

SANDY HOOK BAY

DESCRIPTIONS OF REFERENCE STATIONS

NOTE

This map is based upon surveys by the U. S. Engineer Dept. 1912-1921, with incorporation of more line and topography in part from U. S. C. & G. S. charts and of towers and buoys from various sources.
 Coordinates refer to the plane of mean low water.
 A distance of 6 ft. depth is shown blue.

The monuments, except S. H. 6, 7, were set in 1913 and 1914, and are bronze or reference points set in masonry or in concrete (concrements).
 Coordinates of points and bearings of lines herein refer to an extension of the meridian as shown by the Bureau of Rotted-Line, New York, with a true perpendicular and parallel to the true meridian through U. S. C. & G. S. Station "Bogert" on the north shore of the bay.

The coordinates of the Bogert are South 23° 55' E. Read 20000 ft. The station lines shown on this map are correct as shown by the bearing lines, respectively, appearing on this map and the survey of the station in 1912, and are shown in blue. The bearings of the station lines are shown in blue in other portions; the original indefinite colored lines have been replaced by straight lines.

The separate bulkhead line is shown thus: ————
 The separate pierhead line is shown thus: ————
 Combined pierhead and bulkhead line:
 The bulkhead line follows the line for the pierhead line, the pierhead line the line to which open piled structures may be built.
