| 0:00 | 1 | R1 | Well, I asked you to think about something the last time. Do you remember that? |
|  | 2 | Stephanie | Yes. |
|  | 3 | R1 | Remember what it was? |
|  | 4 | Stephanie | It was, um, like, a plus b quantity to the fourth and then to the fifth. I worked it out on paper. |
|  | 5 | R1 | Do you have it? |
|  | 6 | Stephanie | Yes. |
|  | 7 | R1 | Can you show it to me? |
|  | 8 | Stephanie | All right. [leaves table] |
|  | 9 | R2 | [off camera; whispering] The standard with combinatorics is two (inaudible) subscripts on each side... |
|  | 10 | R1 | [off camera] Well that's another way. |
|  | 11 | R2 | [off camera; whispering]-that's (inaudible) |
|  | 12 | R1 | [off camera] I thought that was permutations. |
|  | 13 | R2 | [off camera; whispering] One's a $P$ and one's a $C$. |
|  | 14 | R1 | Oh, okay, thank you. |
|  | 15 | Stephanie | [returns to table] There's, um, the fourth. |
|  | 16 | R1 | I just want to look at something. Do you mind if I do something? I don't want to mess up yours. |
|  | 17 | Stephanie | No, go ahead. |
|  | 18 | R1 | I want the camera to take a picture of this before I mess it up. Who's taking a picture of this? |
|  | 19 | R3 | Me- one second. |
|  | 20 | R1 | I need another piece of paper. |
|  | 21 | R3 | Lined? (inaudible) |
|  | 22 | R1 | I'll take lined paper. I want you to study this for a minute. This is really very nice. I can see you worked hard at this. Now, for a moment, you see your $a^{\prime}$ s and $b$ 's? |
|  | 23 | Stephanie | Mm-hmm. |
|  | 24 | R1 | Right? $a$ plus $b$ to the zero equals one, right? |

|  | 25 | Stephanie | Mm-hmm. |
|  | 26 | R1 | I'm not going to worry about the $a$ and $b$, I'm going to worry about the number in front of it. What's the number in front of $a$ here, when you don't put a number- when you have just $a$ and you don't have any number written, there's a number that it's understood. Did you know that? So if I write $a$ - |
|  | 27 | Stephanie | Oh one. |
|  | 28 | R1 | It's one. So that's one $a$ plus one $b$. |
|  | 29 | Stephanie | Yeah. |
|  | 30 | R1 | Right, so if I'm going to write this is one you wrote. And then $a$ plus $b$. That's one $a$ and one $b$. That's my one. |
|  | 31 | Stephanie | Yes. |
|  | 32 | R1 | And $a$ squared plus $2 a b$ plus $b$ squared. That's how many $a$ squared? |
|  | 33 | Stephanie | Uh-huh. [pause] One? |
|  | 34 | R1 | There's one $a$ squared. |
|  | 35 | Stephanie | And one $b$ squared. |
|  | 36 | R1 | And two $a b$. |
|  | 37 | Stephanie | Yeah. |
|  | 38 | Stephanie /R1 | And one $b$ squared. |
|  | 39 | R1 | One- two- one- those are my coefficients. The coefficients here, even though you don't see them, are ones. |
|  | 40 | Stephanie | Yeah. |
|  | 41 | R1 | Right? Now, read off my next set of coefficients. |
|  | 42 | Stephanie | There's $a$ cubed. |
|  | 43 | R1 | One. |
|  | 44 | Stephanie | And there's three $a$ squared $b$ and there's three $a b$ squared and there's $b$ cubed. Isn't that the same thing? |
|  | 45 | R1 | What do you mean? |
|  | 46 | Stephanie | As the towers? |
|  | 47 | R1 | Why? |

|  | 48 | Stephanie | It just is. |
|  | 49 | R1 | Ok so, what do you have for the next one? Let's continue and compare this. |
|  | 50 | Stephanie | Um, $a$ to the fourth. |
|  | 51 | R1 | One of them? |
|  | 52 | Stephanie | Yeah. And you have |
|  | 53 | R1 | 4- |
|  | 54 | Stephanie | four $a$ cubed $b$. |
|  | 55 | R1 | And 6-4-1 |
|  | 56 | Stephanie | Oh, okay. |
|  | 57 | R1 | And the next one? |
|  | 58 | Stephanie | $1-5-10-10-5-1$ |
|  | 59 | R1 | You did all that hard work but I'm going to tell you what those coefficients are- $1-6-15-20-15-6$ and 1 . Let's see if I'm right. |
|  | 60 | Stephanie | Yeah. |
|  | 61 | R1 | Hmmm. So, the only difference is here you have an $a$ squared and what does $a$ squared mean? |
|  | 62 | Stephanie | $a$ times $a$. |
|  | 63 | R1 | Or two factors of $a$. |
|  | 64 | Stephanie | Yes. |
|  | 65 | R1 | Right? |
|  | 66 | Stephanie | Ok. |
|  | 67 | R1 | So you have two factors of $a$, right? |
|  | 68 | Stephanie | Mm-hmm. |
|  | 69 | R1 | You have one of those. One thing with two factors of $a$, one thing with two $a$ 's in it. |
|  | 70 | Stephanie | Mm-hmm. |
|  | 71 | R1 | I don't want to think of $a$ 's; I want to think of red. |
|  | 72 | Stephanie | Ok. |
|  | 73 | R1 | Can you switch that a minute? So now I have one thing with two reds. What thing could I be thinking of if I have two reds? |

|  | 74 | Stephanie | A tower that's two high? |
|  | 75 | R1 | And here I'm talking about two things. |
|  | 76 | Stephanie | Mm-hmm. |
|  | 77 | R1 | One is- |
|  | 78 | Stephanie | -red- |
|  | 79 | Stephanie <br> /R1 | -and one is yellow. |
|  | 80 | R1 | Is that possible in two high? |
|  | 81 | Stephanie | Yeah. |
|  | 82 | R1 | To have the one red and one yellow? There are two of them. |
|  | 83 | Stephanie | Yeah. 'Cause one is- the red can be on top or on the bottom. And <br> the yellow -same thing. |
|  | 84 | R1 | And what about b squared? |
|  | 85 | Stephanie | Um- two yellow. |
|  | 86 | R1 | Ok, so I could think about this as these coefficients tell me how <br> many of combinations of them and these tell me which ones - <br> exactly two red, right? |
|  | 87 | Stephanie | Mm-hmm. |
|  | 88 | R1 | -exactly one red and a yellow- |
|  | 99 | Stephanie | Mm-hmm. |
|  | 91 | R1 | Stephanie |
|  | 92 | R1 | Yeach. |
|  | 93 | Stephanie | Does that work here? |
|  | 94 | R1 | So I'm talking about towers of three red. How many of those? <br> Exactly three red? |
|  | 95 | Stephanie | Mm-hmm. |
|  | 96 | R1 | There's one? |
|  | 97 | Stephanie | Yes. |
|  | 98 | R1 | And here I have... |
|  | 99 | Stephanie | Um . . towers . . um . . . of red and yellow, three high, I guess? <br> Since there's three of them? |
|  |  |  |  |

|  | 100 | R1 | Right, and how many are reds and how many of them are yellow? |
|  | 101 | Stephanie | Two are red and one is yellow. And . . . |
|  | 102 | R1 | And there are three of those. |
|  | 103 | Stephanie | Yes. And the next. . . |
|  | 104 | R1 | Do you really believe that? |
|  | 105 | Stephanie | Yes. |
|  | 106 | R1 | Two are reds and one are yellow? Can you see them? The three? The yellow, the yellow, the yellow? |
|  | 107 | Stephanie | Yeah uh yeah. I mean, you could have, um, the red, the red, the yellow. The red, the yellow, the red. The yellow, red, red. |
|  | 108 | R1 | Say that again. That was too fast for me. I was trying to concentrate. |
|  | 109 | Stephanie | The red, the red, the yellow. The red, the yellow, the red. Or the, um, yellow, yellow, red- uh- yellow, red, red. |
|  | 110 | R1 | I'm going to believe what you said is true, but somehow I'm having trouble focusing. Um. One more time. |
|  | 111 | Stephanie | Red- |
|  | 112 | R1 | On the bottom? |
|  | 113 | Stephanie | On the top. |
|  | 114 | R1 | Ok, that's why I'm having trouble. Red on the top. |
|  | 115 | Stephanie | -red, yellow. |
|  | 116 | R1 | Red, red, yellow's on the bottom. |
|  | 117 | Stephanie | Red, on the top, yellow, red. |
|  | 118 | R1 | Mm-hmm. |
|  | 119 | Stephanie | Or yellow on the top, red, red. |
|  | 120 | R1 | Alright, I think I see it. We'll listen to the tape. I'm getting tired. But you see the relationship here between towers? |
|  | 121 | Stephanie | Yes |
|  | 122 | R1 | Good. You can write that up for me for next time. |
|  | 123 | Stephanie | Ok. |
|  | 124 | R1 | So you see, all this hard work, when you get a test, you know, or |

|  | 125 | Stephanie | take a college board- |
|  | 126 | R1 | -and they say expand $a$ plus- you know, $a$ plus $b$ to the sixth, |
|  | 127 | Stephanie | Mm-hmm. |
|  | 128 | R1 | Think how fast you can do that. |
|  | 129 | Stephanie | Yeah. |
|  | 130 | R1 | That's very nice. Maybe this is where we should stop unless <br> Ethel has a question, or Steve? Or Elena? Oh, Steve had said- <br> said- whispered something to me when you went over there, <br> that, he reminded me of something that I had not remembered, <br> that you might also see this notation in books. You might see the <br> five here and the zero here [writes ${ }_{5} C_{0}$ ]. |
|  | 131 | Stephanie | Ok, but it's the same thing? |
