Figure S4. Potential connectivity for site 2394 (indicated with an arrow), Palawan Region, Philippines, following 10 and 30-day dispersal periods (a, c). Probability density function of the relative contributions TST_j of connected sites (j) to the TST_{pc} are binned into 0.5°C intervals (b, d). Black line indicates the local TST. Dashed line indicates the TST_{pc} based on the TSTs of the connected reefs.
