Trips Awheel
WHERE TO GO AND HOW TO GET THERE

When you travel by automobile, one of the most pleasant experiences is to be on the road, to see the countryside, to enjoy the freedom of the open road. But there is another side to the story. The driver must be alert, must be prepared for all eventualities. He must be able to cope with the unexpected, to react quickly to the changing conditions of the road. This is where your car's suspension system comes into play. A good suspension system ensures a smooth ride, absorbs shocks, and keeps the car stable in all conditions. So the next time you go on a trip, remember to check your suspension and make sure it's in good condition.
