

# CANFIELD'S

*Fig. 1*

## Improved Screw Car - Brake.

*Fig. 2*

Patented Jan. 9th, 1872.

This Brake is the most durable, the simplest, cheapest, strongest, safest and most powerful, and has a less number of pieces in it than any other brake in use.

It has been in use nearly two years, during which time it has been constantly subjected to the severest trials possible, all of which it sustained triumphantly. It is conceded by every one that has ever tried this brake, that it is the easiest to be applied that there is in existence. It is unequalled for gravity roads. It is applicable to cars already built, without any alteration in their structure. Railroad rights for sale. For further information apply to
