IMPORTED AND MANUFACTURED BY

WILLIAMS, BROWN & EARLE

918 CHESTNUT STREET

PHILADELPHIA, PA.
The Most Perfect Moving Picture Outfit.
A Complete Dissolving Lantern.
An Extra Lantern for showing Announcements.
An Extra Lantern for showing Song Slides and A Moving Picture Machine Combined.

THE NEW COMBINED CINEMATOGRAPH AND DISSOLVING LANTERN.
No. 2 A. F. M.—THE NEW DISSOLVING ELECTRIC LANTERN, with two complex sets of 5 1/2 inch condensers, two 6 inch objectives, special base so that the upper lantern can be used independently while moving picture machine is in operation if needed. Same with adjustable legs, two exercises for 600 volt current, two No. 2 extra long burning arc lamps for burning 3 hours and a half or two hours without running. Edison Universal Model Moving Picture Mechanism, with upper and lower fine focus. The price of the outfit complete ............................... $225.00
No. 3 B. F. M., same as Outfit No. 3 A. F. M., but with Edison Exhibition Model Mechanism instead of Universal Model .................. $285.00
We supply these outfits with enclosed lamp boxes and 60 dog arc lamps at the same prices as above.

The Powers Cameragraph.
A High Grade Motion Picture Machine
With Fire Proof Magazine and Take-up Device.

The Powers Cameragraph is arranged with a mechanism of the very finest finish, and is adjusted for high speed. It is equipped with moving picture lens, with stereopticon attachment and lens for showing lantern slides, lamp house arranged to slide on metal rods, carrying two Plane-Convex Condensers, some and improved shutter for cutting off the light, with electric hand feed lamp carried on adjustable base, with rheostat for alternating or direct current up to 110 volts, with cut off switch and wire connections. The stand is fitted with a nickel plated steel adjustable legs. The outfit is supplied with upper and lower, fire proof magazines, reel hanger, winding attachment and two 10 inch reels. A framing device is supplied for centering the picture on the screen.

The Powers Cameragraph complete as above described, ................................. $175.00
The Powers Cameragraph same as above, with the addition of Fire Proof Safety Shutter ......................................................... 189.00
Extra Star Wheel and Shaft ....................................................... 3.50
The Edison Exhibition Model Kinetoscope
With Improved Take-up and Film Magazines

The Edison Exhibition Model Kinetoscope is supplied with mechanism in a cabinet and case complete with upper and lower film magazines, improved take-up attachment and ten ten inch rolls, and with four bulb electric lamp house and Motion Picture Mechanism. The cabinet is a handsome walnut box. It is provided with adjustable interior frame and slides, and two plane convex condensing lenses, for the exhibition of the moving pictures. Each two objectives, one for stereopticon slides and one for motion pictures and two for stereo pictures and one for stereopticon slides and is arranged stereopticon attachment so that either type of slide or motion picture can be chosen. The cabinet is either supplied with one bulb or for electric light with the following provision: For the attachment of a switch, connections from lamp to switch, adjustable switch for 35 or 65 volt alternating current, or 100 to 120 volt direct current. The cabinet is beautifully finished and is a thoroughly reliable and satisfactory instrument.

Price of Edison Exhibition Model Kinetoscope as above described $135.00
Special undersize 8thns for passing 35 envelopes of current on 35 to 75 volt system $175.00
Adjustable Metal Lens including top to fit the base board, per set of 5 $10.00
Cam Shaft with Cam and Large Bevel Gear Assembled 4.00
Intermittent Shutter and Star Wheel assembled on Shaft 6.00

THE NEW PERFECTION REWINDER.
For Moving Picture Films.

In offering the Perfection Rewinder, we believe that we may confidently claim for it that it is the most convenient, best made and cheapest rewinder that has ever been put on the market. It is arranged so as to handle two 16 inch Reels and both reels are held in position on the Rewinder, thus, obviating the necessity of holding one reel in the hand and winding with the other hand, which has been the method employed in many of the Rewinders on the market. The Rewinder can be attached to any table or shelf, fits any size reel up to 10 inches and should be part of the equipment of every Moving Picture Exhibitor.

Price of the Perfection Rewinder, not including Reels, $3.00.

Rewinder for Examining and Patching Film.

We are also making the Perfection Rewinder extra large size, 14 inches from centre to centre of reels, especially adapted to examining and patching films, $3.75.

FILM REELS.
Our Film Reels are made of pressed steel and are therefore stiff and not easily bent. They are carefully adjusted and will fit any Standard American Machine. They are made in inches in diameter to hold 2000 feet.

Price, each ...........................................$1.00

CONDENSING LENSES.

No. 187. Condensing Lens, 1 in. diameter ..............................$1.00

No. 185. Condensing Lens, 1 1/2 in. diameter ...........................1.00

No. 182. Condensing Lens, 2 in. diameter ..............................1.00

No. 180. Condensing Lens, 2 1/2 in. diameter ..........................1.00

ELECTROGIZED GLASS FOR PROTECTING CONDENSERS FROM HEAT.

Electrovided Glass is supplied in circular plates the exact diameter of the Condenser, and when inserted between the Condenser and the light, protects the Condenser from much of the heat and thus greatly reduces the breakage of lenses. When ordering, state diameter of lens used.

Price, each ...........................................60 cents
Oxodium—The New Chemical for Making Oxygen.

Oxodium gives the most perfect results in any standard gas lighting outfit. It does not crumble, it is put up in convenient form, being in small bungs about 1/4 in. square. It will not deteriorate if left in the generator, and it gives 150 times its own volume in pure Oxygen Gas. It is safe, reliable, and economical. Oxodium is packed in full size tin boxes with screw cap, convenient to carry. Price per box, $1.35.

**FILM CEMENT,**

For Joining Moving Picture Film.

Our Film Cement has now been on the market for upwards of 5 years and it has been pronounced by experienced exhibitors the most powerful and satisfactory adhesive. In the manufacture of our cement only the finest materials are used. Price per bottle, 25 cents.

**EXTRA BRILLIANT LIMES,**

For the Calcium or Oxy-Hydrogen Light.

Our Extra Brilliant Limes are manufactured with the greatest possible care in order to ensure a finely finished point. The quality of the material is such that the flames are uniform, and free from impurity, thus giving a smooth, even, brilliant light which is so much desired by exhibitors.

Extra brilliant Limes per dozen in screw top cases, 15.00
Limes in separate sealed glass tubes, each, 1.25
The Oxodium Outfit for Making Oxygen Gas.

This Generator is arranged to produce pure Oxygen Gas from Oxylithe or from the wonderful, new chemical, Oxodium.

We especially recommend the use of Oxodium, owing to its convenient form in cubes and because it produces 350 times its own bulk of pure Oxygen Gas.

The Generator is compact, portable, easily used and produces a light of 750 candle power.

Oxodium Outfit Complete, without Lanthum,..................$25.00
Oxodium per box, .................................................. $1.50

LIST OF ANNOUNCEMENT SLIDES.

1. Those who have not seen the entire performance may return for the next.
2. We cordially invite Ladies and Children to this Theater. No Portrait will be shown that cannot possibly offend the most refined eye.

List sent on application.

OUTFIT FOR PREPARING ANNOUNCEMENTS.

Outlet 1, consists of 15 pieces of Transparent film on which announcements can be written on the typewriter or with India ink, 6 sets of Cover glass, one box of Ribber bands, one bottle of India ink ........................................... 1.00

SCREENS.

Although the ordinary muslin screen is largely used, the great objection to it has always been the fact that a large portion of the light which falls on the screen is absorbed instead of being reflected back to the audience. We have overcome this difficulty by introducing our New Double Fabric, Machine Enamelled Muslin Screens on Spring Rollers. These screens are supplied on spring rollers, or on wooden rollers to be wound up by a cord.

No. 128. SLIDING CARRIER FOR LANTERN SLIDES. This is a simple and effective slide carrier for use in either a single lantern or stereopticon. While one slide is being shown another may be placed in the extreme end of the carrier and rapidly moved to its proper position in the lantern, when the first one may easily be removed. Price ........ $1.75

No. 127. ORDINARY WOODEN SLIDE CARRIER. Can be used with any lantern. Price ........ 45

CARBONS.

We especially recommend our carbons as they are made of the purest material and therefore burn more smoothly and for a longer time than other brands.

Cored Carbons, 0.56 inches, per dozen 400; per 100 .......................... $1.30
Cored Carbons, 0.56 inches, per dozen 420; per 100 .......................... $1.50
THE 90° HAND FEED ARC LAMP.

Owing to their compactness and the ease with which they can be fitted to any lathe, 90° arc lamps have become very popular. The total height of these lamps above the base is about 6 inches.

The carbons meet at an angle of 90 degrees and are readily adjusted from the back of the lantern body. They have special adjustments for both direct and alternating current.

Lamp No. 3 is a much heavier instrument than No. 4, and is therefore recommended where heavy currents are required. The screw threads are fitted in roller bearings to avoid "jams" while hot.

Price of the 90° Degree Hand Feed Arc Lamp No. 3 .................. $12.00
Price of the 90° Degree Hand Feed Arc Lamp No. 4 .................. $14.50

THE COMPACT HAND FEED ELECTRIC ARC LAMP.

To meet the demand for a very compact and inexpensive arc lamp we have made this model. The carbons are accurately adjusted and centered by a rack and pinion adjustment. The lamp can be inclined at any angle and raised and lowered. The whole instrument is finely finished in bright nickel and can be used on either the direct or alternating current.

Price of the Compact Hand Feed Electric Arc Lamp .................. $8.00

RHEOSTATS.

New Adjustable Constant-Temperature Rheostat.

| Price for 110-volt 25 amperes | $8.00 |
| Price for 110-volt 35 amperes | 10.00 |
| Price for 220-volt 25 amperes  | 20.00 |
| Price for 220-volt 35 amperes  | 30.00 |

Rheostats made for any other current to order.

These rheostats are suitable for use on low tension currents; they are well made and exceedingly compact.

As the voltage of the current generally in use is from 100 to 220 volts it is necessary to use a rheostat with all the lanterns herein listed.

We strongly recommend the use of the constant-temperature rheostat in avoiding all danger of over-heating.

NEW CYLINDRICAL RHEOSTAT.

This rheostat is cylindrical in form, the wire being wound round and round a central core. It is a popular pattern owing to its cheapness, but is not nearly so durable as the styles shown above and cannot be used in some places on account of the manufacturers' regulations. It is adapted for use on the 40 to 115 volt direct or alternating currents and is adjustable. Price ... $6.00
THE NEW POLYOPSE LENS
FOR STEREOPICONS AND MAGIC LANTERNS
Adjustable Focus. Gives any standard size picture at any distance from the screen.

The Polyopse Lens is a wonderful triumph in Lens making. It accomplishes that seemingly impossible feat of giving a picture of almost any desired size at any regular distance from the screen. That is, with the lantern say 30 feet from the screen the size of the picture may be varied as desired from about 5 feet square to about 5 feet square, any size between these being also obtainable. In short, it combines all the properties of the ½, ¾, ¾ and ¾ size Lenses. It may be used at any distance from 5 to 100 feet from the screen. The method of use is extremely simple.

When used as shown on left of cut it is practically a ½ size Lens, by slipping the cell shown at right of cut over the rear of the Lens, any picture within the range of a ½, ¾, or ¾ size Lens may be had by drawing the bellows in or out until the desired size is obtained and then focusing the Lens with the rack and pinion. It gives a picture that for sharpness of focus and brilliancy of definition cannot be excelled.

PRICE
The Polyopse Lens, complete . . . . . $25.00

Williams, Brown & Earle,
Cinematographs Supplies and Moving Picture Films.

918 CHESTNUT STREET PHILADELPHIA, PA.
