| 1 | 46 |  | Jessica | Well, I just realized um, cause um, I think that um well there is twenty-five people in the class and that's an odd number, yeah, so um, like you couldn't have like all even groups, so that's why I think, like, some people got like, one ninth and one fourth. |
| 2 | 47 |  | RT1 | I wonder if there would have been a way. I don't want you to solve this now, but I want you to think about, of sharing those three bars of candy so everybody got the same amount, exactly. [Andrew raises his hand] Can you think about a way, think about that Andrew, any ideas? |
| 3 | 48 |  | Andrew | Well, I um, what I did one um day we had to do for homework, that we had to divide it equally, so I came up with the answer everybody got one and one fifth. |
| 4 | 49 |  | RT1 | How did you do that? |
| 5 | 50 |  | Andrew | Well, there was three candy bars and each one had ten um rectangles in it. So I took um twenty-five of them and circled it and put one. Then, the five left, if you divided them up into fives it would be five, ten, fifteen, twenty, twenty-five, so each person would get one and one fifth. |
| 6 |  |  | Jessica | Yeah, that's what I got myself. |
| 7 | 51 |  | RT1 | That is an interesting conjecture, isn't it? Did you hear that what Andrew said? How many of you followed what Andrew said? |
| 8 | 52 |  | Class | [Few students raise their hands.] |
| 8 | 53 |  | RT1 | I wonder if there is a way to uh to test that, that it would have been, um, okay. Could you draw us a picture or something to show us, is there a way? Did you? |
| 9 |  |  | Andrew | Well, Yeah |
| 10 |  |  | RT1 | Andrew, how did you show that? |
| 11 |  |  | Andrew | Well, I um made the three candy bars |
| 12 |  |  | RT1 | Can you all try to imagine what he's doing, the three candy bars? |
| 13 | 54 |  | Andrew | With the ten pieces in them. |

| 14 | 55 |  | RT1 | Alright, Ten. Ten. Ten. Could you all imagine that? |
| :--- | :--- | :--- | :--- | :--- |
| 15 | 56 |  | Class | Umm-hum ['Yes'] |
| 16 | 57 |  | Andrew | And then, I took two candy bars and then five pieces <br> of the other one to make twenty-five. |
| 17 | 58 |  | RT1 | Everybody gets one of those thirty pieces and there are <br> how many left over? |
| 18 | 59 |  | Class | Five. |
| 19 | 60 |  | RT1 | Five. Do you all follow that? How many of you <br> follow so far? |
| 20 | 61 |  | Class | [Some students raise their hands.] |
| 21 | 62 |  | RT1 | There's thirty pieces and everybody got a piece, <br> there's five left over, okay. |
| 22 | 63 |  | Andrew | Then those five would be just like one candy bar only <br> they would be smaller so you divide them into fifths <br> and five, ten, fifteen, twenty, twenty-five. Cause five <br> times five is twenty-five equals the amount of people. <br> So everybody gets one and one fifth. |
| 23 | 64 |  | RT1 | How many, what do you think about that? Would that <br> have been fairer, you think? |
| 24 | 65 |  | Class | [Mumbles 'Yes'] |
| 25 | 66 | RT1 | To get one and one fifth? As compared to some <br> people getting one and one quarter and some people <br> getting one and one ninth? What do you think? |  |
| 26 | 67 |  | Class | Yea |
