary treatise of Gaius does not mention this division, and it is limited to the Jus Privatum. Justinian, in his Institutes, after making this division of Jus into Publicum and Privatum, says, "we must therefore treat of Jus Privatum," from which it appears that he did not contemplate treating of Jus Publicum, though the
forms were not observed, there was no ownership virtue of the Jus Gentium, and it may perhaps be passage (ii. 65), he speaks of alienation or change such ownership was acquired by the Jus Gentium. by Gaius (ii. 40, &c.) that the In bonis arose by and usucapion.

recognized by Roman law; not by Roman law, and usucapion. case (ii. 40) there is no ownership either as re cognized by Roman law as such, or by Roman law. accordingly when ownership could be alienation, which is completely effected by tra dition, so that there is a legal change of ownership or derived from the Jus Gentium. In the other sense, the expression Populous Romanus Quirites has given rise to much discussion. Becker (Handb. der Romischen Alterthümer, vol. ii. p. 24) concludes that Roman and Quirites are not so opposed that Romani is the historical and political name viewed with respect to foreign states, and Quirites the political name as viewed with reference to Rome. Accordingly Quirites is equivalent to Cives.

(Sueton. Caes. 70; Plut. Caes. 51; Liv. xlv. 37.) It does not seem easy to explain the difference between Civitas Romana and the Jus Quiritium, yet so much seems clear that Civitas Romana was a term large enough to comprehend all who were Cives in any sense. But the Jus Quiritium in its later sense seems to be the pure Privatum Jus as opposed to the Publicum Jus, and thus it differs from Jus Civile viewed as the whole Roman law, or as opposed to the law of other people. He who claimed a thing exclusively as his own claimed it to be his ex Jure Quiritium. (Gaius, ii. 40. &c.) Accordingly we find the expressions Dominus and Dominium ex Jure Quiritium, as contrasted with In bonis [DOMINIO]. Such part of the Roman law, in its widest sense, as related to buying, selling, letting, hiring, and such obligations as were founded on the Jus Civile, were considered to belong to the Jus Gentium (Dig. 1. tit. 1. s. 5), that is, the Jus Naturale. (Gaius, ii. 65.) Accordingly when ownership could be acquired by tradition, occupation, or in any other way, not specially provided for by the Jus Civile, such ownership was acquired by the Jus Gentium. When the Jus Civile prescribed certain forms by which ownership was to be transferred, and such forms were not observed, there was no ownership Jure Civili or Jure Quiritum, but there was that intestacy which was called In bonis. (It is not said by Gaius, 40, &c.) that the In bonis arose by vice of the Jus Gentium, and it may perhaps be concluded that he did not so view it; for in another passage (ii. 65), he speaks of alienation or change of ownership being effected either by the Jus Naturale, as in the case of tradition, or by the Jus Civile, as in the case of mancipatio, in jure cessio, and usurcation. In this passage he is speaking of alienation, which is completely effected by tradition, so that there is a legal change of ownership recognized by Roman law; not by Roman law, specially as such, but by Roman law as adopting or derived from the Jus Gentium. In the other case (ii. 40) there is no ownership either as recognized by Roman law as such, or by Roman law as adopting the Jus Gentium; the In bonis is merely recognized by the Praetorian Law, to which division it therefore belongs. So far as the equity of the praetor may be said to be based on the Jus Gentium, so far may the In bonis be said to be founded on it also. Properly speaking, the Jus Gentium was only received as Roman law, when it did not contradict the Jus Civile; that is, it could only have its full effect as the Jus Gentium when it was not contradicted or limited by the Jus Civile. When it was so contradicted or limited, the praetor could only give it a partial effect, but in so doing, it is obvious that he was endeavouring to nullify the Jus Civile and so to make the Jus Gentium as extensive in its operation, as it would have been but for the limitation of the Jus Civile. The bounds that were placed to this power of the praetor were not very definite. Still he generally fashioned his Jus Praetorium after the analogy of the Jus Civile, and though he made it of no effect as against his Jus Praetorium, he maintained its form and left it to its full operation, except so far as he necessarily limited its operation by his own Jus Praetorium.

Jus used absolutely is defined to be “ars boni et aequi” (Dig. 1. tit. 1. s. 1), which is an absurd definition. What it really is, may be collected from the above enumeration of its parts or divisions. Its general significations is Law, and in this sense it is opposed to Lex or a Law. Lex, however, as already shown, is sometimes used generally for Law, as in the instance from Cicero where it is opposed to Natura. Lex therefore in this general sense comprehends legis and all the other parts of the Jus Civile. In its special sense of a Law, it is included in Jus. Jus is also used in the plural number (jura) apparently in the sense of the component parts of Jus, as in Gaius (i, 2), where he says “Constant autem jura ex legibus,” &c.; and in another passage (i. 158), where he says with reference to the Agnationis Jus or Law of Agnatio, “civilia ratio civilia quidem jura corrempere potest.” Indeed in this passage Agnationis Jus and Cognationis Jus are two of the Jura or parts of Jus, which with other Jura make up the whole of Jus. Again (Gaius, ii. 62), that provision of the Lex Julia de Adulteriis, which forbade the alienation of the Fundus Dotalis, is referred to thus—“ quod quidem jus,” “ which rule of law” or “ which law”—it being a law comprehended in another law, which contained this and many other provisions. Thus though Lex in its strict sense of a Law is different from Jus in its large sense, and though Jus, in its narrower sense, is perhaps never used for a Lex, still Jus, in its larger sense, is used to express a rule of law. Thus Gaius (i. 47) speaks of the jura or legal provisions comprised in the Lex Aelia Sentia; and of jura as based on the Responsa Prudentium (“responsa praedaemium sunt sententiae et opiniones eorum quibus permissum est jura conderere,” Gaius, i. 7; Jurisconsult). Jus has also the meaning of a faculty or legal right. Thus Gaius says, “it is an actio in rem. when we claim a corporeal thing as our own, or claim some jus as our own, such as a jus utendi. unde, agendi.” The parental power is called a “Jus proprium ciborum Romanorum.” The meaning of law generally, and of a legal right, are applied to Jus by Cicero in the same sentence: “I, a man ignorant of law (imperitus juris), seek is
maintain my right (meum jus) by the Interdiction." (Pro Caeceia, c. 11.) As the several rules of law which are often comprised in one lex, or which make up the whole body of Jus (Law), may be called jura with reference to their object, so the various legal rights which are severally called jus with reference to some particular subject, may be collectively called jura. Thus we find the phrase Jura Parentis to express all the rights that flow from the fact of legal paternity.

The phrase Jura Praetorium, which is used by the Roman Jurists, is somewhat peculiar, and open to objection. [Servitus]

The Roman father had over his children and a husband over his wife in mann, being a jus or legal right, there hence arose the distinction of persons into those who are sui et those who are alieni juris. All the rights of such persons severally are represented by the phrase "Jus Personarum," or that division of the whole matter of Jus which treats of the condition of persons as members of a Familia. [Familia]

This leads to the mention of another division of the matter of law which appears among the Roman Jurists, namely, the Law of Persons; the Law of Things; which is expressed by the phrase "jus quod ad res pertinet;" and the Law of Actions, "jus quod ad actiones pertinet." (Gaius, i. 8.) In his first book Gaius treats of the Law of Persons, in the sense explained in the article INSTITUTIONES, in the fourth he treats of the Law of Actions; and accordingly the second and third contain the Law of Things, to express which he does not use a phraseology analogous to that of "Jus Personarum;" but he says he will treat De Rebus. [INSTITUTIONES]

The adjective Jusdictum often occurs in the Latin writers, in the sense of that which is consistent with Jus or Law, or is not contrary to law. Thus it is a justum (legal) matrimonium, if there is consensus between the two parties to the marriage. The word Jusdictum has many varieties of meaning, which may generally be derived, without much difficulty, from the meanings of Jus: as justa servitus, justum concilium, justum iter, Justus exercitus, justa causa.

Jus is opposed to Judicium, and a thing was said to be done in jure or in judicio, according as it was done either by a Roman, or before a judex. [Judicium] Thus all matters of legal question were said to be done "aut ad populum, aut in jure, aut ad judicem." (Plaut. Menench. iv. 2. 18.) Jus, in the sense of the place "in quo jus redititur" (Dig. 1. tit. 1. s. 11), is only an application of the name of what is done to the place in which it is done. The expression Jus Dicere is explained under Jurisdiction.

The foregoing explanation of Jus may not be entirely free from error, nor would it be easy to make it so, as will appear from comparing the views of various modern writers. [G. L.]

JUS AELIANUM. [Aelites; Edictum.]

JUS AELIANUM was a compilation by Sextus Aelius Pactus, surnamed Catus, who was consul b. c. 198 (Liv. xxxii. 7), and who is called by his contemporary Ennius, "exegie cordatus homo." He is also frequently mentioned with praise by Cicero (de Rep. i. 18, de Or. i. 45, iii. 33). The Jus Aelianum, also called Tripathita, contained the Law of the Twelve Tables, an interpretation, and the Leges Actiones. This work existed in the time of Pomponius. (Dig. 1. tit. 2. s. 2. § 38.) Cicero also speaks of some commentary by Aelius. (De Orat. i. 36, Top. 2.) [G. L.]

JUS APPLICATIO'NIS. [Exsilio, p. 516, b.]

JUS CIVILE. [Jus.]

JUS CIVILE FLAVI'NUM. Appius Claudius Cæcucus, who was censor b. c. 312, is said to have drawn up a book of Actiones or forms of procedure, which his clerk Cn. Flavius made public. (Cic. de Or. i. 41.) According to one story (Dig. 1. tit. 2. s. 7) Flavius surreptitiously obtained possession of the book of Appius, and was rewarded by the people for his services by being made Tribunus Plebis and Curule Aedile.

The effect of this publication was to extend the knowledge and the practice of the law to the plebeians, and to separate the Jus Civile from the Jus Pontificium. (Liv. ix. 45; Gellius, vi. 9; Cic. pro Murena, 11.) [G. L.]

JUS CIVILE PAPIRI'A NUM or PAPI'SI' NUM was a compilation of the Leges Regiae or laws passed in the kingly period of Rome. They are mentioned by Livy (vi. 1). This compilation was commented on by Granius Flaccus in the time of Julius Caesar (Dig. 50. tit. 16. s. 144), to which circumstance we probably owe the preservation of existing fragments of the Leges Regiae. There is great doubt as to the exact character of this compilation of Papirs, and as to the time when it was made. Even the name of the compiler is not quite certain, as he is variously called Caius, Sextus, and Publius. The best notice of the fragments of the Leges Regiae is by Dirksen, in his Versuchen zur Kritik und auslegung der Quellen des Römischen Rechts." See also Zimmern, Gesch. des Röm. Privatrechts. [G. L.]

JUSJURANDUM (opKos), an oath. 1. Greek. An oath is an appeal to some superior being, calling on him to bear witness that the swearer speaks the truth, or intends to perform the promise which he makes. Hence the expressions ἴστι ζεύς, τῶν μαρτυρῶν, and others of the same import, so frequently used in the taking of oaths. (Soph. Trach. 399, Antip. 104; Sl.
Paul, Galat. i. 20.) It is obvious that such an appeal implies a belief, not only in the existence of the being to whom called upon, but also in his power and inclination to punish the false swearer; and the force of an oath is founded on this belief. Hence an oath is called ἱερός ἱερός. (Hom. Hymn. ad Merc. 273, 515; Pind. Od. vii. 119.) ζέως ἱερός (Soph. Philoct. 1324) is the god who has regard to oaths, and punishes their violation. Ζήπ' ἥχων ἐκεύσωτον (Soph. Trach. 1190) means (according to Suidas) ἱερόν ἑγγυητήν.

We find early mention in the Greek writers of oaths being taken on solemn and important occasions, as treaties, alliances, vows, compact, and agreements between nations and individuals. Thus, when the Greeks and Trojans agree to decide the fate of the war by a single combat between Menelaus and Paris, they ratify their agreement by an oath. (II. lii. 276.) The alliance between Croesus and the Lacedaemonians is confirmed by oath. (Herod. i. 69.) So is the treaty between the Medes and Lydians, whose rites in swearing (as Herodotus tells us, i. 74) were the same as those of the Greeks, with this addition, that they made an incision in their arms and tasted each other's blood. We may further notice the treaty of peace between the Athenians and Peloponnesians, upon which every state was to swear ἐπίχρωρον ἱερὸν τοῦ μέγιστον (Thucyd. v. 47), the vow of the Ionian women (Herod. i. 140), that of the Phocaenians (Id. 165), and the promise of Circe to Ulysses (Od. x. 345). The reliance placed in an oath is specially shown in the dialogue between Aegeus and Medea in Eurip. Med. 756—760; and the speech of Athena in Eurip. Suppl. 1196. For other examples we refer the reader to Soph. Oed. Tyr. 647, 651, 830, 860, 867, Equites, 609, Lyseid. 81, 148; the Athenians swore principally by Zeus, Athena, Apollo (their πατριωτικοί Δίες), Demeter, and Dionysus.

The office or character of the party, or the place, or the occasion often suggested the oath to be taken. Thus, Ἰπιγείεσθαι the priestess swears by Artemis at Ephesos, ἱερὸν τοῦ πατρῶν (= the temple) and τοῦ υἱοῦ (Soc. v. 3). Hence the propriety of the famous oath in Demosthenes, by the warriors whom he fought at Marathon, &c. Here we may observe, that as swearing became a common practice with men upon trivial occasions, and in ordinary conversation, they used to take oaths by any god, person, or thing, as their peculiar habits or predilections, or the fancy of the moment, dictated. Pythagoras on this account swore by the number Four. (Lucian, Pythag. 4; Plut. de Plac. Phil. i. 3, 1616.) Socrates used to swear ἐκ τοῦ κυρίου, in which he was absurdly imitated by others. (Athen. ix. p. 370.) Aristophanes, so keenly alive to all the foibles of his countrymen, takes notice of this custom, and turns it into ridicule. Hence he makes the sausage-dealer swear ἐκ τοῦ Ἑρμῆν τοῦ ἀγρόσπου (Equit.
Women also had their favourite oaths. As the men preferred swearing by Hercules, Apollo, &c., so other sex were said to swear by Aphrodite, Demeter, and Persephone, Hecate, Artemis; and Athenian women by Aglauros, Pandrosus, &c. (Lucian, Dyl. Meretr. 7; Xen. Memor. i. § 5; Aristoph. Lysist. 81, 148, 208, 439, Eccles. 70, Thesm. 286, 383, 533; Theocr. Idyl. xv. 14.)

The security which an oath was supposed to confer induced the Greeks, as it has people of modern times, to impose it as an obligation upon persons invested with authority, or intrusted with the discharge of responsible duties. (Plato, de Leg. xii. p. 918.) The Athenians, with whom the science of legislation was carried to the greatest perfection, were, of all the Greek states, the most punctilious in this respect. The youth, entering upon his 20th year, was not permitted to assume the privileges of a citizen, or to be registered in the list of male inhabitants, without a solemn oath in the temple of Aglauros to obey the laws and defend his country. (The form of his oath is preserved in Polyb. viii. 105.) The archon, the judge, and the arbitrator, were required to bind themselves by an oath to perform their respective duties. (See Polyb. ii. 5, 14, ed. Steph.; and Dacier.) As to the oath taken by the Senate of Five Hundred, see Demosth. c. Timoc. 745. As to the oath of the witness, and the voluntary oath of parties to an action, see MARTYRIA. The importance, at least apparently, attached to oaths in courts of justice, is proved by various passages in the orators. (Andoc. de Myst. 5; Lycurg. c. Leocr. 157. ed. Steph.; Antiph. de m. Herod. 139, 140, ed. Steph.; Demosth. c. Apol. 860.) Demosthenes constantly reminds his judges that they are on their oaths, and Lycurgus (c.e.) declares that the ancients required of persons engaged in ordinary transactions with foreign nations in the name of the republic. Oaths, or various modes of swearing in common life. Oaths taken before the praetor or in courts of justice.

2. ROMAN. The subject of Roman oaths may be treated under four divisions: (1) Oaths taken by magistrates and other persons engaged in the management of the state, or in transactions with foreign nations in the name of the republic. (2) Oaths, or various modes of swearing in common life. (3) Oaths taken before the praetor or in courts of justice.

I. Oaths taken by magistrates and other persons who entered the service of the republic. After the establishment of the republic the consuls, and subsequently all the other magistrates, were obliged, within five days after their appointment, to promise on oath that they would protect and observe the laws of the republic (in legesjurare, Liv. xxxi. 50; compare Dionys. v. 1.). Vestal virgin and the flamen dialis were not allowed to swear on any occasion (Liv. L. c.; Fest. sv. Jurare; Plut. Quaest. Rom. p. 275), but whether they also entered upon their sacred offices without taking an oath analogous to that of magistrates is unknown. When a flamen dialis was elected to a magistracy, he might either petition for an especial dispensation (ut legibus solveretur), or he might depute some one to take the oath for him. But this could not be done unless the praetor had given permission to the people. The first Roman consuls seem only to have sworn that they would not restore the kingly government, nor allow any one else to do so (Liv. ii. 1; Dionys. l. c.), and this may have been the case till all fears of such a restoration having vanished, the oath was changed into a jurasum in leges. The consular oath was occasionally taken under the empire. (Plin. Paneg. 64.)

During the later period of the republic we also find that magistrates, when the time of their office had expired, addressed the people and swore that during their office they had undertaken nothing against the republic, but had done their utmost to promote its welfare. (Cic. ad Fam. v. 2, § 7, pro Sulla, 11, in Pison. 3, pro Dom. 35; Dion Cass. xxxvii. p. 52, xxxviii. p. 72, lii. p. 568, ed. Steph.; Liv. xxix. 37.) In some cases a tribune of the people might compel the whole senate to promise on oath that they would observe a plebeian, u 3
and allow it to be carried into effect, as was the case with the lex agraria of Saturninus. The censor Q. Metellus, who refused to swear, was sent into exile. (Appian, B. C. i. 29; Cic. pro Sext. 47; Plut. Mar. 29.) During the time of the empire all magistrates on entering their office were obliged to pledge themselves by an oath that they would observe the acta Caesarum (jurare in acta Caesarum, Suet. Tiber. 67 ; Tacit. Annal. i. 72, xii. 26, xvi. 22 ; Dion Cass. xlvi. p. 384, &c.), and the senators had to do the same regularly every year on the first of January. (Dion Cass. liii. p. 724 ; compare Lipsius, Excurs. A. ad Tacit. Annal. i. 72.)

All Roman soldiers after they were enlisted for a campaign, had to take the military oath (sacramentum), which was administered in the following manner: — Each tribunus militum assembled his regiment, and picked out one of the men to whom he put the oath, that he would obey the commands of his generals and execute them punctually. The other men then came forward one after another and repeated the same oath, saying that they would do like the first (idem in me, Polyb. vi. 21 ; Fest. s. v. Prajuratio). Livy (xxii. 38) says that until the year 216 B.C. the military oath was only sacramentum, i.e. the soldiers took it voluntarily, and promised (with imprecations) that they would not desert from the army, and not leave the ranks except to fight against the enemy or to save a Roman citizen. But in the year 216 B.C. the soldiers were compelled by the tribunes to take the oath, which the tribunes put to them, that they would meet at the command of the consuls and not leave the standards without their orders, so that in this case the military oath became a jusjurandum. But Livy (xxii. 38) speaks of a second oath which was put to all who served in the army, whether freemen or slaves, as soon as the castrametatio had taken place, and by which they promised that they would steal nothing from the camp, and that they would take to the tribunes whatever they might happen to find. The military oath was, according to Dionysius (xi. 43), the most sacred of all, and the law allowed a general to put to death without a formal trial any soldier who ventured to act contrary to his oath. It was taken upon the signs, which were themselves considered sacred. In the time of the empire a clause was added to the military oath, in which the soldiers declared that they would consider the safety of the emperor more important than anything else, and that they loved neither themselves nor their children more than their sovereign. (Arrian, Epict. iii. 14 ; Suet. Calig. 15 ; Ammian. Marc. xxi. 5.) On the military oath in general, compare Brissonius, De Formul. iv. c. 1-5.

II. Oaths taken in transactions with foreign nations in the name of the republic. The most ancient form of an oath of this kind is recorded by Livy (i. 24), in a treaty between the Romans and Albans. The pater patratus pronounced the oath in the name of his country, and struck the victim with a flint-stone, calling on Jupiter to destroy the Roman nation in like manner, as he (the pater patratus) destroyed the animal, if the people should violate the oath. The chiefs or priests of the other nation then swore in a similar manner by their own gods. The ceremony was sometimes different, inasmuch as the fetialis cast away the stone from his hands, saying, Sti sciens filio, tuum me Diespiter salva urbe arces tecis efficacit, ut ego hunc lapidem. (Fest. s. v. Lapidem.) Owing to the prominent part which the stone (lapis silex) played in this act, Jupiter himself was called Jupiter Lapis (Polyb. iii. 22), and hence it was in antiquity not uncommon among the Romans in ordinary conversation to swear by Jupiter Lapis. (Gellius, i. 21 ; Cic. ad Fam. vii. 1, 12 ; Plut. Sulla, 10.) In swearing to a treaty with a foreign nation, a victim (a pig or a lamb) was in the early times always sacrificed by the fetialis (whence the expressions foedus iure, depra 

III. Oaths or various modes of swearing in common life. The practice of swearing or calling upon some god or gods as witnesses to the truth of assertions made in common life or in ordinary conversations, was as common among the Romans as among the Greeks. The various forms used in swearing may be divided into three classes: —

1. Simple invocations of one or more gods, as Herce or Hercherne, that is, ita me Hercules iuvet, amet, or servet (Fest. s. v. Meocstor) ; Pol. Perpol or Adepol, that is, per Pollucen ; per Jovem La-pidem or simply per Jovem ; per superos ; per deos immortales; medianus fidius, that is, ita me Dius (Aios) filius iuvet (Fest. s. v. ; Varro, de Ling. Lat. iv. p. 29, Bip.); ita me deus amet, or deus amit. Sometimes also two or a great number of gods were invoked by their names. (Plaut. Bacchid. iv. 8. 51 ; Terent. Andr. iii. 2, 25.) 

2. More oath-taking with foreign perjury was common among the Romans in their dealings with foreigners as well as among themselves.

3. Oaths or various modes of swearing in common life. The practice of swearing or calling upon some god or gods as witnesses to the truth of assertions made in common life or in ordinary conversations, was as common among the Romans as among the Greeks. The various forms used in swearing may be divided into three classes: —
men were regarded as divine beings, and persons who swore by their own genius, or by that of a friend, and during the empire by that of an emperor. (Horat. Epist. i. 7, 94 ; Suet. Calig. 27.) Women as well as men swore by most of the gods; but some of them were peculiar to one of the sexes. Thus women never swore by Hercules, and men never by Castor; Varro, moreover, said that in ancient times women only swore by Castor and Pollux, while in the extant writers we find men frequently swearing by Pollux. (Gellius, xi. 6.) Juno and Venus were mostly invoked by women, but also by lovers and effeminate men in general (Plaut. Pseudol. iii. 2. 10; Thirl. iv. 13, 15; Juvi. ii. 98; Ovid. Amor. ii. 27, ii. 8. 18.)

2. Invocations of the gods, together with an execration, in case the swearer was stating a falsehood. Execrations of this kind are, Divi me per-
dant (Plut. Mil. Glor. iii. 2. 20; Cest. i. 1. 21); dixi me interficiant (Plaut. Mostell. i. 3. 53); dis-
perseus (Horat. Sat. i. 9. 47); ne vivam (Cic. ad Fam. vii. 23; M. x. 12. 3); ne salva sim (Cic. ad At. xvi. 13), &c.

3. Persons also used to swear by the indivi-
duals or things most dear to them. Thus we have instances of a person swearing by his own or another man's head (Dig. 12. tit. 3. s. 34); Ovid, Trist. v. 4. 45; Heroid. iii. 107; Juv. vi. 16), by his eyes (Plaut. Menenoch. v. 9. 1; Ovid, Amor. ii. 16. 44), by his own welfare or that of his children (Dig. 12. tit. 2. s. 5; Plin. Epist. ii. 20), by the effect of the oath being taken or refused (jusjurandum) having this effect is necesse,

Jusu, QUOD, ACTIO, is a Praetorian actio which a man had against a father or master of a slave (dominum), if a filiusfamilias or a slave had entered into any contract at the bidding of the sion (jusu) of the father or master, for the full amount of the matter in dispute. He who thus contracted with a filiusfamilias or a slave, was not considered to deal with them on their own credit, but on that of the father or master. This Actio is classed by Gaius with the Exercitatoria and Insutitoria. (Gaius, iv. 70; Dig. 15. tit. 4. 1.)

IV. Oaths taken before the praetor or in courts of justice. There might be a jusjurandum either in jure or in judicio. The jusjurandum in jure had a like effect to the confession in jure, and it stood in the place of the Littis Contestatio (Dig. 5. tit. 1. s. 28 §2). The jusjurandum in jure is the oath which one party proposed to his adversary (detulit) that he should make about the matter in dispute; and the effect of the oath being taken or refused was equivalent to a judicium. If the defendant took the oath, he had in answer to the actio an exceptio rei in judicium deductae and rei judicatae. Thus the courts of law and the treasury were shut up, no ambassadors were received in the senate, and no auctions took place (jurisdictionem intermitti, claudi aerarium, judicia tolli, Cist. de cons. Resp. 36; Dig. 25. tit. 4. 14; Wunder's note). The Justitium was proclaimed (edicere, indicere) by the senate and the magistrates in times of public alarm and danger; and after confidence and tranquillity had been restored, the Justitium was removed (remittere, escuere) by the same authorities. (Liv. vi. 7. ix. 7, x. 21; Plut. Sol. 8, Mar. 35.) As such times of alarm are usually accompanied with general sorrow, a Justitium came in course of time to be ordained as a mark of public mourning, and under the empire was only employed for this reason. Thus we find it usually proclaimed on the death of an emperor or of a member of the imperial family. It was observed in the provinces as well as at Rome, and during its continuance the soldiers were released from their ordinary military duties. (Tac. Ann. i. 16. ii. 82; Suet. Tiber. 52, Cal. 24, Galb. 10.)

JUVE\NALIA, or JU\NE\AL\ES LUDI ("\UPE\E\E\DA\L\Ps \PE\E\Ps T\Ps \KE\ME\K\ME\ME\Ps\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\ME\M
LABYRINTHUS.

20th-second year of his age. These games were not celebrated in the circus, but in a private theatre erected in a pleasure-ground (nemus), and consisted of every kind of theatrical performance, Greek and Roman plays, mimetic pieces, and the like. The most distinguished persons in the state, old and young, male and female, were expected to take part in them. The emperor set the example by appearing on the stage; and Dion Cassius mentions a distinguished Roman matron, upwards of eighty years of age, who danced in the games. It was one of the offences given by Paetus Thrax that he had not acquitted himself with credit at this festival. (Dion. Cass. liv. 19; Tac. Ann. xiv. 15, xv. 83, xvi. 21.) Suetonius (Nor. 12) confounds this festival with the Quinquennalia, which was instituted in the following year, A.D. 69. [QUINQUENNALLA.] The Quinquennalia continued to be celebrated by subsequent emperors, but not on the same occasion. The name was given to those games which were exhibited by the emperors on the 1st of January in each year. They no longer consisted of scenic representations, but of chariot races and combats of wild beasts. (Dion Cass. lvii. 14; Sidon. Apoll. Corn. xxii. 307, 428; Capit. Cord. 4; comp. Lipsius, ad Tuc. Ann. xiv. 15.)

LABRUM. [BALNEAE, p. 191.]

LABRUM. [SITALIS, p. 190.]

LABYRINTHUS. (Λαβύρινθος). This word appears to be of Greek origin, and not of Egyptian as has generally been supposed; it is probably a derivative form of λαύριον, and etymologically connected with λαυρός. Accordingly, the proper definition of labyrinth is a large and complicated subterranean cavern with numerous and intricate passages, similar to those of a mine. (Welcker, Aeschyli. Tril. p. 212, &c.) Hence the caverns near Nauplia in Argolis were called labyrinths. (Strabo, vii. 6. p. 369.) And this is indeed the definition of labyrinth as has generally been supposed; it is probably a derivative form of λαύριον, and etymologically connected with λαυρός, and etymologically connected with λαυρός. Accordingly, the proper definition of labyrinth is a large and complicated subterranean cavern with numerous and intricate passages, similar to those of a mine. (Welcker, Aeschyli. Tril. p. 212, &c.) Hence the caverns near Nauplia in Argolis were called labyrinths. (Strabo, vii. 6. p. 369.) And this is indeed the characteristic feature of all the structures to which the ancients apply the name labyrinth, for they are always described as either entirely or partially underground.

The earliest and most renowned labyrinth was that of Egypt, which lay beyond lake Mousiris, at a short distance from the city of Crocodiles (Assiout), in the province now called Faioum. Herodotus (ii. 140) ascribes its construction to the dodecaarchs (about 650 b.c.), and Menh (i. 9) to Psammetichus alone. But other and more probable accounts refer its construction to a much earlier age. (Plin. H. N. xxxvi. 19; Diod. Sic. i. 61, 69; Strabo, xvii. p. 811.) This edifice, which in grandeur even excelled the pyramids, is described by Herodotus and Pliny (l. c.). It had 3000 apartments, 1500 underground, and the same number above it, and the whole was surrounded by a wall. It was divided into courts, each of which was surrounded by colonnades of white marble. At the time of Diodorus and of Pliny the Egyptian labyrinth was still extant. But the ruins which modern travellers describe as relics of the ancient labyrinth, as well as the place where they saw them, do not agree with what we know from the best ancient authorities respecting its architecture and its site. (British Mus. Egyptian Art, vol. i. p. 54, &c., and more especially Bunsen, Egyptennsche Stelle in der Weltgesch., vol. ii. p. 324, &c.) The purpose which this labyrinth was intended to serve, can only be matter of conjecture. It has been supposed by some writers that the whole arrangement of the edifice was a symbolical representation of the zodiac and the solar system. Herodotus, who saw the upper part of this labyrinth, and went through it, was not permitted by the keepers to enter the subterranean part, and he was told by them that there were buried the kings by whom the labyrinth had been built, and the sacred crocodiles.

The second labyrinth mentioned by the ancients was that of Crete, in the neighbourhood of Cnosus: Daedalus was said to have built it after the model of the Egyptian, and at the command of king Minos. (Plin. Diod. ii. c. c.) This labyrinth is said to have been only one hundredth part the size of the Egyptian, and to have been the habitation of the monster Minotaurus. Although the Cretan labyrinth is very frequently mentioned by ancient authors, yet none of them speaks of it as an eyewitness; and Diodorus and Pliny expressly state that not a trace of it was to be seen in their days. These circumstances, together with the impossibility of accounting for the objects which a Cretan king could have had in view in raising such a building, have induced almost all modern writers to deny altogether the existence of the Cretan labyrinth. This opinion is not only supported by some testimonies of the ancients themselves, but by the peculiar nature of some parts of the island of Crete. The author of the Etymologicum Magnus calls the Cretan labyrinth "a mountain with a cavern," and Eustathius (ad Odys. xi. p. 1688) calls it "a subterranean cavern," and similar statements are made by several other writers quoted by Meursius (Creta, pp. 67 and 69). Such large caverns actually exist in some parts of Crete, especially in the neighbourhood of the ancient town of Gortys; and it was probably some such cavern in the neighbourhood of Cnosus that gave rise to the story of a labyrinth built in the reign of Minos. (See Walpole's Travels, p. 402, &c.; Höckh, Kreta, i. p. 56, &c., and p. 447, &c.)

A third labyrinth, the construction of which belongs to a more historical age, was that in the island of Lemnos. It was commenced by Smills, an Aeginitan architect, and completed by Rhoeus and Diodorus of Samos, about the time of the first Olympiad. (Plin. l. c.) It was in its construction similar to the Egyptian, and was only distinguished from it by a greater number of columns. Remains of it were still extant in the time of Pliny. It is uncertain whether this labyrinth was intended as a temple of the Caberii, or whether it had any connection with the art of mining. (Welcker, Aeschyli. Tril. l. c.)

Samos had likewise a labyrinth, which was built by Theodorus, the same who assisted in building that of Lemnos; but no particulars are known. (Plin. H. N. xxxiv. 8.) Lastly, we have to mention a fabulous edifice in Etruria, to which Pliny applies the name of labyrinth. It is described as being in the neighbourhood of Clusium, and as the tomb of Lar Porsona. But no writer says that he ever saw it, or remains of it; and Pliny, who thought the description which
he found of it too fabulous, did not venture to give it in his own words, but quoted those of Varro, who had probably taken the account from the popular stories of the Etruscans themselves. It was said to have been built partly under and partly above ground, whence the name labyrinth is correctly applied to it. But a building like this, says Niebuhr (History of Rome, vol. i. p. 130. note 405), is absolutely impossible, and belongs to the Arabian Nights. (Comp. Abeken, Mittelitalien, p. 243.)

[L. S.]

**LACERNA (μαρκός, μαρδόνη),** a cloak worn by the Romans over the toga, whence it is called by Juvenal (ix. 28) "munimentum togae." It right shoulder by means of a buckle it in his own words, but quoted those of Varro, Arabian Nights. (Comp. Abeken, Mittelitalien, p. 243.)

It differed from the paenula in being an open garment like the Greek pallium, and fastened on the right shoulder by means of a buckle (fibula), whereas the paenula was what is called a vestimentum clausum with an opening for the head. [PARENULA.]

The Lacerna appears to have been commonly used in the army (Vel. Pat. ii. 70, 80; Ovid, Fast. ii. 746; Prop. iv. 3. 18), but in the time of Cicero was not usually worn in the city (Cic. Philipp. ii. 30.) It soon afterwards, however, became quite common at Rome, as we learn from Suetonius, who says (Aug. 40) that Augustus, seeing one day a great number of citizens before his tribunal dressed in the lacerna, which was commonly of a dark colour (pallati), repeated with indignation the line of Virgil.

"Romani rerum dominos, gentesque togatam,"

and gave orders that the Aediles should henceforth allow no one to be in the forum or circus in that dress.

Most persons seem to have carried a lacerna or paenula with them, when they attended the public games, to protect them from the cold or rain (Dion Cass. liv. 13); and thus we are told that the equites used to stand up at the entrance of Claudius and lay aside their lacernae. (Suet. Claud. 6.)

The lacerna was usually, as already remarked, of a dark colour (fuscus coloris, Mart. i. 97. 9), and was frequently made of the dark wool of the Baetic sheep (Baeticae lacernae, xiv. 133). It was, however, sometimes dyed with the Tyrian purple, and with other colours. (Juv. i. 27; Mart. i. 97.)

Martial (viii. 10) speaks of larcernae of the former kind, which cost as much as 10,000 sesterces. (Mart. xiv. 133, ed. Miiller), and therefore termed laena, a cloak worn at the entrance of Claudius and lay aside their lacernae. (Suet. Claud. 6.)

The lacerna was, as already remarked, of a dark colour (fuscus coloris, Mart. i. 97. 9), and was frequently made of the dark wool of the Baetic sheep (Baeticae lacernae, xiv. 133). It was, however, sometimes dyed with the Tyrian purple, and with other colours. (Juv. i. 27; Mart. i. 97.)

Martial (viii. 10) speaks of larcernae of the former kind, which cost as much as 10,000 sesterces. When the emperor was expected at the public games, it was the practice to wear white lacernae only. (Mart. iv. 2, xiv. 137.)

The lacerna was sometimes thrown over the head for the purpose of concealment (Hor. Sat. ii. 7. 55); but a cucullus or cowl was generally used for that purpose, which appears to have been frequently attached to the lacerna, and to have formed a part of the dress. (Mart. xiv. 139, 132.) See Becker, Gallus, vol. ii. p. 95, &c. [CUCULLUS.]

LACINIAE, the angular extremities of the toga, one of which was brought round over the left shoulder. It was generally tucked into the girdle, but sometimes was allowed to hang down loose. Plautus (Merc. i. 2. 16) indicates that it occasionally served for a pocket-handkerchief. (At tu edepol summ laciniam atque absterge sudorem tibi.) Velleius Paterculus (ii. 3) represents Scipio Nasica as wrapping the lacinia of his toga round his left arm for a shield (compare V. i. Max. iii. 2, § 17) before he rushed upon Tib. Gracchus; while, according to Servius (ad Virg. Aen. vii. 612), the Cenicos Gabinius was formed by girding the toga tight round the body by one of its laciniac or loose ends. These expressions are quite irreconcilable with the opinion of Ferrarius and others, that the lacinia was the lower border or skirt of the toga, while all the passages adduced by them admit of easy explanation according to the above view. The laciniac was undoubtedly permitted by some to sweep the ground, especially by such as wore their garments loosely. Thus Macrobius (Sat. ii. 3) remarks upon one of Cicero's witticisms, "Janus in Caesarem quaerit laciniac, ut traducat," which corresponds with the well-known caution of Sulla addressed to Pompey, "Cave tibi illum pulvere mae praecinctum;" and Suetonius tells how the emperor Caius, being filled with jealousy on account of the paediata lavished on a gladiator, hurried out of the theatre in such haste "ut calcata lacinia togae praecepserit per grudisaret." Moreover, the secondary and figurative meanings of the word, namely, a rag (Plin. H. N. xix. 7), a narrow neck of land (Id. iv. 32), the point of a leaf (Id. vi. 30), the excursion which he took from the neck of a stag (Id. viii. 50), &c., accord perfectly with the idea of the angular extremity of a piece of cloth, but can scarcely be connected naturally with the notion of a border or skirt.

The corresponding Greek term was κράτσαιδον, and perhaps πτερύγων (Pollux considers these synonymous); and accordingly Plutarch (Grach. 19) and Appian (B. C. i. 16) employ the former in narrating the story of Scipio alluded to above, with this difference, however, that they describe him as throwing το κράτσαιδον του ιαχθου over his head instead of twisting it round his arm.

[LACONICUM.]

LAENA. (BAEBL, p. 184, b. 190, b.)

LACUNAR. (DOMUS, p. 452, a.)

LACUS. (FONS, p. 544, b.)

LAENA, the same word with the Greek χαλων, and radically connected with λαχυς, lana, &c.

1. It signifies, properly, a woollen cloak, the cloth of which was twice the ordinary thickness (duarum togarum instar, Varro, de Ling. Lat. v. 123, ed. Müller), and therefore termed duplex (Festus, s. v. Laena; Serv. ad Virg. Aen. iv. 262), shaggy upon both sides (Schol. ad Juv. iii. 283), worn over the pallium or the toga for the sake of warmth. (Mart. xiv. 136.) Hence persons carried a laena with them when they went out to supper (Mart. vii. 59); and the rich man in Juvenal, who walks home at night escorted by a train of slaves and lighted on his way by flambeaux, is wrapped in a scarlet laena. (Juv. iii. 283.)

2. A robe of state, forming, it is said, in ancient times, part of the kingly dress. (Plut. Num. 7.)

3. The flamines offered sacrifice in a laena which was fastened round the throat by a clasp, and in the case of the dialis was woven by the hands of the flamínica. (Serv. ad Virg. Aen. iv. 262; Cic. Brut. 57.)

4. In later times the laena seems, to a certain extent, to have been worn as a substitute for the toga. Thus the courtly bard in Persius (i. 32) is introduced reciting his fashionable lays with a violet-coloured laena over his shoulders; and we gather from Juvenal (v. 150, viii. 73) that it was
another by a chain of runners, each of whom formed a successive chain. The first, after running a certain distance, handed it to the second, the second in like manner to the third, and so on, till it reached the point proposed. Hence the game is used by Herodotus (viii. 98) as a comparison whereby to illustrate the Persian ἀγαθοποιία, by Plato (Leg. p. 776, b) as a living image of successive generations of men, as also in the well-known line of Lucretius (i. 77).

"Et quasi cursores vital lampada tradunt."

(Compare also Anoct, ad Herenn. iv. 46.) And it is said that the art consisted in the several runners carrying the torch unextinguished through their respective distances, those who let it go out losing all share of honour. Now, if this were all, such explanation might content us. But, secondly, we are plainly told that it was an ἄγων, the runners are said ἀμμαλὴθα (Plat. Rep. l. c.); some are said to have won (νίκαν λαμπάδαν, Andoc. in Alcib. ad fin.; compare Böckh, Inscr. No. 243, 244); the Schol. on Aristoph. Ran. (l. c.) talks of τῶν ἄγων τρέχωντας, which shows that it must have been a race between a number of persons; the Schol. on the same play (v. 133) speaks of ἀδίκαια τῶν δρωμάτων, τῶν τρέχωντας, which shows that a number must have started at once.

This second account implies competition. But in a chain of runners, each of whom handed the torch to the next man successively, where could the competition be? One runner might be said to lose— he who let the torch out; but who could be said to win?

We offer the following hypothesis in answer to this question. Suppose that there were several chains of runners, each of which had to carry the torch the given distance. Then both conditions would be fulfilled. The torch would be handed along each chain, —which would answer to the first condition of successive delivery. That chain in which it travelled most quickly and soonest reached its destination would be the winner,— which would answer to the second condition, it being a race between competitors.

In confirmation of this hypothesis we observe as follows:— The inscription in Böckh, No. 245, consists of the following lines:

λαμπάδα ρειχθαν συν ἕφθοι τὴν ἡ ἀνδρα ϊς Ἐντυχίδος παῖς ὅτι Ἐντυχίδοις Ἀμνιασώς.

This Eutychides was no doubt the gymnasiarch who won the ἕφθοι he had trained, just as Andocides (l. c.) talks of his νενεκτέκτως λαμπάδας as gymnasiarch; so too Inscr. No. 250 records a like victory of the tribe Cecrops. Now we know that the gymnasiarchs were chosen one from each tribe. If then each furnished a chain of λαμπαδοφόροι, there would have been ten (in later times twelve) chains of runners. Perhaps, however, the gymnasiarchs were not all called on to perform this service, but each one only in the year, which would allow us for each of the three greater celebrations.
(the Prometheia, Panathenaea, and Hephaesteia) three or four chains of competitors.

The place of running was in the great celebrations, from the altar of the Three Gods (Prometheus, Athena, and Hephaestos) in the outer Cerameicus to the Acropolis, a distance of near half a mile. (Pausan. i. 30. § 2; Schol. ad Rom. 1085.) That in honour of Bendis was run in the Peiraeus.

(Plat. l. c.)

The origin of these games must be sought, we think, in the worship of the Titan Prometheus. The action of carrying an unextinguished light from the Cerameicus to the Acropolis is a lively symbol of the benefit conferred by the Titan upon man, when he bore fire from the habitations of the gods, and bestowed it upon man.

κλέφαι δικαίωμα τυρώς τελέσκοπον αὐχήν ἐν κόλπο νάβοθι.

(Heisid. Theog. 566. Gaisf.)

But the gratitude to the giver of fire soon passed to the Olympian gods who presided over its use,—Hephaestos, who taught men to apply it to the melting and moulding of metal, and Athena, who carried it through the whole circle of useful and ornamental arts. To these three gods, then, were the Romans Lucidus; so also to Artemis, called the Cerameicus or Potters’ quarter—we are much in doubt as to Pan, to whom a perpetual fire was kept up in the temple of the gods who gave and taught men the use of meat or fruit (Cic. ad Att. vi. 1; Hor. Sat. ii. 4, ii. 4, 41; Ovid. de Ponte, 5; Petron. 31); and consequently at sacrifices (Virg. Georg. ii. 194, 394, Aen. viii. 284, xii. 215; Ovid. de Ponte, iv. 8, 40) and funeral banquets (Propert. ii. 13. 23). The silver dishes, used by the Romans at their grand dinners, were of a vast size, so that a boar, for example, might be brought whole to table. (Hor. l. c.) They often weighed from 100 to 500 pounds. (Plin. H. N. xxxii. 52.)

The balance (Libra bilax, Mart. Cap. ii. 180) was so called, because it had two metallic dishes. (Cic. Acad. iv. 12, Tusc. v. 17; Virg. Aen. xii. 725; Pers. iv. 229.)

L'APHRIA (Adopia), an annual festival, celebrated at Patrae in Achaia, in honour of Artemis, surnamed Laphria. The peculiar manner in which it was solemnised during the time of the Roman empire (for the worship of Artemis Laphria was not introduced at Patrae till the time of Augustus), is described by Pausanias (viii. 18. § 7). On the approach of the festival the Patraeans placed in a circle, around the altar of the goddess, large pieces of green wood, each being sixteen yards in length; within the altar they placed dry wood. They then formed an approach to the altar in the shape of steps, which were slightly covered with earth. On the first day of the festival a most magnificent procession went to the temple of Artemis, and at the end of it there followed a maiden who had to perform the functions of priestess on the occasion, and who rode in a chariot drawn by stags. On the second day the goddess was honoured with numerous sacrifices, offered by the state as well as by private individuals. These sacrifices consisted of eatable birds, boars, stags, goats, sometimes of the cubs of wolves and bears, and sometimes of the wild animals themselves. All these animals were thrown upon the altar alive at the moment when the dry wood was set on fire. Pausanias says that he often saw a bear, or some other of the animals, when seized by the flames, leap from the altar and escape across the barricade of green wood. Those persons who had thrown them upon the altar, caught the devoted victims again, and threw them back into the flames. The Patraeans did not remember that a person had ever been injured by any of the animals on this occasion. (Comp. Paus. iv. 31. § 8; Schol. ad Eurip. Orest. 1087.)

LAPICIDINAE. [LACTUMINAE.]

LAPIS MILLIARIUS. [Milliarium.]

LAPIS SPECULARIS. [Domus, p. 432 a.]

LAQUEAR. [Domus, p. 432 a.]

LAQUEUS. [Domus, p. 432 a.]

LAQUEUS, a rope, was used to signify the punishment of death by strangling. This mode of execution was never performed in public, but only in prison and generally in the Tullianum. Hence we find the words career and laqueus often joined together (see e.g. Tac. Ann. iii. 50). Persons convicted of treason were most frequently put to death by strangling, as for instance the Catilinarian conspirators (laqueo gutam frefere, Sall. Cat. 55). This punishment was frequently inflicted in the reign of Tiberius (Tac. Ann. v. 9, vi. 39, 40; Suet. Tib. 61), but was abolished soon afterwards (Tac. Ann. xiv. 48).

LAQUEATORES. [Gladiatores, p. 575, b.]

LARA’RIUM was a place in the inner part of a Roman house, which was dedicated to the Lares,
and in which their images were kept and worshipped. It seems to have been customary for religious Romans in the morning, immediately after they rose to perform their prayers in the lararium. This custom is said at least to have been observed by the emperor Alexander Severus (Lamprid. Al. Sec. 29, 31), who had among the statues of his Lares those of Christ, Abraham, Orpheus, and Alexander the Great. This emperor had a second lararium, from which the first is distinguished by the epithet major, and the images of his second or lesser lararium were representations of great and distinguished men, among whom are mentioned Virgil, Cicero, and Achilles. That these images were sometimes of gold, is stated by Suetonius (Vitell. 2). We do not know whether it was customary to have more than one lararium in a house, or whether the case of Alexander Severus is merely to be looked upon as an exception. [L. S.]

LARENTAILA, sometimes written LARENTINAILA and LAURENTAILA, was a Roman festival in honour of Acca Larentia, the wife of Faunus, and the nurse of Romulus and Remus. It was celebrated in December on the 10th before the Kalends of January. (Pestus, s. v.; Macrobi. i. 10; Ovid, Fast. iii. 57.) The sacrifice in this festival was performed in the Velabrum at the place which led into the Nova Via, which was outside of the old city not far from the porta Romanula. At this place Acca was said to have been buried. (Macrobi. l. c.; Varr. de Ling. Lat. v. 23, 24.) This festival appears not to have been confined to Acca Larentia, but to have been sacred to all the Lares. (Hartung, Die Religion der Roemer, vol. ii. p. 146.)

LARES. See Dict. of Gr. and Rom. Biography and Mythology.

LARGITIO. [AMBITUS; FRUMENTARIAE LEGES.]

LARNACES (λάρνακες). [Funus p. 555, b.]

LATER. [dim. LATERCULUS (πλιθύδος, dim. πλιθύδις, πλιθύθορις,) a brick. Besides the Greeks and Romans other ancient nations employed brick for building to a great extent, especially the Babylonians (Herod. 179; Xen. Amb. iii. 4. §§ 7, 11; Nahum, iii. 14) and Egyptians. In the latter country a painting on the walls of a tomb at Thebes (Wilkinson's Manners and Customs, vol. ii. p. 99) exhibits slaves, in one part employed in procuring water, in mixing, tempering, and carrying the clay, or in turning the bricks out of the mould [forma], and arranging them in order on the ground to be dried by the sun, and in another part carrying the dried bricks by means of the yoke [asilia]. In the annexed woodcut we see a man with three bricks suspended from each end of the yoke, and beside him another who returns from having deposited his load.

These figures are selected from the above-mentioned painting, being in fact original portraits of two Αγιώτατοι πλιθύθορια, girl with linen round the loins in exact accordance with the description given of them by Aristophanes, who at the same time alludes to all the operations in the process of brick-making (πλιθύτωπαδα, Schol. in Pind. Ol. v. 20), which are exhibited in the Theban painting. (Aesch. 1132—1152; Schol. ad loc.)

The Romans distinguished between those bricks which were merely dried by the sun and air (lateres crudi, Plin. H. N. xxxv. 48; Varro, de Re Rast. i. 14; Col. de Re Rast. ix. 1; πλιθύδος ὑπάλληλος, Plin. xxxvi. 49; Vitruv. ii. 3.) It was usual to mix straw with the clay. (Vitruv. l. c.; Pallad. de Re Rast. vi. 12; Exod. v. 7.) In building a brick wall, at least crudo laterre, i. e. with unburnt bricks, the interstices were filled with clay or mud (luto, Col. l. c.), but the bricks were also sometimes cemented with mortar. (Wyttenbach, p. 65, 66.) For an account of the mode of arranging the bricks, see MURUS. The Babylonians used asphaltum as the cement. (Herod. l. c.) Pliny (vii. 57) calls the brickfield lateraria, and to make bricks latere dukere, corresponding to the Greek πλιθύθος ἑλκεως or ἐργεως. (Herod. i. 179, ii. 136.)

The Greeks considered perpendicular brick walls more durable than stone, and introduced them in their greatest public edifices. Brick was so common at Rome as to give occasion to the remark of the emperor Augustus in reference to his improvements, that, having found it brick (lateritiam), he had left it marble. (Sueton. Aug. 29.) The Babylonian bricks are commonly found inscribed with the characters called from their appearance arrow-headed or cuneiform. It is probable that these inscriptions recorded the time and place where the bricks were made. The same practice was enjoined by law upon the Roman brickmakers. Each had his mark, such as the figure of a god, a plant, or an animal, incised by his own name, often with the name of the place, of the consultant, or of the owner of the kiln or the brickfield. (Screux
It has been observed by several antiquaries, that these imprints upon bricks might throw considerable light upon the history and ancient geography of the places where they are found. Mr. P. E. Wiener has accordingly traced the 22nd legion through a great part of Germany by the bricks which bear its name. (De Leg. Rom. sec. sec., Darmstadt, 1830, p. 106—137.) In Britain many Roman bricks have been found in the country of the Silures, especially at Caer-leon, with the in

We learn from Martial's epigrams (xiv. 61, 62) that bladder was used for lanterns as well as horn. Some centuries later glass was also substituted. (Isid. Orig. xx. 16.) The most transparent horn lanterns were brought from Carthage. (Plaut. Amph. p. 21.) It was carried by a slave (Plaut. Amphit. Pro. 149, 1. 185; Val. Max. vi. 8 § 1), who was called the laterarius. (Cic. in Pis. 9.)

LATERNAN. LATINITAS. 669

Phercerates, p. 21.) All these expressions are used after the Social war to signify a certain status intermediate between that of Cicera and Peregrini. The word “Latinitas” occurs in Cicero (od Att. xiv. 12), where he is speaking of the Latinitas being given to the Siculi after Caesar's death. Before the passing of the Lex Julia de Civitate, Latin were the citizens of the old towns of the Latin nation, with the exception of those which were raised to the rank of municipia; it also comprehended the colonies Latinae. There were before the Lex Julia only two classes, Cicera and Peregrini; and Peregrini comprehended the Latini, Socii, and the Provinciales, or the free subjects of the Romans beyond the limits of Italy. About the year B.C. 89, a Lex Pompeia gave the Jus Latii to all the Transpadani, and the privilege of obtaining the Roman civitas by having filled a magistratus in their own cities. To denote the status of these Transpadani, the word Latinitas was used, which, since the passing of the Lex Julia had lost its proper signification; and this was the origin of that Latinitas which thenceforth existed to the time of Justinian.

This new Latinitas or Jus Latii was given to whole towns and countries; as for instance by Augustus to the simple of Spain

Pliny, in describing the towns of Spain, always describes the proper colonies as consisting “Civium Romanorum,” while he describes other towns as consisting sometimes “Latinorum veterum,” or as consisting of oppidani “Latii veteris,” from which an opposition between Latini Veteres and Latini might be inferred. But a careful examination of Pliny rather leads to the conclusion that his Latini Veteres and Latini are the same, and that by these
LATINITAS.

terms he merely designates the Latini Colonarii hereafter mentioned. The emendation of Niebuhr is therefore not supported by these passages of Pliny, and though ingenious, it ought perhaps to be rejected; not for the reasons assigned by Madvig, which Savyiny has answered, but because it does not appear to be consistent with the whole context of Gaius.

The new Latini had not the connubium; and it is a doubtful question whether the old Latini had it. The new Latini had the commercium.

This new Latinitas, which was given to the Transpadani, was that legal status which the Lex Junia Norbana gave to a numerous class of freedmen, hence called Latini Juniani. (Gaius, i. 22, iii. 56; Ulp. Frag. tit. i.) The date of this law is not ascertained; but it is fixed with some probability at A. U. C. 772. (Latini Juniani, by C. A. Von Vangereow, Marburg, 1833.)

The Latini Colonarii, who are mentioned by Ulpian (Frag. xix. 4 s.), are the inhabitants of towns beyond Italy, to whom the Latinitas was given. These are the towns which Pliny calls "oppida Romanorum," and enumerated with the "oppida civium Romanorum" (iii. 3), which were military colonies of Roman citizens. The passages in which the Latini Colonarii are mentioned, as a class then existing, must have been written before Caracalla gave the Civitas to the whole empire.

These, which are the views of Savyiny on this difficult subject, are contained in the Zeitschrift, vol. ix. Der Röm. Volkschluss der Tafel von Heraclea. The Latini could acquire the Jus Quiritium, according to Ulpian (Epp. tit. iii. De Latinit. in the following ways:—By the Beneficium Principale, Liberii, Iteratio, Militia, Navis, Aedificium, Piatrinium; and by a Senatus-consultum it was given to a female "vulgo quae sit enixa." These various modes of acquiring the civitas are treated in detail by Ulpian, from which, as well as the connection of this title "De Latinis" with the connection of this title, Savigny attributed to the Greeks to Palamedes (ABACUS, p. 424—426.)

The invention of a game resembling draughts was attributed by the Greeks to Palamedes (ABACUS, § 10). Comp. Rein, Das Criminalrecht der Römer, pp. 424—426.

LATRUNCULI (πεσσος, ψηφοι), draughts. The invention of a game resembling draughts was attributed by the Greeks to Palamedes (ABACUS, § 5). The game is certainly mentioned by Homer, who represents the suitors of Penelope amusing themselves with it. (Od. i. 107.) Others ascribed the invention to the Egyptian Theuth (Plat. Phaedr. p. 274 d.); and the paintings in Egyptian tombs, which are of far higher antiquity than any Greek monuments, not unfrequently represent persons employed in this recreation. The painting, from which the accompanying woodcut is taken, is on a papyrus preserved in the Museum of Antiquities at Leyden, and was probably made about 1700 years B.C. It is remarkable that a man is here represented playing alone; whereas not only in works of Egyptian art, but also on Greek painted vases, we commonly observe two persons playing together. For this purpose there were two sets of men, one set being black, the other white or red. Being intended to represent a miniature combat between two armies, they were called soldiers (milites, Ovid. Fast. ii. 477), foes (hostes), and marauders (latrones, dim. latruncaled, Ovid. Art. Amat. ii. 208, iii. 357; Mart. xiv.

LATROCN/NIUM, LATRO'NES. Armed persons, who robbed others abroad on the public roads, or elsewhere, were called Latrones, and their crime Latrocinium. Murder was not an essential part of the crime, though it was frequently an accompaniment. (Sen. de Ben. v. 14; Festus, p. 118, ed. Müller; Dig. 49. tit. 15. s. 24; 50. tit. 16. s. 118.) Under the republic, Latrones were apprehended by the public magistrates, such as consuls and praetors, and forthwith executed (Liv. xxxix. 29, 41). By the Lex Cornelia de Siccariis of the dictator Sulla, they were classed with sicarii, and punished with death, and this law continued in force in the imperial period (Paulus, v. 23; Dig. 48. tit. 19. s. 28; § 15; Sen. de Clem. ii. 1, Epist. 7; Petron. 91.) The Grasatores were another kind of robbers, who robbed people in the streets or roads. The name seems to have been originally applied to those robbers, who did not carry arms, and who followed their trade alone. They appear to have been classed with the sicarii by the Lex Cornelia; and if they used arms or were united with others in committing the robbery, they were punished in the same manner as latrones (Cic. de Fato, 15; Suet. Oct. 32; Dig. 48. tit. 19. s. 28; § 10). Comp. Rein, Das Criminalrecht der Römer, pp. 424—426.

LATRUNCULII.
LAUTUMIAE.

20; Sen. Epist. 107); also CALCULI, because stones were often employed for the purpose. (Gell. xiv. 1.) Sometimes they were made of metal or ivory, glass or earthenware, and they were various and often fanciful in their forms. The object of each player was to get one of his adversary’s men between two of his own, in which case he was entitled to take the man kept in check (Ovid, l. c.; Mart. xiv. 17), or, as the phrase was, ali- gatus (Sen. Epist. 118). Some of the men were obliged to be moved in a certain direction (ordine), and were therefore called ordinarii; others might be moved any way, and were called vagi (Isid. Orig. viii. 67); in this respect the game resembled chess, which is certainly a game of great antiquity.

Seneca calls the board on which the Romans played at droughts, tabula latrunuclaria (Epist. 116). The spaces into which the board was divided were called monandrae. (Mart. vii. 71.) The abacus, represented at page 1, is crossed by five lines. As five men were allowed on each side, we may suppose one player to arrange his five men on the lines at the bottom of the abacus, and the other to place his five men on the same lines at the top, and we shall have them disposed according to the accounts of ancient writers (Etymol. Mag. s. v. Πνεῦς: Pollux, ix. 97; Enstuth, in Hon. l. c.), who say that the middle line of the five was called κατα γραμμα. But instead of five, the Greeks and Romans often had twelve lines on the board, whence the game so played was called duodecim scripta. (Cic. de Orat. i. 50; Quintil. xi. 2; Ovid, Art. Amot. iii. 363.) Indeed there can be little doubt that the latrunuclui were arranged and played in a considerable variety of ways, as is now the case in Egypt and other Oriental countries. (Niebuhr, Reisebeschr. nach Arabien, vol. i. p. 172.)

Besides playing with draughtsmen only, when the game was altogether one of skill, the ancients used dice (Tasserae, σωλήν) at the same time, so as to combine chance with skill, as we do in backgammon or tric-trac. (Ter. Adelph. iv. 7. 23;
Isid. Orig. xviii. 60; Brunc, An. iii. 60; Becker, Gallus, vol. ii. p. 223, &c.)

LAUTUS CLAVUS. [Clavus Latus.]

LAUDATIO FUNEBRIS. [Funus, p. 559 a.]

LAURENTIA. [Larentia.]

LA TIA. [Legatus.]

LAUTUMIAE, LAUTO' MIAE, LATO' MIAE or LATU' MIAE (λατουμίαι or λατουμίαν, Lat. Lapidicinum), are literally places where stones are cut, or quarries; and in this sense the word λατουμία was used by the Sicilian Greeks. (Pseudo-Ascon. ad Cic. c. Ferr. ii. 1. p. 161, ed. Orell.) Compare Diodor. Sic. xi. 25; Plaut. Poenul. iv. 2. 5. Capt. iii. 5. 65; Festus, s. v. Latuniae.) In particular, however, the name latunumiae was given to the public prison of Syracuse. It lay in the steep and almost inaccessible part of the town which was called Epipolae, and had been built by Dionysius the tyrant. (Aelian. F. H. xii. 44; Cic. c. Ferr. v. 55.) Cicero, who had undoubtedly seen it himself, describes it (c. Ferr. v. 27) as an immense and magnificent work, worthy of kings and tyrants. It was cut to an immense depth into the solid rock, so that nothing could be imagined to be a safer or stronger prison than this, though it had no roof, and thus left the prisoners exposed to the heat of the sun, the rain, and the coldness of the nights. (Compare Thucyd. vii. 87.) The whole was a stadium in length, and two plextra in width. (Aelian. l. c.) It was not only used as a prison for Syracusan criminals, but other Sicilian towns also had their criminals often removed to it. The Tullianum at Rome was also sometimes called latuniae. [Carcher.]

LEC'TICA (κλῆνας, κλικίδιον, or φορέον) was a kind of couch or litter, in which persons, in a lying position, were carried from one place to another. They may be divided into two classes, viz., those which were used for carrying the dead, and those which served as conveniences for the living.

The former of these two kinds of lecticae (also called lectica funebria, lecticula, lectus funebris, feretrum or capulum), in which the dead were carried to the grave, seems to have been used among the Greeks and Romans from very early times. In the beauty and costliness of their ornaments these lecticae varied according to the rank and circumstances of the deceased. [Funus, p. 559 a.] The lectica on which the body of Augustus was carried to the grave, was made of ivory and gold, and was covered with costly draperies of purple and gold. (Dion Cass. lvi. 34; compare Dionys. Ant. Rom. iv. 76; Corn. Nepos, Att. 22. § 2; Tacit. Hist. iii. 67.) During the latter period of the empire public servants (lectiarii) were appointed for the purpose of carrying the dead to the grave without any expense to the family to whom the deceased belonged. (Novell. 43 and 56.) Representations of lecticae funebres have been found on several sepulchral monuments. The following woodcut represents one taken from the tombstone of M. Antonius Antonius Lupus.

(Compare Lipsius, Elect. i. 19; Scheffer, De Re Vehiculari, ii. 5. p. 89; Gruter, Inscrip. p. 954. 8; Böttiger, Sabina, vol. ii. p. 200; Agyalava, Wanderungen durch Pompeii.)

Lecticae for sick persons and invalids seem likewise to have been in use in Greece and at Rome from very early times, and their construction probably differed very little from that of a lectica funebris. (Liv. ii. 36; Aurel. Vict. De Vir. Ill. c. 34.) We also frequently read that generals in their camps, when they had received a severe wound, or when they were suffering from ill health, made use of a lectica to be carried from one place to another. (Liv. xxiv. 42; Val. Max. ii. 8. § 2; i. 7; Sueton. Aug. 91.)

Down to the time of the Gracchi we do not hear that lecticae were used at Rome for any other purposes than those mentioned above. The Greeks, however, had long been familiar with a different kind of lectica (κλῆνας or φορέον), which was introduced among them from Asia, and which was more an article of luxury than anything to supply an actual want. It consisted of a bed or mattress and a pillow to support the head, placed upon a kind of bedstead or couch. It had a roof consisting of the skin of an ox, extending over the couch and resting on four posts. The sides of this lectica were covered with curtains (αναδομά). It ap-
Lectica.

Pears to have been chiefly used by women (Suid. s. v. φοίνικος), and by men only when they were in ill health. (Ananc. ap Athen. xii. p. 533, &c.; Plut. Periclus, 27; Lysias, De Futam. Praen. p. 172; Andocid. De M. pet. p. 59; Plut. Eumen. 14.) If a man without any physic made use of a lectica, he drew upon himself the censure of his countrymen as a person of effeminate character. (Dinarch. c. Demosth. p. 29.) But in the time subsequent to the Macedonian conquests in Asia, lecticae were not only more generally used in Greece, but were also more magnificently adorned. (Plut. Arat. 17.) The persons or slaves who carried their masters or mistresses in a lectica were called φορέαρχοι (Diog. Laert. v. 4. § 73), and their number was generally two or four. (Lucian, Epist. Saturn. 20; Sos. s. Gall. 10; Cyn. 9; compare Becker, Charicles, ii. p. 71, &c.) When this kind of lectica was introduced among the Romans, it was chiefly used in travelling, and only very seldom in the city of Rome itself. The first trace of such a lectica is in a fragment of a speech of C. Gracchus, quoted by Gellius (x. 3). From this passage it seems evident that this article of luxury was introduced into Italy from Asia, and that at the time scarcely any other lectica than the lectica funebrae was known to the country people about Rome. It also appears from this passage that the lectica there spoken of was covered; otherwise the countryman could not have asked whether they were carrying a dead body. (Compare Cic. Philo. ii. 45; Petron. Sat. 9 ; Dion Cass. vii. 43.)

The resemblance of such a lectica used by the Romans to that which the Greeks had received from Asia is manifest from the words of Martial (xi. 98): lectica tuta pelle veloque. It had a roof consisting of a large piece of skin or leather expanded over it and supported by four posts, and the sides also were covered with curtains (velum, plagae, or plagulae; compare Senec. Sias. i. 6; Suet. Titi. 10). During the time of the empire, however, the curriculae were not thought a sufficient protection for a man, though they were chiefly used in journeys, and in the city of Rome itself only by ladies and invalids. (Dion Cass. ivii. 17.) The persons or slaves who carried a body in a lectica were called lecticarii (asseres), attached to it, but not fixed, so that they might easily be taken off when necessary. (Juv. i. 64; Mart. ii. 81, v. 77; Cic. c. Verr. v. 11, ad Quist. ii. 10.) Wealthy Romans kept certain slaves solely as their lecticarii (Cic. ad Fam. iv. 12); and for this purpose they generally selected the tallest, strongest, and most handsome men, and had them always well dressed. In the time of Martial it seems to have been customary for the lecticarii to wear beautiful red livories. The lectica was generally preceded by a slave called antemambulus, whose office was to make room for it. (Martial, iii. 46; Plin. Epist. iii. 14; compare Becker, Gallus, i. p. 213, &c.)

Shortly after the introduction of these lecticae among the Romans, and during the latter period of the republic, they appear to have been very common, though they were chiefly used in journeys, and in the city of Rome itself only by ladies and invalids. (Dion Cass. ivii. 17.) But in the time of Claudius it seems to have been necessary to restrain the use of lectica, and to confine the privilege of using them to certain persons of a certain age, and to certain days of the year. (Sueton. Clem. 43.)

In the reign of Claudius we find that the privilege of using a lectica in the city was still a great distinction, which was only granted by the emperor to his especial favourites. (Suet. Claud. 28.) But what until then had been a privilege became gradually a right assumed by all, and every wealthy Roman kept one or more lecticae, with the requisite number of lecticarii. The emperor Domitian, however, forbade prostitutes the use of lecticae. (Suet. Domit. 8.) Enterprising individuals gradually began to form companies (corpus lecticariorum), and to establish public lecticae, which had their stands (ostera lecticariorum) in the regio transtiberina, and probably in other parts also, where any one might take a lectica on hire. (Victor, De Regionibus. Urb. Rom. in Graevii Thesaur. iii. p. 49; Martial, iii. 46.) The persons of whom these companies consisted, were probably of the lower orders or freedmen. (Compare Gruter, Inscriptioni. 599. 11, 600. 1.)

The legicae of which we have hitherto spoken, were all portable, i.e. they were constructed in such a manner that the asseres might easily be fastened to them whenever it was necessary to carry a person in them from one place to another. But the name lectica, or rather the diminutives lecutula, was also sometimes applied to a kind of

Lectica.
LECTUS.

sofa, which was not moved out of the house. On it the Romans frequently reclined for the purpose of reading or writing, for the ancients when writing seldom sat at a table as we do, but generally reclined on a couch; in this posture they raised one knee, and upon it they placed the parchment or tablet on which they wrote. From this kind of occupation the sofa was called lectica (Quenuer- toria (Suet. Aug. 78), or more commonly lectetus. (Plin. Epist. v. 5; Ovid, Trist. i. 11. 38; compare Alstorph, De Lectios Venerum Diatriba, Amsterdam, 1704.)

LECTICA'RI. [LECTICA.]

LECTISTERNIUM. Sacrifices being of the nature of feasts, the Greeks and Romans on occasion of extraordinary solemnities placed images of the gods reclining on couches, with tables and viands before them, as if they were really partaking of the things offered in sacrifice. This ceremony was called a lectisternium. Three specimens of the couches employed for the purpose are in the Glyptotek at Munich. The woodcut here introduced exhibits one of them, which is represented with a cushion covered by a cloth hanging in ample folds down each side. This beautiful pul-

vinae (Sueton. Jul. 76; Corn. Nep. Timoth. 2) is wrought altogether in white marble, and is some-

what more than two feet in height. At the Epulum Jovis, which was the most noted lectisternium at Rome, and which was celebrated in the Capitol, the statue of Jupiter was laid in a reclining posture on a couch, while those of Juno and Minerva were seated on chairs by his side; and this distinction was observed in allusion to the persons for whose use it was destined; for in some cases we find that it was made of solid ivory or maple or box-wood, or veneered with a coating of some more expensive wood. At a later period, bedsteads were not only made of solid ivory or silver feet. (Pollux, x. 34, vi. 9.) Sometimes, however, the bottom part of a bedstead was likewise protected by silver feet, so that in this case the Greek bedstead resembled a modern so-called French bed-

stead. The κλίτη was generally made of wood, which in quality varied according to the means of the persons for whose use it was destined; for in some cases we find that it was made of solid maple or box-wood, or veneered with a coating of these more expensive woods. At a later period, bedsteads were not only made of solid ivory or veneered with tortoise-shell, but sometimes had silver feet. (Pollux, x. 84, vi. 9.) Sometimes, however, the cover or tablet on which the bed or mattress was supported was made of skins (καέα) upon which the ρήγα was placed, and over these linen sheets or carpets were spread; the χαλία, lastly, served as a cover or blanket for the sleeper. (Odys. iv. 296, &c.; II. xxiv. 643, &c.; ix. 608, &c.) Poor persons slept on skins or beds of dry herbs spread on the ground. (Odys. xiv. 519; xx. 139, &c.; xi. 180, &c.; compare Nitzsche, Zur Odys. vol. i. p. 210.) These simple beds, to which after the Homeric age a pillow for the head was added, continued to be used by the poorer classes among the Greeks at all times. Thus the bed of the orator Lycurgus is said to have consisted of one sheep-skin (κωδιον) and a pillow. (Plut. Vit. Dec. OraL Lycurg. p. 842. c.) But the complete bed (εῦδρ) of a wealthy Greek in later times, generally consisted of the following parts: κλίτη, ἐπιτοσον, τυλειον ον κηφαλον, προσκεφαλειον, and αμφυάματα. The κλίτη is properly speaking only the bed-

stead, and seems to have consisted only of posts fitted into one another and resting upon four feet. At the head part alone there was a board (ἀνάκλιντων or ἐπικλιντων) to support the pillow and prevent its falling out. Sometimes the ἀνάκλιντων was wanting, as we see in drawings on ancient vases. (Pollux, x. 84, vi. 9.) Sometimes, however, the bottom part of a bedstead was likewise protected by silver feet, so that in this case the Greek bedstead resembled a modern so-called French bed-

stead. The κλίτη was generally made of wood, which in quality varied according to the means of the persons for whose use it was destined; for in some cases we find that it was made of solid maple or box-wood, or veneered with a coating of these more expensive woods. At a later period, bedsteads were not only made of solid ivory or veneered with tortoise-shell, but sometimes had silver feet. (Pollux, l. c.; Aelian, V. H. xii. 29; Athen. vi. p. 255.)

The bedstead was provided with girdles (τόλυν, ἐπιτοσον, κεφαρία) on which the bed or mattress (κηφαλον, τυλειον, κωνας or τόλυ) rested; in-

stead of these girdles poorer people used strings. (Aristoph. Aτ. 814, with the Schol.) The cover or ticking of a mattress was made of linen or wool-

len cloth, or of leather, and the usual material with which it was filled (το ἐμβαλλεμένον, πλεξωμα, κηφαλας, or γαβάλας) was either wool or dried weeds. At the head part of the bed, and supported by the επικλιντων, lay a round pillow (προσκεφαλειον)
to support the head; and in some ancient pictures two or three square pillows are seen, which were intended to support the back. The covers of such pillows are striped in several pictures on ancient vases (see the woodcut under Symposium), and were probably of various colours. They were undoubtedly filled with the same materials as the beds and mattresses.

The bed-covers, which may be termed blankets or counterpanes, were called by a variety of names, such as periostróma, ὑποστρóma, ἐπιθέλιαμα, ἐστρόπιδες, χαλαίνα, ἄμεροστρόπιδες, ἔπιθελαια, δα-πίδες, ψυλλοδίκες, ἑωτίδες, χρύσαπτα, τάπητες or οἴον, and in the common name, however, was στρώματα. They were generally made of cloth, which was very thick and woolly either on one or on both sides. (Pollux, vi. 9.) It is not always easy to distinguish whether the ancients, when speaking of κλίνα, mean beds in our sense of the word, or the couches on which they lay at meal times. We consequently do not know whether the descriptive epithets of κλίνα, enumerated by Pollux, belong to beds or to couches. But this matters little, as there was scarcely any difference between the beds of the ancient and their couches, with this exception, that the latter being made for appearance as well as for comfort, were, on the whole, undoubtedly more splendid and costly than the former. Considering, however, that bedsteads were often made of the most costly materials, we may reasonably infer that the coverings and other ornaments of beds were little inferior to those of couches. Notwithstanding the splendour and comfort of many Greek beds, the Asiatics, who have at all times excelled the Europeans in these kinds of luxuries, said that the Greeks did not understand how to make a comfortable bed. (Athen. ii. p. 48 ; Plut. Polyp. 30.) The places most celebrated for the manufacture of splendid bed-covers were Miletus, Corinth, and Carthage. (Aristoph. Rom. 410, 542, with the Schol.; Lyisistr. 732 ; Cic. c. Verr. i. 34 ; Athen. i. pp. 27, 28.) It appears that the Greeks, though they wore night-gowns, did not simply cover themselves with the στρώματα, but wove them up in them. Less wealthy persons continued, according to the ancient custom, to use skins of sheep and other animals, especially in winter, as blankets. (Pollux, x. 123 ; Aristoph. Nub. 10.)

The bedsteads of the poorer classes are designated by the names σκλημώνοι, ἀσκέτις, and κεκάςτος, and an exaggerated description of such a bed is given by Aristophanes. (Plut. 540, &c.; compare Lyisistr. 916.) The words χαμεληνα and χαμεληνα, which originally signified a bed of straw or dry herbs made on the ground (Theocrit. iii. 53 ; Plut. Lyc. 10), were afterwards applied to a bed which was only near the ground, to distinguish it from the κλίνη which was generally a high bedstead. χαμεληνα were the usual beds for slaves, soldiers in the field, and poor citizens, and the mattresses used in them were mere mats made of rushes or bast. (Pollux, l. c., and vi. 11 ; Becker, Chart. vol. ii. pp. 114—122 ; Pollux, x. c. 7, 8, vi. 1.)

The beds of the Romans (lecti cubicularia) in the earlier periods of the republic were probably of the same description as those used in Greece; but towards the end of the republic and during the empire, the luxury of the wealthy Romans far surpassed everything we find described in Greece. The bedstead was generally rather high, so that persons entered the bed (scander, ascendere) by means of steps placed beside it (suumum, Varro, de Ling. Lat. v. 168 ; Müller ; Ovid. Fast. ii. 349, &c.). It was sometimes made of metal, and sometimes of costly kinds of wood or veneered with tortoise-shell or ivory; its feet (fulera) were frequently of silver or gold. (Plin. xvi. 43 ; Mart. xii. 67 ; Juvi. xi. 94.) The bed or mattress (cubica and torus) rested upon girts or strings (rutes, fasces, institae, or fuses) which connected the two horizontal side-posts of the bed. (Cic. de Div. ii. 65 ; Mart. v. 62 ; Sueton. Aug. v. 42 ; Horat. Epod. xii. 12 ; Cato, de Rer Rust. c. 10.) In beds destined for two persons, the two sides are distinguished by different names; the sides at which persons entered was open, and bore the name of sponda; the other side, which was protected by a board, was called pleutes. (Isidor. xx. 11. p. 629, ed. Luidemann.) The two sides of a such a bed are also distinguished by the names torus exterior and torus interior, or sponda exterior and sponda interior (Ovid. Amor. iii. 14. 32 ; Sueton. Caes. 49.) and from these expressions it is not impossible that such lecth had two beds or mattresses, one for each person. Mattresses were in the earlier times filled with dry herbs (Varro, l. c.; Ovid. Fast. i. 200 and 203), or straw (Horat. Sat. ii. 3. 117 ; Mart. xiv. 160 ; Senec. De Vit. Beat. c. 25), and such beds continued to be used by the poor. But in subsequent times wool, and at a still later period, feathers were used by the wealthy for the beds as well as the pillows. (Plin. H. N. viii. 48, x. 22 ; Plut. Mil. Glor. iv. 4. 2 ; Cic. Thee. iii. 19 ; Mart. xiv. 161 and 159.) The cloth or ticking (peperinentum or involucrum), with which the beds or mattresses were covered, was called toral, torale, linetum, or segetes. (Horat. Sat. ii. 4. 84, Epist. i. 5. 21 ; Varro, l. c.) The blankets or counterpanes (vestes stragulae, stragula, peristromata, peripetasma) were in the houses of wealthy Romans of the most costly description, and generally of a purple colour (stragula conchygio tineta, peristromata conchigiatia, coccina stragula) and embroidered with beautiful figures in gold. Covers of this sort were called peripetasma Antar was, because they were said to have been first used at the court of Attalus. (Plin. H. N. l. c.; Cic. c. Verr. iv. 12, 26 ; Philip. ii. 27 ; Mart. ii. 16.) The pillows were likewise covered with magnificent casings. Whether the ancients had curtains to their beds is not mentioned anywhere; but as curtains, or rather a kind of canopy (avbiesa), were used in the lectus trieliniaris (Horat. Carm. iii. 29. 15, Suet. ii. 8, 54) for the purpose of preventing the dust falling upon the persons lying on it, it is not improbable that the same or a similar contrivance was used in the lectus cubicularius.

The lectus genialis or adversus was the bridal bed which stood in the atrium, opposite the janua, whence it derived the epithet adversus. (Horat. Epist. i. 1. 87 ; Festus, s. v.; comp. Domus, p. 428 a.) It was generally high, with steps by its side, and in later times beautifully adorned. (Geillius, xii. 9 ; Lucan. ii. 355 ; Cic. pro Cluent. c. 5.)

Respecting the lectus funebris see the articles Funus and Lecta. An account of the disposition of the couches used at entertainments, and
of the place which each guest occupied, is given under TRICLINIUM. (Becker, Gallias, vol. l. p. 42, &c.)

LECYTHUS (λεγνος), a small narrow-mouthed vessel, the principal use of which was to hold oil, for anointing after the bath, and in the palaestra. It was sometimes of leather, but more often of earthen-ware. Numerous terra-cotta vessels of this sort exist, of an oval shape, holding about a pint, generally painted a plain dark brown or black, but sometimes a bright colour, while a few examples are adorned with beautifully executed paintings. Most of them are the productions of the Athenian potters. (Hom. Od. vi. 79 ; Krause, Gymn., u. Agon., vol. i. p. 189, and in Pauly's Rech. Ency., 2. X. x.) [P. S.]

LEGATIO LIBERA. [LEGATUS, p. 678, b.]

LEGATUM is defined (Dig. 30. a. 116) to be

"dilehatio hereditatis qua testator ex eo quod universal heredis foret aliquid quid collatam velit." This singular succession presupposes a universal succession, for if there is no heres ex testamento person loco heredis, there can be no legacy. A Legatum then is a part of the hereditas which a testator gives out of it, from the heres (ab herede); that is, it is a gift to a person out of that whole (exterum) which is diminished to the heres by such gift. Accordingly the phrase "ab herede legare" thus becomes intelligible. (Dig. 30. a. 116 ; "ei testamento legit grandem pecuniam a filio," Cic. pro Client. 12.) A legatee could not be charged with the payment of a legacy out of what was given to him, a rule of law which was thus expressed, "A legatario legari non potest." A legatum was something given according to the Jus Civile, and therefore could only be given inutile. "A Legatum," he says, "is that property which is left by a testament, which he afterwards alienated, but as the matter of legacies is not intelligible to the vulgar, I shall not acquire the Quiritarian ownership of the legacy. The two schools raised a question as to this, Whether under such circumstances, the legatee obtained the Quiritarian ownership of the thing before he had consented to take it. The opinion of the Proculliani who contended for such consent, was confirmed by a Constitution of Antoninus Pius (Gaius, ii. 195). It was consistent with the nature of the Per Vindicationem, that those things only could be so given, in which the testator had the Quiritarian ownership: and it was also necessary that he should have such ownership both at the time of making his will and at the time of his death; otherwise the legacy was void (inutile). If there was an exception in respect of things "quaes pendere, numerum, mensura constant," as vine, oil, corn, and the precious metals in the form of coin (pecunia numera), in regard to which it was sufficient if the testator had the Quiritarian ownership at the time of his death. By a senatusconsultum of the time of Nero, it was enacted that if a testator left a thing as a legacy, which had never been his, the legatee should be equally good as if it had been left in the form most advantageous to the legatee (optimo jure), which form was the Legatum per damnationem. But if a testator gave a thing of his own by a testament, which he afterwards alienated, it was the best opinion that the legacy was inutile by the Jus Civile, and that the Senatusconsultum did not make it good. If the same thing was given to more than one person either jointly (conjunctim) so as to make them collegatarii, or severally (disjunctim), each took an equal share. A legatum was given conjunctim thus: "Titio et Scio hominem Stichum do, lego;" disjunctim, thus: "Titio hominem Stichum do, lego ; Scio eundem hominem Stichum do, lego." This lawsuit on the Quiritarian ownership was to take, his portion went to the others. In the case of a conditional legacy left per vindicationem, the schools were divided in opinion; the Scabini said that it was the property of the herses during the pendency of the condition; the Proculliani said that it was "res nullius." The form of the Per damnationem was this: Heres mens Stichum servum meum dare damnas esto; but the word Dato was equally effective. A thing which belonged to another (alena res) could be thus left, and the herses was bound to procure the thing for the legatee or to pay him the value of it. A thing not in existence at the date of the will might be left by this form, as the future produce of a female slave (auscilia). The legatee did not acquire the Quiritarian ownership of the legacy by virtue of the hereditatis aditio: the thing still remained the property of the herses, but the effect of the legatum was to establish an obligatio between the herses and the legatee, who could sue for it by an Actio in personam. If it was a thing Mancipi, the legatee could only acquire the Quiritarian ownership. The form of the Per damnationem was this: Heres mens Stichum servum meum dare damnas esto; but the word Dato was equally effective. A thing which belonged to another (alena res) could be thus left, and the herses was bound to procure the thing for the legatee or to pay him the value of it. A thing not in existence at the date of the will might be left by this form, as the future produce of a female slave (auscilia). The legatee did not acquire the Quiritarian ownership of the legacy by virtue of the hereditatis aditio: the thing still remained the property of the herses, but the effect of the legatum was to establish an obligatio between the herses and the legatee, who could sue for it by an Actio in personam. If it was a thing Mancipi, the legatee could only acquire the Quiritarian ownership. The form of the Per damnationem was this: Heres mens Stichum servum meum dare damnas esto; but the word Dato was equally effective. A thing which belonged to another (alena res) could be thus left, and the herses was bound to procure the thing for the legatee or to pay him the value of it. A thing not in existence at the date of the will might be left by this form, as the future produce of a female slave (auscilia). The legatee did not acquire the Quiritarian ownership of the legacy by virtue of the hereditatis aditio: the thing still remained the property of the herses, but the effect of the legatum was to establish an obligatio between the herses and the legatee, who could sue for it by an Actio in personam. If it was a thing Mancipi, the legatee could only acquire the Quiritarian ownership. The form of the Per damnationem was this: Heres mens Stichum servum meum dare damnas esto; but the word Dato was equally effective. A thing which belonged to another (alena res) could be thus left, and the herses was bound to procure the thing for the legatee or to pay him the value of it. A thing not in existence at the date of the will might be left by this form, as the future produce of a female slave (auscilia). The legatee did not acquire the Quiritarian ownership of the legacy by virtue of the hereditatis aditio: the thing still remained the property of the herses, but the effect of the legatum was to establish an obligatio between the herses and the legatee, who could sue for it by an Actio in personam. If it was a thing Mancipi, the legatee could only acquire the Quiritarian ownership. The form of the Per damnationem was this: Heres mens Stichum servum meum dare damnas esto; but the word Dato was equally effective. A thing which belonged to another (alena res) could be thus left, and the herses was bound to procure the thing for the legatee or to pay him the value of it. A thing not in existence at the date of the will might be left by this form, as the future produce of a female slave (auscilia). The legatee did not acquire the Quiritarian ownership of the legacy by virtue of the hereditatis aditio: the thing still remained the property of the herses, but the effect of the legatum was to establish an obligatio between the herses and the legatee, who could sue for it by an Actio in personam. If it was a thing Mancipi, the legatee could only acquire the Quiritarian ownership. The form of the Per damnationem was this: Heres mens Stichum servum meum dare damnas esto; but the word Dato was equally effective. A thing which belonged to another (alena res) could be thus left, and the herses was bound to procure the thing for the legatee or to pay him the value of it. A thing not in existence at the date of the will might be left by this form, as the future produce of a female slave (auscilia). The legatee did not acquire the Quiritarian ownership of the legacy by virtue of the hereditatis aditio: the thing still remained the property of the herses, but the effect of the legatum was to establish an obligatio between the herses and the legatee, who could sue for it by an Actio in personam. If it was a thing Mancipi, the legatee could only acquire the Quiritarian ownership. The form of the Per damnationem was this: Heres mens Stichum servum meum dare damnas esto; but the word Dato was equally effective. A thing which belonged to another (alena res) could be thus left, and the herses was bound to procure the thing for the legatee or to pay him the value of it. A thing not in existence at the date of the will might be left by this form, as the future produce of a female slave (auscilia). The legatee did not acquire the Quiritarian ownership of the legacy by virtue of the hereditatis aditio: the thing still remained the property of the herses, but the effect of the legatum was to establish an obligatio between the herses and the legatee, who could sue for it by an Actio in personam. If it was a thing Mancipi, the legatee could only acquire the Quiritarian ownership. The form of the Per damnationem was this: Heres mens Stichum servum meum dare damnas esto; but the word Dato was equally effective. A thing which belonged to another (alena res) could be thus left, and the herses was bound to procure the thing for the legatee or to pay him the value of it. A thing not
tarian ownership of it by Mancipatio or In jure cessio from the heres; if it was merely delivered, the legatarius only acquired the complete ownership (plenum jus) by usucapion. If the same thing was left to two or more conjunctim, each had an equal share; if disjunctim, the heres was bound to give the thing to one and its value to the rest. In the case of a gift conjunctim the share of the legatee who failed to take belonged to the testator. The Legatum Sinendi modo was thus given: “Heres meus damnas esto sinere Lucium Titium hominem Stichum sumere sibique habere;” by which form a testator could give either his own property or that which was the property of his heres at the time of the death. As in the case of a legatum per damnationem, the legatee prosecuted his claim by an Actio in personam. It was doubted whether the heres was bound to transfer the property, in the case of a res mancipi, by mancipatio or in jure cessio; or, in the case of a thing needed by the legatee, by traditio or delivery, for the words of the gift are “permit him to take.” If the same thing was left to several conjunctim, they took it in common, but without any jus accrescendi if one of them failed to take. It was a still more doubtful question (in the time of Gaius), whether, if the same thing was given in this way to two severally (disjunctim), the whole was due to each, or if the heres was released from all further claim, when either of them had obtained possession of the whole with his permission.

The Legatum per praeceptionem was in this manner: “Lucius Titius hominem Stichum Pracepito;” where “pracepito,” in the opinion of the Sabinianii, is the same as “praecipium sumito,” or “take first.” The Sabinianii accordingly were of opinion that a legacy could only thus be left to one who was also made a heres; but a Senatusconsultum Neronianum made the legacy good, even if it was thus left to an extraneus, that is, to an uncertain person. If the same thing was given in this way to two severally (disjunctim), the whole was due to each, or if the heres was released from all further claim, when either of them had obtained possession of the whole with his permission. The consequence was that in such cases the scriptio heredes refused to take the hereditas, and there was of course an intestacy.

The first legislative measure on this subject was the Lex Falcidia (B. c. 40) at last took away all means of evasion by declaring that a testator should not give more than three-fourths in legacies, and thus a fourth was secured to the heredes; and “this law,” says Gaius, “is now in force.” The Senatusconsultum Pegasusianum extended the same rule of law to fidiecommissee [FIDEICOMMISSUM]; and the Emperor Antoninus applied it to the case of fideicommissa, when there was an intestacy. (Dig. 35. tit. 2. s. 18.) The Lex Falcidia (n. c. 40) applied the property of persons who died in captivity (apud hostes), for a previous Lex Cornelia had given to the wills of such persons the same force as if they had died cives (in civitate, Dig. 35. tit. 2. s. 1).

Legata were inutilia or void, if they were given before a heres was instituted by the will, for the will derived all its legal efficacy from such institution; there was the same rule as to a gift of freedom. It was an inutil legatum, if in form the gift was given after the death of the heres, but it might be given on the event of his death; it was also inutil if given in form on the day before the death of the testator, for which rule of law, says Gaius, there seems to be no good reason (pretiosa ratio). A legatum could not be left in the way of a penalty (poenae nomine), that is, for the purpose of compelling the heres to do or restraining him from doing any particular act: but Justinian made all such legata good, except those which were impossible, or forbidden by law or against boni mores (probrosa) (Inst. 2. tit. 2. s. 36). A legacy could not be left to an uncertain person (uncerta.
legatum had become his (post diem legati cedentem), it passed to his heres; or to use a phrase of English law, the legacy was vested. The phrase "dies legati cedit" accordingly means "the time is come at which the legacy belongs to the legatee," though the time may not have come when he is entitled to receive it; and "dies venit" denotes the arrival of the day on which it can be demanded. (Dig. 50. tit. 16. s. 213.) If the legacy was left conditionally there was no vesting till the condition was fulfilled. By the old law, legacies which were left unconditionally or from a time named (in diem certum) were vested from the time of the testator's death; but by the Lex Papia they vested from the time of opening the will. The legacy might vest immediately on the death of the testator and yet the testator might defer the time of payment. (Dig. 36. tit. 2. s. 21.) A legacy might also be left on a condition of time only, as a legacy to Titius when or if he should attain the age of fourteen years, in which case the words when and if were considered equivalent, a decision which has been adopted in English law, in cases in which there is nothing in the will which gives the words "when" or "if" a different signification. (Dig. 36. tit. 2. s. 5.22; Hanson v. Graham, 6 Ves. p. 213.)

(Gaius, ii. 191—245; Ulp. Frag. tit. xxiv. &c.; Dig. 30—32, &c.; Inst. ii. tit. 20—22; Paulus, S. R. iii. tit. 6.) [Fideicommissum.] [G. L.]

LEGATUS. Legati may be divided into three classes: 1. Legati or ambassadors sent to Rome by foreign nations; 2. Legati or ambassadors sent from Rome to foreign nations and into the provinces; 3. Legati who accompanied the Roman generals into the field, or the proconsuls and praetors into the provinces.

I. Foreign legati at Rome, from whatever country they came, had to go to the temple of Saturn and deposit their name with the quaestors, which Plutarch (Quaest. Rom. p. 275, b.) explains as a remnant of an ancient custom; for formerly, says he, the quaestors sent presents to all legati, which were called lautia, and if any ambassador was taken ill at Rome, he was immediately sent to a hospitable house who, if he died, had also to pay the expenses of his burial from the public treasury. When afterwards the number of foreign ambassadors increased in proportion as the republic became extended, the former hospitable custom was reduced to the mere formality of depositing the name with the keepers of the public treasury. Previous to their admission into the city, foreign ambassadors seem to have been obliged to give notice from what nation they came and for what purpose; for several instances are mentioned in which ambassadors were prohibited from entering the city, especially in case of a war between Rome and the state from which they came. (Liv. xxx. 21, xii. 36, xlv. 22.) In such cases the ambassadors were either not heard at all, and obliged to quit Italy (Liv. xiii. 36), or an audience was given to them by the senate (senatus legatis datur) outside the city, in the temple of Bellona. (Liv. i. c.; xxx. 21.) This was evidently a sign of mistrust, but the ambassadors were nevertheless treated as public guests, and some public villa outside the city was sometimes assigned for their reception. In other cases, however, as soon as the report of the landing of foreign ambassadors on the coast of Italy was brought to Rome, especially if they were persons of great distinction, as the son of Masinissa (Liv. xiv. 13), or if they...
came from an ally of the Roman people, some one of the inferior magistrates, or a legatus of a consul, was despatched by the senate to receive and conduct them to the city at the expense of the republic. When they were introduced into the senate by the praetor or consul, they first explained what they had to communicate, and then the praetor invited the senators to put their questions to the ambassadors. (Liv. xxx. 22.) The manner in which this questioning was frequently carried on, especially when the envoys came from a state with which the Romans were at war, required more of the cross-questioning of a witness in a court of justice, than an inquiry made with a view to gain a clear understanding of what was proposed. (Liv. l. c. with Gronov's note.) The whole transaction was carried on by interpreters, and in the Latin language. [INTERPRETES.] Valerius Maximus (ii. 2. § 3) states that the Greek rhetorician Molo, a teacher of Cicero, was the first foreigner who ever addressed the Roman senate in his own tongue. After the ambassadors had thus been examined, they were requested to leave the assembly of the senate, who now began to discuss the subject brought before them. The result was communicated to the ambassadors by the praetor. (Liv. viii. 1.) In some cases ambassadors not only received rich presents on their departure, but were at the command of the senate conducted by a rhetorician Molo, a teacher of Cicero, was the first

All ambassadors, whencesoever they came, were considered by the Romans throughout the whole period of their existence as sacred and inviolable. (Cic. ad Fam. vi. 6, pro Leg. Manil. 19,) but the sanction of the senate (senatusconsultum) was an essential point without which no one could be legally considered a legatus (Cic. c. Vatin. i. c., pro Sext. 14;) and from Livy (xiii. 1; compare xiv. 18) it appears that the nomination by the magistrates (consul, praetor, or dictator) did not take place until they had been authorised by a decree of the senate. The persons appointed to this office were usually men of great military talents, and it was their duty to advise and assist their superior in all his undertakings, and to act in his stead both in civil and military affairs. (Varro, de Ling. Lat. v. 87, Müller.) The legati were thus always men in whom the consul placed great confidence, and were frequently his friends or relations; but they had no power independent of the command of their general. (Caes. de Bell. Civ. ii. 17, iii. 51; Appian, de Bell. Civ. i. 38.) Their number varied according to the greatness or importance of the war, or the extent of the province: three is the smallest number we know of but Pompey, when in Asia, had fifteen legati. When the consuls were absent from the army, or when a proconsul left his province, the legati or one of them took his place, and then had the insignia as well as the power of his superior. He was in this case called legatus pro praetore (Liv. xxix. 9; Lydus, de Magistr. iii. 3; Caes. de Bell. Gall. i. 21), and hence we sometimes read that a man governed a province as a legatus without any mention being made of the proconsul whose viceregent he was. (Sallust. Cat. 42.) During the latter period of the republic, it happened that a consul carried on a war, or a proconsul governed his province through his legati, while he himself remained at Rome, or conducted some other more urgent affairs. When the provinces were divided at the time of the empire [PROVINCIA], those of the Roman people were governed by men who had either been consuls or praetors, and the former were always accompanied by three legati, the latter by one. (Don Cass. ii. 13; Dig. i. tit. 16.) The provinces of the emperor, who was himself the proconsul, were governed by persons whom the emperor himself appointed, and who had been consuls or praetors, or were at least senators. These viceregerents of the emperors were called legati Augusti pro praetore, legati praetorii, legati consulares, or simply legati, and they, like the governors of the provinciae populi Romani, had one or three legati as their assistants. (Strabo, iii. p. 303; compare Dig. i. tit. 16. s. 7; Theol. Ann. xii. 59, Agricol. c. 7; Spanheim, de Usu et praet. Nunum. ii. p. 555.)

During the latter period of the republic it had become customary for senators to obtain from the senate the permission to travel through or stay in any province at the expense of the provincials, merely for the purpose of managing and conducting their own personal affairs. There was no restraint as to the length of time the senators were allowed to avail themselves of this privilege, which was a heavy burden upon the provincials. This mode of sojourning in a province was called legatio libera, because those who availed themselves of it enjoyed all the privileges of a public legatus or ambassador, without having any of his duties to perform. At the time of Cicero the privilege of
legatio libera was abused to a very great extent. Cicero, therefore, in his consilium endeavoured to put an end to it, but owing to the opposition of a tribune, he only succeeded in limiting the time of its duration to one year. (Cic. de Leg. iii. 8. de Leg. Agr. i. 3, pro Flacc. 34, Philipp. i. 2.) Julius Caesar afterwards extended the time during which a senator might avail himself of legatio libera to five years (Cic. de Leg. Agr. i. 5), and this law of Caesar (Lex Julia) seems to have remained in force down to a very late period. (Suet. Julius Caesar afterwards extended the time during which a senator might avail himself of legatio libera to five years (Cic. de Leg. Agr. i. 5), and this law of Caesar (Lex Julia) seems to have remained in force down to a very late period. (Suet. Tiber. 31; Dig. 50. tit. 7. s. 14.) [L. S.]

they were performed also were divided into leitourgía politikai, such as were incumbent upon citizens, and leitourgía tôn metoików. (De- moth. c. Lept. p. 462.) The only liturgies which are mentioned as having been performed by the metoikoi, are the choregia at the festival of the Lenea (Schol. ad Aristoph. Plut. 954), and the kératería (Ulpian, ad Demosth. Lept. § 15), to which may be added the hieraiporia and skideaphoria. [HYDRIAPHORIA.]

That liturgies were not peculiar to Athens, has been shown by Röckh (Pub. Econ. &c. p. 299), for choregia and other liturgies are mentioned at Siphnos (Isocrit. Aeginit. c. 17); choregia in Aegina even before the Persian wars (Herod. v. 83); in Mytilene during the Peloponnesian war (Antiph. de Caed. Herod. p. 744); at Thebes in the time of Epanoimondas (Plut. Aristid. 1); at Orchomenos, in Rhodes, and in several towns of Asia Minor. (Compare Wolf, Prolegom. in De- moth. Lept. p. lxxxi. &c.; Wachamuth, vol. ii. p. 92, &c.)

LEMBUS, a skiff or small boat, used for carrying a person from a ship to the shore. (Plaut. Merc. i. 2. 81, ii. 1. 33.) The name was also given to the light boats which were sent ahead of a fleet to obtain information of the enemy's movements. (Isidor. Orig. xix. 1; Liv. xxxi. 43, xiv. 10.) Pliny (H. N. vii. 56, s. 57) attributes their invention to the inhabitants of Cyrene.

LEMNISCUS (ΛΜΝΙΣΧΟΣ). This word is said to have originally been used only by the Syracuseans. (Hesych. s. e.) It signified a kind of coloured ribbon which hung down from crowns or diadems at the back part of the head. (Fast. s. r.) The earliest crowns are said to have consisted of wool, so that we have to conceive the lemniscus as a ribbon wound around the wool in such a manner that the two ends of the ribbon, where they met, were allowed to hang down. See the representations of the corona obidionalis and civicia in p. 359, where the lemnisci not only appear as a means to keep the little branches of the crowns together, but also serve as an ornament. From the remark of Servius (ad Aen. v. 269) it appears that coronae adorned with lemnisci were a greater distinction than those without them. This serves to explain an expression of Cicero (palma lemniscata, pro Rose. Am. 35) where palma means a victory, and the epiteth lemniscata indicates the contrary of infamias, and at the same time implies an honourable as well as lucrative victory. (Comp. Auson. Epist. xx. 5.)

It seems that lemnisci were also worn alone and without being connected with crowns, especially by ladies, as an ornament for the head. (Plin. H. N. xxi. 3.) To show honour and admiration for a person, flowers, garlands, and lemnisci were sometimes showered upon him while he walked in public. (Casaub. ad Suet. Ner. 25; Liv. xxxiii. 19.)

Lemnisci seem originally to have been made of wool, and afterwards of the finest kinds of bast (philopterun. (Plin. H. N. xxv. 14)); but during the latter period of the republic the wealthy Cnossus not only made the foliage or leaves of thin sheets of gold and silver, but the lemnisci likewise; and P. Claudius Pulcher embellished the metal lemnisci with works of art in relief and with inscriptions. (Plin. H. N. xxi. 3.)

The word lemniscus is used by medical writers in the signification of a kind of liniment applied to wounds. (Celsus, vii. 28; Veget. de Re Vener. ii. 14 and 48, iii. 18.)

LENOlä or LEMURIA, a festival for the souls of the departed, which was celebrated at Rome every year in the month of May. It was said to have been instituted by Romulus to appease the spirit of Remus whom he had slain (Ovid. Fast. v. 478, &c.), and to have been called originally Lemuria. It was celebrated at night and in silence, and during three alternate days, that is, on the ninth, eleventh, and thirteenth of May. During this season the temples of the gods were closed, and it was thought unlucky for women to marry at this time and during the whole month of May, and those who ventured to marry were believed to die soon after, whence the proverb, mense Maii multae rubent. Those who celebrated the Lemuria, walked barefooted, washed their hands three times, and threw nine times black beans behind their backs, believing by this ceremony to secure themselves against the Lemures. (Varro, Vita pop. Rom. Fragm. p. 241, ed. Bipont; Servius, ad Aen. i. 276.) As regards the solemnities on each of the three days, we only know that on the second there were games in the circus in honour of Mars (Ovid. Fast. v. 597), and that on the third day the images of the thirty Argei, made of rushes, were thrown from the pons sublicius into the Tiber by the Vestal virgins. (Ovid. Fast. v. 621; Fest. s. s. Deponent; compare Argel.) On the same day there was a festival of the merchants (festum mercatorum, Ovid. Fast. v. 670, &c.), probably because on this day the temple of Mercury had been dedicated in the year 495 B.C. (Liv. ii. 21.) On this occasion the merchants offered up incense, and by means of a laurel-branch sprinkled themselves and their goods with water from the well of Mercury at the Porta Capena, hoping thereby to make their business prosper. (L. S.)

LEMURES. See Dict. of Gr. an' Rom. Biography and Mythology.

LENAEA. (Dionysia, p. 411, b.)

LENO, LENOCINIUM. Lenocinium is defined by Ulpian (Dig. 3. tit. 2. s. 4) to be the keeping of female slaves for prostitution and the profits of it; and it was also lenocinium if gain was made in the like way by means of free women. Some lenones kept brothels (lupanaria) or open houses for prostitution. This trade was not forbidden, but the praetor's edict attached infamia to such persons [INFAMIA]. In the time of Caligula (Sueton. Cal. 49, and the notes in Burnand's ed.), a tax was laid on lenones. Theodosius and Valentinian endeavoured to prevent parents from prostituting their children and masters their female slaves by severe penalties; and they forbade the practice of lenocinium under pain of corporal punishment, and banishment from the city, and so forth. Justinian (Nov. 14) also attempted to put down all lenocinium by banishing lenones from the city, and by making the owners of houses, who allowed prostitution to be carried on in them, liable to forfeit the houses and to pay ten pounds of gold; those who by trickery or force got girls into their possession and gave them up to prostitution were punished with the "extreme penalties;" but it is not said what these extreme penalties were. This Novella contains curious matter.

The Lex Julia de Adulteris defined the leno- cinium which that lex prohibited (Dig. 48. tit. 5.
It was lenocinium, if a husband allowed his wife to commit adultery in order to share the gain. The legislation of Justinian (Nov. 117. c. 9. § 3) allowed a wife a divorce, if her husband had attempted to make her prostitute herself; and the woman could recover the dos and the donatio proper nuptias. It was lenocinium in the husband if he kept or took back (comp. Sueton. Domit. 8) a wife whom he had detected in an act of adultery, or if he let the adulterer who was detected in the act, escape; or if he did not prosecute him.

With respect to other persons than the husband, it was lenocinium by the lex Julia, if a man married a woman who was condemned for adultery; if a person who had detected others in adultery, held his peace for a sum of money; if a man commenced a prosecution for adultery and discontinued it; and if a person lent his house or chamber for adulterium or stuprum. In all these cases, the penalty of the lex Julia was the same as for adultery or stuprum. The legislation of Justinian (Nov. 117. c. 9. § 3) allowed a wife a divorce, if her husband commenced a prosecution for adultery and discontinued it; or if he kept or took back (comp. Sueton. Domit. 8) a wife whom he had detected in an act of adultery.

The legislation of Justinian (Nov. 117. c. 9. § 3) allowed a wife a divorce, if her husband commenced a prosecution for adultery and discontinued it; or if he kept or took back (comp. Sueton. Domit. 8) a wife whom he had detected in an act of adultery.

The legislation of Justinian (Nov. 117. c. 9. § 3) allowed a wife a divorce, if her husband commenced a prosecution for adultery and discontinued it; or if he kept or took back (comp. Sueton. Domit. 8) a wife whom he had detected in an act of adultery.
but this definition, as Gellius observes, will not apply to such cases as the Lex about the Imperium of Pompeius, or that about the return of Cicero, which related only to individuals, and were properly called Privilegia.

Of Roman Leges, viewed with reference to the mode of enactment, there were properly two kinds, Leges Curiae et Leges Centuriarum. Plebiscita were not so called, though they were called Laws, and in the course of time had the same effect as Leges.

Originally the Leges Curiae were the only Leges, and they were passed by the populus in the Comitia Curtiaria. After the establishment of the Comitia Centuriaria, the Comitia Curtiaria fell almost into disuse; but so long as the Republic lasted, and even under Augustus, a shadow of the old constitution was preserved in the formal conferring of the Imperium by a Lex Curtiaria only, and in the ceremony of adrogation being effected only in these Comitia. [Adoptio.]

Those Leges, properly so called, with which we are acquainted, were passed in the Comitia Curtiaria, and were proposed (royobantor) by a magistratus of senatorial rank. Such a Lex was also designated by the name Populi Seiuitium. (Festus, s. v. Seiuitum Pop.) As to the functions of the Senate in legislation, see Auctor and Senatus.

A Plebiscitum was a law made in the Comitia Tributa, on the rogation of a Tribune:—"Plebis citum est quod plebis plebeio magistratu interrogante, veluti Tribuno, constituentat." (Inst. 1. tit. 2. s. 4.) "Accordingly," says Gaius (i. 3), "formerly the patricii used to say that they were not bound by Plebiscita, because they were made without their sanction (sine auctoritate eorum); but afterwards the Lex Hortensia was carried (s. c. 288), which provided that Plebiscita should bind the whole populus (in the larger sense of the word), and thus they were made of equal force with Leges." (Liv. viii. 12; Gall. xii. 27; Leges Publiliae.)

When the Comitia Tributa were put on the same footing as the Curtiaria, the name Lex was applied also to Plebiscita, and thus Lex became a generic term, to which was sometimes added the specific designation, as Lex Plebeivescitum, Lex sive Plebiscitum est [Plebiscitum].

Cicero, in his enumeration of the sources of Roman law (Top. 5), does not mention Plebiscita, which he undoubtedly comprehended under "leges." Various Plebiscita are quoted as leges, such as the Lex Falcidia (Gaius, ii. 227) and Lex Aquilia. (Cic. pro Tullia, 8. 11.) In the Table of Heraclea the words "lege plebisvescit" appear to refer to the same enactment; and in the Lex Rubria there occurs the phrase "ex leges Rubria sive id plebiscitum est." (Savigny, Zeitschrift, &c., vol. ix. p. 535.)

The word Rogatio (from the verb rogā) properly means any measure proposed to the legislative body, and therefore is equally applicable to a proposed Lex and a proposed Plebiscitum. Accordingly there occur the expressions "populum rogāre," to propose a lex to the populus; and "legem rogāre," to propose a lex. (Festus, s. v. Rogati.)

A Rogatio then is properly a proposed lex or a proposed plebiscitum. The terms Rogatio, Rogatio also apply to a person being proposed for a magistratus at the Comitia. (Sall. Jug. 29.) The form of a Rogatio, in the case of Adrogatio, which was
times a chapter of a lex was referred to under the title of the lex, with the addition of a reference to the contents of the chapter, as Lex Julia de Fundo Dotali, which was a chapter of the Lex Julia de Adulteris. A lex sometimes took its name from the chief contents or its first chapter, as Lex Julia de Mariandinis Ordinis. Sometimes a lex comprised very various provisions, relating to matters essentially different, and in that case it was called Lex Saturna. [Lex Caecilia Didia, Lex Julia Municipalis.]

The terms in which a lex was expressed were fixed by the person who proposed it; but in many cases probably he would require the assistance of some person who was acquainted with technical language. A lex was proposed to the Comitia in its entire form for acceptance or rejection: there was no discussion on the clauses, and no alteration of them in the Comitia, and indeed discussion of details and alteration were impossible. The Sanctio of a Lex (Rhct. ad Herenn. ii. 10; Papinian, Dig. 48. tit. 19. s. 41) made a Lex which the Romans call Perfecta. In a Lex Perfecta, the act which is done contrary to the provisions of the lex, is declared by the Lex to be null. If a Lex did not contain this Sanctio, it was called Imperfecta. A Lex was called minus quam perfecta, when the act which was done contrary to its provisions was not declared null, but the Lex imposed a penalty. (Savigny, System, &c. vol. iv. p. 549, &c.) This division of Leges into Perfectae, &c. is obviously only applicable to such Leges as referred to what the Romans called the department of Privatum Jus.

The number of Leges was greatly increased in the later part of the republican period (Tact. Ann. iii. 25—28), and Julius Caesar is said to have contemplated a revision of the whole body. Under him and Augustus numerous enactments were passed, which are known under the general name of Juliae Leges. [Juliae Leges.] It is often stated that no Leges, properly so called, or Plebiscita, were passed after the time of Augustus; but this is a mistake. Though the voting might be in mere form, still the form was kept; and if this were not so, the passage of Gaucis (i. 2, &c.), in which he speaks of leges and plebiscita as forms of legislation still in use, would not be correct.

Besides, various leges are mentioned as having been passed under the Empire, such as the Lex Visellia, a Lex Agraria under Caligula, and a Lex Claudia on the tutela of women. (Gaius, i. 157, 171.) It does not appear when the ancient forms of legislation were laid aside, but they certainly long survived the popular elections to which alone the passage of Tacitus (Ann. i. 15) refers.

In the Digest a Senatusconsultum is sometimes referred to as a Lex (14. tit. 6. s. 9. § 4; s. 14); in which there was no great impropriety if we have regard to the time, for Senatusconsulta were then laws. Still a Senatusconsultum, properly so called, must not be confounded with a Lex properly so called; and there is no reason for supposing that the Lex Claudia of Gaucis was a Senatusconsultum, for when he speaks of a Senatusconsultum of the time of Claudia, he calls it such (i. 84, 91). However there is no mention of any Lex being enacted later than the time of Nerva. (Dig. 47. tit. 21. s. 3. § 1.)

It remains further to explain the words Rogatio and Privilegium.

Rogatio is defined by Festus to be, a command of the Populus relating to one or more persons, but not to all persons; or relating to one or more things, but not to all. That which the Populus has commanded (seuut) with respect to all persons or things is a Lex; and Aelius Gallus says, Rogatio is a genus legis; that which is Lex is not consequently (continuus) Rogatio; but Rogatio must be less than Lex, if it has been proposed (rogato) at legal comitiam (justis comitiis). According to this definition a rogatio, when enacted, is Lex; there is also Lex which is not rogatio; therefore we must assume a general name Lex, comprehending Lex Proper and Rogatio. The passage of Aelius Gallus is emended by Goettling (Geschichte der Röm. Staatsw. &c. p. 510); but his emendation is founded on mistaking the sense of the passage, and it converts the clear meaning of Gallus into nonsense. According to the definition of Gallus, Rogatio was equivalent to Privilegium, a term which occurred in the Twelve Tables (Cic. de Leg. iii. 19); and it is stated, according to Gallus (Festus, s. v. Rogatio) an enactment that had for its object a single person, which is indicated by the term of the word (privi-legium), "prive res" being the same as "singular res." The word privilege, according to the explanation of Gallus, did not convey any notion of the character of the legislative measures: it might be beneficial to the party to whom it referred, or it might not. It is generally used by Cicero in the unfavourable sense (pro Domi, 17; pro Scetio, 30; rogationem privilegii similam, Brut. 23). Accordingly in the Republican period Privilegia were not general Laws or parts of the general Law: they bear the character of an exception to the general rule. In the Corpus Juris Privilegium is the common name for a Jus Singulare, the meaning of which is explained by Savigny (System, &c. i. p. 61).

The meaning of Lex, as contrasted with Jus, is stated in the article Jus.

Some other significations of Lex, which are not its proper significations, are easily explained: for instance, Lex is used to express the terms or conditions of a contract, apparently with reference to the binding force of all legal contracts. In English instruments which contain covenants, it is often expressed that it shall be "lawful" for one or more of the parties to do a certain act, by which something is indicated which is legal, and which therefore makes a valid agreement. The work of Marcus Manilius (Cos. c. c. 149) on sales is quoted by Cicero (de Or. i. 50) as "Manilianus venalium vendendorum leges." (See Dig. 13. tit. i. s. 40, where Lex means conditions of sale.) Accordingly we find the expression Leges Censorinae to express the conditions on which the censors let the public property to farm; and perhaps the term also signifies certain standing regulations for such matters, which the censors were empowered to make. (Frag. de jure Fisci, s. 18; Dig. 50. tit. 16. s. 203.) In both the cases just referred to, the phrase Lex Censoria is used (in the singular number); and this Lex, whether a Law proper or not, seems to have been divided into chapters.

Lex simply sometimes signifies the laws of the Twelve Tables.

The extant authorities for the Roman Leges are the works of the classical Roman writers, of the Roman Jurists, and inscriptions. The most useful
modern collection is that in the Onomasticon of Orellius, intitled "Index Legum Romanarum quorum apud Cicersonem, ejusque Scholiastas, item apud Livium, Vellicium Paterculum, A. Cellium nominatim mentio fit." There are also extant fragments of several laws on bronze tablets, such as the Lex Thoria, which is a Lex Agraria, and is cut on the back of the same tablet which contains the Lex Servilia; the Lex Rubria; and some few other monuments.

The following is a list of the principal Leges: —

ACILIA DE COLONIS DEDUCENDIS (Liv. xxxii. 29).

ACILIA. [REPETUNDARUM.]

ACILIA CALPURNIA. [AMBITUS.]

AEBUTIA, of uncertain date, which with two Juliae Leges put an end to the Leges Actiones, except in certain cases. [JUDEX; ACTIO.]

Another Lex of the same name prohibited the proposer of a lex, which created any office or power (curatii ac potentas), from having such office or power, and even excluded his collaege, cognati and affines. (Cic. in Rull. ii. 8, where he mentions also a Lex Licinian, and in the pro Domo, 20.)

AEVILIA. This Lex and a Fufia Lex passed about the end of the sixth century of the city, gave to all the magistrates the omnuniciato or power of preventing or dissolving the comitia, by observing the omens and declaring them to be unfavourable. (Cic. Phil. ii. 32, pro Sestio, 13, ad Att. ii. 9.)

There is some difficulty in stating the precise nature of these two Leges; for it is most probable that there were two. The passages in which they are mentioned are collected in Orellii Onomasticon, Index Legum.

AEVILIA DE COLONIS DEDUCENDIS. (Livy xxxiv. 53.)

AEVILIA SENTIA. This law which was passed in the time of Augustus (about a. d. 3), chiefly regulated the manumission of slaves; a matter that has been put under certain restrictions in modern slave states also.

By one provision of this law slaves who had been put in chains by their masters as a punishment, or branded, or subjected to the other punishments mentioned in the law (Gaius, i. 13), if they were afterwards manumitted either by the same master or another, did not become Roman citizens or even Latini, but were in the class of Peregrini dediticii. [DEDITICII.] The law also made regulations as to the age of slaves who might be manumitted. It enacted that slaves under thirty years of age who were manumitted, only became Roman citizens when they were manumitted by the Vindicta, and after a legal cause for manumission had been established before a consilium. What was a legal cause (causa justa), and how the consilium was constituted, are explained by Gaius (i. 19, 20). These consilia for the manumission of slaves were held at stated times in the provinces, and in Rome. A slave under thirty years of age could become a Roman citizen if he was made free and herea by the testament of a master, who was not solvent. (Gaius, i. 21.) The law also contained provisions by which those who were under thirty years of age at the time of manumission, and had become Latini in consequence of manumission, might acquire the Roman citizenship on certain conditions, which were these. They must have taken to wife a Roman citizen, or a Latina colonaria or a woman of the same class as themselves, and must have had as evidence of that fact the presence of five Roman citizens of full age, and have begotten a son who had attained the age of one year. On showing these facts to the praetor at Rome, or to the governor in a province, and the magistrate declaring that the facts were proved, the man, his wife, and his child became Roman citizens. If the father died before he had proved his case before the magistrate, the mother could do it, and the legal effect was the same.

If a man manumitted his slave to defraud his creditors, or to defraud a patron of his patronal rights, the act of manumission was made invalid by this law. A person under the age of twenty years was also prevented from manumitting any slave, except by the process of Vindicta, and after establishing a legal cause before a consilium. The consequence was that though a man, who had completed his fourteenth year, could make a will, he could not by his will manumit a slave (Gaius, i. 37—40). A male under the age of twenty could manumit his slave so as to make him a Latinus, but this also required a legal cause to be affirmed by a consilium. The provisions of the Lex Aelia Sentia, as to manumitting slaves for the purpose of defrauding creditors, did not apply to Peregrini, until the provision was extended for their benefit by a Sctum in the time of Hadrian. The other provisions of the Lex did not apply to Peregrini. The application of the principles of the law is shown in other passages of Gaius (i. 66, 68, 70, 71, 80, 139, iii. 5, 73, 74). In a free state, when manumission must change the condition of slaves into that of citizens, the importance of limiting and regulating the manumitting power is obvious. Under the later Empire such regulations would be of little importance. This law was passed according to the constitutional forms in the time of Augustus, when the status of a Civis had not yet lost its value, and the semblance of the old constitution still existed (Ulpian, Frag. tit. i.; Dig. 28. tit. 5. s. 57, 60; 38, tit. 2. s. 33; Tact. Annal. xv. 55.)

AMEILIA DE CENSORIBUS. A Lex passed in the Dictatorship of Marmecus Aemilii (b. c. 433), by which the Censors were elected for a year and a half, instead of a whole lustrum. (Liv. iv. 24, ix. 33.) After this Lex they had accordingly only a year and a half allowed them for holding the census and letting out the public works to farm.

AMEILIA BAEBIA. [CORNELIA BAEBIA.]

AMEILIA LEPIDI, AMELIA SCAURI. [SUNTUARIAE LEGES.]

AGRA RIAE. [AGRARIAE LEGES; and LEX APULIAE; CASSIA; CORNELIA; FLAMBIA; FLAVIA; JULIA; LICINIA; MAMILIA; SEMPRONIA; SERVILLA; THORIA.]

AMBITUS. [AMBITUS.]

AMPIA, a Lex proposed by T. Ampius and T. Labienus, tr. pl. b. c. 64, by which Cn. Pompeius was allowed to wear a crown of bay at the Ludi Circenses, and the like. (Vell. Pat. ii. 40; Dion Cass. xxxvii. 21.)

ANNALES LEGES were those Leges which determined at what age a man might be a candidate for the several magistratus. (Cic. Philipp. v. 17.)

The first Lex which particularly determined the age at which a man might be a candidate for the several magistratus was the Villia. It was
LEX BAEBIA CORNELIA.

propesed by L. Villius, tr. pl. b. c. 180 (Liv. xxi. 4.) According to this Lex a man might be elected questor at the age of thirty-one, and consul at forty-three. [Villia.]

There seems to have been also a Lex Pinaria on this subject. (Cic. de Orat. ii. 65.)

ANTONIA DE THERMENSIBUS, about b. c. 72, by which Thermessus in Pisidia was recognised as Libern. (Puchta, Inst. vol. i. § 69; Dirksen, Bemerkungen über das Plebiscitum de Thermensibus.)

ANTONIAE, the name of various enactments proposed or passed by the influence of M. Antonius, after the death of the Dictator J. Caesar, such as the Judicaria. [Judex, p. 650, a.] Another lex was promulgated allowing an appeal to the populus for each of four legions. (Liv. ix. 30.)

The measure probably originated with C. Atinius, who was tribune B. c. 130. (Plin. iv. 18, 19; Dion Cass. xxxvii. 37.)

empowered all magistratus to fine persons who resisted their authority, and fixed the highest fine at two sheep, for the authorities vary in this. (Cic. ad Herenn. i. 9.) Various other measures proposed by M. Antonius are mentioned by Cicero (Phil. i. 1, ii. 43, v. 3, 5) Dion Cassius (xlv. 51, xlv. 29, 25, 34, xlv. 23, 24), and Appian (Bell. Civ. iii. 27, 30.)

APULEIA, gave a surety an action against his co-sureties for whatever he had paid above his share. [Intercessio.]

APULEIA AGRAARIA, proposed by the tribune L. Apuleius Saturninus, b. c. 101. (Liv. viii. 75; Appian, Bell. Civ. i. 29; Cic. pro Sestio, 16, 47.)

APULEIA DE COLONIIS DEDUCENDIS (Cic. pro Balbo, 21.)

APULEIA FRUMENTARIA, proposed about the same time by the same tribune. (Auct. ad Herenn. i. 12.) [Frumentariae leges.]

APULEIA MAJESTATIS. [Majestas.]

AQUILIA [DAMNI INJURIA ACTIO.]

ATERNIA TARPEIA, b. c. 455. This Lex empowered all magistrates to fine persons who resisted their authority; but it fixed the highest fine at two sheep, for the authorities vary in this. (Cic. de Rep. ii. 35; Dionys. x. 50; Gell. xi. 1; Festus, s. v. Mutilam, Ovibus, Peculates, Niebuhr, Hist. of Rome, vol. ii. p. 390.)

ATIA DE SACERDOTIIS (b. c. 63), proposed by the tribune T. Attius Labienus, repealed the Lex Cornelia de Sacerdotis. (Dion Cass. xxxvii. 57.)

ATLIA MAICORNIA, enacted b. c. 312, empowered the populus to elect sixteen tribuni militum for each of four legions. (Liv. ix. 30.)

ATLIA. [JULIA LEX ET TITIA; TUTOR.]

ATINIA, allowed no usucapion in a stolen thing. (Gell. xvii. 7; Inst. 2. tit. 6. s. 2.) [Furtum.]

ATINIA, of uncertain date, was a plebiscitum which gave the rank of senator to a tribune. (Gell. xiv. 8.) The measure probably originated with C. Atinius, who was tribune b. c. 130. (Plin. H. N. viii. 45; Cic. pro Domna, 47.)

AUFIDA. [AMBITUS; SENATUSCONSULTUM.]

AURELIA JUDICIA [JUDEX, p. 650, a.]

AURELIA TRIBUNICIA. [Tribunl.]

BAEBIA (b. c. 192), which enacted that four praetors and six praetors should be chosen in alternate years (Liv. xiv. 41; but the law was not observed. (Meyer, Orator. Roman. Fragm. p. 90, 2nd ed.)

BAEBIA CORNELIA. [AMBITUS.]
LEX CINCI.

donumve accipiat. In the time of Augustus, the lex Cincia was confirmed by a senatusconsultum (Dion Cass. liv. 18), and a penalty of four times the sum received was imposed on the advocate. This fact of confirmation will explain a passage in Tacit. (Ann. xii. 42). The law was so far modified in the time of Claudius, that an advocate was allowed to receive ten sestertia; if he took any sum beyond that, he was liable to be prosecuted for repetundae (repetundarum tenell.: Tacit. Ann. xi. 7; see also Sueton. Nero, 17, and the note in Burnmann's edition). [REpetUNDae. It appears that this permission was so far restricted in Trajan's time, that the fee could not be paid till the time was done. (Plin. Ep. v. 21).]

So far the Cincian law presents no difficulty; but it appears that the provisions of the law were not limited to the case already stated. They applied also to gifts in general; or, at least, there were enactments which did limit the amount of what a person could give, and also required gifts to be accompanied with certain formalities; and it does not seem possible to refer these enactments to any other than the Cincian law. The numerous contradictions and difficulties which perplex this subject, are perhaps satisfactorily reconciled and removed by the following conjecture of Savigny (Ubcr die Lex Cincia, Zeitschrift, &c. iv.): — "Gifts which exceeded a certain amount were only valid when made by mancipatio, in jure cessio, or contrary to the law, according to Savigny, was to prevent foolish and hasty gifts to a large amount; and consequently was intended among other things to prevent fraud. This was effected by declaring that certain forms were necessary to make the gift valid, such as mancipatio and in jure cessio, both of which required some time and ceremony, and so allowed the giver opportunity to reflect on what he was doing. These forms also could not be observed, except in the presence of other persons, which was an additional security against fraud. It is true that this advantage was not secured by the law in the case of the most valuable things, see mancipi; namely, money; for the transferring of which bare tradition was sufficient; but, on the other hand, a gift of a large sum of ready money is one that people of all gifts are least likely to make.

Savigny concludes, and principally from a passage in Pliny's letters (x. 3), that the Cincian law originally contained no exception in favour of relatives; but that all gifts above a certain amount required the formalities already mentioned. The emperor Antoninus Pius introduced an exception in favour of parents and children, and also of near collateral kinsmen. It appears that this exception was subsequently abolished (Cod. Hermog. vi. 1), but was restored by Constantine (A. n. 319) so far as it was in favour of parents and children; and so it continued as long as the provisions of the Cincian law were in force.

As to the amount beyond which the law forbade a gift to be made, except in conformity to its provisions, see Savigny, Zeitschrift, &c. iv. p. 36. The matter of the lex Cincia is also discussed in an elaborate essay by Haase (Reinheimisches Museum, 1827), and it is discussed by Fuchta, Inst. vol. ii. § 206. These examinations of the subject, togeth

LEGES CORNELIAE.

ther with the essay of Savigny, will furnish the reader with all the necessary references and materials for investigating this subject.

CLAUDIA, a Lex passed in the time of the emperor Claudius, took away the agnatorum tutela in the case of women. (Gaius, i. 171.)

CLAUDIA DE SENATORIBUS, b. c. 218. The provisions of this Lex are stated by Livy (xxi. 63), and alluded to by Cicero (in Verr. v. 18) as antiquated and dead.

CLAUDIA DE SOCHIS, b. c. 177. (Liv. xiii. 8, 9.)

CLAUDIA DE SENATU COOPTANDO HALESIGNORUM (Cic. in Verr. ii. 45).

CLODIA DE AUSPICIS, prevented the magistrates from dissolving the Comitia Tributa, by declaring that the auspices were unfavourable. This lex therefore repealed the Aelia and Fufia.

CLAUDIA DE CENSORIBUS. [CAECILIA.]

CLAUDIA DE CIVIBUS ROMANIS INTEREMPTIS, to the effect that "qui cives Romanum indemnatarum interemerisset ei aqua et igni interdiceretur." (Veill. Pat. ii. 45.) It was in consequence of this lex that the interdict was pronounced against Cicer, who considers the whole proceeding as a privilege. (Pro Domu, 18, &c., Post Redit in Sen. 2, 5, &c.; Dion Cass. xxxvii. 14.)

CLODIA FRUMENTARIA, by which the corn, which had formerly been sold to the poor citizens at a low rate, was given. (Dion Cass. xxxvii. 13; Cic. pro Domu, 10.) [FRUMENTARIAE LEGES.]

CLODIA DE SODALITIBUS OR DE COLLEGIS, restored the sodalitia which had been abolished by a senatusconsultum of the year b. c. 80, and permitted the formation of new sodalitia. (Cic. in Pis. 4, pro Sest. 25, ad Att. iii. 15; Dion Cass. xxxvii. 13.)

CLODIA DE LIBERTINORUM SUFFRAGIS (Cic. pro Mil. 12, 35.)

CLODIA DE REGE PTOLEMARO ET DE EXSULIBUS BYZANTINIS (Veill. Pat. ii. 45; Cic. pro Domu, 8, 20, pro Sest. 29; Dion Cass. xxxviii. 30; Plut. Cat. Min. 54.).

There were other so-called Leges Clodiae, which were however Privilegia.

COELIA. [CAELIA.]

COMMISSORIA LEX. [COMMISSORIA LEX.]

CORNE/LIAE. Various leges passed in the dictatorship of Sulla and by his influence, are so called. (Liv. Epit. 60.)

AGRARIA, by which many of the inhabitants of Etruria and Latium were deprived of the complete civitas and retained only the commercium, and a large part of their lands were made Publicum and given to military colonists. (Cic. in Ruit. ii. 28, iii. 2, 3.)

CIVITATIBUS. (Liv. Epit. 88; Cic. pro Dom. 30, pro Caeccin. 33, 35; Sall. Hist. Frug. lib. 1. Oral. Lepid.)

DE FALNIS. [FALSUM.]

DE INJURIS. [INJURIA.]

Judicaria. [Judex, p. 650, a.]

DE MAGISTRATIBUS (Appian, Bell. Civ. i. 100, 101), partly the name of various plebiscita (Liv. vii. 42, x. 13.).

MAJESTATIBUS. [MAJESTAS.]
NUMMARIA. [FALSUM.]

De Proscriptione et Proscriptis. [PROSCRIPTI.]

De Provinciis Ordinandis (Cic. ad Fam. i. 9, iii. 6, 8, 10).

De Parricidio. [See below, Lex de Sica-riis.]

De Rejectione Judicem (Cic. Verr. ii. 31; and Orellii Onomasticon).

De Repetundis (Cic. pro Rabir. 4).

De Sacrorum. [SACRERAT.]

De Sententia Ferenda (Cic. pro Cluent. cc. 20, 27). This was probably only a chapter in a Lex Judicaria.

De Sicario et Veneficiis. A law of the Twelve Tables contained some provision as to homicide (Plut. H. N. xviii. 3); but besides, it is all that we know. It is generally assumed that the law of Numa Pompilius, quoted by Festus (s. v. Parici Quaestores), “Si quis hominem liberum dolo sciens morti duit paricida esto,” was incorporated in the Twelve Tables, and is the law of homicide to which Pliny refers; but this cannot be proved. It is generally supposed that the laws of the Twelve Tables contained provisions against incantations (malum carmen) and poisoning, both of which offences were also included under parricidium: the murderer of a parent was liberum dolo sciens morti duit paricida esto,” was

itiul against persons going about armed with the

sacrii, and Orellii incorporated in the Twelve Tables, and is the law

of homicide to which Pliny refers; but this can

ihe crime were also punished by the law, and

of the writers or the compilers. Besides,

nemus, and a mother who killed a filius or filia; but it did not extend to a father. All privies to

the crime were also punished by the law, and

other murders were not. (Dig. 49. tit. 8, 9; Paulus, Recept. Sentent. v. tit. 24; Dirksen, Uebersicht, &c. der Zweitzelffestesetze. Leipzig.)

Sicario. [SICARIO.

Triubnica, which diminished the power of the Tribuni Plebis. (Vell. Pat. ii. 30; Appian, Bell. Civ. ii. 29; Cass. Bell. Civ. i. 7.)

Unciaria, appears to have been a lex which lowered the rate of interest, and to have been passed about the same time with the Lex Sumtuariae of Sulla. (Festus, s. v. Uncia.)

De Vadiinonio. [VADIMONIUM.]

De Vi Publica. [Vi PUBLICA.]

There were other Leges Coriniae, such as that de Sponsoribus [INTERCESSIO], which may be Lex de Cornelia Sulla.

There were also Lexes Corneliae, which were proposed by the Tribunus C. Cornelius about B. c. 67, and limited the Edictal power by compelling the Praetors Jus dicere ex edictis suis perpetuis. (Ascon. in Cic. Cornel. p. 56; Dion Cass. xxxvi. 23.) [EDICTUM.]

Another sense, as he says of the same Tribune enacted that no one “legibus solvere vel,” unless such a measure was agreed on in a meeting of the Senate at which

_attempts at the crime also came within its provisions. The punishment was the same as that affixed by the lex Cornelia de sicarioi (Dig. l. c.), by which must be meant the same punishment that the lex Cornelia affixed to crimes of the same kind. He who killed a father, mother, grand-
proposed that ten men should be appointed brought forward by the tribunes in the following year with some modifications: the new rogation latores) to a Plebiscitum, pursuant to which commissioners the Tribune Duilius, which enacted "qui plebem provocatio creasset, tergo ac capite puniretur." pointed for the purpose. On the return of the such unconstitutional proceedings, as the enactment proposal of the Consul. (Liv. vii. 16.) Aug.

The Patricians opposed the measure, but it was opposed by M. Antonius, Magister Equitum. (Liv. Epit. 113; Dion Cass. xiii. 32; Plut. Anton.9.)

This law is sometimes, but erroneously, attributed to Appius Claudius and his friends: but the second body of Decemviri comprised three plebeians, according to Dionysius (x. 58), but Livy (iv. 3) speaks only of Patricians. Two more Tables were added by these Decemviri, which Cicero (de Repub. ii. 37) calls "Duae tabulae iniquarum legum." The proposition which showed no connection between the Patres and the Plebs is referred to the Eleventh Table. (Dirksen, Uebersicht, &c., p. 740.)

The whole Twelve Tables were first published in the consulslih of L. Valerius and M. Horatius after the downfall of the Decemviri, B.C. 449. (Liv. iii. 54, 57.) This the first attempt to make a code remained also the only attempt for near one thousand years, until the legislation of Justinian. The Twelve Tables are mentioned by the Roman writers under a great variety of names: Lex Duodecim Tabularum, Lex Decemviralis, Leges XII., Lex XII. tabularum or Duodecim, and sometimes they are referred to under the names of Leges and Lex simply, as being pre-eminently The Law.

The Laws were cut on bronze tablets and put up in a public place. (Liv. iii. 57; Diod. xii. 56.) Pomponius (Dig. 1. tit. 2. s. 2. § 4) states that the first Ten Tables were on ivory (tabulae eborae): a note of Zimmerm (Gesch. des Röm. Privatrechts, vol. i. p. 101) contains references to various authorities which give this dispute of this dispute of the circumstances of the burning of the city by the Gauls (Liv. vi. 1), an order was made to collect the old foedera and leges; for, as it has been well remarked, Livy's words, which are supposed to imply that the Twelve Tables were lost, and restored or reconstructed, may just as well mean that they were not lost. Indeed, the juster interpretation of the passage is, that they were looked for and were found. However this may be, neither the Romans of the age of Cicero nor at any time after have any doubt as to the genuineness of the collection which then existed.

The legislation of the Twelve Tables has been a fruitful matter of speculation and inquiry to modern historians and jurists, who have often handled the subject in the most uncritical manner and with utter disregard to the evidence. As to the mission to the Greek cities, the fact rests on as much and as good evidence as most other facts of the same age, and there is nothing in it improbable, though we do not know what the commissioners brought back with them. It is further said that

should be appointed to draw up the code of laws (decemviri Legibus scribundis), but they were to be chosen only from the Patricians, with a provision that the rights of the Plebeians should be respected by the decemviri in drawing up the laws. (Liv. iii. 52, &c.) In the following year (B.C. 451) the Decemviri were appointed in the Comitia Centuriata, and during the time of their office no other magistrates were chosen. The body consisted of ten Patricians, including the three commissioners who had been sent abroad: Appius Claudius, Consul designatus, was at the head of the body.

The Ten took the administration of affairs in turn, and the Insignia of office were only used by him who for the time being directed the administration. (Liv. iii. 38.) Ten Tables of Laws were prepared during the year, and after being approved by the Senate were confirmed by the Comitia Centuriata. As it was considered that some further Laws were wanted, Decemviri were again elected B.C. 450, consisting of Appius Claudius and his friends: but the second body of Decemviri comprised three plebeians, according to Dionysius (x. 58), but Livy (iv. 3) speaks only of Patricians. Two more Tables were added by these Decemviri, which Cicero (de Repub. ii. 37) calls "Duae tabulae iniquarum legum." The proposition which showed no connection between the Patres and the Plebs is referred to the Eleventh Table. (Dirksen, Uebersicht, &c., p. 740.)

The whole Twelve Tables were first published in the consulslih of L. Valerius and M. Horatius after the downfall of the Decemviri, B.C. 449. (Liv. iii. 54, 57.) This the first attempt to make a code remained also the only attempt for near one thousand years, until the legislation of Justinian. The Twelve Tables are mentioned by the Roman writers under a great variety of names: Lex Duodecim Tabularum, Lex Decemviralis, Leges XII., Lex XII. tabularum or Duodecim, and sometimes they are referred to under the names of Leges and Lex simply, as being pre-eminently The Law.

The Laws were cut on bronze tablets and put up in a public place. (Liv. iii. 57; Diod. xii. 56.) Pomponius (Dig. 1. tit. 2. s. 2. § 4) states that the first Ten Tables were on ivory (tabulae eborae): a note of Zimmerm (Gesch. des Röm. Privatrechts, vol. i. p. 101) contains references to various authorities which give this dispute of the circumstances of the burning of the city by the Gauls (Liv. vi. 1), an order was made to collect the old foedera and leges; for, as it has been well remarked, Livy's words, which are supposed to imply that the Twelve Tables were lost, and restored or reconstructed, may just as well mean that they were not lost. Indeed, the juster interpretation of the passage is, that they were looked for and were found. However this may be, neither the Romans of the age of Cicero nor at any time after have any doubt as to the genuineness of the collection which then existed.

The legislation of the Twelve Tables has been a fruitful matter of speculation and inquiry to modern historians and jurists, who have often handled the subject in the most uncritical manner and with utter disregard to the evidence. As to the mission to the Greek cities, the fact rests on as much and as good evidence as most other facts of the same age, and there is nothing in it improbable, though we do not know what the commissioners brought back with them. It is further said that
Hermodorus an Ephesian exile aided the Decemviri in drawing up the Twelve Tables, though his assistance would probably be confined to the interpretation of Greek laws, as it has been suggested (Strabo, p. 612, Cassaub.; Pompon. de Orig. Juris, Dig. l. tit. 2. a. 2. § 4). This tradition was confirmed by the fact of a statue having been erected in the Comitium at Rome in memory of Hermodorus; but it did not exist in the time of Pliny. (Plin. H. N. xxxiv. 5.)

The Twelve Tables contained matters relating both to the Jus Publicum and the Jus Privatum (Dea publique privative juris, Liv. iii. 54). The Twelve Tables were formed of two classes, and the Jus Publicum underwent great changes in the course of years, but the Jus Privatum of the Twelve Tables continued to be the fundamental law of the Roman State. Cicero speaks of learning the laws of the Twelve Tables (et carmen necessarium) when a boy (de Leg. ii. 4, 23); but he adds that this practice had fallen into disuse when he wrote, the Edict having then become of more importance. But this does not mean that the fundamental principles of the Twelve Tables were ever formally repealed, but that the Jus Hororum grew up by the side of them, and mitigated their rigour or supplied their defects. There is indeed an instance in which positive legislation interfered with them, by the abolition of the Legis actio, but the Twelve Tables themselves were never repealed. They became the foundation of the Jus Civile; and they continued to exist together with the unwritten Law. The Law which grew up in the course of time existed in harmony with the Twelve Tables, and was a development of their fundamental principles. It is a remarkable circumstance in the history of Roman Law and a proof of the practical skill of the Romans, that long before Jurisprudence was a science, the doctrine of Successio per Universitatem was so completely and accurately stated in the Law of the Twelve Tables, that the Jurists of the best period could find nothing to improve. (Cod. 3. tit. 36. s. 6; 10. tit. 2. s. 25. § 9, 13; 4. tit. 16. s. 7; 2. tit. 3. s. 26; Savigny's System, &c. i. p. 383.) The Roman writers speak in high terms of the precision of the enactments contained in the Twelve Tables, and of the propriety of the language which they were expressed. (Cic. a. Rep. iv. 8; Diodor. xii. 26.) That many of their provisions should have become obscure in the course of time, owing to the change which language undergoes, is nothing surprising; nor can we wonder if the strictness of the old law should often have seemed unnecessarily harsh in a later age. (Gell. xvi. 10.) So far as we can form a judgment by the few fragments which remain, the enactments were expressed with great brevity and archite simplicity.

Sextus Africaeus Catus in his Tripartita commented on the Twelve Tables, and the work existed in the time of Pompey. (J. C. A. E. C.) Antistius Labeo also wrote a comment on the Twelve Tables, which is mentioned several times by Galliuss. (i. 12, vii. 15, xx. 1.) Gaious also wrote a Comment on the Tables, which is mentioned six books (ut legem XII. tabularum), twenty fragments of which are contained in the Digest, and collected by Homilius in his Palingenesia. (l. 117.) There were also other commentaries or explanations of the Laws of the Twelve Tables. (Cic. de Leg. ii. 25, 26.)

The notion which has sometimes been enter-
terms of the form of written law, is obvious. However, what was actually received of foreign law could not be more than a few rules, of an arbitrary system of law of any country. The Jus Privatum was hardly and indeed could hardly be affected by any rules of foreign law; and as to resemblance between Roman Law and the Law of any Greek states, that is no ground for a conclusion that the Roman rules are derived from the Greek.

The fragments of the Twelve Tables have often been collected, but the most complete essay on their history, and on the critical labours of scholars and jurists, is by Dirksen, Uberblick der bisherigen Versuche zur Kritik und Herstellung des Textes der Zwolf-Tafel-Fragmente, Leipzig, 1824. Zimmer's Geschichte, &c, contains references to all authorities on this subject; and Puchta's Institutionen, &c, i. § 54, 55, 73, 78, some valuable remarks on them.

FABIA DE PLACIO. [Plagium.]

FABIA DE NUMERO SEXTATORUM (Cic. pro Mureova, 34).

FALCIDIUM. [Legatum.]

FANNA. [Seniatuarie Leges.]

FANNA. [Junia de Pererignis.]

FLAMINIA, was an Agraria Lex for the distribution of lands in Picenum, proposed by the tribune C. Flaminius, in b. c. 228 according to Cicero, or in b. c. 232 according to Polybius. The latter date is the more probable. (Cic. Acad. ii. 5, de Senect. 4; Polyb. ii. 21.)

FLAVIA AGRARIA, b. c. 60, for the distribution of lands among Pompeius' soldiers, proposed by the Tribune C. Flavia, who committed the Consul Cæcilius Metellus to prison for opposing it. (Cic. ad Att. i. 18, 19; Dion Cass. xxxvii. 50.)

FRUMENTARIAE. [Frumentariae Leges.]

FUfIA. [Aelia.]

FUfIA DE RELIGIONE, b. c. 61, was a privilegium which related to the trial of Clodius. (Cic. ad Att. i. 13, 16.)

FUfIA JUDICIA'RIA. [Judex, p. 650., a., and the remarks in Orellii Onomastioon.]

FUfIA or FUfIA CANINIA, limited the number of slaves to be manumitted by testament. [Manumissio.]

FUfIA DE FENORE (Gains, iii. 122).

FUfIA DE SPONSORIBUS. [Intercessio.]

FUfIA or FUfIA TESTAMENTARIA. [Legatum.]

FABIANA TABELLARIA. [Tabellariae.]

There were various Gabiniae Leges, some of which were Privilegia, as that (B. c. 67) for conferring the Roman civitas on Spaniards in Spain, with the advice of his consilium (de consiliis senatoris, Cic. pro Balb. 8, 14).

GENU'CIA, b. c. 53, forbade altogether the taking of interest for the use of money. (Liv. vii. 42.) It is conjectured that Appian (Bull. Cic. i. 54) alludes to this law (Orellii Onomastioon). Other Plebiscita of the same year are mentioned by Livy (vii. 42).

GALLIÆ SABALPYNÆ. [Rubrib.

HIERONICA was not a Lex properly so called. Before the Roman conquest of Sicily, the payment of the tenths of wine, oil, and other produce had been fixed by Hiero, and the Roman quaestors, in letting these tenths to farm, followed the practice which they found established. (Cic. Verr. ii. 13, 26, 60, iii. 6, &c.)

HORTIA DE POMPARIANIS (Cic. Phil. xiii. 16).

HORTIONIA, proposed by M. Horatius, made the persons of the Tribunes, the Aediles, and others sacrosancti. (Liv. iii. 55.) [Valeriae et Hortia.]

Another Lex Hortia mentioned by Gellius (vi. 7) was a privilegium.

Hortensia was mentioned only in the Institutes of Justinian (iv. tit. 19).

ICULIA, intitled by Livy, De Aventino Publicando, was proposed by L. Icilius, tr. pl. n. c. 466. As to the object of this Lex, see the passages which are here referred to; and particularly Dionysius, and the article Superficies. (Liv. iii. 31, 32; Dionys. x. 32, 33; Niebuhr, Hist. of Rome, ii. p. 301; Puchta, Inst. ii. § 244.)

Another Lex Icilius, proposed by the Tribune S. Icilius b. c. 471, had for its object to prevent all interruption to the Tribunes while they were addressing the Senate. In some cases the penalty was death. (Dionys. vii. 17; Cic. pro Sestio, 37; Niebuhr, ii. p. 231.)

Juliae, leges, most of which were passed in the time of C. Julius Caesar and Augustus.

De Adulteriis. [Adulterium.]

Agraria is referred to by Suetonius (Jul. Caesar, c. 20), and in the Digest, De Termino Moto (47. tit. 21). But the lex of C. Caesar, referred to in the Digest, is probably a lex of Caligula. The Agraria lex of the dictator Caesar was passed b. c. 59, when he was consul. (Dion Cass. xxxviii. 1—7, &c.; Appian, Bell. Civ. ii. 10; Vell. Pat. ii. 44; Cic. Phil. ii. 39, ad Att. ii. 16, 18; Rudorff, Lex Mamilia de Colonia, Zeit-schrift, vol. ix.)

De Amicitia. [Amicitia.]

De Annona. (Dig. 48. tit. 1. s. 1.)

De Bonis Cedula. This lex provided that a debtor might escape all personal molestation from his creditors by giving up his property to them for the purpose of sale and distribution. (Gains, iii. 78.) It is doubtful if this lex was passed in the time of Julius Caesar or of Augustus, though probably of the former. (Cic. Cle. iii. 1; Sueton. Caes. 42; Tacit. Ann. vi. 16; Dion
The benefit of the lex was extended to the provinces by the imperial constitutions. (Cod. 7. tit. 71. s. 4.)

Caducaria is the same as the Lex Julia de Papiis Poppis.

De Carde et Veneficio (Sueton. Nero, c. 33), perhaps the same as the Lex De Vi Publica.

De Civitate, was passed in the consulship of L. Julius Caesar and P. Rutilius Lupus, n. c. 90. [Civitas; Foederatar Civitates.]

De Fenore, or rather De Pecuniis Mutuis or Creditis (B. c. 47), passed in the time of Julius Caesar (Sueton. Caes. c. 42 ; Caesar, de Bell. Civil. iii. 1). The object of it was to make an arrangement between debentors and creditors, for the satisfaction of the latter. The possessions and res were to be estimated at the value which they had before the civil war, and to be surrendered to the creditors at that value; whatever had been paid before the civil war, and to be surrendered to the possessors of that kind which is called Satura.

De Fundo Dotali. The provisions as to the Fundus Dotalis were contained in the Lex Julia de Adulteris. (Gaius, ii. 63 ; Paulus, S. R. ii. tit. 21. s. 2 ; Dig. De Fundo Dotali, 23. tit. 5. s. 1, 2, 13.) This Julia Lex was commented on by Papinian, Ulpian, and Paulus. [Adulterium.]

Judiciaria. The lex referred to in the Digest (4. tit. 8. s. 41) by which a person under twenty years of age was not compelled to be a judex, is probably one of the Leges Julias Judiciariae. (Gell. xiv. c. 2.) As to the other Juliae Leges Judiciariae, see JUDEx. [De Libris Legationibus. (Cic. ad Att. xv. 11.) [Legatus.]

Majestatis. (Cic. Phil. i. 91.) The Lex Majestatis of the Digest (48. tit. 4) is probably a lex of Augustus. [Majestas.]

De Mariandis Ordinibus. [Julia et Papia Poppa.] Municipalis, commonly called the Table of Heraclea. In the year 1752 there were found near the Gulf of Tarentum and in the neighbourhood of the ancient city of Heraclea, large fragments of a bronze tablet which contained on one side a Roman lex and on the other a Greek inscription. The whole is now in the Museo Borbonico at Naples. The lex contains various provisions as to the police of the city of Rome, and as to the constitution of communities of Roman citizens (municipia, coloniae, praefecturae, fora, conciliabula civium Romanorum). It was accordingly a lex of that kind which is called Satura.

It is somewhat difficult to determine the date of this lex, but there seem to be only two dates which can be asssumed as probable; one is the time immediately after the Social War, or shortly after n. c. 69 ; the other is that which shortly followed the admission of the Transpadani to the civitas (n. c. 49). This latter date, in favour of which various considerations preponderate, seems to be fixed about the year n. c. 45 by a letter of Cicero (ad Fam. vi. 18). Compare the tablet I. 94, 104, as to persons whom the lex excluded from the office of decurio.

It seems that the lex of the year n. c. 49, which gave the civitas to the Transpadani, enacted that a Roman commissioner should be sent to all the towns for the purpose of framing regulations for their municipal organization. The Lex Julia empowered the commissioners to continue their labours for one year from the date of the lex, the terms of which were so extended as to comprise the whole of Italy. The lex was therefore appropriately called Municipalis, as being one which established certain regulations for all municipia; and this sense of the term municipalis must be distinguished from that which merely refers to the local usages or to the positive laws of any given place, and which is expressed by such terms as Lex Municipi, Lex Civitatis, and other equivalent terms.

The name Lex Julia rests mainly on the fact (assumed to be demonstrated) that this lex was passed when Julius Caesar was in the possession of full power, that it is the lex referred to by Cicero, and that it is improbable that it would have been called by any other personal appellation than that of Julia. It is further proved by a short inscription found at Padua in 1696, that there was a Lex Julia Municipalis; and the contents of the inscription (Titius Auriliae) seem to refer to this Lex de Mutuis Pecuniis.

De Papiis Poppis. The provisions as to the Lex Julia Papias Poppias were sometimes to the Lex de Bonis Cedendis; but it would have been caused by Novae Tabulae. (Com. de Provinciis.)

Cod. 7. tit. 71. s. 4.) A passage of Tacitus (Ann. vi. 16) is sometimes considered as referring to this lex, and sometimes to the Lex de Bonis Cedendis; but it does not seem to refer to either of them. The passage of Dion Cassius (Iviii. 21. 443) seems to refer to this Lex de Mutuis Pecuniis.

Papinian, Ulpian, and Paulus. [ADULTERIUM.]

The Lex Julia is sometimes considered as referring to this lex, and that it is improbable that it would have been passed when Julius Caesar was in the possession of full power, that it is the lex referred to by Cicero, and that it is improbable that it would have been called by any other personal apellation than that of Julia. It is further proved by a short inscription found at Padua in 1696, that there was a Lex Julia Municipalis; and the contents of the inscription (Titius Auriliae) seem to refer to this Lex de Mutuis Pecuniis.

De Denuo, or rather De Pecuniis Mutuis or Creditis (B. c. 47), passed in the time of Julius Caesar (Sueton. Caes. c. 42.) A passage of Tacitus (Ann. vi. 16) is sometimes considered as referring to this lex, and sometimes to the Lex de Bonis Cedendis; but it does not seem to refer to either of them. The passage of Dion Cassius (Iviii. 21. 443) seems to refer to this Lex de Mutuis Pecuniis.
paea, sometimes Lex Julia et Papia, sometimes Lex de Maritandis Ordinibus, from the chapter which treated of the marriages of the senators (Gaius, i. 178; Ulp. Fraq. xi. 20; Lex Marita, Hor. Curn. Sec.), sometimes Lex Caducaria, Decimaria, &c. from the various chapters. (Ulp. Fraq. xxviii. tit. 7; Dion Cass. liv. 16, lvi. 1, &c.; Tacit. Ann. iii. 25.)

There were many commentaries on these leges or on this lex by the Roman jurists, of which considerable fragments are preserved in the Digest: Gaius wrote 15 books, Ulpian, 20, and Paulus 10 books at least on this lex. The lex contained at least 35 chapters (Dig. 22. tit. 2.), but it is impossible to say to which of the two leges included under the general title of Lex Julia et Papia Poppaea, the several provisions as now known to us, belong. Attempts have been made both by J. Gothofredus and Heineccius to restore the lex, on the assumption that its provisions are reducible to the two general heads of a Lex Maritalis and Lex Caducaria.

The provisions of this lex or of these Leges forbade the marriage of a senator or a senator's child with a libertinus, with a woman whose father or mother had followed an Ars Ludicra, and with a prostitute; and also the marriage of a libertinus with a senator's daughter. If an hereditas or a legatum was left to a person on condition of not marrying, or on conditions which in effect prevented marriage, the conditions were illegal, and the gift was unconditional. The condition, however, might be to marry a certain specified person or certain specified persons; or it might be, to marry a particular person; but then the person must be such a one as would be a suitable match, otherwise the condition would be in effect a condition not to marry, and therefore void. (Dig. 35. tit. i. s. 63.)

In order to promote marriage, various penalties were imposed on those who lived in a state of celibacy (caelibatus) after a certain age. Caelibes could not take an hereditas or a legacy (legatum); but if a person was caelibes at the time of the testator's death, and was not otherwise disqualified (jure civilis), he might take the hereditas or legatum, if he obeyed the lex within one hundred days, that is, if he married within that time. (Ulp. Fraq. xvii. 19.) If he did not comply with the lex, the gift became caducum. [CADUCA.]

The Lex Julia allowed widows a term of one year (vacatio) from the death of a husband, and divorced women a term (vacatio) of six months from the time of the divorce, within which periods they were not subject to the penalties of the lex; the Lex Papia extended these periods respectively to two years, and a year and six months. (Ulp. Fraq. xiv.)

A man when he attained the age of sixty and a woman when she attained the age of fifty were not included within certain penalties of the lex (Ulpian, Fraq. xvi.); but if they had not obeyed the lex before attaining those respective ages, they were perpetually bound by its penalties by a Senatus-consulturn Pernicium. A Senatus-consulturn Claudianum so far modified the strictness of the new rule as to give to a man who married above sixty the same advantage that he would have had if he had married under sixty, provided he married a woman who was under fifty; the ground of which rule was the legal notion that a woman under fifty was still capable of having children. (Ulp. Fraq. xvi.; Sueton. Claud. 25.) If the woman was above fifty and the man under sixty, this was called Imper Matrimonium, and by a Senatus-consulturn Calvitianum it was entirely without effect as to releasing from incapacity to take legata and dotes. On the death of the woman, therefore, the dos became caducus.

By the Lex Papia Poppaea a candidate who had three children was preferred to one who had fewer. (Tacit. Ann. xv. 19; Plin. Ep. vii. 16.) Freedmen who had a certain number of children were freed "operarium obligatione" (Dig. 38. tit. 1. De Operibus Libertarii), and libertae, who had four children, were released from the tutela of their patrons. (Ulp. Fraq. tit. 29.) Those who had three children living at Rome, four in Italy, and five in the provinces, were excused from the office of tutor or curator. (Inst. i. tit. 25; Dig. 27. tit. 1.) After the passing of this lex, it became usual for the senate, and afterwards the emperor (princeps) to give occasionally, as a privilege, to certain persons who had not children, the same advantage that the lex secured to those who had children. This was called the Jus Liberorum. Pliny says (Ep. ii. 138) that he had lately obtained from the emperor, for a friend of his, the Jus Trium Liberorum. (See also Ep. x. 55, 96; and Dion Cass. lv. 2, and the note of Reimarus.) This privilege is mentioned in some inscriptions, on which the abbreviation I. L. II. (jus liberorum habens) sometimes occurs, which is equivalent to "jura parentis habere." The emperor M. Antoninus provided that children should be registered by name within thirty days after their birth with the Praefectus Aerarii Saturni. (Capitol. M. Ant. c. 9; compare Juvenal, Sat. ix. 94.)

The lex also imposed penalties on orbis, that is, married persons who had no children (qui liberorum non habent, Gaius, ii. 111) from the age of twenty-five to sixty in a man, and from the age of twenty to fifty in a woman. By the Lex Papia, orbis could only take one half of an hereditas or legatum which was left to them. (Gaius, ii. 286.) It seems that an attempt had been made to evade this part of the lex by adoptions, which a Senatus-consulturn Neronianum declared to be ineffectual for the purpose of relieving a person from the penalties of the lex. (Tacit. Ann. vi. 9.)

As a general rule a husband and wife could only leave to one another a tenth part of their property; but there were exceptions in respect of children either born of the marriage or by another marriage of one of the parties, which allowed of the free disposal of a larger part. This privilege might also be acquired by obtaining the Jus Liberorum. (Ulp. Fraq. tit. xv. 6.)

As to some provisions of this lex, see PATRONUS.

PECULATUS. [PECULATUS.]

JULIA ET PLAUTIA, which enacted that there could be no usucapion in things obtained by robbery (vi possessae). The Twelve Tables had already provided that there could be no usucapion in stolen things. (Gaius, ii. 45; Inst. 2. tit. 6.) This lex was probably passed B. C. 89.

JULIA PAPIRIA. [PAPIRIA.]

DE PROVINCIS. (Dion Cass. xliii. 25; Orelli, Onomasticon, refers to this Lex Julia de Repetundis the regulations of Provincialibus Sumptibus, which Ernesti considers to belong to the Lex Julia de Repetundis.) [PROVINCIAE.]
LEX JUNIA VELLEIA.

De Publicanis (Cic. ad Attic. i. 16, pro Cr. Plancio, c. 14, ed. Wunder; Appian, Bell. Cic. ii. 13.)

Refetundarum. [Refetundarum]

De Residuis. [Peculatus]

De Sacerdotibus. (Cic. Ep. ad Brutiam, i. 5.)

De Sacklegis. [Peculatus]

Sumtaria, passed in the time of Julius Caesar (Dion Cass. xliii. 25) and one under Augustus. (Gell. ii. 24.) [Sumtariae Leges.]

Theatralis (Sueton. Aug. 40; Plin. xxxii. 2), which permitted Roman equites, in case they or their parents had ever had a census equestris, to sit in the fourteen rows (guttuardiarum ordinaria) fixed by the Lex Rostralis, n. c. 67.

Julia et Titia (Inst. i. tit. 20) empowered the praeses of a province to appoint a tutor for urbanus and the majority of the tribuni plebis; and one under Augustus, had given the same power at Rome to the praetor, (Dion Cass. xliii. 25) and one under Augustus. (Gell. ii. 24.) [Sumtariae Leges.]

Sit in the fourteen rows their parents had ever had a census equestris, to their parents had ever had a census equestris, to
to the praetor urbanus and the majority of the tribuni plebis; and

LEX LICINIA.

Lex Licinia (Cic. de Off. iii. 11, Brut. 26, 28; de Leg. Agr. i. 4; Festus, s. v. Respublica; Meyer, Ort. Rom. Fragm. p. 229, 2nd ed.)

Lex Licinia. [Licinia Junia]

Lex Licinia norba, 'na of uncertain date, but probably about A. D. 19, enacted that when a Roman citizen had manumitted a slave without the requisite formalities, the manumission should not in all cases be ineffectual, but the manumitted person should have the status of a Latinus. (Gaius, i. 16, 17, 22, &c., iii. 56; Ulp. Fraqg. i. xx. 8, xxii. 3.)

[Lexinsula; Libertus; Manumissio.]

A special clause in the Lex took away from those Latinus Juniani, as they were called, the capacity of making a testament, taking under a testament, and being appointed tutors by a testament. Yet they had the other parts of the testament facicio (Ulp. Fraqg. xx. 8). The condition of the Latinus Juniani is the subject of an essay by C. A. von Vangerow, Marburg, 1833; see also the remarks of Puebla, Inst. ii. § 218, on the date of the Lex Junia; and also §§ 217, 218.

De Libertinorum Suffragis. [Clodia; Manumissio.]

Lex Licinia Petroynia or Patroynia (Dig. 40. tit. i. s. 24). It is doubtful whether this is the same as Patroynia, or is another Lex. [Petroynia; Patroynia.]

Juvia Repetundarum. [Repetundarum]

Juvia Velleta, allowed a child who was in the womb, and who, when born, would be the testator's suus heres, to be instituted heres, even if he should be born in the lifetime of the testator. It also so far modified the old law, that a person who by the death of a heres instituted after the testator had made his will, became a heres quasi ascendendo, did not break the will, if he was instituted heres. (Gaius, ii. 134; Ulp. Fraqg. xxi. 19, ed. Böcking.)

Laetoria. [Curator.]

Sometimes the lex proposed by Volero for electing plebeian magistrates at the Comitia Tributa is cited as a Lex Licinia and even equestrius, (96, 57.)

LICINIA. [Abutia.]

Lex Licinia de ludus Apollinaris (Liv. xxvi. 23).

Lex Licinia de Sodalithis. [Abutia.]

Lex Licinia Junia, or, as it is sometimes called, Junia et Licinia, passed in the consulship of L. Licinius Murena and Junius Silanus, b. c. 62, enforced the Caecilia Dilia, in connection with which it is sometimes mentioned. (Cic. pro Sexto, 64, Phil. v. 9, ad Att. ii. 3, iv. 16, in Vatin. 14.)

Lex Licinia Mucia de Civibus Regundis (probably Repundises), passed in the consulship of L. Licinius Crassus the orator, and Q. Mucius Scaevola Pontifex Maximus, b. c. 95, which enacted a strict examination as to the title to citizenship, and deprived of the exercise of civic rights all those who could not make out a good title to them. This measure partly led to the Marsian war. (Cic. de Off. iii. 11, Brut. 16, pro Balbo, 21, 24, pro Sestio, 13; Ascon. in Cornel. p. 67.)

Lex Licinia Sumtaria. [Sumtariae Leges.]

Lex Licinia. In the year b. c. 375 C. Licinius Stolo and L. Sextius being elected two of the Tribuni Plebis, promulgated various Rogationes, the object of which was to weaken the power of the Patricians and for the benefit of the Plebs. One Rogatio related to the debts, with which the Plebs was incumbered (Liv. vi. 34): and it proposed by Volero for electing M. Licinius Stolo and L. Sextius retaliated in the same way, and would not allow any comitia to be held except those for the election of Aediles and Tribuni Plebis. They were also re-elected Tribuni Plebis, and they persevered for five years in preventing the election of any Curule Magistratus.

In the year 368, the two tribunes were still selected, for the eighth time, and they felt their power increasing with the diminution of the opposition of their colleagues, and by having the aid of one of the Tribuni Militum, M. Fabius, the father-in-law of C. Licinius Stolo. After violent agitation, a new Rogation was promulgated to the
effect that instead of Duumviri sacris faciundis, Decemviri should be elected, and that half of them should be Plebeians. In the year B.C. 366, when Licinius and Sextius had been elected Tribuni for the tenth time, the law was passed as to the Decemviri, and five plebeians and five patricians were elected, a measure which prepared the way for the plebeians participating in the honours of the consulship. The Rogations of Licinius were finally carried, and in the year B.C. 365 L. Sextius was elected consul, being the first Plebeian who attained that dignity. The Patricians were compensated for their loss of the exclusive right to the consultation by the creation of the office of Curule Aedile and of Praetor.

The law as to the settlement between debtor and creditor was, if Livy's text is to be literally understood, an invasion of the established rights of property. Niebuhr's explanation of this law is contained in his third volume, pp. 23, &c.

Besides the limitation fixed by the second Lex to the number of jugera which an individual might possess in the public land, it declared that no individual should possess more than 500 jugera of smaller land and 500 smaller animals on the public pastures. Licinius was the first who fell under the penalties of his own law. The statement is that "he, together with his son, possessed a thousand jugera of the ager publicus," and by emancipating his son had acquired by the Law of Licinius, but there is no evidence on this matter. The story is told as a part of the land to pass to the son when emancipated, says that in order to conceal his violation of the law, Licinius emancipated part of the land to his son. The facts as stated by Livy are not put in the clearest light. The son when emancipated would be as much intitled to possess 500 jugera as the father, and if he bona fide possessed that quantity of the Ager publicus, there was no fraud on his part.

The story is therefore related by Columella (i. 3). Pliny (Ep. v. 26) and Cato (i. 2) and Colloca (i. 2). The last writer not understanding what he was recording, says that in order to conceal his violation of the law, Licinius emancipated part of the land to his son. The facts as stated by Livy are not put in the clearest light. The son when emancipated would be as much intitled to possess 500 jugera as the father, and if he bona fide possessed that quantity of the Ager publicus, there was no fraud on his part. From the story of the 600 jugera of Pliny (Subst. Rer. fam. 1. 3) and Valerius Maximus (viii. 6. § 8), the last writer not understanding what he was recording, says that in order to conceal his violation of the law, Licinius emancipated part of the land to his son. The facts as stated by Livy are not put in the clearest light. The son when emancipated would be as much intitled to possess 500 jugera as the father, and if he bona fide possessed that quantity of the Ager publicus, there was no fraud on his part.

The story is therefore related by Columella (i. 3). Pliny (Ep. v. 26) and Cato (i. 2) and Colloca (i. 2). The last writer not understanding what he was recording, says that in order to conceal his violation of the law, Licinius emancipated part of the land to his son. The facts as stated by Livy are not put in the clearest light. The son when emancipated would be as much intitled to possess 500 jugera as the father, and if he bona fide possessed that quantity of the Ager publicus, there was no fraud on his part.
LEX PAPRIIA.

created the triumvir curule Gore. (Liv. xxxiii. 42; Cic. de Or. iii. 13.) [LUCINIA.]

MANLIA DE LIBERTINORvm Suf-
FRA'GIS (B. C. 58; Ascon. in Mil. p. 46.)

MALNIA DE VICE'SIMA MANUMIS-
S0'RM. [MANUMISSIO.

MAR'cia probably about the year B.C. 352
"adversus feneratores." (Gaius, iv. 23; Liv. vii. 21.)

MAR'cia DE LIGU'RBIS. (Liv. xili. 22.)

MAR'cia an agrarian law proposed by the
tribune L. Marcus Philippus, B. C. 104. (Cic. de
Off. ii. 21.)

MAR'IA proposed by Marius when tribune
B. C. 119, for narrowing the pontes at elections.
(Cic. de Leg. iii. 17; Plut. Mar. 4.)

ME'MMIA or RE'MMIA. [CALUMNIA.]

MEN'SIA. This lex enacted that if a woman
who was a Roman citizen (civis Romana) married
a peregrinus, the offspring was a peregrinus. If
there was connubium between the peregrinus and
the Roman citizeness, the offspring was a peregrinus.
(Cic. de Off. i. 18.)

MULCTA'RUM AESTIMATIO'NE (B. C. 430)
fixed a money value according to which fines were
paid, which formerly were paid in sheep and cattle.
(Liv. iv. 30; Cic. de Rep. ii. 35.)

PER'RIA, of uncertain date, enacted that no
nudes should be declared consensuare without a
Plebisicium (injussu Plebis, Cic. pro Dom. 49).

PI'RIA PLAUTIA, a Plebisicium of the year B.C. 89,
proposed by the tribunes C. Papirius
Carbo and M. Plautius Silvanus, in the consulship of
C. Pompeius Strabo and L. Porcius Cato, is
called by Cicero (pro Archia, 4) a lex of Silvanus
and Carbo. (See CIVITAS; FOEDERATARV
CIVITATES; and Savigny, Volkschluss der Tujel
von Heraclius, Zeitschrift, ix.)

PAPI'RIA POETELIA. [POSEILIA.]

PAPI'RIA DE SACRAMENTO (Festus,
s. v. Sacramentum), proposed by L. Papirius,
tribune plebs, probably enacted that in the case of
the Legis actio sacramentem, the money should not
be actually deposited, but security should be given
for it. (Puchta, Inst. ii. 161, note 101.)

PAPI'RIA TABELLARIA. [TABELLARIA
LEGES.]

PED'IA, related to the murderers of the Dic-
tator Caesar. (Vell. Pat. ii. 69.)

PEDUCAEA, B. C. 113, a Plebisicium, seems
to have been merely a Privilegium and not a ge-
neral law against Incestum. (Cic. de Nat. Deor.
iii. 30; Ascon. in Cic. Mil. p. 46.)

PESULAN'IA provided that if an animal did
any damage, the owner should make it good or
give up the animal. (Paul. S. R. 1. tit. 15, s. 1. 3.)
There was a general provision to this effect in the
Twelve Tables (Dirksen, Ueberseicht, &c. p. 532,
&c.), and it might be inferred from Paulus that
this Lex extended the provisions of the old law
to dogs. The name of the lex may be uncertain.
See the note in Arnold’s edition of Paulus.

PET'IHIA, a Lex under this title, de decima-
regis An-
tioch. (Liv. xxxviii. 54.)

PETRE'IA, a Lex under this title, de decima-
cells militum, in case of mutiny, is mentioned by
Cic. Cornel, ii. 47), according to the old
editions. But the true reading is πατρικον
νυμφαι.

PETRONIA, probably passed in the time of
Augustus, and subsequently amended by various
senatusconsulta, forbade a master to deliver up his
slave to fight with wild beasts. If, however, the
master thought that his slave deserved such a
punishment, he might take him before the author-
ities (judex) who might condemn him to fight if
he appeared to deserve it. (Dig. 48. tit. 8. s. 11.
18. tit. 1. s. 42; Gall. v. 14; Puchta, Inst. i. § 107,
note 101; Savigny, Zeitschrift, ix. p. 374, on the
inscription found on a wall of the amphitheatre
of Pompei.)

PINA'RIA (Gaius, iv. 15) related to the giving
of a Judex within a limited time. (See Puchta,
Inst. i. § 53.)

PINA'RIA. [ANNALES LEGES.]

PLAETO'RIA. [CURATOR.]

PLAETO'RIA DE PLAETO'RE UR-
BA'NO. (Varro, de Ling. Lat. vi. 5; Censorinus,
de Die Natalis, e. 24.)

PLAUTIA or PLOTIA DE VI. [VIS.]

PLAUTIA or PLOTIA JUDICARIA is
mentioned by Asconius (in Cic. Cornel, p. 79) as

V Y 4
LEX PUBLIIAE.

LEGES PUBLIIAE.

having enacted that fifteen persons should be annually elected by each tribe out of its own body to be placed in the Album Judicum.

PLAUTIA or PLOTIA DE REDITU LEPIDANORUM. (Sueton. Cas. 5; Gellius, xiii. 3.)

PLAUTIA PAPRIA. [PAPIRIA PLAUTIA.]

POETELIA, B.C. 358, a Plebiscitum, was the first Lex against Ambitus. (Livy. viii. 15.)

POETELIA PAPRIA, B.C. 326, made an important change in the liabilities of the Nexi. (Livy. viii. 28.) [NEWL.

POMPELAE. There were various Leges so called.

POMPEIA, proposed by Cn. Pompeius Strabo, the father of Cn. Pompeius Magnus, probably in his consulship B.C. 89, gave the Jus Latii or Latinitas to all the towns of the Transpadani, and probably the Civitas to the Cispadani. (Savigny, Volkschiff der Tafel von Heraclea, Zeitschrift, ix.)

——— DE AMBIV. [AMBIVS.]

——— DE IMPERIO CAESARI PROROGANDO.

(Vell. Pat. ii. 46 ; Appian, B.C. ii. 18.)

——— JUDICARIA. [JUDEX.]

——— DE JURE MAGISTRATUM (Sueton. Caes. 28 ; Dion Cass. xi. 56 ; Cic. ad Att. viii. 3) forbade a person to be a candidate for public offices (petitio honorum) who was not at Rome; but C. Julius Caesar was excepted. This was doubtless the old law, but it had apparently become obsolete.

——— DE PARRICIDIS. [CORNELIA DE SICARIIS.]

TRIBUNITIA (B.C. 70) restored the old Tribunia Potestas which Sulla had nearly destroyed. (Sueton. Cas. 5 ; Vell. Pat. ii. 30 ; Cic. de Leg. iii. 9, 11, in Verr. Act. i. 15 ; Liv. Epit. 57.) [TRIBUNL.

——— DE VI was a Privilegium, and only referred to the case of Milo. (Cic. Phil. ii. 9 ; Ascon. and Schol. Bob. in Argum. Milon.)

PAPULIA. [PAPIA.]

PO/RCIAE DE CAPITE CIVIUM or DE PROVOCATIONE enacted that a Roman citizen should not be scourged or put to death. (Livy. x. 9 ; Cic. de Rep. ii. 31, pro Rabir. 3, 4 ; Sall. Catil. 51.)

PO/RCIA DE PROVINCII (about B.C. 198). The passage in Livy (xxiii. 27, "Sumtus quos in cultum praetorum," &c.) is supposed to refer to a Porcia Lex, to which the Plebiscitum de Thermensibus refers; and the words quoted by Cicero (Verr. ii. 4, 5, "Ne quis emat mancipium") are taken, as it is conjectured, from this Porcia Lex.

PUBLICIA permitted betting at certain games which required strength, as running and leaping. (Dig. ix. tit. 5.)

PUBLICIA DE SPONSO/RIBUS. [INTERCESSIO.]

PUBLILIA LEX was proposed by Publius Volero, a tribunus plebis, and enacted B.C. 471. The terms of the Rogatio were "ut plebiscita omnes Quirites tenerent: alteram, ut legum quee comitia centuriata ferrentur, antea inimicorum Patres auctor; tertiam ut alter utique ex plebe, quum co ventum sit ut unquemque plebeium consulem fieri liceret, censor crearetur." The provision of the first lex seems to be the same as that of the Lex Hortensia, B.C. 368 "ut plebiscita universum populum tenerem" (Gains, i. 3). Some critics suppose that the first Lex enacted that a Plebiscitum should be a Lex without being confirmed by the Comitia Centuriata, but that it would still require the confirmation of the Senate, or, as some suppose, of the Comitia Curiata. The Lex Hortensia, it is further supposed, did away with the confirmation of the Curiae, or, as some suppose, of the Senate. But the expression "omnes Quirites" of Livy clearly has some reference, and, according to correct interpretation, must be taken to have some reference, to the extent of the effect of a Plebiscitum. There is no difficulty in giving a consistent meaning to Livy's words. The first Lex enacted that Plebiscita should bind all the Quirites; which means nothing else than that a Plebiscitum should have the effect of a Lex passed at the Comitia Centuriata. It is not here said whether the Comitia Tributa could legislate on all matters on which the Comitia Centuriata could [PUBLILIA LEX]; and nothing is said as to the dispensing with any form for the confirming of a Lex passed at these Comitia. And that Livy did not suppose that the first Lex contained any regulations as to matter of form, it is evident by what he says of the second Lex, which did regulate the form of legislation. This is the clear meaning of Livy's words: it may not be the true import of the first Lex; but it is somewhat difficult to prove any thing about a matter beyond what the evidence shows. [PLEBISCITUM.]

The simplest meaning of the second Lex, according to the words, is, that no Rogatio should be proposed at the Comitia Centuriata, until the Patres had approved of it, and had given it their auctoritas. If we knew who were meant by the Patres, the meaning of the Lex would be tolerably clear. It is now generally supposed that Livy means the Comitia Curiata, and that their vote on the measures of the Comitia Centuriata was
taken away. If Patres means the Senate, then the purport of the Lex is this, that no measure must be proposed at the Centuriae Dies, without a SCatum first authorising it. (Comp. Liv. xlv. 21.)

The meaning of the third Lex is plain enough. Puechta shows or tries to show that the first Lex Publilia simply rendered unnecessary the confirmation of a Plebisicium by the Comitia Centuriata; and therefore there remained only the confirmation of the Senate. Accordingly, the effect of the first Lex was to make the Comitia Tributa cease to have merely the initiative in legislation; henceforth, Plebisicium did not require the confirmation of a Lex Centuriata, but only that of the Senate; and we may, probably, from this time date the use of the expression: "Lex sive id Plebisicium est."

He considers the second Lex to have simply declared the old practice, that the Comitia Centuriata should pass no Rationem without the authority of a previous Senatusconsultum. The two Leges then had this relation to one another: the first Lex provided, that a Lex passed at the Comitia Tributa, which before this time was confirmed by a Senatusconsultum, and finally ratified by the Comitia Centuriata, should not require the ratification of the Comitia Centuriata; the second Lex declared that the old practice as to the Comitia Centuriata should be maintained, that the Leges passed there should have the previous authorisation (auctoritas) of the Senate.

On the subject of these Leges, see Zachariae Suda, i. p. 56, note; Puechta, Inst. i. § 59; and Niebuhr, vol. ii. p. 114, &c. Eng. Tr.; and see VALEARIAE LEGES.

PUPIA, mentioned by Cicero (ad Quint. ii. 13, ad Fam. i. 4) seems to have enacted that the Senate could not meet on Comitiales Dies.

QUINTIA was a lex proposed by T. Quintius Crispinus, consul B.c. 9, and enacted by the Populus for the preservation of the Aqueductus. The Lex is preserved by Frontinus (de Aquaeduct Rom.);

REGIA, properly LEX DE IMPERIO PRINCIPIS. The nature of the Imperium and the mode of conferring it have been explained. Sulla, in his own person the Imperium, the Tribunitia auctoritas of the Senate. Passed there should have the previous authorisation of the Senate; and we may, probably, from this time date the use of the expression: "Lex sive id Plebisicium est."

He considers the second Lex to have simply declared the old practice, that the Comitia Centuriata should pass no Rationem without the authority of a previous Senatusconsultum. The two Leges then had this relation to one another: the first Lex provided, that a Lex passed at the Comitia Tributa, which before this time was confirmed by a Senatusconsultum, and finally ratified by the Comitia Centuriata, should not require the ratification of the Comitia Centuriata; the second Lex declared that the old practice as to the Comitia Centuriata should be maintained, that the Leges passed there should have the previous authorisation (auctoritas) of the Senate.

On the subject of these Leges, see Zachariae Suda, i. p. 56, note; Puechta, Inst. i. § 59; and Niebuhr, vol. ii. p. 114, &c. Eng. Tr.; and see VALEARIAE LEGES.

PUPIA, mentioned by Cicero (ad Quint. ii. 13, ad Fam. i. 4) seems to have enacted that the Senate could not meet on Comitiales Dies.

QUINTIA was a lex proposed by T. Quintius Crispinus, consul B.c. 9, and enacted by the Populus for the preservation of the Aqueductus. The Lex is preserved by Frontinus (de Aquaeduct Rom.).

REGIA, properly LEX DE IMPERIO PRINCIPIS. The nature of the Imperium and the mode of conferring it have been explained under IMPERIUM. Augustus, by virtue of uniting in his own person the Imperium, the Tribunitia, the Censura, the Censorian power, and the office of Pontifex, was in fact many magistrates in one; and his title was Princeps. These various powers were conferred on the earliest Principes (emperors) by various leges; but finally the whole of this combined authority was conferred by a Lex Imperii or Lex de Imperio. (Dion Cassius, lxxii. 18; his remarks on the power of Augustus, and the notes of Reimarus.) By this Lex the Imperial authority, as we may call it, was conferred on the Princeps (cum ipse Imperator per legem Imperium accipiat, Gaius, i. 5), and legislative power. By this Lex the Princeps was also called "solutus legibus," that is, many restrictive enactments were declared not to apply to him, either in his private or his magisterial capacity (Dion Cass. iii. 10, 28); for instance, Caligula was released by a Senatusconsultum, which was probably followed by a Lex as a matter of form, from the Lex Julia et Papia. (Dion Cass. lxxii. 15; compare Ulpian, Dig. i. tit. 3. s. 31.) This Lex De Imperio was preceded by a Senatusconsultum. (Tact. Hist. i. 47, iv. 3, 6.) A considerable fragment of the Lex De Imperio Vespasiani is still preserved at Rome. (Haubold, Spangenberg, Mo- num. Legal. p. 221.) It is sometimes incorrectly called a Senatusconsultum, but on the fragment itself it is called a Lex. It is true that a Senatusconsultum preceded the Lex, and the enactment of the Lex was a mere form. This Lex empowers Vespasian to make treaties, to originate Senatusconsulta, to propose persons to the people and the Senate to be elected to magistrates, to extend the Pomerium, to make constitutions or edicts which should have the force of law, and to be released from the same laws from which Augustus, Tiberius, and Claudius were released; and all that he had done before the enactment of this Lex (ante legem rogatum) was to have the same effect as if it had been done by the command of the people.

This Lex De Imperio Principis is several times named Lex Regia in the Corpus Juris (Inst. i. tit. 2. s. 6.; Dig. i. tit. 4. s. 1.; Cod. i. tit. 17. 167). There is no evidence that the Lex De Imperio Principis was ever called Lex Regia under the early emperors. Under the later emperors there is nothing surprising in the name Regia being adopted as a common expression, when the emperor was called Dominus, a title which was given even to Trajan, the Lex De Imperio might well be called Regia. To deny the existence of a Lex De Imperio would show a very imperfect knowledge of the history and constitution of Rome, and a want of critical judgment. (Puechta, Inst. i. § 68.)

REGIAE. [JUS CIVILE PAPIRIANUM.]

REMMIA. [COLUMNA.]

REPETUNDA/ RUM. [REPETUNDAR.]

RHODIA. The Rhodians had a maritime code which was highly esteemed. Some of its provisions were adopted by the Romans, and have thus been incorporated into the maritime law of European states. Strabo (p. 652, Casaub.) speaks of the wise laws of Rhodes and their admirable policy, especially in naval matters; and Cicero (pro Leg. Manil. e. 16) to the same effect. The Digest (14. tit. 2) contains so much of the Lex Rhodiorniae as relates to jactus or the throwing overboard of goods in order to save the vessel or the remainder of the cargo. This Lex Rhodiorniae de Jactu, is not a Lex in the proper sense of the term.

RO'SCIA THEATRALIS, proposed by the tribune L. Roscius Otho, B.c. 67, which gave the Equites a special place at the public spectacles in fourteen rows or seats (in quattuordecim gradibus sive ordinibus) next to the place of the senators, which was in the orchestra. This Lex was also assigned to the purposes of the Lex Rhodiorniae, which is in the Digest (14. tit. 2) called Lex of Otho (Juv. xiv. 324), or referred to by his name. (Hor. Epod. iv. 16.) This law caused some popular disturbance in the consulship of Cicero, B. c. 63, which he checked by a speech. (Cic. ad Att. ii. 1; Plut. Cic. c. 18.)

RU'BRIA. The province of Gallia Cisalpina ceased to be a Provincia, and became a part of Italia about the year B. c. 34. When this change took place, it was necessary to provide for the
LEX SATURA.

administration of justice, as the usual modes of provincial administration would cease with the determination of the provincial form of government. This was effected by a Lex, the name of which is unknown, but a large part of it, on a bronze tablet, is preserved in the Museum at Parma. This Lex arranged the judiciary establishment of the former provincia, and appointed two viri and four viri juri dicundo; a Praefectus Mutinensis was also appointed, and according to others, the Lex Rubria is this very Lex de Gallia Cisalpina. This subject is discussed by Savigny (Zeitschrift, ix.) and by Puchta (Zeitschrift, x. Uber den Inhalt der Lex Rubria de Gallia Cisalpina).

This Lex has been published several times; the latest edition is "Tavola legislativa della Gallia Cisalpina ritrovata in Veleia et restituita alla sua vera lezione da D. Pietro de Lama, Parma 1820."

We only possess the end of the nineteenth chapter of this Lex, which is contained in the Liber Rusta et Queritria (qvei de familia eerentanda devidenda iudicium sibi darei reddeve, &c. postulaverint, &c.). The matter of this Lex therefore, so far as we know it, purely concerns procedure, as Puchta remarks.

RUPILIAE (v. c. 131), were the regulations established by P. Rutilius, and ten legati, for the administration of the province of Sicily, after the close of the first servile war. They were made in pursuance of a consultament of the senate. Cicero (in Verr. ii. 15, 16, 37) speaks of these regulations as a Decretum of Rupilius; but it was not a Lex proper. The powers given to the commissioners by the Lex Julia Municipalis were of a similar kind. There was also a Lex Rupilia de Coopando Varrari, which Cicero calls Lex Rupilia; but it was not a Lex proper. The powers given to the commissioners by the Lex Julia Municipalis were of a similar kind.

Other provisions were of a similar nature, as theLex Julia de Adominiis, the Lex Julia de Adultibus, and the Lex Julia de Possessibus. These last two were designed to prevent the large possessions being reduced, whereas many generations by private persons, had often changed hands by sale, and had been improved and built upon. It was first proposed to indemnify the Possessors for all improvements, but it appears that when they made opposition to the measure, this proposal was withdrawn.

Other measures were designed by Tiberius, but his premature death stopped them. The execution of the Agraria Lex of Tiberius was impeded by a Senatusconsultum, which put an end to the commission. The Lex was revived by Caius Gracchus, but it was not a Lex proper. The powers given to the commissioners by the Lex Julia Municipalis were of a similar kind.

The Lex was revived by Caius Gracchus, but it was not a Lex proper. The powers given to the commissioners by the Lex Julia Municipalis were of a similar kind.

LEX SEMPROMIAE.

SCANTI’NIA, proposed by a tribune: the date and contents are not known, but its object was to the punishment of the provinces.

The Lex Julia de Adominiis considered this offence as included in Suprum and it was punishable with a fine; but by the later Imperial constitutions the punishment was death. (Sueton. Dom. 8 ; Paulius, S. R. ii. tit. 26. s. 13.)

Scribonia VIARIA de De Vis Munidens, proposed by C. Scribonius Caro, tr. pleb. B. C. 51. (Orelli Onomasticon.)

SEMPRO’NIAE LEGES, were leges proposed by Tiberius and C. Gracchus respectively, while they were tribuni plebis.

Agraria of Tiberius was proposed by him during his tribunate B. C. 133. The nature of this measure is explained by Appian. (Bell. Civ. i. 10, &c.) It was an Agraria Lex, the object of which was the distribution of the Public Land among the poorer citizens. (Agrariae Leges.) Tib. Gracchus with the advice of P. Licinius Crassus, Pontifex Maximus, P. Mucius Scaevola, afterwards Pontifex Maximus, and Appius Claudius (Plut. Tib. Gracchus, 9), proposed that no person should hold more of the Ager Publicus than 500 jugera (comp. Liciniae Leges), but that for every son he might hold 250 more. The poor who were to be provided with land out of what remained after the large possessions were reduced, were not to have the power of alienating their own lots; and they were to pay the tenths. The law was enacted and the execution of it was intrusted to three persons (tres viri), who were Tiberius himself, his brother Cauius, and Appius Claudius. The execution of the law was attended with great difficulty, because the public land which had been held for many generations by private persons, had been dealt with like private property, and it had been changed hands by sale, and had been improved and built upon. The Senatusconsultum, which put an end to the commission, was an Agraria Lex of Tiberius, but his premature death stopped them. The execution of the Agraria Lex of Tiberius was impeded by a Senatusconsultum, which put an end to the commission. The Lex was revived by Caius Gracchus, trib. pl. in b. c. 123. The senate ruined the cause of Gracchus by engaging the tribune M. Livius Drusus to propose measures of a character
even more popular than those of Gracchus. The legislation about the Roman Public Land requires a history in itself.

De Capite Civium, proposed by C. Gracchus b.c. 123, enacted that the caput or condition of a Roman citizen could not be affected without a trial and vote of the people. (Cic. pro Rabir. c. 4; and Cicero's disingenuous exposition, In Cat. iv. 5).

Plutarch (C. Gracchus, 4) appears to allude to this Lex; but if he does, he has mistaken its purport. Fromentaries.

De Provinciis Consularibus proposed by C. Gracchus, b.c. 123, enacted, that in every year, before the Comitia for electing the consuls, the senate should determine the two provinces which the consuls should have; and the consuls were to settle between themselves by lot, or otherwise, which province each should have. (Sullust, Jug. c. 27, and the note of Curtius; Cic. de Prov. Cons. c. 2.)

There may have been other measures proposed and carried by C. Gracchus; but it is not easy to distinguish between all that was proposed and carried, and what was simply proposed. The Lives of Tiberius and C. Gracchus, translated with notes by G. Long, give some information on the legislation of the Gracchi, which should be compared with Appian. (Bell. Civ. i. 122; and Judex, p. 649, b.)

De Provinciis Consularibus proposed by C. Gracchus, b.c. 123, enacted, that in every year, before the Comitia for electing the consuls, the senate should determine the two provinces which the consuls should have; and the consuls were to settle between themselves by lot, or otherwise, which province each should have. (Sullust, Jug. c. 27, and the note of Curtius; Cic. de Prov. Cons. c. 2.)

There may have been other measures proposed and carried by C. Gracchus; but it is not easy to distinguish between all that was proposed and carried, and what was simply proposed. The Lives of Tiberius and C. Gracchus, translated with notes by G. Long, give some information on the legislation of the Gracchi, which should be compared with Appian. (Bell. Civ. i. 122; and Judex, p. 649, b.)

Sempronius (Liv. xxxv. 7), which enacted that the law should be compared with Appian. Fromentaries.

The Roman Public Land requires a history in itself. The last enactment may have been intended to expel persons from the senate who should get in debt. All these Leges were repealed by Sulla. (App. Bell. Civ. i. 55, 59; Liv. Epit. 77; Vell. Pat. ii. 18.)

Sulpiciae, proposed by the tribune P. Sulpicius Rufus, a supporter of Marius, b.c. 88, enacted the recall of the exiles, the distribution of the new citizens and the libertini among the thirty-five tribes, that the command in the Mithridatic war should be taken from Sulla and given to Marius, and that a Senator should not contract debt to the amount of more than 2000 denarii. (Plut. Sull. 8.) The last enactment may have been intended to expel persons from the senate who should get in debt. All these Leges were repealed by Sulla. (App. Bell. Civ. i. 55, 59; Liv. Epit. 77; Vell. Pat. ii. 18.)

Epit. 77; Vell. Pat. ii. 18.)
five Agrarian laws were enacted, Domia, Thoria, Marcia, Apuleia, and Titia. It further appears from comparing two passages of Cicero (de Or. ii. 70; and Brutus, 36), in which he speaks of the Lex Thoria, with the fragments of this Lex whose title is lost, that the fragments are those of the Lex Thoria.

Now the date of the Lex Thoria is fixed by Rudorff at the year of the city 643 or B. C. 111, which is consequently the date of the Lex Thoria. Proceeding on the assumption that the fragmentary Lex was the Plebiscitum, called the Lex Thoria, Sigerius restored the beginning of it according to the usual form of Roman Plebiscita: Sp. Thorivs,... F. Tr. Plebem ivre reg. Plebeseque ivre scivit Triva... Principivm fuit pro tribv Q. Fabivs. Q. F. primvs scivit.

The history of this inscription is curious. It was not cut on the rough back of the bronze tablet till after the other side, which is smooth, had been occupied by the Servilia Lex. The Servilia Lex is certainly not of earlier date than the year of the city 649, or B. C. 106, and consequently the Lex Thoria could not have been cut on this tablet before the year 648. It seems that the tablet was large enough for the Lex Servilia, for which it was intended, but much too small for the Agrarian Law; consequently, the characters of the Agrarian side of the tablet are remarkably small, the lines narrow, the abbreviations numerous, and the chapters only separated by two or three points, whereas on the other side the letters are uniform, large, and well made, the lines wide, the words written at full length, and the chapters of the Lex separated by superscriptions. Further, the lines (of the Agrarian Lex) are often so oblique that they cross the straight lines on the opposite side, which are cut very deep and consequently are visible on the side on which the Agrarian Lex is cut. (Rudorff.)

The subject-matter of this Lex cannot be stated without entering into detail: the whole is examined by Rudorff with great care. The main subject of the Lex to which the first eighteen chapters or forty-three lines refer, is the Public land in the territory of Corinth. Rudorff concludes that the Lex applied to other land also; and for two reasons. First, the Roman Agrarian Laws of the seventh century of the city, related to all the provinces of the empire, of which we have an example in the case of the Lex Servilia of Rullus. Secondly, the fragment of the Lex Thoria, which is preserved, is so broad compared with the height that we may conclude that the complete tablet contained three times as much as it does now; for nearly all the bronze tablets on which Roman laws are cut, are of an oblong form, with the height much greater than their width.

Of the two-thirds of the tablet which it is concluded have been lost, not a trace has yet been discovered.

The essay of Rudorff contains a copy of the inscription, with the restoration of the passages that are defaced. The value of this attempt can only be estimated by an investigation as complete as that of the author.

LEX THORIA.

LEGES VALERIAE.

TAITIA, similar in its provisions to the Lex Publicia. (Dig. 11. tit. 5. s. 3.)

TITIA DE TUTO'РИBУS (see JULIA LEX ET TITIA, and Gaius i. 195).

TREBO'NIA, a plebiscitum proposed by L. Trebonius, B. C. 448, which enacted that if the ten tribunes were not chosen before the Comitia were dissolved, those who were elected should not fill up the number (co-optare), but that the Comitia should be continued till the ten were elected. (Liv. iii. 65, v. 10.)

TREBONIA DE PROVINCIIS CONSUL'ARI'BUS. (Plut. Cat. Min. 43; Liv. Epit. 105; Dion Cass. xxxix. 33.)

TRIBUNITIA. [TRIBUNUS.]

TULLIA DE AMBITU. [AMBITUS.]

TULLIA DE LEGATIONE LIBERA. [LEGATUS, p. 679, a.]

VALE'RIAE LEGES. In B. C. 508, the consuls P. Valerius proposed and carried various laws, the purpose of which was to remove the suspicion of aiming at kingly power, and to increase his popularity. The chief were a Lex which gave an appeal (provocatio) to the populace against magistrates, and one which declared to be accursed, and devoted the man and his property, who should form a design to seize the kingly power (Liv. ii. 8). Owing to these popular measures, the consul received the cognomen of Publicola, by which he is generally known. This statement of the law on Provocatio by Livy is very brief and unsatisfactory. Cicero (de Rep. ii. 31) states more distinctly that this Lex was the first that was passed at the Comitia Centuriata, and that the provisions were "ne quis magistratus civem Romanum adversus provocationem necaret neve verberaret." The Lex, therefore, secured the right of appeal to all Roman cives; and it is consistent with this, that some of the Roman cives, the patrians, as Niebuhr states, had already the provocatio to their curiae. This right of provocatio only applied to Rome and a mile round the city, for the Imperium of the consuls beyond this boundary was unlimited (Liv. iii. 65, v. 10.). Consequently, the characters of the Agrarian side of the tablet are remarkably small, the lines narrow, the abbreviations numerous, and the chapters only separated by two or three points, whereas on the other side the letters are uniform, large, and well made, the lines wide, the words written at full length, and the chapters of the Lex separated by superscriptions. Further, the lines (of the Agrarian Lex) are often so oblique that they cross the straight lines on the opposite side, which are cut very deep and consequently are visible on the side on which the Agrarian Lex is cut. (Rudorff.)

In B. C. 448, the consul P. Valerius proposed and carried various laws, the purpose of which was to remove the suspicion of aiming at kingly power, and to increase his popularity. The chief were a Lex which gave an appeal (provocatio) to the populace against magistrates, and one which declared to be accursed, and devoted the man and his property, who should form a design to seize the kingly power (Liv. ii. 8). Owing to these popular measures, the consul received the cognomen of Publicola, by which he is generally known. This statement of the law on Provocatio by Livy is very brief and unsatisfactory. Cicero (de Rep. ii. 31) states more distinctly that this Lex was the first that was passed at the Comitia Centuriata, and that the provisions were "ne quis magistratus civem Romanum adversus provocationem necaret neve verberaret." The Lex, therefore, secured the right of appeal to all Roman cives; and it is consistent with this, that some of the Roman cives, the patrians, as Niebuhr states, had already the provocatio to their curiae. This right of provocatio only applied to Rome and a mile round the city, for the Imperium of the consuls beyond this boundary was unlimited (Liv. iii. 65, v. 10.). Consequently, the characters of the Agrarian side of the tablet are remarkably small, the lines narrow, the abbreviations numerous, and the chapters only separated by two or three points, whereas on the other side the letters are uniform, large, and well made, the lines wide, the words written at full length, and the chapters of the Lex separated by superscriptions. Further, the lines (of the Agrarian Lex) are often so oblique that they cross the straight lines on the opposite side, which are cut very deep and consequently are visible on the side on which the Agrarian Lex is cut. (Rudorff.)

In c. 19 it is said that the appeal was also to the δίμοι; and this measure made Publicola popular with the δημοσικαί, whom we must take to be the Plebes (comp. Dionys. ix. 39). Dionysius generally uses δίμοι to signify Plebes; but he also uses παλλίδος in the same sense (vii. 65, viii. 70, 71, x. 40).

VALE'RIAE ET HORATIAE LEGES were proposed by the consuls L. Valerius and M. Horatius n. c. 43. (Livy ii. 30. neque enim provocatio consernum epous mille passuum.) Conformably to this, the Judicium quae Imperio continentur comprised among other cases those where the Judicium was beyond the limits of the mille passus. The substance of the two Laws is stated by Dionysius (Antiq. Rom. v. 19, 70) with more precision and apparently in accordance with the terms of the Leges. The right of provocatio was intended to protect persons against the summary jurisdiction of the consuls, by giving them an appeal to the δίμοι, and until the παλλίδος decided on their case, no punishment could be inflicted. (c. 70.) In c. 19 it is said that the appeal was also to the δίμοι; and this measure made Publicola popular with the δημοσικαί, whom we must take to be the Plebes (comp. Dionys. ix. 39). Dionysius generally uses δίμοι to signify Plebes; but he also uses παλλίδος in the same sense (vii. 65, viii. 70, 71, x. 40.).
LEX VICESIMARIA.

LEX VOCONIA.

VILELLIA ANNAELIS. [ANNALES, p. 684, b, and the Essay of Wex on the Leges Annales of the Romans, translated in the Classical Museum, No. X.]

VISE'LLIA made a man liable to a criminal prosecution who, being a Latinus, assumed to exercise the rights of an Ingenuus. (Cod. ix. tit. 21.)

VOCO'NIA, was enacted on the proposal of Q. Voconius Saxa, a Tribunus Plebis. In the "De Senectute" of Cicero, Cato the elder is introduced as saying that he spoke in favour of the Lex when he was sixty-five years of age, and in the consilium of Caepio and Philippus. (B. c. 169.) Gellius also speaks of the oration in which Cato recommended this Lex. (Cic. pro Balbo, 8, Cato Major, 5; Gellius, vii. 15, xviii. 6.)

One provision of the Lex was that no person who should be included in the census, after the census of that year (post eos censores; the Censors of that year were A. Postumius and Q. Fulvius), should make any female (virginem neve mulierem) his hers. (Cic. in Verrem, i. 41, 42.) Cicero does not state that the Lex fixed the census at any sum; but it appears from Gaius (ii. 274) that a woman could not be made hers by any person who was rated in the census at 100,000 asses or upwards (centum millia aeras), though she could take the hereditas per fideicommissam. Dion Cassius (iv. 10) names the sum as 25,000 drachmae, which is 100,000 sesterii. The lex allowed no exceptions even in favour of an only daughter. (Augustin. de Civit. Dei, iii. 21.) The lex only applied to testaments, and therefore a daughter or other female could inherit ab intestate to any amount. The Vestal Virgins could make women their heredes in all cases, which was the only exception to the provisions of the Lex. (Cic. de Rep. ii. 10; Gell. i. 12.)

If the terms of the Lex are correctly reported by Cicero, a person who was not census might make a woman his hers, whatever was the amount of his property, and so Cicero understands the Lex (in Verr. i. 41). Still there is a difficulty about the meaning of census. If it is taken to mean that a person whose property was above 100,000, and who was not included in the census, could dispose of his property as he pleased by testament, the purpose of the Lex would be frustrated; and further "the not being included in the census" (neque census esset) seems rather vague. Still, according to the terms of the Lex, any person who had ever been included in the census, would be affected by this legal incapacity. Sometimes it is assumed that the last census is meant. The Edict extended the rule of the Voconia Lex to the Bono rum Possesso. (Dig. 37. tit. 1. s. 12.)

Another provision of the Lex forbade a person, who was census, to give more in amount in the form of a legacy or a donation mortis causa, to any person than the hers or heredes should take. This provision secured something to the hers or heredes, but still the provision was ineffectual, and the object of this lex was only accomplished by the Lex Falcidia. [LEGATUM.] Gaius (ii. 226), in quoting this provision of the Lex, does not mention the condition of being census, but this is stated by Cicero (in Verr. i. 43).

Some writers suppose that this Lex also contained a provision by which a testator was forbidden to give a woman more than half of his property by way of legacy; and it appears from Cicero that
LEX VOCONIA.

the Lex applied to legacies (de mulierum legatis et hereditatisbus, Cic. de Repub. iii. 10). But this provision was not allowed by some of the best critics to have been a part of the Lex. Quintillian (Declam. 264) states that by the Lex (Voconia) a woman could not take by testament more than half of a person's property; but Quintillian says nothing of the provisions of this Lex, which incapacitated women altogether from taking under a will in certain cases, and in the passage referred to he is speaking of two women being made heredes of a property in equal shares. The dispute between the cognati and the two women turned on the words of the Lex, "ne liceat mulieri plusquam dimidiam partem bonorum suorum relinquere," the cognati contending that the Lex did not allow the whole property to be thus given to two women in equal shares, though it was admitted that if half of the property had been given to one woman, there would have been no ground for dispute. It is quite consistent that the Lex might have allowed a woman to take half of a man's property in certain cases, and in the passage referred to he might have meant that the lex prevented a man from making even his own daughter sole heres; and then the clause which followed the words "ne liceat mulieri plusquam dimidiam partem bonorum suorum relinquere," the cognati contending that the Lex did not allow the whole property to be thus given to two women in equal shares, though it was admitted that if half of the property had been given to one woman, there would have been no ground for dispute. It is quite consistent that the Lex might have allowed a woman to take half of a man's property in certain cases, and in the passage referred to he might have meant that the lex prevented a man from making even his own daughter sole heres; and then the clause which followed the words "ne liceat mulieri plusquam dimidiam partem bonorum suorum relinquere," the cognati contending that the Lex did not allow the whole property to be thus given to two women in equal shares, though it was admitted that if half of the property had been given to one woman, there would have been no ground for dispute.

LIBELLUS.

Particularly when there are many Leges relating to one subject, as Augusitana, Repetundae, &c. Several of the Roman Leges were modified by Senatusconsulta. The Senatusconsulta, which are properly laws, are enumerated under Senatusconsultum.

LEXIARCHI (λησχαρχος). [Ecclesia, p. 441, a.]

LEXIARCHICON (λησχαρχικον). [Demus.]

LEXIS (λησις). [Diere.]

LIBELLA, instruments. [Libra.]

LIBELLA, a small Roman silver coin, which is mentioned by Varro (L. L. v. 36, p. 68, Müller) as having existed in the early age of the city, but which in his time, and apparently for a considerable period before, was no longer coined. The name, however, was retained especially as a proverbial expression for a very small value. (Plant. Pseud. ii. 2, 34, Capt. v. 1, 27; Cic. Ver. ii. 2, pro Rosc. Com. 4.) It was equal in value to the as (whence its name), and, in the system of silver money, it was the tenth part of the denarius. (Varr. i. c.; Plin. H. N. xxxii. 3, s. 13.) The words of Varro and Pliny clearly imply that the libella was equal in value to the old full-weight as, and it seems most probable that the coin ceased being struck at the time of the reduction of the as, on account of the inconveniently small size which it would have assumed. The libella was subdivided into the semibella, its half, and the teruncius, its quarter. Cicero (ad Att. vii. 12) uses these words to express fractions of an estate, with reference to the denarius as the unit, the libella signifying 1/10th and the teruncius 1/40th of the whole. (Böckh, Metrol. Untersuch. p. 453, &c.)

[?] LIBELLUS, the diminutive form of libellus, and signifies properly a little book. A libellus was distinguished from other kinds of writings, by being written like our books by pages, whereas other writings were written transversa charta. (Suet. Cas. 56.) A libellus, however, did not necessarily consist of several pages. It was used by the Romans as a technical term in the following cases:—

1. Libelli accusatorum or accusatorius were the written accusations which in some cases a plaintiff, after having received the permission to bring an action against a person, drew up, signed, and sent to the judicial authorities, viz., in the city to the praetor, and in a province to the procurator. (Cod. 9. tit. 2. a. 8; Dig. 48. tit. 5. s. 2. 17. 29; 47. tit. 2. s. 74; compare Actio.) The form in which a libellus accusatorius was to be written, is described by Ulpian in a case of adultery. (Dig. 48. tit. 2. s. 3.) The accuser had to sign the libellus, and if he could not write, he was obliged to get somebody else to do it for him. If the libellus was not written in the proper legal form, it was invalid, but the plaintiff had still the right to bring the same action again in its legal form. (Ju. vi. 244, &c.; Tacit. Ann. iii. 44; Plin. Epist. vii. 27; compare Brison. de Form. v. c. 187, &c.)

2. Libelli fainosi were what we call libels or pasquinades, intended to injure the character of persons. A law of the Twelve Tables inflicted very severe punishments on those who composed defamatory writings against any person. (Cic. de Re Pub. iv. 10; Arnob. iv. p. 151.) During the latter part of the republic this law appears to have been in abeyance, for Tacitus (Ann. i. 72) says that previous to the time of Augustus libels had never
been legally punished (compare Cic. ad Fam. iii. 11), and that Augustus provoked by the audacity with which Cassius Severus brought into disrepute the most illustrious persons of the age, ordained, by a lex majestatis, that the authors of libelli famosi should be brought to trial. On this occasion Augustus, who was informed of the existence of several such works, had a search made at Rome by the aediles, and in other places by the local magistrates, and ordered the libels to be burnt; some of the authors were subjected to punishment. (Dion Cass. iv. 27.) A law quoted by Ulpian (Dig. 47. tit. 10. s. 5) ordained that the author of a libellus famosus should be intestabilis, and during the later period of the empire we find that capital punishment was not only inflicted upon the author, but upon those persons in whose possession a libellus famosus was found, or who did not destroy it as soon as it came into their hands. (Cod. 9. tit. 36.)

For further information on this subject see Rein, Das Criminalrecht der Römer, pp. 378, &c. 531.

3. Libellus memoriae, a pocket or memorandum book. (Suet. Cæs. 56.) The libellus, from which vicero (ad Att. vi. 1. § 5) communicates a memorandum of Brutus, appears to have been a book of this description.

4. Libellus is used by the Roman jurists as equivalent to Orationes Principis. [Orationes Principis]

5. The word libellus was also applied to a variety of writings, which in most cases probably consisted of one page only:—

a. To short letters addressed to a person for the purpose of cautioning him against some danger which threatened his life (Sueton. Cæs. 81, Calig. 30); and to any short letters or reports addressed to the senate or private individuals. (Suet. Cæs. 56, August. 94; Cic. ad Fam. xi. 11.)

b. To the bills stuck up in the most frequented parts of the city, in case of a debtor having absconded. (Cic. pro Quinct. 6, 15, 19; Reim, Röm. Privatw. p. 499.) Such bills were also stuck upon the estates of such a debtor, and his friends who wished to pay for him sometimes pulled down such bills. (Sene. de Benef. iv. 12.)

c. To petitions to the emperors. (Suet. Aug. 55; Auct. vii. 31, 3, 82. 1.) The emperors had their especial officers or secretaries who attended to all petitions (libelli prefectus, Dig. 20. tit. 5), and who read and answered them in the name of the emperor. (Suet. Domit. 14.) Such a libellus is still extant. See Gruter, Inscript. p. 171.

d. To the bills of appeal called libellus appellationis, which was a person who did not acquaint in a judicial sentence, had to send in after the lapse of two or three days. (Dig. 40. tit. 1.)

e. To the bills stuck up in the most frequented parts of the city, in case of a debtor having absconded. (Cic. pro Quinct. 6, 15, 19; Reim, Röm. Privatw. p. 499.) Such bills were also stuck upon the estates of such a debtor, and his friends who wished to pay for him sometimes pulled down such bills. (Sene. de Benef. iv. 12.)

f. To the bills of appeal called libellus appellationis, which was a person who did not acquaint in a judicial sentence, had to send in after the lapse of two or three days. (Dig. 40. tit. 1.)

g. To the bills stuck up in the most frequented parts of the city, in case of a debtor having absconded. (Cic. pro Quinct. 6, 15, 19; Reim, Röm. Privatw. p. 499.) Such bills were also stuck upon the estates of such a debtor, and his friends who wished to pay for him sometimes pulled down such bills. (Sene. de Benef. iv. 12.)
It is said to have been invented by Eumenes II. king of Pergamus, in consequence of the prohibition of the export of papyrus from Egypt, by Ptolemy Epiphanes. (Plin. xiii. 21.) It is probable, however, that Eumenes introduced only some improvement in the manufacture of parchment, as Herodotus mentions writing on skins as common in his time, and says that the Ionians had been accustomed to give the name of skins (διπτέρα) to books. (v. 58.) Other materials are also mentioned as used for writing on, but books appear to have been almost invariably written either upon papyrus or parchment.

The ancients wrote usually on only one side of the paper or parchment, whence Juvenal (i. 5) speaks of an extremely long tragedy as "Summi plena jam margine libri Scriptus et in tergo neddum fixitus Orestes."

Such works were called Opistographi (Plin. Ep. iii. 5), and are also said to be written in aversa charta. (Mart. viii. 62.)

The back of the paper, instead of being written upon, was usually stained with saffron colour or the ink was rubbed off by the使用者. There it was also usual to include only one book in a volume or division.

It is frequently the custom to erase or wash out writing of little importance, and to write upon the paper or parchment again, which was then called Palimpsestus (παλιμπήστος). This practice is mentioned by Cicero (ad Fam. vii. 19), who praises his friend Trebatius for having been so economical as to write upon a palimpsest, but wonders what those writings might have been which were considered of less importance than a letter. (Compare Catall. xxii. 5; Martial, xiv. 7.)

Papyrus or parchment was joined together so as to form one sheet; and when the work was finished, it was rolled on a staff, whence it was usual to include only one book in a volume or roll, so that there were generally the same number of volumes as of books. Thus Ovid (Trist. i. 1. 117) calls his fifteen books of Metamorphoses "mutatae ter quinque volumina formae." (Compare Cic. Tusc. iii. 3; ad Fam. xvii. 17.) When a book was long, it was sometimes divided into two volumes; thus Pliny (Ep. iii. 5) speaks of a work in three books "in sex volumina propter amplitudinem divisi."

In the papyri rolls found at Herculaneum, the stick on which the papyrus is rolled does not project from the papyrus, but is concealed by it. Usually, however, there were balls or bosses, ornamented or painted, called umbilici or coruna, which were fastened at each end of the stick and projected from the papyrus. (Martial, iii. 2, v. 6, 15; Tibull. iii. 1. 14; Ovid. Trist. i. 1. 8.) The ends of the roll were carefully cut, polished with pumice-stone, and coloured black; they were called the geminis frontes. (Ovid. i. c.)

To protect the roll from injury it was frequently put in a parchment case, which was stained with a purple colour or with the yellow of the Latum. Martial (x. 53) calls such a covering a papyracea toga. Something of the same kind is meant by the Greek στυλοβας (στυλόβας, Cic. ad Att. iv. 5), which Hesychius explains by διπτέραν στολας.

The title of the book (titulus index) was written on a small strip of papyrus or parchment with a light red colour (cocceum or minusium). Winkelmann supposed that the title was on a kind of ticket suspended to the roll, as is seen in the paintings at Herculaneum (see woodcut), but it was most probably stuck on the papyrus itself. (Compare Tibull. i. c.) We learn from Seneca (de Tranq. An. 9) and Martial (xiv. 180) that the portraits of the authors were often placed on the first page or cover.

As the demand for books increased towards the end of the Roman republic, and it became the fashion for the Roman nobles to have a library, the trade of booksellers naturally arose. They were called Librarii (Cic. de Leg. iii. 20), Bibliopolae (Mart. iv. 71, xiii. 3), and by the Greek writers βιβλιοκαταλόγοι or βιβλιοκαταλόγοι. Their shop was called taberna libraria (Cic. Phil. ii. 9). These shops were chiefly in the Argiletum (Mart. i. 4), and in the Vicus Sandalarius (Gell xviii. 4). On the shop door, or the pillar, as the case might be, there would be written a short allusion to this by Horace (Sat. i. 4. 71. "Art. Poët. 372") and Martial (i. 118). The price at which books were sold, seems to have been moderate. Martial says (i. c.) that a good copy of the first book of his epigrams might be had for five denarii. In the time of Augustus, the Sosii appear to have been the great booksellers at Rome. (Hor. Ep. i. 20. 2, Art. Poët. 345; see also Becker, Gallus, vol. i. p. 153, &c.) Compare the articles ATRAMENTUM, BIBLIOTHECA, CALAMUS, CAPSA, STYLOUS.

LIBER, LIBERTAS. The Roman writers divide all men into Liberi and Servi (Servus); and men were either born Liberi, in which case they were called by the Romans Ingenui (Ingenii), or became Liberi after being Servi, in which case they were called Libertini (Libertatis).

Libertas is defined in the Institutes of Justinian (1. tit. 1), to be "the natural faculty to do that which a man pleases, except he be in any thing hindered by force or law." Accordingly the Romans considered Libertas as the natural state or condition of men (Servus). A man might either be born a slave, or he might become a slave by loss of freedom. Libertas was the first essential of the three which determined status or condition: the other two were Civitas and Familia. Without Libertas there could be no status. Civitas imputa Libertas; but Libertas did not necessarily imply Civitas, for a man might be Liber without being Civis. (Civis.) Familia implies both Libertas and Civitas, and he only who is Civis has Familia. (Familia.) Thus, Familia necessarily includes Libertas, but Libertas does not necessarily include Familia in one sense; for Familia may be changed, while libertas and civitas remain (cum et libertas et civitas retenetur, familia tantum mutatur minus esse capitis diminutionem constat; v. i. tit. 5. s. 11). But Civitas so far necessarily imputa Familia, that no Civis Romanus was permanently without Familia. (G. L.)

LIBERTUS.

LIBERORUM JUS. [Lex Julia et Patia Popaeae.]

LIBERTUS (ἀπελευθερωτής), a freedman. 1. GREEK. It was not uncommon for a master at Athens to restore a slave to freedom. A private person therefore could liberate his slave without any particular formality; sometimes the state would emancipate a slave, but then the purchase money had to be restored to his master. (Plat. de Leg. xi. p. 914.) The state into which a slave thus entered was called ἀπελευθερία, and he was said to be καθ’ ἀπελευθέρων. (Demosth. pro Thorn. p. 945.) It is not quite certain whether those persons who are termed χώραι ὄχοιτες (Demosth. Philipp. i. p. 59) were likewise freedmen, as the grammarians assume, or whether they were persons yet in slavery, but living separated from their masters' household; but in Demosthenes (c. Euerg. et Mnesib. p. 1161) the expression χώραι φίλοι is evidently used as synonymous with "he has been emancipated." A slave when manumitted entered into the status of a ἀτέλεης (Mnesib., Herod. c. 29; compare Müller, De Jur. hered. Atl. p. 51). The neglect of any of the duties which a freedman had towards his former master, was prosecuted by the ἀποστασιοῦ δίκη. [APOSTASIOU DIKE.]

The Spartans likewise restored their slaves sometimes to freedom, but in what degree such freedmen partook of the civic franchise is not known. That they could never receive the full Spartan franchise is expressly stated by Dion Chrysostomus (C. res. xxxvi. p. 448, b), but Müller (Dor. 273 &c.) entitles the notion that Spartan ἀποστασιαῖοι, after passing through several stages, might in the end obtain the full franchise; this notion however is more than doubtful. Spartan ἀποστασιαῖοι were frequently used in the armies and in the senate, and were, according to Myro (ap. Athen. vi. p. 271), designated by the names of ἀμαντῖς, ἀποστασιαῖοι, ἁρπαγότας, ἐνθρευτησίας, ἀποστασιοῦντας, ἀποστασιαῖοι.

2. ROMAN. Freemen (liberi) were either Ingenui paid by their masters, or Liberati. Liberati were those persons who had been released from legal servitute (qui ex justa servitute manumissi sunt, Gaius, i. 11). A manumitted slave was Libertus (that is, liberatus) with reference to his master; with reference to the class to which he belonged after manumission, he was Libertinus. According to Suetonius, libertinus was the son of a libertus in the time of the censor Appius Claudius, and for some time after (Gaius, c. 34); but this is not the meaning of the word in the extant Roman writers.

There were three modes of Legitima manumission, the vindicta, the census, and the testamentum: if the manumitted slave was above thirty years of age, he was the Quiritarian property of his master, and if he was manumitted in proper form (legitema, justa et legitima manumissiones) he became a Civis Romanus: if any of these conditions were wanting, he became a Latinus; and in some cases only a Dediticus. [MANEMISSIO.] Thus there were, as Ulpius observes, three kinds of Liberti: Cives Romani, Latini Juniani, and Dediticii.

The Status of a Civis Romanus and that of a Dediticus, have been already described. [CIVITAS; DEDITICII.] As to the political condition of Libertini under the republic, who were Cives Romani, see MANEMISSIO.

Originally slaves who were so manumitted as not to become Civis Romanus, were still slaves; but the Praetor took them under his protection, and if he did not become Civis Romanus, he maintained their freedom, though he could not make them Cives Romani. The Lex Junia gave them a certain status, which was expressed by the phrase Latinus Juniatus: they were called Latinis, says Gaius (i. 23, ii. 58), because they were put on the same footing as the Latini Colonarii, and Juniani because they Junia Lex gave them freedom, whereas before they were by strict law (ex Jure Quiritum) slaves. Gaius (iii. 58) says that the Lex Junia declared such manumitted persons to be free as if they had been Roman citizens by birth (cives Romani ingenui), who had gone out from Rome to join a Latin colony, and thereby had become Latini Colonarii: this passage, which is not free from difficulty, is remarked on by Savigny (Zeitschrift, ix. p. 520).

A Latinus could attain the Civitas in several ways. (Gaius, i. 28, &c.; Ulp. Frap. tit. 3; LATINITAS.) As the patria potestas was a Jus pecuniae, it followed that a Latinus had not the (Roman) patria potestas over his children. If, however, he had married either a Latina and had begotten a child, who would of course be a Latinus, or had married a Roman civil, and had begotten a child, which, by a senatusconsultum of Hadrian, would be a Romanus Civis, he might, by complying with the provisions of the Lex Aelia Sentia, in the former case obtain the civitas for himself, his wife, and child, and in both cases acquire the patria potestas over his child just as if the child had been born in justae nuptiae. (Gaius, i. 90, 56.)

In considering the legal condition of Libertini, it is necessary to remember that even those who were Cives Romani were not Ingenui, and that their patroni had still certain rights with respect to them. The Latini Juniani were under some special incapacities; for the Lex Junia which determined their status, neither gave them the power of making a will, nor of taking property under a will, nor of being named Tuteare in a will. They could not therefore take either as heredes or legitimes. Libertini were certainly not libertini, but they could take by way of fideicommissum. (Gaius, i. 24.) The sons of libertini were ingenui, but they could not have gentile rights;
and the descendants of libertini were sometimes tainted with their servile origin. (Hor. Serm. i. 6, 46.)

The law which concerns the property (bona) of Libertini may be considered under PATRONUS; see also INGEXUI and LEX JUNIA. [G. L.]

LIBITINARII. [FUNUS, p. 558, a.]

LIBRA or AS, a pound, the unit of weight among the Romans and Italians. Many ancient specimens of this weight, its parts and multiples, have come down to us; but of these some are imperfect, and the rest differ so much in weight that no satisfactory conclusion can be drawn from them.

liberto may be considered under PATRONUS; see also INGEXUI and LEX JUNIA. [G. L.]

The difference between some of these specimens is as much as two ounces. An account of some of the most remarkable of them is given by Hussey (Ancient Weights, &c. ix. § 3), and Böckh (Metrolog. Untersuch. p. 170). This variety is to be accounted for partly by the well-known carelessness of the Romans in keeping to their standards of weight, and partly by the fact that many of the extant weights are from provincial towns, in which this carelessness was notoriously greater than in theetrails.

The computation of the weight of the libra has been attempted in two ways, which are more fully discussed under PONDERA. The method which has been followed by most writers is that of deducing it from the weights of the silver coins—a process which gives, according to Hussey, 5040 grains, and according to Wurm and Böckh, a little more than 5053. The other plan is that of weighing the quantity of water held by the Congius of Vespasian, which originally contained 10 Roman pounds, which gives a result of about 5000 grains. According to the former computation, it was somewhat less than 13, according to the latter, somewhat more than 13 ounces avoirdupois; and, according to either, its value may be roughly stated as a little less than 3-4th of a pound avoirdupois.

The uncial division, which has been noticed in speaking of the coin As, was also applied to the weight. (See the Tables.) The divisions of the ounce are given under UNCIA. Where the word pondo, or its abbreviations P. or POND., occur with a simple number, the weight understood is that of the other. (Winckelmann, Mon. Ined. 133; Millin, Peintures de Vases Ant. i. pl. 19, p. 39.)

A balance is often represented on the reverse of the Roman imperial coins; and to indicate more distinctly its signification, it is frequently held by a female in her right hand, while she supports a cornucopia in her left, the words AQUIVITAS AVGSTI being inscribed on the margin, so as to denote the justice and impartiality with which the emperors dispensed their bounty.

The constellation Libra is placed in the Zodiac at the equinox, because it is the period of the year at which day and night are equally balanced. (Virg. Georg. i. 208; Plin. H. N. xxix. 69; Schol. in Art. 89.)

The manuscript's or carpenter's level was called libra or libella (whence the English name), on account of its resemblance in many respects to a balance. (Varro, de Re Rust. i. 6; Columella, iii. 13; Plin. H. N. xxxvi. 52.) Hence the verb librum meant to level as well as to weigh. The woodcut to the article CIRCINUS shows a libella fidelis having the form of the letter A (Veget. iii. 20), and the line and plummet (perpendicular) depending from the apex.

LIBRAMENTUM, LIBRARIO AQUARUM. [AQUAEDUCTUS, p. 113, b.]

LIBRARII, the name of slaves, who were employed by their masters in writing or copying in any way. They must be distinguished from the scribae publici, who were freemen [SCRIBAE], and also from the booksellers [LIBER], to both of whom this name is occasionally applied. The slaves, to whom the name of librarii was given, may be divided into three classes:

1. Librarii who were employed in copying books, called Scriptores Librarii by Horace (Ars Poet. 334). These librarii were called in later times antiquarii. (Cod. 12. tit. 19. s. 10; Cod. Theod. 4. tit. 8. s. 2; Isid. Orig. vi. 14.)

2. Librarii who were employed in writing letters.

3. Librarii who were employed in writing inscriptions on bronze balances may be seen in the British Museum and in other collections of antiquities, and also of the steel-yard [STATETER], which was used for the same purposes as the libra. The woodcut to the article CATENA shows some of the chains by which the scales are suspended from the beam. In the works of ancient art, the balance is also introduced emblematically in a great variety of ways. The annexed woodcut is taken from a beautiful bronze patera, representing Mercury and Apollo engaged in exploring the fates of Achilles and Memnon, by weighing the attendant genius of the one against the other. (Winckelmann, Mon. Ined. 133; Millin, Peintures de Vases Ant. i. pl. 19, p. 39.)

A balance is often represented on the reverse of the Roman imperial coins; and to indicate more distinctly its signification, it is frequently held by a female in her right hand, while she supports a cornucopia in her left, the words AQUIVITAS AVGSTI being inscribed on the margin, so as to denote the justice and impartiality with which the emperors dispensed their bounty.

The constellation Libra is placed in the Zodiac at the equinox, because it is the period of the year at which day and night are equally balanced. (Virg. Georg. i. 208; Plin. H. N. xxix. 69; Schol. in Art. 89.)

The mason's or carpenter's level was called libra or libella (whence the English name), on account of its resemblance in many respects to a balance. (Varro, de Re Rust. i. 6; Columella, iii. 13; Plin. H. N. xxxvi. 52.) Hence the verb librum meant to level as well as to weigh. The woodcut to the article CIRCINUS shows a libella fidelis having the form of the letter A (Veget. iii. 20), and the line and plummet (perpendicular) depending from the apex.

LIBRAMENTUM, LIBRARIO AQUARUM. [AQUAEDUCTUS, p. 113, b.]

LIBRARII, the name of slaves, who were employed by their masters in writing or copying in any way. They must be distinguished from the scribae publici, who were freemen [SCRIBAE], and also from the booksellers [LIBER], to both of whom this name is occasionally applied. The slaves, to whom the name of librarii was given, may be divided into three classes:

1. Librarii who were employed in copying books, called Scriptores Librarii by Horace (Ars Poet. 334). These librarii were called in later times antiquarii. (Cod. 12. tit. 19. s. 10; Cod. Theod. 4. tit. 8. s. 2; Isid. Orig. vi. 14.)

2. Librarii who were employed in writing letters.

3. Librarii who were employed in writing inscriptions on bronze balances may be seen in the British Museum and in other collections of antiquities, and also of the steel-yard [STATETER], which was used for the same purposes as the libra. The woodcut to the article CATENA shows some of the chains by which the scales are suspended from the beam. In the works of ancient art, the balance is also introduced emblematically in a great variety of ways. The annexed woodcut is taken from a beautiful bronze patera, representing Mercury and Apollo engaged in exploring the fates of Achilles and Memnon, by weighing the attendant genius of the one against the other. (Winckelmann, Mon. Ined. 133; Millin, Peintures de Vases Ant. i. pl. 19, p. 39.)

A balance is often represented on the reverse of the Roman imperial coins; and to indicate more distinctly its signification, it is frequently held by a female in her right hand, while she supports a cornucopia in her left, the words AQUIVITAS AVGSTI being inscribed on the margin, so as to denote the justice and impartiality with which the emperors dispensed their bounty.

The constellation Libra is placed in the Zodiac at the equinox, because it is the period of the year at which day and night are equally balanced. (Virg. Georg. i. 208; Plin. H. N. xxix. 69; Schol. in Art. 89.)

The mason's or carpenter's level was called libra or libella (whence the English name), on account of its resemblance in many respects to a balance. (Varro, de Re Rust. i. 6; Columella, iii. 13; Plin. H. N. xxxvi. 52.) Hence the verb librum meant to level as well as to weigh. The woodcut to the article CIRCINUS shows a libella fidelis having the form of the letter A (Veget. iii. 20), and the line and plummet (perpendicular) depending from the apex.

LIBRAMENTUM, LIBRARIO AQUARUM. [AQUAEDUCTUS, p. 113, b.]

LIBRARII, the name of slaves, who were employed by their masters in writing or copying in any way. They must be distinguished from the scribae publici, who were freemen [SCRIBAE], and also from the booksellers [LIBER], to both of whom this name is occasionally applied. The slaves, to whom the name of librarii was given, may be divided into three classes:

1. Librarii who were employed in copying books, called Scriptores Librarii by Horace (Ars Poet. 334). These librarii were called in later times antiquarii. (Cod. 12. tit. 19. s. 10; Cod. Theod. 4. tit. 8. s. 2; Isid. Orig. vi. 14.) Isidore
(l.c.) says that the librarii copied both old and new books, while the antiquarii copied only old books. Becker (Gallus. vol. i. p. 164), however, thinks that, when the cursive character came into general use, the name of antiquarii was applied to the抄写ists who transcribed books in the old uncial character. The name of librarii was also given to those who bound books (Cic. ad Att. iv. 4), and to those who had the care of libraries.

2. Librarii ad studium were slaves who were employed by their masters when studying to make extracts from books, &c. (Orelli, Inscr. 719 ; Suet. Claud. 28 ; Cic. ad Fam. xvi. 21.) To this class the notarii, or short-hand writers, belonged, who could write down rapidly whatever their masters dictated to them. (Plin. Ep. iii. 6 ; Martial, xiv. 20.) [Notarii.]

3. Librarii ad epistolam, whose principal duty was to write letters from their master’s dictation. (Orelli, Inscr. 2437, 2997, &c.; Becker, Gallus. vol. i. p. 180.) To this class belonged the slaves called ad manum, a manu, or amanuenses. [Ama-

NUENSIS.]

LIBRATOR is in general a person who examines things by a LIBRA; but the name was, in particular, applied to two kinds of persons.

1. Librator aquae, a person whose knowledge was indispensable in the construction of aqueducts, sewers, and other structures for the purpose of conveying a fluid from one place to another. He examined by a hydrostatic balance (libra aquaria) the relative heights of the places from and to which the water was to be conducted. Some persons at Rome made this occupation their business, and were engaged under the curatores aquarum, though architects were also expected to be able to act as libratores. (Plin. Epist. x. 50 ; Frontin. de Aquaed. 163 ; compare Vitruv. viii. 6 ; Cod. 10. tit. 66. s. 1.)

2. Libratores in the armies were probably soldiers who attacked the enemy by hurling with their own hands (librando) lances or spears against them. (Tactit. Ann. ii. 20, xiii. 39 ; in both these passages some MSS. have libratores.) Lipsius (ad Tactit. Ann. l. c.) thinks that the libratores were men who threw darts or stones against the enemy by means of machines, tormenta (compare his Polioret. iv. 3). But this supposition can scarcely be supported by any good authority. During the time of the republic libratores are not mentioned to have been of the same form as the instruments containing one-fourth of the CYATHUS. (Columella, R. R. xii. 21 ; Plin. H. N. xx. 5. s. 18.) It signifies a spoonful, like cockle; only the liga
d was larger than the cocklear. The spoon which was called liga, or lingula (dim. of ling-
gus) from its shape, was used for various purposes, especially to clean out small and narrow vessels, and to eat jellies and such things. (Cato, R. R. 84 ; Colum. ix. 5 ; Plin. H. N. xxi. 14. s. 49 ; Martial, viii. 33. 25. 71. 9, xiv. 120 ; Becker, Gallus, ii. p. 156.) The word is also used for the leather tongue of a shoe (Pollux, ii. 109, vii. 89 ; Festus s. c.).

LIMA, a file, was made of iron or of two curved iron prongs, which was used by the ancient hus-

bands to clear the fields from weeds. (Ovid, ex Post. i. 8. 59 ; Mart. iv. 64 ; Stat. Theb. iii. 589 ; Colum. x. 89.) The ligo seems also to have been used in digging the soil and breaking the clods. (Hor. Carm. iii. 6. 38, Epist. i. 14. 27 ; Ovid, Amor. iii. 10. 31 ; compare Dickson, On the Hus-

dantia of the Ancients, i. p. 415.) [L. S.]

LIGULA (lingula or lingula) was a hatchet formed either of one broad iron or of two curved

iron prongs, which was used by the ancient hus-

bands to clear the fields from weeds. (Ovid, ex Post. i. 8. 59 ; Mart. iv. 64 ; Stat. Theb. iii. 589 ; Colum. x. 89.) The ligo seems also to have been used in digging the soil and breaking the clods. (Hor. Carm. iii. 6. 38, Epist. i. 14. 27 ; Ovid, Amor. iii. 10. 31 ; compare Dickson, On the Hus-

dantia of the Ancients, i. p. 415.) [L. S.]

LIGVIIA, a vessel of fluid capacity, was used in conveying a

fluid from one place to another. He

was indispensable in the construction of aqua-
ducts, sewers, and other structures for the purpose of conveying a fluid from one place to another. Aqueducts were accompanied by a lictor, whenever she went out (Dion Cass. xiv. 19), and the honour of one or two lictors was usually granted to the wives and other female members of the Imperial family. (Tactit. Ann. i. 14, xiii. 2.)

There were also thirty lictors called Lictores Curii, whose duty it was to summon the curiae to the comitia curiata ; and when these meetings became little more than a form, their suffrages were represented by the thirty lictors. (Gell. xv. 27 ; Cic. Agr. ii. 12 ; Orelli, Inscr. 2176, 2922, 3240.)

LIGO (λίσσα) or λακβέλα was a hatchet formed either of one broad iron or of two curved

iron prongs, which was used by the ancient hus-

bands to clear the fields from weeds. (Ovid, ex Post. i. 8. 59 ; Mart. iv. 64 ; Stat. Theb. iii. 589 ; Colum. x. 89.) The ligo seems also to have been used in digging the soil and breaking the clods. (Hor. Carm. iii. 6. 38, Epist. i. 14. 27 ; Ovid, Amor. iii. 10. 31 ; compare Dickson, On the Hus-

dantia of the Ancients, i. p. 415.) [L. S.]

LIGVIIA, a vessel of fluid capacity, containing one-fourth of the CYATHES. (Columella, R. R. xii. 21 ; Plin. H. N. xx. 5. s. 18.) It signifies a spoonful, like cocklear; only the liga

was larger than the cocklear. The spoon which was called liga, or lingula (dim. of ling-
gus) from its shape, was used for various purposes, especially to clean out small and narrow vessels, and to eat jellies and such things. (Cato, R. R. 84 ; Colum. ix. 5 ; Plin. H. N. xxi. 14. s. 49 ; Martial, viii. 33. 25. 71. 9, xiv. 120 ; Becker, Gallus, ii. p. 156.) The word is also used for the leather tongue of a shoe (Pollux, ii. 109, vii. 89 ; Festus s. c.). [P. S.]

LIMA, a file, was made of iron or steel, for the purpose of polishing metal or stone, and appears to have been of the same form as the instruments used for similar purposes in modern times. (Plin. H. N. xxvii. 8. s. 32, ix. 35. s. 54, xxvii. 9. s. 41 ; Plut. Monarch. i. 1. 9.)

LIMBUS (λίμβος), the border of a tunic (Corippus, de Laur. Just. ii. 117) or a scarf. (Virg. 

\[2 \times 2\]
LITIS CONTESTATIO.

Aen. iv. 137; Serv. in loc.) This ornament, when displayed upon the tunic, was of a similar kind with the CYCLAS and INSTIATA (Servius in Virg. Aen. ii. 616), but much less expensive, more common and more simple. It was generally woven in the same piece with the entire garment of which it formed a part, and it had sometimes the appearance of a scarlet or purple band upon a white ground; in other instances it resembled foliage (Virg. Aen. i. 649; Ovid, Met. vi. 127), or the scrolls and meanders introduced in architecture. A very elegant effect was produced by bands of gold thread interwoven in cloth of Tyrian purple (Ovid, Met. v. 51), and called Anpoe or teria. (Festus, s. v.; Brunck, Aulul. i. 483.) Demetrius Poliorcetes was arrayed in this manner (χωροφωπος ἄλουρης, Plut. Deum. 41). Virgil (Aen. v. 251) mentions a scarf enriched with gold, the border of which was in the form of a double meander. In illustration of this account examples of both the single and the double meander are introduced at the top of the annexed woodcut. The other eight specimens of limbi are selected to show some of the principal varieties of this ornament, which present themselves on Etruscan vases and other works of ancient art.

The use of the limbus was almost confined to the female sex among the Greeks and Romans; but in other nations it was admitted into the dress of men likewise. An ornamental band, when used by itself as a fillet to surround the temples or the waist, was also called limbus. (Stat. Theb. vi. 367, Achill. ii. 176; Claud. de Cons. Multii Theod. 118.) Probably the limbolarii mentioned by Plautus (Aulul. iii. 5. 45), who were persons employed in making bands of this description, were persons employed in making bands of this description.

LINEN. [JANUA.] LINTERA'MEN, LI'NTEUM. [PALLIUM.] LITHESTRO'TA. [DOMUS; PICTURA, sub fin.] LITIS CONTESTATIO. "Contestari" is when each party to a suit (utereque reus) says, "Testos esto;" Two or more parties to a suit (adversarii) are said contestari litem, because when the Judicium is arranged (ordinato judicio) each party is accustomed to say, "Testos esto." (Festus, s. v. Contestari.) The Litis Contestatio was therefore so called because persons were called on by the parties to the suit to "bear witness," "to be witnesses." It is not here said what they were to be witnesses of, but it may be inferred from the use of the words contestatio and testatio in a similar sense in other passages (Dig. 29. tit. 1. s. 20; Ulp. Freg. xx. s. 9) that this contestatio was the formal termination of certain acts of which the persons called to be witnesses were at some future time to bear record. Accordingly the Contestatio, spoken of in the passage of Festus, must refer to the words ordinato judicio, that is, to the whole business that has taken place In Jure and which is now completed. This interpretation seems to be confirmed by the following considerations.

When the Legis Actiones were in force, the procedure consisted of a series of oral acts and pleadings. The whole procedure, as was the case after the introduction of the Formula, was divided into two parts, that before the Magistratus or In Jure, and that before the Judex or In Judicio. Before the Magistratus consisted of acts and words by the parties, and by the Magistratus, the result of which was the determination of the form and manner of the future proceedings In Judicio. When the parties appeared before the Judex, it would be necessary for him to be fully informed of all the proceedings In Jure: this was effected in later times by the Formula, a written instrument under the authority of the Praetor, which contained the result of all the transactions In Jure in the form of instructions for the Judex. But there is no evidence of any such written instructions having been used in the time of the Legis Actions; and this must therefore have been effected in some other way. The Litis Contestatio then may be thus explained: the whole proceedings In Jure took place before witnesses, and the Contestatio was the conclusion of these proceedings; and it was the act by which the litigant parties called on the witnesses to bear record before the Judex of what had taken place In Jure.

This, which seems a probable explanation of the original meaning of Litis Contestatio, may be compared to some extent with the apparently original sense of Recorder and Recording in English law. (Penny Cyclopaedia, art. Recorder.) When the Formula was introduced, the Litis Contestatio would be unnecessary, and there appears no trace of it in its original sense in the classical jurists. Still the expressions Litis Contestatio and Litis Contestata frequently occur in the Digest, but only in the sense of the conclusion of the proceedings In Jure, and this is the meaning of the phrases, Ante litem contestatam, Post litem contestatam. (Gaius, iii. 180, iv. 114.) The expression Litis Contestata in a passive sense is used by Cicero (pro rose. Con. c. 11, 12, pro Flacco, c. 11, and in the Lex Rubricia of Gallia Cisalpina, col. i. l. 48, "quos inter id judicium accipientur levis contestatibus"). As the Litis Contestatio was originally and properly the termination of the proceedings In Jure, it is easily conceivable that after this form had fallen into disuse, the name should still be retained to express the conclusion of such proceedings. When the phrase Litem Contestari occurs in the classical jurists, it can mean nothing more than the proceedings by which the parties terminate the procedure In Jure and so prepare the matter in dispute for the investigation of the Judex.

It appears from the passage in Festus that the phrase Contestari litem was used, because the words "Testos esto" were uttered by the parties after the Judicium Ordinatum. It was therefore the uttering of the words "Testes esto," which
gave rise to the phrase Litis Contestatio; but this does not inform us what the Litis Contestatio properly was. Still as the name of a thing is derived from that which constitutes its essence, it may be that the name here expresses the thing, that is, that the Litis Contestatio was so called, for the reason which Festus gives, and that it also consisted in the litigant parties calling on the witnesses to bear record. But as it is usual for the whole of a thing to take its name from some special part, so in the time of the Leges Actiones, which was equivalent to the whole proceedings in Jure, and that the whole was so called from that part which completed it.

The time when the proper Litis Contestatio fell into disuse cannot be determined, though it would seem that this must have taken place with the passing of the Acutia Lex and the two Leges Juliae which did away with the Leges Actiones, except in certain cases. It is also uncertain if the proper Litis Contestatio still existed in those Leges Actiones, which were not interfered with by the Leges above mentioned; and if so, whether it existed in the old form or in a modified shape.

This view of the matter is by Keller, in his treatise "Ueber Litis Contestation und Urtheil nach Classischen Römischen Rechth," Zürich, 1827. Other opinions are noticed in his work. The author labours particularly to show that the expression Litis Contestatio always refers to the proceedings In Jure and never to those In Judicio.

Savigny (System, &c. vi. § 256—279) has also fully examined the Litis Contestatio. He shows that in the Extraordinaria Judicia [JUDICIUM] which existed at the same time with the process of the formula, and in which there was neither Judex nor formula, and in which the whole legal dispute was conducted before a magistratus, the Litis Contestatio means the time when the parties had fully declared their several claims and answers to such claims before the magistratus. This was substantially the same as the Litis Contestatio, and the difference lay simply in the external form. (Comp. Cod. 3. tit. 9. s. 1, Rescript of Severus and Antoninus.) At a later period, when all actions had become changed into extraordinaria judicia, that which was before the exception now became the rule, and Litis Contestata in the system of Justinian consisted in the statements made by the parties to a suit before the magistrate respecting the claim or demand, and the answer or defence to it. When this was done, the cause was ready for hearing.

[LITRA] (LITRA), a word which was used by the Greeks of Sicily in their system of weights and money, and which occurs as early as in the fragments of Simonides and Epicharmus, is evidently another form of the Italian word libra, as we are told by Festus (s. v. Libra, "Aerpa enim libra est"). It was the unit of an uncial system similar to that used in the Roman and Italian weights and money [As; LITRA], its twelfth part being called organa (the Roman sarcin), and six, five, four, three, and two of these twelfth parts being denominated respectively hulitarvrn, pentagram, tetrap, tria, and dias. As a coin, the LITRA was equal in value to the Aeginetan obol; and hence the origin of the word may be explained, by supposing that the Greeks of Sicily, having brought with them the Aeginetan obol, afterwards assimilated their system of coinage to that used by their Italian neighbours, making their obol to answer to the libra, under the name of LITRA. In the same way a Corinthian stater of ten obols was called in Syracuse a daedarkrro, or piece of ten litras. (Aristot. Op. Polit. iv. 24, 173, ix. 6, 80; Müller, Dor. iii. 10. § 12.) See NUMMUS and PONDERA.

The cotyla, used for measuring oil, which is mentioned by Galen [COTYLA], is also called by him LITRA. Here the word is only a Greek form of libra. [See LIBRA, sub fin.]

[LITUUS] Müller (Die Etrusker, rv. 1. 5) supposes this to be an Etruscan word signifying crooked. In the Latin writers it is used to denote 1. The crooked staff borne by the augurs, with which they divided the expanse of heaven when viewed with reference to divination (tempulum), into regions (regiones); the number of these according to the Etruscan discipline, being sixteen, according to the Roman practice, four. (Müller, iii. 6. 1; Cic. de Div. i. 18.) Cicero (de Div. i 7) describes the litusus as "incurvum et leviter a summum inflexum bacillum"; and Livy (i. 18) as "baculum sive nodo adunceum." It is very frequently exhibited upon works of art. The figure in the middle of the following illustrations is from a most ancient specimen of Etruscan sculpture in the possession of Inghirami (Monumenti Etruschi, tom. vi. tav. P. 5. 1), representing an augur; the two others are Roman denarii.

2. A sort of trumpet slightly curved at the extremity. (Festus, s. v.; Gell. v. 8.) It differed both from the tuba and the cornu (Hor. Carm. ii. 1. 17; Lucan, l. 237), the former being straight while the latter was bent round into a spiral shape. Lydus (De Mens. iv. 50) calls the litusus the sacerdotal trumpet (legavichy draxwvpa), and says that it was employed by Remulus when he proclaimed the title of his city. Acro (ad Horat. Carm. i. 1. 23) asserts that it was peculiar to cavalry, while the tuba belonged to infantry. Its tones are usually characterised as harsh and shrill (stridor lituum, Lucan, l. 237; sonitus acutus, Ennius, apud Fest. s. v.; Stat. Theb. vi. 228, &c.). See Müller, Die Etrusker, iv. 1. 5. The following representation is from Fabretti.

[W. R.]
LODIX.

LOCAI. [CALONES.]

LOCATI ET CONDUCTI ACTIO. [LOCATI.]

LOCATIO, CONDUCTIO, is one of those contracts which are made merely by consent, without the observation of any peculiar form. The contract might be either a locatio conductio rerum, or a locatio conductio operarum. In the locatio conductio rerum, he who promises the use of the thing, is locator, he who promises to give a sum of money for the use is conductor: if the thing is a dwelling house, the conductor is called inquilinus; if it is cultivable land, he is called colonus. The locatio conductio operarum consists either in giving certain services for a fixed price, or giving that which is the result of labour, as an article of furniture, or a house. He for whom the service is done, or the thing is made, is called locator: he who undertakes to produce the thing is conductor or redemp-tor. (Hor. Carm. iii. 1.)

The determination of a fixed price or sum of money (merces, pensio) is an essential part of the contract. When then lands were let, the merces might consist in a part of the produce. (Dig. 4. tit. 65. a. 21.) When the parties have agreed about the object and the price, the contract is completed; and the parties have severally the actiones locati et conducti for enforcing the obligatio. (Dig. 19. tit. 2.)

This being the nature of the contract of locatio et conductio, it was a matter of doubt sometimes whether a contract was locatio et conductio or something else: when a man made a pair of shoes or suit of clothes for another, it was doubted whether the contract was emtio et venditio, or locatio et conductio. The better opinion, and that which is conformable to the nature of the thing, was that if a man furnished the materials to the tailor or shoemaker, it was a contract of locatio et conductio; if the tailor or shoemaker furnished the materials, it was a contract of emtio et venditio. (Gaius, iii. 142, &c.; Inst. 3. tit. 24. s. 3, 4.) A doubt also arose as to the nature of the contract when a thing was given to a man to be used, and he gave the lender another thing to be used. Sometimes it was doubted whether the contract was Locatus et Conductio or Emittio et Vinditio; whether the thing let (locata) for ever, as was done with lands belonging to municipia, which were let on condition that so long as the rent was paid, neither the conductor nor his heirs could be turned out of the land: but the better opinion was in favour of this being a contract of Locatio et Conductio. [EMPHYTEUSIS.] [G. L.]

LOCULAE [LOCULUM], or ASSIDUI, was the name of the Roman citizens who were included in the five classes of the Servian constitution, and was opposed to the Proletarii. The term assidui seems to have been the older appellation; but the etymology of both words is very uncertain. (Cic. Top. 2, de Rep. ii. 22; Plin. H. N. xviii. 3; Festus, s. v. Assiduus, Loculetus; Becker, Rom. Alterth. vol. ii. pt. 1. pp. 211, 212.)

LODIX, dim. LODICIULA (σδιον), a small shaggy blanket. (Juv. vii. 66.) Sometimes two lodices sewed together were used as the coverlet of a bed. (Mart. xiv. 146.) The Emperor Augustus occasionally wrapt himself in a blanket of this description on account of its warmth. (Sueton. Aug. 83.) It was also used as a carpet (ancilla lodiculam in pavimento diligenter extendit, Petron. Sat. 20). The Romans obtained these blankets from Verona. (Mart. xiv. 152). Their lodix was nearly, if not altogether, the same as the sagulum worn by the Germans. (Tac. Germ. 6.) [SAGUM.] [J. Y.]

LOGISTAE (λογισταί). [ETHYNE.]

LOGOGRAPHI (λογογραφοί), is a name applied by the Greeks to two distinct classes of persons.

1. To the earlier Greek historians previous to Herodotus, though Thucydides (i. 21) applies the name logographer to all historians previous to himself, and thus includes Herodotus among the number. The Ionians were the first of the Greeks who cultivated history; and the first logographer, who lived about Olymp. 60, was Cadmus, a native of Miletus, who wrote a history of the foundation of his native city. The characteristic feature of all the logographers previous to Herodotus is, that they seem to have aimed more at amusing their hearers or readers than at imparting accurate historical knowledge. They described in a loose and mythical subjects and traditions which had previously been treated of by the epic and especially by the cyclic poets. The omissions in the narratives of their predecessors were probably filled up by traditions derived from other quarters, in order to produce, at least in form, a connected history. In many cases they were mere collections of local and genealogical traditions. (Thirlwall, Hist. of Greece, ii. p. 127, &c.; Müller, Hist. of Greek Lit. i. p. 206, &c.; Wachsmuth, Hellen. Alterth. ii. p. 443, &c.)

2. To persons who wrote judicial speeches or pleadings and sold them to those who were in want of them. These persons were called λόγοσοι as well as λογογράφοι. Antiphon, the orator, was the first who practised this art at Athens, towards the close of the Peloponnesian war. (Plut. Vit. Dec. Orat. p. 832, ed. Frankf.; Aristot. Rhet. i. 33.) After this time the custom of making and selling speeches became very general, and though the persons who practised it were not very highly thought of and placed on a par with the sophists (Demosth. de Fals. Fals. Leg. pp. 417, 420; Plut. Phaedr. p. 257, c; Anaxim. Rhet. xxxvi. 22 and 24; compare Plat. Euthydem. p. 272, a, 289, d, 305, a), yet we find that orators of great merit did not scruple to write speeches of various kinds for other persons. Thus Lysias wrote for others numerous λόγους εἰς δικαστήρια τε καὶ θυσίας καὶ πρὸς ἐκκλησίας ἐθέσεως, and besides πανηγυρικοῦς, ἔρωτικος, καὶ ἔπαινοκοις. (Dionys. Hal. Lys. p. 82, ed. Syllburg; compare Meier and Schbm. Att. Pros. p. 771.) [L. S.]

LODORIAS DIKE (Λοδορίας δίκη) [ΚΑΚΩΝΙΩΝ DIKE.]

LONCHE (Λόνχη). [HASTA.]

LOPE (Λόπη, also λόπος, dim. λόπων), the ancient Greek name of the AMICTUS, whether consisting of the hide of an animal or of cloth. Having fallen into disuse as a colloquial or prosaic term (Phryn. Ecl. p. 461, ed. Lobbeck), it was retained, though employed very sparingly, by the poets. (Hom. Od. xii. 224; Apoll. Rhod. ii. 82; Schol. in loc.; Anacreon, Frag. 79; Theocrit. xiv. 66; Brunnck, Anal. i. 230, ii. 185.) We also find it retained in λοπώνθης, literally one who puts on the amictus, a term properly applicable to those persons who frequent the thermes in
order to steal the clothes of the bathers (Schol. in Hom. l. c.), but used in a more general sense to denote thieves and highwaymen of all classes. From the same root was formed the verb ἐκλαυτίζω, meaning, to take off the amictus, to denude. (Soph. Trachin. 925.)

LÖPHOS (λόφος). [Galea.]

LORACII. [Flagrum.]

LORICA (λόρικα), a cuirass. The epithet μυθόδωρος, applied to two light-armed warriors in the Iliad (ii. 529, 630; Schol. ad loc.), and opposed to χαλαχώτης, the common epithet of the Greek soldiers, indicates the early use of the linen cuirass. It continued to be worn to much later times among the Asians, especially the Persians (Xen. Cyrop. vi. 4; Piut. Alex. p. 1524, ed. Steph.), the Egyptians (Herod. ii. 182, iii. 47), the Phoenicians (Paus. vi. 19. § 4), and the Chalybes. (Xen. Anab. iv. 7. § 15.) Iphicrates endeavoured to restore the use of it among the Greeks (Nepos, Iphic. i. 4), and it was occasionally adopted by the Romans, though considered a much less effectual defence than a cuirass of metal. (Sueton. Galbae, 19; Arrian, Tact. p. 14, ed. Blancard.)

A much stronger material for cuirasses was horn, which was applied to this use more especially by the Sarmatians and Quadi, being cut into small pieces, which were planed and polished and fastened, like feathers, upon linen shirts. (Amm. Marcell. xvii. 12. ed. Wagner.) Hoofs were employed for the same purpose. Pausanias (i. 21. § 8) having made mention of a thorax preserved in the temple of Aesculapius at Athens, gives the following account of the Sarmatians:—Having vast herds of horses, which they sometimes kill for food or for sacrifice, they collect their hoofs, and sew them together, so that the scales overlap one another, and in general appearance they resemble the surface of a green fir-cone. This author adds, that the loricae made of these horny scales imitate the surface of a green fir-cone. This author adds, that the loricae made of these horny scales are much more strong and impenetrable than linen cuirasses, which are useful to hunters, but are much more strong and impenetrable than the loricae made of these horny scales.

Aipolclcfy) (!), applied to two light-armed warriors in the Iliad. The Roman hastati wore cuirasses of chain-mail, i.e. hauberks or habergeons (ἀλυσιδωτοῖς ὀξυκάκας, Polyb. vi. 21; Athen. v. 22; Arrian, l. c.). Virgil several times mentions hauberks in which the rings, linked or hooked into one another, were of gold (loricam consortam hamin, aureoque trilocem, Virg. Aen. iii. 467, v. 239, vii. 629).

In contradistinction to the flexible cuirasses, or coats of mail, which have now been described, that commonly worn by the Greeks and Romans, more especially in the earlier ages, was called ἄφραξ στάδιος, or στατός, because, when placed upon the ground on its lower edge, it stood erect. In consequence of its firmness it was even used as a seat to rest upon. (Paus. x. 27. § 2.) It consisted principally of the two γύλα, viz. the breast-plate (pectorale) made of hard leather or of bronze, iron, or sometimes the more precious metals, which covered the breast and abdomen (Hom. Il. v. 99, xiii. 507, 587, xvii. 314); and of the correspond-
ing plate which covered the back. (Paus. x. 26. 2; Hom. II. xv. 530.) Both of these pieces were adapted to the form of the body, as may be perceived in the representation of them in the woodcuts at pages 135, 196. The two figures here introduced are designed to show the usual difference of form and appearance between the antique Greek thorax and that worn by the Roman emperors and generals. The right-hand figure is from one of Mr. Hope's fictile vases (Costumes of the Ancients, i. 102), and bears a very strong resemblance to a Greek warrior painted on one of Sir W. Hamilton's (i. 4). The figure on the left hand is taken from a marble statue of Caligula found at Gabii. (Visconti, Mon. Gab. No. 38.) The gorgon's head over the breast, and the two griffins underneath it, illustrate the style of ornament which was common in the same circumstances. (Mart. vii. 1. 1—4.) [AEGIS.] The execution of these ornaments in relief was more especially the work of the Corinthians. (Cic. Verr. iv. 44.)

The two plates were united on the right side of the body by two hinges, as seen in the equestrian statue of the younger Balbus at Naples, and in various portions of bronze cuirasses still in existence. On the other side, and sometimes on both sides, they were fastened by means of buckles (τετράδων, Paus. i. c.). [FIBULA.] In Roman statues we often observe a band surrounding the waist and tied before. The breast-plate and the back-plate were further connected together by leathern straps passing over the shoulders, and fastened in front by means of buttons or of ribands tied in a bow. In the last woodcut both of the connecting ribands in the right-hand figure are tied to a ring over the navel. The breast-plate of Caligula has a ring over each breast, designed to fulfil the same purpose. Bands of metal often supplied the place of the leathern straps, or else covered them so as to become very ornamental, being terminated by a lion's head, or some other suitable figure appearing on each side of the breast. The most beautiful specimens of enriched bronze shoulder-bands now in existence are those which were found A.D. 1820, near the river Siris in S. Italy, and which are preserved in the British Museum. They were originally gilt, and represent in very salient relief two Grecian heroes combating two Amazons. They are seven inches in length, and belong to the description of bronzes called ἥρας σφόρθλατα, having been beaten into form with wonderful skill by the hammer. Brøndsted (Bronzes of Siris, London, 1836) has illustrated the purpose which they served, by showing them in connection with a portion of another lorica, which lay upon the shoulders behind the neck. This fragment was found in Greece. Its hinges are sufficiently preserved to show most distinctly the manner in which the shoulder-bands were fastened to them (see woodcut). 

"Around the lower edge of the cuirass," observes Brøndsted, "were attached straps, four or five inches long, of leather, or perhaps of felt, and
covered with small plates of metal. These straps served in part for ornament, and partly also to protect the lower region of the body in concert with the belt (κυρή) and the band (μύτρα). They are well shown in the preceding figure of Caligula.

Instead of the straps here described, which the Greeks called πτέρυγες (Xen. de Re Equest. xii. 4), the Chalybes, who were encountered by Xenophon on his retreat (Anab. iv. 7. § 15), had in the same situation a kind of cordage. Appendages of a similar kind were sometimes fastened by hinges to the lorica at the right shoulder, for the purpose of protecting the part of the body which was exposed by lifting up the arm in throwing the spear or using the sword. (Xen. de Re Equest. xii. 6.)

Of Grecian cuirasses the Attic were accounted the best and most beautiful. (Aelian, V. H. iii. 24). The cuirass was worn universally by the heavy-armed infantry and by the horsemen, except that Alexander the Great gave to the less brave of his soldiers breast-plates only, in order that the defenceless state of their backs might decrease their propensity to flight. (Polyaen. iv. 3. 13.) These were called half-cuirasses (μήδεματα). The thorax was sometimes found to be very oppressive and cumbersome. (Tac. Ann. i. 64.)

LORICA, LORICATIO, in architecture. [MURUS; TECTORIUM OPUS.]
LOUTRON (λουτρόν). [BALNEAE.]
LUCAR. [HISTRIO, p. 613, a.]
LUCERES. [PATRICII.]
LUCERNA (λυξ), an oil lamp. The Greeks and Romans originally used candles; but in later times candles were chiefly confined to the houses of the lower classes. [CANDELA.] A great number of ancient lamps has come down to us; the greater part of which are made of terra cotta (ηρώες, Aristoph. Ecl. 1), but also a considerable number of bronze. Most of the lamps are of an oval form, and flat upon the top, on which there are frequently figures in relief. (See the woodcuts, pp. 143, 395, 464.) In the lamps there are one or more round holes according to the number of wicks (ελλεψια) burnt in it; and as these holes were called from an obvious analogy, μυκτίσες or μύκες, literally nostrils or nozzles, the lamp was also called Μονομυκές, Διηγμεκές, Πολυμυκές, or Πολυμύκες, according as it contained one, two, three, or a greater number of nozzles or holes for the wicks. The following example of a διηγμέκες lucerna, upon which there is a winged boy with a goose, is taken from the Museo Borbonico, vol. iv. pl. 14.

The next woodcut, taken from the same work (vol. i. pl. 10), represents one of the most beautiful bronze lamps which has yet been found. Upon it is the figure of a standing Silenus.

The lamps sometimes hung in chains from the ceiling of the room (Virg. Aen. i. 726; Petron. 39), but generally stood upon a stand. [CANDELABRUM.] Sometimes a figure holds the lamp, as in the annexed woodcut (Museo Borbon. vol. vii. pl. 15), which also exhibits the needle or instrument which served to trim the wick, and is attached to the figure by means of a chain. (Comp. Virg. Moret. 11. "Et productus aus stupas humore carentes.")

We read of lucernae cubiculares, ledesnares, triclinares, sepulcrales, &c.; but these names were only given to the lamps on account of the purposes to which they were applied, and not on account of a difference in shape. The lucernae cubiculares were burnt in bed-chambers all night. (Mart. xiv. 39, x. 38.)

Perfumed oil was sometimes burnt in the lamps. (Petron. 70; Mart. x. 38, 9.)

LUCTA, LUCTATIO (πάλη, πάλαιμα, παλαιμαστίνη, or καταδηλτίκη), wrestling. The word πάλη is sometimes used in a wider sense, embracing all gymnastic exercises with the exception of dancing, whence the schools of the athletes were called palaestrae, that is, schools in which the πάλη in its widest sense was taught. (Plat. de Leg. vii. p. 789; Herod. ix. 33.) [PALAESTRA.]

There are also many passages in ancient writers in which πάλη and παλαιμονί are used to designate any particular species of athletic games besides wrestling, or a combination of several games. (See Krause, p. 400, note 2.)

The Greeks ascribed the invention of wrestling to mythical personages, such as Palaestra, the daughter of Hermes (Apollod. ii. 4. § 9), Antaeus and Cerycen (Plat. de Leg. vii. p. 796), Phorbas of Athens, or Theseus. (Schol. ad Pind. Nem. v. 49.) Hermes, the god of all gymnastic exercises,
Theseus is said by Pausanias (i. 39. § 3) to have been the first who reduced the game of wrestling to certain rules, and to have thus raised it to the rank of an art; whereas before his time it was a rude fight, in which bodily size and strength alone decided the victory. The most celebrated wrestler in the heroic age was Hercules. In the Homeric age wrestling was much practised, and a beautiful description of a wrestling match is given in the Iliad (xxiii. 710, &c.; compare Od. vii. 103, 126, 346; Hesiod, Stat. Herc. 362, where μάχεων (μάχεων signifies the pankration). During this period wrestlers contended naked, with the exception of the loins, which were covered with the περισσωμα (Ii. xxiii. 700), and this custom remained throughout Greece until Ol 15, from which time the perizoma was no longer used, and wrestlers fought entirely naked. (Thucyd. i. 6, with the Schol.; Paus. i. 44. § 1; Dionys. vii. 72.) In the Homeric age the custom of anointing the body for the purpose of wrestling does not appear to have been known, but in the time of Solon it was quite general, and was said to have been adopted by the Cretans and Lacedaemonians at a very early period. (Thucyd. l.c.; Plat. de I. Prom. v. 452.) After the body was anointed, it was strewed over with sand or dust, in order to enable the wrestlers to take a firm hold of each other. At the festival of the Sthenia in Argos the pankration was accompanied by flute-music. [STHENIA.]

When two athletes began their contest, each might use a variety of means to seize his antagonist in the most advantageous manner, and to throw him down without exposing himself (Ovid. Met. ix. 33, &c.; Stat. Theb. vi. 881, &c.; Heliodor. Aethiop. x. p. 285); but one of the great objects was to make every attack with elegance and beauty, and the fight was for this as well as for other purposes regulated by certain laws. (Plat. de Leg. viii. p. 834; Cic. Orat. 68; Lucian, Anach. 24; Aelian, V.H. xi. 1.) Striking, for instance, was not allowed, but pushing an antagonist backward (ἀθυμίας) was frequently resorted to. (Plut. Symp. ii. 5; Lucian, Anach. i. 24.) It is probably on account of the laws by which this game was regulated, and the great art which it required in consequence, that Plutarch (Symp. ii. 4) calls it the τεχνικόν τοῖς πανορθόντωσι τῶν ἀθλημάτων. But notwithstanding these laws, wrestling was a favorite amusement, and a beautiful and picturesque scene is given of the game in the Iliad, xxiii. 700, and in the Symposium. (Thucyd. l.c.; Plato, de I. Prom. v. 452.) The place, where the wrestlers contended, was generally soft ground, and covered with sand. (Xen. Anab. iv. 6. § 28; Lucian, Anach. 2.) Effeminate persons sometimes frequented the games, and magnificently carpeted the place on which they wrestled. (Ath. xii. p. 539.) Each of the various tribes of the Greeks seems to have shown its peculiar and national character in the game of wrestling in some particular trick or stratagem, by which it excelled the others.

In a didactic point of view the αἰλισθήσις was considered beneficial to the interior parts of the body, the loins, and the lower parts in general, but injurious to the head; whereas the ἐποίησις was believed to act beneficially upon the upper parts of the body. It was owing to these salutary effects that wrestling was practised in all the gymnasia as well as in the palaestrae, and that in Ol 37 wrestling for boys was introduced at the Olympic games, and soon after in the other great games, and at Athens in the Eleusinia, and Thesea also. (Paus. v. 8. § 3, iii. 11. § 6; Pind. Ol. viii. 68; Gall. xv. 20; Plut. Symp. ii. 5.) The most renowned of all the Greek wrestlers in the historical age was Milon of Croton, whose name was known throughout the ancient world. (Herod. iii. 137; Strab. vi. p. 262, &c.; Diodor. xii. 8.) Other distinguished wrestlers are enumerated by Krause (p. 135, &c.), who has also given a very minute account of the game of wrestling and every thing connected with it, in his Gymnastik und Agon. d. Hell. pp. 400—439. [L.S.]

LUDI is the common name for the whole variety of theatrical exhibitions, games and contests, which were held at Rome on various occasions, but chiefly at the festival of the gods; and as the ludi at certain festivals formed the principal part of the solemnities, these festivals themselves are called ludi. Sometimes, however, ludi were also held in honour of a magistrate or of a deceased person, and in this case the games may be considered as ludi privati, though all the people might partake in them.

All ludi were divided by the Romans into two classes, viz. ludi circenses and ludi scenici (Cic. de Leg. ii. 15), accordingly as they were held in the circus or in the theatre; in the latter case they were mostly theatrical representations with their various modifications; in the former they consisted of all or of a part of the games enumerated in the articles Circus and Gladiatones. Another division of the ludi into stari, imperati, and socii, was made only with regard to religious festivals, and is analogous to the division of the feriae. [Feriae.]

The superintendence of the games and the solemnities connected with them was in most cases intrusted to the aediles. [Aediles.] If the lawful rites were not observed in the celebration of the ludi, it depended upon the decision of the pontiffs whether they were to be held again (instaurari) or not. An alphabetical list of the principal ludi is subjoined. [L.S.]
LUDI CAPITOLINI.

LUDI APOLLINARIES were instituted at Rome during the second Punic war, four years after the battle of Cannae (B.C. 212), at the command of an oracle contained in the books of the ancient seer Marcus (carmina Marciana, Liv. xxv. 12; Macrob. Sat. i. 17). It was stated by some of the ancient annalists that these ludi were instituted for the purpose of obtaining from Apollo the protection of human life during the hottest season of summer; but Livy and Macrobius adopt the account founded upon the most authentic document, the carmina Marcianae themselves, that the Apollinarian games were instituted partly to expel the Carthaginians from Italy, and partly to preserve, through the favour of the god, the republic from all dangers. The oracle suggested that the games should be held every year under the superintendence of the praetor urbanus, and that ten men should perform the sacrifices according to Greek rites. The senate complying with the advice of the oracle made two senatusconsulta; one that, at the end of the games, the praetor should receive 12,000 asses to be expended on the solemnities and sacrifices, and another that the games should sacrifice to Apollo, according to Greek rites, a bull with gilt horns and two white goats also with gilt horns, and to Latona a heifer with gilt horns. The games themselves were held in the Circus Maximus, the spectators were adorned with chaplets, and each citizen gave a contribution towards defraying the expenses. (Festus, s. v. Apollinaris.) The Roman matrons performed supplications, the people took their meals in the palaestra with open doors, and the whole day—

LUDI FUNEERES. 715

(mean that they were to be patricians. (Liv. v. 50, 52.) These priests were called Capitolini. (Cic. ad Quint. Frat. ii. 5.) One of the amusements at the Capitoline games, a solemnity which was observed as late as the time of Plutarch, was that a herald offered the Sardiani for public sale, and that some old man was led about, who, in order to produce laughter, wore a toga praetexta, and a bulla puerilis which hung down from his neck. (Plut. Quaest. Rom. p. 277; Fest. s. v. Sardi venales, &c.) According to some of the ancients this ceremony was intended to ridicule the Veientines, who were sold as slaves, to Rome, and numbers of whom were sold as slaves, while their king, represented by the old man with the bulla (such was said to have been the costume of the Etruscan kings), was led through the city as an object of ridicule.

The Veientines, it is further said, were designated by the name Sardiani or Sardi, because they were believed to have come from Lydia, the capital of which was Sardes. This specimen of ancient etymology, however, is opposed by another interpretation of the origin of the ceremony given by Sinnius Capito. According to this author, the name Sardiani or Sardi had nothing to do with the Veientines, but referred to the inhabitants of Sardinia. When their island was subdued by the Romans in B.C. 238, no spoils were found, but a great number of Sardinians were brought to Rome and sold as slaves, and these proved to be slaves of the worst kind. (Fest. c. ; Aurel. Vict. de Vir. Illustr. c. 57.) Hence arose the proverb, Sardi venales; alius alio negotio (Cic. ad Fam. vii. 24), and hence also the ceremony at the Capitoline games. At what time or at what intervals these ludi were celebrated is not mentioned. During the time of the empire they seem to have fallen into oblivion, but they were restored by Domitian, and were henceforth celebrated every fifth year under the name of agones Capitolini. (See Jos. Scaliger, Auson. Lec. i. 10.) [L.S.]

LUDI CIRCENSES ROMANI or MAGNI, were celebrated every year during several days, from the fourth to the twelfth of September, in honour of the three great divinities, Jupiter, Juno, and Minerva (Cic. c. Ferr. v. 14), or according to others, in honour of Jupiter, Consus, and Neptunus Equestris. They were superintended by the curule aediles. For further particulars see CIRCUS, p. 286, &c. [L.S.]

LUDI COMPITALICI. [COMPITALIA.]

LUDI FLORALES. [FLORALIA.]

LUDI FUNEERES were games celebrated at the funeral pyre of illustrious persons. Such games are mentioned in the very early legends of the history of Greece and Rome, and they continued with various modifications until the introduction of Christianity. It was at such a ludus funebres that in the year B.C. 264 gladiatorial fights were exhibited at Rome for the first time, which henceforward remained the most essential part in all ludi funebres. [GLADIATORIENS, p. 574, &c.] The duration of these games varied according to circumstances. They lasted sometimes for three and sometimes for four days, though it may be supposed that in the majority of cases they did not last more than one day. On one occasion 120 gladiators fought in the course of three days, and the whole forum was covered with triclinia and tents, in which the people feasted. (Liv. xxii. 30, xxxi.
50, xxxix. 46 ; Plin. H. N. xxxv. 7.) It was
thought disgraceful for women to be present at
these games, and Publius Sempronius separated
himself from his wife because she had been present
without his knowledge at ludi funebres. (Plut. Quo.
est. Rom. p. 267, n ; Val. Max. vi. 3. § 12 ;
compare Suet. Aug. 44.) These ludi, though on
some occasions the whole people took part in them,
were not ludi publici, properly speaking, as they
were given by private individuals in honour of
their relations or friends. Compare Funus. p.
562. [L. S.]

LUDI HONORARI are expressly mentioned
only by Suetonius (Aug. 32), who states that
Augustus devoted thirty days, which had been
occupied till that time by ludi honorarii, to the
transaction of legal business. What is meant by
ludi honorarii, is not quite certain. According to
Festus (s. v. Honorarii ludos) they were the same
as the Libariana. Scaliger, however, in his note
on Suetonius, has made it appear very probable
that they were the same as those which Tertullian
(De S. Ject. c. 21) says were given for the purpose
of gaining honours and popularity, in contradistinc-
tion to other ludi which were intended either
either as an honour to the gods, or as obia for the dead.
At the time of Augustus this kind of ludi which
Tacitus (Agric. 6) seems to designate by the name
inania honoris, were so common that no one ob-
tained any public office without lavishing a con-
siderable portion of his property on the exhibition
of games. Augustus therefore wisely assigned
some thirty days of the year, on which such
spectacles had been exhibited previously, to the
transaction of business, i. e. he made these 30 days
fasti. (Compare Ernesti and F. A. Wolf, ad
Sueton. I. c.)

[L. S.]

LUDI JUVENALES. [JUVENALES.]

LUDI LIBERALES. [DIONYSIA, p. 414.]

LUDI MARTIALES were celebrated every
year on the first of August, in the Circus, and in
honour of Mars, because the temple of Mars had
been dedicated on this day. (Dion Cass. lx. 5 ;
Sueton. Claud. 4.) The ancient calendaria men-
tion also other ludi martiales which were held in
the Circus on the 12th of May.

[L. S.]

LUDI MEGALENES. [MEGALESIA.]

LUDI NATALITII are the games with which
the birth-day of an emperor was generally cele-
brated. They were held in the Circus, whence
they were conducted by the praetor urbanus on behalf of the fishermen of the Tiber,
who made the day a holiday. (Ovid. Fast. vi. 235,
&c.; Fest. s. v. Piscat. ludi.)

[L. S.]

LUDI PLEBEII were, according to the
Pseudo-Aseconius (ad Verr. i. p. 143, Orelli),
the games which had been instituted in commemora-
tion of the freedom of the plebeians after the banis-
tment of the kings, or after the secession of the
plebeis to the Aventine. The first of these ac-
counts is not borne out by the history of the ple-
beian order, and it is more probable that these
games were instituted in commemoration of the
reconciliation between the patricians and plebeians
after the first secession to the mons saevr, or, ac-
cording to others, to the Aventine. They were
held on the 16th, 17th, and 18th of November,
and were conducted by the plebeian aediles. (Liv.
xxviii. 10, xxxi. 7.) It is sufficiently clear from the
ancient calendaria that the ludi plebeii were not,
as some have supposed, the same as, or a part
of, the ludi Romani.

[L. S.]

LUDI PONTIFICIALES were probably no-
thing but a particular kind of the ludi honorarii
mentioned above. They were for the first time
given by Augustus, when, after the death of Lepi-
dus, he obtained the office of pontifex maximus.
(Sueton. Aug. 44.)

[L. S.]

LUDI QUAESTORII were of the same cha-
acter as the preceding games. They were insti-
tuted by the emperor Claudius (Suet. Claud. 24 ;
Tacit. Ann. ii. 22), who disclosed that all who ob-
tained the office of quaeator should, at their own
expense, give gladiatorial exhibitions. Nero did
away with this obligation for newly appointed
quaestors (Tacit. Ann. xiii. 5), but it was revived
by Domitian. (Sueton. Domit. c. 4.)

[L. S.]

LUDI ROMANI or MAGNAI. [MEGALESIA.]

LUDI SAECUALES. If we were to judge
from their name, these games would have been
celebrated once in every century or saeculum ; but
we do not find that they were celebrated with this
regularity at any period of Roman history, and the
name ludi saeculares itself was never used during
the time of the republic. In order to understand
their real character we must distinguish between the
time of the republic and of the empire, since at
these two periods these ludi were of an entirely
different character.

During the time of the republic they were called
ludi Tarentini, Terentini, or Taurii, while during the
empire they bore the name of ludi saeculares.
(Fest. s. v. Saecu. ludi and Tauri ludi; Val. Max.
ii. 4. § 5.) Their origin is described by Vaurius
Maximus, who attributes their institution to the
miraculous recovery of three children of one Vale-
rius, who had been attacked by a plague raging at the
time in Rome, and were restored to health by drink-
ing some water warmed at a place in the Campus
Martius, called Tarentum. Vaurius afterwards
offered sacrifices in the Tarentum to Dis and Pro-
serrina, to whom the recovery of his children was
supposed to be owing, spread lectisternia for the
gods, and held festive games for three successive
nights, because his three children had been saved.
The account of Valerius Maximus agrees in the
main with those of Censorinus (De Die Nat. c. 17)
and of Zosimus (ii. 8), and all appear to have
drawn their information from the ancient annalist, Vale-
rius Antias. While according to this account the
Tarentine games were first celebrated by Vaurius,
another legend seems to consider the fight of the
Horatians and Curiatians as connected with their
first celebration. A third account (Festus, s. v.
Taurii luid ; Serv. ad Aen. ii. 140) ascribes their
first institution to the reign of Tarquinius Superbus.
A fearful plague broke out, by which all pregnant women were affected in such a manner that the children died in the womb. Games were then instituted to propitiate the infernal divinities, and sacrifices of sterile cows (tauroeae) were offered up to them, whence the games were called ludi Taurii. These games and sacrifices took place in the Circus Flaminius, that the infernal divinities might not enter the city. Festus (s. v. Suec. ludi) and Censorinus ascribe the first celebration to the consul Valerius Poplicola. This account admits that the worship of Dia and Proserpina had existed long before, but states that the games and sacrifices were now performed for the first time to avert a plague, and in that part of the Campus Martius which had belonged to the last king Tarquinius, from whom the place derived its name Tarentum. Valerius Maximus and Zosimus, who knew of the celebration of these games by Valerius Poplicola, endeavour to reconcile their two accounts by representing the celebration of Poplicola as the second in chronological order. Other less important traditions are mentioned by Servius (ad Aen. ii. 110) and by Varro (ad Aen. iii. 140). As regards the names Tarenti or Taurii, they are perhaps nothing but different forms of the same word, and of the same root as Tarquinius. All the accounts mentioned above, though differing as to the time at which and the persons by whom the Tarentine games were first celebrated, yet agree in stating that they were celebrated for the purpose of averting from the state some great calamity by which it had been afflicted, and that they were held in honour of Dia and Proserpina. From the time of the consul Valerius Poplicola down to that of Augustus, the Tarentine games were only once, about three times, and again only on certain emergencies, and not at any fixed time, so that we must conclude that their celebration was in no way connected with certain cycles of time (saecula). The deities in whose honour they were held during the republic, continued, as at first, to be Dia and Proserpina. As to the times at which these three celebrations took place, the commentarii of the quindecimviri and the accounts of the annalists did not agree (Censorin. l. c.), and the discrepancy of the statements still exists; but the chief interest of the three lambs which were offered up the third day, lies in the fact that they were burnt. A temporary scene like that of a theatre was erected in the Tarentum, and illuminated with lights and fires.

In this scene festive hymns were sung by a chorus, and various other ceremonies, together with theatrical performances, took place. During the morning of the first day the people went to the Capitol to offer solemn sacrifices to Jupiter; thence they returned to the Tarentum to sing three choruses in honour of Apollo and Diana. On the second day the noblest matrons, at an hour fixed by an oracle, assembled on the Capitol, performed supplications, sang hymns to the gods, and also visited the altar of Juno. The emperor and the quindecimviri offered sacrifices which had been vowed before, to all the great divinities. On the third day Greek and Latin choruses were sung in the sanctuary of Apollo by three times nine boys and maidens of great beauty whose parents were still alive. The object of these hymns was to implore the protection of the gods for all cities, towns, and officers of the empire. One of these hymns was the carmen saeculare by Horace, which was especially composed for the occasion, and adapted to the circumstances of the time. During the whole of the three days and nights, games of every description were carried on in all the circuses and theatres, and sacrifices were offered in all the temples.

The first celebration of the ludi saeculares in the reign of Augustus took place in the summer of the year B. C. 17 (Tacit. Ann. xi. 11); the second took place in the reign of Claudius, A. D. 47 (Suet. Claud. 21); the third in the reign of Domitian, A. D. 88 (Suet. Domit. 4, with Ernesti's note); and the last in the reign of Philippus A. D. 248, and, as was generally believed, just 1000 years after the building of the city. (Jul. Capitol, Gord. Tert. c. 33; compare Scaliger, De Emerd. Tempor. p. 486; Hartung, Die Religion der Römer, vol. ii. p. 92, &c., and the commentators ad Horat. Carm. Secund.)

LUPANAR. [Cauponae, p. 258, b.]
LUPATUM. [Frenum.]

LUPERCALIA, one of the most ancient Roman festivals, which was celebrated every year in honour of Lupercus, the god of fertility. All the ceremonies with which it was held, and all we know of its history, shows that it was originally a shepherd-festival. (Plut. Fast. ii. 317.)

Its introduction at Rome was connected with the names of Romulus and Remus, the kings of shepherds. It is said to have been introduced to the Arcadian Evander. This misrepresentation arose partly from the desire of those of Greece, and partly from its rude and remost antiquity. The festival was held every February 15th, in the Lupercal, where Romulus and Remus were said to have been nurtured by the she-wolf; the place contained an altar and a grove sacred to the god Lupercus. (Aurel. Vict. de Orig. Gent. Rom. 22; Ovid. Fast. ii. 267.)

Here the Luperci assembled on the day of the Lupercalia, and sacrificed to the god goats and young dogs, which animals are remarkable for their strong sexual instinct, and thus were appropriate sacrifices to the god of fertility. (Plut. Caes. 61.) Hence its introduction at Rome was connected with the names of Romulus and Remus, the kings of shepherds. Greek writers and their followers among the Romans represent it as a festival of Pan, and ascribe its introduction to the Arcadian Evander. This misrepresentation arose partly from the desire of those writers to identify the Roman divinities with those of Greece, and partly from its rude and almost savage ceremonies, which certainly are a proof that the festival must have originated in the remotest antiquity. The festival was held every February 15th, in the Lupercal, where Romulus and Remus were said to have been nurtured by the she-wolf; the place contained an altar and a grove sacred to the god Lupercus. (Aurel. Vict. de Orig. Gent. Rom. 22; Ovid. Fast. ii. 267.)

Here the Luperci assembled on the day of the Lupercalia, and sacrificed to the god goats and young dogs, which animals are remarkable for their strong sexual instinct, and thus were appropriate sacrifices to the god of fertility. (Plut. Rom. 21; Servius ad Aen. viii. 54.) Two youths of noble birth were then led to the Luperci, and one of the latter touched their forehead with a sword dipped in the blood of the victims; other Luperci immediately after wiped off the bloody spots with wool dipped in milk. Hereupon the two youths were obliged to break out into a shout of laughter. This ceremony was probably a symbolical purification of the shepherds. After the sacrifice was over, the Luperci partook of a meal, where Romulus and Remus were said to have been nurtured by the she-wolf; the place contained an altar and a grove sacred to the god Lupercus. (Aurel. Vict. de Orig. Gent. Rom. 22; Ovid. Fast. ii. 267.)

Two youths of noble birth were then led to the Luperci, and one of the latter touched their forehead with a sword dipped in the blood of the victims; other Luperci immediately after wiped off the bloody spots with wool dipped in milk. Hereupon the two youths were obliged to break out into a shout of laughter. This ceremony was probably a symbolical purification of the shepherds. After the sacrifice was over, the Luperci partook of a meal, where Romulus and Remus were said to have been nurtured by the she-wolf; the place contained an altar and a grove sacred to the god Lupercus. (Aurel. Vict. de Orig. Gent. Rom. 22; Ovid. Fast. ii. 267.)

The goat-skin itself, represented half naked and half covered with goat's skin, as a sign of priestly dignity and of the power of their office. (Varro, de ling. Lat. v. p. 60, B.)

The festival of the Lupercalia, though it necessarily lost its original import at the time when the Romans were no longer a nation of shepherds, was yet always observed in commemoration of the founders of the city. Antonius, in his consulship, was one of the Luperci, and not only ran with them half-naked and covered with pieces of goat-skin through the city, but even addressed the people in the forum in this rude attire. (Plut. Caes. 61.)

After the time of Caesar, however, the Lupercalia seem to have been neglected, for Augustus is said to have restored it (Suet. Aug. 31), but he forbade youths (imberles) to take part in the running. The festival was henceforth celebrated regularly down to the time of the emperor Anastasius. Lupercalia were also celebrated in other towns of Italy and Gaul, for Luperci are mentioned in inscriptions of Veliterniae, Praeneste, Nemausus, and other places. (Orelli, Inscr. n. 2251, &c.)

LUPERCICI, were the priests of the god Lupercus. They formed a college (sodalitas, euraelia), the members of which were originally youths of patrician families, and which was said to have been instituted by Romulus and Remus. (Plut. Rom. 21.) The college was divided into two classes, the one called Fabii or Fabiani, and the other Quinctillii or Quinctiliani. (Fest. s. v. Quinctiliani Luperci and Fabiani.) These names, which are the same as those with which we are acquainted in the inscriptions of Veliterniae, Praeneste, Nemausus, and Remus were designated in the early Roman legends, seem to show that the priesthood was originally confined to certain gentes. (Ovid. Fast. ii. 378, who, however, confounds the Potitii and Pinarii with the Quinctilii and Fabii.) But if such actually was the case, this limitation does not seem to have existed for a very long time, though the two classes retained their original names, for Festus says, that in course of time the number of Luperci increased, "Quia honoris gratia multi in Lupercis adscribantur. What was the original number of Luperci, and how long their office lasted, is unknown; but it is stated in inscriptions (Orelli, n. 2256 and n. 4920) that a person held the office of Lupercus twice, and another three times, and this fact shows at least that the priests were not appointed for life. Julius Caesar added to the two classes of the college a third with the name of Juli or Juliani (Dion Cass. xiv. 6; Suet. Caes. 76), and made Antonius their high priest. He also assigned to them certain revenues (recticulalibus), which were afterwards withdrawn from them. (Cic. Philipp. iii. 15, with the note of P. Manutius.) But it is uncertain whether Caesar assigned these revenues to the whole college, or merely to the Julii. From this time the two ancient classes of the Luperci are sometimes distinguished from the new one by the name of Luperci veteres. (Orelli, n. 2253.) Although in early times the Luperci were taken only from noble families, their strange and indecent conduct at the Lupercalia was offensive to the more refined Romans of a later age (Cic. Philipp. ii. 34), and Cicero (pro Cael. 11) characterises the college as a "Fera quadam sodalitas et plane posttricia antiquae agrarii, quorum colito illa silvestris antea est..."
Institutum quam humanitas atque leges. Respecting the rites with which they solemnized the Lupercalia see Lupercalia. [L. S.]

Lupus ferreus, the iron wolf used by the besieged in repelling the attacks of the besiegers, and especially in seizing the battering-ram and diverting its blows. [Aries.] (Liv. xxxvii. 3; Veget. de Re Milit. ii. 25, iv. 23.) [J. Y.]

Lustratio (xαζδρωσις), a rite originally a purification by ablation in water. But the lustrations, of which we possess direct knowledge, are always connected with sacrifices and other religious rites, and consisted in the sprinkling of water by means of a branch of laurel or olive, and at Rome sometimes by means of the aspergillum (χεφρυς), and in the burning of certain materials, the smoke of which was thought to have a purifying effect. Whenever sacrifices were offered, it seems to have been customary to carry them around the person or thing to be purified. Lustrations were made in ancient Greece, and probably at Rome also, by private individuals when they had polluted themselves with any criminal action. Whole cities and states also sometimes underwent purifications to expiate the crime or crimes committed by a member of the community. The most celebrated purification of this kind was that of Athens, performed by Epimenides of Crete, after the Cylonian massacre. (Diog. Laer. i. 10. § 3.) Purifications also took place when a sacred spot had been unhallowed by profane use, as by burying dead bodies in it, such as was the case with the island of Delos. (Thucyd. i. 5, iii. 104.)

The Romans performed lustrations on many occasions, on which the Greeks did not think of them; and the object of most Roman lustrations was not to atone for the commission of crime, but to obtain the blessing of the gods upon the persons or things which were lustrated. Thus fields were purified after the business of sowing was over (Ovid. Fast. i. 669), and before the sickle was put to the corn. [Arvales fratres.] The manner in which sheep were lustrated every year at the festival of the Pallina, is described by Ovid (Fast. iv. 735). The shepherd towards evening sprinkled his flock with water, adorned the fold with branches and foliage, burnt pure sulphur and various herbs, and offered sacrifices to Pales. The object of this lustration was to preserve the flock from disease, contagion, and other evils. (Cato, de Re Rust. c. 141.) All Roman armies before they took the field were lustrated ( Dion Cass. xlvii. 38; Appian, Hisp. c. 15, Civit. iv. 89, et passim), and as this solemnity was probably always connected with a review of the troops, the word lustration was also used in the sense of the modern review. (Cic. ad Att. v. 20, § 2.) The least customary on such occasions are not mentioned, but they probably resembled those with which a fleet was lustrated before it set sail, and which are described by Appian (Civit. c. 96). Altars were erected on the shore, and the vessels manned with their troops assembled in order close to the coast. Every body kept profound silence, and priests standing close by the water killed the victims, and carried the purification sacrifices (xαζδρωσις) in small boats three times around the fleet. On these rounds they were accompanied by the generals, who prayed to the gods to preserve the fleet from all dangers. Hereupon the priests divided the sacrifices into two parts, one of which was thrown into the sea, and the other burnt upon the altars, while the multitude around prayed to the gods. (Compare Liv. xxxvi. 42, and xxix. 27, where also a prayer is recorded such as generals used to offer on these occasions.) When a Macedonian army was lustrated, a dog was cut in two pieces in the place where the army was to assemble, and one half of the dog was thrown at a distance on the right and the other to the left. The army then assembled in the place between the spots where the pieces had fallen. (Liv. xI. 6; Curt. x. 9. § 12.) But to return to the Romans. The establishment of a new colony was always preceded by a lustratio with solemn sacrifices. (Cic. de Divin. i. 45; Barth, ad Stat. Theb. iv. p. 1073.) The city of Rome itself, as well as other towns within its dominion, always underwent a lustratio, after they had been visited by some great calamity, such as civil bloodshed, awful prodigies, and the like. (Appian, Civit. i. 26; Liv. xxxv. 9, xii. 20.) A regular and general lustratio of the whole Roman people took place after the completion of every lustrum, when the censor had finished his census and before he laid down his office. The lustratio (also called lustrum, Fest. s. v.) was conducted by one of the censors (Cic. de Divin. i. 45), and held with sacrifices called Suovetaurilia (Liv. i. 44; Varro, de Re Rust. ii. 1), because the sacrifices consisted of a pig (or ram), a sheep, and an ox. This lustratio, which continued to be observed in the days of Dionysius, took place in the Campus Martius, where the people assembled for the purpose. The sacrifices were carried three times around the assembled multitude. (Dionys. Ant. Rom. iv. 22.) Another regular lustration which was observed every year in the month of February, was said to have been instituted because the god Februus was believed to be potens lustrationum, and because in this month the solemnities in honour of the divi manes took place. (Macrobi. Sat. i. 13; compare Hartung, Die Religion der Römer, i. p. 198, &c.) [L. S.]

Lustrum (from Iuo, Gr. λαούω), is properly speaking a lustration or purification of the whole Roman people performed by one of the censors in the Campus Martius, after the business of the census was over. [Censor; Lustratio.] As this purification took place only once in five years, the word lustrum was also used to designate the time between two lustra. Varro (de Ling. Lat. vi. 11, ed. Müll.) erroneously derives the word lustrum from Iuo (I pay), because the vestigalia and tributa were paid every five years to the censors. The first lustrum was performed in B. c. 566 by king Servius, after he had completed his census (Liv. i. 44; Dionys. iv. 22), and afterwards it is said to have taken place regularly every five years after the census was over. In the earliest period of the republic the business of the census and the solemnities of the lustrum were performed by the censors. The first censores were appointed in B. c. 443, and from this year down to B. c. 294 there had, according to Livy (x. 47), only been 26 pairs of censors, and only 21 lustra, or general purifications, although if all had been regular, there would have been 30 pairs of censors and 30 lustra. We must therefore conclude, that sometimes the census was not held at all, or at least not by the censors. We also learn from his statement that the census might take place without the lustrum, and indeed two cases of this kind are recorded (Liv. iii. 22, xxiv.
ingens for saeculum.

The time when the lustrum took place has been very ingeniously defined by Niebuhr (Hist. of Rom. i. p. 277). Six ancient Roman years of 364 days each, or the six ancient years made 1824 days, while the five solar years contained 1825 days. The lustrum, or the great year of the ancient Romans (Censorin. de Die Nat. 18), was thus a cycle, at the end of which, the beginning of the ancient year nearly coincided with that of the solar year. As the coincidence however was not perfect, a month of 24 days was intercalated in every eleventh lustrum. Now it is highly probable that the recurrence of such a cycle or great year was, from the earliest times, solemnized with sacrifices and purifications, and that Servius Tullius did not introduce them, but merely connected them with his census, and thus set the example for subsequent ages, which however, as we have seen, was not observed with regularity. At first the irregularity may have been caused by the struggles between the patri- cians and plebeians, when the appointment of cen- sors was purposely neglected to increase the dis- orders; but we also find that similar neglects took place at a later period, when no such cause ex- isted. (Sueton. Aug. 37, Claud. 16.) The last lustrum was solemnized at Rome, in A.D. 74, in the reign of Vespasian. (Censorin. l.c.)

Many writers of the latter period of the republic and during the empire, use the word lustrum for any space of five years, and without any regard to the census. (Ovid, Fast. iv. 1. 6), while others even apply it in the sense of the Greek pent- taeteris or an Olympiad, which only contained four years. (Ovid, ex Pont. iv. 6. 5, &c.; Mart. iv. 45.) Martial also uses the expression lustrum ingenia for saeculum.

LYCÆA (Λύκαια), a festival with contests, celebrated by the Arcadians in honour of Zeus suffixed by the name Lycaon, the son of Pelasgus. (Paus. viii. 2. § 1; Strab. viii. p. 388.) He is also said, instead of the cakes which had formerly been offered to the god, to have sacrificed a child to Zeus, and to have sprinkled the altar with its blood. It is not improbable that human sacrifices were offered in Arcadia to Zeus Lycaeus down to a very late period in Grecian history. (Porphyry de Ab- stain. ii. 27.) No further particulars respecting the celebration of the Lycaea are known, with the ex- ception of the statement of Plutarch (Caes. 61), that the celebration of the Lycaea in some degree resembled that of the Roman Lupercalia. [L. S.]

LYCHINUCCHUS. [CANDELABRUM.]

LYRA (λύρα, Lat. fides), a lyre, one of the most ancient musical instruments of the stringed kind. There can scarcely be any doubt that this and similar instruments were used by the Eastern nations and by the Egyptians, long before the Greeks became acquainted with them, and that they were introduced among the Greeks from Asia Minor. (Wilkinson's Monuments and Cast. of the Anc. Egypt. ii. pp. 272, 288, &c.) The Greeks them-
though it cannot be denied that there existed lyres with only three strings. (Blanchini, *De Tribus Generibus Instrumentorum Musice Veterum Or-
menacae Dissertatio*, tab. iv.) The preceding description of a tetrachord and the following one of a heptachord are both taken from the work of
Blanchini.

The heptachord introduced by Terpander henceforth continued to be most commonly used by the Greeks as well as subsequently by the Romans, though in the course of time many additions and improvements were
made which are described below. In the ancient tetrachord the two extreme strings stood to each
other in the relation of a fourth (*dēa teò-
șáρów*), i.e. the lower string made three vibrations in the
time that the upper one made four. In
the most ancient arrangement of the seven strings which is called the diatonic, the two middle strings were strung in such a manner, that the three intervals between the four strings produced twice a whole tone, and one semi-
tone; two extreme in forming his heptachord, in reality added a new
tetrachord to the ancient one, but left out the third string of the latter, as there was between it and the fourth only an interval of a semi-tone.

The heptachord thus had the compass of an octave, or, as the ancients called it, a diapason (*dēa pás-
ów*). The intervals between the seven strings in the
diatomic scale were as follows:—between one and
two a whole tone, between two and three a whole
tone, between three and four a whole tone and a semi-tone, and was four and five and six a whole tone each, between six and seven a semi-
tone. The seven strings themselves were called, beginning from the highest, *nίτη*, *pαρανή*
, *pαραμός*, *μίση*, *λιχανός*, *pαρυντά*, *μπάνη*.

(Böckh, *de Metris Pindari*, p. 205, &c.) Pindar himself made use of the heptachord, though in his
time an eighth string had been added. In
the time of Philip and Alexander the number of strings was increased to eleven by Timotheus of Miletus (Suidas, s. v. Σύνθες; Müller, *Dor*. iv. 6. § 3), an innovation which was severely cen-
sured by the Spartans, who refused to go beyond the
number of seven strings. (Cic. *de Leg.* ii. 15; Athen. xiv. p. 636.) It is however clear that the
ancients made use of a variety of lyres, and in the representations which we still possess, the number of strings varies from three to eleven. About
the time of Sappho and Anacreon several stringed instru-
ments, such as *magnace*, *barbiton*, and others, were used in Greece, and especially in Lebæo.

They had been introduced from Asia Minor, and
their number of strings far exceeded that of the lyre, for we know that some had a compass of
two octaves, and others had even twenty strings, so that they must have more resembled a modern harp than a lyre. (Bode, *Gesch. der Lyriscbo. Dicht-
kunst der Hellenen*, vol. i. p. 302, &c.; compare
Quint. xii. 10.)

It has been remarked above that the name *lyra*
occurs very seldom in the earliest Greek writers, and that originally this instrument and the cithara were the same. But about the time of Pindar in-
novations seem to have been introduced by which
the lyra became distinct from the cithara, the in-
vention of which was ascribed to Apollo, and hence
the name of the former now occurs more frequently.

cases no more than seven strings. The difference
between the two instruments is described above;
the lyra had a great and full-sounding bottom,
which continued as before to be made generally of
tortoise-shell, from which, as Lucian (*Did. Mor.*
1) expresses it, the horns rose as from the head of a
stag. A transverse piece of wood connecting the
two horns at or near their top-ends served to fasten
the strings, and was called *ζυγός*, and in Latin
*transulitum*.

The horns were called *πύθων* or *cornua.* (Sch. *ad Ilid.* ii. 253; Heych. *s. n. Ζυγαρά*; Cic. *de Nat. Doctr.* ii. 58.) These instru-
ments were often adorned in the most costly
manner with gold and ivory. (Cic. *ad Heron.* iv. 47; Ovid. *Mel.* xi. 167.) The lyre was considered as a more manly instrument than the cithara,
which, on account of its smaller-sounding bottom,
excluded full-sounding and deep tones, and was
more calculated for the middle tones. The lyre
when played stood in an upright position between
the knees, while the cithara stood upon the knees
of the player. Both instruments were held with
the left hand, and played with the right. (Ovid.
*Metam.* xi. 168.) It has generally been supposed
that the strings of these instruments were always
touched with a little staff called *plectrum* (*πλέ-
κτρυον*); see woodcut under *MÉNSA*), but among
the paintings discovered at Herculaneum we find
several instances where the persons play the lyre
with their fingers. (See also Ovid. *Heroid.* iii.
118.) The lyre was at all times only played as an accompaniment to songs.

The Latin name *filicina*, which was used for a lyre
as well as a cithara, is probably the same as the
Greek σφίςκα, which, according to Hezychius (*s. v.*), signifies gut-string; but Festus (*s. v.*) takes it to
be the same as *fides* (faith), because the lyre was
the symbol of harmony and unity among men.

The lyre (cithara or phorminx) was at first
used in the recitations of epic poetry, though it was
probably not played during the recitation itself,
but only as a prelude before the minstrel com-
menced his story, and in the intervals or pauses
between the several parts. The lyre has given its
name to a species of poetry called *lyric*: this kind
of poetry was originally never recited or sung with-
out the accompaniment of the lyre, and sometimes
also of an appropriate dance. (Compare the article
*MUSICA*; Plutarch, *de Musica*; Böckh, *de Metris
Pindari*; Drieherg, *Musikalische Wissenschaften
der Griechen*; and by the same author *Ausschlüsse
über die Musik der Griechen*; Burney, *History of
Music*; Hawkins, *History of Music*; Krüger, *De
Musica Graec. Orginis circius Pindari temporum flo-
rentibus*, Göttingen, 1849; Müller, *Hist. of Greek
Lit.* p. 148, &c.)
MACELLIUM (μαχαλία, Athen. i. 9; μαχαλίς, κρεπαλίς), a provision-market, frequented by cooks, fishermen, poulterers, confectioners, butchers, and men of similar occupations. (Varro, de Re Rust. iii. 2. 17, de Ling. Lat. v. 32. pp. 147, 148. ed. Spengel; Plant. Aulal. ii. 8. 3; Ter. Eur. ii. 2. 24; Hor. Sat. i. 3. 229, Epist. i. 15. 31; Seneca, Epist. 78.) [FORUM.] From macellum, a provision-merchant was called macellarius (μαχαλίς, κρεπαλίς). (Sueton. Jul. 26; Vespas. 19; Varro, de Re Rust. iii. 2. 4.) The Athenians called their macellum εἰς τὸν ἄγοραν, just as they called their slave-markets εἰς τὸν ὀξών, and other markets, by the name of the commodities sold in them. (Poll. ix. 47; x. 19; Harpocr. els.)

MACINAE (μηχαναί), and ΟΡΓΑΝΑ (ὄργανα). The object of this article is to give a brief general account of those contrivances for the concentration and application of force, which are known by the names of instruments, mechanical powers, machines, engines, and so forth, as they were in use among the Greeks and Romans, especially in the time of Vitruvius, to whose tenth book the reader is referred for the details of the subject.

The general, but loose, definition which Vitruvius gives of a machine (x. 1. § 1), is a wooden structure, having the virtue of moving very great weights. A machine differs from an organon, inasmuch as the former is more complex and produces greater effects of power than the latter: perhaps the distinction may be best expressed by translating the terms respectively as machine or engine and instrument. Under the latter class, besides common tools and simple instruments, as the plough for example, Vitruvius appears to include the simple mechanical powers, which, however, when used in combination, as in the crane and other machines, become machines. Thus Horace uses the word for the machines used to launch vessels (Carm. i. 4. 2), which appears to have been effected by the joint force of ropes and pulleys drawing the ship, and a screw pushing it forwards, aided by rollers (φλαγγοες) beneath it. The word organon was also used in its modern sense of a musical instrument. [See HYDRAUL.]

The Greek writers, whom Vitruvius followed, divided machines into three classes, the (genres) σκευοτορίου or ἀκροβατικῶν (respecting which see Vitruvius and his commentators), the spirital or τυχευτικῶν [HYDRAUL], and the tractorium or Βαρύναν (or λαχανιναν according to the reading of the old editions) for moving heavy weights. The information which he gives us may perhaps, however, be exhibited better under another classification.

1. Mechanical Engines.

1. The Simple Mechanical Powers were known to the Greek mechanicians from a period earlier than can be assigned, and their theories were completely demonstrated by Archimedes. Vitruvius (x. 3. s. 8) discusses of the two modes of raising heavy weights, by rectilinear (στεντείων) and circular (κυκλωτής) motion. He explains the action of the lever (ferreus vectis), and its three different sorts, according to the position of the fulcrum (στρομάκλειον), and some of its applications, as in the steelyard (trutina, staetera), and the cars and rudder-cars of a ship; and alludes to the principle of virtual velocities. The inclined plane is not spoken of by Vitruvius as a machine, but its properties as an aid in the elevation of weights are often referred to by him and other writers; and in early times it was, doubtless, the sole means by which the great blocks of stone in the upper parts of buildings could be raised to their places.

Under the head of circular motion, Vitruvius makes a passing allusion to the various forms or wheels and screws, planaria, rhodas, tumulana, rotae, cockleae, scorpiones, balistae, prela, about which see the respective articles. It is worth while, also, to notice the methods adopted by Chersiphron and his son Mctagenes, the architects of the temple of Artemis at Ephesus, and by later architects, to convey large blocks of marble from the quarries, by supporting them in a cradle between wheels, or enclosing them in a cylindrical frame-work or wood (Vitruv. x. 6. s. 2); and also the account which Vitruvius gives of the mode of measuring the distance passed over by a carriage or a ship, by an instrument attached to the wheel of the former, or to a sort of paddle-wheel projecting from the side of the latter (c. 9. s. 14). What he says of the pulley will be more conveniently stated under the next head.

2. Compound Mechanical Powers, or Machines for raising heavy weights (machinae tractoriae). Of these Vitruvius describes three principal sorts. All of them consisting of a proper erect frame-work (either three beams, or one supported by ropes): from which hang pulleys, the rope of which is worked either by a number of men, or by a winch (σωκύλα), or by a large drum (γυμπαναμ, ακρι-πειρων, πετριφων) moved as a tread-wheel, only from within. He describes the different sort of pulleys, according to the number of sheaves (σειραί in each block (τροχεία or ρέχαμα), whence also the machine received special names, such as trispastos, when there were three sheaves, one in the lower block and two in the upper; and pentastatos, when there were five sheaves, two in the lower block, and three in the upper (x. 2—5).

II. Military Engines. (Vitruv. x. 15—22; Vegetius and the other writers de Re Militari: Aries; Helpeolis; Testudo; Tormentum; Turris, &c.)

III. Theatrical Machines. [THEATRUM.]

IV. Hydraulic Engines. 1. Conveyance and delivery of water through pipes and channels. [AQUAECUSTUS; EMISSARIUM: FISTULA; FONS.] It has been shown, under the articles referred to, that the ancients well knew, and that they applied in practice, the hydrostatic law, that water enclosed in a bent pipe rises to the same level in both arms. It also appears, from the work of Prontinus, that they were acquainted with the laws of hydraulics, that the quantity of water delivered by an orifice in a given time depends on the size of the orifice and on the height of the water in the reservoir; and also, that it is delivered faster through a short pipe than through a mere orifice of equal diameter.

2. Machines for raising water. The ancients did not know enough of the laws of atmospheric pressure to be acquainted with the common sucking pump; but they had a sort of forcing pump, which is described by Vitruvius (x. 12), who ascribes the invention to Ctesibius. For raising water a small
hight only they had the well-known screw of Archimedes, an instrument which, for this particular purpose, has never been surpassed. (Vitruv. x. 11; Cichor.) But their pumps were chiefly fitted on the principle of those in which the water is lifted in buckets, placed either at the extremity of a lever, or on the rim of a wheel, or on a chain working between two wheels. (Vitruv. x. 9; Antilia; Tympanum.)

3. Machines in which water is the moving power. (Vitruv. x. 10; Mola.)

4. Other applications of water, as to the measurement of time, and the production of musical sounds, in theclepsydra and the hydraulic organ. (Vitruv. ix. 5, x. 13; Horologium; Hydraulica.)

MAENIUM, signified, originally, a protection, an inclosure, which was erected round the Roman forum, in order to give more accommodation to the spectators of the gladiatorial combats, by the censors, C. Maenius, n. c. 318 (Festus, s. a. p. 135, ed. Müller; Isidor. Orig. xvi. 3. § 11) and hence lawsuits in general came to be called maenienia. Many allusions to such structures, and to the regulations which were found necessary to keep them within due bounds, are found in the ancient writers (Cic. Acad. iv. 22; Non. p. 83. s. 65, Müll.; Sueton. Colomb. 16; Vitruv. v. 1; Plin. H. N. xxxv. 10. s. 37; Cal. Max. ix. 12. § 7; Cal. Just. viii. 2. 20, 10. 11, xiii. 6. 2. § 6, l. 16. 242. § 1; Amm. Marc. xxvii. 9. 10; see also Amm. Theatetius, p. 38, and Circus, p. 265, a.)

MAGADIS. [Lyra, p. 721, a; Musica.]

MAGADOR, which contains the same root as mag-is and mag-nus, was applied at Rome to persons possessing various kinds of offices, and is thus explained by Festus (s. v. Magadorare): — "Magis- torare, modernari. Unde magistro non solum doctores artium, sed etiam pagorum, societatum, vicorum, collegiorum, equitum dicuntur; quia omnes hi magis ceteris passunt." Paulus (Dig. 50. tit. 16. s. 5f.) thus defines the word: — "Quibus praecipuo recurum incumbunt, et qui magis quam ceteri diligentiam et sollicitudinem rebus, quibus prae sunt, debent, hi magistro appellantur." The following is a list of the principal magistri: —

MAGISTRO ADSSIONUM. [Admissionales.]

MAGISTER ARMORUM appears to have been the same officer as the Magister Militum. (Amm. Marc. xvi. 7, xx. 6, b.)

MAGISTER AUCTIONIS. [Bonorum Emptio.]

MAGISTER BIBENDI. [Symposium.]

MAGISTER COLLEGII was the president of a college or corporation. [Collegium.]

MAGISTER EQUITUM. [Dictator, p. 407, b.]

MAGISTER LIBELLORUM was an officer or secretary who read and answered petitions addressed to the emperors. (Libellus, 4. c.) He is called in an inscription "Magister Libellorum et Cognitorum," (Ortiz, l. c.)

MAGISTER MEMORIALI, an officer whose duty it was to receive the decision of the emperor on any subject and communicate it to the public or the persons concerned. (Amm. Marc. xv. 5, xxvii. 6.)

MAGISTER MILITUM, the title of the two officers, to whom Constantine intrusted the command of all the armies of the empire. One was placed over the cavalry, and the other over the infantry. On the divisions of the empire their number was increased, and each of them had both cavalry and infantry under his command. In addition to the title of Magistri militum, we find them called Magistri armorum, equitum et peditum, utriusque militiae (Zosim. ii. 36, iv. 27; Vales. ad Ann. Marc. xvi. 7.) In the fifth century, there were in the Eastern empire two of these officers at court, and three in the provinces; in the western empire, two at court, and one in Gaul. Under Justinian, a new magister militum was appointed for Armenia and Pontus. (Walter, Geschichte des Römischen Rechts, § 342, 2d ed.)

MAGISTER NAVIS. [Exercitatoria Actio.]

MAGISTER OFFICIORUM, was an officer of high rank at the imperial court, who had the superintendence of all audiences with the emperor, and also had extensive jurisdiction over both civil and military officers. (Cod. 1. tit. 31; 12. tit. 16; Cod. Theod. 1. tit. 9; 6. tit. 9; Amm. Marc. xv. 5; xx. 2, xxii. 3; Cassiod. Var. vi. 6.)

MAGISTER POPULI. [Dictator.]

MAGISTER SCRINORUM, had the care of all the papers and documents belonging to the emperor. (Cod. 12. tit. 9; Spartan. Ael. Ver. 4; Lanprid. Alex. Ser. 26.)

MAGISTER SOCIETATIS. The equites, who farmed the taxes at Rome, were divided into companies or partnerships; and he who presided in such a company was called Magister Societatis. (Cic. Verr. ii. 74, ad Fam. xiii. 9, pro Plancio, 13.)

MAGISTER VICORUM. Augustus divided Rome into certain regions and vicia, and commanded that the people of each vicus should choose magistri to manage its affairs. (Suet. Aug. 30, Tib. 76; Orelli, Inscr. 5, 813, 1530.) From an inscription on an ancient stone referred to by Pictacius (Lexicon, s. e.) it appears that there were four such magistri to each vicus. They were accustomed to exhibit the Ludi Comitalis dressed in the praetexta. (Ascon. in Cis. Pison. p. 7, ed. Orelli.)

MAGISTRATUS. A definition of Magistratus may be collected from Pomponius, De Origine Juris (Dig. 1. tit. 2). Magistratus are those "qui juri dicundo presunt." The King was originally the sole Magistratus; he had all the Potestas. On the expulsion of the Kings, two Consuls were annually appointed and they were Magistratus. In course of time other Magistratus were appointed, so that Pomponius enumerates as the Magistratus of his time "qui in civitate jura reddebant," ten tribuni plebis, two consuls, eighteen praetors, and six aediles. He adds that the Praefecti Annonae et Vigilum were not Magistratus. The Dictator was also a Magistratus; and the Censors; and the Decemviri litibus judicandis. The governors of the provinces was exercised by the Praesides of the provinces; and also by the Curule Aediles whose jurisdiction in the Provinciae Populi Romani was exercised by the Quaestors of those Provinces.

The word Magistratus contains the same element as mag(is)ter and mag(nus); and it signifies both the persons and the office, as we see in the phrase "se magistratu abdicate," which signifies to give up the office before the time at which it regularly...
expired. (On the abdicatio, see Rubino, Römische Staatsverfassung, p. 88; and Plut. Cic. 19.) (Liv. vi. 1, xxii. 23.) According to Festus, a magistratus was one who had "judicium auspiciunum." According to M. Messala the augur, quoted by Gellius (xiii. 15), the Auspicia Maxima belonged to the Consuls, Praetors, and Censors, and the Minora auspica to the other Magistratus; accordingly the Consuls, Praetors, and Censors were called Majores, and they were elected at the Comitia Centuriata; the other Magistratus were called Minores. The Magistratus were also divided into Curules and those who were not Curules: the Magistratus Curules were the dictator, consuls, praetors, censors, and the curule aediles, who were so called, because they had the Jus Sefane Curulis. The magistrates were chosen only from the Patricians in the early Republic, but in course of time the Plebeians shared these honours, with the exception of that of the Interrex: the Plebeian Magistratus properly so called were the Plebeian Aediles and the Tribuni Plebis.

The distinction of Magistratus into Majores who had the Imperium, and the Minores who had not, had a reference to Jurisdiction also. The former term comprised Praetors and governors of Provinces; the latter, in the Republican time, comprised Aediles and Quaestors, and, under the Empire, the numerous body of Municipal Magistrates. The want of the Imperium limited the power of the Magistratus Minor in various matters which came under their cognizance, and the want of it also removed other matters entirely from their jurisdiction. Those matters which belonged to Jurisdiction in its limited sense were within the competence of the Magistratus Minores [JURISDICTIO]; but those matters which belong to the Imperium, were for that reason not within the competence of the Magistratus Minores. As proceeding from the Imperium we find enumerated the praetoriae stipulationes, such as the cautio damni infecti, and easement in possessionem, and the In integrum restitutio. The want of the Imperium limited the jurisdiction of the Municipal Magistrates. As proceeding from the Imperium it was further necessary to determine what should be the form of procedure before these Magistrates in all matters that were extra ordinem, that is, in such matters as did not belong to their competence because they were Magistratus Minores, but were specially given to them by a Lex. The determining of this form of procedure was the object of the Jus. [LEX RUBRIA] (Puechta, Zeitschrift, x. p. 195.)

The case of Adoption (properly so called) illustrates the distinction of Magistratus into Majores and Minores, as founded on the possessing or not possessing the Imperium. (Gaius, i. 99.) This adoption was effected "Imperio Magistratus," as for instance before the Praetor at Rome; in the Provinciae the same thing was effected before a Proconsul or Legatus, both of whom therefore had the Imperium. The Municipal Magistratus, as they had not the Imperium, could not give validity to such an act of adoption.

MAJESTAS is defined by Ulpian (Dig. 48. tit. 4. s. 1) to be "crimen illud quod adversus Populum Romanum vel adversus securitatem ejus committitur." He then gives various instances of the crime of Majestas, some of which pretty nearly correspond to treason in English law; but all the offences included under Majestas comprehend more than the English treason. One of the offences included in the Majestas was the effecting, aiding in, or planning the death of a Magistratus Populi Romani or of one who had Imperium or Potestas. Though the phrase "crimen majestatis" was used, the complete expression was "crimen laesae, immunitae, diminutae, minutae, majestatis." The word Majestas consistently with its relation to mag (nus) signifies the magnitude or greatness of a thing. "Majestas," says Cicero (Part. 30) "est quedam magnitudo Populi Romani;" "Majestas est in Imperii atque in nominis Populi Romani dignitate." Accordingly the phrases "Majestas Populi Romani" and "Majestas Populi Romani dignitate" were used. The phrase Majestas Publica in the Digest is equivalent to the Majestas Populi Romani. In the Republican period the term Majestas Laesa or Minuta was most commonly applied to cases of a general betraying or surrendering his army to the enemy, exciting sedition, and generally by his bad conduct in administration impairing the Majestas of the State. (Tacit. Ann. i. 72.)

The Laws of the Twelve Tables punished with death a person who stirred up an enemy against Rome or surrendered a Roman citizen to an enemy. (Dig. 48. tit. 4. s. 3.) The Lexes Majestas Publica in the Digest are equivalent to the Lex Julia; and several of the special provisions of the Lex Julia are enumerated in the passage just referred to.

Like many other leges the Lex Julia was modified...
by Senatusconsulta and Imperial Constitutions; and we must not conclude from the title in the Digest, "Ad Legem Julianam Majestatis," that all the provisions enumerated under that title were comprehended in the original Lex Julia. It is stated by Marcius, as there cited, that it was not Majestas to repair the statues of the Caesar which were going to decay; and a Rescript of Severus and his son Antoninus Caracalla declared that if a stone was thrown and accidentally struck a statue of the Emperor, that also was not Majestas; and they also graciously declared that it was not Majestas to sell the statues of the Caesar before they were consecrated. Here then is an instance under the title ad Legem Julianam Majestatis of the Imperial rescripts declaring what was not Majestas. There is also an extract from Saturninus De Judiciis, who says that if a person melted down the statues or images of the Emperor which were already consecrated, or did any similar act, he was liable to death. But even this also does not prove that this provision was a part of the Julia Lex, as originally passed, for a Lex after being amended by Senatusconsulta or Imperial Constitutions still retained its name. In the time of Tiberius it was a matter of charge against a man that in selling a garden he had included a statue of Augustus; which Tiberius declared to be no offence. (Tacit. Ann. i. 73.)

The old punishment of Majestas was perpetual interdict from fire and water; but now, says Paulus (S. R. v. 39), that is, in the later Imperial period, persons of low condition are thrown to wild beasts, or burnt alive; persons of better condition are simply put to death. The property of the offender was confiscated and his memory was infamous.

In the early times of the Republic every act of a citizen which was injurious to the State or its peace was called Perduellio, and the offender (perduellis) was tried before the populus (populi judicii), and, if convicted, exiit deo judico (Liv. ii. 41, vi. 20.) The earliest trial and form of procedure is that which is given by Livy (i. 26); after the overthrow of the king power the notion of Perduellio and the process were in some degree changed. Numerous offences against the state were comprehended under Perduellio. For instance Cn. Fulvius (Liv. xxvi. c. 3.) was charged with the offence of perduellio for losing a Roman army; but in course of time, and probably after the passing of the Lex Perduellionis judicium, it does not appear that this Lex applied to Perduellio, the punishment was acqua et igna interdicto. According to Gaius "perduellus" originally signified "hostis" (Dig. 50. tit. 16. s. 234); and thus the old offence of perduellio was equivalent to making war on the Roman State. The trial for perduellio (perduellionis judicium) existed to the later times of the Republic; but the name seems to have almost fallen into disuse, and various leges were passed for the purpose of determining more accurately what should be considered Majestas.

These Leges were a Lex Apuleia, probably passed in the fifth consulship of Marius, the exact contents of which are unknown (Cic. de Or. ii. 25, 49), a Lex Varia n. c. 91 (Appian, Bell. Civ. i. 37; Cic. Brut. 89; Valer. Maxim. viii. 6. §4), a Lex Cornelia passed by L. Cornelius Sulla (Cic. in Pis. 21, pro Client. 35), and the Lex Julia already mentioned, and which continued under the Empire to be the fundamental enactment on this subject. This Lex Julia is by some attributed to C. Julius Caesar, and assigned to the year B.C. 48, and this may be the Lex referred to in the Digest; some assume a second Lex Julia, under Augustus. That a Lex de Majestate was passed in Caesar's time appears from Cicero. (Philipp. i. 9.)

Under the Empire the term Majestas was applied to the penalty of the reigning Caesar, and we find the phrases Majestas Augustae, Imperatoria, and Regia. It was however nothing new to apply the term to the Emperor, considered in some of his capacities, for it was applied to the magistratus under the Republic, as to the consul and praetor. (Cic. Philipp. xiii. 9, in Pisonem, 11.) Horace even addresses Augustus (Ep. ii. 1. 288) in the terms "majestas tua," but this can hardly be viewed otherwise than as a personal compliment, and not as said with reference to any of the offices which might occasion the penalties to various new offences against the person of the Emperor belongs of course to the Imperial period. Augustus availed himself of the Lex for prosecuting the authors of famosi libelli (copiominationem de famosis libellis, specie legis e/uis, tractavit, Tacit. Ann. i. 72; Dion Cass. lvi. 27; Sueton. Oct. 55): the proper inference from the passage of Tacitus is that the Leges Majestatis (for they all seem to be comprised under the term "Legem Majestatis") did not apply to words or writings, for these were punishable otherwise. The passage of Cicero (ad Fam. iii. 11) is manifestly corrupt, and as it stands, inconsistent with the context; it cannot be taken as evidence that the Lex Majestatis of Sulla contained any provisions as to libellous words, as to which there were other sufficient provisions. [INJURIA.] Signius has attempted to collect the capita of the Lex Majestatis of Sulla. Under Tiberius the offence of Majestas was extended to all acts and words which might appear to be disrespectful to the Princeps, as appears from various passages in the citus (Ann. i. 73, 74, ii. 50, iii. 38, 66, 67, &c.). The term Perduellio was still in use under the Empire, and seems to have been equivalent to Majestas at that period.

An inquiry might be made into an act of Majestas against the Imperator even after the death of the offender; a rule which was established (as we are informed by Paulus) by M. Aurelius in the case of Druncianus or Druncanianus, a senator who had taken part in the outbreak of Cassius, and whose property was claimed by the fiscus after his death. (Perhaps the account of Capitolinus, M. Ant. Phil. c. 26, and of Vulcatius Gallicanus, Avitius Cassius, c. 9, is not inconsistent with the statement of Paulus: on the case of Druncianus, see Tillemont, Histoire des Empereurs, vol. ii. p. 382.) A constitution of S. Severus and Antoninus Caracalla declared that from the time that an act of Majestas was committed, a man could not alienate or divest himself or manumit a slave, to which the great (magnus) Antoninus (probably Caracalla is still meant), added that a debtor could not after that time lawfully make a payment to him. In the matter of Majestas slaves could also be examined by torture in order to give evidence against their master; this provision, though comprehended in the Code under the title Ad Legem Julianam Majestatis, was perhaps not contained in the ori-
ginal law, for Tiberius sold a man's slaves to the actor publicus (Ann. iii. 67) in order that they might give evidence against their master, who was accused of Repetundae and also of Majestas. Women were admitted as evidence in a case of Læsa Majestas, and the case of Fulvia is cited as an instance. (Dig. 48. tit. 4; Cod. i. tit. 6.)

As to the phrase Patria Majestas, see Patria Potestas. (The history of Majestas is given with great minuteness by Rein, Das Criminalrecht der Römer. A brief view of the subject is very difficult to give.)

MAJO'RES. [INFANS.]

MALLEUS, dim. MALLE'OLUS (μαλατρός: σφόδρα, dim. σφυρίων), a hammer, a mallet, was used much for the same purposes in ancient as in modern times. When several men were striking with their hammers on the same anvil, it was a matter of necessity that they should strike in time, and Virgil accordingly says of the Cyclopes, "inter se brachia tollunt in usum eum." (Geo. iv. 174; Aen. viii. 452.) The scene which he describes is represented in the annexed woodcut, taken from an ancient bas-relief, in which Vulcan, Brontes, and Steropes, are seen forging the metal, while the third Cyclops, Pyracmon, blows the bellows. (Aen. viii. 423.) Beside the anvil stand [INCUS] is seen the vessel of water, in which the hot iron or bronze was immersed. (Lb. v. 450, 451.)

But besides the employment of the hammer upon the anvil for making all ordinary utensils, the smith (χαλεῖς) wrought with this instrument figures called ἐργα σφυρίλατα (or δλοσφυρία, Bruneck, Anot. ii. 222), which were either small and fine, some of their parts being beaten as thin as paper and being in very high relief, as in the bronzes of S iris [LORICA], or of colossal proportions, being composed of separate plates, rivetted together: of this the most remarkable example was the statue of the sun of wrought bronze (σφυρίλατος κολοσσός, Theocrit. xxii. 47; βασιλείαν, Philo, de l Spectac. 4. p. 14, ed. Orelli), seventy cubits high, which was erected in Rhodes. Another remarkable production of the same kind was the golden statue of Jupiter (Strabo, viii. 6. 20; Plat. Phaedr. p. 292, Heindorf), which was erected at Olympia by the sons of Cyreneus.

By other artists the hammer was used in conjunction with the chisel [DOLABRA], as by the carpenter (pulsus malleus, Coripp. de Laud. Justini, iv. 47; woodcut, p. 98) and the sculptor.

The term malleolus denoted a hammer, the transverse head of which was formed for holding pitch and tow; which, having been set on fire, was projected slowly, so that it might not be extinguished during its flight, upon houses and other buildings in order to set them on fire; and which was therefore commonly used in sieges together with torches and falariæ. (Liv. xxxviii. 6; Non. Marcellus, p. 536, ed. Lips; Festus, s. v.; Cic. pro Mil. 24; Veget. de Re Mil. iv. 18; Vitr. x. 16. 9; ed. Schmitz.)

MALUS. [NAVIS.]

MALUS OCULUS. [FASCINUM.]

MANCEPS has the same relation to Mancipium that Auspect has to Auspiciun. It is properly qui manu capit. But the word has several special significations. Mancipes were they who bid at the public lettings of the censors for the purpose of farming any part of the public property. (Festus, s. v. Mancus; Mancipes dictur quid qui quid a populo emitt, conductive, quia, &c.; Cic. pro Planc. c. 36, ed. Wunder.) Sometimes the chief of the Publicani generally are meant by this term, as they were no doubt the bidders and gave the security, and then they shared the undertaking with others or underlet it. (Ascon. in Div. Verr. c. 10.) The Mancipes would accordingly have distinctive names according to the kind of revenue which they took on lease, as Decumani, Portitores, Pecuarii. Saetoniustus (Fest. 1, and the note in Burmann's edition) says that the father of Petro was a manuceps of labourers (operae) who went yearly from Umbria to Sabinum to cultivate the land; that is, he hired them from their masters and paid so much for the use of them; as is now often done in slave countries. The terms Mancipes Thermarum et Salinarum occur in the Theodosian Code (14. tit. 5. s. 3).

MANCI'PATIO. [MANCIPIUM.]

MA/NCIPI RES. [DOMINUM.]

MANCIPII CAUSA. The three expressions by which the Romans indicated the status in which a free person might be with respect to another, were In Potestate, In Manu, and In Mancipio. Accordingly a child in Potestate and a wife in Manu were properly Res Mancipi; and they were said to be In Mancipio. Still such persons, when mancipated, were not exactly in the relation of slaves to the persons to whom they were mancipated; but they occupied a status between free persons and slaves, which was expressed by the words Mancipi causa. Such persons as were in Mancipi causa were not Sui juris (Gaius, i. 48—50); and all that they acquired, was acquired for the persons to whom they were mancipated. But they differed from slaves in not being possessed; they might also have an injuriarum actio for ill-treatment from those who had them In Mancipio, and they did not lose the rights of Ingenui, but these rights were only suspended. As to contracts, the person with whom they contracted might obtain the sale of such property (bona) as would have been theirs, if they had not been in mancipi causa; as Gaius expresses it (iv. 80). Persons In mancipi causa might be manumitted in the same way as slaves, and the limitations of the Lex Aelia Sentia and Furia Caninia did not apply to such manumissions. The per-
son who effected the manumission thereby acquired a kind of patronal right, which was of some importance in the matters of hereditas and tutela. (Savigny, System, &c. i. 360.)

The strict practice of Mancipatio, as applied to children, had fallen into disuse in the time of Gaius, and probably still earlier, and it had then become a mere legal form by which the Patria Potestas was dissolved [EMANCIPATIO] ; except a person was emancipated ex noxali causa. In case of delicts by the son, the father could emancipate him (ex noxali causa mancipio daret), and one act of mancipatio was considered sufficient (Gaius, iv. 75—78; Liv. viii. 28; but the son had a right of action for recovering his freedom, when he had worked out the amount of the damage. (Mos. et Rom. Leg. Coll. ii. 3.) Justinius put an end to the noxae datio in the case of children, which indeed before his time had fallen into disuse. (Inst. 4. tit. 6. s. 7.)

In his time, Gaius remarks (i. 141), that men were not kept in mancipii causa (in eo jure) for any long time, the form of mancipatio being only used (except in the case of a noxalis causa) for the purpose of emancipation. But questions of law still arose out of this form; for the three manipicationes, which were necessary in the case of a son, might not always have been observed. Accordingly a child begotten by a son who had been twice mancipated, but born after the third mancipatio of his father, was still in the power of his grandfather. A child begotten by a son who was in his third mancipatio, came into his father's power if he was manumitted after that mancipatio; but if the father died in mancipio, the child became sui juris. (Gaius, i. 135.)

Compio, by which a woman came in manum, was effected by mancipatio, and the compio might be either matrimonii causa, or fiduciae causa. The fiduciae causa compio was a ceremony which was necessary when a woman wished to change her tutors, and also when she wished to make a will; but a senatusconsultum of Hadrian dispensed with the ceremony in the latter case. (Gaius, i. 115, &c.)

Dion Cassius (xlviii. 44) says that Tiberius Nero transferred or gave (ζήτουσα) his wife to Octavianus, but a senatusconsultum of Hadrian dispensed with the ceremony. The purchaser or person to whom the mancipatio was made did not acquire the possession of the mancipatio; for the acquisition of possession was a separate act. (Gaius, iv. 131.) Gaius calls Manципatio "imaginaria quaedam venditio," for though the law required this form for the transfer of the Quiritarian ownership, the real contract of sale consisted in the agreement of the parties as to the price. The party who transferred the ownership of a thing pursuant to these forms was said "mancipio dare;" he who thus acquired the ownership was said "mancipio accipere." (Plaut. Trinum. ii. 3.) The verb "mancipare" is sometimes used as equivalent to "mancipio dare." Horace (Ep. ii. 2. 159) uses the phrase "mancipat usus," which is not an unreasonable licence: he means to say that "usus" or usucapion has the same effect as mancipatio, which is true; but usus only had its effect in the case of Res Mancipi, where there had been no Mancipatio or In Jure Cessio. Both Mancipatio and In Jure Cessio existed before the Twelve Tables (Frag. Vat. 59).

Mancipatio is used by Gaius to express the act of transfer, but in Cicero the word Mancipium is used in this sense. (Cic. de Off. iii. 16, de Orat. i. 39.)

The division of things into Res Mancipi and Nec Mancipi, had reference to the formalities requisite to be observed in the transfer of ownership. It is stated in the article DOMINIIU, what things were things Mancipi. To this list may be added children of Roman parents, who were according to the old law Res Mancipi. [MANCIPI CAUSA.] The Quiritarian ownership of Res Mancipi could only be immediately transferred by mancipatio or In Jure Cessio; transfer by tradition only made such things In bonis. The Quiritarian ownership of Res nec mancipi was acquired by tradition only, when there was a justa causa. Quiritarian ownership is called mancipium by the earlier Roman writers; the word dominium is first used by later writers, as for instance Gaius. Mancipatio could only take place between Roman citizens or those who had the Commercium; which indeed appears from the words used by the purchaser. (Gaius, i. 119; Ulp. frag. xix. 5.)

The only word then by which this formal transfer of ownership was made was Mancipium, which occurs in the Twelve Tables. (Dirksen, Uebersicht, &c. p. 395.) The word nexus or nexus is also sometimes used in the same sense. Cicero (Tow.
five) defines "Abalienatio" to be "ejus rei quae mancipi est," and this is effected either by "traditio alteri nexu aut in jure cessio inter quos ea jure civilis fieri possunt." According to this definition "Abalienatio" is of a Res Mancipi, a class of things determinate; and the mode of transfer is either by "traditio nexu" or by "in jure cessio." These two modes correspond respectively to the "mancipatio" and "in jure cessio" of Gaius (ii. 41), and accordingly mancipatio or the older term mancipium is equivalent to "traditio nexu:" in other words mancipium was a nexus or nexum, Cicero (De Harusp. respons. c. 7) uses both words in the same sentence, where he speaks of various titles to property, and among them he mentions the Jus mancipii and Jus nexi. He may mean here to speak of the Jus mancipii in its special sense as contrasted with the Jus nexi which had a wider meaning; in another instance he uses both words to express one thing. (Ad Fam. iv. 30). According to Aelius Gallus, everything was "nexum" "quodcunque per aes et libram geritur;" and as according to Aelius Gallus, everything was "nexum" "mancipium" and "mancipatio" and "in jure cessio" of Gaius (iii. iv. 3), is still used in such forms of transfer.

When things were transferred by mancipatio under a contract of sale, the vendor was bound to warrant in double of the amount of the thing sold, and to give a warranty in double of the amount of the thing sold. (Inst. ii. s. 16.) A vendor therefore who had a doubtful title would not sell by mancipium, but would merely transfer by delivery, and leave the purchaser to obtain the Quiritarian ownership of the thing by usucapio. (Plaut. Curi. iv. 2, 9, Persa, iv. 3, 55.) Accordingly Varro observes (De Re Rustica, ii. 10) that if a slave was not transferred by mancipium, the seller entered into a stipulatio dupli to be enforced by the buyer in the case of eviction; when the transfer was by mancipium, this stipulatio per aes et libram was not necessary, and as mancipatio was effected per aes et libram, it was consequently a nexum. The form of mancipatio by the aes and libra continued probably till Justinian abolished the distinction between Res Mancipi and Res Nec Mancipi. It is alluded to by Horace (Ep. ii. 2, 158), and the libra, says Pliny (xxxiii. 8), is still used in such forms of transfer.

Mandatum. It is a contract of mandatum when one person commissions another to do something without reward, and that other person undertakes to do it; and generally it may be stated that whenever a man commissions another to do something without pay, which, if the thing were to be done for pay (merces), would make the transaction a contract of locatio and conductio, the contract of mandatum exists; as if a man gives clothes to a tailor to be furbished up and cleaned, or to a tailor (sarcinator) to mend. The person who gave the commission was the mandans or mandator: he who received it, was the mandatarius. The mandatum might be either on the sole account of the mandator, or on another person's account, or on the account of the mandator and another person, or on account of the mandator and mandatarius or on the account of the mandatarius and another person. But there could be no mandatum on the account (gratia) of the mandatarius only; as if a man were to advise another to put his money out to interest, and it were lost, the loser would have no mandati actio against his adviser. If the advice were to lend the money to Titius, and the loan had the like result, it was a question whether this was a case of mandatum; but the opinion of Sabinus prevailed, that it was, and the mandant thus became secure for Titius. It was not mandatum if the thing was contra bonos mores, or in other words, if the object of the mandatum was an illegal act. A mandatum might be general or special; and the mandatarius was bound to keep within the limits of the mandate. The mandator had an utilis actio against such persons as the mandatarius contracted with; and such persons had the like action against the mandator; and a directa actio against the mandatarius. The mandator and mandatarius had also respectively a directa actio against one another in respect of the mandatum; the actio of the mandatarius might be for indemnity generally in respect of what he had done bona fide. If the mandatarius exceeded his commission, he had no actio against the mandator, but the mandator in such case had an action for the amount of damage sustained by the non-execution of the mandate, provided it could have been executed. The mandate might be recalled by the mandans, or renounced by the mandatarius, "dum adhuc integra res sit," that is, no loss must accrue to either party in consequence of the contract being rescinded. The contract was dissolved by the death of either party; but if the mandatarius executed the mandate after the death of the mandator, in ignorance of his death, he had his action against the heres, which was allowed "utilitatis causa." According to Cicero a mandati judicium was "non minus turpe quam ferti" (Pro Rosc. Amer. c. 38) which however would obviously depend on circumstances. [Infamia.]

Mandatum is sometimes used in the sense of a command from a superior to an inferior. Under the empire the Mandata Principum were the commands and instructions given to governors of provinces and others. (See the letter of Plinius to Trajanus, and the emperor's answer, Plin. Ep. x. 111, 112.) Frontinus (De Aquisuelt.) classes the Mandata Principum with Lex and Senatusconsulta. (See Puchta, Inst. i. 110.)

(Gaius, iii. 155-162, iv. 83, 84; Inst. 3, tit. 28; Dig. 17. tit. 1; Cod. 4. tit. 35; Vangerev Pandcklen, &c. iii. 469.)

[G. L.]
MANDRAE. [LATRUNCULI.]
MANDYAS (μανδιάς). [LACERNA.]
MANES. See Dict. of Greek and Rom. Biography and Mythology.
MANGONES. [SERVUS.]

MAN'ICA, a sleeve. Besides the use of sleeves sewed to the tunic, which, when so manufactured, was called chiridota or manicatta tunic (Curt. iii. 7. p. 12, ed. Zumpt), sleeves were also worn as a separate part of the dress. Palladius (de Re Rust. i. 49) mentions the propriety of providing oecers manicica de quiades, i.e. leggins and sleeves made of hides, as useful both to the huntsman and to the agricultural labourer. The Roman gladiators wore, together with greaves, a sleeve of an appropriate kind on the right arm and hand (Juv. vi. 255), as is exhibited in the woodcuts at p. 576.

These parts of dress are mentioned together even as early as the Homeric age (see Od. xxiv. 228, 229). In this passage the manicas (χειδῆς) seem to be mittens, worn on the hands to protect them from briars and thorns; and Eustathius, in his commentary on the passage, distinguishes between simple mittens, such as our labourers use in hedging, and gloves, which he calls χειδῆς δακτυλωτα (p. 1960, in.).

Gloves with fingers (digitata, Varro, de Re Rust. i. 55) were worn among the Romans for the performance of certain manual operations. Pliny the younger refers also to the use of manicae in winter to protect the hands from cold (Epist. iii. 5). Those used by the Persians were probably made of fur, perhaps resembling muffs; the Persians also wore gloves in winter (Saecr. Thras., Xen. Cyrop. viii. 3 § 17). In an enumeration of the instruments of torture used in the fourth century of the Christian era we observe “the glove” (Sync. Epist. 58); but its construction or material is not described.

Handcuffs were called manicae. (Virg. Georg. iv. 439, Aen. ii. 146; Plaut. Asin. ii. 2, 38, Capt. iii. 5, 1, Most. v. 1, 17; Non. Marcellus, s. e. Manicae.)

MANIPULUS; MANIPULARES; MANIPULA RII. [EXERCITIUS, p. 500, b.]

MAN'SIOS, a post-station at the end of a day’s journey. The great roads, which were constructed first by the kings of Persia and afterwards by the Romans, were provided, at intervals corresponding to the length of a day’s journey, with establishments of the same kind with the khans or caravanserais which are still found in the East. There were 111 such stations on the road from Sardes to Susa (Hord. v. 52, 53, vi. 118), their average distance from one another being something less than 20 English miles. The khan, erected at the station for the accommodation of travellers, was under the superintendence of a cisiarius called by Herodotus καταλωνις and καταγωγή. To stop for the night was καταλέυω. (Xen. Anab. i. 8; Aelian, V. H. i. 32.) As the ancient roads made by the kings of Persia are still followed to a considerable extent (Heeren, Ideen, vol. i. pt. ii. pp. 193—203, 713—720), so there is also reason to believe that the modern khan, which is a square building, enclosing a large open court, surrounded by balconies with a series of doors entering into plain unfurnished apartments, and having a fountain in the centre of the court, has been copied by uninterrupted custom from the Persic καταλωνις, and that, whether on occasion of the arrival of armies or of caravans, they have always served to afford a shelter during the night both to man and beast.

The Latin term mansio is derived from manere, signifying to pass the night at a place in travelling. On the great Roman roads the mansioes were at the same distance from one another as on those of the Persian empire. They were originally called castrum, being probably mere places of encampment formed by making earthen entrenchments. In process of time they included, not only barracks and magazines of provisions (horrea) for the troops, but commodious buildings adapted for the reception of travellers of all ranks, and even of the emperor himself, if he should have occasion to visit them. At those stations the cisiarii kept pigs for hire and for conveying government despatches. (CISIUM; ESSEZUM.) The mansio was under the superintendence of an officer called mansionarius.

Besides the post-stations at the end of each day’s journey, there were on the Roman military ways others at convenient intervals, which were used merely to change horses or to take refreshment, and which were called mutationes (Δαντεῖοι). There were four or five mutationes to one mansio. The Itinerarium a Burdigala Hierusalem usque, which is a road-book drawn up about the time of Constantine, mentions in order the mansioes from Bourdeaux to Jerusalem with the intervening mutationes, and other more considerable places, which are called either civitates, vicus, or castella. The number of leagues (leuga) or of miles between one place and another is also set down. (J. Y.)

MAN'TELE (χειροκυραττος, χειρωκυραττος), a napkin. The circumstance, that forks were not invented in ancient times, gave occasion to the use of napkins at meals to wipe the hands (Xen. Cyrop. i. 3 § 51); also when the meal was finished, and even before it commenced, an apparatus was carried round for washing the hands. A basin, called in Latin laluvium (Festus, s. v.), and in Greek χέρινδος, χέρβινος, or χειρόντιρος, was held under the hands to receive the water, which was poured upon them out of a ewer (urceolus). Thus Homer describes the practice, and according to the account of a recent traveller, it continues unchanged in the countries to which his description referred. (Fellow’s Journal, 1838. p. 171.) The hands of a slave who poured out the water, also held the napkin or towel for wiping the hands dry. The word mappa, said to be of Carthaginian origin (Quintil. i. 5. § 57), denoted a smaller kind of napkin, or a handkerchief, which the guests carried with them to table. (Hor. Sat. ii. 4. 81, ii. 8, 63.) The mantele, as it was larger than the mappa, was sometimes used as a table-cloth. (Martial, xii. 29, xiv. 130.)

The napkin used at table were commonly made of coarse unbleached linen (φυλάγγα, Athen. ix. 79). Sometimes, however, they were of fine linen (εκτρίμμαστα λαμφρά σιδηροφοί, Philoxenus, ap. Athen. ix. 77). Sometimes they were woolen with a soft and even nap (τοισία μαντελία villis, Virg. Georg. iv. 377, Aen. i. 702). Those made of Asbestos must have been rare. The Romans in the time of the emperors used linen napkins embroidered or interwoven with gold (Lampred. Heliod. 27. Al. Severus, 97, 40), and the traveller already quoted informs us that this luxury still continues in the East. Napkins were also worn by women as a head-dress, in which case they were of fine materials and gay colours. (Athen. ix,
MANUMISSIO.

79.) These were no doubt put on in a variety of
elegant ways, resembling those which are in use
among the females of Italy, Greece, and Asia
Minor, at the present day.

MANTIKE (μαντική). [DIVINATIO.]
MAN'BIAE. [SPOLIA.]
MANUM, CONVENTIO IN. [MATERIALIS.]

MANUMISSIO was the form by which slaves and
persons In Mancipii causa were released from
those conditions respectively.

There were three modes of effecting a Justa et
Legitima Manumissio, namely, Vindicta, Census,
and Testamentum, which are enumerated both by
Gaius and Ulpian (Frag. i.) as existing in their
time. (Compare Cic. Top. 2, and Plautus, Cos. ii.
8. 68.) Of these the Manumissio by Vindicta is
probably the oldest, and perhaps was once the only
mode of manumission. It is mentioned by Livy
as in use at an early period (ii. 5), and indeed he
states that some persons refer the origin of the
Vindicta to the event there related, and derive its
name from Vindicta, the latter part, at least, of
the supposition is of no value.

The ceremony of the Manumissio by the Vin-
dicta was as follows:—The master brought his
slave before the magistratus, and stated the grounds
(causa) of the intended manumission. The lictor
of the magistratus laid a rod (festuca) on the head
of the slave, accompanied with certain formal words,
in which he declared that he was a free man ex
Jure Quiritium, that is, "vindicavit in libertatem."
The master in the meantime held the slave, and
after he had pronounced the words "hunc hom-
inem liberum volo," he turned him round (mo-
mento turbinis exit Marcus Dama,
Persius, Sat. v. 78) and let him go (emisit e manu,
Plaut. Capt. ii. 3. 48), whence the general name of
the act of manumission. The magistratus then
declared him to be free, in reference to which
Cicero (ad Att. vii. 2) seems to use the word
"addicere." The word Vindicta itself, which is
properly the res vindicata, is used for festuca by
Horace (Sat. ii. 7. 76). Plautus (Mil. Glor. 1.
15) uses festuca.

It seems highly probable that this form of Manu-
missio was framed after the analogy of the In Jure
vindicationes (Gaius, iv. 16); and that the lictor
in the case of manumission represented the opposite
claimant in the vindicatio. (Unterholzer, Von
den formen der Manumissio per Vindictam und
Emancipatio, Zeitschrift, vol. ii. p. 139.)

As for the explanation of the word Vindicta see
VINDICAR and VINCITATO.

The Manumissio by the Census is thus briefly
described by Ulpián: "Slaves were formerly
manumitted by census, when at the lustral census
(lustrali census) at Rome they gave in their census
(some road menam instead of census) at the bidding
of their masters." Persons In mancipio might also
obtain their manumission in this way. (Gaius, i.
140.) The slave must of course have had a suffi-
cient Peculium, or the master must have given him
property.

In the absence of decisive testimony as to the
origin of these two modes of manumission, modern
writers indulge themselves in a variety of conjec-
tures. It may be true that originally the manu-
mission by Vindicta was given liberally and not
civitas; but this opinion is not probable. It may
casily be allowed that in the earliest period the

MANUMISSIO.

civitas could only be conferred by the sovereign
power, and that therefore there could be no effect-
ual manumission except by the same power. But
the form of the Vindicta itself supposes, not that
the person manumitted was a slave, but that he
was a free person, against whose freedom his
master made a claim. The proceeding before the
magistratus was in form an assertion of the slave's
freedom (mana asservi liberati causa, Plaut. Poen.
iv. 2. 83, &c.), to which the owner made no de-
ference, but he let him go as a free man. The
proceeding then resembles the In Jure Census,
and was in fact a fictitious suit in which freedom
(libertas) was the matter in issue. It followed as
a consequence of the fiction, that when the magis-
tratus pronounced in favour of freedom Ex jure
Quiritium, there could be no dispute about the
Civitas.

In the case of the Census the slave was regis-
tered as a citizen with his master's consent. The
assumption that the Vindicta must have originally
preceded the Census, for which there is no evi-
dence at all, is not consistent with the nature of the
proceeding, which was a registration of the slave,
with his master's consent, as a citizen. A question
might arise whether he should be considered free
immediately on being entered on the censor's roll,
or not until the lustrum was celebrated (Cic. de Or.
i. 40); and this was a matter of some importance,
for his acquisitions were only his own from the
time when he became a free man.

The law of the Twelve Tables confirmed free-
dom which was given by will (testamentum). Free-
dom (libertas) might be given either directly, that
is, as a legacy in way of gift or fideicommissum. The
slave who was made free directly, was called orcinus
libertas (or horcinus, as in Ulp. Frag.), for the
same reason perhaps that certain senators were
called Orcini. (Sueton. Octav. 35.) He who re-
ceived his libertas by way of fideicommissum, was
not the libertus of the testator, but of the person
who was requested to manumit him (manunmissor):
if the heres, who was requested to manumit, re-
fused, he might be compelled to manumit upon appli-
cation being made to the proper authority. Lib-
ertas might be given by fideicommissum of the
slave, of the testator, of his heres, or of his legatee,
and also to the slave of any other person (extraneus).
In case of libertas being thus given to the slave of
any other person, the gift of libertas was extin-
guished, if the owner would not sell the slave at a
fair price. A slave who was made conditionally
free by testament, was called Statu liber, and he
was the slave of the heres until the condition was
fulfilled. If a Statu liber was sold by the heres,
or if the ownership of him was acquired by usu-
caption, he had still the benefit of the condition: this
provision was contained in the Law of the Twelve
Tables. If a slave was made free and heres by the
testator's will, on the death of the testator he
became both free and heres, whether he wished it
or not. (Gaius, ii. 153; Ulp. Frag. xxi. 11.)

HERES.

A manumission by adoption is spoken of, but
nothing is known of it. (Gell. v. 19; Inst. 1. tit. 11.
s. 12.)

The Lex Aelia Sentia laid various restrictions on
manumission [LEX AELIA SENTIA], particularly as
it relates to slaves under the age of eighteen. The
consequence of manumitting slaves above thirty years of age had
become very simple in the time of Gaius (i. 20): it
might be in the public road (in transitus), as when the praetor or proconsul was going to the bath or the theatre. It was not the place which determined the validity of such an act, but it was the circumstance of its being done before a competent authority.

The Lex Furia or Fusa Caninia fixed limits to the number of slaves who could be manumitted by will. The number allowed was a half, one third, one fourth, and one fifth of the whole number that the testator possessed, according to a scale fixed by the lex. As its provisions only applied to cases where a man had more than two slaves, the owner of one slave or of two slaves was not affected by this lex. It also provided that the slaves to whom freedom was given, should be named. This lex only applied to manumission by testament. It was passed about A.D. 7, and several senatusconsulta were made to prevent evasions of it. (Sueton. Octur. 40; Gaius, 1. 42—46.) This lex was repealed by Justinian. (Cod. 5. tit. 3. De leg. Fas. Can. tolkndu.)

A form of manumission "inter amicos" is alluded to by Gaius. This was in fact no legal manumission, but it was a mere expression of the freedom which the testator possessed, according to a scale fixed by law. The testator could name whom he pleased by testamemt. This was in fact no legal manumission; but it was a mere expression of the freedom which the testator possessed, according to a scale fixed by law. The testator could name whom he pleased by testament. This was in fact no legal manumission; but it was a mere expression of the freedom which the testator possessed, according to a scale fixed by law. The testator could name whom he pleased by testament.

The act of manumission established the relation of Patronus and Libertus between the manumissor and the libertus, [LEX JUNIA NORBANA; LATINI.] A Manumissio sacrorum causa is sometimes mentioned as a kind of manumission, whereas the words Sacrorum causa point rather to the grounds of the manumission: the form might be the usual form. (Festus, s. v. Manumittit, Puri; Savigny, Zeitschrift, vol. iii. p. 402.)

Besides the due observance of the legal forms, it was necessary in order to effect a complete manumission that the manumissor should have the Quiritarian ownership of the slave. If the slave was merely in bonis, he only became a Latinus by manumission. A woman in tutela, and a pupilla or pupillus could not manumit. If several persons were joint owners (socti) of a slave, and one of them manumitted the slave in such form as would have effected complete manumission, if the slave had been the sole property of the manumissor, such manumissor lost his share in the slave which accrued to the other joint owner or joint owners. Justinian stated that if only one joint owner was willing to manumit a slave, the others might be compelled to manumit on receiving the price fixed by law for their shares. If one person had the ususfructus and another the property of a slave, and the slave was manumitted by him who had the property, he did not become free till the ususfructus had expired: in the meantime, however, he had no legal owner (dominus).

The act of manumission established the relation of Patronus and Libertus between the manumissor and the libertus. (Libertus.) When manumitted by a citizen, the Libertus took the praenomen and the gentile name of the manumissor, and became in a sense a member of the gens of his patron. To these two names he added some other name as a cognomen, either some name by which he was previously known, or some name assumed on the occasion: thus we find the names L. Cornelius Chrysогonus, M. Tullius Tiro, P. Terentius Afer, and other like names. If he was manumitted by the state as a Servus publicus, he received the civitas and a praenomen and gentile name, or he took that of the magistratus before whom he was manumitted. The slave also assumed the toga or dress of a Roman citizen, shaved his head and put on a pileus; this last circumstance explains the expression "servos ad pileum vocare" (Liv. xxiv. 32), which means to invite the slaves to join in some civil disturbance by promising them liberty. The relation between a Patronus and Libertus is stated under Patronus.

At the time when Gaius wrote, the peculiar rights of Roman citizens were of less importance than they had been under the republic. He states that all slaves who were manumitted in the proper form and under the proper legal conditions, became complete Roman citizens. But this could not have been so in the earliest ages. The liberti of the plebeians, for instance, before their masters obtained the honors, could not be in a better condition than those who manumitted them, and their masters had not then the complete civitas. The want of ingenius also affected their status; but this continued to be the case even under the empire. (INGENIUM.)

According to Dionysius (iv. 22), Servius Tullius placed the libertini in the four urbanae Tribus. In b.c. 311, the censor Appius Claudius gave the libertini a place in all the tribes. (Plut. Poplicol. 7; Liv. ix. 46; Diod. xx. 36.) In the year B.C. 304, they were again placed in the four tribus urbanae (Liv. ix. 46); but it seems that the libertini did not keep to their tribes, for in B.C. 220 they were again placed in the four urbanae tribes. (Liv. Epit. xx.) In the censorship of Tiberius Gracchus, B.C. 169, they were placed in one of the tribus urbanae determined by lot (Liv. xiv. 15; compare Dionys. iv. 22), or as Cicero (de Or. i. 9) expresses it, the father of Tiberius and Caius Sempronii Scaurus, about B.C. 116, they were restored to the four city tribes, and this remained their condition to the end of the republic, though various attempts were made to give them a better suffrage. As to the attempt of the tribune, C. Manilius b.c. 58, to give the libertini votes in all the tribes, see Dion Cassius (xxxvi. 25), and the note of Reimarus. As to the distribution of the libertini in the tribes, see Becker, Handb. d. Röm. Alterth. i. 20. (German text.)

A tax was levied on manumission by a Lex Manlia, B.C. 357: it consisted of the twentieth part of the value of the slave, hence called Vicesima. (Liv. vii. 16, xxvii. 10; Cic. ad Att. ii. 16.) As to manumission, see Becker, Handb. der Röm. Alterthümer, 2e Th. 1ste Abt.; Dig. 40. tit. 1. De Manumissionibus. (G. L.)

MANUS INJECTIO. [HARPAGO.]
tium x milia quae dolo malo non solvisti ob emm rem ego tibi sestertium x milia judicati manus injicio." The defendant who had been condemned in a certain sum, had thirty days allowed him to make payment in, and after that time he was liable to the manus injicio. The defendant was not permitted to make an oral mode of defence to find some responsible person (eindex) who would undertake his defence (pro eo lege agere). If he found no vindex, the plaintiff might carry the defendant to his house and keep him in confinement for sixty days, during which time his name and the amount of his debt were proclaimed at three successive Sundays. If no one paid the debt, the defendant might be put to death or sold. (Gell. xx. 1.) According to the words of the Twelve Tables, the person must be brought before the Praetor (in iure), which of course means that he must be seized first: if when brought before the praetor, he did not pay the money (mi judicatum solvi) or find a vindex, he might be carried off and put in chains, apparently without the formality of an adictio. The Lex Publilia, evidently following the analogy of the Twelve Tables, allowed the manus injicio in the case of money paid by a sponsor, if the sponsor was not repaid in six months. The Lex Furia de Sponsu allowed it against him who had exacted from a sponsor more than his just proportion (virils paras). These and other leges allowed the manus injicio pro judicato, because in these cases the claim of the plaintiff was equivalent to a claim of a res judicata. Other leges granted the manus injicio pura, that is, non pro judicato, as the Lex Furia Testamentaria and the Marcia adversus Generatores. But in these cases the defendant might withdraw himself from the manus injicio (numum sibi depellere), and defend his cause; but it would appear that he could only relieve himself from this seizure, by actually undertaking to defend himself by legal means. Accordingly, if we follow the analogy of the old law, it was in these cases an execution if the defendant chose to let it be so; if he did not, it was the same as serving him the name of which is obliterated in Gaius, allowed the person seized to defend his own cause except when the defendant was domiciled in a town, or when the law was applicable to him as a state citizen. (Inst. ii. § 160, 162, 179, iii. § 269.)

MARTYRIA.

MARTYRIA (μαρτυρία, μαρτυρέω), signifies strictly the deposition of a witness in a court of justice, though the word is applied metaphorically to all kinds of testimony. We shall here explain—1, what persons were competent to be witnesses at Athens; 2, what was the nature of their obligation; 3, in what manner their evidence was given; 4, what was the punishment for giving false evidence.

None but freemen could be witnesses. The incapacity of women may be inferred from the general policy of the Athenian law, and the absence of any example in the orators where a woman's evidence is produced. The same observation applies to minors.

Slaves were not allowed to give evidence, unless upon examination by torture (βάρσανος). There appears to have been one exception to this rule, viz., that a slave might be a witness against a freeman in case of a charge of murder (Antiph. de Morte Her. 728), though Plutarch (Att. Proc. p. 215) thinks this only applied to the giving information. The party who wished to obtain the evidence of a slave belonging to his opponent challenged him to give up the slave to be examined (διηγεί τον δοῦλον). The challenge was called πρόκλησις. The owner, if he gave him up, was said ἐκδοῦσαι or παραδοῦσαι. But he was not obliged so to do, and the general practice was to refuse to give up slaves, which perhaps arose from humanity, though the opponent always ascribed it to a fear lest the truth should be elicited. The orators affected to consider the evidence of slaves, wrung from them by torture, more valuable and trustworthy than that of freemen; but it must be observed, they always use this argument when the slave had not been examined. (Demosth. c. Aphob. 848, c. Onet. 674; Hudtwalcker, Ueber die Diäteten, p. 44, &c.)

Citizens who had been disfranchised (ἐγκατακυρήσατοι) could not appear as witnesses (any more than as jurors or plaintiffs) in a court of justice; for they had lost all honourable rights and privileges. (Demosth. c. Neer. 1353; Wachsmuth, vol. ii. pt. i. p. 244.) But there was no objection to alien freemen. (Demosth. c. Lucr. 927, 929; Aeschin. de Fals. Leg. 49, ed. Stephe.) We learn from Harpocratius (s. v. Διακατακυρήσεις) that in actions against freemen for neglect of duty to their
The obligation to attend as a witness, both in civil and criminal proceedings, and to give such evidence as he is able to give, arises out of the duty which every man owes to the state; and there is no reason to believe that any persons (except the parties themselves) were exempted from this obligation. The passages which Plutner (Att. Proc. p. 217) and Schömann (Att. Proc. p. 671) cite in support of the contrary view, prove nothing more than that the near relations of a party were reluctant to give evidence against him; whereas the fact that they were bound by law to give evidence may be inferred from Demosthenes (c. Aphob. 849, 850, 855).

The party who desired the evidence of a witness, summoned him to attend for that purpose. The summons was called πρόσκλησις. (Demosth. c. Timoth. 1194.) If the witness promised to attend and failed to do so, he was liable to an action called δίκη λειψαμένων. Whether he promised or not, he was bound to attend, and if his absence caused injury to the party, he was liable to an action (δίκη βλαβής). This is the probable distinction between these forms of action, as to which there has been much doubt. (Meier and Schömann, Att. Proc. p. 387; Plutner, Att. Proc. p. 221.)

The attendance of the witness was first required at the ἀνάκρισις, where he was to make his deposition before the superintending magistrate (ἡγεμόνι δικαστήριον). The party in whose favour he appeared, generally wrote the deposition at home upon a whitened board or tablet (λευκωμωτῷ γραμματείῳ), which he brought with him to the magistrate’s office, and, when the witness had deposited thereto, put into the box (ἐκών) in which all the documents in the cause were deposited. If the deposition were not prepared beforehand, as must always have been the case when the party was not exactly aware what evidence would be given, or when any thing took place before the magistrate which could not be foreseen, as for instance a challenge, or question and answer by the parties; in such a case it was usual to write down the evidence upon a waxen tablet. The difference between these methods was much the same as between writing with a pen on paper, and with a pencil on a slate; the latter could easily be rubbed out and written over again if necessary. (Demosth. c. Steph. 1132.) If the witness did not attend, his evidence was nevertheless put into the box, that is, such evidence as the party intended him to give, or thought he might give, at the trial. For all testimonial evidence was required to be in writing, in order that there might be no mistake about the terms, and the witness might leave no subterfuge for himself when convicted of falsehood. (Demosth. c. Steph. 1115, 1130.)

If the witness promised to give, or thought he might give, at the trial, for all testimonial evidence was required to be in writing, in order that there might be no mistake about the terms, and the witness might leave no subterfuge for himself when convicted of falsehood. (Demosth. c. Steph. 1115, 1130.) The deposition might last several days, and, so long as it lasted, fresh evidence might be brought, but none could be brought after the last day, when the box was sealed by the magistrate, and kept so by him till the day of trial. (Demosth. c. Aphob. 836, c. Bocot. de Nom. 999, c. Ewery. et Mnes. 1143, c. Conon. 1265.)

The form of a deposition was simple. The following example is from Demosthenes (c. Locr. 927): — “Archonides son of Archedamus of Anagynus testifies, that articles of agreement were deposited with him by Androcles of Sphecus, Nausicles of Carytus, Artemon and Apollodorus both of Phaselus, and that the agreement is still in his hands.” Here we must observe that whenever a document was put in evidence at the trial, as an agreement, a will, the evidence of a slave, a challenge, or an answer given by either party at the ἀνάκρισις, it was certified by a witness, whose deposition was at the same time produced and read. (Demosth. pro Florn. 946, 949, 987, c. Phanéry. 1046, c. Steph. 1111.)

The witness, whether he had attended before the magistrate or not, was obliged to be present at the trial, in order to confirm his testimony. The only exception was, when he was ill or out of the country, in which case a commission might be sent to examine him. (EsMARTYRiA.) All evidence was produced by the party during his own speech, the κληφθέντα being stopped for that purpose. (Isaeus, de Pyrr. her. 39, ed. Steph.; Demosth. c. Eubal. 1305.) The witness was called by an officer of the court, and mounted on the raised platform (βήμα) of the speaker, while his deposition was read over to him by the clerk; he then signed his assent, either by express words, or bowing his head in silence. (Lys. de Eratos. Mort. 94, ed. Steph.; Aesch. de Fals. Leg. 49, ed. Steph.; Demosth. c. Mid. 560, c. Phorm. 913, c. Steph. 1109, c. Eubal. 1305.) In the editions that we have of the orators we see sometimes Μαρτυρία written (when evidence is produced) and sometimes Μαρτύρες. The student must not be deceived by this, and suppose that sometimes the deposition only was read, sometimes the witnesses themselves were present. The old editors merely followed the language of the orators, who said “call the witnesses,” or “mount up witnesses,” or “the clerk shall read you the evidence” or something to the same effect, varying the expression according to their fancy. (See Lys. pro Mantith. 147, ed. Steph.; Isaeus, de Pyrr. her. 43, ed. Steph.; Demosth. c. Callipp. 1236, c. Neuter. 1352.)

If the witness was hostile, he was required either to depose to the statement read over to him, or to take an oath that he knew nothing about it (μαρτύρεις κάμινως). One or the other he was compelled to do, or if he refused, he was sentenced to pay a fine of a thousand drachms to the state, which sentence was immediately proclaimed by the officer of the court, who was commanded κλητικώς ἡκατερίας αἰτήν, i. e. to give him notice that he was in contempt and had incurred the fine. (Demosth. c. Aphob. 850, c. Neuter. 1372,
MARTYRIA.

An oath was usually taken by the witness at the ἀνάκτεις, where he was sworn by the opposite party at an altar (πρὸς τὸν βαμών ξαφνίσθην). If he had not attended at the ἀνάκτεις, he might be sworn afterwards in court; as was always the case when a witness took the oath of denial (ἐξώμασε). In the passage just cited from Lycurgus, the expression λαβών τὰ ἱερὰ means nothing more than touching the altar or its appurtenances, and hath no reference to a public altar, (Opusc. Philol. vol. i. pp. 37—39.) Whether the plaintiff was always bound to take an oath, is a doubtful point. (See Demosth. c. Coron. 1265, c. Steph. 1119, c. Eudol. 1105; Aesch. de Fals. Leg. 49, ed. Steph.; Schömann, Att. Proc. p. 675.)

The oath of the witness (the ordinary τύμμωσις ὁρκος) must not be confounded with the oath taken by one of the parties, or by some friend or other person out of court, with a view to decide the cause or some particular point in dispute. This was taken by the consent of the adversary, upon a challenge given and accepted; it was an oath of a more solemn kind, sworn by (or upon the heads of) the children of the party swearing (κατὰ τῶν παιδών), or by perfect or full-grown victims (καθ' ἱερῶν τελείων), and often with curses upon himself or his family (κατ' ἤρωλειας), and sometimes was accompanied with peculiar rites, such as passing through fire (διὰ τοῦ τυρός). The mother, or other female relation of the party (who could not be a witness) was at liberty to take this oath. (Demosth. c. Apoph. 852, c. Boost. de Dote, 1011, c. Timoth. 1203, c. Callip. 240, c. Conon. 1262, c. Neer. 1365; Wachsmuth, vol. ii. pt. i. p. 335; Hudswalker, pp. 52—57.)

On some extraordinary occasions we find that freemen were put to the torture by a special decree of the people or the senate; as on the occasion of the mutilated Hermes busts (Thirlwall, Hist. of Greece, c. 25, p. 393); and they were less scrupulous about aliens than about citizens; but (as a general rule) it is certain that freemen could not be tortured in courts of justice, and even an emigrant after a settlement of Demosthenes says it would be an act of impiety (οὐδ' ἄνθων) to give up for such a purpose. (Demosth. c. Apoph. 856, c. Timoth. 1200; Meier, Att. Proc. p. 684.)

With respect to hearsay evidence see ECHARKYRIA; and with respect to the affidavit called διαμαιρτορία, see HESNE, p. 597, a.

We have hitherto spoken only of causes which came before the dicasts in the ordinary way, and have said nothing of those which were decided by the public arbitrators. The above remarks, however, will equally apply to the latter, if the reader will bear in mind that the arbiter performed the duties of the magistrate at the ἀνάκτεις as well as those of the δικαιστή at the trial. He heard the witnesses and received the depositions from day to day, as long as he sat, and kept the ἐξώνs open until the last day (κυρίων ημέραν). (See Demosth. c. Mid. 541, c. Timoth. 1199; Meier and Schömann, Att. Proc. p. 676.)

If the witness in a cause gave false evidence, the injured party was at liberty to bring an action against him (δίκη πενδομαρτυρίων) to recover compensation. The proceeding was sometimes called ἐλάσκιψις, and the plaintiff was said ἑπακρηπτος-θαὶ τῷ μαρτυρῳ τῷ μαρτυρεῖ (Isaeus, de Pyrr. her. 50, c. Dioec. her. 52, ed. Steph.; Demosth. c. Apoph. 846, 856; Harpocr. s. v. ἐκσκαπάντως). This cause was probably tried before the same presiding magistrate as the one in which the evidence was given. (Meier, Att. Proc. p. 45.) The form of the plaintiff's bill, and of the defendant's plea in denia, will be found in Demosthenes (c. Steph. 1115). From the same passage we also learn that the action for false testimony was a τιμιβάς ἀγών, in which the plaintiff laid his own damages in the bill; and from Demosthenes (c. Apoph. 849, 859), it appears that the dicasts had power not only to give damages in the cause, but could impose the penalty of ἄττιμα by a προτραμάρια. (See also Isaeus, de Dioec. her. 52.) A witness who had been a third time convicted of giving false testimony was ipso jure disfranchised. (Meier, Att. Proc. p. 393.)

When a witness, by giving false evidence against a man upon a criminal trial, had procured his conviction, and the convict was sentenced to such a punishment (for instance, death or banishment) as rendered it impossible for him to bring an action, any other person was allowed to institute a public prosecution against the witness, either by a γραφή, or perhaps by an εὐσυγγελεία or προβολή. (Andoc. de Mýst. 4; Planter, Att. Proc. p. 411; Meier, Att. Proc. p. 302.)

After the conviction of the witness, an action might be maintained against the party who summoned him to give false evidence, called δίκη κακοέξωνίων. (Demosth. c. Timoth. 1201, c. Enery. et Mnas. 1139.) And it is not improbable that a similar action might be brought against a person, who had procured false evidence to be given against another, after the conviction of the witness in a γραφή πενδομαρτυρίας. (Meier, Att. Proc. p. 718.)

It appears, that in certain cases a man who had lost a cause was enabled to obtain a reversal of the judgment (δίκη ἀνάδικος), by convicting a certain number of the adverse witnesses of false testimony. Thus in inheritance causes the law enacted ἀνὰ τὶς τῶν ψευδομαρτυρῶν, πάλιν ἐξ ἀρχής εἶναι περὶ αὐτῶν τὰς λῆξις. (Isaeus, de Hegm. her. 68, ed. Steph., de Dicæog. her. 50, 51.) This was the more necessary, on account of the facility afforded to the parties to stop the progress of these causes by affidavit, and also because no money could compensate an Athenian for the loss of an inheritance. The same remedy was given by the law to those who had been convicted in a δίκη πευδομαρτυρίων or in a γραφή ἂξινια. In the last case the convicted person, who proceeded against the witness, was compelled to remain in prison until the determination of his suit. (Demosth. c. Timoer. 741.) We are informed that these are the only cases in which a judgment was allowed to be reversed in this way; but whether there were not more cases than these has been justly doubted by Schömann (Att. Proc. 761). The Scholiast on Plato (Ley. xi. 14) is evidently wrong
in supposing that it was necessary under the Athenian law to convict more than half the number of the witnesses. This appears from the passage above cited from Isaeus on the estate of Hagnias. We conclude by noticing a few expressions. Μαρτυρεῖν τινι is to testify in favour of a man, καταμαρτυρεῖν τινος to testify against. Μαρτυροθεῖα to call to witness (a word used poetically), διαμαρτυροθεῖα and sometimes έπιμαρτυροθεῖα, τοίς παρόνται, to call upon those who are present to take notice of what passes, with a view to give evidence. (Demosth. c. Engr. et Mnes. 1150.) Ψευδομαρτυρεῖαι and επιμαρτυρεῖαι are never used in differently, which affords some proof that testimony money was not necessarily on oath. The Mαρτυροθεῖα (witness in the case) is to be distinguished from the καταθηρις οι καταθωρις, who merely gave evidence of the summons to appear. [C. R. K.]

MΑΣΤΕΡΙΕΣ (μαστιφεις). [ΖΕΤΕΤΑΕ.]

ΜΑΣΤΙΓΙΑ. [ΦΛΑΓΡΗΣ.]

ΜΑΣΤΙΓΟΦΟΡΗΙ or ΜΑΣΤΙΓΟΝΟΜΗ (μαστιγοφορόν ει μαστιγονομόν), the name of the lower police officers in the Greek states, who carried into execution the corporal punishments inflicted by the higher magistrates. Thus Lycurgus assigned mastigophori to the Paedonomus at Sparta, who had the general superintendence of the education of the boys. (Xen. Rep. Lac. ii. 2, iv. 6; Plut. Lyc. 17.) In the theatre the mastigophori preserved order, and were stationed for this purpose in the orchestra, near the thymele. (Schol. ad Plut. p. 99, Ruhnken; Lucian, Pisc. 33.) In the Olympic games the βαθύδοξοι performed the same duties. At Athens they were discharged by the public slaves, called bowmen (τοίσματα), or Scythians (Σκυθια). [ΔΕΣΘΥ.]

ΜΑΤΑΡΑ. [ΜΑΤΑΡΗ. p. 689, s.]

ΜΑΤΕΡΕΙΑΝΙΑΣ. [ΜΑΤΡΙΜΟΝΙΟΝ.]

ΜΑΘΕΜΑΤΙΚΗ. [ΑΣΤΡΟΛΟΓΙΑ.]

ΜΑΤΡΑΛΙΑ, a festival celebrated at Rome every year on the 11th of June, in honour of the goddess Mater Matuta, whose temple stood in the Forum Boarium. It was celebrated only by Roman matrons, and the sacrifices offered to the goddess consisted of cakes baked in pots of earthenware. (Varro, de Ling. Lat. iv. p. 31, Bip.; Ovid. Fast. vi. 475, &c.) Slaves were not allowed to take part in the solemn proceedings, to enter the temple of the goddess. One slave, however, was admitted by the matrons, but only to be exposed to a humiliating treatment, for one of the matrons gave her a blow on the cheek and then sent her away from the temple. The matrons on this occasion took with them the children of their sisters, but not their own, held them in their arms, and prayed for their welfare. (Plut. Camil. 5, Quesst. Rom. p. 297.) The statue of the goddess was then crowned with a garland, by one of the matrons who had not yet lost a husband. (Tertull. Monogam. c. 17.) The Greek writers and their Roman followers, who identify the Mater Matuta with Leucothea or Ino, explain the ceremonies of the Matralia by means of the mythological stories which relate to these Greek goddesses. But the real import of the worship of the Mater Matuta appears to have been to incite upon mothers the principle, that they ought to take care of the children of their sisters as much as of their own, and that they should not leave them to careless slaves, the contempt for whom was symbolically expressed by the infliction of a blow on the cheek of the one admitted into the temple. (Compare Hartung, Die Religion der Römer, vol. ii. p. 73.)

MAUTRIMONIUM. 735

MAUTRIMONIUM, NUPTIARUM (Gyges), marriage. 1. GREEK. The ancient Greek legislators considered the relation of marriage as a matter not merely of private, but also of public or general interest. This was particularly the case at Sparta, where the subordination of private interests and happiness to the real or supposed exigencies of the state was strongly exemplified in the regulations on this subject. For instance, by the laws of Lycurgus, criminal proceedings might be taken against those who married too late (γραφή γάμου) or not at all (γραφή κακουγμον), as well as against those who married on the wrong day (γραφή δέκαμου). (Pollux, viii. 40; Plut. Lycurg. 15.) These regulations were founded on the generally recognised principle, that it was the duty of every citizen to raise up a strong and healthy progeny of legitimate children to the state. (Müller, Diorias, iv. § 3.) So entirely, in fact, did the Spartans consider the πενελόπια, or the production of children, as the main object of marriage, and an object which the state was bound to promote, that whenever a woman had no children by her own husband, she was not only allowed, but even required by the laws, to cohabit with another man. (Xen. de Rep. Lac. i. 8.) On the same principle, and for the purpose of preventing the extinction of his family, the Spartan king, Anaxandrides, was allowed to cohabit with two wives, for whom he kept two separate establishments: a case of bigamy, which, as Herodotus (vi. 39, 40) observes, was not at all consistent with Spartan nor indeed with Hellenic customs. Thus the heroes of Homer appear never to have had more than one κούραδ θυάτηρ (Buttmann, Lexilogus, 73); though they are frequently represented as living in concubinage with one or more παλακακη. Solon also seems to have viewed marriage as a matter in which the state had a right to interfere, for we are told that his laws allowed of a γραφή γάμου, though the regulation seems to have grown obsolete in later times; at any rate there is no instance on record of its application. (Platner, Process, &c. vol. ii. p. 246.) Plato too may be quoted to prove how general was this feeling, for according to his laws the Hercules of Homer appear never to have provided for a continuance of representatives to succeed himself as ministers of the Divinity (τοις θεοις τηρεσις αυτοι τωρα παραβαδουναι). Another was the desire felt by almost every one, not merely to perpetuate his own name, but also to prevent his "heritage being desolate, and his name being cut off" (ὅπως μη εξηρμασωσι τοις οφετέρων αυτών οίκους), and to leave some one who might make the customary offerings at his grave (ἀλλα ἔταν καὶ τοις ἑαυτῶν ισευτας de Apoll. Herod. p. 66, Bk.). We are told that with this view childless persons sometimes adopted children.
The choice of a wife among the ancients was but rarely grounded upon affection, and scarcely ever would have been the result of previous acquaintance or familiarity. In many cases a father chose for his son a bride whom the latter had never seen, or compelled him to marry for the sake of checking his extravagances. Terence (Andria, i. 5) thus illustrates the practice:—

"Pater prateriens modo
Mithi apud forum, uxor tibi ducenda est, Pamphilte,
hodie inquit: para."

In Plautus (Trinum, v. 2. 59) a son promises his father that he will marry in these words:—

"Ego ducam, pater: etiam si quam alienam jubebis." Representations of this sort may indeed be considered as exaggerations, but there must have been scenes in real life to which they in some measure correspond. Nor was the consent of a female to a match proposed for her generally thought necessary; she was obliged to submit to the wishes of her parents, and receive from them, it might be, a stranger for her husband and lord. Sophocles thus describes the lot of women in this respect:—

"When we are grown up (he makes a female say) we are driven away from our parents and paternal gods,"

καὶ ταῦτα, ἐπειδὴ εὑροθώρω γέλυ μια,
χρεῖον ἐπαινεῖν, καὶ δοκεῖν καλῶς ἔχειν.

Frag. Ter. So also in Euripides (Androm. 551) Hermione declares that it is her father's business to provide a husband for her. The result of marriages contracted in this manner would naturally be a want of confidence and mutual understanding between husband and wife, until they became better acquainted with, and accustomed to, each other. Xenophon (Oecoc. 7, § 10.) illustrates this with much naiveté in the person of Ischomachus, who says of his newly married wife:—"When at last she was manageable (χρείωτθησα), and getting tame so that I could talk with her, I asked her," &c., &c. By the Athenian laws a citizen was not allowed to marry with a foreign woman, nor conversely, under very severe penalties (Demosth. c. Nicer. p. 1550); but promiscuity by blood (ἀγγελεία), or consanguinity (συγγένεια), was not, with some few exceptions, a bar to marriage in any part of Greece; direct lineal descent was. (Isaeus, de Ciron, her. p. 72.) Thus brothers were permitted to marry with sisters even, if not ἰδικρίστωρ, or born from the same mother, as Cimon did with Elpinice, though a connection of this sort appears to have been looked on with abhorrence. (Becker, Charikles, vol. ii. p. 448.) In the earlier periods of society, indeed, we can easily conceive that a spirit of caste or family pride, and other causes such as the difficulties in the way of social intercourse would tend to make marriages frequent amongst near relations and connections. (Compare Numbers, c. xxxvi.) At Athens, however, in the case of a father dying intestate, and without male children, his heiress had no choice in marriage; she was compelled by law to marry her nearest kinman not in the ascending line; and if the heiress were poor (δύσης) the nearest unmarried kinman either married her or portioned her suitably to her rank. When there were several coheiresses, they were respectively married to their kinsmen, the nearest having the first choice. [Επικλερος.] The heiress in fact, together with her inheritance, seems to have belonged to the kinmen of the family, so that in early times a father could not give his daughter (if an heiress) in marriage without their consent. (Müller, Doriens, ii. 10. § 4.) But this was not the case according to the later Athenian law (Demosth. c. Steph. p. 1134), by which a father was empowered to dispose of his daughter by will or otherwise; just as widows also were disposed of in marriage, by the will of their husbands, who were considered their rightful guardians (κόρηος). (Demosth. c. Aplob. p. 814.)

The same practice of marrying in the family (αἰκος), especially in the case of heiresses, prevailed at Sparta; thus Leonidas married the heiress of Cleomenes, as being her ἀγγελεία or, next of kin, and Anaxandrides his own sister's daughter. Moreover, if a father had not determined himself concerning his daughter, it was decided by the king's court, who among the privileged persons or members of the same family should marry the heiress. (Herod. vi. 57; Müller, l. c.) A striking resemblance to the Athenian law respecting heiresses is also found in the Jewish code, as detailed in Numbers (c. xxvii. 1—11), and exemplified in Ruth (c. iv.).

But match-making among the ancients was not, in default of any legal regulations, entirely left to the care and forethought of parents, for we read of women who made a profession of it, and who were therefore called προμηθητρίαι or προμηθετρίδαι. (Pollux, iii. 31.) The profession, however, does not seem to have been thought very honourable nor to have been held in repute, as being too nearly connected with, or likely to be prostituted to, προμηθεία, &c. (Plato, Theat. 2. p. 180.)

Particular days and seasons of the year were thought auspicious and favourable for marriage amongst the Greeks. Aristotle (Polit. vii. 15) speaks of the winter generally as being so considered, and at Athens the month Παυλινωρ, partly corresponding to our January, received its name from marriages being frequently celebrated in it. Heiod (Oper. 800) recommends marrying on the fourth day of the month,

'Εν δὲ τετάρτῃ μηνὸς ἄγεοσα ἢ ὀλον ἄκοιτον,
but whether he means the fourth from the beginning or end of the month is doubtful. Euripides (Iphig. in Au. 707) speaks as if the time of the full moon were thought favourable, ὅταν σελήνης ἐκυρίης ἔλθη κύκλος,
in which he is confirmed by the expression διχομηθαὶ ἐστεραί, or the full-moon nights in Pindar. (Isth. vii. 45.) That this prepossession, however, was not general and permanent appears from Proclus (ad Hesiod. Oper. 782), who informs us that the Athenians selected for marriages the times of new moon (τὰς πρὸς σύνοδον ἡμέρας), i. e. when the sun and moon were in conjunction. There was also some difference of opinion, on which it is not worth while to dilate, about the proper age for marrying; but generally speaking men were expected to marry between 30 and 35, and women about 20 or rather before. (Plato, Leg. vi. p. 785.) We proceed now to explain the usual preliminaries and accompaniments of marriage in various parts of Greece. The most important preliminary
at Athens was the Epomia (επομια) or betrothal, which was in fact indispensable to the completion of the marriage ceremony. It was made by the natural or legal guardian (δέκιος) of the bride elect, and attended by the relatives of both parties as witnesses. The law of Athens ordained, that all children born from a marriage legally contracted in this respect should be γενεῖοι (Demosth. c. Steph. p. 1134), and consequently, if sons, θυγμοροι, or intituled to inherit equally or in gavel-kind. It would seem, therefore, that the issue of a marriage without espousals would lose their heritable rights, which depended on their being born ήλιον και εγγυητι γινομενοι: i.e. from a citizen and a legally betrothed wife. The wife's dowry was also settled at the espousals. (Meier and Schäfer, p. 415.)

But there were also several ceremonies observed either on or immediately before the day of marriage. The first of these were the προτελεία γάμου or προγαμία (Pollux, iii. 38), and consisted of sacrifices or offerings made to the Θεοι γαμμαίλοι or divinities who presided over marriage. They are generally supposed to have been made on the day before the γάμος or marriage; but there is a passage in Euripides (Iphig. in Aul. 642) which makes it probable that this was not always the case. The sacrificer was the father of the bride elect; the divinities to whom the offering was made were, according to Pollux (iii. 381), Hera and Artemis, and the Fates, whom the brides elect then dedicated the απαρχαι of their hair. According to Diodorus Siculus (v. 73) they were Zeus and Hera τελεία (Juno promula); but they probably varied in different countries, and were sometimes the Θεοί ηγεμόνια or local deities. The offerings to Artemis were probably made with a view of propitiating her, as she was supposed to be averse to marriage. (Braunson.) We may also observe that Pollux uses προγαμία as synonymous with προτελεία, making γάμος identical with τέλειο, as if marriage were the τέλος or perfection of man's being: whence τέλειος connected with or presiding over marriage or a married person, and δόμος ἡμτελής a house without a husband or incomplete. (Iliom. II. ii. 701.)

Another ceremony of almost general observance on the wedding day, was the bathing of both the bride and bridegroom in water fetched from some particular fountain, which was sometimes the water of the fountain Callirrhoe, at Athens. The water was fetched from the fountain Callirrhoe, by a pair of mules or oxen, and furnished with a καλωτι or kind of a couch as a seat. On either side of her sat the bridegroom, and one of his most intimate friends or relations, who from his office was called παρώνυμος or νυμφώνυντις: but as he rode in the carriage (χωμα) with the bride and bridegroom, he was sometimes called the παρόχος (δ έκ τριτον δ παρωχώμενον παρόχος έκλήθη, Harper. s. v.). Hence Aristophanes (Ares, 1735) speaks of the "blooming Love guiding the supple reins," when Zeus was wedded to Hera, as the Ζηλος παρόχος γάμων τῆς τ' ευδάμωνος Πρας.

The nuptial procession was probably accom-panied, according to circumstances, by a number of persons, some of whom carried the nuptial torches (Σπέταλαμία, Aristoph. Pax, 1318); and in some places, as in Boeotia, it was customary to burn the axe of the carriage on its arrival at the bridegroom's house, as a symbol that the bride was to remain at home and not go abroad. (Plut. Qatar. Rom. p. 111.) If the bridegroom had been married before, the bride was not conducted to his house by himself, but by one of his friends, who was therefore called νυμφαγωγής. (Hesych. s. v.; Pollux, iii. 40.)

Both bride and bridegroom (the former veiled) were of course decked out in their best attire, with chaplets on their heads. The bride's dress was generally made of scarlet or crimson, with festoons of ivy and bay. (Plut. Amot. 10. p. 27.) As the bridal procession moved along, the Hymenean song was sung to the accompaniment of Lydian flutes, even in olden times, as beautifully described by Homer (II. xviii. 490; Hes. Sent. Iere. 275), and the married pair received the greetings and congratulations of those who met them. (Aristoph. Pax, 1316.) After entering the bridegroom's house, into which the bride was probably conducted by her mother bearing a lighted torch (Eurip. Phoen. v. 311), it was customary to shower sweetmeats upon them (καταχυσματα) as emblems of plenty and prosperity. (Schol. ad Aristoph. Plut. 768.)

After this came the γάμος or nuptial feast, the Σούη γαμεῖς, which was generally (Becker, Charikles, vol. ii. p. 469) given in the house of the bridegroom or his parents; and besides being a festive meeting, served other and more important purposes. There was no public right whether civil or religious connected with the celebration of marriage amongst the ancient Greeks, and therefore no public record of its solemnisation. This deficiency was supplied by the marriage feast, for the guests were of course competent to prove the fact of a marriage having taken place; and Demosthenes (c. Oct. p. 869) says they were invited partly with such views. To this feast, contrary to the usual practice amongst the Greeks, women were invited as well as men; but they seem to have sat at a separate table, with the bride still veiled amongst them. (Lucian, Convic. 9; Athen. xiv. p. 614.) At the conclusion of this feast she was conducted by her husband into the bridal chamber; and a law of Solon (Plut. Solon, c. 20) required that on entering it they should eat a quince together, as if to indicate that their conversation ought to be sweet and agreeable. The song called the Epithalamium (ἐπιθαλάμιον, sc. μέλος) was then sung before the doors of the bridal chamber, as represented by Theocritus in his 18th Idyl, where, speaking of the marriage of Helen, he says—

"Twelve Spartan virgins, the Laconian bloom,
Choir'd before fair Helen's bridal room—
To the same time with cadence true they beat
The rapid round of many twinkling feet,
One measure tript, one song together sung,
Their hymeneal all the palace rung."
suckle it, and that she might not meet with any
ira.p6fvi.oi.

Apartments (see Herod., vi. 65), but of course with
the attendant upon the sick inmates of the
house, whether free or slaves. (Xen. Oecon. 7. § 37.)
The παιδοφορία was the physical education of the
children, on which Plutarch (de Educat. Puer. 5.
p. 9) observes that mothers ought themselves to
nurture and suckle their children, though frequently
female citizens were hired as wet-nurses. (Demosth.
c. Eubul. p. 1309.) The Spartan nurses were so
famous, that they were engaged even in foreign
states; thus Alcibiades we are told was suckled by
a Laconian nurse. (Plut. Lycurg. 16.) It is scarcely
necessary to remark that we have been speaking of
the household of a citizen in good circumstances,
to which only our observations can apply.

The consideration in which women were held by
their husbands, and the respect paid to them in an-
cient Greece, would naturally depend, in some de-
gree, on their intellectual and moral character; but
generally speaking the Greeks entertained compara-
tively little regard for the female character. They
considered women, in fact, as decidedly inferior to
men, qualified to discharge only the subordinate
functions in life, and rather necessary as help-
mates, than agreeable as companions. To these
notions female education for the most part corre-
sponded, and in fact confirmed them; it did not
supply the elegant accomplishments and refinement
of manners which indicate very clearly what was the tone of
feeling on this subject. Moreover, before marriage
Grecian women were kept in a state of confinement,
which amounted to little short of a deprivation of
liberty, which so they are even said to have been
watched and guarded in strong apartments,

χυροπία ταφενιών. φησινωρίνην γαλάδα
(Eurip. Iph. in Aulis.), nor was it thought be-
coming in them to be seen in public (Eurip. Orest.
108), except on some particular occasions, when
they appeared as spectators of, or participants in
religious processions; of which, young men de-
sire of being married would usually avail them-
selves to determine the object of their choice.
Even after marriage the restrictions imposed upon
young women of the middle and higher classes.
were of a very jealous and almost Oriental character. They occupied, as is well known, a separate part of the house, and in the absence of their husband it was thought highly improper for a man even to enter where they were. (Demosth. c. Euryp. pp. 1157, 1160.) From various passages of the Attic comedians it would also seem that married women were required to keep at home (οἰκουρίαν), and not allowed to go out of doors without the permission of their husbands. Thus, in a fragment of Menander (Μενακόμη, p. 87), we are told that married women are not allowed to pass the gate of the court-yard of the house,

—πέρας γὰρ ἄδικος θάρα

'Ελευθέρη γυναίκι νεομυίστων οἰκίαι:

and Aristophanes (Thesm. p. 750) speaks of their husbands forbidding them to go out. Again, on occasions of great public alarm (e.g., when the news of the defeat at Chaeronaea reached Athens), the women are spoken of, not as leaving their houses, but standing at their doors and inquiring after the fate of their husbands, a circumstance which is described as being discreditably to themselves and the city. (Demosth. c. Euryp. § 12.) Lycurg. c. Laced. p. 53, Bek.) From a passage in Plutarch (de Gen. Socr. 33) it appears that on this subject there was the same feeling at Thebes as well as at Athens; and the same writer (Σολών, 21) informs us that one of Solon’s laws specified the conditions and occasions upon which women were to be allowed to leave their houses. In later times there were magistrates at Athens (the γυνακονδυλοί), charged, as their name denotes, with the supervision of the behaviour of women. [Γυνακονδυλοί.]

But we must observe that the description given above of the social condition and estimation of women in Greece, does not apply to the Heroic times as described by Homer, nor to the Doric state of Sparta. With respect to the former, we have only space to remark, that the women of the Homeric times enjoyed much more freedom and consideration than those of later ages, and that the connection between the sexes was then of a more generous and affectionate character than afterwards. For another important distinction see Dos (GREEK). (Becker, Charikles, vol. ii. p. 415.)

Among the Dorians generally, and in Sparta especially, the relation of the wife to the husband, and the regard paid to women, was for the most part the same as that represented by Homer to have prevailed universally amongst the ancient Greeks; and as such, presented a strong contrast to the habits and principles of the Ionic Athenians, with whom the ancient custom of Greece, in this respect, was in a great measure supplanted by that of the East. At Sparta, for instance, the wife was honoured with the title of διάστρωμα or "mistress," an appellation not used unmeaningly or ironically, and which was common amongst the Thessalians and other nations of northern Greece. (Müller, ii. 4. § 4.) Moreover, the public intercourse permitted by the Dorians between the sexes was (comparatively at least) of so free and unrestricted a character, as to have given occasion for the well known charges of licentiousness (άσεσις) against the Spartan women. (Eurip. Androm. 506.) The influence, too, which the Lacedaemonian women enjoyed was so great that the Spartans were blamed for submitting to the yoke of their wives; and even Aristotle (Pol. ii. 6) thought it necessary to account for the circumstance, by the supposition that Lycurgus had failed in his attempt to regulate the life and conduct of the Spartan women as he had wished. In short there was a great contrast and difference between the treatment of women in the Dorian and Ionic states of Greece, which is well described by Müller (i. c.) in the following words:

"Amongst the Ionians women were merely considered in an inferior and servile light, and though the Aeolians allowed their feelings a more exalted tone, as is proved by the amatory poetesses of Lesbos, the women, as well as Sparta, in the south of Italy, were almost the only nation who considered the higher attributes of the female mind as capable of cultivation." In Sparta, too, the unmarried women lived more in public than the married. The former appeared with their faces uncovered, the latter veiled; and at Sparta, in Crete, and at Olympia, virginas were permitted to be spectators of the gymnastic contests, and married women only were excluded. The reverse of this was the case in Ionia. (Müller, ii. 2. § 2.)

The preceding investigation will have prepared the reader for the fact, that the strictest conjugal fidelity was required under very severe penalties from the wife [ADULTERIUM], while great laxity was allowed to the husband. The general practice is thus illustrated by Plautus (Mercat. iv. 6. 2):

—Nam si vir scortum duxit clam uxorem schem, si deservit uxor, impune est viro.

'Eux viro si clam domo egressa est foras, Viro fit causa, exigitur matrimonium.'

In cases of adultery by the wife, the Athenian law subjected the husband to 'ática, if he continued to cohabit with her; so that she was ipso facto divorced. (Demosth. c. Neat. p. 1374.) But a separation might be effected in two different ways: by the wife leaving the husband, or the husband dismissing the wife. If the latter supposèd her husband to have acted without sufficient justification in such a course, it was competent for her after dismissal, or rather for her guardians, to bring an action for dismissal (δικαίωμα ἀποστρίψεως or ἀποστριώματος); the corresponding action, if brought by the husband, was a δικαίωμα ἀποστρίψεως. If, however, a wife was dismissed in any way by her husband, he was liable to an action called a δικη κακώσεως, so that the wife was not entirely unprotected by the laws: a conclusion justified by a fragment in Athenaeus (xiii. p. 559) in which married women are spoken of as relying on its protection. But a separation, whether it originated from the husband or wife, was considered to reflect discredit on the latter (δ ὡρ διαλόγος ἐστὶν αἰχύνων ἔχων, Frag. apud Stob. p. 67, Gaisford) independent of the difficulties and inconveniences to which she was subjected by it. At Sparta barrenness on the part of a wife seems to have been a ground for dismissal by the husband (Herod. vi. 61); and from a passage in Dion Chrysostom (Orat. xv. p. 447) it has been inferred that women were in the habit of imposing supposititious children with a view of keeping (καταστρέφων) their husbands: not that the word admits of, if indeed it does not (from the tense) require, a different interpretation.

This article has been mainly composed from Becker's Charikles (vol. ii. p. 415). The duties of
an Athenian wife are stated somewhat in detail by Xenophon (Oeconom. ad init.).

2. ROMAN. A Roman marriage was called Justum Nuptiae, Justum Matrimonium, Legitimum Matrimonium, as being conformable to Jus Civile or to Roman Law. A marriage was either Cum conventione uxoris in manum viri, or it was without this conventio. In both cases there must be connubium between the parties, and consent; the male must also be pubes, and the woman viri potens. The legal consequences as to the power of the father over his children were the same in both. Opposed to the Legitimum Matrimonium was the Matrimonium Juris Gentium.

A Roman marriage may be viewed, First with reference to the conditions required for a Justum Matrimonium; Secondly, with reference to the forms of the marriage; Thirdly, with reference to its legal consequences.

Unless there was connubium there could be no Roman marriage. Connubium is defined by Ulpian (Frag. v. 3) to be "uxoris jure ducendae facultas," or the faculty by which a man may make a woman his lawful wife. But in truth this is no definition at all, nor does it give any information. Connubium is merely a term which comprehends all the conditions of a legal marriage. Accordingly, the term is explained by particular instances: "Roman men citizens," says Ulpian, "have connubium with Roman women citizens (Romanae cives); but with Latine and Peregrinae only in those cases where it has been permitted. With slaves there is no connubium."

Sometimes connubium, that is the faculty of contracting a Roman marriage, is viewed with reference to one of its most important consequences, namely, the Patria Potestas: "for," says Gaius, "since it is the effect of Connubium that the children follow the condition of their father, it results that when Connubium exists, the children are not only Roman citizens, but are also in the power of their father." Generally, it may be stated that there was only connubium between Roman citizens: the cases in which it at any time existed between parties, not both Roman citizens, were exceptions to the general rule. Originally, or at least at one period of the Republic, there was no Connubium between the Plebeians and the Patricians, and this was altered by the Lex Canuleia which allowed Connubium between persons of those two classes.

There was no connubium between many persons with respect to one another, who had severally connubium with respect to other persons. Thus there were various degrees of consanguinity within which there was no connubium. There was no connubium between parent and child, whether the relation was natural or by adoption; and a man could not marry an adopted daughter or granddaughter, even after he had emancipated her. There was no connubium between brothers and sisters, whether of the whole or of the half blood: but a man might marry a sister by adoption after her emancipation, or after his own emancipation. It became legal to marry a brother's daughter after Claudius had set the example by marrying Agrippina; but the rule was not carried further than the example, and in the time of Gaius it remained unlawful for a man to marry his sister's daughter. (Gaius, l. 62; Tacit. Ann. xii. 5; Sueton. Claud. 26.)

There was no connubium also between persons within certain relations of affinity, as between a man and his sorcus, nurus, privigna, and noverca. Any illegal union of a male and female, though affecting to be, was not a marriage: the man had no legal wife, and the children had no legal father; consequently they were not in the power of their reputed father. These restrictions as to marriage were not founded on any enactments: they were a part of that large mass of Roman law which belongs to Jus Maritus Constitutionum.

The marriage of Domitius, afterwards the emperor Nero, with Octavia the daughter of Claudius, seems at first sight somewhat irregular. Nero was adopted by Claudius by a Lex Curiata (Tacit. Ann. xii. 26), but he was already his son-in-law; at least the sponsalia are mentioned before the adoption. (Tacit. Ann. xii. 9.) There seems to be no rule of law which would prevent a man from adopting his son-in-law; though if the adoption took place before the marriage, it would be illegal, as stated by Gaius.

Persons who had certain bodily imperfections, as eunuchs, and others who from any cause could not contract marriage; for though pubertas was in course of time fixed at a positive age [IMPUBES], yet as the foundation of the notion of pubertas was physical capacity for sexual intercourse, there could be no pubertas if there was a physical incapacity.

The essence of marriage was consent, and the consent, says Ulpian, "both of those who come together, and of those in whose power they are;" and "marriage is not effected by sexual union, but by consent." Those then who were not sui juris, had not, strictly speaking, connubium, or the "uxoris jure ducendae facultas;" though in another sense, they had connubium by virtue of the consent of those in whose power they were, if there was no other impediment. (Dig. 23. tit. 1. s. 11-13.)

The Lex Julia et Papia Poppaea placed certain restrictions on marriage as to the parties between whom it could take place. [JULIA ET PAPIA POPPAEA; INFAMIA.]

A man could only have one lawful wife at a time; and consequently if he were married, and divorced his wife, a second marriage would be no marriage, unless the divorce were effectual.

The marriage Cum conventione in manum differed from that Sine conventione, in the relationship which it effected between the husband and the wife; the marriage Cum conventione was a necessary condition to make a woman a materfamilias. By the marriage Cum conventione, the wife passed into the familia of her husband, and was to him in the relation of a daughter, or as it was expressed, "in manum convenit." (Cic. Top. 3; filiae loco est, Gaius, ii. 159.) In the marriage Sine conventione, the wife's relation to her own familia remained as before, and she was merely Uxor. "UXor," says Cicero (Top. 3), "is a genus of which there are two species; one is materfamilias, "Quae in manum convenit;" the other is uxor only." Accordingly a materfamilias is a wife who is in manu, and in the familia of her husband, and consequently one of his sui heredes; or in the manus of him in whose power her husband is. A wife not in manu was not a member of her husband's familia, and therefore the term could not apply to her. Gellius (xviii. 6) also states that this
was the old meaning of materfamilias. Matrona was properly a wife not in manu, and equivalent to Cicero's "tantummodo uxor;" and she was called matrona before she had any children. But these words are not always used in these their original and proper meanings. (See Ulp. Frug. iv.)

No forms were requisite in marriage; the best evidence of marriage was cohabitation matrimonii causa. The matrimonii causa might be proved by various kinds of evidence. A marriage Cum conventione might be effected by Usus, Farreum, and Coemptio.

If a woman lived with a man for a whole year as his wife, she became in manu viri by virtue of this matrimonial cohabitation. The consent to live together as man and wife was the marriage: the usus for a year had the manus aa its result; and this was by analogy to Usucapion of movables generally, in which usus for one year gave ownership. The Law of the Twelve Tables provided that if a woman did not wish to come into the manus of her husband in this manner, she should absent herself from him annually for three nights. (Gell. iii. 2; Gaius, i. 111.) The Twelve Tables probably did not introduce the usus in the case of a woman cohabiting with a man matrimonii causa, any more than they probably did in the case of other things; but as in the case of other things they fixed the time within which the usus should have its full effect, so they established a positive rule as to what time should be a sufficient interruption of usus in the case of matrimonial cohabitation, and such a positive rule was obviously necessary in order to determine what should be a sufficient legal interruption of usus.

Farreum was a form of marriage, in which certain words were used in the presence of ten witnesses, and were accompanied by a certain religious ceremony in which panis farreus was employed; Farreum was a form of marriage, in which certain words were used in the presence of ten witnesses, and were accompanied by a certain religious ceremony in which panis farreus was employed; and hence this form of marriage was also called Confarreatio. This form of marriage must have fallen generally into disuse in the time of Gaius, who remarks (§ 112) that this legal form of marriage (hoc jas) was in use even in his time for the marriages of the Flamines Majeores and some others. This passage of Gaius is defective in the MS., but its general sense may be collected from comparing it with Tacitus (Ann. iv. 16) and Servius (ad Aeneid. iv. 104, 374). It appears that certain priestly offices, such as that of Flamen Dialis, could only be held by those who were born of parents who had been married by this ceremony (confarreati parentes). Even in the time of Tiberius, the ceremony of confarreatio was only observed by a few. As to divorce between persons married by confarreatio, see DIVORTIUM. The confarreatio is supposed to have been the mode of contracting marriage among the patricians, and it was a religious ceremony which put the wife in manu viri.

Coemptio was effected by Mancipatio, and consequently the wife was in mancipio. (Gaius, i. 118.) A woman who was cohabitating with a man as uxor, might come into his manus by this ceremony, in which case the coemptio was said to be matrimonii causa, and she who was formerly uxor became a proper nuptialis. (Compare Varro, ad Ling. Lat. vi. 43.) If the coemptio was effected at the time of the marriage, it was still a separate act. The other coemptio which was called fiduciae causa and which was between a woman and a man not her husband, is considered under TESTAMENTI and TUTELA. If, however, an uxor made a coemptio with her husband, not matrimonii causa, but fiduciae causa, the consequence was that she was in manu, and thereby acquired the rights of a daughter. It is stated by a modern writer, that the reason why a woman did not come in mancipium by the coemptio, but only in manum, is this, that she was not mancipated, but mancipated herself, under the authority of her father if she was in his power, and that of her tutors, if she was not in the power of her father; the absurdity of which is obvious, if we have regard to the form of mancipatio as described by Gaius (i. 119), who also speaks (i. 118, a) of mancipatio as being the form by which a parent released his daughter from the patria potestas (e suo jure), which he did when he gave his daughter in manum viri. The mancipatio must in all cases have been considered as legally effected by the father or the tutors.

In the course of time, marriage without the manus became the usual marriage. The manus by usus fell into desuetude. (Gaius, i. 111.) Sponsalia were not an unusual preliminary of marriage, but they were not necessary. "Sponsalia," according to Florentinus (Dig. 23. tit. 1. s. 1) "sunt mentio et reprimissio nuptiarum futurorum." Gallius has preserved (iv. 4) an extract from the work of Servius Sulpicius Rufus De Dotibus, which, from the authority of that great jurist, may be considered as unexceptionable. (Compare Varro, de Ling. Lat. vi. 70.) Sponsalia, according to Servius, was a contract by stipulations and sponsiones, the former on the part of the future husband, the latter on the part of him who gave the woman in marriage. The woman who was promised in marriage was accordingly called Sponsa, which is equivalent to Promissa; the man who engaged to marry was called Sponsus. The Sponsalia then were an agreement to marry, made in such form as to give each party a right of action in case of non-performance, and the offending party was condemned in such damages as to the Judge seemed just. This was the law (jus) of Sponsalia, adds Servius; but the law which he does not mention gave the Civitas to all Latium; whence we may conclude that alterations were afterwards made in it.

The Sponsalia were of course not binding, if the parties consented to waive the contract; and either party could dissolve the contract as either could dissolve a marriage. If a person was in the relation of double sponsalia at the same time, he was liable to Infamia. [INFAMIA.] Sometimes a present was made by the future husband to the future wife by way of earnest (arreks, arreka sponsilition), or as it was called propter nuptias donatio. (Cod. 5. tit. 3.) Sponsalia might be contracted by those who were not under seven years of age. The regulation of Augustus, which was apparently comprised in the Lex Julia et Papia, which declared that no sponsalia should be valid if the marriage did not follow within two years, was not always observed. (Sueton. Aug. c. 34; Dion Cass. liv. 16, and the note of Reimarus.) [INFANS; IMPEDIMENTA.] The consequences of marriage were:

1. The power of the father over the children of the marriage, which was a completely new relation, an effect indeed of marriage, but one which had no
influence over the relation of the husband and wife. [Patricia Potestas.]

2. The liabilities of either of the parties to the punishments affixed to the violation of the marriage union. [Adulterium; Divortium.]

3. The relation of husband and wife with respect to property, to which head belong the matters of Dos, Donatio inter virum et uxorem, Donatio propter nuptias, &c. Many of these matters, however, are not necessary consequences of marriage, but the consequence of certain acts which are rendered possible by marriage.

In the later Roman history we often read of marriage contracts which have reference to Dos, and generally to the relation of husband and wife viewed with reference to property. A title of the Digest (23. tit. 4) treats De Pactis Dotalibus, which might be made either before or after marriage.

The Roman notion of marriage was this:—it is the union of male and female, a consortship for the whole of life, the inseparable consuetude of life, an intercommunion of law, sacred and not sacred. (Dig. 23. tit. 2. s. 1.) But it is not meant that marriage was to this extent regulated by law, for marriage is a thing which is, to a great extent, beyond the domain of law. The definition or description means that there is no legal separation of the interests of husband and wife in such matters in which the separation would be opposed to the notion of marriage. Thus the wife had the sacra, the domicile, and the rank of the husband. Marriage was established by consent, and continued by dissent; for the dissent of either party, when formally expressed, could dissolve the relation. [Divortium.]

Neither in the old Roman law nor in its later modifications, was a community of property an essential part of the notion of marriage; unless we assume that originally all marriages were accompanied with the conventio in manum, the inseparable consuetude of life, an intercommunion of law, sacred and not sacred. (Dig. 23. tit. 2. s. 1.) But it is not meant that marriage was to this extent regulated by law, for marriage is a thing which is, to a great extent, beyond the domain of law. The definition or description means that there is no legal separation of the interests of husband and wife in such matters in which the separation would be opposed to the notion of marriage. Thus the wife had the sacra, the domicile, and the rank of the husband. Marriage was established by consent, and continued by dissent; for the dissent of either party, when formally expressed, could dissolve the relation. [Divortium.]

At Rome, the matrimonium juris civilis was originally the only marriage. But under the influence of the Jus Gentium, a cohabitation between Peregrini, or between Latini, or between Peregrini and Latini and Romani, which, in its essentials, was a marriage, a consortium omnis vitae with the affectio maritalis, was recognised as such; and though such marriage could not have all the effect of a Roman marriage, it had its general effect in this, that the children of such marriage had a father. Thus was established the notion of a valid marriage generally, which marriage might be either Juris Civis or Juris Gentium. Certain conditions were requisite for a valid marriage generally, and particular conditions were necessary for a Roman marriage. In the system of Justinian, the distinction ceased, and there remained only the notion of a valid marriage generally; which is the sense of Justae nuptiae in the Justinian system. This valid or legal marriage is opposed to all cohabitation which is not marriage; and the children of such cohabitation have no father. (Puchta, Just. iii. § 267.) [Infamia.]

The above is only an outline of the Law of Marriage, but it is sufficient to enable a student to carry his investigations farther. [G. L.]

It remains to describe the customs and rites which were observed by the Romans at marriages (vitus nuptialis or nuptiarum solomonta justa, τὰ νομικάνων τῶν γάμων). After the parties had agreed to marry and the persons in whose potestas they were had consented, a meeting of friends was sometimes held by the marriage, the purpose of settling the marriage-contract, which was called sponsalia, and written on tablets (tabulae legittimae), and signed by both parties. (Juv. Sat. ii. 119, &c, vi. 25, 200; Gallius, iv. 4.) The woman after she had promised to become the wife of a man was called sponsa, pacta, dicta, or sponsera. (Gell. l. c.; Plaut. Trinum, i. 4. 99; Nonius, iv. p. 213.) From Juvenal (Sat. vi. 27) it appears
that, at least during the imperial period, the man put a ring on the finger of his betrothed, as a pledge of his fidelity. This ring was probably, like all rings at this time, worn on the left hand, and on the finger nearest to the smallest. (Macrob. Sat. vii. 13.) The last point to be fixed was the day on which the marriage was to take place. Towards the close of the republic it had become customary to betroth young girls when they were yet children; Augustus therefore limited the time during which a man was allowed to continue betrothed to a girl (Suet. Aug. 34), and forbade men to be betrothed to girls before the latter had completed their tenth year, so that the age of puberty being twelve years, a girl might not be compelled to be betrothed longer than two years. (Dion Cass. liv. p. 609, Steph.)

The Romans believed that certain days were unfortunate for the performance of the marriage rites, either on account of the religious character of those days themselves, or on account of the days by which they were followed, as the woman had to perform certain religious rites on the day after her wedding, which ought not to be on a dies atri. Days not suitable for entering upon matrimony were the Calends, Nones, and Ides of every month, all dies atri, the whole months of May (Ovid. Fast. v. 490; Plut. Quaest. Rom. p. 284) and February, and a great number of festivals. (Macrob. Sat. i. 15; Ovid. Fast. ii. 557.) Widows, on the other hand, might marry on days which were insipuous for maidens. (Macrob. Sat. i. c.; Plut. Quaest. Rom. p. 289.)

On the wedding-day, which in the early times was never fixed upon without consulting the auguries (Cic. de Div. i. 16; Val. Max. ii. 1, § 1), the bride was dressed in a long white robe with a purple fringe or adorned with ribands. (Juv. ii. 9.) Hereupon the marriage was completed by pronouncing a solemn formula or prayer, after which another sacrifice was offered. A cake was made of flour and the mola salsa prepared by the Vestal virgins (Serv. ad Virg. Eclog. viii. 82), and carried before the bride when she was conducted to the residence of her husband. It is uncertain whether this cake is the same as that which is called nestaceum (Juv. Sot. vi. 201), and which was in the evening distributed among the guests assembled at the house of the young husband.

The bride was conducted to the house of her husband in the evening. She was taken with apparent violence from the arms of her mother, or of the person who had to give her away. On her way she was accompanied by three boys dressed in the praetexta, and whose fathers and mothers were still alive (patrini et matrini). One of them carried before her a torch of white thorn (spina) or, according to others, of pine wood; the two others walked by her side supporting her by the arm. (Fest. s. v. Patrini et matrini; Varro, ap. Charissiam, i. p. 117; Plin. H. N. xvi. 18.) The bride herself carried a distaff and a spindle with wool. (Plin. H. N. viii. 48; Plut. Quaest. Rom. p. 271.)

A boy called camillus carried in a covered vase (cumera, cumerum, or cillum) the so called utensils of the bride and playthings for children (crepundia, Fest. s. v. Cumerum; Plut. Cistel. iii. 1. 5). Besides these persons who officiated on the occasion, the procession was attended by a numerous train of friends both of the bride and the bridegroom, whose attendance was called officium and ad officium venire. (Suet. Calig. 25, Claud. 26.) Plutarch (Quaest. Rom. init.) speaks of five wax-candles which were used at marriages; if these were borne in the procession, it must have been to light the company which followed the bride; but it may also be that they were lighted during the marriage ceremony in the house of the bride.

When the procession arrived at the house of the bridegroom, the door of which was adorned with garlands and flowers, the bride was carried across the threshold by pronubi, i.e. men who had only been married to one woman, that she might not knock against it with her foot, which would have been an evil omen. (Plut. Quaest. Rom. p. 271, c; Plaut. Cistel. iv. 4. 1.) Before she entered the house, she wound wool around the door-post of her new residence, and anointed them with lard (adeps suillus) or wolf’s fat (adeps lupinus, Serv. ad Aen. iv. 19; Plin. H. N. xxviii. 9.) The husband received her with fire and water, which the woman had to touch. This was either a symbolic purification (for Serv. ad Aen. iv. 104, says that the newly married couple washed their feet in this water), or it was a symbolic expression of welcome, as the interdiciere aqua et igni was the formula for banishment. The bride saluted her husband with the words: uti tu cuma, ego Caiia (Plut. Quaest. Rom. L. c.) After she had entered the house with distaff and spindle, she was placed upon a sheep-skin, and here the keys of the house were delivered into her hands. (Fest. s. v. Clavis.)

A repast (coena nuptialis) given by the husband to the whole train of relatives and friends who accompanied the bride, generally concluded the solemnity of the day. (Plaut. Cistel. v. 2. 61; Suet. Calig. 25.) Many ancient writers mention a very popular song, Talassius or Talassio, which was sung at weddings (Plut. Quaest. Rom. L. c.; Liv. iv. 9; Dionys., Ant. Rom. ii. 31; Fest. s. v. Talassium); but whether it was sung during the repast or during the procession is not quite clear, though we may infer from the story respecting the origin of the song, that it was sung while the procession was advancing towards the house of the husband.

It may easily be imagined that a solemnity like that of marriage did not take place among the merry and humorous Italians without a variety of jests and railleries, and Ovid (Fast. iii. 675) mentions obscene songs which were sung before the door of the bridal apartment by girls, after the company had left. These songs were probably the
old Fescrianna (FESCRNIANNA), and are frequently
called Epithalamia. At the end of the r-past the
bride was conducted by matrons who had not had
more than one husband (pronuba), to the lectus
genialis in the atrium, which was on this occasion
magnificently adorned and strewed with flowers.
On the following day the husband sometimes gave
another entertainment to his friends, which was
called repota (Fest. s. v.; Horat. Sat. ii. 2. 60),
and the woman who on this day undertook the
management of the house of her husband, had to
perform certain religious rites (Macrob. Sat. i. 15),
on which account, as was observed above, it was
necessary to select a day for the marriage which
was not followed by a dies ater. These rites prob-
ably consisted of sacrifices to the dii Penates.

The rites and ceremonies which have been men-
tioned above, are not described by any ancient
writer in the order in which they took place, and
the order adopted above rests in some measure
merely upon conjecture. Nor is it, on the other
hand, clear which of the rites belonged to each of
the three forms of marriage. Thus much only is
certain, that the most solemn ceremonies and those
of a religious nature belonged to confarrcatio.

The position of a Roman woman after marriage
was very different from that of a Greek woman.
The Roman presided over the whole household;
she educated her children, watched over and pre-
served the honour of the house, and as the mater-
familias she shared the honours and respect shown
to her husband. Far from being confined like the
matron, at least during the better centuries of the
Republic, occupied the most important part of the
house, the atrium. (Compare Lipsius, Æcl. i. 17;
Böttiger, Aldobrandin. Hochzeit, p. 124, &c.; Bris-
sonius, De Ritu Neptianarum, de Jure Consobrii,
Paris, 1664. 12mo.)

MATRONA. [MATRIMONII. p. 741, a.]

MATRONALIA, also called MATRO-
NALES FERIAE, a festival celebrated by the
Romans on the Ist of March in honour of Juno Lucina.
(Fest. s. v.; Horat. Sat. ii. 2. 60), and the woman
who on this day undertook the management of the
house of her husband, had to perform certain religious rites (Macrob. Sat. i. 15), on which account, as was observed above, it was necessary to select a day for the marriage which was not followed by a dies ater. These rites probably consisted of sacrifices to the dii Penates.
